The Health Information Exchange measures for eligible hospitals and CAHs hold particular importance because of the role they play within the care continuum. In addition, these measures encourage and leverage interoperability on a broader scale and promote health IT-based care coordination. However, through our review of existing measures, we determined that we could potentially improve the measures to further reduce burden and better focus the measures on interoperability in provider to provider exchange. Such modifications would address a number of concerns raised by stakeholders including:

- Supporting the implementation of effective health IT supported workflows based on a specific organization's needs;
- Reducing complexity and burden associated with the manual tracking of workflows to support health IT measures; and
- Emphasizing within these measures the importance of using health IT to support closing the referral loop to improve care coordination.

The Health Information Exchange objective includes three measures under § 495.24(e)(6)(ii), and we believe we can potentially improve each to streamline measurement, remove redundancy, reduce complexity and burden, and address stakeholders' concerns about the focus and impact of the measures on the interoperable use of health IT.

As discussed in section VIII.D.6.a. of the preamble of this proposed rule, we are proposing to remove the exclusions from all three of the measures associated with the Health Information Exchange objective under § 495.24(c)(7)(iii) in proposed § 495.24(e)(6). However, in the event we finalize the new scoring methodology we are proposing, eligible hospitals and CAHs would be able to claim an exclusion under the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure as indicated in section VIII.D.6.c.(4) of the preamble of this proposed rule.

We are proposing several changes to the current measures under the Stage 3 Health Information Exchange objective. First, we are proposing to change the name of Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information. We also are proposing to remove the current Stage 3 Clinical Information Reconciliation measure and combine it with the Request/Accept Summary of Care measure to create a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information. This proposed new measure would include actions from both the current Request/Accept Summary of Care measure and Clinical Information Reconciliation measure and focus on the exchange of the health care information while reducing the administrative burden of reporting on two separate measures.

As discussed earlier in the proposed rule, in the event we do not finalize the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, we would maintain the current Health Information Exchange objective, associated measures and exclusions under § 495.24(c)(7) as described in section VIII.D.5. of the preamble of this proposed rule and as outlined in the table in that section which describes Stage 3 objectives and measures if new scoring methodology is not finalized.

We are seeking public comment on these proposals.

(1) Proposed Modifications To Send a Summary of Care Measure

We are proposing to change the name of the Send a Summary of Care measure at 42 CFR 495.24(c)(7)(ii)(A) to Support Electronic Referral Loops by Sending Health Information at 42 CFR 495.24(e)(6)(ii)(A), to better reflect the emphasis on completing the referral loop and improving care coordination. We are proposing to change the measure description only to remove the previously defined threshold from Stage 3, in alignment with our proposed implementation of a performance-based scoring system, to require that the eligible hospital or CAH create a summary of care record using CEHRT and electronically exchange the summary of care record for at least one transition of care or referral.

Proposed name and measure description: Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care: (1) Creates a summary of care record using CEHRT; and (2) electronically exchanges the summary of care record.

Through public comment and stakeholder correspondence, we have become aware that, in the health care industry, there is some misunderstanding of the scope of transitions and referrals which must be included in the denominator of this measure. In the rulemaking for Stages 2 and 3 (77 FR 54013 through 54021, 80 FR 62852 through 62862), we noted the denominator for this measure includes all transitions of care and referrals from an inpatient setting and all transitions or referrals from an emergency department where follow up care is ordered by an authorized provider. In the event that an eligible hospital or CAH is the recipient of a transition of care or referral, and subsequent to providing care the eligible hospital or CAH transitions or refers the patient back to the referring provider of care, this transition of care should be included in the denominator of the measure for the eligible hospital or CAH. We expect this will help build upon the current provider to provider communication via electronic exchange of summary of care records created by CEHRT required under this measure, further promote interoperability and care coordination with additional health care providers, and prevent redundancy in creation of a separate measure.

In the past, stakeholders have raised concerns that the summary care records shared according to the CCDA standard included excessive information not relevant to immediate care needs, which increased burden on health care providers. Under the ONC Health IT Certification Program, certified EHR technology must have the capability to exchange all of the information in the Common Clinical Data Set (CCDS) as part of a summary care record structured according to the CCDA standard. We previously finalized in the Stage 2 final rule (77 FR 53991 through 53993) that health care providers must transmit all of the CCDS information as part of this summary care record, if known, and that health care providers must always transmit information about the problem list, medications, and medication allergies, or validate that this information is not known.

As finalized in the 2015 EHR Incentive Programs final rule (80 FR 62852 through 62861), our policy allows health care providers to constrain the information in the summary care record to support transitions of care. For instance, we encouraged health care providers to send a list of items that he or she believes to be pertinent and relevant to the patient's care, rather than a list of all problems, whether active or resolved, that have ever populated the problem list. While a current problem list must always be included, the health care provider can use his or her judgment in deciding which items historically present on the problem list, medical history list (if it exists in CEHRT), or surgical history list are relevant given the clinical circumstances.

We also wish to encourage eligible hospitals and CAHs to use the document template available within the CCDA which contains the most clinically relevant information that may be required by the recipient of the transition or referral. Accordingly, we are proposing that eligible hospitals and CAHs may use any document template within the CCDA standard for purposes of the measures under the Health Information Exchange objective. While eligible hospitals' and CAHs' CEHRT must be capable of sending the full CCDA upon request, we believe this additional flexibility will help support efforts to ensure the information supporting a transition is relevant.

For instance, when the eligible hospital or CAH is referring to another health care provider, the recommended document is the ''Referral Note,'' which is designed to communicate pertinent information from a health care provider who is requesting services of another health care provider of clinical or nonclinical services. When the receiving health care provider sends back the information, the most relevant CCDA document template may be the ''Consultation Note,'' which is generated by a request from a clinician for an opinion or advice from another clinician. However, eligible hospitals and CAHs may choose to utilize other documents within the CCDA to support transitions, for instance the ''Discharge Summary'' document. For more information about the CCDA and associated templates, we refer readers to: *http://www.hl7.org/documentcenter/public/standards/dstu/CDAR2_IG_CCDA_CLINNOTES_R1_DSTU_R2.1_2015AUG.zip*.

We note that under the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, measures would not have required thresholds for reporting; therefore, if the new scoring methodology and measure were finalized, this measure would not have a reporting threshold. In the event we do not finalize the proposed scoring methodology, we would maintain the current Stage 3 requirements finalized in previous rulemaking. Therefore, eligible hospitals and CAHs would be required report on the Stage 3 Send a Summary of Care measure under the Health Information Exchange objective codified at § 495.24(c)(7)(ii)(A).

We are inviting public comment on the measure proposals.

(2) Proposed Removal of the Request/Accept Summary of Care Measure

We are proposing to remove the Request/Accept Summary of Care measure at § 495.24(c)(7)(ii)(B) under the proposed § 495.24(e)(6) based on our analysis of the existing measure and in response to stakeholder input.

Through review of implementation practices based on stakeholder feedback, we believe that the existing Request/Accept Summary of Care measure is not feasible for machine calculation in the majority of cases. The intent of the measure is to identify when health care providers are engaging with other providers of care or care team members to obtain up-to-date patient health information and to subsequently incorporate relevant data into the patient record. However, stakeholders have noted the measure specification does not effectively further this purpose. Specifically, the existing measure specification results in unintended consequences where health care providers implement either:

- A burdensome workflow to document the manual action to request

or obtain an electronic record, for example, clicking a check box to document each phone call or similar manual administrative task, or

• A workflow which is limited to only querying internal resources for the existence of an electronic document.

Neither of these two implementation options is desirable when the intent of the measure is to incentivize and encourage eligible hospitals and CAHs to implement effective workflows to identify, receive, and incorporate patient health information from other providers of care into the patient record.

In addition, our analysis identified that the definition of ''incorporate'' within the Request/Accept Summary of Care measure is insufficient to ensure an interoperable result. In the 2015 EHR Incentive Programs final rule at 80 FR 62860, we did not define ''incorporate'' as we believed it would vary based on an eligible hospital's or CAH's workflows, patient population, and the referring provider of care. In addition, we noted that the information could be included as an attachment, as a link within the EHR, as imported structured data or reconciled within the record and not exclusively performed through use of CEHRT. Further, stakeholder feedback highlights the fact that the requirement to incorporate data is insufficiently clear regarding what data must be incorporated.

Our intention was that ''incorporate'' would relate to the workflows undertaken in the process of clinical information reconciliation further defined in the Clinical Information Reconciliation measure (80 FR 62852 through 62862). Taken together, the three measures under the Health Information Exchange objective were intended to support the referral loop through sending, receiving, and incorporating patient health data into the patient record. However, stakeholder feedback on the measures suggests that the separation between receiving and reconciling patient health information is not reflective of clinical and care coordination workflows. Further, stakeholders noted that when approached separately, the incorporate portion of the Request/Accept Summary of Care measure is both inconsistent with and redundant to the Clinical Information Reconciliation measure which causes unnecessary burden and duplicative measure calculation.

We are requesting public comments on our proposal to remove the Request/Accept Summary of Care measure.

(3) Proposed Removal of the Clinical Information Reconciliation Measure

We are proposing to remove the Clinical Information Reconciliation measure at § 495.24(c)(7)(ii)(C) from the new measures at proposed § 495.24(e)(6) to reduce redundancy, complexity, and provider burden.

As discussed in the prior subsection, we believe the Clinical Information Reconciliation measure is redundant in regard to the requirement to ''incorporate'' electronic summaries of care in light of the requirements of the Request/Accept Summary of Care measure. In addition, the measure is not fully health IT based as the exchange of health care information is not required to complete the measure action and the measure specification is not limited to only the reconciliation of electronic information in health IT supported workflows. We stated in the 2015 EHR Incentive Programs final rule at 80 FR 62861 that the clinical information reconciliation process could involve both automated and manual reconciliation to allow the receiving health care provider to work with both electronic data received as well as the patient to reconcile their health information. Further, stakeholder feedback from hospitals, clinicians, and health IT developers indicates that because the measure is not fully based on the use of health IT to meet the measurement requirements, eligible hospitals and CAHs must engage in burdensome tracking of manual workflows. While the overall activity of clinical information reconciliation supports quality patient care and should be a part of effective clinical workflows, the process to record and track each individual action places unnecessary burden on eligible hospitals and CAHs.

We are inviting public comment on our proposal to remove the Clinical Information Reconciliation measure.

(4) Proposed New HIE Measure: Support Electronic Referral Loops by Receiving and Incorporating Health Information

We are proposing to add the following new measure for inclusion in the Health Information Exchange objective at § 495.24(e)(6)(ii)(B): Support Electronic Referral Loops by Receiving and Incorporating Health Information. This measure would build upon and replace the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures.

Proposed measure name and description: Support Electronic Referral Loops by Receiving and Incorporating Health Information: For at least one electronic summary of care record received for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition of care or referral, or for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient, the eligible hospital or CAH conducts clinical information reconciliation for medication, mediation allergy, and current problem list.

We are proposing to combine two existing measures, the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure, in this new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to focus on the exchange of health care information as the current Clinical Information Reconciliation measure is not reliant on the exchange of health care information nor use of CEHRT to complete the measure action. We are not proposing to change the actions associated with the existing measures; rather, we are proposing to combine the two measures to focus on the exchange of the health care information, reduce administrative burden, and streamline and simplify reporting.

CMS and ONC worked together to define the following for this measure:

Denominator: Number of electronic summary of care records received using CEHRT for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition of care or referral, and for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient.

Numerator: The number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient's known medication allergies; and (3) Current Problem List—Review of the patient's current and active diagnoses.

For the proposed measure, the denominator would increment on the receipt of an electronic summary of care record after the eligible hospital or CAH engages in workflows to obtain an electronic summary of care record for a transition, referral or patient encounter in which the health care provider has never before encountered the patient. The numerator would increment upon

completion of clinical information reconciliation of the electronic summary of care record for medications, medication allergies, and current problems. The eligible hospital or CAH would no longer be required to manually count each individual non-health-IT-related action taken to engage with other providers of care and care team members to identify and obtain the electronic summary of care record. Instead, the proposed measure would focus on the result of these actions when an electronic summary of care record is successfully identified, received, and reconciled with the patient record. We believe this approach would allow eligible hospitals and CAHs to determine and implement appropriate workflows supporting efforts to receive the electronic summary of care record consistent with the implementation of effective health IT information exchange at an organizational level.

Finally, we are proposing to apply our existing policy for cases in which the eligible hospital or CAH determines no update or modification is necessary within the patient record based on the electronic clinical information received, and the eligible hospital or CAH may count the reconciliation in the numerator without completing a redundant or duplicate update to the record. We welcome public comment on methods by which this specific action could potentially be electronically measured by the provider's health IT system—such as incrementing on electronic signature or approval by an authorized provider—to mitigate the risk of burden associated with manual tracking of the action.

We welcome public comment on these proposals. In addition, we are seeking public comment on methods and approaches to quantify the reduction in burden for eligible hospitals and CAHs implementing streamlined workflows for this proposed measure. We also are seeking public comment on the impact these proposals may have for health IT developers in updating, testing, and implementing new measure calculations related to these proposed changes. Specifically, we are seeking public comment on whether ONC should require developers to recertify their EHR technology as a result of the changes proposed, or whether they should be able to make the changes and engage in testing without recertification. Finally, we are seeking public comment on whether this proposed new measure that combines the Request/Accept Summary of Care and Clinical Information Reconciliation measures should be adopted, or whether either or both of the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures should be retained in lieu of this proposed new measure.

In the event we finalize the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, above, an exclusion would be available for eligible hospitals and CAHs that could not implement the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure for an EHR reporting period in CY 2019.

We note that under the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, measures would not have required thresholds for reporting. Therefore, if the proposed scoring methodology and measure were finalized, this measure would not have a reporting threshold. In the event we do not finalize the proposed new scoring methodology, we would maintain the current Stage 3 requirements finalized in previous rulemaking. Therefore, eligible hospitals and CAHs would be required report on the Stage 3 Request/Accept Summary of Care measure and Clinical Information Reconciliation measures under the Health Information Exchange objective codified at § 495.24(c)(7)(ii)(B) and (C).

We also are proposing that, in order to meet this measure, an eligible hospital or CAH must use the capabilities and standards as defined for CEHRT at 45 CFR 170.315(g)(1) and (g)(2).

d. Measure Proposals for the Provider to Patient Exchange Objective

The Provider to Patient Exchange objective for eligible hospitals and CAHs builds upon the goal of improved access and exchange of patient health information, patient centered communication and coordination of care using CEHRT. We are proposing a new scoring methodology in section VIII.D.5. of the preamble of this proposed rule, under which (in section VIII.D.6. of the preamble of this proposed rule) which we are proposing to rename the Patient Electronic Access to Health Information objective to Provider to Patient Exchange, remove the Patient Specific Education measure and rename the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information. In addition, we are proposing to remove the Coordination of Care through Patient Engagement objective and all associated measures. The existing Stage 3 Patient Electronic Access to Health Information objective includes two measures under § 495.24(c)(5)(ii) and the existing Stage 3 Coordination of Care through Patient Engagement objective includes three measures under § 495.24(c)(6)(ii).

We reviewed the existing Stage 3 requirements and determined that the proposals for the Patient Electronic Access to Health Information objective and Coordination of Care through Patient Engagement objective could reduce program complexity and burden and better focus on leveraging the most current health IT functions and standards for patient flexibility of access and exchange of health information. We are proposing the Provider to Patient Exchange objective would include one measure, the existing Stage 3 Provide Patient Access measure, which are proposing to rename to Provide Patients Electronic Access to Their Health Information. In addition, we are proposing to revise the measure description for the Provide Patients Electronic Access to Their Health Information measure to change the threshold from more than 50 percent to at least one unique patient in accordance with the proposed scoring methodology proposed in section VIII.D.5. of the preamble of this proposed rule. As discussed in section VIII.D.6.a. of the preamble of this proposed rule, we are proposing to remove the exclusion for the Provide Patients Electronic Access to Their Health Information measure.

As discussed below, if we finalize the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, we are proposing to remove all of the other measures currently associated with the Patient Electronic Access to Health Information objective and the Coordination of Care through Patient Engagement objective.

If we do not finalize the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, we would maintain the existing Stage 3 requirements finalized in previous rulemaking as outlined in the table in that section which describes Stage 3 objectives and measures if new scoring methodology is not finalized. Therefore, we would retain the existing Patient Electronic Access to Health Information objective, associated measures and exclusions under § 495.24(c)(5) and the existing Coordination of Care through Patient Engagement objective, associated measures and exclusions under § 495.24(c)(6).

(1) Proposed Modifications To Provide Patient Access Measure

We are proposing to change the name of the Provide Patient Access measure at 42 CFR 495.24(c)(5)(ii)(A) to Provide Patients Electronic Access to Their Health Information at proposed 42 CFR 495.24(e)(7)(ii)(A) to better reflect the emphasis on patient engagement in their health care and patient's electronic access of their health information through use of APIs. We are proposing to change the measure description only to remove the previously established threshold from Stage 3, in alignment with our proposed implementation of a performance-based scoring methodology, to require that the eligible hospital or CAH provide timely access for viewing, downloading or transmitting their health information for at least one unique patient discharged using any application of the patient's choice.

Proposed name and measure description: Provide Patients Electronic Access to Their Health Information: For at least one unique patient discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23):

- The patient (or the patient authorized representative) is provided timely access to view online, download, and transmit his or her health information; and
- The eligible hospital or CAH ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the API in the eligible hospital or CAH's CEHRT.

We are proposing to change the measure name to emphasize electronic access of patient health information as opposed to use of paper based actions in accordance with the 2015 EHR Incentive Programs final rule policy for Stage 3 to discontinue inclusion of paper based formats and limit the focus to only health IT solutions to encourage adoption and innovation in use of CEHRT (80 FR 62783 through 62784). In addition, we are committed to promoting patient engagement with their health care information and ensuring access in an electronic format upon discharge from the eligible hospital or CAH.

We note that under the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, measures would not have required thresholds for reporting. Therefore, if the new scoring methodology and measure were finalized, this measure would not have a reporting threshold. In the event we do not finalize the proposed scoring methodology, we would maintain the existing Stage 3 requirements finalized in previous rulemaking. Therefore, eligible hospitals and CAHs would be required report on the Stage 3 Provide Patient Access measure under the Patient Electronic Access to Health Information objective codified at § 495.24(c)(5)(ii)(A).

We are inviting public comment on the measure proposal.

(2) Proposed Removal of the Patient Generated Health Data Measure

We are proposing to remove the Patient Generated Health Data (PGHD) measure at 42 CFR 495.24(c)(6)(ii)(C) at proposed § 495.24(e)(7) to reduce complexity and focus on the goal of using advanced EHR technology and functionalities to advance interoperability and health information exchange.

As finalized in the 2015 EHR Incentive Programs final rule at 80 FR 62851, the measure is not fully health IT based as we did not specify the manner in which health care providers would incorporate the data received. Instead, we finalized that health care providers could work with their EHR developers to establish the methods and processes that work best for their practice and needs. We indicated that this could include incorporation of the information using a structured format (such as an existing field in the EHR or maintaining an isolation between the data and the patient record such as incorporation as an attachment, link or text reference which would not require the advanced use of CEHRT. We note that although this measure requires use of the 2015 Edition, it does not require key updates to functions and standards of health IT, therefore, it does not align with the current program goals of improving interoperability, prioritizing actions completed electronically and use of advanced CEHRT functionalities.

We are seeking public comment on our proposal to remove the Patient Generated Health Data measure.

(3) Proposed Removal of the Patient-Specific Education Measure

We are proposing to remove the Patient-Specific Education measure at § 495.24(c)(5)(ii)(B) at proposed § 495.24(e)(7) as it has proven burdensome to eligible hospitals and CAHs in ways that were unintended and detract from health care providers' progress on current program priorities.

The Patient-Specific Education measure was finalized as a Stage 3 measure for eligible hospitals and CAHs in the 2015 EHR Incentive Programs final rule with the intent to build upon the Stage 2 policy goals of using CEHRT for provider-patient communication (80 FR 62841 through 62846).

We believe that the Patient-Specific Education measure does not align with the current emphasis of the Medicare Promoting Interoperability Program to increase interoperability, leverage the most current health IT functions and standards or reduce burden for eligible hospitals and CAHs. For example, the Patient-Specific Education measure's primary focus is on use of CEHRT for patient resources specific to their health care and diagnosis as well as patient centered care. However, the education resources do not need to be maintained within or generated by CEHRT. Therefore, even though the CEHRT identifies the patient educational resources, the process to generate them could take additional time and interrupt health care provider's workflows. In addition, there could be redundancy in providing educational materials based on resources identified by the CEHRT as CEHRT identifies educational resources using the patient's medication list and problem list but can also include other elements as well. If there are no changes to a patient's health status or treatment based on his or her health care information, there would likely be many resources and materials that present the same type of information and could increase burden to the health care provider in seeking additional resources to provide.

We are inviting public comment on our proposal to remove the Patient-Specific Education measure.

(4) Proposed Removal of the Secure Messaging Measure

We are proposing to remove the Secure Messaging measure at § 495.24(c)(6)(ii)(B) at proposed § 495.24(e)(7) as it has proven burdensome to eligible hospitals and CAHs in ways that were unintended and detract from health care providers' progress on current program priorities.

Secure Messaging was finalized as a Stage 3 measures for eligible hospitals and CAHs in the 2015 EHR Incentive Programs final rule with the intent to build upon the Stage 2 policy goals of using CEHRT for provider-patient communication (80 FR 62841 through 62849). As mentioned above, we believe that Secure Messaging does not align with the current emphasis of the Medicare Promoting Interoperability Program to increase interoperability or reduce burden for eligible hospitals and CAHs.

In addition, we believe there is burden associated with tracking secure messages, including the unintended consequences of workflows designed for the measure rather than for clinical and administrative effectiveness. We note that Secure Messaging is not part of the EHR Incentive Programs requirements for eligible hospitals and CAHs under Modified Stage 2. This measure was finalized in the 2015 EHR Incentive Programs final rule for Stage 3 (80 FR 62846 through 62852) under the Coordination of Care Through Patient Engagement objective which allows health care providers flexibility by requiring them to report on all three measures but only require them to meet the thresholds of two measures. This allows health care providers the option to choose measure options that best fit their organizational needs and patient population. We believe that because this measure is not currently required, removal would not negatively impact patient engagement nor care coordination and serve to decrease burden.

In addition, after further review, we believe that this measure may not be practical for eligible hospitals and CAHs as the patient would likely receive follow up care from another health care provider such as the patient's primary care physician, a rehabilitation facility, or home health after discharge. The patient would communicate with those health care providers instead of the hospital for information related to their health post-discharge.

We are inviting public comment on our proposal to remove the Secure Messaging measure.

(5) Proposed Removal of the View, Download or Transmit Measure

We are proposing to remove the View, Download or Transmit measure at § 495.24(c)(6)(ii)(A) at proposed § 495.24(e)(7) as it has proven burdensome to eligible hospitals and CAHs in ways that were unintended and detract from eligible hospitals and CAHs progress on current program priorities.

We received health care provider and stakeholder feedback through correspondence, public forums, and listening sessions indicating there is ongoing concern with measures which require patient action for successful attestation. We have noted that data analysis on the patient action measures supports stakeholder concerns that barriers exist which impact a provider's ability to meet them. Health care providers have noted that the demographics of their patient populations which may include low-income, location in remote, rural areas and an aging population contribute to the barriers as the patients do not have access to computers, internet and/or email. They have also noted that this particular population is concerned with having their health information online. In addition, stakeholders have indicated that successful attestation of the measure is reliant upon the patient, and patient education and engagement may not be enough to overcome the barriers. In the 2015 EHR Incentive Programs final rule at 80 FR 62789, we reduced the thresholds for both patient action measures of VDT and Secure Messaging based on concerns from health care providers and to increase successful attestation on this measure. After additional review, we note that successful attestation predicated solely on a patient's action has inadvertently created burdens to health care providers and detracts from progress on the Promoting Interoperability Program's measure goals of focusing on patient care, interoperability and leveraging advanced used of health IT. Therefore, we are proposing to remove the View, Download or Transmit measure.

We are inviting public comment on our proposal to remove the View, Download or Transmit measure.

e. Proposed Modifications to the Public Health and Clinical Data Registry Reporting Objective and Measures

In connection with the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, we are proposing changes to the Public Health and Clinical Data Registry Reporting objective and six associated measures under 42 CFR 495.24(c)(8)(ii)(A) through (F) in proposed 42 CFR 495.24(e)(7). We believe that public health reporting through EHRs will extend the use of electronic reporting solutions to additional events and care processes, increase timeliness and efficiency of reporting and replace manual data entry.

We are proposing to change the name of the objective to Public Health and Clinical Data Exchange. Under the new scoring methodology proposed in section VII.D.5. of the preamble of this proposed rule, in aligning with our goal to increase flexibility, improve value, and focus on burden reduction, we are proposing that eligible hospitals and CAHs would be required to attest to the Syndromic Surveillance Reporting measure and at least one additional measure from the following options: Immunization Registry Reporting; Clinical Data Registry Reporting; Electronic Case Reporting; Public Health Registry Reporting; and Electronic Reportable Laboratory Result Reporting.

We are proposing to require the Syndromic Surveillance Reporting measure under the Public Health and Clinical Data Exchange objective because the CDC indicates the primary source of data for syndromic surveillance comes from EHRs in emergency care settings. Typically, EHR data transmitted from health care facilities to public health agencies for syndromic surveillance are not filtered or categorized. As a result, public health agencies can use the same data that support delivery of care for an all-hazards surveillance approach.

The EHR Incentive Program has enabled the growth of syndromic surveillance across the country and in a number of States, such as Illinois and Wisconsin, nearly all of the hospitals with emergency departments are participating. More complete coverage allows public health agencies to monitor trends in emergency department visits with more precision, detect smaller increases in morbidity, identify emerging health threats in smaller geographic areas, and collaborate with healthcare and other State agencies to respond quickly to emerging health threats.

In addition, syndromic surveillance reporting via CEHRT leverages the wealth and depth of clinical information that has not been captured before to study emerging health conditions like the rising opioid overdose epidemic. The data will also provide a unique opportunity to examine rare conditions and new procedures. We are seeking public comment on the proposal to require reporting on this measure.

We stated in the 2015 EHR Incentive Programs final rule at 80 FR 62771 that one of the program goals was to increase interoperability through public health registry exchange of data. We continue to believe that public health reporting is valuable in terms of health information exchange between health care providers and public health and clinical data registries. For example, when immunization information is directly exchanged between EHRs and registries, patient information may be accessed by all of a patient's health care providers for improved continuity of care and reduced provider burden, as well as supporting population health monitoring. While we believe that it is important to leverage health IT through advanced use of CEHRT, for public health and clinical data registries reporting, we also want to reduce burden. Through stakeholder feedback, we understand that some of the existing active engagement requirements are

complicated and confusing, and contributed to unintended burden due to issues related to readiness or onboarding for electronic exchange with registries. Therefore, under the new scoring methodology proposed in section VII.D.5. of the preamble of this proposed rule, we are proposing to require attestation to only two measures under the Public Health and Clinical Data Exchange objective instead of three, which is currently required under Stage 3.

In addition, we intend to propose in future rulemaking to remove the Public Health and Clinical Data Exchange objective and measures no later than CY 2022, and are seeking public comment on whether hospitals will continue to share such data with public health entities once the Public Health and Clinical Data Exchange objective and measures are removed, as well as other policy levers outside of the Promoting Interoperability Program that could be adopted for continued reporting to public health and clinical data registries, if necessary. As noted above, while we believe that these registries provide the necessary monitoring of public health nationally and contribute to the overall health of the nation, we are also focusing on reducing burden and identifying other appropriate venues in which reporting to public health and clinical data registries could be reported. We are seeking public comment on the role that each of the public health and clinical data registries should have in the future of the Promoting Interoperability Programs and whether the submission of this data should still be required when the incentive payments for meaningful use of CEHRT will end in 2021.

Lastly, we are seeking public comment on whether the Promoting Interoperability Programs are the best means for promoting the sharing of clinical data with public health entities.

In the event we do not finalize the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule, we would maintain the existing Stage 3 requirements finalized in previous rulemaking and outlined in the table in that section which describes Stage 3 objectives and measures if new scoring methodology is not finalized. Therefore, we would retain the existing Public Health and Clinical Data Registry Reporting objective and associated measures and exclusions under § 495.24(c)(8).

f. Request for Comment—Potential New Measures for HIE Objective: Health Information Exchange Across the Care Continuum

We are working to introduce additional flexibility to allow providers a wider range of options in selecting measures that are most appropriate to their setting, patient population, and clinical practice improvement goals. For this reason, we are seeking public comment on a potential concept for two additional measure options for the Health Information Exchange objective for eligible hospitals and CAHs.

The Stage 3 program requirements for health information exchange primarily focused on the exchange between and among eligible hospitals, CAHs and eligible professionals. While these use cases represent a significant portion of the health care industry, the care continuum is much broader and includes a wide range of health care providers and settings of care that have adopted and implemented health IT systems to support patient care and electronic information exchange. Specifically, health care providers in long-term care and post-acute care settings, skilled nursing facilities, and behavioral health settings have made significant advancements in the adoption and use of health IT. Many current Promoting Interoperability Program participants are now engaged in bi-directional exchange of patient health information with these health care providers and settings of care and many more are seeking to incorporate these workflows as part of efforts to improve care team coordination or to support alternative payment models.

For these reasons, we are seeking public comment on two potential new measures for inclusion in the program to enable eligible hospitals and CAHs to exchange health information through health IT supported care coordination across a wide range of settings.

New Measure Description for Support Electronic Referral Loops by Sending Health Information Across the Care Continuum: For at least one transition of care or referral to a provider of care other than an eligible hospital or CAH, the eligible hospital or CAH creates a summary of care record using CEHRT; and electronically exchanges the summary of care record.

New Measure Denominator: Number of transitions of care and referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) was the transitioning or referring provider to a provider of care other than an eligible hospital or CAH.

New Measure Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created and exchanged electronically using CEHRT.

New Measure Description for Support Electronic Referral Loops By Receiving and Incorporating Health Information Across the Care Continuum: For at least one electronic summary of care record received by an eligible hospital or CAH from a transition of care or referral from a provider of care other than an eligible hospital or CAH, the eligible hospital or CAH conducts clinical information reconciliation for medications, mediation allergies, and problem list.

New Measure Denominator: The number of electronic summary of care records received for a patient encounter during the EHR reporting period for which an eligible hospital or CAH was the recipient of a transition of care or referral from a provider of care other than an eligible hospital or CAH.

New Measure Numerator: The number of electronic summary of care records in the denominator for which clinical information reconciliation was completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient's known medication allergies; and (3) Current Problem List—Review of the patient's current and active diagnoses.

We are seeking public comment on whether these two measures should be combined into one measure so that an eligible hospital or CAH that is engaged in exchanging health information across the care continuum may include any such exchange in a single measure. We are seeking public comment on whether the denominators should be combined to a single measure including both transitions of care from a hospital and transitions of care to a hospital. We also are seeking public comment on whether the numerators should be combined to a single measure including both the sending and receiving of electronic patient health information. We are seeking public comment on whether the potential new measures should be considered for inclusion in a future program year or whether stakeholders believe there is sufficient readiness and interest in these measures to adopt them as early as 2019. For the purposes of focusing the denominator, we are seeking public comment regarding whether the potential new measures should be limited to transitions of care and referrals specific to long-term and post-acute care, skilled nursing care,

and behavioral health care settings. We also are seeking public comment on whether additional settings of care should be considered for inclusion in the denominators and if a provider should be allowed to limit the denominators to a specific type of care setting based on their organizational needs, clinical improvement goals, or participation in an alternative payment model. Finally, we are seeking public comment on the impact the potential new measures may have for health IT developers to develop, test, and implement a new measure calculation for a future program year.

7. Proposed Application of Proposed Scoring Methodology and Measures Under the Medicaid Promoting Interoperability Program

As indicated in sections VIII.D.5. and VIII.D.6. of the preamble of this proposed rule, we are not proposing to require States to adopt the new scoring methodology and measures that we are proposing. Instead, we are proposing to give States the option to adopt the new scoring methodology we are proposing in section VIII.D.5. of the preamble of this proposed rule together with the measures proposals included in section VIII.D.6. of the preamble of this proposed rule for their Medicaid Promoting Interoperability Programs. Any State that wishes to exercise this option must submit a change to its State Medicaid HIT Plan (SMHP) for CMS' approval, as specified in § 495.332. If a State chooses not to submit such a change, or if the change is not approved, the objectives, measures, and scoring would remain the same as currently specified under § 495.24. We believe that States are unlikely to choose this option due to concerns with burden, time constraints and costs associated with implementing updates to technology and reporting systems, as very few eligible hospitals will be eligible to receive an incentive payment under the Medicaid Promoting Interoperability Program in 2019 and subsequent years. However, our proposal to extend this option to States would allow them flexibility to benefit from the improvements to meaningful use scoring outlined in this proposed rule, if they so choose. Similarly, we also request public comment on whether we should modify the objectives and measures for eligible professionals (EPs) in the Medicaid Promoting Interoperability Program in order to encourage greater interoperability for Medicaid EPs. We are interested in policy options that should be considered, including the benefits of greater alignment with the Merit-Based Incentive Payment System requirements for Eligible Clinicians. We also are inviting comments on the burdens and hurdles that such policy changes might create for EPs and States.

In connection with these proposals regarding the scoring methodology and measures, we are proposing to require under § 495.40(b)(2)(vii) ''dual-eligible'' eligible hospitals and CAHs (those that are eligible for an incentive payment under Medicare for meaningful use of CEHRT and/or subject to the Medicare payment reduction for failing to demonstrate meaningful use, and are also eligible to earn a Medicaid incentive payment for meaningful use) to demonstrate meaningful use for the Promoting Interoperability Program to CMS, and not to their respective State Medicaid agency, beginning with the EHR reporting period in CY 2019. This includes all attestation requirements, including the objectives and measures of meaningful use, in addition to reporting clinical quality measures. In the past, we have generally adopted a common definition of meaningful use under Medicare and Medicaid (for example, 77 FR 44324 through 44326). If we adopt the proposals made in this rule, there would not be a common definition of meaningful use, unless a State chooses to exercise the option described above and receives approval from CMS. In light of these changes, we believe it would be more efficient and straightforward in terms of program administration and operations if all dual-eligible eligible hospitals and CAHs demonstrate meaningful use to CMS. If a dual-eligible eligible hospital or CAH instead demonstrates meaningful use to its State Medicaid agency, it would only qualify for an incentive payment under Medicaid (assuming it meets all eligibility and other program requirements), and it would not qualify for an incentive payment under Medicare and/or avoid the Medicare payment reduction. The proposals in this rule would not change the deeming policy under the definition of meaningful EHR user under § 495.4, under which an eligible hospital or CAH that successfully demonstrates meaningful use to CMS would be deemed a meaningful EHR user for purposes of the Medicaid incentive payment.

We also are proposing to amend the requirements for State reporting to CMS under the Medicaid Promoting Interoperability Program under § 495.316(g), so that States would not be required to report, for program years after 2018, provider-level attestation data for each eligible hospital that attests to the State to demonstrate meaningful use.

We are seeking public comments on these proposals.

8. Promoting Interoperability Program Future Direction

In future years of the Promoting Interoperability Program, we will continue to consider changes which support a variety of HHS goals, including: Reducing administrative burden, supporting alignment with the Quality Payment Program, advancing interoperability and the exchange of health information, and promoting innovative uses of health IT. We believe a focus on interoperability and simplification will reduce health care provider burden while allowing flexibility to pursue innovative applications that improve care delivery. One strategy we are exploring is creating a set of priority health IT activities that would serve as alternatives to the traditional EHR Incentive Program measures.

For example, we are seeking public comment on whether participation in the Trusted Exchange Framework and Common Agreement (TEFCA) should be considered a health IT activity that could count for credit within the Health Information Exchange objective in lieu of reporting on measures for this objective. The 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, requires HHS to take steps to enable the electronic sharing of health information ensuring interoperability for health care providers and settings across the care continuum. Congress directed ONC to ''develop or support a trusted exchange framework, including a common agreement among health information networks nationally.'' In January 2018, ONC released a draft version of the Trusted Exchange Framework.[383] ONC will revise the draft TEF based on public comment and ultimately release a final version of the Trusted Exchange Framework that will subsequently be available for adoption by HINs and their participants seeking to participate in nationwide health information exchange. By participating in, or serving as, a health information network, health IT developers and other stakeholders can ensure that health care providers have the ability to seamlessly share and receive a core set of data from other network participants in accordance with a set of permitted purposes and

[383] The draft version of the Trusted Exchange Framework may be accessed at: *https://beta.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement.*

applicable privacy and security requirements.

To qualify for this activity, an eligible hospital or CAH would demonstrate that they are using CEHRT from a developer who participates in or serves as a health information network which has adopted the TEFCA. Eligible hospitals and CAHs could also be required to demonstrate that they are active participants in a health information network and routinely sharing health information to support care transitions. They could also be required to demonstrate that their CEHRT enables the use of an open API to exchange information with the network.

We also are considering a health IT activity in which eligible hospitals and CAHs could obtain credit if they maintain an open API which allows patients to access their health information through a preferred third party. This could be the open API maintained to comply with the terms of the TEFCA or a standalone offering as long as the API offers ongoing persistent access to outside parties. Under this approach, an eligible hospital or CAH that attests to making such an open API available for the purposes of ensuring patients have access to their health information would receive full credit for the Provide Patient Access measure under this objective.

Finally, we are considering developing a health IT activity which would allow eligible hospitals and CAHs to obtain credit under the Public Health and Clinical Data Exchange objective for piloting emerging technology standards. A priority outcome for the draft Trusted Exchange Framework is enabling bulk data queries which health care providers and other stakeholders can utilize to conduct effective population health management across their entire attributed population. However, technical infrastructure to support this use case on a widespread basis is still in development.

HHS could develop a health IT activity under which an eligible hospital or CAH would participate in a pilot, and eventually implement in production, use of an API based on the emerging update to the FHIR standard which would allow population level data access through an API in lieu of reporting on measures under the Public Health and Clinical Data Exchange objective.

We welcome stakeholder comments on the concept of adopting health IT activities, and specifically on the health IT activities described above. We also welcome recommendations for other health IT activities through which eligible hospitals and CAHs could earn credit in lieu of reporting on specific measures, and which add value for patients and health care providers, are relevant to patient care and clinical workflows, support alignment with existing objectives, promote flexibility, are feasible for implementation, are innovative in the use of health IT and promote interoperability.

Finally, we specifically are seeking public comments on the following questions:

- What health IT activities should CMS consider recognizing in lieu of reporting on objectives that would most effectively advance priorities for nationwide interoperability and spur innovation? What principles should CMS employ to identify health IT activities?
- Do stakeholders believe that introducing health IT activities in lieu of reporting on measures would decrease burden associated with the Promoting Interoperability Programs?
- If additional measures were added to the program, what measures would be beneficial to add to promote our goals of care coordination and interoperability?
- How can the Promoting Interoperability Program for eligible hospitals and CAHs further align with the Quality Payment Program (for example, requirements for eligible clinicians under MIPS and Advanced APMs) to reduce burden for health care providers, especially hospital-based MIPS eligible clinicians?
- What other steps can HHS take to further reduce the administrative burden associated with the Promoting Interoperability Program?

9. Clinical Quality Measurement for Eligible Hospitals and Critical Access Hospitals (CAHs) Participating in the Medicare and Medicaid Promoting Interoperability Programs

a. Background and Current CQMs

Under sections 1814(l)(3)(A), 1886(n)(3)(A), and 1903(t)(6)(C)(i)(II) of the Act and the definition of ''meaningful EHR user'' under 42 CFR 495.4, eligible hospitals and CAHs must report on clinical quality measures (referred to as CQMs or eCQMs) selected by CMS using CEHRT, as part of being a meaningful EHR user under the Medicare and Medicaid Promoting Interoperability Programs.

The table below lists the 16 CQMs available for eligible hospitals and CAHs to report under the Medicare and Medicaid PI Programs beginning in CY 2017 (81 FR 57255).

CQMs for Eligible Hospitals and CAHs Beginning With CY 2017

Short name	Measure name	NQF No.
AMI–8a	Primary PCI Received Within 90 Minutes of Hospital Arrival	0163
ED–3	Median Time from ED Arrival to ED Departure for Discharged ED Patients	0496
CAC–3	Home Management Plan of Care Document Given to Patient/Caregiver	+
ED–1	Median Time from ED Arrival to ED Departure for Admitted ED Patients	0495
ED–2	Admit Decision Time to ED Departure Time for Admitted Patients	0497
EHDI–1a	Hearing Screening Prior to Hospital Discharge	1354
PC–01	Elective Delivery (Collected in aggregate, submitted via web-based tool or electronic clinical quality measure).	0469
PC–05	Exclusive Breast Milk Feeding*	0480
STK–02	Discharged on Antithrombotic Therapy	0435
STK–03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK–05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK–06	Discharged on Statin Medication	0439
STK–08	Stroke Education	+
STK–10	Assessed for Rehabilitation	0441
VTE–1	Venous Thromboembolism Prophylaxis	0371
VTE–2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372

+ NQF endorsement has been removed.

* Measure name has been shortened. We refer readers to annually updated measure specifications on the CMS eCQI Resource Center web page for further information at: *https://www.healthit.gov/newsroom/ecqi-resource-center*.

b. Proposed CQMs for Reporting Periods Beginning With CY 2020

As we have stated previously in rulemaking (82 FR 38479), we plan to continue to align the CQM reporting requirements for the PI Programs with the Hospital IQR Program. In order to move the program forward in the least burdensome manner possible, while maintaining a set of the most meaningful quality measures and continuing to incentivize improvement in the quality of care provided to patients, we believe it is appropriate to propose to remove certain eCQMs at this time to develop an even more streamlined set of the most meaningful eCQMs for hospitals. To align with the Hospital IQR Program, we are proposing to reduce the number of eCQMs in the Medicare and Medicaid Promoting Interoperability Programs eCQM measure set from which eligible hospitals and CAHs report, by proposing to remove eight eCQMs (from the 16 eCQMs currently in the measure set) beginning with the reporting period in CY 2020. The eight eCQMs we are proposing to remove are:

- Primary PCI Received Within 90 Minutes of Hospital Arrival (NQF #0163) (AMI–8a);
- Home Management Plan of Care Document Given to Patient/Caregiver (CAC–3);
- Median Time from ED Arrival to ED Departure for Admitted ED Patients (NQF #0495) (ED–1);
- Hearing Screening Prior to Hospital Discharge (NQF #1354) (EHDI–1a);
- Elective Delivery (NQF #0469) (PC–01);
- Stroke Education (STK–08) (adopted at 78 FR 50807;
- Assessed for Rehabilitation (NQF #0441) (STK–10); and
- Median Time from ED Arrival to ED Departure for Discharged ED Patients (NQF 0496) (ED–3).

We note that the first seven eCQMs on this list are currently included in the Hospital IQR Program, and in section VIII.A.5.(b)(9), we are proposing to remove them from the Hospital IQR Program beginning in CY 2020. For more information on the first seven eCQMs selected for removal, we refer readers to section VIII.A.5.(b)(9) of the preamble of this proposed rule.

We believe that a coordinated reduction in the overall number of eCQMs in both the Hospital IQR Program and Medicare and Medicaid EHR Promoting Interoperability will reduce certification burden on hospitals, improve the quality of reported data by enabling eligible hospitals and CAHs to focus on a smaller, more specific subset of CQMs while still allowing eligible hospitals and CAHs some flexibility to select which eCQMs to report that best reflect their patient populations and support internal quality improvement efforts. With respect to the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure (NQF 0496) (ED–3), this is an outpatient measure and is not included as an eCQM in the Hospital IQR Program. We are proposing to remove it so the eCQMs would align completely between the two programs in order to reduce burden and enable eligible hospitals and CAHs to easily report electronically through the Hospital IQR Program submission mechanism.

As we stated in section VIII.A.5.(b)(9) with regard to the Hospital IQR Program proposal for the CY 2020 reporting period and subsequent years, we also considered proposing to remove these eCQMs one year earlier, beginning with the CY 2019 reporting period/FY 2021 payment determination. In establishing our eCQM policies, we must balance the needs of eligible hospitals and CAHs with variable preferences and capabilities. Overall, across the range of capabilities and resources for eCQM reporting, stakeholders have expressed that they want more time to prepare for eCQM changes.

We recognize that some hospitals and health IT vendors may prefer earlier removal in order to forgo maintenance on those eCQMs proposed for removal. In preparation for this proposed rule, we weighed the relative burdens associated with removing these measures beginning with the CY 2019 reporting period or beginning with the CY 2020 reporting period. In the event we finalize our proposal to remove these eCQMs, we intend to align the timing of the removal for the Medicare and Medicaid Promoting Interoperability Programs with the Hospital IQR Program.

We are inviting public comment on our proposal, including the specific measures proposed for removal and the timing of removal from the Medicare and Medicaid Promoting Interoperability Programs.

d. Proposed CQM Reporting Periods and Criteria for the Medicare and Medicaid Promoting Interoperability Programs in CY 2019

For CY 2019, we are proposing the same CQM reporting periods and criteria as established in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38479 through 38483) for the Medicare and Medicaid EHR Incentive Programs in CY 2018, which would be as follows:

For CY 2019, for eligible hospitals and CAHs that report CQMs electronically, we are proposing the reporting period for the Medicare and Medicaid Promoting Interoperability Programs would be one, self-selected calendar quarter of CY 2019 data, and the submission period for the Medicare Promoting Interoperability Program would be the 2 months following the close of the calendar year, ending February 29, 2020. For eligible hospitals and CAHs that report CQMs by attestation under the Medicare Promoting Interoperability Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid Promoting Interoperability Program, we previously established a CQM reporting period of the full CY 2019 (consisting of 4 quarterly data reporting periods) (80 FR 62893). We also established an exception to this full-year reporting period for eligible hospitals and CAHs demonstrating meaningful use for the first time under their State's Medicaid EHR Incentive Program. Under this exception, the CQM reporting period is any continuous 90-day period within CY 2019 (80 FR 62893). We are proposing that the submission period for eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program would be the 2 months following the close of the CY 2019 CQM reporting period, ending February 29, 2020. In regard to the Medicaid EHR Incentive Program, we provide States with the flexibility to determine the method of reporting CQMs (attestation or electronic reporting) and the submission periods for reporting CQMs, subject to prior approval by CMS.

For the CY 2019 reporting period, we are proposing that the reporting criteria under the Medicare and Medicaid Promoting Interoperability Program for eligible hospitals and CAHs reporting CQMs electronically would be as follows: For eligible hospitals and CAHs participating only in the Promoting

Interoperability Program, or participating in both the Promoting Interoperability Program and the Hospital IQR Program, report on at least 4 self-selected CQMs from the set of 16 available CQMs listed in the table above.

We are proposing the following reporting criteria for eligible hospitals and CAHs that report CQMs by attestation under the Medicare Promoting Interoperability Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid Promoting Interoperability Program, for the reporting period in CY 2019—report on all 16 available CQMs listed in the table in section VIII.D.9.a. of the preamble of this proposed rule, above.

We are requesting public comments on these proposals.

e. CQM Reporting Form and Method for the Medicare Promoting Interoperability Program in CY 2019

As we stated in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759 through 49760), for the reporting periods in 2016 and future years, we are requiring QRDA–I for CQM electronic submissions for the Medicare EHR Incentive (now Promoting Interoperability) Program. As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49760), States would continue to have the option, subject to our prior approval, to allow or require QRDA–III for CQM reporting.

The form and method of electronic submission are further explained in sub-regulatory guidance and the certification process. For example, the following documents are updated annually to reflect the most recent CQM electronic specifications: The CMS Implementation Guide for QRDA; program specific performance calculation guidance; and CQM electronic specifications and guidance documents. These documents are located on the eCQI Resource Center web page at: *https://ecqi.healthit.gov/*. For further information on CQM reporting, we refer readers to the EHR Incentive Program (now Promoting Interoperability Program) website where guides and tip sheets are located at: *http://www.cms.gov/ehrincentiveprograms*. For the reporting period in CY 2019 reporting period, we are proposing the following for CQM submission under the Medicare Promoting Interoperability Program:

- Eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program (single program participation)—electronically report CQMs through QualityNet Portal.
- Eligible hospital and CAH options for electronic reporting for multiple programs (that is, Promoting Interoperability Program and Hospital IQR Program participation)—electronically report through QualityNet Portal.

As noted in the 2015 EHR Incentive Programs final rule (80 FR 62894), starting in 2018, eligible hospitals and CAHs participating in the Medicare EHR Incentive Program must electronically report CQMs where feasible; and attestation to CQMs will no longer be an option except in certain circumstances where electronic reporting is not feasible. For the Medicaid Promoting Interoperability Program, States continue to be responsible for determining whether and how electronic reporting of CQMs would occur, or if they wish to allow reporting through attestation. Any changes that States make to their CQM reporting methods must be submitted through the State Medicaid Health IT Plan (SMHP) process for CMS review and approval prior to being implemented.

For CY 2019, we are proposing to continue our policy regarding the electronic submission of CQMs, which requires the use of the most recent version of the CQM electronic specification for each CQM to which the EHR is certified. For the CY 2019 electronic reporting of CQMs, this means eligible hospitals and CAHs are required to use the Spring 2017 version of the CQM electronic specifications and any applicable addenda available on the eCQI Resource Center web page at: *https://ecqi.healthit.gov/*. In addition, we are proposing that eligible hospitals or CAHs must have their EHR technology certified to all 16 available CQMs listed in the table above. As discussed in section VIII.D.3. of the preamble of this proposed rule, eligible hospitals and CAHs are required to use 2015 Edition CEHRT for the Medicare and Medicaid Promoting Interoperability Programs in CY 2019. We reiterate that an EHR certified for CQMs under the 2015 Edition certification criteria does not have to be recertified each time it is updated to a more recent version of the CQMs (82 FR 38485).

We are requesting public comments on these proposals.

f. Request for Comment

Stakeholders continue to identify areas for improvement in the implementation of eCQMs under a variety of CMS programs, including the Hospital IQR Program and the Medicare and Medicaid EHR Incentive (now Promoting Interoperability) Programs. While effective utilization of eCQMs promises greater efficiency and more timely access to data to support quality improvement activities, various types of burden associated with these measurement approaches detracts from these benefits. Moreover, some providers may have low awareness of the resources and tools available to help address issues that arise in utilizing eCQMs.

Program design and operations associated with measurement aspects of these programs can be a significant source of burden for providers. Uncertainty around rapidly shifting timelines and requirements can pose significant financial and operational planning challenges for organizations, while lack of alignment across programs results in further complexity. In addition, the implementation of eCQMs within the EHR is a significant source of burden. Health IT products vary widely in the eCQMs they offer, and incorporating new measure specifications into a product, along with validation and testing of the updates, can be challenging and time-consuming. Lack of transparency from developers around data sources within the EHR, mapping, measure calculations, and reporting schemas, can hinder providers' ability to implement eCQMs and ensure the accuracy of results. Moreover, challenges in extracting data from the EHR and integrating with other applications can serve as a source of burden for providers seeking to bring together different technology solutions and work with other third party services to complete reporting and quality improvement activities.

Stakeholders have expressed support for increasing the availability of new eCQMs, developing eCQMs that focus on patient outcomes and higher impact measurement areas, and exploring how eCQMs can reduce the burden associated with chart-abstracted measures. However, they have also identified barriers which may contribute to a lack of adequate development of eCQMs and limit their potential, including long development timelines, lack of guidelines/prioritization of and participation in eCQM development, limited field testing, and program policies that limit innovation by focusing on ''least common denominator'' approaches.

We are seeking stakeholder feedback on ways that we could address these and other challenges related to eCQM use. Specifically, we are inviting comment on the following:

• What aspects of the use of eCQMs are most burdensome to hospitals and health IT vendors?
• What program and policy changes, such as improved regulatory alignment, would have the greatest impact on addressing eCQM burden?
• What are the most significant barriers to the availability and use of new eCQMs today?
• What specifically would stakeholders like to see us do to reduce burden and maximize the benefits of eCQMs?
• How could we encourage hospitals and health IT vendors to engage in improvements to existing eCQMs?
• How could we encourage hospitals and health IT vendors to engage in testing new eCQMs?
• Would hospitals and health IT vendors be interested in or willing to participate in pilots or models of alternative approaches to quality measurement that would explore less burdensome ways of approaching quality measurement, such as sharing data with third parties that use machine learning and natural language processing to classify quality of care or other approaches?
• What ways could we incentivize or reward innovative uses of health IT that could reduce burden for hospitals?
• What additional resources or tools would hospitals and health IT vendors like to have publicly available to support testing, implementation, and reporting of eCQMs?

10. Participation in the Medicare Promoting Interoperability Program for Subsection (d) Puerto Rico Hospitals

a. Background

In the Stage 1 final rule (77 FR 44448), we noted that subsection (d) Puerto Rico hospitals as defined in section 1886(d)(9)(A) of the Act were not ''eligible hospitals'' as defined in section 1886(n)(6)(B) of the Act, and therefore were not eligible for the incentive payments for the meaningful use of CEHRT under section 1886(n) of the Act. Section 602(a) of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) subsequently amended section 1886(n)(6)(B) of the Act to include subsection (d) Puerto Rico hospitals in the definition of ''eligible hospital,'' which made subsection (d) Puerto Rico hospitals eligible for the incentive payments under section 1886(n) of the Act for hospitals that are meaningful EHR users and subject to the payment reductions under section 1886(b)(3)(B)(ix) of the Act for hospitals that are not meaningful EHR users. In order to take into account delays in implementation, section 602(d) of the Consolidated Appropriations Act, 2016 adjusted the existing timelines for the incentive payments by five years and payment reductions by 7 years for subsection (d) Puerto Rico hospitals, as further discussed in the sections below.

As authorized under section 602(c) of the Consolidated Appropriations Act, 2016, we have previously elected to implement the amendments made by section 602 as applied to subsection (d) Puerto Rico hospitals through program instruction. In doing so we have sought to align the policies for subsection (d) Puerto Rico hospitals with our existing policies for eligible hospitals under the Medicare Promoting Interoperability Program to the greatest extent possible, while taking into account the unique circumstances applicable to hospitals on Puerto Rico. In the following sections of the proposed rule, we are proposing to codify the program instructions we have issued to subsection (d) Puerto Rico hospitals and to amend our regulations under Parts 412 and 495 such that the provisions that apply to eligible hospitals would include subsection (d) Puerto Rico hospitals unless otherwise indicated.

We are requesting public comments on the proposals made in the following sections.

b. Definitions

(1) Eligible Hospital: Subsection (d) Puerto Rico Hospitals

We are proposing to define a ''Puerto Rico eligible hospital'' under § 495.100 as a subsection (d) Puerto Rico hospital as defined in section 1886(d)(9)(A) of the Act.

We are proposing to amend the definition of ''eligible hospital'' under § 495.100 to include Puerto Rico eligible hospitals unless otherwise indicated.

We are proposing to amend the general provisions under § 412.200 as related to prospective payment rates for inpatient operating costs for subsection (d) Puerto Rico hospitals.

(2) EHR Reporting Period: Subsection (d) Puerto Rico Hospitals

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that for subsection (d) Puerto Rico hospitals, FY 2016 is the first payment year under section 1886(n)(2)(G)(i) of the Act for which an incentive payment could be made to a hospital that is a meaningful EHR user. The definition of ''EHR reporting period'' under § 495.4 specifies for eligible hospitals for the FY 2016 payment year an EHR reporting period of any continuous 90-day period in CY 2016, which is consistent with the program instructions we issued to subsection (d) Puerto Rico hospitals, so we do not believe any amendment is necessary. We are proposing to amend the definition of ''EHR reporting period'' under § 495.4 to specify for Puerto Rico eligible hospitals for the FY 2017 payment year an EHR reporting period of a minimum of any continuous 14-day period in CY 2017, which is consistent with the program instructions we issued to subsection (d) Puerto Rico hospitals. We allowed for a 14-day EHR reporting period in CY 2017 to acknowledge and account for the devastation to Puerto Rico caused by Hurricane Maria. We have not issued program instructions to subsection (d) Puerto Rico hospitals concerning the EHR reporting periods for the payment years after FY 2017. For the FY 2018, 2019, and 2020 payment years, we are proposing an EHR reporting period of a minimum of any continuous 90-day period in CYs 2018, 2019, and 2020 respectively for Puerto Rico eligible hospitals, and we are proposing corresponding amendments to the definition of ''EHR reporting period'' under § 495.4.

(3) EHR Reporting Period for a Payment Adjustment Year for Eligible Hospitals: Subsection (d) Puerto Rico Hospitals

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that the payment reductions under section 1886(b)(3)(B)(ix) of the Act would apply beginning with FY 2022 for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for the applicable EHR reporting period for the payment adjustment year. Because Puerto Rico eligible hospitals would be considered eligible hospitals, the EHR reporting periods for payment adjustment years and related policies, including deadlines and requests for significant hardship exceptions, that we establish for eligible hospitals would also apply to Puerto Rico eligible hospitals beginning with the FY 2022 payment adjustment year.

(4) Payment Year for Subsection (d) Puerto Rico Hospitals

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that for subsection (d) Puerto Rico hospitals, FY 2016 is the first payment year under section 1886(n)(2)(G)(i) of the Act for which an incentive payment could be made to a hospital that is a meaningful EHR user. We are proposing to amend the definition of ''payment year'' under § 495.4 to specify for Puerto Rico eligible hospitals, payment year means a Federal FY beginning with 2016.

(5) Payment Adjustment Year for Subsection (d) Puerto Rico Hospitals

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that the payment reductions under section 1886(b)(3)(B)(ix) of the Act will apply beginning with FY 2022 for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for the applicable EHR reporting period for the payment adjustment year. We are proposing to amend the definition of ''payment adjustment year'' under § 495.4 to specify for Puerto Rico eligible hospitals, payment adjustment year means a Federal fiscal year beginning with 2022.

c. Duration and Timing of Incentive Payments for Subsection (d) Puerto Rico Hospitals—Transition Periods and Transition Factors

Section 602(d) of the Consolidated Appropriations Act, 2016 provides for a phase down under section 1886(n)(2)(E)(ii) of the Act for subsection (d) Puerto Rico hospitals whose first payment year is after 2018. We are proposing to amend § 495.104(b) to specify the following years for which Puerto Rico eligible hospitals may receive incentive payments under section 1886(n) of the Act:

- Puerto Rico eligible hospitals whose first payment year is FY 2016 may receive such payments for FYs 2016 through 2019.
- Puerto Rico eligible hospitals whose first payment year is FY 2017 may receive such payments for FYs 2017 through 2020.
- Puerto Rico eligible hospitals whose first payment year is FY 2018 may receive such payments for FYs 2018 through 2021.
- Puerto Rico eligible hospitals whose first payment year is FY 2019 may receive such payments for FY 2019 through 2021.
- Puerto Rico eligible hospitals whose first payment year is FY 2020 may receive such payments for FY 2020 through 2021.

We are proposing to amend § 495.104(c)(5) to specify the following transition factors under section 1886(n)(2)(E)(i) of the Act for Puerto Rico eligible hospitals:

PROPOSED TRANSITION FACTORS FOR SUBSECTION (d) PUERTO RICO HOSPITALS

	First Payment Year (FY)				
	2016	2017	2018	2019	2020
2016	1.00				
2017	0.75	1.00			
2018	0.50	0.75	1.00		
2019	0.25	0.50	0.75	0.75	
2020	.....	0.25	0.50	0.50	0.50
2021	.....	.....	0.25	0.25	0.25

d. Market Basket Adjustment for Subsection (d) Puerto Rico Hospitals

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that the payment reductions under section 1886(b)(3)(B)(ix) of the Act would apply beginning with FY 2022 for subsection (d) Puerto Rico hospitals. We are proposing for a subsection (d) Puerto Rico hospital that is not a meaningful EHR user for the EHR reporting period for the FY, three-quarters of the applicable percentage increase otherwise applicable for such FY shall be reduced by 33 1/3 percent for FY 2022, 66 2/3 percent for FY 2023, and 100 percent for FY 2024 and each subsequent FY. We are proposing to amend § 412.64(d)(3) to reflect these proposed reductions.

11. Proposed Modifications to the Medicare Advantage Promoting Interoperability Program

a. Participation in the Medicare Advantage Promoting Interoperability Program for Subsection (d) Puerto Rico Hospitals

Section 1853(m) of the Act provides for incentive payments to qualifying Medicare Advantage (MA) organizations for certain affiliated eligible hospitals (as defined in section 1886(n)(6)(B)) that meaningfully use certified EHR technology, and for application of downward payment adjustments to qualifying MA organizations for their affiliated hospitals that are not meaningful users of certified EHR technology, beginning in FY 2015. As noted in section D.8 of this proposed rule, section 602(a) of the Consolidated Appropriations Act, 2016 amended section 1886(n)(6)(B) of the Act to include subsection (d) Puerto Rico hospitals in the definition of ''eligible hospital.'' We note that the definition of ''qualifying MA-affiliated hospital'' in § 495.200 means an eligible hospital under section 1866(n)(6) that meets certain other criteria. Therefore, the amendment to section 1866(n)(6) by the Consolidated Appropriations Act to include subsection (d) Puerto Rico hospitals renders such hospitals potentially eligible as qualifying MA-affiliated hospitals for purposes of the Medicare Advantage EHR/PI incentives and payment adjustments. We are proposing certain changes to our regulations under 42 CFR part 495 so that the incentive payment and payment adjustment provisions that apply to MA-affiliated eligible hospitals are applicable to MA-affiliated eligible hospitals in Puerto Rico.

b. Definitions

(1) Payment Year for MA-Affiliated Eligible Hospitals in Puerto Rico

Section 602(d) of the Consolidated Appropriations Act, 2016 provides that for subsection (d) Puerto Rico hospitals, FY 2016 is the first payment year for which an EHR incentive payment could be made to an eligible hospital that is a meaningful EHR user. We are proposing to amend the definition of ''payment year'' under § 495.200 to specify that, with respect to MA-affiliated eligible hospitals in Puerto Rico, payment year means a Federal FY beginning with 2016.

(2) MA Payment Adjustment Year for MA-Affiliated Eligible Hospitals in Puerto Rico

Section 602(d) of the Consolidated Appropriations Act, 2016 provides for payment reductions to subsection (d) Puerto Rico hospitals that are not meaningful EHR users for the applicable EHR reporting period for the payment adjustment year, beginning with FY 2022. We are proposing to amend the definition of ''MA payment adjustment year'' under § 495.200 to specify that, for qualifying MA organizations that first receive an MA EHR incentive payment for at least 1 payment year for

an MA-affiliated eligible hospital in Puerto Rico, payment adjustment year means a calendar year starting with 2022.

We are soliciting feedback on whether we should amend the definition of ''MA payment adjustment year'' to specify that the duration of the reporting period for MA-affiliated eligible hospitals for purposes of determining whether a qualifying MA organization is subject to a payment adjustment should be other than the full federal fiscal year ending in the MA payment adjustment year. We also are requesting comments on an alternative approach under which we would use the same reporting period that is used for the Medicare Promoting Interoperability Program.

c. Payment Adjustments Effective for 2015 and Subsequent MA Payment Years With Respect to MA-Affiliated Eligible Hospitals

Under § 495.211, beginning for MA payment adjustment year 2015, payment adjustments set are made to prospective payments (issued under section 1853(a)(1)(A) of the Act) of qualifying MA organizations that previously received incentive payments under the MA EHR Incentive (now Promoting Interoperability) Program, if all or a portion of the MA-affiliated eligible hospitals that would meet the definition of qualifying MA-affiliated eligible hospitals (but for their demonstration of meaningful use) are not meaningful EHR users. Section 495.211(e) sets forth the formula for calculating payment adjustments for 2015 and subsequent years with respect to MA-affiliated eligible hospitals. We are proposing to amend paragraph (e) by adding a new subparagraph (4), which specifies that, prior to payment adjustment year 2022, subsection (d) Puerto Rico hospitals are neither qualifying nor potentially qualifying MA-affiliated eligible hospitals for purposes of applying the payment adjustments under § 495.211.

We are soliciting comment on whether further regulatory amendments are necessary or appropriate so that the EHR incentive payment and payment adjustment provisions that apply to MA-affiliated eligible hospitals are applicable to MA-affiliated eligible hospitals in Puerto Rico in a manner that is consistent with the Consolidated Appropriations Act, 2016.

12. Proposed Modifications to the Medicaid Promoting Interoperability Program

The policies proposed in this section would apply only in the Medicaid EHR Incentive (now Promoting Interoperability) Program.

a. Proposed Requirements Regarding Prior Approval of Requests for Proposals (RFPs) and Contracts in Support of the Medicaid Promoting Interoperability Program

Section 1903(a)(3)(F)(ii) of the Act establishes an enhanced federal matching rate of 90 percent for State expenditures related to the administration of Medicaid Promoting Interoperability Program payments. On July 28, 2010, in the Stage 1 final rule (75 FR 44313, 44507), we established prior approval requirements for State funding, planning documents, proposed budgets, project schedules, and certain implementation activities that a State may wish to pursue in support of the Medicaid Promoting Interoperability Program, as a condition of receipt of the 90 percent FFP available to States under section 1903(a)(3)(F)(ii) of the Act. To minimize the burden on States, we designed the prior approval conditions and prior approval process to mirror what was at the time used in support of acquiring automated data processing (ADP) equipment and services in conjunction with development and operation of States' Medicaid Management Information Systems (MMIS), which are the States' automated mechanized claims processing and information retrieval systems approved by CMS. Specifically, at § 495.324(b)(2) we established that, as a condition of receiving 90 percent FFP for administration of their Medicaid Promoting Interoperability programs, States must receive prior approval for requests for proposals and contracts used to complete activities under 42 CFR part 495 subpart D, unless specifically exempted by HHS, before release of the request for proposal or execution of the contract. This was consistent with the requirement then in place for MMIS at 45 CFR 95.611(a)(2). At section 495.324(b)(3) we established that unless specifically exempted by HHS, States must receive prior approval for contract amendments involving contract cost increases exceeding $100,000 or contract time extensions of more than 60 days, prior to execution of the contract amendment. This was consistent with the requirement then in place at 45 CFR 95.611(b)(2)(iv).

Subsequently, in the final rule titled ''State Systems Advance Planning Document (APD) Process'' (75 FR 66319, October 28, 2010), HHS amended 45 CFR 95.611(b)(2)(iii) to establish a $500,000 threshold for prior HHS approval of acquisition solicitation documents and contracts for ADP equipment or services for which States would seek enhanced federal matching funds (75 FR 66331). In the same rule, HHS also established at 45 CFR 95.611(b)(2)(iv) a $500,000 prior approval threshold for contract amendments for which States would seek enhanced Federal match (75 FR 66324). In the final rule titled ''Medicaid Program; Mechanized Claims Processing and Information Retrieval Systems (90/10)'' (80 FR 75817, 75836 through 75837, December 4, 2015), 45 CFR 95.611(a)(2) was amended to establish a $500,000 threshold for prior approval of acquisitions related to ADP equipment and services matched at the enhanced rate for MMIS authorized under 42 CFR part 433, subpart C. There was previously no threshold dollar amount for prior approvals related to such acquisitions in 45 CFR 95.611(a)(2).

We are now proposing to amend 42 CFR 495.324(b)(2) and 495.324(b)(3) to align with current prior approval policy for MMIS and ADP systems at 45 CFR 95.611(a)(2)(ii), and (b)(2)(iii) and (iv), and to minimize burden on States. Specifically, we are proposing that the prior approval dollar threshold in § 495.324(b)(3) would be increased to $500,000, and that a prior approval threshold of $500,000 would be added to § 495.324(b)(2). We also are proposing minor amendments to the language of 495.324(b)(2) and (3) to better align it with the language of 45 CFR 95.611(b)(2)(iii) and (iv). In addition, in light of these proposed changes, we are proposing a conforming amendment to amend the threshold in § 495.324(d) for prior approval of justifications for sole source acquisitions to be the same $500,000 threshold. That threshold is currently aligned with the $100,000 threshold in current § 495.324(b)(3). We believe that amending § 495.324(d) to preserve alignment with § 495.324(b)(3) would reduce burden on States and maintain the consistency of our prior approval requirements. This proposal would not affect the other requirements that States must comply with when making acquisitions in support of the Medicaid Promoting Interoperability Program under the Federal provisions contained in 42 CFR part 495, subpart D, and specifically 42 CFR 495.348, regardless of conditions for prior approval.

We believe that this proposal would reduce burden on States by raising the prior approval thresholds and generally aligning them with the thresholds for prior approval of MMIS and ADP acquisitions costs. We are inviting public comments on this proposal.

b. Funding Availability to States To Conclude the Medicaid Promoting Interoperability Program

Under section 1903(a)(3)(F) and (t) of the Act, State Medicaid programs may receive FFP in expenditures for incentive payments to certain Medicaid providers to adopt, implement, upgrade, and meaningfully use CEHRT. In addition, FFP is available to States for reasonable administrative expenses related to administration of those incentive payments as long as the State meets certain conditions. Specifically, section 1903(a)(3)(F)(i) of the Act establishes 100 percent FFP to States for incentive payments to eligible Medicaid providers (described in section 1903(t)(1) and (2) of the Act) to adopt, implement, upgrade, and meaningfully use CEHRT. Section 1903(a)(3)(F)(ii) of the Act establishes 90 percent FFP to States for administrative expenses related to administration of the incentive payments.

In § 495.320 and § 495.322, we provide the general rule that States may receive: (1) 100 Percent FFP in State expenditures for EHR incentive payments; and (2) 90 percent FFP in State expenditures for administrative activities in support of implementing incentive payments to Medicaid eligible providers. Section 495.316 establishes State monitoring and reporting requirements regarding activities required to receive an incentive payment. Subject to § 495.332, the State is responsible for tracking and verifying the activities necessary for a Medicaid EP or eligible hospital to receive an incentive payment for each payment year, as described in § 495.314.

To date, we have not established a date beyond which 90 percent FFP is no longer available to States for their expenditures related to administering the Medicaid Promoting Interoperability Program. In the Stage 1 final rule (75 FR 44319), we established that, in accordance with sections 1903(t)(4)(A)(iii) and (5)(D) of the Act, in no case may any Medicaid EP or eligible hospital receive an incentive payment after 2021 (42 CFR 495.310(a)(2)(v) and 495.310(f)).

Because December 31, 2021 is the last date that States could make Medicaid Promoting Interoperability incentive payments to Medicaid EPs and eligible hospitals (other than pursuant to a successful appeal related to 2021 or a prior year), we believe it is reasonable for States to conclude most administrative activities related to the Medicaid Promoting Interoperability Program, including submitting final required reports to CMS, by September 30, 2022. Therefore, we are proposing to amend § 495.322 to provide that the 90 percent FFP for Medicaid Promoting Interoperability Program administration would no longer be available for most State expenditures incurred after September 30, 2022.

We are proposing a later sunset date for the availability of 90 percent enhanced match for State administrative costs related to Medicaid Promoting Interoperability Program audit and appeals activities, as well as costs related to administering incentive payment disbursements and recoupments that might result from those activities. We acknowledge that States have a responsibility to conduct audits of the payments made to Medicaid providers participating in the Medicaid Promoting Interoperability Program, in accordance with § 495.368, in order to combat fraud and abuse, and that States also must provide a process for EHR incentive payment appeals in accordance with § 495.370. We expect that these activities will require administration for some time after, but at most a year, beyond September 30, 2022. Because provider incentive payments could be disbursed up until December 31, 2021, we anticipate that States would need additional time to review provider risk factors, select samples, and conduct audits. Once post-payment audits are completed, States would also need time to work with any providers who choose to appeal their audit findings. Collectively, the post-payment audit process and/or appeals process could take several months, and in some cases might take more than one year. Therefore, we are proposing that the 90 percent FFP would continue to be available for State administrative expenditures related to Medicaid Promoting Interoperability Program audit and appeals activities until September 30, 2023. States would not be able to claim any Medicaid Promoting Interoperability Program administrative match for expenditures incurred after September 30, 2023.

States should be aware that under this proposal, they would need to incur the expenditures for which they would claim the 90 percent FFP for Medicaid Promoting Interoperability Program administrative activities no later than the sunset dates of September 30, 2022 or September 30, 2023, as applicable. This means that for States to claim the 90 percent FFP for goods and services related to Medicaid Promoting Interoperability Program administrative activities, States would have to ensure that the goods and services are provided no later than close of business September 30, 2022 or close of business September 30, 2023, as applicable. Thus, for example, if an amount that is related to administration of a Medicaid Promoting Interoperability Program audit or appeal has been obligated by September 30, 2023, but the good or service has not yet been furnished by that date, then the expenditure could not be claimed at the enhanced 90 percent FFP.

We are inviting public comments on this proposal, especially on whether the timelines proposed provide States with a reasonable amount of time to wind down their Medicaid Promoting Interoperability Program.

IX. Proposed Revisions of the Supporting Documentation Required for Submission of an Acceptable Medicare Cost Report

A. Background

Sections 1815(a) and 1833(e) of the Act provide that no Medicare payments will be made to a provider unless it has furnished the information, as may be requested by the Secretary, to determine the amount of payments due the provider under the Medicare program. In general, providers submit this information through annual cost reports [384] that cover a 12-month period of time. Under the regulations at 42 CFR 413.20(b) and 413.24(f), providers are required to submit cost reports annually, with the reporting period based on the provider's accounting year. For cost years beginning on or after October 1, 1989, section 1886(f)(1) of the Act and § 413.24(f)(4) of the regulations require hospitals to submit cost reports in a standardized electronic format, and the same requirement was later imposed for other types of providers.

All providers participating in the Medicare program are required under § 413.20(a) to maintain sufficient financial records and statistical data for proper determination of costs payable under the program. Moreover, providers

[384] There are currently nine Medicare cost reports: The Hospital and Health Care Complex Cost Report, Form CMS–2552, OMB No. 0938–0050; the Skilled Nursing Facility and Skilled Nursing Facility Health Care Complex Cost Report, Form CMS–2540, OMB No. 0938–0463; the Home Health Agency Cost Report, Form CMS–1728, OMB No. 0938–0022; the Outpatient Rehabilitation Provider Cost Report, Form CMS–2088, OMB No. 0938–0037; the Independent Rural Health Clinic and Freestanding Federally Qualified Health Center Cost Report (prior to October 1, 2014), Form CMS–222, OMB No. 0938–0107; the Federally Qualified Health Center Cost Report (beginning on or after October 1, 2014), Form CMS–224, OMB No. 0938–1298; the Organ Procurement Organizations and Histocompatibility Laboratory, Form CMS–216, OMB No. 0938–0102; the Independent Renal Dialysis Facility Cost Report, Form CMS–265, OMB No. 0938–0236; and the Hospice Cost and Data Report, Form CMS–1984, OMB No. 0938–0758.

must use standardized definitions and follow accounting, statistical, and reporting practices that are widely accepted in the hospital and related fields. Upon receipt of a provider's cost report, the Medicare Administrative Contractor (herein referred to as ''contractor'') reviews the cost report to determine its acceptability in accordance with § 413.24(f)(5). Each cost report submission by a provider to its contractor, including an amended cost report, is considered to be a separate cost report submission under § 413.24(f)(5). Each cost report submission requires the supporting documentation specified in § 413.24(f)(5)(i). A cost report submitted without the required supporting documentation is rejected under § 413.24(f)(5)(i). Under § 413.24(f)(5)(iii), when the cost report is rejected, it is deemed an unacceptable submission and treated as if it had never been filed.

Several provisions in the regulations requiring supporting documentation for the Medicare cost report to be acceptable need to be updated to reflect current practices, to improve the accuracy of these reports, and to facilitate more efficient contractor review of cost reports. The regulations at § 413.24(f)(5)(i) provides that a provider's cost report is rejected if the provider does not complete and submit the Provider Cost Reimbursement Questionnaire (a questionnaire independent of the cost report, OMB No. 0938–0301, also known as Form CMS–339). The Form CMS–339 requires the provider to submit supporting documents, as applicable, for items such as Medicare bad debt, approved educational activities, and cost allocation from a home office or chain organization.

Beginning in 2011, as cost report forms were updated for various provider types, the Form CMS–339 was incorporated as a worksheet in the Medicare cost report (the worksheet title and placement within the cost report vary by provider type), and is no longer submitted as a separate supporting document. The Form CMS–339 has been incorporated into all Medicare cost reports except for the Organ Procurement Organization (OPO) and Histocompatibility Laboratory cost report, Form CMS–216. In section IX.B. of the preamble of this proposed rule, we are proposing to incorporate the Form CMS–339 into the OPO and Histocompatibility cost report, Form CMS–216.

The cost report worksheet that incorporated the Form CMS–339 continues to require the provider to submit supporting documents for Medicare bad debt, approved educational activities, and certain cost allocation information from a home office or chain organization, as applicable. However, our regulations at § 413.24(f)(5)(i) do not reflect that the Provider Cost Reimbursement Questionnaire, Form CMS–339, has been incorporated into the Medicare cost report as a worksheet because the regulations require the Form CMS–339 to be submitted as a supporting document to the cost report.

Section 413.24(f)(5)(i) also provides that a cost report is rejected for a teaching hospital if a copy of the Intern and Resident Information System (IRIS) diskette is not included as supporting documentation. However, diskettes are no longer used by providers to furnish this data to contractors.

Section 413.20 of the regulations requires providers to maintain sufficient financial records and statistical data for the proper determination of costs payable under the program as well as an adequate ongoing system for furnishing records needed to provide accurate cost data and other information capable of verification by qualified auditors. In accordance with § 413.20(d), the provider must furnish such information to the contractor as may be necessary to assure proper payment. Information from the provider relating to Medicaid days used in the calculation of DSH payments, charity care charges, uninsured discounts, and home office cost allocations are necessary to assure proper payment. While our regulations require that these supporting documents be maintained by the provider and furnished to the contractor to assure proper payment, § 413.24(f)(5) does not require submission of supporting documentation for Medicaid days used in the calculation of DSH payments, charity care charges, uninsured discounts, or home office cost allocations reported on a provider's cost report for the provider to have an acceptable cost report submission. These supporting documents are often subsequently requested by the contractor, and must be submitted by the provider in order to assure proper payment, which can delay payments and prolong audits.

Our specific proposals for revising our regulations are discussed below.

B. Proposed Revisions to Regulations

1. Provider Cost Reimbursement Questionnaire

Section 413.24(f)(5)(i) of the regulations provides that a provider's Medicare cost report is rejected for lack of supporting documentation if it does not include the Provider Cost Reimbursement Questionnaire (also known as Form CMS–339). As discussed in section IX.A. of the preamble of this proposed rule, beginning in 2011, as cost report forms were updated, the Provider Cost Reimbursement Questionnaire, Form CMS–339, was incorporated into all Medicare cost reports as a worksheet, except the OPO and Histocompatibility Laboratory cost report, Form CMS–216. In this proposed rule, we are proposing to incorporate the Provider Cost Reimbursement Questionnaire, Form CMS–339, into the OPO and Histocompatibility Laboratory cost report, Form CMS–216. The incorporation of the Form CMS–339 into the Form CMS–216 will complete our incorporation of the Form CMS–339 into all Medicare cost reports.

In addition, in this proposed rule, we are proposing to revise § 413.24(f)(5)(i) by removing the reference to the Provider Cost Reimbursement Questionnaire so that § 413.24(f)(5)(i) no longer states that a cost report will be rejected for lack of supporting documentation if it does not include a Provider Cost Reimbursement Questionnaire (Form CMS–339). Furthermore, we are proposing to add language to the first sentence of § 413.24(f)(5)(i) to clarify that a provider must submit all necessary supporting documents for its cost report. We believe this proposal is consistent with the recordkeeping requirements in §§ 413.20 and 413.24.

2. Intern and Resident Information System (IRIS) Data

Section 413.24(f)(5)(i) also provides that a Medicare cost report for a teaching hospital is rejected for lack of supporting documentation if the cost report does not include a copy of the Intern and Resident Information System (IRIS) diskette.

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA), Public Law 99–272, establishes a methodology for determining payments to hospitals for the GME programs (which is currently implemented in the regulations at 42 CFR 413.75 through 413.83). To account for the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals, section 1886(d)(5)(B) of the Act provides for a payment adjustment known as the IME adjustment under the IPPS for hospitals that have residents in an approved GME program. The regulation regarding the calculation of this additional payment is located at 42 CFR 412.105. (We refer

readers to section IV.E. of the preamble of this proposed rule for additional background on direct GME and IME payments.)

In accordance with § 413.78(b) for direct GME and § 412.105(f)(1)(iii)(A) for IME, no individual may be counted as more than one full-time equivalent (FTE). A hospital cannot claim the time spent by residents training at another hospital; if a resident spends time in more than one hospital or in a nonprovider setting, the resident counts as a partial FTE based on the proportion of time worked at the hospital to the total time worked. A part-time resident counts as a partial FTE based on the proportion of allowable time worked compared to the total time necessary to fill a full-time internship or residency slot.

In 1990, we established the IRIS, under the authority of sections 1886(d)(5)(B) and 1886(h) of the Act, in order to facilitate proper counting of FTE residents by hospitals that rotate their FTE residents from one hospital or nonprovider setting to another. Teaching hospitals use the IRIS to collect and report information on residents training in approved residency programs. Section 413.24(f)(5)(i) requires teaching hospitals to submit the IRIS data along with their Medicare cost reports in order to have an acceptable cost report submission. The IRIS can be downloaded from CMS' website at: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Computer-Data-and-Systems/IRIS/index.html?redirect=/iris*. We are currently in the process of producing a new Extensible Markup Language (XML)-based IRIS file format that captures FTE resident count data consistent with the manner in which FTEs are reported on the Medicare cost report.

After receiving the IRIS data along with each teaching hospital's cost report, the contractors upload the data to a national database housed at CMS, which can be used to identify ''duplicates,'' that is, FTE residents being claimed by more than one hospital for the same rotation. Identifying duplicates allows the contractors to approach the hospitals that simultaneously claimed the same FTE, and correct the duplicate reporting on the respective hospitals' cost reports for direct GME and IME payment purposes.

Historically, we would collect the IRIS data from hospitals on a diskette, as referenced in § 413.24(f)(5)(i). Because diskettes are no longer used by providers to furnish these data to contractors, in this proposed rule, we are proposing to remove the reference in the regulations to a diskette and instead reference ''Intern and Resident Information System data.'' Specifically, we are proposing to amend § 413.24(f)(5)(i) by adding a new paragraph (A) to include this proposed revised language.

In addition, to enhance the contractors' ability to review duplicates and to ensure residents are not being double-counted, we believe it is necessary and appropriate to require that the total unweighted and weighted FTE counts on the IRIS for direct GME and IME respectively, for all applicable allopathic, osteopathic, dental, and podiatric residents that a hospital may train, must equal the same total unweighted and weighted FTE counts for direct GME and IME reported on Worksheet E–4 and Worksheet E, Part A. The need to verify and maintain the integrity of the IRIS data has been the subject of reviews by the Office of the Inspector General (OIG) over the years. An August 2014 OIG report cited the need for CMS to develop procedures to ensure that no resident is counted as more than one FTE in the calculation of Medicare GME payments (OIG Report No. A–02–13–01014, August 2014). More recently, a July 2017 OIG report recommended that procedures be developed to ensure that no resident is counted as more than one FTE in the calculation of Medicare GME payments (OIG Report No. A–02–15–01027, July 2017).

Therefore, effective for cost reports filed on or after October 1, 2018, we are proposing to add the requirement that IRIS data contain the same total counts of direct GME FTE residents (unweighted and weighted) and of IME FTE residents as the total counts of direct GME and IME FTE residents reported in the cost report. Specifically, we are proposing to specify in a new paragraph (A) of § 413.24(f)(5)(i) that, effective for cost reports filed on or after October 1, 2018, the IRIS data must contain the same total counts of direct GME FTE residents (unweighted and weighted) and of IME FTE residents as the total counts of direct GME FTE and IME FTE residents reported in the hospital's cost report, or the cost report will be rejected for lack of supporting documentation.

3. Medicare Bad Debt Reimbursement

Under section 1861(v)(1) of the Act and the regulations at § 413.89, Medicare may reimburse a portion of the uncollectible deductible and coinsurance amounts to those entities eligible to receive reimbursement for Medicare bad debt. The Medicare Provider Reimbursement Manual (PRM–1, CMS Pub. 15–1), Chapter 3, provides guidance to providers that claim Medicare bad debt reimbursement.

Section 413.24(f)(5)(i) provides that an acceptable cost report submission requires the provider to submit a Provider Cost Reimbursement Questionnaire, Form CMS–339. The Form CMS–339, which has been incorporated into all Medicare cost reports (except the OPO and Histocompatibility Laboratory cost report, Form CMS–216, which we are now proposing to incorporate into the cost report, as discussed in section IX.B.1. of the preamble of this proposed rule), requires the provider to submit supporting documentation with the cost report to substantiate its claims for Medicare bad debt reimbursement. For example, the hospital cost report, which incorporated the Form CMS–339, instructs hospitals to submit a ''completed Exhibit 2 or internal schedules duplicating the documentation requested on Exhibit 2 to support the bad debts claimed'' (Section 4004.2 of CMS Pub. 15–2). This ''completed Exhibit 2 or internal schedules duplicating the documentation requested on Exhibit 2 to support the bad debts claimed'' is also known as the Medicare bad debt listing and requires information such as the patient's name, dates of service, the beneficiary's Medicaid status, if applicable, the date that collection effort ceased, and the deductible and coinsurance amounts.

Because the Provider Cost Reimbursement Questionnaire is incorporated into the cost report as a worksheet, the bad debt listing continues to be required for an acceptable cost report under § 413.24(f)(5). In this proposed rule, we are proposing to require that the Medicare bad debt listing correspond to the bad debt amount claimed in the provider's cost report, in order for the provider to have an acceptable cost report submission under § 413.24(f)(5). This is also consistent with a provider's recordkeeping and cost reporting requirements of §§ 413.20 and 413.24, and will facilitate the contractor's review and verification of the cost report. Specifically, we are proposing to amend § 413.24(f)(5)(i) by adding a new paragraph (B) to specify that, effective for cost reporting periods beginning on or after October 1, 2018, for providers claiming Medicare bad debt reimbursement, a cost report would be rejected for lack of supporting documentation if it does not include a detailed bad debt listing that

corresponds to the bad debt amounts claimed in the provider's cost report.

4. Disproportionate Share Hospital (DSH) Payment Adjustment

The DSH payment adjustment provision under section 1886(d)(5)(F) of the Act was enacted by section 9105 of COBRA and became effective for discharges occurring on or after May 1, 1986. Under section 1886(d)(5)(F) of the Act, the primary method by which a hospital qualifies for a Medicare DSH payment is based on the hospital's disproportionate patient percentage, which is determined using a statutory formula. This statutory formula incorporates the hospital's number of patient days for patients who are eligible for Medicaid, but were not entitled to benefits under Medicare Part A (''Medicaid eligible days''), which hospitals are required to submit on their cost reports.

Currently, in order for a DSH eligible hospital to have an acceptable cost report submission, there is no requirement for the hospital to also submit a listing of its Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's cost report, as a supporting document. DSH eligible hospitals have always been required to collect and maintain this data for completion of the cost report, and to submit it when requested. However, we are proposing that in order to have an acceptable cost report submission, DSH eligible hospitals must submit this supporting data with their cost reports. To ensure accurate DSH payments, additional information regarding Medicaid eligible days is required in order to validate the number of Medicaid eligible days the hospital reports in its cost report. Currently, when this information regarding Medicaid eligible days is not submitted by the DSH eligible hospitals with the cost report, contractors must request it. An audit may reveal an overstatement of a hospital's Medicaid eligible days. However, an audit of these data may not take place for more than a year after the cost report has been submitted, and tentative program reimbursement payments are often issued to a provider upon the submission of the cost report. Because the existing burden estimate for a DSH eligible hospital's cost report already reflects the requirement that these hospitals collect, maintain, and submit this data when requested, there is not additional burden.

Requiring a provider to submit, as a supporting document with its cost report, a listing of the provider's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the DSH eligible hospital's cost report would provide contractors with the DSH eligible hospital's source document listing the Medicaid eligible days claimed on its cost report and would be consistent with the recordkeeping and cost reporting requirements of §§ 413.20 and 413.24, which require a provider to substantiate its costs. A requirement to submit this supporting documentation also would facilitate the contractor's review and verification of the cost report without the need to request additional data from the provider. This proposal would not affect a hospital's ability to submit an amended cost report, within 12 months after the hospital's cost report is due, that reflects updated information on Medicaid eligible patient days after the hospital receives updated Medicaid eligibility information from the State (CY 2016 OPPS/ASC final rule with comment period (80 FR 70560)).

Therefore, in this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, in order for a hospital eligible for a Medicare DSH payment adjustment to have an acceptable cost report submission in accordance with § 413.24(f)(5), the provider must submit a detailed listing of its Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the provider's cost report, as a supporting document with the provider's cost report. In addition, we are proposing that if the provider submits an amended cost report that changes its Medicaid eligible days, an amended listing or an addendum to the original listing of the provider's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the provider's amended cost report would also need to be submitted as a supporting document with the amended cost report.

Consistent with this proposal, we are proposing to amend § 413.24(f)(5)(i) by adding a new paragraph (C) to specify that, effective for cost reporting periods beginning on or after October 1, 2018, for hospitals claiming a DSH payment adjustment, a cost report will be rejected for lack of supporting documentation if it does not include a detailed listing of the hospital's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's cost report. If the hospital submits an amended cost report that changes its Medicaid eligible days, an amended listing or an addendum to the original listing of the hospital's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's amended cost report would be required.

5. Charity Care and Uninsured Discounts

Section 3133 of the Affordable Care Act amended the Medicare DSH payment adjustment provision at section 1886(d)(5)(F) of the Act, and established section 1886(r) of the Act which provides for an additional payment that reflects a hospital's uncompensated care (which includes charity care and discounts given to uninsured patients who qualify under the hospital's charity care policy or financial assistance policy). In accordance with the FY 2018 IPPS/LTCH PPS final rule (82 FR 38201 through 38208), starting in FY 2018, Worksheet S–10 of the cost report is used as a data source for calculating uncompensated care payments.

Currently there is no requirement for a DSH eligible hospital to submit supporting documentation with its cost report, to substantiate its charity care or discounts given to uninsured patients who qualify under the hospital's charity care policy or financial assistance policy, in order for its cost report submission to be acceptable in accordance with § 413.24(f)(5). Uncompensated care data reported on a hospital's cost report did not have an impact on the determination of uncompensated care payments before FY 2018 when the agency first began using Worksheet S–10 data to calculate uncompensated care payments. However, because the Worksheet S–10 data are now utilized to make uncompensated care payments to DSH-eligible hospitals, documentation to substantiate charity care or discounts given to uninsured patients who qualify under the hospital's charity care or financial assistance policy is needed to complete the cost report and to ensure there is no duplication when hospitals report Medicare bad debt, charity care, and uninsured discounts. All hospitals, including DSH eligible hospitals, have always been required to collect and maintain this data for completion of the cost report, and submit it when requested. However, we are now proposing that in order to have an acceptable cost report submission, DSH eligible hospitals must submit this supporting data with their cost reports. To ensure accurate uncompensated care payments, additional supporting information regarding charity care and uninsured discounts is required in order to validate the amounts reported in the cost report. Currently, when the documentation to support the charity care charges and uninsured discounts is not submitted by DSH eligible hospitals with the cost report, contractors must

request it. Because the existing burden estimate for a DSH eligible hospital's cost report already reflects the requirement that these hospitals collect, maintain, and submit this data when requested, there is no additional burden.

We believe that requiring a DSH eligible hospital to submit, with its cost report, a detailed listing of its charity care and uninsured discounts that corresponds to the amount claimed in the hospital's cost report would be consistent with the recordkeeping and cost reporting requirements of §§ 413.20 and 413.24, which require a provider to substantiate its costs. This supporting documentation also would facilitate the contractor's review and verification of the cost report without the need to request additional data from the provider.

Therefore, in this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, in order for hospitals reporting charity care and/or uninsured discounts to have an acceptable cost report submission under § 413.24(f)(5), the provider must submit a detailed listing of charity care and/or uninsured discounts that contains information such as the patient name, dates of service, insurer (if applicable), and the amount of charity care and/or uninsured discount given that corresponds to the amount claimed in the hospital's cost report as a supporting document with the hospital's cost report.

Consistent with this proposal, we are proposing to amend § 413.24(f)(5)(i) by adding a new paragraph (D) to specify that, effective for cost reporting periods beginning on or after October 1, 2018, for hospitals reporting charity care and/or uninsured discounts, a cost report will be rejected for lack of supporting documentation if it does not include a detailed listing of charity care and/or uninsured discounts that corresponds to the amounts claimed in the provider's cost report.

6. Home Office Allocations

A chain organization consists of a group of two or more health care facilities which are owned, leased, or through any other device, controlled by one organization (Provider Reimbursement Manual 1 (PRM–1), CMS Pub. 15–1, Chapter 21, Section 2150). Chain organizations include, but are not limited to, chains operated by proprietary organizations and chains operated by various religious, charitable, and governmental organizations. A chain organization may also include business organizations which are engaged in other activities not directly related to health care.

When a provider claims costs on its cost report that are allocated from a home office (also known as a chain home office or chain organization), the Home Office Cost Statement constitutes the documentary support required of the provider to be reimbursed for home office costs in the provider's cost report as set forth in Section 2153, Chapter 21, of the PRM–1. Section 2153 states that each contractor servicing a provider in a chain must be furnished with a detailed Home Office Cost Statement as a basis for reimbursing the provider for cost allocations from a home office or chain organization. However, many cost reports that have home office costs allocated to them are submitted without a Home Office Cost Statement as a supporting document. In addition, there are home offices or chain organizations that are not completing a Home Office Cost Statement to support the costs they are allocating to the provider cost reports. Lack of this documentation should result in a disallowance of costs. It is our understanding that some providers paid under a PPS mistakenly believe that a Home Office Cost Statement is no longer required. However, the home office costs reported in the provider's cost report may have an impact on future ratesetting and payment refinement activities. We believe that requiring a home office or chain organization to complete a Home Office Cost Statement and a provider to submit, with its cost report, a copy of the Home Office Cost Statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report, is consistent with Section 2153 of the PRM–1 and would be consistent with a provider's recordkeeping and cost reporting requirements of §§ 413.20 and 413.24, which require a provider to substantiate its costs.

Therefore, in this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, in order for a provider claiming costs on its cost report that are allocated from a home office or chain organization to have an acceptable cost report submission under § 413.24(f)(5), a Home Office Cost Statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report must be submitted as a supporting document with the provider's cost report. This proposal would facilitate the contractor's review and verification of the cost report without needing to request additional data from the provider. With our proposal, we anticipate more providers will submit the Home Office Cost Statement to support the amounts reported in their cost reports, in order to have an acceptable cost report submission. Because the existing burden estimate for a provider's cost report already reflects the requirement that providers collect, maintain, and submit this data, there is no additional burden.

Consistent with this proposal, we are proposing to amend § 413.24(f)(5)(i) by adding a new paragraph (E) to specify that, effective for cost reporting periods beginning on or after October 1, 2018, for providers claiming costs on their cost report that are allocated from a home office or chain organization, a cost report will be rejected for lack of supporting documentation if it does not include a Home Office Cost Statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report.

We are seeking public comment on all of our proposals.

X. Requirements for Hospitals To Make Public a List of Their Standard Charges via the Internet

In the FY 2015 IPPS/LTCH proposed rule and final rule (79 FR 28169 and 79 FR 50146, respectively), we discussed the implementation of section 2718(e) of the Public Health Service Act, which aims to improve the transparency of hospital charges. We noted that section 2718(e) of the Public Health Service Act, which was enacted as part of the Affordable Care Act, requires that each hospital operating within the United States, for each year, establish (and update) and make public (in accordance with guidelines developed by the Secretary) a list of the hospital's standard charges for items and services provided by the hospital, including for diagnosis-related groups established under section 1886(d)(4) of the Social Security Act. We reminded hospitals of their obligation to comply with the provisions of section 2718(e) of the Public Health Service Act and provided guidelines for its implementation. We stated that hospitals are required to either make public a list of their standard charges (whether that be the chargemaster itself or in another form of their choice) or their policies for allowing the public to view a list of those charges in response to an inquiry.

We encouraged hospitals to undertake efforts to engage in consumer friendly communication of their charges to help patients understand what their potential

financial liability might be for services they obtain at the hospital, and to enable patients to compare charges for similar services across hospitals. We also stated that we expect that hospitals will update the information at least annually, or more often as appropriate, to reflect current charges. We further noted that we are confident that hospital compliance with this statutory transparency requirement will greatly improve the public accessibility of charge information. Finally, we stated that we would continue to review and post relevant charge data in a consumer-friendly way, as we previously have done by posting hospital and physician charge information on the CMS website.

We are concerned that challenges continue to exist for patients due to insufficient price transparency. Such challenges include patients being surprised by out-of-network bills for physicians, such as anesthesiologists and radiologists, who provide services at in-network hospitals, and patients being surprised by facility fees and physician fees for emergency room visits. We also are concerned that chargemaster data are not helpful to patients for determining what they are likely to pay for a particular service or hospital stay. In order to promote greater price transparency for patients, we are considering ways to improve the accessibility and usability of the charge information that hospitals are required to disclose under section 2718(e) of the Public Health Service Act.

As one step to further improve the public accessibility of charge information, effective January 1, 2019, we are updating our guidelines to require hospitals to make available a list of their current standard charges via the internet in a machine readable format and to update this information at least annually, or more often as appropriate. This could be in the form of the chargemaster itself or another form of the hospital's choice, as long as the information is in machine readable format.

We also are considering other potential actions that would be appropriate, either under the authority of section 2718(e) of the Public Health Service Act or under other authority, to further our objective of having hospitals undertake efforts to engage in consumer-friendly communication of their charges to help patients understand what their potential financial liability might be for services they obtain at the hospital, and to enable patients to compare charges for similar services across hospitals. Therefore, we are seeking public comment on the following:

- Should ''standard charges'' be defined to mean: average or median rates for the items on the chargemaster; average or median rates for groups of services commonly billed together (such as for an MS–DRG), as determined by the hospital based on its billing patterns; or the average discount off the chargemaster amount across all payers, either for each item on the chargemaster or for groups of services commonly billed together? Should ''standard charges'' be defined and reported for both some measure of the average contracted rate and the chargemaster? Or is the best measure of a hospital's standard charges its chargemaster?
- What types of information would be most beneficial to patients, how can hospitals best enable patients to use charge and cost information in their decision-making, and how can CMS and providers help third parties create patient-friendly interfaces with these data?
- Should health care providers be required to inform patients how much their out-of- pocket costs for a service will be before those patients are furnished that service? What changes would be needed to support greater transparency around patient obligations for their out-of-pocket costs? What can be done to better inform patients of these obligations? Should health care providers play any role in helping to inform patients of what their out-of-pocket obligations will be?
- Should we require health care providers to provide patients with information on what Medicare pays for a particular service performed by a health care provider? If CMS were to finalize a requirement that this information be made available to beneficiaries by health care providers, what changes would need to be made by health care providers? What corresponding regulatory changes would be necessary?

CMS is considering making information regarding noncompliance with section 2718(e) of the Public Health Service Act public and intends to consider this as well as additional enforcement mechanisms in future rulemaking. Therefore, we are seeking comment on the following:

- What is the most appropriate mechanism for CMS to enforce price transparency requirements? Should CMS require hospitals to attest to meeting requirements in the provider agreement or elsewhere? How should CMS assess hospital compliance? Should CMS publicize complaints regarding access to price information or review hospital compliance and post results? What is the most effective way for CMS to publicize information regarding hospitals that fail to comply? Should CMS impose civil money penalties on hospitals that fail to make standard charges publically available as required by section 2718(e) of the Public Health Service Act? Should CMS use a framework similar to the Federal civil penalties under 45 CFR 158.601, *et seq.* that apply to issuers that fail to report information and pay rebates related to medical loss ratios, as required by sections 2718(a) and (b) of the Public Health Service Act, or would a different framework be more appropriate?

In addition, we are seeking public comment on improving our understanding of out-of-pocket costs for patients with Medigap coverage, especially with respect to the following particular questions:

- How does Medigap coverage affect patients' understanding of their out-of-pocket costs before they receive care? What challenges do providers face in providing information about out-of-pocket costs to patients with Medigap? What changes would be needed to support providers sharing out-of-pocket cost information with patients that reflects the patient's Medigap coverage? Who is best situated to provide patients with Medigap coverage clear information on their out-of-pocket costs prior to receipt of care? What State-specific requirements or programs help educate Medigap patients about their out-of-pocket costs prior to receipt of care?

We also note that, in the interest of public accessibility, we continue to post charge data for services furnished to Medicare beneficiaries covered under Medicare fee-for-service by diagnosis-related group for each IPPS hospital on our website. These charge data are based on the MEDPAR short-stay inpatient data and augmented with the provider-of-service data and hospital referral regions data to include provider characteristics and hospital referral region. For each hospital-DRG record, the charge data include total discharges for Medicare beneficiaries, average covered charges, average total payments, and average Medicare payments. Data are currently available for FYs 2011 through 2015 for the more than 3,000 IPPS hospitals within the 50 United States and District of Columbia. These data are available at: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Medicare-Provider-Charge-Data/Inpatient.html*.

XI. Proposed Revisions Regarding Physician Certification and Recertification of Claims

Our Medicare regulations at 42 CFR 424.11, which implement sections 1814(a)(2) and 1835(a)(2) of the Act, specify the requirements for physician statements that certify and periodically recertify as to the medical necessity of certain types of covered services provided to Medicare beneficiaries. The regulation provision under § 424.11(c) specifies that when supporting information for the required physician statement is available elsewhere in the records (for example, in the physician's progress notes), the information need not be repeated in the statement itself. The last sentence of § 424.11(c) further provides that it will suffice for the statement to indicate where the information is to be found.

As part of our ongoing initiative to identify Medicare regulations that are unnecessary, obsolete, or excessively burdensome on health care providers and suppliers—and thereby free up resources that could be used to improve or enhance patient care—we have been made aware that the provisions of § 424.11(c) which state that it will suffice for the statement to indicate where the information is to be found may be resulting in unnecessary denials of Medicare claims. As currently worded, this last sentence of § 424.11(c) can result in a claim being denied merely because the physician statement technically fails to identify a specific location in the file for the supporting information, even when that information nevertheless may be readily apparent to the reviewer. We believe that continuing to require the location to be specified in this situation is unnecessary. Certifications and recertifications continue to be based on the criteria for the service being certified, and the medical record must contain adequate documentation of the relevant criteria for which the physician is providing certification or recertification, even if the precise location of the information within the medical record is not included. Moreover, the need for the precise location is becoming increasingly obsolete with the growing utilization of electronic health records (EHRs)—which, by their nature, are readily searchable. Accordingly, in this proposed rule, we are proposing to delete the last sentence of § 424.11(c). In addition, we are proposing to relocate the second sentence of § 424.11(c) (indicating that supporting information contained elsewhere in the provider's records need not be repeated in the certification or recertification statement itself) to the end of the immediately preceding paragraph (b), which describes similar kinds of flexibility that are currently afforded in terms of completing the required statement.

We are inviting public comments on our proposals.

XII. Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange Through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers

Currently, Medicare- and Medicaid-participating providers and suppliers are at varying stages of adoption of health information technology (health IT). Many hospitals have adopted electronic health records (EHRs), and CMS has provided incentive payments to eligible hospitals, critical access hospitals (CAHs), and eligible professionals who have demonstrated meaningful use of certified EHR technology (CEHRT) under the Medicare EHR Incentive Program. As of 2015, 96 percent of Medicare- and Medicaid-participating non-Federal acute care hospitals had adopted certified EHRs with the capability to electronically export a summary of clinical care.[385] While both adoption of EHRs and electronic exchange of information have grown substantially among hospitals, significant obstacles to exchanging electronic health information across the continuum of care persist. Routine electronic transfer of information post-discharge has not been achieved by providers and suppliers in many localities and regions throughout the Nation.

CMS is firmly committed to the use of certified health IT and interoperable EHR systems for electronic healthcare information exchange to effectively help hospitals and other Medicare- and Medicaid-participating providers and suppliers improve internal care delivery practices, support the exchange of important information across care team members during transitions of care, and enable reporting of electronically specified clinical quality measures (eCQMs). The Office of the National Coordinator for Health Information Technology (ONC) acts as the principal Federal entity charged with coordination of nationwide efforts to implement and use health information technology and the electronic exchange of health information on behalf of the Department of Health and Human Services.

In 2015, ONC finalized the 2015 Edition health IT certification criteria (2015 Edition), the most recent criteria for health IT to be certified to under the ONC Health IT Certification Program. The 2015 Edition facilitates greater interoperability for several clinical health information purposes and enables health information exchange through new and enhanced certification criteria, standards, and implementation specifications. CMS requires eligible hospitals and CAHs in the Medicare and Medicaid EHR Incentive Programs and eligible clinicians in the Quality Payment Program (QPP) to use EHR technology certified to the 2015 Edition beginning in CY 2019.

In addition, several important initiatives will be implemented over the next several years to provide hospitals and other participating providers and suppliers with access to robust infrastructure that will enable routine electronic exchange of health information. Section 4003 of the 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, and amending section 3000 of the Public Health Service Act (42 U.S.C. 300jj), requires HHS to take steps to advance the electronic exchange of health information and interoperability for participating providers and suppliers in various settings across the care continuum. Specifically, Congress directed that ONC ''. . . for the purpose of ensuring full network-to-network exchange of health information, convene public-private and public-public partnerships to build consensus and develop or support a trusted exchange framework, including a common agreement among health information networks nationally.'' In January 2018, ONC released a draft version of its proposal for the Trusted Exchange Framework and Common Agreement,[386] which outlines principles and minimum terms and conditions for trusted exchange to enable interoperability across disparate health information networks (HINs). The Trusted Exchange Framework (TEF) is focused on achieving the following four important outcomes in the long-term:

- Professional care providers, who deliver care across the continuum, can access health information about their patients, regardless of where the patient received care.

[385] These statistics can be accessed at: *https://dashboard.healthit.gov/quickstats/pages/FIG-Hospital-EHR-Adoption.php.*

[386] The draft version of the trusted Exchange Framework may be accessed at: *https://beta.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement.*

• Patients can find all of their health information from across the care continuum, even if they do not remember the name of the professional care provider they saw.

• Professional care providers and health systems, as well as public and private health care organizations and public and private payer organizations accountable for managing benefits and the health of populations, can receive necessary and appropriate information on groups of individuals without having to access one record at a time, allowing them to analyze population health trends, outcomes, and costs; identify at-risk populations; and track progress on quality improvement initiatives.

• The health IT community has open and accessible application programming interfaces (APIs) to encourage entrepreneurial, user-focused innovation that will make health information more accessible and improve EHR usability.

ONC will revise the draft TEF based on public comment and ultimately release a final version of the TEF that will subsequently be available for adoption by HINs and their participants seeking to participate in nationwide health information exchange. The goal for stakeholders that participate in, or serve as, a HIN is to ensure that participants will have the ability to seamlessly share and receive a core set of data from other network participants in accordance with a set of permitted purposes and applicable privacy and security requirements. Broad adoption of this framework and its associated exchange standards is intended to both achieve the outcomes described above while creating an environment more conducive to innovation.

In light of the widespread adoption of EHRs along with the increasing availability of health information exchange infrastructure predominantly among hospitals, we are interested in hearing from stakeholders on how we could use the CMS health and safety standards that are required for providers and suppliers participating in the Medicare and Medicaid programs (that is, the Conditions of Participation (CoPs), Conditions for Coverage (CfCs), and Requirements for Participation (RfPs) for Long Term Care Facilities) to further advance electronic exchange of information that supports safe, effective transitions of care between hospitals and community providers. Specifically, CMS might consider revisions to the current CMS CoPs for hospitals such as: Requiring that hospitals transferring medically necessary information to another facility upon a patient transfer or discharge do so electronically; requiring that hospitals electronically send required discharge information to a community provider via electronic means if possible and if a community provider can be identified; and requiring that hospitals make certain information available to patients or a specified third-party application (for example, required discharge instructions) via electronic means if requested.

On November 3, 2015, we published a proposed rule (80 FR 68126) to implement the provisions of the IMPACT Act and to revise the discharge planning CoP requirements that hospitals (including short-term acute care hospitals, long-term care hospitals (LTCHs), inpatient rehabilitation hospitals (IRFs), inpatient psychiatric hospitals (IPFs), children's hospitals, and cancer hospitals), critical access hospitals (CAHs), and home health agencies (HHAs) must meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. However, several of the proposed requirements directly address the issue of communication between providers and between providers and patients, as well as the issue of interoperability:

• Hospitals and CAHs would be required to transfer certain necessary medical information and a copy of the discharge instructions and discharge summary to the patient's practitioner, if the practitioner is known and has been clearly identified;

• Hospitals and CAHs would be required to send certain necessary medical information to the receiving facility/post-acute care providers, at the time of discharge; and

• Hospitals, CAHs and HHAs, would need to comply with the IMPACT Act requirements that would require hospitals, CAHs, and certain post-acute care providers to use data on quality measures and data on resource use measures to assist patients during the discharge planning process, while taking into account the patient's goals of care and treatment preferences.

We published another proposed rule (81 FR 39448), on June 16, 2016, that updated a number of CoP requirements that hospitals and CAHs must meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. One of the proposed hospital CoP revisions in that rule directly addresses the issues of communication between providers and patients, patient access to their medical records, and interoperability. We proposed that patients have the right to access their medical records, upon an oral or written request, in the form and format requested by such patients, if it is readily producible in such form and format (including in an electronic form or format when such medical records are maintained electronically); or, if not, in a readable hard copy form or such other form and format as agreed to by the facility and the individual, including current medical records, within a reasonable timeframe. The hospital must not frustrate the legitimate efforts of individuals to gain access to their own medical records and must actively seek to meet these requests as quickly as its record keeping system permits.

We also published a final rule (81 FR 68688), on October 4, 2016, that revised the requirements that LTC facilities must meet to participate in the Medicare and Medicaid programs, where we made a number of revisions based on the importance of effective communication between providers during transitions of care, such as transfers and discharges of residents to other facilities or providers, or to home. Among these revisions was a requirement that the transferring LTC facility must provide all necessary information to the resident's receiving provider, whether it is an acute care hospital, a LTC hospital, a psychiatric facility, another LTC facility, a hospice, a health agency, or another community-based provider or practitioner. We specified that necessary information must include the following:

• Contact information of the practitioner responsible for the care of the resident;

• Resident representative information including contact information;

• Advance directive information;

• Special instructions or precautions for ongoing care;

• The resident's comprehensive care plan goals; and

• All other necessary information, including a copy of the resident's discharge or transfer summary and any other documentation to ensure a safe and effective transition of care.

We note that the discharge summary mentioned above must include reconciliation of the resident's medications, as well as a recapitulation of the resident's stay, a final summary of the resident's status, and the post-discharge plan of care. In the preamble to the rule, we encouraged LTC facilities to electronically exchange this information if possible and to identify opportunities to streamline the collection and exchange of resident information by using information that the facility is already capturing electronically.

Additionally, we specifically invite stakeholder feedback on the following

questions regarding possible new or revised CoPs/CfCs/RfPs for interoperability and electronic exchange of health information:

- If CMS were to propose a new CoP/CfC/RfP standard to require electronic exchange of medically necessary information, would this help to reduce information blocking as defined in section 4004 of the 21st Century Cures Act?
- Should CMS propose new CoPs/CfCs/RfPs for hospitals and other participating providers and suppliers to ensure a patient's or resident's (or his or her caregiver's or representative's) right and ability to electronically access his or her health information without undue burden? Would existing portals or other electronic means currently in use by many hospitals satisfy such a requirement regarding patient/resident access as well as interoperability?
- Are new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information necessary to ensure patients/residents and their treating providers routinely receive relevant electronic health information from hospitals on a timely basis or will this be achieved in the next few years through existing Medicare and Medicaid policies, HIPAA, and implementation of relevant policies in the 21st Century Cures Act?
- What would be a reasonable implementation timeframe for compliance with new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information if CMS were to propose and finalize such requirements? Should these requirements have delayed implementation dates for specific participating providers and suppliers, or types of participating providers and suppliers (for example, participating providers and suppliers that are not eligible for the Medicare and Medicaid EHR Incentive Programs)?
- Do stakeholders believe that new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information would help improve routine electronic transfer of health information as well as overall patient/resident care and safety?
- Under new or revised CoPs/CfCs/RfPs, should non-electronic forms of sharing medically necessary information (for example, printed copies of patient/resident discharge/transfer summaries shared directly with the patient/resident or with the receiving provider or supplier, either directly transferred with the patient/resident or by mail or fax to the receiving provider or supplier) be permitted to continue if the receiving provider, supplier, or patient/resident cannot receive the information electronically?
- Are there any other operational or legal considerations (for example, HIPAA), obstacles, or barriers that hospitals and other providers and suppliers would face in implementing changes to meet new or revised interoperability and health information exchange requirements under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future?
- What types of exceptions, if any, to meeting new or revised interoperability and health information exchange requirements, should be allowed under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future? Should exceptions under the QPP including CEHRT hardship or small practices be extended to new requirements? Would extending such exceptions impact the effectiveness of these requirements?

We would also like to directly address the issue of communication between hospitals (as well as the other providers and suppliers across the continuum of patient care) and their patients and caregivers. MyHealthEData is a government-wide initiative aimed at breaking down barriers that contribute to preventing patients from being able to access and control their medical records. Privacy and security of patient data will be at the center of all CMS efforts in this area. CMS must protect the confidentiality of patient data, and CMS is completely aligned with the Department of Veterans Affairs (VA), the National Institutes of Health (NIH), ONC, and the rest of the Federal Government, on this objective.

While some Medicare beneficiaries have had, for quite some time, the ability to download their Medicare claims information, in pdf or Excel formats, through the CMS Blue Button platform, the information was provided without any context or other information that would help beneficiaries understand what the data was really telling them. For beneficiaries, their claims information is useless if it is either too hard to obtain or, as was the case with the information provided through previous versions of Blue Button, hard to understand. In an effort to fully contribute to the Federal Government's MyHealthEData initiative, CMS developed and launched the new Blue Button 2.0, which represents a major step toward giving patients meaningful control of their health information in an easy-to-access and understandable way. Blue Button 2.0 is a developer-friendly, standards-based API that enables Medicare beneficiaries to connect their claims data to secure applications, services, and research programs they trust. The possibilities for better care through Blue Button 2.0 data are exciting, and might include enabling the creation of health dashboards for Medicare beneficiaries to view their health information in a single portal, or allowing beneficiaries to share complete medication lists with their doctors to prevent dangerous drug interactions.

To fully understand all of these health IT interoperability issues, initiatives, and innovations through the lens of its regulatory authority, CMS invites members of the public to submit their ideas on how best to accomplish the goal of fully interoperable health IT and EHR systems for Medicare- and Medicaid-participating providers and suppliers, as well as how best to further contribute to and advance the MyHealthEData initiative for patients. We are particularly interested in identifying fundamental barriers to interoperability and health information exchange, including those specific barriers that prevent patients from being able to access and control their medical records. We also welcome the public's ideas and innovative thoughts on addressing these barriers and ultimately removing or reducing them in an effective way, specifically through revisions to the current CMS CoPs, CfCs, and RfPs for hospitals and other participating providers and suppliers. We have received stakeholder input through recent CMS Listening Sessions on the need to address health IT adoption and interoperability among providers that were not eligible for the Medicare and Medicaid EHR Incentives program, including long-term and post-acute care providers, behavioral health providers, clinical laboratories and social service providers, and we would also welcome specific input on how to encourage adoption of certified health IT and interoperability among these types of providers and suppliers as well.

We note that this is a Request for Information only. Respondents are encouraged to provide complete but concise and organized responses, including any relevant data and specific examples. However, respondents are not required to address every issue or respond to every question discussed in this Request for Information to have their responses considered. In accordance with the implementing regulations of the Paperwork Reduction Act at 5 CFR 1320.3(h)(4), all responses will be considered, provided they contain information CMS can use to identify and contact the commenter, if needed.

This Request for Information is issued solely for information and planning

purposes; it does not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. This Request for Information does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through this Request for Information and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to this Request for Information; all costs associated with responding to this Request for Information will be solely at the interested party's expense.

We note that not responding to this Request for Information does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this Request for Information announcement for additional information pertaining to this request. In addition, we note that CMS will not respond to questions about the policy issues raised in this Request for Information. CMS will not respond to comment submissions in response to this Request for Information in the FY 2019 IPPS/LTCH PPS final rule. Rather, CMS will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance. CMS may or may not choose to contact individual responders. Such communications would be for the sole purpose of clarifying statements in the responders' written responses. Contractor support personnel may be used to review responses to this Request for Information. Responses to this notice are not offers and cannot be accepted by the Government to form a binding contract or issue a grant. Information obtained as a result of this Request for Information may be used by the Government for program planning on a nonattribution basis. Respondents should not include any information that might be considered proprietary or confidential.

This Request for Information should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publically post the public comments received, or a summary of those public comments.

XIII. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2018 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the proposed policies set forth in this proposed rule. MedPAC recommendations for the IPPS for FY 2019 are addressed in Appendix B to this proposed rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's website at: *http://www.medpac.gov*.

XIV. Other Required Information

A. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Following is a listing of the IPPS-related data files that are available.

Commenters interested in discussing any data files used in construction of this proposed rule should contact Michael Treitel at (410) 786–4552.

1. CMS Wage Data Public Use File

This file contains the hospital hours and salaries from Worksheet S–3, Parts II and III from FY 2015 Medicare cost reports used to create the proposed FY 2019 IPPS wage index. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.L. of the preamble of this proposed rule.

Processing year	Wage data year	PPS fiscal year
2018	2015	2019
2017	2014	2018
2016	2013	2017
2015	2012	2016
2014	2011	2015
2013	2010	2014
2012	2009	2013
2011	2008	2012
2010	2007	2011
2009	2006	2010
2008	2005	2009
2007	2004	2008

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Periods Available: FY 2007 through FY 2019 IPPS Update.

2. CMS Occupational Mix Data Public Use File

This file contains the CY 2016 occupational mix survey data to be used to compute the occupational mix adjusted wage indexes. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.L. of the preamble of this proposed rule.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Period Available: FY 2019 IPPS Update.

3. Provider Occupational Mix Adjustment Factors for Each Occupational Category Public Use File

This file contains each hospital's occupational mix adjustment factors by occupational category. Two versions of these files are created each year to support the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Period Available: FY 2019 IPPS Update.

4. Other Wage Index Files

CMS releases other wage index analysis files after each proposed and final rule.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Periods Available: FY 2005 through FY 2019 IPPS Update.

5. FY 2019 IPPS SSA/FIPS CBSA State and County Crosswalk

This file contains a crosswalk of State and county codes used by the Social Security Administration (SSA) and the Federal Information Processing Standards (FIPS), county name, and a list of Core-Based Statistical Areas (CBSAs).

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2019 IPPS Update.

6. HCRIS Cost Report Data

The data included in this file contain cost reports with fiscal years ending on

or after September 30, 1996. These data files contain the highest level of cost report status.

Media: Internet at: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/Cost-Reports/Cost-Reports-by-Fiscal-Year.html.*

(We note that data are no longer offered on a CD. All of the data collected are now available free for download from the cited website.)

7. Provider-Specific File

This file is a component of the PRICER program used in the MAC's system to compute DRG/MS–DRG payments for individual bills. The file contains records for all prospective payment system eligible hospitals, including hospitals in waiver States, and data elements used in the prospective payment system recalibration processes and related activities. Beginning with December 1988, the individual records were enlarged to include pass-through per diems and other elements.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ProspMedicareFeeSvcPmtGen/psf_text.html.*

Period Available: Quarterly Update.

8. CMS Medicare Case-Mix Index File

This file contains the Medicare case-mix index by provider number as published in each year's update of the Medicare hospital inpatient prospective payment system. The case-mix index is a measure of the costliness of cases treated by a hospital relative to the cost of the national average of all Medicare hospital cases, using DRG/MS–DRG weights as a measure of relative costliness of cases. Two versions of this file are created each year to support the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Periods Available: FY 1985 through FY 2019.

9. MS–DRG Relative Weights (Also Table 5—MS–DRGs)

This file contains a listing of MS–DRGs, MS–DRG narrative descriptions, relative weights, and geometric and arithmetic mean lengths of stay for each fiscal year. Two versions of this file are created each year to support the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Periods Available: FY 2005 through FY 2019 IPPS Update

10. IPPS Payment Impact File

This file contains data used to estimate payments under Medicare's hospital inpatient prospective payment systems for operating and capital-related costs. The data are taken from various sources, including the Provider-Specific File, HCRIS Cost Report Data, MedPAR Limited Data Sets, and prior impact files. The data set is abstracted from an internal file used for the impact analysis of the changes to the prospective payment systems published in the **Federal Register**. Two versions of this file are created each year to support the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Historical-Impact-Files-for-FY-1994-through-Present.html.*

Periods Available: FY 1994 through FY 2019 IPPS Update.

11. AOR/BOR Tables

This file contains data used to develop the MS–DRG relative weights. It contains mean, maximum, minimum, standard deviation, and coefficient of variation statistics by MS–DRG for length of stay and standardized charges. The BOR tables are ''Before Outliers Removed'' and the AOR is ''After Outliers Removed.'' (Outliers refer to statistical outliers, not payment outliers.)

Two versions of this file are created each year to support the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Periods Available: FY 2005 through FY 2019 IPPS Update.

12. Prospective Payment System (PPS) Standardizing File

This file contains information that standardizes the charges used to calculate relative weights to determine payments under the hospital inpatient operating and capital prospective payment systems. Variables include wage index, cost-of-living adjustment (COLA), case-mix index, indirect medical education (IME) adjustment, disproportionate share, and the Core-Based Statistical Area (CBSA). The file supports the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2019 IPPS Update.

13. Hospital Readmissions Reduction Program Supplemental File

This file contains information on the calculation of the Hospital Readmissions Reduction Program (HRRP) payment adjustment. Variables include the proxy excess readmission ratios for acute myocardial infarction (AMI), pneumonia (PN) and heart failure (HF), coronary obstruction pulmonary disease (COPD), total hip arthroplasty (THA)/total knee arthroplasty (TKA), and coronary artery bypass grafting (CABG) and the proxy readmissions payment adjustment for each provider included in the program. In addition, the file contains information on the number of cases for each of the applicable conditions excluded in the calculation of the readmission payment adjustment factors. It also contains MS–DRG relative weight information to estimate the payment adjustment factors. The file supports the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2019 IPPS Update.

14. Medicare Disproportionate Share Hospital (DSH) Supplemental File

This file contains information on the calculation of the uncompensated care payments for FY 2019. Variables include the data used to determine a hospital's share of uncompensated care payments, total uncompensated care payments and estimated per claim uncompensated care payment amounts. The file supports the rulemaking.

Media: Internet at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2019 IPPS Update.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and

approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In this proposed rule, we are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

2. ICRs for Application for GME Resident Slots

The information collection requirements associated with the preservation of resident cap positions from close hospitals, addressed in section IV.L.2. of the preamble of this proposed rule, are not subject to the Paperwork Reduction Act, as stated in section 5506 of the Affordable Care Act.

3. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

The Hospital IQR Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment (RHQDAPU) Program) was originally established to implement section 501(b) of the MMA, Public Law 108–173. The collection of information associated with the original starter set of quality measures was previously approved under OMB control number 0938–0918. All of the information collection requirements previously approved under OMB control number 0938–0918 have been combined with the information collection request currently approved under OMB control number 0938–1022. OMB has currently approved 3,637,282 hours of burden and approximately $133 million under OMB control number 0938–1022, accounting for information collection burden experienced by 3,300 IPPS hospitals and 1,100 non-IPPS hospitals for the FY 2020 payment determination.[387] We no longer use OMB control number 0938–0918. Below, we describe the burden changes with regards to collection of information under OMB control number 0938–1022 for IPPS hospitals due to the proposals in this proposed rule.

In section VIII.A. of the preamble of this proposed rule, we discuss the following proposals that we expect to affect our collection of information burden estimates: (1) eCQM reporting and submission requirements for the CY 2019 reporting period/FY 2021 payment determination; (2) removal of eight chart-abstracted measures beginning with the CY 2019 reporting period/FY 2021 payment determination; and (3) removal of one chart-abstracted measure beginning with the CY 2020 reporting period/FY 2022 payment determination. Details on these proposals, as well as the expected burden changes, are discussed below.

This proposed rule also includes proposals with respect to claims-based measures to: (1) Remove 17 claims-based measures beginning with the CY 2018 reporting period/FY 2020 payment determination; (2) remove two claims-based measures beginning with the CY 2019 reporting period/FY 2021 payment determination; (3) remove one claims-based measure beginning with CY 2020 reporting period/FY 2022 payment determination; (4) remove one claims-based measure beginning with the CY 2021 reporting period/FY 2023 payment determination; (5) remove two structural measures beginning with the CY 2018 reporting period/FY 2020 payment determination; and (6) remove seven eCQMs beginning with CY 2020 reporting period/FY 2022 payment determination. As discussed further below, we do not expect these proposals to affect our information collection burden estimates.

b. Information Collection Burden Estimate for the Proposed Removal of Chart-Abstracted Measures

(1) Information Collection Burden Estimate for the Proposed Removal of Eight Chart-Abstracted Measures Beginning With the CY 2019 Reporting Period/FY 2021 Payment Determination

In sections VIII.A.5.b(2)(b) and VIII.A.5.b.(8)(b) of the preamble of this proposed rule, we are proposing to remove eight chart-abstracted measures (five National Healthcare Safety Network (NHSN)) hospital-acquired infection (HAI) measures and three clinical process of care measures) beginning with the CY 2019 reporting period/FY 2021 payment determination:

- National Healthcare Safety Network Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717);
- National Healthcare Safety Network Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138);
- National Healthcare Safety Network Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139);
- National Healthcare Safety Network Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716);
- American College of Surgeons—Centers for Disease Control and Prevention Harmonized Procedure-Specific Surgical Site Infection (SSI) Outcome Measure (Colon and Abdominal Hysterectomy SSI) (NQF #0753);
- Median Time from ED Arrival to ED Departure for Admitted ED Patients (ED–1) (NQF #0495);
- Influenza Immunization (IMM–2) (NQF #1659); and
- Incidence of Potentially Preventable Venous Thromboembolism (VTE–6).

Because the burden associated with submitting data for the NHSN HAI measures (CDI, CAUTI, CLABSI, MRSA Bacteremia, and Colon and Abdominal Hysterectomy SSI) is captured under separate OMB control number 0920–0666, we do not provide an independent estimate of the information collection burden associated with these measures for the Hospital IQR Program. Because the NHSN HAI measures will be retained in the HAC Reduction Program, we do not anticipate a reduction in data collection and reporting burden associated with the CDC NHSN's OMB control number 0920–0666. We note, however, that we anticipate a reduction in burden associated with the Hospital IQR Program validation activities we conduct for these NHSN HAI measures, as discussed further below.

We anticipate a reduction in information collection burden for all IPPS hospitals of 741,074 hours, or 225 hours per hospital, as a result of our proposals to remove the ED–1 and IMM–2 chart-abstracted measures beginning with the CY 2019 reporting period/FY 2021 payment determination. This estimate was calculated by considering the previously approved information collection burden estimate for reporting the combined global population set (ED–1, ED–2, and IMM–2) of 1,599,074 hours, minus the estimated information collection reporting burden for only the ED–2

[387] The information collection burden associated with submitting data for the HCP and HAI measures (CDI, CAUTI, CLABSI, MRSA Bacteremia, and Colon and Abdominal Hysterectomy SSI) via the CDC's NHSN system is captured under a separate OMB control number, 0920–0666. The information collection burden associated with submitting data for the HCAHPS Survey measure is captured under OMB control number 0938–0981.

measure [388] ([15 minutes per record × 260 records per hospital per quarter × 4 quarters]/60 minutes per hour × 3,300 IPPS hospital = 858,000 hours). Through these calculations (1,599,074 hours − 858,000 hours), we estimate a reduction of 741,074 hours, or 225 hours per hospital per year (741,074 hours/3,300 hospitals) across all IPPS hospitals for the CY 2019 reporting period/FY 2021 payment determination if our proposals to remove the ED–1 and IMM–2 measures from the Hospital IQR Program are finalized as proposed.

We also anticipate our proposal to remove the VTE–6 measure would result in an information collection burden reduction of 304,997 hours for all IPPS hospitals, or 92 hours per hospital, for the CY 2019 reporting period/FY 2021 payment determination. We have previously estimated a reporting burden of 92 hours (7 minutes per record × 198 records per hospital per quarter × 4 quarters/60 minutes) per hospital per year, or 304,997 hours (92 hours per hospital × 3,300 hospitals) across all hospitals associated with abstracting and reporting VTE–6. Therefore, we estimate an information collection burden decrease of 304,997 hours for the CY 2019 reporting period/FY 2021 payment determination if our proposal to remove this measure from the Hospital IQR Program is finalized as proposed.

In summary, if our proposals in section VIII.A.5.b.(8) of the preamble of this proposed rule to remove IMM–2, ED–1, and VTE–6 are finalized as proposed, we estimate an information collection burden reduction of 1,046,071 hours (−741,074 hours for ED–1 and IMM–2 removal + −304,997 hours for VTE–6 removal) and approximately $38.3 million (1,046,071 hours × $36.58 per hour [389]) across all 3,300 IPPS hospitals participating in the Hospital IQR Program for the CY 2019 reporting period/FY 2021 payment determination.

(2) Information Collection Burden Estimate for the Proposed Removal of One Chart-Abstracted Measure Beginning With the CY 2020 Reporting Period/FY 2022 Payment Determination

In section VIII.A.5.b.(8)(b) of the preamble of this proposed rule, we are proposing to remove the ED–2 measure (NQF #0497) beginning with the CY 2020 reporting period/FY 2022 payment determination. We anticipate removing this chart-abstracted measure would reduce the reporting burden for all IPPS hospitals by a total of 858,000 hours, or 260 hours per hospital. As discussed above, we estimate reporting the ED–2 measure takes approximately 260 hours (15 minutes per record × 260 records per hospital per quarter × 4 quarters/60 minutes = 260 hours) per hospital per year, or 858,000 hours (260 hours × 3,300 hospitals) across all IPPS hospitals. We, therefore, estimate an 858,000 hour information collection burden decrease for the CY 2020 reporting period/FY 2022 payment determination as a result of our proposal to remove this measure from the Hospital IQR Program.

In summary, if our proposal in section VIII.A.5.b.(8)(b) of the preamble of this proposed rule to remove ED–2 is finalized as proposed, we estimate an information collection burden reduction of 858,000 hours and approximately $31.4 million (858,000 hours × $36.58 per hour [390]) across all 3,300 IPPS hospitals participating in the Hospital IQR Program for the CY 2020 reporting period/FY 2022 payment determination.

(3) Information Collection Impacts on Data Validation Resulting From Chart-Abstracted Measure Removal

While we are not proposing any changes to our validation requirements related to chart-abstracted measures, if our proposals in section VIII.A.5.b.(2)(b) and section VIII.A.5.b.(8) of the preamble of this proposed rule to remove five NHSN HAIs and four clinical process of care measures are finalized as proposed, we believe that hospitals would experience an overall reduction in information collection burden associated with chart-abstracted measure validation beginning with the FY 2022 payment determination.

As noted in the FY 2016 IPPS/LTCH IPPS final rule (80 FR 49762 and 49763), we reimburse hospitals directly for expenses associated with submission of charts for clinical process of care measure data validation (we reimburse hospitals at 12 cents per photocopied page; for hospitals providing charts digitally via a re-writable disc, such as encrypted CD–ROMs, DVDs, or flash drives, we reimburse hospitals at a rate of 40 cents per disc); we do not believe any additional information collection burden is associated with submitting this information via Web portal or PDF (79 FR 50346). Therefore, because we directly reimburse, we do not anticipate any net change in burden associated with the cost of submission of validation charts as a result of our proposals to remove four clinical process of care measures. Hospitals would no longer be required to submit, or be reimbursed for submitting, these data to CMS.

Because we are proposing to remove all of the NHSN HAI measures from the Hospital IQR Program and because hospitals selected for validation currently are required to submit validation templates for the NHSN HAI measures, we anticipate a reduction in information collection burden under the Hospital IQR Program associated with the NHSN HAI data validation effort. We note that the burden associated with data collection for the NHSN HAI measures (CDI, CAUTI, CLABSI, MRSA Bacteremia, and Colon and Abdominal Hysterectomy SSI) is accounted for under the CDC NHSN OMB control number 0920–0666. Because the NHSN HAI measures will be retained in the HAC Reduction Program, we do not anticipate a change in data collection and reporting burden associated with this OMB control number due to our proposals. The data validation activities, however, are conducted by CMS. Since the measures were adopted into the Hospital IQR Program, CMS has validated the data for purposes of the Program. Therefore, this burden has been captured under the Hospital IQR Program's OMB control number 0938–1022. We have previously estimated a reporting burden of 80 hours (1,200 minutes per record × 1 record per hospital per quarter × 4 quarters/60 minutes) per hospital selected for chart-abstracted measure validation per year to submit the CLABSI and CAUTI templates, and 64 hours (960 minutes per record × 1 record per hospital per quarter × 4 quarters/60 minutes) per hospital selected for chart-abstracted measure validation per year to submit the MRSA and CDI templates. We, therefore, estimate a total validation burden decrease of 43,200 hours ([−80 hours per hospital to submit CLABSI and CAUTI templates + −64 hours per hospital to submit MRSA and CDI templates] × 300 hospitals selected for validation) and approximately $1.6 million (43,200 hours × $36.58 per hour [391]) for the FY 2022 payment

[388] Estimated 15 minutes per case for reporting ED–2 measure based on average Clinical Data Abstraction Center abstraction times for 3Q 2016, 4Q 2016, and 1Q 2017 discharge data.

[389] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[390] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[391] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of

determination because of the removal of these measures from the Hospital IQR Program and the secondary effects on validation. We note that we are proposing that the HAC Reduction Program will begin validation of these NHSN HAI measures as discussed in section IV.J. of the preamble of this proposed rule.

c. Information Collection Burden Estimate for Proposed Removal of Two Structural Measures

In sections VIII.A.5.a. and b.(1) of the preamble of this proposed rule, we are proposing to remove two structural measures (Hospital Survey on Patient Safety Culture and Safe Surgery Checklist Use) beginning with the CY 2018 reporting period/FY 2020 payment determination. We anticipate removing these measures will result in a minimal information collection burden reduction for hospitals. Specifically, we do anticipate a very slight reduction in information collection burden associated with the proposed removal of the Safe Surgery Checklist measure because completion of this measure takes hospitals approximately two minutes each year (77 FR 53666). Similarly, we anticipate a very slight reduction in information collection burden associated with the proposed removal of the Patient Safety Checklist measure (80 FR 49762 through 49873). Consistent with previous years (80 FR 49762), we estimate a collection of information burden of 15 minutes per hospital to report all four previously finalized structural measures and to complete other forms (such as the Extraordinary Circumstances Extension/Exemption Request Form). Therefore, our information collection burden estimate of 15 minutes per hospital remains unchanged because we believe the reduction in information collection burden associated with removing these two structural measures is sufficiently minimal that it will not substantially impact this estimate, and we want to retain a conservative estimate of the information collection burden associated with the use of our forms.

d. Burden Estimate for Proposed Removal of Claims-Based Measures

In section VIII.A.5.b.(2)(a), (3), (4), (6), and (7) of the preamble of this proposed rule, we are proposing to remove the following 17 claims-based measures beginning with the CY 2018 reporting period/FY 2020 payment determination:

- Patient Safety and Adverse Events Composite Measure (PSI 90) (NQF #0531);
- Hospital 30-Day All-Cause Risk-Standardized Readmission Rate Following Acute Myocardial Infarction (AMI) Hospitalization (NQF #0505) (READM–30–AMI);
- Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization (NQF #1891) (READM–30–COPD);
- Hospital 30-Day, All-Cause, Unplanned, Risk-Standardized Readmission Rate Following Coronary Artery Bypass Graft (CABG) Surgery (NQF #2515) (READM–30–CABG);
- Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Heart Failure Hospitalization (NQF #0330) (READM–30–HF);
- Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506) (READM–30–PN);
- 30-day Risk-Standardized Readmission Rate Following Stroke Hospitalization (READ–30–STK;
- Hospital-Level 30-Day, All-Cause Risk-Standardized Readmission Rate Following Elective Primary Total Hip Arthroplasty and/or Total Knee Arthroplasty (NQF #1551) (READM–30–THA/TKA);
- Hospital 30-day, All-Cause, Risk-Standardized Mortality Rate Following Acute Myocardial Infarction (AMI) Hospitalization for Patients 18 and Older (NQF #0230) (MORT–30–AMI);
- Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Heart Failure Hospitalization (NQF #0229) (MORT–30–HF);
- Medicare Spending Per Beneficiary (MSPB)—Hospital (NQF #2158);
- Cellulitis Clinical Episode-Based Payment Measure (Cellulitis Payment);
- Gastrointestinal Hemorrhage Clinical Episode-Based Payment Measure (GI Payment);
- Kidney/Urinary Tract Infection Clinical Episode-Based Payment Measure (Kidney/UTI Payment);
- Aortic Aneurysm Procedure Clinical Episode-Based Payment Measure (AA Payment);
- Cholecystectomy and Common Duct Exploration Clinical Episode-Based Payment Measure (Chole and CDE Payment); and
- Spinal Fusion Clinical Episode-Based Payment Measure (SFusion Payment).

In addition, we are proposing to remove two claims-based measures beginning with the CY 2019 reporting period/FY 2021 payment determination: (1) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization (NQF #1893); and (2) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization (NQF #0468). We also are proposing to remove one claims-based measure, Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Coronary Artery Bypass Graft (CABG) Surgery measure (NQF #2558), beginning with the CY 2020 reporting period/FY 2022 payment determination, and one claims-based measure, Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty and/or Total Knee Arthroplasty, beginning with the CY 2021 reporting period/FY 2023 payment determination.

Because these claims-based measures are calculated using only data already reported to the Medicare program for payment purposes, we do not anticipate that removing these measures will affect information collection burden on hospitals. However, we refer readers to section VIII.A.5.b.(2)(a), (3), (4), (6) and (7) of the preamble of this proposed rule for a discussion of the reduction in costs associated with these measures unrelated to the information collection burden.

e. Information Collection Burden Estimate for Proposed Removal of eCQMs

In section VIII.A.5.b.(9) of the preamble of this proposed rule, we are proposing to remove the following seven eCQMs from the eCQM measure set beginning with the CY 2020 reporting period/FY 2022 payment determination:

- Primary PCI Received within 90 Minutes of Hospital Arrival (AMI–8a);
- Home Management and Plan of Care Document Given to Patient/Caregiver (CAC–3);
- Median Time from ED Arrival to ED Departure for Admitted ED Patients (ED–1) (NQF #0495); [392]
- Hearing Screening Prior to Hospital Discharge (EHDI–1a) (NQF# 1354);
- Elective Delivery (PC–01) (NQF #0469);
- Stroke Education (STK–08); and
- Assessed for Rehabilitation (STK–10) (NQF #0441).

Because these eCQMs being proposed for removal were among a set of 15 eCQMs available for reporting, we believe that reducing the number of

$18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[392] Median Time from ED Arrival to ED Departure for Admitted ED Patients (ED–1) is proposed for removal in both chart-abstracted and eCQM forms.

eCQMs from which hospitals choose would enable hospitals to focus on and maintain a smaller subset of measures (8 instead of 15), but this would not have an effect on the burden of submitting information to CMS. Hospitals will still be required to submit 4 eCQMs of their choice from the eCQM measure set. While the information collection burden would not change, we refer readers to section VIII.A.4.b. of the preamble of this proposed rule where we acknowledge that costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining Program requirements.

f. Information Collection Burden Estimates for the Proposed Updates to the eCQM Reporting Requirements

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38355 through 38361), we finalized eCQM reporting requirements, such that hospitals submit one, self-selected calendar quarter of data for 4 eCQMs in the Hospital IQR Program measure set for the CY 2018 reporting period/FY 2020 payment determination. In section VIII.A.10.d.(2) of the preamble of this proposed rule, we are proposing to require that hospitals continue to submit one, self-selected calendar quarter of data for 4 eCQMs in the Hospital IQR Program measure set for the CY 2019 reporting period/FY 2021 payment determination. Therefore, we believe the burden estimate of 40 minutes per hospital per year (10 minutes per record × 4 eCQMs × 1 quarter) associated with eCQM reporting requirements finalized for the CY 2018 reporting period/FY 2020 payment determination will also apply to the CY 2019 reporting period/FY 2021 payment determination.

g. Information Collection Burden Estimate for the Proposed Modifications to EHR Certification Requirements

In section VIII.A.10.d.(3) of the preamble of this proposed rule, we are proposing to update the EHR certification requirements by requiring the use of EHR technology certified to the 2015 Edition beginning with the CY 2019 reporting period/FY 2021 payment determination, to align with the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs) for eligible hospitals and CAHs. We do not expect this proposal to affect our information collection burden estimates because this proposal does not require hospitals to submit new data to CMS. With respect to any costs unrelated to data submission, we refer readers to Appendix I.K. of the preamble of this proposed rule.

h. Summary of Information Collection Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022, we estimate: (1) A total information collection burden reduction of 1,046,138 hours (−1,046,071 hours due to the proposed removal of ED–1, IMM–2, and VTE–6 measures for the CY 2019 reporting period/FY 2021 payment determination and −67 hours for no longer collecting data for the voluntary Hybrid HWR measure [393]) and a total cost reduction related to information collection of approximately $38.3 million (−1,046,138 hours × $36.58 per hour [394]) for the CY 2019 reporting period/FY 2021 payment determination; and (2) a total information collection burden reduction of 901,200 hours (−858,000 hours due to the proposed removal of ED–2—43,200 hours due to no longer needing to validate NHSN HAI measures under the Hospital IQR Program) and a total information collection cost reduction of approximately $33 million (−901,200 hours × $36.58 per hour [395]) for the CY 2020 reporting period/FY 2022 payment determination. These are the total information collection burden reduction estimates for which we are requesting OMB approval under OMB number 0938–1022.

HOSPITAL IQR PROGRAM CY 2019 REPORTING PERIOD/FY 2021 PAYMENT DETERMINATION INFORMATION COLLECTION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control No. 0938–1022 for CY 2019 reporting period/FY 2021 payment Determination							
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly proposed annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours
Reporting on Emergency department throughput (ED–1)/Immunizations (IMM–2)	13	4	3,300	260	225	858,000	1,599,074	−741,074
Venous thromboembolism (VTE)	7	4	3,300	198	92	0	304,997	−304,997
Voluntary HWR Reporting [396]	10	4	100	1	0.67	0	67	−67

Total Change in Information Collection Burden Hours: −1,046,138.
Total Cost Estimate: Updated Hourly Wage ($36.58) × Change in Burden Hours (−1,046,138) = −$38,267,728.

[393] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38350 through 38355), we finalized our proposal to collect data on a voluntary basis for the Hybrid HWR measure for the CY 2018 reporting period/FY 2020 payment determination. We estimated that approximately 100 hospitals would voluntarily report data for this measure, resulting in a total burden of 67 hours across all hospitals for the CY 2018 reporting period/FY 2020 payment determination (82 FR 38504). Because we only finalized voluntary collection of data for one year, voluntary collection of this data would no longer occur, beginning with the CY 2019 reporting period/FY 2021 payment determination and subsequent years, resulting in a reduction in burden of 67 hours across all hospitals.

[394] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[395] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

HOSPITAL IQR PROGRAM CY 2020 REPORTING PERIOD/FY 2022 PAYMENT DETERMINATION INFORMATION COLLECTION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control No. 0938–1022 for CY 2020 reporting period/FY 2022 payment determination							
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly proposed annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours
Reporting on Emergency department throughput (ED–2 only)	15	4	3,300	260	260	0	858,000	−858,000
HAI Validation Templates (CLABSI, CAUTI)	1,200	4	300	1	80	0	24,000	−24,000
HAI Validation Templates (MRSA, CDI)	960	4	300	1	64	0	19,200	−19,200
Total Change in Information Collection Burden Hours: −901,200								
Total Cost Estimate: Updated Hourly Wage ($36.58) × Change in Burden Hours (−901,200) = $32,965,896								

4. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

a. Background

As discussed in sections VIII.B. of the preamble of this proposed rule, section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate. Below we discuss only changes in burden that would result from the proposals in this proposed rule.

b. Proposed Revision of Time Estimate for Structural and Web-Based Tool Measures for the FY 2021 Program Year and Subsequent Years

In this proposed rule, we are proposing a revision to our burden calculation methodology. With all the parameters considered when PCHs submit data on PCHQR Program measures (training of appropriate staff members on National Healthcare Safety Network (NHSN) reporting and the CMS Web Measures Tool for the reporting of the clinical process/oncology care measures; the time required for collection and aggregation of data; and the time required for reporting of the data by the PCH's representative), we strive to achieve continuity in how we calculate and analyze burden data. In prior years, we have based our burden estimates on the notion that all 11 PCHs would report on all measures for all cases (78 FR 50958). These assumptions were made in order to be as comprehensive as possible given a lack of PCH-specific data available at the time. However, we believe it is more appropriate to use estimates developed using data available in other quality reporting programs wherever possible, because we believe these estimates will provide a more accurate estimate of burden associated with data collection and reporting. Our proposal to update the estimate the time required to collect and report data for structural measures and measures that use a web-based tool is discussed below.

We initially adopted five clinical process/cancer specific treatment measures that utilized a web-based tool for the FY 2016 program year in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50841 through 50844). In that rule, we did not specify burden estimates based on the measure type, but instead provided estimates ''for submitting all quality measure data'' (78 FR 50958). Since then, we have been able to better understand and differentiate the various levels of effort associated with data abstraction and submission for specific types of measures. Moreover, in understanding that certain measure types prove more burdensome than others (that is, chart-abstracted measures), we believe it is necessary to provide burden estimates that better reflect with the type of measure being discussed.

Using historical data from its validation contractor, the Hospital IQR Program has previously estimated that it takes 15 minutes per hospital to report on four structural measures (80 FR 49762). We believe this estimate is appropriate for the PCHQR Program because data submission for measures that utilize a web-based tool is similar to the data submission for a structural measure, in that both types of measures use the same reporting mechanism, the QualityNet Secure Portal. In addition, we wish to account for the time associated with data collection and aggregation for individual measures when considering burden, and believe 15 minutes per measure is an appropriately conservative estimate for the measures submitted via a web-based tool in the PCHQR Program. Therefore, we are proposing to apply this burden estimate to four measures that utilize a web-based tool: (1) Oncology: Radiation Dose Limits to Normal Tissues (PCH–14/NQF #0382); (2) Oncology: Medical and Radiation—Pain Intensity Quantified (PCH–16/NQF #0384); (3) Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (PCH–17/NQF #0390); and (4) Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (PCH–18/NQF #0389).

We are inviting public comment on our proposal to utilize a burden estimate of 15 minutes per measure, per PCH, with respect to the burden estimates we discuss below for the FY 2021 program year and subsequent years.

[396] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38350 through 38355), we finalized our proposal to collect data on a voluntary basis for the Hybrid HWR measure for the CY 2018 reporting period/FY 2020 payment determination. We estimated that approximately 100 hospitals would voluntarily report data for this measure, resulting in a total burden of 67 hours across all hospitals for the CY 2018 reporting period/FY 2020 payment determination (82 FR 38504). Because we only finalized voluntary collection of data for one year, voluntary collection of this data would no longer occur beginning with the CY 2019 reporting period/FY 2021 payment determination and subsequent years resulting in a reduction in burden of 67 hours across all hospitals.

c. Estimated Burden of PCHQR Program Proposals for the FY 2021 Program Year

In section VIII.B.3. of the preamble of this proposed rule, we are proposing to remove six measures beginning with the FY 2021 program year—four web-based, structural measures: (1) Oncology: Radiation Dose Limits to Normal Tissues (PCH–14/NQF #0382); (2) Oncology: Medical and Radiation—Pain Intensity Quantified (PCH–16/NQF #0384); (3) Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (PCH–17/NQF #0390); (4) Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (PCH–18/NQF #0389), and two chart-abstracted, NHSN measures: (5) NHSN Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (PCH–5/NQF #0138) and (6) NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (PCH–4/NQF #0139). In addition, in section VIII.B.4.b. of the preamble of this proposed rule, we are proposing to adopt one claims-based measure, 30-Day Unplanned Readmissions for Cancer Patients (NQF #3188), beginning with the FY 2021 program year. If these proposals are finalized, the PCHQR Program measure set would consist of 13 measures for the FY 2021 program year.

We anticipate our proposal to remove four web-based, structural measures will reduce the burden associated with quality reporting on PCHs. If our proposal to apply the burden estimate of 15 minutes per measure to the four web-based, structural measures is finalized as proposed, we estimate a reduction of 1 hour (or 60 minutes) per PCH (15 minutes per measure × 4 measures = 60 minutes), and a total annual reduction of approximately 11 hours for all 11 PCHs (60 minutes × 11 PCHs/60 minutes per hour), due to the proposed removal of these four measures.

We anticipate that the proposed removal of the two NHSN measures: (1) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (PCH–5/NQF #0138) and (2) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (PCH–4/NQF #0139) will result in a burden decrease. Historically, we have accounted for the burden associated with collecting and reporting data for the Catheter-Associated Urinary Tract Infections (CAUTI) and Central Line-Associated Bloodstream Infection (CLABSI) National Healthcare Safety Network measures as though they were standalone chart-abstracted measures.[397] Specifically, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we originally estimated the burden for reporting three chart-abstracted cancer measures and two NHSN CDC measures (CLABSI and CAUTI) at approximately 6,293.5 hours annually for each PCH, or 69,228.5 burden hours annually for all 11 PCHs. Using this estimate, we estimated 1,259 burden hours per measure (6,294 hours/5 measures = 1,258.8 hours per measure). As such, if our proposal to remove the CAUTI and CLABSI measures is finalized as proposed, we estimate an annual burden reduction of 2,518 hours per PCH (1,259 hours × 2 measures = 2,518 hours) and an annual burden reduction of 27,698 hours across all eleven PCHs (2,518 hours per PCH × 11 PCHs = 27,698 hours).

We do not anticipate any increase in burden on PCHs related to our proposal to adopt the claims-based 30-Day Unplanned Readmissions for Cancer Patients measure (NQF #3188) beginning with the FY 2021 program year. Because this measure is claims-based and therefore does not require facilities to submit any additional data, we do not believe there is any increase in burden associated with this proposal.

In summary, if our proposals to remove six measures and to modify our burden estimation methodology for measures that utilize a web-based submission tool are finalized as proposed, we estimate a total reduction of 27,709 hours of burden per year for all 11 PCHs (−27,698 hours for the removal of the CAUTI & CLABSI measures − 11 hours for the removal of the four web-based, structural measures = 27,709 total hours) beginning with the FY 2021 program year. Coupled with our estimated salary costs, we estimate that these proposed changes would result in a reduction in annual labor costs of $1,013,595 (27,709 hours × $36.58 hourly labor cost[398]) across the 11 PCHs beginning with the FY 2021 PCHQR Program. The burden associated with these reporting requirements is currently approved under OMB control number 0938–1175. The information collection will be revised and submitted to OMB.

5. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IV.I. of the preamble of this proposed rule, we discuss proposed requirements for the Hospital VBP Program. Specifically, in this proposed rule, with respect to quality measures, we are proposing to remove four claims-based measures effective with the effective date of the FY 2019 IPPS/LTCH PPS final rule. Because these claims-based measures are calculated using only data already reported to the Medicare program for payment purposes, we do not anticipate removing these measures will increase or decrease the reporting burden on hospitals. However, we believe removal of these measures from the Hospital VBP Program will reduce other costs associated with the program, such as: (1) Costs for health care providers and clinicians to track the confidential feedback preview reports and publicly reported information on the measures in more than one program; (2) costs for CMS to analyze, and publicly report the measure data in multiple programs; and (3) confusion for beneficiaries to see public reporting on the same measures in different programs.

In addition, in this proposed rule, we are proposing to remove six chart-abstracted measures beginning with the FY 2021 program year. Because these chart-abstracted measures used data required for and collected under the Hospital IQR Program (OMB control number 0938–1022), there was no additional data collection burden associated these measures under the Hospital VBP Program. Therefore, we do not anticipate removing these measures will increase or decrease the reporting burden on hospitals. However, we believe removal of these measures from the Hospital VBP Program will reduce other costs associated with the program, such as: (1) Costs for health care providers and clinicians to track the confidential feedback preview reports and publicly reported information on the measures in more than one program; (2) costs for CMS to analyze, and publicly report the measures' data in multiple programs; and (3) confusion for beneficiaries to see public reporting on the same measures in different programs. We note that we are proposing to remove seven claims-based measures from the Hospital IQR

[397] We note that the Centers for Disease Control and Prevention (CDC), the owner of the NHSN system, maintains its own OMB control number, 0920–0666, that estimates the burden associated with reporting data for the measures retained in the PCHQR program, that utilize the NHSN system. We have not independently accounted for the burden associated with adopting subsequent measures utilizing the NHSN system (that is, Colon and Abdominal Hysterectomy SSI; CDI; MRSA Bacteremia; and Influenza Vaccination Coverage Among Healthcare Personnel (HCP) measures) because the burden associated with reporting these measures is captured under the aforementioned OMB control number.

[398] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38504 through 38505), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

Program, which have been finalized previously for, and will remain in, the Hospital VBP Program. However, we do not believe retaining these claims-based measures in the Hospital VBP Program will create any additional burden for hospitals because the measure data will continue to be collected using Medicare FFS claims hospitals are already submitting to the Medicare program for payment purposes.

6. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As discussed in section VIII.C.5. of the preamble of this proposed rule, we are proposing to remove two measures from the LTCH QRP beginning with the FY 2020 LTCH QRP and to remove one measure from the LTCH QRP beginning with the FY 2021 LTCH QRP.

In section VIII.C.5.a. and b. of the preamble of this proposed rule, we are proposing to remove two CDC NHSN measures: National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716) and National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure—beginning with the FY 2020 LTCH QRP. LTCHs would no longer be required to submit data on these measures beginning with October 1, 2018 admissions and discharges. As a result, the burden and cost specifically for LTCHs for complying with the requirements of the LTCH QRP would be reduced. While the overall burden estimates are accounted for under OMB control number (0920–0666), to specifically account for burden reductions, the CDC provided more detailed estimates for LTCH reporting on the data for the measures we are proposing to remove.

Based on estimates provided by the CDC, which is based on the frequency of actual reporting on such data, we estimate that the removal of the National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716) would result in a 3-hour (15 minutes per MRSA submission × 12 estimated submissions per LTCH per year) reduction in clinical staff time annually to report data, which equates to a decrease of 1,260 hours (3 hours burden per LTCH per year × 420 total LTCHs) in burden for all LTCHs. Given 10 minutes of registered nurse time at $69.40 per hour, and 5 minutes of medical records or health information technician time at $39.86 per hour, for the submission of MRSA data to the NHSN per LTCH per year, we estimate that the total cost of complying with the requirements of the LTCH QRP would be reduced by $178.66 per LTCH annually, or $75,037.20 for all LTCHs annually.

Applying the same approach on burden reduction estimations, we estimate that the removal of the National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure from the LTCH QRP would result in a 4.4 hour (22 minutes per VAE submission × 12 estimated submissions per LTCH per year) reduction in clinical staff time to report data, which equates to a decrease of 1,848 hours (4.4 hours burden per LTCH per year × 420 total LTCHs) in burden for all LTCHs. Given the registered nurse hourly rate of $69.40 per hour, and medical records or health information technician rate of $39.86 per hour for the submission of VAE data to the NHSN per LTCH per year, we estimate that the total cost of complying with the LTCH QRP would be reduced by $293.54 per LTCH annually, or $123,288.48 for all LTCHs annually.

In addition, in section VIII.C.5.c. of the preamble of this proposed rule, we are proposing to remove the measure, Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680), beginning with the FY 2021 LTCH QRP. LTCHs would no longer be required to submit data on this measure beginning with October 1, 2018 admissions and discharges. As a result, the estimated burden and cost for LTCHs for complying with requirements of the LTCH QRP would be reduced. Specifically, we believe that there would be a 1.8 minute reduction in clinical staff time to report data per patient stay. We estimate 136,476 discharges from 420 LTCHs annually. This equates to a decrease of 4,094 hours in burden for all LTCHs (0.03 hours per assessment × 136,476 discharges). Given 1.8 minutes of registered nurse time at $69.40 per hour completing an average of 325 sets of LTCH CARE Data Set assessments per LTCH per year, we estimate that the total cost would be reduced by $676.53 per LTCH annually, or $284,143.03 for all LTCHs annually. This decrease in burden will be accounted for in the information collection under OMB control number 0938–1163.

Overall, the cost associated with the proposed changes to the LTCH QRP is estimated at a reduction of $1,148.73 per LTCH annually or $482,468.71 for all LTCHs.

7. ICRs Relating to the Hospital-Acquired Condition (HAC) Reduction Program

In section IV.J. of the preamble of this proposed rule, we discuss proposed requirements for the HAC Reduction Program. In this proposed rule, we are not proposing to adopt any new measures into the HAC Reduction Program. However, the Hospital IQR Program is proposing to remove the claims-based Patient Safety and Adverse Events Composite (PSI 90) and five NHSN HAI measures (CDI, CAUTI, CLABSI, MRSA, and SSI). These measures had been previously adopted for, and will remain in, the HAC Reduction Program.

We do not believe that retaining the claims-based PSI 90 measure in the HAC Reduction Program will create any additional burden for hospitals because it will continue to be collected using Medicare FFS claims hospitals are already submitting to the Medicare program for payment purposes.

We note the burden associated with collecting and submitting data for the HAI measures (CDI, CAUTI, CLABSI, MRSA, and Colon and Abdominal Hysterectomy SSI) via the NHSN system is captured under a separate OMB control number, 0920–0666, and therefore will not impact our burden estimates.

We anticipate the proposed discontinuation of the HAI measure validation process under the Hospital IQR Program will result in a net burden decrease to the Hospital IQR Program, but will result in an off-setting net burden increase to the HAC Reduction Program because hospitals selected for validation will continue to be required to submit validation templates for the HAI measures. Therefore, if our proposals in section VIII.A.5.b.(2)(b) of the preamble of this proposed rule to remove the HAI chart-abstracted measures from the Hospital IQR Program are adopted, data validation for the measures will transfer to the HAC Reduction Program, and this is will result in a net neutral transfer of 43,200 hours and approximately $1.6 million with no overall net increase in burden.

Under the Hospital IQR Program, we have previously estimated a reporting burden of 80 hours (1,200 minutes per record × 1 record per hospital per quarter × 4 quarters/60 minutes) per hospital selected for validation per year to submit the CLABSI and CAUTI templates, and 64 hours (960 minutes per record × 1 record per hospital per quarter × 4 quarters/60 minutes) per hospital selected for validation per year to submit the MRSA and CDI templates.

We therefore estimate a total burden shift of 43,200 hours ([80 hours per hospital to submit CLABSI and CAUTI templates + 64 hours per hospital to submit MRSA and CDI templates] × 300 hospitals selected for validation) and approximately $1.6 million (43,200 hours × $36.58 per hour [399]) as a result of our proposals to discontinue HAI validation under the Hospital IQR Program and begin a validation process under the HAC Reduction Program.

8. ICRs Relating to the Hospital Readmissions Reduction Program

In section IV.H. of the preamble of this proposed rule, we discuss proposed requirements for the Hospital Readmissions Reduction Program. In this proposed rule, we are not proposing to adopt any new measures into the Hospital Readmissions Reduction Program. However, we are proposing to remove six claims-based measures from the Hospital IQR Program, which have been finalized previously for, and will remain in, the Hospital Readmissions Reduction Program. We do not believe that these claims-based measures remaining in the Hospital Readmissions Reduction Program will create any additional burden for hospitals because they will continue to be collected using Medicare FFS claims hospitals are already submitting to the Medicare program for payment purposes.

9. ICRs for the Promoting Interoperability Programs

a. Background and Proposed Update to Hourly Wage Rate

In section VIII.D. of the preamble of this proposed rule, we are proposing a new performance-based scoring methodology and changes to the Stage 3 objectives and measures for eligible hospitals and CAHs that attest to CMS for the Medicare Promoting Interoperability Program. We are also proposing: To change the EHR reporting period in CYs 2019 and 2020; to establish the CQM reporting period and criteria for CY 2019, proposing the removal of eight CQMs beginning in CY 2020; and to codify the policies for subsection (d) Puerto Rico hospitals to participate in the Medicare Promoting Interoperability Program for eligible hospitals, including policies previously implemented through program instruction. We are retaining the requirement for the 2015 Edition of CEHRT to be used beginning in CY 2019.

In prior rules (81 FR 57260), we have estimated that the electronic reporting of CQM data could be accomplished by staff with a mean hourly wage of $16.42 per hour.[400] Because this wage rate is based on Bureau of Labor Statistics (BLS) data dating to 2012, we are proposing to update the wage rate to the most recent data available from the BLS, which is the 2016 wage rate of $19.93.[401] We are calculating the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage. This is an estimated adjustment, since both fringe benefits and overhead costs vary significantly from employer-to-employer and the methods of estimating such costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($19.44 × 2 = $39.86) to estimate total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs. We refer readers to the Hospital IQR Program discussion in section XIV.B.3. of the preamble of this proposed rule, above, for more information regarding the information collection burden related to reporting of CQMs.

b. Burden Estimates

In sections VIII.D.5. and 6. of the preamble of this proposed rule, we are proposing a new scoring methodology for eligible hospitals and CAHs that attest to CMS for the Promoting Interoperability Program, and the addition of two new opioid measures that would be optional in 2019. This scoring approach would require eligible hospitals and CAHs to report by attestation on only six measures. We consider this scoring methodology to be based more on performance and not solely on whether an eligible hospital or CAH meets the thresholds for measures. We estimate that the new scoring methodology would reduce the necessary response time by .25 hours. This is a reduction to the previous burden estimate provided in the 2015 EHR Incentive Programs final rule (80 FR 62928). We are updating the burden estimate to take into account the reduced burden associated with the proposed new requirements for eligible hospitals and CAHs for Stage 3 of meaningful use. We believe the burden would be different for eligible hospitals that attest to a State for purposes of receiving a Medicaid incentive payment because the existing Stage 3 requirements would continue to apply to them. We note that under section 101(b)(1) of the Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10), the Medicare EHR Incentive Program was sunset for EPs in 2018, and now many of these EPs are subject to the requirements of the Quality Payment Program (QPP). Currently the burden is estimated at $388,408,189 annually. We estimate the burden for all participants in the Medicare and Medicaid Promoting Interoperability Programs represents a total cost of $61,113,527.80, which is a reduction of $327,294,661 annually. We also note that the currently approved burden in hours are 4,230,155 and as a result of this proposal we believe it will be reduced to 623,562.19 hours. This burden reduction would occur as a result of the reduced numbers of EPs and the new scoring methodology for eligible hospitals and CAHs proposed in this proposed rule. The burden estimate includes subsection (d) Puerto Rico hospitals. Below is the burden table where we take into account these changes and the burden that would ensue as a result of the changes. Please note that the information collection request (OMB Control number 0938–1278) is being revised and will be submitted to OMB.

BURDEN AND COST ESTIMATES ASSOCIATED WITH INFORMATION COLLECTION

Reg section	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total cost ($)
§ 495.24(d)—Objectives/Measures (Medicaid EPs)	80,000	80,000	7.43	594,400	100	$59,440,000

[399] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[400] Occupational Outlook Handbook. Available at: *http://www.bls.gov/oes/2012/may/oes292071.htm.*

[401] Occupational Outlook Handbook. Available at: *https://www.bls.gov/oes/current/oes292071.htm.*

BURDEN AND COST ESTIMATES ASSOCIATED WITH INFORMATION COLLECTION—Continued

Reg section	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total cost ($)
§ 495.24(d)—Objectives/Measures Medicaid (eligible hospitals/CAHs) ...	133	133	7.43	988.19	67.25	66,455.78
§ 495.24(e)—Objectives/Measures Medicare (eligible hospitals/CAHs) ..	3300	3300	7.18	23,694	67.25	1,593,421.50
§ 495.316—Quarterly Reporting (Medicaid)	56	224	20	4,480	3.047	13,650.56
Totals	83,489	83,489	.....	623,562.19	.....	$61,113,527.80

There are 3,300 eligible hospitals and CAHs that attest to CMS (Medicare-only and dual-eligible) under the Medicare Promoting Interoperability Program. Therefore, the total estimated annual cost burden for all eligible hospitals and CAHs in the Medicare Promoting Interoperability Program to attest to meaningful use would be $,1,593,421.5 (3,300 eligible hospitals and CAHs × 7 hours 18 minutes × $67.25).[402]

We are proposing that the new scoring methodology and changes to the Stage 3 objectives and measures for eligible hospitals and CAHs that attest to CMS would be optional for States to implement through changes to their State Medicaid HIT Plans approved by CMS for eligible hospitals participating in their Medicaid Promoting Interoperability Program. If States choose not to align, eligible hospitals in those States would continue to attest to the objectives and measures as currently specified under § 495.24(d). Extending this option to States would allow them flexibility to benefit from the improvements to meaningful use scoring outlined in this proposed rule, if they so choose. If States choose to take this option, we anticipate the same burden reduction for Medicaid eligible hospitals as discussed above, but a significant burden increase for States that would have to overhaul their systems to collect data. If States do not take the option, they would face no burden increase or decrease.

In section VIII.D.7. of the preamble of this proposed rule, we are proposing the EHR reporting periods in CYs 2019 and 2020 for new and returning participants attesting to CMS or their State Medicaid agency would be a minimum of any continuous 90-day period within each of the CYs 2019 and 2020. This would mean that EPs that attest to a State for the State's Medicaid Promoting Interoperability Program and eligible hospitals and CAHs attesting to CMS or the State's Medicaid Promoting Interoperability Program would attest to meaningful use of CEHRT for an EHR reporting period of a minimum of any continuous 90-day period from January 1, 2019 through December 31, 2019 and from January 1, 2020 through December 31, 2020, respectively. The applicable incentive payment year and payment adjustment years for the EHR reporting periods in 2019 and 2020, as well as the deadlines for attestation and other related program requirements, would remain the same as established in prior rulemaking. We are proposing corresponding changes to the definition of ''EHR reporting period'' and ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4. We do not expect these proposals to affect our burden estimates because we have never required a different EHR reporting period.

In section VIII.D.9. of the preamble of this proposed rule we are proposing that the reporting period for Medicare and Medicaid eligible hospitals and CAHs that report CQMs electronically would be one, self-selected calendar quarter of CY 2019 data. We are proposing that eligible hospitals and CAHs participating in only the EHR Program, or participating in both the Promoting Interoperability Programs and the Hospital IQR Program, report on at least 4 self-selected CQMs. We are also proposing to remove eight CQMs beginning in 2020. We believe to report on the 4 self-selected CQMs electronically would cost ($39.86 × 40 min) 1,594.4 per hospital times 3,300 hospitals results in a total burden of $5,261,520 for all eligible hospitals and CAHs.

In section VIII.D.10. of the preamble of this proposed rule, we are proposing to incorporate into our regulations program guidance regarding subsection (d) Puerto Rico hospitals. Because we are not proposing any new requirements, we do not believe that these proposals will affect burden.

In section VIII.D.12.a. of the preamble of this proposed rule, we are proposing to amend 45 CFR 495.324(b)(2) and 495.324(b)(3) to align with current prior approval policy for MMIS and ADP systems at 45 CFR 95.611(a)(2)(ii), and (b)(2)(iii) and (iv), and to minimize burden on States. Specifically, we are proposing that the prior approval dollar threshold in § 495.324(b)(3) would be increased to $500,000, and that a prior approval threshold of $500,000 would be added to § 495.324(b)(2). In addition, in light of these proposed changes, we are proposing a conforming amendment to amend the threshold in § 495.324(d) for prior approval of justifications for sole source acquisitions to be the same $500,000 threshold. That threshold is currently aligned with the $100,000 threshold in current § 495.324(b)(3). Amending § 495.324(d) to preserve alignment with § 495.324(b)(3) would reduce burden on States and maintain the consistency of our prior approval requirements. We believe that this proposal would reduce burden on States by raising the prior approval thresholds and generally aligning them with the thresholds for prior approval of MMIS and ADP acquisitions costs.

In section VIII.D.12.b. of the preamble of this proposed rule, we are proposing that the 90 percent FFP for Medicaid Promoting Interoperability Program administration would no longer be available for most State expenditures incurred after September 30, 2022. We are proposing a later sunset date, September 30, 2023, for the availability of 90 percent enhanced match for State administrative costs related to Medicaid Promoting Interoperability Program audit and appeals activities, as well as costs related to administering incentive payment disbursements and recoupments that might result from those activities. States would not be able to claim any Medicaid Promoting Interoperability Program administrative match for expenditures incurred after September 30, 2023. We do not believe that these proposals would impose any

[402] *https://www.bls.gov/oes/current/oes231011.htm.*

additional burdens on States, because they only affect the timing of State expenditures.

We are requesting public comments on these information collection and recordkeeping requirements.

10. ICRs for Proposed Revisions to the Supporting Documentation Requirements for Medicare Cost Reports

In section IX.B.1. of the preamble of this proposed rule, we are proposing to incorporate the Provider Cost Reimbursement Questionnaire, Form CMS–339 (OMB No. 0938–0301) into the Organ Procurement Organization (OPO) and Histocompatibility Laboratory cost report, Form CMS–216 (OMB No. 0938–0102), which would complete our incorporation of the Form CMS–339 into all Medicare cost reports. We also are proposing to update § 413.24(f)(5)(i) to reflect that an acceptable cost report would no longer require the provider to separately submit a Provider Cost Reimbursement Questionnaire, Form CMS–339, by removing the reference to the questionnaire.

There are 58 OPOs and 47 histocompatibility laboratories. This proposal would not require additional data collection from OPOs or histocompatibility laboratories. This proposal would benefit OPOs and histocompatibility laboratories because they would no longer be required to complete and submit the Form CMS–339 as a separate form independent of the Medicare cost report in order to have an acceptable cost report submission under § 413.24(f)(5)(i).

Currently, all OPOs and histocompatibility laboratories are required to complete Form CMS–339. The proposal to incorporate the Provider Cost Reimbursement Questionnaire, Form CMS–339, into the OPO and Histocompatibility Laboratory cost report would eliminate the requirement to complete the Form CMS–339. The estimated annual burden associated with Form CMS–339 is 3 hours per respondent. The time required by an OPO or a histocompatibility laboratory to complete the Form CMS–339 would be reduced if it is incorporated into the cost report. The incorporation of the Form CMS–339 into the cost report as a cost report worksheet would decrease burden upon OPOs and histocompatibility laboratories. These entities would no longer be required to review multiple pages of questions not applicable to them. This proposal would result in an overall burden reduction to the 58 OPOs and 47 histocompatibility laboratories of a total of 289 hours.

Instead, these entities would be required to respond to 5 questions, which we estimate would take 15 minutes per entity. The total estimated burden across all respondents would be 26 hours ((105 respondents) × (0.25 hours/response)). By eliminating the requirement to complete the inapplicable parts of the Form CMS–339, each OPO or histocompatibility laboratory would experience a net burden decrease of 2.75 hours.

Based on the most recent Bureau of Labor Statistics (BLS) 2016 Occupational Outlook Handbook, the mean hourly wage for Category 43–3031 (bookkeeping, accounting, and auditing clerk) is $19.34. We added 100 percent of the mean hourly wage to account for fringe benefits and overhead, which calculates to a total hourly wage of $38.68 ($19.34 + $19.34). The overall decrease in costs to the 58 OPOs and 47 histocompatibility laboratories is $11,178.52 ($38.68 × 289 hours).

In section IX.B.6. of the preamble of this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, in order for a provider claiming costs on its cost report that are allocated from a home office or chain organization to have an acceptable cost report submission under § 413.24(f)(5), a Home Office Cost Statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report must be submitted as a supporting document with the provider's cost report. With our proposal, we anticipate that more providers claiming costs on their cost reports that are allocated from a home office or chain organization will submit a Home Office Cost Statement with their cost reports in order to have an acceptable cost report submission. Based on the most recent available FY 2016 data in CMS' System for Tracking Audit and Reimbursement, there were approximately 94 providers that claimed costs on their cost reports that were allocated from approximately 13 home offices or chain organizations, but did not submit a Home Office Cost Statement with their cost reports to substantiate these allocated costs.

Because the existing burden estimate for a provider's cost report already reflects the requirement that providers collect, maintain, and submit this data, there is no additional burden placed upon providers as a result of our proposal to require them to submit these supporting documents along with their cost report in order to have an acceptable cost report submission. To account for the anticipated increase in home office cost statement submissions, we will adjust the number of respondents in the Home Office Cost Statement (OMB Control number 0938–0202) information collection request that is currently being developed for reinstatement.

C. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this proposed rule, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document.

List of Subjects

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Electronic health records, Health facilities, Health professions, Health maintenance organizations (HMO), Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble of this proposed rule, the Centers for Medicare and Medicaid Services is proposing to amend 42 CFR chapter IV as set forth below:

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 is revised to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh); secs. 123 and 124 of subtitle A of Title I of Pub. L. 106–113 (113 Stat. 1501A–332); sec. 307 of Subtitle A of Title III of Pub. L. 106–554; sec. 114 of 110–173; sec. 4302 of Pub. L. 111–5; secs. 3106 and 10312 of Pub. L. 111–148; sec. 1206 of Pub. L. 113–67; sec. 112 of Pub. L. 113–93; sec. 231 of Pub. L.

114–113; secs. 15004, 15006, 15007, 15008, 15009, and 15010 of Pub. L. 114–255; and sec. 51005 of Division E of Title X of Pub. L. 115–123.

■ 2. Section 412.3 is amended by revising paragraph (a) to read as follows:

§ 412.3 Admissions.

(a) For purposes of payment under Medicare Part A, an individual is considered an inpatient of a hospital, including a critical access hospital, if formally admitted as an inpatient pursuant to an order for inpatient admission by a physician or other qualified practitioner in accordance with this section and §§ 482.24(c), 482.12(c), and 485.638(a)(4)(iii) of this chapter for a critical access hospital. In addition, inpatient rehabilitation facilities also must adhere to the admission requirements specified in § 412.622.

* * * * *

■ 3. Section 412.4 is amended by adding paragraph (c)(4) to read as follows:

§ 412.4 Discharges and transfers.

* * * * *

(c) * * *

(4) For discharges occurring on or after October 1, 2018, to hospice care by a hospice program.

* * * * *

■ 4. Section 412.22 is amended by adding paragraph (h)(2)(iii)(A)(*4*) to read as follows:

§ 412.22 Excluded hospitals and hospital units: General rules.

* * * * *

(h) * * *

(2) * * *

(iii) * * *

(A) * * *

(*4*) On or after October 1, 2018, a satellite facility that is part of a hospital excluded from the prospective payment systems specified in § 412.1(a)(1) that provides inpatient services in a building also used by another hospital that is excluded from the prospective payment systems specified in § 412.1(a)(1), or in one or more entire buildings located on the same campus as buildings used by another hospital that is excluded from the prospective payment systems specified in § 412.1(a)(1), is not required to meet the criteria specified in paragraphs (h)(2)(iii)(A)(*1*) through (*3*) of this section in order to be excluded from the inpatient prospective payment system. A satellite facility that is part of a hospital excluded from the prospective payment systems specified in § 412.1(a)(1) which is located in a building also used by another hospital that is not excluded from the prospective payment systems specified in § 412.1(a)(1), or in one or more entire buildings located on the same campus as buildings used by another hospital that is not excluded from the prospective payment systems specified in § 412.1(a)(1), is required to meet the criteria specified in paragraphs (h)(2)(iii)(A)(*1*) through (*3*) of this section in order to be excluded from the prospective payment systems specified in § 412.1(a)(1).

* * * * *

■ 5. Section 412.25 is amended by—

■ a. Revising paragraphs (a)(1)(ii), (d), and (e)(2)(iii)(A); and

■ b. Adding paragraph (e)(2)(iv).

The revisions and addition read as follows:

§ 412.25 Excluded hospital units: Common requirements.

(a) * * *

(1) * * *

(ii) Prior to October 1, 2019, is not excluded in its entirety from the prospective payment systems; and

* * * * *

(d) *Number of excluded units.* Each hospital may have only one unit of each type (psychiatric or rehabilitation) excluded from the prospective payment systems specified in § 412.1(a)(1). A hospital excluded from the prospective payment systems as specified in § 412.1(a)(1) may not have an excluded unit (psychiatric or rehabilitation) that is excluded on the same basis as the hospital.

(e) * * *

(2) * * *

(iii) * * *

(A) Except as provided in paragraph (e)(2)(iv) of this section, it is not under the control of the governing body or chief executive officer of the hospital in which it is located, and it furnishes inpatient care through the use of medical personnel who are not under the control of the medical staff or chief medical officer of the hospital in which it is located.

* * * * *

(iv) Effective for cost reporting periods beginning on or after October 1, 2019, the requirements of paragraph (e)(2)(iii)(A) of this section do not apply to a satellite facility of a unit that is part of a hospital excluded from the prospective payment systems specified in § 412.1(a)(1) that does not furnish services in a building also used by another hospital that is not excluded from the prospective payment systems specified in § 412.1(a)(1), or in one or more entire buildings located on the same campus as buildings used by another hospital that is not excluded from the prospective payment systems specified in § 412.1(a)(1).

* * * * *

■ 6. Section 412.64 is amended by revising paragraphs (d)(1)(vii) and (d)(3) to read as follows:

§ § 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(d) * * *

(1) * * *

(vii) For fiscal years 2017, 2018, and 2019, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.75 percentage point.

* * * * *

(3)(i) Beginning fiscal year 2015, in the case of a ''subsection (d) hospital,'' as defined under section 1886(d)(1)(B) of the Act, that is not a meaningful electronic health record (EHR) user as defined in part 495 of this chapter for the applicable EHR reporting period and does not receive an exception, three-fourths of the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals is reduced—

(A) For fiscal year 2015, by 33 1/3 percent;

(B) For fiscal year 2016, by 66 2/3 percent; and

(C) For fiscal year 2017 and subsequent fiscal years, by 100 percent.

(ii) Beginning fiscal year 2022, in the case of a ''subsection (d) Puerto Rico hospital,'' as defined under section 1886(d)(9)(A) of the Act, that is not a meaningful EHR user as defined in part 495 of this chapter for the applicable EHR reporting period and does not receive an exception, three-fourths of the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals is reduced—

(A) For fiscal year 2022, by 33 1/3 percent;

(B) For fiscal year 2023, by 66 2/3 percent; and

(C) For fiscal year 2024 and subsequent fiscal years, by 100 percent.

* * * * *

■ 7. Section 412.90 is amended by revising paragraph (j) to read as follows:

§ 412.90 General rules.

* * * * *

(j) *Medicare-dependent, small rural hospitals.* For cost reporting periods

beginning on or after April 1, 1990, and before October 1, 1994, and for discharges occurring on or after October 1, 1997 and before October 1, 2022, CMS adjusts the prospective payment rates for inpatient operating costs determined under subparts D and E of this part if a hospital is classified as a Medicare-dependent, small rural hospital.

* * * * *

§ 412.92 [Amended]

■ 8. Section 412.92 is amended—

■ a. In paragraph (a)(1)(ii) by removing the term ''intermediary'' and adding the term ''MAC'' is its place;

■ b. By adding paragraph (a)(4);

■ c. In paragraph (b)(1)(i) by removing the term ''fiscal intermediary'' and adding the term ''MAC'' in its place;

■ d. In paragraphs (b)(1)(iii)(B) and ((b)(1)(iv) by removing the term ''intermediary'' and adding the term ''MAC'' in its place;

■ e. In paragraph (b)(1)(v) by removing the term ''intermediary's'' and adding the term ''MAC's'' in its place, and removing the term ''intermediary'' and adding the term ''MAC'' in its place;

■ f. By revising paragraphs (b)(2)(i) and (ii) introductory text and (b)(2)(ii)(B);

■ g. By adding paragraph (b)(2)(ii)(C);

■ h. By revising paragraph (b)(2)(iv);

■ i. In paragraphs (b)(3)(i), (ii) and (iii) by removing the term ''fiscal intermediary'' and adding the term ''MAC'' in its place;

■ j. In paragraph (b)(3)(iv) by removing the phrase ''fiscal intermediary or'';

■ k. In paragraph (d)(2) introductory text, (e)(1) and (e)(3) introductory text by removing the term ''intermediary'' wherever it appears and adding the term ''MAC'' in its place;

■ l. In paragraph (e)(2) introductory text by removing the term ''intermediary's'' and adding the term ''MAC's'' in its place;

■ m. In paragraph (e)(2)(i) by removing the term ''intermediary'' and adding the term ''MAC'' in its place; and

■ n. In paragraphs (e)(3)(i) introductory text, and (e)(3)(ii) and (iii) by removing the term ''intermediary'' and adding the term ''MAC'' in its place.

The revisions and addition read as follows:

§ 412.92 Special treatment: sole community hospitals.

(a) * * *

(4) For a hospital with a main campus and one or more remote locations under a single provider agreement where services are provided and billed under the inpatient hospital prospective payment system and that meets the provider-based criteria at § 413.65 of this chapter as a main campus and a remote location of a hospital, combined data from the main campus and its remote location(s) are required to demonstrate that the criteria specified in paragraphs (a)(1)(i) and (ii) of this section are met. For the mileage and rural location criteria in paragraph (a) of this section and the mileage, accessibility, and travel time criteria specified in paragraphs (a)(1) through (3) of this section, the hospital must demonstrate that the main campus and its remote location(s) each independently satisfy those requirements.

(b) * * *

(2) * * *

(i) For applications received on or before September 30, 2018, sole community hospital status is effective 30 days after the date of CMS' written notification of approval, except as provided in paragraph (b)(2)(v) of this section. For applications received on or after October 1, 2018, sole community hospital status is effective as of the date CMS receives the complete application, except as provided in paragraph (b)(2)(v) of this section.

(ii) When a court order or a determination by the Provider Reimbursement Review Board (PRRB) reverses a CMS denial of sole community hospital status and no further appeal is made, the sole community hospital status is effective as follows:

* * * * *

(B) If the hospital's application for sole community hospital status was received on or after October 1, 1983 and on or before September 30, 2018, the effective date is 30 days after the date of CMS' original written notification of denial.

(C) If the hospital's application for sole community hospital status was received on or after October 1, 2018, the effective date is the date CMS receives the complete application.

* * * * *

(iv) For applications received on or before September 30, 2018, a hospital classified as a sole community hospital receives a payment adjustment, as described in paragraph (d) of this section, effective with discharges occurring on or after 30 days after the date of CMS' approval of the classification. For applications received on or after October 1, 2018, a hospital classified as a sole community hospital receives a payment adjustment, as described in paragraph (d) of this section, effective with discharges occurring on or after the date CMS receives the complete application.

* * * * *

■ 9. Section 412.96 is amended by redesignating paragraph (d) as paragraph (e) and adding a new paragraph (d) to read as follows:

§ 412.96 Special treatment: Referral centers.

* * * * *

(d) *Criteria for hospitals that have remote location(s).* For a hospital with a main campus and one or more remote locations under a single provider agreement where services are provided and billed under the inpatient hospital prospective payment system and that meets the provider-based criteria at § 413.65 of this chapter as a main campus and a remote location of a hospital, combined data from the main campus and its remote location(s) are required to demonstrate that the criteria specified in paragraphs (b)(1) and (2) and (c)(1) through (5) of this section are met. For the rural location criteria specified in paragraphs (b)(1) and (c) of this section and the mileage criteria specified in paragraphs (b)(2)(ii) and (c)(4) of this section, the hospital must demonstrate that the main campus and its remote locations each independently satisfy those requirements.

* * * * *

■ 10. Section 412.101 is amended by—

■ a. Revising paragraph (b)(2);

■ b. Revising paragraphs (c)(1) and (2) introductory text;

■ c. Adding paragraph (c)(3); and

■ d. Revising paragraph (d).

The revisions and addition read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *

(2) In order to qualify for this adjustment, a hospital must meet the following criteria, subject to the provisions of paragraph (e) of this section:

(i) For FY 2005 through FY 2010 and FY 2023 and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this section) from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

(ii) For FY 2011 through FY 2018, a hospital must have fewer than 1,600 Medicare discharges, as defined in paragraph (a) of this section, during the

fiscal year, based on the hospital's Medicare discharges from the most recently available MedPAR data as determined by CMS, and be located more than 15 road miles, as defined in paragraph (a) of this section, from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

(iii) For FY 2019 through FY 2022, a hospital must have fewer than 3,800 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 15 road miles (as defined in paragraph (a) of this section) from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

* * * * *

(c) * * *

(1) For FY 2005 through FY 2010 and FY 2023 and subsequent fiscal years, the adjustment is an additional 25 percent for each Medicare discharge.

(2) For FY 2011 through FY 2018, the adjustment is as follows:

* * * * *

(3) For FY 2019 through FY 2022, the adjustment is as follows:

(i) For low-volume hospitals with 500 or fewer total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, the adjustment is an additional 25 percent for each Medicare discharge.

(ii) For low-volume hospitals with more than 500 and fewer than 3,800 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, the adjustment for each Medicare discharge is an additional percent calculated using the formula [(95/330)—(number of total discharges/13,200)]. ''Total discharges'' is determined as described in paragraph (b)(2)(iii) of this section.

(d) *Eligibility of new hospitals for the adjustment.* For FYs 2005 through 2010 and FY 2019 and subsequent fiscal years, a new hospital will be eligible for a low-volume adjustment under this section once it has submitted a cost report for a cost reporting period that indicates that it meets discharge requirements during the applicable fiscal year and has provided its Medicare administrative contractor with sufficient evidence that it meets the distance requirement, as specified in paragraph (b)(2) of this section.

* * * * *

■ 11. Section 412.103 is amended by adding paragraph (a)(7) and revising paragraph (b)(6) to read as follows:

§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.

(a) * * *

(7) For a hospital with a main campus and one or more remote locations under a single provider agreement where services are provided and billed under the inpatient hospital prospective payment system and that meets the provider-based criteria at § 413.65 of this chapter as a main campus and a remote location of a hospital, the hospital is required to demonstrate that the main campus and its remote location(s) each independently satisfy the location conditions specified in paragraphs (a)(1), (2), and (6) of this section.

(b) * * *

(6) *Lock-in date for the wage index calculation and budget neutrality.* In order for a hospital to be treated as rural in the wage index and budget neutrality calculations under § 412.64(e)(1)(ii), (2), and (4) and (h) for the payment rates for the next Federal fiscal year, the hospital's application must be approved by the CMS Regional Office in accordance with the requirements of this section no later than 60 days after the public display date at the Office of the Federal Register of the inpatient prospective payment system proposed rule for the next Federal fiscal year.

* * * * *

§ 412.105 [Amended]

■ 12. Section 412.105 is amended in paragraph (f)(1)(vii) by removing the reference ''§§ 413.79(e)(1) through (e)(4)'' and adding in its place the reference ''§ 413.79(e)''.

■ 13. Section 412.106 is amended by adding paragraph (g)(1)(iii)(C)(*5*) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(g) * * *

(1) * * *

(iii) * * *

(C) * * *

(*5*) For fiscal year 2019, CMS will base its estimates of the amount of hospital uncompensated care on utilization data for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (4) of this section, using data on Medicaid utilization from 2013 cost reports from the most recent HCRIS database extract and the most recent available year of data on Medicare SSI utilization (or, for Puerto Rico hospitals, a proxy for Medicare SSI utilization data), and for hospitals other than Puerto Rico hospitals, IHS or Tribal hospitals, and all-inclusive rate providers, data on uncompensated care costs, defined as charity care costs plus non-Medicare bad debt costs from 2014 and 2015 cost reports from the most recent HCRIS database extract.

* * * * *

§ 412.108 [Amended]

■ 14. Section 412.108 is amended—

■ a. By revising paragraph (a)(1);

■ b. By adding paragraph (a)(3);

■ c. By revising paragraph (b)(4) introductory text;

■ d. In paragraphs (b)(1) and (3), and (b)(4)(i), (ii), and (iii), (b)(5), (6), (7), (8), and (9), and (d)(1), (d)(2)(i), (d)(3) introductory text, and (d)(3)(i), (ii), and (iii) by removing the terms ''fiscal intermediary'' and ''intermediary'' wherever they appear and adding the term ''MAC'' in their place;

■ e. In paragraph (b)(8) and (9) and (d)(2) introductory text by removing the terms ''fiscal intermediary's'' and ''intermediary's'' and adding the term ''MAC's'' in their place; and

■ f. By revising paragraph (c)(2)(iii) introductory text.

The revisions and additions read as follows:

§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.

(a) * * *

(1) *General considerations.* For cost reporting periods beginning on or after April 1, 1990, and ending before October 1, 1994, or for discharges occurring on or after October 1, 1997, and before October 1, 2022, a hospital is classified as a Medicare-dependent, small rural hospital if it meets all of the following conditions:

(i) It is located in a rural area (as defined in subpart D of this part) or it is located in a State with no rural area and satisfies any of the criteria under § 412.103(a)(1) or (3) or under § 412.103(a)(2) as of January 1, 2018.

(ii) The hospital has 100 or fewer beds as defined in § 412.105(b) during the cost reporting period.

(iii) The hospital is not also classified as a sole community hospital under § 412.92.

(iv) At least 60 percent of the hospital's inpatient days or discharges were attributable to individuals entitled to Medicare Part A benefits during the hospital's cost reporting period or periods as follows, subject to the provisions of paragraph (a)(1)(v) of this section:

(A) The hospital's cost reporting period ending on or after September 30, 1987 and before September 30, 1988.

(B) If the hospital does not have a cost reporting period that meets the criterion set forth in paragraph (a)(1)(iv)(A) of this section, the hospital's cost reporting period beginning on or after October 1, 1986, and before October 1, 1987.

(C) At least two of the last three most recent audited cost reporting periods for which the Secretary has a settled cost report.

(v) If the cost reporting period determined under paragraph (a)(1)(iv) of this section is for less than 12 months, the hospital's most recent 12-month or longer cost reporting period before the short period is used.

* * * * *

(3) *Criteria for hospitals that have remote location(s).* For a hospital with a main campus and one or more remote locations under a single provider agreement where services are provided and billed under the inpatient hospital prospective payment system and that meets the provider-based criteria at § 413.65 as a main campus and a remote location of a hospital, combined data from the main campus and its remote location(s) are required to demonstrate that the criteria in paragraphs (a)(1) and (2) of this section are met. For the location requirement specified in paragraph (a)(1)(i) of this section, the hospital must demonstrate that the main campus and its remote locations each independently satisfy this requirement.

(b) * * *

(4) For applications received on or before September 30, 2018, a determination of MDH status made by the MAC is effective 30 days after the date the MAC provides written notification to the hospital. For applications received on or after October 1, 2018, a determination of MDH status made by the MAC is effective as of the date CMS receives the complete application. An approved MDH status determination remains in effect unless there is a change in the circumstances under which the status was approved.

* * * * *

(c) * * *

(2) * * *

(iii) For discharges occurring during cost reporting periods (or portions thereof) beginning on or after October 1, 2006, and before October 1, 2022, 75 percent of the amount that the Federal rate determined under paragraph (c)(1) of this section is exceeded by the highest of the following:

* * * * *

■ 15. Section 412.152 is amended by adding, in alphabetical order, definitions of ''Applicable period for dual-eligibility'', ''Dual-eligible'', and ''Proportion of dual-eligibles'' to read as follows:

§ 412.152 Definitions for the Hospital Readmissions Reduction Program.

* * * * *

Applicable period for dual-eligibility is the 3-year data period corresponding to the applicable period as established by the Secretary for the Hospital Readmissions Reduction Program.

* * * * *

Dual-eligible is a patient beneficiary who has been identified as having full benefit status in both the Medicare and Medicaid programs in the State Medicare Modernization Act (MMA) files for the month the beneficiary was discharged from the hospital.

* * * * *

Proportion of dual-eligibles is the number of dual-eligible patients among all Medicare Fee-for-Service and Medicare Advantage stays during the applicable period.

* * * * *

■ 16. Section 412.164 is amended by revising paragraph (a) to read as follows:

§ 412.164 Measure selection under the Hospital Value-Based Purchasing (VBP) Program.

(a) CMS will select measures, other than measures of readmissions, for purposes of the Hospital VBP Program. The measures will be selected from the measures specified under section 1886(b)(3)(B)(viii) of the Act (the Hospital Inpatient Quality Reporting Program).

* * * * *

■ 17. Section 412.200 is revised to read as follows:

§ 412.200 General provisions.

Beginning with discharges occurring on or after October 1, 1987, hospitals located in Puerto Rico are subject to the rules governing the prospective payment system for inpatient operating costs. Except as provided in this subpart, the provisions of subparts A, B, C, F, G, and H of this part apply to hospitals located in Puerto Rico. Except for § 412.60, which deals with DRG classification and weighting factors, or as otherwise specified, the provisions of subparts D and E, which describe the methodology used to determine prospective payment rates for inpatient operating costs for hospitals, do not apply to hospitals located in Puerto Rico. Instead, the methodology for determining prospective payment rates for inpatient operating costs for these hospitals is set forth in §§ 412.204 through 412.212.

■ 18. Section 412.230 is amended by revising paragraph (d)(5) to read as follows:

§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.

* * * * *

(d) * * *

(5) *Single hospital MSA exception.* The requirements of paragraph (d)(1)(iii) of this section do not apply if a hospital is the single hospital in its MSA with published 3-year average hourly wage data included in the current fiscal year inpatient prospective payment system final rule.

■ 19. Section 412.500 is amended by adding paragraphs (a)(9) and (10) to read as follows:

§ 412.500 Basis and scope of subpart.

(a) * * *

(9) Section 51005(a) of Public Law 115–123 which extended the blended payment rate for the site neutral payment rate cases to apply to discharges occurring in cost reporting periods beginning in FYs 2018 and 2019.

(10) Section 51005(b) of Public Law which reduces the IPPS comparable amount for the site neutral payment rate cases by 4.6 percent for FYs 2018 through 2026.

* * * * *

■ 20. Section 412.522 is amended by—

■ a. Adding paragraph (c)(1)(iii);

■ b. Removing paragraph (c)(2)(v); and

■ c. Revising paragraph (c)(3) introductory text.

The addition and revision read as follows:

§ 412.522 Application of site neutral payment rate.

* * * * *

(c) * * *

(1) * * *

(iii) For discharges occurring in fiscal years 2018 through 2026, the amount in paragraph (c)(1)(i) of this section is reduced by 4.6 percent.

* * * * *

(3) *Transition.* For discharges occurring in cost reporting periods beginning on or after October 1, 2015 and on or before September 30, 2019, payment for discharges under paragraph (c)(1) of this section are made using a blended payment rate, which is determined as—

* * * * *

■ 21. Section 412.523 is amended by adding paragraphs (c)(3)(xv) and (d)(6) to read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xv) *For long-term care hospital prospective payment system fiscal year beginning October 1, 2018, and ending September 30, 2019.* The LTCH PPS standard Federal payment rate for the long-term care hospital prospective payment system beginning October 1, 2018, and ending September 30, 2019, is the standard Federal payment rate for the previous long-term care hospital prospective payment system fiscal year updated by 1.15 percent and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *

(d) * * *

(6) *Adjustment for the elimination of the limitation on long-term care hospital admissions from referring hospitals.* The standard Federal payment rate determined in paragraph (c)(3) of this section for discharges occurring on or after October 1, 2018 is permanently adjusted by a one-time factor so that estimated aggregate payments to LTCH PPS standard Federal rate cases in FY 2019 are projected to equal estimated aggregate payments that would have been paid for such cases without regard to the elimination of the limitation on long-term care hospital admissions from referring hospitals.

* * * * *

§ 412.525 [Amended]

■ 22. Section 412.525 is amended by removing paragraph (d)(6).

§ 412.538 [Removed and reserved]

■ 23. Section 412.538 is removed and reserved.

■ 24. Section 412.560 is amended by—

■ a. Adding paragraph (b)(3); and

■ b. Revising paragraphs (d)(1) and (3).

The addition and revisions read as follows:

§ 412.560 Requirements under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP).

* * * * *

(b) * * *

(3) CMS may remove a quality measure from the LTCH QRP based on one or more of the following factors:

(i) Measure performance among long-term care hospitals is so high and unvarying that meaningful distinctions in improvements in performance can no longer be made.

(ii) Performance or improvement on a measure does not result in better patient outcomes.

(iii) A measure does not align with current clinical guidelines or practice.

(iv) A more broadly applicable measure (across settings, populations, or conditions) for the particular topic is available.

(v) A measure that is more proximal in time to desired patient outcomes for the particular topic is available.

(vi) A measure that is more strongly associated with desired patient outcomes for the particular topic is available.

(vii) Collection or public reporting of a measure leads to negative, unintended consequences other than patient harm.

(viii) The costs associated with a measure outweigh the benefit of its continued use in the program.

* * * * *

(d) * * *

(1) *Written letter of noncompliance decision.* Long-term care hospitals that do not meet the requirement in paragraph (b) of this section for a program year will receive a notification of noncompliance sent through at least one of the following methods: Quality Improvement and Evaluation System (QIES) Assessment Submission and Processing (ASAP) system, the United States Postal Service, or via an email from the MAC.

* * * * *

(3) *CMS decision on reconsideration request.* CMS will notify long-term care hospitals, in writing, of its final decision regarding any reconsideration request through at least one of the following methods: The QIES ASAP system, the United States Postal Service, or via an email from the MAC.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 25. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883 and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–113, 113 Stat. 1501A–332; sec. 3201 of Public Law 112–96, 126 Stat. 156; sec. 632 of Public Law 112–240, 126 Stat. 2354; sec. 217 of Public Law 113–93, 129 Stat. 1040; and sec. 204 of Public Law 113–295, 128 Stat. 4010; and sec. 808 of Public Law 114–27, 129 Stat. 362.

■ 26. Section 413.24 is amended by revising paragraph (f)(5)(i) to read as follows:

§ 413.24 Adequate cost data and cost finding.

* * * * *

(f) * * *

(5) * * *

(i) All providers—The provider must accurately complete and submit the required cost reporting forms, including all necessary signatures and supporting documents. A cost report is rejected for lack of supporting documentation if it does not include the following:

(A) *Teaching hospitals*—For teaching hospitals, the Intern and Resident Information System (IRIS) data. Effective for cost reports filed on or after October 1, 2018, the IRIS data must contain the same total counts of direct GME FTE residents (unweighted and weighted) and IME FTE residents as the total counts of direct GME FTE and IME FTE residents reported in the provider's cost report.

(B) *Bad debt*—Effective for cost reporting periods beginning on or after October 1, 2018, for providers claiming Medicare bad debt reimbursement, a detailed bad debt listing that corresponds to the amount of bad debt claimed in the provider's cost report.

(C) *DSH eligible hospitals*—Effective for cost reporting periods beginning on or after October 1, 2018, for hospitals claiming a disproportionate share hospital payment adjustment, a detailed listing of the hospital's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's cost report. If the hospital submits an amended cost report that changes its Medicaid eligible days, the hospital must submit an amended listing or an addendum to the original listing of the hospital's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's amended cost report.

(D) *Charity care and uninsured discounts*—Effective for cost reporting periods beginning on or after October 1, 2018, for DSH eligible hospitals reporting charity care and/or uninsured discounts, a detailed listing of charity care and/or uninsured discounts that corresponds to the amounts claimed in the DSH eligible hospital's cost report.

(E) *Home office cost allocation*—Effective for cost reporting periods beginning on or after October 1, 2018, for providers claiming costs on their cost report that are allocated from a home office or chain organization, a home office cost statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report.

* * * * *

■ 27. Section 413.79 is amended by revising paragraph (e)(1)(iv) to read as follows:

§ 413.79 Direct GME Payments: Determination of the weighted number of FTE residents.

* * * * *

(e) * * *

(1) * * *

(iv)(A) Effective for Medicare GME affiliation agreements entered into on or after October 1, 2005, an urban hospital that qualifies for an adjustment to its FTE cap under paragraph (e)(1) of this section is permitted to be part of a Medicare GME affiliated group for purposes of establishing an aggregate FTE cap only if the adjustment that results from the affiliation is an increase to the urban hospital's FTE cap.

(B) Effective for Medicare GME affiliation agreements entered into on or after July 1, 2019, an urban hospital that qualifies for an adjustment to its FTE cap under paragraph (e)(1) of this section is permitted to be part of a Medicare GME affiliated group for purposes of establishing an aggregate FTE cap and receive an adjustment that is a decrease to the urban hospital's FTE cap only if the decrease results from a Medicare GME affiliated group consisting solely of two or more urban hospitals that qualify to receive adjustments to their FTE caps under paragraph (e)(1) of this section.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 28. The authority citation for part 424 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 29. Section 424.11 is amended by revising paragraphs (b) and (c) to read as follows:

§ 424.11 General procedures.

* * * * *

(b) *Obtaining the certification and recertification statements.* No specific procedures or forms are required for certification and recertification statements. The provider may adopt any method that permits verification. The certification and recertification statements may be entered on forms, notes, or records that the appropriate individual signs, or on a special separate form. Except as provided in paragraph (d) of this section for delayed certifications, there must be a separate signed statement for each certification or recertification. If supporting information for the signed statement is contained in other provider records (such as physicians' progress notes), it need not be repeated in the statement itself.

(c) *Required information.* The succeeding sections of this subpart set forth specific information required for different types of services.

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 30. The authority citation for part 495 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 31. Section 495.4 is amended—

■ a. In the definition of ''EHR reporting period'' by revising paragraph (1)(iii), adding paragraph (1)(iv), revising paragraphs (2)(ii)(C) and (D) and (2)(iii), and adding paragraph (2)(iv);

■ b. In the definition of ''EHR reporting period for a payment adjustment year'' by revising paragraph (2)(iii) and adding paragraph (2)(iv), revising paragraph (3)(iii), and adding paragraph (3)(iv); and

■ c. By revising the definitions of ''Payment adjustment year'' and ''Payment year''.

The revisions and additions read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period. * * *

(1) * * *

(iii) For the CY 2019 payment year under the Medicaid Promoting Interoperability Program:

(A) For the EP first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within CY 2019.

(B) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2019.

(iv) For the CY 2020 payment year under the Medicaid Promoting Interoperability Program:

(A) For the EP first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within CY 2020.

(B) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2020.

(2) * * *

(ii) * * *

(C) For the FY 2017 payment year as follows:

(*1*) Under the Medicaid EHR Incentive Program:

(*i*) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2017.

(*ii*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2017.

(*iii*) For the eligible hospital or CAH demonstrating the Stage 3 objectives and measures at § 495.24, any continuous 90-day period within CY 2017.

(*2*) Under the Medicare EHR Incentive Program, for a Puerto Rico eligible hospital, any continuous 14-day period within CY 2017.

(D) For the FY 2018 payment year as follows:

(*1*) Under the Medicaid Promoting Interoperability Program:

(*i*) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2018.

(*ii*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2018.

(*2*) Under the Medicare Promoting Interoperability Program, for a Puerto Rico eligible hospital, any continuous 90-day period within CY 2018.

(iii) For the FY 2019 payment year as follows:

(A) Under the Medicaid Promoting Interoperability Program:

(*1*) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2019.

(*2*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2019.

(B) Under the Medicare Promoting Interoperability Program, for a Puerto Rico eligible hospital, any continuous 90-day period within CY 2019.

(iv) For the FY 2020 payment year as follows:

(A) Under the Medicaid Promoting Interoperability Program:

(*1*) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2020.

(*2*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2020.

(B) Under the Medicare Promoting Interoperability Program, for a Puerto

Rico eligible hospital, any continuous 90-day period within CY 2020.

* * * * *

EHR reporting period for a payment adjustment year. * * *

(2) * * *

(iii) The following are applicable for 2019:

(A) If an eligible hospital has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2019 and applies for the FY 2020 and 2021 payment adjustment years. For the FY 2020 payment adjustment year, the EHR reporting period must end before and the eligible hospital must successfully register for and attest to meaningful use no later than October 1, 2019.

(B) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2019 and applies for the FY 2021 payment adjustment year.

(iv) The following are applicable for 2020:

(A) If an eligible hospital has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2020 and applies for the FY 2021 and 2022 payment adjustment years. For the FY 2021 payment adjustment year, the EHR reporting period must end before and the eligible hospital must successfully register for and attest to meaningful use no later than October 1, 2020.

(B) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2020 and applies for the FY 2022 payment adjustment year.

(3) * * *

(iii) The following are applicable for 2019:

(A) If a CAH has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2019 and applies for the FY 2019 payment adjustment year.

(B) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2019 and applies for the FY 2019 payment adjustment year.

(iv) The following are applicable for 2020:

(A) If a CAH has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2020 and applies for the FY 2020 payment adjustment year.

(B) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2020 and applies for the FY 2020 payment adjustment year.

* * * * *

Payment adjustment year means the following:

(1) For an EP, a calendar year beginning with CY 2015.

(2) For a CAH or an eligible hospital, a Federal fiscal year beginning with FY 2015.

(3) For a Puerto Rico eligible hospital, a Federal fiscal year beginning with FY 2022.

Payment year means the following:

(1) For an EP, a calendar year beginning with CY 2011.

(2) For a CAH or an eligible hospital, a Federal fiscal year beginning with FY 2011.

(3) For a Puerto Rico eligible hospital, a Federal fiscal year beginning with FY 2016.

* * * * *

■ 32. Section 495.24 is amended by revising the introductory text, paragraphs (c) and (d) headings and adding paragraph (e) to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

The criteria specified in paragraphs (c) and (d) of this section are optional for 2017 and 2018 for EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year. The criteria specified in paragraph (d) of this section are applicable for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid Promoting Interoperability Program for 2019 and subsequent years. The criteria specified in paragraph (e) of this section are applicable for eligible hospitals and CAHs attesting to CMS for 2019 and subsequent years.

* * * * *

(c) *Stage 3 objectives and measures for eligible hospitals and CAHs attesting to CMS—*

* * * * *

(d) *Stage 3 objectives and measures for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid Promoting Interoperability Program for 2019 and subsequent years—*

* * * * *

(e) *Stage 3 objectives and measures for eligible hospitals and CAHs attesting to CMS for 2019 and subsequent years—*

(1) *General rule.* Except as specified in paragraph (e)(2) of this section, eligible hospitals and CAHs must meet all objectives and associated measures of the Stage 3 criteria specified in this paragraph (e) and earn a total score of at least 50 points to meet the definition of a meaningful EHR user.

(2) *Exclusion for nonapplicable measures.* (i) An eligible hospital or CAH may exclude a particular measure that includes an option for exclusion contained in this paragraph (e) if the eligible hospital or CAH meets the following requirements:

(A) Meets the criteria in the applicable measure that would permit the exclusion.

(B) Attests to the exclusion.

(ii) *Distribution of points for nonapplicable measures.* For eligible hospitals or CAHs that claim such exclusion, the points assigned to the excluded measure will be distributed to other measures as outlined in this paragraph (e).

(3) *Objectives and associated measures in this paragraph (e) that rely on measures that count unique patients or actions.* (i) If a measure (or associated objective) in this paragraph (e) references paragraph (e)(3) of this section, the measure may be calculated by reviewing only the actions for patients whose records are maintained using CEHRT. A patient's record is maintained using CEHRT if sufficient data were entered in the CEHRT to allow the record to be saved, and not rejected due to incomplete data.

(ii) If the objective and associated measure does not reference this paragraph (e)(3), the measure must be calculated by reviewing all patient records, not just those maintained using CEHRT.

(4) *Protect patient health information*—(i) *Objective.* Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.

(ii) *Measure scoring.* Eligible hospitals and CAHs are required to report on the security risk analysis measure in paragraph (e)(4)(iii) of this section, but no points are available for this measure.

(iii) *Security risk analysis measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45

CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

(5) *Electronic prescribing*—(i) *Objective.* Generate and transmit permissible discharge prescriptions electronically (eRx).

(ii) *Measures scoring.* (A) In 2019, eligible hospitals and CAHs must meet the e-Prescribing measure in paragraph (e)(5)(iii)(A) of this section and have the option to report on the query of PDMP measure and verify opioid treatment agreement measure in paragraphs (e)(5)(iii)(B) and (C) of this section. The electronic prescribing objective in paragraph (e)(5)(i) of this section is worth up to 20 points.

(B) In 2020 and subsequent years, eligible hospitals and CAHs must meet each of the measures in paragraphs (e)(5)(iii)(A), (B) and (C) of this section. The electronic prescribing objective in paragraph (e)(5)(i) of this section is worth up to 15 points.

(iii) *Measures.* (A) *e-Prescribing measure.* Subject to paragraph (e)(3) of this section, at least one hospital discharge medication order for permissible prescriptions (for new and changed prescriptions) is queried for a drug formulary and transmitted electronically using CEHRT. This performance-based measure is worth up to 10 points in 2019 and up to 5 points in 2020 and subsequent years.

(B) *Query of prescription drug monitoring program (PDMP) measure.* Subject to paragraph (e)(3) of this section, for at least one Schedule II opioid electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a Prescription Drug Monitoring Program (PDMP) for prescription drug history, except where prohibited and in accordance with applicable law. This performance-based measure is worth up to 5 bonus points in 2019 and up to 5 points in 2020 and subsequent years.

(C) *Verify opioid treatment agreement measure.* Subject to paragraph (e)(4) of this section, f or at least one unique patient for whom a Schedule II opioid was electronically prescribed by the eligible hospital or CAH using CEHRT during the EHR reporting period, if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days within a 6-month look-back period, the eligible hospital or CAH seeks to identify the existence of a signed opioid treatment agreement and incorporates it into the patient's electronic health record using CEHRT. This performance-based measure is worth up to 5 bonus points in 2019 and up to 5 points in 2020 and subsequent years.

(iv) *Exclusion for an EHR reporting period in CY 2019 in accordance with paragraph (e)(2) of this section.* An exclusion claimed under paragraph (e)(5)(vi)(A) of this section will redistribute 10 points equally among the measures associated with the health information exchange objective under paragraph (e)(6) of this section.

(v) *Exclusions beginning with an EHR reporting period in CY 2020 in accordance with paragraph (e)(2) of this section.* An exclusion claimed under paragraph (e)(5)(vi)(A) of this section will redistribute 15 points equally among the measures associated with the health information exchange objective under paragraph (e)(6) of this section and the provide patients electronic access to their health information measure under paragraph (e)(7)(ii) of this section. An exclusion claimed under paragraph (e)(5)(vi)(B) or (C) of this section will redistribute 5 points for each excluded measure to the e-Prescribing measure under paragraph (e)(5)(iii)(A) of this section.

(vi) *Exclusions in accordance with paragraph (e)(2) of this section.* (A) Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of the eligible hospital or CAH's EHR reporting period may be excluded from the measure specified in paragraph (e)(5)(iii)(A) of this section for an EHR reporting period in CY 2019 and may be excluded from the measures specified in paragraphs (e)(5)(iii)(A) through (C) of this section beginning with an EHR reporting period in CY 2020.

(B) Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions for controlled substances and is not located within 10 miles of any pharmacy that accepts electronic prescriptions for controlled substances at the start of their EHR reporting period may be excluded from the measures specified in paragraphs (e)(5)(iii)(B) and (C) of this section beginning with an EHR reporting period in CY 2020.

(C) Any eligible hospital or CAH that is unable to report the measure in accordance with applicable law may be excluded from the measures specified in paragraphs (e)(5)(iii)(B) and (C) of this section beginning with an EHR reporting period in CY 2020.

(6) *Health information exchange*—(i) *Objective.* The eligible hospital or CAH provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

(ii) *Measures.* Eligible hospitals and CAHs must meet both of the following measures (each worth up to 20 points), and could receive up to 40 points for this objective.

(A) *Support electronic referral loops by sending health information measure:* Subject to paragraph (e)(3) of this section, for at least one transition of care or referral, the eligible hospital or CAH that transitions or refers its patient to another setting of care or provider of care—

(*1*) Creates a summary of care record using CEHRT; and

(*2*) Electronically exchanges the summary of care record.

(B) *Support electronic referral loops by receiving and incorporating health information measure:* Subject to paragraph (e)(3) of this section, for at least one electronic summary of care record received for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition of care or referral, or for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient, the eligible hospital or CAH conducts clinical information reconciliation for medication, mediation allergy, and current problem list.

(iii) *Exclusions in accordance with paragraph (e)(2) of this section.* Claiming the exclusion will redistribute 20 points to the support electronic referral loops by sending health information measure under paragraph (e)(6)(ii)(A). Any eligible hospital or CAH that is unable to implement the measure for an EHR reporting period in 2019 may be excluded from the measure specified in paragraph (e)(6)(ii)(B) of this section.

(7) *Provider to Patient Exchange*—(i) *Objective.* The eligible hospital or CAH provides patients (or patient-authorized representative) with timely electronic access to their health information.

(ii) *Provide patients electronic access to their health information measure.* Eligible hospitals and CAHs must meet the following measure, and could receive up to 40 points for this objective in 2019 and up to 35 points for this objective in 2020 and subsequent years.

For at least one unique patient discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23)—

(A) The patient (or patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and

(B) The eligible hospital or CAH ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the API in the eligible hospital or CAH's CEHRT. This performance-based measure is worth up to 40 points in 2019 and up to 35 points in 2020 and subsequent years.

(8) *Public health and clinical data exchange*—(i) *Objective.* The eligible hospital or CAH is in active engagement with a public health agency (PHA) or clinical data registry (CDR) to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measures.* In order to meet the objective under paragraph (e)(8)(i) of this section, an eligible hospital or CAH must meet the syndromic surveillance reporting measure in paragraph (e)(8)(ii)(A) of this section and one additional measure from paragraphs (e)(8)(ii)(B) through (F) of this section. Eligible hospitals and CAHs could receive a total of 10 points for this objective.

(A) *Syndromic surveillance reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.

(B) *Immunization registry reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

(C) *Electronic case reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit case reporting of reportable conditions.

(D) *Public health registry reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit data to public health registries.

(E) *Clinical data registry reporting measure.* The eligible hospital or CAH is in active engagement to submit data to a clinical data registry.

(F) *Electronic reportable laboratory result reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit electronic reportable laboratory results.

(iii) *Exclusions in accordance with paragraph (e)(2) of this section.* An exclusion claimed under paragraphs (e)(8)(iii)(A) through (F) of this section will redistribute 10 points to the provide patients electronic access to their health information measure under paragraph (e)(7)(ii) of this section.

(A) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure specified in paragraph (e)(8)(ii)(A) of this section if the eligible hospital or CAH—

(*1*) Does not have an emergency or urgent care department.

(*2*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs as of 6 months prior to the start of the EHR reporting period.

(B) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from to the immunization registry reporting measure specified in paragraph (e)(8)(ii)(B) of this section if the eligible hospital or CAH—

(*1*) Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.

(C) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the electronic case reporting measure specified in paragraph (e)(8)(ii)(C) of this section if the eligible hospital or CAH—

(*1*) Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of their EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the EHR reporting period.

(D) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the public health registry reporting measure specified in paragraph (e)(8)(ii)(D) of this section if the eligible hospital or CAH—

(*1*) Does not diagnose or directly treat any disease or condition associated with a public health registry in its jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(E) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the clinical data registry reporting measure specified in paragraph (e)(8)(ii)(E) of this section if the eligible hospital or CAH—

(*1*) Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no clinical data registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(F) Any eligible hospital or CAH meeting one or more of the following

criteria may be excluded from the electronic reportable laboratory result reporting measure specified in paragraph (e)(8)(ii)(F) of this section if the eligible hospital or CAH—

(*1*) Does not perform or order laboratory tests that are reportable in its jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific ELR standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic reportable laboratory results from an eligible hospital or CAH as of 6 months prior to the start of the EHR reporting period.

■ 33. Section 495.40 is amended by adding paragraph (b)(2)(vii) to read as follows:

§ 495.40 Demonstration of meaningful use criteria.

* * * * *

(b) * * *

(2) * * *

(vii) *Exception for dual-eligible eligible hospitals and CAHs beginning in CY 2019.* (A) Beginning with the EHR reporting period in CY 2019, dual-eligible eligible hospitals and CAHs (those that are eligible for an incentive payment under Medicare for meaningful use of CEHRT and/or subject to the Medicare payment reduction for failing to demonstrate meaningful use, and are also eligible to earn a Medicaid incentive payment for meaningful use) must satisfy the requirements under paragraph (b)(2) of this section by attestation and reporting information to CMS, not to their respective state Medicaid agency.

(B) Dual-eligible eligible hospitals and CAHs that demonstrate meaningful use to their state Medicaid agency may only qualify for an incentive payment under Medicaid and will not qualify for an incentive payment under Medicare and/or avoid the Medicare payment reduction.

* * * * *

■ 34. Section 495.100 is amended by revising the definition of ''Eligible hospital'' and adding a definition of ''Puerto Rico eligible hospital'' in alphabetical order to read as follows:

§ 495.100 Definitions.

* * * * *

Eligible hospital means a hospital subject to the prospective payment system specified in § 412.1(a)(1) of this chapter, excluding those hospitals specified in § 412.23 of this chapter, excluding those hospital units specified in § 412.25 of this chapter, and including Puerto Rico eligible hospitals unless otherwise indicated.

* * * * *

Puerto Rico eligible hospital means a subsection (d) Puerto Rico hospital as defined in section 1886(d)(9)(A) of the Social Security Act.

* * * * *

■ 35. Section 495.104 is amended by adding paragraphs (b)(6) through (10) and (c)(5)(vi) through (x) to read as follows:

§ 495.104 Incentive payments to eligible hospitals.

* * * * *

(b) * * *

(6) Puerto Rico eligible hospitals whose first payment year is FY 2016 may receive such payments for FYs 2016 through 2019.

(7) Puerto Rico eligible hospitals whose first payment year is FY 2017 may receive such payments for FYs 2017 through 2020.

(8) Puerto Rico eligible hospitals whose first payment year is FY 2018 may receive such payments for FYs 2018 through 2021.

(9) Puerto Rico eligible hospitals whose first payment year is FY 2019 may receive such payments for FYs 2019 through 2021.

(10) Puerto Rico eligible hospitals whose first payment year is FY 2020 may receive such payments for FYs 2020 through 2021.

(c) * * *

(5) * * *

(vi) For Puerto Rico eligible hospitals whose first payment year is FY 2016—

(A) 1 for FY 2016;

(B) 3/4 for FY 2017;

(C) 1/2 for FY 2018; and

(D) 1/4 for FY 2019.

(vii) For Puerto Rico eligible hospitals whose first payment year is FY 2017—

(A) 1 for FY 2017;

(B) 3/4 for FY 2018;

(C) 1/2 for FY 2019; and

(D) 1/4 for FY 2020;

(viii) For Puerto Rico eligible hospitals whose first payment year is FY 2018—

(A) 1 for FY 2018;

(B) 3/4 for FY 2018;

(C) 1/2 for FY 2019; and

(D) 1/4 for FY 2020.

(ix) For Puerto Rico eligible hospitals whose first payment year is FY 2019—

(A) 3/4 for FY 2019;

(B) 1/2 for FY 2020; and

(C) 1/4 for FY 2021.

(x) For Puerto Rico eligible hospitals whose first payment year is FY 2020—

(A) 1/2 for FY 2020; and

(B) 1/4 for FY 2021.

* * * * *

■ 36. Section 495.200 is amended by revising the definitions of ''MA payment adjustment year'' and ''Payment year'' to read as follows:

§ 495.200 Definitions.

* * * * *

MA payment adjustment year means—

(1) Except as provided in paragraph (2) of this definition, for qualifying MA organizations that receive an MA EHR incentive payment for at least 1 payment year, calendar years beginning with CY 2015.

(2) For qualifying MA organizations that receive an MA EHR incentive payment for a qualifying MA-affiliated eligible hospital in Puerto Rico for at least 1 payment year, and that have not previously received an MA EHR incentive payment for a qualifying MA-affiliated eligible hospital not in Puerto Rico, calendar years beginning with CY 2022.

(3) For MA-affiliated eligible hospitals, the applicable EHR reporting period for purposes of determining whether the MA organization is subject to a payment adjustment is the Federal fiscal year ending in the MA payment adjustment year.

(4) For MA EPs, the applicable EHR reporting period for purposes of determining whether the MA organization is subject to a payment adjustment is the calendar year concurrent with the payment adjustment year.

* * * * *

Payment year means—

(1) For a qualifying MA EP, a calendar year beginning with CY 2011 and ending with CY 2016; and

(2) For an eligible hospital, a Federal fiscal year beginning with FY 2011 and ending with FY 2016; and

(3) For an eligible hospital in Puerto Rico, a Federal fiscal year beginning with FY 2016 and ending with FY 2021.

* * * * *

■ 37. Section 495.211 is amended by adding paragraph (e)(4) to read as follows:

§ 495.211 Payment adjustments effective for 2015 and subsequent MA payment years with respect to MA EPs and MA-affiliated eligible hospitals.

* * * * *

(e) * * *

(4) For MA payment adjustment years prior to 2022, subsection (d) Puerto Rico hospitals are neither potentially qualifying MA-affiliated eligible hospitals nor qualifying MA-affiliated eligible hospitals for purposes of

applying the payment adjustments under paragraph (e) of this section.

■ 38. Section 495.316 is amended by revising paragraph (g)(2) to read as follows:

§ 495.316 State monitoring and reporting regarding activities required to receive an incentive payment.

* * * * *

(g) * * *

(2) Subject to paragraph (h)(2) of this section, provider-level attestation data for each eligible hospital that attests to demonstrating meaningful use for each payment year beginning with 2013 and ending after 2018.

* * * * *

■ 39. Section 495.322 is revised to read as follows:

§ 495.322 FFP for reasonable administrative expenses.

(a) Subject to prior approval conditions at § 495.324, FFP is available at 90 percent in State expenditures for administrative activities in support of implementing incentive payments to Medicaid eligible providers.

(b) FFP available under paragraph (a) of this section is available only for expenditures incurred on or before September 30, 2022, except for expenditures related to audit and appeal activities required under this subpart, which must be incurred on or before September 30, 2023.

■ 40. Section 495.324 is amended by revising paragraphs (b)(2) and (3) and (d) to read as follows:

§ 495.324 Prior approval conditions.

* * * * *

(b) * * *

(2) For the acquisition solicitation documents and any contract that a State may utilize to complete activities under this subpart, unless specifically exempted by the Department of Health and Human Services, prior to release of the acquisition solicitation documents or prior to execution of the contract, when the contract is anticipated to or will exceed $500,000.

(3) For contract amendments, unless specifically exempted by the Department of Health and Human Services, prior to execution of the contract amendment, involving contract cost increases exceeding $500,000 or contract time extensions of more than 60 days.

* * * * *

(d) A State must obtain prior written approval from HHS of its justification for a sole source acquisition, when it plans to acquire noncompetitively from a nongovernmental source HIT equipment or services, with proposed FFP under this subpart if the total State and Federal acquisition cost is more than $500,000.

Dated: March 29, 2018.

Seema Verma,

Administrator, Centers for Medicare and Medicaid Services.

Dated: April 2, 2018.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Proposed Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2018, and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2018

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the proposed prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2019 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2019. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the proposed figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this proposed rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that will be effective for cost reporting periods beginning on or after October 1, 2018.

In addition, we are setting forth a description of the methods and data we used to determine the proposed LTCH PPS standard Federal payment rate that would be applicable to Medicare LTCHs for FY 2019.

In general, except for SCHs and MDHs, for FY 2019, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation. Section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Section 50205 of the Bipartisan Budget Act of 2018, enacted February 9, 2018, extended the MDH program for discharges on or after October 1, 2017 through September 30, 2022.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (including, as discussed in section IV.G. of the preamble of this proposed rule, uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor.

As discussed in section IV.B. of the preamble of this proposed rule, in accordance with section 1886(d)(9)(E) of the Act as amended by section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), for FY 2019, subsection (d) Puerto Rico hospitals will continue to be paid based on 100 percent of the national standardized amount. Because Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update, our discussion below does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are proposing to make changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2019. In section III. of this Addendum, we discuss our proposed policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2019. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2019. In section V. of this Addendum, we discuss

proposed policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2019. The tables to which we refer in the preamble of this proposed rule are listed in section VI. of this Addendum and are available via the internet on the CMS website.

II. Proposed Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2019

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. Below we discuss the factors we are proposing to use for determining the proposed prospective payment rates for FY 2019.

In summary, the proposed standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2019, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section IV.B. of the preamble of this proposed rule for a complete discussion on the proposed FY 2019 inpatient hospital update. Below is a table with these four options:

FY 2019	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Proposed Market Basket Rate-of-Increase	2.8	2.8	2.8	2.8
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.7	−0.7
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.1	0.0	−2.1
Proposed MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.75	−0.75	−0.75	−0.75
Proposed Applicable Percentage Increase Applied to Standardized Amount	1.25	−0.85	0.55	−1.55

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico.

In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to Puerto Rico hospitals that are not meaningful EHR users, effective FY 2022. Accordingly, because the provisions of section 1886(b)(3)(B)(ix) of the Act are not applicable to hospitals located in Puerto Rico until FY 2022, the adjustments under this provision are not applicable for FY 2019.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.
- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2017 budget neutrality factor and applying a revised factor.
- A positive adjustment of 0.5 percent in FYs 2019 through 2023 as required under section 414 of the MACRA.
- An adjustment to ensure the effects of the Rural Community Hospital Demonstration program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, as amended by section 15003 of Public Law 114–255 which amended section 410A of Public Law 108–173 to provide for a 10-year extension of the demonstration program (in place of the 5-year extension required by the Affordable Care Act) beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173, are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- An adjustment to remove the FY 2018 outlier offset and apply an offset for FY 2019, as provided for in section 1886(d)(3)(B) of the Act.

For FY 2019, consistent with current law, we are proposing to apply the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are proposing to apply a uniform, national budget neutrality adjustment to the FY 2019 wage index for the rural floor. We note that, in section III.H.2.b. of the preamble to this proposed rule, we are proposing not to extend the imputed floor policy (both the original methodology and alternative methodology) for FY 2019. Therefore, for FY 2019, in this proposed rule, we are proposing to not include the imputed floor (calculated under the original methodology and alternative methodology) in calculating the uniform, national rural floor budget neutrality adjustment, which is reflected in the proposed FY 2019 wage index.

A. Calculation of the Proposed Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska

and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2019, we are proposing to continue to use the national labor-related and nonlabor-related shares (which are based on the 2014-based hospital market basket) that were used in FY 2018. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2019, as discussed in section III. of the preamble of this proposed rule, we are proposing to continue to use a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The proposed standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this proposed rule and are available via the internet on the CMS website.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Accordingly, we are proposing to calculate the FY 2019 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this proposed rule, we are proposing to use the 2014-based IPPS operating and capital market baskets for FY 2019. As discussed in section IV.B. of the preamble of this proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are proposing to reduce the FY 2019 applicable percentage increase (which is based on IGI's fourth quarter 2017 forecast of the 2014-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2019) of 0.8 percentage point, which is also calculated based on IGI's fourth quarter 2017 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are proposing to further update the standardized amount for FY 2019 by the estimated market basket percentage increase less 0.75 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by sections 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services required as inputs to provide hospital inpatient services.

Based on IGI's 2017 fourth quarter forecast of the hospital market basket increase (as discussed in Appendix B of this proposed rule), the forecast of the hospital market basket increase for FY 2019 for this proposed rule is 2.8 percent. As discussed earlier, for FY 2019, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section IV.B. of the preamble of this proposed rule for a complete discussion on the FY 2019 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that would be applied to update the national standardized amount. The proposed standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2019 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2019 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this proposed rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the proposed FY 2019 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we apply the following inclusion and exclusion criteria: Include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); exclude CAHs at the time of this proposed rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS-excluded cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- As in the past, we are proposing to adjust the FY 2019 standardized amount to remove the effects of the FY 2018 geographic reclassifications and outlier payments before applying the FY 2019 updates. We then apply budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on proposed FY 2019 payment policies.
- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood

factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We also remove organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

• For FY 2019, the Bundled Payments for Care Improvement (BPCI) Initiative will have ended and a new model, the BPCI Advanced model will have begun. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in the BPCI Advanced model in one of two capacities: As a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: *https://innovation.cms.gov/initiatives/bpci-advanced/.*

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI Initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process (which includes recalibration of the MS–DRG relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital's participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). For FY 2019, consistent with how we have treated hospitals that participated in the BPCI Initiative, we are proposing to include all applicable data from subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations. We believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act.

• Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the approach we have taken in prior years, for FY 2019 and subsequent years, we are proposing to continue to apply a proxy hospital readmissions payment adjustment and a proxy hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, we are proposing to apply a proposed proxy readmissions payment adjustment factor and a proposed proxy hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the purpose of calculating the proposed proxy FY 2019 readmissions payment adjustment factors, for both this proposed rule and the final rule, as discussed in section IV.H. of the preamble of this proposed rule, we are proposing to use the proportion of dually-eligible Medicare beneficiaries, excess readmission ratios, and aggregate payments for excess readmissions from the prior fiscal year's applicable period because, at this time and at the time of the development of the final rule, hospitals will not yet have had the opportunity to review and correct the data (program calculations based on the proposed FY 2019 applicable period of July 1, 2014 to June 30, 2017) before the data are made public under our policy regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400) and section IV.H. of the preamble of this proposed rule.)

In addition, for FY 2019, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we are proposing to use proxy hospital VBP payment adjustment factors for FY 2019 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2019 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

• The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and an additional statutory adjustment, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2019 (as we did for the last 5 fiscal years), we are proposing to include estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we are proposing to consider estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

• When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.F. of the preamble to this proposed rule and below, we are proposing to continue to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are proposing to include estimated uncompensated care payments in this comparison.

Similarly, for MDHs, as discussed in section IV.F. of the preamble of this proposed rule, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, we are proposing to continue to take into consideration uncompensated care payments in the computation of payments under the

Federal rate and the hospital-specific rate for MDHs.

• We are proposing to include an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2019. Similar to FY 2018, we are including this adjustment based on data on the prior year's performance. Payments for hospitals will be estimated based on the proposed applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2019.

• In our determination of all proposed budget neutrality factors described in section II.A.4. of this Addendum, we use transfer-adjusted discharges. Specifically, we calculated the transfer-adjusted discharges using the statutory expansion of the postacute care transfer policy to include discharges to hospice care by a hospice program as discussed in section IV.A.2.b. of the preamble of this proposed rule.

a. Proposed Recalibration of MS–DRG Relative Weights

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.G. of the preamble of this proposed rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are proposing to make a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For FY 2019, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2017 discharge data to simulate payments and compared the following:

• Aggregate payments using the FY 2018 labor-related share percentages, the FY 2018 relative weights, and the FY 2018 pre-reclassified wage data, and applied the proposed FY 2019 hospital readmissions payment adjustments and estimated FY 2019 hospital VBP payment adjustments; and

• Aggregate payments using the FY 2018 labor-related share percentages, the proposed FY 2019 relative weights, and the FY 2018 pre-reclassified wage data, and applied the proposed FY 2019 hospital readmissions payment adjustments and estimated FY 2019 hospital VBP payment adjustments applied above.

Based on this comparison, we computed a proposed budget neutrality adjustment factor equal to 0.997896 and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we also are proposing to apply the MS–DRG reclassification and recalibration budget neutrality factor of 0.997896 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2018.

b. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2019, we are proposing to adjust 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this proposed rule.

To compute a proposed budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2017 discharge data to simulate payments and compared the following:

• Aggregate payments using the proposed FY 2019 relative weights and the FY 2018 pre-reclassified wage indexes, applied the FY 2018 labor-related share of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the proposed FY 2019 hospital readmissions payment adjustment and the estimated FY 2019 hospital VBP payment adjustment; and

• Aggregate payments using the proposed FY 2019 relative weights and the proposed FY 2019 pre-reclassified wage indexes, applied the proposed labor-related share for FY 2019 of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same proposed FY 2019 hospital readmissions payment adjustments and estimated FY 2019 hospital VBP payment adjustments applied above.

In addition, we applied the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the proposed payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2018 to FY 2019. By applying this methodology, we determined a proposed budget neutrality adjustment factor of 1.001182 for proposed changes to the wage index.

c. Reclassified Hospitals—Proposed Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the proposed budget neutrality adjustment factor for FY 2019, we used FY 2017 discharge data to simulate payments and compared the following:

• Aggregate payments using the proposed FY 2019 labor-related share percentages, the proposed FY 2019 relative weights, and the proposed FY 2019 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the proposed FY 2019 hospital readmissions payment adjustments and the estimated FY 2019 hospital VBP payment adjustments; and

• Aggregate payments using the proposed FY 2019 labor-related share percentages, the proposed FY 2019 relative weights, and the proposed FY 2019 wage data after such reclassifications, and applied the same proposed FY 2019 hospital readmissions payment adjustments and the estimated FY 2019 hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this proposed rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks proposed for FY 2019, and apply the proposed policies explained in section III. of the preamble of this proposed rule. Based on these simulations, we calculated a proposed budget neutrality adjustment factor of 0.987084 to ensure that the effects of these provisions are budget neutral, consistent with the statute.

The proposed FY 2019 budget neutrality adjustment factor was applied to the proposed standardized amount after removing the effects of the FY 2018 budget

neutrality adjustment factor. We note that the proposed FY 2019 budget neutrality adjustment reflects FY 2019 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this proposed rule.

d. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) is equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this proposed rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index.

As noted above and as discussed in section III.G.2. of the preamble of this proposed rule, the imputed floor is set to expire effective October 1, 2018, and we are not proposing to extend the imputed floor policy.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2019, we are proposing to calculate a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the proposed FY 2019 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the proposed FY 2019 rural Puerto Rico wage index is calculated based on the average of the proposed FY 2019 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); San German, PR (CBSA 41900); and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the proposed national rural floor budget neutrality adjustment factor, we used FY 2017 discharge data to simulate payments and the proposed post-reclassified national wage indexes and compared the following:

- National simulated payments without the proposed national rural floor; and
- National simulated payments with the proposed national rural floor.

Based on this comparison, we determined a proposed national rural floor budget neutrality adjustment factor of 0.994733. The national adjustment was applied to the national wage indexes to produce a proposed national rural floor budget neutral wage index.

e. Proposed Rural Community Hospital Demonstration Program Adjustment

In section IV.L. of the preamble of this proposed rule, we discuss the Rural Community Hospital Demonstration program, which was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and extended for another 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Subsequently, section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted December 13, 2016, amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act, as further discussed below). We make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. We refer the reader to section IV.L. of the preamble of this proposed rule for complete details regarding the Rural Community Hospital Demonstration.

With regard to budget neutrality, as mentioned earlier, we make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration are budget neutral, as required under section 410A(c)(2) of Public Law 108–173. For FY 2019, the total amount that we are proposing to apply to make an adjustment to the standardized amounts to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral is $73,191,887. Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2019, we computed a proposed factor of 0.999325 for the Rural Community Hospital Demonstration budget neutrality adjustment that will be applied to the IPPS standard Federal payment rate. We refer readers to section IV.L. of the preamble of this proposed rule on complete details regarding the calculation of the amount we are applying to make an adjustment to the standardized amount.

We note, as discussed in section IV.L. of the preamble of this proposed rule, if updated or additional data become available prior to issuance of the FY 2019 IPPS/LTCH PPS final rule, we would use those data to the extent appropriate to determine the budget neutrality offset amount for FY 2019. We refer readers to section IV.L. of the preamble of this proposed rule on complete details regarding the availability of additional data prior to the FY 2019 IPPS/LTCH PPS final rule.

f. Proposed Adjustment for FY 2019 Required Under Section 414 of Public Law 114–10 (MACRA)

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment for each of FYs 2018 through 2023. (As noted in the FY 2018 IPPS/LTCH PPS proposed and final rules, section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted December 13, 2016, reduced the adjustment for FY 2018 from 0.5 percentage points to 0.4588 percentage points.) Therefore, for FY 2019, we are proposing to implement the required +0.5 percent adjustment to the standardized amount. This is a permanent adjustment to the payment rates.

g. Proposed Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2019 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm*.

(1) Proposed FY 2019 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to

public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the proposed FY 2019 outlier threshold, we simulated payments by applying proposed FY 2019 payment rates and policies using cases from the FY 2017 MedPAR file. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described below) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

In order to determine the proposed FY 2019 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2017 to FY 2019. As discussed in the FY 2015 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals. As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57282), we are using the following methodology to calculate the charge inflation factor for FY 2019:

- To produce the most stable measure of charge inflation, we applied the following inclusion and exclusion criteria of hospitals claims in our measure of charge inflation: Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); include CAHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals who have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- In order to ensure that we capture only FFS claims, we included claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- In order to further ensure that we capture only FFS claims, we excluded claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49779 through 49780), we stated that commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. In response to those comments, we stated that we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. In response to those comments, similar to FY 2016, FY 2017, and FY 2018, for FY 2019, we grouped claims data by quarter in the table below in order that the public would be able to replicate the claims summary for the claims with discharge dates through September 30, 2017, that are available under the current limited data set (LDS) structure. In order to provide even more information in response to the commenters' request, similar to FY 2016, FY 2017, and FY 2018, for FY 2019, we are making available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* (click on the links on the left titled ''FY 2019 IPPS Proposed Rule Home Page'' and then click the link ''FY 2019 Proposed Rule Data Files'') more detailed summary tables by provider with the monthly charges that were used to compute the charge inflation factor. We continue to work with our systems teams and privacy office to explore expanding the information available in the current LDS, perhaps through the provision of a supplemental data file for future rulemaking.

Quarter	Covered charges (January 1, 2016, through December 31, 2016)	Cases (January 1, 2016, through December 31, 2016)	Covered charges (January 1, 2017, through December 31, 2017)	Cases (January 1, 2017, through December 31, 2017)
1	$140,753,065,878	2,506,525	$149,358,509,178	2,551,065
2	135,409,469,345	2,414,710	140,445,911,726	2,397,110
3	132,239,610,957	2,356,131	135,004,161,478	2,293,958
4	138,440,787,173	2,412,708	108,175,925,297	1,821,225
Total	546,842,933,353	9,690,074	532,984,507,679	9,063,358

Under this methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2019, we compared the average covered charge per case of $56,433 ($546,842,933,353/9,690,074) from the second quarter of FY 2016 through the first quarter of FY 2017 (January 1, 2016, through December 31, 2016) to the average covered charge per case of $58,806.52 ($532,984,507,679/9,063,358) from the second quarter of FY 2017 through the first quarter of FY 2018 (January 1, 2017, through December 31, 2017). This rate-of-change was 4.2 percent (1.04205) or 9.5 percent (1.085868) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified above.

As we have done in the past, in this proposed rule, we are proposing to establish the proposed FY 2019 outlier threshold using hospital CCRs from the December 2017 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of this proposed rule. We are proposing to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described below to hospitals assigned the statewide average CCR.

For FY 2019, we also are proposing to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). We are proposing that, if more recent data became available, we would use that data to calculate the final FY 2019 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we have done since FY 2014, we are proposing to adjust the CCRs from the December 2017 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2016 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2017 update of the PSF. We note that we used total transfer-adjusted cases from FY 2017 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule, we calculated a proposed December 2016 operating national average case-weighted CCR of 0.266065 and a proposed December 2017 operating national average case-weighted CCR of 0.262830. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2016 operating national average case-weighted CCR from the December 2017 operating national average case-weighted CCR and then dividing the result by the December 2016 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.987842.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, we calculated a December 2016 capital national average case-weighted CCR of 0.023104 and a December 2017 capital national average case-weighted CCR of 0.022076. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2016 capital national average case-weighted CCR from the December 2017 capital national average case-weighted CCR and then dividing the result by the December 2016 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.955517.

As discussed in section III.B.3. of the preamble of the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.G.3. of the preamble of this proposed rule, in accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments were applied after rural floor budget neutrality adjustments were applied for all labor market areas, in order to ensure that no hospital in a frontier State would receive a wage index less than 1.0000 due to the proposed rural floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the proposed outlier threshold for FY 2019, it was necessary to adjust the proposed wage index of those eligible hospitals in a frontier State when calculating the proposed outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2019. If we did not take the above into account, our estimate of total FY 2019 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2019 outlier payments, we are proposing not to make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement. We continue to believe that, due to the policy implemented in the June 9, 2003 Outlier Final Rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We note that we have instructed MACs to identify for CMS any instances where: (1) A hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed; and (2) the total outlier payments for the hospital exceeded $500,000.00 for that period. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, we are proposing not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

As described in sections IV.H. and IV.I., respectively, of the preamble of this proposed rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the proposed hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we are proposing to exclude the proposed hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2019, we also are proposing to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2019, we are proposing to include estimated FY 2019 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we are proposing to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1 of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. We used a threshold of $27,545 and calculated total operating Federal payments of $92,908,351,672 and total outlier payments of $4,738,377,622. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold met the 5.1 percent target. As a result, we are proposing an outlier fixed-loss cost threshold for FY 2019 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus $27,545.

(2) Other Proposed Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient

capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2019 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 5.06 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we are proposing to reduce the FY 2019 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The proposed outlier adjustment factors that would be applied to the standardized amount based on the proposed FY 2019 outlier threshold are as follows:

	Operating standardized amounts	Capital federal rate
National	0.948999	0.949367

We are proposing to apply the outlier adjustment factors to the proposed FY 2019 payment rates after removing the effects of the FY 2018 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.167 or capital CCRs greater than 0.154, or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the internet on the CMS website) contains the proposed statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the above range. These statewide average ratios would be effective for discharges occurring on or after October 1, 2018 and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable proposed statewide average capital CCRs. As previously stated, the proposed CCRs in Tables 8A and 8B would be used during FY 2019 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the proposed statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of Change Request 3966 are followed. In addition, as mentioned above, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation, we refer readers to the CMS website: *http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf.*

(3) Alternative Considered for a Potential Change to the CCRs Used for Outliers, New Technology Add-On Payments, and Payments to IPPS-Excluded Cancer Hospitals for Chimeric Antigen Receptor (CAR) T-Cell Therapy

As discussed in section II.F.2.d. of the preamble of this proposed rule, we have received many inquiries from the public regarding payment of CAR T-cell therapy. For FY 2019, one suggestion from the public was to allow hospitals to utilize a CCR specific to the ICD–10–PCS procedure codes used to report the performance of procedures involving the use of CAR T-cell therapy drugs, for example a CCR of 1.0, when determining whether an individual case qualifies for FY 2019 outlier payments and to determine the cost of an individual case for FY 2019 for purposes of a new technology add-on payment, if approved. As previously discussed, procedures involving the use of CAR T-cell therapy drugs are currently identified with ICD–10–PCS procedure codes XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3) and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3), which both became effective October 1, 2017.

Two CAR T-cell therapy drugs received FDA approval in 2017. KYMRIAH™ (manufactured by Novartis Pharmaceuticals Corporation) was approved for the use in the treatment of patients up to 25 years of age with B-cell precursor acute lymphoblastic leukemia (ALL) that is refractory or in second or later relapse. YESCARTA™ (manufactured by Kite Pharma, Inc.) was approved for the use in the treatment of adult patients with certain types of large B-cell lymphoma and who have not responded to or who have relapsed after at least two other kinds of treatment.

As discussed in greater detail in section II.H.5.a. of the preamble of this proposed rule, the manufacturer of KYMRIAH™ and the manufacturer of YESCARTA™ submitted separate applications for new technology add-on payments for FY 2019. We believe that, in the context of these pending new technology add-on payment applications, there may also be merit in the suggestion from the public to allow hospitals to utilize a CCR specific to procedures involving the ICD–10–PCS procedures codes describing CAR T-cell therapy drugs for FY 2019 as part of the determination of the cost of a case for purposes of calculating outlier payments for individual FY 2019 cases, new technology add-on payments, if approved, for individual FY 2019 cases, and payments to IPPS-excluded cancer hospitals beginning in FY 2019. For example, a CCR of 1.0 could be used for charges associated with ICD–10–PCS procedure codes XW033C3 and XW043C3, as many public inquirers believed hospitals would be unlikely to set charges different from costs for the use of KYMRIAH™ and YESCARTA™. Such a change would result in a higher outlier payment, higher new technology add-on payment, or the determination of higher costs for IPPS-excluded cancer hospital cases. For example, if a hospital charged $400,000 for the procedure described by ICD–10–PCS procedure code XW033C3, the application of a hypothetical CCR of 0.25 results in a cost of $100,000 (= $400,000 * 0.25) while the application of a hypothetical CCR of 1.00 results in a cost of $400,000 (= $400,000 * 1.0).

We are inviting public comments on this alternative approach for FY 2019.

We also are inviting comments on how this payment alternative would affect access to care, as well as how it affects incentives to encourage lower drug prices, which is a high priority for this Administration. In addition, we are considering alternative approaches and authorities to encourage value-based care and lower drug prices. We solicit comments on how the payment methodology alternatives may intersect and affect future participation in any such alternative approaches.

(4) FY 2017 Outlier Payments

Our current estimate, using available FY 2017 claims data, is that actual outlier payments for FY 2017 were approximately 5.53 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2017, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2017. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments

to ensure that total outlier payments for FY 2017 are equal to 5.1 percent of total MS–DRG payments. As explained in the FY 2003 Outlier Final Rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS–DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS–DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2018 will not be available until after September 30, 2018, we are unable to provide an estimate of actual outlier payments for FY 2018 based on FY 2018 claims data in this proposed rule. We will provide an estimate of actual FY 2018 outlier payments in the FY 2020 IPPS/LTCH PPS proposed rule.

5. Proposed FY 2019 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are proposing to apply to all hospitals, except hospitals located in Puerto Rico, for FY 2019. The proposed standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). The proposed amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 68.3 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are proposing to apply a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the proposed standardized amounts reflecting the proposed applicable percentage increases for FY 2019.

The proposed labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2019 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similar to above, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2018 national standardized amount to the proposed FY 2019 national standardized amount. The second through fifth columns display the changes from the FY 2018 standardized amounts for each applicable proposed FY 2019 standardized amount. The first row of the table shows the updated (through FY 2018) average standardized amount after restoring the FY 2018 offsets for outlier payments and the geographic reclassification budget neutrality. The MS–DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2018 adjustment factors are not removed from this table.

CHANGES FROM FY 2018 STANDARDIZED AMOUNTS TO THE PROPOSED FY 2019 STANDARDIZED AMOUNTS

	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
FY 2018 Base Rate after removing: 1. FY 2018 Geographic Reclassification Budget Neutrality (0.987985). 2. FY 2018 Operating Outlier Offset (0.948998).	If Wage Index is Greater Than 1.0000: Labor (68.3%): $4,059.36 Nonlabor (30.4%): $1,884.07 If Wage Index is less Than or Equal to 1.0000: Labor (62%): $3,684.92 Nonlabor (38%): $2,258.50	If Wage Index is Greater Than 1.0000: Labor (68.3%): $4,059.36 Nonlabor (30.4%): $1,884.07 If Wage Index is less Than or Equal to 1.0000: Labor (62%): $3,684.92 Nonlabor (38%): $2,258.50	If Wage Index is Greater Than 1.0000: Labor (68.3%): $4,059.36 Nonlabor (30.4%): $1,884.07 If Wage Index is less Than or Equal to 1.0000: Labor (62%): $3,684.92 Nonlabor (38%): $2,258.50	If Wage Index is Greater Than 1.0000: Labor (68.3%): $4,059.36 Nonlabor (30.4%): $1,884.07 If Wage Index is less Than or Equal to 1.0000: Labor (62%): $3,684.92 Nonlabor (38%): $2,258.50
Proposed FY 2019 Update Factor	1.0125	0.9915	1.0055	0.9845
Proposed FY 2019 MS–DRG Recalibration Budget Neutrality Factor.	0.997896	0.997896	0.997896	0.997896
Proposed FY 2019 Wage Index Budget Neutrality Factor.	1.001182	1.001182	1.001182	1.001182
Proposed FY 2019 Reclassification Budget Neutrality Factor.	0.987084	0.987084	0.987084	0.987084
Proposed FY 2019 Operating Outlier Factor	0.948999	0.948999	0.948999	0.948999
Proposed FY 2019 Rural Demonstration Budget Neutrality Factor.	0.999325	0.999325	0.999325	0.999325
Adjustment for FY 2019 Required under Section 414 of Public Law 114–10 (MACRA).	1.005	1.005	1.005	1.005
Proposed National Standardized Amount for FY 2019 if Wage Index is Greater Than 1.0000; Labor/Non-Labor Share Percentage (68.3/31.7).	Labor: $3,863.17 Nonlabor: $1,793.01	Labor: $3,783.04 Nonlabor: $1,755.82	Labor: $3,836.46 Nonlabor: $1,780.61	Labor: $3,756.34 Nonlabor: $1,743.43
Proposed National Standardized Amount for FY 2019 if Wage Index is Less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/0;38).	Labor: $3,506.83 Nonlabor: $2,149.35	Labor: $3,434.09 Nonlabor: $2,104.77	Labor: $3,482.58 Nonlabor: $2,134.49	Labor: $3,409.86 Nonlabor: $2,089.91

B. Proposed Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the proposed labor-related and nonlabor-related shares that we are proposing to use to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2019. This section addresses two types of adjustments to the standardized amounts that are made in determining the proposed prospective payment rates as described in this Addendum.

1. Proposed Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2019, as discussed in section IV.B.3. of the preamble of this proposed rule, we are proposing to apply a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this proposed rule, we discuss the data and methodology for the proposed FY 2019 wage index.

2. Proposed Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively).

For FY 2018, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38530 through 38531), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are proposing to continue to use the same COLA factors in FY 2019 that were used in FY 2018 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. Below is a table listing the proposed COLA factors for FY 2019.

PROPOSED FY2019 COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	Cost of living adjustment factor
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.25
Rest of Alaska	1.25
City and County of Honolulu	1.25
County of Hawaii	1.21
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, the next update to the COLA factors for Alaska and Hawaii would occur at the same time as the update to the labor-related share of the IPPS market basket (no later than FY 2022).

C. Calculation of the Proposed Prospective Payment Rates

General Formula for Calculation of the Prospective Payment Rates for FY 2019

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2019 equals the Federal rate (which includes uncompensated care payments).

Section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Section 50205 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), enacted February 9, 2018, extended the MDH program for discharges on or after October 1, 2017 through September 30, 2022.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section V.G. of the preamble of this proposed rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2019 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below. The prospective payment rate for MDHs for FY 2019 equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described below. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

1. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula below is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described above) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS–DRG and MS–DRG relative weight for each claim based on

the ICD–10–CM procedure and diagnosis codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS–DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))

—Federal Payment for Capital Costs = MS–DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Fact × (l + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)

—Capital Costs = (Billed Charges × Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)

—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + New Technology Add-On Payment Amount

—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)

—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS–DRG)

—Operating Outlier Payment = (Operating Costs − Operating Outlier Threshold) × Marginal Cost Factor

—Capital Outlier Payment = (Capital Costs − Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment to the total claim payment amount. As noted in the formula above, we take uncompensated care payments and new technology add-on payments into consideration when calculating outlier payments.

2. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

As noted above, as discussed in section IV.G. of the preamble of this FY 2019 IPPS/LTCH PPS proposed rule, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Section 50205 of the Bipartisan Budget Act of 2018, enacted February 9, 2018, extended the MDH program for discharges on or after October 1, 2017 through September 30, 2022. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2019

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the proposed applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2019	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a Meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a Meaningful EHR user
Proposed Market Basket Rate-of-Increase	2.8	2.8	2.8	2.8
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.7	−0.7
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.1	0.0	−2.1
Proposed MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.75	−0.75	−0.75	−0.75
Proposed Applicable Percentage Increase Applied to Standardized Amount	1.25	−0.85	0.55	−1.55

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section IV.B. of the preamble of this proposed rule.

In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the proposed hospital-specific rate for an SCH or an MDH is adjusted by the proposed MS–DRG reclassification and recalibration budget neutrality factor of 0.997896, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH or MDH would receive for its discharges beginning on or after October 1, 2018. We note that, in this proposed rule, for FY 2019, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D.

of the preamble of this proposed rule for a complete discussion regarding our proposed policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

III. Proposed Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2019

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the proposed capital Federal rate for FY 2019, which would be effective for discharges occurring on or after October 1, 2018.

All hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs, which currently specifies capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2019

In the discussion that follows, we explain the factors that we used to determine the proposed capital Federal rate for FY 2019. In particular, we explain why the proposed FY 2019 capital Federal rate would increase approximately 1.28 percent, compared to the FY 2018 capital Federal rate. As discussed in the impact analysis in Appendix A to this proposed rule, we estimate that capital payments per discharge will increase approximately 1.7 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

a. Description of the Update Framework

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change as appropriate each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The proposed update factor for FY 2019 under that framework is 1.2 percent based on a projected 1.2 percent increase in the 2014-based CIPI, a proposed 0.0 percentage point adjustment for intensity, a proposed 0.0 percentage point adjustment for case-mix, a proposed 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2019 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are proposing to apply in the update framework for FY 2019.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patient changes (''real'' case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (''coding effects''); and
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2019, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase would equal 0.5 percent for FY 2019. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, the proposed net adjustment for case-mix change in FY 2019 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2017 DRG reclassification and recalibration as part of our proposed update for FY 2019. We assume, for purposes of this adjustment, that the estimate of FY 2017 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are proposing to make a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2019.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.0 percentage point was calculated for the FY 2017 update, for which there are historical data. That is, current historical data indicate that the forecasted FY 2017 CIPI (1.2 percent) used in calculating the FY 2017 update factor was 0.0 percentage point higher than actual realized price increases (1.2 percent). As this does not exceed the 0.25 percentage point threshold, we are not proposing to make an adjustment for forecast error in the update for FY 2019.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity

factor for the operating update framework reflected how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this proposed rule, we are proposing to continue to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2019 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2019, we are proposing to use an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2012 and extending through FY 2016. Based on these data, we estimated that case-mix constant intensity declined during FYs 2012 through 2016. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity will decline during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2019. Therefore, we are proposing to make a 0.0 percentage point adjustment for intensity in the update for FY 2019.

Above, we described the basis of the components we used to develop the proposed 1.2 percent capital update factor under the capital update framework for FY 2019 as shown in the following table.

PROPOSED CMS FY 2019 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	1.2
Intensity	0.0
Case-Mix Adjustment Factors	
Real Across DRG Change	0.5
Projected Case-Mix Change	0.5
Subtotal	1.2
Effect of FY 2017 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Proposed Total Update	1.2

*The capital input price index represents the 2014-based CIPI.

b. Comparison of CMS and MedPAC Update Recommendation

In its March 2018 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS payments for FY 2019. (We refer readers to MedPAC's Report to the Congress: Medicare Payment Policy, March 2018, Chapter 3, available on the website at: *http://www.medpac.gov*.)

2. Proposed Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2018, we estimated that outlier payments for capital would equal 5.17 percent of inpatient capital-related payments based on the capital Federal rate in FY 2018. Based on the thresholds as set forth in section II.A. of this Addendum, we estimate that outlier payments for capital-related costs would equal 5.06 percent for inpatient capital-related payments based on the proposed capital Federal rate in FY 2019. Therefore, we are proposing to apply an outlier adjustment factor of 0.9494 in determining the capital Federal rate for FY 2019. Thus, we estimate that the percentage of capital outlier payments to proposed total capital Federal rate payments for FY 2019 would be lower than the percentage for FY 2018.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The proposed FY 2019 outlier adjustment of 0.9494 is a 0.12 percent change from the FY 2018 outlier adjustment of 0.9483. Therefore, the proposed net change in the outlier adjustment to the capital Federal rate for FY 2019 is 1.0012(0.9494/0.9483) so that the proposed outlier adjustment would increase the FY 2019 capital Federal rate by 0.12 percent compared to the FY 2018 outlier adjustment.

3. Proposed Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. The budget neutrality factor for DRG reclassifications and recalibration nationally is applied in determining the capital IPPS Federal rate, and is applicable for all hospitals, including those hospitals located in Puerto Rico.

To determine the proposed factors for FY 2019, we compared estimated aggregate capital Federal rate payments based on the FY 2018 MS–DRG classifications and relative weights and the FY 2018 GAF to estimated aggregate capital Federal rate payments based on the FY 2018 MS–DRG classifications and relative weights and the proposed FY 2019 GAFs. To achieve budget neutrality for the changes in the GAFs, based on calculations using updated data, we are proposing to apply an incremental budget neutrality adjustment factor of 1.000094 for FY 2019 to the previous cumulative FY 2018 adjustment factor.

We then compared estimated aggregate capital Federal rate payments based on the FY 2018 MS–DRG relative weights and the proposed FY 2019 GAFs to estimate aggregate capital Federal rate payments based on the cumulative effects of the proposed FY 2019 MS–DRG classifications and relative weights and the proposed FY 2019 GAFs. The proposed incremental adjustment factor for DRG classifications and changes in relative weights is 0.9996. The proposed incremental adjustment factors for MS–DRG classifications and proposed changes in relative weights and for proposed changes in the GAFs through FY 2019 is 0.9997. We note that all the values are calculated with unrounded numbers.

The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS–DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor for changes in the GAF (including geographic reclassification) and the MS–DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The proposed incremental adjustment factor of 0.9997 (the product of the proposed incremental national GAF budget neutrality

adjustment factor of 1.00009 and the proposed incremental DRG budget neutrality adjustment factor of 0.9996) accounts for the MS–DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects on the GAFs of FY 2019 geographic reclassification decisions made by the MGCRB compared to FY 2018 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Proposed Capital Federal Rate for FY 2019

For FY 2018, we established a capital Federal rate of $453.95 (82 FR 46144 through 46145). We are proposing to establish an update of 1.2 percent in determining the FY 2019 capital Federal rate for all hospitals. As a result of this proposed update and the proposed budget neutrality factors discussed earlier, we are proposing to establish a national capital Federal rate of $459.78 for FY 2019. The proposed national capital Federal rate for FY 2019 was calculated as follows:

- The proposed FY 2019 update factor is 1.012; that is, the proposed update is 1.2 percent.
- The proposed FY 2019 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS–DRG classifications and relative weights and changes in the GAFs is 0.9997.
- The proposed FY 2019 outlier adjustment factor is 0.9494.

We are providing the following chart that shows how each of the proposed factors and adjustments for FY 2019 affects the computation of the proposed FY 2019 national capital Federal rate in comparison to the FY 2018 national capital Federal rate as presented in the FY 2018 IPPS/LTCH PPS Correction Notice (82 FR 46144 through 46145). The proposed FY 2019 update factor has the effect of increasing the capital Federal rate by 1.2 percent compared to the FY 2018 capital Federal rate. The proposed GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.03 percent. The proposed FY 2019 outlier adjustment factor has the effect of increasing the capital Federal rate by 0.12 percent compared to the FY 2018 capital Federal rate. The combined effect of all the proposed changes would increase the national capital Federal rate by approximately 1.28 percent compared to the FY 2018 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2018 CAPITAL FEDERAL RATE AND PROPOSED FY 2019 CAPITAL FEDERAL RATE

	FY 2018	Proposed FY 2019	Proposed change	Proposed percent change
Update Factor [1]	1.0130	1.012	1.012	1.20
GAF/DRG Adjustment Factor [1]	0.9987	0.9997	.09997	−0.03
Outlier Adjustment Factor [2]	0.9483	0.9494	1.0012	0.12
Capital Federal Rate	$453.95	$459.78	1.0128	[3] 1.28

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2018 to FY 2019 resulting from the application of the proposed 0.9997 GAF/DRG budget neutrality adjustment factor for FY 2019 is a net change of 0.9997 (or –0.03 percent).

[2] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the proposed FY 2019 outlier adjustment factor is 0.9494/0.9483 or 1.0012 (or 0.12 percent).

[3] Percent change may not sum due to rounding.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2019

For purposes of calculating payments for each discharge during FY 2019, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate. Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The proposed outlier thresholds for FY 2019 are in section II.A. of this Addendum. For FY 2019, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS–DRG plus the proposed fixed-loss amount of $27,545.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. For this FY 2019 IPPS/LTCH PPS proposed rule, we are using the rebased and revised IPPS operating and capital market baskets that reflect a 2014 base year. For a complete discussion of this rebasing, we refer readers to section IV. of the preamble of the FY 2018 IPPS/LTCH PPS final rule.

2. Forecast of the CIPI for FY 2019

Based on IGI's fourth quarter 2017 forecast, for this proposed rule, we are forecasting the 2014-based CIPI to increase 1.2 percent in FY 2019. This reflects a projected 1.6 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 3.0 percent increase in other capital expense prices in FY 2019, partially offset by a projected 1.3 percent decline in vintage-weighted interest expense prices in FY 2019. The weighted average of these three factors produces the forecasted 1.2 percent increase for the 2014-based CIPI in FY 2019.

IV. Proposed Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2019

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as

specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

The proposed FY 2019 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children's hospitals, the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, RNHCIs, and extended neoplastic disease care hospitals is the estimated percentage increase in the IPPS operating market basket for FY 2019, in accordance with applicable regulations at § 413.40. Based on IGI's 2017 fourth quarter forecast, we estimated that the 2014-based IPPS operating market basket update for FY 2019 is 2.8 percent (that is, the estimate of the market basket rate-of-increase). However, we are proposing that if more recent data become available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2019. Therefore, for children's hospitals, the 11 cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), extended neoplastic disease care hospitals, and RNHCIs, the FY 2019 rate-of-increase percentage that would be applied to the FY 2018 target amounts, in order to determine the proposed FY 2019 target amounts is 2.8 percent.

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VII. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule for the proposed update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2019. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Proposed Changes to the Payment Rates for the LTCH PPS for FY 2019

A. Proposed LTCH PPS Standard Federal Payment Rate for FY 2019

1. Overview

In section VII. of the preamble of this proposed rule, we discuss our proposed annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2019.

Under § 412.523(c)(3) of the regulations, for LTCH PPS FYs 2012 through 2017, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3)(A)(i) (citing sections 1886(b)(3)(B)(xi)(II), 1886(m)(3)(A)(ii), and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (c)(3)(xiii)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312).) Sections 1886(m)(3)(A) and 1886(m)(3)(C) of the Act specify that, for rate year 2010 and each subsequent rate year, except FY 2018, any annual update to the standard Federal payment rate shall be reduced:

- For rate year 2010 through 2019, by the ''other adjustment'' specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as ''the multifactor productivity (MFP) adjustment'') as discussed in section VII.D.2. of the preamble of this proposed rule.

This section of the Act further provides that the application of section 1886(m)(3) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VII.D.2.a. of the preamble of this proposed rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the Proposed FY 2019 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice, for FY 2019, we are proposing to apply the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the proposed LTCH PPS standard Federal payment rate for FY 2019, we also are proposing to make certain regulatory adjustments, consistent with past practices. Specifically, in determining the proposed FY 2019 LTCH PPS standard Federal payment rate, we are proposing to apply a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data and labor-related share) in accordance with § 412.523(d)(4) and a proposed budget neutrality adjustment factor for the proposed elimination of the 25-percent threshold policy (discussed in VII.D. of the preamble of this proposed rule).

In this FY 2019 IPPS/LTCH PPS proposed rule, we are proposing an annual update to the LTCH PPS standard Federal payment rate of 1.15 percent. Accordingly, under proposed § 412.523(c)(3)(xv), we are proposing to apply a factor of 1.0115 to the FY 2018 LTCH PPS standard Federal payment rate of $41,415.11 to determine the proposed FY 2019 LTCH PPS standard Federal payment rate. Also, under proposed § 412.523(c)(3)(xv), applied in conjunction with the provisions of § 412.523(c)(4), we are proposing an annual update to the LTCH PPS standard Federal payment rate of -0.85 percent (that is, a proposed update factor of 0.9915) for FY 2019 for LTCHs that fail to submit the required quality reporting data for FY 2019 as required under the LTCH QRP. Consistent with § 412.523(d)(4), we also are proposing to apply an area wage level budget neutrality factor to the proposed FY 2019 LTCH PPS standard Federal payment rate of 0.999713 based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment (that is, the proposed annual update of the wage index values and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal rate payments. Finally, we are proposing to apply a one-time, permanent budget neutrality adjustment of 0.990535 for our proposed elimination of the 25-percent threshold policy (discussed in VII.E. of the preamble of this proposed rule). Accordingly, we are proposing an LTCH PPS standard Federal payment rate of $41,482.98 (calculated as $41,415.11 × 1.0115 × 0.999713 × 0.990535) for FY 2019 (calculations performed on rounded numbers). For LTCHs that fail to submit quality reporting data for FY 2019, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are proposing an LTCH PPS standard Federal payment rate of $40,662.75 (calculated as $41,415.11 × 0.9915 × 0.999713 × 0.990535) (calculations performed on rounded numbers) for FY 2019.

B. Proposed Adjustment for Area Wage Levels Under the LTCH PPS for FY 2019

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

2. Proposed Geographic Classifications (Labor Market Areas) for the LTCH PPS Standard Federal Payment Rate

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as

defined by the Executive OMB and a ''rural area'' is defined as any area outside of an urban area. (Information on OMB's MSA delineations based on the 2010 standards can be found at: *https://obamawhitehouse.archives.gov/sites/default/files/omb/assets/fedreg_2010/06282010_metro_standards-Complete.pdf.*)

The CBSA-based geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the OMB labor market area delineations based on the 2010 Decennial Census data. The current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. We adopted these labor market area delineations because they are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that these OMB delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) of the regulations (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provided updates to and superseded OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provided detailed information on the update to statistical areas since February 28, 2013. We adopted the updates contained in OMB Bulletin No. 15–01, as discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913 through 56914). On August 15, 2017, OMB issued OMB Bulletin No. 17–01 that updated and superseded Bulletin No. 15–01. As discussed in section III.A.2. of the preamble of this proposed rule, OMB Bulletin No. 17–01 and its attachments provide detailed information on the update to statistical areas since the July 15, 2015 release of Bulletin No. 15–01 and are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2014, and July 1, 2015. A copy of this bulletin may be obtained on the website at: *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/bulletins/2017/b-17-01.pdf.*

OMB Bulletin No. 17–01 made the following change that is relevant to the LTCH PPS CBSA-based labor market area (geographic classification) delineations:

- Twin Falls, ID, with principal city Twin Falls, ID and consisting of counties Jerome County, ID and Twin Falls County, ID, which was a Micropolitan (geographically rural) area, now qualifies as an urban area under new CBSA 46300 entitled Twin Falls, ID.

This change affects all providers located in CBSA 46300, but our database shows no LTCHs located in CBSA 46300.

We believe that this revision to the CBSA-based labor market area delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). Therefore, we are proposing to adopt this revision under the LTCH PPS, effective October 1, 2018. Accordingly, the proposed FY 2019 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum to this proposed rule (which are available via the internet on the CMS website) reflect the revision to the CBSA-based labor market area delineations described above. We note that, as discussed in section III.A.2. of the preamble of this proposed rule, the revision to the CBSA-based delineations also is being proposed under the IPPS.

3. Proposed Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting a 2009-based LTCH-specific market basket. In addition, beginning in FY 2013, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH-specific market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) As noted previously, we rebased and revised the 2009-based LTCH-specific market basket to reflect a 2013 base year. In conjunction with that policy, as discussed in section VII.D. of the preamble of this FY 2019 IPPS/LTCH PPS proposed rule, we are proposing to establish that the LTCH PPS labor-related share for FY 2019 is the sum of the FY 2019 relative importance of each labor-related cost category in the 2013-based LTCH market basket using the most recent available data.

Specifically, we are proposing to establish that the labor-related share for FY 2019 includes the sum of the labor-related portion of operating costs from the 2013-based LTCH market basket (that is, the sum of the FY 2019 relative importance share of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services) and a portion of the Capital-Related cost weight from the 2013-based LTCH PPS market basket. Based on IGI's fourth quarter 2017 forecast of the 2013-based LTCH market basket, we are proposing to establish a labor-related share under the LTCH PPS for FY 2019 of 66.2 percent. This labor-related share is determined using the same methodology as employed in calculating all previous LTCH PPS labor-related shares. Consistent with our historical practice, we also are proposing that if more recent data become available, we would use that data, if appropriate, to determine the final FY 2019 labor-related share in the final rule. (We note that a labor-related share of 66.2 percent is the same as the labor-related share for FY 2018. Although the relative importance of some components of the market basket have changed, the proposed labor-related share remains at 66.2 percent when aggregating these components and rounding to one decimal.)

The proposed labor-related share for FY 2019 is the sum of the FY 2019 relative importance of each labor-related cost category, and would reflect the different rates of price change for these cost categories between the base year (2013) and FY 2019. The sum of the relative importance for FY 2019 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) is 62.0 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (the same percentage applied to the 2009-based LTCH-specific market basket). Because the relative importance for capital-related costs under our policies is 9.1 percent of the 2013-based LTCH market basket in FY 2019, we are proposing to take 46 percent of 9.1 percent to determine the labor-related share of capital-related costs for FY 2019 (0.46 x 9.1). The result is 4.2 percent, which we added to 62.0 percent for the operating cost amount to determine the total proposed labor-related share for FY 2019. Therefore, we are proposing that the labor-related share under the LTCH PPS for FY 2019 is 66.2 percent.

4. Proposed Wage Index for FY 2019 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The

area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider.

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38538 through 38539), we calculated the FY 2018 LTCH PPS area wage index values using the same data used for the FY 2018 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2014), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2018 LTCH PPS area wage index values, consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, as discussed in this FY 2019 IPPS/LTCH PPS proposed rule, to determine the applicable area wage index values for the FY 2019 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are proposing to use wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2015, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act because these data are the most recent complete data available. We also note that these are the same data we are using to compute the FY 2019 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this proposed rule. We are proposing to compute the proposed FY 2019 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, labor market area delineations, including the proposed updates, as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. We also are proposing to continue to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2019, we are proposing to continue to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data would be determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data would be determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2015 IPPS wage data that we are proposing to use to determine the proposed FY 2019 LTCH PPS standard Federal payment rate area wage index values in this proposed rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with the methodology discussed above, we calculated the proposed FY 2019 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on the FY 2015 IPPS wage data that we are proposing to use to determine the proposed FY 2019 LTCH PPS standard Federal payment rate area wage index values in this proposed rule, there are no rural areas without IPPS hospital wage data. Therefore, it is not necessary to use our established methodology to calculate a proposed LTCH PPS standard Federal payment rate wage index value for proposed rural areas with no IPPS wage data for FY 2019. We note that, as IPPS wage data are dynamic, it is possible that the number of rural areas without IPPS wage data will vary in the future. The proposed FY 2019 LTCH PPS standard Federal payment rate wage index values that would be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2018, through September 30, 2019, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website.

5. Proposed Budget Neutrality Adjustment for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).) In this proposed rule, for FY 2019 LTCH PPS standard Federal payment rate cases, in accordance with § 412.523(d)(4), we are proposing to apply an area wage level adjustment budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the proposed adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). Specifically, we are proposing to determine an area wage level adjustment budget neutrality factor that would be applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2019 using the following methodology:

Step 1—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2018 wage index values and the FY 2018 labor-related share of 66.2 percent (as established in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38314 and 38315)).

Step 2—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the proposed FY 2019 wage index values (as shown in Tables 12A and 12B listed in the Addendum to this proposed rule and available via the internet on the CMS website) and the proposed FY 2019 labor-related share of 66.2 percent (based on the latest available data as previously discussed in this Addendum).

Step 3—We calculated the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2018 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the proposed FY 2019 area wage level adjustments (calculated in Step 2) to determine the proposed area wage level adjustment budget neutrality factor for FY 2019 LTCH PPS standard Federal payment rate payments.

Step 4—We then applied the proposed FY 2019 area wage level adjustment budget neutrality factor from Step 3 to determine the proposed FY 2019 LTCH PPS standard Federal payment rate after the application of the proposed FY 2019 annual update (discussed previously in section V.A. of this Addendum).

We note that, with the exception of cases subject to the transitional blend payment rate

provisions and certain temporary exemptions for certain spinal cord specialty hospitals and certain severe wound cases, under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. Because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, we only used data from claims that would have qualified for payment at the LTCH PPS standard Federal payment rate if such rate had been in effect at the time of discharge to calculate the FY 2019 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor described above.

For this proposed rule, using the steps in the methodology previously described, we determined a proposed FY 2019 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 0.999713. Accordingly, in section V.A. of the Addendum to this proposed rule, to determine the proposed FY 2019 LTCH PPS standard Federal payment rate, we are proposing to apply an area wage level adjustment budget neutrality factor of 0.999713, in accordance with § 412.523(d)(4). The proposed FY 2019 LTCH PPS standard Federal payment rate shown in Table 1E of the Addendum to this proposed rule reflects this adjustment factor.

C. Proposed LTCH PPS Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described. The methodology used to determine the COLA factors for Alaska and Hawaii is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we update the COLA factors using the methodology described above every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), and we last updated the COLA factors for Alaska and Hawaii published by OPM for 2009 in FY 2018 (82 FR 38539 through 38540).

We continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii. Therefore, in this proposed rule for FY 2019, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are proposing to continue to use the COLA factors based on the 2009 OPM COLA factors updated through 2016 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2018 IPPS/LTCH PPS final rule. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii and for a discussion on the FY 2018 COLA factors, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38539 through 38540).) Consistent with our historical practice, we are proposing to establish that the COLA factors shown in the following table will be used to adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii under § 412.525(b).

PROPOSED COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2019

Area	FY 2018 and proposed FY 2019
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.25
Rest of Alaska	1.25
City and County of Honolulu	1.25
County of Hawaii	1.21
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Proposed Adjustment for LTCH PPS High Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

In order to maintain budget neutrality, consistent with the budget neutrality requirement for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 2-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended payment rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted above, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and also are used to determine payments for site neutral payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient

operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs above the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. LTCH Total CCR Ceiling

Consistent with our historical practice, we are proposing to use the most recent data to determine the LTCH total CCR ceiling for FY 2019 in this proposed rule. Specifically, in this proposed rule, using our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the December 2017 update of the Provider Specific File (PSF), which is the most recent data available, we are proposing to establish an LTCH total CCR ceiling of 1.28 under the LTCH PPS for FY 2019 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48118 through 48119).)

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on ''total'' IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(C)(*2*), the current SSO policy at § 412.529(f)(4)(iii)(B), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this proposed rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the December 2017 update of the PSF, we are proposing to establish LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2018, through September 30, 2019, in Table 8C listed in section VI. of the Addendum to this proposed rule (and available via the internet on the CMS website). Consistent with our historical practice, we also are proposing that if more recent data become available, we would use that data to determine the LTCH PPS statewide average total CCRs for FY 2019 in the final rule.

Under the current LTCH PPS labor market areas, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut has areas that are designated as rural, in our calculation of the LTCH statewide average CCRs, there was no data available from short-term, acute care IPPS hospitals to compute a rural statewide average CCR or there were no short-term, acute care IPPS hospitals or LTCHs located in that area as of December 2017. Therefore, consistent with our existing methodology, we are proposing to use the national average total CCR for rural IPPS hospitals for rural Connecticut in Table 8C. While Massachusetts also has rural areas, the statewide average CCR for rural areas in Massachusetts is based on one provider whose CCR is an atypical 1.215. Because this is much higher than the statewide urban average and furthermore implies costs exceeded charges, as with Connecticut, we are proposing to use the national average total CCR for rural hospitals for hospitals located in rural Massachusetts. Furthermore, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we are proposing to continue to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

d. Reconciliation of HCO Payments

Under the HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation. Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to Sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010), and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. Proposed Changes to High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Establishment of the Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2019

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount and target for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes

had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been a LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. We use MedPAR claims data and CCRs based on data from the most recent PSF (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) to establish an applicable fixed-loss threshold amount for LTCH PPS standard Federal payment rate cases.

In this FY 2019 IPPS/LTCH PPS proposed rule, we are proposing to continue to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2019 using the best available data that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the proposed payment rates and policies for these cases presented in this proposed rule). Specifically, based on the most recent complete LTCH data available at this time (that is, LTCH claims data from the December 2017 update of the FY 2017 MedPAR file and CCRs from the December 2017 update of the PSF), we are proposing to determine a proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2019 of $30,639 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2019 payments for such cases. Under this proposal, we would continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed adjusted LTCH PPS standard Federal payment rate payment and the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases of $30,639).

We note that the proposed fixed-loss amount for HCO cases paid under the LTCH PPS standard Federal payment rate in FY 2019 of $30,639 is higher than the FY 2018 fixed-loss amount of $27,381 for LTCH PPS standard Federal payment rate cases. However, based on the most recent available data at the time of the development of this FY 2019 IPPS/LTCH PPS proposed rule, we found that the current FY 2018 HCO threshold of $27,381 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 7.988 percent of the estimated total LTCH PPS payments in FY 2018, which exceeds the 7.975 percent target by 0.01 percentage points. We continue to believe, as discussed in detail in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38543), this increase is largely attributable to the rate-of-change (that is, increase) in the Medicare allowable charges on the claims data in addition to updates to CCRs from the December 2016 update of the PSF to the March 2017 update of the PSF. Consistent with our historical practice of using the best data available, we are proposing that, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2019 in the final rule, we would use the most recent available LTCH claims data and CCR data at the time.

3. Proposed High-Cost Outlier Payments for Site Neutral Payment Rate Cases

Under § 412.525(a), site neutral payment rate cases receive an additional HCO payment for costs that exceed the HCO threshold that is equal to 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold (80 FR 49618 through 49629). In the following discussion, we note that the statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 through FY 2019 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the LTCH PPS standard Federal payment rate amount for the discharge (§ 412.522(c)(3)). As such, for FY 2019 discharges paid under the transitional payment method, the discussion below pertains only to the site neutral payment rate portion of the blended payment rate under § 412.522(c)(3)(i).

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FY 2019, we continue to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases, FY 2017 claims for these cases were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2018, at that time our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2018 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2018. In particular, in FY 2018, we established the fixed-loss amount for site neutral payment rate cases as the FY 2018 IPPS fixed-loss amount of $26,537 (82 FR 46145).

As noted earlier, because not all claims in the data used for this proposed rule were subject to the site neutral payment rate, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2018 when developing a proposed fixed-loss amount for site neutral payment rate cases for FY 2019. Because our actuaries continue to project that site neutral payment rate cases in FY 2019 will continue to mirror an IPPS case paid under the same MS–DRG, we continue to believe that it would be inappropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS. More specifically, as with FYs 2016 through 2018, our actuaries project that the costs and resource use for FY 2019 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the

historical data. (Based on the most recent FY 2017 LTCH claims data, approximately 64 percent of LTCH cases would have been paid the LTCH PPS standard Federal payment rate and approximately 36 percent of LTCH cases would have been paid the site neutral payment rate for discharges occurring in FY 2017.)

For these reasons, we continue to believe that the most appropriate proposed fixed-loss amount for site neutral payment rate cases for FY 2019 is the proposed IPPS fixed-loss amount for FY 2019. Therefore, consistent with past practice, in this FY 2019 IPPS/LTCH PPS proposed rule, for FY 2019, we are proposing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the proposed IPPS fixed-loss amount. That is, we are proposing a fixed-loss amount for site neutral payment rate cases of $27,545, which is the same proposed FY 2019 IPPS fixed-loss amount discussed in section II.A.4.g.(1) of the Addendum to this proposed rule. We continue to believe that this policy would reduce differences between HCO payments for similar cases under the IPPS and site neutral payment rate cases under the LTCH PPS and promote fairness between the two systems. Accordingly, for FY 2019, we are proposing to calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of $27,545).

In establishing a HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2019 would not result in any increase in estimated aggregate FY 2019 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments (or the portion of the blended payment rate payment for FY 2018 discharges occurring in LTCH cost reporting periods beginning before October 1, 2017) by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2019. In order to achieve this, for FY 2019, in general, we are proposing to continue to use the policy adopted for FY 2018.

As discussed earlier, consistent with the IPPS HCO payment threshold, we estimate our proposed fixed-loss threshold of $27,545 results in HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2019 would not result in any increase in estimated aggregate FY 2019 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2019. In order to achieve this, for FY 2019, we are proposing to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as $1.0 - 5.1/100 = 0.949$) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with the policy adopted for FY 2018, this proposed HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

E. Proposed Update to the IPPS Comparable/Equivalent Amounts To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that is based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

For FY 2019, as discussed in greater detail in section IV.F.3. of the preamble of this proposed rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 67.51 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2018. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act will be adjusted to 50.63 percent (the product of 75 percent and 67.51 percent) and the resulting amount will be used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2019, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 75.63 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 50.63 percent = 75.63 percent).

In this FY 2019 IPPS/LTCH PPS proposed rule, for FY 2019, we are proposing to establish that the calculation of the ''IPPS comparable amount'' under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 75.63 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we are proposing that if more recent data became available, if appropriate, we will use that data to determine this factor in the final rule.

F. Computing the Proposed Adjusted LTCH PPS Federal Prospective Payments for FY 2019

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal payment rate. Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages by multiplying the proposed labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the proposed FY 2019 values are shown in Tables 12A through 12B listed in section VI. of the Addendum to this proposed rule and are available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the proposed FY 2019 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this proposed rule, we are proposing to establish an LTCH PPS standard Federal payment rate for FY 2019 of $41,482.98, as discussed in section V.A. of the Addendum to this proposed rule. We illustrate the methodology to adjust the proposed LTCH PPS standard Federal payment rate for FY 2019 in the following example:

Example:

During FY 2019, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in Chicago, Illinois (CBSA 16974). The proposed FY 2019 LTCH PPS wage index value for CBSA 16974 is 1.0511 (obtained from Table 12A listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a proposed relative weight for FY 2019 of 0.9595 (obtained from Table 11 listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website). The LTCH submitted quality reporting data for FY 2019 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2019, we computed the wage-adjusted proposed Federal prospective payment amount by multiplying the unadjusted proposed FY 2019 LTCH PPS standard Federal payment rate ($41,482.98) by the proposed labor-related share (66.2 percent) and the wage index value (1.0511). This wage-adjusted amount was then added to the proposed nonlabor-related portion of the unadjusted proposed LTCH PPS standard Federal payment rate (33.8 percent; adjusted for cost of living, if applicable) to determine the adjusted proposed LTCH PPS standard Federal payment rate, which is then multiplied by the proposed MS–LTC–DRG relative weight (0.9595) to calculate the total adjusted proposed LTCH PPS standard Federal prospective payment for FY 2019 ($41,149.38). The table below illustrates the components of the calculations in this example.

Proposed Unadjusted LTCH PPS Standard Federal Prospective Payment Rate	$41,482.98
Proposed Labor-Related Share	× 0.662
Proposed Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= $27,461.73
Proposed Wage Index (CBSA 16974)	× 1.0511
Proposed Wage-Adjusted Labor Share of LTCH PPS Standard Federal Payment Rate	= $28,865.02
Proposed Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($41,482.98 x 0.338)	+ $14,021.25
Proposed Adjusted LTCH PPS Standard Federal Payment Amount	= $42,886.27
Proposed MS–LTC–DRG 189 Relative Weight	× 0.9595
Proposed Total Adjusted LTCH PPS Standard Federal Prospective Payment	= $41,149.38

VI. Tables Referenced in This Proposed Rule Generally Available Only Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this proposed rule and in this Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2018, for the FY 2019 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the internet. Specifically, all IPPS tables listed below, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will generally only be available through the internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49807), we streamlined and consolidated the wage index tables for FY 2016 and subsequent fiscal years.

As discussed in section III.J. of the preamble to this proposed rule, we are adding a new Table 4, ''List of Counties Eligible for the Out-Migration Adjustment under Section 1886(d)(13) of the Act—FY 2019,'' associated with this proposed rule. This table consists of the following: A list of counties that would be eligible for the out-migration adjustment for FY 2019 identified by FIPS county code, the proposed FY 2019 out-migration adjustment, and the number of years the adjustment would be in effect. We believe this new table would make this information more transparent and provide the public with easier access to this information. We intend to make the information available annually via Table 4 in the IPPS/LTCH PPS proposed and final rules, and are including it among the tables associated with this FY 2019 IPPS/LTCH PPS proposed rule that are available via the internet on the CMS website.

As discussed in sections II.F.13., II.F.15.b. and d., II.F.16., and II.F.18. of the preamble of this proposed rule, we developed the following ICD–10–CM and ICD–10–PCS code tables for FY 2019: Table 6A.—New Diagnosis Codes; Table 6B.—New Procedure Codes; Table 6C.—Invalid Diagnosis Codes; Table 6D.—Invalid Procedure Codes; Table 6E.—Revised Diagnosis Code Titles; Table 6F.—Revised Procedure Code Titles; Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusion List; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusion List; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusion List; Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusion List; Table 6I.1.—Proposed Additions to the MCC List; Table 6I.2.—Proposed Deletions to the MCC List; Table 6J.1.—Proposed Additions to the CC List; Table 6J.2.—Proposed Deletions to the CC List; and Table 6P.— ICD–10–CM and ICD–10–PCS Codes for Proposed MS–DRG Changes. Table 6P contains multiple tables, 6P.1 through 6P.1k, that include the ICD–10–CM and ICD–10–PCS code lists relating to specific proposed MS–DRG changes. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital's total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section IV.K. of the preamble of this proposed rule, we are not providing the hospital-level data as a table associated with this proposed rule. The hospital-level data for the FY 2019 HAC Reduction Program will be made publicly available once it has undergone the review and corrections process.

As discussed in section II.H.1. of the preamble of this proposed rule, Table 10 that we have released in prior fiscal years contained the thresholds that we use to evaluate applications for new medical service and technology add-on payments for the fiscal year that follows the fiscal year that is otherwise the subject of the rulemaking. In an effort to clarify for the public that the listed thresholds will be used for new technology add-on payment applications for the next fiscal year (in this case, for FY 2020) rather than the fiscal year that is otherwise the subject of the rulemaking (in this case, for FY 2019), we are proposing to provide the thresholds previously included in Table 10 as one of our publicly available data files

posted via the internet on the CMS website for the rulemaking for the upcoming fiscal year at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html,* which is the same URL where the impact data files associated with the rulemaking for the applicable fiscal year are posted. We refer readers to section II.H.1. of the preamble of this proposed rule regarding our proposal to include the thresholds previously included in Table 10 as one of our public data files.

As discussed in section VII.B of the preamble of this proposed rule, in previous fiscal years, Table 13A.—Composition of Low-Volume Quintiles for MS–LTC–DRGs (which was listed in section VI. of the Addendum to the proposed and final rules and available via the internet on the CMS website) listed the composition of the low-volume quintiles for MS–LTC–DRGs for the respective year, and Table 13B.—No Volume MS–LTC–DRG Crosswalk (also listed in section VI. of the Addendum to the proposed and final rules and available via the internet on the CMS website) listed the no-volume MS–LTC–DRGs and the MS–LTC–DRGs to which each was cross-walked (that is, the cross-walked MS–LTC–DRGs). The information contained in Tables 13A and 13B is used in the development of Table 11.—MS–LTC–DRGs, Relative Weights, Geometric Average Length of Stay, and Short-Stay Outlier (SSO) Threshold for LTCH PPS Discharges, which contains the proposed MS–LTC–DRGs and their respective proposed relative weights, geometric mean length of stay, and five-sixths of the geometric mean length of stay (used to identify SSO cases) for the respective fiscal year (and also is listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website). Because the information contained in Tables 13A and 13B does not contain proposed payment rates or factors for the applicable payment year, we are proposing to generally provide the data previously published in Tables 13A and 13B for each annual proposed rule and final rule as one of our supplemental data files via the internet on the CMS website for the respective rule and fiscal year (that is, FY 2019 and subsequent fiscal years) at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* (that is, the same URL address where the impact data files associated with the rule are posted). To streamline the information made available to the public that is used in the annual development of Table 11, we believe that this proposed change in the presentation of the information contained in Tables 13A and 13B will make it easier for the public to navigate and find the relevant data and information used for the development of proposed payment rates or factors for the applicable payment year, while continuing to furnish the same information contained in the tables provided in previous fiscal years.

In addition, Table 18 associated with this proposed rule contains the proposed Factor 3 for purposes of determining the FY 2019 uncompensated care payment for all hospitals and identifies whether or not a hospital is projected to receive Medicare DSH payments and, therefore, eligible to receive the additional payment for uncompensated care for FY 2019. A hospital's Factor 3 determines the proportion of the aggregate amount available for uncompensated care payments that a Medicare DSH eligible hospital will receive under section 3133 of the Affordable Care Act.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified below should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this FY 2019 proposed rule are generally only available through the internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled, ''FY 2019 IPPS Proposed Rule Home Page'' or ''Acute Inpatient—Files for Download.''

TABLE 1A—PROPOSED NATIONAL ADJUSTED OPERATING STANDARDIZED AMOUNTS, LABOR/NONLABOR

[(68.3 percent labor share/31.7 percent nonlabor share if wage index is greater than 1)—FY 2019]

Hospital submitted quality data and is a meaningful EHR user (Update = 1.25 Percent)		Hospital submitted quality data and is NOT a meaningful EHR user (update = −0.85 percent)		Hospital did NOT submit quality data and is a meaningful EHR user (update = 0.550 percent)		Hospital did NOT submit quality data and is NOT a meaningful EHR user (update = −1.55 percent)	
Labor	Nonlabor	Labor	Nonlabor	Labor	Nonlabor	Labor	Nonlabor
$3,863.17	$1,793.01	$3,783.04	$1,755.82	$3,836.46	$1,780.61	$3,756.34	$1,743.43

TABLE 1B—PROPOSED NATIONAL ADJUSTED OPERATING STANDARDIZED AMOUNTS, LABOR/NONLABOR

[(62 percent labor share/38 percent nonlabor share if wage index is less than or equal to 1)—FY 2019]

Hospital submitted quality data and is a meaningful EHR User (update = 1.25 percent)		Hospital submitted quality data and is NOT a meaningful EHR user (update = −0.85 percent)		Hospital did NOT submit quality data and is a meaningful EHR user (update = 0.550 percent)		Hospital did NOT submit quality data and is NOT a meaningful EHR user (update = −1.55 percent)	
Labor	Nonlabor	Labor	Nonlabor	Labor	Nonlabor	Labor	Nonlabor
$3,506.83	$2,149.35	$3,434.09	$2,104.77	$3,482.58	$2,134.49	$3,409.86	$2,089.91

TABLE 1C—PROPOSED ADJUSTED OPERATING STANDARDIZED AMOUNTS FOR HOSPITALS IN PUERTO RICO, LABOR/NONLABOR

[(National: 62 percent labor share/38 percent nonlabor share because wage index is less than or equal to 1)—FY 2019]

Standardized amount	Rates if wage index is greater than 1		Rates if wage index is less than or equal to 1	
	Labor	Nonlabor	Labor	Nonlabor
National [1]	Not Applicable	Not Applicable	$3,506.83	$2,149.35

[1] For FY 2019, there are no CBSAs in Puerto Rico with a national wage index greater than 1.

TABLE 1D—PROPOSED CAPITAL STANDARD FEDERAL PAYMENT RATE

[FY 2019]

	Rate
National	$459.78

TABLE 1E—PROPOSED LTCH PPS STANDARD FEDERAL PAYMENT RATE

[FY 2019]

	Full update (1.15 percent)	Reduced update * (−0.85 percent)
Standard Federal Rate	$41,482.98	$40,662.75

* For LTCHs that fail to submit quality reporting data for FY 2019 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This proposed rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This proposed rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) (Having an annual effect on the economy of $100 million or more in any 1 year, or adversely and materially affecting a sector of the

economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as ''economically significant''); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

We have determined that this proposed rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the proposed changes for FY 2019 acute care hospital operating and capital payments would redistribute amounts in excess of $100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other proposed payment changes in this proposed rule, would result in an estimated $4.1 billion increase in FY 2019 payments, primarily driven by a combined $4.0 billion increase in FY 2019 operating payments and uncompensated care payments, and a combined $0.1 billion increase in FY 2019 capital payments and low-volume hospital payments. These proposed changes are relative to payments made in FY 2018. The impact analysis of the proposed capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience a decrease in payments by $5 million in FY 2019 relative to FY 2018.

Our operating impact estimate includes the proposed 0.5 percent adjustment required under section 414 of the MACRA applied to the IPPS standardized amount, as discussed in section II.D. of the preamble of this proposed rule. In addition, our operating payment impact estimate includes the proposed 1.25 percent hospital update to the standardized amount (which includes the estimated 2.8 percent market basket update less 0.8 percentage point for the proposed multifactor productivity adjustment and less 0.75 percentage point required under the Affordable Care Act). The estimates of proposed IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which would also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this proposed rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This proposed rule would affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this proposed rule.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this proposed rule would further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these proposed changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this proposed rule contains a range of policies, we refer readers to the section of the proposed rule where each policy is discussed. These sections include the rational for our decisions, including the need for the proposed policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our proposed policy changes, as well as statutory changes effective for FY 2019, on various hospital groups. We estimate the effects of individual proposed policy changes by estimating payments per case, while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. In addition, we discuss limitations of our analysis for specific proposed policies in the discussion of those proposed policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 29 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2018, there were 3,257 IPPS acute care hospitals included in our analysis. This represents approximately 54 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,395 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, 11 cancer hospitals, extended neoplastic disease care hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of proposed changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this proposed rule. The impact of the proposed update and policy changes to the LTCH PPS for FY 2019 is discussed in section I.J. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of March 2018, there were 98 children's hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, 1 extended neoplastic disease care hospital, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 280 rehabilitation hospitals and 844 rehabilitation units, and approximately 409 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 538 psychiatric hospitals and 1,098 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this proposed rule. The impacts of the proposed changes on LTCHs are discussed in section I.J. of this Appendix.

For children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCIs, the update of the rate-of-increase limit (or target amount) would be the estimated FY 2019 percentage increase in the 2014-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's 2017 fourth quarter forecast of the 2014-based IPPS market basket increase, we are estimating the FY 2019 update to be 2.8 percent (that is, the estimate of the market basket rate-of-increase). We are proposing that if more recent data become available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2019. However, the Affordable Care Act requires an adjustment for multifactor productivity (currently proposed at 0.8 percentage point for FY 2019) and a 0.75 percentage point reduction to the market basket update, resulting in a proposed 1.25 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in

section IV.B. of the preamble of this proposed rule. Children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the proposed update is the percentage increase in the 2014-based IPPS operating market basket for FY 2019, estimated at 2.8 percent, without the reductions described previously under the Affordable Care Act.

The impact of the proposed update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Proposed Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this proposed rule, we are announcing proposed policy changes and payment rate updates for the IPPS for FY 2019 for operating costs of acute care hospitals. The proposed FY 2019 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that proposed total FY 2019 operating payments would increase by 2.1 percent, compared to FY 2018. In addition to the applicable percentage increase, this amount reflects the proposed 0.5 percent permanent adjustment to the standardized amount required under section 414 of the MACRA. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the proposed changes to each system. This section deals with the proposed changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain proposed changes in this proposed rule. However, there are other proposed changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those proposed changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of proposed changes in payments per case presented in this section are taken from the FY 2017 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the proposed changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each proposed change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2017 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of proposed payments under the capital IPPS, and the impact of proposed payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2019 are discussed in section I.I. of this Appendix.

We discuss the following proposed changes:

- The effects of the proposed application of the adjustment required under section 414 of the MACRA and the applicable percentage increase (including the proposed market basket update, the proposed multifactor productivity adjustment, and the applicable percentage reduction in accordance with the Affordable Care Act) to the standardized amount and hospital-specific rates.
- The effects of the proposed changes to the relative weights and MS–DRG GROUPER.
- The effects of the proposed changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2015, compared to the FY 2014 wage data, to calculate the proposed FY 2019 wage index.
- The effects of the geographic reclassifications by the MGCRB (as of publication of this proposed rule) that would be effective for FY 2019.
- The effects of the proposed rural floor with the application of the national budget neutrality factor to the wage index, and the proposed expiration of the imputed floor.
- The effects of the proposed frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
- The effects of the proposed implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes for FY 2019. This provision is not budget neutral.
- The total estimated change in proposed payments based on the proposed FY 2019 policies relative to payments based on FY 2018 policies that include the proposed applicable percentage increase of 1.25 percent (or proposed 2.8 percent market basket update with a proposed reduction of 0.8 percentage point for the multifactor productivity adjustment, and a 0.75 percentage point reduction, as required under the Affordable Care Act).

To illustrate the impact of the proposed FY 2019 changes, our analysis begins with a FY 2018 baseline simulation model using: The FY 2018 applicable percentage increase of 1.35 percent, the 0.4588 percent adjustment to the Federal standardized amount, and the adjustment factor of (1/1.006) to both the national standardized amount and the hospitals specific rate; the FY 2018 MS–DRG GROUPER (Version 35); the FY 2018 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2018 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes. Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Pub. L. 109–171, as amended by section 4102(b)(1)(A) of the ARRA (Public Law 111–5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111–148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner, and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2019, we are proposing that hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act would receive an applicable percentage increase of 0.55 percent. At the time this impact was prepared, 54 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2019 because they failed the quality data submission process or did not choose to participate, but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the proposed

payment changes for FY 2019 using a reduced update for these hospitals.

For FY 2019, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user will be subject to a reduction of three-quarters of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act. Therefore, for FY 2019, we are proposing that hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act would receive an applicable percentage increase of −0.85 percent. At the time this impact analysis was prepared, 148 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2019 because they are identified as not meaningful EHR users that do submit quality information under section 1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the proposed payment changes for FY 2019 using a reduced update for these hospitals.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act would receive a proposed applicable percentage increase of −1.55 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a three-quarter reduction of the market basket update for being identified as not a meaningful EHR user. At the time this impact was prepared, 43 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2019 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each proposed policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2019 model incorporating all of the proposed changes. This simulation allows us to isolate the effects of each proposed change.

Our comparison illustrates the proposed percent change in payments per case from FY 2018 to FY 2019. Two factors not discussed separately have significant impacts here. The first factor is the proposed update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are proposing to update the standardized amounts for FY 2019 using a proposed applicable percentage increase of 1.25 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.8 percent with a proposed 0.8 percentage point reduction for the multifactor productivity adjustment and a 0.75 percentage point reduction, as required, under the Affordable Care Act. Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users would receive a proposed update of 0.55 percent. This proposed update includes a reduction of one-quarter of the market basket update for failure to submit these data. Hospitals that do comply with the quality data submission requirements but are not meaningful EHR users would receive a proposed update of −0.85 percent, which includes a reduction of three-quarters of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users would receive an proposed update of −1.55 percent. Under section 1886(b)(3)(B)(iv) of the Act, the proposed update to the hospital-specific amounts for SCHs and MDHs is also equal to the applicable percentage increase, or 1.25 percent, if the hospital submits quality data and is a meaningful EHR user.

A second significant factor that affects the proposed changes in hospitals' payments per case from FY 2018 to FY 2019 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2018 that would no longer be reclassified in FY 2019. Conversely, payments may increase for hospitals not reclassified in FY 2018 that were reclassified in FY 2019.

2. Analysis of Table I

Table I displays the results of our analysis of the proposed changes for FY 2019. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the proposed overall impact on the 3,257 acute care hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,480 hospitals located in urban areas included in our analysis. Among these, there are 1,310 hospitals located in large urban areas (populations over 1 million), and 1,170 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 777 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2019 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,281, 1,325, 956, and 976, respectively.

The next three groupings examine the impacts of the proposed changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,162 nonteaching hospitals in our analysis, 846 teaching hospitals with fewer than 100 residents, and 249 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next three rows examine the impacts of the proposed changes on rural hospitals by special payment groups (SCHs, MDHs and RRCs). There were 328 RRCs, 311 SCHs, 135 MDHs, 133 hospitals that are both SCHs and RRCs, and 14 hospitals that are both MDHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2015 or FY 2014 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2019. The second grouping shows the MGCRB rural reclassifications.

Hospitals:								
Other Reclassified Hospitals (Section 1886(d)(8)(B))	47	1.6	-0.3	0	2.5	-0.2	0	1

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2017, and hospital cost report data are from reporting periods beginning in FY 2015 and FY 2014.

[2] This column displays the payment impact of the proposed hospital rate update and other adjustments, including the proposed 1.25 percent adjustment to the national standardized amount and the hospital-specific rate (the estimated 2.8 percent market basket update reduced by 0.8 percentage point for the multifactor productivity adjustment and the 0.75 percentage point reduction under the Affordable Care Act), and the 0.5 percent adjustment to the national standardized amount required under section 414 of the MACRA.

[3] This column displays the payment impact of the proposed changes to the Version 36 GROUPER, the proposed changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2017 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the proposed recalibration budget neutrality factor of 0.997896 in accordance with section 1886(d)(4)(C)(iii) of the Act.

[4] This column displays the payment impact of the proposed update to wage index data using FY 2015 and 2014 cost report data and the OMB labor market area delineations based on 2010 Decennial Census data. This column displays the payment impact of the application of the proposed wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The proposed wage budget neutrality factor is 1.001182.

[5] Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2019 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2019. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the proposed geographic budget neutrality factor of 0.987084.

[6] This column displays the effects of the proposed rural floor and proposed expiration of the imputed floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The proposed rural floor budget neutrality factor applied to the wage index is 0.994733.

[7] This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

[8] This column shows the estimated proposed change in payments from FY 2018 to FY 2019.

BILLING CODE 4120–01–C

a. Effects of the Proposed Hospital Update and Other Proposed Adjustments (Column 1)

As discussed in section IV.B. of the preamble of this proposed rule, this column includes the proposed hospital update, including the proposed 2.8 percent market basket update, the reduction of proposed 0.8 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction, in accordance with the Affordable Care Act. In addition, as discussed in section II.D. of the preamble of this proposed rule, this column includes the FY 2018 +0.5 percent adjustment required under section 414 of the MACRA. As a result, we are proposing to make a 1.75 percent update to the national standardized amount. This column also includes the proposed update to the hospital-specific rates which includes the proposed 2.8 percent market basket update, the proposed reduction of 0.8 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction in accordance with the Affordable Care Act. As a result, we are proposing to make a 1.25 percent update to the hospital-specific rates.

Overall, hospitals would experience a 1.7 percent increase in payments primarily due to the combined effects of the proposed hospital update to the national standardized amount and the proposed hospital update to the hospital-specific rate. Hospitals that are paid under the hospital-specific rate would experience a 1.25 percent increase in payments; therefore, hospital categories containing hospitals paid under the hospital specific rate would experience a lower than average increase in payments.

b. Effects of the Proposed Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the proposed changes to the MS–DRGs and relative weights with the application of the proposed recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a proposed recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this proposed rule, the proposed FY 2019 MS–DRG relative weights would be 100 percent cost-based and 100 percent MS–DRGs. For FY 2019, the MS–DRGs are calculated using the FY 2017 MedPAR data grouped to the Version 36 (FY 2019) MS–DRGs. The methodology to calculate the proposed relative weights and the reclassification changes to the GROUPER are described in more detail in section II.G. of the preamble of this proposed rule.

The ''All Hospitals'' line in Column 2 indicates that proposed changes due to the MS–DRGs and relative weights would result in a 0.0 percent change in payments with the application of the proposed recalibration budget neutrality factor of 0.997896 to the standardized amount. Hospital categories that generally treat more medical cases than surgical cases would experience a decrease in their payments under the relative weights. For example, rural hospitals would experience a 0.3 percent decrease in payments in part because rural hospitals tend to treat fewer surgical cases than medical cases. Conversely, teaching hospitals with more than 100 residents would experience an increase in payments of 0.1 percent as those hospitals treat more surgical cases than medical cases.

c. Effects of the Proposed Wage Index Changes (Column 3)

Column 3 shows the impact of updated wage data using FY 2015 cost report data, with the application of the proposed wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards used in FY 2019 are based on OMB standards published on February 28, 2013 (75 FR 37246 and 37252), and 2010 Decennial Census data (OMB Bulletin No. 13–01), as updated in OMB Bulletin Nos. 15–01 and 17–01. (We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963) for a full discussion on our adoption of the OMB labor market area delineations, based on the 2010 Decennial Census data, effective beginning with the FY 2015 IPPS wage index, to section III.A.2. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913) for a discussion of our adoption of the CBSA updates in OMB Bulletin No. 15–01, which were effective beginning with the FY 2017 wage index, and to section III.A.2. of this proposed rule for a discussion of our proposed adoption of the CBSA update in OMB Bulletin No. 17–01 for the FY 2019 wage index.)

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the proposed wage index for acute care hospitals for FY 2019 is based on data submitted for hospital cost reporting periods, beginning on or after October 1, 2014 and before October 1, 2015. The estimated impact of the updated wage data using the FY 2015 cost report data and the OMB labor market area delineations on hospital payments is isolated in Column 3 by holding the other proposed payment parameters constant in this simulation. That is, Column 3 shows the proposed percentage change in payments when going from a model using the FY 2018 wage index, based on FY 2014 wage data, the labor-related share of 68.3 percent, under the OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the proposed FY 2019 pre-reclassification wage index based on FY 2015 wage data with the labor-related share of 68.3 percent, under the OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters, such as use of the Version 36 MS–DRG GROUPER constant. The proposed FY 2019 occupational mix adjustment is based on the CY 2016 occupational mix survey.

In addition, the column shows the impact of the application of the proposed wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2019, we are proposing to calculate the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 68.3 percent are budget neutral, without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The proposed FY 2019 wage budget neutrality factor is 1.001182, and the overall proposed payment change is 0 percent.

Column 3 shows the impacts of updating the wage data using FY 2015 cost reports. Overall, the proposed new wage data and the labor-related share, combined with the proposed wage budget neutrality adjustment, would lead to no change for all hospitals, as shown in Column 3.

In looking at the wage data itself, the national average hourly wage would increase 1.02 percent compared to FY 2018. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the proposed 1.02 percent increase in the national average hourly wage. Of the 3,226 hospitals with wage data for both FYs 2018 and 2019, 1,445 or 44.8 percent would experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to proposed changes in the average hourly wage data for FY 2019 relative to FY 2018. Among urban hospitals, 10 would experience a decrease of 10 percent or more, and 6 urban hospitals would experience an increase of 10 percent or more. One hundred urban hospitals would experience an increase or decrease of at least 5 percent or more but less than 10 percent. Among rural hospitals, 5 would experience an increase of increase of 10 percent or more, and 2 would experience a decrease of 10 percent or more. Nine rural hospitals would experience an increase or decrease of at least 5 percent or more but less than 10 percent. However, 748 rural hospitals would experience increases or decreases of less than 5 percent, while 2,346 urban hospitals would experience increases or decreases of less than 5 percent. No urban hospitals and no rural hospitals would experience no change to their wage index. These figures reflect proposed changes in the

''pre-reclassified, occupational mix-adjusted wage index,'' that is, the wage index before the application of geographic reclassification, the rural floor, the out-migration adjustment, and other wage index exceptions and adjustments. (We refer readers to sections III.G. through III.L. of the preamble of this proposed rule for a complete discussion of the exceptions and adjustments to the proposed wage index.) We note that the ''post-reclassified wage index'' or ''payment wage index,'' which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this proposed rule, which are available via the internet on the CMS website) is used to adjust the labor-related share of a hospital's standardized amount, either 68.3 percent or 62 percent, depending upon whether a hospital's wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the proposed pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller change than would occur in a hospital's payment wage index and total payment.

The following chart shows the projected impact of proposed changes in the area wage index values for urban and rural hospitals.

Proposed FY 2019 percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase 10 percent or more	6	5
Increase greater than or equal to 5 percent and less than 10 percent	55	3
Increase or decrease less than 5 percent	2,346	748
Decrease greater than or equal to 5 percent and less than 10 percent	45	6
Decrease 10 percent or more	10	2
Unchanged	0	0

d. Effects of MGCRB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located). The proposed changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2019.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS proposed rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year (we refer readers to the discussion of our clarification of this policy in section III.I.2. of the preamble to this proposed rule).

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are proposing to apply an adjustment of 0.987084 to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this proposed rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification would increase payments to rural hospitals by an average of 1.4 percent. By region, all the rural hospital categories would experience increases in payments due to MGCRB reclassifications.

Table 2 listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website reflects the reclassifications for FY 2019.

e. Effects of the Proposed Rural Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RY 2010 LTCH PPS final rule, the FYs 2011 through 2018 IPPS/LTCH PPS final rules, and this FY 2019 proposed rule, section 4410 of Public Law 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We would apply a uniform budget neutrality adjustment to the wage index. As discussed in section III.G. of the preamble of this proposed rule, we are not proposing to extend the imputed floor policy. Therefore, column 6 shows the effects of the proposed rural floor only.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally. We have calculated a proposed FY 2019 rural floor budget neutrality factor to be applied to the wage index of 0.994733, which would reduce wage indexes by 0.53 percent.

Column 5 shows the projected impact of the rural floor with the national rural floor budget neutrality factor applied to the wage index based on the OMB labor market area delineations. The column compares the proposed post-reclassification FY 2019 wage index of providers before the proposed rural floor adjustment and the post-reclassification FY 2019 wage index of providers with the rural floor adjustment based on the OMB labor market area delineations. Only urban hospitals can benefit from the rural floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) would experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 255 hospitals would receive the rural floor in FY 2019. All IPPS hospitals in our model would have their wage index reduced by the proposed rural floor budget neutrality adjustment of 0.994733. We project that, in aggregate, rural hospitals would experience a −0.2 percent decrease in payments as a result of the application of the proposed rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project hospitals located in urban areas would experience no change in payments because proposed increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region would experience a 2.2 percent increase in payments primarily due to the application of the rural floor in Massachusetts. Thirty-five urban providers in Massachusetts are expected to receive the rural floor wage index value, including the proposed rural floor budget neutrality adjustment, increasing payments overall to Massachusetts by an estimated $49 million. We estimate that Massachusetts hospitals would receive approximately a 1.4 percent increase in IPPS payments due to the application of the proposed rural floor in FY 2019.

Urban Puerto Rico hospitals are expected to experience a 0 percent increase in payments as a result of the application of the proposed rural floor.

In response to a public comment addressed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593), we are providing the payment impact of the rural floor with budget neutrality at the State level. Column 1 of the following table displays the number of IPPS hospitals located in each State. Column 2 displays the number of hospitals in each State that would receive the rural floor wage index for FY 2019. Column 3 displays the percentage of total payments each State would receive or contribute to fund the rural floor with national budget neutrality. The column compares the proposed post-reclassification FY 2019 wage index of providers before the rural floor adjustment and the proposed post-reclassification FY 2019 wage index of providers with the rural floor adjustment. Column 4 displays the estimated payment amount that each State

would gain or lose due to the application of the rural floor with national budget neutrality.

PROPOSED FY 2019 IPPS ESTIMATED PAYMENTS DUE TO PROPOSED RURAL FLOOR WITH NATIONAL BUDGET NEUTRALITY

	Number of hospitals (1)	Number of hospitals that would receive the rural floor (2)	Proposed percent change in payments due to application of rural floor with budget neutrality (3)	Difference (in $ millions) (4)

f. Effects of the Application of Proposed the Frontier State Wage Index and Proposed Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage-index of 1.00 for all hospitals located in ''frontier States,'' and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are

not budget neutral and would increase payments overall by 0.1 percent compared to the provisions not being in effect.

The term ''frontier States'' is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States and 50 hospitals located in those States would receive a frontier wage index of 1.0000. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately $61 million. Rural and urban hospitals located in the West North Central region would experience an increase in payments by 0.2 and 0.6 percent, respectively, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment would receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 220 providers that would receive the out-migration wage adjustment in FY 2019. Rural hospitals generally would qualify for the adjustment, resulting in a 0.1 percent increase in payments. This provision appears to benefit section 401 hospitals and RRCs in that they would each experience a 0.1 and 0.2 percent increase in payments, respectively. (We note that there has been an increase in the number of RRCs as a result of the decision by the Court of Appeals for the Third Circuit in *Geisinger Community Medical Center* vs. *Secretary, United States Department of Health and Human Services,* 794 F.3d 383 (3d Cir. 2015) and subsequent regulatory changes (81 FR 23428).) This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the proposed out-migration increase would be approximately $36 million.

g. Effects of All Proposed FY 2019 Changes (Column 7)

Column 7 shows our estimate of the proposed changes in payments per discharge from FY 2018 and FY 2019, resulting from all proposed changes reflected in this proposed rule for FY 2019. It includes combined effects of the year-to-year change of the previous columns in the table.

The proposed average increase in payments under the IPPS for all hospitals is approximately 2.1 percent for FY 2019 relative to FY 2018 and for this row is primarily driven by the proposed changes reflected in Column 1. Column 7 includes the proposed annual hospital update of 1.25 percent to the national standardized amount. This proposed annual hospital update includes the proposed 2.8 percent market basket update, the proposed 0.8 percentage point reduction for the multifactor productivity adjustment, and the 0.75 percentage point reduction under section 3401 of the Affordable Care Act. As discussed in section II.D. of the preamble of this proposed rule, this column also includes the +0.5 percent adjustment required under section 414 of the MACRA. Hospitals paid under the hospital-specific rate would receive a 1.25 percent hospital update. As described in Column 1, the proposed annual hospital update with the proposed +0.5 percent adjustment for hospitals paid under the national standardized amount, combined with the proposed annual hospital update for hospitals paid under the hospital-specific rates, would result in a 2.1 percent increase in payments in FY 2019 relative to FY 2018. There are also interactive effects among the various factors comprising the payment system that we are not able to isolate, which contribute to our estimate of the proposed changes in payments per discharge from FY 2018 and FY 2019 in Column 7.

Overall payments to hospitals paid under the IPPS due to the proposed applicable percentage increase and changes to policies related to MS–DRGs, geographic adjustments, and outliers are estimated to increase by 2.1 percent for FY 2019. Hospitals in urban areas would experience a 2.1 percent increase in payments per discharge in FY 2019 compared to FY 2018. Hospital payments per discharge in rural areas are estimated to increase by 1.1 percent in FY 2019.

3. Impact Analysis of Table II

Table II presents the projected impact of the proposed changes for FY 2019 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2018 with the estimated proposed average payments per discharge for FY 2019, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the proposed changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 7 of Table I.

TABLE II—IMPACT ANALYSIS OF PROPOSED CHANGES FOR FY 2019 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM

[Payments per discharge]

	Number of hospitals	Estimated average FY 2018 payment per discharge	Estimated proposed average FY 2019 payment per discharge	Proposed FY 2019 changes
	(1)	(2)	(3)	(4)
All Hospitals	3,257	12,167	12,418	2.1
By Geographic Location	0	0	0	0
Urban hospitals	2,480	12,514	12,782	2.1
Large urban areas	1,310	13,078	13,356	2.1
Other urban areas	1,170	11,958	12,215	2.1
Rural hospitals	777	9,115	9,215	1.1
Bed Size (Urban)	0	0	0	0
0–99 beds	638	9,985	10,129	1.4
100–199 beds	763	10,422	10,598	1.7
200–299 beds	438	11,356	11,598	2.1
300–499 beds	427	12,635	12,902	2.1
500 or more beds	214	15,498	15,887	2.5
Bed Size (Rural)	0	0	0	0
0–49 beds	299	7,793	7,853	0.8
50–99 beds	279	8,630	8,717	1
100–149 beds	116	9,057	9,149	1
150–199 beds	44	9,611	9,712	1
200 or more beds	39	10,713	10,876	1.5

TABLE II—IMPACT ANALYSIS OF PROPOSED CHANGES FOR FY 2019 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM—Continued

[Payments per discharge]

	Number of hospitals (1)	Estimated average FY 2018 payment per discharge (2)	Estimated proposed average FY 2019 payment per discharge (3)	Proposed FY 2019 changes (4)

Rural Hospitals Reclassified Full Year	278	9,469	9,596	1.3
Rural Nonreclassified Hospitals Full Year	452	8,662	8,723	0.7
All Section 401 Reclassified Hospitals:	246	13,340	13,694	2.7
Other Reclassified Hospitals (Section 1886(d)(8)(B))	47	8,579	8,665	1

H. Effects of Other Proposed Policy Changes

In addition to those proposed policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are proposing to make various other changes in this proposed rule. Generally, we have limited or no specific data available with which to estimate the impacts of these proposed changes. Our estimates of the likely impacts associated with these other proposed changes are discussed in this section.

1. Effects of Proposed Policy Relating to New Medical Service and Technology Add-On Payments

In section II.H. of the preamble to this proposed rule, we discuss 15 technologies for which we received applications for add-on payments for new medical services and technologies for FY 2019, as well as the status of the new technologies that were approved to receive new technology add-on payments in FY 2018. As explained in the preamble to this proposed rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.H.6. of the preamble of this proposed rule, we have not yet determined whether any of the 15 technologies for which we received applications for consideration for new technology add-on payments for FY 2019 will meet the specified criteria. Consequently, it is premature to estimate the potential payment impact of these 15 technologies for any potential new technology add-on payments for FY 2019. We note that if any of the 15 technologies are found to be eligible for new technology add-on payments for FY 2019, in the FY 2019 IPPS/LTCH PPS final rule, we would discuss the estimated payment impact for FY 2019.

In section II.H.5. of the preamble of this proposed rule, we are proposing to discontinue new technology add-on payments for Idarucizumab, GORE® EXCLUDER® Iliac Branch Endoprosthesis (IBE), Edwards/Perceval Sutureless Valves, and Vistogard™ (Uridine Triacetate) for FY 2019 because these technologies will have been on the U.S. market for 3 years. We also are proposing to continue to make new technology add-on payments for Defitelio® (Defibrotide), Ustekinumab (Stelara®) and Bezlotoxumab (Zinplava™) in FY 2019 because these technologies would still be considered new. We note that new technology add-on payments for each case are limited to the lesser of (1) 50 percent of the costs of the new technology or (2) 50 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in new technology add-on payments for FY 2019 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. The following are estimates for FY 2019 for the three technologies for which we are proposing to continue to make new technology add-on payments in FY 2019:

- Based on the applicant's estimate from FY 2017, we currently estimate that new technology add-on payments for Defitelio® would increase overall FY 2019 payments by $5,161,200 (maximum add-on payment of $75,900 * 68 patients).
- Based on the applicant's estimate from FY 2018, we currently estimate that new technology add-on payments for Ustekinumab (Stelara®) would increase overall FY 2019 payments by $400,800 (maximum add-on payment of $2,400 * 167 patients).
- Based on the applicant's estimate for FY 2018, we currently estimate that new technology add-on payments for Bezlotoxumab (Zinplava™) would increase overall FY 2019 payments by $2,857,600 (maximum add-on payment of $1,900 * 1,504 patients).

2. Effects of Proposed Changes to MS–DRGs Subject to the Postacute Care Transfer Policy and the MS–DRG Special Payment Policy

In section IV.A. of the preamble of this proposed rule, we discuss our proposed changes to the list of MS–DRGs subject to the postacute care transfer policy and the MS–DRG special payment policy. As reflected in Table 5 listed in section VI. of the Addendum to this proposed rule (which is available via the internet on the CMS website), using criteria set forth in regulations at 42 CFR 412.4, we evaluated MS–DRG charge, discharge, and transfer data to determine which proposed new or revised MS–DRGs would qualify for the postacute care transfer and MS–DRG special payment policies. As a result of our proposals to revise the MS–DRG classifications for FY 2019, which are discussed in section II.F. of the preamble of this proposed rule, we are proposing additions to the list of MS–DRGs subject to the MS–DRG special payment policy. Column 4 of Table I in this Appendix A shows the effects of the proposed changes to the MS–DRGs and the proposed relative payment weights and the application of the proposed recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate DRG classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods for determining the changes due to the MS–DRGs and relative payment weights account for and include changes as a result of the proposed changes to the MS–DRGs subject to the MS–DRG postacute care transfer and MS–DRG special payment policies. We refer readers to section I.G. of this Appendix A for a detailed discussion of payment impacts due to the proposed MS–DRG reclassification policies for FY 2019.

In section IV.A.2.b. of the preamble of this proposed rule, we discuss our proposed conforming changes to the regulations at § 412.4(c) to reflect the amendments to section 1886(d)(5)(J) of the Act made by section 53109 of the Bipartisan Budget Act of 2018. Section 53109 of the Bipartisan Budget Act of 2018 amended section 1886(d)(5)(J) of the Act to include discharges to hospice services provided by a hospice program as a ''qualified discharge'' under the postacute

care transfer policy, effective for discharges occurring on or after October 1, 2018. To implement this change, we are proposing that discharges using Patient Discharge Status code of 50 (Discharged/Transferred to Hospice—Routine or Continuous Home Care) or 51 (Discharged/Transferred to Hospice, General Inpatient Care or Inpatient Respite) would be subject to the postacute care transfer policy, effective for discharges occurring on or after October 1, 2018. Our actuaries estimate that this change in the postacute care transfer policy would generate an annual savings of approximately $240 million in Medicare payments in FY 2019, and up to $540 million annually by FY 2028.

3. Effects of Proposed Changes to Low-Volume Hospital Payment Adjustment Policy

In section IV.D. of the preamble of this proposed rule, we discuss the proposed changes to the low-volume hospital payment policy for FY 2019 to implement the provisions of section 50204 of the Bipartisan Budget Act of 2018. Specifically, for FY 2019, qualifying hospitals must have less than 3,800 combined Medicare and non-Medicare discharges (instead of 1,600 Medicare discharges) and must be located more than 15 road miles from another subsection (d) hospital. Section 50204 of the Bipartisan Budget Act of 2018 also modified the methodology for calculating the payment adjustment for low-volume hospitals for FYs 2019 through 2022. To implement these requirements, we are proposing that the low-volume hospital payment adjustment would be determined as follows:

- For low-volume hospitals with 500 or fewer total discharges during the fiscal year, an additional 25 percent for each Medicare discharge.
- For low-volume hospitals with total discharges during the fiscal year of more than 500 and fewer than 3,800, an additional percent calculated using the formula [(95/330) × (number of total discharges/13,200)] for each Medicare discharge.

Based upon the best available data at this time, we estimate the changes to the low-volume hospital payment adjustment policy that we are proposing to implement in accordance with section 50204 of the Bipartisan Budget Act of 2018 would increase Medicare payments by $72 million in FY 2019 as compared to FY 2018. More specifically, in FY 2019, we estimate that 622 providers would receive approximately $417 million compared to our estimate of 606 providers receiving approximately $345 million in FY 2018. These payment estimates were determined by identifying providers that, based on the best available data, are expected to qualify under the criteria that will apply in FY 2019 (that is, are located at least 15 miles from the nearest subsection (d) hospital and have less than 3,800 total discharges), and were determined from the same data used in developing the quantitative analyses of proposed changes in payments per case discussed previously in section I.G. of this Appendix A.

4. Effects of the Proposed Changes to Medicare DSH and Uncompensated Care Payments for FY 2019

As discussed in section IV.F. of the preamble of this proposed rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals and additional statutory adjustments (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. Each hospital eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this proposed rule, we are proposing to establish the amount to be distributed as uncompensated care payments to DSH eligible hospitals, which for FY 2019 is $8,250,415,972.16. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a proposed Factor 2 of 67.51 percent. For FY 2018, the amount available to be distributed for uncompensated care was $6,766,695,163.56, or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 58.01 percent. To calculate proposed Factor 3 for FY 2019, we used an average of data computed using Medicaid days from hospitals' 2013 cost reports from the HCRIS database as updated through February 15, 2018, uncompensated care costs from hospitals' 2014 and 2015 cost reports from the same extract of HCRIS, and SSI days from the FY 2016 SSI ratios. For each eligible hospital, with the exception of Puerto Rico hospitals, all-inclusive rate providers, and Indian Health Service and Tribal hospitals, we calculated a proposed Factor 3 using information from cost reports for FYs 2013, 2014, and 2015. To calculate Factor 3 for Puerto Rico hospitals, all-inclusive rate providers, and Indian Health Service and Tribal hospitals, we used data regarding low-income insured days for FY 2013. For a complete discussion of the proposed methodology for calculating Factor 3, we refer readers to section IV.F.4. of the preamble of this proposed rule.

To estimate the impact of the combined effect of proposed changes in Factors 1 and 2, as well as the proposed changes to the data used in determining Factor 3, on the calculation of Medicare uncompensated care payments (UCP), we compared total UCP estimated in the FY 2018 IPPS/LTCH PPS final rule to total UCP estimated in this FY 2019 IPPS/LTCH PPS proposed rule. For FY 2018, for each hospital, we calculated 75 percent of the estimated amount that would have been paid as Medicare DSH payments in the absence of section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 58.01 percent and multiplied by a Factor 3 calculated, as described in the FY 2018 IPPS/LTCH PPS final rule. For FY 2019, we calculate 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 67.51 percent and multiplied by a Factor 3 calculated using the methodology described previously.

Our analysis included 2,485 hospitals that are projected to be eligible for DSH in FY 2019. It did not include hospitals that terminated their participation from the Medicare program as of January 1, 2018, Maryland hospitals, new hospitals, MDHs, and SCHs that are expected to be paid based on their hospital-specific rates. Hospitals participating in the Rural Community Hospital Demonstration Program were inadvertently included in the current impact analysis, but will be excluded in the final rule, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. Roughly $6.6 million in total uncompensated care payments was estimated for 13 of the 30 participating hospitals. However, in the final rule, uncompensated care payments will be distributed only to eligible hospitals projected to receive Medicare DSH payments. In addition, low-income insured days and uncompensated care costs from merged or acquired hospitals were combined into the surviving hospital's CMS certification number (CCN), and the nonsurviving CCN was excluded from the analysis. The estimated impact of the proposed changes in Factors 1, 2, and 3 on uncompensated care payments across all hospitals projected to be eligible for DSH payments in FY 2019, by hospital characteristic, is presented in the following table.

MODELED UNCOMPENSATED CARE PAYMENTS FOR ESTIMATED FY 2019 DSHS BY HOSPITAL TYPE: MODEL UCP $ (IN MILLIONS) FROM FY 2018 TO FY 2019

	Number of estimated DSHs	FY 2018 final rule CN estimated UCP $ (in millions)	FY 2019 proposed rule estimated UCP $ (in millions)	Dollar difference: FY 2019–FY 2018 (in millions)	Percent change **

Source: Dobson √ DaVanzo analysis of 2013–2015 Hospital Cost Reports.

* Dollar UCP calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, uncompensated care payments are estimated to be $6,767 million in FY 2018 and $8,250 million in FY 2018.

** Percentage change is determined as the difference between Medicare UCP payments modeled for the FY 2019 IPPS/LTCH PPS proposed rule (column 3) and Medicare UCP payments modeled for the FY 2018 IPPS/LTCH PPS final rule correction notice (column 2) divided by Medicare UCP payments modeled for the FY 2018 final rule correction notice (column 2) times 100 percent.

*** Hospitals with Missing or Unknown Medicare Utilization are not shown in table.

Changes in projected FY 2019 uncompensated care payments from payments in FY 2018 are driven by increases in Factor 1 and Factor 2, as well as by an increase in the number of hospitals eligible to receive DSH in FY 2019 relative to FY 2018. Factor 1 has increased from $11.665 billion to $12.221 billion, and the percent change in the percent of individuals who are

uninsured (Factor 2) has increased from 58.01 percent to 67.51 percent. Based on the proposed increases in these two factors, the proposed impact analysis found that, across all projected DSH eligible hospitals, FY 2019 uncompensated care payments are estimated at approximately $8.250 billion, or an increase of approximately 21.9 percent from FY 2018 uncompensated care payments (approximately $6.767 billion). While these proposed changes would result in a net increase in the amount available to be distributed in uncompensated care payments, the projected payment increases vary by hospital type. This redistribution of uncompensated care payments is caused by changes in Factor 3.

As seen in the above table, percent increases smaller than 21.93 percent indicate that hospitals within the specified category are projected to experience a smaller increase in uncompensated care payments, on average, compared to the universe of projected FY 2019 DSH hospitals. Conversely, percent increases that are greater than 21.93 percent indicate a hospital type is projected to have a larger increase than the overall average. The variation in the distribution of payments by hospital characteristic is largely dependent on a given hospital's number of Medicaid days and SSI days, as well as its uncompensated care costs as reported in the Worksheet S–10, used in the Factor 3 computation.

Many rural hospitals are projected to experience a larger increase in uncompensated care payments than their urban counterparts. Overall, rural hospitals are projected to receive a 32.50 percent increase in uncompensated care payments, while urban hospitals are projected to receive a 21.35 percent increase in uncompensated care payments.

By bed size, smaller hospitals are projected to receive larger increases in uncompensated care payments than larger hospitals, in both rural and urban settings. Rural hospitals with 0–99 beds are projected to receive a 41.01 percent payment increase, and rural hospitals with 100–249 beds are projected to see a 26.77 percent increase. Larger rural hospitals with 250+ beds are projected to experience a 16.21 percent payment increase, which is smaller than the overall average. This trend is consistent with urban hospitals, in which the smallest urban hospitals (0–99 beds) are projected to receive an increase in uncompensated care payments of 38.53 percent. Urban hospitals with 100–250 beds are projected to receive an increase of 22.59 percent, which is consistent with the overall average, while larger urban hospitals with and 250+ beds are projected to receive a 20.30 percent increase in uncompensated care payments, which is somewhat smaller than the overall average but larger than the increase projected for their rural counterparts.

By region, rural hospitals in the West North Central region are expected to receive a large increase in uncompensated care payments, as are rural hospitals in the Mountain, Pacific, South Atlantic, West South Central, East North Central, and New England regions. Rural hospitals in the Middle Atlantic and East South Central regions are projected to receive smaller than average payment increases. Regionally, urban hospitals are projected to receive a wide range of payment changes. Small increases in uncompensated care payments are projected in the Pacific and Middle Atlantic regions. Smaller than average increases in payments are also projected in the New England, Mountain, East North Central, and East South Central regions. Hospitals in the South Atlantic and West South Central regions are projected to receive a larger than average increase in uncompensated payments, while the projected increase in the West North Central region and in Puerto Rico is generally consistent with the overall average increase of 21.93 percent.

Nonteaching hospitals are projected to receive a larger than average payment increase of 24.90 percent. Teaching hospitals with fewer than 100 residents are projected to receive payment increases of 19.96 percent, which is slightly below average, while those teaching hospitals with 100+ residents have a projected payment increase of 21.27 percent, consistent with the overall average. Government and proprietary hospitals are projected to receive larger than average increases (34.93 percent and 23.98 percent, respectively), while voluntary hospitals are expected to receive increases lower than the overall average at 16.35 percent. Hospitals with 0 to 25 percent Medicare utilization are projected to receive increases in uncompensated care payments slightly below the overall average, while all other hospitals are projected to receive larger increases.

5. Effects of Proposed Reduction Under the Hospital Readmissions Reduction Program for FY 2019

In section IV.H. of the preamble of this proposed rule, we discuss proposed requirements for the Hospital Readmissions Reduction Program. This program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. The table and analysis below illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology, as outlined in this FY 2019 IPPS/LTCH PPS proposed rule. In this table, we are presenting the estimated impact of the FY 2019 Hospital Readmissions Reduction Program on hospitals by hospital characteristic.

The table presents results of hospitals stratified into quintiles based on the proportion of dual-eligible stays among Medicare fee-for-service (FFS) and managed care stays between July 1, 2013 and June 30, 2016 (that is, the FY 2018 Hospital Readmissions Reduction Program performance period). Hospitals' performance on the excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality. To analyze the results by hospital characteristic, we used the FY 2018 Inpatient Prospective Payment System (IPPS) Final Rule Impact File.

This table includes 3,064 non-Maryland hospitals eligible to receive a penalty during the performance period. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between July 1, 2013 and June 30, 2016. The second column in the table indicates the total number of penalty eligible non-Maryland hospitals (that is, have an estimated payment adjustment factor less than 1) with available data for each characteristic.

The third column in the table indicates the percentage of penalized hospitals among those eligible to receive a penalty for each characteristic. For example, with regards to teaching status, 81.90 percent of eligible hospitals characterized as non-teaching hospitals would be penalized. Among teaching hospitals, 90.05 percent of eligible hospitals with fewer than 100 residents and 96.37 percent of eligible hospitals with 100 or more residents would be penalized.

The fourth column in the table estimates the financial impact on hospitals by hospital characteristics. The table shows the share of payment adjustments as a percentage of all base operating DRG payments for each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2015 and September 30, 2016 (FY 2016). For example, the penalty as a share of payments for urban hospitals is 0.69 percent. This means that total penalties for all urban hospitals are 0.69 percent of total payments for urban hospitals. Measuring the financial impact on hospitals as a proportion of total base operating DRG payments allows us to account for differences in the amount of base operating DRG payments for hospitals within the characteristic when comparing the financial impact of the program on different groups of hospitals.

ESTIMATED PERCENTAGE OF HOSPITALS PENALIZED AND PENALTY AS SHARE OF PAYMENT FOR FY 2019 HOSPITAL READMISSIONS REDUCTION PROGRAM

[By hospital characteristic]

Hospital characteristic	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized [c] (%)	Penalty as a share of payments [d] (%)
All Hospitals	3,064	2,610	85.18	0.70
By Geographic Location (n=3,064): [e]				
Urban hospitals	2,291	1,991	86.91	0.69
1–99 beds	530	375	70.75	0.80
100–199 beds	711	645	90.72	0.81
200–299 beds	419	387	92.36	0.77
300–399 beds	273	255	93.41	0.69
400–499 beds	145	137	94.48	0.55
500 or more beds	213	192	90.14	0.62

Source: Results based on July 1, 2013 through June 30, 2016 discharges among subsection (d) and Maryland hospitals only. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals since Maryland hospitals are not eligible for a penalty under the program. Hospitals are stratified into five peer groups based on the proportion of FFS and managed care dual-eligible stays for the 3-year FY 2018 performance period. Hospital characteristics are from the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) Final Rule Impact File.

[a] This column is the number of applicable hospitals within the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (*i.e.,* they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.

[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty.

[d] The penalty as a share of payments is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all hospitals with that characteristic. MedPAR data from October 1, 2015 through September 30, 2016 (FY 2016), are used to calculate the total base operating DRG payments, which are used to estimate total penalties.

[e] The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. All hospitals had information for: Geographic location, bed size, teaching status, ownership type, safety-net status, DSH patient percentage, and region (n=3,064). Not all hospitals had data for MCR percent (n=3,061).

[f] A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

[g] A hospital is considered a safety-net hospital if they are in the top DSH quintile.

[h] DSH [Disproportionate Share Hospital] patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[i] MCR [Medicare Cost Report] percent is the percentage of total inpatient stays from Medicare patients.

6. Effects of Proposed Changes Under the FY 2019 Hospital Value-Based Purchasing (VBP) Program

a. Effects of Proposed Changes for FY 2019

In section IV.I. of the preamble of this proposed rule, we discuss the Hospital VBP Program under which the Secretary makes value-based incentive payments to hospitals based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2019 through a reduction to the FY 2019 base operating DRG payment amount for the discharge for the hospital for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2019 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

In section IV.I.1.b. of the preamble of this proposed rule, we estimate the available pool of funds for value-based incentive payments in the FY 2019 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or a total of approximately $1.9 billion. This estimated available pool for FY 2019 is based on the historical pool of hospitals that were eligible to participate in the FY 2018 program year and the payment information from the December 2017 update to the FY 2017 MedPAR file.

The proposed estimated impacts of the FY 2019 program year by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2018 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the December 2017 update to the FY 2017 MedPAR file. The proxy adjustment factors can be found in Table 16 associated with this proposed rule (available via the internet on the CMS website).

The impact analysis shows that, for the FY 2019 program year, the number of hospitals that would receive an increase in their base operating DRG payment amount is higher than the number of hospitals that would receive a decrease. On average, urban hospitals in the West North Central region and rural hospitals in Mountain region would have the highest positive percent change in base operating DRG. Urban Middle Atlantic, urban South Atlantic, and urban East South Central regions would experience an average decrease in base operating DRG. All other regions, both urban and rural, would have an average increase in base operating DRG.

As DSH percent increases, the average percent change in base operating DRG would decrease. With respect to hospitals' Medicare utilization as a percent of inpatient days (MCR), as the MCR percent increases, the percent change in base operating DRG would tend to increase. On average, teaching hospitals would have a decrease in base operating DRG, while non-teaching hospitals would have an increase in base operating DRG.

IMPACT ANALYSIS OF BASE OPERATING DRG PAYMENT AMOUNTS RESULTING FROM THE FY 2019 HOSPITAL VBP PROGRAM

Teaching	1,045	−0.032

Actual FY 2019 program year's TPSs will not be reviewed and corrected by hospitals until after the FY 2019 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2018 program year will be used for the updated impact analysis in that final rule.

b. Effects of Proposed Domain Weighting and Alternative Considered Beginning With the FY 2021 Program Year

In section IV.I.4.b. of the preamble of this proposed rule, we discuss our proposed changes to the Hospital VBP Program domain weighting beginning with the FY 2021 program year. We note that we are not proposing to make any changes to the domain weighting for the FY 2019 or FY 2020 program years. The estimated impacts of the proposed domain weighting and alternative considered for three domains beginning with the FY 2021 program year, by hospital characteristic found in the table below, are based on historical TPSs. This analysis uses the same data set as the proposed estimated impacts for the FY 2019 program year above, and is intended to expand upon the analysis of the proposed domain weighting and alternative considered discussed in section IV.I.4.b. of the preamble of this proposed rule.

This impact analysis shows that under the proposed domain weighting to increase the Clinical Outcomes domain (proposed domain name; previously referred to as the Clinical Care domain) from 25 percent to 50 percent of each hospital's TPS, we estimate that on average, urban hospitals in the East South Central region and rural hospitals in New England region would have the highest positive percent change in base operating DRG. We estimate that four of the urban regions would have a decrease in base operating DRG, on average. We estimate that rural hospitals in East South Central and West South Central would have a decrease in base operating DRG, on average, while rural hospitals in the other regions would have an increase. We estimate that hospitals with a DSH percent 0–25 would have a positive percent change in base operating DRG, while hospitals with higher DSH percentages would have negative percent change in base operating DRG, on average. We estimate that hospitals with MCR percent over 65 would have a positive percent change in base operating DRG, while hospitals with lower MCR percentages would have negative percent change in base operating DRG, on average. We estimate that both teaching and non-teaching hospitals would have a negative percent change in base operating DRG.

Under the alternative domain weighting we considered of equally weighting each of the three domains to constitute one-third of each hospital's TPS, we estimate that rural hospitals in New England region would have the highest positive percent change in base operating DRG, with all rural hospitals estimated to have a positive percent change in base operating DRG. We estimate that on average urban hospitals in four regions would have a positive percent change in base operating DRG, while urban hospitals in five of the regions would have a negative percent change in base operating DRG. We estimate that hospitals with a DSH percent of 0–25 and 25–50 would have a positive percent change in base operating DRG, while hospitals with higher DSH percentages would have negative percent change in base operating DRG, on average. We estimate that hospitals with MCR percent 0–25 would have a negative percent change in base operating DRG, while hospitals with higher MCR percentages would have positive percent change in base operating DRG, on average. We estimate that teaching hospitals would have a negative percent change in base operating DRG, on average, while nonteaching hospitals would have a positive percent change in base operating DRG.

7. Effects of Proposed Changes to the HAC Reduction Program for FY 2019

In section IV.J. of the preamble of this proposed rule, we discuss proposed requirements for the HAC Reduction Program. In this proposed rule, we are not proposing to adopt any new measures into the HAC Reduction Program. However, the Hospital IQR Program is proposing to remove the claims-based Patient Safety and Adverse Events Composite (PSI–90) and five NHSN HAI measures. These measures had been previously adopted for, and will remain in, the HAC Reduction Program. We are proposing to begin validation of these HAI measures under the HAC Reduction Program beginning in FY 2020.

We note the burden associated with collecting and submitting data via the NHSN system is captured under a separate OMB control number, 0920–0666, and therefore will not impact our burden estimates. We anticipate the proposed removal of the NHSN HAI measures from the Hospital IQR Program will result in a net burden decrease to the Hospital IQR Program, but will result in an off-setting net burden increase to the HAC Reduction Program because hospitals selected for validation will continue to be required to submit validation templates for the HAI measures. Therefore, if the proposals found in section VIII.A.5.b.(1) and IV.J.4.e. of the preamble of this proposed rule to remove HAI chart-abstracted measures from the Hospital IQR Program and adopt validation process for the HAC Reduction Program are finalized, then we anticipate a shift in burden associated with this data validation effort to the HAC Reduction Program beginning in FY 2020. We discuss the associated burden hours in section XV.B.7. of this proposed rule, and note the burden associated with these requirements is captured in an information collection request currently available for review and comment, OMB control number 0938—NEW.

The table below presents the estimated proportion of hospitals in the FY 2019 worst-performing quartile of the Total HAC Scores by hospital characteristic. These FY 2019 HAC Reduction Program results were calculated using the Winsorized z-score methodology finalized in the 2017 IPPS/LTCH PPS final rule (80 FR 57022 through 57025). Each hospital's Total HAC Score was calculated as the weighted average of the hospital's Domain 1 score (15 percent) and

Domain 2 score (85 percent). Non-Maryland hospitals with a Total HAC Score above the 75th percentile Total HAC Score were identified as being in the worst-performing quartile.

We used the modified Recalibrated Patient Safety Indicator (PSI) 90 Composite measure results based on Medicare fee-for-service (FFS) discharges from October 1, 2015 through June 30, 2017 and ICD–10 recalibrated version 8.0 of the CMS PSI software to estimate the impact of the FY 2019 HAC Reduction Program. For the CDC Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) measure results, we used standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2015 through December 31, 2016.[403]

To analyze the results by hospital characteristic, we used the FY 2018 Final Rule Impact File. This table includes 3,216 non-Maryland hospitals with an FY 2019 Total HAC Score. Of these, 3,201 hospitals had information for geographic location and bed size, Disproportionate Share Hospital (DSH) percent, teaching status, ownership status, and safety-net status;[404] 3,188 had information for Medicare Cost Report (MCR) percent; and 3,214 had information for their geographic region. Maryland hospitals and hospitals without a Total HAC Score are not included in the table below.

The second column in the table indicates the total number of non-Maryland hospitals with available data for each characteristic that have a Total HAC Score for the FY 2019 HAC Reduction Program. For example, with regard to teaching status, 2,131 hospitals are characterized as non-teaching hospitals, 822 are characterized as teaching hospitals with fewer than 100 residents, and 248 are characterized as teaching hospitals with at least 100 residents. This only represents a total of 3,201 hospitals because the other 15 hospitals have missing data for teaching status. The third column in the table indicates the number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. These hospitals would receive a payment reduction under the FY 2019 HAC Reduction Program. For example, with regard to teaching status, 475 out of 2,131 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 199 out of 822 hospitals with fewer than 100 residents and 116 out of 248 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the proportion of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores and would receive a payment reduction under the FY 2019 HAC Reduction Program. For example, 22.3 percent of the 2,131 hospitals characterized as non-teaching hospitals, 24.2 percent of the 822 teaching hospitals with fewer than 100 residents, and 46.8 percent of the 248 hospitals with 100 or more residents would be subject to a payment reduction.

ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2019 HAC REDUCTION PROGRAM

[By hospital characteristic]

Hospital characteristic	Number of hospitals	Number of hospitals in the worst-performing quartile [a]	Percent of hospitals in the worst-performing quartile [b]
Total [c]	3,216	804	25.0
By Geographic Location (n=3,201): [d]			
Urban hospitals	2,415	630	26.1
1–99 beds	624	125	20.0
100–199 beds	724	190	26.2
200–299 beds	432	116	26.9
300–399 beds	275	77	28.0
400–499 beds	147	48	32.7
500 or more beds	213	74	34.7
Rural hospitals	786	160	20.4
1–49 beds	304	56	18.4
50–99 beds	283	68	24.0
100–149 beds	116	21	18.1
150–199 beds	44	8	18.2
200 or more beds	39	7	17.9
By Safety-Net Status [e] (n=3,201):			
Non-safety net	2,557	570	22.3
Safety-net	644	220	34.2
By DSH Percent [f] (n=3,201):			
0–24	1,340	285	21.3
25–49	1,472	358	24.3
50–64	210	76	36.2
65 and over	179	71	39.7
By Teaching Status [g] (n=3,201):			
Non-teaching	2,131	475	22.3
Fewer than 100 residents	822	199	24.2
100 or more residents	248	116	46.8
By Ownership (n=3,201):			
Voluntary	1,866	474	25.4
Proprietary	838	166	19.8
Government	497	150	30.2
By MCR Percent [h] (n=3,188):			
0–24	515	148	28.7
25–49	2,128	513	24.1
50–64	471	109	23.1

[403] Updated FY 2019 data for the CDC NHSN measures (1/1/2016 through 12/31/2017) was not available at the time of publishing this proposed rule.

[404] A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2019 HAC REDUCTION PROGRAM—Continued

[By hospital characteristic]

Hospital characteristic	Number of hospitals	Number of hospitals in the worst-performing quartile [a]	Percent of hospitals in the worst-performing quartile [b]
65 and over	74	15	20.3
By Region (n=3,214): [i]

Source: FY 2019 HAC Reduction Program Proposed Rule Results are based on Recalibrated PSI 90 Composite data from October 2015 through June 2017 and CDC CLABSI, CAUTI, SSI, CDI, and MRSA results from January 2015 through December 2016. Hospital Characteristics are based on the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) Final Rule Impact File.

[a] This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

[b] This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

[c] The number of non-Maryland hospitals with a FY 2019 Total HAC Score (N=3,216). Note that not all hospitals have data for all hospital characteristics.

[d] The number of hospitals that had information for geographic location with bed size, Safety-net status, Disproportionate Share Hospital (DSH) percent, teaching status, and ownership status (n=3,201).

[e] A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

[f] The DSH patient percentage is equal to the sum of (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[g] A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

[h] Not all hospitals had data for MCR percent (n=3,188).

[i] Not all hospitals had data for Region (n=3,214).

8. Effects of Proposed Changes Relating to Medicare GME Agreements for New Urban Teaching Hospitals

In section IV.K.2. of the preamble of this proposed rule, we discuss our proposal to provide new urban teaching hospitals with greater flexibility under the regulation governing Medicare GME affiliation agreements. Currently, if a new urban teaching hospital participates in a Medicare GME affiliation agreement, it can only receive an increase in its cap(s) as part of that agreement. That is, if a hospital with IME or direct GME FTE resident caps established under § 412.105(f)(1)(iv) or § 413.79(c)(2), or both, based on training occurring in 1996, is part of the Medicare GME affiliated group, § 413.79(e)(1)(iv) provides that the new urban teaching hospital(s) would only be permitted to receive in increase in its cap(s). We are proposing to revise the regulation to specify that, effective for Medicare GME affiliation agreements entered into on or after July 1, 2019, a new urban teaching hospital (that is, a hospital that qualifies for an adjustment under § 412.105(f)(1)(vii) or § 413.79(e)(1), or both) may participate in a Medicare GME affiliated group composed solely of new urban teaching hospitals and be eligible to receive a decrease to its FTE caps as a result of participation in that affiliated group. Rather than create new FTE cap slots to cross train residents, Medicare GME affiliation agreements use existing cap slots to allow residents to rotate to various hospitals. Because Medicare GME affiliation agreements use existing FTE cap slots, we do not anticipate any significant cost impact associated with this proposal.

9. Effects of Proposed Implementation of the Rural Community Hospital Demonstration Program in FY 2019

In section IV.L. of the preamble of this proposed rule for FY 2019, we discussed our implementation and budget neutrality methodology for section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, and more recently, by section 15003 of Public Law 114–255, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals.

Section 15003 of Public Law 114–255 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 10-year extension period (in place of the 5-year extension period required by the Affordable Care Act), beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. In the preamble to this proposed rule, we described the terms of participation for the extension period authorized by Public Law 114–255. In the FY 2018 IPPS/LTCH PPS final rule, we finalized our policy with regard to the effective date for the application of the reasonable cost-based payment methodology under the demonstration for those among the hospitals that had previously participated and were choosing to participate in the second 5-year extension period. According to our finalized policy, each of these previously participating hospitals began the second 5 years of the 10-year extension period on the date immediately after the date the period of performance under the 5-year extension period ended. However, by the time of the FY 2018 IPPS/LTCH PPS final rule, we had not been able to verify which among the previously participating hospitals would be continuing participation, and thus were not able to estimate the costs of the demonstration for that year's final rule. We stated in the final rule that we would instead include the estimated costs of the demonstration for all participating hospitals for FY 2018, along with those for FY 2019, in the budget neutrality offset amount for the FY 2019 proposed and final rules.

Seventeen of the 21 hospitals that completed their periods of participation under the extension period authorized by the Affordable Care Act have elected to continue in the second 5-year extension period, while 13 additional hospitals have been selected to participate. Each of these newly participating hospitals will begin its 5-year period of participation effective the start of the first cost reporting period on or after October 1, 2017. Thus, 30 hospitals are participating in the demonstration during FY 2018.

In the FY 2018 IPPS/LTCH PPS final rule, we finalized the budget neutrality methodology in accordance with our policies for implementing the demonstration, adopting the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

Because we were unable to confirm the hospitals that would be participating in the second extension period in time for including the estimates of the cost of the demonstration in FY 2018 in the FY 2018 final rule, we indicated that we will include this estimate in the FY 2019 IPPS/LTCH proposed and final rules. For this proposed rule, the resulting amounts applicable to FYs 2018 and 2019, respectively, are $33,254,247 and $78,409,842, which we are proposing to include in the budget neutrality offset adjustment for FY 2019. These estimated amounts are based on the specific assumptions regarding the data sources used, that is, recently available ''as submitted'' cost reports and historical and proposed update factors for cost, payment, and volume. If updated data become available prior to the FY 2019 IPPS/LTCH PPS final rule, we will use them to the extent appropriate to estimate the costs of the demonstration program. In addition, we will determine the costs of the demonstration for the previously participating hospitals for the period from when their period of performance ended for the first 5-year extension period and the start of the cost report year in FY 2018 when finalized cost reports for this period are available. We will include these costs for the demonstration in future rulemaking.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the final IPPS rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2010 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 15003 of Public Law 114–255, we will continue this general procedure. Currently, finalized cost reports are now available for the 16 hospitals that completed a cost reporting period beginning in FY 2011 according to the demonstration cost-based payment methodology, as well as for the 23 hospitals that completed such a cost reporting period beginning in FY 2012. The actual costs of the demonstration for FY 2011 as determined from the finalized cost reports fell short of the estimated amount that was finalized in the FY 2011 IPPS/LTCH PPS final rule for FY 2011 by $29,971,829; the actual costs of the demonstration for FY 2012 fell short of the amount that was finalized in the FY 2012 final rule by $8,500,373.

We note that, for this proposed rule, the amounts identified for the actual costs of the demonstration for each of FYs 2011 and 2012 (determined from current finalized cost reports) are less than the amounts that were identified in the final rule for each these fiscal years. Therefore, in keeping with previous policy finalized in similar situations when the costs of the demonstration fell short of the amount estimated in the corresponding year's final rule, we will be including this component as a negative adjustment to the budget neutrality offset amount for the current fiscal year.

Therefore, for FY 2019, the total amount that we are proposing to apply to the national IPPS rates is $73,191,887. If updated data become available prior to the FY 2019 IPPS/LTCH PPS final rule, we would use them to the extent appropriate to determine the budget neutrality offset amount for FY 2019. Furthermore, if the needed cost reports are available in time for the FY 2019 IPPS/LTCH PPS final rule, we will also identify the difference between the total cost of the demonstration based on finalized FY 2013 cost reports and the estimate of the costs of the demonstration for that year, and incorporate that amount into the budget neutrality offset amount for FY 2019. In addition, when finalized cost reports for FYs 2014 through 2016 are available, we will include the difference between the actual costs as reflected on these cost reports and the amounts included in the budget neutrality offset amounts for these fiscal years in a future final rule.

10. Effect of Proposed Revision of the Hospital Inpatient Admission Order Documentation Requirements

In section IV.M. of the preamble of this proposed rule, we discuss our proposal to revise the admission order documentation requirements. Specifically, we are proposing to revise the inpatient admission order policy to no longer require the presence of a written inpatient admission order in the medical record as a specific condition of Medicare Part A payment. Our actuaries estimate that any increase in Medicare payments due to the proposed change would be negligible, given the anticipated low volume of claims that would be payable under this proposed policy that would not have been paid under the current policy.

11. Effect of Proposed Policy Changes Relating to Satellite Facilities and Excluded Units

In section VI.B. of the preamble of this proposed rule, we discuss our proposal to revise the regulations applicable to satellite facilities so that the separateness and control requirements would only apply to IPPS-excluded satellite facilities that are co-located with IPPS hospitals beginning in FY 2019. This proposed policy change is premised on the belief that the policy concerns that underlie our existing satellite facility regulations (that is, inappropriate patient shifting and hospitals acting as illegal de facto units) are sufficiently moderated in situations where IPPS-excluded hospitals are co-located with each other but not IPPS hospitals, in large part due to the payment system changes that have occurred over the intervening years for IPPS-excluded hospitals, the requirements in the hospital conditions of participation (CoPs) (which are still present regardless of these proposed changes), and because such changes would be consistent with the revisions to our HwH policy that were finalized in the FY 2018 IPPS/LTCH PPS final rule, which was estimated to have a *de minimus* effect on Medicare payments due to the administrative nature of the changes. We also are proposing to revise our regulations to allow IPPS-excluded hospitals to operate as IPPS-excluded units, as discussed in section VI.C. of the preamble to this proposed rule, effective with cost reporting periods beginning on or after October 1, 2019. We believe that this proposal is also consistent with the revisions to our HwH policy that were finalized in the FY 2018 IPPS/LTCH PPS final rule and the proposed changes to the satellite regulation discussed previously. We do not expect any significant payment impact as a result of either of these proposed policies because these policies are primarily administrative in nature and are not expected to result in additional Medicare expenditures that would have been made, regardless of our changes, because IPPS hospital co-location is already allowed under existing regulations.

12. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In section VI.D.2. of the preamble of this proposed rule, we discuss the implementation of the FCHIP demonstration, which allows eligible entities to develop and test new models for the delivery of health care services in eligible counties in order to improve access to and better integrate the delivery of acute care, extended care, and other health care services to Medicare beneficiaries in no more than four States. Budget neutrality estimates for the demonstration will be based on the demonstration period of August 1, 2016 through July 31, 2019. The demonstration includes three intervention prongs, under which specific waivers of Medicare payment rules will allow for enhanced payment: Telehealth, skilled nursing facility/nursing facility services, and ambulance services. These waivers are being implemented with the goal of increasing access to care with no net increase in costs. (We initially addressed

this demonstration in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065).)

We specified the payment enhancements for the demonstration and selected CAHs for participation with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration will produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments resulting from the demonstration). However, because of the small size of this demonstration program and uncertainty associated with projected Medicare utilization and costs, in the FY 2017 IPPS/LTCH PPS final rule we adopted a contingency plan (81 FR 57064 through 57065) to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. Accordingly, if analysis of claims data for the Medicare beneficiaries receiving services at each of the participating CAHs, as well as of other data sources, including cost reports, shows that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. The demonstration is projected to impact payments to participating CAHs under both Medicare Part A and Part B. Thus, in the event that we determine that aggregate payments under the demonstration exceed the payments that would otherwise have been made, CMS will recoup payments through reductions of Medicare payments to all CAHs under both Medicare Part A and Part B. Because of the small scale of the demonstration, it would not be feasible to implement budget neutrality by reducing payments only to the participating CAHs. Therefore, we will make the reduction to payments to all CAHs, not just those participating in the demonstration, because the FCHIP demonstration is specifically designed to test innovations that affect delivery of services by this provider category. As we explained in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57065), we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of the Act permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Given the 3-year period of performance of the FCHIP demonstration and the time needed to conduct the budget neutrality analysis, in the event the demonstration is found not to have been budget neutral, we plan to recoup any excess costs over a period of three cost report periods, beginning in CY 2020. Therefore, this policy has no impact for any national payment system for FY 2019.

13. Effects of Proposed Revisions of the Supporting Documentation Required for Submission of an Acceptable Medicare Cost Report

In section IX.B.1. of the preamble of this proposed rule, we are proposing to incorporate the Provider Cost Reimbursement Questionnaire, Form CMS–339 (OMB No. 0938–0301), into the Organ Procurement Organization (OPO) and Histocompatibility Laboratory cost report, Form CMS–216 (OMB No. 0938–0102), which would complete our incorporation of the Form CMS–339 into all Medicare cost reports. We also are proposing to update § 413.24(f)(5)(i) to reflect that an acceptable cost report will no longer require the provider to separately submit a Provider Cost Reimbursement Questionnaire, Form CMS–339, by removing the reference to the questionnaire. There are 58 OPOs and 47 histocompatibility laboratories. This proposal would not require additional data collection from OPOs or histocompatibility laboratories. This proposal would benefit OPOs and histocompatibility laboratories because they would no longer be required to complete and submit the Form CMS–339 as a separate form independent of the Medicare cost report in order to have an acceptable cost report submission under § 413.24(f)(5)(i). As discussed in detail in section IX.B.10. of the preamble of this proposed rule, this proposal would decrease overall costs to the 58 OPOs and 47 histocompatibility laboratories by $11,178.52.

In section IX.B.2. of the preamble of this proposed rule, we also are proposing that, effective for cost reports filed on or after October 1, 2018, a cost report is rejected for teaching hospitals for lack of supporting documentation if it does not include the IRIS data that contains the same total counts of direct GME FTE residents (unweighted and weighted) and of IME FTE residents as the total counts of direct GME FTE and IME FTE residents reported in the teaching hospital's cost report. This proposal would continue to require all teaching hospitals to submit the IRIS data under § 413.24(f)(5) to have an acceptable cost report submission. However, this proposal would require that this data must correspond to the same total counts of direct GME FTE residents (unweighted and weighted) and of IME FTE residents as the total counts of direct GME FTE and IME FTE residents reported in the teaching hospital's cost report. Providers are required under §§ 413.20 and 413.24 to maintain data that substantiates their costs. IRIS is the source document for reporting FTEs in all teaching hospitals' cost reports. To enhance the contractors' ability to review duplicates and to ensure residents are not being double-counted, we believe it is necessary and appropriate to require that the total unweighted and weighted FTE counts on the IRIS for direct GME and IME respectively, for all applicable allopathic, osteopathic, dental, and podiatric residents that a hospital may train, must equal the same total unweighted and weighted FTE counts for direct GME and IME reported on Worksheet E–4 and Worksheet E, Part A. Because all teaching hospitals are already required to submit the IRIS data under § 413.24(f)(5) to have an acceptable cost report submission, there are no additional burdens or expenses placed upon teaching hospitals as a result of our proposal to require that the supporting documents submitted (the IRIS data) correspond to the amounts reported in the cost report in order to have an acceptable cost report submission.

In section IX.B.3. of the preamble of this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, for providers claiming Medicare bad debt reimbursement, a cost report is rejected for lack of supporting documentation if it does not include a Medicare bad debt listing that corresponds to the bad debt amounts claimed in the provider's Medicare cost report. This proposal would not require providers claiming Medicare bad debt reimbursement to collect additional data. Providers are required under §§ 413.20 and 413.24 to maintain data that substantiates their costs. The cost report worksheet that incorporated Form CMS–339 continues to require providers who claim Medicare bad debt reimbursement to submit a bad debt listing with the cost report in order to have an acceptable cost report submission. Because of the existing requirement, there are no additional burdens or expenses placed upon providers to ensure that the supporting documentation, the bad debt listing, corresponds to the amounts reported in the cost report in order to have an acceptable cost report submission.

In section IX.B.4. of the preamble of this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, for hospitals claiming a disproportionate share hospital payment adjustment, a cost report is rejected for lack of supporting documentation if it does not include a detailed listing of the hospital's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the hospital's cost report. Providers are required under §§ 413.20 and 413.24 to maintain data that substantiates their costs. The provider must furnish such information to the contractor as may be necessary to assure proper payment by the program. Currently, when the supporting documentation regarding Medicaid eligible days is not submitted by DSH eligible hospitals with their cost report, contractors must request it. Tentative program reimbursement payments are often issued to providers upon the submission of the cost report, and a subsequent submission of supporting documentation may reveal an overstatement of a hospital's Medicaid eligible days with a resulting overpayment to the provider.

Requiring a provider to submit, as a supporting document with its cost report, a listing of the provider's Medicaid eligible days that corresponds to the Medicaid eligible days claimed in the DSH eligible hospital's cost report would be consistent with the recordkeeping and cost reporting requirements of §§ 413.20 and 413.24, which require providers to maintain data that substantiates their costs. This proposal to require providers to submit the supporting documentation with the cost report would also facilitate accurate provider payment and

the contractor's review and verification of the cost report.

This proposal would not require hospitals claiming a DSH payment adjustment to collect additional data. Hospitals claiming a DSH payment adjustment are already collecting the data in order to report the hospital's Medicaid eligible days in the hospital's cost report. Because the existing burden estimate for a DSH eligible hospital's cost report already reflects the requirement that these hospitals collect, maintain, and submit this data when requested, there is no additional burden placed upon hospitals as a result of our proposal to require them to submit these supporting documents along with their cost report, and to ensure the supporting documentation corresponds to the amounts reported in the cost report in order to have an acceptable cost report submission.

In section IX.B.5. of the preamble of this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, for DSH eligible hospitals reporting charity care and/or uninsured discounts, a cost report is rejected for lack of supporting documentation if it does not include a detailed listing of charity care and/or uninsured discounts that corresponds to the amounts claimed in the provider's cost report. Providers are required under §§ 413.20 and 413.24 to maintain data that substantiates their costs. The provider must furnish such information to the contractor as may be necessary to assure proper payment by the program. Contractors regularly request that hospitals claiming charity care and/or uninsured discounts submit documentation to support their charity care and/or uninsured discounts reported in their cost report. This proposal to require providers to submit this supporting documentation with the cost report would facilitate accurate payment to the provider and the contractor's review and verification of the cost report.

This proposal would not require DSH eligible hospitals reporting charity care and/or uninsured discounts to collect additional data but would require them to submit the supporting documentation with the cost report rather than at a later time. Because the existing burden estimate for a DSH eligible hospital's cost report already reflects the requirement that these hospitals collect, maintain, and submit this data when requested, there is no additional burden placed upon DSH eligible hospitals as a result of our proposal to require them to submit these supporting documents along with their cost report and to ensure the supporting documentation corresponds to the amounts reported in the cost report in order to have an acceptable cost report submission.

In section IX.B.6. of the preamble of this proposed rule, we are proposing that, effective for cost reporting periods beginning on or after October 1, 2018, for a provider reporting costs on its cost report that are allocated from a home office or chain organization, a cost report is rejected for lack of supporting documentation if it does not include a copy of the Home Office Cost Statement completed by the home office or chain organization that corresponds to the amounts allocated from the home office or chain organization to the provider's cost report. This proposal would not require providers reporting costs on their cost report that are allocated from a home office or chain organization to collect additional data. Instead, this proposal would codify our longstanding policy requiring costs allocated from a home office or chain organization to a provider be substantiated on the provider's cost report. Providers are required under §§ 413.20 and 413.24 to maintain data that substantiates their costs. With our proposal, we anticipate more providers will submit the Home Office Cost Statement to support the amounts reported in their cost reports, in order to have an acceptable cost report submission. Because the existing burden estimate for a provider's cost report already reflects the requirement that providers collect, maintain, and submit this data, there is no additional burden placed upon providers as a result of our proposal to require them to submit these supporting documents along with their cost report, in order to have an acceptable cost report submission.

14. Effect of Proposed Revisions Regarding Physician Certification and Recertification of Claims

In section XI. of the preamble of this proposed rule, we discuss our proposal to remove from the regulations the requirement that a physician statement of certification or recertification must itself indicate where that supporting information is to be found in the medical record. While moving this provision would have no substantive impact, we have examined the impact of eliminating the provision pertaining to where the supporting information is to be found and believe that substantial time and money would be saved by physicians when completing both certification and recertification statements. On average, we estimate that it requires approximately 9 minutes for the precise location of the various elements to be identified and recorded in the statements. This time currently is expended not only with the completion of an initial certification statement but each time a recertification statement is completed.

While the proposed elimination of this provision would benefit physicians in terms of reducing the amount of time expended in completing certification and recertification statements, it would also benefit physicians whose claims have been denied either because the physician failed to include this information in the certification and/or recertification statement or failed to accurately account for the information in the statements. In fact, these claims are routinely denied even in situations where the location of the information within a paper medical record is readily apparent to the reviewer. Given the improved capabilities of searchable electronic health records, these types of denials are increasingly unnecessary. We also expect a positive impact for beneficiaries because beneficiaries would no longer receive notices that these claims were denied, which inevitably caused confusion given the nature of these denials. Moreover, the denial of claims due to the failure to include the location of information within a paper medical record results in appeals. As an example, these denials are significant for skilled nursing facility (SNF) claims. In the SNF setting, a required element of the certification and recertification statement is the required estimated length of need (ELON) element. The table below shows in Row 1 the SNF improper payment rates for claims in error (certification statement does not indicate where in the medical record the required information of ELON is to be found; however the medical record contains the missing information); and in Row 2, the error rate if these claims are no longer considered to be erroneous (due to removal of the provision in the regulations). The data shown in the table are from the 2017 CERT reporting period and includes claims from July 1, 2015 through June 30, 2016.

Provider type	Label	Projected dollars in error	Projected dollars paid	Improper payment rate (%)	95 percent confidence interval
SNF	ELON Claims in Error	$3,259,219,132	$34,949,922,572	9.3	7.6–11.0
SNF	ELON Claims Not in Error	2,776,135,742	34,949,922,572	7.9	6.3–9.5

Overall, there is a 1.4 percentage point reduction in the improper payment rate in the SNF setting alone. The impact on the SNF setting is significant. Yet, if this 1.4 percentage point is considered uniformly across all provider settings, the magnitude of this provision and its impact on the Medicare Trust funds is extensive. Moreover, by eliminating these denials and subsequent appeals, MACS would have more time to dedicate to other more pertinent appeal issues.

I. Effects of Proposed Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented below, we used data from the December 2017 update of the FY 2017 MedPAR file and the December 2017 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the proposed changes to the capital prospective payment system do not incorporate cost data, we used the December 2017 update of the most recently available hospital cost report data (FYs 2015 and 2016) to categorize

hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described later in this section.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the December 2017 update of the FY 2017 MedPAR file, we simulated payments under the capital IPPS for FY 2018 and proposed payments for FY 2019 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the proposed capital IPPS payments in FY 2019 is as follows:

(Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case-mix. We then added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index would increase by 0.5 percent in both FYs 2018 and 2019.
- We estimate that Medicare discharges would be approximately 11.0 million in FY 2018 and 11.1 million in FY 2019.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this proposed rule, the proposed update is 1.2 percent for FY 2019.
- In addition to the proposed FY 2019 update factor, the proposed FY 2019 capital Federal rate was calculated based on a proposed GAF/DRG budget neutrality adjustment factor of 0.9997 and a proposed outlier adjustment factor of 0.9494.

2. Results

We used the actuarial model previously described in section I.I. of Appendix A of this proposed rule to estimate the potential impact of our proposed changes for FY 2019 on total capital payments per case, using a universe of 3,257 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the December 2017 update of the FY 2017 MedPAR file, the December 2017 update to the PSF, and the most recent cost report data from the December 2017 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2018 and estimated proposed total payments per case for FY 2019 based on the proposed FY 2019 payment policies. Column 2 shows estimates of payments per case under our model for FY 2018. Column 3 shows estimates of proposed payments per case under our model for FY 2019. Column 4 shows the total percentage change in payments from FY 2018 to FY 2019. The change represented in Column 4 includes the proposed 1.2 percent update to the capital Federal rate and other proposed changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2019 are expected to increase as compared to capital payments per case in FY 2018. This expected increase overall is largely due to the proposed 1.2 percent update to the capital Federal rate for FY 2019. Hospitals within both rural and urban regions may experience an increase or a decrease in capital payments per case due to proposed changes in the GAFs. These regional effects of the proposed changes to the GAFs on capital payments are consistent with the projected changes in payments due to proposed changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix A.

The net impact of these proposed changes is an estimated 1.7 percent change in capital payments per case from FY 2018 to FY 2019 for all hospitals (as shown in Table III).

The geographic comparison shows that, on average, hospitals in urban classifications would experience an increase in capital IPPS payments per case in FY 2019 as compared to FY 2018, while those hospitals in rural classifications would experience a decrease in capital IPPS payments. Capital IPPS payments per case would increase by an estimated 2.9 percent for hospitals in large urban areas and by 1.0 for hospitals in other urban areas, while payments to hospitals in rural areas would decrease by 1.4 percent, from FY 2018 to FY 2019.

The comparisons by region show that the estimated increases in capital payments per case from FY 2018 to FY 2019 in urban areas would range from a 0.3 percent increase for the Mountain urban region to a 3.7 percent increase for the Pacific urban region. For rural regions, the Mountain rural region is projected to experience the largest increase in capital IPPS payments per case of 0.9 percent, while the East South Central rural region is projected to experience a decrease in capital IPPS payments per case of 2.9 percent.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are expected to experience an increase in capital payments per case from FY 2018 to FY 2019. The proposed increase in capital payments for voluntary hospitals is estimated to be 1.5 percent. Government hospitals and proprietary hospitals are expected to experience an increase in capital IPPS payments of 2.9 and 1.8 percent, respectively.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2019. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this proposed rule for FY 2019, we show the average capital payments per case for reclassified hospitals for FY 2019. Urban reclassified hospitals are expected to experience an increase in capital payments of 0.7 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.7 percent. The estimated percentage decrease for rural reclassified hospitals is 2.3 percent, and for rural nonreclassified hospitals, the estimated percentage decrease in capital payments is 0.1 percent.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE

[FY 2018 payments compared to proposed FY 2019 payments]

	Number of hospitals	Average FY 2018 payments/ case	Proposed average FY 2019 payments/ case	Change
By Geographic Location:				
All hospitals	3,257	948	964	1.7
Large urban areas (populations over 1 million)	1,310	1,021	1,051	2.9
Other urban areas (populations of 1 million of fewer)	1,170	938	947	1.0

J. Effects of Proposed Payment Rate Changes and Proposed Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VII. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule, we set forth the proposed annual update to the payment rates for the LTCH PPS for FY 2019. In the preamble of this proposed rule, we specify the statutory authority for the provisions that are presented, identify the proposed policies, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this proposed rule, we discuss the impact of the proposed changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this proposed rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 409 LTCHs included in this impact analysis. We note that, although there are currently approximately 417 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the proposed FY 2019 MS–LTC–DRG relative weights (discussed in section VII.B.3.c. of the preamble of this proposed rule. Moreover, in the claims data used for this proposed rule, 1 of these 409 LTCHs only have claims for site neutral payment rate cases and are thus not included in our impact analysis for LTCH PPS standard Federal payment rate cases.) In the impact analysis, we used the proposed payment rate, factors, and policies presented in this proposed rule, the proposed 1.0115 percent annual update to the LTCH PPS standard Federal payment rate, the proposed update to the MS–LTC–DRG classifications and relative weights, the proposed update to the wage index values and labor-related share, the proposed elimination of the 25-pecent threshold policy and corresponding proposed one-time permanent budget neutrality adjustment (discussed in VII.E. of the preamble of this proposed rule), and the best available claims and CCR data to estimate the proposed change in payments for FY 2019.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a); or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, there are two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. The statute also establishes a transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 through FY 2019. The transitional payment amount for site neutral payment rate cases is a blended payment rate, which is calculated as 50 percent of the applicable site neutral payment rate amount for the discharge as determined under § 412.522(c)(1) and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge determined under § 412.523.

Based on the best available data for the 409 LTCHs in our database that were considered in the analyses used for this proposed rule, we estimate that overall LTCH PPS payments in FY 2019 would decrease by approximately 0.1 percent (or approximately $5 million) based on the proposed rates and factors presented in section VII. of the preamble and section V. of the Addendum to this proposed rule.

Based on the FY 2017 LTCH cases that were used for the analyses in this proposed rule, approximately 36 percent of those cases were classified as site neutral payment rate cases (that is, 36 percent of LTCH cases did not meet the patient-level criteria for exclusion from the site neutral payment rate). Our Office of the Actuary estimates that the percent of LTCH PPS cases that will be paid at the site neutral payment rate in FY 2018 will not change significantly from the most recent historical data. Taking into account the transitional blended payment rate and other changes that will apply to the site neutral payment rate cases in FY 2019, we estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will decrease by approximately 1.1 percent (or approximately $11 million).

Approximately 64 percent of LTCH cases are expected to meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2019, and would be paid based on the LTCH PPS standard Federal payment rate for the full year. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2019 would increase approximately 0.2 percent (or approximately $6 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2019 is primarily due to the proposed 1.15 percent annual update to the LTCH PPS standard Federal payment rate for FY 2019 (discussed in section V.A. of the Addendum to this proposed rule) and the proposed −0.9 percent one-time permanent budget neutrality adjustment under our proposal to eliminate the 25-percent threshold policy.

Based on the 409 LTCHs that were represented in the FY 2017 LTCH cases that were used for the analyses in this proposed rule presented in this Appendix, we estimate that aggregate FY 2019 LTCH PPS payments would be approximately $4.510 billion, as compared to estimated aggregate FY 2018 LTCH PPS payments of approximately $4.515 billion, resulting in an estimated overall decrease in LTCH PPS payments of approximately $5 million. We note that the estimated $5 million decrease in LTCH PPS payments in FY 2019 does not reflect changes in LTCH admissions or case-mix intensity, which would also affect the overall payment effects of the proposed policies in this proposed rule.

The LTCH PPS standard Federal payment rate for FY 2018 is $41,415.11. For FY 2019, we are proposing to establish an LTCH PPS

standard Federal payment rate of $41,482.98 which reflects the proposed 1.15 percent annual update to the LTCH PPS standard Federal payment rate, the proposed area wage budget neutrality factor of 0.999713 to ensure that the changes in the wage indexes and labor-related share do not influence aggregate payments, and the proposed one-time permanent budget neutrality adjustment of 0.990535 to ensure that our proposed elimination of the 25-percent threshold policy (discussed in VII.E. of the preamble of this proposed rule) do not influence aggregate LTCH PPS payments. For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are proposing to establish an LTCH PPS standard Federal payment rate of $40,662.75. This proposed LTCH PPS standard Federal payment rate reflects the proposed updates and factors previously described as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP. We note that the factors previously described to determine the proposed FY 2019 LTCH PPS standard Federal payment rate are applied to the FY 2018 LTCH PPS standard Federal rate set forth under § 412.523(c)(3)(xiv) (that is, $41,415.11).

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the proposed annual update of 1.15 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 1.1 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019, on average, for all LTCHs (Column 6). In addition to the proposed annual update to the LTCH PPS standard Federal payment rate for FY 2019, the estimated increase of 1.1 percent shown in Column 6 of Table IV also includes estimated payments for SSO cases that would be paid using methodologies that are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update of LTCHs that do not submit the required LTCH QRP data. Therefore, for all hospital categories, the projected increase in payments based on the proposed LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases is somewhat less than the 1.15 percent annual update for FY 2019.

For FY 2019, we are proposing to update the wage index values based on the most recent available data, and we are proposing to continue to use labor market areas based on the OMB CBSA delineations (as discussed in section V.B. of the Addendum to this proposed rule). In addition, we are proposing to maintain the labor-related share at 66.2 percent under the LTCH PPS for FY 2019, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs of the 2013-based LTCH market basket. We also are proposing to apply a proposed area wage level budget neutrality factor of 0.999713 to ensure that the changes to the wage data and labor-related share do not result in any change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

As we discuss in VII.E. of the preamble of this proposed rule, we are proposing to eliminate the 25-percent threshold policy in a budget neutral manner. Therefore, for FY 2019, we are proposing to apply a one-time permanent budget neutrality factor of 0.990535 to ensure the proposed elimination of the 25-percent threshold policy does not result in any change in estimated aggregate LTCH PPS payments.

We currently estimate total HCO payments for LTCH PPS standard Federal payment rate cases would decrease from FY 2018 to FY 2019. Based on the FY 2017 LTCH cases that were used for the analyses in this proposed rule, we estimate that the FY 2018 HCO threshold of $27,381 (as established in the FY 2018 IPPS/LTCH PPS final rule) would result in estimated HCO payments for LTCH PPS standard Federal payment rate cases in FY 2018 that are above the 7.975 percent target. Specifically, we currently estimate that HCO payments for LTCH PPS standard Federal payment rate cases would be approximately 7.988 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2018. Combined with our estimate that FY 2019 HCO payments for LTCH PPS standard Federal payment rate cases would be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2019, this would result in a negligible estimated decrease in HCO payments of less than 0.1 percent between FY 2018 and FY 2019. We note that, consistent with past practice, in calculating these estimated HCO payments, we increased estimated costs by our actuaries' projected market basket percentage increase factor.

Table IV shows the estimated impact of the proposed payment rate and proposed policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2019 by comparing estimated FY 2018 LTCH PPS payments to estimated FY 2019 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) We note that these impacts do not include LTCH PPS site neutral payment rate cases for the reasons discussed in section I.J.4. of this Appendix. As we discuss in detail throughout this proposed rule, based on the most recent available data, we believe that the provisions of this proposed rule relating to the LTCH PPS, which are projected to result in an overall decrease in estimated aggregate LTCH PPS payments, and the resulting LTCH PPS payment amounts would result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting no change in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This estimated impact is based on the FY 2017 data for the 21 rural LTCHs (out of 409 LTCHs) that were used for the impact analyses shown in Table IV.

3. Anticipated Effects of Proposed LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs ''maintain budget neutrality.'' We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, including any applicable HCO payments, or 100 percent of the estimated cost of the case. The statute also establishes a transitional payment method for cases that are paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 through FY 2019, under which the site neutral payment rate cases are paid based on a blended payment rate calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge.

As discussed in section I.J. of this Appendix, we project a decrease in aggregate LTCH PPS payments in FY 2019 of approximately $5 million. This estimated decrease in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately $6 million and the projected decrease in payments to site neutral payment rate cases of approximately $11 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016.

As discussed in section V.D. of the Addendum to this proposed rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this proposed rule to project estimated FY 2019

LTCH PPS payments (that is, FY 2017 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the proposed change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the proposed changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects proposed changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.4. of this Appendix refers only to the impact on proposed LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the proposed changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.538. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the proposed changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this proposed rule on different categories of LTCHs for FY 2019, it is necessary to estimate payments per discharge for FY 2018 using the rates, factors, and the policies established in the FY 2018 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2019 using the proposed rates, factors, and the policies in this FY 2019 IPPS/LTCH PPS proposed rule (as discussed in section VII. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule). As discussed elsewhere in this proposed rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: Large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Calculation of Proposed LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our proposed policies on proposed payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2018 and proposed FY 2019 payments on a case-by-case basis using historical LTCH claims from the FY 2017 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2017 MedPAR files. For modeling FY 2018 LTCH PPS payments, we used the FY 2018 standard Federal payment rate of $41,415.11 (or $ 40,595.02 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP).

Similarly, for modeling payments based on the proposed FY 2019 LTCH PPS standard Federal payment rate, we used the proposed FY 2019 standard Federal payment rate of $41,482.98 (or $40,662.75 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2018 LTCH PPS payments, we used the current FY 2018 labor-related share (66.2 percent), the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2018 IPPS/LTCH PPS final rule (which are available via the internet on the CMS website), the FY 2018 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $27,381 (as discussed in section V.D. of the Addendum to that final rule), and the FY 2018 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2018 nonlabor-related share (33.8 percent) for LTCHs located in Alaska and Hawaii.

Similarly, for modeling proposed FY 2019 LTCH PPS payments, we used the proposed FY 2019 LTCH PPS labor-related share (66.2 percent), the proposed FY 2019 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this proposed rule (which are available via the internet on the CMS website), the proposed FY 2019 fixed-loss amount for LTCH PPS standard Federal payment rate cases of $30,639 (as discussed in section V.D.3. of the Addendum to this proposed rule), and the proposed FY 2019 COLA factors (shown in the table in section V.C. of the Addendum to this proposed rule) to adjust the FY 2019 nonlabor-related share (33.8 percent) for LTCHs located in Alaska and Hawaii.

The impacts that follow reflect the estimated ''losses'' or ''gains'' among the various classifications of LTCHs from FY 2018 to FY 2019 based on the proposed payment rates and proposed policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. Table IV illustrates the estimated aggregate impact of the proposed change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2018 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated FY 2019 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2018 to FY 2019 due to the proposed annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this proposed rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019 for proposed changes to the area wage level adjustment (that is, the wage indexes and the labor-related share), including the application of the proposed area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this proposed rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 (Column 4) to FY 2019 (Column 5) for all proposed changes.

TABLE IV—IMPACT OF PROPOSED PAYMENT RATE AND PROPOSED POLICY CHANGES TO LTCH PPS PAYMENTS FOR LTCH PPS STANDARD FEDERAL PAYMENT RATE CASES FOR FY 2019

[Estimated FY 2018 payments compared to estimated FY 2019 payments]

LTCH classification	Number of LTCHS	Number of LTCH PPS standard payment rate cases	Average FY 2018 LTCH PPS payment per standard payment rate	Average proposed FY 2019 LTCH PPS payment per standard payment rate [1]	Proposed percent change due to change to the proposed annual update to the standard federal rate [2]	Proposed percent change due to proposed changes to area wage adjustment with wage budget neutrality [3]	Proposed percent change due to all proposed standard payment rate changes [4]

[1] Estimated FY 2019 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the proposed payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this proposed rule.

[2] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019 for the proposed annual update to the LTCH PPS standard Federal payment rate.

[3] Proposed percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019 for proposed changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this proposed rule).

[4] Proposed percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 (shown in Column 4) to FY 2019 (shown in Column 5), including all of the proposed changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this proposed rule. We note that this column, which shows the proposed percent change in estimated payments per discharge for all proposed changes, does not equal the sum of the proposed percent changes in estimated payments per discharge for the proposed annual update to the LTCH PPS standard Federal payment rate (Column 6) and the proposed changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in estimated payments to aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

d. Results

Based on the FY 2017 LTCH cases (from 409 LTCHs) that were used for the analyses in this proposed rule, we have prepared the following summary of the impact (as shown in Table IV) of the proposed LTCH PPS payment rate and proposed policy changes for LTCH PPS standard Federal payment rate cases presented in this proposed rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 0.2 percent, on average, for all LTCHs from FY 2018 to FY 2019 as a result of the proposed payment rate and proposed policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. This estimated 0.2 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2019 LTCH PPS payments (using the proposed payment rates and factors discussed in this proposed rule) to estimated FY 2018 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.4. of this Appendix).

As stated previously, we are proposing to update the LTCH PPS standard Federal payment rate for FY 2019 by 1.15 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. Consistent with § 412.523(d)(4), we also are proposing to apply an area wage level budget neutrality factor to the proposed FY 2019 LTCH PPS standard Federal payment rate of 0.999713, based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment (that is, the proposed annual update of the wage index values and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Finally, we are proposing to make a budget neutrality adjustment of 0.990535 for our proposed elimination of the 25-percent threshold

policy (discussed in VII.E. of the preamble of this proposed rule). As we also explained earlier in this section, for most categories of LTCHs (as shown in Table IV, Column 6), the estimated payment increase due to the proposed 1.15 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 1.1 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2018 to FY 2019. This is because our estimate of the proposed changes in payments due to the proposed update to the LTCH PPS standard Federal payment rate also reflects estimated payments for SSO cases that are paid using a methodology that is not entirely affected by the update to the LTCH PPS standard Federal payment rate. Consequently, for certain hospital categories, we estimate that payments to LTCH PPS standard Federal payment rate cases may increase by less than 1.1 percent due to the proposed annual update to the LTCH PPS standard Federal payment rate for FY 2019.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 3 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the proposed overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019 for all hospitals is 0.2 percent. However, for rural LTCHs, estimated payments for LTCH PPS standard Federal payment rate cases are expected to remain constant. This is primarily driven by a projected decrease resulting from changes to the proposed changes to the area wage index adjustment. For urban LTCHs, we estimate an increase of 0.2 percent from FY 2018 to FY 2019. Among the urban LTCHs, large urban LTCHs are projected to experience an increase of 0.3 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019, and such payments for the remaining urban LTCHs are projected to remain constant from FY 2018 to FY 2019, as shown in Table IV.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 43 percent) are in LTCHs that began participating in the Medicare program after October 2002, and they are projected to experience a 0.2 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019, as shown in Table IV.

Approximately 3 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience an average percent decrease of 0.6 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019. Approximately 10 percent of LTCHs began participating in the Medicare program between October 1983 and September 1993, and these LTCHs are projected to experience an increase of 0.5 percent in estimated payments for LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019. LTCHs that began participating in the Medicare program between October 1993 and October 1, 2002, which treat approximately 41 percent of all LTCH PPS standard Federal payment rate cases, are projected to experience a 0.1 percent increase in estimated payments from FY 2018 to FY 2019.

(3) Ownership Control

LTCHs are grouped into four categories based on ownership control type: Voluntary, proprietary, government and unknown. Based on the most recent available data, approximately 19 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 78 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience a 0.3 percent increase in payments to LTCH PPS standard Federal payment rate cases, while proprietary LTCHs are expected to experience an average increase of 0.1 percent in payments to LTCH PPS standard Federal payment rate cases. Government owned and operated LTCHs, meanwhile, are expected to experience a 0.4 percent increase in payments to LTCH PPS standard Federal payment rate cases from FY 2018 to FY 2019.

(4) Census Region

Estimated payments per discharge for LTCH PPS standard Federal payment rate cases for FY 2019 are projected to increase across 4 of the 9 census regions. LTCHs located in the East and West North Central regions and the Mountain region are projected to experience a slight decrease of 0.1 and 0.2 percent, respectively, while LTCHs located New England are expected to experience a 0.5 decrease in payments. All other regions are projected to experience constant or increased payments per discharge for FY 2019 in comparison to FY 2018. Of the 9 census regions, we project that the increase in estimated payments per discharge to LTCH PPS standard Federal payment rate cases will have the largest positive impact on LTCHs in the Pacific region (1.1 percent) and the Middle Atlantic region (0.7 percent) as shown in Table IV. These regional variations are largely due to proposed updates in the wage index.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with 0–24 beds would experience a decrease in payments for LTCH PPS standard Federal payment rate cases of 0.1 percent, while LTCHs with 125–199 beds are expected to experience a decrease of 0.2 percent. We expect the remaining categories to experience an increase in payments of 0.1 and 0.2 percent for LTCHs with 25–49 and 50–74 beds, respectively, a 0.4 percent increase in payments for LTCHs with 75–124 beds, and a 0.6 increase for LTCHs with 200 or more beds.

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this proposed rule would result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2019 relative to FY 2018 of approximately 6 million (or approximately 0.2 percent) for the 409 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this proposed rule would result in a decrease in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2019 relative to FY 2018 of approximately $11 million (or approximately 1.1 percent) for the 409 LTCHs in our database. Therefore, we project that the provisions of this proposed rule would result in a decrease in estimated aggregate LTCH PPS payments to all LTCH cases in FY 2019 relative to FY 2018 of approximately $5 million (or approximately 0.1 percent) for the 409 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this proposed rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed above, we do not expect the continued implementation of the site neutral payment system to have a negative impact access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Proposed Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

1. Background

In section VIII.A. of the preamble of this proposed rule, we discuss our current and proposed requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2021 payment determination.

In this proposed rule, we are proposing to: (1) Extend eCQM reporting requirements to the CY 2019 reporting period/FY 2021 payment determination; (2) require the 2015 Edition of CEHRT for eCQMs beginning with the CY 2019 reporting period/FY 2021 payment determination; (3) remove 17 claims-based measures beginning with the CY 2018 reporting period/FY 2020 payment determination; (4) remove two structural

measures beginning with the CY 2018 reporting period/FY 2020 payment determination; (5) remove two claims-based measures beginning with the CY 2019 reporting period/FY 2021 payment determination; (6) remove eight chart-abstracted measures beginning with the CY 2019 reporting period/FY 2021 payment determination; (7) remove one claims-based measure beginning with the CY 2020 reporting period/FY 2022 payment determination; (8) remove one chart-abstracted measure beginning with the CY 2020 reporting period/FY 2022 payment determination; (9) remove seven eCQMs beginning with CY 2020 reporting period/FY 2022 payment determination; (10) remove one claims-based measure beginning with the CY 2021 reporting period/FY 2023 payment determination; and (11) adopt a new measure removal factor.

We do not believe our proposal to adopt a new measure removal factor will directly affect burden. However, as further explained in section XIV.B.3. of the preamble of this proposed rule, we believe that there will be an overall decrease in the estimated information collection burden for hospitals due to the other proposed policies. We refer readers to section XIV.B.3. of the preamble of this proposed rule for a summary of our information collection burden estimate calculations. The effects of these proposals are discussed in more detail below.

2. Impact of Proposed Extension of eCQM Reporting Requirements

In the FY 2018 IPPS/LTCH PPS final rule, we finalized policies to require hospitals to submit one, self-selected calendar quarter of data for four eCQMs in the Hospital IQR Program measure set for the CY 2018 reporting period/FY 2020 payment determination (82 FR 38355 through 38361). In section VIII.A.11.d.(2) of the preamble of this proposed rule, we are proposing to extend those reporting requirements for the CY 2019 reporting period/FY 2021 payment determination, such that hospitals would be required to submit one, self-selected calendar quarter of data for four eCQMs in the Hospital IQR Program measure set. Therefore, we believe our burden estimate of 40 minutes per hospital per year (10 minutes per record $\times 4$ eCQMs $\times 1$ quarter) associated with eCQM reporting requirements finalized for the CY 2018 reporting period/FY 2020 payment determination will also apply to the CY 2019 reporting period/FY 2021 payment determination.

3. Impact of Proposed Requirement To Certify EHR to the 2015 Edition

In section VIII.A.11.d.(3) of the preamble of this proposed rule, we discuss our proposal to require use of EHR technology certified to the 2015 Edition beginning with the CY 2019 reporting period/FY 2021 payment determination, which aligns with previously established requirements in the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs). As described in section XIV.B.3.g. of the preamble of this proposed rule, we expect this proposal to have no impact on information collection burden for the Hospital IQR Program because this proposal does not require hospitals to submit new data to CMS.

With respect to any costs unrelated to data submission, although this proposal would require some investment in systems updates, the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs) previously finalized a requirement that hospitals use the 2015 Edition of CEHRT beginning with the CY 2019 reporting period/FY 2021 payment determination (80 FR 62761 through 62955). Because all hospitals participating in the Hospital IQR Program are subsection (d) hospitals that also participate in the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs), we do not anticipate any additional costs as a result of this proposal.

4. Impact of Proposed Removal of Chart-Abstracted Measures

In sections VIII.A.5.b.(2)(b) and VIII.A.5.b.(8) of the preamble of this proposed rule, beginning with the CY 2019 reporting period/FY 2021 payment determination, we are proposing to remove eight chart-abstracted measures—five National Health and Safety Network (NHSN) hospital-acquired infection (HAI) measures (CDI (NQF #1717), CAUTI (NQF #0138), CLABSI (NQF #0139), MRSA Bacteremia (NQF #1716), Colon and Abdominal Hysterectomy SSI (NQF #0753)) and three clinical process of care measures (ED–1 (NQF #0495), IMM–2 (NQF #1659), VTE–6 [405]). In section VIII.A.5.b.(8)(b) of the preamble of this proposed rule, beginning with the CY 2020 reporting period/FY 2022 payment determination, we also are proposing to remove one chart-abstracted clinical process of care measure (ED–2).

As described in detail in section XIV.B.3. of the preamble of this proposed rule, we expect our proposals to remove the clinical process of care chart-abstracted measures would reduce the information collection burden by 1,046,071 hours and approximately $38.3 million for the CY 2019 reporting period/FY 2021 payment determination, and an additional 901,200 hours and approximately $33 million for the CY 2020 reporting period/FY 2022 payment determination for the Hospital IQR Program. We note that the burden of data collection for the NHSN HAI measures (CDI, CAUTI, CLABSI, MRSA Bacteremia, and Colon and Abdominal Hysterectomy SSI) is accounted for under the Centers for Disease Control and Prevention (CDC) National Health and Safety Network (NHSN) OMB control number 0920–0666. Because burden associated with submitting data for the NHSN HAI measures is captured under a separate OMB control number, we do not provide an independent estimate of the information collection burden associated with these measures for the Hospital IQR Program.

The data validation activities, however, are conducted by CMS. Since the measures were adopted into the Hospital IQR Program, CMS has validated the data for purposes of the Program. Therefore, this burden has been captured under the Hospital IQR Program's OMB control number 0938–1022. While we did not propose any changes directly to the validation process related to chart-abstracted measures, if our proposals to remove five NHSN HAI and four clinical process of care chart-abstracted measures (in section VIII.A.5.b.(2)(b) and section VIII.A.5.b.(8) of the preamble of this proposed rule) are finalized as proposed, we believe that hospitals will experience an overall reduction in burden associated with validation of chart-abstracted measures beginning with the FY 2022 payment determination because hospitals selected for validation are currently required to submit validation templates for the NHSN HAI measures for the Hospital IQR Program. In addition, if our proposals to remove the NHSN HAI measures are finalized, the information collection burden associated with submission of these validation templates would be eliminated from the Hospital IQR Program. As described in detail in section XIV.B.3. of the preamble of this proposed rule, we estimate a total decrease of 43,200 hours and approximately $1.6 million as a result of discontinuing submission of NHSN HAI validation templates under the Hospital IQR Program as described in section IV.K.4.e. of the preamble of this proposed rule. The proposed removal of NHSN HAI measures from the Hospital IQR Program, the subsequent cessation of validation processes for the NHSN HAI measures, the retention of these measures in the HAC Reduction Program, and the proposed implementation of a validation process for these measures under the HAC Reduction Program, represent no net change in information collection burden for the NHSN HAI measures across CMS hospital quality programs. Therefore, we do not anticipate any change under the CDC NHSN's OMB control number 0920–0666 due to our proposals.

Furthermore, we anticipate that the costs to hospitals participating in the Hospital IQR Program, beyond that associated with information collection, will be reduced because hospitals would no longer need to review multiple feedback reports for the NHSN HAI measures from three different hospital quality programs (the Hospital IQR, Hospital VBP, and HAC Reduction Programs) that use three different reporting periods, which result in interpreting slightly different measure rates for the same measures (under the Hospital IQR Program, a rolling four quarters of data are used to update the *Hospital Compare* website; under the Hospital VBP Program, 1-year periods are used for each of the baseline period and the performance period; and under the HAC Reduction Program, a 2-year performance period is used).

5. Impact of Proposed Removal of Two Structural Measures

In section VIII.A.5.a. and VII.A.5.b.(1) of the preamble of this proposed rule, we are proposing to remove two structural measures, Hospital Survey on Patient Safety Culture and Safe Surgery Checklist, beginning with the CY 2018 reporting period/FY 2020 payment determination. We believe these

[405] NQF endorsement has been removed.

proposals will result in a minimal information collection burden reduction, which is addressed in section XIV.B.3. of the preamble of this proposed rule. In addition, we refer readers to VIII.A.4.b. of the preamble of this proposed rule, where we acknowledge that costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining Program requirements. We believe it may be unnecessarily costly and/or of limited benefit to retain or maintain a measure which our analyses show no longer meaningfully supports program objectives (for example, informing beneficiary choice or payment scoring). As discussed in sections VIII.A.5.a. and VIII.A.5.b.(1) of the preamble of this proposed rule, we believe these measure are of limited utility for internal hospital quality improvement efforts because they do not provide individual patient level data or any information on patient outcomes. In addition, our analyses show that use of patient safety culture surveys and safe surgery checklists is widely in practice among hospitals. Therefore, we do not believe that these measures support the program objectives of facilitating internal hospital quality improvement efforts or informing beneficiary choice.

6. Impact of the Proposed Removal of Claims-Based Measures

In sections VIII.A.5.b.(2)(a), (3), (4), (6), and (7) of the preamble of this proposed rule, we are proposing to remove 17 claims-based measures PSI–90 (NQF #0531), READM–30–AMI (NQF #0505), READM–30–CABG (NQF #2515), READM–30–COPD (NQF #1891), READM–30–HF (NQF #0330), READM–30–PN (NQF #0506), READM–30–THA/TKA (NQF #1551), READM–30–STK, MORT–30–AMI (NQF #0230), MORT–30–HF (NQF #0229), MSPB (NQF #2158), Cellulitis Payment, GI Payment, Kidney/UTI Payment, AA Payment, Chole and CDE Payment, and SFusion Payment) beginning with the CY 2018 reporting period/CY 2020 payment determination. In addition, in section VIII.A.5.b.(4) of the preamble of this proposed rule, we are proposing to remove two claims-based measures (MORT–30–COPD (NQF #1893) and MORT–30–PN (NQF #0468)) beginning with the CY 2019 reporting period/FY 2021 payment determination. Furthermore, in sections VIII.A.5.b.(4) and VIII.A.5.b.(5), respectively, of the preamble of this proposed rule, we are proposing to remove one-claims based measure (MORT–30–CABG (NQF #2558)) beginning with the CY 2020 reporting period/FY 2022 payment determination and one claims-based measure (Hip/Knee Complications (NQF #1550)) beginning with the CY 2021 reporting period/FY 2023 payment determination.

These claims-based measures are calculated using only data already reported to the Medicare program for payment purposes, therefore, we do not believe removing these measures will impact the information collection burden on hospitals. Nonetheless, we anticipate that hospitals will experience a general cost reduction associated with these proposals stemming from no longer having to review and track various program requirements or measure information in multiple confidential feedback and preview reports from multiple programs that reflect multiple measure rates due to varying scoring methodologies and reporting periods.

7. Impact of the Proposed Removal of eCQMs

In section VIII.A.5.b.(9) of the preamble of this proposed rule, we are proposing to remove seven eCQMs from the Hospital IQR Program eCQM measure set beginning with the CY 2020 reporting period/FY 2022 payment determination. As described in section XIV.B.3. of this proposed rule, we do not anticipate that removal of these seven eCQMs will affect the information collection burden for hospitals. However, as discussed in section VIII.A.4.b. of the preamble of this proposed rule, we believe costs are multifaceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining Program requirements, such as maintaining measure specifications in hospitals' EHR systems for all of the eCQMs available for use in the Hospital IQR Program. We further discuss costs unrelated to information collection associated with eCQM removal in section VIII.A.5.b.(9) of the preamble of this proposed rule.

8. Summary of Effects

In summary, we estimate: (1) A total information collection burden reduction of 1,046,138 hours (−1,046,071 hours due to the proposed removal of ED–1 (NQF #0495), IMM–2 (NQF #1659), and VTE–6 [406] measures for the CY 2019 reporting period/FY 2021 payment determination and −67 hours for no longer collecting data for the voluntary Hybrid HWR measure [407]) and a total cost reduction related to information collection of approximately $38.3 million (−1,046,138 hours × $36.58 per hour [408]) for the CY 2019 reporting period/FY 2021 payment determination; and (2) a total information collection burden reduction of 901,200 hours (−858,000 hours due to the proposed removal of ED–2 −43,200 hours due to the proposed discontinuation of the NHSN HAI measure validation process under the Hospital IQR Program) and a total cost reduction related to information collection of approximately $33 million (−901,200 hours × $36.58 per hour [409]) for the CY 2020 reporting period/FY 2022 payment determination. As stated earlier, we also anticipate additional cost reductions unrelated to the information collection burden associated with our proposals, including, for example, no longer having to review and track measure information in multiple feedback reports from multiple programs and maintaining measure specifications in hospitals' EHR systems for all eCQMs available for use in the program.

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements of this Program. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years or slightly decrease. We believe that reducing the number of chart-abstracted measures used in the Hospital IQR Program would, at least in part, help increase hospitals' chances to meet all Program requirements and receive their full annual percentage increase.

We refer readers to section XIV.B.3. of the preamble of this proposed rule (information collection requirements) for a detailed discussion of the burden of the requirements for submitting data to the Hospital IQR Program.

L. Effects of Proposed Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section VIII.B. of the preamble of this proposed rule, we discuss our proposed policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In section VIII.B.3.b. of the preamble of this proposed rule, we are proposing to remove four web-based, structural measures: (1) Oncology: Radiation Dose Limits to Normal Tissues (PCH–14/NQF #0382); (2) Oncology: Medical and Radiation—Pain Intensity Quantified (PCH–16/NQF #0384); (3) Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (PCH–17/NQF #0390); and (4) Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (PCH–18/NQF #0389), and two chart-abstracted, NHSN measures: (5) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (PCH–5/NQF #0138) and (6) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (PCH–4/NQF #0139) beginning with the FY 2021 program year. In addition, in section VIII.B.4. of the preamble of this proposed rule, we are proposing to adopt one claims-based measure for the FY 2021 program year and subsequent years: 30-Day Unplanned Readmissions for Cancer Patients measure (NQF #3188). If

[406] NQF Endorsement has been removed.

[407] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38350 through 38355), we finalized our proposal to collect data on a voluntary basis for the Hybrid HWR measure for the CY 2018 reporting period/FY 2020 payment determination. We estimated that approximately 100 hospitals would voluntarily report data for this measure, resulting in a total burden of 67 hours across all hospitals for the CY 2018 reporting period/FY 2020 payment determination (82 FR 38504). Because we only finalized voluntary collection of data for one year, voluntary collection of this data would no longer occur beginning with the CY 2019 reporting period/FY 2021 payment determination and subsequent years resulting in a reduction in burden of 67 hours across all hospitals.

[408] In the FY 2017 IPPS/LTCH PPS final rule (82 FR 38501), we finalized an hourly wage estimate of $18.29 per hour, plus 100 percent overhead and fringe benefits, for the Hospital IQR Program. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $36.58 per hour.

[409] Ibid.

finalized, the PCHQR Program measure set would consist of 13 measures for the FY 2021 program. Further, in section XIV.B.4.b. of the preamble of this proposed rule, we are proposing to adopt a new time burden estimate, to be applied to structural and web-based tool measures for the FY 2021 program year and subsequent years. Specifically, we are proposing to adopt the estimate of 15 minutes for reporting these types of measures, which is the time estimate utilized by the Hospital IQR Program (80 FR 49762).

As explained in section XIV.B.4.c. of the preamble of this proposed rule, we anticipate that these proposed new requirements would reduce the overall burden on participating PCHs. If our proposal to apply 15 minutes per measure as a burden estimate for structural measures and web-based tool measures and our proposal to remove the following web-based structural measures: (1) Oncology: Radiation Dose Limits to Normal Tissues (PCH–14/NQF #0382); (2) Oncology: Medical and Radiation—Pain Intensity Quantified (PCH–16/NQF #0384); (3) Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (PCH–17/NQF #0390); and (4) Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (PCH–18/NQF #0389)) are finalized as proposed, we estimate a reduction of 1 hour (or 60 minutes) per PCH (15 minutes per measure × 4 measures = 60 minutes), and a total annual reduction of approximately 11 hours for all 11 PCHs (60 minutes × 11 PCHs/60 minutes per hour), as a result of the proposed removal of these four measures.

We further anticipate that the proposed removal of the two NHSN measures: (1) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (PCH–5/NQF #0138) and (2) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (PCH–4/NQF #0139) will result in a net burden decrease. If our proposal to remove the CAUTI and CLABSI measures is finalized as proposed, we estimate an annual burden reduction of 2,518 hours per PCH (1,259 hours × 2 measures = 2,518 hours) and an annual burden reduction of 27,698 hours across all 11 PCHs (2,518 hours × 11 PCHs = 27,698 hours).

We do not anticipate any increase in burden on the PCHs associated with our proposal to adopt a claims-based measure into the PCHQR Program beginning with the FY 2021 program year. This measure is claims-based and does not require facilities to report any additional data beyond that already submitted on Medicare administrative claims for payment purposes. Therefore, we do not believe that there is any associated burden with this proposal.

In summary, if our proposals to remove 6 measures are finalized as proposed, we estimate a total burden reduction of 27,709 hours of burden per year for all 11 PCHs (27,698 hours for the removal of the CAUTI & CLABSI measures + 11 hours for the removal of the 4 web-based, structural measures = 27,709 total hours), beginning with the FY 2021 program year.

M. Effects of Proposed Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

Under the LTCH QRP, the Secretary reduces by 2 percentage points the annual update to the LTCH PPS standard Federal rate for discharges for an LTCH during a fiscal year if the LTCH has not complied with the LTCH QRP requirements specified for that fiscal year. Information is not available to determine the precise number of LTCHs that will not meet the requirements to receive the full annual update for the FY 2019 payment determination.

We believe that the burden and costs associated with the LTCH QRP is the time and effort associated with complying with the requirements of the LTCH QRP. We intend to closely monitor the effects of this quality reporting program on LTCHs and to help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, and help desks.

We refer readers to section XIV.B.6. of the preamble of this proposed rule for details discussing information collection requirements for the LTCH QRP.

N. Effects of Proposed Requirements Regarding the Promoting Interoperability Programs

In section VIII.D. of the preamble of this proposed rule, we are proposing a new performance-based scoring methodology and changes to the Stage 3 objectives and measures for eligible hospitals and CAHs that attest to CMS under the Medicare Promoting Interoperability Program. We also are proposing changes to the EHR reporting period in CYs 2019 and 2020; the CQM reporting period and criteria for CY 2019; and to codify the policies for subsection (d) Puerto Rico hospitals to participate in the Medicare Promoting Interoperability Program for eligible hospitals, including policies previously implemented through program instruction. We believe that, overall, these proposals would reduce burden. We refer readers to section XIV.B.9. of the preamble of this proposed rule for additional discussion on the information collection effects associated with these proposals.

In section VIII.D.12.a. of the preamble of this proposed rule, we are proposing to amend 42 CFR 495.324(b)(2) and 495.324(b)(3) to align with current prior approval policy for MMIS and ADP systems at 45 CFR 95.611(a)(2)(ii), and (b)(2)(iii) and (iv), and to minimize burden on States. Specifically, we are proposing that the prior approval dollar threshold in § 495.324(b)(3) would be increased to $500,000, and that a prior approval threshold of $500,000 would be added to § 495.324(b)(2). In addition, in light of these proposed changes, we are proposing a conforming amendment to amend the threshold in § 495.324(d) for prior approval of justifications for sole source acquisitions to be the same $500,000 threshold. That threshold is currently aligned with the $100,000 threshold in current 495.324(b)(3). Amending § 495.324(d) to preserve alignment with § 495.324(b)(3) maintain the consistency of our prior approval requirements. We believe that these proposals also would reduce burden on States by raising the prior approval thresholds and generally aligning them with the thresholds for prior approval of MMIS and ADP acquisitions costs.

In section VIII.D.12.b. of the preamble of this proposed rule, we are proposing to amend 42 CFR 495.322 to provide that the 90 percent FFP for Medicaid Promoting Interoperability Program administration would no longer be available for most State expenditures incurred after September 30, 2022. We are proposing a later sunset date, September 30, 2023, for the availability of 90 percent enhanced match for State administrative costs related to Medicaid Promoting Interoperability Program audit and appeals activities, as well as costs related to administering incentive payment disbursements and recoupments that might result from those activities. States would not be able to claim any Medicaid Promoting Interoperability Program administrative match for expenditures incurred after September 30, 2023. We do not believe that these proposals would impose any additional burdens on States. We refer readers to section XIV.B.9. of the preamble of this proposed rule for additional discussion on the information collection effects associated with these proposals.

O. Alternatives Considered

This proposed rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

For example, as discussed in section II.F.2.d. of the preamble of this proposed rule, section II.H.5.a. of the preamble of this proposed rule, and section II.A.4.g. of the Addendum to this proposed rule, we believe that, in the context of the pending new technology add-on payment applications for two CAR T-cell therapy drugs, there may be merit in the suggestions from the public to create a new MS–DRG for the assignment of procedures involving the utilization of CAR T-cell therapy drugs and cases representing patients who receive treatment involving CAR T-cell therapy as an alternative to our proposed MS–DRG assignment to MS–DRG 016 for FY 2019, or the suggestions to allow hospitals to utilize an alternative CCR specific to procedures involving CAR T-cell therapy drugs for purposes of outlier payments, new technology add-on payments, if approved, and payments to IPPS excluded cancer hospitals. We are considering these alternatives for FY 2019 and are seeking public comment on them.

We also are inviting comments on how these payment alternatives would affect access to care, as well as how they affect incentives to encourage lower drug prices, which is a high priority for this Administration. In addition, we are considering alternative approaches and authorities to encourage value-based care and lower drug prices. We solicit comments on how the payment methodology alternatives may intersect and affect future participation in any such alternative approaches.

As discussed in section II.A.4.g. of the Addendum to this proposed rule, the impact

of an alternative CCR specific to procedures involving CAR T-cell therapy drugs is dependent on the relationship between the CCR that would otherwise be used and the alternative CCR used. For illustrative purposes, we discussed an example where if a hospital charged $400,000 for a procedure involving the utilization of the CAR T-cell therapy drug described by ICD–10–PCS code XW033C3, the application of a hypothetical CCR of 0.25 results in a cost of $100,000 (=$400,000 * 0.25), while the application of a hypothetical CCR of 1.00 results in a cost of $400,000 (=$400,000 * 1.0).

The impact of the creation of a separate MS–DRG for procedures involving the utilization of CAR T-cell therapy drugs and cases representing patients receiving treatment involving CAR T-cell therapy would be dependent on the relative weighting factor determined for the separate MS–DRG. We are inviting public comments on the most appropriate approach for determining the relative weighting factor under this alternative, such as an approach based on taking into account an appropriate portion of the average sales price (ASP) for these drugs, or other approaches. We note that our proposed relative weighting factor for MS–DRG 016 for FY 2019 can be found in Table 5 associated with this proposed rule (which is available via the internet on the CMS website).

As discussed in section VIII.A.5.b.(9) of the preamble of this proposed rule, in the context of removing seven eCQMs from the Hospital IQR Program for the CY 2020 reporting period/FY 2022 payment determination and subsequent years, we considered proposing to remove these seven eCQMs 1 year earlier, beginning with the CY 2019 reporting period/FY 2021 payment determination. Our analyses indicated no estimated change in average reporting burden between these two options. We interpret the lack of difference is due to very few hospitals choosing the seven eCQMs proposed for removal. Because the alternatives considered do not impact the collection of information for hospitals, we do not expect these alternatives to affect the reporting burden on hospitals associated with the Hospital IQR Program. We considered these alternatives and are seeking public comment on them.

As discussed in section IV.I.4.b. of the preamble of this proposed rule, in the context of scoring hospitals for purposes of the Hospital VBP Program for the FY 2021 program year and subsequent years, we analyzed two domain weighting options based on our proposals to remove 10 measures and the Safety domain from the Hospital VBP Program. As an alternative to our proposal to weight the three remaining domains as Clinical Outcomes domain (proposed name change)—50 percent; Person and Community Engagement domain—25 percent; and Efficiency and Cost Reduction domain—25 percent, we considered weighting each of the three remaining domains equally, meaning each of the three domains would be weighted as one-third of a hospital's Total Performance Score (TPS), beginning with the FY 2021 program year. As discussed in section IV.I.4.b. of the preamble of this proposed rule, we also considered keeping the current domain weighting (25 percent for each of the four domains—Safety, Clinical Outcomes (proposed name change), Person and Community Engagement, and Efficiency and Cost Reduction—with proportionate reweighting if a hospital has sufficient data on only three domains), which would require keeping at least one or more of the measures in the Safety domain and the Safety domain itself. As summarized in section IV.I.4.b.(3) of the preamble of this proposed rule, to understand the potential impacts of the proposed domain weighting on hospitals' TPSs, we conducted analyses using FY 2018 program data that estimated the potential impacts of our proposed domain weighting policy to increase the weight of the Clinical Outcomes domain from 25 percent to 50 percent of a hospital's TPS and an alternative weighting policy we considered of equal weights whereby each domain would constitute one-third (1/3) of a hospital's TPS. The table below provides an overview of the estimated impact on hospitals' TPS by certain hospital characteristics and as they would compare to actual FY 2018 TPSs, which include scoring on four domains, including the Safety domain, and applying proportionate reweighting if a hospital has sufficient data on only three domains.

COMPARISON OF ESTIMATED AVERAGE TPSS AND UNWEIGHTED DOMAIN SCORES *

Hospital characteristic	Actual FY 2018 average clinical care domain score	Actual FY 2018 average person and community engagement domain score	Actual FY 2018 average efficiency and cost reduction domain score	Actual FY 2018 average TPS (4 domains) +	Proposed increased weighting of clinical care domain: estimated average TPS	Alternative weighting: estimated average TPS
All Hospitals **	43.2	33.5	18.8	37.4	34.6	31.8
Bed Size:						
1–99	33.4	46.0	35.7	44.6	37.2	38.4
100–199	42.2	34.5	21.0	39.2	35.0	32.6
200–299	44.5	27.9	12.9	34.4	32.4	28.4
300–399	48.2	27.3	10.0	33.3	33.4	28.5
400+	50.9	26.9	7.6	31.9	34.1	28.5
Geographic Location:						
Urban	46.8	30.7	13.7	35.7	34.5	30.4
Rural	33.7	40.5	31.7	41.9	34.9	35.3
Safety Net Status ***:						
Non-Safety Net	42.7	35.4	19.0	37.9	34.9	32.4
Safety Net	45.1	25.7	18.1	35.6	33.5	29.6
Teaching Status:						
Non-Teaching	39.9	36.7	22.9	39.4	34.9	33.2
Teaching	48.7	27.9	11.8	34.1	34.3	29.5

* Analysis based on FY 2018 Hospital VBP Program data.

** Only eligible hospitals are included in this analysis. Excluded hospitals (for example, hospitals not meeting the minimum domains required for calculation, hospitals receiving three or more immediate jeopardy citations in the FY 2018 performance period, hospitals subject to payment reductions under the Hospital IQR Program in FY 2018, and hospitals located in the state of Maryland) were removed from this analysis.

+ Based on current policies, which includes the Safety domain, and proportionate reweighting for hospitals with sufficient data on only three domains.

*** For purposes of this analysis, 'safety net' status is defined as those hospitals with top 10 percentile of Disproportionate Share Hospital (DSH) patient percentage from the FY 2018 IPPS/LTCH PPS final rule impact file: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2018-IPPS-Final-Rule-Home-Page-Items/FY2018-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending*.

The table below provides a summary of the estimated impacts on average TPSs and payment adjustments for all hospitals,[410] including as they would compare to actual FY 2018 program results under current domain weighting policies.

Summary of estimated impacts on average TPS and payment adjustments using FY 2018 program data	Actual (4 domains) +	Proposed increased weight for clinical outcomes (3 domains)	Equal weighting alternative (3 domains)
Total number of hospitals with a payment adjustment	2,808	2,701	2,701.
Number of hospitals receiving a positive payment adjustment (percent)	1,597 (57 percent)	1,209 (45 percent)	1,337 (50 percent).
Average positive payment adjustment percentage	0.60 percent	0.58 percent	0.70 percent.
Estimated average positive payment adjustment	$128,161	$233,620	$204,038.
Number of hospitals receiving a negative payment adjustment (percent)	1,211 (43 percent)	1,492 (55 percent)	1,364 (50 percent).
Average negative payment adjustment percentage	−0.41 percent	−0.60 percent	−0.57 percent.
Estimated average negative payment adjustment	$169,011	$189,307	$200,000.
Number of hospitals receiving a positive payment adjustment with a composite quality score * below the median (percent).	341 (21 percent)	134 (11 percent)	266 (20 percent).
Average TPS	37.4	34.6	31.8.
Lowest TPS receiving a positive payment adjustment	34.6	35.9	30.9.
Slope of the linear exchange function	2.8908851882	2.7849297316	3.2405954322.

+ Based on current policies, which includes the Safety domain, and proportionate reweighting for hospitals with sufficient data on only three domains.
* ''Composite quality score'' is defined as a hospital's TPS minus the hospital's weighted Efficiency and Cost Reduction domain score.

We also refer readers to section I.H.6.b. of Appendix A of this proposed rule for a detailed discussion regarding the estimated impacts of the proposed domain weighting and equal weighting alternative on hospital percentage payment adjustments. Because the alternatives considered do not impact the collection of information for hospitals, we do not expect these alternatives to affect the reporting burden on hospitals. We considered these alternatives and are seeking public comment on them.

As discussed in section IV.J.5. of the preamble of this proposed rule, in the context of scoring hospitals for the purposes of the HAC Reduction Program, we analyzed two alternative scoring options to the current methodology for the FY 2020 program year and subsequent years. The alternative scoring methodologies considered are an Equal Measure Weights methodology, which would remove the domains and assign equal weight to each measure for which a hospital has a score, and a Variable Domain Weighting methodology, which would vary the weighting of Domain 1 and 2 based on the number of measures in each domain. We are considering these alternative approaches to allow the HAC Reduction Program to continue to fairly assess all hospitals' performance under the Program.

We simulated results under each scoring approach using FY 2018 HAC Reduction Program data. We compared the percentage of hospitals in the worst-performing quartile in FY 2018 to the percentage that would be in the worst-performing quartile under each scoring approach. The table below provides a high-level overview of the estimated impact of these approaches on several key groups of hospitals.

Hospital group [a]	Equal measure weights (percent)	Variable domain weights (percent)
Teaching hospitals: 100 or more residents (N=248)	2.4	1.6
Safety-net [b] (N=644)	0.6	0.8
Urban hospitals: 400 or more beds (N=360)	2.2	1.1
Hospitals with 100 or fewer beds (N=1,169)	−1.8	−0.9
Hospitals with a measure score for:		
Zero Domain 2 measures (N=188)	0.0	0.0
One Domain 2 measure (N=269)	−4.2	−1.9
Two Domain 2 measures (N=225)	−0.8	−0.4
Three Domain 2 measures (N=198)	−2.5	−2.5
Four Domain 2 measures (N=253)	−0.4	0.4
Five Domain 2 measures (N=2,022)	1.0	0.5

[a] The number of hospitals in the given hospital group for FY 2018 is specified in parenthesis in this column (for example, N=248).
[b] Hospitals are considered safety-net hospitals if they are in the top quintile for DSH percent.

As shown in the table above, the Equal Measure Weights approach generally has a larger impact than the Variable Domain Weights approach. Under the Equal Measure Weights Approach, as compared to the current methodology using FY2018 HAC Reduction Program data, the percentage of hospitals in the worst-performing quartile decreases by 1.8 percent for small hospitals (that is, 100 or fewer beds), 4.2 percent for hospitals with one Domain 2 measure, 0.8 percent for hospitals with two Domain 2 measures, while it increases by 2.2 percent for large urban hospitals (that is, 400 or more beds) and 2.4 percent for large teaching hospitals (that is, 100 or more residents). The Variable Domain Weights approach changes the percentage of hospitals in the worst-performing quartile by less than two percent for these groups of hospitals.

To understand the potential impacts of these alternatives on hospitals' Total HAC Reduction Program Penalty Amount, we conducted an analysis that estimated the potential impacts of these alternatives using FY 2013 payment data annualized by a factor to estimate in FY 2019 payment dollars. Based on this analysis, we expect that aggregate penalty amounts would slightly increase under both alternative methodologies proposed in this rule. We also expect an increase in the penalty amount under both methodologies because some larger hospitals may move into the worst-performing quartile and smaller hospitals may move out of the worst-performing quartile. Because the 1 percent penalty applies uniformly to hospitals in the worst-performing quartile, we anticipate that overall program penalties would rise slightly if more larger hospitals move into the penalty quartile. The alternative weighting approach considered, variable weighting, would increase estimated total penalties by approximately $7,585,812. The proposed

[410] Only eligible hospitals are included in this analysis. Excluded hospitals (for example, hospitals not meeting the minimum domains required for calculation, hospitals receiving three or more immediate jeopardy citations in the FY 2018 performance period, hospitals subject to payment reductions under the Hospital IQR Program in FY 2018, and hospitals located in the state of Maryland) were removed from this analysis.

weighting approach would increase estimated total penalties by $19,061,086, over $11 million more than the alternative weighting approach considered. The table below displays the results of our analysis in FY 2013 dollars, FY 2019 dollars, and as a percentage difference.

Scenario	Total HAC reduction program penalty amount (FY 2019 dollars) *	Percentage difference from FY 2018	Difference from FY 2018 (FY 2019 dollars) *
FY 2018 HAC Reduction Program—Before Proposed Weighting Change	$441,684,337	N/A	N/A
Variable Domain Weights	449,270,149	1.7	$7,585,812
Equal Measure Weights	460,745,424	4.3	19,061,086

* Estimated change in total penalties applied using FY 2013 payments annualized to FY 2019 payment dollars.

After consideration of the current policy, Equal Measure Weights and Variable Domain Weighting methodologies, we are seeking public comment on these approaches. Because the alternatives considered do not impact the collection of information for hospitals, we do not expect these alternatives to affect the reporting burden on hospitals associated with the HAC Reduction Program.

P. Reducing Regulation and Controlling Regulatory Costs

Executive Order 13771, titled Reducing Regulation and Controlling Regulatory Costs, was issued on January 30, 2017. This proposed rule, if finalized, is considered an E.O. 13771 deregulatory action. We estimate that this rule generates $72 million in annualized cost savings, discounted at 7 percent relative to fiscal year 2016, over a perpetual time horizon. We discuss the estimated burden and cost reductions for the Hospital IQR Program in section XIV.B.3. of the preamble of the proposed rule, and estimate that the impact of these proposed changes is a reduction in costs of approximately $21,585 per hospital annually or approximately $71,233,624 for all hospitals annually. We note that in section VIII.A.5.c.(1). of the preamble of this proposed rule, we are proposing to remove the hospital-acquired infection (HAI) measures from the Hospital IQR Program and, therefore, discontinue validation of these measures under the Hospital IQR Program. However, these measures will remain in the HAC Reduction Program and, therefore, we are proposing to begin validation of these measures under the HAC Reduction Program using the same processes and information collection requirements previously used under the Hospital IQR Program. As a result, the net costs reflected in the table below for the HAC Reduction Program do not constitute a new information collection requirement on participating hospitals, but a transition of the HAI measure validation process from one program to another based on our efforts to reduce measure duplication across programs. We discuss the estimated burden and cost impacts for the proposed transition of HAI data validation from the Hospital IQR Program to the HAC Reduction Program in section XIV.B.7. of the preamble of the proposed rule. We discuss the estimated burden and cost reductions for the PCHQR Program in section XIV.B.4. of the preamble of this proposed rule, and estimate that the impact of these proposed changes is a reduction in costs of approximately $92,145 per PCH annually or approximately $1,013,595 for all participating PCHs annually. We discuss the estimated burden and cost reductions for the proposed LTCH QRP measure removals in section XIV.B.6. of the preamble of this proposed rule, and estimate that the impact of these proposed changes is a reduction in costs of approximately $1,148 per LTCH annually or approximately $482,469 for all LTCHs annually. Also, as noted in section I.R. of this Appendix, the regulatory review cost for this proposed rule is $8,809,182.

Section of the proposed rule	Description	Amount of costs or savings
Section XIV.B.3. of the preamble	ICRs for the Hospital IQR Program	($71,233,624)
Section XIV.B.4. of the preamble	ICRs for the PCHQR Program	(1,013,595)
Section XIV.B.6. of the preamble	ICRs for the LTCH QRP	(482,469)
Section XIV.B.7. of the preamble	ICRs for the HAC Reduction Program *	1,580,256
Total		(72 million)

* We note that the net costs reflected in this table for the HAC Reduction Program do not constitute a new information collection requirement on participating hospitals, but a transition of the HAI measure validation process from one program to another based on our efforts to reduce measure duplication across programs.

Q. Overall Conclusion

1. Acute Care Hospitals

Overall, acute care hospitals are estimated to experience an increase of 3.4 percent, or approximately $4.1 billion, in their combined operating and capital payments as modeled for this proposed rule. Approximately 3.2 percentage points of this estimated increase is due to the proposed change in operating payments, including uncompensated care payments (discussed in sections I.G. and I.H. of this Appendix), approximately 0.1 percentage points is due to the proposed change in capital payments (discussed in section I.I of this Appendix), and approximately 0.1 percentage points is due to the proposed change in low-volume hospital payments (discussed in section I.H of this Appendix).

Table I of section I.G. of this Appendix also demonstrates the estimated redistributional impacts of the IPPS budget neutrality requirements for the proposed MS–DRG and wage index changes, and for the proposed wage index reclassifications under the MGCRB.

We estimate that hospitals would experience a 1.7 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there would be a $146 million increase in capital payments in FY 2019 compared to FY 2018.

The discussions presented in the previous pages, in combination with the remainder of this proposed rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience a decrease in estimated payments per discharge in FY 2019. In the impact analysis, we are using the proposed rates, factors, and policies presented in this proposed rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2019. Accordingly, based on the best available data for the 409 LTCHs in our database, we estimate that overall FY 2019 LTCH PPS payments would decrease approximately $5 million relative to FY 2018 as a result of the proposed payment rates and factors presented in this proposed rule.

R. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that would review the proposed rule, we assumed that the total number of timely pieces of correspondence on last year's proposed rule would be the number of reviewers of the proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For those reasons, and consistent with our approach in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38585), we believe that the number of past commenters would be a fair estimate of the number of reviewers of the proposed rule. We welcome any public comments on the approach in estimating the number of entities that will review this proposed rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of the proposed rule. Therefore, for the purposes of our estimate, and consistent with our approach in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38585), we assume that each reviewer read approximately 50 percent of the proposed rule. We welcome public comments on this assumption.

We have used the number of timely pieces of correspondence on the FY 2018 proposed rule as our estimate for the number of reviewers of this proposed rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing the proposed rule is $105.16 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 19 hours for the staff to review half of the proposed rule. For each IPPS hospital or LTCH that reviews this proposed rule, the estimated cost is $1,998 (19 hours × $105.16). Therefore, we estimate that the total cost of reviewing this proposed rule is $8,809,182 ($1,998 × 4,409 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *https://obamawhitehouse.archives.gov/omb/circulars_a-004_a-4/* and *https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html*), in the following Table V., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the proposed changes to the IPPS presented in this proposed rule. All expenditures are classified as transfers to Medicare providers.

As shown below in Table V., the net costs to the Federal Government associated with the proposed policies in this proposed rule are estimated at $4.1 billion.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2018 TO FY 2019

Category	Transfers
Annualized Monetized Transfers.	$4.1 billion.
From Whom to Whom	Federal Government to IPPS Medicare Providers.

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the proposed payment rates and factors presented in this proposed rule under the LTCH PPS is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2019 relative to FY 2018 of approximately $5 million based on the data for 409 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A–4 (available at *https://obamawhitehouse.archives.gov/omb/circulars_a004_a-4/* and *https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html*), in Table VI., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate to the changes to the LTCH PPS. Table VI. provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the proposed payment rates and factors and other provisions presented in this proposed rule based on the data for the 409 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. below, the net savings to the Federal Government associated with the policies for LTCHs in this proposed rule are estimated at $5 million.

TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2018 LTCH PPS TO THE FY 2019 LTCH PPS

Category	Transfers
Annualized Monetized Transfers.	−$5 million.
From Whom to Whom	Federal Government to LTCH Medicare Providers.

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $7.5 million to $38.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA website at: *http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this proposed rule relating to acute care hospitals will have a significant impact on small entities as explained in this Appendix. For example, because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this proposed rule are impacts on small entities. For example, we refer readers to ''Table I.—Impact Analysis of Proposed Changes to the IPPS for Operating Costs for FY 2019.'' Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.J. of this Appendix. MACs are not considered to be small entities because they do not meet the SBA definition of a small business. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this proposed rule constitutes our regulatory flexibility analysis. This proposed rule contains a range of proposed policies. It provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

In this proposed rule, we are soliciting public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we receive and our responses will be presented throughout the final rule.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is

located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2019, that threshold level is approximately $146 million. This proposed rule would not mandate any requirements for State, local, or tribal governments, nor would it affect private sector costs.

VI. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. This proposed rule contains provisions applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act and, thus, has tribal implications. Therefore, in accordance with Executive Order 13175 and the CMS Tribal Consultation Policy (December 2015), CMS will consult with Tribal officials on these Indian-specific provisions of the proposed rule prior to the formal promulgation of this rule.

VII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this proposed rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2019, consistent with our approach for FY 2018, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2019

A. Proposed FY 2019 Inpatient Hospital Update

As discussed in section IV.B. of the preamble to this proposed rule, for FY 2019, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.75 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2019 adjustment of 0.75 percentage point may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38587), we replaced the FY 2010-based IPPS operating and capital market baskets with the rebased and revised 2014-based IPPS operating and capital market baskets effective with FY 2018.

In this FY 2019 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we are proposing to base the proposed FY 2019 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2017 forecast of the 2014-based IPPS market basket rate-of-increase with historical data through third quarter 2017, which is estimated to be 2.8 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B. of the preamble of this FY 2019 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2017 forecast, we are proposing an MFP adjustment of 0.8 percent for FY 2019. We also are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2019 market basket update and MFP adjustment for the final rule. Therefore, based on IGI's fourth quarter 2017 forecast of the 2014-based IPPS market basket and the MFP adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we are proposing four possible applicable percentage increases that could be applied to the standardized amount, as shown in the table below.

FY 2019	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is not a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR User
Proposed Market Basket Rate-of-Increase	2.8	2.8	2.8	2.8
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.7	−0.7
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.1	0.0	−2.1
Proposed MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.75	−0.75	−0.75	−0.75
Proposed Applicable Percentage Increase Applied to Standardized Amount	1.25	−0.85	0.55	−1.55

B. Proposed Update for SCHs and MDHs for FY 2019

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2019 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). As discussed in section IV.G. of the preamble of this proposed rule, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) extended the MDH program through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Section 50205 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), enacted on February 9, 2018, extended the MDH program for discharges on or after October 1, 2017 through September 30, 2022.

As previously mentioned, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are proposing the same four possible applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs and MDHs.

C. Proposed FY 2019 Puerto Rico Hospital Update

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56939), prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. Section 601 of Public Law 114–113 amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section IV.B.1. of the preamble of this proposed rule. Accordingly, for FY 2019, we are proposing an applicable percentage increase of 1.25 percent to the standardized amount for hospitals located in Puerto Rico.

D. Proposed Update for Hospitals Excluded From the IPPS for FY 2019

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this proposed rule, in the FY 2018 IPPS/LTCH PPS final rule, we finalized the use of the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2018 and subsequent fiscal years. In addition, as discussed in section IV.A. of the preamble of this proposed rule, the update to the target amount for extended neoplastic disease care hospitals for FY 2019 would be the percentage increase in the 2014-based IPPS operating market basket. Accordingly, for FY 2019, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa would be the FY 2019 percentage increase in the 2014-based IPPS operating market basket. For this proposed rule, the current estimate of the IPPS operating market basket percentage increase for FY 2019 is 2.8 percent.

E. Proposed Update for LTCHs for FY 2019

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this proposed rule, we are proposing to update the LTCH PPS standard Federal payment rate by 1.15 percent for FY 2019, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA. In accordance with the LTCHQR Program under section 1886(m)(5) of the Act, we are proposing to reduce the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are proposing to establish an update factor of 1.0115 in determining the LTCH PPS standard Federal rate for FY 2019. For LTCHs that fail to submit quality data for FY 2019, we are proposing to apply an annual update to the LTCH PPS standard Federal rate of −0.85 percent (that is, the proposed annual update for FY 2019 of 1.15 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying a proposed update factor of 0.9915 in determining the LTCH PPS standard Federal rate for FY 2019. (We note that, as discussed in section VII.D. of the preamble of this proposed rule, the proposed update to the LTCH PPS standard Federal payment rate of 1.15 percent for FY 2019 does not reflect any proposed budget neutrality factors, such as the proposed offset for the elimination of the LTCH PPS 25-percent threshold policy.)

III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update in the amount specified in current law for FY 2019. MedPAC's rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa and extended neoplastic disease care hospitals of 2.8 percent.

For FY 2019, consistent with policy set forth in section VII. of the preamble of this proposed rule, for LTCHs that submit quality data, we are recommending an update of 1.15 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2019, we are recommending an annual update to the LTCH PPS standard Federal rate of −0.85 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2018 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates in the amount specified in current law. We refer readers to

the March 2018 MedPAC report, which is available for download at *www.medpac.gov*, for a complete discussion on this recommendation.

Response: We agree with MedPAC, and consistent with current law, we are proposing to apply an applicable percentage increase for FY 2019 of 1.25 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are proposing to continue to use separate updates for operating and capital payments. The proposed update to the capital rate is discussed in section III. of the Addendum to this proposed rule.

Social Security Administration

20 CFR Parts 404 and 416
Revised Medical Criteria for Evaluating Musculoskeletal Disorders; Proposed Rule

SOCIAL SECURITY ADMINISTRATION

20 CFR Parts 404 and 416

[Docket No. SSA–2006–0112]

RIN 0960–AG38

Revised Medical Criteria for Evaluating Musculoskeletal Disorders

AGENCY: Social Security Administration.

ACTION: Notice of proposed rulemaking.

SUMMARY: We propose to revise the criteria in the Listing of Impairments (listings) that we use to evaluate claims involving musculoskeletal disorders in adults and children under titles II and XVI of the Social Security Act (Act). These proposed revisions reflect our adjudicative experience, advances in medical knowledge and treatment of musculoskeletal disorders, and recommendations from medical experts.

DATES: To ensure that your comments are considered, we must receive them no later than July 6, 2018.

ADDRESSES: You may submit comments by one of three methods—internet, fax, or mail. Do not submit the same comments multiple times or by more than one method. Regardless of which method you choose, please state that your comments refer to Docket No. SSA–2006–0112 so that we may associate your comments with the correct regulation.

Caution: You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at *http://www.regulations.gov.* Use the *Search* function to find docket number SSA–2006–0112. The system will issue you a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each comment manually. It may take up to a week for your comment to be viewable.

2. *Fax:* Fax comments to (410) 966–2830.

3. *Mail:* Address your comments to the Office of Regulations and Reports Clearance, Social Security Administration, 107 Altmeyer Building, 6401 Security Boulevard, Baltimore, Maryland 21235–6401.

Comments are available for public viewing on the Federal eRulemaking portal at *http://www.regulations.gov* or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT: Cheryl A. Williams, Office of Disability Policy, Social Security Administration, 6401 Security Boulevard, Baltimore, Maryland 21235–6401, (410) 965–1020. For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213, or TTY 1–800–325–0778, or visit our internet site, Social Security Online, at *http://www.socialsecurity.gov.*

SUPPLEMENTARY INFORMATION: This notice of proposed rulemaking (NPRM) is divided into several parts. First, we provide the supplementary information, which is often referred to as the preamble. In the preamble, we explain why we propose to revise the listings for the musculoskeletal body system and how we developed the proposed rules. We also offer a narrative of the changes we are proposing. The preamble tells the story behind the proposed rule changes, but if we decide to proceed with a final rule, the preamble will not become part of the Code of Federal Regulations.

The next section is the proposed revisions to the listing of impairments, located in Appendix 1 to Subpart P of 20 CFR part 404. For each body system affected by these proposed rules (*e.g.,* 1.00 Musculoskeletal Disorders), we first provide proposed changes to the introductory text (*e.g.,* 1.00A, B, C, etc.). If we decide to proceed with a final rule, the introductory text will become part of the Code of Federal Regulations. The introductory text details which disorders we evaluate and what evidence we need to conduct this evaluation. It also defines certain terms, and provides valuable background information. Individuals often refer to the introductory text for additional details related to a specific listing under which a medically determinable impairment (MDI) is being evaluated. After the introductory text, we provide specific listing text and criteria (*e.g.,* 1.15 and 1.16). The listings themselves provide specific criteria that an MDI must meet (or medically equal) in order for an individual to be found disabled under the listings.

I. Why are we proposing to revise the listings for the musculoskeletal body system?

We last published final rules that revised the musculoskeletal body system on November 19, 2001.[1] We are now proposing to update the introductory text and criteria in the current listings to reflect our adjudicative experience, advances in medical knowledge and treatment of musculoskeletal disorders, and comments and recommendations from medical experts.

While we believe our proposed revisions reflect advances in medical knowledge and treatment of musculoskeletal disorders, we are interested in receiving public comments on the following issues:

- Are there any musculoskeletal disorders that will meet one of the proposed listings, but are generally expected to medically improve after a certain amount of time to the point at which the disorders will no longer be of listing-level severity? If you believe there are musculoskeletal disorders that fit into this category, please tell us by submitting your comments and any supporting research or data. We will use your comments on this issue to inform our policy on the timing of continuing disability reviews.[2]
- Are the proposed functional criteria appropriate and sufficient for assessing listing level severity? If you believe the proposed functional criteria are either insufficient for documenting an impairment that meets a listing-level severity, or you believe these criteria will exclude eligible individuals with an impairment of listing-level severity, please tell us by submitting your comments and any supporting research or data.
- Did we remove or omit any valuable information that should be included in the introductory text? We intend for this text to ease administrative burdens for adjudicators, claimants, claimant representatives, and the public by clarifying terms, removing extraneous language, and providing guidance in an orderly fashion. If you believe we removed or omitted any valuable information, please tell us by submitting your comments and any supporting research or data.
- Should any of the proposed listings for musculoskeletal disorders be combined into one listing or divided into multiple listings for adjudicative ease and capture individuals with impairments that meet a listing-level severity? If you believe our listing categories create unnecessary administrative barriers for impairments that meet listing level severity, please

[1] 66 FR 58010. We also made a conforming change to the rules for musculoskeletal disorders when we published final rules revising the rules for immune system disorders on March 18, 2006 (73 FR 14570).

[2] See §§ 404.1590 and 416.990 of this chapter for our policy on when we will conduct a continuing disability review.

tell us by submitting your comments and any supporting research or data.

• Did we appropriately define ''close proximity of time'' in section 1.00C7 as meaning that all of the relevant criteria have to appear in the medical record within a period not to exceed 4 months of one another for musculoskeletal disorders? The 4-month threshold represents a period in which an individual receiving treatment for a chronic severe musculoskeletal impairment will undergo multiple examinations or treatments from their medical source(s). Individuals with chronic severe musculoskeletal impairments typically undergo multiple examinations or treatments. Therefore, we believe a 4-month threshold provides individuals with adequate time to receive multiple medical treatments documenting the existence of listing level criteria, should the relevant criteria exist. If you believe the ''close proximity of time'' should be defined by a different measure than 4 months, please tell us by submitting your comments and any supporting research or data.

• Based on advances in medical surgical, recuperative, and functionally restorative treatment of musculoskeletal disorders, would the proposed listing criteria allow us to adequately assess whether an individual has achieved ''maximum benefit from therapy'' or whether an individual is ''under continuing surgical management''? It is important that we do not encourage or incentivize individuals to increase their medical treatment to maintain or access disability benefits, particularly medical treatments that would likely be ineffective, or that may even be harmful, for the individual? If you believe ''the maximum therapeutic benefits'' criterion should be revised and evaluated by a different measure, please tell us by submitting your comments and any supporting research or data.

II. How did we develop these proposed rules?

As medicine and medical treatment are continuously evolving, we utilized well-known references such as the *Guides to the Evaluation of Permanent Impairment* from the American Medical Association, *Harrison's Principles of Internal Medicine, Current Diagnosis & Treatment in Orthopedics,* and *Nelson Textbook of Pediatrics* as a starting point to develop the proposed changes to these rules.[3] We also requested extensive input from our medical consultants (physicians employed by or who contract with us) who have years of experience practicing in relevant fields of medicine and who have intimate knowledge of our disability programs to develop our proposed changes to the musculoskeletal disorders listings. We rely on our medical consultants and their professional opinions based on their clinical experience and research to help us develop what criteria correspond with listing-level severity.

In developing our proposed rule changes, we used the resources above, our programmatic knowledge, our adjudicative experience, and the medical literature, such as *Archives of Physical Medicine and Rehabilitation, Journal of the American Academy of Orthopaedic Surgeons,* and *Hand Clinics.* These resources informed us of the most recent best practices and medical advancements and either support, or are consistent with, our proposed rule changes.

In addition to these distinguished medical sources and our medical consultants, in proposing these changes to the musculoskeletal disorders listings, we used information from:

• People who make and review disability determinations and decisions for us in State agencies, in our Office of Quality Review, and in our Office of Hearing Operations;

• Comments we received regarding the 2001 ''Final rules with request for comment,''[4] which we used as a starting point for identifying areas needing further research; and

• Additional published sources we list in the References section at the end of this preamble, including the National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division (formerly the Institute of Medicine).

III. What major revisions are we proposing?

We propose to revise both the content and the structure of the adult and childhood musculoskeletal disorders listings and introductory texts as follows:

• Provide uniform and specific severity criteria for evaluating the effects of a musculoskeletal disorder on a person's functioning;

• Revise the introductory texts in 1.00 *Musculoskeletal Disorders* and 101.00 *Musculoskeletal Disorders* to provide guidance on the specific severity criteria;

• Add specific sections in the introductory texts in 1.00 *Musculoskeletal Disorders* and 101.00 *Musculoskeletal Disorders* to provide guidance on each listing;

• Revise the content and structure of the current listings to incorporate the new severity criteria into each listing;

• Add listings for evaluating pathologic fractures due to any cause (1.19 *Pathologic fractures due to any cause* for adults and 101.19 *Pathologic fractures due to any cause* for children);

• Add a child listing for evaluating musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay (101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay*);

• Use the same general structure in most adult and child listings, consisting of symptoms, signs, laboratory findings, and applicable functional criteria, in that order;

• Remove current 1.02 and 101.02 *Major dysfunction of a joint(s) (due to any cause)* and incorporate the provisions in proposed 1.18 and 101.18 *Abnormality of a major joint(s) in any extremity;*

• Remove current 1.04 *Disorders of the spine* and 1.04A ''Evidence of nerve root compression,'' and incorporate the provisions of 1.04A in proposed 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s);*

• Remove current 1.04B ''Spinal arachnoiditis'' because it is a secondary effect, rather than a primary skeletal spine disorder, which can be evaluated under proposed 1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina;*

• Remove current 1.04C ''Lumbar spinal stenosis,'' and incorporate its provisions in proposed 1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina;*

• Remove current 101.04 *Disorders of the spine* and incorporate the provisions in proposed 101.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s)* and 101.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina;*

• Remove current 1.05 and 101.05 *Amputation (due to any cause),* and incorporate its provisions in proposed 1.20 and 101.20 *Amputation due to any cause;*

• Remove current 1.06 and 101.06 *Fracture of the femur, tibia, pelvis, or one or more of the tarsal bones;* and incorporate the provisions of those listings in proposed 1.22 and 101.22 *Non-healing or complex fracture of the*

[3] Full citations are available in X. *References* below.

[4] The final rules with request for comments are available at *http://www.gpo.gov/fdsys/pkg/FR-2001-11-19/pdf/01-28456.pdf.* Comments on the final rules may be found at *http://www.regulations.gov/,* and search for ''SSA–2006–0112''.

femur, tibia, pelvis, or one or more of the tarsal bones;

- Remove current 1.07 and 101.07 *Fracture of an upper extremity;* and incorporate the provisions of those listings in proposed 1.23 and 101.23 *Non-healing or complex fracture of an upper extremity;* and
- Remove current 1.08 and 101.08 *Soft tissue injury (e.g., burns),* and incorporate the provisions in proposed 1.21 and 101.21 *Soft tissue injury or abnormality under continuing surgical management.*

IV. What changes are we proposing to the introductory text of the musculoskeletal disorders listings for adults?

We propose to adopt a question-and-answer framework to make the guidance contained in the introduction easier for adjudicators, claimants, claimant representatives, and the public to locate, and to make the introductory text consistent with the format used in other body systems.

We propose to remove the phrases ''loss of function'' and ''functional loss'' and replace the content of current 1.00B1 *General,* 101.00B1 *General,* 1.00B2 *How we define loss of function in these listings,* and 101.00B2 *How We Define Loss of Function in These Listings.* We are replacing the content of 1.00B1 *General* and 101.00B1 *General* because it may be read to imply that we require an absence of function in order to evaluate an impairment under these listings. Except in the case of amputation, the proposed listings do not require a complete absence of function. In 1.00B2 *How We Define Loss of Function in These Listings* and 101.00B2 *How We Define Loss of Function in These Listings,* we are removing the descriptive phrases, ''inability to ambulate effectively,'' ''extreme limitation of the ability to walk,'' ''interferes very seriously with the individual's ability to independently initiate, sustain, or complete activities,'' ''ineffective ambulation,'' and ''independent ambulation,'' along with the corresponding examples in that paragraph. We are replacing these descriptors with uniform and specific severity criteria, which we believe will provide clearer guidance for adjudicators and the public.

We propose to provide new uniform and specific functional criteria, which we describe in the introductory text for each listing, for evaluating the severity of limitations caused by musculoskeletal disorders. We chose these particular functional criteria because they clearly illustrate the level of dysfunction for upper and lower extremities that would cause an adult to be unable to work, or that would cause a child to be unable to perform age-appropriate activities. The effects of a particular disorder on musculoskeletal functioning, and the treatment needed, direct which of these criteria are appropriate for each of the listings. The functional criteria for adults are as follows:

1. A documented medical need for a walker, bilateral canes, or bilateral crutches;

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

In developing this uniform and specific severity criteria, we utilized medical resources, such as ''Ambulatory Assistive Devices in Orthopaedics: Uses and Modifications,'' [5] the professional experience of our medical consultants, information related to workplace functioning from the Bureau of Labor Statistics, and our adjudicative experience. Each of these criteria illustrate restrictions of multiple extremities and thus, significant limitations.

We propose to explain each proposed listing in separate sections of the introduction.

The following chart shows the headings of the current and proposed sections of the adult introductory text:

Proposed 1.00—Introduction

The following is a detailed description of the changes we propose to the introductory text.

Proposed 1.00A—Which disorders do we evaluate under these listings?

We propose to revise current 1.00A *Disorders of the musculoskeletal system* to explain that we evaluate musculoskeletal disorders that result in dysfunction of the skeletal spine or of the upper or lower extremities,[6] fractures, and soft tissue [7] abnormalities or injuries that are under continuing surgical management.

We begin with listings for disorders affecting functioning of the skeletal spine, because our adjudicative experience shows that these are the most frequently used listings in this body system.

Proposed 1.00B—Which related disorders do we evaluate under other listings?

We propose to replace the content of current 1.00B *Loss of function* with improved guidance for disorders that affect musculoskeletal functioning, which we evaluate under other listings. We explain that we evaluate injuries of the skeletal spine resulting in dysfunction of the spinal cord under 11.00 *Neurological Disorders,* and we evaluate inflammatory arthritis under 14.00 *Immune System Disorders.* We state that we evaluate abnormal curvatures of the spine that adversely affect functioning in other body systems under the appropriate listing in the affected body system. We have removed the guidance from current 1.00L that states ''Abnormal curvatures of the spine (specifically, scoliosis, kyphosis and kyphoscoliosis) can result in impaired ambulation, but may also adversely affect functioning in body systems other than the musculoskeletal system.'' Instead, we propose to evaluate spinal curvatures that affect musculoskeletal functioning under proposed 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s),* depending on the area of dysfunction created by the curvature. We also state that we can evaluate a curvature of the spine that is under continuing surgical management under proposed 1.21 *Soft tissue injury or abnormality under continuing surgical management.*

Proposed 1.00C—What evidence do we need to evaluate your musculoskeletal disorder under these listings?

We propose to replace current 1.00C *Diagnosis and Evaluation* with a comprehensive explanation of the information and evidence we need to evaluate musculoskeletal disorders. Once we establish the disorder, we evaluate evidence from medical and non-medical sources to assess severity and duration under the musculoskeletal listings. We describe the elements needed in a physical examination report. We discuss laboratory and other test findings and their usefulness and limitations, and we explain our policy concerning evaluation of imaging and other diagnostic tests. We discuss our need for operative reports and what we will accept in the absence of such reports, incorporating the guidance from current introductory section 1.00P *When surgical procedures have been performed.* We identify the evidence we need concerning a person's treatment and response to it.

In section 1.00C6 *Assistive devices,* we clarify what we mean by a prosthesis(es) and an orthosis(es). We discuss the evidence we need when a person with a musculoskeletal disorder uses an assistive device(s), including a cane(s), crutch(es), walker, prosthesis(es), or orthosis(es).

In section 1.00C7 *Longitudinal evidence,* we explain the importance of a longitudinal medical record in determining whether a musculoskeletal disorder satisfies the duration requirement. We explain that, for all listings except 1.19 *Pathologic fractures due to any cause,* 1.20A ''Amputation of both upper extremities'' 1.20B ''Hemipelvectomy or hip disarticulation'', and 1.21 *Soft tissue injury or abnormality under continuing surgical management,* all listing criteria must be present simultaneously, or within a close proximity of time; and must have lasted, or be expected to last, for a continuous period of at least 12 months for a disorder to meet a listing.

In section 1.00C *What evidence do we need to evaluate your musculoskeletal disorder under these listings?,* we clarify that, when the listing criteria are linked by the word ''and'' (whether in small case or capital case), the requirements must be simultaneously present, or present within a ''close proximity of time,'' which we define in section 1.00C7 as meaning that all of the relevant criteria have to appear in the medical record within a period not to exceed 4 months of one another. Consistent with the standard of care and common industry practice, according to our medical consultants, literature review, and external medical experts, such as those from the Health and Medicine Division at the National Academies of Science Engineering and Medicine, an individual receiving treatment for a chronic severe musculoskeletal impairment will typically receive treatment or undergo examination at least once every 3 months. Should an individual meet an applicable listing, the listing criteria is likely to be documented every third month. The 4-month threshold provides leeway in cases where a physical examination might not be performed or symptoms are not documented at a given appointment. The 4-month threshold represents a period in which individuals receiving treatment for a chronic severe musculoskeletal impairment will undergo multiple examinations or treatments from their medical source(s), providing a window encompassing multiple medical

[6] Impairments involving the shoulders will typically affect upper extremities while the impairments involving the pelvis, hips, and ribs typically affect lower extremities. When assessing dysfunction, the resultant incapacity or limitation is key to assessing the impairment under the applicable medical listing.

[7] Soft tissue refers to non-skeletal tissues that make up a large percentage of the body, such as the tendons, ligaments, fascia and muscles.

appointments over which applicable listing criteria can be adequately documented. The 4-month threshold does not apply to imaging.

We propose to add this clarification to address a holding in *Radford* v. *Colvin,* 734 F.3d 288 (4th Cir. 2013) with respect to current 1.04A *Disorders of the spine,* ''Evidence of nerve root compression.'' The *Radford* Court held that ''[a] claimant need not show that each symptom was present at precisely the same time—*i.e.,* simultaneously—in order to establish the chronic nature of his condition. Nor need a claimant show that the symptoms were present in the claimant in particularly close proximity.'' [8]

Because this holding of the *Radford* Court differed from our interpretation of the listing requirement, we issued Acquiescence Ruling (AR) 15–1(4) to implement the Court of Appeals holding within the States in the Fourth Circuit.[9] We now propose to clarify our longstanding interpretation of the regulations in response to the *Radford* decision. We also propose to clarify that this policy applies to other listings that have similar requirements.

The issuance of a new regulation to address a holding of a Court of Appeals that conflicts with our policy is consistent with the process described in our regulations for issuing and rescinding Acquiescence Rulings. Our regulations specifically contemplate that we may ''subsequently publish a new regulation(s) addressing an issue(s) not previously included in our regulations when that issue(s) was the subject of a circuit court holding that conflicted with our interpretation of the Social Security Act or regulations and that holding was not compelled by the statute or Constitution.'' 20 CFR 404.985(e)(4), 416.1485(e)(4). After we have considered the public comments in response to these proposed rules and issued any final rules, we will decide whether we need to rescind the *Radford* AR.

Section 1.00C8 *Surgical treatment,* discusses how we evaluate surgical treatment. We explain when and why we may wait to receive additional evidence before making a determination of disability.

Proposed 1.00D—How do we consider symptoms, including pain, under these listings?

We propose to replace current 1.00D *The physical examination* with guidance about how we consider symptoms of musculoskeletal impairments, particularly pain. We explain that your pain must be supported by medical signs and laboratory findings, established by medically acceptable clinical, laboratory, or diagnostic techniques, showing the existence of a medical impairment(s) which results from anatomical, physiological, or psychological abnormalities.

Proposed 1.00E—How do we use the functional criteria under these listings?

We propose to replace current 1.00E *Examination of the Spine* with new guidance about how we use the functional criteria to evaluate musculoskeletal disorders under these listings. We explain what we mean by functional criteria, we list the criteria, and we explain why listings 1.20A 'Amputation of both upper extremities'', 1.20B ''Hemipelvectomy or hip disarticulation'' and 1.21 *Soft tissue injury or abnormality under continuing surgical management* do not include the functional criteria. We also explain that we will evaluate a person's functioning with respect to the work environment, rather than the home environment, because the ability to walk independently about one's home without the use of assistive devices does not, in and of itself, indicate an ability to walk without an assistive device in a work environment. We explain that in order to be disabling, a musculoskeletal disorder must satisfy the medical criteria as well as the 12-month duration requirement and, where applicable, must include at least one of the functional criteria of a listing.

Proposed 1.00F—What do we consider when we evaluate disorders of the skeletal spine resulting in compromise of a nerve root(s) (1.15)?

We propose to replace the content of current 1.00F *Major joints* with guidance regarding how we evaluate disorders of the skeletal spine under proposed 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s).* In proposed 1.00F, we list the various spinal disorders that result in compromise of nerve roots; we explain the symptoms and signs associated with those disorders; and we explain how a medical source evaluates those symptoms and signs in clinical examinations.

Proposed 1.00G—What do we consider when we evaluate lumbar spinal stenosis resulting in compromise of the cauda equina (1.16)?

We propose to replace the content of current 1.00G *Measurements of joint motion* with guidance about how we evaluate the effects of compromise of the cauda equina due to lumbar spinal stenosis under proposed 1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina.* We explain how lumbar spinal stenosis can compromise the cauda equina; we provide a more detailed discussion of the cauda equina and associated symptoms and signs; and we explain how the disorder affects functioning. We also explain the difference between pain caused by compromise of the cauda equina (neurogenic claudication or pseudoclaudication) and pain caused by peripheral arterial disease (vascular claudication).

Proposed 1.00I—What do we consider when we evaluate abnormality of a major joint(s) in any extremity (1.18)?

We propose to replace the content of current 1.00I *Effects of Treatment* with guidance about how we evaluate abnormality in a major joint(s) under proposed 1.18 *Abnormality of a major joint(s) in any extremity.* We explain how we define abnormalities of the joints, and give specific examples of the types of diseases, injuries, and other conditions that may contribute to joint dysfunction. We also explain how these disorders interfere with functions of the extremities.

Proposed 1.00J—What do we consider when we evaluate pathologic fractures due to any cause (1.19)?

We propose to replace the content of current 1.00J *Orthotic, Prosthetic, or Assistive Devices* with guidance regarding how we evaluate pathologic fractures under proposed new 1.19 *Pathologic fractures due to any cause.* We explain what we mean by ''pathologic fractures;'' we state that these types of fractures can affect the skeletal spine, extremities, or other parts of the skeletal system; we give examples of disorders that can cause pathologic fractures; and we explain how we evaluate their occurrence and recurrence.

Proposed 1.00K—What do we consider when we evaluate amputation due to any cause (1.20)?

We propose to replace the content of current 1.00K *Disorders of the spine* with guidance about how we evaluate amputation due to any cause under proposed 1.20 *Amputation due to any*

[8] 734 F.3d at 294.

[9] 80 FR 57418 (2015). Available at: *https://www.ssa.gov/OP_Home/rulings/ar/04/AR2015-01-ar-04.html.*

cause. We explain that we evaluate amputations involving upper or lower extremities and combinations of those extremities, as well as hemipelvectomies and hip disarticulations. We explain that when a person has amputations of one upper extremity at any level above the wrist and one lower extremity at or above the ankle, we consider whether the person has a documented medical need for a one-handed assistive device. We also explain how we consider amputation of one or both lower extremities at or above the ankle (tarsal joint). We state that we use this listing when a person has residual limb complications that have lasted, or are expected to last, for at least 12 months, and the person is not currently undergoing surgical management.

Proposed 1.00L—What do we consider when we evaluate soft tissue injury or abnormality under continuing surgical management (1.21)?

We propose to replace the content of current 1.00L *Abnormal curvatures of the spine* with guidance about how we evaluate soft tissue abnormality or injury of any part of the body that is under continuing surgical management. We also incorporate the provisions of current sections 1.00M *Under continuing surgical management,* 1.00N *After maximum benefit from therapy has been achieved,* 1.00O *Major function of the face and head,* and 1.00P *When surgical procedures have been performed.* We explain that we use proposed 1.21 *Soft tissue injury or abnormality under continuing surgical management* to evaluate any soft tissue abnormality or injury, whether congenital or acquired, including malformations, third- and fourth-degree burns, craniofacial injuries, avulsive injuries, amputations with complications of the residual limb(s), and complications of non-healing or complex traumatic fractures. We explain that a person must have a documented medical need for a continuing series of ongoing surgical procedures and associated medical treatments, directed toward saving, reconstructing, or replacing the affected part of the body. We further explain that these treatments must have been, or must be expected to be, ongoing for a continuous period of least 12 months. We list the clinical evidence we need to determine whether a disorder meets this listing. We explain how we evaluate third- and fourth-degree burns and craniofacial injuries. We also explain how we evaluate when maximum therapeutic benefit has occurred and how we evaluate residual impairment.

Proposed 1.00M—What do we consider when we evaluate non-healing or complex fractures of the femur, tibia, pelvis, or one or more of the tarsal bones (1.22)?

We propose to replace the content of current 1.00M *Under continuing surgical management* with guidance about how we evaluate non-healing or complex fractures involving bones in the lower extremity. We also provide definitions for ''non-healing fracture'' and ''complex fracture.''

Proposed 1.00N—What do we consider when we evaluate non-healing or complex fractures of an upper extremity (1.23)?

We propose to replace the content of current 1.00N *After maximum benefit from therapy* with guidance about how we evaluate non-healing or complex fractures involving bone in the upper extremity. We also provide definitions for ''non-healing fracture'' and ''complex fracture.''

Proposed 1.00O—How do we determine your soft tissue injury or abnormality or your upper extremity fracture is no longer under continuing surgical management or you have received maximum therapeutic benefit?

We propose to replace the content of current 1.00O *Major function of the face and head* with guidance about determining when a soft tissue injury or abnormality or upper extremity fracture is no longer under continuing surgical management. We also incorporate the provisions of current sections 1.00M *Under continuing surgical management,* 1.00N *After maximum benefit from therapy has been achieved,* and 1.00P *When surgical procedures have been performed.*

Proposed 1.00P—How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment?

We propose to replace the content of current 1.00P *When surgical procedures have been performed* with guidance about how we assess impairments when there is no longitudinal medical record. We explain that when the individual has not received ongoing treatment or has just begun treatment, we may ask the individual to attend a consultative examination. We also explain that we may be able to assess the severity and duration of the individual's impairment based on the medical record and current evidence alone. In this section, we incorporate guidance from current section 1.00H3 *When there is no record of ongoing treatment.*

Proposed 1.00R—How do we evaluate disorders that do not meet one of the musculoskeletal listings?

We propose to add a new section 1.00R with guidance explaining that if a person's disorder does not meet or medically equal the criteria of any of these listings, we will consider whether it meets or medically equals the criteria for a listing in another body system. We explain that if an impairment does not meet or medically equal any listing, we will assess the person's residual functional capacity (RFC) and determine whether the person is capable of performing past work or adjusting to other work in the national economy. We also cite the rules we use when we determine whether a person continues to be disabled. In this section, we incorporate guidance from current section 1.00H4 *Evaluation when the criteria of a musculoskeletal listing are not met.*

V. What changes are we proposing to the musculoskeletal listings for adults?

We propose to revise the name of the body system from ''Musculoskeletal System'' to ''Musculoskeletal Disorders.''

We propose to rename the headings of the listings and to renumber the listings in a more logical order, beginning with disorders of the spine, as those are the most frequently used; moving outward physically to the extremities; and then to skeletal or soft tissue injuries. When these rules become final, renumbering the listings should make it easier for us to keep track of data trends for specific types of impairments over time. It should also help to prevent confusion in identifying or referring to prior listings after we publish a final rule.

We propose to present the overall structure of the listings in an outline form to make the rules more readily accessible to the reader. The following chart provides a comparison of the current and the proposed adult listings:

Current listing	Proposed listing
1.02 *Major dysfunction of a joint(s) (due to any cause)*	1.02 Removed without replacement.
1.03 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.*	1.03 Removed without replacement.
1.04 *Disorders of the spine*	1.04 Removed without replacement.
1.05 *Amputation (due to any cause)*	1.05 Removed without replacement.
1.06 *Fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.*	1.06 Removed without replacement.
1.07 *Fracture of an upper extremity*	1.07 Removed without replacement.
1.08 *Soft tissue injury (e.g., burns)*	1.08 Removed without replacement.
	1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s).*
	1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina.*
	1.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.*
	1.18 *Abnormality of a major joint(s) in any extremity.*
	1.19 *Pathologic fractures due to any cause.*
	1.20 *Amputation due to any cause.*
	1.21 *Soft tissue injury or abnormality under continuing surgical management.*
	1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones*
	1.23 *Non-healing or complex fracture of an upper extremity.*

All of the proposed musculoskeletal listings contain multiple criteria. We distinguish whether all of the criteria must be met in order to meet that specific listing or just one of the criteria must be met in order to meet that specific listing by using a capital ''AND'' or ''OR,'' respectively. The ''AND'' or ''OR'' sit on a line independently on the left margin. We also distinguish whether all sub-criteria must be met or just one of the sub-criteria must be met in order to satisfy the relevant criteria by using a lowercase ''and'' or ''or,'' respectively.

1.15 Disorders of the Skeletal Spine Resulting in Compromise of a Nerve Root(s)

Proposed 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s)* incorporates and clarifies the provisions of current 1.04A for evidence of nerve root compression. In proposed 1.15 we have removed references to the particular disorders associated with compromise of a nerve root(s) and discussion of the tests used to demonstrate them. We have incorporated the references to specific disorders in the introductory text because they are examples of possible causative agents, whereas the listing addresses the effects of those agents on the nerve root(s). We have also removed the sign of atrophy from the listing because medical research and our experience does not show atrophy necessarily correlates with any given level of functioning. We have provided for consideration of limitation of motion by evaluating the physical limitation of musculoskeletal functioning it causes using the new functional criteria. Under proposed criterion 1.15B for radicular neurological signs, we have included muscle weakness and sensory changes. We have also added the requirement for ''[d]ecreased deep tendon reflexes'' to the criterion because it is a manifestation of the disorder and illustrates our intentions for this listing. A criterion for imaging, which is not explicitly required in current 1.04A, has been added as proposed 1.15C ''Findings on imaging consistent with compromise of a nerve root(s)'' because it is a component necessary to establishing the disorder.

1.16 Lumbar Spinal Stenosis Resulting in Compromise of the Cauda Equina

Proposed 1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina* incorporates and clarifies the provisions of current 1.04C for lumbar spinal stenosis resulting in pseudoclaudication. We incorporate each of the requirements in current 1.04C into sections A–D of the proposed listing and clarify the current requirements with specific information in sections A–C. We have made a separate listing for compromise of the cauda equina due to the effects of lumbar spinal stenosis, because the symptoms and signs of this disorder differ from those of other nerve root(s) disorders and are not typically associated with a specific nerve root(s).

1.17 Reconstructive Surgery or Surgical Arthrodesis of a Major Weight-Bearing Joint

Proposed 1.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint* incorporates and clarifies the provisions of current listing 1.03 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.*

1.18 Abnormality of a Major Joint(s) in Any Extremity

Proposed 1.18 *Abnormality of a major joint(s) in any extremity* incorporates and clarifies the provisions of current listings 1.02 *Major dysfunction of a joint(s) (due to any cause).* It includes the criteria from current 1.02 for evaluating dysfunction of any of the major joints in either the upper or lower extremities, or both, whether due to anatomical deformity, pain, or abnormal motion. We removed the terms ''peripheral'' and ''weight-bearing,'' which are in the current listing for major joint disorders (1.02 *Major dysfunction of a joint(s) (due to any cause)),* because proposed 1.18 covers all major joints in any extremity, making those distinctions unnecessary.

1.19 Pathologic Fractures Due to Any Cause

Proposed 1.19 *Pathologic fractures due to any cause* is a new listing that covers pathologic fractures of any part of the musculoskeletal system. Medical treatment and recovery expectations for fractures differ, depending on whether the condition is due to an underlying pathology (such as osteoporosis), or to a traumatic event. For this reason, we propose a separate listing for fractures caused by an underlying pathology in order to provide specific criteria related to their evaluation and adjudication. We propose to evaluate complex or non-

healing traumatic fractures under proposed 1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones* or 1.23 *Non-healing or complex fracture of an upper extremity.*

1.20 Amputation Due to Any Cause

Proposed 1.20 *Amputation due to any cause* incorporates and clarifies the provisions of current 1.05 *Amputation (due to any cause).* Proposed 1.20B for hemipelvectomy or hip disarticulation corresponds to current 1.05D for hemipelvectomy or hip disarticulation. In proposed 1.20A for amputation of both upper extremities and 1.20B for hemipelvectomy or hip disarticulation, we do not include any functional criteria, because we presume that a person with a disorder under either proposed 1.20A or 1.20B has limitations that satisfy one or more of the functional criteria in 1.00E2 and meet the duration requirement.

1.21 Soft Tissue Injury or Abnormality Under Continuing Surgical Management

Proposed 1.21 *Soft tissue injury or abnormality under continuing surgical management* revises current listing 1.08 *Soft tissue injury (e.g., burns).* This proposed listing is consistent with our long-standing recognition that extensive, prolonged treatment in order to re-establish or improve function of the affected body part(s) may contribute to an inability to perform work-related activity.

It encompasses any abnormality of, or injury (including burns) to soft tissue that is under continuing surgical management directed toward saving, reconstructing, or replacing the affected part of the body. In proposed 1.21, we do not include any functional criteria because the prescribed surgical procedures treatments typically require a series of documented interventions over extended periods, which render the person unable to perform work-related activity on a sustained basis.

1.22 Non-Healing or Complex Fracture of the Femur, Tibia, Pelvis, or One or More of the Tarsal Bones

Proposed 1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones* incorporates and clarifies the provisions of current listing 1.06 *Fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.*

1.23 Non-Healing or Complex Fracture of an Upper Extremity

Proposed 1.23 *Non-healing or complex fracture of an upper extremity* incorporates and clarifies the provisions of current listing 1.07 *Fracture of an upper extremity.*

VI. What changes are we proposing to the introductory text of the musculoskeletal disorders listings for children?

The same basic rules for evaluating musculoskeletal disorders in adults apply to the evaluation of such disorders in children. Except for changes in the introductory text specific to children, we propose to repeat most of the introductory text of proposed 1.00 *Musculoskeletal Disorders* in the introductory text of proposed 101.00 *Musculoskeletal Disorders.* Since we have already described these proposed revisions in the introductory text of proposed 1.00, we describe here only those sections of the proposed 101.00 rules that are unique to children or that require further explanation.

The following chart shows the headings of the current and proposed sections of the childhood introductory text:

Current introductory text	Proposed introductory text
A. *Disorders of the musculoskeletal system*	A. *Which disorders do we evaluate under these listings?*
B. *Loss of Function*	B. *Which related disorders do we evaluate under other listings?*
C. *Diagnosis and Evaluation*	C. *What evidence do we need to evaluate your musculoskeletal disorder under these listings?*
D. *The physical examination*	D. *How do we consider symptoms, including pain, under these listings?*
E. *Examination of the Spine*	E. *How do we use the functional criteria under these listings?*
F. *Major joints*	F. *What do we consider when we evaluate disorders of the skeletal spine resulting in compromise of a nerve root(s) (101.15)?*
G. *Measurements of joint motion*	G. *What do we consider when we evaluate lumbar spinal stenosis resulting in compromise of the cauda equina (101.16)?*
H. *Documentation*	H. *What do we consider when we evaluate reconstructive surgery or surgical arthrodesis of a major weight-bearing joint (101.17)?*
I. *Effects of Treatment*	I. *What do we consider when we evaluate abnormality of a major joint(s) in any extremity (101.18)?*
J. *Orthotic, Prosthetic, or Assistive Devices*	J. *What do we consider when we evaluate pathologic fractures due to any cause (101.19)?*
K. *Disorders of the spine*	K. *What do we consider when we evaluate amputation due to any cause (101.20)?*
L. *Abnormal curvatures of the spine*	L. *What do we consider when we evaluate soft tissue injury or abnormality under continuing surgical management (101.21)?*
M. *Under continuing surgical management*	M. *What do we consider when we evaluate non-healing or complex fractures of the femur, tibia, pelvis, or one or more of the tarsal bones (101.22)?*
N. *After maximum benefit from therapy has been achieved*	N. *What do we consider when we evaluate non-healing or complex fractures of an upper extremity (101.23)?*
O. *Major function of the face and head*	O. *What do we consider when we evaluate musculoskeletal disorders of infants and toddlers from birth to attainment of age 3 with developmental motor delay (101.24)?*
P. *When surgical procedures have been performed*	P. *How do we determine when your soft tissue injury or abnormality, or your upper extremity fracture, is no longer under continuing surgical management or you have received maximum therapeutic benefit?*
	Q. *How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment?*
	R. *How do we evaluate disorders that do not meet one of the musculoskeletal listings?*

VII. What changes are we proposing to the musculoskeletal disorders listings for children?

We propose to revise the name of the body system from ''Musculoskeletal System'' to ''Musculoskeletal Disorders.''

We propose to add 101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay.* This listing evaluates developmental motor delay due to a musculoskeletal medically determinable impairment as a functional criterion for infants and toddlers. We propose to move the requirement of developmental motor skills that are no greater than one-half of the expected age performance from current 101.00B2c(2) *How we assess inability to perform fine and gross movements in very young children* into proposed 101.24. Proposed 101.24 does not have an adult counterpart.

We propose to use functional criteria for children that are the same as the criteria for adults.

The following chart provides a comparison of the current childhood listings and the proposed childhood listings:

Current childhood listings	Proposed childhood listings
101.02 *Major dysfunction of a joint(s) (due to any cause)*	101.02 Removed without replacement.
101.03 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.*	101.03 Removed without replacement.
101.04 *Disorders of the spine*	101.04 Removed without replacement.
101.05 *Amputation (due to any cause)*	101.05 Removed without replacement.
101.06 *Fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.*	101.06 Removed without replacement.
101.07 *Fracture of an upper extremity*	101.07 Removed without replacement.
101.08 *Soft tissue injury (e.g., burns)*	101.08 Removed without replacement.
	101.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s).*
	101.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina.*
	101.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.*
	101.18 *Abnormality of a major joint(s) in any extremity.*
	101.19 *Pathologic fractures due to any cause.*
	101.20 *Amputation due to any cause.*
	101.21 *Soft tissue injury or abnormality under continuing surgical management.*
	101.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.*
	101.23 *Non-healing or complex fracture of an upper extremity.*
	101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay.*

As is the case with adults, for children, all of the proposed musculoskeletal listings contain multiple criteria. We distinguish whether all of the criteria must be met in order to meet that specific listing or just one of the criteria must be met in order to meet that specific listing by using a capital ''AND'' or ''OR,'' respectively. The ''AND'' or ''OR'' sit on a line independently on the left margin. We also distinguish whether all sub-criteria must be met or just one of the sub-criteria must be met in order to satisfy the relevant criteria by using a lowercase ''and'' or ''or,'' respectively.

VIII. Other Changes

We propose to make conforming changes to current sections 4.00G4 *What is lymphedema and how will we evaluate it?* and 104.00F9 *What is lymphedema and how will we evaluate it?* of the cardiovascular system listings to indicate that we may evaluate whether lymphedema medically equals proposed listings 1.18 and 101.18 *Abnormality of a major joint(s) in any extremity.*

We propose to make conforming changes to the introductory text and listing criteria for immune system disorders. Many disorders of the immune system affect the musculoskeletal system; therefore, we are making these revisions to reflect this relationship and ensure consistency in our evaluation of musculoskeletal functioning. In 14.00C *Definitions* and 114.00C *Definitions,* we propose to provide explanations of terms for evaluating immune system disorders consistent with those we propose for evaluating musculoskeletal disorders. We propose to add definitions for ''assistive device(s),'' ''documented medical need,'' ''fine and gross movements,'' and ''hand-held assistive device.'' We also propose to replace ''major peripheral joints'' with ''major joint of an upper or lower extremity,'' to revise the explanation of that term, and to remove the terms ''inability to ambulate effectively'' and ''inability to perform fine and gross movements effectively'' for consistency with the proposed musculoskeletal disorders listings.

We propose to revise the information in current sections 14.00D4 *Polymyositis and dermatomyositis (14.05)* and 114.00D4 ''*Polymyositis and dermatomyositis (114.05)*'' describing how we evaluate polymyositis and dermatomyositis in motor skills of newborns, younger infants, children, and adults. We propose to revise these sections for consistency with the proposal to remove the term ''unable to ambulate effectively.'' We propose to replace ''ambulate effectively'' with ''walk without physical or mechanical assistance.''

We propose to make editorial changes to current sections 14.00D6 *Inflammatory arthritis (14.09)* and 114.00D6 *Inflammatory arthritis (114.09).* We propose to replace ''major peripheral joints'' with ''major joints in an upper or lower extremity,'' ''ambulation or fine and gross movements'' with ''walking or performing fine and gross movements,'' and ''ambulation or the performance of fine and gross movements'' with ''walking or performing fine and gross movements.''

We propose to make conforming changes to describe listing-level severity in proposed listing criteria 14.09A and 114.09A ''Persistent inflammation or persistent deformity'' as follows: we propose to replace ''an impairment that results in an 'extreme' (very serious) limitation'' with ''the presence of an impairment-related, significant limitation cited in the criteria of these listings.'' We propose to replace ''one major peripheral weight-bearing joint resulting in the inability to ambulate effectively'' with ''one major joint in a lower extremity resulting in a documented medical need for a walker, bilateral canes, or bilateral crutches.'' We propose to replace ''one major peripheral joint in each upper extremity resulting in the inability to perform fine and gross movements effectively'' with ''one major joint in each upper extremity resulting in an impairment-related, significant limitation in the ability to perform fine and gross movements.''

To describe listing-level severity in current listing criteria 14.09C and 114.09 C ''Ankylosing spondylitis or other spondyloarthropathies'' we propose to replace ''extreme limitation'' with ''impairment-related significant limitation'' and ''inability to ambulate effectively'' with ''a documented medical need for a walker, bilateral canes, or bilateral crutches.''

To describe listing-level severity in current listing criteria 14.09B, C, and D and 114.09B and C for impairments due to inflammatory arthritis, we also propose to replace ''major peripheral joints'' with ''major joints in an upper or lower extremity.''

We propose to revise current section 114.00J2b ''Musculoskeletal involvement, such as surgical reconstruction of a joint, under 101.00'' to indicate that we may evaluate immune system disorders in children involving developmental motor delay under 101.00 *Musculoskeletal Disorders.*

We propose conforming changes to current immune system disorders listings 14.04 *Systemic sclerosis (scleroderma),* 14.05 *Polymyositis and dermatomyositis,* 14.09 *Inflammatory arthritis,* 114.04 *Systemic sclerosis (scleroderma),* 114.05 *Polymyositis and dermatomyositis* and 114.09 *Inflammatory arthritis.* In proposed 14.04 *Systemic sclerosis (scleroderma),* 14.05 *Polymyositis and dermatomyositis,* and 14.09 *Inflammatory arthritis* for adults, we would replace ''inability to ambulate effectively'' with the requirement of one of the following:

- A documented medical need for a walker, bilateral canes, or bilateral crutches; or
- An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity.

In proposed 114.04 *Systemic sclerosis (scleroderma*), 114.05 *Polymyositis and dermatomyositis,* and 114.09 *Inflammatory arthritis* for children, we would replace ''inability to ambulate effectively'' with the requirement of one of the following:

- A documented medical need for a walker, bilateral canes, or bilateral crutches; or
- An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity.

In proposed 14.04 *Systemic sclerosis (scleroderma),* 14.05 *Polymyositis and dermatomyositis,* and 14.09 *Inflammatory arthritis* for adults, we would replace ''inability to perform fine and gross movements effectively'' with ''inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.''

In proposed 114.04 *Systemic sclerosis (scleroderma),* 114.05 *Polymyositis and dermatomyositis,* and 114.09 *Inflammatory arthritis* for children, we would replace ''inability to perform fine and gross movements effectively'' with ''inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.''

In proposed 14.09 *Inflammatory arthritis* and 114.09 *Inflammatory arthritis,* we would replace ''major peripheral weight-bearing joints'' with ''major joints in a lower extremity(ies).'' In proposed 14.09 *Inflammatory arthritis* and 114.09 *Inflammatory arthritis,* we would replace ''major peripheral joints'' with ''major joints'' or ''major joints of an upper or lower extremity(ies),'' as appropriate for the affected extremity(-ies).

We propose to remove the first and second examples in § 416.926a(m) of this chapter, *Examples of impairments that functionally equal the listings.* The first example is ''[a]ny condition that is disabling at the time of onset, requiring continuing surgical management within 12 months after onset as a life-saving measure or for salvage or restoration of function, and such major function is not restored or is not expected to be restored within 12 months after onset of this condition.'' (See § 416.926a(m)(1) of this chapter.) We are removing this example because, at the time it was written, there were no specific criteria that considered the need for ongoing surgical management in the listings. The second example is ''[e]ffective ambulation possible only with obligatory bilateral upper limb assistance.'' (See § 416.926a(m)(2) of this chapter.) We are removing this example because several of the proposed childhood listings include a criterion considering ''. . . a documented medical need for a walker, bilateral canes, or bilateral crutches'' (that is, ''obligatory bilateral upper limb assistance.'') With the inclusion of the proposed childhood listings, it will no longer be necessary to have these examples in the regulations.

IX. Administrative Matters

What is our authority to make rules and set procedures for determining whether a person is disabled under our statutory definition?

The Social Security Act authorizes us to make rules and regulations and to establish necessary and appropriate procedures to implement them.[10]

How long would these proposed rules be effective?

If we publish these proposed rules as final rules, they will remain in effect for 5 years after the date they become effective, unless we extend them, or revise and issue them again.

Clarity of These Proposed Rules

Executive Order 12866, as supplemented by Executive Order 13563, requires each agency to write all rules in plain language. In addition to your substantive comments on these proposed rules, we invite your comments on how to make them easier to understand.

For example:

- Would more, but shorter, sections be better?
- Are the requirements in the rules clearly stated?
- Have we organized the material to suit your needs?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rules easier to understand?
- Do the rules contain technical language or jargon that is not clear?

[10] Sections 205(a), 702(a)(5), and 1631(d)(1).

• Would a different format make the rules easier to understand, *e.g.,* grouping and order of sections, use of headings, paragraphing?

Anticipated Economic Impact of the Proposed Rules

Financial Classification of SSA's Regulations

Based on criteria established by OMB Circular A–4 and Executive Order 13771, we classify this rule as a ''transfer rule.'' Transfer rules do not create or impose novel costs; rather, they regulate the transfer of monetary payments from one group to another without affecting the total resources available to society.

Under our Old-Age, Survivors, and Disability Insurance program (OASDI), SSA's regulations govern the transfer of benefits payments to qualified workers primarily from revenues collected from payroll taxes (FICA) and self-employment taxes (SECA). Under the Supplemental Security Income (SSI) program, funded by general tax revenues, SSA makes payments to individuals with limited income and resources who are aged, blind, or disabled.

This proposed rule establishes eligibility criteria for transferring disability payments to those persons who qualify for such payments based on the presence of a musculoskeletal body system disorder.

Anticipated Accounting Costs of These Proposed Rules

Anticipated Costs to Our Programs

For fiscal years (FY) 2018–2022, our Office of the Chief Actuary estimates that this proposed rule, once finalized, may result in a reduction of $57,000,000 to our OASDI program costs, and an increase of $11,000,000 to our SSI program costs. It is important to note that due to the roughly offsetting estimated effects of changes from allowance to denial and from denial to allowance, the true net effect for either program, OASDI or SSI, could potentially be either a small cost or a small saving.

Anticipated Administrative Costs to the Social Security Administration

In calculating whether the implementation of this proposed rule, once finalized, may result in administrative costs or savings to the agency, we examine two sources: (1) Work-years and (2) direct financial administrative costs.

We define work-years as a measure of the SSA employee work time a proposed rule will cost or save during implementation of its policies. We calculate one work-year as 2,080 hours of labor, which represents the amount of hours one SSA employee works per year based on a standard 40-hour workweek.

We estimate the direct financial administrative costs of a proposed rule by examining requirements stemming from new regulations, including systems start-up and maintenance costs, operational costs resulting from new workloads, and internal training costs for relevant agency staff and adjudicators. To assess savings resulting from a proposed rule, we examine Systems and operational workload changes.

Based on the above factors, our Office of Budget, Finance, and Management estimates that implementation of these proposed rules, upon finalization, will result in overall administrative savings for SSA of fewer than 15 work-years and less than $2 million annually for the period of FY 2018–2022.

When will we start to use these rules?

We will not use these rules until we evaluate public comments and publish final rules in the **Federal Register**. All final rules we issue include an effective date. We will continue to use our current rules until that date. If we publish final rules, we will include a summary of those relevant comments we received along with responses and an explanation of how we will apply the new rules.

Regulatory Procedures

Executive Order 12866, as Supplemented by Executive Order 13563

We consulted with the Office of Management and Budget (OMB) and determined that this notice of proposed rulemaking (NPRM) meets the criteria for a significant regulatory action under Executive Order 12866, as supplemented by Executive Order 13563. Therefore, OMB reviewed it.

Regulatory Flexibility Act

We certify that this NPRM will not have a significant economic impact on a substantial number of small entities because it affects individuals only. Therefore, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act, as amended.

Paperwork Reduction Act

These proposed rules do not create any new or affect any existing collections and, therefore, do not require OMB approval under the Paperwork Reduction Act.

(Catalog of Federal Domestic Assistance Program Nos. 96.001, Social Security–Disability Insurance; 96.002, Social Security–Retirement Insurance; 96.004, Social Security–Survivors Insurance; and 96.006, Supplemental Security Income).

List of Subjects

20 CFR Part 404

Administrative practice and procedure; Blind, Disability benefits; Old-Age, survivors, and disability insurance; Reporting and recordkeeping requirements; Social Security.

20 CFR Part 416

Administrative practice and procedure, Blind, Disability benefits, Public assistance programs, Reporting and recordkeeping requirements, Supplemental Security Income (SSI).

Nancy A. Berryhill,

Acting Commissioner of Social Security.

For the reasons set out in the preamble, we propose to amend 20 CFR, chapter III, part 404, subpart P as set forth below:

PART 404—FEDERAL OLD-AGE, SURVIVORS AND DISABILITY INSURANCE (1950–)

Subpart P—[Amended]

■ 1. The authority citation for subpart P of part 404 continues to read as follows:

Authority: Secs. 202, 205(a)–(b) and (d)–(h), 216(i), 221(a) and (h)–(j), 222(c), 223, 225, and 702(a)(5) of the Social Security Act (42 U.S.C. 402, 405(a)–(b) and (d)–(h), 416(i), 421(a) and (h)–(j), 422(c), 423, 425, and 902(a)(5)); sec. 211(b), Pub. L. 104–193, 110 Stat. 2105, 2189; sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

■ 2. Amend appendix 1 to subpart P of part 404 as follows:

■ a. Revise item 2 of the introductory text before part A;

■ b. Amend part A by revising the body system name for section 1.00 in the table of contents;

■ c. Revise section 1.00 of part A;

■ d. Revise the second sentence of paragraph 4.00G4b of part A;

■ e. Redesignate current 14.00C2 through 14.00C12 of part A as follows:

Old section	New section
14.00C2	14.00C3
14.00C3	14.00C4
14.00C4	14.00C6
14.00C5	14.00C7
14.00C6	14.00C8
14.00C7	14.00C9
14.00C8	14.00C10
14.00C9	14.00C11
14.00C10	14.00C12
14.00C11	14.00C13
14.00C12	14.00C14

■ f. Add new paragraphs 14.00C2 and 14.00C5 to part A;

■ g. Revise 14.00C8 through 14.00C10;

■ h. Revise the first sentence of paragraph 14.00D4c(i) of part A;

■ i. Revise the second and third sentences of paragraph 14.00D6a of part A;

■ j. Revise paragraph 14.00D6e(i) and the first sentence of 14.00D6e(ii) of part A;

■ k. Revise 14.04B, 14.04C2, and 14.05A of part A;

■ l. Revise 14.09A and the first sentence of 14.09B of part A;

■ m. Amend part B by revising the body system name for section 101.00 in the table of contents;

■ n. Revise section 101.00 of part B;

■ o. Revise the second sentence of paragraph 104.00F9b of part B;

■ p. Redesignate current 114.00C2 through 114.00C12 of part B as follows:

Old section	New section
114.00C2	114.00C3
114.00C3	114.00C4
114.00C4	114.00C6
114.00C5	114.00C7
114.00C6	114.00C8
114.00C7	114.00C9
114.00C8	114.00C10
114.00C9	114.00C11
114.00C10	114.00C12
114.00C11	114.00C13
114.00C12	114.00C14

■ q. Add new paragraphs 114.00C2 and 114.00C5 to part B;

■ r. Revise 114.00C8 through 114.00C10;
■ s. Revise the first sentence of paragraph 114.00D4c(ii) of part B;
■ t. Revise the second and third sentences of paragraph 114.00D6a of part B;
■ u. Revise paragraph 114.00D6e(i) and the first sentence of 114.00D6e(ii) of part B;
■ v. Revise listings 114.04B, 114.04C2, and 114.05A of part B; and
■ w. Revise 114.09A and the heading of 114.09B of part B.

The revisions read as follows:

Appendix 1 to Subpart P of Part 404—Listing of Impairments

* * * * *

2. Musculoskeletal Disorders (1.00 and 101.00): [THIS EXPIRES 5 YEARS FROM THE EFFECTIVE DATE OF THE FINAL RULES].

* * * * *

Part A

* * * * *

1.00 Musculoskeletal Disorders.

* * * * *

1.00 Musculoskeletal Disorders

A. *Which disorders do we evaluate under these listings?*

1. We evaluate disorders of the skeletal spine (vertebral column) or of the upper or lower extremities that affect musculoskeletal functioning in the musculoskeletal body system listings. We use the term ''skeletal'' when we are referring to the structure of the bony skeleton. The skeletal spine refers to the bony structures, ligaments, and discs making up the spine. We refer to the ''skeletal'' spine in some musculoskeletal listings to differentiate it from the neurological spine (see 1.00B1). Disorders may be congenital or acquired, and may include deformities, amputations, or other musculoskeletal abnormalities. These disorders may involve the bones or major joints; or the tendons, ligaments, muscles, or other soft tissues.

2. We also evaluate soft tissue abnormalities or injuries (including burns) that are under continuing surgical management (see 1.00L1). The abnormalities or injuries may affect any part of the body, including the face and skull.

B. *Which related disorders do we evaluate under other listings?*

1. We evaluate a disorder or injury of the skeletal spine that results in damage to, and neurological dysfunction of, the spinal cord and its associated nerves (for example, paraplegia or quadriplegia) under the criteria in 11.00 *Neurological Disorders.*

2. We evaluate inflammatory arthritis (for example, rheumatoid arthritis) under the criteria in 14.00 *Immune System Disorders.*

3. We evaluate curvatures of the skeletal spine under these musculoskeletal disorders listings and other listings as appropriate for the affected body system. Curvatures of the skeletal spine that affect musculoskeletal functioning are evaluated under 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s).* If a curvature of the skeletal spine is under continuing surgical management, we can evaluate it for medical equivalence to 1.21 *Soft tissue injury or abnormality under continuing surgical management.* Curvatures of the skeletal spine may also adversely affect functioning in body systems other than the musculoskeletal system. For example, the curvature may interfere with your ability to breathe (see 3.00 *Respiratory Disorders*); there may be impaired myocardial function (see 4.00 *Cardiovascular System*); or there may be disfigurement resulting in social withdrawal or depression (see 12.00 *Mental Disorders*).

4. We evaluate non-healing or pathological fractures due to cancer, whether it is a primary site or metastases, under the criteria in 13.00 *Cancer (Malignant Neoplastic Diseases).*

5. We evaluate the leg pain associated with peripheral vascular claudication, as well as diabetic foot ulcers, under the criteria in 4.00 *Cardiovascular System.*

6. We evaluate burns that do not require continuing surgical management under the criteria in 8.00 *Skin Disorders.*

C. *What evidence do we need to evaluate your musculoskeletal disorder under these listings?*

1. *General.* To establish the presence of a musculoskeletal disorder as a medically determinable impairment, we need objective medical evidence from an acceptable medical source who has examined you for the disorder. To assess the severity and duration of your disorder, we evaluate evidence from both medical and nonmedical sources who can describe how you function. If there is no record of ongoing medical treatment for your disorder, we will follow the guidelines in 1.00P *How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment*? We will determine the extent and kinds of evidence we need from medical and non-medical sources based on the individual facts about your disorder. For our basic rules on evidence, see §§ 404.1502, 404.1512, 404.1513, 404.1513a, 404.1520b, 416.902, 416.912, 416.913, 416.913a, and 416.920b of this chapter. For our rules on evidence about your symptoms, see §§ 404.1529 and 416.929 of this chapter.

2. *Physical examination report(s).* In the report(s) of your physical examination, we need a detailed description of the orthopedic, neurologic, or other objective clinical findings appropriate to your specific musculoskeletal disorder. We require objective clinical findings from the medical source's direct observations during your physical examination, not simply his or her report of your statements about your symptoms and limitations. When the medical source reports that a clinical test sign(s) is positive, unless we have evidence to the contrary, we will assume that he or she performed the test properly. For instance, we will assume a straight-leg raising test was conducted properly, *i.e.,* in a sitting and supine position, even if the medical source does not specify the positions in which the test was performed. In the absence of evidence to the contrary, we will accept the medical source's interpretation of the test. If you use an assistive device (see 1.00C6), the report must support the medical need for the device. If reduction in muscle strength is a factor, we require medical documentation of measurement of the strength of the muscle(s) in question, generally based on a grading system of 0 to 5. Zero (0) indicates complete loss of strength and 5 indicates maximum strength, consistent with Table 1 below. The documentation should also include measurements of grip and pinch strength, if there is evidence of involvement of one or both hands.

TABLE 1

Grading Scale of Muscle Function: 0 to 5

0	None	No visible or palpable contraction.
1	Trace	Visible or palpable contraction with no motion.
2	Poor	Active range of motion (ROM) with gravity eliminated.
3	Fair	Active ROM against gravity only, without resistance.
4	Good	Active ROM against gravity, moderate resistance.
5	Normal	Active ROM against gravity, maximum resistance.

3. *Laboratory findings: Imaging and other diagnostic tests*

a. Imaging refers to medical imaging techniques, such as x-ray, computed tomography (CT), magnetic resonance imaging (MRI), and radionuclide scanning. For the purpose of these listings, the imaging technique(s) must be consistent with the generally accepted standards of medical knowledge and clinical practice.

b. Findings on imaging must have lasted, or must be expected to last, for a continuous period of at least 12 months.

c. Imaging and other diagnostic tests can provide evidence of physical abnormalities; however, they may correlate poorly with

your symptoms, including pain, or with your musculoskeletal functioning. Accordingly, we cannot use such tests as a substitute for physical examination findings about your ability to function, nor can we infer severity or functional limitations based solely on such tests.

d. For our policies about when we will purchase imaging and other diagnostic tests, see §§ 404.1519k, 404.1519m, 416.919k, and 416.919m of this chapter.

4. *Operative reports.* If you have had a surgical procedure(s), we need either the operative reports, including details of the findings at surgery and information about any medical complications that may have occurred, or confirmatory evidence of the surgical procedure(s) from a medical source (for example, detailed follow-up reports or notations in the medical records concerning your past medical history).

5. *Effects of treatment*

a. *General.* Treatments for musculoskeletal disorders may have beneficial or adverse effects, and responses to treatment vary from person to person. We will evaluate all of the effects of treatment (including surgical treatment, medications, and therapy) on the symptoms, signs, and laboratory findings of your musculoskeletal disorder, and on your musculoskeletal functioning.

b. *Response to treatment.* To evaluate your musculoskeletal functioning in response to treatment, we need specific information related to your impairment, including the following: A description of your medications, including frequency of administration; the type and frequency of therapy you receive; and a description of your response to treatment and any complications you experience related to your impairment. The effects of treatment may be temporary or long-term. We need information over a sufficient period to determine the effect of treatment on your current musculoskeletal functioning and to permit reasonable projections about your future functioning. In some cases, we will need additional evidence to make an assessment about your response to treatment. Depending upon the timing of this treatment in relation to the alleged onset date of disability, we may need to defer evaluation of the impairment for a period of up to 3 months from the date treatment began to permit consideration of treatment effects, unless we can make a determination or decision using the evidence we have.

6. *Assistive devices*

a. *General.* An assistive device, for the purposes of these listings, is any device that is used to improve stability, dexterity, or mobility. An assistive device can be worn (see 1.00C6b and c), or hand-held (see 1.00C6d). If you use any type of assistive device(s), we need evidence from a medical source regarding the documented medical need for the device(s). When we use the term ''documented medical need,'' we mean that there is evidence from a medical source(s) in the medical record that supports your need for an assistive device (see §§ 404.1513 and 416.913 of this chapter). The evidence must include documentation from a medical source(s) describing any limitation(s) in your upper or lower extremity functioning that supports your need for the assistive device(s), and the circumstances for which you need it. The evidence does not have to include a specific prescription for the device(s).

b. *Prosthesis(es).* A prosthesis is a wearable device, such as an artificial limb, that takes the place of an absent body part. We need evidence from a medical source documenting your ability to walk, or to perform fine and gross movements (see 1.00E3), with the prosthesis(es) in place. When amputation(s) involves a lower extremity or extremities, it is not necessary to evaluate your ability to walk without the prosthesis(es) in place. If you cannot use your prosthesis(es) due to complications affecting your residual limb(s), we need documentation from a medical source regarding the condition of your residual limb(s) and the medical basis for your inability to use the prosthesis(es).

c. *Orthosis(es).* An orthosis is a wearable device that prevents or corrects a dysfunction or deformity by aligning or supporting the affected body part. An orthosis may also be referred to as a ''brace.'' If you have an orthosis(es), we need evidence from a medical source documenting your ability to walk, or to perform fine and gross movements, with the orthosis(es) in place. If you cannot use your orthosis(es), we need evidence from a medical source documenting the medical basis for your inability to use the device(s).

d. *Hand-held assistive devices.* Hand-held assistive devices include canes, crutches, or walkers, and are carried in your hand(s) to support or aid you in walking. When you require a one-handed assistive device for ambulation, such as a cane or single crutch, and your other upper extremity has limitations preventing its use for fine or gross movement(s) (see 1.00E3), the need for the assistive device limits the use of both upper extremities. If you use a hand-held assistive device, we need evidence from a medical source documenting your need for the device(s) and describing how you walk with the device(s).

7. *Longitudinal evidence*

a. We generally need a longitudinal medical record to assess the duration of your musculoskeletal disorder, because symptoms, signs, and laboratory findings related to most musculoskeletal disorders may wax and wane, may improve over time, or may respond to treatment. By providing evidence over an extended period, the medical record will show whether your musculoskeletal functioning is improving, worsening, or unchanging.

b. For 1.19 *Pathologic fractures due to any cause* and 1.21 *Soft tissue injury or abnormality under continuing surgical management,* the required 12-month duration period is stated in the listing itself. For 1.20A (amputation of both upper extremities) or 1.20B (hemipelvectomy or hip disarticulation), we presume satisfaction of the duration requirement.

c. For all listings not referenced in 1.00C7b above, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. When we use the term ''close proximity of time,'' we mean that all of the relevant criteria have to appear in the medical record within a period not to exceed 4 months of one another. When the criterion in question is imaging, we mean those findings on imaging that we could reasonably expect to have been present at the date of impairment or date of onset. To meet a listing that uses the word ''and'' or ''AND'' to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

8. *Surgical treatment*

For some musculoskeletal disorders, a medical source may recommend surgery. If you have not yet had the recommended surgery, we will not deny your claim based on an assumption that surgery will resolve or improve your disorder. We will assess each case on an individual basis. Depending on your response to treatment, or depending on your medical sources' treatment plans, we may defer our findings regarding the effect of surgical intervention until a sufficient period has passed to permit proper consideration or judgment about your future functioning. See 1.00C5b *Response to treatment.*

D. *How do we consider symptoms, including pain, under these listings?*

1. Individuals with musculoskeletal disorders may experience pain or other symptoms; however, statements alone about your pain or other symptoms cannot establish that you are disabled. Further, an alleged or reported increase in the intensity of a symptom, such as pain, no matter how severe, cannot be substituted for a medical sign or diagnostic finding present in the listing criteria. Pain is included as just one consideration in paragraph A in listings 1.15, 1.16, and 1.18, but is not required to satisfy the criteria in these listings. Examples of other findings that will satisfy the criteria in paragraph A include muscle fatigue, nonradicular distribution of sensory loss in one or both extremities, and joint stiffness.

2. To consider your pain, we require objective medical evidence from an acceptable medical source showing the existence of a medically determinable impairment(s) (MDI) that could reasonably be expected to produce the pain. When your musculoskeletal MDI could reasonably be expected to produce the pain or other symptoms alleged, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with all of the objective medical evidence, including medical signs and laboratory or diagnostic findings. See §§ 404.1529 and 416.929 of this chapter for information on how we evaluate pain or other symptoms related to a musculoskeletal impairment.

E. *How do we use the functional criteria under these listings?*

1. *General.* We will determine that your musculoskeletal disorder meets a listing if it satisfies the medical criteria; includes at least one of the functional criteria, if included in the listing; and satisfies the 12-month duration requirement. We will use the relevant evidence that we have to evaluate

your musculoskeletal functioning with respect to the work environment rather than the home environment. For example, an ability to walk independently at home without an assistive device does not, in and of itself, indicate an ability to walk without an assistive device in a work environment.

2. *Functional criteria.* The functional criteria are based on impairment-related physical limitations in your ability to use both upper extremities, one or both lower extremities, or a combination of one upper and one lower extremity. A musculoskeletal disorder satisfies the functional criteria of a listing when the medical documentation shows the presence of at least one of the impairment-related limitations cited in the listing. The required impairment-related physical limitation of musculoskeletal functioning must have lasted, or be expected to last, for a continuous period of at least 12 months, medically documented by one of the following:

a. A documented medical need (see 1.00C6a) for a walker, bilateral canes, or bilateral crutches (see 1.00C6d);

b. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements (see 1.00E3), and a documented medical need (see 1.00C6a) for a one-handed assistive device (see 1.00C6d) that requires the use of your other upper extremity;

c. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements (see 1.00E3).

3. *Fine and gross movements.* Fine movements, for the purposes of these listings, involve use of your wrists, hands, and fingers; such movements include picking, pinching, manipulating, and fingering. Gross movements involve use of your shoulders, upper arms, forearms, and hands; such movements include handling, gripping, grasping, holding, turning, and reaching. Gross movements also include exertional abilities such as lifting, carrying, pushing, and pulling. Examples of inability to perform fine and gross movements include, but are not limited to, the inability to take care of personal hygiene, the inability to sort and handle papers or files, and the inability to place files in a file cabinet at or above waist level.

4. *When we do not use the functional criteria.* We do not use the functional criteria to evaluate amputation of both upper extremities under 1.20A, hemipelvectomy or hip disarticulation under 1.20B, and soft tissue injuries or abnormalities under continuing surgical management under 1.21.

F. *What do we consider when we evaluate disorders of the skeletal spine resulting in compromise of a nerve root(s) (1.15)?*

1. *General.* We consider musculoskeletal disorders such as herniated nucleus pulposus, spinal osteoarthritis (spondylosis), vertebral slippage (spondylolisthesis), degenerative disc disease, facet arthritis, and vertebral fracture or dislocation. Spinal disorders may cause cervical or lumbar spine dysfunction when abnormalities of the skeletal spine compromise nerve roots of the cervical spine, a nerve root of the lumbar spine, or a nerve root of both cervical and lumbar spines.

2. *Compromise of a nerve root(s).* Compromise of a nerve root(s), sometimes referred to as ''nerve root impingement,'' is a term used when a physical object is seen pushing on the nerve root in an imaging study or during surgery. Objects such as tumors, herniated discs, foreign bodies, or arthritic spurs may cause compromise of a nerve root. It can occur when a musculoskeletal disorder produces irritation, inflammation, or compression of the nerve root(s) as it exits the skeletal spine between the vertebrae. Related symptoms must be associated with, or follow the path of, the specific nerve root(s), thereby presenting a neuro-anatomic (usually referred to as ''radicular'') distribution of symptoms and signs, including pain, paresthesia (for example, burning, prickling, or tingling), sensory loss, and usually muscle weakness specific to the affected nerve root(s).

a. *Compromise of unilateral nerve root of the cervical spine.* Compromise of a nerve root as it exits the cervical spine between the vertebrae may affect the functioning of the associated upper extremity. The clinical examination reproduces the related symptoms based on radicular signs and clinical tests (for example, a positive Spurling's test) appropriate to the specific cervical nerve root.

b. *Compromise of bilateral nerve roots of the cervical spine.* Although uncommon, if compromise of a nerve root occurs on both sides of the cervical spinal column, functioning of both upper extremities may be limited.

c. *Compromise of a nerve root(s) of the lumbar spine.* Compromise of a nerve root as it exits the lumbar spine between the vertebrae may limit the functioning of the associated lower extremity. The clinical examination reproduces the related symptoms based on radicular signs and clinical tests. When a nerve root of the lumbar spine is compromised, we require a positive straight-leg raising test (also known as a Lasegue test) in both supine and sitting positions appropriate to the specific lumbar nerve root that is compromised. (See 1.00C2 for guidance on interpreting information from a physical examination report.)

G. *What do we consider when we evaluate lumbar spinal stenosis resulting in compromise of the cauda equina (1.16)?*

1. We consider the limiting effects of pain, sensory changes, and muscle weakness caused by compromise of the cauda equina due to lumbar spinal stenosis. The cauda equina is a bundle of nerve roots that descends from the lower part of the spinal cord. Lumbar spinal stenosis can compress the nerves of the cauda equina, causing sensory changes and muscle weakness that may affect your ability to stand or walk. Pain related to compromise of the cauda equina is ''nonradicular,'' because it is not typically associated with a specific nerve root (as is radicular pain in the cervical or lumbar spine).

2. Compromise of the cauda equina due to spinal stenosis can affect your ability to walk because of neurogenic claudication (also known as pseudoclaudication), a disorder usually causing non-radicular pain that starts in the low back and radiates bilaterally (or less commonly, unilaterally) into the buttocks and lower extremities (or extremity). Extension of the lumbar spine, as when walking or merely standing, provokes the pain of neurogenic claudication. It is relieved by forward flexion of the lumbar spine or by sitting. In contrast, the leg pain associated with peripheral vascular claudication results from inadequate arterial blood flow to a lower extremity. It occurs repeatedly and consistently when a person walks a certain distance and is relieved when the person rests.

H. *What do we consider when we evaluate reconstructive surgery or surgical arthrodesis of a major weight-bearing joint (1.17)?*

1. We consider reconstructive surgery or surgical arthrodesis when an acceptable medical source(s) documents the surgical procedure(s) and associated medical treatments to restore function of the affected body part(s). The reconstructive surgery may be a single event or it may be a series of procedures directed toward the salvage or restoration of functional use of the affected joint.

2. *Major weight-bearing joints.* The major weight-bearing joints are the hip, knee, and ankle-foot. The ankle and foot are considered together as one major joint.

3. *Surgical arthrodesis.* Surgical arthrodesis is the artificial fusion of the bones that form a joint, essentially eliminating the joint.

I. *What do we consider when we evaluate abnormality of a major joint(s) in any extremity (1.18)?*

1. *General.* We consider musculoskeletal disorders that produce anatomical abnormalities of major joints of the extremities, resulting in functional abnormalities in the upper or lower extremities (for example, osteoarthritis and chronic infections of bones and joints, surgical arthrodesis of a joint). Major joint of an upper extremity refers to the shoulder, elbow, and wrist-hand. We consider the wrist and hand together as one major joint. Major joint of a lower extremity refers to the hip, knee, and ankle-foot. We consider the ankle and hindfoot together as one major joint, because it is necessary for walking. Abnormalities affecting the joints may include ligamentous laxity or rupture, soft tissue contracture, or tendon rupture, and can cause muscle weakness of the affected body part.

2. *How do we define abnormality in the extremities?* An anatomical abnormality in any extremity(ies) is one that is readily observable by a medical source during a physical examination (for example, subluxation or contracture), or is present on imaging (for example, ankylosis, bony destruction, joint space narrowing, or deformity). A functional abnormality is abnormal motion or instability of the affected part(s), including limitation of motion, excessive motion (hypermobility), movement outside the normal plane of motion for the joint (for example, lateral deviation), or fixation of the affected parts.

J. *What do we consider when we evaluate pathologic fractures due to any cause (1.19)?*

We consider pathologic fractures of the bones in the skeletal spine, extremities, or other parts of the skeletal system. Pathologic fractures result from disorders that weaken the bones, making them vulnerable to breakage. For non-healing or complex traumatic fractures without accompanying pathology, see 1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones* or 1.23 *Non-healing or complex fracture of an upper extremity.* Pathologic fractures may occur with osteoporosis, osteogenesis imperfecta or any other skeletal dysplasias, side effects of medications, and disorders of the endocrine or other body systems. They must occur on separate, distinct occasions, rather than multiple fractures occurring at the same time, but they may affect the same bone(s) multiple times. There is no required period between the incidents of fracture(s), but they must all occur within a 12-month period; for example, separate incidents may occur within hours or days of each other. However, the associated limitation(s) of function must last, or be expected to last, at least 12 months.

K. *What do we consider when we evaluate amputation due to any cause (1.20)?*

1. *General.* We consider amputation (the full or partial loss or absence of any extremity) due to any cause, including trauma, congenital abnormality or absence, surgery for treatment of conditions such as cancer or infection, or complications of peripheral vascular disease or diabetes mellitus.

2. *Amputation of both upper extremities (1.20A).* Upper extremity amputations, for the purposes of this listing, may occur at any level above the wrists (carpal joints), up to and including disarticulation of the shoulder (glenohumeral) joint. We do not evaluate amputations below the wrists under this listing, because the resulting limitation of function of the thumb(s), finger(s), or hand(s) will vary, depending on the extent of loss and corresponding effect on fine and gross movements (see 1.00E3). For amputations below the wrist, we will follow the remaining steps of the sequential evaluation process (see §§ 404.1520 and 416.920 of this chapter).

3. *Hemipelvectomy or hip disarticulation (1.20B).* Hemipelvectomy involves amputation of an entire lower extremity through the sacroiliac joint. Hip disarticulation involves amputation of an entire lower extremity through the hip joint capsule and closure of the remaining musculature over the exposed acetabular bone.

4. *Amputation of one upper extremity at any level above the wrist and one lower extremity at or above the ankle (1.20C).* We evaluate the absence of one upper extremity and one lower extremity with regard to whether you have a documented medical need (see 1.00C6a) for a one-handed assistive device (see 1.00C6d), such as a cane or crutch. In this situation, you may wear a prosthesis (see 1.00C6b) on your lower extremity, but nevertheless have a documented medical need for a one-handed assistive device. If you do, you would need to use your other upper extremity to hold the assistive device, making the extremity unavailable to perform other fine and gross movements (see 1.00E3) such as carrying. In such a case, your disorder would meet this listing.

5. *Amputation of one or both lower extremities at or above the ankle (tarsal joint) (1.20D).* When we evaluate amputations of one or both lower extremities:

a. We consider the condition of your residual limb(s), and whether you can wear a prosthesis(es) (see 1.00C6b). When you have a prosthesis(es), we will examine your residual limb with the prosthesis(es) in place. If you are unable to use a prosthesis(es) because of residual limb complications that have lasted, or are expected to last, for at least 12 months, and you are not currently undergoing surgical management (see 1.00L) of your condition, we evaluate your disorder under this listing.

b. Under 1.20D ''Amputation of one or both lower extremities at or above the ankle (tarsal joint),'' we consider whether you have a documented medical need (see 1.00C6a) for a hand-held assistive device(s) (1.00C) and your ability to walk with the device(s).

c. If you have a non-healing residual limb(s) and are receiving ongoing surgical treatment expected to re-establish or improve function, and that ongoing surgical treatment has not ended, or is not expected to end, within at least 12 months of the initiation of the surgical management (see 1.00L1), we evaluate your disorder under 1.21 *Soft tissue injury or abnormality under continuing surgical management.*

L. *What do we consider when we evaluate soft tissue injuries or abnormalities under continuing surgical management (1.21)?*

1. *General.*

a. We consider any soft tissue injury or abnormality involving the soft tissues of the body, whether congenital or acquired, when an acceptable medical source(s) documents the need for ongoing surgical procedures and associated medical treatments to restore function of the affected body part(s). Surgical management includes the surgery(-ies) itself, as well as various post-surgical procedures, surgical complications, infections or other medical complications, related illnesses, or related treatments that delay a person's attainment of maximum benefit from surgery.

b. Surgical procedures and associated treatments typically take place over extended periods, which may render you unable to perform work-related activity on a sustained basis. To document such inability, we must have evidence from an acceptable medical source(s) confirming that the surgical management has continued, or is expected to continue, for at least 12 months from the date of the first surgical intervention. These procedures and treatments must be directed toward saving, reconstructing, or replacing the affected part of the body to re-establish or improve its function, and not for cosmetic appearances alone.

c. Examples include malformations, third and fourth degree burns, crush injuries, craniofacial injuries, avulsive injuries, and amputations with complications of the residual limb(s).

d. We evaluate skeletal spine abnormalities or injuries under 1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s),* or 1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina,* as appropriate. We evaluate abnormalities or injuries of bones in the lower extremities under 1.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint,* 1.18 *Abnormality of a major joint(s) in any extremity,* or 1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.* We evaluate abnormalities or injuries of bones in the upper extremities under 1.18 *Abnormality of a major joint(s) in any extremity,* or 1.23 *Non-healing or complex fracture of an upper extremity.*

2. *Documentation.* In addition to the objective medical evidence we need to establish your soft tissue injury or abnormality, we also need all of the following medically documented evidence about your continuing surgical management:

a. Operative reports and related laboratory findings;

b. Records of post-surgical procedures;

c. Records of any surgical or medical complications (for example, related infections or systemic illnesses);

d. Records of any prolonged post-operative recovery periods and related treatments (for example, surgeries and treatments for burns);

e. An acceptable medical source's plans for additional surgeries; and

f. Records detailing any other factors that have delayed, or that an acceptable medical source expects to delay, the saving, restoring, or replacing of the involved part for a continuous period of at least 12 months following the initiation of the surgical management.

3. *Burns.* Third- and fourth-degree burns damage or destroy nerve tissue, reducing or preventing transmission of signals through those nerves. Such burns frequently require multiple surgical procedures and related therapies to re-establish or improve function, which we evaluate under 1.21 *Soft tissue injury or abnormality under continuing surgical management.* When burns are no longer under continuing surgical management, we evaluate the residual impairment(s) (see 1.00O). When the residual impairment(s) affects the musculoskeletal system, as often occurs in third and fourth degree burns, it can result in permanent musculoskeletal tissue loss, joint contractures, or loss of extremities. We will evaluate such impairments under the relevant musculoskeletal listing(s), for example, 1.18 *Abnormality of a major joint(s) in any extremity* or 1.20 *Amputation due to any cause.* When the residual impairment(s) involves another body system(s), we will evaluate the impairment(s) under the relevant body system listing (for example, 8.08 *Burns*).

4. *Craniofacial injuries.* Surgeons may treat craniofacial injuries with multiple surgical procedures. These injuries may affect vision, hearing, speech, and the initiation of the digestive process, including mastication. When the craniofacial injury-related residual impairment(s) involves another body system(s), we will evaluate the impairment(s) under the relevant body system listings. See 1.00O regarding evaluation of residual impairment(s).

M. *What do we consider when we evaluate non-healing or complex fractures of the*

femur, tibia, pelvis, or one or more of the tarsal bones (1.22)?

1. We evaluate a non-healing (nonunion) or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones with regard to whether you have a documented medical need (see 1.00C6a) for a bilateral (two-handed) assistive device (see 1.00C6d), such as a walker or bilateral crutches.

2. *Non-healing fracture.* A non-healing fracture is a fracture that has failed to unite completely. Nonunion is usually established when a minimum of 9 months has elapsed since the injury and the fracture site has shown no progressive signs of healing for a minimum of 3 months.

3. *Complex fracture.* A fracture is complex when one or more of the following occur:

a. Comminuted (broken into many pieces) bone fragments,

b. Multiple fractures in a single bone,

c. Bone loss due to severe trauma,

d. Damage to the surrounding soft tissue,

e. Severe cartilage damage to the associated joint, or

f. Dislocation of the associated joint.

4. When a complex fracture involves soft tissue damage, the treatment may involve continuing surgical management to restore or improve functioning. In such cases, we may evaluate the fracture(s) under 1.21 *Soft tissue injury or abnormality under continuing surgical management.*

N. *What do we consider when we evaluate non-healing or complex fractures of an upper extremity (1.23)?*

1. We evaluate a non-healing (nonunion) or complex fracture of an upper extremity under continuing surgical management (see 1.00L1a) with regard to whether you have an inability to use both upper extremities to independently initiate, sustain, and complete fine and gross movements.

2. *Non-healing fracture.* A non-healing fracture is a fracture that has failed to unite completely. Nonunion is usually established when a minimum of 9 months have elapsed since the injury and the fracture site has shown no progressive signs of healing for a minimum of 3 months.

3. *Complex fracture.* A fracture is complex when one or more of the following occur:

a. Comminuted (broken into many pieces) bone fragments,

b. Multiple fractures in a single bone,

c. Bone loss due to severe trauma,

d. Damage to the surrounding soft tissue,

e. Severe cartilage damage to the associated joint, or

f. Dislocation of the associated joint.

O. *How do we determine when your soft tissue injury or abnormality or your upper extremity fracture is no longer under continuing surgical management or you have received maximum therapeutic benefit?*

1. Your soft tissue injury or abnormality or your upper extremity fracture is no longer under continuing surgical management when the last surgical procedure or medical treatment directed toward the re-establishment or improvement of function of the involved part has occurred. We will find that you have received maximum therapeutic benefit from treatment if there are no significant changes in physical findings or on appropriate imaging for any 6-month period after the last surgical procedure or medical treatment. We may also find that you have received maximum therapeutic benefit if your medical source(s) indicates that further improvement is not expected after the last surgical procedure or medical treatment.

2. When you have received maximum therapeutic benefit from treatment, we will evaluate any impairment-related residual symptoms, signs, and laboratory findings (including those on imaging), any complications associated with your surgical procedures or medical treatments, and any residual limitations in your functioning. Depending upon all of those factors, we may find that your musculoskeletal impairment is no longer severe.

3. If your impairment(s) remains severe, we will evaluate your residual limitations and all other impairment-related factors to determine whether your musculoskeletal disorder meets or medically equals another listing. If it does not, we will follow the remaining steps of the sequential evaluation process to determine whether you have the residual functional capacity (RFC) to engage in substantial gainful activity. If your impairment involves burns and remains severe, we will follow the above sequence by evaluating your impairment as described in 1.00L3.

P. *How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment?*

1. You may not have received ongoing treatment or may not have an ongoing relationship with the medical community despite having a musculoskeletal disorder(s). In either of these situations, you will not have a longitudinal medical record for us to review when we evaluate your disorder. We may therefore ask you to attend a consultative examination to determine the severity and potential duration of your disorder (see §§ 404.1519a(b) and 416.919a(b) of this chapter).

2. In some instances, we may be able to assess the severity and duration of your musculoskeletal disorder based on your medical record and current evidence alone. If the information in your case record is not sufficient or appropriate to show that you have a musculoskeletal disorder that meets the criteria of one of the musculoskeletal disorders listings, we will follow the rules in 1.00R.

Q. *How do we evaluate substance use disorders that co-exist with a musculoskeletal disorder?*

If we find that you are disabled and there is medical evidence in your case record establishing that you have a substance use disorder that co-exists with your musculoskeletal disorder, we will determine whether your substance use disorder is a contributing factor material to the determination of disability (see §§ 404.1535 and 416.935 of this chapter).

R. *How do we evaluate disorders that do not meet one of the musculoskeletal listings?*

1. These listings are only examples of musculoskeletal disorders that we consider severe enough to prevent your ability to engage in any gainful activity. If your musculoskeletal disorder(s) does not meet the criteria of any of these listings, we will consider whether you have an impairment(s) that meets the criteria of a listing in another body system.

2. If you have a severe medically determinable impairment(s) that does not meet any listing, we will determine whether your impairment(s) medically equals a listing. See §§ 404.1526 and 416.926 of this chapter. If it does not medically equal a listing, we will assess your RFC. See §§ 404.1545 and 416.945 of this chapter. To assess your RFC, we may require evidence in addition to, or different from, the types of evidence that we use to determine whether your impairment(s) meets or medically equals a listing. We will use the assessment of your RFC to evaluate your claim at the fourth, and if necessary, the fifth step of the sequential evaluation process to determine whether you can perform your past work or adjust to any other work, respectively. See §§ 404.1520 and 416.920 of this chapter.

3. We use the rules in §§ 404.1594 and 416.994 of this chapter, as appropriate, when we decide whether you continue to be disabled.

1.01 Category of Impairments, Musculoskeletal Disorders

1.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s)* (see 1.00F), documented by A, B, C, and D:

A. Symptom(s) of neuro-anatomic (radicular) distribution of one or more of the following manifestations consistent with compromise of the affected nerve root(s):

1. Pain; or

2. Paresthesias; or

3. Muscle fatigue.

AND

B. Radicular neurological signs present during physical examination or testing and evidenced by 1, 2, and 4; or 1, 3, and 4 below:

1. Muscle weakness; and

2. Sensory changes evidenced by:

a. Decreased sensation; or

b. Sensory nerve deficit (abnormal sensory nerve latency) on electrodiagnostic testing; or

3. Decreased deep tendon reflexes; and

4. Sign(s) of nerve root irritation, tension, or compression, consistent with compromise of the affected nerve root (see 1.00F2).

AND

C. Findings on imaging consistent with compromise of a nerve root(s) in the cervical or lumbosacral spine (see 1.00C3).

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 1.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

1.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina* (see 1.00G), documented by A, B, C, and D:

A. Symptoms of neurological compromise, such as pain, manifested as:

1. Nonradicular distribution of pain in one or both lower extremities; or

2. Nonradicular distribution of sensory loss in one or both extremities; or

3. Neurogenic claudication.

AND

B. Nonradicular neurological signs present during physical examination or testing and evidenced by 1 and 2, or 1 and 3, below:

1. Muscle weakness; and

2. Sensory changes evidenced by:

a. Decreased sensation; or

b. Sensory nerve deficit (abnormal sensory nerve latency) on electrodiagnostic testing; or

c. Areflexia, trophic ulceration, or bladder or bowel incontinence.

3. Decreased deep tendon reflexes in one or both lower extremities.

AND

C. Findings on imaging or in an operative report consistent with compromise of the cauda equina with lumbar spinal stenosis.

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 1.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity.

1.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint* (see 1.00H), documented by A, B, and C:

A. Documented history of reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months.

AND

C. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 1.00E).

1.18 *Abnormality of a major joint(s) in any extremity* (see 1.00I), documented by A, B, C, and D:

A. Chronic joint pain or stiffness.

AND

B. Abnormal motion, instability, or immobility of the affected joint(s).

AND

C. Anatomical abnormality of the affected joint(s) noted on:

1. Physical examination (for example, subluxation, contracture, bony or fibrous ankylosis); or

2. Imaging (for example, joint space narrowing, bony destruction, or ankylosis or arthrodesis of the affected joint).

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 1.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

1.19 *Pathologic fractures due to any cause* (see 1.00J), documented by A and B:

A. Three or more medically documented pathologic fractures occurring on separate occasions within a 12-month period;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 1.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

1.20 *Amputation due to any cause* (see 1.00K), documented by A, B, C, or D:

A. Amputation of both upper extremities, occurring at any level above the wrists (carpal joints), up to and including the shoulder (glenohumeral) joint.

OR

B. Hemipelvectomy or hip disarticulation.

OR

C. Amputation of one upper extremity, occurring at any level above the wrist (carpal joints), and one lower extremity at or above the ankle (tarsal joint), and medical documentation of one the following (see 1.00E):

1. The documented medical need for a one-handed assistive device requiring the use of the other upper extremity; or

2. The inability to use the remaining upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

OR

D. Amputation of one or both lower extremities at or above the ankle (tarsal joint), with complications of the residual limb that have lasted or can be expected to last for at least 12 months, and medical documentation of both 1 and 2 (see 1.00E):

1. The inability to use a prosthetic device(s); and

2. The documented medical need for a walker, bilateral canes, or bilateral crutches.

1.21 *Soft tissue injury or abnormality under continuing surgical management* (see 1.00L), documented by A, B, and C in the medical record:

A. Evidence confirms ongoing surgical management directed towards saving, reconstructing, or replacing the affected part of the body.

AND

B. The surgical management has been, or is expected to be, ongoing for at least 12 months.

AND

C. Maximum benefit from therapy has not yet been achieved.

1.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones* (see 1.00M), documented by A and B and C:

A. Solid union not evident on appropriate medically acceptable imaging and not clinically solid;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months,

AND

C. Medical documentation of medical need for a walker, bilateral canes, or bilateral crutches (see 1.00E).

1.23 *Non-healing or complex fracture of an upper extremity* (see 1.00N), documented by A and B and C:

A. Nonunion of a fracture, or complex fracture of the shaft of the humerus, radius, or ulna, under continuing surgical management, as defined in 1.00O, directed toward restoration of functional use of the extremity;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months;

AND

C. Medical documentation of at least one of the following (see 1.00E):

1. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

2. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and

complete work-related activities involving fine and gross movements.

* * * * *

G. *Evaluating Peripheral Vascular Disease*

* * * * *

4. *What is lymphedema and how will we evaluate it?*

* * * * *

b. * * * We will evaluate lymphedema by considering whether the underlying cause meets or medically equals any listing or whether the lymphedema medically equals a cardiovascular listing, such as 4.11 *Chronic venous insufficiency,* or a musculoskeletal listing, such as 1.18 *Abnormality of a major joint(s) in any extremity.* * * *

* * * * *

14.00 IMMUNE SYSTEM DISORDERS

* * * * *

C. *Definitions*

* * * * *

2. *Assistive device(s)* has the same meaning as in 1.00C6a.

* * * * *

5. *Documented medical need* has the same meaning as in 1.00C6a.

* * * * *

8. *Fine and gross movements* has the same meaning as in 1.00E3.

9. *Hand-held assistive device* has the same meaning as in 1.00C6d.

10. *Major joint of an upper or lower extremity* has the same meaning as in 1.00I1.

* * * * *

D. *How do we document and evaluate the listed autoimmune disorders?*

* * * * *

4. *Polymyositis and dermatomyositis (14.05).*

* * * * *

c. * * *

(i) Weakness of your pelvic girdle muscles that results in your inability to rise independently from a squatting or sitting position or to climb stairs may be an indication that you are unable to walk without physical or mechanical assistance. * * *

* * * * *

d. * * *

6. * * *

a. *General.* * * * Clinically, inflammation of major joints in an upper or lower extremity may be the dominant manifestation causing difficulties with walking or performing fine and gross movements; there may be joint pain, swelling, and tenderness. The arthritis may affect other joints, or cause less limitation in walking or performing fine and gross movements. * * *

* * * * *

e. * * *

(i) Listing-level severity in 14.09 *Inflammatory arthritis* is shown by the presence of an impairment-related, significant limitation cited in the criteria of these listings. In 14.09A, listing-level severity is satisfied with persistent inflammation or deformity in one major joint in a lower extremity resulting in a documented medical need for a walker, bilateral canes, or bilateral crutches as required in 14.09A1, or one major joint in each upper extremity resulting in an impairment-related, significant limitation in the ability to perform fine and gross movements as required in 14.09A2. In 14.09C1, if you have the required ankylosis (fixation) of your cervical or dorsolumbar spine, we will find that you have an impairment-related significant limitation in your ability to see in front of you, above you, and to the side. Therefore, a listing-level impairment in the ability to walk is implicit in 14.09C1, even though you might not require bilateral upper limb assistance.

(ii) Listing-level severity is shown in 14.09B, 14.09C2, and 14.09D by inflammatory arthritis that involves various combinations of complications of one or more major joints in an upper or lower extremity or other joints, such as inflammation or deformity, extra-articular features, repeated manifestations, and constitutional symptoms or signs. * * *

* * * * *

14.04 *Systemic sclerosis (scleroderma).* As described in 14.00D3. With:

* * * * *

B. One of the following:

1. Toe contractures or fixed deformity of one or both feet, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 14.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 14.00C9) that requires the use of the other upper extremity; or

2. Finger contractures or fixed deformity in both hands, resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements; or

3. Atrophy with irreversible damage in one or both lower extremities, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 14.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 14.00C9) that requires the use of the other upper extremity; or

4. Atrophy with irreversible damage in both upper extremities, resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

OR

C. Raynaud's phenomenon, characterized by:

* * * * *

2. Ischemia with ulcerations of toes or fingers, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 14.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 14.00C9) that requires the use of the other upper extremity; or

c. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

* * * * *

14.05 *Polymyositis and dermatomyositis.* As described in 14.00D4. With:

A. Proximal limb-girdle (pelvic or shoulder) muscle weakness, resulting in one of the following:

1. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 14.00C9); or

2. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 14.00C9) that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

* * * * *

14.09 *Inflammatory arthritis.* As described in 14.00D6. With:

A. Persistent inflammation or persistent deformity of:

1. One or more major joints in a lower extremity(ies) resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 14.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete work-related activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 14.00C9) that requires the use of the other upper extremity; or

2. One or more major joints in each upper extremity resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete work-related activities involving fine and gross movements.

OR

B. Inflammation or deformity in one or more major joints of an upper or lower extremity(ies) with: * * *

* * * * *

Part B

* * * * *

101.00 Musculoskeletal Disorders.

* * * * *

101.00 Musculoskeletal Disorders

A. *Which disorders do we evaluate under these listings?*

1. We evaluate disorders of the skeletal spine (vertebral column) or of the upper or lower extremities that affect musculoskeletal functioning in the musculoskeletal body system listings. We use the term ''skeletal'' when we are referring to the structure of the bony skeleton. The skeletal spine refers to the bony structures, ligaments, and discs making up the spine. We refer to the ''skeletal'' spine in some musculoskeletal listings to differentiate it from the neurological spine (see 101.00B1). Disorders may be congenital or acquired, and may include deformities, amputations, or other musculoskeletal abnormalities. These disorders may involve the bones or major joints; or the tendons, ligaments, muscles, or other soft tissues.

2. We also evaluate soft tissue abnormalities or injuries (including burns) that are under continuing surgical management (see 101.00L). The abnormalities or injuries may affect any part of the body, including the face and skull.

B. *Which related disorders do we evaluate under other listings?*

1. We evaluate a disorder or injury of the skeletal spine that results in damage to, and neurological dysfunction of, the spinal cord and its associated nerves (for example, paraplegia or quadriplegia) under the criteria in 111.00 *Neurological Disorders.*

2. We evaluate inflammatory arthritis (for example, rheumatoid arthritis) under the criteria in 114.00 *Immune System Disorders.*

3. We evaluate curvatures of the skeletal spine under these musculoskeletal disorders listings and other listings as appropriate for the affected body system. Curvatures of the skeletal spine that affect musculoskeletal functioning are evaluated under 101.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s).* If a curvature of the skeletal spine is under continuing surgical management, we can evaluate it for medical equivalence to 101.21 *Soft tissue injury or abnormality under continuing surgical management.* Skeletal curvatures may also adversely affect functioning in body systems other than the musculoskeletal system. For example, the curvature may interfere with your ability to breathe (see 103.00 *Respiratory Disorders*); there may be impaired myocardial function (see 104.00 *Cardiovascular System*); or there may be disfigurement resulting in social withdrawal or depression (see 112.00 *Mental Disorders*).

4. We evaluate non-healing or pathological fractures due to cancer, whether it is a primary site or metastases, under the criteria in 113.00 *Cancer (Malignant Neoplastic Diseases).*

5. We evaluate the leg pain associated with peripheral vascular claudication under the criteria in 104.00 *Cardiovascular System.*

6. We evaluate burns that do not require continuing surgical management under the criteria in 108.00 *Skin Disorders.*

C. *What evidence do we need to evaluate your musculoskeletal disorder under these listings?*

1. *General.* To establish the presence of a musculoskeletal disorder as a medically determinable impairment, we need objective medical evidence from an acceptable medical source who has examined you for the disorder. To assess the severity and duration of your disorder, we evaluate evidence from both medical and nonmedical sources who can describe how you function. If there is no record of ongoing medical treatment for your disorder, we will follow the guidelines in 101.00Q *How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment?* We will determine the extent and kinds of evidence we need from medical and non-medical sources based on the individual facts about your disorder. For our basic rules on evidence, see §§ 416.902, 416.912, 416.913, 416.913a, and 416.920b of this chapter. For our rules on evidence about your symptoms, see § 416.929 of this chapter.

2. *Physical examination report(s).* In the report(s) of your physical examination, we need a detailed description of the orthopedic, neurologic, or other objective clinical findings appropriate to your specific musculoskeletal disorder. We require objective clinical findings from the medical source's direct observations during your physical examination, not simply his or her report of your statements about your symptoms and limitations. When the medical source reports that a clinical test sign(s) is positive, unless we have evidence to the contrary, we will assume that he or she performed the test properly. For instance, we will assume a straight-leg raising test was conducted properly, *i.e.,* in a sitting and supine position, even if the medical source does not specify the positions in which the test was performed. In the absence of evidence to the contrary, we will accept the medical source's interpretation of the test. If you use an assistive device (see 101.00C6), the report must support the medical need for the device. If reduction in muscle strength is a factor, we require medical documentation of measurement of the strength of the muscle(s) in question, generally based on a grading system of 0 to 5. Zero (0) indicates complete loss of strength and 5 indicates maximum strength, consistent with Table 1 below. The documentation should also include measurements of grip and pinch strength, if there is evidence of involvement of one or both hands.

TABLE 1

Grading Scale of Muscle Function: 0 to 5

0	None	No visible or palpable contraction.
1	Trace	Visible or palpable contraction with no motion.
2	Poor	Active range of motion (ROM) with gravity eliminated.
3	Fair	Active ROM against gravity only, without resistance.
4	Good	Active ROM against gravity, moderate resistance.
5	Normal	Active ROM against gravity, maximum resistance.

3. *Laboratory findings: Imaging and other diagnostic tests*

a. Imaging refers to medical imaging techniques, such as x-ray, computed tomography (CT), magnetic resonance imaging (MRI), and radionuclide scanning. For the purpose of these listings, the imaging technique(s) must be consistent with the generally accepted standards of medical knowledge and clinical practice.

b. Findings on imaging must have lasted, or must be expected to last, for a continuous period of at least 12 months.

c. Imaging and other diagnostic tests can provide evidence of physical abnormalities; however, they may correlate poorly with your symptoms, including pain, or with your musculoskeletal functioning. Accordingly, we cannot use such tests as a substitute for physical examination findings about your ability to function, nor can we infer severity or functional limitations based solely on such tests.

d. For our policies about when we will purchase imaging and other diagnostic tests, see §§ 416.919k and 416.919m of this chapter.

4. *Operative reports.* If you have had a surgical procedure(s), we need either the operative reports, including details of the findings at surgery and information about any medical complications that may have occurred, or confirmatory evidence of the surgical procedure(s) from a medical source (for example, detailed follow-up reports or notations in the medical records concerning your past medical history).

5. *Effects of treatment*

a. *General.* Treatments for musculoskeletal disorders may have beneficial or adverse effects, and responses to treatment vary from person to person. We will evaluate all of the effects of treatment (including surgical treatment, medications, and therapy) on the symptoms, signs, and laboratory findings of your musculoskeletal disorder, and on your musculoskeletal functioning.

b. *Response to treatment.* To evaluate your musculoskeletal functioning in response to treatment, we need specific information related to your impairment, including the following: A description of your medications, including frequency of administration; the type and frequency of therapy you receive; and a description of your response to treatment and any complications you experience related to your impairment. The effects of treatment may be temporary or long-term. We need information over a sufficient period to determine the effect of

treatment on your current musculoskeletal functioning and to permit reasonable projections about your future functioning. In some cases, we will need additional evidence to make an assessment about your response to treatment. Depending upon the timing of this treatment in relation to the alleged onset date of disability, we may need to defer evaluation of the impairment for a period of up to 3 months from the date treatment began to permit consideration of treatment effects, unless we can make a determination or decision using the evidence we have.

6. *Assistive devices*

a. *General.* An assistive device, for the purposes of these listings, is any device that is used to improve stability, dexterity, or mobility. An assistive device can be worn (see 101.00C6b and c), or hand-held (see 101.00C6d). If you use any type of assistive device(s), we need evidence from a medical source regarding the documented medical need for the device(s). When we use the term ''documented medical need,'' we mean that there is evidence from a medical source(s) in the medical record that supports your need for an assistive device (see § 416.913 of this chapter). The evidence must include documentation from a medical source(s) describing any limitation(s) in your upper or lower extremity functioning that supports your need for the assistive device, and supporting the circumstances for which you need it. The evidence does not have to include a specific prescription for the device.

b. *Prosthesis(es).* A prosthesis is a wearable device, such as an artificial limb, that takes the place of an absent body part. We need evidence from a medical source documenting your ability to walk, or to perform fine and gross movements (see 101.00E4), with the prosthesis(es) in place. When amputation(s) involves a lower extremity or extremities, it is not necessary to evaluate your ability to walk without the prosthesis(es) in place. If you cannot use your prosthesis(es) due to complications affecting your residual limb(s), we need documentation from a medical source regarding the condition of your residual limb(s) and the medical basis for your inability to use the prosthesis(es).

c. *Orthosis(es).* An orthosis is a wearable device that prevents or corrects a dysfunction or deformity by aligning or supporting the affected body part. An orthosis may also be referred to as a ''brace.'' If you have an orthosis(es), we need evidence from a medical source documenting your ability to walk, or to perform fine and gross movements, with the orthosis(es) in place. If you cannot use your orthosis(es), we need evidence from a medical source documenting the medical basis for your inability to use the device(s).

d. *Hand-held assistive devices.* Hand-held assistive devices include canes, crutches, or walkers, and are carried in your hand(s) to support or aid you in walking. When you require a one-handed assistive device for ambulation, such as a cane or single crutch, and your other upper extremity has limitations preventing its use for fine or gross movement(s) (see 101.00E4), the need for the assistive device limits the use of both upper extremities. If you use a hand-held assistive device, we need evidence from a medical source documenting your need for the device(s) and describing how you walk with the device(s).

7. *Longitudinal evidence*

a. We generally need a longitudinal medical record to assess the duration of your musculoskeletal disorder, because symptoms, signs, and laboratory findings related to most musculoskeletal disorders may wax and wane, may improve over time, or may respond to treatment. By providing evidence over an extended period, the medical record will show whether your musculoskeletal functioning is improving, worsening, or unchanging.

b. For 101.19 *Pathologic fractures due to any cause* and 101.21 *Soft tissue injury or abnormality under continuing surgical management,* the required 12-month duration period is stated in the listing itself. For 101.20A (amputation of both upper extremities) or 101.20B (hemipelvectomy or hip disarticulation), we presume satisfaction of the duration requirement.

c. For all listings not referenced in 101.00C7b above, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. When we use the term ''close proximity of time,'' we mean that all of the relevant criteria have to appear in the medical record within a period not to exceed 4 months of one another. When the criterion in question is imaging, we mean those findings on imaging that we could reasonably expect to have been present at the date of impairment or date of onset. To meet a listing that uses the word ''and'' or ''AND'' to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

8. *Surgical treatment*

For some musculoskeletal disorders, a medical source may recommend surgery. If you have not yet had the recommended surgery, we will not deny your claim based on an assumption that surgery will resolve or improve your disorder. We will assess each case on an individual basis. Depending on your response to treatment, or depending on your medical sources' treatment plans, we may defer our findings regarding the effect of surgical intervention until a sufficient period has passed to permit proper consideration or judgment about your future functioning. See 101.00C5b *Response to treatment.*

D. *How do we consider symptoms, including pain, under these listings?*

1. Individuals with musculoskeletal disorders may experience pain or other symptoms; however, statements alone about your pain or other symptoms cannot establish that you are disabled. Further, an alleged or reported increase in the intensity of a symptom, such as pain, no matter how severe, cannot be substituted for a medical sign or diagnostic finding present in the listing criteria. Pain is included as just one consideration in paragraph A in listings 101.15, 101.16, and 101.18, but is not required to satisfy the criteria in these listings. Examples of other findings that will satisfy the criteria in paragraph A include muscle fatigue, nonradicular distribution of sensory loss in one or both extremities, and joint stiffness.

2. To consider your pain, we require objective medical evidence from an acceptable medical source showing the existence of a medically determinable impairment(s) (MDI) that could reasonably be expected to produce the pain. When your musculoskeletal MDI could reasonably be expected to produce the pain or other symptoms alleged, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with all of the objective medical evidence, including medical signs and laboratory or diagnostic findings. See § 416.929 of this chapter for information on how we evaluate pain or other symptoms related to a musculoskeletal impairment.

E. *How do we use the functional criteria under these listings?*

1. *General.* We will determine that your musculoskeletal disorder meets a listing if it satisfies the medical criteria; includes at least one of the functional criteria, if included in the listing; and satisfies the 12-month duration requirement. We will use the relevant evidence that we have to compare your musculoskeletal functioning to the functioning of children your age who do not have impairments. For example, if you are able to walk at home without an assistive device, we will not consider that to be conclusive evidence that you have similar functioning to other children your age who do not have impairments.

2. *Medical and functional criteria, birth to attainment of age 3.* The medical and functional criteria for children in this age group are in 101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay.*

3. *Functional criteria, age 3 to attainment of age 18.* The functional criteria are based on impairment-related physical limitations in your ability to use both upper extremities, one or both lower extremities, or a combination of one upper and one lower extremity. A musculoskeletal disorder satisfies the functional criteria of a listing when the medical documentation shows the presence of at least one of the impairment-related limitations cited in the listing. The functional criteria require impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, medically documented by one of the following:

a. A documented medical need (see 101.00C6a) for a walker, bilateral canes, or bilateral crutches (see 101.00C6d);

b. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements (see 101.00E4), and a documented medical need (see 101.00C6a) for a one-handed assistive device (see 101.00C6d) that requires the use of your other upper extremity;

c. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements (see 101.00E4).

4. *Fine and gross movements.* Fine movements, for the purposes of these listings, involve use of your wrists, hands, and fingers; such movements include picking, pinching, manipulating, and fingering. Gross movements involve use of your shoulders, upper arms, forearms, and hands; such movements include handling, gripping, grasping, holding, turning, and reaching. Gross movements also include exertional abilities such as lifting, carrying, pushing, and pulling.

5. *When we do not use the functional criteria.* We do not use the functional criteria to evaluate amputation of both upper extremities under 101.20A, hemipelvectomy or hip disarticulation under 101.20B, and soft tissue injuries or abnormalities under continuing surgical management under 101.21.

F. *What do we consider when we evaluate disorders of the skeletal spine resulting in compromise of a nerve root(s) (101.15)?*

1. *General.* We consider musculoskeletal disorders such as skeletal dysplasias, caudal regression syndrome, tethered spinal cord syndrome, vertebral slippage (spondylolisthesis), scoliosis, and vertebral fracture or dislocation. Spinal disorders may cause cervical or lumbar spine dysfunction when abnormalities of the skeletal spine compromise nerve roots of the cervical spine, a nerve root of the lumbar spine, or a nerve root of both cervical and lumbar spines.

2. *Compromise of a nerve root(s).* Compromise of a nerve root(s), sometimes referred to as ''nerve root impingement,'' is a term used when a physical object is seen pushing on the nerve root in an imaging study or during surgery. Objects such as tumors, herniated discs, foreign bodies, or arthritic spurs may cause compromise of a nerve root. It can occur when a musculoskeletal disorder produces irritation, inflammation, or compression of the nerve root(s) as it exits the skeletal spine between the vertebrae. Related symptoms must be associated with, or follow the path of, the specific nerve root(s), thereby presenting a neuro-anatomic (usually referred to as ''radicular'') distribution of symptoms and signs, including pain, paresthesia (for example, burning, prickling, or tingling), sensory loss, and usually muscle weakness specific to the affected nerve root(s).

a. *Compromise of unilateral nerve root of the cervical spine.* Compromise of a nerve root as it exits the cervical spine between the vertebrae may affect the functioning of the associated upper extremity. The clinical examination reproduces the related symptoms based on radicular signs and clinical tests (for example, a positive Spurling's Test) appropriate to the specific cervical nerve root.

b. *Compromise of bilateral nerve roots of the cervical spine.* Although uncommon, if compromise of a nerve root occurs on both sides of the cervical spinal column, functioning of both upper extremities may be limited.

c. *Compromise of a nerve root(s) of the lumbar spine.* Compromise of a nerve root as it exits the lumbar spine between the vertebrae may limit the functioning of the associated lower extremity. The clinical examination reproduces the related symptoms based on radicular signs and clinical tests. When a nerve root of the lumbar spine is compromised, we require a positive straight-leg raising test (also known as a Lasegue test) in both supine and sitting positions appropriate to the specific lumbar nerve root that is compromised. (See 101.00C2 for guidance on interpreting information from a physical examination report.)

G. *What do we consider when we evaluate lumbar spinal stenosis resulting in compromise of the cauda equina (101.16)?*

1. We consider the limiting effects of pain, sensory changes, and muscle weakness caused by compromise of the cauda equina due to lumbar spinal stenosis. The cauda equina is a bundle of nerve roots that descends from the lower part of the spinal cord. Lumbar spinal stenosis can compress the nerves of the cauda equina, causing sensory changes and muscle weakness that may affect your ability to stand or walk. Pain related to compromise of the cauda equina is ''nonradicular,'' because it is not typically associated with a specific nerve root (as is radicular pain in the cervical or lumbar spine).

2. Compromise of the cauda equina due to spinal stenosis can affect your ability to walk because of neurogenic claudication (also known as pseudoclaudication), a disorder usually causing non-radicular pain that starts in the low back and radiates bilaterally (or less commonly, unilaterally) into the buttocks and lower extremities (or extremity). Extension of the lumbar spine, as when walking or merely standing, provokes the pain of neurogenic claudication. It is relieved by forward flexion of the lumbar spine or by sitting.

H. *What do we consider when we evaluate reconstructive surgery or surgical arthrodesis of a major weight-bearing joint (101.17)?*

1. We consider reconstructive surgery or surgical arthrodesis when an acceptable medical source(s) documents the surgical procedure(s) and associated medical treatments to restore function of the affected body part(s). The reconstructive surgery may be a single event or it may be a series of procedures directed toward the salvage or restoration of functional use of the affected joint.

2. *Major weight-bearing joints.* The major weight-bearing joints are the hip, knee, and ankle-foot. The ankle and foot are considered together as one major joint.

3. *Surgical arthrodesis.* Surgical arthrodesis is the artificial fusion of the bones that form a joint, essentially eliminating the joint.

I. *What do we consider when we evaluate abnormality of a major joint(s) in any extremity (101.18)?*

1. *General.* We consider musculoskeletal disorders that produce anatomical abnormalities of major joints of the extremities, resulting in functional abnormalities in the upper or lower extremities (for example, infections of bones and joints). Major joint of an upper extremity refers to the shoulder, elbow, and wrist-hand. We consider the wrist and hand together as one major joint. Major joint of a lower extremity refers to the hip, knee, and ankle-foot. We consider the ankle and hindfoot together as one major joint, because it is necessary for walking. Abnormalities affecting the joints may include ligamentous laxity or rupture, soft tissue contracture, or tendon rupture, and can cause muscle weakness of the affected body part.

2. *How do we define abnormality in the extremities?* An anatomical abnormality in any extremity(ies) is one that is readily observable by a medical source during a physical examination (for example, subluxation or contracture), or is present on imaging (for example, ankylosis, bony destruction, joint space narrowing, or deformity). A functional abnormality is abnormal motion or instability of the affected part(s), including limitation of motion, excessive motion (hypermobility), movement outside the normal plane of motion for the joint (for example, lateral deviation), or fixation of the affected parts.

J. *What do we consider when we evaluate pathologic fractures due to any cause (101.19)?* We consider pathologic fractures of the bones in the skeletal spine, extremities, or other parts of the skeletal system. Pathologic fractures result from disorders that weaken the bones, making them vulnerable to breakage. For non-healing or complex traumatic fractures without accompanying pathology, see 101.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones,* or 101.23 *Non-healing fracture of an upper extremity.* Pathologic fractures may occur with osteoporosis, osteogenesis imperfecta or any other skeletal dysplasias, side effects of medications, and disorders of the endocrine or other body systems. They must occur on separate, distinct occasions, rather than multiple fractures occurring at the same time, but they may affect the same bone(s) multiple times. There is no required period between the incidents of fracture(s), but they must all occur within a 12-month period; for example, separate incidents may occur within hours or days of each other. However, the associated limitation(s) of function must last, or be expected to last, at least 12 months.

K. *What do we consider when we evaluate amputation due to any cause (101.20)?*

1. *General.* We consider amputations (the full or partial loss or absence of any extremity) due to any cause, including trauma, congenital abnormality or absence, or surgery for treatment of conditions such as cancer or infection.

2. *Amputation of both upper extremities (101.20A).* Upper extremity amputations, for the purposes of this listing, may occur at any level above the wrists (carpal joints), up to and including disarticulation of the shoulder (glenohumeral) joint. We do not evaluate amputations below the wrists under this listing, because the resulting limitation of function of the thumb(s), finger(s), or hand(s) will vary, depending on the extent of loss and corresponding effect on fine and gross

movements (see 101.00E4). For amputations below the wrist, we will follow our rules for determining functional equivalence to the listings (see § 416.926a of this chapter).

3. *Hemipelvectomy or hip disarticulation (101.20B).* Hemipelvectomy involves amputation of an entire lower extremity through the sacroiliac joint. Hip disarticulation involves amputation of an entire lower extremity through the hip joint capsule and closure of the remaining musculature over the exposed acetabular bone.

4. *Amputation of one upper extremity at any level above the wrist and one lower extremity at or above the ankle (101.20C).* We evaluate the absence of one upper extremity and one lower extremity with regard to whether you have a documented medical need (see 101.00C6a) for a one-handed assistive device (see 101.00C6d), such as a cane or crutch. In this situation, you may wear a prosthesis (see 101.00C6b) on your lower extremity, but nevertheless have a documented medical need for a one-handed assistive device. If you do, you would need to use your other upper extremity to hold the assistive device, making the extremity unavailable to perform other fine and gross movements (see 101.00E4) such as carrying. In such a case, your disorder would meet this listing.

5. *Amputation of one or both lower extremities at or above the ankle (tarsal joint), (101.20D).* When we evaluate amputations of one or both lower extremities:

a. We consider the condition of your residual limb(s), and whether you can wear a prosthesis(es) (see 101.00C6b). When you have a prosthesis(es), we will examine your residual limb with the prosthesis(es) in place. If you are unable to use a prosthesis(es) because of residual limb complications that have lasted, or are expected to last, for at least 12 months, and you are not currently undergoing surgical management (see 101.00L1) of your condition, we evaluate your disorder under this listing.

b. Under 101.20D ''Amputation of one or both lower extremities at or above the ankle (tarsal joint),'' we consider whether you have a documented medical need (see 101.00C6a) for a hand-held assistive device(s) (see 101.00C6d) and your ability to walk with the device(s).

c. If you have a non-healing residual limb(s) and are receiving ongoing surgical treatment expected to re-establish or improve function, and that ongoing surgical treatment has not ended, or is not expected to end, within at least 12 months of the initiation of the surgical management (see 101.00L1), we evaluate your disorder under 101.21 *Soft tissue injury or abnormality under continuing surgical management.*

L. *What do we consider when we evaluate soft tissue injury or abnormality under continuing surgical management (101.21)?*

1. *General.*

a. We consider any soft tissue injury or abnormality involving the soft tissues of the body, whether congenital or acquired, when an acceptable medical source(s) documents the need for ongoing surgical procedures and associated medical treatments to restore function of the affected body parts. Surgical management includes the surgery(-ies) itself, as well as various post-surgical procedures, surgical complications, infections or other medical complications, related illnesses, or related treatments that delay a person's attainment of maximum benefit from therapy.

b. Surgical procedures and associated treatments typically take place over extended periods, which may render you unable to perform age-appropriate activity on a sustained basis. To document such inability, we must have evidence from an acceptable medical source(s) confirming that the surgical management has continued, or is expected to continue, for at least 12 months from the date of the first surgical intervention. These procedures and treatments must be directed toward saving, reconstructing, or replacing the affected part of the body to re-establish or improve its function, and not for cosmetic appearances alone.

c. Examples include malformations, third- and fourth-degree burns, crush injuries, craniofacial injuries, avulsive injuries, and amputations with complications of the residual limb(s).

d. We evaluate skeletal spine abnormalities or injuries under 101.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s)* or 101.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina,* as appropriate. We evaluate abnormalities or injuries of bones in the lower extremities under 101.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint,* 101.18 *Abnormality of a major joint(s) in any extremity,* or 101.22 *Non-healing fracture of the femur, tibia, pelvis, or one or more of the tarsal bones.* We evaluate abnormalities or injuries of bones in the upper extremities under 101.18 *Abnormality of a major joint(s) in any extremity,* or 101.23 *Non-healing or complex fracture of an upper extremity.*

2. *Documentation.* In addition to the objective medical evidence we need to establish your soft tissue injury or abnormality, we also need all of the following medically documented evidence about your continuing surgical management:

a. Operative reports and related laboratory findings;

b. Records of post-surgical procedures;

c. Records of any surgical or medical complications (for example, related infections or systemic illnesses);

d. Records of any prolonged post-operative recovery periods and related treatments (for example, surgeries and treatments for burns); and

e. An acceptable medical source's plans for additional surgeries;

f. Records detailing any other factors that have delayed, or that an acceptable medical source expects to delay, the saving, restoring, or replacing of the involved part for a continuous period of at least 12 months following the initiation of the surgical management.

3. *Burns.* Third- and fourth-degree burns damage or destroy nerve tissue, reducing or preventing transmission of signals through those nerves. Such burns frequently require multiple surgical procedures and related therapies to re-establish or improve function, which we evaluate under 101.21 *Soft tissue injury or abnormality under continuing surgical management.* When burns are no longer under continuing surgical management, we evaluate the residual impairment(s) (see 101.00P). When the residual impairment(s) affects the musculoskeletal system, as often occurs in third and fourth degree burns, it can result in permanent musculoskeletal tissue loss, joint contractures, or loss of extremities. We will evaluate such impairments under the relevant musculoskeletal listing(s), for example, 101.18 *Abnormality of a major joint(s) in any extremity* or 101.20 *Amputation due to any cause.* When the residual impairment(s) involves another body system(s), we will evaluate the impairment(s) under the relevant body system listing (for example, 108.08 *Burns*).

4. *Congenital abnormalities or craniofacial injuries.* Surgeons may treat craniofacial injuries or abnormalities with multiple surgical procedures. These injuries or abnormalities may affect vision, hearing, speech, and the initiation of the digestive process, including mastication. When the craniofacial injury-related or congenital residual impairment(s) involves another body system(s), we will evaluate the impairment(s) under the relevant body system listings. See 101.00P regarding evaluation of residual impairment(s).

M. *What do we consider when we evaluate non-healing or complex fractures of the femur, tibia, pelvis, or one or more of the tarsal bones (101.22)?*

1. We evaluate a non-healing (nonunion) or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones with regard to whether you have a documented medical need (see 101.00C6a) for a bilateral (two-handed) assistive device (see 101.00C6d), such as a walker or bilateral crutches.

2. *Non-healing fracture.* A non-healing fracture is a fracture that has failed to unite completely. Nonunion is usually established when a minimum of 9 months has elapsed since the injury and the fracture site has shown no progressive signs of healing for a minimum of 3 months.

3. *Complex fracture.* A fracture is complex when one or more of the following occur:

a. Comminuted (broken into many pieces) bone fragments,

b. Multiple fractures in a single bone,

c. Bone loss due to severe trauma,

d. Damage to the surrounding soft tissue,

e. Severe cartilage damage to the associated joint, or

f. Dislocation of the associated joint.

4. When a complex fracture involves soft tissue damage, the treatment may involve continuing surgical management to restore or improve functioning. In such cases, we may evaluate the fracture(s) under 101.21 *Soft tissue injury or abnormality under continuing surgical management.*

N. *What do we consider when we evaluate non-healing or complex fractures of an upper extremity (101.23)?*

1. We evaluate a non-healing (nonunion) or complex fracture of an upper extremity under continuing surgical management (see 101.00L1a) with regard to whether you have an inability to use both upper extremities to

independently initiate, sustain, and complete fine and gross movements.

2. *Non-healing fracture.* A non-healing fracture is a fracture that has failed to unite completely. Nonunion is usually established when a minimum of 9 months has elapsed since the injury and the fracture site has shown no progressive signs of healing for a minimum of 3 months.

3. *Complex fracture.* A fracture is complex when one or more of the following occur:

a. Comminuted (broken into many pieces) bone fragments

b. Multiple fractures in a single bone

c. Bone loss due to severe trauma

d. Damage to the surrounding soft tissue

e. Severe cartilage damage to the associated joint

f. Dislocation of the associated joint.

O. *What do we consider when we evaluate musculoskeletal disorders of infants and toddlers from birth to attainment of age 3 with developmental motor delay (101.24)?*

1. Under listing 101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay,* we use reports from an acceptable medical source(s) to establish a diagnosis of delay in your motor development. To evaluate the severity level of your developmental motor delay, we accept developmental test reports from an acceptable medical source, or from early intervention specialists, physical and occupational therapists, and other sources.

a. If there is a standardized developmental assessment in your medical record, we will use the results to evaluate your developmental motor delay under 101.24A. Such an assessment compares your level of development to the level typically expected for children of your chronological age. If you were born prematurely, we use your corrected chronological age (CCA) for comparison. Your CCA is your chronological age adjusted by a period of gestational prematurity (CCA = (chronological age)—(number of weeks premature)) (see § 416.924b(b) of this chapter).

b. If there is no standardized developmental assessment in your medical record, we will use narrative developmental reports from a medical source(s) to evaluate your developmental motor delay under 101.24B. These reports must provide detailed information sufficient for us to assess the severity of your motor delay. If we cannot obtain sufficient detail from narrative reports, we may purchase standardized developmental assessments.

(i) A narrative developmental report is based on clinical observations, progress notes, and well-baby check-ups, and must include your developmental history; examination findings (with abnormal findings noted on repeated examinations); and an overall assessment of your development (that is, more than one or two isolated skills) by the medical source.

(ii) Some narrative developmental reports may include results from developmental screening tests, which can show that you are not developing or achieving skills within expected timeframes. Although medical sources may refer to screening test results as supporting evidence in the narrative developmental report, screening test results alone cannot establish a medically determinable impairment or the severity of developmental motor delay.

2. Examples of disorders we evaluate include arthrogryposis, clubfoot, osteogenesis imperfecta, caudal regression syndrome, fracture complications, disorders affecting the hip and pelvis, and complications associated with your disorder or its treatment. Some medical records may simply document your condition as ''developmental motor delay.''

P. *How do we determine when your soft tissue injury or abnormality or your upper extremity fracture is no longer under continuing surgical management or you have received maximum therapeutic benefit?*

1. Your soft tissue injury or abnormality or your upper extremity fracture is no longer under continuing surgical management when the last surgical procedure or medical treatment directed toward the re-establishment or improvement of function of the involved part has occurred. We will find that you have received maximum therapeutic benefit from treatment if there are no significant changes in physical findings or on appropriate imaging for any 6-month period after the last surgical procedure or medical treatment. We may also find that you have received maximum therapeutic benefit if your medical source(s) indicates that further improvement is not expected after the last surgical procedure or medical treatment.

2. When you have received maximum therapeutic benefit from treatment, we will evaluate any impairment-related residual symptoms, signs, and laboratory findings (including those on imaging), any complications associated with your surgical procedures or medical treatments, and any residual limitations in your functioning. Depending upon all of those factors, we may find that your musculoskeletal impairment is no longer severe.

3. If your impairment(s) remains severe, we will evaluate your residual limitations and all other impairment-related factors to determine whether your musculoskeletal disorder meets or medically equals another listing or functionally equals the listings. If your impairment involves burns and remains severe, we will follow the above sequence by evaluating your impairment as described in 101.00L3.

Q. *How do we evaluate the severity and duration of your established musculoskeletal disorder when there is no record of ongoing treatment?*

1. You may not have received ongoing treatment or may not have an ongoing relationship with the medical community despite having a musculoskeletal disorder(s). In either of these situations, you will not have a longitudinal medical record for us to review when we evaluate your disorder. We may therefore ask you to attend a consultative examination to determine the severity and potential duration of your disorder (see § 416.919a(b) of this chapter).

2. In some instances, we may be able to assess the severity and duration of your musculoskeletal disorder based on your medical record and current evidence alone. If the information in your case record is not sufficient or appropriate to show that you have a musculoskeletal disorder that meets the criteria of one of the musculoskeletal disorders listings, we will follow the rules in 101.00R.

R. *How do we evaluate disorders that do not meet one of the musculoskeletal listings?*

1. These listings are only examples of musculoskeletal disorders that we consider severe enough to result in marked and severe functional limitations. If your musculoskeletal disorder(s) does not meet the criteria of any of these listings, we will consider whether you have an impairment(s) that meets the criteria of a listing in another body system.

2. If you have a severe medically determinable impairment(s) that does not meet any listing, we will determine whether your impairment(s) medically equals a listing (see § 416.926 of this chapter). If it does not medically equal a listing, we will determine whether it functionally equals the listings (see § 416.926a of this chapter).

3. We use the rules in § 416.994a of this chapter when we decide whether you continue to be disabled.

101.01 Category of Impairments, Musculoskeletal Disorders

101.15 *Disorders of the skeletal spine resulting in compromise of a nerve root(s)* (see 101.00F), documented by A, B, C, and D:

A. Symptom(s) of neuro-anatomic (radicular) distribution of one or more of the following manifestations consistent with compromise of the affected nerve root(s):

1. Pain; or

2. Paresthesias; or

3. Muscle fatigue.

AND

B. Radicular neurological signs present during physical examination or testing and evidenced by 1, 2, and 4; or 1, 3, and 4 below:

1. Muscle weakness; and

2. Sensory changes evidenced by:

a. Decreased sensation; or

b. Sensory nerve deficit (abnormal sensory nerve latency) on electrodiagnostic testing; or

3. Decreased deep tendon reflexes; and

4. Sign(s) of nerve root irritation, tension, or compression, consistent with compromise of the affected nerve root (see 101.00F2).

AND

C. Findings on imaging consistent with compromise of a nerve root(s) in the cervical or lumbosacral spine (see 101.00C3).

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 101.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

101.16 *Lumbar spinal stenosis resulting in compromise of the cauda equina* (see 101.00G), documented by A, B, C, and D:

A. Symptoms of neurological compromise, such as pain, manifested as:

1. Nonradicular distribution of pain in one or both lower extremities; or

2. Nonradicular distribution of sensory loss in one or both extremities; or

3. Neurogenic claudication.

AND

B. Nonradicular neurological signs present during physical examination or testing and evidenced by 1 and 2, or 1 and 3, below:

1. Muscle weakness; and

2. Sensory changes evidenced by:

a. Decreased sensation; or

b. Sensory nerve deficit (abnormal sensory nerve latency) on electrodiagnostic testing; or

c. Areflexia, trophic ulceration, or bladder or bowel incontinence.

3. Decreased deep tendon reflexes in one or both lower extremities.

AND

C. Findings on imaging or in an operative report consistent with compromise of the cauda equina with lumbar spinal stenosis.

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 101.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity.

101.17 *Reconstructive surgery or surgical arthrodesis of a major weight-bearing joint* (see 101.00H), documented by A and B and C:

A. Documented history of reconstructive surgery or surgical arthrodesis of a major weight-bearing joint.

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months.

AND

C. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 101.00E).

101.18 *Abnormality of a major joint(s) in any extremity* (see 101.00I), documented by A, B, C, and D:

A. Chronic joint pain or stiffness.

AND

B. Abnormal motion, instability, or immobility of the affected joint(s).

AND

C. Anatomical abnormality of the affected joint(s) noted on:

1. Physical examination (for example, subluxation, contracture, bony or fibrous ankylosis); or

2. Imaging (for example, joint space narrowing, bony destruction, or ankylosis or arthrodesis of the affected joint).

AND

D. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 101.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

101.19 *Pathologic fractures due to any cause* (see 101.00J), documented by A and B:

A. Three or more medically documented pathologic fractures occurring on separate occasions within a 12-month period;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months, and medical documentation of at least one of the following (see 101.00E):

1. A documented medical need for a walker, bilateral canes, or bilateral crutches; or

2. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

101.20 *Amputation due to any cause* (see 101.00K), documented by A, B, C, or D:

A. Amputation of both upper extremities, occurring at any level above the wrists (carpal joints), up to and including the shoulder (glenohumeral) joint.

OR

B. Hemipelvectomy or hip disarticulation.

OR

C. Amputation of one upper extremity, occurring at any level above the wrist (carpal joints), and one lower extremity at or above the ankle (tarsal joint), and medical documentation of one the following (see 101.00E):

1. The documented medical need for a one-handed assistive device requiring the use of the other upper extremity, or

2. The inability to use the remaining upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

OR

D. Amputation of one or both lower extremities at or above the ankle (tarsal joint), with complications of the residual limb that have lasted or can be expected to last for at least 12 months, and medical documentation of both 1 and 2 (see 101.00E):

1. The inability to use a prosthetic device(s); and

2. The documented medical need for a walker, bilateral canes, or bilateral crutches.

101.21 *Soft tissue injury or abnormality under continuing surgical management* (see 101.00L), documented by A, B, and C in the medical record:

A. Evidence confirms ongoing surgical management directed towards saving, reconstructing, or replacing the affected part of the body.

AND

B. The surgical management has been, or is expected to be, ongoing for at least 12 months.

AND

C. Maximum benefit from therapy has not yet been achieved.

101.22 *Non-healing or complex fracture of the femur, tibia, pelvis, or one or more of the tarsal bones* (see 101.00M), documented by A and B and C:

A. Solid union not evident on appropriate medically acceptable imaging and not clinically solid;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months,

AND

C. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 101.00E).

101.23 *Non-healing or complex fracture of an upper extremity* (see 101.00N), Documented by A and B and C:

A. Nonunion of a fracture, or complex fracture, of the shaft of the humerus, radius, or ulna, under continuing surgical management, as defined in 1.00P, directed toward restoration of functional use of the extremity;

AND

B. Impairment-related physical limitation of musculoskeletal functioning that has lasted, or can be expected to last, for a continuous period of at least 12 months,

AND

C. Medical documentation of at least one of the following (see 101.00E):

1. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device that requires the use of the other upper extremity; or

2. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and

complete age-appropriate activities involving fine and gross movements.

101.24 *Musculoskeletal disorders of infants and toddlers, from birth to attainment of age 3, with developmental motor delay* (see 101.00O), as documented by A or B:

A. A standardized developmental motor assessment that:

1. Shows motor development not more than one-half the level typically expected for child's age; or

2. Results in a valid score that is at least three standard deviations below the mean.

OR

B. Two narrative developmental reports that:

1. Are dated at least 120 days apart; and

2. Show motor development not more than one-half of the level typically expected for child's age.

6. *Inflammatory arthritis (114.09).*

a. *General.* * * * Clinically, inflammation of major joints in an upper or lower extremity may be the dominant manifestation causing difficulties with walking or performing fine and gross movements; there may be joint pain, swelling, and tenderness. The arthritis may affect other joints, or cause less limitation in walking or performing fine and gross movements. * * *

* * * * *

e. *How we evaluate inflammatory arthritis under the listings.*

(i) Listing-level severity in 114.09 *Inflammatory arthritis* A and C1 is shown by the presence of an impairment-related, significant limitation cited in the criteria of these listings. In 114.09A, listing-level severity is satisfied with persistent inflammation or deformity in one major joint in a lower extremity resulting in a documented medical need for a walker, bilateral canes, or bilateral crutches as required in 114.09A1, or one major joint in each upper extremity resulting in an impairment-related, significant limitation in the ability to perform fine and gross movements as required in 114.09A2. In 114.09C1, if you have the required ankylosis (fixation) of your cervical or dorsolumbar spine, we will find that you have an impairment-related significant limitation in your ability to see in front of you, above you, and to the side. Therefore, a listing-level impairment in the ability to walk is implicit in 114.09C1, even though you might not require bilateral upper limb assistance.

(ii) Listing-level severity is shown in 114.09B and 114.09C2 by inflammatory arthritis that involves various combinations of complications of one or more major joints in an upper or lower extremity or other joints, such as inflammation or deformity, extra-articular features, repeated manifestations, and constitutional symptoms and signs. * * *

* * * * *

114.01 Category of Impairments, Immune System Disorders

* * * * *

114.04 *Systemic sclerosis (scleroderma).* As described in 114.00D3. With:

* * * * *

B. One of the following:

1. Toe contractures or fixed deformity of one or both feet, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 114.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 114.00C9) that requires the use of the other upper extremity; or

2. Finger contractures or fixed deformity in both hands, resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements; or

3. Atrophy with irreversible damage in one or both lower extremities, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 114.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 114.00C9) that requires the use of the other upper extremity; or

4. Atrophy with irreversible damage in both upper extremities, resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

OR

C. Raynaud's phenomenon, characterized by:

* * * * *

2. Ischemia with ulcerations of toes or fingers, resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 114.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 114.00C9) that requires the use of the other upper extremity; or

c. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

* * * * *

114.05 *Polymyositis and dermatomyositis.* As described in 114.00D4. With:

A. Proximal limb-girdle (pelvic or shoulder) muscle weakness, resulting in one of the following:

1. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 114.00C9); or

2. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 114.00C9) that requires the use of the other upper extremity; or

3. An inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

* * * * *

114.09 *Inflammatory arthritis.* As described in 114.00D6. With:

A. Persistent inflammation or persistent deformity of:

1. One or more major joints in a lower extremity(ies) resulting in one of the following:

a. A documented medical need for a walker, bilateral canes, or bilateral crutches (see 114.00C9); or

b. An inability to use one upper extremity to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements, and a documented medical need for a one-handed assistive device (see 114.00C9) that requires the use of the other upper extremity; or

2. One or more major joints in each upper extremity resulting in an inability to use both upper extremities to the extent that neither can be used to independently initiate, sustain, and complete age-appropriate activities involving fine and gross movements.

OR

B. Inflammation or deformity in one or more major joints of an upper or lower extremity(ies) with: * * *

* * * * *

PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED

Subpart I—[Amended]

■ 3. The authority citation for subpart I of part 416 continues to read as follows:

Authority: Secs. 221(m), 702(a)(5), 1611, 1614, 1619, 1631(a), (c), (d)(1), and (p), and 1633 of the Social Security Act (42 U.S.C. 421(m), 902(a)(5), 1382, 1382c, 1382h, 1383(a), (c), (d)(1), and (p), and 1383b); secs. 4(c) and 5, 6(c)-(e), 14(a), and 15, Pub. L. 98–460, 98 Stat. 1794, 1801, 1802, and 1808 (42 U.S.C. 421 note, 423 note, and 1382h note).

■ 4. Amend § 416.926a by removing paragraph (m)(1) through (m)(2) and redesignating paragraphs (m)(3) through (m)(5) as (m)(1) through (m)(3).

Title 3—

The President

Proclamation 9739 of April 30, 2018

Adjusting Imports of Aluminum Into the United States

By the President of the United States of America

A Proclamation

1. On January 19, 2018, the Secretary of Commerce (Secretary) transmitted to me a report on his investigation into the effect of imports of aluminum articles on the national security of the United States under section 232 of the Trade Expansion Act of 1962, as amended (19 U.S.C. 1862).

2. In Proclamation 9704 of March 8, 2018 (Adjusting Imports of Aluminum Into the United States), I concurred in the Secretary's finding that aluminum articles are being imported into the United States in such quantities and under such circumstances as to threaten to impair the national security of the United States, and decided to adjust the imports of aluminum articles, as defined in clause 1 of Proclamation 9704, by imposing a 10 percent ad valorem tariff on such articles imported from all countries except Canada and Mexico. I further stated that any country with which we have a security relationship is welcome to discuss with the United States alternative ways to address the threatened impairment of the national security caused by imports from that country, and noted that, should the United States and any such country arrive at a satisfactory alternative means to address the threat to the national security such that I determine that imports from that country no longer threaten to impair the national security, I may remove or modify the restriction on aluminum articles imports from that country and, if necessary, adjust the tariff as it applies to other countries, as the national security interests of the United States require.

3. In Proclamation 9710 of March 22, 2018 (Adjusting Imports of Aluminum Into the United States), I noted the continuing discussions with the Argentine Republic (Argentina), the Commonwealth of Australia (Australia), the Federative Republic of Brazil (Brazil), Canada, Mexico, the Republic of Korea (South Korea), and the European Union (EU) on behalf of its member countries, on satisfactory alternative means to address the threatened impairment to the national security by imports of aluminum articles from those countries. Recognizing that each of these countries and the EU has an important security relationship with the United States, I determined that the necessary and appropriate means to address the threat to national security posed by imports of aluminum articles from these countries was to continue the ongoing discussions and to exempt aluminum articles imports from these countries from the tariff proclaimed in Proclamation 9704 until May 1, 2018.

4. The United States has agreed in principle with Argentina, Australia, and Brazil on satisfactory alternative means to address the threatened impairment to our national security posed by aluminum articles imported from these countries. I have determined that the necessary and appropriate means to address the threat to national security posed by imports of aluminum articles from Argentina, Australia, and Brazil is to extend the temporary exemption of these countries from the tariff proclaimed in Proclamation 9704, in order to finalize the details of these satisfactory alternative means to address the threatened impairment to our national security posed by aluminum articles imported from these countries. In my judgment, and

for the reasons I stated in paragraph 10 of Proclamation 9710, these discussions will be most productive if aluminum articles from Argentina, Australia, and Brazil remain exempt from the tariff proclaimed in Proclamation 9704, until the details can be finalized and implemented by proclamation. Because the United States has agreed in principle with these countries, in my judgment, it is unnecessary to set an expiration date for the exemptions. Nevertheless, if the satisfactory alternative means are not finalized shortly, I will consider re-imposing the tariff.

5. The United States is continuing discussions with Canada, Mexico, and the EU. I have determined that the necessary and appropriate means to address the threat to the national security posed by imports of aluminum articles from these countries is to continue these discussions and to extend the temporary exemption of these countries from the tariff proclaimed in Proclamation 9704, at least at this time. In my judgment, and for the reasons I stated in paragraph 10 of Proclamation 9710, these discussions will be most productive if aluminum articles from these countries remain exempt from the tariff proclaimed in Proclamation 9704.

6. For the reasons I stated in paragraph 11 of Proclamation 9710, however, the tariff imposed by Proclamation 9704 remains an important first step in ensuring the economic stability of our domestic aluminum industry and removing the threatened impairment of the national security. As a result, unless I determine by further proclamation that the United States has reached a satisfactory alternative means to remove the threatened impairment to the national security by imports of aluminum articles from Canada, Mexico, and the member countries of the EU, the tariff set forth in clause 2 of Proclamation 9704 shall be effective June 1, 2018, for these countries.

7. I have determined that, in light of the ongoing discussions that may result in long-term exclusions from the tariff proclaimed in Proclamation 9704, it is necessary and appropriate, at this time, to maintain the current tariff level as it applies to other countries.

8. Section 232 of the Trade Expansion Act of 1962, as amended, authorizes the President to adjust the imports of an article and its derivatives that are being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security.

9. Section 604 of the Trade Act of 1974, as amended (19 U.S.C. 2483), authorizes the President to embody in the Harmonized Tariff Schedule of the United States (HTSUS) the substance of statutes affecting import treatment, and actions thereunder, including the removal, modification, continuance, or imposition of any rate of duty or other import restriction.

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, by the authority vested in me by the Constitution and the laws of the United States of America, including section 232 of the Trade Expansion Act of 1962, as amended, section 301 of title 3, United States Code, and section 604 of the Trade Act of 1974, as amended, do hereby proclaim as follows:

(1) Imports of all aluminum articles from Argentina, Australia, and Brazil shall be exempt from the duty established in clause 2 of Proclamation 9704, as amended by clause 1 of Proclamation 9710. Imports of all aluminum articles from Canada, Mexico, and the member countries of the EU shall be exempt from the duty established in clause 2 of Proclamation 9704 until 12:01 a.m. eastern daylight time on June 1, 2018. Further, clause 2 of Proclamation 9704, as amended by clause 1 of Proclamation 9710, is also amended by striking the last two sentences and inserting in lieu thereof the following two sentences: ''Except as otherwise provided in this proclamation, or in notices published pursuant to clause 3 of this proclamation, all aluminum articles imports specified in the Annex shall be subject to an additional 10 percent ad valorem rate of duty with respect to goods entered for consumption, or withdrawn from warehouse for consumption, as follows: (a) on or after 12:01 a.m. eastern daylight time on March 23, 2018, from all countries except Argentina, Australia, Brazil, Canada, Mexico,

South Korea, and the member countries of the European Union, (b) on or after 12:01 a.m. eastern daylight time on May 1, 2018, from all countries except Argentina, Australia, Brazil, Canada, Mexico, and the member countries of the European Union, and (c) on or after 12:01 a.m. eastern daylight time on June 1, 2018, from all countries except Argentina, Australia, and Brazil. This rate of duty, which is in addition to any other duties, fees, exactions, and charges applicable to such imported aluminum articles, shall apply to imports of aluminum articles from each country as specified in the preceding sentence.''

(2) The exemption afforded to aluminum articles from Canada, Mexico, and the member countries of the EU shall apply only to aluminum articles of such countries entered for consumption, or withdrawn from warehouse for consumption, through the close of May 31, 2018, at which time such countries shall be deleted from the article description of heading 9903.85.01 of the HTSUS.

(3) Clause 5 of Proclamation 9710 is amended by inserting the phrase '', except those eligible for admission under ''domestic status'' as defined in 19 CFR 146.43, which is subject to the duty imposed pursuant to Proclamation 9704, as amended by Proclamation 9710,'' after the words ''Any aluminum article'' in the first and second sentences.

(4) Aluminum articles shall not be subject upon entry for consumption to the duty established in clause 2 of Proclamation 9704, as amended by clause 1 of this proclamation, merely by reason of manufacture in a U.S. foreign trade zone. However, aluminum articles admitted to a U.S. foreign trade zone in ''privileged foreign status'' pursuant to clause 5 of Proclamation 9710, as amended by clause 3 of this proclamation, shall retain that status consistent with 19 CFR 146.41(e).

(5) No drawback shall be available with respect to the duties imposed on any aluminum article pursuant to Proclamation 9704, as amended by clause 1 of this proclamation.

(6) The Secretary, in consultation with U.S. Customs and Border Protection of the Department of Homeland Security and other relevant executive departments and agencies, shall revise the HTSUS so that it conforms to the amendments and effective dates directed in this proclamation. The Secretary shall publish any such modification to the HTSUS in the *Federal Register.*

(7) Any provision of previous proclamations and Executive Orders that is inconsistent with the actions taken in this proclamation is superseded to the extent of such inconsistency.

IN WITNESS WHEREOF, I have hereunto set my hand this thirtieth day of April, in the year of our Lord two thousand eighteen, and of the Independence of the United States of America the two hundred and forty-second.

ANNEX

TO MODIFY CERTAIN PROVISIONS OF CHAPTER 99 OF THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

A. Subchapter III of chapter 99 of the Harmonized Tariff Schedule of the United States (HTS) is modified as set forth below, with the material in the new tariff provisions inserted in the columns labeled "Heading/Subheading", "Article Description", "Rates of Duty 1-General", "Rates of Duty 1-Special," and "Rates of Duty 2", respectively. The modifications made in item 3 of this part shall be effective for goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on May 1, 2018. The modifications made in item 1 to subdivision (a) of U.S. note 19, as well as the modifications made in item 2 of this part, shall be effective for goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on March 23, 2018.

1. The text of subdivision (a) of U.S. note 19 to such subchapter is modified to read as follows:

"This note and the tariff provisions referred to herein set forth the ordinary customs duty treatment applicable to all entries of the aluminum products of all countries other than of the United States, when such aluminum products are classifiable in the headings or subheadings enumerated in subdivision (b) of this note. All anti-dumping or countervailing duties, or other duties and charges applicable to such goods shall continue to be imposed, except as may be expressly provided herein.

(i) Heading 9903.85.01 provides the ordinary customs duty treatment of aluminum products of all countries other than products of the United States and other than of countries expressly exempt therefrom, pursuant to the article description of such heading. For any such products that are eligible for special tariff treatment under any of the free trade agreements or preference programs listed in general note 3(c)(i) to the tariff schedule, the duty provided in this heading shall be collected in addition to any special rate of duty otherwise applicable under the appropriate tariff subheading, except where prohibited by law. Goods for which entry is claimed under a provision of chapter 98 and which are subject to the additional duties prescribed herein shall be eligible for and subject to the terms of such provision and applicable U.S. Customs and Border Protection ("CBP") regulations, except that duties under subheading 9802.00.60 shall be assessed based upon the full value of the imported article. No claim for entry or for any duty exemption or reduction shall be allowed for the aluminum products enumerated in subdivision (b) of this note under a provision of chapter 99 that may set forth a lower rate of duty or provide duty-free treatment, taking into account information supplied by CBP, but any additional duty prescribed in any provision of this subchapter or subchapter IV of chapter 99 shall be imposed in addition to the duty in heading 9903.85.01.

2. The text of subdivision (b) of U.S. note 19 is modified by adding below clause (b)(v) the sentence "Any reference above to aluminum products classifiable in any heading or subheading of chapter 76, as the case may be, shall mean that any good provided for in the article description of such heading or subheading and of all its subordinate provisions (both legal and statistical) is covered by the provisions of this note and related tariff provisions."

3. The following new subheadings and superior text thereto are inserted in numerical sequence in subchapter III:

Heading/ Subheading	Article description	Rates of Duty		
		1		2
		General	Special	
9903.85.01	Products of aluminum provided for in the tariff headings or subheadings enumerated in note 19 to this subchapter, except products of Argentina, of Australia, of Brazil, of Canada, of Mexico, or of the member countries of the European Union or any exclusions that may be determined and announced by the Department of Commerce.....	The duty provided in the applic-able subhe-ading + 10%	The duty provided in the applicable subheading + 10% (AU, BH, CA, CL, CO, E, IL, JO, KR, MA, MX, OM, P, PA, PE, SG)	The duty provided in the applica-ble subhe-ading + 10%

Proclamation 9740 of April 30, 2018

Adjusting Imports of Steel Into the United States

By the President of the United States of America

A Proclamation

1. On January 11, 2018, the Secretary of Commerce (Secretary) transmitted to me a report on his investigation into the effect of imports of steel mill articles on the national security of the United States under section 232 of the Trade Expansion Act of 1962, as amended (19 U.S.C. 1862).

2. In Proclamation 9705 of March 8, 2018 (Adjusting Imports of Steel Into the United States), I concurred in the Secretary's finding that steel mill articles are being imported into the United States in such quantities and under such circumstances as to threaten to impair the national security of the United States, and decided to adjust the imports of steel mill articles, as defined in clause 1 of Proclamation 9705, as amended by clause 8 of Proclamation 9711 of March 22, 2018 (Adjusting Imports of Steel Into the United States) (steel articles), by imposing a 25 percent ad valorem tariff on such articles imported from all countries except Canada and Mexico. I further stated that any country with which we have a security relationship is welcome to discuss with the United States alternative ways to address the threatened impairment of the national security caused by imports from that country, and noted that, should the United States and any such country arrive at a satisfactory alternative means to address the threat to the national security such that I determine that imports from that country no longer threaten to impair the national security, I may remove or modify the restriction on steel articles imports from that country and, if necessary, adjust the tariff as it applies to other countries, as the national security interests of the United States require.

3. In Proclamation 9711, I noted the continuing discussions with the Argentine Republic (Argentina), the Commonwealth of Australia (Australia), the Federative Republic of Brazil (Brazil), Canada, Mexico, the Republic of Korea (South Korea), and the European Union (EU) on behalf of its member countries, on satisfactory alternative means to address the threatened impairment to the national security by imports of steel articles from those countries. Recognizing that each of these countries and the EU has an important security relationship with the United States, I determined that the necessary and appropriate means to address the threat to national security posed by imports of steel articles from these countries was to continue the ongoing discussions and to exempt steel articles imports from these countries from the tariff proclaimed in Proclamation 9705 until May 1, 2018.

4. The United States has successfully concluded discussions with South Korea on satisfactory alternative means to address the threatened impairment to our national security posed by steel articles imports from South Korea. The United States and South Korea have agreed on a range of measures, including measures to reduce excess steel production and excess steel capacity, and measures that will contribute to increased capacity utilization in the United States, including a quota that restricts the quantity of steel articles imported into the United States from South Korea. In my judgment, these measures will provide an effective, long-term alternative means to address South Korea's contribution to the threatened impairment to our national security by restraining steel articles exports to the United States

from South Korea, limiting transshipment, and discouraging excess capacity and excess steel production. In light of this agreement, I have determined that steel articles imports from South Korea will no longer threaten to impair the national security and have decided to exclude South Korea from the tariff proclaimed in Proclamation 9705. The United States will monitor the implementation and effectiveness of the quota and other measures agreed upon with South Korea in addressing our national security needs, and I may revisit this determination, as appropriate.

5. The United States has agreed in principle with Argentina, Australia, and Brazil on satisfactory alternative means to address the threatened impairment to our national security posed by steel articles imported from these countries. I have determined that the necessary and appropriate means to address the threat to national security posed by imports of steel articles from Argentina, Australia, and Brazil is to extend the temporary exemption of these countries from the tariff proclaimed in Proclamation 9705, in order to finalize the details of these satisfactory alternative means to address the threatened impairment to our national security posed by steel articles imported from these countries. In my judgment, and for the reasons I stated in paragraph 10 of Proclamation 9711, these discussions will be most productive if steel articles from Argentina, Australia, and Brazil remain exempt from the tariff proclaimed in Proclamation 9705, until the details can be finalized and implemented by proclamation. Because the United States has agreed in principle with these countries, in my judgment, it is unnecessary to set an expiration date for the exemptions. Nevertheless, if the satisfactory alternative means are not finalized shortly, I will consider re-imposing the tariff.

6. The United States is continuing discussions with Canada, Mexico, and the EU. I have determined that the necessary and appropriate means to address the threat to the national security posed by imports of steel articles from these countries is to continue these discussions and to extend the temporary exemption of these countries from the tariff proclaimed in Proclamation 9705, at least at this time. In my judgment, and for the reasons I stated in paragraph 10 of Proclamation 9711, these discussions will be most productive if steel articles from these countries remain exempt from the tariff proclaimed in Proclamation 9705.

7. For the reasons I stated in paragraph 11 of Proclamation 9711, however, the tariff imposed by Proclamation 9705 remains an important first step in ensuring the economic stability of our domestic steel industry and removing the threatened impairment of the national security. As a result, unless I determine by further proclamation that the United States has reached a satisfactory alternative means to remove the threatened impairment to the national security by imports of steel articles from Canada, Mexico, and the member countries of the EU, the tariff set forth in clause 2 of Proclamation 9705 shall be effective June 1, 2018, for these countries.

8. In light of my determination to exclude, on a long-term basis, South Korea from the tariff proclaimed in Proclamation 9705, I have considered whether it is necessary and appropriate in light of our national security interests to make any corresponding adjustments to the tariff set forth in clause 2 of Proclamation 9705 as it applies to other countries. I have determined that, in light of the agreed-upon quota and other measures with South Korea, the measures being finalized with Argentina, Australia, and Brazil, and the ongoing discussions that may result in further long-term exclusions from the tariff proclaimed in Proclamation 9705, it is necessary and appropriate, at this time, to maintain the current tariff level as it applies to other countries.

9. Section 232 of the Trade Expansion Act of 1962, as amended, authorizes the President to adjust the imports of an article and its derivatives that are being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security.

10. Section 604 of the Trade Act of 1974, as amended (19 U.S.C. 2483), authorizes the President to embody in the Harmonized Tariff Schedule of the United States (HTSUS) the substance of statutes affecting import treatment, and actions thereunder, including the removal, modification, continuance, or imposition of any rate of duty or other import restriction.

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, by the authority vested in me by the Constitution and the laws of the United States of America, including section 232 of the Trade Expansion Act of 1962, as amended, section 301 of title 3, United States Code, and section 604 of the Trade Act of 1974, as amended, do hereby proclaim as follows:

(1) Imports of all steel articles from Argentina, Australia, Brazil, and South Korea shall be exempt from the duty established in clause 2 of Proclamation 9705, as amended by clause 1 of Proclamation 9711. Imports of all steel articles from Canada, Mexico, and the member countries of the EU shall be exempt from the duty established in clause 2 of Proclamation 9705 until 12:01 a.m. eastern daylight time on June 1, 2018. Further, clause 2 of Proclamation 9705, as amended by clause 1 of Proclamation 9711, is also amended by striking the last two sentences and inserting in lieu thereof the following two sentences: ''Except as otherwise provided in this proclamation, or in notices published pursuant to clause 3 of this proclamation, all steel articles imports specified in the Annex shall be subject to an additional 25 percent ad valorem rate of duty with respect to goods entered for consumption, or withdrawn from warehouse for consumption, as follows: (a) on or after 12:01 a.m. eastern daylight time on March 23, 2018, from all countries except Argentina, Australia, Brazil, Canada, Mexico, South Korea, and the member countries of the European Union, and (b) on or after 12:01 a.m. eastern daylight time on June 1, 2018, from all countries except Argentina, Australia, Brazil, and South Korea. This rate of duty, which is in addition to any other duties, fees, exactions, and charges applicable to such imported steel articles, shall apply to imports of steel articles from each country as specified in the preceding sentence.''.

(2) In order to provide the quota treatment referred to in paragraph 4 of this proclamation to steel articles imports from South Korea, U.S. Note 16 of subchapter III of chapter 99 of the HTSUS is amended as provided for in Part A of the Annex to this proclamation. U.S. Customs and Border Protection (CBP) of the Department of Homeland Security shall implement this quota as soon as practicable, taking into account all steel articles imports from South Korea since January 1, 2018.

(3) The exemption afforded to steel articles from Canada, Mexico, and the member countries of the EU shall apply only to steel articles of such countries entered for consumption, or withdrawn from warehouse for consumption, through the close of May 31, 2018, at which time such countries shall be deleted from the article description of heading 9903.80.01 of the HTSUS.

(4) Clause 5 of Proclamation 9711 is amended by inserting the phrase '', except those eligible for admission under ''domestic status'' as defined in 19 CFR 146.43, which is subject to the duty imposed pursuant to Proclamation 9705, as amended by Proclamation 9711,'' after the words ''Any steel article'' in the first and second sentences.

(5) Steel articles shall not be subject upon entry for consumption to the duty established in clause 2 of Proclamation 9705, as amended by clause 1 of this proclamation, merely by reason of manufacture in a U.S. foreign trade zone. However, steel articles admitted to a U.S. foreign trade zone in ''privileged foreign status'' pursuant to clause 5 of Proclamation 9711, as amended by clause 4 of this proclamation, shall retain that status consistent with 19 CFR 146.41(e).

(6) No drawback shall be available with respect to the duties imposed on any steel article pursuant to Proclamation 9705, as amended by clause 1 of this proclamation.

(7) The Secretary, in consultation with CBP and other relevant executive departments and agencies, shall revise the HTSUS so that it conforms to the amendments and effective dates directed in this proclamation. The Secretary shall publish any such modification to the HTSUS in the *Federal Register*.

(8) Any provision of previous proclamations and Executive Orders that is inconsistent with the actions taken in this proclamation is superseded to the extent of such inconsistency.

IN WITNESS WHEREOF, I have hereunto set my hand this thirtieth day of April, in the year of our Lord two thousand eighteen, and of the Independence of the United States of America the two hundred and forty-second.

ANNEX

TO MODIFY CERTAIN PROVISIONS OF CHAPTER 99 OF THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

A. Subchapter III of chapter 99 of the Harmonized Tariff Schedule of the United States (HTS) is modified below, with the material in the new tariff provisions inserted in the columns labeled "Heading/Subheading", "Article Description", "Rates of Duty 1-General", "Rates of Duty 1-Special," and "Rates of Duty 2", respectively. Except as provided in the superior text to subheadings 9903.80.05 through 9903.80.58 in item 4, the modifications made in items 1, 3 and 4 of this part shall be effective for goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on May 1, 2018; except that the modifications in item 1 to the opening paragraph of subdivision (a) and to subdivision (a)(i) of U.S. note 16, as well as the modifications made in item 2 of this part, shall be effective for goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on March 23, 2018. Quota amounts are calculated beginning on January 1 of each calendar year, including for calendar year 2018.

1. The text of subdivision (a) of U.S. note 16 to such subchapter is modified to read as follows:

> "This note and the tariff provisions referred to herein set forth the ordinary customs duty treatment applicable to all entries of the iron or steel products of all countries other than of the United States, when such iron or steel products are classifiable in the headings or subheadings enumerated in subdivision (b) of this note. All anti-dumping or countervailing duties, or other duties and charges applicable to such goods shall continue to be imposed, except as may be expressly provided herein.
>
> (i) Heading 9903.80.01 provides the ordinary customs duty treatment of iron or steel products of all countries other than products of the United States and other than of countries expressly exempt therefrom, pursuant to the article description of such heading and the terms of subdivision (e) of this note. For any such products that are eligible for special tariff treatment under any of the free trade agreements or preference programs listed in general note 3(c)(i) to the tariff schedule, the duty provided in this heading shall be collected in addition to any special rate of duty otherwise applicable under the appropriate tariff subheading, except where prohibited by law. Goods for which entry is claimed under a provision of chapter 98 and which are subject to the additional duties prescribed herein shall be eligible for and subject to the terms of such provision and applicable U.S. Customs and Border Protection ("CBP") regulations, except that duties under subheading 9802.00.60 shall be assessed based upon the full value of the imported article. No claim for entry or for any duty exemption or reduction shall be allowed for the iron or steel products enumerated in subdivision (b) of this note under a provision of chapter 99 that may set forth a lower rate of duty or provide duty-free treatment, taking into account information supplied by CBP, but any additional duty prescribed in any provision of this subchapter or subchapter IV of chapter 99 shall be imposed in addition to the duty in heading 9903.80.01.

(ii) Subheadings 9903.80.05 through 9903.80.58, inclusive, provide the ordinary customs duty and quota treatment of such goods enumerated in subdivision (b) of this note when they are the product of any country enumerated in the superior text thereto and expressly exempt from the scope of heading 9903.80.01, subject to the limitations in subdivision (e) of this note.

2. The text of subdivision (b) of such U.S. note 16 is modified by adding below clause (b)(v) the sentence "Any reference above to iron or steel products classifiable in any heading or subheading of chapter 72 or 73, as the case may be, shall mean that any good provided for in the article description of such heading or subheading and of all its subordinate provisions (both legal and statistical) is covered by the provisions of this note and related tariff provisions." The text of subdivisions (b), (c) and (d) of such U.S. note 16 are each modified by deleting "heading 9903.80.01" and by inserting in lieu thereof "heading 9903.80.01 and subheadings 9903.80.05 through 9903.80.58, inclusive,".

3. The following new subdivision (e) is hereby inserted at the end of such U.S. note 16:

"(e) Subheadings 9903.80.05 through 9903.80.58, inclusive, set forth the ordinary customs duty treatment for the iron or steel products (as enumerated in subdivision (b) of this note) of any country enumerated in the superior text to such subheadings, subject to the annual aggregate quantitative limitations proclaimed for these subheadings and as set forth on the Internet site of CBP at the following link: https://www.cbp.gov/trade/quota . Imports from any such country in an aggregate quantity under any such subheading during any of the periods January through March, April through June, July through September, or October through December in any year that is in excess of 30 percent of the total aggregate quantity provided for a calendar year for such country, as set forth on the Internet site of CBP, shall not be allowed."

4. The following new subheadings and superior text thereto are inserted in numerical sequence in subchapter III:

Heading/ Subheading	Article description	Rates of Duty		
		1		2
		General	Special	
	Iron or steel products of South Korea enumerated in U.S. note 16(b) to this subchapter, if entered in aggregate quantities prescribed in subdivision (e) of such note for any calendar year starting on January 1, 2018 and for any portion thereof as prescribed in such subdivision (e):			
9903.80.05	Hot-rolled sheet, provided for in subheading 7208.10.60, 7208.26.00, 7208.27.00, 7208.38.00, 7208.39.00, 7208.40.60, 7208.53.00, 7208.54.00, 7208.90.00, 7225.30.70 or 7225.40.70	Free		
9903.80.06	Hot-rolled strip, provided for in subheading 7211.19.15, 7211.19.20, 7211.19.30, 7211.19.45, 7211.19.60, 7211.19.75, 7226.91.70 or 7226.91.80	Free		
9903.80.07	Hot-rolled plate, in coils, provided for in subheading 7208.10.15, 7208.10.30, 7208.25.30, 7208.25.60, 7208.36.00, 7208.37.00, 7211.14.00 (except for statistical reporting numbers 7211.14.0030 and 7211.14.0045) or 7225.30.30	Free		
9903.80.08	Cold-rolled sheet and other products, provided for in subheading 7209.15.00, 7209.16.00, 7209.17.00, 7209.18.15, 7209.18.60, 7209.25.00, 7209.26.00, 7209.27.00, 7209.28.00, 7209.90.00, 7210.70.30, 7225.50.70, 7225.50.80 or 7225.99.00	Free		
9903.80.09	Cold-rolled strip and other products, provided for in subheading 7211.23.15, 7211.23.20, 7211.23.30, 7211.23.45, 7211.23.60, 7211.29.20, 7211.29.45, 7211.29.60, 7211.90.00, 7212.40.10, 7212.40.50, 7226.92.50, 7226.92.70, 7226.92.80 or 7226.99.01 (except for statistical reporting numbers 7226.99.0110 and 7226.99.0130)	Free		
9903.80.10	Cold-rolled black plate, provided for in subheading 7209.18.25	Free		
9903.80.11	Plate in cut lengths, provided for in subheading 7208.40.30, 7208.51.00, 7208.52.00, 7210.90.10, 7211.13.00, 7211.14.00 (except for statistical reporting number 7211.14.0090), 7225.40.30, 7225.50.60 or 7226.91.50	Free		

Heading/ Subheading	Article description	Rates of Duty		
		1		2
		General	Special	
9903.80.12	Flat-rolled products, hot-dipped, provided for in subheading 7210.41.00, 7210.49.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6030 and 7210.70.6090), 7212.30.10, 7212.30.30, 7212.30.50, 7225.92.00 or 7226.99.01 (except for statistical reporting numbers 7226.99.0110 and 7226.99.0180)	Free		
9903.80.13	Flat-rolled products, coated, provided for in subheading 7210.20.00, 7210.61.00, 7210.69.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6030 and 7210.70.6060), 7210.90.60, 7210.90.90, 7212.50.00 or 7212.60.00	Free		
9903.80.14	Tin-free steel, provided for in subheading 7210.50.00	Free		
9903.80.15	Tin plate, provided for in subheading 7210.11.00, 7210.12.00 or 7212.10.00	Free		
9903.80.16	Silicon electrical steel sheets and strip, provided for in subheading 7225.11.00, 7225.19.00, 7226.11.10, 7226.11.90, 7226.19.10 or 7226.19.90	Free		
9903.80.17	Sheets and strip electrolytically coated or plated with zinc, provided for in subheading 7210.30.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6060 and 7210.70.6090), 7212.20.00, 7225.91.00 or 7226.99.01 (except for statistical reporting numbers 7226.99.0130 and 7226.99.0180)	Free		
9903.80.18	Oil country pipe and tube goods, provided for in subheading 7304.23.30, 7304.23.60, 7304.29.10, 7304.29.20, 7304.29.31, 7304.29.41, 7304.29.50, 7304.29.61, 7305.20.20, 7305.20.40, 7305.20.60, 7305.20.80, 7306.29.10, 7306.29.20, 7306.29.31, 7306.29.41, 7306.29.60 or 7306.29.81	Free

9903.80.52	Sheet piling, provided for in subheading 7301.10.00	Free		
9903.80.53	Nonumerated railroad goods, provided for in subheading 7302.40.00, 7302.90.10 and 7302.90.90	Free		
9903.80.54	Rails other than those known as "standard rails," provided for in subheading 7302.10.10 (except for statistical reporting numbers 7302.10.1010, 7302.10.1035, 7302.10.1065 and 7302.10.1075)	Free		
9903.80.55	Rails known as "standard rails," provided for in subheading 7302.10.10 (except for statistical reporting numbers 7302.10.1015, 7302.10.1025, 7302.10.1045 and 7302.10.1055) or 7302.10.50	Free		
9903.80.56	Products of tool steel and other products, provided for in subheading 7224.10.00 (except for statistical reporting numbers 7224.10.0005 and 7224.10.0075), 7224.90.00 (except for statistical reporting numbers 7224.90.0005, 7224.90.0045, 7224.90.0055, 7224.90.0065 and 7224.90.0075), 7225.30.11, 7225.30.51, 7225.40.11, 7225.40.51, 7225.50.11, 7226.20.00, 7226.91.05, 7226.91.15, 7226.91.25, 7226.92.10, 7226.92.30, 7227.10.00, 7227.90.10, 7227.90.20, 7228.10.00, 7228.30.20, 7228.30.40, 7228.30.60, 7228.50.10, 7228.60.10 or 7229.90.05	Free		
9903.80.57	Blooms, billets and slabs, semi-finished, provided for in subheading 7207.11.00, 7207.12.00, 7207.19.00, 7207.20.00 or 7224.90.00 (except for statistical reporting numbers 7224.90.0015, 7224.90.0025, and 7224.90.0035)	Free		
9903.80.58	Ingots, provided for in subheading 7206.10.00, 7206.90.00 or 7224.10.00 (except for statistical reporting number 7224.10.0045)	Free		

B. For the purposes of administering the quantitative limitations applicable to subheadings 9903.80.05 through 9903.80.58 (as created in part A of this annex), the following annual aggregate limits shall apply for the period starting with calendar year 2018 and for subsequent years, unless modified or terminated:

SOUTH KOREA

Heading/ Subheading	Article description	Quantitative Limitation
	Iron or steel products of South Korea enumerated in U.S. note 16(b) to this subchapter, if entered in aggregate quantities prescribed in subdivision (e) of such note for any calendar year starting on January 1, 2018 and for any portion thereof as prescribed in such subdivision (e):	
9903.80.05	Hot-rolled sheet, provided for in subheading 7208.10.60, 7208.26.00, 7208.27.00, 7208.38.00, 7208.39.00, 7208.40.60, 7208.53.00, 7208.54.00, 7208.90.00, 7225.30.70 or 7225.40.70	404,694,045 kg
9903.80.06	Hot-rolled strip, provided for in subheading 7211.19.15, 7211.19.20, 7211.19.30, 7211.19.45, 7211.19.60, 7211.19.75, 7226.91.70 or 7226.91.80	249,173 kg
9903.80.07	Hot-rolled plate, in coils, provided for in subheading 7208.10.15, 7208.10.30, 7208.25.30, 7208.25.60, 7208.36.00, 7208.37.00, 7211.14.00 (except for statistical reporting numbers 7211.14.0030 and 7211.14.0045) or 7225.30.30	125,346,920 kg
9903.80.08	Cold-rolled sheet, and other products, provided for in subheading 7209.15.00, 7209.16.00, 7209.17.00, 7209.18.15, 7209.18.60, 7209.25.00, 7209.26.00, 7209.27.00, 7209.28.00, 7209.90.00, 7210.70.30, 7225.50.70, 7225.50.80 or 7225.99.00	90,336,230 kg
9903.80.09	Cold-rolled strip, and other products, provided for in subheading 7211.23.15, 7211.23.20, 7211.23.30, 7211.23.45, 7211.23.60, 7211.29.20, 7211.29.45, 7211.29.60, 7211.90.00, 7212.40.10, 7212.40.50, 7226.92.50, 7226.92.70, 7226.92.80 or 7226.99.01 (except for statistical reporting numbers 7226.99.0110 and 7226.99.0130)	3,207,110 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.10	Cold-rolled black plate, provided for in subheading 7209.18.25	34,385,821 kg
9903.80.11	Plate in cut lengths, provided for in subheading 7208.40.30, 7208.51.00, 7208.52.00, 7210.90.10, 7211.13.00, 7211.14.00 (except for statistical reporting number 7211.14.0090), 7225.40.30, 7225.50.60 or 7226.91.50	202,530,628 kg
9903.80.12	Flat-rolled products, hot-dipped, provided for in subheading 7210.41.00, 7210.49.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6030 and 7210.70.6090), 7212.30.10, 7212.30.30, 7212.30.50, 7225.92.00 or 7226.99.01 (except for statistical reporting numbers 7226.99.0110 and 7226.99.0180)	166,310,597 kg
9903.80.13	Flat-rolled products, coated, provided for in subheading 7210.20.00, 7210.61.00, 7210.69.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6030 and 7210.70.6060), 7210.90.60, 7210.90.90, 7212.50.00 or 7212.60.00	190,840,544 kg
9903.80.14	Tin-free steel, provided for in subheading 7210.50.00	18,374,353 kg
9903.80.15	Tin plate, provided for in subheading 7210.11.00, 7210.12.00 or 7212.10.00	54,749,093 kg
9903.80.16	Silicon electrical steel sheets and strip, provided for in subheading 7225.11.00, 7225.19.00, 7226.11.10, 7226.11.90, 7226.19.10 or 7226.19.90	7,505,976 kg
9903.80.17	Sheets and strip electrolytically coated or plated with zinc, provided for in subheading 7210.30.00, 7210.70.60 (except for statistical reporting numbers 7210.70.6060 and 7210.70.6090), 7212.20.00, 7225.91.00 or 7226.99.01 (except for statistical reporting numbers 7226.99.0130 and 7226.99.0180)	13,094,743 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.18	Oil country pipe and tube goods, provided for in subheading 7304.23.30, 7304.23.60, 7304.29.10, 7304.29.20, 7304.29.31, 7304.29.41, 7304.29.50, 7304.29.61, 7305.20.20, 7305.20.40, 7305.20.60, 7305.20.80, 7306.29.10, 7306.29.20, 7306.29.31, 7306.29.41, 7306.29.60 or 7306.29.81	460,867,818 kg
9903.80.19	Line pipe exceeding 406.4 mm in outside diameter, provided for in subheading 7304.19.10 (except for statistical reporting numbers 7304.19.1020, 7304.19.1030, 7304.19.1045 and 7304.19.1060), 7304.19.50 (except for statistical reporting numbers 7304.19.5020 and 7304.19.5050), 7305.11.10, 7305.11.50, 7305.12.10, 7305.12.50, 7305.19.10 or 7305.19.50	125,646,499 kg
9903.80.20	Line pipe not exceeding 406.4 mm in outside diameter, provided for in subheading 7304.19.10 (except for statistical reporting number 7304.19.1080), 7304.19.50 (except for statistical reporting number 7304.19.5080), 7306.19.10 (except for statistical reporting number 7306.19.1050) or 7306.19.51 (except for statistical reporting number 7306.19.5150)	51,383,847 kg
9903.80.21	Other line pipe, provided for in subheading 7306.19.10 (except for statistical reporting number 7306.19.1010) or 7306.19.51 (except for statistical reporting number 7306.19.5110)	250,007,048 kg
9903.80.22	Standard pipe, provided for in subheading 7304.39.00 (except for statistical reporting numbers 7304.39.0002, 7304.39.0004, 7304.39.0006, 7304.39.0008, 7304.39.0028, 7304.39.0032, 7304.39.0040, 7304.39.0044, 7304.39.0052, 7304.39.0056, 7304.39.0068 and 7304.39.0072), 7304.59.80 (except for statistical reporting numbers 7304.59.8020, 7304.59.8025, 7304.59.8035, 7304.59.8040, 7304.59.8050, 7304.59.8055, 7304.59.8065 and 7304.59.8070) or 7306.30.50 (except for statistical reporting numbers 7306.30.5010, 7306.30.5015, 7306.30.5020 and 7306.30.5035)	69,469,685 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.23	Structural pipe and tube, provided for in subheading 7304.90.10, 7304.90.30, 7305.31.20, 7305.31.40, 7305.31.60 (except for statistical reporting number 7305.31.6010), 7306.30.30, 7306.50.30, 7306.61.10, 7306.61.30, 7306.69.10 or 7306.69.30.....	54,003,708 kg
9903.80.24	Mechanical tubing and other products, provided for in subheading 7304.31.30, 7304.31.60 (except for statistical reporting numbers 7304.31.6010), 7304.39.00 (except for statistical reporting numbers 7304.39.0002, 7304.39.0004, 7304.39.0006, 7304.39.0008, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0036, 7304.39.0048, 7304.39.0062, 7304.39.0076 and 7304.39.0080), 7304.51.10, 7304.51.50 (except for statistical reporting numbers 7304.51.5005, 7304.51.5015 and 7304.51.5045), 7304.59.10, 7304.59.60, 7304.59.80 (except for statistical reporting numbers 7304.59.8010, 7304.59.8015, 7304.59.8030, 7304.59.8045, 7304.59.8060 and 7304.59.8080), 7304.90.50, 7304.90.70, 7306.30.10, 7306.30.50 (except for statistical reporting numbers 7306.30.5010, 7306.30.5025, 7306.30.5028, 7306.30.5032, 7306.30.5040, 7306.30.5055, 7306.30.5085 and 7306.30.5090), 7306.50.10, 7306.50.50 (except for statistical reporting number 7306.50.5010), 7306.61.50, 7306.61.70 (except for statistical reporting number 7306.61.7030), 7306.69.50 or 7306.69.70 (except for statistical reporting number 7306.69.7030).....	8,438,050 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.25	Pressure tubing and other products, provided for in subheading 7304.31.60 (except for statistical reporting number 7304.31.6050), 7304.39.00 (except for statistical reporting numbers 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.39.0076 and 7304.39.0080), 7304.51.50 (except for statistical reporting numbers 7304.51.5005 and 7304.51.5060), 7304.59.20, 7306.30.50 (except for statistical reporting numbers 7306.30.5015, 7306.30.5020, 7306.30.5025, 7306.30.5028, 7306.30.5032, 7306.30.5035, 7306.30.5040, 7306.30.5055, 7306.30.5085 and 7306.30.5090) or 7306.50.50 (except for statistical reporting numbers 7306.50.5030, 7306.50.5050 and 7306.50.5070)	1,172,695 kg
9903.80.26	Tubes or pipes for piling and other products, provided for in subheading 7305.39.10 or 7305.39.50	4,807,122 kg
9903.80.27	Pipes and tubes, not specially provided for, provided for in subheading 7304.51.50 (except for statistical reporting numbers 7304.51.5015, 7304.51.5045 and 7304.51.5060), 7305.90.10, 7305.90.50, 7306.90.10 or 7306.90.50	449,740 kg
9903.80.28	Hot-rolled sheet of stainless steel, provided for in subheading 7219.13.00, 7219.14.00, 7319.23.00 or 7219.24.00	1,172,992 kg
9903.80.29	Hot-rolled strip of stainless steel and other products, provided for in subheading 7220.12.10 or 7220.12.50	13,346 kg
9903.80.30	Hot-rolled plate of stainless steel, in coils, and other products, provided for in subheading 7219.11.00 or 7219.12.00	218,649 kg
9903.80.31	Cold-rolled sheet of stainless steel and other products, provided for in subheading 7219.32.00, 7219.33.00, 7219.34.00, 7219.35.00 or 7219.90.00	13,460,008 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.32	Cold-rolled strip of stainless steel, provided for in subheading 7220.20.10, 7220.20.60, 7220.20.70, 7220.20.80, 7220.20.90 or 7220.90.00	1,649,722 kg
9903.80.33	Cold-rolled plate of stainless steel, in coils, provided for in subheading 7219.31.00 (except for statistical reporting number 7219.31.0050)	24,905 kg
9903.80.34	Wire of stainless steel, drawn, provided for in subheading 7223.00.10, 7223.00.50 or 7223.00.90	5,338,007 kg
9903.80.35	Pipes and tubes of stainless steel, provided for in subheading 7304.41.30, 7304.41.60, 7304.49.00, 7305.31.60 (except for statistical reporting number 7305.31.6090), 7306.40.10, 7306.40.50, 7306.61.70 (except 7306.61.7060) or 7306.69.70 (except for statistical reporting number 7306.69.7060)	12,602,387 kg
9903.80.36	Line pipe of stainless steel, provided for in subheading 7304.11.00 or 7306.11.00	1,254,097 kg
9903.80.37	Bars and rods of stainless steel, cold finished, provided for in subheading 7222.20.00 or 7222.30.00	224,622 kg
9903.80.38	Bars and rods of stainless steel, hot-rolled, provided for in heading 7221.00.00 (except for statistical reporting numbers 7221.00.0017, 7221.00.0018 and 7221.00.0030) or subheading 7222.11.00, 7222.19.00 or 7222.40.30 (except for statistical reporting numbers 7222.40.3025 and 7222.40.3045)	45,391 kg
9903.80.39	Blooms, billets and slabs of stainless steel and other products, provided for in subheading 7218.91.00 and 7218.99.00	110,360 kg
9903.80.40	Oil country pipe and tube goods of stainless steel and other products, provided for in subheading 7304.22.00, 7304.24.30, 7304.24.40, 7304.24.60, 7306.21.30, 7306.21.40 or 7306.21.80	3,500 kg
9903.80.41	Ingot and other primary forms of stainless steel, provided for in subheading 7218.10.00	215,467 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.42	Flat-rolled products of stainless steel, provided for in subheading 7219.21.00, 7219.22.00, 7219.31.00 (except for statistical reporting number 7219.31.0010) or 7220.11.00	2,329,416 kg
9903.80.43	Bars and rods, hot-rolled, in irregularly wound coils, of stainless steel, provided for in heading 7221.00.00 (except for statistical reporting numbers 7221.00.0005, 7221.00.0045 and 7221.00.0075)	0 kg
9903.80.44	Angles, shapes and sections of stainless steel, provided for in subheading 7222.40.30 (except for statistical reporting numbers 7222.40.3065 and 7222.40.3085) or 7222.40.60	49 kg
9903.80.45	Angles, shapes and sections, provided for in subheading 7216.31.00, 7216.32.00, 7216.33.00, 7216.40.00, 7216.50.00, 7216.99.00, 7228.70.30 (except for statistical reporting numbers 7228.70.3060 and 7228.70.3081) or 7228.70.60	106,760,293 kg
9903.80.46	Bars and rods, hot-rolled, in irregularly wound coils, provided for in subheading 7213.91.30, 9213.91.45, 7213.91.60, 7213.99.00 (except for statistical reporting number 7213.99.0060), 7227.20.00 (except for statistical reporting number 7227.20.0080) or 7227.90.60 (except for statistical reporting numbers 7227.90.6005, 7227.90.6010, 7227.90.6040 and 7227.90.6090)	56,474,925 kg
9903.80.47	Wire (other than of stainless steel), provided for in subheading 7217.10.10, 7217.10.20, 7217.10.30, 7217.10.40, 7217.10.50, 7217.10.60, 7217.10.70, 7217.10.80, 7217.10.90, 7217.20.15, 7217.20.30, 7217.20.45, 7217.20.60, 7217.20.75, 7217.30.15, 7217.30.30, 7217.30.45, 7217.30.60, 7217.30.75, 7217.90.10, 7217.90.50, 7229.20.00, 7229.90.10, 7229.90.50 or 7229.90.90	40,508,288 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.48	Bars, hot-rolled, not of stainless steel, provided for in subheading 7213.20.00, 7213.99.00 (except for statistical reporting numbers 7213.99.0030 and 7213.99.0090), 7214.10.00, 7214.30.00, 7214.91.00, 7214.99.00, 7215.90.10, 7227.20.00 (except for statistical reporting number 7227.20.0030), 7227.90.60 (except for statistical reporting numbers 7227.90.6020, 7227.90.6030 and 7227.90.6035), 7228.20.10, 7228.30.80 (except for statistical reporting number 7228.30.8010), 7228.40.00, 7228.60.60 or 7228.80.00	32,914,618 kg
9903.80.49	Bars, cold-finished, not of stainless steel, provided for in subheading 7215.10.00, 7215.50.00, 7215.90.30, 7215.90.50, 7228.20.50, 7228.50.50 or 7228.60.80	9,535,366 kg
9903.80.50	Angles, shapes and sections of a type known as "light-shaped bars" and other products, provided for in subheading 7216.10.00, 7216.21.00, 7216.22.00 or 7228.70.30 (except for statistical reporting numbers 7228.70.3010, 7228.70.3020 and 7228.70.3041)	1,150,356 kg
9903.80.51	Reinforcing bars, provided for in subheading 7213.10.00, 7214.20.00 or 7228.30.80 (except for statistical reporting numbers 7228.30.8005, 7228.30.8015, 7228.30.8041, 7228.30.8045 and 7228.30.8070)	4,400,770 kg
9903.80.52	Sheet piling, provided for in subheading 7301.10.00	0 kg
9903.80.53	Nonumerated railroad goods, provided for in subheading 7302.40.00, 7302.90.10 and 7302.90.90	109,715 kg
9903.80.54	Rails other than those known as "standard rails," provided for in subheading 7302.10.10 (except for statistical reporting numbers 7302.10.1010, 7302.10.1035, 7302.10.1065 and 7302.10.1075)	467 kg

Heading/ Subheading	Article description	Quantitative Limitation
9903.80.55	Rails known as "standard rails," provided for in subheading 7302.10.10 (except for statistical reporting numbers 7302.10.1015, 7302.10.1025, 7302.10.1045 and 7302.10.1055) or 7302.10.50	770 kg
9903.80.56	Products of tool steel and other products, provided for in subheading 7224.10.00 (except for statistical reporting numbers 7224.10.0005 and 7224.10.0075), 7224.90.00 (except for statistical reporting numbers 7224.90.0005, 7224.90.0045, 7224.90.0055, 7224.90.0065 and 7224.90.0075), 7225.30.11, 7225.30.51, 7225.40.11, 7225.40.51, 7225.50.11, 7226.20.00, 7226.91.05, 7226.91.15, 7226.91.25, 7226.92.10, 7226.92.30, 7227.10.00, 7227.90.10, 7227.90.20, 7228.10.00, 7228.30.20, 7228.30.40, 7228.30.60, 7228.50.10, 7228.60.10 or 7229.90.05	849,004 kg
9903.80.57	Blooms, billets and slabs, semi-finished, provided for in subheading 7207.11.00, 7207.12.00, 7207.19.00, 7207.20.00 or 7224.90.00 (except for statistical reporting numbers 7224.90.0015, 7224.90.0025, and 7224.90.0035)	1,697,955 kg
9903.80.58	Ingots, provided for in subheading 7206.10.00, 7206.90.00 or 7224.10.00 (except for statistical reporting number 7224.10.0045)	74,667 kg

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: **www.fdsys.gov.**

Federal Register information and research tools, including Public Inspection List, indexes, and Code of Federal Regulations are located at: **www.ofr.gov.**

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to **https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new**, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to **http://listserv.gsa.gov/archives/publaws-l.html** and select *Join or leave the list (or change settings);* then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: **fedreg.info@nara.gov**

The Federal Register staff cannot interpret specific documents or regulations.

CFR Checklist. Effective January 1, 2009, the CFR Checklist no longer appears in the Federal Register. This information can be found online at **http://bookstore.gpo.gov/.**

FEDERAL REGISTER PAGES AND DATE, MAY
