FEDERAL REGISTER

Vol. 83 Monday,

No. 88 May 7, 2018

Book 1 of 2 Books

Pages 19905–20162

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 83 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 83, No. 88
Monday, May 7, 2018

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

7 CFR Part 1773

RIN 0572–AC33

Policy on Audits of RUS Borrowers and Grantees

AGENCY: Rural Utilities Service, USDA.

ACTION: Final rule with request for comment.

SUMMARY: The Rural Utilities Service (RUS) is amending its regulations regarding its Policy on Audits to incorporate 2011 revisions to the Generally Accepted Government Auditing Standards (GAGAS) issued by the Government Accountability Office (GAO), the clarified audit standards issued by the American Institute of Certified Public Accountants (AICPA) in 2011, and Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, Subpart F, Audit Requirements, issued by the Office of Management and Budget on December 26, 2013, and adopted by USDA on December 26, 2014. RUS is also expanding and clarifying its regulations to: include grant recipients, amend its peer review requirements, amend its reporting requirements, expand the options for the electronic filing of audits, and clarify a number of existing audit requirements, and is amending the title to reflect this change.

DATES: *Effective Date:* Rule will become effective on July 6, 2018 and is applicable for financial audits for periods ending on or after December 15, 2018.

Comment Date: Comments must be received by RUS on or before June 6, 2018.

ADDRESSES: Submit comments by either of the following methods:

- Federal eRulemaking Portal at *https://www.regulations.gov/*. Follow instructions for submitting comments.
- *Postal Mail/Commercial Delivery:* Please send your comments addressed to Thomas P. Dickson, Acting Director, Program Development and Regulatory Analysis, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue SW, STOP 1522, Room 5164–S, Washington, DC 20250–1522.

Additional information about Rural Development and its programs is available on the internet at *https://www.rd.usda.gov/*.

FOR FURTHER INFORMATION CONTACT: William Chris Colberg, Acting Chief, Technical Accounting and Auditing Staff, Program Accounting Services Division, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue SW, STOP 1523, Washington, DC 20250–1523. Telephone: (202) 720–1905.

SUPPLEMENTARY INFORMATION:

Executive Order 12866

This final rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget (OMB).

Executive Order 12372

This final rule is excluded from the scope of Executive Order 12372, Intergovernmental Consultation, which may require consultation with state and local officials. See the final rule related notice entitled, ''Department Programs and Activities Excluded from Executive Order 12372'' (50 FR 47034) advising that RUS loans and loan guarantees were not covered by Executive Order 12372.

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. RUS has determined that this final rule meets the applicable standards provided in section 3 of the Executive Order. In addition, all state and local laws and regulations that are in conflict with this rule will be preempted, no retroactive effect will be given to this rule, and, in accordance with section 212(e) of the Department of Agriculture Reorganization Act of 1994 (7 U.S.C. 6912(e)), administrative appeal procedures, if any, must be exhausted before an action against the Department or its agencies may be initiated.

Regulatory Flexibility Act Certification

RUS has determined that this final rule will not have significant impact on a substantial number of small entities defined in the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The RUS loan programs provide borrowers with loans at interest rates and terms that are more favorable than those generally available from the private sector. Borrowers, as a result of obtaining federal financing, receive economic benefits that exceed any direct cost associated with RUS regulations and requirements.

National Environmental Policy Act Certification

RUS has determined that this final rule will not significantly affect the quality of the human environment as defined by the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*). Therefore, this action does not require an environmental impact statement or assessment.

Catalog of Federal Domestic Assistance

The programs described by this final rule are listed in the Catalog of Federal Domestic Assistance under Numbers CFDA 10.751, Rural Energy Savings Program; CFDA 10.787, Broadband Initiatives Program; CFDA 10.850, Rural Electrification Loans and Loan Guarantees; CFDA 10.851, Rural Telephone Loans and Loan Guarantees; CFDA 10.855, Distance Learning and Telemedicine Loans and Grants; CFDA 10.857, Bulk Fuel Revolving Fund Grants; CFDA 10.858, Denali Commission Grants and Loans; CFDA 10.859, Assistance to High Energy Cost Rural Communities; CFDA 10.861, Public Television Station Digital Transition Grant Program; and, CFDA 10.863, Community Connect Grant Program. The General Services Administration (GSA) website at *http://www.cfda.gov* contains a PDF file version of the CFDA catalog. The print edition of the catalog may be purchased from the U.S. Government Publishing Office (GPO) by calling (202) 512–1800 or toll free at 1–866–512–1800, or by ordering it online at *http://bookstore.gpo.gov.*

Information Collection and Recordkeeping Requirements

The reporting and recordkeeping requirements contained in this final rule have been approved by the Office of

Management and Budget (OMB) under OMB Control Number 0572–0095, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C Chapter 35). This final rule contains no new reporting or recordkeeping burdens under OMB Control Number 0572–0095 that would require approval under the Paperwork Reduction Act.

Send questions or comments regarding this burden or any other aspect of these collections of information, including suggestions for reducing the burden, to Thomas P. Dickson, Acting Director, Program Development and Regulatory Analysis, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue SW, Stop 1522, Room 5164–S, Washington, DC 20250–1522.

Unfunded Mandates

This final rule contains no Federal mandates (under the regulatory provision of title II of the Unfunded Mandates Reform Act of 1995) for state, local, and tribal governments or the private sector. Thus, this final rule is not subject to the requirements of sections 202 and 205 of the Unfunded Mandates Reform Act of 1995.

Comments

We invite you to participate in this rulemaking by submitting written comments, data, or views before the noted deadline. We will consider the comments we received and may conduct additional rulemaking based on the comments.

Background

7 CFR part 1773, Policy on Audits of RUS Borrowers and Grantees (Part 1773), implements the standard RUS security instrument provision requiring RUS electric and telecommunications borrowers and grantees to prepare and furnish to RUS, at least once during each 12-month period, a full and complete report of its financial condition, operations, and cash flows, in form and substance satisfactory to RUS; audited and certified by an independent audit organization, satisfactory to RUS, and accompanied by a report of such audit, in form and substance satisfactory to RUS. This rule is amended to include coverage of all grantees and the title of Part 1773 is revised to reflect this change.

This rule amends Part 1773 to incorporate the 2011 revisions to GAGAS by the GAO issued in December 2011. The 2011 revision contains major changes that reinforce the principles of transparency and accountability and provide the framework for high-quality government audits that add value. This revision to GAGAS incorporates the AICPA Statements on Auditing Standards. The 2011 revisions to GAGAS were effective for financial audits for periods ending on or after December 15, 2012.

The professional standards and guidance contained in GAGAS provide a framework for conducting high quality audits with competence, integrity, objectivity, and independence. These standards are used by auditors of entities that receive government awards and audit organizations performing GAGAS audits. GAGAS contains standards for audits as well as requirements and guidance dealing with ethics, independence, auditors' professional judgment and competence, quality control, performance of the audit, and reporting.

This rule amends Part 1773 to incorporate the clarified audit standards issued by the AICPA in October 2011. The purpose of redrafting the auditing standards was for clarity and convergence although there were some changes and additions in terms of requirements. The clarified standards also introduced new terminology and new audit reports by adding extra paragraphs and segregating sections of the report under subheadings.

In 2013, the Office of Management and Budget (OMB) revised uniform administrative requirements, cost principles, and audit requirements for Federal awards by issuing 2 CFR part 200, which served to consolidate and replace OMB Circulars A–21, A–87, A–89, A–102, A–110, A–122, and A–133. 2 CFR part 200 was adopted by USDA in December 2014. The portion of this CFR applicable to audits, Subpart F, is recognized and adopted by this revision to Part 1773.

This rule revises all subparts to encompass grantees, to remove most references to Rural Telephone Bank (RTB), to conform the language used to generally accepted auditing standards (GAAS) issued by the AICPA and GAGAS. This rule adds, changes or deletes definitions as appropriate to clarify certain existing information. Perhaps most importantly, this rule replaces the RUS management letter with a report on compliance with aspects of contractual agreements and regulatory requirements based on the requirements found in AU–C 806 of GAAS. This rule also provides information on the electronic filing of annual audits in § 1773.21. RUS is also adding a requirement to the reporting package for a schedule of findings and recommendations in § 1773.34.

Due to the state boards of accountancy having now adopted peer review requirements as part of the CPA licensing requirements for performing attestation services, this amended rule significantly streamlines the RUS peer review monitoring included in § 1773.5 by removing much of the guidance previously provided with regard to auditor participation in an approved peer review program. RUS will no longer require that all auditors submit copies of their peer review reports but reserves the right to request said reports on a case by case basis. It also removes the option of requesting a waiver of the peer review requirement, relying instead on the requirements of the state boards of accountancy and the guidance provided within the peer review programs themselves.

Due to the scope and pervasiveness of the revisions being implemented, Part 1773 as revised is being published in its entirety in this final rule.

In this revision to Part 1773, all sample reports and financial statements will be combined into four appendices which will be available in RUS Bulletin 1773–1, Policy on Audits of RUS Borrowers and Grantees. Appendix A of RUS Bulletin 1773–1 contains the sample reports, financial statements and schedule of findings and recommendations for electric borrowers; Appendix B contains similar samples for telecommunications borrowers; Appendix C for broadband borrowers; and Appendix D contains sample reports for grantees. Appendices A through D will not be printed in the Code of Federal Regulations; however, these appendices are available at *https://www.regulations.gov/* for review and comment in conjunction with the comment period for this final rule. Only Subparts A through E will be published in the Code of Federal Regulations. The appendices are included in RUS Bulletin 1773–1, Policy on Audits of RUS Borrowers and Grantees, which contains all of Part 1773, including subparts A through E and the appendices. Publishing Part 1773 in bulletin form provides the RUS audit policy in an easy to read format. This publication is available on RUS' website at *https://www.rd.usda.gov/publications/regulations-guidelines/rural-utilities-service-audit.*

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex,

gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from public assistance programs, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720–2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877–8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.ascr.usda.gov/filing-program-discrimination-complaint-usda-customer* and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by:

(1) *Mail:* U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410;

(2) *fax:* (202) 690–7442; or

(3) *email: program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

List of Subjects in 7 CFR Part 1773

Accounting, Auditing, Electric power, Grants, Loan programs—broadband, Loan programs—communications, Loan programs—energy, Reporting and recordkeeping requirements, Rural areas, Telephone.

■ For the reasons set forth in the preamble, RUS revises 7 CFR part 1773 to read as follows:

PART 1773—POLICY ON AUDITS OF RUS BORROWERS AND GRANTEES

Subpart A—General Provisions

Sec.

Subpart B—RUS Audit Requirements

Subpart C—RUS Requirements for the Submission and Review of the Reporting Package

Subpart D—RUS Reporting Requirements

Subpart E—RUS Audit Requirements and Documentation

Authority: 7 U.S.C. 901 *et seq.,* 7 U.S.C. 1921 *et seq.,* 7 U.S.C. 6941 *et seq.*

Subpart A—General Provisions

§ 1773.1 General.

(a) This part implements the standards for audits required by the loan and grant agreements of Rural Utilities Service (RUS) electric and telecommunications borrowers and grantees. The provisions require auditees to prepare and furnish to RUS, at least once during each 12-month period, a full and complete report of its financial condition, operations, and cash flows, in form and substance satisfactory to RUS, audited and certified by an independent auditor, satisfactory to RUS, and accompanied by a report of such audit, in form and substance satisfactory to RUS.

(b) This part is based on the requirements of GAGAS in effect at the time of the audit and applicable RUS regulations and subpart F (Audit Requirements) of 2 CFR part 200 (Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards) (2 CFR 200.500–200.521).

(c) This part further sets forth the criteria for selecting auditors satisfactory to RUS and certain audit procedures and audit documentation that must be performed and prepared before an audit report will be accepted by RUS.

(d) Failure to provide an audit in compliance with this part is a serious violation of the RUS Security Agreement. RUS relies on audited financial statements in order to assess and monitor the financial condition of its borrowers and grantees and to fulfill its fiduciary responsibilities.

(e) RUS reserves the right to suspend its acceptance of audits performed by auditors who, in the opinion of RUS, are not meeting the requirements of this part or with unresolved disputes or issues until such time that the matter can be resolved to RUS' satisfaction.

§ 1773.2 Definitions.

As used in this part:

2 CFR part 200, subpart F means 2 CFR part 200, Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards, subpart F, Audit Requirements, as adopted by USDA in 2 CFR part 400.

AA–PARA means RUS Assistant Administrator, Program Accounting and Regulatory Analysis.

Administrator means the Administrator of RUS.

Affiliated company means a company that directly or indirectly through one or more intermediaries, control or are controlled by, or are under common control with, the auditee.

AICPA means the American Institute of Certified Public Accountants.

ASC means the Accounting Standards Codification issued by the Financial Accounting Standards Board.

Audit means an examination of financial statements by an independent auditor for the purpose of expressing an opinion on the fairness with which those statements present financial position, results of operations, and changes in cash flows in accordance with accounting principles generally accepted in the United States of America (GAAP) and for determining whether the auditee has complied with applicable laws, regulations, and provisions of loan or grant contracts and grant agreements that could have a material effect on the financial statements.

Audit date means the ''as of'' date established by the auditee.

Audit documentation has the same meaning as defined in the AICPA's professional auditing standards.

Auditee means an RUS borrower and/or grantee that is required to submit an annual audit as a condition of the award.

Auditor means government auditors as well as certified public accounting firms that perform audits using generally accepted government auditing standards (GAGAS).

BCAS means Broadband Collection and Analysis System (or successor system).

Borrower means an entity that has an outstanding RUS or Federal Financing Bank (FFB) loan or loan guarantee.

CPA means a Certified Public Accountant.

DCS means the Data Collection System (or successor system).

FASB means Financial Accounting Standards Board.

FFB means the Federal Financing Bank, a body corporate and instrumentality of the United States of America under the general supervision of the Secretary of the Department of the Treasury.

Fraud has the same meaning as defined in the AICPA's professional auditing standards.

GAAP has the same meaning as defined in accounting standards issued by the Government Accounting Standards Board (GASB) and the Financial Accounting Standards Board (FASB).

GAGAS means generally accepted government auditing standards as set forth in Government Auditing Standards, issued by the Comptroller General of the United States, Government Accountability Office.

GAO means the United States Government Accountability Office.

GASB means Government Accounting Standards Board.

Governance board means the auditee's board of directors, managing members, or other official body charged with governance.

Grantee means an entity that has a continuing responsibility under a grant agreement with RUS.

Illegal act has the same meaning as defined by the Public Company Accounting Oversight Board.

Material weakness has the same meaning as defined in the AICPA's professional auditing standards.

OIG means the Office of the Inspector General, United States Department of Agriculture.

OMB means The Office of Management and Budget.

Regulatory asset means an asset resulting from an action of a regulator as defined by FASB.

Regulatory liability means a liability imposed on a regulated enterprise by an action of a regulator as defined by FASB.

Related party has the same meaning as defined by FASB.

Reporting package means:

(1) The auditor's report on the financial statements;

(2) The report on internal control over financial reporting and on compliance and other matters;

(3) The report on compliance with aspects of contractual agreements and regulatory requirements;

(4) The schedule of findings and recommendations; and

(5) All supplemental schedules and information required by this part.

RUS means the Rural Utilities Service, an agency of the United States Department of Agriculture.

RUS Bulletin 1773–1, Policy on Audits of RUS Borrowers and Grantees, is a publication prepared by RUS that contains the RUS regulation 7 CFR part 1773 and exhibits of sample audit reports, financial statements, reports on internal control over financial reporting and on compliance and other matters, report on compliance with aspects of contractual agreements and regulatory requirements, and schedule of findings and recommendations used in preparing audits of RUS borrowers and grantees. This bulletin is available on the internet at *https://www.rd.usda.gov/publications/regulations-guidelines/bulletins/program-accounting.*

RUS security agreement means a loan agreement, grant agreement, mortgage, security agreement, or other form of agreement that governs the terms and conditions of, or provides security for, loan and/or grant funds provided by RUS to the auditee.

Significant deficiency has the same meaning as defined in the AICPA's professional auditing standards.

Single Audit Act means Single Audit Act of 1984 (31 U.S.C. 7501 *et seq.*) as implemented by 2 CFR part 200, subpart F.

State means any state or territory of the United States, or the District of Columbia.

Uniform System of Accounts means, for telecommunications borrowers, Bulletin 1770B–1, Accounting Requirements for RUS Telecommunications Borrowers (*https://www.rd.usda.gov/files/UTP_Bulletins_1770B-1.pdf*), and for electric borrowers, as contained in 7 CFR part 1767, Accounting Requirements for RUS Electric Borrowers, subpart B—Uniform System of Accounts, Bulletin 1767B–1, (*https://www.rd.usda.gov/files/UPA_Bulletin_1767B-1.pdf*).

Subpart B—RUS Audit Requirements

§ 1773.3 Annual audit.

(a) Each auditee must have its financial statements audited annually by an auditor selected by the auditee and approved by RUS as set forth in § 1773.4. All auditees must submit audited financial statements on a comparative basis covering two consecutive 12 month periods, unless the entity has not been in existence for two consecutive 12-month audit periods. Consolidated statements of the parent are not an acceptable replacement for an audit of the auditee.

(b) Each auditee must establish an annual audit date within 12 months of the date of the first advance and must prepare annual financial statements for the audit date established. Each auditee must notify the AA–PARA of the audit date at least 90 days prior to the selected audit date.

(c) Auditees must furnish a reporting package to RUS within 120 days of the audit date. (See § 1773.21). Until all loans made or guaranteed by RUS are repaid and unliquidated obligations rescinded, auditees that are borrowers must continue to provide annual audited financial statements. Auditees that are grantees must furnish annual audited financial statements in the year of the first advance and until all funds have been advanced or rescinded, and all financial compliance requirements have been fully satisfied.

(d) In addition to the requirements of this part, certain auditees may be subject to the Single Audit Act. An auditee that is defined as a Non-Federal Entity as defined in 2 CFR 200.69 means a state, local government, Indian tribe, institution of higher education (IHE), or nonprofit organization that carries out a Federal award as a recipient or subrecipient and is required to meet the requirements of this part as follows:

(1) Borrowers and/or grantees expending the threshold established for the Single Audit Act (currently $750,000) or more in Federal awards during the year must have an audit performed in accordance with the Single Audit Act. See 2 CFR 200.502, Basis For Determining Federal Awards Expended, for guidance in determining annual expenditures. The audited financial statements must be submitted to RUS and to the Federal Audit Clearinghouse.

(2) For auditees expending less than the threshold for expenditure in Federal awards during the year, RUS reserves its right under 2 CFR 200.503, Relationship to other audit requirements, to arrange for an audit performed in accordance with this part.

(3) Within 30 days of the audit date, auditees must notify the AA–PARA, in writing, of the total Federal awards expended during the year and must state whether the audit will be performed in accordance with the Single Audit Act, or this part.

(i) An auditee electing to comply with this part must select an auditor that meets the qualifications set forth in § 1773.5.

(ii) If an audit is performed in accordance with the Single Audit Act, the auditor's reporting on the financial statements that meet the requirements of the Single Audit Act, will be sufficient to satisfy the auditee's obligations under this part.

(e) Subpart F of 2 CFR part 200 does not apply to audits of RUS electric and telecommunications cooperatives and for-profit telecommunications borrowers unless the borrower has contractually agreed with another Federal agency (*e.g.* Federal Emergency Management Agency) to provide a financial audit performed in accordance with 2 CFR part 200, subpart F. In no circumstance will an auditee be required to submit separate audits performed in accordance with this part and 2 CFR part 200, subpart F.

§ 1773.4 Auditee's responsibilities.

(a) *Selection of a qualified auditor.* The auditee's governance board is responsible for the selection of a qualified auditor that meets the requirements set forth in § 1773.5. When selecting an auditor, the auditee should consider, among other matters:

(1) The qualifications of auditors available to do the work;

(2) The auditor's experience in performing audits of utilities, related industries, or in the case of grantees, experience in auditing entities comparable to the grantee; and

(3) The auditor's ability to complete the audit and submit the reporting package within 90 days of the audit date.

(b) *Board approval of selection.* The board's approval of an auditor must be recorded by a board resolution that states:

(1) The auditor represents that it meets RUS qualifications to perform an audit; and

(2) The auditee and auditor will enter into an audit engagement in accordance with § 1773.6.

(c) *Notification of selection.* When the initial selection or subsequent change of an auditor has been made, the auditee must notify the AA–PARA, in writing, at least 90 days prior to the audit date.

(1) Within 30 days of the date of receipt of such notice, RUS will notify the auditee, in writing, if the selection or change in auditor is not satisfactory.

(2) Notification to RUS that the same auditor has been selected for succeeding audits of the auditee's financial statements is not required; however, the procedures outlined in this part must be followed for each new auditor selected, even though such auditor may previously have been approved by RUS to audit records of other RUS auditees. Changes in the name of an auditor are considered to be a change in the auditor.

(d) *Audit engagement letter.* The auditee must enter into an audit agreement with the auditor that complies with § 1773.6 prior to the initiation of the audit.

(e) *Debarment certification.* The auditee must obtain, from the selected auditor, a lower tier covered transaction certification (Form AD–1048, Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion—Lower Tier Covered Transactions), as required by Executive Orders 12549 and 12689, Debarment and Suspension, and any rules or regulations issued thereunder.

(f) *Peer review report.* The auditee must obtain, from the selected auditor, a copy of the auditor's current approved peer review report.

(g) *Preparation of schedules.* The auditee must prepare any schedules that are required by the auditor to perform the audit, including a schedule of deferred debits and deferred credits and a detailed schedule of investments in subsidiary and affiliated companies accounted for on the cost, equity, or consolidated basis. The detailed schedule of investments can be included in the notes to the financial statements or as a separate schedule as long as all information required is adequately disclosed. Samples of these schedules can be found in Appendices A–D, of RUS Bulletin 1773–1.

(1) The schedule of deferred debits and deferred credits must include a description of the deferral and a notation as to whether the deferral has received written approval from RUS. If a determination is made that prior written approval is not required, cite the specific authority for the deferral.

(2) The schedule of investments must include investments in subsidiary and affiliated companies, corporations, limited liability corporations and partnerships, joint ventures, etc. accounted for on either the cost, equity or on a consolidated basis. For all investments, the auditee must list the name of the entity, ownership percentage, and the principal business in which the entity is engaged. For investments recorded on the cost basis, the auditee must include the original investment, advances, dividends declared or paid in the current and prior years and the net investment. For investments recorded on the equity or consolidated basis, the auditee must include the ownership percentage, original investment, advances, dividends declared or paid in the current and prior years, and current and prior years' earnings and losses, including accumulated losses in excess of the original investment.

(h) *Scope limitations.* The auditee will not limit the scope of the audit to the extent that the auditor is unable to provide an unqualified opinion that the financial statements are presented fairly in conformity with GAAP due to the scope limitation.

(i) *Submission of reporting package.* The auditee must submit to RUS the required reporting package as set forth in § 1773.21.

(1) A reporting package that fails to meet the requirements detailed in this part will be returned to the auditee with a written explanation of noncompliance.

(2) The auditee must, within 30 days of the date of the letter or email detailing the noncompliance, submit a corrected reporting package to RUS.

(3) If a corrected reporting package is not received within 30 days of the date of the letter or email detailing the noncompliance, RUS will take appropriate action, depending on the severity of the noncompliance.

(j) *Submission of a plan of corrective action.* If the auditor's report contains findings and recommendations but does not include the auditee's response, the auditee must submit written responses to RUS within 180 days of the audit date. The written responses must address:

(1) The corrective action already taken or planned, or the reason the auditee believes no action is necessary; and

(2) The status of corrective action taken on previously reported findings and recommendations.

§ 1773.5 Qualifications of the auditor.

Auditors that meet the qualifications criteria of this section and enter into an audit engagement with the auditee that complies with § 1773.6, will be considered satisfactory to RUS.

(a) *Licensing.* Auditors that audit the financial statements of an RUS auditee must be licensed to perform attestation engagements in the United States of America. Auditors do not have to be licensed by the state in which the auditee is located; however, auditors must abide by the rules and regulations of professional conduct promulgated by

the accountancy board of the state in which the auditee is located.

(b) *Independence.* Auditors must be independent as determined by the standards for independence in the AICPA Code of Professional Conduct and in GAGAS in effect at the time of the audit.

(c) *Peer review requirement.* Auditors must be enrolled and participating in a peer review program, and must have undergone a satisfactory peer review of their accounting and audit practice. The peer review must be in effect at the date of the audit report opinion.

(1) *Peer review reports.* RUS reserves the right to request peer review reports from selected auditors.

(2) *Peer review requirements for new auditors.* New auditing firms must meet the requirements of their state board of accountancy with regard to enrolling in a peer review program, timing of the first peer review, and any other peer review requirements.

§ 1773.6 Auditor communication.

(a) GAGAS and AICPA standards require that the auditor communicate with the auditee the auditor's understanding of the services to be performed and document that understanding through a written communication to those charged with governance. To be acceptable to RUS, the auditor's communication must take the form of an audit engagement letter prepared by the auditor and must be formally accepted by the governance board or an audit committee representing the governance board. In addition to the requirements of the AICPA's professional auditing standards and GAGAS, the engagement letter must also include the following:

(1) The nature of planned work and level of assurance to be provided related to internal control over financial reporting and compliance with laws, regulation, and provision of contracts or grant agreements;

(2) That the auditee and auditor acknowledge that the audit is being performed and that the reporting package is being issued to enable the auditee to comply with the provisions of RUS's security instrument which requires compliance with this part;

(3) That the auditor acknowledges the mandatory reporting requirements for fraud, illegal acts, or noncompliance with provisions of laws, regulations, contracts, and grant agreements in § 1773.9. Acceptance of the engagement letter by the auditee is required, thus granting the auditor permission to directly notify the appropriate officials which may include but is not limited to the governance board, RUS, and OIG;

(4) That the auditor acknowledges that it is required under § 1773.7 to contact RUS if the auditor is unable to resolve scope limitations imposed by the auditee, or if such limitations in scope violate this part. Acceptance of the engagement letter by the auditee is required, thus granting the auditor permission to directly notify the AA–PARA as needed;

(5) That the auditee and auditor acknowledge that RUS will consider the auditee to be in violation of its RUS Security Agreement and this part if the auditee fails to have an audit performed and documented in compliance with GAGAS and this part;

(6) That the auditor represents that it meets the requirements under this part to perform the audit;

(7) That the auditor will perform the audit and will prepare the reporting package in accordance with the requirements of this part;

(8) That the auditor will document the audit work performed in accordance with GAGAS, and the requirements of this part; and

(9) That the auditor will make all audit documentation, including the reporting package available to RUS or its representatives (including but not limited to OIG and GAO), upon request, and will permit the photocopying of all such audit documentation.

(b) A copy of the audit engagement letter must be available at the auditee's office for inspection by RUS personnel. One copy of the current audit engagement letter must be maintained in the auditor's audit documentation.

§ 1773.7 Audit standards.

(a) The audit of the financial statements must be performed in accordance with GAGAS and this part in effect at the audit date unless the auditee is directed otherwise, in writing, by RUS.

(b) The audit of the financial statements must include such tests of the accounting records and such other auditing procedures that are sufficient to enable the auditor to express an opinion on the financial statements and to issue the required reporting package.

(c)(1) The auditee will not limit the scope of the audit to the extent that the auditor is unable to meet RUS audit requirements without prior written approval of the AA–PARA.

(2) If the auditor determines during the audit that an unqualified opinion cannot be issued due to a scope limitation imposed by the auditee, the auditor should use professional judgment to determine what levels of the auditee's management and/or those charged with governance should be informed.

(3) After informing the auditee's management and/or those charged with governance, if the scope limitation is not adequately resolved, the auditor should immediately contact the AA–PARA.

§ 1773.8 Audit date.

(a) The annual audit must be performed as of the end of the same calendar month each year unless prior approval to change the audit date is obtained, in writing, from RUS.

(1) An auditee may request a change in the audit date by writing to the AA–PARA at least 60 days prior to the currently approved audit date, providing justification for the change.

(2) The time period between the prior audit date and the newly requested audit date must be no longer than twenty-three months.

(3) Comparative financial statements must be prepared and audited for the 12 months ending as of the new audit date and for the 12 months immediately preceding that period.

§ 1773.9 Disclosure of fraud, and noncompliance with provisions of laws, regulations, contracts, and loan and grant agreements.

(a) In accordance with GAGAS, the auditor is responsible for planning and performing the audit to provide reasonable assurance about whether the financial statements are free of material misstatement due to error or fraud. The auditor must also plan the audit to provide reasonable assurance of detecting material misstatements resulting from violations of provisions of laws, regulations, contracts or loan and grant agreements that could have a direct and material effect on the financial statements.

(b) If specific information comes to the auditor's attention that provides evidence concerning the existence of possible violations of provisions of laws, regulations, contracts or loan and grant agreements that could have a material indirect effect on the financial statements, the auditor should apply audit procedures specifically directed to ascertaining whether a violation of provisions of laws, regulations, contract or grant agreements has occurred.

(c) Pursuant to the terms of its audit engagement letter with the auditee, the auditor must immediately report, in writing, all instances of fraud, illegal acts, and all indications or instances of noncompliance with laws, whether material or not, to:

(1) The president of the auditee's governance board;

(2) AA–PARA; and
(3) OIG, as follows:
(i) For all audits performed in accordance with § 1773.3(d) (audits conducted in accordance with 2 CFR part 200 ''Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards''), report to the USDA–OIG-Audit, National Single Audit Coordinator for USDA, 401 W. Peachtree St NW, Room 2328, Atlanta, GA 30308,
(ii) For all other audits conducted in accordance with § 1773.3 report to the appropriate office based on location. See *https://www.usda.gov/oig/national.htm* to determine the correct reporting location.

§ 1773.10 Access to audit documentation.

Pursuant to the terms of this part and the audit engagement letter, the auditor must make all audit documentation available to RUS, or its designated representative, upon request and must permit RUS, or its designated representative, to photocopy all audit documentation.

§§ 1773.11–1773.19 [Reserved]

Subpart C—RUS Requirements for the Submission and Review of the Reporting Package

§ 1773.20 The auditor's submission of the reporting package.

(a) *Time limit.* Within 90 days of the audit date, the auditor must deliver the reporting package to the auditee's governance board. At a minimum, copies should be provided for each member of the governance board and the manager. The auditor must also provide an electronic copy of the audit which meets the requirements of § 1773.21 for subsequent transmittal to RUS.

(b) *Communication with the governance board.* In addition to providing sufficient copies of the reporting package for each member of the auditee's governance board, RUS requires that the auditor report all audit findings to the auditee's governance board. RUS recommends that audit findings also be communicated orally unless oral communication would not be adequate. If the information is communicated orally, the auditor must document the communication by appropriate memoranda or notations in the audit documentation. If the auditor communicates in writing, a copy of the written communication must be included in the auditor's audit documentation.

(c) *Matters to be communicated.* Matters communicated to those charged with governance must include, but are not limited to the matters to be communicated as prescribed in the AICPA's professional standards AU–C Section 260, ''The Auditor's Communication with Those Charged with Governance''.

§ 1773.21 Auditee's review and submission of the reporting package.

(a) The auditee's governance board should note and record receipt of the reporting package and any action taken in response to the reporting package in the minutes of the board meeting at which such reporting package is presented.

(b) The auditee must furnish RUS with an electronic copy of the reporting package within 120 days of the audit date as provided for in § 1773.3.

(c) The auditee must furnish AA–PARA with a copy of its plan for corrective action, if any, within 180 days of the audit date.

(d) The auditee must include in the reporting package a copy of each special report, summary of recommendations or similar communications, if any, received from the auditor as a result of the audit.

(e) All required submissions to RUS described in paragraphs (b) through (d) of this section should be furnished electronically. The electronic copy must be provided in a Portable Document Format (PDF). Auditees with a designation from 0001 through 0199 in the Electric program and 500 through 699 in the Telecommunications programs shall upload the reporting package to the DCS or its successor system. Borrowers and/or grantees with a designation from 1100 through 1199, 1300 through 1399, and 1400 through 1499 in the Broadband program shall upload the reporting package to the BCAS or its successor system. All other borrowers and/or grantees may upload their reporting package through DCS or its successor system. Specific instructions for submission are available from the Technical Accounting and Auditing Staff.

§§ 1773.22–1773.29 [Reserved]

Subpart D—RUS Reporting Requirements

§ 1773.30 [Reserved]

§ 1773.31 Auditor's report on the financial statements.

The auditor must prepare a written report on comparative balance sheets, statements of revenue and patronage capital (or statement of operations customary to the type of entity reporting) and statements of cash flows. The report must include the manual or printed signature of the auditor, cover all statements presented, and refer to the separate report on internal controls over financial reporting and on compliance and other matters and the report on compliance with aspects of contractual agreements and regulatory requirements issued in conjunction with the auditor's report on the financial statements. The auditor's report on the financial statements should also state that the report on internal controls over financial reporting and on compliance and other matters is an integral part of a GAGAS audit, and in considering the results of the audit, that this report should be read along with the auditor's report on the financial statements.

§ 1773.32 Report on internal control over financial reporting and on compliance and other matters.

(a) As required by GAGAS, the auditor must prepare a written report describing the scope of the auditor's testing of internal control over financial reporting and of compliance with provisions of laws, regulations, contracts, and loan and grant agreements, and that the tests provided sufficient, appropriate evidence to support opinions on the effectiveness of internal control and on compliance with provisions of laws, regulations, contracts, and loan and grant agreements. This report must include the manual or printed signature of the auditor and must include the following items as appropriate:
(1) Significant deficiencies and material weaknesses in internal control;
(2) Instances of fraud and noncompliance with provisions of laws or regulations that have a material effect on the audit and any other instances that warrant the attention of those charged with governance;
(3) Noncompliance with provisions of contracts or grant agreements that have a material effect on the audit; and
(4) Abuse that has a material effect on the audit.

(b) When the auditor detects instances of noncompliance or abuse that have an effect on the financial statements that are less than material but warrant the attention of those charged with governance, they should communicate those findings in writing to those charged with governance in a separate communication. If the auditor has issued a separate communication detailing immaterial instances of noncompliance or abuse, the report on internal controls over financial reporting and on compliance and other matters must be modified to include a statement such as:

''We noted certain immaterial instances of noncompliance [and/or abuse], which we have reported to the management of (auditee's name) in a separate letter dated (month, day, 20XX).''

(c) If the auditor has issued a separate letter to management to communicate other matters involving the design and operation of the internal control over financial reporting, the report on internal controls over financial reporting and on compliance and other matters must be modified to include a statement such as:

''However, we noted other matters involving the internal control over financial reporting that we have reported to the management of (auditee's name) in a separate letter dated (month, day, 20XX).''

(d) The report must contain the status of known but uncorrected deficiencies from prior audits that affect the current audit objective.

§ 1773.33 Report on compliance with aspects of contractual agreements and regulatory requirements.

The auditor must prepare a report on compliance with aspects of contractual agreements and regulatory requirements that includes, at a minimum, comments on:

(a) *Audit procedures.* State whether the audit has been performed in accordance with this part;

(b) *Special reports.* State whether any special reports, summaries of recommendations, or similar communications were furnished to the auditee's management during the course of the audit or during interim audit work, and provide a description of the information furnished;

(c) *Accounting and records.* Comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the auditee did not maintain adequate and effective accounting procedures and records and utilize adequate and fair methods for accumulating and recording labor, material, and overhead costs, and for distributing these costs to construction, retirement, and maintenance or other expense accounts. Where appropriate, comment on whether anything came to the auditor's attention to indicate that the auditee did not:

(1) Establish continuing property records (CPRs) that are updated on a current basis, at least annually, and are reconciled with the controlling general ledger plant accounts;

(2) Promptly clear construction clearing accounts of costs of completed construction to the proper classified plant accounts and accrue depreciation on such completed construction from the date the plant was placed in service;

(3) Currently and systematically record and properly price retirements of plant;

(4) Properly account for the accumulated provision for depreciation accounts associated with retirements of plant or properly disclose any unusual charges or credits to such accounts; and

(5) Obtain RUS approval for the sale, lease or transfer of capital assets secured under the RUS security agreement when approval is required, and properly handle any proceeds from the sale or lease of plant, material or scrap in conformance with RUS requirements.

(d) *Materials control.* Comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the control over materials and supplies was not adequate.

(e) *Compliance with RUS loan and security instrument provisions.* Comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the following provisions of RUS' loan and security instruments have not been complied with:

(1) For electric auditees, provisions related to:

(i) The requirements for an auditee to obtain written approval of mortgagees to enter into any contract for the management, operation, or maintenance of the auditee's system if the contract covers all or substantially all of the electric system. For purposes of this part, the following contracts shall be deemed as requiring RUS approval:

(A) Management contracts in which the auditee has contracted to have another auditee or other entity manage its affairs;

(B) Operations and maintenance contracts in which the auditee has contracted to have another auditee or other entity operate and/or maintain all or substantially all of the physical plant facilities of the auditee.

(C) Operations and maintenance contracts in which the auditee has contracted to operate and maintain the physical plant facilities of another auditee or other utility system;

(ii) The requirement for an auditee to prepare and furnish mortgagees annual or periodic financial and operating reports on the auditee's financial condition and operations accurately and within the required deadlines. The auditor shall comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the information represented by the auditee as having been submitted to RUS in its most recent December 31 Financial and Operating Report Electric Distribution or Financial and Operating Report Electric Power Supply was not in agreement with the auditee's audited records. If the auditee represents that an amended report has been filed as of December 31, the comments must relate to the amended report; and

(iii) The requirement for an auditee to use depreciation rates that are within the ranges established by RUS for each primary plant account (See RUS Bulletin 183–1, Depreciation Rates and Procedures *at https://www.rd.usda.gov/files/UPA_Bulletin_183-1.pdf*), or with the requirements of the state regulatory body having jurisdiction over the auditee's depreciation rates in computing monthly accruals.

(2) For telecommunications auditees, provisions related to:

(i) The requirement for an auditee to obtain written approval of the mortgagees to enter into any contract, agreement or lease between the auditee and an affiliate other than as allowed under 7 CFR part 1744, subpart E; and

(ii) The requirement for an auditee to prepare and furnish mortgagees annual or periodic financial and operating reports on the auditee's financial condition and operations accurately and within the required deadlines. The auditor shall comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the information represented by the auditee as having been submitted to RUS in its most recent December 31 Operating Report for Telecommunications Borrowers was not in agreement with the auditee's audited records. If the auditee represents that an amended report has been filed as of December 31, the comments must be related to the amended report.

(3) For Broadband auditees, provisions relating to the requirement for an auditee to prepare and furnish mortgagee quarterly or periodic financial and operating reports on the auditee's financial condition and operations accurately and within the required deadlines. The auditor shall comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the information represented by the auditee as having been submitted to RUS in its most recent BCAS filing was not in agreement with the auditee's audited records. If the auditee represents that an amended report has been filed, the comments must be related to the amended report.

(4) For grantees, provisions related to:

(i) Recipients of Broadband Initiatives Program loans and grants, the requirement for the recipient to prepare and furnish RUS quarterly and annual financial and operating reports on the financial condition and operations of the auditee accurately and within the required deadlines. The auditor shall comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the information represented by the auditee as having been submitted to RUS in its most recent BCAS filing was not in agreement with the audited records of the auditee. If the auditee represents that an amended report has been filed, the comments must relate to the amended report. The auditor must state whether the Annual Compliance Certificate required by the RUS Security Agreement has been filed in a timely manner with RUS.

(ii) Recipients of all other grant programs within the electric and telecommunications programs, the requirements to prepare and furnish RUS with any required financial reporting accurately and within required deadlines, as appropriate for that specific program. The auditor shall comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the information represented by the grantee as having been submitted to RUS in its most recent filing was not in agreement with the audited records of the grantee. If the grantee represents that an amended report has been filed, the comments must relate to the amended report.

(f) *Related party transactions.* Comment on whether, during the course of the audit, anything came to the attention of the auditor to indicate that all material related party transactions have not been disclosed in the notes to the financial statements in accordance with ASC 850, entitled ''Related Party Disclosures''.

(g) *Deferred debits and deferred credits.* For electric auditees, comment on whether, during the course of the audit anything came to the attention of the auditor to indicate that the auditee provided detailed schedule of deferred debits and deferred credits, including, but not limited to, margin stabilization plans, revenue deferral plans, and expense deferrals is not accurately presented. This schedule must be included as supplemental information or within the notes to the financial statements; and

(h) *Investments.* For electric and telecommunications auditees, comment on whether, during the course of the audit, anything came to the auditor's attention to indicate that the auditee provided detailed schedule of investments is not accurately presented. This schedule must be included as supplemental information or within the notes to the financial statements. The auditor must state that the audit did not disclose any investments in subsidiary or affiliated companies.

§ 1773.34 Schedule of findings and recommendations.

The auditor must prepare a schedule of findings and recommendations to be included with the audited financial statements. The schedule of findings and recommendations shall be developed and presented utilizing the elements of a finding discussed in GAGAS and shall include recommendations for remediation. If the schedule does not include responses from management, as well as any planned corrective actions, those items must be submitted directly to the AA–PARA by management in accordance with § 1773.4(j).

§§ 1773.35–1773.37 [Reserved]

Subpart E—RUS Audit Requirements and Documentation

§ 1773.38 Scope of engagement.

The audit requirements set forth in § 1773.39 through 1773.45 must be met annually by the auditor during the audit of the RUS auditee's financial statements. The auditor must exercise professional judgment in determining whether any auditing procedures in addition to those mandated by GAGAS or this part should be performed on the auditee's financial records in order to afford a reasonable basis for rendering the auditor's report on the financial statements, report on internal controls over financial reporting and on compliance and other matters, report on compliance with aspects of contractual agreements and regulatory requirements, and schedule of findings and recommendations.

§ 1773.39 Utility plant and accumulated depreciation.

(a) *General.* The audit of these accounts shall include tests of additions, replacements, retirements, and changes. The auditor's audit documentation shall support that the auditor:

(1) Examined direct labor and material transactions to determine whether the auditee's accounting records reflect a complete accumulation of costs;

(2) Examined indirect costs and overhead charges to determine if they conform to the Uniform System of Accounts or the Federal Acquisitions Regulations as required under the RUS Security Agreement;

(3) Reviewed the costs of completed construction and retirement projects to determine if they were cleared promptly from the work in progress accounts to the classified plant in service accounts and the related depreciation accounts;

(4) Examined direct purchases of special equipment and general plant;

(5) Determined the degree of accuracy and control of costing retirements, including tests of salvage and removal costs;

(6) Reviewed the auditee's work order procedures; and

(7) Reviewed depreciation rates for adequate support, and compared them to RUS guidelines to determine that they were in compliance.

(b) *Construction work in progress.* (1) The audit documentation shall include a summary of open work orders reconciled to the general ledger and note on the summary any unusual or atypical projects.

(2) The auditor's audit documentation shall support that the auditor:

(i) Reviewed equipment purchases charged to work orders, including payments and receiving reports;

(ii) Reviewed contracts showing the scope of the work, the nature of the contract, the contract amount, and scheduled payments and reviewed supporting documents to determine that services contracted for were in fact rendered;

(iii) Reviewed time cards and pay rates for a sample of employees who allocate their time to work orders;

(iv) Reviewed the nature of material and supplies issued to the project, traced amounts and quantities to supporting documents, and reviewed the reasonableness of clearing rates for assignment of stores expense to the work order;

(v) Reviewed the accuracy of the computation of overheads applied to the work order; and

(vi) Reviewed other costs charged to the work order for support and propriety.

(3) The auditor's audit documentation shall support that the auditor:

(i) Scheduled payments to contractors and traced to verify payments and supporting invoices;

(ii) Traced contract costs to final closeout documents, to the general ledger, and to the continuing property records; and

(iii) Verified the costs of owner furnished materials, if applicable.

(4) The auditor shall review the auditee's procedures for unitization and classification of work order and contract

costs. The auditor's audit documentation shall support that the auditor:

(i) Reviewed the tabulation of record units for construction from the work order staking sheets to the tabulation of record units, to the unitization sheets, and to the continuing property records;

(ii) Reviewed the procedures for unitizing and distributing costs of completed construction to the plant accounts;

(iii) Verified that standard costs were being used;

(iv) Evaluated the basis for development of standard costs; and

(v) Determined that costs of completed construction were cleared promptly from work in progress accounts.

(c) *Continuing property records.* The auditor's audit documentation shall support that the auditor:

(1) Determined whether the subsidiary plant records agree with the controlling general ledger plant accounts;

(2) Noted differences in the audit documentation; and

(3) Commented, in the report on compliance with aspects of contractual agreements and regulatory requirements, on any discrepancies.

(d) *Retirement work-in-progress.* The auditor's audit documentation shall support that the auditor:

(1) Determined that plant retirements are currently and systematically recorded and priced on the basis of the continuing property records, and determined that costs of removal have been properly accounted for;

(2) Explained the method used in computing the cost of units of plant retired if continuing property records have not been established and determined whether costs appeared reasonable; and

(3) Determined the manner in which net losses due to retirements were accounted for and traced clearing entries to the depreciation reserve, the plant accounts, and the continuing property records.

(e) *Provision for accumulated depreciation.* The auditor's audit documentation shall support that the auditor:

(1) Verified the depreciation accruals for the period, including the depreciation base;

(2) Reviewed the basis of the depreciation rates, any change in rates and the reason for the change, and, if appropriate, determined whether the rates are in compliance with RUS requirements or with the requirements of the state regulatory body having jurisdiction over the auditee's depreciation rates;

(3) Reviewed salvage and removal costs; and

(4) Searched for unrecorded retirements.

(f) *Other reserves.* The auditor's audit documentation shall include an account analysis for all other material plant reserves, such as the reserve for the amortization of plant acquisition adjustments. The auditor's audit documentation shall support that appropriate tests of transactions were performed.

(g) *Narrative.* The auditor shall include in the audit documentation a comprehensive narrative on the scope of work performed, observations made, and conclusions reached. Matters covered in this narrative shall include:

(1) The nature of construction and other additions;

(2) The control over, and the accuracy of pricing retirements;

(3) The accuracy of distributing costs to classified utility plant accounts;

(4) An evaluation of the method of:

(i) Capitalizing the direct loadings on labor and material costs;

(ii) Distributing transportation costs and other expense clearing accounts; and

(iii) Capitalizing overhead costs;

(5) The tests of depreciation;

(6) A review of agreements such as those relating to acquisitions, property sales, and leases which affect the plant accounts; and

(7) Notations, if applicable, of RUS approval of property sales and the propriety of the disposition of the proceeds.

§ 1773.40 Regulatory assets.

The auditor's audit documentation shall support that the auditor tested whether all regulatory assets comply with the requirements of ASC 980. For Electric auditees only, the auditor's audit documentation shall support that all regulatory assets have received RUS approval.

§ 1773.41 Extraordinary retirement losses.

The auditor's audit documentation shall support that the auditor tested retirement losses, including any required approval by a regulatory commission with jurisdiction in the matter, or RUS, in the absence of commission jurisdiction.

§ 1773.42 Clearing accounts.

The auditor's audit documentation shall support that the auditor tested all clearing accounts and that transactions selected for testing were reviewed for proper allocation between expense and capital accounts.

§ 1773.43 Capital and equity accounts.

(a) *Capital stock.* For privately owned companies, the audit documentation shall include analyses of all stock transactions during the audit period. The auditor's audit documentation shall support that the auditor:

(1) Reviewed the subsidiary records and reconciled them to the general ledger control account;

(2) Reviewed authorizations and issuances or redemptions of capital stock for proper approvals by the governance board, stockholders, regulatory commissions and RUS, as required;

(3) Determined that transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, and RUS loan documents; and

(4) Determined that transactions were recorded in accordance with the Uniform System of Accounts.

(b) *Memberships.* For cooperative organizations, the audit documentation shall include an analysis of the membership transactions during the audit period. The auditor's audit documentation shall support that the auditor:

(1) Reviewed the subsidiary records and reconciled them to the general ledger control account; and

(2) Determined that transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, and RUS loan documents.

(c) *Patronage capital, retained earnings, margins, and other equities.* The audit documentation shall include an analysis of the patronage capital, retained earnings, margins and other equities, and any related reserve accounts. The auditor's audit documentation shall support that the auditor:

(1) Determined that the transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, RUS loan documents, Uniform System of Accounts, or orders of regulatory commissions;

(2) Traced payments to underlying support; and

(3) Determined whether, under the terms of the RUS security instrument, restrictions of retained earnings or margins are required and, if so, whether they have been properly recorded.

§ 1773.44 Long-term debt.

The auditor's audit documentation shall support that the auditor:

(a) Confirmed RUS, FFB, and RTB debt to the appropriate confirmation schedule (RUS Form 690, Confirmation

Schedule Obligation to the FFB; Form 614, Confirmation Schedule—Long-term Obligation to RUS; or, Confirmation Schedule for RTB Debt);

(b) Confirmed other long-term debt directly with the lender;

(c) Examined notes executed or cancelled during the audit period; and

(d) Tested accrued interest computations.

§ 1773.45 Regulatory liabilities.

The auditor's audit documentation shall support that all regulatory liabilities comply with the requirements of ASC 980. For electric auditees only, the auditor's audit documentation shall document whether all regulatory liabilities have received RUS approval.

§§ 1773.46–1773.48 [Reserved]

§ 1773.49 OMB Control Number.

The information collection requirements in this part are approved by the Office of Management and Budget (OMB) and assigned the OMB Control Number 0572–0095.

Date: April 30, 2018.

Kenneth L. Johnson,

Administrator, Rural Utilities Service.

SMALL BUSINESS ADMINISTRATION

13 CFR Part 120

RIN 3245–AG79

Debt Refinancing in 504 Loan Program

AGENCY: U.S. Small Business Administration.

ACTION: Final rule.

SUMMARY: This rule finalizes the interim final rule (IFR) that was published on May 25, 2016, to implement the debt refinancing program reauthorized by Section 521 of Division E of the Consolidated Appropriations Act, 2016. In response to comments received on the IFR, this final rule makes some additional revisions to the program's regulations with respect to the definition of Qualified debt, the requirements related to Eligible Business Expenses, the refinancing of Projects involving single or limited use properties, and the disbursement period.

DATES: This rule is effective June 6, 2018.

FOR FURTHER INFORMATION CONTACT: Linda Reilly, 504 Program Chief at *linda.reilly@sba.gov* or 202–205–9949.

SUPPLEMENTARY INFORMATION:

I. Background Information

The 504 Loan Program is an SBA financing program authorized under Title V of the Small Business Investment Act of 1958 (the ''SBIAct''), 15 U.S.C. 695 *et seq.* The core mission of the 504 Loan Program is to provide long-term financing to small businesses for the purchase or improvement of land, buildings, and major equipment, in an effort to facilitate the creation or retention of jobs and local economic development. Under the 504 Loan Program, loans are made to small business applicants by Certified Development Companies (''CDCs''), which are certified and regulated by SBA to promote economic development within their community. In general, a project in the 504 Loan Program (a ''504 Project'') includes: A loan obtained from a private sector lender with a senior lien covering at least 50 percent of the project cost; a loan obtained from a CDC (a ''504 Loan'') with a junior lien covering up to 40 percent of the total cost (backed by a 100 percent SBA-guaranteed debenture); and a contribution from the Borrower of at least 10 percent equity.

The Small Business Jobs Act of 2010 (the ''Jobs Act''), Public Law 111–240, 124 Stat. 2504, enacted on September 27, 2010, temporarily expanded the ability of a small business to use the 504 Loan Program to refinance certain qualifying debt. Prior to the Jobs Act, a 504 Project could include a refinancing component only if the project involved an expansion of the small business and the existing indebtedness did not exceed 50% of the project cost of the expansion. *See* 13 CFR 120.882(e). The temporary Jobs Act program authorized the use of the 504 Loan Program for the refinancing of debt where there is no expansion of the small business concern (the ''Debt Refinancing Program''). That program expired on September 27, 2012.

Section 521 of Division E of the Consolidated Appropriations Act, 2016 (the ''2016 Act''), Public Law 114–113, enacted on December 22, 2015, reauthorized the Debt Refinancing Program with three modifications:

(1) The Debt Refinancing Program shall be in effect only in those fiscal years during which the cost to the Federal Government of making guarantees under the Debt Refinancing Program and under the 504 Loan Program is zero;

(2) A CDC is required to limit its financings under the 504 Loan Program so that, during any fiscal year, new financings under the Debt Refinancing Program do not exceed 50% of the dollars the CDC loaned under the 504 Loan Program during the previous fiscal year. The 2016 Act provides that this limitation may be waived by SBA upon application by a CDC and after determining that the refinance loan is needed for good cause; and

(3) The alternate job retention goal authorized by the Jobs Act for the Debt Refinancing Program is eliminated.

On May 25, 2016, SBA published an interim final rule to implement the 2016 Act (81 FR 33123) and, with the ''zero cost'' requirement satisfied for fiscal year 2016, SBA began accepting applications for assistance under the Debt Refinancing Program on June 25, 2016, the effective date of the interim final rule. With the ''zero cost'' requirement satisfied for fiscal years 2017 and 2018, the Debt Refinancing Program has continued to be in effect without interruption. The regulations governing this program are found at 13 CFR 120.882(g).

II. Summary of Comments Received

SBA received 49 comments during the comment period for the interim final rule, which closed on July 25, 2016. Of the comments received, 44, or 90%, were from Certified Development Companies, one was from a trade association, one was from a law firm, one was from a commercial real estate broker, one was from a financial institution, and one was from a private citizen. Below is a summary of the comments received.

A. Definition of Qualified Debt—Section 120.882(g)(15)

The Jobs Act authorizes the refinancing of ''Qualified Debt'' which is defined to mean, among other factors, ''indebtedness'' that ''was incurred not less than 2 years before the date of the application for assistance'', that ''is a commercial loan'', and the proceeds of which were used to acquire an Eligible Fixed Asset. *See* section 502(7)(C)(III)(aa)(AA), (BB), and (DD) of the SBIAct. In imposing the two-year requirement, Congress clearly did not want the Debt Refinancing Program to apply to new loans (*i.e.,* loans less than two years old). In implementing this statutory requirement, the current regulations define ''Qualified debt'', in part, as a ''commercial loan . . . [t]hat was incurred not less than 2 years before the date of the application for the refinancing available under [the 504 Debt Refinancing Program]''. *See* 13 CFR 120.882(g)(15) (definition of ''Qualified debt''). Debt that was refinanced through the execution of a new Note within the two year period would not be considered Qualified debt under the current regulations.

Twenty-nine commenters requested that the definition of Qualified debt be revised to include debt that has been refinanced within the 2 years prior to the date of the 504 Debt Refinancing application. The commenters argue that, as long as the debt being refinanced was originally incurred more than 2 years before application, it falls under the statutory definition. Some of the commenters also contend that the term ''indebtedness'' is broader than the term ''commercial loan'', and that SBA should look to the date of the ''original'' indebtedness and not the date that the loan was refinanced. One commenter suggested that a refinancing within two years of the application date that extends the date of the balloon payment should be allowed if the borrower did not receive any additional funds with the new loan.

SBA has reconsidered this issue and agrees that it is appropriate to consider the substance of the refinancing, rather than the form (*i.e.,* whether the most recent debt is evidenced by a new Note), to determine whether it is the same ''indebtedness'' as the prior loan. SBA has concluded that certain loans that are refinanced within two years of the date of application (the resulting loan herein referred to as the ''most recent loan'') may qualify as the same indebtedness, but only if the most recent loan is, in effect, a replacement for the prior loan. Specifically, in order to be considered the same indebtedness, the most recent loan cannot have advanced any additional funds to the Borrower (other than to pay the closing costs of the refinancing). SBA is revising the definition of ''Qualified debt'' to reflect that SBA will consider the most recent loan to be the same indebtedness as the prior loan if the effect of the most recent loan was to extend the prior loan's maturity date without advancing any additional proceeds to the Borrower. The collateral for the most recent loan must also include, at a minimum, the same Eligible Fixed Asset(s) that served as collateral for the prior loan that was refinanced. (Other terms of the most recent loan, however, such as interest rate or amortization schedule, may be different and may also include the addition of other eligible collateral.) In order to ensure that the Debt Refinancing Program complies with the statutory prohibition against refinancing new indebtedness, CDCs must submit to SBA as part of the application copies of the most recent loan and lien instruments, as well as copies of the loan and lien instruments for the loan that was replaced by the most recent loan, to show that the effect of the most recent loan was to extend the prior loan's maturity date without advancing any additional funds to the Borrower (other than to pay the closing costs of the refinancing).

In addition, SBA received comments relating to the statutory requirement that the applicant be current on all payments due for not less than one year preceding the date of application. *See* section 502(7)(C)(III)(bb) of the SBIAct. The current regulations define ''current on all payments due'' to mean that ''no payment was more than 30 days past due from either the original payment terms or modified payment terms (including deferments) if such modification was agreed to in writing by the Borrower and the lender of the existing debt no less than one year preceding the date of application.'' See 13 CFR 120.882(g)(15) (definition of ''Qualified debt'', ¶ (vii)). In the Interim Final Rule published on May 25, 2016, SBA explained that it established the requirement that the modification be executed no less than one year preceding the 504 application because a debt should not be considered ''current on all payments due for not less than one year preceding the date of application'' if the payment terms were modified during the one year period. This requirement was imposed, in part, to ensure that the Debt Refinancing Program would not be used to refinance loans that had been modified for the sole purpose of avoiding a delinquency or default within the prior year.

Some commenters requested that SBA allow a modification (including through a renewal or extension) within the one year period when the purpose of the modification is to extend a balloon payment. SBA has reconsidered this issue and agrees that modifications that extend the maturity date of the loan may be allowed, provided that, during the one year period prior to the date of application (*i.e.,* in the months prior to and after the modification), the applicant is current on all payments due, there have been no deferments of any payments, and no additional proceeds were advanced through the modification. To conform the current regulation to this revision, SBA is removing the reference to deferments from the regulatory text.

In addition, as SBA is now allowing certain refinanced loans to satisfy the 2-year indebtedness requirement described in ¶ II.A. above, these refinanced loans should not be excluded from the definition of ''current on all payments due for not less than one year preceding the date of application'' merely because the refinance occurred within the year prior to application. Thus, SBA will allow a refinanced loan to satisfy the ''current on all payments due'' requirement provided that it satisfies the same requirements as a modified loan, including that, during the one year period prior to the date of application (*i.e.,* in the months prior to and after the refinancing), the applicant was current on all payments due, there were no deferments of any payments, and no additional proceeds were advanced through the refinancing (other than to pay the closing costs of the refinancing). (To be consistent with the change to the ''Qualified debt'' definition regarding when the indebtedness is incurred, the modified or refinanced loan may also change the interest rate and other terms.)

SBA emphasizes that it expressly reserves the right to determine, at its discretion on a loan-by-loan basis, whether the modified or refinanced repayment terms fail to satisfy prudent lending standards.

B. Refinancing Projects Involving Limited or Single Purpose Properties—13 CFR 120.882(g)(5)

Concerns were expressed by 24 commenters about requiring Borrowers to contribute 15%, instead of 10%, for the refinancing of projects involving limited/single purpose properties. The commenters noted that, under the temporary Debt Refinancing Program, SBA required such Borrowers to make only a 10% contribution but, when SBA began to process applications under the reauthorized Debt Refinancing Program, SBA required Borrowers to contribute 15%. SBA notes that the temporary Debt Refinancing Program was implemented during very different economic conditions, when the projects to be refinanced under this program were sometimes significantly under-collateralized. By requiring Borrowers to contribute only 10% and not 15% for refinancing projects involving limited or single purpose properties, SBA made the program more available to Borrowers at a time when it was difficult for small businesses to access capital. Because the project was for the refinancing of an existing debt, and was not for the acquisition, construction, conversion, or expansion of a limited or single purpose property, SBA concluded that the 15% contribution was not required under statutory or regulatory requirements. *See* section 502(3)(C)(ii) and 13 CFR 120.910(a)(2). Due to the critical need to provide small businesses with access to capital during that time, SBA was willing to absorb the additional risk posed by debt refinancing projects where the

underlying collateral was limited or single purpose properties.

However, when SBA implemented the 2016 Act, SBA reconsidered this policy in light of the fact that, with the economic recovery, project properties are now typically over-collateralized and can readily provide the additional 5% equity and often more, thereby mitigating the risk presented to SBA by projects involving single or limited purpose properties in the event of liquidation. The 2016 Act states that the Debt Refinancing Program may provide ''not more than 90% of the value of the collateral'' for the refinancing of the Qualified Debt, and SBA has determined that, where the underlying collateral is limited or single purpose properties, the financing provided through the Debt Refinancing Program will be limited to 85% of the collateral value, with 15% being contributed by the Borrower.

In the event that general market conditions result again in 504 Projects that are significantly under-collateralized, however, SBA wants the Debt Refinancing Program to have the flexibility to allow Borrowers to contribute only 10% toward the cost of a project involving single or limited use properties. Accordingly, the rule will provide that, if the Refinancing Project involves a limited or single purpose building or structure, the Borrower must contribute not less than 15%; *provided, however,* that SBA may determine, in its discretion, that in the event of an economic recession, as determined by the National Bureau of Economic Research or its equivalent, the required Borrower contribution may be not less than 10% for such projects. In such circumstance, SBA will publish a notice in the **Federal Register** of its determination and setting forth the justification for the lower required Borrower contribution. This lower Borrower contribution requirement would be in effect until the first day of the calendar quarter after the economic recession has ended as determined by the National Bureau of Economic Research or its equivalent. SBA will publish a notice in the **Federal Register** to announce that the lower required Borrower contribution ceased being in effect as of that date.

With respect to the loan provided by the Third Party Lender, the statute requires the Third Party Lender to contribute 50% to the project cost when the project is financing the construction (or acquisition, conversion or expansion) of a single or limited purpose property. *See* section 502(3)(B)(ii) of the SBIAct. While this statutory requirement does not strictly apply to the refinancing of existing debt involving single/limited purpose property, SBA has considered whether Third Party Lenders should nevertheless be required to contribute 50% in the case of refinancing a debt involving such properties. As Borrowers are now often able in the current market to contribute 20% or more equity to the Refinancing Project's costs, the 504 loan would amount to 30% or less of the project cost if the Third Party Lender were required to contribute 50%, which does not maximize the economic benefit of the 504 Loan Program to the small business. Thus, SBA has determined that Third Party Lenders will not be required to contribute 50% but, as required for all projects financed under the Debt Refinancing Program, their participation must be at least equal to the SBA 504 loan.

C. Extension of Disbursement Deadline—13 CFR 120.882(g)(12)

The current rule requires that the 504 loan proceeds be disbursed within 6 months after loan approval, and authorizes the Director, Office of Financial Assistance, or his or her designee, to approve any request for extension of the disbursement period for good cause. 13 CFR 120.882(g)(12). A commenter stated that, now that the program is permanent, the rule should be revised to allow up to one year for disbursement. The commenter observed that six months may not be sufficient time to, for example, satisfy certain environmental requirements. SBA has considered this comment and agrees to change the disbursement period to nine months, and to provide the Director, Office of Financial Assistance (D/FA), or his or her designee, with the authority to approve any request for extension of the disbursement period for not more than an additional six months for good cause. SBA finds that this increase, along with the limited authority to approve any request for extension for good cause, is sufficient to address the commenter's concerns. SBA is revising 13 CFR 120.882(g)(12) accordingly.

D. Financing of Eligible Business Expenses—13 CFR 120.882(g)(6)(i) and (ii)

1. Loan-to-Value Limitations With Financing of Eligible Business Expenses

Under the Debt Refinancing Program, Borrowers may finance Eligible Business Expenses as part of the Refinancing Project if the amount of cash funds that will be provided for the Refinancing Project exceeds the amount to be paid to the lender of the Qualified debt. See 13 CFR 120.882(g)(6)(ii).

When SBA first implemented the reauthorized Debt Refinancing Program in 2016, SBA applied a maximum 75% loan-to-value (LTV) for any project that financed business expenses and limited such financing of business expenses to no more than 25% of the value of the Eligible Fixed Asset(s) securing the Qualified Debt. *See* Policy Notice 5000–1382, effective May 26, 2016. Thirty-six commenters expressed concerns that the 75% LTV was severely restrictive and would impair utilization of the program, and many urged SBA to allow for a 90% LTV for all Refinancing Projects. SBA considered these comments and decided to revise 13 CFR 120.882(g)(6)(i) to allow a maximum LTV of 85% for any project that includes the financing of Eligible Business Expenses. SBA concludes that this higher LTV will provide increased access to credit without adding undue risk to SBA.

In addition, most of the commenters expressed support for the 25% limitation on the amount that may be financed for business expenses, though SBA did receive at least one comment suggesting that the small business should determine the percentage of these expenses that may be financed. SBA notes that the financing of business expenses during Fiscal Year 2017 averaged less than 15% of the value of the Eligible Fixed Asset(s) securing the Qualified Debt. In addition, with the statutory requirement that SBA maintain the Debt Refinancing Program at zero subsidy in order for the program to be in effect during any fiscal year, SBA must be diligent in placing prudent controls on the program to mitigate SBA's risk and exposure. Accordingly, SBA has decided to limit the portion of the financing that may be for business expenses to 20% of the value of the Eligible Fixed Asset(s). In addition, if the Refinancing Project includes the financing of Eligible Business Expenses, SBA will not accept as collateral any fixed assets other than the Eligible Fixed Asset(s) securing the Qualified Debt. Accordingly, SBA is revising 13 CFR 120.882(g)(6)(i) and (ii) and the definition of ''Refinancing Project'' in 13 CFR 120.882(g)(15).

2. Eligible Business Expenses May Include Non-Capital Expenditures

Twenty-eight commenters requested that SBA allow Borrowers to finance minor renovations or ''non-substantial modifications or improvements to the Eligible Fixed Assets'' as an Eligible Business Expense under the Debt Refinancing Program. Enacted by Congress in 2010, the Jobs Act created the temporary Debt Refinancing Program for projects that do *not* involve

the expansion of a small business. *See* section 502(7)(C)(ii) of the SBIAct. SBA has concluded that the regulations would benefit from greater clarity regarding the type of minor renovations or ''non-substantial modifications or improvements'' that SBA regards as not involving the expansion of the small business.

SBA believes that a reasonable approach to this issue is to permit the financing of business expenses in the program as long as the expenses may be deducted as ordinary and necessary expenses on the small business's federal tax returns during the taxable year in which they were paid or incurred. *See* Internal Revenue Code, section 162. Examples of such expenses may include repairs, maintenance and minor improvements or renovations. Capital expenditures, on the other hand, would not be eligible for financing in the program because they have a useful life substantially beyond the taxable year. *See* Internal Revenue Code, section 263(a). Examples of such capital expenses may include the acquisition of land or improvements or betterments made to increase the value of any property. SBA believes that using this distinction between operating and capital expenditures is consistent with the statutory requirement that the Debt Refinancing Program be used for Refinancing Projects that do not involve the expansion of a small business.

Accordingly, SBA is revising the definition of Eligible Business Expenses to allow the financing of ''any other expenses of the business that are not capital expenditures.'' With the addition of this category, SBA is clarifying that the Borrower may finance any operating expense that it records and deducts as an expense in the taxable year in which it was paid or incurred, but may not finance any capital expense that is used to acquire or improve assets and which the Borrower may not claim as a deduction in the taxable year in which the expense was paid or incurred. SBA will rely upon the CDC and the small business to represent the nature of the expense and that the expense may be deducted as an ordinary and necessary expense during the taxable year in which it was paid or incurred. CDCs must document their determination regarding the nature of the expense in the credit memorandum.

SBA is also removing the phrase ''or other obligations of the business'' from the definition to clarify that, except as described below, other debt of the business is not included as an Eligible Business Expense. As SBA recently clarified, credit card debt may be included as an Eligible Business Expense if the credit card is issued in the name of the Applicant small business and the Applicant certifies that the credit card debt being refinanced was incurred exclusively for business related purposes. *See* SOP 50 10 5(J), Subpart C, Chapter 2, ¶ IV.E.3.g). SBA has also determined that business lines of credit may be included as an Eligible Business Expense if the business line of credit satisfies the same requirements as credit card debt. For debt that was incurred with a credit card or a business line of credit, the proceeds of the debt being refinanced, like all other business expenses financed under the Debt Refinancing Program, must have been used for expenses of the business that are not capital expenditures.

E. Waiver of the 50% Limitation—13 CFR 120.882(g)(10)

The 2016 Act requires that a CDC limit its financings under the 504 Loan Program so that, during any fiscal year, new financings under the Debt Refinancing Program do not exceed 50% of the dollars the CDC loaned under the 504 Loan Program during the previous fiscal year. The 2016 Act also provides that this limitation may be waived upon application by a CDC and upon SBA's determination that the refinance loan is needed for good cause. In the interim final rule, SBA stated that it would provide guidance regarding the good cause determination in its Standard Operating Procedures or other guidance documents. SBA received many comments suggesting various factors for SBA to consider in making the good cause determination, including projects that (i) assist manufacturing firms, (ii) will employ 1 full time equivalent job for every $100,000 in requested assistance, (iii) include the participation of another economic development entity, (iv) involve a borrower who has a pre-existing relationship with the CDC, or (v) involve a CDC with less than $5 million in 504 loans during the prior fiscal year. Some commenters also expressed concerns that the 50% limitation is disadvantageous to smaller or rural CDCs that may not have the same capacity as larger CDCs to finance these projects.

SBA considered these comments and concludes that the focus of the good cause determination should be only on the Borrower's financing needs, and not on the circumstances of the CDCs or other factors. Accordingly, as reflected in the recently issued SOP 50 10 5(J), Subpart C, Chapter 2, § IV.E.2, SBA will consider the following factors in determining whether there is good cause for the Borrower to obtain the refinancing through a CDC that exceeds the 50% requirement: (1) Whether the Borrower has access to other sources of financing, including other CDCs that have not exceeded their 50% cap; and (2) whether the CDC has an existing 504 loan with the Borrower that is in current status. No change to the regulation is necessary.

F. Statutory Requirements

Several commenters requested changes to other program requirements in the Debt Refinancing Program, including that SBA: (i) Allow 504 or 7(a) loans to be refinanced in the Debt Refinancing Program, (ii) allow CDCs participating in the Premier Certified Lenders Program (PCLP) to use their delegated authority to approve loans made in the Debt Refinancing Program, and (iii) reinstate the alternative job retention goal provided in the Jobs Act for Borrowers that do not meet the job creation and retention goals under sections 501(d) and (e) of the Small Business Investment SBIAct.

However, each of these program requirements is mandated by statute: the prohibition against refinancing a loan subject to a guarantee by a Federal agency is mandated by section 502(7)(C)(i)(III)(aa)(CC) of the SBIAct; the prohibition against PCLP CDCs using their delegated authority to approve loans made in the Debt Refinancing Program is mandated by section 502(7)(C)(v) of the SBIAct; and the elimination of the alternative job retention goal was made by section 521(a)(1) of the 2016 Act. SBA notes that, with the elimination of the alternate job retention goal, all applicants for a loan under the Debt Refinancing Program are required to meet the job creation and retention goals under section 501(d) and (e) of the SBIAct. Based on these goals, a 504 Project, including a project financed under the Debt Refinancing Program, must achieve one of the economic development objectives set forth in 13 CFR 120.861 or 120.862.

Accordingly, SBA cannot adopt the requested changes.

III. Section-by-Section Analysis

Except as set forth below, 13 CFR 120.882(g) remains unchanged.

Section 120.882(g) Introductory Text. In the Interim Final Rule, SBA revised the introductory text in this section to remove the following phrase that is no longer applicable: ''For applications received on or after February 17, 2011 and approved by SBA no later than September 27, 2012''. Also, with the permanent reauthorization of the Debt Refinancing Program by the 2016 Act, a specific application period is

unnecessary. No comments were received on this provision and no further changes are being made.

Section 120.882(g)(3). In the Interim Final Rule, SBA revised this section by removing the maturity date requirement. In its place, SBA inserted the 2016 Act's requirement that, for the Debt Refinancing Program to be in effect during any fiscal year, the cost to the Federal government of making guarantees under the Debt Refinancing Program and under the 504 Loan Program must be zero. No comments were received on this provision and no further changes are being made.

Section 120.882(g)(5). This paragraph is being revised to provide that, if the Refinancing Project involves a limited or single purpose building or structure, the Borrower must contribute not less than 15%. However, SBA may determine, in its discretion, that in the event of an economic recession as determined by the National Bureau of Economic Research or its equivalent, the required Borrower contribution may be not less than 10% for such projects. This lower Borrower contribution requirement may be in effect until the recession ends as determined by the National Bureau of Economic Research or its equivalent. As explained above, SBA will publish a notice in the **Federal Register** to announce the lower Borrower contribution requirement and explaining its justification, and a notice to announce that, due to the end of the recession, the lower Borrower contribution requirement is no longer in effect.

Section 120.882(g)(6). As discussed above, SBA is revising § 120.882(g)(6)(i) to allow a maximum LTV of 85% for any project that includes the financing of Eligible Business Expenses, and to limit the portion of the financing that may be used for Eligible Business Expenses to 20% of the value of the Eligible Fixed Asset(s). SBA is also revising § 120.882(g)(6)(ii) to amend the definition of Eligible Business Expenses to include ''any other expenses of the business that are not capital expenditures'', and to remove the phrase ''other obligations of the business'' from the definition to clarify that Eligible Business Expense may include credit card debt and business lines of credit in the name of the small business that were incurred exclusively for business related purposes, but no other debt of the business may be included.

Section 120.882(g)(10). As discussed above, the 2016 Act eliminated the alternate job retention goal and, accordingly, SBA removed the alternate job retention goal provision from the regulations in the Interim Final Rule.

Instead, the Interim Final Rule revised § 120.882(g)(10) to reflect the 2016 Act's requirement that a CDC limit its financings under the Debt Refinancing Program so that, during any fiscal year (October 1 to September 30), new financings under the Debt Refinancing Program do not exceed 50% of the dollars loaned by the CDC under the 504 Loan Program during the previous fiscal year. Because the 2016 Act provides that the 50% limitation applies to the dollars loaned under the 504 Loan Program during the previous fiscal year, all financings made by the CDC during the previous fiscal year will be included in determining this number, including those financings made under the Debt Refinancing Program.

The Interim Final Rule provided that, as authorized by the 2016 Act, the 50% limitation may be waived upon application by a CDC and a determination by SBA that the refinance loan is needed for good cause. As discussed above, SBA received comments on this provision and SBA has issued waiver guidance in the recently issued Standard Operating Procedure 50 10 5(J). SBA will monitor the implementation of this guidance and update it as needed in its policy guidance. For clarity, SBA is changing the term ''refinance loan'' to ''504 loan'' in the last sentence of section 120.882(g)((10). No further changes are being made to the regulation.

Section 120.882(g)(12). As discussed above, this paragraph is being revised to change the period by which a loan must be disbursed from six months to nine months. The Director, Office of Financial Assistance (D/FA), or his or her designee, will have the authority to approve any request for extension of the disbursement period for not more than an additional six months for good cause.

Section 120.882(g)(13). This section prohibits the Third Party Loan from being sold on the secondary market as a part of a pool guaranteed under subpart J of part 120 when the debt being refinanced is same institution debt. Subpart J of part 120, the Secondary Market Guarantee Program for First Lien Position 504 Loan Pools, expired on September 23, 2012; however, should this program be reauthorized, SBA wants to ensure that this prohibition remains in effect. Accordingly, in the Interim Final Rule, SBA revised this provision to make it clear that the prohibition would apply to any successor to the program described in subpart J of part 120. No comments were received on this provision and no further changes are being made.

Section 120.882(g)(15) (Definition of ''Qualified debt''). As discussed above, SBA is revising the criterion in paragraph (i) to allow certain loans that are refinanced within the two years prior to the date of application to be eligible as the same ''indebtedness'' if the effect of the refinancing was to extend the maturity date without advancing any additional proceeds, and the collateral for the most recent loan includes, at a minimum, the same Eligible Fixed Asset(s) that served as collateral for the former loan that was refinanced. Other terms of the most recent loan, such as interest rate and the addition of other collateral, may be different. To be considered for eligibility by SBA, the loan documents and lien instruments for the most recent loan, as well as the loan documents and lien instruments for the loan that was replaced by the most recent loan, must be submitted to SBA as part of the application.

SBA is also revising the definition of ''current on all payments due'' in paragraph (vii) to allow the payment terms of a loan to be modified less than one year prior to the date of application (whether through a modification to an existing Note or a refinancing that results in a new Note) if the purpose of the modification or refinancing is to extend the maturity date of the loan, including balloon payments, no additional proceeds were advanced to the Borrower, and the Borrower was current on all payments due for the one year period prior to the date of application (*i.e.,* in the months prior to and after the effective date of the modification or refinancing), including that there were no deferments of any payment.

SBA emphasizes that it reserves the right to determine, at its discretion on a loan-by-loan basis, whether the terms of any modification or refinancing are consistent with prudent lending standards.

Section 120.882(g)(15) (Definition of ''Refinancing Project''). SBA is revising this definition to provide that, if the Refinancing Project includes the financing of Eligible Business Expenses, SBA will not accept as collateral any fixed assets other than the Eligible Fixed Asset(s) securing the Qualified debt.

Compliance With Executive Orders 12866, 12988, 13132, and 13563, 13771, the Paperwork Reduction Act (44 U.S.C., Ch. 35), and the Regulatory Flexibility Act (5 U.S.C. 601–612)

Executive Order 12866

The Office of Management and Budget has determined that this rule does not constitute a ''significant regulatory action'' under Executive Order 12866. This rule is also not a major rule under the Congressional Review Act.

Executive Order 12988

This action meets applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden. The action does not have preemptive effect or retroactive effect.

Executive Order 13132

This rule does not have federalism implications as defined in Executive Order 13132. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in the Executive Order. As such it does not warrant the preparation of a Federalism Assessment.

Executive Order 13563

The Consolidated Appropriations Act, 2016, reauthorized the Debt Refinancing Program, which was first authorized by the Jobs Act. The Agency received significant public comments on the Jobs Act interim final rule that was issued to implement the temporary Debt Refinancing Program (*see* 76 FR 9213, February 17, 2011). To assist in developing that interim final rule, the Agency held a public forum on November 17, 2010 in Boston, Massachusetts. As discussed above, SBA received a significant number of public comments on the interim final rule that was published to implement the reauthorized Debt Refinancing Program, and the revisions made by this final rule are the result of the public participation in the rulemaking process.

Executive Order 13771

This rule is not an Executive Order 13771 regulatory action because it is not significant under E.O. 12866.

Paperwork Reduction Act, 44 U.S.C., Ch. 35

SBA has determined that this final rule does not impose any additional reporting or recordkeeping requirements under the Paperwork Reduction Act.

Regulatory Flexibility Act, 5 U.S.C. 601–612

The RFA requires administrative agencies to consider the effect of their actions on small entities, including small non-profit businesses, and small local governments. Pursuant to the RFA, when an agency issues a rule, the agency must prepare an analysis that describes whether the impact of the rule will have a significant economic impact on a substantial number of these small entities. However, the RFA requires such analysis only where notice and comment rulemaking is required. This rule finalizes the interim final rule that was published in 2016 to implement the reauthorized Debt Refinancing Program. In issuing that rule, SBA provided just cause why it could be published without notice and comment, and therefore, exempted from the RFA requirement to prepare an initial regulatory flexibility analysis. Since this final rule merely finalizes that exempted interim rule, SBA believes a final regulatory analysis is also not required.

List of Subjects in 13 CFR Part 120

Loan programs—business, Small businesses, Reporting and recordkeeping requirements.

Accordingly, the interim final rule amending 13 CFR part 120 which was published at 81 FR 33123 on May 25, 2016, is adopted as a final rule with the following changes:

PART 120—BUSINESS LOANS

■ 1. The authority citation for 13 CFR part 120 is revised to read as follows:

Authority: 15 U.S.C. 634(b) (6), (b) (7), (b) (14), (h), and note, 636(a), (h) and (m), 650, 687(f), 696(3) and (7), and 697(a) and (e); Pub. L. 111–5, 123 Stat. 115, Pub. L. 111–240, 124 Stat. 2504.

■ 2. Amend § 120.882 by:
■ a. Adding three sentences after the first sentence of paragraph (g)(5), and removing ''10%'' in the last sentence;
■ b. Revising paragraph (g)(6)(i);
■ c. Removing the third and fourth sentences of paragraph (g)(6)(ii) and adding in their place five sentences;
■ d. Removing the words ''refinance loan'' in the last sentence of paragraph (g)(10) and adding the words ''504 loan'' in their place;
■ e. Revising paragraph (g)(12);
■ f. Removing the semicolon at the end of paragraph (i) in the definition of ''Qualified debt'' in paragraph (g)(15), adding a period in its place, and adding two sentences to the end of the paragraph;
■ g. Removing the second sentence of paragraph (vii) in the definition of ''Qualified debt'' in paragraph (g)(15) and adding in its place two sentences; and
■ h. Revising the definition of ''Refinancing Project'' in paragraph (g)(15).

The additions and revisions read as follows:

§ 120.882 Eligible Project costs for 504 loans.

* * * * *

* * *

(g) * * *

(5) * * * If the Refinancing Project involves a limited or single purpose building or structure, the Borrower must contribute not less than 15% (excluding administrative costs), unless SBA determines, in its discretion, and publishes a notice in the **Federal Register**, that due to an economic recession, as determined by the National Bureau of Economic Research or its equivalent, Borrowers may contribute not less than 10% for Refinancing Projects involving a limited or single purpose property during the recession. The lower required contribution by the Borrower will be in effect until the first day of the calendar quarter following the end of the economic recession as determined by the National Bureau of Economic Research or its equivalent. SBA will publish a notice in the **Federal Register** announcing the date on which the requirement of the lower Borrower contribution ended. * * *

(6)(i) The portion of the Refinancing Project provided by the 504 loan and the Third Party Loan may be no more than 90% of the fair market value of the fixed assets that will serve as collateral, except that if the Borrower's application includes a request to finance the Eligible Business Expenses described in paragraph (g)(6)(ii) of this section, the portion of the Refinancing Project provided by the 504 loan and the Third Party Loan may be no more than 85% of the fair market value of the fixed assets that will serve as collateral and the Borrower may receive no more than 20% of the fair market value of the Eligible Fixed Asset(s) securing the Qualified Debt for Eligible Business Expenses;

(ii) * * * For the purposes of this paragraph (g), ''Eligible Business Expenses'' are limited to the operating expenses of the business that were incurred but not paid prior to the date of application or that will become due for payment within 18 months after the date of application. These expenses may include salaries, rent, utilities, inventory, and other expenses of the business that are not capital expenditures. Debt is not included as an

Eligible Business Expense, except debt that was incurred with a credit card or a business line of credit may be included if the credit card or business line of credit is issued in the name of the small business and the Applicant certifies that the debt being refinanced was incurred exclusively for business related purposes. Loan proceeds must not be used to refinance any personal expenses. Both the CDC and the Borrower must certify in the application that the funds will be used to cover Eligible Business Expenses. * * *

* * * * *

(12) The 504 loans approved under this paragraph (g) must be disbursed within 9 months after loan approval. The Director, Office of Financial Assistance, or his or her designee, may approve a request for extension of the disbursement period for an additional 6 months for good cause.

* * * * *

(15) * * *

Qualified debt is a commercial loan:

* * *

(i) * * * A commercial loan that was refinanced within the two years prior to the date of application (the most recent loan) may be deemed incurred not less than 2 years before the date of the application provided that the effect of the most recent loan was to extend the maturity date without advancing any additional proceeds (except to cover closing costs) and the collateral for the most recent loan includes, at a minimum, the same Eligible Fixed Asset(s) that served as collateral for the former loan that was refinanced. The loan documents and lien instruments for the most recent loan, as well as the loan documents and lien instruments for the loan that was replaced by the most recent loan, must be submitted to SBA as part of the application.

* * * * *

(vii) * * * For the purposes of this paragraph (vii), ''current on all payments due'' means that no payment was more than 30 days past due from either the original payment terms or modified payment terms (whether through a modification to an existing Note or through a refinancing that results in a new Note). The modification (or refinancing) must have been agreed to in writing by the Borrower and the lender of the existing debt no less than one year preceding the date of application, except that a modified (or refinanced) loan may be allowed if the purpose of the modification (or refinancing) was to extend the maturity date of the loan, including any balloon payment, and if, during the one year period prior to the date of application (*i.e.,* in the months prior to and after the modification or refinancing), the Borrower was current on all payments due, there have been no deferments of any payments, and no additional proceeds were advanced through the modification or refinancing (except to cover closing costs). * * *

* * * * *

Refinancing Project means the fair market value of the Eligible Fixed Asset(s) securing the qualified debt and any other fixed assets acceptable to SBA, except that if the Refinancing Project includes the financing of Eligible Business Expenses, SBA will not accept as collateral any fixed assets other than the Eligible Fixed Asset(s) securing the Qualified Debt.

* * * * *

Dated: April 26, 2018.

Linda E. McMahon,

Administrator.

BILLING CODE 8025–01–P

SMALL BUSINESS ADMINISTRATION

13 CFR Part 120

Express Bridge Loan Pilot Program; Modification of Fee Policy

AGENCY: U.S. Small Business Administration.

ACTION: Notification of change to Express Bridge Loan Pilot Program and impact on regulatory provision.

SUMMARY: On October 16, 2017, the U.S. Small Business Administration (SBA) published a document announcing the Express Bridge Loan Pilot Program (Express Bridge Pilot). In that document, SBA provided an overview of the Express Bridge Pilot and modified an Agency regulation relating to loan underwriting for loans made under the Express Bridge Pilot. SBA continues to refine and improve the design of the Express Bridge Pilot and is issuing this document to revise the program requirements, including the modification of an Agency regulation relating to fees that can be collected from the Applicant or Borrower in connection with a loan made under the Express Bridge Pilot.

DATES: The revised program requirements described in this document apply to all Express Bridge Pilot loans approved on or after May 7, 2018, and the Express Bridge Pilot will remain available through September 30, 2020.

FOR FURTHER INFORMATION CONTACT: Dianna Seaborn, Director, Office of Financial Assistance, U.S. Small Business Administration, 409 Third Street SW, Washington, DC 20416; Telephone (202) 205–3645; email address: *dianna.seaborn@sba.gov.*

SUPPLEMENTARY INFORMATION: On October 16, 2017, SBA published a document announcing the Express Bridge Pilot. (82 FR 47958) The Express Bridge Pilot is designed to supplement the Agency's disaster response capabilities and authorizes the Agency's 7(a) Lenders with SBA Express lending authority to deliver expedited SBA-guaranteed financing on an emergency basis for disaster-related purposes to small businesses located in communities impacted by a Presidentially-declared disaster, while the businesses apply for and await long-term financing (including through SBA's direct disaster loan program, if eligible).

The Express Bridge Pilot applies the policies and procedures in place for the Agency's SBA Express program, except as outlined in the **Federal Register** document published on October 16, 2017. Pursuant to the authority provided to SBA under 13 CFR 120.3 to suspend, modify or waive certain regulations in establishing and testing pilot loan initiatives, SBA modified the regulation at 13 CFR 120.150 (''What are SBA's lending criteria?''), which applies to loans made in the 7(a) Business Loan Program. SBA modified the regulation in order to minimize the burdens on the businesses applying for loans through the Express Bridge Pilot and to expand the opportunities for SBA Express lenders to participate in the pilot.

SBA continues to refine and improve the design of the Express Bridge Pilot and, therefore, is issuing this document to clarify the fees that Lenders or third parties are able to collect from Applicants or Borrowers in connection with loans made under the pilot. All Express Bridge Pilot loans are subject to the same upfront guaranty fees required for 7(a) loans of similar size and maturity as set forth in 13 CFR 120.220. In addition, all Express Bridge Pilot loans are subject to the same Lender's annual service fee required for all 7(a) loans as set forth in 13 CFR 120.220(f).

In order to ensure that Applicants and Borrowers are charged only those additional fees reasonably necessary in connection with an Express Bridge Pilot loan, SBA is modifying the regulation at 13 CFR 120.221 (''Fees and expenses which the Lender may collect from a loan applicant or Borrower''), using the term modify as contemplated under 13 CFR 120.3, to permit Lenders to collect only the following:

1. *Lender Fees:* An SBA Express Lender must not impose any fees or direct costs on an Express Bridge Pilot Applicant or Borrower, except for the following:

a. *Application Fee:* SBA Express Lenders may charge an Express Bridge Pilot Applicant an application fee. The maximum permissible application fee is 2% of the loan amount or $250, whichever is greater. If an application fee is charged, it must be disclosed on SBA Form 159(7a), Fee Disclosure Form and Compensation Agreement for Agent Services in Connection with a SBA 7(a) Loan. If an undisbursed loan is canceled, the Lender may retain the application fee;

b. *Late Payment Fee:* A late payment fee not to exceed 5 percent of the scheduled Express Bridge Pilot loan payment; and

c. *Liquidation Costs:* The reasonable direct costs of liquidation.

2. *Prohibition on all other fees and charges, including by loan packagers, referral agents or brokers.* Except as permitted in 1. above, no other fee or costs may be charged to an Express Bridge Pilot Applicant or Borrower by the Lender. In addition, no fee or costs may be charged to an Express Bridge Pilot Applicant or Borrower by any third party in connection with an Express Bridge Pilot loan, including any referral fee, broker's fee, or similar fee.

The modification of this regulation will permit SBA Express lenders to recoup some of their costs in processing the application, without subjecting the Applicant to excessive or unnecessary fees for these small guaranteed loans that are intended to provide immediate cash to assist the small business with rebuilding and continuing or restarting its operations while awaiting long-term disaster financing. SBA believes that the costs of the program should be kept as low as possible to aid the disaster-affected small business. The application fee is optional; therefore an SBA Express Lender may choose not to collect an application fee from an Express Bridge Pilot Applicant. Additionally, because an Express Bridge Pilot loan Applicant must have had an existing banking relationship with the SBA Express lender, there is no need for either the Applicant or the Lender to pay a referral fee, broker's fee, or similar fee for these loans.

SBA's modification of 13 CFR 120.221 is authorized by 13 CFR 120.3 of its regulations, which provides that the SBA Administrator may suspend, modify or waive rules for a limited period of time to test new programs or ideas. This modification applies only to loans made under the Express Bridge Pilot and will last only for the duration of the pilot, which expires September 30, 2020. As part of the Express Bridge Pilot, this modification applies only to those small businesses that were located, as of the date of the applicable disaster, in counties that have been Presidentially-declared as disaster areas, plus any contiguous counties. A listing of Presidentially-declared disaster declarations, including primary and contiguous counties can be located at *www.sba.gov/disaster.*

All other SBA terms and conditions and regulatory waivers related to the Express Bridge Pilot remain unchanged.

SBA will provide more detailed guidance in the form of a program guide, which will be available on SBA's website, *http://www.sba.gov.* SBA may also provide additional guidance, if needed, through SBA notices, which also will be published on SBA's website, *http://www.sba.gov.*

Authority: 15 U.S.C. 636(a)(25); 13 CFR 120.3.

Dated: April 26, 2018.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2017–1163; Product Identifier 2017–CE–041–AD; Amendment 39–19260; AD 2018–09–04]

RIN 2120–AA64

Airworthiness Directives; Gulfstream Aerospace Corporation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Gulfstream Aerospace Corporation Models G–IV and GIV–X airplanes. This AD was prompted by the potential for fatigue cracks developing in the main landing gear actuator attachment fitting that had a certain repair incorporated. This AD requires incorporating new revisions into the Instructions for Continued Airworthiness of the Limitations section of the FAA-approved maintenance program (*e.g.,* maintenance manual) that establish an inspection cycle for the repaired MLG side brace actuator fittings. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 11, 2018.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of June 11, 2018.

ADDRESSES: For service information identified in this final rule, contact Gulfstream Aerospace Corporation, P.O. Box 2206, Savannah, Georgia 31402–2206; telephone: (800) 810–4853; fax 912–965–3520; email: *pubs@gulfstream.com;* internet: *http://www.gulfstream.com/product_support/technical_pubs/pubs/index.htm.* You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1163.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1163; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is Docket Operations, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: William O. Herderich, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474–5547; fax: (404) 474–5605; email: *william.o.herderich@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Gulfstream Aerospace Corporation Models G–IV and GIV–X airplanes. The NPRM published in the **Federal Register** on December 12, 2017 (82 FR 58362). The NPRM was prompted by the potential for fatigue cracks developing in the main landing gear actuator attachment fitting that had a certain repair incorporated. The NPRM proposed to require incorporating new revisions into the

Instructions for Continued Airworthiness of the Limitations section of the FAA-approved maintenance program (*e.g.,* maintenance manual) that establish an inspection cycle for the repaired MLG side brace actuator fittings. We are issuing this AD to address the unsafe condition on these products.

Comments

We gave the public the opportunity to participate in developing this final rule. The following presents the comment received on the NPRM and the FAA's response to the comment.

Request To Change Compliance Time

Gulfstream Aerospace Corporation stated that the compliance time for the actions required in the proposed AD should be changed to be in-line with the service information incorporated by reference in the proposed AD.

Gulfstream Aerospace Corporation stated that the compliance time specified in the service information incorporated by reference in the proposed AD is 24 months from September 16, 2016. Gulfstream Aerospace Corporation believes that the 100-hour time-in-service (TIS) compliance time after the effective date of the proposed AD significantly reduces the original compliance time and may cause an undue burden on the owner/operators of the affected airplanes.

We agree that the compliance time can be changed to more fully coincide with the service bulletin without affecting the safety risk of this AD. We have changed the compliance time of this AD to ''Within the next 100 hours time-in-service (TIS) after the effective date of this AD or within the next 3 months after the effective date of this AD, whichever occurs later.'' The 3-month compliance time combined with the 35 days after publication in the **Federal Register** effective date should coincide with the compliance time in the service bulletin.

Conclusion

We reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this final rule as proposed except for minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

We reviewed Gulfstream G350 Customer Bulletin Number 192A, dated June 15, 2017, including Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016 (for model Gulfstream G350); Gulfstream G450 Customer Bulletin 192A, dated June 15, 2017, including Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016 (for model Gulfstream G450); Gulfstream IV Customer Bulletin Number 238A, dated June 15, 2017, including Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016 (for model Gulfstream IV); Gulfstream G300 Customer Bulletin Number 238A, dated June 15, 2017, including Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016 (for model Gulfstream G300); and Gulfstream G400 Customer Bulletin Number 238A, dated June 15, 2017, including Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016 (for model Gulfstream G400). For the applicable models, the service information describes procedures for inspecting maintenance records to determine if repair SE05732102 for the main landing gear side brace fitting has been incorporated and determining initial and repetitive inspection requirements for the main landing gear side brace fitting. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 709 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspect Maintenance Records	1 work-hour × $85 per hour = $85	Not applicable	$85	$60,265
Incorporate new revisions into the Instructions for Continued Airworthiness of the Limitations section of the FAA-approved maintenance program (*e.g.,* maintenance manual).	1 work-hour × $85 per hour = $85	Not applicable	85	60,265

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs

applicable to small airplanes, gliders, domestic business jet transport airplanes, and associated appliances to the Director of the Policy and Innovation Division.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–09–04 Gulfstream Aerospace Corporation: Amendment 39–19260; Docket No. FAA–2017–1163; Product Identifier 2017–CE–041–AD.

(a) Effective Date

This AD is effective June 11, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the following Gulfstream Aerospace Corporation model airplanes that are certificated in any category:

(1) Model G–IV, serial numbers (S/Ns) 1000 through 1399 having Aircraft Service Change (ASC) 416A (MSG–3) incorporated; and S/Ns 1400 through 1535; and

(2) Model GIV–X, S/Ns 4001 through 4355.

(d) Subject

Joint Aircraft System Component (JASC)/Air Transport Association (ATA) of America Code 32, Landing Gear.

(e) Unsafe Condition

This AD was prompted by the potential for fatigue cracks in the main landing gear (MLG) actuator attachment fitting that had a certain repair incorporated. We are issuing this AD to prevent failure of the MLG actuator attachment. The unsafe condition, if not addressed, could compromise the lateral support of the MLG during ground maneuvers, possibly leading to collapse of the affected MLG with consequent loss of control. In addition, this condition could also cause the MLG side brace to fail, which could result in a penetration of the wing fuel tank causing an uncontained fire.

(f) Compliance

At whichever of the following in paragraphs (f)(1) and (f)(2) that occurs later, comply with the actions in paragraphs (g) through (i) of this AD, unless already done.

(1) Within the next 100 hours time-in-service after June 11, 2018 (the effective date of this AD); or

(2) Within the next 3 months after June 11, 2018 (the effective date of this AD).

(g) Inspect Maintenance Records

Inspect the airplane maintenance records to determine if repair SE05732102 for the MLG side brace fitting has been incorporated. To do this inspection, use the Accomplishment Instructions in Gulfstream G350 Customer Bulletin Number 192A; Gulfstream G450 Customer Bulletin 192A; Gulfstream IV Customer Bulletin Number 238A; Gulfstream G300 Customer Bulletin Number 238A; and Gulfstream G400 Customer Bulletin Number 238A; all dated June 15, 2017, as applicable. The service information referenced in this paragraph specifies sending a service reply card back to Gulfstream Aerospace Corporation if repair SE05732102 for the MLG side brace fitting has been not been incorporated. This action is not required in this AD.

(h) Determine Initial and Repetitive Inspection Requirements

If it is determined during the maintenance records inspection required in paragraph (g) of this AD that repair SE05732102 for the MLG side brace fitting has been incorporated, determine the initial and repetitive inspection requirements using the Accomplishment Instructions of the service information identified in paragraph (g) of this AD along with the following documents, as applicable. Comply with the inspection requirements as determined.

(1) Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016, to Gulfstream G350 Customer Bulletin No. 192A, dated June 15, 2017;

(2) Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016, to Gulfstream G450 Customer Bulletin No. 192A, dated June 15, 2017;

(3) Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016, to Gulfstream IV Customer Bulletin No. 283A, dated June 15, 2017;

(4) Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016, to Gulfstream G300 Customer Bulletin No. 283A, dated June 15, 2017; and

(5) Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016, to Gulfstream G400 Customer Bulletin No. 283A, dated June 15, 2017.

(i) Revise Limitations Section

Insert the documents listed in paragraphs (h)(1) through (5) of this AD into the Instructions for Continued Airworthiness of the Limitations section of the FAA-approved maintenance program (*e.g.,* maintenance manual), as applicable. The revised limitations sections establish inspections of the repaired MLG side brace actuator fittings.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Atlanta ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (k) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (g) through (i) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(k) Related Information

For more information about this AD, contact William O. Herderich, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474–5547; fax: (404) 474–5605; email: *william.o.herderich@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Gulfstream G350 Customer Bulletin Number 192A, dated June 15, 2017, that incorporates Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016.

(ii) Gulfstream G450 Customer Bulletin 192A, dated June 15, 2017, that incorporates Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016.

(iii) Gulfstream IV Customer Bulletin Number 238A, dated June 15, 2017, that incorporates Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016.

(iv) Gulfstream G300 Customer Bulletin Number 238A, dated June 15, 2017, that incorporates Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016.

(v) Gulfstream G400 Customer Bulletin Number 238A, dated June 15, 2017, that incorporates Appendix A, Gulfstream Document GIV–SGER–553, Revision A, Instructions for Continued Airworthiness for Gulfstream Repair Drawing SE05732102, dated December 14, 2016.

(3) For Gulfstream Aerospace Corporation service information identified in this AD, contact Gulfstream Aerospace Corporation, P.O. Box 2206, Savannah, Georgia 31402–2206; telephone: (800) 810–4853; fax 912–965–3520; email: *pubs@gulfstream.com;* internet: *http://www.gulfstream.com/product_support/technical_pubs/pubs/index.htm.*

(4) You may view this service information at FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued in Kansas City, Missouri, on April 19, 2018.

Melvin Johnson,

Deputy Director, Policy and Innovation Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2017–1245; Product Identifier 2017–NM–099–AD; Amendment 39–19266; AD 2018–09–09]

RIN 2120–AA64

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Airbus Model A318 series airplanes and Model A319 series airplanes; all Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes; and all Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. This AD was prompted by an evaluation by the design approval holder (DAH) indicating that the holes of the upper cleat to upper stringer attachments at certain areas of the left- and right-hand wings are subject to widespread fatigue damage (WFD). This AD requires modifying the holes of the upper cleat to upper stringer attachments at certain areas of the left- and right-hand wings. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 11, 2018.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 11, 2018.

ADDRESSES: For service information identified in this final rule, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone: +33 5 61 93 36 96; fax: +33 5 61 93 44 51; email: *account.airworth-eas@airbus.com;* internet: *http://www.airbus.com.* You may view this referenced service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1245.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1245; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Sanjay Ralhan, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3223.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus Model A318 series airplanes and Model A319 series airplanes; all Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes; and all Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. The NPRM published in the **Federal Register** on January 12, 2018 (83 FR 1579) (''the NPRM''). The NPRM was prompted by an evaluation by the DAH indicating that the holes of the upper cleat to upper stringer attachments at certain areas of the left- and right-hand wings are subject to WFD. The NPRM proposed to require modifying the holes of the upper cleat to upper stringer attachments at certain areas of the left- and right-hand wings. We are issuing this AD to prevent fatigue cracking in the stringer attachment holes of the wings, which could result in reduced structural integrity of the wings.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2017–0117, dated July 7, 2017 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for certain Airbus Model A318 series airplanes and Model A319 series

airplanes; all Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes; and all Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. The MCAI states:

> Within the scope of work of service life extension for A320 aeroplanes and of widespread fatigue damage evaluations, it has been determined that a structural modification is required to allow the aeroplanes to continue operation up to the limit of validity (LoV).
>
> This condition, if not corrected, may affect the structural integrity of the wing.
>
> To address this potential unsafe condition, Airbus issued [service bulletin] SB A320–57–1208, providing instructions to oversize the holes of the upper cleat to upper stringer attachments at Rib 2 to Rib 7 (inclusive).
>
> For the reason described above, this [EASA] AD requires modification of the affected holes.

You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1245.

Comments

We gave the public the opportunity to participate in developing this AD. The following presents the comments received on the NPRM and the FAA's response to each comment. United Airlines agreed with the intent of the NPRM.

Request To Clarify Applicability

Allegiant Air asked that we clarify the manufacturer serial numbers (MSNs) identified in the applicability section of the proposed AD. Allegiant Air stated that the effectivity specified in Airbus Service Bulletin A320–57–1208, dated November 21, 2016, identifies airplanes up to and including MSN 7493, and asked about airplanes having MSNs higher than 7493. Allegiant Air noted that it has 11 Model A320 airplanes with MSNs outside those listed in Airbus Service Bulletin A320–57–1208, dated November 21, 2016. Allegiant Air added that it understands the AD takes precedence over the service information, but there are several configurations listed therein. Allegiant Air also added that since the MSNs in question are not listed in the effectivity of the service information, an operator with an MSN outside the effectivity will not know which modification kit to order.

We agree to clarify. The effectivity in Airbus Service Bulletin A320–57–1208, dated November 21, 2016, does not include all MSNs for Model A320 airplanes, and the applicability specified in paragraph (c) of this AD includes all MSNs for Model A320 airplanes, except for airplanes having certain modifications. We acknowledge that the referenced service information may not be adequate for certain airplane configurations. Therefore, we have revised paragraph (g) of this AD to provide an option for doing the modification, including identification of the appropriate modification kit, using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or EASA; or Airbus's EASA Design Organization Approval (DOA).

In addition, Airbus has informed us that Revision 1 of the referenced service information will expand the effectivity to include MSNs up to 8555. Airbus has also informed us that, upon request, it will issue a technical adaptation as an interim method of compliance until a revised service bulletin is issued.

Conclusion

We reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this AD as proposed except for minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for correcting the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

Airbus has issued Airbus Service Bulletin A320–57–1208, dated November 21, 2016. This service information describes procedures for modifying the stringer attachments at rib 2 through rib 7 of the left- and right-hand wings. The modification includes oversizing the holes, doing an eddy current inspection of the affected holes for damage, and repair. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 1,136 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Modification (by oversizing and doing eddy current inspection).	125 work-hours × $85 per hour = $10,625	$26,260	$36,885	$41,901,360

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes to the Director of the System Oversight Division.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on

the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a ''significant regulatory action'' under Executive Order 12866,

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

3. Will not affect intrastate aviation in Alaska, and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–09–09 Airbus: Amendment 39–19266; Docket No. FAA–2017–1245; Product Identifier 2017–NM–099–AD.

(a) Effective Date

This AD is effective June 11, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Model A318–111, –112, –121, and –122 airplanes; Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes; Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes; certificated in any category; all manufacturer serial numbers, except airplanes specified in paragraphs (c)(1) and (c)(2) of this AD.

(1) Model A318 series airplanes on which Airbus Modification (Mod) 39195 has been embodied in production or Airbus Service Bulletin A320–00–1219 has been embodied in service.

(2) Model A319 series airplanes on which Airbus Mod 28238, Mod 28162, and Mod 28342 have been embodied in production.

(d) Subject

Air Transport Association (ATA) of America Code 57, Wings.

(e) Reason

This AD was prompted by an evaluation by the design approval holder indicating that the holes of the upper cleat to upper stringer attachments at rib 2 through rib 7 of the left- and right-hand wings are subject to widespread fatigue damage. We are issuing this AD to prevent fatigue cracking in the stringer attachment holes of the wings, which could result in reduced structural integrity of the wings.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Modification

Before reaching the upper limit, but not before reaching the lower limit, as defined in table 1 to paragraph (g) of this AD, as applicable: Modify the holes of the upper cleat to upper stringer attachments at rib 2 through rib 7 inclusive, on the left- and right-hand wings by oversizing the holes, doing eddy current inspections of the holes for damage, and repairing any damage found before further flight, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–57–1208, dated November 21, 2016, except as required by paragraph (h) of this AD; or using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or the European Aviation Safety Agency (EASA); or Airbus's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

Table 1 to paragraph (g) of this AD – *Window of Embodiment (Total Accumulated Flight Hours (TFH) or Total Accumulated Flight Cycles (TFC), whichever occurs first since airplane first flight)*

Airplanes affected		Lower Limit		Upper Limit	
		TFH	TFC	TFH	TFC
A318-100	All	94,000	47,000	159,200	79,600
A319-100 and A320-200	Pre-mod 160001 and Pre-Airbus Service Bulletin A320-57-1193	94,000	47,000	159,200	79,600
A319-100 and A320-200	Post-mod 160001 or Post-Airbus Service Bulletin A320-57-1193	52,260	26,130	101,610	50,805
A321-100 and A321-200	Pre-mod 160021	101,200	50,600	148,300	74,100

(h) Service Information Exception

Where Airbus Service Bulletin A320–57–1208, dated November 21, 2016, specifies to contact Airbus for appropriate action, and specifies that action as ''RC'' (Required for Compliance): Before further flight, accomplish corrective actions in accordance with the procedures specified in paragraph (i)(2) of this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (j)(2) of this AD. Information may be emailed to *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* As of the effective date of this AD, for any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or EASA; or Airbus's EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (h) of this AD: If any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2017–0117, dated July 7, 2017, for related information. This MCAI may be found in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–1245.

(2) For more information about this AD, contact Sanjay Ralhan, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3223.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Airbus Service Bulletin A320–57–1208, dated November 21, 2016.

(ii) Reserved.

(3) For service information identified in this AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone: +33 5 61 93 36 96; fax: +33 5 61 93 44 51; email: *account.airworth-eas@airbus.com;* internet: *http://www.airbus.com.*

RIN 2120–AA64

Airworthiness Directives; Safran Helicopter Engines, S.A., Turboshaft Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for all Safran Helicopter Engines, S.A., Arriel 2E turboshaft engines. This AD was prompted by reports of ruptured front support pins on the accessory gearbox front support. This AD requires replacement of the accessory gearbox front support. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD becomes effective June 11, 2018.

ADDRESSES: For service information identified in this final rule, contact Safran Helicopter Engines, S.A., 40220 Tarnos, France; phone: (33) 05 59 74 40 00; fax: (33) 05 59 74 45 15. You may view this service information at the FAA, Engine and Propeller Standards Branch, 1200 District Avenue, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7759. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0838.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0838; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the mandatory continuing airworthiness information (MCAI), the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is Docket Operations, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Robert Green, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue; phone: 781–238–7754; fax: 781–238–7199; email: *robert.green@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Safran Helicopter Engines, S.A., Arriel 2E turboshaft engines. The NPRM published in the **Federal Register** on November 3, 2017 (82 FR 51170). The NPRM was prompted by reports of ruptured front support pins on the accessory gearbox front support. The NPRM proposed to require replacement of the accessory gearbox front support. We are issuing this AD to address the unsafe condition on these products.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2016–0235, dated November 24, 2016 (referred to after this as the MCAI), to

address the unsafe condition on these products. The MCAI states:

Some cases were reported of ruptured front support pins on ARRIEL 1E2 engines. That condition, if not detected and corrected, could lead to the loss of the load path integrity of the engine front support. Consequently, Turboméca issued Mandatory Service Bulletin (MSB) 292 72 0842 to provide instructions for the inspection of the pins and front support replacement, and EASA issued AD 2015–0064 (later revised) to require those actions. Since EASA AD 2015–0064R1 was issued, SAFRAN Helicopter Engines developed a new pin design, in order to increase the mechanical strength of the pin, through modification TU380, for ARRIEL 1E2 engines. Although no cases of front support pin rupture have been reported on ARRIEL 2E engines, since the ARRIEL 1E2 and 2E type designs have the same front support, SAFRAN Helicopter Engines decided to also apply this new pin design on ARRIEL 2E engines through modification TU197. To address this potential unsafe condition, SAFRAN Helicopter Engines decided, as precautionary measure, to replace the front support on ARRIEL 2E engines, and published MSB 292 72 2197 to provide instructions for in-service front support replacement. For the reasons described above, this [EASA] AD requires modification of the affected engines by replacement of each pre-mod TU197 front support.

You may obtain further information by examining the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0838.

Comments

We gave the public the opportunity to participate in developing this final rule. We received no comments on the NPRM or on the determination of the cost to the public.

Conclusion

We reviewed the relevant data and determined that air safety and the public interest require adopting this final rule as proposed.

Related Service Information

We reviewed Safran Helicopter Engines, S.A., Mandatory Service Bulletin (MSB) No. 292 72 2197, Version A, dated September 15, 2016. The MSB describes procedures for replacement of the accessory gearbox front support.

Costs of Compliance

We estimate that this AD affects 28 engines installed on aircraft of U.S. registry.

We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Front support replacement	2 work-hours × $85 per hour = $170	$19,731	$19,901	$557,228

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to engines, propellers, and associated appliances to the Manager, Engine and Propeller Standards Branch, Policy and Innovation Division.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–10–01 Safran Helicopter Engines, S.A.: Amendment 39–19275; Docket No. FAA–2017–0838; Product Identifier 2017–NE–33–AD.

(a) Effective Date

This AD is effective June 11, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Safran Helicopter Engines, S.A., Arriel 2E turboshaft engines with front support, part number 0 292 11 715 0, installed (pre-mod TU 197 configuration).

(d) Subject

Joint Aircraft System Component (JASC) Code 8300, Accessory Gearboxes.

(e) Unsafe Condition

This AD was prompted by reports of ruptured front support pins on the accessory gearbox front support. We are issuing this AD to prevent failure of a front support, loss of

engine thrust control and reduced control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Before the accessory gearbox and transmission shaft module (Module 01) accumulates 1,600 engine operating hours since new, or within 80 engine operating hours after the effective date of this AD, whichever occurs later, replace the front support with a part eligible for installation.

(h) Definition

For the purpose of this AD, a part eligible for installation is a Module 01 with a pre-mod TU 197 front support, that has not accumulated more than 1,680 engine operating hours since new; or a Module 01 with a post-mod TU 197 front support.

(i) Installation Prohibition

As of the effective date of this AD, you may not install a pre-mod TU 197 front support on any engine with a post-mod TU 197 front support installed.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, FAA, ECO Branch, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in paragraph (k)(1) of this AD. You may email your request to: *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For more information about this AD, contact Robert Green, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7754; fax: 781–238–7199; email: *robert.green@faa.gov.*

(2) Refer to EASA AD 2016–0235, dated November 24, 2016, for more information. You may examine the EASA AD in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating it in Docket No. FAA–2017–0838.

(l) Material Incorporated by Reference

None.

Issued in Burlington, Massachusetts, on May 1, 2018.

Karen M. Grant,

Acting Manager, Engine and Propeller Standards Branch, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2017–0721; Airspace Docket No. 17–AGL–15]

Amendment of Class E Airspace; Charlotte, MI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class E airspace extending upward from 700 feet above the surface at Fitch H. Beach Airport, Charlotte, MI, due to the decommissioning of the Lansing VHF omnidirectional range (VOR) and collocated tactical air navigation (TACAN) which provided navigation guidance for the instrument procedures to this airport. The Lansing VOR/TACAN is being decommissioned as part of the VOR Minimum Operational Network (MON) Program. This action enhances safety and management of instrument flight rules (IFR) operations at this airport. Additionally, the geographic coordinates of the airport are being adjusted to coincide with the FAA's aeronautical database. An editorial change is also being made removing the city associated with the airport name in the airspace legal designation.

DATES: Effective 0901 UTC, July 19, 2018. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741–6030, or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends the Class E airspace extending upward from 700 feet above the surface at Fitch H. Beach Airport, Charlotte, MI, to support IFR operations for instrument approach procedures at the airport.

History

The FAA published notice of proposed rulemaking (NPRM) in the **Federal Register** (82 FR 44541; September 25, 2017) for Docket No. FAA–2017–0721 to modify the Class E airspace extending upward from 700 feet above the surface at Fitch H. Beach Airport, Charlotte, MI. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. One comment was received stating ''. . . increasing one class of airspace would diminish the boundary between two. This would require the Pilot In Command to request access in their airspace.''

The FAA does not agree. The airspace classification, currently Class E airspace extending upward from 700 feet above the surface, is being amended to increase the radius of the airspace by 0.1 mile to fully protect the transitional IFR requirements to and from the terminal and en route environments at Fitch H. Beach Airport, Charlotte, MI, as required by FAA Order 7400.2L, Procedures for Handling Airspace Matters. This amendment only affects the class E airspace extending upward from 700 feet above the surface at Fitch H. Beach Airport and does not affect or impact any other airspace within the area. This amendment does not change the class of airspace, and therefore does not change any of the current

requirements on the pilot in command when operating at Fitch H. Beach Airport.

Due to a recent change to FAA Order 7400.2L, dated October 12, 2017, the name of the city associated with the airport is removed from the airspace legal designation.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 modifies Class E airspace area extending upward from 700 feet above the surface within a 6.4-mile radius (increased from a 6.3-mile radius) at Fitch H. Beach, Charlotte, MI, and updates the geographic coordinates of the airport to coincide with the FAA's aeronautical database.

The name of the city associated with the airport is removed from the airspace legal designation to comply with a recent change to FAA Order 7400.2L. Except for the change noted above, this rule is the same as published in the NPRM.

Airspace reconfiguration is necessary due to the decommissioning of the Lansing VOR/TACAN, which provided navigation guidance for the instrument procedures to this airport, as part of the VOR MON Program. This action enhances safety and the management of IFR operations at this airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL MI E5 Charlotte, MI [Amended]

Fitch H. Beach Airport, MI

(Lat. 42°34′27″ N, long. 84°48′44″ W)

That airspace extending upward from 700 feet above the surface within a 6.4-mile radius of the Fitch H. Beach Airport.

Issued in Fort Worth, Texas, on April 30, 2018.

Amendment of Class E Airspace; Muscatine, IA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class E airspace designated as a surface area and Class E airspace extending upward from 700 feet above the surface at Muscatine Municipal Airport, Muscatine, IA. This action is required due to the decommissioning of the Port City VHF omnidirectional range (VOR) facility, which provided navigation guidance for the instrument procedures to this airport. The VOR has been decommissioned as part of the VOR Minimum Operational Network (MON) Program.

DATES: Effective 0901 UTC, July 19, 2018. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741–6030, or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.* FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace designated as a surface area and Class E airspace extending upward from 700 feet above the surface at Muscatine Municipal Airport, Muscatine, IA, to support instrument flight rules (IFR) operations at the airport.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (82 FR 61698; December 29, 2017) for Docket No. FAA–2017–1002 to modify Class E airspace designated as a surface area and Class E airspace extending upward from 700 feet above the surface at Muscatine Municipal Airport, Muscatine, IA. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6002 and 6005, respectively, of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

The FAA amends Title 14, Code of Federal Regulations (14 CFR) part 71 by:

Modifying Class E airspace designated as a surface area to within a 4.1-mile radius (increased from a 3.9-mile radius) of Muscatine Municipal Airport, Muscatine, IA, with an extension 1.0 mile either side of the 305° bearing from the airport from the 4.1-mile radius to 4.4 miles northwest of the airport, and an extension 1.0 mile either side of the 238° bearing from the airport from the 4.1-mile radius to 4.4 miles southwest of the airport. This action also makes an editorial change to the airspace legal description replacing ''Airport/Facility Directory'' with ''Chart Supplement''; and

Modifying Class E airspace extending upward from 700 feet above the surface at Muscatine Municipal Airport by removing the Port City VOR/DME from the airspace description, removing the extensions referencing the Port City VOR/DME, and adding an extension 3.8 miles either side of the 238° bearing from the airport from the 6.6-mile radius to 10.5 miles southwest of the airport.

Airspace reconfiguration is necessary due to the decommissioning of the Port City VOR as part of the VOR MON Program, and to bring the airspace and airspace descriptions into compliance with FAA Order 7400.2L, Procedures for Handling Airspace Matters. Controlled airspace is necessary for the safety and management of IFR operations at the airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6002 Class E Airspace Areas Designated as Surface Areas.

* * * * *

ACE IA E2 Muscatine, IA [Amended]

Muscatine Municipal Airport, IA
(Lat. 41°22′04″ N, long. 91°08′54″ W)

Within a 4.1-mile radius of Muscatine Municipal Airport, and within 1.0 mile either side of the 305° bearing from the airport from the 4.1-mile radius to 4.4 miles northwest of the airport, and within 1.0 mile either side of the 238° bearing from the airport from the 4.1-mile radius to 4.4 miles southwest of the airport. This Class E airspace area is effective during specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ACE IA E5 Muscatine, IA [Amended]

Muscatine Municipal Airport, IA
(Lat. 41°22′04″ N, long. 91°08′54″ W)

That airspace extending upward from 700 feet above the surface within a 6.6-mile

radius of Muscatine Municipal Airport and within 3.8 miles either side of the 238° bearing from the airport from the 6.6-mile radius to 10.5 miles southwest of the airport.

Issued in Fort Worth, Texas, on April 25, 2018.

Christopher L. Southerland,

Acting Manager, Operations Support Group, ATO Central Service Center.

Amendment of Class E Airspace; Milwaukee, WI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class E airspace extending upward from 700 feet above the surface at Batten International Airport, Racine, WI, contained within the Milwaukee, WI, airspace description. This action is required due to the decommissioning of the Horlick VHF omnidirectional range (VOR) which provided navigation guidance for the standard instrument approach procedures to this airport. The Horlick VOR is being decommissioned as part of the VOR Minimum Operational Network (MON) Program. This action enhances the safety and management of instrument flight rules (IFR) operations at the airport.

DATES: Effective 0901 UTC, July 19, 2018. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741–6030, or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace extending upward from 700 feet above the surface at Batten International Airport, Racine, WI, contained within the Milwaukee, WI, airspace description, to support IFR operations at the airport.

History

The FAA published a notice of proposed rulemaking (NPRM) in the **Federal Register** (82 FR 44365; September 22, 2017) for Docket No. FAA–2017–0740 to modify Class E airspace extending upward from 700 feet above the surface at Batten International Airport, Racine, WI, contained within the Milwaukee, WI, airspace legal description. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 modifies Class E airspace area extending upward from 700 feet above the surface to within a 6.6-mile radius (decreased from an 8.1-mile radius) at Batten International Airport, Racine, WI, contained within the Milwaukee, WI, airspace legal description.

Airspace reconfiguration is necessary due to the decommissioning of the Horlick VOR, which provided navigation guidance for the instrument procedures to this airport, as part of the VOR MON Program. This action enhances safety and the management of IFR operations at this airport.

The names of the cities associated with the airports listed in the Milwaukee, WI, airspace designation have been removed to comply with a recent change to FAA Order 7400.2L, Procedures for Handling Airspace Matters.

Except for the change noted above, this rule is the same as published in the NPRM.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL WI E5 Milwaukee, WI [Amended]

General Mitchell International Airport, WI
(Lat. 42°56′49″ N, long. 87°53′49″ W)
Batten International Airport, WI
(Lat. 42°45′40″ N, long. 87°48′50″ W)
Waukesha County Airport, WI
(Lat. 43°02′28″ N, long. 88°14′13″ W)
Lawrence J. Timmerman Airport, WI
(Lat. 43°06′37″ N, long. 88°02′04″ W)

That airspace extending upward from 700 feet above the surface within an 8.4-mile radius of General Mitchell International Airport, and within a 6.6-mile radius of Batten International Airport, and within a 7.5-mile radius of Waukesha County Airport, and within 2 miles each side of the 282° bearing from Waukesha County Airport extending from the 7.5-mile radius to 10.5 miles west of Waukesha County Airport, and within an 8.9-mile radius of Lawrence J. Timmerman Airport.

Issued in Fort Worth, Texas, on April 30, 2018.

Christopher L. Southerland,

Acting Manager, Operations Support Group, ATO Central Service Center.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 573

[Docket No. FDA–2014–F–1509]

Food Additives Permitted in Feed and Drinking Water of Animals; Marine Microalgae

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA, we, or the Agency) is amending the regulations for food additives permitted in feed and drinking water of animals to provide for the safe use of dried marine microalgae as a source of docosahexaenoic acid (DHA) for use in complete, dry foods for adult dogs. This action is in response to a food additive petition filed by DSM Nutritional Products.

DATES: This rule is effective May 7, 2018. See section V of this document for further information on the filing of objections. Submit either electronic or written objections and requests for a hearing on the final rule by June 6, 2018.

ADDRESSES: You may submit objections and requests for a hearing as follows. Please note that late, untimely filed objections will not be considered. Electronic objections must be submitted on or before June 6, 2018. The *https://www.regulations.gov* electronic filing system will accept comments until midnight Eastern Time at the end of June 6, 2018. Objections received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic objections in the following way:

- Federal eRulemaking Portal: *https://www.regulations.gov.* Follow the instructions for submitting objections. Objections submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your objection will be made public, you are solely responsible for ensuring that your objection does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your objection, that information will be posted on *https://www.regulations.gov.*
- If you want to submit an objection with confidential information that you do not wish to be made available to the public, submit the objection as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper objections submitted to the Dockets Management Staff, FDA will post your objection, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2014–F–1509 for ''Food Additives Permitted in Feed and Drinking Water of Animals; Marine Microalgae.'' Received objections, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions*—To submit an objection with confidential information that you do not wish to be made publicly available, submit your objections only as a written/paper submission. You should submit two copies in total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of objections. The second copy, which will have the claimed confidential information redacted/

blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your objections and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper objections received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Chelsea Trull, Center for Veterinary Medicine, Food and Drug Administration, 7519 Standish Pl. (HFV–224), Rockville, MD 20855, 240–402–6729, *chelsea.trull@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In a document published in the **Federal Register** of October 16, 2014 (79 FR 62090), FDA announced that we had filed a food additive petition (animal use) (FAP 2288) submitted by DSM Nutritional Products, 45 Waterview Blvd., Parsippany, NJ 07054. The petition proposed that the regulations for food additives permitted in feed and drinking water of animals be amended to provide for the safe use of *Schizochytrium* sp. dried marine microalgae as a source of DHA for use in complete, dry foods for adult dogs.

II. Conclusion

FDA concludes that the data establish the safety and utility of *Schizochytrium* sp. dried marine microalgae as a source of DHA for use in complete, dry foods for adult dogs and that the food additive regulations should be amended as set forth in this document. This is not a significant regulatory action subject to Executive Order 12866.

III. Public Disclosure

In accordance with § 571.1(h) (21 CFR 571.1(h)), the petition and documents we considered and relied upon in reaching our decision to approve the petition will be made available for inspection at the Center for Veterinary Medicine by appointment with the information contact person (see **FOR FURTHER INFORMATION CONTACT**). As provided in § 571.1(h), we will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

IV. Analysis of Environmental Impact

The Agency has determined under 21 CFR 25.32(r) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

V. Objections and Hearing Requests

Any person who will be adversely affected by this regulation may file with the Dockets Management Staff (see **ADDRESSES**) either electronic or written objections. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provision of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection.

List of Subjects in 21 CFR Part 573

Animal feeds, Food additives.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 573 is amended as follows:

PART 573—FOOD ADDITIVES PERMITTED IN FEED AND DRINKING WATER OF ANIMALS

■ 1. The authority citation for part 573 continues to read as follows:

Authority: 21 U.S.C. 321, 342, 348.

■ 2. Add § 573.615 to subpart B to read as follows:

§ 573.615 Marine microalgae.

The food additive, marine microalgae, may be safely used as a source of docosahexaenoic acid (DHA) and other omega-3 fatty acids in accordance with the following prescribed conditions:

(a) The additive is dried whole cells of nonviable, nontoxigenic, nonpathogenic *Schizochytrium* sp. algae grown as a pure culture.

(b) The additive is used in complete, dry adult maintenance food for dogs in accordance with good manufacturing and feeding practices not to exceed 16.5 pounds per ton (7.5 kilograms (kg) per 1000 kg) of complete, dry, adult maintenance dog food.

(c) The additive consists of not less than 17.0 percent (4*Z*,7*Z*,10*Z*,13*Z*,16*Z*,19*Z*)-docosa-4,7,10,13,16,19-hexaenoic acid (docosahexaenoic acid or DHA).

(d) The additive meets the following specifications:

(1) Not less than 40 percent crude fat;

(2) Not more than 12 percent ash;

(3) Not more than 8 percent unsaponifiable matter;

(4) Not more than 5 percent insoluble impurities;

(5) Not more than 5 percent free fatty acids; and

(6) Not more than 6 percent water.

(e) To ensure the safe use of the additive, in addition to other information required by the Federal Food, Drug, and Cosmetic Act:

(1) The label and labeling of the additive, any feed premix, and complete feed, shall contain the name of the additive, marine microalgae.

(2) The label and labeling of the additive and any feed premix shall also contain:

(i) A statement to indicate that the maximum use level of the additive shall not exceed 16.5 pounds per ton (7.5 kg per 1000 kg) of complete, dry, adult maintenance dog food.

(ii) Adequate directions for use.

Dated: May 1, 2018.

Leslie Kux,

Associate Commissioner for Policy.

[Docket No. FDA–2017–N–7007]

RIN 0910–AH49

Removal of Certain Time of Inspection and Duties of Inspector Regulations for Biological Products; Withdrawal

AGENCY: Food and Drug Administration, HHS.

ACTION: Direct final rule; withdrawal.

SUMMARY: The Food and Drug Administration (FDA) published in the **Federal Register** of January 26, 2018, a direct final rule to amend the general biologics regulations relating to time of inspection requirements and to also remove duties of inspector requirements. The comment period closed April 11, 2018. FDA is withdrawing the direct final rule because the Agency received significant adverse comment.

DATES: The direct final rule published at January 26, 2018 (83 FR 3586), is withdrawn effective May 7, 2018.

FOR FURTHER INFORMATION CONTACT: Melissa Segal, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION: Therefore, under the Federal Food, Drug, and Cosmetic Act, and under authority delegated to the Commissioner of Food and Drugs, the direct final rule published on January 26, 2018 (83 FR 3586) is withdrawn.

Dated: May 1, 2018.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. OSHA–2018–0003]

RIN 1218–AB76

Revising the Beryllium Standard for General Industry

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Direct final rule; request for comment.

SUMMARY: On January 9, 2017, the Occupational Safety and Health Administration (OSHA) issued a final rule adopting a comprehensive general industry standard for exposure to beryllium and beryllium compounds. In this Direct Final Rule (DFR), OSHA is adopting a number of clarifying amendments to address the application of the standard to materials containing trace amounts of beryllium. OSHA believes this rule will maintain safety and health protections for workers while reducing the burden to employers of complying with the current rule.

DATES: This DFR will become effective on July 6, 2018 unless significant adverse comment is submitted (transmitted, postmarked, or delivered) by June 6, 2018. If DOL receives significant adverse comment, the Agency will publish a timely withdrawal in the **Federal Register** informing the public that this DFR will not take effect (see Section III, ''Direct Final Rulemaking,'' for more details on this process). Comments to this DFR, hearing requests, and other information must be submitted (transmitted, postmarked, or delivered) by June 6, 2018. All submissions must bear a postmark or provide other evidence of the submission date.

ADDRESSES: The public can submit comments, hearing requests, and other material, identified by Docket No. OSHA–2018–0003, using any of the following methods:

Electronically: Submit comments and attachments, as well as hearing requests and other information, electronically at *http://www.regulations.gov,* which is the Federal e-Rulemaking Portal. Follow the instructions online for submitting comments. Note that this docket may include several different **Federal Register** notices involving active rulemakings, so it is extremely important to select the correct notice or its ID number when submitting comments for this rulemaking. After accessing ''all documents and comments'' in the docket (OSHA–2018–0003), check the ''Rule'' box in the column headed ''Document Type,'' find the document posted on the date of publication of this document, and click the ''Submit a Comment'' link. Additional instructions for submitting comments are available from the *http://www.regulations.gov* homepage.

Facsimile: OSHA allows facsimile transmission of comments that are 10 pages or fewer in length (including attachments). Fax these documents to the OSHA Docket Office at (202) 693–1648. OSHA does not require hard copies of these documents. Instead of transmitting facsimile copies of attachments that supplement these documents (*e.g.,* studies, journal articles), commenters must submit these attachments to the OSHA Docket Office, Docket No. OSHA–2018–0003, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3653, 200 Constitution Avenue NW, Washington, DC 20210. These attachments must clearly identify the sender's name, the date, the subject, and the docket number (OSHA–2018–0003) so that the Docket Office can attach them to the appropriate document.

Regular mail, express delivery, hand delivery, and messenger (courier) service: Submit comments and any additional material to the OSHA Docket Office, Docket No. OSHA–2018–0003, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3653, 200 Constitution Avenue NW, Washington, DC 20210; telephone: (202) 693–2350. (OSHA's TTY number is (877) 889–5627.) Contact the OSHA Docket Office for information about security procedures concerning delivery of materials by express delivery, hand delivery, and messenger service. The Docket Office will accept deliveries (express delivery, hand delivery, messenger service) during the Docket Office's normal business hours, 10:00 a.m. to 3:00 p.m., ET.

Instructions: All submissions must include the Agency's name, the title of the rulemaking (Beryllium Standard: Direct Final Rule), and the docket number (OSHA–2018–0003). OSHA will place comments and other material, including any personal information, in the public docket without revision, and the comments and other material will be available online at *http://www.regulations.gov.* Therefore, OSHA cautions commenters about submitting statements they do not want made available to the public, or submitting comments that contain personal

information (either about themselves or others), such as Social Security Numbers, birth dates, and medical data.

Docket: To read or download comments or other material in the docket, go to *http://www.regulations.gov* or to the OSHA Docket Office at the above address. The electronic docket for this direct final rule established at *http://www.regulations.gov* contains most of the documents in the docket. However, some information (*e.g.,* copyrighted material) is not available publicly to read or download through this website. All submissions, including copyrighted material, are available for inspection at the OSHA Docket Office. Contact the OSHA Docket Office for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT:

Press inquiries: Mr. Frank Meilinger, OSHA Office of Communications, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3647, 200 Constitution Avenue NW, Washington, DC 20210; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

General information and technical inquiries: William Perry or Maureen Ruskin, Directorate of Standards and Guidance, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3718, 200 Constitution Avenue NW, Washington, DC 20210; telephone (202) 693–1950.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background

On January 9, 2017, OSHA published its final rule Occupational Exposure to Beryllium and Beryllium Compounds in the **Federal Register** (82 FR 2470). OSHA concluded that employees exposed to beryllium and beryllium compounds at the preceding permissible exposure limits (PELs) were at significant risk of material impairment of health, specifically chronic beryllium disease and lung cancer. OSHA concluded that the new 8-hour time-weighted average (TWA) PEL of 0.2 μg/m^3 reduced this significant risk to the maximum extent feasible. Based on information submitted to the record, in the final rule OSHA issued three separate standards—general industry, shipyards, and construction. In addition to the revised PEL, the final rule established a new short-term exposure limit (STEL) of 2.0 μg/m^3 over a 15-minute sampling period and an action level of 0.1 μg/m^3 as an 8-hour TWA, along with a number of ancillary provisions intended to provide additional protections to employees, such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, personal protective clothing and equipment, housekeeping, medical surveillance, hazard communication, and recordkeeping similar to those found in other OSHA health standards.

This DFR amends the text of the beryllium standard for general industry to clarify OSHA's intent with respect to certain terms in the standard, including the definition of Beryllium Work Area (BWA), the definition of emergency, and the meaning of the terms dermal contact and beryllium contamination. It also clarifies OSHA's intent with respect to provisions for disposal and recycling and with respect to provisions that the Agency intends to apply only where skin can be exposed to materials containing at least 0.1% beryllium by weight.

This direct final rule is expected to be an Executive Order (E.O.) 13771 deregulatory action. Details on OSHA's cost/cost savings estimates for this direct final rule can be found in the rule's economic analysis. OSHA has estimated that, at a 3 percent discount rate over 10 years, there are net annual cost savings of $0.36 million per year for this direct final rule; at a discount rate of 7 percent, there are net annual cost savings of $0.37 million per year. When the Department uses a perpetual time horizon, the annualized cost savings of the direct final rule is $0.37 million with 7 percent discounting. While the 2017 Beryllium Final Rule went into effect on May 20, 2017, compliance obligations do not begin until May 11, 2018.

II. Consideration of Comments

OSHA will consider comments on all issues related to this action including economic or other regulatory impacts of this action on the regulated community. If OSHA receives no significant adverse comment, OSHA will publish a **Federal Register** document confirming the effective date of this DFR and withdrawing the companion Notice of Proposed Rulemaking (NPRM). Such confirmation may include minor stylistic or technical changes to the document. For the purpose of judicial review, OSHA views the date of confirmation of the effective date of this DFR as the date of promulgation.

III. Direct Final Rulemaking

In direct final rulemaking, an agency publishes a DFR in the **Federal Register**, with a statement that the rule will go into effect unless the agency receives significant adverse comment within a specified period. The agency may publish an identical concurrent NPRM. If the agency receives no significant adverse comment in response to the DFR, the rule goes into effect. OSHA typically confirms the effective date of a DFR through a separate **Federal Register** document. If the agency receives a significant adverse comment, the agency withdraws the DFR and treats such comment as a response to the NPRM. An agency typically uses direct final rulemaking when an agency anticipates that a rule will not be controversial.

For purposes of this DFR, a significant adverse comment is one that explains why the amendments to OSHA's beryllium standard would be inappropriate. In determining whether a comment necessitates withdrawal of the DFR, OSHA will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process. OSHA will not consider a comment recommending an additional amendment to this rule to be a significant adverse comment unless the comment states why the DFR would be ineffective without the addition.

In addition to publishing this DFR, OSHA is publishing a companion NPRM in the **Federal Register**. The comment period for the NPRM runs concurrently with that of the DFR. OSHA will treat comments received on the companion NPRM as comments also regarding the DFR. Similarly, OSHA will consider significant adverse comment submitted to the DFR as comment to the companion NPRM. Therefore, if OSHA receives a significant adverse comment on either this DFR or the NPRM, it will withdraw this DFR and proceed with the companion NPRM. In the event OSHA withdraws the DFR because of significant adverse comment, OSHA will consider all timely comments received in response to the DFR when it continues with the NPRM. After carefully considering all comments to the DFR and the NPRM, OSHA will decide whether to publish a new final rule.

OSHA determined that the subject of this rulemaking is suitable for direct final rulemaking. This amendment to the standard is clarifying in nature and does not adversely impact the safety or health of employees. The amended standard will clarify OSHA's intent regarding certain terms in the standard, including the definition of Beryllium Work Area (BWA), the definition of emergency, and the meaning of the terms dermal contact and beryllium contamination. It will also clarify OSHA's intent with respect to provisions for disposal and recycling and with respect to provisions that the Agency intends to apply only where skin can be exposed to materials containing at least 0.1% beryllium by weight. The revisions do not impose any new costs or duties. For these reasons, OSHA does not anticipate objections from the public to this rulemaking action.

IV. Discussion of Changes

On January 9, 2017, OSHA adopted comprehensive standards addressing exposure to beryllium and beryllium compounds in general industry, construction, and shipyards. 82 FR 2470. Beryllium ''occurs naturally in rocks, soil, coal, and volcanic dust,'' but can cause harm to workers through exposure in the workplace. 80 FR 47579. OSHA has thus set a general industry exposure limit for beryllium and beryllium compounds since 1971, modified most recently in 2017. *See* 80 FR 47578–47579; 82 FR 2471. This DFR amends that 2017 general industry beryllium standard (codified at 29 CFR 1910.1024) to clarify its applicability to materials containing trace amounts of beryllium and to make related changes. This DFR does not affect the construction and shipyard standards, which are being addressed in a separate rulemaking. See 82 FR 29182.

During the last rulemaking, OSHA addressed the issue of trace amounts of beryllium. In its notice of proposed rulemaking, OSHA proposed to exempt from its beryllium standard materials containing less than 0.1% beryllium by weight on the premise that workers in exempted industries are not exposed at levels of concern, 80 FR 47775, but noted evidence of high airborne exposures in some of those industries, in particular the primary aluminum production and coal-fired power generation industries. 80 FR 47776. Therefore, OSHA proposed for comment several regulatory alternatives, including an alternative that would ''expand the scope of the proposed standard to also include all operations in general industry where beryllium exists only as a trace contaminant.'' 80 FR 47730. After receiving comment, OSHA adopted in the final rule an alternative limiting the exemption for materials containing less than 0.1% beryllium by weight to where the employer has objective data demonstrating that employee exposure to airborne beryllium will remain below the action level (AL) of 0.1 $\mu g/m^3$, measured as an 8-hour TWA, under any foreseeable conditions. 29 CFR 1910.1024(a)(2). In doing so, OSHA noted that the AL exception ensured that workers with airborne exposures of concern were covered by the standard:

> OSHA agrees with the many commenters and testimony expressing concern that materials containing trace amounts of beryllium (less than 0.1 percent by weight) can result in hazardous [airborne] exposures to beryllium. We disagree, however, with those who supported completely eliminating the exemption because this could have unintended consequences of expanding the scope to cover minute amounts of naturally occurring beryllium (Ex 1756 Tr. 55). Instead, we believe that alternative #1b—essentially as proposed by Materion and USW [United Steelworkers] and acknowledging that workers can have significant [airborne] beryllium exposures even with materials containing less than 0.1%—is the most appropriate approach. Therefore, in the final standard, it is exempting from the standard's application materials containing less than 0.1% beryllium by weight only where the employer has objective data demonstrating that employee [airborne] exposure to beryllium will remain below the action level as an 8-hour TWA under any foreseeable conditions. 82 FR 2643.

As the regulatory history makes clear, OSHA intended to protect employees working with trace beryllium only when it caused airborne exposures of concern. OSHA did not intend for provisions aimed at protecting workers from the effects of dermal contact to apply in the case of materials containing only trace amounts of beryllium. Since the publication of the final rule, however, stakeholders have suggested that an unintended consequence of the final rule's revision of the trace exemption is that provisions designed to protect workers from dermal contact with beryllium-contaminated material could be read as applying to materials with only trace amounts of beryllium.

This DFR adjusts the regulatory text of the general industry beryllium standard to clarify that OSHA does not intend for requirements that primarily address dermal contact to apply in processes, operations, or areas involving only materials containing less than 0.1% beryllium by weight. These clarifications are made through changes to the definition of beryllium work area; the addition of definitions of dermal contact, beryllium-contaminated, and contaminated with beryllium; clarifications of certain hygiene provisions with respect to beryllium contamination; and the clarifications to provisions for disposal and recycling. In addition, because under these changes it is possible to have a regulated area that is not a beryllium work area, this DFR makes changes to certain housekeeping provisions to ensure they apply in all regulated areas. Finally, this DFR also includes a change to the definition of ''emergency'', adding detail to the definition so as to clarify the nature of the circumstances OSHA intends to be considered an emergency for the purposes of the standard.

Definition of beryllium work area. Paragraph (b) of the beryllium standard published in January 2017 defined a beryllium work area as any work area containing a process or operation that can release beryllium where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium. This DFR amends the definition as follows: ''Beryllium work area means any work area: (1) Containing a process or operation that can release beryllium and that involves materials that contain at least 0.1% beryllium by weight; and (2) where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium.'' This change clarifies OSHA's intent that many of the provisions associated with beryllium work areas should only apply to areas where there are processes or operations involving materials at least 0.1% beryllium by weight.

Specifically, this change to the beryllium work area definition clarifies OSHA's intent that the following provisions associated with beryllium work areas do not apply where processes and operations involve only materials containing trace amounts of beryllium (less than 0.1% beryllium by weight): Establishing and demarcating beryllium work areas (paragraphs (e)(1)(i) and (e)(2)(i)); including procedures for minimizing cross-contamination within (paragraph (f)(1)(i)(D)) or minimizing migration of beryllium out of (paragraph (f)(1)(i)(F)) such areas in the written exposure control plan; ensuring that at least one engineering or process control is in place to reduce beryllium exposure where airborne beryllium levels meet or exceed the AL (revised paragraph

(f)(2)(ii)).[1] Additionally, for areas where beryllium is only present in materials at concentrations of less than 0.1% beryllium by weight, unless that area is also a regulated area, employers are not required to ensure that all surfaces in such areas are as free as practicable of beryllium (paragraph (j)(1)(i)); ensure that all surfaces in such areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure (paragraph (j)(2)(i)); or prohibit dry sweeping or brushing for cleaning surfaces in such areas (paragraph (j)(2)(ii)).

This DFR also includes conforming changes to maintain the January 2017 rule's requirements for housekeeping in regulated areas. Because all regulated areas were also beryllium work areas under the January 2017 beryllium standard, OSHA did not specify whether requirements for beryllium work areas should also apply in regulated areas (areas in which airborne beryllium exposure meets or exceeds the TWA PEL or STEL). This DFR's clarification to the definition of beryllium work area, however, means that it is possible for a work area to be a regulated area, but not a beryllium work area. This would occur when processes that involve only materials containing less than 0.1% beryllium by weight nevertheless create airborne beryllium exposures at or above the TWA PEL or STEL. 82 FR 2583. It is thus important to clarify that housekeeping (paragraph (j)) requirements continue to apply in regulated areas, even if the processes or operations in these areas involve materials with only trace beryllium. Operations or processes involving trace beryllium materials must generate extremely high dust levels in order to exceed the TWA PEL or STEL. Following the housekeeping methods required by paragraph (j) will help to protect workers against resuspension of surface beryllium accumulations from extremely dusty operations and limit workers' airborne exposure to beryllium.

The DFR accordingly amends paragraphs (j)(1)(i), (j)(2)(i), and (j)(2)(ii) to state explicitly that they apply to regulated areas, as follows. Paragraph (j)(1)(i), as amended, states that ''[t]he employer must maintain all surfaces in beryllium work areas and regulated areas as free as practicable of beryllium and in accordance with the written exposure control plan required under paragraph (f)(1) and the cleaning methods required under paragraph (j)(2) of this standard.'' Paragraph (j)(2)(i), as amended, states that ''[t]he employer must ensure that surfaces in beryllium work areas and regulated areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure.'' Paragraph (j)(2)(ii), as amended, states that ''[t]he employer must not allow dry sweeping or brushing for cleaning surfaces in beryllium work areas or regulated areas unless HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure are not safe or effective.''

This DFR also makes conforming changes to the engineering controls requirements to ensure that the hierarchy of controls continues to apply in all regulated areas. Paragraph (f)(2) of the January 2017 beryllium standard provided that, if airborne exposures still exceed the PEL or STEL after implementing at least one control for each operation in a beryllium work area that releases airborne beryllium, the employer must implement additional or enhanced engineering and work practice controls to reduce airborne exposure to or below the limit exceeded. OSHA intended this provision to apply to all operations within the scope of the standard that can release airborne beryllium. 82 FR 2671–72. Because, under this DFR's revisions, not all regulated areas will be beryllium work areas, this DFR rearranges the regulatory text of paragraph (f)(2) to make clear that the hierarchy of controls will continue to apply in regulated areas that are not beryllium work areas.

Definitions related to beryllium contamination. To further clarify OSHA's intent that the standard's requirements aimed at reducing the effect of dermal contact with beryllium should not apply to areas where there are no processes or operations involving materials containing at least 0.1% beryllium by weight, this DFR defines ''beryllium-contaminated or contaminated with beryllium'' and adds those terms to certain provisions in the standard. The DFR defines those terms as follows: ''Contaminated with beryllium and beryllium-contaminated mean contaminated with dust, fumes, mists, or solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight.'' The DFR adds the terms to certain provisions in the standard's requirements for hygiene areas and disposal and recycling.

The use of this definition accordingly clarifies OSHA's intent that the following provisions, which apply where clothing, hair, skin, or work surfaces are beryllium-contaminated, do not apply where the contaminating material contains less than 0.1% beryllium by weight: Paragraph (h)(2)(i) and paragraph (h)(2)(ii), which require the employer to ensure that each employee removes all beryllium-contaminated personal protective clothing and equipment at the appropriate time and as specified in the written exposure control plan required by paragraph (f)(1); and paragraph (h)(2)(iii) and paragraph (h)(2)(iv), which require the employer to ensure that measures to prevent cross contamination between beryllium-contaminated personal protective clothing and equipment and street clothing are observed and that beryllium-contaminated personal protective clothing and equipment are not removed from the workplace. This DFR also amends paragraph (h)(3)(ii), which requires the employer to ensure that beryllium is properly removed from PPE, by adding the term ''beryllium-contaminated'' so that this requirement applies only where the contaminating material contains at least 0.1% beryllium by weight. The amended paragraph (h)(3)(ii) reads as follows: ''The employer must ensure that beryllium is not removed from beryllium-contaminated personal protective clothing and equipment by blowing, shaking, or any other means that disperses beryllium into the air.''

Similarly, the DFR's inclusion of the term ''contaminated with beryllium'' in paragraphs (i)(3)(i)(B) and (i)(3)(ii)(B) clarifies OSHA's intent that those provisions, which require employers to provide and ensure use of showers where employees' hair or body parts other than hands, face, and neck can reasonably be expected to become contaminated with beryllium, do not apply where the contaminating material contains less than 0.1% beryllium by weight.

The DFR's adoption of the definition of ''beryllium-contaminated'' further clarifies the application of certain requirements that are meant to minimize re-entrainment of airborne beryllium and reduce the effect of

[1] As explained in the preamble to the January 2017 rule, in industries that process or handle materials with only trace amounts of beryllium and that encounter exposures to beryllium above the action level, the PEL would ''be exceeded only during operations that generate [an] excessive amount of visible airborne dust.'' 82 FR 2583. OSHA therefore expects that if exposures in such a facility are below the PEL but above the AL, there is already at least one engineering or process control in place, so this requirement had no effect on primary aluminum production or coal-fired utilities. The 2017 FEA explained that this provision would only require additional controls in two job categories in two application groups, neither of which are in primary aluminum production or coal-fired utilities. (Document ID OSHA–H005C–2006–0870–2042, p. V–12).

dermal contact with beryllium. Specifically, it clarifies that paragraph (j)(2)(iii), which prohibits the use of compressed air for cleaning beryllium-contaminated surfaces except where used in conjunction with an appropriate ventilation system, and paragraph (j)(2)(iv), which requires the use of respiratory protection and PPE in accordance with paragraphs (g) and (h) of the standard when dry sweeping, brushing, or compressed air are used to clean beryllium-contaminated surfaces, do not apply where the contaminating material contains less than 0.1% beryllium by weight. OSHA does not expect the additional airborne exposure from dry brushing, sweeping, or using compressed air to significantly increase the levels of airborne exposure outside regulated areas when working with trace beryllium. This is because for trace beryllium to generate airborne exposures of concern, excessive amounts of dust would need to be generated, and this would not happen outside of regulated areas.

This DFR also adds the term ''beryllium-contaminated'' to certain requirements pertaining to eating and drinking areas to clarify that hygiene requirements in these areas apply only where materials containing more than 0.1% beryllium by weight may contaminate such areas. Paragraph (i)(4)(i), as amended by this DFR, states that wherever the employer allows employees to consume food or beverages at a worksite where beryllium is present, the employer must ensure that ''[b]eryllium-contaminated surfaces in eating and drinking areas are as free as practicable of beryllium.'' Paragraph (i)(4)(ii), as amended by this DFR, requires employers to ensure that ''[n]o employees enter any eating or drinking area with beryllium-contaminated personal protective clothing or equipment unless, prior to entry, surface beryllium has been removed from the clothing or equipment by methods that do not disperse beryllium into the air or onto an employee's body.''

Definition of dermal contact with beryllium. To clarify OSHA's intent that requirements of the standard associated with dermal contact with beryllium should not apply to areas where there are no processes or operations involving materials at least 0.1% beryllium by weight, this DFR also adds a definition for dermal contact with beryllium. This new definition provides, ''Dermal contact with beryllium means skin exposure to: (1) Soluble beryllium compounds containing beryllium in concentrations greater than or equal to 0.1 percent by weight; (2) solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight; or (3) dust, fumes, or mists containing beryllium in concentrations greater than or equal to 0.1 percent by weight.'' Accordingly, the definition clarifies that paragraph (h)(1)(ii), which requires an employer to provide and ensure the use of personal protective clothing and equipment where there is a reasonable expectation of dermal contact with beryllium, applies only where contact may occur with materials containing at least 0.1% beryllium by weight. This definition also clarifies that the requirements related to dermal contact in the written exposure control plan, washing facilities, medical examinations, and training provisions only apply where contact may occur with materials containing at least 0.1% beryllium by weight.

Definition of emergency. This DFR also clarifies the definition of ''emergency'' in paragraph (b) of the beryllium standard published in January 2017. That paragraph defined an emergency as ''any uncontrolled release of airborne beryllium.'' This DFR amends the definition as follows: ''Emergency means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which may or does result in an uncontrolled and unintended release of airborne beryllium that presents a significant hazard.'' This change clarifies the circumstances under which the provisions associated with emergencies should apply, including the requirements that employers provide and ensure employee use of respirators and that employers provide medical surveillance to employees exposed in an emergency. This change is consistent with OSHA's intent as explained in the preamble to the 2017 final rule. 82 FR 2690 (''An emergency could result from equipment failure, rupture of containers, or failure of control equipment, among other causes.''). These examples show OSHA's intent to define an ''emergency'' as something unintended as well as uncontrolled, and including the examples in the new definition make that clear. It is also consistent with other OSHA standards, such as methylenedianiline (1910.1050), vinyl chloride (1910.1017), acrylonitrile (1910.1045), benzene (1910.1028), and ethylene oxide (1910.1047).

Disposal and recycling. Finally, this DFR clarifies the application of the disposal and recycling provisions. Paragraph (j)(3) of the beryllium standard published in January 2017 required employers to ensure that materials designated for disposal that contain or are contaminated with beryllium are disposed of in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of the standard. It also required that materials designated for recycling which contain or are contaminated with beryllium are cleaned to be as free as practicable of surface beryllium contamination and labeled in accordance with paragraph (m)(3) of the standard, or placed in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of the standard. These provisions were designed to protect workers from dermal contact with beryllium dust generated during processing, where there is a risk of beryllium sensitization. See 82 FR 2694, 2695. This DFR accordingly limits those requirements to ''materials that contain beryllium in concentrations of 0.1 percent by weight or more or are contaminated with beryllium,'' consistent with OSHA's intention that provisions aimed at protecting workers from the effects of dermal contact do not apply in the case of materials containing only trace amounts of beryllium. The hazard communication standard continues to apply according to its terms. See 29 CFR 1910.1200.

V. Legal Considerations

The purpose of the Occupational Safety and Health Act of 1970) (''OSH Act''; 29 U.S.C. 651 *et seq.*) is ''to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources.'' 29 U.S.C. 651(b). To achieve this goal, Congress authorized the Secretary of Labor to promulgate and enforce occupational safety and health standards. 29 U.S.C. 655(b), 658. A safety or health standard is a standard that ''requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment.'' 29 U.S.C. 652(8). A standard is reasonably necessary or appropriate when a significant risk of material harm exists in the workplace and the standard would substantially reduce or eliminate that workplace risk. See *Industrial Union Dept., AFL–CIO* v. *Am. Petroleum Inst.,* 448 U.S. 607, 641–42 (1980) (plurality opinion).

OSHA need not make additional findings on risk for this DFR. As discussed above, this DFR will not diminish the employee protections put into place by the standard being amended. And because OSHA previously determined that the

beryllium standard substantially reduces a significant risk (82 FR 2545–52), it is unnecessary for the Agency to make additional findings on risk for the minor changes and clarifications being made to the standard. See, *e.g., Public Citizen Health Research Group* v. *Tyson,* 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must ''find that each and every aspect of its standard eliminates a significant risk'').

OSHA has determined that these minor changes and clarifications are technologically and economically feasible. All OSHA standards must be both technologically and economically feasible. See *United Steelworkers* v. *Marshall,* 647 F.2d 1189, 1264 (D.C. Cir. 1980) (''*Lead I*''). The Supreme Court has defined feasibility as ''capable of being done.'' *Am. Textile Mfrs. Inst.* v. *Donovan,* 452 U.S. 490, 509–10 (1981) (''*Cotton Dust*''). Courts have further clarified that a standard is technologically feasible if OSHA proves a reasonable possibility, ''within the limits of the best available evidence . . . that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations.'' *Lead I,* 647 F.2d at 1272. With respect to economic feasibility, courts have held that ''a standard is feasible if it does not threaten massive dislocation to or imperil the existence of the industry.'' *Id.* at 1265 (internal quotation marks and citations omitted). In the final economic analysis (FEA) for the 2017 beryllium rule, OSHA concluded that the rule was economically and technologically feasible. OSHA has determined that this DFR is also economically and technologically feasible, because it does not impose any new requirements or costs.

VI. Final Economic Analysis and Regulatory Flexibility Act Certification

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This DFR is not an ''economically significant regulatory action'' under Executive Order 12866, or a ''major rule'' under the Congressional Review Act (5 U.S.C. 801 *et seq.*), and its impacts do not trigger the analytical requirements of UMRA. Neither the benefits nor the costs of this DFR would exceed $100 million in any given year. This DFR would, however, result in a net cost savings for employers in primary aluminum production and coal-fired utilities, which are the only industries in General Industry covered by the 2017 Beryllium Final Rule that OSHA identified with operations involving materials containing only trace beryllium (less than 0.1% beryllium by weight).

Several calculations illustrate the expected cost savings. At a discount rate of 3 percent, this DFR would yield annualized cost savings of $0.36 million per year for 10 years. At a discount rate of 7 percent, this DFR would yield an annualized cost savings of $0.37 million per year for 10 years. These net cost savings amount to approximately 0.6 percent of the original estimated cost of the 2017 Beryllium Final Rule for General Industry at discount rates of either 3 or 7 percent; to approximately 5.3 percent of the original estimated cost of the 2017 Beryllium Final Rule for primary aluminum production and coal-fired utilities only at a discount rate of 3 percent and 5.2 percent of the original estimated cost of the 2017 Beryllium Final Rule for primary aluminum production and coal-fired utilities only at a discount rate of 7 percent.[2] Under a perpetual time horizon, the annualized cost savings of this DFR is $0.37 million at a discount rate of 7 percent.

1. Changes to the Baseline: Updating to 2017 Dollars and Removing Familiarization Costs

Because baseline costs typically reflect the costs of compliance *without* the changes set forth in an agency's action—in this case, the DFR—OSHA has revised the baseline costs, as displayed in the FEA in support of the beryllium standard of January 9, 2017, in two ways. First, OSHA updated the projected costs for general industry contained in the FEA that accompanied the rule from 2015 to 2017 dollars, using the latest Occupational Employment Statistics (OES) wage data (for 2016) and inflating them to 2017 dollars. Second, OSHA excluded certain familiarization costs, included in the cost estimates developed in the beryllium FEA for the 2017 Beryllium Final Rule, because OSHA expects that those costs have already been incurred by affected employers. Thus, the baseline costs for this FEA are the projected costs from the 2017 FEA, updated to 2017 dollars, less familiarization costs in the 2017 beryllium final rule (but including some new familiarization costs for employers to become familiar with the revised provisions). Throughout this analysis of costs and cost savings, the context is limited to employers in primary aluminum production and coal-fired utilities.

2. Discussion of Overhead Costs

As in the 2017 FEA, OSHA has not accounted for overhead labor costs in its analysis of the cost savings for this DFR due to concerns about consistency. There are several ways to look at the cost elements that fit the definition of overhead, and there is a range of overhead estimates currently used within the federal government—for example, the Environmental Protection Agency has used 17 percent,[3] and government contractors have been reported to use an average of 77 percent.[4] Some overhead costs, such as advertising and marketing, may be more closely correlated with output than with labor. Other overhead costs vary with the number of new employees. For example, rent or payroll processing costs may change little with the addition of 1 employee in a 500-employee firm, but may change substantially with the addition of 100 employees. If an employer is able to rearrange current employees' duties to implement a rule, then the marginal share of overhead costs, such as rent, insurance, and major office equipment (*e.g.,* computers, printers, copiers) would be very difficult to measure with accuracy.

If OSHA had included an overhead rate when estimating the marginal cost of labor, without further analyzing an appropriate quantitative adjustment, and adopted for these purposes an overhead rate of 17 percent on base wages, the cost savings of this DFR

[2] The original estimated cost of the 2017 beryllium final rule for General Industry, and separately for primary aluminum production and coal-fired utilities, was updated to 2017 dollars and additionally adjusted and corrected, as subsequently explained in the text.

[3] See Grant Thornton LLP. 2015 Government Contractor Survey (Document ID OSHA–H005C–2006–0870–2153). The application of this overhead rate was based on an approach used by the Environmental Protection Agency, as described in EPA's ''Wage Rates for Economic Analyses of the Toxics Release Inventory Program,'' June 10, 2002. This analysis itself was based on a survey of several large chemical manufacturing plants: Heiden Associates, Final Report: A Study of Industry Compliance Costs Under the Final Comprehensive Assessment Information Rule, Prepared for the Chemical Manufacturers Association, December 14, 1989.

[4] For further examples of overhead cost estimates, please see the Employee Benefits Security Administration's guidance at *https://www.dol.gov/sites/default/files/ebsa/laws-and-regulations/rules-and-regulations/technical-appendices/labor-cost-inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-august-2016.pdf.*

would increase to approximately $0.39 million per year, at discount rates of either 3 percent or 7 percent.[5] The addition of 17 percent overhead on base wages would therefore increase cost savings by approximately 7 percent above the primary estimate at either discount rate.

3. Cost Impact of the Changes to the Standard

OSHA estimates a net cost savings from this DFR for employers at primary aluminum production and coal-fired utilities, which again are the only two industries identified in the 2017 FEA as having costs associated with exposure to trace beryllium materials.[6] Annualizing the present value of net cost savings over ten years, the result is an annualized net cost savings of $0.36 million per year at a discount rate of 3 percent, or $0.37 million per year at a discount rate of 7 percent. When the Department uses a perpetual time horizon, the annualized net cost savings of this DFR is $0.37 million at a discount rate of 7 percent.

The undiscounted cost savings by provision and year are presented below in Table 1, and the cost savings by provision and discount rate are shown below in Tables 2 and 3. As described elsewhere in this document, the cost savings described in this FEA reflect savings only for provisions covered by the changes in this DFR as well as added familiarization costs. OSHA estimated no cost savings for the PEL, respiratory protection, exposure assessment, regulated areas, medical surveillance, medical removal protection, written exposure control plan, or training provisions because the DFR makes no changes of substance to those provisions.

[5] OSHA used an overhead rate of 17 percent on base wages in a sensitivity analysis in the FEA (OSHA–2010–0034–4247, p. VII–65) in support of the March 25, 2016 final respirable crystalline silica standards (81 FR 16286) and in the PEA in support of the June 27, 2017 proposed beryllium standards in construction and shipyard sectors (82 FR 29201).

[6] As noted in Section IV of this preamble, coverage of dermal contact with trace beryllium materials was an unintended consequence of OSHA's decision to cover airborne exposures to beryllium above the action level caused by operations that generate excessive amounts of dust from trace beryllium materials. Likewise, in the 2017 FEA supporting OSHA's Beryllium Final Rule, through an oversight, OSHA made no distinction between trace and non-trace beryllium materials when determining the cost of requirements triggered by dermal contact with beryllium. The cost savings generated by this FEA are a result of correcting these oversights.

a. Beryllium work areas. OSHA is limiting the definition of ''beryllium work area'' to any work area containing a process or operation ''that involves materials that contain at least 0.1% beryllium by weight. . . .'' OSHA has determined that affected establishments in primary aluminum production and coal-fired utilities would thus no longer need to designate and demarcate beryllium work areas because their materials would not meet that threshold outside of the ''regulated areas'' in primary aluminum production where employee exposures to airborne beryllium would exceed the PEL. In its previous economic analysis, OSHA had estimated that each of the establishments in these categories required beryllium work areas in addition to ''regulated areas,'' which were costed separately. The removal of these beryllium work area designations results in an annualized cost savings of $12,913 using a 3 percent discount rate and $15,682 using a 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

b. Protective work clothing and equipment. OSHA is recognizing no cost savings in this DFR for the elimination of PPE requirements associated with dermal contact in coal-fired utilities. In its 2017 FEA, OSHA listed the PPE compliance rate for utility workers at coal-fired utilities at 75 percent and therefore estimated PPE costs for the residual 25 percent of utility workers in the industry (where airborne exposures exceed the PEL or STEL or where there is dermal contact with beryllium). But upon further review, OSHA has determined that it should not have included those costs because affected employers in coal-fired utilities were already required to wear PPE under 29 CFR 1910.1018(j) to prevent skin and eye irritation from exposure to trace inorganic arsenic found in coal ash. As OSHA noted in its technological feasibility analysis, inorganic arsenic is often found in coal fly ash in ''concentrations 10 to 1,000 times greater than beryllium,'' fly ash is the primary source of beryllium exposure for employees in coal-fired utilities, and employers in this application group indicated that they were already following a majority of the provisions of the rule to comply with OSHA requirements for other hazardous substances, such as arsenic (p. IV–652). Thus, in all of the areas within a facility in which employees are likely to be exposed to beryllium, they are also likely to be exposed to concentrations of arsenic significantly high so as to trigger the arsenic PPE requirements. Accordingly, coal-fired utility compliance rates with the PPE requirement for affected workers should have been 100 percent in the prior FEA, and no costs for PPE for these workers should have been included in OSHA's cost estimates. Because OSHA should not have included new beryllium PPE costs for this group, OSHA is recognizing no cost savings in this DFR for the elimination of PPE requirements associated with dermal contact in coal-fired utilities.

There are, however, some small PPE cost savings for primary aluminum production. The January 2017 rule requires employers to provide PPE in two situations: (1) Where airborne exposure exceeds, or can reasonably be expected to exceed, the TWA PEL or STEL; and (2) where there is a reasonable expectation of dermal contact with beryllium. 29 CFR 1910.1024(h)(1). It is the second of these two situations which OSHA believes will trigger cost savings. Because this DFR clarifies that ''dermal contact with beryllium'' does not include contact with beryllium in concentrations less than 0.1% beryllium by weight, gloves and other PPE requirements will be triggered by a reasonable expectation of dermal contact only with materials containing more than 0.1% beryllium by weight. In primary aluminum production, there is no dermal contact with materials containing beryllium above this threshold. As a result, the Agency has determined that in primary aluminum production, additional PPE is only necessary for workers exposed over the PEL. This change results in an annualized cost savings for employers in primary aluminum production of $35,023 using a 3 or 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

c. Hygiene areas and practices. The DFR's adoption of a definition for ''contaminated with beryllium'' also reduces the costs of complying with the Hygiene Areas and Practices provision in primary aluminum production (the costs for coal-fired utilities would not be affected). The 2017 Final Beryllium Rule requires employers to provide showers where both of two conditions are met:

(A) Airborne exposure exceeds, or can reasonably be expected to exceed, the TWA PEL or STEL; and

(B) Beryllium can reasonably be expected to contaminate employees' hair or body parts other than hands, face, and neck.

29 CFR 1910.1024(i)(3)(i). By revising (B) to incorporate the newly defined term ''contaminated with beryllium,'' the condition in paragraph (B) will not be met in primary aluminum production because no employees in this application group can reasonably be expected to become ''contaminated with beryllium.'' Thus, the beryllium standard does not require employers in this application group to provide showers. Similarly, employers need not provide the estimated lower-cost alternative of head coverings, discussed in the 2017 FEA.[7] Removing the cost of head coverings for workers in this application group results in an annualized cost savings for employers in primary aluminum production of $415 using a 3 or 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

d. Housekeeping. Similar to the above discussion about PPE in coal-fired utilities, OSHA is recognizing no cost savings in this DFR for coal-fired utilities as a result of the modification of the housekeeping requirements. In the FEA in support of the 2017 Beryllium Final Rule, the Agency listed the housekeeping compliance rate for affected workers at coal-fired utilities at 75 percent and therefore estimated housekeeping costs for the residual 25 percent of utility workers in a beryllium work area. But upon further review, OSHA has determined that affected employers in coal-fired utilities were already required to perform comparable housekeeping duties under 29 CFR 1910.1018(k) to prevent accumulations of inorganic arsenic found in coal ash. Accordingly, coal-fired utility compliance rates with the housekeeping requirements for affected workers should have been 100 percent in the prior FEA, and no costs for housekeeping for these workers should have been included in OSHA's cost estimates. Consequently, OSHA is recognizing no cost savings in this DFR for coal-fired utilities as a result of the modification of the housekeeping requirements.

The rule clarification also means that employers in primary aluminum production facilities will typically only be required to comply with the beryllium housekeeping provisions in ''regulated areas,'' which for cost purposes OSHA identified as employees exposed over the PEL in its exposure profile. There are several exceptions, none of which have a quantifiable impact on costs: Employers in this industry would still need to follow the housekeeping requirements when cleaning up spills and emergency releases of beryllium (paragraph (j)(1)(ii)), handling and maintaining cleaning equipment (paragraph (j)(2)(v)), and when necessary to reduce some workers exposures below the PEL (serving as an engineering control to prevent over-exposure to beryllium within regulated areas or the need for regulated areas). OSHA did not identify separate costs in its prior FEA for this use of housekeeping as a form of engineering control and does not do so here. Thus, for cost calculation purposes in this new FEA, OSHA removed housekeeping costs for all employees exposed below the PEL in its exposure profile. This change results in an annualized cost savings for employers in primary aluminum production of $323,664 using a 3 percent discount rate and $330,324 using a 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3. OSHA believes that these estimated cost savings might be slightly overstated to the extent that some housekeeping outside of the regulated areas will still be needed to perform an engineering-control function in some facilities, but the Agency is unable to quantify them now because of the variability among facilities and controls that employers may implement to comply with the standard.

e. Additional familiarization. In the FEA in support of OSHA's 2017 Beryllium Final Rule, the Agency determined that employers would need to spend time familiarizing themselves with the rule and allocated 4, 8, and 40 hours, depending on establishment size (fewer than 20 employees, between 20 and 499 employees, and 500 or more employees, respectively). OSHA has similarly determined that establishments will need to spend time familiarizing themselves with this DFR. As the affected provisions in this DFR are only a fraction of all the provisions in the 2017 final rule and would not require any new actions on the part of employers, the Agency has estimated familiarization time of 2, 4, and 20 hours per employer, depending on establishment size, for a supervisor to review the changes to the beryllium rule reflected in this DFR. This results in an annualized cost of $9,404 using a 3 percent discount rate and $11,421 using a 7 percent discount rate. Annualized costs by provision and discount rate—3 and 7 percent—can be seen below in Tables 2 and 3, respectively.

f. Unchanged provisions. As discussed earlier, this DFR primarily serves to clarify OSHA's intent with respect to certain terms and requirements in OSHA's 2017 beryllium general industry standard. These changes largely deal with clarifying the application of various requirements to trace beryllium. The triggers for most provisions in the standard—the PEL, respiratory protection, exposure assessment, regulated areas, medical surveillance, medical removal protection, written exposure control plan, and training provisions[8]—are determined by factors other than beryllium concentration and are unchanged by this DFR. Similarly, the revised definition of ''emergency'' in this DFR would not affect the costs estimated for the other provisions in the standard.

4. Economic and Technological Feasibility

In the FEA for the 2017 beryllium standard, OSHA concluded that the rule was economically and technologically feasible. This DFR does not impose any new requirements and has the net impact of removing a small amount of cost, so OSHA has determined that this final rule is also economically and technologically feasible.

[7] In the previous FEA, OSHA had included costs for head coverings in lieu of showers, reasoning that employees could avoid the need for showers because the head coverings and other PPE would prevent their hair or body parts from becoming contaminated with beryllium.

[8] While the changes in the standard do not mandate any additional employee training, OSHA notes that it had previously accounted for costs of annual re-training required by the standard (Document ID OSHA–H005C–2006–0870–2042, p. V–221).

5. Effects on Benefits

This DFR clarifies aspects of the 2017 general industry beryllium standard to address unintended consequences regarding the applicability of provisions designed to protect workers from dermal contact with beryllium-containing materials and trace amounts of beryllium. This DFR makes clear that OSHA did not, and does not, intend to apply the provisions aimed at protecting workers from the effects of dermal contact to industries that only work with beryllium in trace amounts where there is limited or no airborne exposure. In the prior FEA, OSHA did not identify any quantifiable benefits from avoiding beryllium sensitization from dermal contact (see discussion at p. VII–16 through VII–18). Thus, the revisions in this DFR, which are focused on dermal contact, do not have any impact on OSHA's previous benefit estimates.

6. Regulatory Flexibility Act Certification

This DFR will result in cost savings for affected small entities, and those savings fall below levels that could be said to have a significant positive economic impact on a substantial number of small entities.[9] Therefore, OSHA certifies that this direct final rule would not have a significant impact on a substantial number of small entities.

[9] OSHA investigated whether the projected cost savings would exceed 1 percent of revenues or 5 percent of profits for small entities and very small entities for every industry. To determine if this was the case, OSHA returned to its original regulatory flexibility analysis (in the 2017 FEA) for small entities and very small entities. OSHA found that the cost savings of this DFR are such a small percentage of revenues and profits for every affected industry that OSHA's criteria would not be exceeded for any industry.

TABLE 1—TOTAL UNDISCOUNTED NET COST SAVINGS OF THE FINAL BERYLLIUM STANDARD BY YEAR

[2017 Dollars]

Application group	Year

VII. OMB Review Under the Paperwork Reduction Act of 1995

This rule contains no information collection requirements subject to OMB approval under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* and its implementing regulations at 5 CFR part 1320. The PRA defines a *collection of information* as *the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public of facts or opinions by or for an agency regardless of form or format.* See 44 U.S.C. 3502(3)(A). While not affected by this rulemaking, the Department has cleared information collections related to occupational exposure to beryllium standards—general industry, 29 CFR 1910.1024; construction, 29 CFR 1926.1124; and shipyards, 29 CFR 1915.1024—under control number 1218–0267. The existing approved information collections are unchanged by this rulemaking. The Department welcomes comments on this determination.

VIII. Federalism

OSHA reviewed this DFR in accordance with the Executive Order on Federalism (E.O. 13132, 64 FR 43255, August 10, 1999), which requires that Federal agencies, to the extent possible, refrain from limiting State policy options, consult with States prior to taking any actions that would restrict State policy options, and take such actions only when clear constitutional and statutory authority exists and the problem is national in scope. E.O. 13132 provides for preemption of State law only with the expressed consent of Congress. Any such preemption is to be limited to the extent possible.

Under Section 18 of the OSH Act, 29 U.S.C. 651 *et seq.,* Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards; States that obtain Federal approval for such a plan are referred to as ''State Plan States'' (29 U.S.C. 667). Occupational safety and health standards developed by State Plan States must be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. Subject to these requirements, State Plan States are free to develop and enforce under State law their own requirements for safety and health standards.

This DFR complies with E.O. 13132. In States without OSHA approved State Plans, Congress expressly provides for OSHA standards to preempt State occupational safety and health standards in areas addressed by the Federal standards. In these States, this DFR would limit State policy options in the same manner as every standard promulgated by OSHA. In States with OSHA approved State Plans, this rulemaking does not significantly limit State policy options.

IX. State Plan States

When Federal OSHA promulgates a new standard or more stringent amendment to an existing standard, the 28 States and U.S. Territories with their own OSHA approved occupational safety and health plans (''State Plan States'') must amend their standards to reflect the new standard or amendment, or show OSHA why such action is unnecessary, *e.g.,* because an existing State standard covering this area is ''at least as effective'' as the new Federal standard or amendment. 29 CFR 1953.5(a). The State standard must be at least as effective as the final Federal rule, must be applicable to both the private and public (State and local government employees) sectors, and must be completed within six months of the promulgation date of the final Federal rule. When OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plan States are not required to amend their standards, although the Agency may encourage them to do so. The 28 States and U.S. Territories with OSHA approved occupational safety and health plans are: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming; Connecticut, Illinois, Maine, New Jersey, New York, and the Virgin Islands have OSHA approved State Plans that apply to State and local government employees only.

This DFR clarifies requirements and addresses the unintended consequences associated with provisions intended to address the effects of dermal contact with beryllium as applied to trace beryllium. It imposes no new requirements. Therefore, no new State standards would be required beyond those already required by the promulgation of the January 2017 beryllium standard for general industry. State-Plan States may nonetheless choose to conform to these revisions.

X. Unfunded Mandates Reform Act

OSHA reviewed this DFR according to the Unfunded Mandates Reform Act of 1995 (''UMRA''; 2 U.S.C. 1501 *et seq.*) and Executive Order 12875 (58 FR 58093). As discussed above in Section VI (''Economic Analysis and Regulatory Flexibility Certification'') of this preamble, the Agency determined that this DFR does not impose significant additional costs on any private- or public-sector entity. Accordingly, this DFR does not require significant additional expenditures by either public or private employers.

As noted above under Section IX (''State-Plan States''), the Agency's standards do not apply to State and local governments except in States that have elected voluntarily to adopt a State Plan approved by the Agency. Consequently, this DFR does not meet the definition of a ''Federal intergovernmental mandate'' (see Section 421(5) of the UMRA (2 U.S.C. 658(5))). Therefore, for the purposes of the UMRA, the Agency certifies that this DFR does not mandate that State, local, or Tribal governments adopt new, unfunded regulatory obligations. Further, OSHA concludes that the rule would not impose a Federal mandate on the private sector in excess of $100 million (adjusted annually for inflation) in expenditures in any one year.

List of Subjects in 29 CFR Part 1910

Beryllium, General industry, Health, Occupational safety and health.

Signed at Washington, DC, on April 27, 2018.

Loren Sweatt,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

Amendments to Standards

For the reasons stated in the preamble, OSHA amends 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority section for subpart Z of part 1910 continues to read as follows:

Authority: 29 U.S.C. 653, 655, 657) Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Section 1910.1030 also issued under Pub. L. 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 5101 *et seq.*

■ 2. Amend § 1910.1024 as follows:

■ a. Revise the definition of ''Beryllium work area'' in paragraph (b);
■ b. Add definitions for ''Contaminated with beryllium and beryllium-contaminated'' and ''Dermal contact with beryllium'' in alphabetical order in paragraph (b);
■ c. Revise the definition of ''Emergency'' in paragraph (b);
■ d. Revise paragraph (f)(2);
■ e. Revise paragraph (h)(3)(ii);
■ f. Revise paragraphs (i)(3)(i)(B), (i)(3)(ii)(B), (i)(4)(i) and (ii); and
■ g. Revise paragraphs (j)(1)(i), (j)(2)(i) and (ii), and (j)(3).

The revisions and additions read as follows:

§ 1910.1024 Beryllium.

* * * * *

(b) * * *

Beryllium work area means any work area:

(i) Containing a process or operation that can release beryllium and that involves material that contains at least 0.1 percent beryllium by weight; and

(ii) Where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium.

* * * * *

Contaminated with beryllium and beryllium-contaminated mean contaminated with dust, fumes, mists, or solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight.

Dermal contact with beryllium means skin exposure to:

(i) Soluble beryllium compounds containing beryllium in concentrations greater than or equal to 0.1 percent by weight;

(ii) Solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight; or

(iii) Dust, fumes, or mists containing beryllium in concentrations greater than or equal to 0.1 percent by weight.

* * * * *

Emergency means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which may or does result in an uncontrolled and unintended release of airborne beryllium that presents a significant hazard.

* * * * *

(f) * * *

(2) *Engineering and work practice controls.* (i) The employer must use engineering and work practice controls to reduce and maintain employee airborne exposure to beryllium to or below the PEL and STEL, unless the employer can demonstrate that such controls are not feasible. Wherever the employer demonstrates that it is not feasible to reduce airborne exposure to or below the PELs with engineering and work practice controls, the employer must implement and maintain engineering and work practice controls to reduce airborne exposure to the lowest levels feasible and supplement these controls using respiratory protection in accordance with paragraph (g) of this standard.

(ii) For each operation in a beryllium work area that releases airborne beryllium, the employer must ensure that at least one of the following is in place to reduce airborne exposure:

(A) Material and/or process substitution;

(B) Isolation, such as ventilated partial or full enclosures;

(C) Local exhaust ventilation, such as at the points of operation, material handling, and transfer; or

(D) Process control, such as wet methods and automation.

(iii) An employer is exempt from using the controls listed in paragraph (f)(2)(ii) of this standard to the extent that:

(A) The employer can establish that such controls are not feasible; or

(B) The employer can demonstrate that airborne exposure is below the action level, using no fewer than two representative personal breathing zone samples taken at least 7 days apart, for each affected operation.

* * * * *

(h) * * *

(3) * * *

(ii) The employer must ensure that beryllium is not removed from beryllium-contaminated personal protective clothing and equipment by blowing, shaking, or any other means that disperses beryllium into the air.

* * * * *

(i) * * *

(3) * * *

(i) * * *

(B) Employee's hair or body parts other than hands, face, and neck can reasonably be expected to become contaminated with beryllium.

(ii) * * *

(B) The employee's hair or body parts other than hands, face, and neck could reasonably have become contaminated with beryllium.

(4) * * *

(i) Beryllium-contaminated surfaces in eating and drinking areas are as free as practicable of beryllium;

(ii) No employees enter any eating or drinking area with beryllium-contaminated personal protective clothing or equipment unless, prior to entry, surface beryllium has been removed from the clothing or equipment by methods that do not disperse beryllium into the air or onto an employee's body; and

* * * * *

(j) * * *

(1) * * *

(i) The employer must maintain all surfaces in beryllium work areas and regulated areas as free as practicable of beryllium and in accordance with the written exposure control plan required under paragraph (f)(1) and the cleaning methods required under paragraph (j)(2) of this standard; and

* * * * *

(2) * * *

(i) The employer must ensure that surfaces in beryllium work areas and regulated areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure.

(ii) The employer must not allow dry sweeping or brushing for cleaning surfaces in beryllium work areas or regulated areas unless HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure are not safe or effective.

* * * * *

(3) *Disposal and recycling.* For materials that contain beryllium in concentrations of 0.1 percent by weight or more or are contaminated with beryllium, the employer must ensure that:

(i) Materials designated for disposal are disposed of in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of this standard; and

(ii) Materials designated for recycling are cleaned to be as free as practicable of surface beryllium contamination and labeled in accordance with paragraph (m)(3) of this standard, or place in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of this standard.

[FR Doc. 2018–09306 Filed 5–4–18; 8:45 am]

BILLING CODE 4510–26–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Information Security Oversight Office

32 CFR Part 2004

[FDMS No. NARA–16–0006; Agency No. NARA–2018–032]

RIN 3095–AB79

National Industrial Security Program

AGENCY: National Archives and Records Administration (NARA).

ACTION: Final rule.

SUMMARY: The Information Security Oversight Office (ISOO) of the National Archives and Records Administration (NARA), is revising the National Industrial Security Program (NISP) Directive. The NISP safeguards classified information the Federal Government or foreign governments release to contractors, licensees, grantees, and certificate holders. This revision adds provisions incorporating executive branch insider threat policy and minimum standards, identifies the Office of the Director of National Intelligence (ODNI) and the Department of Homeland Security (DHS) as new cognizant security agencies (CSAs), and adds responsibilities for all CSAs and non-CSA departments and agencies (to reflect oversight functions that are already detailed for private sector entities in the National Industrial Security Program Operating Manual (NISPOM)). This revision also makes other administrative changes to be consistent with recent revisions to the NISPOM and with updated regulatory language and style.

DATES: This rule is effective on May 7, 2018.

ADDRESSES: National Archives and Records Administration; ATTN: External Policy Program, Suite 4100, 8601 Adelphi Road; College Park, MD 20740.

FOR FURTHER INFORMATION CONTACT: For information about this regulation and the regulatory process, contact Kimberly Keravuori, External Policy Program Manager, by email at *regulation_comments@nara.gov,* or by telephone at 301.837.3151. For information about the NISP and the requirements in this regulation, contact Mark A. Bradley, Director, ISOO, by telephone at 202–357–5205.

SUPPLEMENTARY INFORMATION: We published proposed revisions to this rule in the **Federal Register** on January 11, 2017 (82 FR 3219) and received seven sets of public comments in response, from companies, industry representative organizations, and law firms. The vast majority of the comments were on 32 CFR 2004.32 and 2004.34, relating to national interest determinations (NIDs) made when an entity is under foreign ownership, control, or influence (FOCI) and the proposed mitigation method is a special security agreement. Overall, commenters strongly recommended that NIDs be eliminated, but, if not possible to do so, the commenters suggested ways in which to streamline the process and the regulatory provisions, including granting the Defense Security Service (DSS) authority to make NIDs concurrently with making eligibility determinations, establishing a presumption of approval if an entity otherwise has a favorable record, and making NIDs prior to contract awards.

We are not at this time able to eliminate NIDs because certain categories of classified information involve assessment of factors specific to that information. The regulation is also not drafted on the basis of what DSS may or may not do, as DSS is not one of the cognizant security agencies (CSAs) specifically named in Executive Order (E.O.) 12829. DSS has authority granted to it by the Department of Defense, one of the CSAs, and each CSA has equivalent authority under the NISP to make entity eligibility determinations and NIDs. We decline to create a presumption of approval because of the potential risk to national security, particularly with regard to certain categories of proscribed information. In addition, no agency has the capability to evaluate companies for a NID prior to any acquisition activity so as to include the NID in contract award documents.

Nonetheless, we have taken the comments and suggestions into consideration and made changes to further streamline the NID process and these regulatory sections in response to the public comments. We have established that the CSA (or DSS for the CSA, in the case of DoD determinations) makes the NID and does so concurrently with making the entity eligibility determination. In this manner, for several categories of classified information, the NID will take no longer than the entity eligibility determination. In cases in which the proscribed information does not require concurrence from a controlling agency, the entity's access may begin as soon as a positive determination is made. Now, only in cases in which the proscribed information requires concurrence from a controlling agency (RD, COMSEC, SCI), must the entity wait in order to have access to that information. We have revised the process to also allow an entity to begin accessing a category of proscribed information once the CSA informs the entity that the controlling agency concurs, even if other categories of proscribed information are pending concurrence. This allows entities to begin work and have access to at least part of the information at a faster rate.

In addition, we revised the regulation to allow an entity's access to SCI, RD, or COMSEC to remain in effect so long as the entity remains eligible for access to classified information and the contract or agreement imposing the requirement for access to those categories of proscribed information remains in effect, except under certain circumstances, and to remain in effect across contract renewals, new task orders, and SSA renewals (except under certain circumstances). Both of these revisions reduce the number of NIDs an entity must undergo and reduce the potential disruptions and burdens of previous NID frequency. We believe these regulations significantly streamline the NID process and reduce burdens on entities by: (1) Allowing the CSA to render NIDs for certain categories of information concurrently with eligibility determinations, (2) allowing access to information as NID concurrences are received rather than waiting for all concurrences, and (3) establishing a 30-day timeline for concurrence (this was included in the proposed rule).

We have coordinated and vetted the comments and resulting revisions through the CSAs listed in E. O. 12829, National Industrial Security Program (January 6, 1993 (58 FR 3479)), as amended by E.O. 13691 (February 13, 2015 (80 FR 9347)): Department of Defense, Department of Energy, Nuclear Regulatory Commission, Office of the Director of National Intelligence, and Department of Homeland Security. We have also coordinated this rule with the other executive branch agencies that are members of the National Industrial Security Program Policy Advisory Committee (NISPPAC) or that release classified information to contractors, licensees, grantees, or certificate holders, and with the industry members of the NISPPAC. These revisions do not change requirements for industry (which are contained in the NISPOM), but instead clarify agency responsibilities.

Background

The NISP is the Federal Government's single, integrated industrial security program. E.O. 12829 (amended in 1993) established the NISP to safeguard classified information in industry and

preserve the nation's economic and technological interests. The President issued E.O. 13691, Promoting Private Sector Cybersecurity Information Sharing (February 13, 2015 (80 FR 9347)), and E.O. 13708, Continuance or Reestablishment of Certain Federal Advisory Committees (September 30, 2015 (80 FR 60271)), which further amended E.O. 12829.

E.O. 12829, sec. 102(b), delegated oversight of the NISP to the Director of NARA's Information Security Oversight Office (ISOO). As part of ISOO's responsibilities under E.O. 12829, it is authorized to issue such directives as necessary to implement the E.O., which are binding on agencies. In 2006, ISOO issued, and periodically updates, this regulation, which functions as one of those directives.

This regulation establishes uniform standards throughout the Program, and helps agencies implement requirements in E.O. 12829, as amended (collectively referred to as ''E.O. 12829'').

This revision also establishes agency responsibilities for implementing the insider threat provisions of E.O. 13587, Structural Reforms to Improve the Security of Classified Networks and the Responsible Sharing and Safeguarding of Classified Information (October 7, 2011 (76 FR 63811)) within the NISP. However, the regulation does not stand alone; users should refer concurrently to the underlying executive orders for guidance.

Nothing in this regulation supersedes the authority of the Secretary of Energy or the Nuclear Regulatory Commission under the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011, *et seq.*); the authority of the Director of National Intelligence (or any intelligence community element) under the Intelligence Reform and Terrorism Prevention Act of 2004 (Pub. L. 108–458), the National Security Act of 1947 (50 U.S.C. 401, *et seq.*), as amended, and E.O. 12333 (December 4, 1981), as amended by E.O. 13355, Strengthened Management of the Intelligence Community (August 27, 2004) and E.O. 13470, Further Amendments to Executive Order 12333 (July 30, 2008); or the authority of the Secretary of Homeland Security, as the Executive Agent for the Classified National Security Information Program established under E.O. 13549, Classified National Security Information Program for State, Local, Tribal, and Private Sector Entities (August 18, 2010), or by E. O. 13284, Amendment of Executive Orders, and Other Actions, in Connection with the Establishment of the Department of Homeland Security, (January 23, 2003).

Regulatory Analysis

The Office of Management and Budget (OMB) has reviewed this proposed regulation.

Review Under Executive Orders 12866 and 13563

Executive Order 12866, Regulatory Planning and Review, 58 FR 51735 (September 30, 1993), and Executive Order 13563, Improving Regulation and Regulation Review, 76 FR 23821 (January 18, 2011), direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). This rule is not ''significant'' under Executive Order 12866, sec. 3(f), and is not a major rule as defined in 5 U.S.C. Chapter 8, Congressional Review of Agency Rulemaking. The Office of Management and Budget (OMB) has reviewed this regulation.

Review Under the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*)

This review requires an agency to prepare an initial regulatory flexibility analysis and publish it when the agency publishes the proposed rule. This requirement does not apply if the agency certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities (5 U.S.C. 603). As required by the Regulatory Flexibility Act, we certify that this rulemaking will not have a significant impact on a substantial number of small entities because it applies only to Federal agencies. This regulation does not establish requirements for entities; those requirements are established in the NISPOM. This rule sets out coinciding requirements for agencies. However, agencies implementing this regulation will do so through contracts with businesses (as well as other agreements with entities) and thus it indirectly affects those entities. Agencies have been applying the requirements and procedures contained in the NISPOM (and, to a lesser extent, contained in this regulation) to entities for 20 years, with the exception of insider threat provisions added to the NISPOM in 2016, and the additions to this regulation do not substantially alter those requirements. Most of the provisions being added to this regulation have applied to entities through the NISPOM; we are simply incorporating the agency responsibilities for those requirements into the regulation. Other revisions to this regulation are primarily administrative, except the new insider threat requirements. The insider threat requirements make minor additions to training, oversight, information system security, and similar functions already being conducted by entities, and thus will not have a significant economic impact on a substantial number of small business entities.

Review Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq*.)

This rule contains information collection activities that are subject to review and approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act. We refer to the following OMB-approved DoD information collection in § 2004.34(b) and (c)(1) of this regulation: OMB control No. 0704–0194, SF 328/CF 328, Certificate Pertaining to Foreign Interests, approved through September 30, 2019. DoD published the information collection notice in the **Federal Register** in May 2015 (80 FR 27938, May 15, 2015) for public comment, and the notice of OMB review in the **Federal Register** in July 2016 (81 FR 47790, July 22, 2016), providing a second opportunity for public comment.

Review Under Executive Order 13132, Federalism, 64 FR 43255 (August 4, 1999)

Review under Executive Order 13132 requires that agencies review regulations for federalism effects on the institutional interest of states and local governments, and, if the effects are sufficiently substantial, prepare a Federal assessment to assist senior policy makers. This rule will not have any direct effects on State and local governments within the meaning of the Executive Order. Therefore, this rule does not include a federalism assessment.

Review Under Executive Order 13771

This final rule is not subject to the requirements of Executive Order 13771 because this final rule is related to agency organization, management, or personnel.

List of Subjects in 32 CFR Part 2004

Classified information, National Industrial Security Program.

■ For the reasons stated in the preamble, the National Archives and Records Administration amends 32 CFR chapter XX by revising part 2004 to read as follows:

PART 2004—NATIONAL INDUSTRIAL SECURITY PROGRAM (NISP)

Subpart A—Implementation and Oversight

Subpart B—Administration

Subpart C—Operations

Authority: Section 102(b)(1) of E.O. 12829 (January 6, 1993), as amended by E.O. 12885 (December 14, 1993), E.O. 13691 (February 12, 2015), and section 4 of E.O. 13708 (September 30, 2015).

Subpart A—Implementation and Oversight

§ 2004.1 Purpose and scope.

(a) This part sets out the National Industrial Security Program (''NISP'' or ''the Program'') governing the protection of agency classified information released to Federal contractors, licensees, grantees, and certificate holders. It establishes uniform standards throughout the Program, and helps agencies implement requirements in E.O. 12829, National Industrial Security Program, as amended by E.O. 12558 and E.O.13691 (collectively referred to as ''E.O. 12829''), E.O. 13691, Promoting Private Sector Cybersecurity Information Sharing, and E.O. 13587, Structural Reforms to Improve the Security of Classified Networks and the Responsible Sharing and Safeguarding of Classified Information. It applies to any executive branch agency that releases classified information to current, prospective, or former Federal contractors, licensees, grantees, or certificate holders. However, this part does not stand alone; users should refer concurrently to the underlying executive orders for guidance. ISOO maintains policy oversight over the NISP as established by E.O.12829.

(b) This part also does not apply to release of classified information pursuant to criminal proceedings. The Classified Information Procedures Act (CIPA) (18 U.S.C. Appendix 3) governs release of classified information in criminal proceedings.

(c) Nothing in this part supersedes the authority of the Secretary of Energy or the Nuclear Regulatory Commission under the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011, *et seq.*) (collectively referred to as ''the Atomic Energy Act''); the authority of the Director of National Intelligence (or any intelligence community element) under the Intelligence Reform and Terrorism Prevention Act of 2004 (Pub. L. 108–458), the National Security Act of 1947 as amended (50 U.S.C. 401, *et seq.*), and E.O. 12333 (December 4, 1981), as amended by E.O. 13355, Strengthened Management of the Intelligence Community (August 27, 2004) and E.O. 13470, Further Amendments to Executive Order 12333 (July 30, 2008) (collectively referred to as ''E.O. 12333''); or the authority of the Secretary of Homeland Security, as the Executive Agent for the Classified National Security Information Program established under E.O. 13549, Classified National Security Information Program for State, Local, Tribal, and Private Sector Entities (August 18, 2010), or as established by E.O. 13284, Amendment of Executive Orders, and Other Actions, in Connection with the Establishment of the Department of Homeland Security (January 23, 2003). In exercising these authorities, CSAs make every effort to facilitate reciprocity, avoid duplication of regulatory requirements, and facilitate uniform standards.

§ 2004.4 Definitions that apply to this part.

(a) *Access* is the ability or opportunity to gain knowledge of classified information.

(b) *Agency(ies)* are any ''Executive agency'' as defined in 5 U.S.C. 105; any ''Military department'' as defined in 5 U.S.C. 102; and any other entity within the executive branch that releases classified information to private sector entities. This includes component agencies under another agency or under a cross-agency oversight office (such as ODNI with CIA), which are also agencies for purposes of this regulation.

(c) *Classified Critical Infrastructure Protection Program (CCIPP)* is the DHS program that executes the classified infrastructure protection program designated by E.O. 13691, ''Promoting Private Sector Cybersecurity Information Sharing.'' The Government uses this program to share classified cybersecurity-related information with employees of private sector entities that own or operate critical infrastructure. Critical infrastructure refers to systems and assets, whether physical or virtual, so vital to the United States that incapacitating or destroying such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination thereof. These entities include banks and power plants, among others. The sectors of critical infrastructure are listed in Presidential Policy Directive 21, *Critical Infrastructure Security and Resilience* (February 12, 2013).

(d) *Classified Critical Infrastructure Protection Program (CCIPP) security point of contact (security POC)* is an official whom a CCIPP entity designates to maintain eligibility information about the entity and its cleared employees, and to report that information to DHS. The CCIPP security POC must be eligible for access to classified information.

(e) *Classified information* is information the Government designates as requiring protection against unauthorized disclosure in the interest of national security, pursuant to E.O. 13526, Classified National Security Information, or any predecessor order, and the Atomic Energy Act of 1954, as amended. Classified information includes national security information (NSI), restricted data (RD), and formerly restricted data (FRD), regardless of its physical form or characteristics (including tangible items other than documents).

(f) *Cognizance* is the area over which a CSA has operational oversight. Normally, a statute or executive order establishes a CSA's cognizance over certain types of information, programs, or non-CSA agencies, although CSAs may also have cognizance through an agreement with another CSA or non-CSA agency or an entity. A CSA may have cognizance over a particular type(s) of classified information based on specific authorities (such as those listed in § 2004.1(c)), and a CSA may have cognizance over certain agencies or cross-agency programs (such as DoD's cognizance over non-CSA agencies as the EA for NISP, or ODNI's oversight (if applicable) of all intelligence community elements within the executive branch). Entities fall under a CSA's cognizance when they enter or compete to enter contracts or agreements to access classified

information under the CSA's cognizance, including when they enter or compete to enter such contracts or agreements with a non-CSA agency or another entity under the CSA's cognizance.

(g) *Cognizant security agencies (CSAs)* are the agencies E.O. 12829, sec. 202, designates as having NISP implementation and security responsibilities for their own agencies (including component agencies) and any entities and non-CSA agencies under their cognizance. The CSAs are: Department of Defense (DoD); Department of Energy (DOE); Nuclear Regulatory Commission (NRC); Office of the Director of National Intelligence (ODNI); and Department of Homeland Security (DHS).

(h) *Cognizant security office (CSO)* is an organizational unit to which the head of a CSA delegates authority to administer industrial security services on behalf of the CSA.

(i) *Contracts or agreements* are any type of arrangement between an agency and an entity or an agency and another agency. They include, but are not limited to, contracts, sub-contracts, licenses, certificates, memoranda of understanding, inter-agency service agreements, other types of documents or arrangements setting out responsibilities, requirements, or terms agreed upon by the parties, programs, projects, and other legitimate U.S. or foreign government requirements. FOCI mitigation or negation measures, such as Voting Trust Agreements, that have the word ''agreement'' in their title are not included in the term ''agreements'' within this part.

(j) *Controlling agency* is an agency that owns or controls the following categories of proscribed information and thus has authority over access to or release of the information: NSA for communications security information (COMSEC); DOE for restricted data (RD); and ODNI for sensitive compartmented information (SCI).

(k) *Entity* is a generic and comprehensive term which may include sole proprietorships, partnerships, corporations, limited liability companies, societies, associations, institutions, contractors, licensees, grantees, certificate holders, and other organizations usually established and operating to carry out a commercial, industrial, educational, or other legitimate business, enterprise, or undertaking, or parts of these organizations. It may reference an entire organization, a prime contractor, parent organization, a branch or division, another type of sub-element, a sub-contractor, subsidiary, or other subordinate or connected entity (referred to as ''sub-entities'' when necessary to distinguish such entities from prime or parent entities), a specific location or facility, or the headquarters/official business location of the organization, depending upon the organization's business structure, the access needs involved, and the responsible CSA's procedures. The term ''entity'' as used in this part refers to the particular entity to which an agency might release, or is releasing, classified information, whether that entity is a parent or subordinate organization.

(l) *Entity eligibility determination* is an assessment by the CSA as to whether an entity is eligible for access to classified information of a certain level (and all lower levels). Eligibility determinations may be broad or limited to specific contracts, sponsoring agencies, or circumstances. A favorable determination results in eligibility to access classified information under the cognizance of the responsible CSA to the level approved. When the entity would be accessing categories of information such as RD or SCI for which the CSA for that information has set additional requirements, CSAs must also assess whether the entity is eligible for access to that category. Some CSAs refer to their favorable determinations as facility security clearances (FCL). A favorable entity eligibility determination does not convey authority to store classified information.

(m) *Foreign interest* is any foreign government, element of a foreign government, or representative of a foreign government; any form of business enterprise or legal entity organized, chartered, or incorporated under the laws of any country other than the United States or its territories; and any person who is not a United States citizen or national.

(n) *Government contracting activity (GCA)* is an agency component or subcomponent to which the agency head delegates broad authority regarding acquisition functions. A foreign government may also be a GCA.

(o) *Industrial security services* are those activities performed by a CSA to verify that an entity is protecting classified information. They include, but are not limited to, conducting oversight reviews, making eligibility determinations, and providing agency and entity guidance and training.

(p) *Insider(s)* are entity employees who are eligible to access classified information and may be authorized access to any U.S. Government or entity resource (such as personnel, facilities, information, equipment, networks, or systems).

(q) *Insider threat* is the likelihood, risk, or potential that an insider will use his or her authorized access, wittingly or unwittingly, to do harm to the national security of the United States. Insider threats may include harm to entity or program information to the extent that the information impacts the entity's or agency's obligations to protect classified information.

(r) *Insider threat response action(s)* are actions (such as investigations) an agency takes to ascertain whether an insider threat exists, and actions the agency takes to mitigate the threat. Agencies may conduct insider threat response actions through their counterintelligence (CI), security, law enforcement, or inspector general organizations, depending on the statutory authority and internal policies that govern the agency.

(s) *Insider threat program senior official (SO)* is the official an agency head or entity designates with responsibility to manage, account for, and oversee the agency's or entity's insider threat program, pursuant to the National Insider Threat Policy and Minimum Standards. An agency may have more than one insider threat program SO.

(t) *Key managers and officials (KMO)* are the senior management official (or authorized executive official under CCIPP), the entity's security officer (or security POC under CCIPP), the insider threat program senior official, and other entity employees whom the responsible CSA identifies as having authority, direct or indirect, to influence or decide matters affecting the entity's management or operations, its contracts requiring access to classified information, or national security interests. They may include individuals who hold majority ownership interest in the entity (in the form of stock or other ownership interests).

(u) *Proscribed information* is information that is classified as top secret (TS) information; communications security (COMSEC) information (excluding controlled cryptographic items when un-keyed or utilized with unclassified keys); restricted data (RD); special access program information (SAP); or sensitive compartmented information (SCI).

(v) *Security officer* is a U.S. citizen employee the entity designates to supervise and direct security measures implementing NISPOM (or equivalent; such as DOE Orders) requirements. Some CSAs refer to this position as a facility security officer (FSO). The security officer must complete security training specified by the responsible CSA, and must have and maintain an

employee eligibility determination level that is at least the same level as the entity's eligibility determination level.

(w) *Senior agency official for NISP (SAO for NISP)* is the official an agency head designates to direct and administer the agency's National Industrial Security Program.

(x) *Senior management official (SMO)* is the person in charge of an entity. Under the CCIPP, this is the authorized executive official with authority to sign the security agreement with DHS.

(y) *Sub-entity* is an entity's branch or division, another type of sub-element, a sub-contractor, subsidiary, or other subordinate or connected entity. Sub-entities fall under the definition of ''entity,'' but this part refers to them as sub-entities when necessary to distinguish such entities from prime contractor or parent entities. See definition of ''entity'' in paragraph (k) of this section for more context.

§ 2004.10 Responsibilities of the Director, Information Security Oversight Office (ISOO).

The Director, ISOO:

(a) Implements E.O. 12829, including ensuring that:

(1) The NISP operates as a single, integrated program across the executive branch of the Federal Government (*i.e.,* such that agencies that release classified information to entities adhere to NISP principles);

(2) A responsible CSA oversees each entity's NISP implementation in accordance with § 2004.22;

(3) All agencies that contract for classified work include the Security Requirements clause, 48 CFR 52.204–2, from the Federal Acquisition Regulation (FAR), or an equivalent clause, in contracts that require access to classified information;

(4) Those agencies for which the Department of Defense (DoD) serves as the CSA or provides industrial security services have agreements with DoD defining the Secretary of Defense's responsibilities on behalf of their agency;

(5) Each CSA issues directions to entities under their cognizance that are consistent with the NISPOM insider threat guidance;

(6) CSAs share with each other, as lawful and appropriate, relevant information about entity employees that indicates an insider threat; and

(7) CSAs conduct ongoing analysis and adjudication of adverse or relevant information about entity employees that indicates an insider threat.

(b) Raises an issue to the National Security Council (NSC) for resolution if the EA's NISPOM coordination process cannot reach a consensus on NISPOM security standards (see § 2004.20(d)).

§ 2004.11 CSA and agency implementing regulations, internal rules, or guidelines.

(a) Each CSA implements NISP practices in part through policies and guidelines that are consistent with this regulation, so that agencies for which it serves as the CSA are aware of appropriate security standards, engage in consistent practices with entities, and so that practices effectively protect classified information those entities receive (including foreign government information that the U.S. Government must protect in the interest of national security).

(b) Each CSA must also routinely review and update its NISP policies and guidelines and promptly issue revisions when needed (including when a change in national policy necessitates a change in agency NISP policies and guidelines).

(c) Non-CSA agencies may choose to augment CSA NISP policies or guidelines as long as the agency policies or guidelines are consistent with the CSA's policies or guidelines and this regulation.

§ 2004.12 ISOO review of agency NISP implementation.

(a) ISOO fulfills its oversight role based, in part, on information received from NISP Policy Advisory Committee (NISPPAC) members, from on-site reviews that ISOO conducts under the authority of E.O. 12829, and from any submitted complaints and suggestions. ISOO reports findings to the responsible CSA or agency.

(b) ISOO reviews agency policies and guidelines to ensure consistency with NISP policies and procedures. ISOO may conduct reviews during routine oversight visits, when a problem or potential problem comes to ISOO's attention, or after a change in national policy that impacts agency policies and guidelines. ISOO provides the responsible agency with findings from these reviews.

Subpart B—Administration

§ 2004.20 National Industrial Security Program Executive Agent and Operating Manual.

(a) The executive agent (EA) for NISP is the Secretary of Defense. The EA:

(1) Provides industrial security services for agencies that are not CSAs but that release classified information to entities. The EA provides industrial security services only through an agreement with the agency. Non-CSA agencies must enter an agreement with the EA and comply with EA industrial security service processes before releasing classified information to an entity;

(2) Provides services for other CSAs by agreement; and

(3) Issues and maintains the National Industrial Security Program Operating Manual (NISPOM) in consultation with all affected agencies and with the concurrence of the other CSAs.

(b) The NISPOM sets out the procedures and standards that entities must follow during all phases of the contracting process to safeguard any classified information an agency releases to an entity. The NISPOM requirements may apply to the entity directly (*i.e.,* through FAR clauses or other contract clauses referring entities to the NISPOM) or through equivalent contract clauses or requirements documents that are consistent with NISPOM requirements.

(c) The EA, in consultation with all affected agencies and with the concurrence of the other CSAs, develops the requirements, restrictions, and safeguards contained in the NISPOM. The EA uses security standards applicable to agencies as the basis for developing NISPOM entity standards to the extent practicable and reasonable.

(d) The EA also facilitates the NISPOM coordination process, which addresses issues raised by entities, agencies, ISOO, or the NISPPAC, including requests to create or change NISPOM security standards.

§ 2004.22 Agency responsibilities.

(a) *Agency categories and general areas of responsibility.* Federal agencies fall into three categories for the purpose of NISP responsibilities:

(1) *CSAs.* CSAs are responsible for carrying out NISP implementation within their agency, for providing NISP industrial security services on behalf of non-CSA agencies by agreement when authorized, and for overseeing NISP compliance by entities that access classified information under the CSA's cognizance. When the CSA has oversight responsibilities for a particular non-CSA agency or for an entity, the CSA also functions as the responsible CSA;

(2) *Non-CSA agencies.* Non-CSA agencies are responsible for entering agreements with a designated CSA for industrial security services, and are responsible for carrying out NISP implementation within their agency consistently with the agreement, the CSA's guidelines and procedures, and this regulation; or

(3) *Agencies that are components of another agency.* Component agencies do not have itemized responsibilities under this regulation and do not

independently need to enter agreements with a CSA, but they follow, and may have responsibilities under, implementing guidelines and procedures established by their CSA or non-CSA agency, or both.

(b) *Responsible CSA role.* (1) The responsible CSA is the CSA (or its delegated CSO) that provides NISP industrial security services on behalf of an agency, determines an entity's eligibility for access, and monitors and inspects an entity's NISP implementation.

(2) In general, the goal is to have one responsible CSA for each agency and for each entity, to minimize the burdens that can result from complying with differing CSA procedures and requirements.

(i) With regard to agencies, NISP accomplishes this goal by a combination of designated CSAs and agreements between agencies and CSAs.

(ii) With regard to entities, CSAs strive to reduce the number of responsible CSAs for a given entity as much as possible. To this end, when more than one CSA releases classified information to a given entity, those CSAs agree on which is the responsible CSA. However, due to certain unique agency authorities, there may be circumstances in which a given entity is under the oversight of more than one responsible CSA.

(3) Responsible CSA for agencies:

(i) In general, each CSA serves as the responsible CSA for classified information that it (or any of its component agencies) releases to entities, unless it enters an agreement otherwise with another CSA.

(ii) DoD serves as the responsible CSA for DHS with the exception of the CCIPP, based on an agreement between the two CSAs.

(iii) DoD serves as the responsible CSA on behalf of all non-CSA agencies, except CSA components, based on E.O. 12829 and its role as NISP EA.

(iv) ODNI serves as the responsible CSA for CIA.

(4) Responsible CSA for entities: When determining the responsible CSA for a given entity, the involved CSAs consider, at a minimum: retained authorities, the information's classification level, number of contracts requiring access to classified information, location, number of Government customers, volume of classified activity, safeguarding requirements, responsibility for entity employee eligibility determinations, and any special requirements.

(5) Responsible CSAs may delegate oversight responsibility to a cognizant security office (CSO) through CSA policy or by written delegation. The CSA must inform entities under its cognizance if it delegates responsibilities. For purposes of this rule, the term CSA also refers to the CSO.

(c) *CSA responsibilities.* (1) The CSA may perform GCA responsibilities as its own GCA.

(2) As CSA, the CSA performs or delegates the following responsibilities:

(i) Designates a CSA senior agency official (SAO) for NISP;

(ii) Identifies the insider threat program senior official (SO) to the Director, ISOO;

(iii) Shares insider threat information with other CSAs, as lawful and appropriate, including information that indicates an insider threat about entity employees eligible to access classified information;

(iv) Acts upon and shares—with security management, GCAs, insider threat program employees, and Government program and CI officials—any relevant entity-reported information about security or CI concerns, as appropriate;

(v) Submits reports to ISOO as required by this part; and

(vi) Develops, coordinates, and provides concurrence on changes to the NISPOM when requested by the EA.

(3) As a responsible CSA, the CSA also performs or delegates the following responsibilities:

(i) Determines whether an entity is eligible for access to classified information (see § 2004.32);

(ii) Allocates funds, ensures appropriate investigations are conducted, and determines entity employee eligibility for access to classified information (see § 2004.36);

(iii) Reviews and approves entity safeguarding measures, including making safeguarding capability determinations (see § 2004.38);

(iv) Conducts periodic security reviews of entity operations (see § 2004.26) to determine that entities: effectively protect classified information provided to them; and follow NISPOM (or equivalent) requirements;

(v) Provides and regularly updates guidance, training, training materials, and briefings to entities on:

(A) Entity implementation of NISPOM (or equivalent) requirements, including: responsibility for protecting classified information, requesting NISPOM interpretations, establishing training programs, and submitting required reports;

(B) Initial security briefings and other briefings required for special categories of information;

(C) Authorization measures for information systems processing classified information (except DHS) (see § 2004.40);

(D) Security training for security officers (or CCIPP POCs) and other employees whose official duties include performing NISP-related functions;

(E) Insider threat programs in accordance with the National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs; and

(F) Other guidance and training as appropriate;

(vi) Establishes a mechanism for entities to submit requests for waivers to NISPOM (or equivalent) provisions;

(vii) Reviews, continuously analyzes, and adjudicates, as appropriate, reports from entities regarding events that:

(A) Impact the status of the entity's eligibility for access to classisfied information;

(B) Impact an employee's eligibility for access;

(C) May indicate an employee poses an insider threat;

(D) Affect proper safeguarding of classified information; or

(E) Indicate that classified information has been lost or compromised;

(viii) Verifies that reports offered in confidence and so marked by an entity may be withheld from public disclosure under applicable exemptions of the Freedom of Information Act (5 U.S.C. 552);

(ix) Requests any additional information needed from an entity about involved employees to determine continued eligibility for access to classified information when the entity reports loss, possible compromise, or unauthorized disclosure of classified information; and

(x) Posts hotline information on its website for entity access, or otherwise disseminates contact numbers to the entities for which the CSA is responsible.

(d) *Non-CSA agency head responsibilities.* The head of a non-CSA agency that is not a CSA component and that releases classified information to entities, performs the following responsibilities:

(1) Designates an SAO for the NISP;

(2) Identifies the insider threat program SO to ISOO to facilitate information sharing;

(3) Enters into an agreement with the EA (except agencies that are components of another agency or a cross-agency oversight office) to act as the responsible CSA on the agency's behalf (see paragraph (a)(1)(ii) of this section);

(4) Performs, or delegates in writing to a GCA, the following responsibilities:

(i) Provides appropriate education and training to agency personnel who implement the NISP;

(ii) Includes FAR security requirements clause 52.204–2, or equivalent (such as the DEAR clause 952.204–2), and a contract security classification specification (or equivalent guidance) into contracts and solicitations that require access to classified information (see § 2004.30); and

(iii) Reports to the appropriate CSA adverse information and insider threat activity pertaining to entity employees having access to classified information.

§ 2004.24 Insider threat program.

(a) Responsible CSAs oversee and analyze entity activity to ensure entities implement an insider threat program in accordance with the National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs (via requirements in the NISPOM or its equivalent) and guidance from the CSA. CSA oversight responsibilities include, but are not limited to:

(1) Verifying that entities appoint insider threat program SOs;

(2) Requiring entities to monitor, report, and review insider threat program activities and response actions in accordance with the provisions set forth in the NISPOM (or equivalent);

(3) Providing entities with access to data relevant to insider threat program activities and applicable reporting requirements and procedures;

(4) Providing entities with a designated means to report insider threat-related activity; and

(5) Advising entities on appropriate insider threat training for entity employees eligible for access to classified information.

(b) CSAs share with other CSAs any insider threat information reported to them by entities, as lawful and appropriate.

§ 2004.26 Reviews of entity NISP implementation.

(a) The responsible CSA conducts recurring oversight reviews of entities' NISP security programs to verify that the entity is protecting classified information and is implementing the provisions of the NISPOM (or equivalent). The CSA determines the scope and frequency of reviews. The CSA generally notifies entities when a review will take place, but may also conduct unannounced reviews at its discretion.

(b) CSAs make every effort to avoid unnecessarily intruding into entity employee personal effects during the reviews.

(c) A CSA may, on entity premises, physically examine the interior spaces of containers not authorized to store classified information in the presence of the entity's representative.

(d) As part of a security review, the CSA:

(1) Verifies that the entity limits entity employees with access to classified information to the minimum number necessary to perform on contracts requiring access to classified information.

(2) Validates that the entity has not provided its employees unauthorized access to classified information;

(3) Reviews the entity's self-inspection program and evaluates and records the entity's remedial actions; and

(4) Verifies that the GCA approved any public release of information pertaining to a contract requiring access to classified information.

(e) As a result of findings during the security review, the CSA may, as appropriate, notify:

(1) GCAs if there are unfavorable results from the review; and

(2) A prime entity if the CSA discovers unsatisfactory security conditions pertaining to a sub-entity.

(f) The CSA maintains a record of reviews it conducts and the results. Based on review results, the responsible CSA determines whether an entity's eligibility for access to classified information may continue. See § 2004.32(g).

§ 2004.28 Cost reports.

(a) Agencies must annually report to the Director, ISOO, on their NISP implementation costs for the previous year.

(b) CSAs must annually collect information on NISP implementation costs incurred by entities under their cognizance and submit a report to the Director, ISOO.

Subpart C—Operations

§ 2004.30 Security classification requirements and guidance.

(a) *Contract or agreement and solicition requirements.* (1) The GCA must incorporate FAR clause 52.204–2, Security Requirements (or equivalent set of security requirements), into contracts or agreements and solicitations requiring access to classified information.

(2) The GCA must also include a contract security classification specification (or equivalent guidance) with each contract or agreement and solicitation that requires access to classified information. The contract security classification specification (or equivalent guidance) must identify the specific elements of classified information involved in each phase of the contract or agreement life-cycle, such as:

(i) Level of classification;

(ii) Where the entity will access or store the classified information, and any requirements or limitations on transmitting classified information outside the entity;

(iii) Any special accesses;

(iv) Any classification guides or other guidance the entity needs to perform during that phase of the contract or agreement;

(v) Any authorization to disclose information about the contract or agreement requiring access to classified information; and

(vi) GCA personnel responsible for interpreting and applying the contract security specifications (or equivalent guidance).

(3) The GCA revises the contract security classification specification (or equivalent guidance) throughout the contract or agreement life-cycle as security requirements change.

(b) *Guidance.* Classification guidance is the exclusive responsibility of the GCA. The GCA prepares classification guidance in accordance with 32 CFR 2001.15, and provides appropriate security classification and declassification guidance to entities.

(c) *Requests for clarification and classification challenges.* (1) The GCA responds to entity requests for clarification and classification challenges.

(2) The responsible CSA assists entities to obtain appropriate classification guidance from the GCA, and to obtain a classification challenge response from the GCA.

(d) *Instructions upon contract or agreement completion or termination.* (1) The GCA provides instructions to the entity for returning or disposing of classified information upon contract or agreement completion or termination, or when an entity no longer has a legitimate need to retain or possess classified information.

(2) The GCA also determines whether the entity may retain classified information for particular purposes after the contract or agreement terminates, and if so, provides written authorization to the entity along with any instructions or limitations (such as which information, for how long, etc).

§ 2004.32 Determining entity eligibility for access to classified information.

(a) *Eligibility determinations.* (1) The responsible CSA determines whether an

entity is eligible for access to classified information. An entity may not have access to classified information until the responsible CSA determines that it meets all the requirements in this section. In general, the entity must be eligible to access classified information at the appropriate level before the CSA may consider any of the entity's subsidiaries, sub-contractors, or other sub-entities for eligibility. However, when the subsidiary will perform all classified work, the CSA may instead exclude the parent entity from access to classified information rather than determining its eligibility. In either case, the CSA must consider all information relevant to assessing whether the entity's access poses an unacceptable risk to national security interests.

(2) A favorable access eligibility determination is not the same as a safeguarding capability determination. Entities may access classified information with a favorable eligibility determination, but may possess classified information only if the CSA determines both access eligibility and safeguarding capability, based on the GCA's requirement in the contract security classification specification (or equivalent).

(3) If an entity has an existing eligibility determination, a CSA will not duplicate eligibility determination processes performed by another CSA. If a CSA cannot acknowledge an entity eligibility determination to another CSA, that entity may be subject to duplicate processing.

(4) Each CSA maintains a record of its entities' eligibility determinations (or critical infrastructure entity eligibility status under the CCIPP, for DHS) and responds to inquiries from GCAs or entities, as appropriate and to the extent authorized by law, regarding the eligibility status of entities under their cognizance.

(b) *Process.* (1) The responsible CSA provides guidance to entities on the eligibility determination process and on how to maintain eligibility throughout the period of the agreement or as long as an entity continues to need access to classified information in connection with a legitimate U.S. or foreign government requirement.

(2) The CSA coordinates with appropriate authorities to determine whether an entity meets the eligibility criteria in paragraph (e) of this section. This includes coordinating with appropriate U.S. Government regulatory authorities to determine entity compliance with laws and regulations.

(3) An entity cannot apply for its own eligibility determination. A GCA or an eligible entity must sponsor the entity to the responsible CSA for an eligibility determination. The GCA or eligible entity may sponsor an entity at any point during the contracting or agreement life-cycle at which the entity must have access to classified information to participate (including the solicitation or competition phase). An entity with limited eligibility granted under paragraph (f) of this section may sponsor a sub-entity for a limited eligibility determination for the same contract, agreement, or circumstance so long as the sponsoring entity is not under FOCI (see § 2004.34(i)).

(4) The GCA must include enough lead time in each phase of the acquisition or agreement cycle to accomplish all required security actions. Required security actions include any eligibility determination necessary for an entity to participate in that phase of the cycle. The GCA may award a contract or agreement before the CSA completes the entity eligibility determination. However, in such cases, the entity may not begin performance on portions of the contract or agreement that require access to classified information until the CSA makes a favorable entity eligibility determination.

(5) When a CSA is unable to make an eligibility determination in sufficient time to qualify an entity to participate in the particular procurement action or phase that gave rise to the GCA request (this includes both solicitation and performance phases), the GCA may request that the CSA continue the determination process to qualify the entity for future classified work for any GCA, provided that the processing delay was not due to the entity's lack of cooperation. Once the CSA determines that an entity is eligible for access to classified information, but a GCA does not award a contract or agreement requiring access to classified information to the entity, or the entity's eligibility status changes, the CSA terminates the entity eligibility determination in accordance with paragraph (g) of this section.

(c) *Coverage.* (1) A favorable eligibility determination allows an entity to access classified information at the determined eligibility level, or lower.

(2) The CSA must ensure that all entities needing access to classified information as part of a legitimate U.S. or foreign government requirement have or receive a favorable eligibility determination before accessing classified information. This includes both prime or parent entities and sub-entities, even in cases in which an entity intends to have the classified work performed only by sub-entities. A prime or parent entity must have a favorable eligibility determination at the same classification level or higher than its sub-entity(ies), unless the CSA determined that the parent entity could be effectively excluded from access (see paragraph (a)(1) of this section).

(3) If a parent and sub-entity need to share classified information with each other, the CSA must validate that both the parent and the sub-entity have favorable eligibility determinations at the level required for the classified information prior to sharing the information.

(d) *DHS Classified Critical Infrastructure Protection Program (CCIPP).* DHS shares classified cybersecurity information with certain employees of entities under the Classified Critical Infrastructure Protection Program (CCIPP). The CCIPP applies only to entities that do not need to store classified information, have no other contracts or agreements already requiring access to classified information, and are not already determined eligible for access to classified information. DHS establishes and implements procedures consistent with the NISP to determine CCIPP entity eligibility for access to classified information.

(e) *Eligibility criteria.* An entity must meet the following requirements to be eligible to access classified information:

(1) It must need to access classified information as part of a legitimate U.S. Government or foreign government requirement, and access must be consistent with U.S. national security interests as determined by the CSA;

(2) It must be organized and existing under the laws of any of the 50 States, the District of Columbia, or an organized U.S. territory (Guam, Commonwealth of the Northern Marianas Islands, Commonwealth of Puerto Rico, and the U.S. Virgin Islands); or an American Indian or Alaska native tribe formally acknowledged by the Assistant Secretary—Indian Affairs, of the U.S. Department of the Interior;

(3) It must be located in the United States or its territorial areas;

(4) It must have a record of compliance with pertinent laws, regulations, and contracts (or other relevant agreements);

(5) Its KMOs must each have and maintain eligibility for access to classified information that is at least the same level as the entity eligibility level;

(6) It and all of its KMOs must not be excluded by a Federal agency, contract review board, or other authorized official from participating in Federal contracts or agreements;

(7) It must meet all requirements the CSA or the authorizing law, regulation, or Government-wide policy establishes for access to the type of classified information or program involved; and

(8) If the CSA determines the entity is under foreign ownership, control, or influence (FOCI), the responsible CSA must:

(i) Agree that sufficient security measures are in place to mitigate or negate risk to national security interests due to the FOCI (see § 2004.34);

(ii) Determine that it is appropriate to grant eligibility for a single, narrowly defined purpose (see § 2004.34(i)); or

(iii) Determine that the entity is not eligible to access classified information.

(9) DoD and DOE cannot award a contract involving access to proscribed information to an entity effectively owned or controlled by a foreign government unless the Secretary of the agency first issues a waiver (see 10 U.S.C. 2536). A waiver is not required if the CSA determines the entity is eligible and it agrees to establish a voting trust agreement (VTA) or proxy agreement (PA) (see § 2004.34(f)) because both VTAs and PAs effectively negate foreign government control.

(f) *Limited entity eligibility determination.* CSAs may choose to allow GCAs to request limited entity eligibility determinations (this is not the same as limited entity eligibility in situations involving FOCI when the FOCI is not mitigated or negated; for more information on limited entity eligibility in such FOCI cases, see § 2004.34(i)). If a CSA permits GCAs to request a limited entity eligibility determination, it must set out parameters within its implementing policies that are consistent with the following requirements:

(1) The GCA, or an entity with limited eligibility, must first request a limited entity eligibility determination from the CSA for the relevant entity and provide justification for limiting eligibility in that case;

(2) Limited entity eligibility is specific to the requesting GCA's classified information, and to a single, narrowly defined contract, agreement, or circumstance;

(3) The entity must otherwise meet the requirements for entity eligibility set out in this part;

(4) The CSA documents the requirements of each limited entity eligibility determination it makes, including the scope of, and any limitations on, access to classified information;

(5) The CSA verifies limited entity eligibility determinations only to the requesting GCA or entity. In the case of multiple limited entity eligibility determinations for a single entity, the CSA verifies each one separately only to its requestor; and

(6) CSAs administratively terminate the limited entity eligibility when there is no longer a need for access to the classified information for which the CSA approved the limited entity eligibility.

(g) *Terminating or revoking eligibility.* (1) The responsible CSA terminates the entity's eligible status when the entity no longer has a need for access to classified information.

(2) The responsible CSA revokes the entity's eligible status if the entity is unable or unwilling to protect classified information.

(3) The CSA coordinates with the GCA(s) to take interim measures, as necessary, toward either termination or revocation.

§ 2004.34 Foreign ownership, control, or influence (FOCI).

(a) *FOCI determination.* A U.S. entity is under foreign ownership, control, or influence (FOCI) when:

(1) A foreign interest has the power to direct or decide matters affecting the entity's management or operations in a manner that could:

(i) Result in unauthorized access to classified information; or

(ii) Adversely affect performance of a contract or agreement requiring access to classified information; and

(2) The foreign interest exercises that power:

(i) Directly or indirectly;

(ii) Through ownership of the U.S. entity's securities, by contractual arrangements, or other similar means;

(iii) By the ability to control or influence the election or appointment of one or more members to the entity's governing board (*e.g.,* board of directors, board of managers, board of trustees) or its equivalent; or

(iv) Prospectively (*i.e.,* is not currently exercising the power, but could).

(b) *CSA guidance.* The CSA establishes guidance for entities on filling out and submitting a Standard Form (SF) 328, Certificate Pertaining to Foreign Interests (OMB Control No. 0704–0194), and on reporting changes in circumstances that might result in a determination that the entity is under FOCI or is no longer under FOCI. The CSA also advises entities on the Government appeal channels for disputing CSA FOCI determinations.

(c) *FOCI factors.* To determine whether an entity is under FOCI, the CSA analyzes available information to determine the existence, nature, and source of FOCI. The CSA:

(1) Considers information the entity or its parent provides on the SF 328/CF 328 (OMB Control No. 0704–0194), and any other relevant information; and

(2) Considers in the aggregate the following factors about the entity:

(i) Record of espionage against U.S. targets, either economic or Government;

(ii) Record of enforcement actions against the entity for transferring technology without authorization;

(iii) Record of compliance with pertinent U.S. laws, regulations, and contracts or agreements;

(iv) Type and sensitivity of the information the entity would access;

(v) Source, nature, and extent of FOCI, including whether foreign interests hold a majority or minority position in the entity, taking into consideration the immediate, intermediate, and ultimate parent entities;

(vi) Nature of any relevant bilateral and multilateral security and information exchange agreements;

(vii) Ownership or control, in whole or in part, by a foreign government; and

(viii) Any other factor that indicates or demonstrates foreign interest capability to control or influence the entity's operations or management.

(d) *Entity access while under FOCI.* (1) If the CSA is determining whether an entity is eligible to access classified information and finds that the entity is under FOCI, the CSA must consider the entity ineligible for access to classified information. The CSA and the entity may then attempt to negotiate FOCI mitigation or negation measures sufficient to permit a favorable eligibility determination.

(2) The CSA may not determine that the entity is eligible to access classified information until the entity has put into place appropriate security measures to negate or mitigate FOCI or is otherwise no longer under FOCI. If the degree of FOCI is such that no mitigation or negation efforts will be sufficient, or access to classified information would be inconsistent with national security interests, then the CSA will determine the entity ineligible for access to classified information.

(3) If an entity comes under FOCI, the CSA may allow the existing eligibility status to continue while the CSA and the entity negotiate acceptable FOCI mitigation or negation measures, as long as there is no indication that classified information is at risk. If the entity does not actively negotiate mitigation or negation measures in good faith, or there are no appropriate measures that will remove the possibility of unauthorized access to classified information or adverse effect on the entity's performance of contracts or

agreements involving classified information, the CSA will take steps, in coordination with the GCA, to terminate eligibility.

(e) *FOCI and entities under the CCIPP.* DHS may sponsor, as part of the CCIPP, a U.S. entity that is under FOCI, under the following circumstances:

(1) The Secretary of DHS proposes appropriate FOCI risk mitigation or negation measures (see paragraph (f) of this section) to the other CSAs and ensures the anticipated release of classified information:

(i) Is authorized for release to the country involved;

(ii) Does not include information classified under the Atomic Energy Act; and

(iii) Does not impede or interfere with the entity's ability to manage and comply with regulatory requirements imposed by other Federal agencies, such as the State Department's International Traffic in Arms Regulation.

(2) If the CSAs agree the mitigation or negation measures are sufficient, DHS may proceed to enter a CCIPP information sharing agreement with the entity. If one or more CSAs disagree, the Secretary of DHS may seek a decision from the Assistant to the President for National Security Affairs before entering a CCIPP information sharing agreement with the entity.

(f) *Mitigation or negation measures to address FOCI.* (1) The CSA-approved mitigation or negation measures must assure that the entity can offset FOCI by effectively denying unauthorized people or entities access to classified information and preventing the foreign interest from adversely impacting the entity's performance on contracts or agreements requiring access to classified information.

(2) Any mitigation or negation measures the CSA approves for an entity must not impede or interfere with the entity's ability to manage and comply with regulatory requirements imposed by other Federal agencies (such as Department of State's International Traffic in Arms Regulation).

(3) If the CSA approves a FOCI mitigation or negation measure for an entity, it may agree that the measure, or particular portions of it, may apply to all of the present and future sub-entities within the entity's organization.

(4) Mitigation or negation measures are different for ownership versus control or influence.

(5) Methods to mitigate foreign control or influence (unrelated to ownership) may include:

(i) Assigning specific oversight duties and responsibilities to independent board members;

(ii) Formulating special executive-level security committees to consider and oversee matters that affect entity performance on contracts or agreements requiring access to classified information;

(iii) Modifying or terminating loan agreements, contracts, agreements, and other understandings with foreign interests;

(iv) Diversifying or reducing foreign-source income;

(v) Demonstrating financial viability independent of foreign interests;

(vi) Eliminating or resolving problem debt;

(vii) Separating, physically or organizationally, the entity component performing on contracts or agreements requiring access to classified information;

(viii) Adopting special board resolutions;

(ix) A combination of these methods, as determined by the CSA; or

(x) Other actions that effectively negate or mitigate foreign control or influence.

(6) Methods to mitigate or negate foreign ownership include:

(i) *Board resolutions.* The CSA and the entity may agree to a board resolution when a foreign interest does not own voting interests sufficient to elect, or is otherwise not entitled to representation on, the entity's governing board. The resolution must identify the foreign shareholders and their representatives (if any), note the extent of foreign ownership, certify that the foreign shareholders and their representatives will not require, will not have, and can be effectively excluded from, access to all classified information, and certify that the entity will not permit the foreign shareholders and their representatives to occupy positions that might enable them to influence the entity's policies and practices, affecting its performance on contracts or agreements requiring access to classified information.

(ii) *Security control agreements (SCAs).* The CSA and the entity may agree to use an SCA when a foreign interest does not effectively own or control an entity (*i.e.,* the entity is under U.S. control), but the foreign interest is entitled to representation on the entity's governing board. At least one cleared U.S. citizen must serve as an outside director on the entity's governing board.

(iii) *Special security agreements (SSAs).* The CSA and the entity may agree to use an SSA when a foreign interest effectively owns or controls an entity. The SSA preserves the foreign owner's right to be represented on the entity's board or governing body with a direct voice in the entity's business management, while denying the foreign owner majority representation and unauthorized access to classified information. When a GCA requires an entity to have access to proscribed information, and the CSA proposes an SSA as the mitigation measure, the CSA makes a national interest determination (NID) as part of determining an entity's eligibility for access. See paragraph (h) of this section for more information on NIDs.

(iv) *Voting trust agreements (VTAs) or proxy agreements (PAs).* The CSA and the entity may agree to use one of these measures when a foreign interest effectively owns or controls an entity. The VTA and PA are arrangements that vest the voting rights of the foreign-owned stock in cleared U.S. citizens approved by the CSA. Under the VTA, the foreign owner transfers legal title in the entity to the trustees approved by the CSA. Under the PA, the foreign owner conveys their voting rights to proxy holders approved by the CSA. The entity must be organized, structured, and financed to be capable of operating as a viable business entity independently from the foreign owner. Both VTAs and PAs can effectively negate foreign ownership and control; therefore, neither imposes any restrictions on the entity's eligibility to have access to classified information or to compete for contracts or agreements requiring access to classified information, including those involving proscribed information. Both VTAs and PAs can also effectively negate foreign government control.

(v) *Combinations of the measures in paragraphs (f)(6)(i) through (iv) of this section or other similar measures that effectively mitigate or negate the risks involved with foreign ownership.* CSAs must identify combination agreements in a way that distinguishes them from other agreements (*e.g.,* a combination SSA-proxy agreement cannot be identified as either an SSA or a proxy agreement beause those names would not distinguish the combination agreement from either of the other types). CSAs must also coordinate terms in combination agreements with the controlling agency prior to releasing proscribed information.

(g) *Standards for FOCI mitigation or negation measures.* The CSA must include the following requirements as part of any FOCI mitigation or negation measures, to ensure that entities implement necessary security and governing controls:

(1) Annual certification and annual compliance reports by the entity's governing board and the KMOs;

(2) The U.S. Government remedies in case the entity is not adequately protecting classified information or not adhering to the provisions of the mitigation or negation measure;

(3) Supplements to FOCI mitigation or negation measures as the CSA deems necessary. In addition to the standard FOCI mitigation or negation measure's requirements, the CSA may require more procedures via a supplement, based upon the circumstances of an entity's operations. The CSA may place these requirements in supplements to the FOCI mitigation or negation measure to allow flexibility as circumstances change without having to renegotiate the entire measure. When making use of supplements, the CSA does not consider the FOCI mitigation measure final until it approves the required supplements (*e.g.,* technology control plan, electronic communication plan); and

(4) For agreements to mitigate or negate ownership (PAs, VTAs, SSAs, and SCAs), the following additional requirements apply:

(i) *FOCI oversight.* The CSA verifies that the entity establishes an oversight body consisting of trustees, proxy holders or outside directors, as applicable, and those officers or directors whom the CSA determines are eligible for access to classified information (see § 2004.36). The entity's security officer is the principal advisor to the oversight body and attends their meetings. The oversight body:

(A) Maintains policies and procedures to safeguard classified information in the entity's possession with no adverse impact on performance of contracts or agreements requiring access to classified information; and

(B) Verifies the entity is complying with the FOCI mitigation or negation measure and related documents, contract security requirements or equivalent, and the NISP;

(ii) *Qualifications of trustees, proxy holders, and outside directors.* The CSA determines eligibility for access to classified information for trustees, proxy holders, and outside directors at the classification level of the entity's eligibility determination. Trustees, proxy holders, and outside directors must meet the following criteria:

(A) Be a U.S. citizen residing in the United States who can exercise management prerogatives relating to their position in a way that ensures that the foreign owner can be effectively insulated from the entity or effectively separated from the entity's classified work;

(B) Be completely disinterested individuals with no prior involvement with the entity, the entities with which it is affiliated, or the foreign owner and its affiliates. Individuals who are serving as trustees, proxy holders, or outside directors as part of a mitigation measure for the entity are not considered to have prior involvement solely by performing that role; and

(C) Be involved in no other circumstances that may affect an individual's ability to serve effectively, such as the number of boards on which the individual serves or the length of time serving on any other boards;

(iii) *Annual meeting.* The CSA meets at least annually with the oversight body to review the purpose and effectiveness of the FOCI mitigation or negation agreement; establish a common understanding of the operating requirements and their implementation; and provide guidance on matters related to FOCI mitigation and industrial security. These meetings include a CSA review of:

(A) Compliance with the approved FOCI mitigation or negation measure;

(B) Problems regarding practical implementation of the mitigation or negation measure; and

(C) Security controls, practices, or procedures and whether they warrant adjustment; and

(iv) *Annual certification.* The CSA reviews the entity's annual report; addresses, and resolves issues identified in the report; and documents the results of this review and any follow-up actions.

(h) *National interest determination (NID)*—(1) *Requirement for a NID.* (i) The CSA must determine whether allowing an entity access to proscribed information under an SSA is consistent with national security interests of the United States as part of making an entity eligibility determination in cases in which:

(A) The GCA requires an entity to have access to proscribed information;

(B) The entity is under FOCI; and

(C) The CSA proposes an SSA to mitigate the FOCI.

(ii) This determination is called a national interest determination (NID). A favorable NID confirms that an entity's access to the proscribed information under an SSA is consistent with national security interests. If the CSA is unable to render a favorable NID, it must consider other FOCI mitigation measures instead of an SSA or reassess the entity's eligibility for access to classified information.

(2) *NID process.* (i) The CSA makes the NID for any categories of proscribed information for which the entity requires access.

(ii) In cases in which any category of the proscribed information is controlled by another agency (ODNI for SCI, DOE for RD, NSA for COMSEC), the CSA asks that controlling agency to concur on the NID for that category of information.

(iii) The CSA informs the GCA and the entity when the NID is complete. In cases involving SCI, RD, or COMSEC, the CSA also informs the GCA and the entity when a controlling agency concurs or non-concurs on that agency's category of proscribed information. The entity may begin accessing a category of proscribed information once the CSA informs the GCA and the entity that the controlling agency concurs, even if other categories of proscribed information are pending concurrence.

(iv) An entity's access to SCI, RD, or COMSEC remains in effect so long as the entity remains eligible for access to classified information and the contract or agreement (or program or project) which imposes the requirement for access to those categories of proscribed information remains in effect, except under the following circumstances:

(A) The CSA, GCA, or controlling agency becomes aware of adverse information that impacts the entity eligibility determination;

(B) The CSA's threat assessment pertaining to the entity indicates a risk to one of the categories of proscribed information;

(C) The CSA becomes aware of any material change regarding the source, nature, and extent of FOCI; or

(D) The entity's record of NISP compliance, based on CSA reviews in accordance with § 2004.26, becomes less than satisfactory.

(v) Under any of these circumstances, the CSA determines whether an entity may continue being eligible for access to classified information, it must change the FOCI mitigation measure in order to remain eligible, or the CSA must terminate or revoke access.

(3) *Process for concurring or non-concurring on a NID.* (i) Each controlling agency tells the CSAs what information the controlling agency requires to consider a NID. ODNI identifies the information it requires to assess a NID for access to SCI, DOE identifies the information it requires to assess a NID for access to RD, and NSA identifies the information it requires to assess a NID for access to COMSEC.

(ii) The CSA requests from the GCA justification for access, a description of the proscribed information involved, and other information the controlling agency requires to concur or non-concur on the NID.

(iii) The CSA requests concurrence on the NID from the controlling agency for the relevant category of proscribed information (ODNI for SCI, DOE for RD,

NSA for COMSEC), and provides the information that controlling agency identified.

(iv) The relevant controlling agency (ODNI for SCI, DOE for RD, NSA for COMSEC) responds in writing to the CSA's request for concurrence.

(A) The controlling agency may concur with the NID for access under a particular contract or agreement, access under a program or project, or for all future access to the same category of proscribed information.

(B) If the relevant controlling agency does not concur with the NID, the controlling agency informs the CSA in writing, citing the reasons why it does not concur. The CSA notifies the applicable GCA and, in coordination with the GCA, then notifies the entity. The entity cannot have access to the category of proscribed information under the control of that agency (*i.e.,* if ODNI does not concur, the entity may not have access to SCI; if DOE does not concur, the entity may not have access to RD; and if NSA does not concur, the entity may not have access to COMSEC). The CSA, in consultation with the applicable GCA, must decide whether the reason the controlling agency did not concur otherwise affects the entity's eligibility for access to classified information (see § 2004.32(g)), or requires changing the FOCI mitigation measure (see paragraph (f) of this section).

(v) When an entity is eligible for access to classified information that includes a favorable NID for SCI, RD, or COMSEC, the CSA does not have to request a new NID concurrence for the same entity if the access requirements for the relevant category of proscribed information and terms remain unchanged for:

(A) Renewing the contract or agreement;

(B) New task orders issued under the contract or agreement;

(C) A new contract or agreement that contains the same provisions as the previous one (this usually applies when the contract or agreement is for a program or project); or

(D) Renewing the SSA.

(vi) When making the decision whether or not to concur with a NID for proscribed information under its control, the controlling agency will not duplicate work already performed by the GCA during the contract award process or by the CSA when determining entity eligibility for access to classified information.

(4) *Timing for concurrence process.* (i) The CSA requests NID concurrence from the controlling agency as soon as the CSA has made a NID, if the entity needs access to SCI, RD, or COMSEC.

(ii) The controlling agency provides a final, written concurrence or non-concurrence to the CSA within 30 days after receiving the request for concurrence from the CSA.

(iii) In cases when a controlling agency requires clarification or additional information from the CSA, the controlling agency responds to the CSA within 30 days to request clarification or additional information as needed, and to coordinate a plan and timeline for concurring or non-concurring. The controlling agency must provide written updates to the CSA every 30 days until it concurs or non-concurs. In turn, the CSA provides the GCA and the entity with updates every 30 days.

(i) *Limited eligibility determinations (for entities under FOCI without mitigation or negation).* (1) In exceptional circumstances when an entity is under FOCI, the CSA may decide that limited eligibility for access to classified information is appropriate when the entity is unable or unwilling to implement FOCI mitigation or negation measures (this is not the same as limited eligibility in other circumstances; for more information on limited eligibility in other cases, see § 2004.32(f)).

(2) The GCA first decides whether to request a limited eligibility determination for the entity and must articulate a compelling need for it to the CSA that is in accordance with U.S. national security interests. The GCA must verify to the CSA that access to classified information is essential to contract or agreement performance, and accept the risk inherent in not mitigating or negating the FOCI. See § 2004.32(b)(3).

(3) The CSA may grant a limited eligibility determination if the GCA requests and the entity meets all other eligibility criteria in § 2004.32(e).

(4) A foreign government may sponsor a U.S. sub-entity of a foreign entity for limited eligibility when the foreign government desires to award a contract or agreement to the U.S. sub-entity that involves access to classified information for which the foreign government is the original classification authority (*i.e.,* foreign government information), and there is no other need for the U.S. sub-entity to have access to classified information.

(5) Limited eligibility determinations are specific to the classified information of the requesting GCA or foreign government, and specific to a single, narrowly defined contract, agreement, or circumstance of that GCA or foreign government.

(6) The access limitations of a favorable limited eligibility determination apply to all of the entity's employees, regardless of citizenship.

(7) A limited eligibility determination is not an option for entities that require access to proscribed information when a foreign government has ownership or control over the entity. See § 2004.32(e)(9).

(8) The CSA administratively terminates the entity's limited eligibility when there is no longer a need for access to the classified information for which the CSA made the favorable limited eligibility determination. Terminating one limited eligibility status does not impact other ones the entity may have.

§ 2004.36 Determining entity employee eligibility for access to classified information.

(a) *Making employee eligibility determinations.* (1) The responsible CSA:

(i) Determines whether entity employees meet the criteria established in the Security Executive Agent Directive (SEAD) 4, National Security Adjudicative Guidelines (December 10, 2016). Entity employees must have a legitimate requirement (*i.e.,* need to know) for access to classified information in the performance of assigned duties and eligibility must be clearly consistent with the interest of the national security.

(ii) Notifies entities of its determinations of employee eligibility for access to classified information.

(iii) Terminates eligibility status when there is no longer a need for access to classified information by entity employees.

(2) The responsible CSA maintains:

(i) SF 312s, Classified Information Nondisclosure Agreements, or other approved nondisclosure agreements, executed by entity employees, as prescribed by ODNI in accordance with 32 CFR 2001.80 and E.O. 13526; and

(ii) Records of its entity employee eligibility determinations, suspensions, and revocations.

(3) CSAs ensure that entities limit the number of employees with access to classified information to the minimum number necessary to work on contracts or agreements requiring access to classified information.

(4) The CSA determines the need for event-driven reinvestigations for entity employees.

(5) CSAs use the Federal Investigative Standards (FIS) issued jointly by the Suitability and Security Executive Agents.

(6) The CSA provides guidance to entities on:

(i) Requesting employee eligibility determinations, to include guidance for submitting fingerprints; and

(ii) Granting employee access to classified information when the employee has had a break in access or a break in employment.

(7) If the CSA receives adverse information about an eligible entity employee, the CSA should consider and possibly investigate, as authorized, to determine whether the employee's eligibility to access classified information remains clearly consistent with the interests of national security. If the CSA determines that an entity employee's continued eligibility is not in the interest of national security, the CSA implements procedures leading to suspension and ultimate revocation of the employee's eligible status, and notifies the entity.

(b) *Consultants.* A consultant is an individual under contract or agreement to provide professional or technical assistance to an entity in a capacity requiring access to classified information. A consultant is considered an entity employee for security purposes. The CSA makes eligibility determinations for entity consultants in the same way it does for entity employees.

(c) *Reciprocity.* The responsible CSA determines if an entity employee was previously investigated or determined eligible by another CSA. CSAs reciprocally accept existing employee eligibility determinations in accordance with applicable and current national level personnel security policy, and must not duplicate employee eligibility investigations conducted by another CSA.

(d) *Limited access authorization (LAA).* (1) CSAs may make LAA determinations for non-U.S. citizen entity employees in rare circumstances, when:

(i) A non-U.S. citizen employee possesses unique or unusual skill or expertise that the agency urgently needs to support a specific U.S. Government contract or agreement; and

(ii) A U.S. citizen with those skills is not available.

(2) A CSA may grant LAAs up to the secret classified level.

(3) CSAs may not use LAAs for access to:

(i) Top secret (TS) information;

(ii) RD or FRD information;

(iii) Information that a Government-designated disclosure authority has not determined releasable to the country of which the individual is a citizen;

(iv) COMSEC information;

(v) Intelligence information, to include SCI;

(vi) NATO information, except as follows: Foreign nationals of a NATO member nation may be authorized access to NATO information subject to the terms of the contract, if the responsible CSA obtains a NATO security clearance certificate from the individual's country of citizenship. NATO access is limited to performance on a specific NATO contract;

(vii) Information for which the U.S. Government has prohibited foreign disclosure in whole or in part; or

(viii) Information provided to the U.S. Government by another government that is classified or provided in confidence.

(4) The responsible CSA provides specific procedures to entities for requesting LAAs. The GCA must concur on an entity's LAA request before the CSA may grant it.

§ 2004.38 Safeguarding and marking.

(a) *Safeguarding approval.* (1) The CSA determines whether an entity's safeguarding capability meets requirements established in 32 CFR part 2001, and other applicable national level policy (*e.g.,* Atomic Energy Act for RD). If the CSA makes a favorable determination, the entity may store classified information at that level or below. If the determination is not favorable, the CSA must ensure that the entity does not possess classified information or does not possess information at the classification level denied or a higher level.

(2) The CSA maintains records of its safeguarding capability determinations and, upon request from GCAs or entities, and as appropriate and to the extent authorized by law, verifies that it has made a favorable safeguarding determination for a given entity and at what level.

(b) *Marking.* The GCA provides guidance to entities that meets requirements in 32 CFR 2001.22, 2001.23, 2001.24, and 2001.25, Derivative classification, Classification marking in the electronic environment, Additional requirements, and Declassification markings; ISOO's marking guide, *Marking Classified National Security Information;* and other applicable national level policy (*e.g.,* Atomic Energy Act for RD) for marking classified information and material.

§ 2004.40 Information system security.

(a) The responsible CSA must authorize an entity information system before the entity can use it to process classified information. The CSA must use the most complete, accurate, and trustworthy information to make a timely, credible, and risk-based decision whether to authorize an entity's system.

(b) The responsible CSA issues to entities guidance that establishes protection measures for entity information systems that process classified information. The responsible CSA must base the guidance on standards applicable to Federal systems, which must include the Federal Information Security Modernization Act of 2014 (FISMA), Public Law 113–283, and may include National Institute of Standards and Technology (NIST) publications, Committee on National Security Systems (CNSS) publications, and Federal information processing standards (FIPS).

§ 2004.42 [Reserved]

Appendix A to Part 2004—Acronym Table

For details on many of these terms, see the definitions at § 2004.4.

CCIPP—Classified Critical Infrastructure Protection Program
CCIPP POC—Entity point of contact under the CCIPP program
CIA—Central Intelligence Agency
CSA—Cognizant security agency
CNSS—Committee on National Security Systems
COMSEC—Communications security
CSO—Cognizant security office
DHS—Department of Homeland Security
DoD—Department of Defense
DOE—Department of Energy
EA—Executive agent (the NISP executive agent is DoD)
E.O.—Executive Order
FAR—Federal Aquisition Regulation
FOCI—Foreign ownership, control, or influence
GCA—Government contracting activity
Insider threat program SO—insider threat senior official (for an agency or for an entity)
ISOO—Information Security Oversight Office of the National Archives and Records Administration (NARA)
KMO—Key managers and officials (of an entity)
LAA—Limited access authorization

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2018–0077]

RIN 1625–AA00

Safety Zone; Ohio River, Metropolis, IL

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing an emergency temporary safety zone for all navigable waters of the Ohio River extending from mile marker (MM) 939.8 to MM 943.0 near Metropolis, IL. This emergency safety zone is needed to protect life, vessels, and the marine environment due to the sinking of one barge in the navigable channel of the Ohio River near MM 940.8 and one barge near the left descending bank at MM 942.5. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Sector Ohio Valley (COTP) or a designated representative.

DATES: This rule is effective without actual notice from 12:01 a.m. until 11:59 p.m. on May 7, 2018. For the purposes of enforcement, actual notice will be used from May 1, 2018 until May 7, 2018.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type USCG–2018–0077 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Joshua Herriott, Sector Ohio Valley, U.S. Coast Guard; telephone 502–779–5343, email *SECOHV-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Ohio Valley
DHS Department of Homeland Security
FR Federal Register
MM Mile marker
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(3)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because publishing an NPRM would be impracticable and contrary to the public interest. On May 1, 2018, a towing vessel struck the I–24 Bridge near mile marker (MM) 940.8, causing 12 barges to break away. One barge sank near MM 940.8, and another sank near MM 942.5 on the left-descending bank. This safety zone must be established immediately to protect people and vessels associated with and resulting from the hazard to navigation created by the sunken barges and we lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule. This safety zone includes closures and navigation restrictions and requirements that are vital to maintaining safe navigation on the Ohio River during the recovery of the sunken barges. Therefore, delaying the effective date for this emergency safety zone to complete the NPRM process would also be contrary to the public interest as it would delay the safety measures vital to safe navigation.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be contrary to public interest because immediate action is needed to protect personnel, vessels, and the marine environment from potential hazards created by the sunken barges.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with the sunken barges will be a safety concern for anyone within MM 939.8 to MM 943.0 of the Ohio River, starting on May 1, 2018, and continuing 24 hours daily through 11:59 p.m. on May 7, 2018. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the sunken barges are being recovered.

IV. Discussion of the Rule

The Coast Guard is establishing a temporary emergency safety zone for all navigable waters of the Ohio River from MM 939.8 and MM 943.0, extending the entire width of the river. Entry is prohibited for all traffic beginning on May 1, 2018 and will continue to be prohibited through midnight on May 7, 2018 or until the hazard has been mitigated. The COTP will terminate the enforcement of this safety zone before May 7, 2018, if the sunken barges have been recovered. Entry into this safety zone is prohibited unless authorized by the COTP or his designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Ohio Valley.

Requests for entry will be considered and reviewed on a case-by-case basis. The COTP may be contacted by telephone at 502–779–5422 or can be reached by VHF–FM channel 16. Persons and vessels permitted to enter this safety zone must transit at their slowest safe speed and comply with all lawful directions issued by the COTP or the designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This determination is based on the limited size, location, and duration the safety zone, and the time of year. This safety zone will restrict vessel traffic from entering or transiting within a 3.2 mile area of navigable waterways on the Ohio River between MM 939.8 and MM 943.0. Moreover, the Coast Guard will issue Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves an emergency safety zone lasting less than one week that will prohibit entry on a 3.2 mile stretch of the Ohio River during recovery of sunken barges. It is categorically excluded from further review under paragraph L60(c) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 01. Because this safety zone is established in response to an emergency situation and is less than one week in duration, a Record of Environmental Consideration (REC) is not required. Should this emergency situation require a safety zone lasting longer than one week, a REC will be made available as indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0077 to read as follows:

§ 165.T08–0077 Safety Zone; Ohio River, Metropolis, IL.

(a) *Location.* The following area is a safety zone: All navigable waters of the Ohio River from mile marker (MM) 939.8 to MM 943.0, extending the entire width of the river.

(b) *Enforcement period.* This section will be enforced from May 1, 2018, through May 7, 2018, or until the sunken barges are recovered, whichever occurs first.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry of vessels or persons into this zone is prohibited unless authorized by the Captain of the Port Sector Ohio Valley (COTP) or designated representative. A ''designated representative'' is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to

units under the operational control of USCG Sector Ohio Valley.

(2) Vessels requiring entry into this safety zone must request permission from the COTP or a designated representative. To seek entry into the safety zone, contact the COTP or the COTP's representative by telephone at 502–779–5422 or on VHF–FM channel 16.

(3) Persons and vessels permitted to enter this safety zone must transit at their slowest safe speed and comply with all lawful directions issued by the COTP or the designated representative.

(d) *Information broadcasts.* The COTP or a designated representative will inform the public of the enforcement times and dates for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Broadcasts (MSIBs), as appropriate.

Dated: May 2, 2018.

M.B. Zamperini,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

[FR Doc. 2018–09662 Filed 5–4–18; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2018–0363]

Safety Zone; Annual Events Requiring Safety Zones in the Captain of the Port Lake Michigan Zone—Marinette Logging and Heritage Fest

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the safety zone for the Marinette Logging and Heritage Festival Fireworks on the Menomonee River in Marinette, WI from 9 p.m. through 11 p.m. on July 14, 2018. This action is necessary and intended to ensure safety of life on navigable waters immediately prior to, during, and after the fireworks display. During the enforcement period, entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan or a designated representative.

DATES: The regulations in 33 CFR 165.929 will be enforced for safety zone (e)(50), Table 165.929, from 9 p.m. through 11 p.m. on July 14, 2018.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice of enforcement, call or email marine event coordinator, MSTC K. Carpino, Prevention Department, Coast Guard Sector Lake Michigan, Milwaukee, WI; telephone (414) 747–7148, email *D09–SMB–SECLakeMichigan-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the Marinette Logging and Heritage Festival Fireworks safety zone listed as item (e)(50) in Table 165.929 of 33 CFR 165.929 from 9 p.m. through 11 p.m. on July 14, 2018 on all waters of the Menominee River, in the vicinity of Stephenson Island, within the arc of a circle with a 900-foot radius from the fireworks launch site in position 45°06.232′ N, 087°37.757′ W (NAD 83). Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan or a designated on-scene representative.

This notice of enforcement is issued under authority of 33 CFR 165.929, Safety Zones; Annual events requiring safety zones in the Captain of the Port Lake Michigan zone, and 5 U.S.C. 552(a). In addition to this publication in the **Federal Register**, the Coast Guard plans to provide the maritime community with advance notification for the enforcement of this safety zone via Broadcast Notice to Mariners or Local Notice to Mariners. The Captain of the Port Lake Michigan or a designated representative will inform the public through a Broadcast Notice to Mariners of any changes in the planned schedule. The Captain of the Port Lake Michigan or a representative may be contacted via Channel 16, VHF–FM., or via telephone (414) 747–7182

Dated: April 19, 2018.

Thomas J. Stuhlreyer,

Captain, U.S. Coast Guard, Captain of the Port, Lake Michigan.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2018–0376]

RIN 1625–AA00

Safety Zone; Neches River, Beaumont, TX

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule; request for comments.

SUMMARY: The Coast Guard is establishing a temporary safety zone on navigable waters of the Neches River extending 500-feet on either side of the Kansas City Southern Railroad Bridge that crosses the Neches River in Beaumont, TX. The safety zone is necessary to protect the bridge as well as persons and property on or near the bridge from potential damage from passing vessels until missing and/or damaged fendering systems are repaired or replaced. Entry of certain vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Marine Safety Unit Port Arthur or a designated representative. We invite your comments on this rule.

DATES: This rule is effective without actual notice from May 7, 2018 through midnight on August 31, 2018. For the purposes of enforcement, actual notice will be used from May 1, 2018 through May 7, 2018. Comments and related material must be received before May 29, 2018.

ADDRESSES: You may submit comments identified by docket number USCG–2018–0376 using the Federal eRulemaking Portal at *http://www.regulations.gov.* See the ''Public Participation and Request for Comment'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments. To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type USCG–2018–0376 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mr. Scott Whalen, Marine Safety Unit Port Arthur, U.S. Coast Guard; telephone 409–719–5086, email *Scott.K.Whalen@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Marine Safety Unit Port Arthur
DHS Department of Homeland Security
FR Federal Register
KCS Kansas City Southern Railroad Company
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code
VTS Vessel Traffic Service

II. Background Information and Regulatory History

On April 19, 2018, the Coast Guard was notified that the wood fendering systems designed to protect bridge support columns of the Kansas City Southern Railroad Company's bridge (KSC) from strikes by vessels transiting under the bridge had been damaged or destroyed by Hurricane Harvey. The south bank column protection fenders are missing and the north bank column protection fenders are severely damaged. KCS indicated that strikes to the support columns could compromise the bridge structure.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(3)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. The fendering systems protecting the bridge from strikes by passing marine traffic are missing or severely damaged and we must establish this safety zone immediately to protect the bridge and those persons that use the bridge. The Coast Guard is providing an opportunity to comment while the rule is in effect and may amend the rule after it becomes effective, if necessary.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to the public interest because immediate action is needed to respond to potential safety hazards posed by and to passing vessel traffic by and to the unprotected bridge columns supporting the KCS Bridge.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The Captain of the Port Marine Safety Unit Port Arthur (COTP) has determined that potential hazards posed by the unprotected bridge columns are a safety concern to the KCS Bridge and to persons and property on or near the bridge. The purpose of this rule is to provide for the safety of the KCS Bridge and persons and property on or near the bridge.

IV. Discussion of the Rule

This rule establishes a safety zone from 1 p.m. on May 1, 2018 through midnight on August 31, 2018 until missing and/or damaged fendering systems are repaired or replaced, whichever occurs first. The safety zone will extend 500-feet on either side of the KCS Bridge that crosses the Neches River in Beaumont, TX in approximate location 30° 04′54.8″ N 094°05′29.4″ W. The duration of the zone is intended to protect the bridge support columns as well as persons and property on or near the bridge until the bridge fendering is repaired or replaced. Only vessels less than 65 feet in length and not engaged in towing are authorized to enter the zone, unless otherwise permitted by the COTP or a designated representative are permitted to enter the safety zone.

Persons and vessels not permitted to enter the safety zone must request permission from the COTP or a designated representative. They may be contacted through Vessel Traffic Service (VTS) on channels 65A or 13 VHF–FM, or by telephone at (409) 719–5070.

Permission to transit through the bridge will be based on weather, tide and current conditions, vessel size, horsepower, and availability of assist vessels. All persons and vessels permitted to enter this temporary safety zone shall comply with the lawful orders or directions given to them by COTP or a designated representative.

Intentional or unintentional contact with any part of the bridge or associated structure, including fendering systems, support columns, spans or any other portion of the bridge, is strictly prohibited. Report any contact with the bridge or associated structures immediately to VTS Port Arthur on channels 65A, 13 or 16 VHF–FM or by telephone at (409) 719–5070.

The Coast Guard will inform the public through public of the effective period of this safety zone through VTS Advisories, Broadcast Notices to Mariners (BNMs), Local Notice to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs) as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated as a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location and duration of the safety zone. This rule will only affect certain vessels transiting the upper reaches of the Neches River in Beaumont, TX. The Coast Guard will issue a VTS Advisory concerning the zone, and the rule allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions

annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry within 500-feet of either side of the KCS Bridge that crosses the Neches River in Beaumont, TX. It is categorically excluded from further review under paragraph L60(d) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 01. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

VI. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. The Coast Guard may amend this temporary final rule if we receive comments from the public that indicate that a change is warranted. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion.

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, visit *http://www.regulations.gov/privacyNotice.*

Documents mentioned in this temporary final rule as being available in the docket, and all public comments, will be in our online docket at *http://www.regulations.gov* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0376 to read as follows:

§ 165.T08–0376 Safety Zone; Neches River, Beaumont, TX.

(a) *Location.* The following area is a safety zone: all navigable waters extending 500-feet on either side of the Kansas City Southern Railroad Bridge that crosses the Neches River in Beaumont, TX in approximate location 30°04′54.8″ N 094°05′29.4″ W.

(b) *Effective period.* This section is effective from 1 p.m. on May 1, 2018 through midnight on August 31, 2018 or until missing and/or damaged fendering systems are repaired or replaced, whichever occurs first.

(c) *Regulations.* (1) No vessel may enter or remain in the safety zone except:

(i) A vessel less than 65 feet in length and not engaged in towing; or

(ii) A vessel authorized by the Captain of the Port Marine Safety Unit Port Arthur (COTP) or a designated representative

(2) Persons and vessels not permitted to enter the safety zone must request permission from the COTP or a designated representative. They may be contacted through Vessel Traffic Service (VTS) on channels 65A or 13 VHF–FM, or by telephone at (409) 719–5070.

(3) Permission to transit through the bridge will be based on weather, tide and current conditions, vessel size, horsepower, and availability of assist vessels. All persons and vessels permitted to enter this temporary safety zone shall comply with the lawful orders or directions given to them by COTP or a designated representative.

(4) Intentional or unintentional contact with any part of the bridge or associated structure, including

fendering systems, support columns, spans or any other portion of the bridge, is strictly prohibited. Report any contact with the bridge or associated structures immediately to VTS Port Arthur on channels 65A, 13 or 16 VHF–FM or by telephone at (409) 719–5070.

(d) *Informational broadcasts.* The Coast Guard will inform the public of the effective period of this safety zone through VTS Advisories, Broadcast Notices to Mariners (BNMs), Local Notice to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs) as appropriate.

Dated: May 1, 2018.

Jacqueline Twomey,

Captain, U.S. Coast Guard, Captain of the Port Marine Safety Unit Port Arthur.

[FR Doc. 2018–09667 Filed 5–4–18; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2017–0294; FRL–9977–31]

Duddingtonia flagrans strain IAH 1297; Exemption from the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all food commodities when used in accordance with label directions and good agricultural practices. International Animal Health Products Pty. Ltd. submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of *Duddingtonia flagrans* strain IAH 1297 under FFDCA.

DATES: This regulation is effective May 7, 2018. Objections and requests for hearings must be received on or before July 6, 2018, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2017–0294, is available at *http://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Robert McNally, Director, Biopesticides and Pollution Prevention Division (7511P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: *BPPDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at *http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2017–0294 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before July 6, 2018. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2017–0294, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

II. Background and Statutory Findings

In the **Federal Register** of October 23, 2017 (82 FR 49022) (FRL–9967–37), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide tolerance petition (PP 6F8531) by International Animal Health Products Pty. Ltd., 18 Healey Circuit, Huntingwood, New South Wales 2148, Australia (in care of SciReg. Inc., 12733 Director's Loop, Woodbridge, VA 22192). The petition requested that 40 CFR part 180 be amended by establishing an exemption from the requirement of a tolerance for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all raw and processed agricultural commodities. That document referenced a summary of the petition prepared by the petitioner International Animal Health Products Pty. Ltd., which is available in the docket via *http://www.regulations.gov.*

There were no comments received in response to the notice of filing.

EPA changed the commodity to be reflected in the tolerance expression from ''in or on all raw and processed agricultural commodities'' to ''in or on all food commodities.'' The reason for this change is explained in Unit VII.B.

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. Pursuant to FFDCA section 408(c)(2)(B), in establishing or maintaining in effect an exemption from the requirement of a tolerance, EPA must take into account the factors set forth in FFDCA section 408(b)(2)(C), which require EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance or tolerance exemption and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . . .'' Additionally, FFDCA section 408(b)(2)(D) requires that EPA consider ''available information concerning the cumulative effects of [a particular pesticide's] . . . residues and other substances that have a common mechanism of toxicity.''

EPA performs a number of analyses to determine the risks from aggregate exposure to pesticide residues. First, for microbial pesticides, EPA determines the pathogenicity and toxicity of the pesticide. Second, EPA examines exposure to the pesticide through food, drinking water, and other exposures that occur as a result of pesticide use in residential settings, as well as other non-occupational exposure to the substance.

III. Toxicological Profile

Consistent with FFDCA section 408(b)(2)(D), EPA reviewed the available scientific data and other relevant information on *Duddingtonia flagrans* strain IAH 1297 and considered their validity, completeness, and reliability, as well as the relationship of this information to human risk. EPA also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children.

A. Overview of Duddingtonia flagrans Strain IAH 1297 (Refs. 1 and 2)

Duddingtonia flagrans is a fungus commonly found worldwide in soils, various plant materials, and animal feces that, in the presence of nematodes, forms looped adhesive network traps in animal feces in pasture when the diet of grazing animals is supplemented with the fungus' chlamydospores or the chlamydospores are acquired naturally from soil or plant material while the animals graze. *Duddingtonia flagrans* strain IAH 1297 chlamydospores can survive passage through the rumen and gastrointestinal tract after ingestion by grazing animals and then germinate on pasture (*i.e.,* the chlamydospores do not germinate in animals and cannot grow at normal body temperature or under anaerobic conditions). Nematode eggs excreted by pastured or wild animals hatch in the presence of *Duddingtonia flagrans* strain IAH 1297. Thereafter, *Duddingtonia flagrans* strain IAH 1297 passively traps nematodes, penetrates the nematode cuticle and kills them within 4–8 hours, occupies the nematode body with hyphae within 20–36 hours, and consumes nematodes within 48 hours, thus breaking the infection excretion and reinfection cycle of nematodes. *Duddingtonia flagrans* strain IAH 1297's use as a feed-through nematicide comes as growing anthelmintic (antiparasitic drug) resistance and general lack of new drug options to treat affected animals is becoming a concern.

B. Microbial Pesticide Toxicology Data Requirements

All applicable mammalian toxicology data requirements supporting the request for an exemption from the requirement of a tolerance for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all food commodities have been fulfilled with data submitted by the petitioner or data waiver requests that have been granted by EPA. The toxicity tests (acute oral and dermal) and the primary dermal irritation test that address potential routes of exposure to the active ingredient are all classified in Toxicity Category IV (see section II of Ref. 3) and reveal no toxicity or irritation attributed to *Duddingtonia flagrans* strain IAH 1297. Moreover, during typical toxicity/pathogenicity testing done with microbial pesticides, *Duddingtonia flagrans* strain IAH 1297 showed no toxicity, pathogenicity, or infectivity via the pulmonary route of exposure. The conclusions and classifications from all toxicological information associated with the active ingredient and submitted by the petitioner are briefly described below.

1. *Acute oral toxicity—rat (Harmonized Guideline 870.1100; Master Record Identification Number (MRID) No. 503887–01).* An acceptable acute oral toxicity study demonstrated that *Duddingtonia flagrans* strain IAH 1297 is not toxic to female rats when dosed via the oral route at 5,000 milligrams per kilogram (mg/kg) of bodyweight. The oral median lethal dose (LD_{50}), which is a statistically derived single dose that can be expected to cause death in 50% of test animals, was greater than 5,000 mg/kg of bodyweight for female rats (Toxicity Category IV). (Refs. 1 and 2).

2. *Acute oral toxicity/pathogenicity (Harmonized Guideline 885.3050; MRID Nos. 501117–14 and 501117–27).* An acceptable scientific rationale was submitted by the petitioner; therefore, EPA waived acute oral toxicity/pathogenicity testing for *Duddingtonia flagrans* strain IAH 1297. An acute oral toxicity study conducted on female rats (MRID No. 503887–01) demonstrated that *Duddingtonia flagrans* strain IAH 1297 was not toxic (LD_{50} greater than 5,000 mg/kg; Toxicity Category IV). Further, field studies were conducted on animal groups in Australia under direction of veterinarians. A 56-day study using young cattle demonstrated that a test substance containing *Duddingtonia flagrans* strain IAH 1297 had no discernible health effects when given with feed at 125 grams per 100 kilograms of bodyweight per day (representing 10X the label use rate). A 42-day study using Merino ewes had no findings attributable to treatment with a test substance containing *Duddingtonia flagrans* strain IAH 1297, and both groups had statistically similar weight gains throughout at 1 kilogram per group per day (representing 5X the label use rate). A 56-day study using horses demonstrated that a test substance containing *Duddingtonia flagrans* strain IAH 1297 had no discernible health effects when given with feed at 1 gram per kilogram bodyweight per day (representing 10X the label use rate). No signs of any infection were observed during these lengthy studies. EPA believes these data, when taken together, indicate that this fungus would not be toxic, infective, and/or pathogenic through the oral route of exposure and that further testing is not necessary. (Refs. 1 and 2).

3. *Acute pulmonary toxicity/pathogenicity—rat (Harmonized Guideline 885.3150; MRID Nos. 501117–*

15, 501117–16, 505317–00, and 505318–00). An acceptable acute pulmonary toxicity/pathogenicity study performed with *Duddingtonia flagrans* strain IAH 1297 did not induce signs of toxicity, infectivity, or pathogenicity when administered to rats as a single, intratracheal dose of 5.8×10^4 spores per animal. Additionally, clearance was established by day 42 of the test. (Refs. 1, 2, and 4).

4. *Acute injection toxicity/pathogenicity (Harmonized Guideline 885.3200; MRID No. 501117–17).* An acceptable scientific rationale was submitted by the petitioner; therefore, EPA waived acute injection toxicity/pathogenicity testing for *Duddingtonia flagrans* strain IAH 1297. Intratracheal pulmonary administration of the highest possible dose of *Duddingtonia flagrans* strain IAH 1297 did not show any sign of infection or pathogenicity (MRID No. 501117–16). Lengthy oral dosing of cattle, sheep, and horses demonstrated no effects at doses of 5–10X the label use rates (MRID No. 501117–27), and an oral dose of 5,000 mg/kg of bodyweight to female rats also demonstrated no effects (MRID No. 503887–01). Further, injection is expected to result in minimal breakdown of spores, and the relatively large size of the spores makes injection testing impractical. The lack of growth when *Duddingtonia flagrans* strain IAH 1297 was tested at 37°C (oral dosing) also allays the need to test infectivity and pathogenicity by the injection route. *Duddingtonia flagrans* strain IAH 1297 has not shown any ability to germinate or grow when mammals were exposed by various other routes, and injection of these large spores is not expected to result in infection even if possible to perform the test. Thus, EPA believes these data and information, when taken together, indicate that this fungus would not be toxic, infective, and/or pathogenic through the injection route of exposure and that further testing is not necessary. (Refs. 1 and 2).

5. *Acute dermal toxicity—rat (Harmonized Guideline 870.1200; MRID No. 501113–05).* An acceptable acute dermal toxicity study conducted using a test substance containing *Duddingtonia flagrans* strain IAH 1297 demonstrated that the fungus was not toxic to rats when dosed at 5,000 mg/kg of bodyweight for 24 hours to a body surface area of approximately 10 percent. Following exposure, animals were observed for 14 days. All animals survived, gained weight, appeared active and healthy, and had no signs of dermal irritation throughout the study. No observable abnormalities were found in any animal at necropsy. The dermal LD_{50} for male and female rats combined was greater than 5,000 mg/kg of bodyweight (Toxicity Category IV). (Refs. 1 and 2).

6. *Primary dermal irritation—rabbit (Harmonized Guideline 870.2500; MRID No. 501113–07*). An acceptable primary dermal irritation study conducted using a test substance containing *Duddingtonia flagrans* strain IAH 1297 demonstrated that the fungus was non-irritating to the skin of rabbits. No dermal erythema, edema, or irritation was noted on any animal during the study. The primary irritation index was 0.0, and all animals gained weight normally during the study (Toxicity Category IV). (Refs. 1 and 2).

IV. Aggregate Exposure

In examining aggregate exposure, FFDCA section 408 directs EPA to consider available information concerning exposures from the pesticide residue in food and all other non-occupational exposures, including drinking water from ground water or surface water and exposure through pesticide use in gardens, lawns, or buildings (residential and other indoor uses).

A. Dietary Exposure (Refs. 1 and 2)

1. *Food exposure.* The proposed use of *Duddingtonia flagrans* strain IAH 1297 is as a feed-through product for grazing animals such as sheep, goats, cattle, horses, deer, alpacas and zoo animals. As *Duddingtonia flagrans* is naturally present in soils and commonly found in various plant materials, it is likely that grazing animals have natural background exposure to the fungus. No adverse effects have been reported as a result of these types of exposures. Studies performed with *Duddingtonia flagrans* strain IAH 1297 have not shown that this strain has the ability to germinate or grow when mammals are exposed by various routes, including the oral route. Further, no foodborne disease outbreaks or cases of mammalian toxin production from *Duddingtonia flagrans* have been reported. As a result, dietary exposure to *Duddingtonia flagrans* strain IAH 1297 through agricultural commodities is not anticipated from use of the pesticide products as the spores and/or components of the spores are unlikely to remain in the treated animals. Should *Duddingtonia flagrans* strain IAH 1297 be present in food, however, supporting toxicological data and information indicate that no toxicity, pathogenicity, or infectivity is likely to occur with this type of exposure resulting from the use of this microbial pesticide when applied in accordance with label directions and good agricultural practices.

2. *Drinking water exposure.* Since *Duddingtonia flagrans* is naturally present in the environment and *Duddingtonia flagrans* strain IAH 1297 will be present in the feces of treated animals, exposure to surface and possibly groundwater can be expected. Water treatment processes should remove any *Duddingtonia flagrans* or *Duddingtonia flagrans* strain IAH 1297 present in these water sources, and no adverse effects have been reported from exposure to *Duddingtonia flagrans* through drinking water. As a result, dietary exposure to *Duddingtonia flagrans* strain IAH 1297 through drinking water is not anticipated from use of the pesticide products as the spores and/or components of the spores are unlikely to survive the water treatment process. Should *Duddingtonia flagrans* strain IAH 1297 be present in water, however, supporting toxicological data and information indicate that no toxicity, pathogenicity, or infectivity is likely to occur with this type of exposure resulting from the use of this microbial pesticide when applied in accordance with label directions and good agricultural practices.

B. Other Non-Occupational Exposure

The pesticide products containing *Duddingtonia flagrans* strain IAH 1297 are proposed for agricultural use sites and zoos. As a result, residential exposures resulting from use of these products are not anticipated. Nevertheless, *Duddingtonia flagrans* strain IAH 1297 was not toxic or irritating by dermal exposure and was not toxic, infective, or pathogenic by pulmonary exposure. Further, the products are mixed into feed ingredients at 2–34.6% so it is not in pure form, and the spore size is at the upper end of the respirable range so human exposures to *Duddingtonia flagrans* strain IAH 1297 by inhalation from contact with animal feed supplements is unlikely.

V. Cumulative Effects From Substances With a Common Mechanism of Toxicity

Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, EPA consider ''available information concerning the cumulative effects of [a particular pesticide's] . . . residues and other substances that have a common mechanism of toxicity.''

Duddingtonia flagrans strain IAH 1297 is not toxic and does not have a common mechanism of toxicity with other substances. Consequently, FFDCA section 408(b)(2)(D)(v) does not apply.

VI. Determination of Safety for U.S. Population, Infants and Children

A. U.S. Population

For all of the reasons discussed previously, EPA concludes that there is reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of *Duddingtonia flagrans* strain IAH 1297. This includes all anticipated dietary exposures and all other exposures for which there is reliable information.

B. Infants and Children

FFDCA section 408(b)(2)(C) provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure, unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act Safety Factor. In applying this provision, EPA either retains the default value of 10X or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor. As discussed above, EPA has concluded that *Duddingtonia flagrans* strain IAH 1297 is not toxic, pathogenic, or infective to mammals, including infants and children. Because there are no threshold levels of concern to infants, children, and adults when *Duddingtonia flagrans* strain IAH 1297 is used in accordance with label directions and good agricultural practices, EPA concludes that no additional margin of safety is necessary to protect infants and children.

VII. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes because EPA is establishing an exemption from the requirement of a tolerance without any numerical limitation.

B. Revisions to Requested Tolerance Exemption

One modification has been made to the requested tolerance exemption. EPA is changing ''in or on all raw and processed agricultural commodities'' to ''in or on all food commodities'' to align with the terminology the Agency currently uses when establishing tolerance exemptions for residues of other like active ingredients.

VIII. Conclusions

EPA concludes that there is a reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of *Duddingtonia flagrans* strain IAH 1297. Therefore, an exemption from the requirement of a tolerance is established for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all food commodities when used in accordance with label directions and good agricultural practices.

X. Statutory and Executive Order Reviews

This action establishes a tolerance exemption under FFDCA section 408(d) in response to a petition submitted to EPA. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance exemption in this action, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes. As a result, this action does not alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, EPA has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, EPA has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000), do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require EPA's consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

XI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure,

Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 26, 2018.

Wynne Miller,

Acting Director, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. Add § 180.1355 to subpart D to read as follows:

§ 180.1355 Duddingtonia flagrans strain IAH 1297; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all food commodities when used in accordance with label directions and good agricultural practices.

40 CFR Part 180

[EPA–HQ–OPP–2017–0249; FRL–9976–60]

Konjac Glucomannan; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of konjac glucomannan (CAS Reg. No. 37220–17–0) when used as an inert ingredient on growing crops only at a concentration not to exceed 1% by weight in a pesticide formulation. Technology Services Group, on behalf of, Attune Agriculture, LLC, submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of konjac glucomannan resulting from use in accordance with the terms of this exemption.

DATES: This regulation is effective May 7, 2018. Objections and requests for hearings must be received on or before July 6, 2018, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2017–0249, is available at *http://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Michael Goodis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at *http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2017–0249 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before July 6, 2018. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2017–0249, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

II. Petition for Exemption

In the **Federal Register** of September 15, 2017 (82 FR 43352) (FRL–9965–43), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN–11048) by Technology Services Group, on behalf of, Attune Agriculture, LLC, 10552 Philadelphia Road, White Marsh, MD 21162. The petition requested that 40 CFR 180.920 be amended by establishing an exemption from the requirement of a tolerance for residues of konjac glucomannan (also referred to as konjac mannan) (CAS Reg. No. 37220–17–0)

when used as an inert ingredient (thickener) in pesticide formulations applied to growing crops only at a maximum use level of 1.0%. That document referenced a summary of the petition prepared by Technology Services Group, on behalf of, Attune Agriculture, LLC, the petitioner, which is available in the docket, *http://www.regulations.gov.* A comment was received on the notice of filing. EPA's response is discussed in Unit V.C.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term ''inert'' is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(b)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .''

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no appreciable risks to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for konjac glucomannan including exposure resulting from the exemption established by this action. EPA's assessment of exposures and risks associated with konjac glucomannan follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by konjac glucomannan as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

Konjac glucomannan is a non-digestible polysaccharide with a large molecular weight (*i.e.,* 200,000–2,000,000 daltons). A substance of this size would be unlikely to penetrate intact human skin or gastrointestinal tract. Because of its large molecular weight and the body's inability to digest it, it is unlikely that the body will absorb konjac glucomannan. This is supported by the studies below.

Often in the literature, konjac flour and konjac glucomannan are used interchangeably. The European Commission defines konjac flour as the unpurified raw product from the root of the perennial plant *Amorphophallus konjac,* and konjac glucomannan refers to the product that has been washed and extracted using water-containing ethanol. The majority of the studies refer to the use of konjac flour as the test substance. EPA has concluded that it is appropriate to rely on those studies since the two substances are essentially the same in molecular weight and origin thus expected to present the same toxicological profile.

Konjac glucomannan exhibits low levels of acute toxicity. Acute studies in rats and mice show oral LD_{50s} of >2,800 mg/kg to >5,000 mg/kg. The dermal LD_{50} in rabbits is >2,000 mg/kg. Konjac glucomannan was not shown to be a skin irritant or dermal sensitizer and shows minimal eye irritation.

Asthmatic responses in humans (*e.g.,* Konjac asthma or *konnyaku* asthma) exposed to airborne powders produced during commercial manufacture of konjac flour from konjac tubers has been reported. It has been associated with the inhalation of dust produced during the production of konjac flour to make konnyaku, a traditional jelly-like Asian food prepared from glucomannan. An inhalation exposure study with guinea pigs demonstrated that respiratory hypersensitivity to food grade konjac flour can be induced following repeated inhalation exposures. According to a more recent study, however, the antigen in konjac flour responsible for respiratory sensitization is actually a protein and not glucomannan.

Several repeat-dose toxicity studies conducted on Sprague-Dawley rats are available for konjac flour: A four-week dietary study, a twelve-week feeding study, an 18-month dietary study, and an 8-week oral study with pregnant cats. Two carcinogenicity studies are also available.

A four-week dietary exposure study was conducted with Sprague-Dawley rats. Groups of four male rats were fed either 5% cellulose (control), 10% cellulose, 10% pectin or 10% konjac (~5,000 mg/kg/day) for 28 days. Compared to the control group, consumption of 10% konjac in the diet decreased the digestion and absorption of protein in the large intestine which resulted in a decrease in body weight gain. Because of the high dosing it is not certain if the effect seen is the result of excessive dosing or from the toxicity of chemical.

In a twelve-week feeding study, groups of 12/sex, five week old Sprague-Dawley rats received the basal diet (a 1% cholesterol) or konjac meal

supplementation at 2.5, 5.0 or 10% of the diet (~1,250, 2,500, or 5,000 mg/kg/day). Changes were seen on gross examination of the liver. The full study report was not available but according to the Food and Agriculture Organization/World Health Organization (FAO/WHO) Joint Expert Committee on Food Additives (JECFA) report, the author suggests the reason for this is that konjac flour binds with bile acids and depresses reabsorption in the intestines which consequently reduces the accumulation of lipids in the liver. All treated groups had reduced total cholesterol in comparison with the high-cholesterol control group. Body-weight gain was slightly but statistically significantly lower in males fed 10% refined konjac meal than in the other groups during the first eight weeks. Food intake was also reduced in this group. Therefore, the NOAEL is 5% of the diet (~2,500 mg/kg/day) with a LOAEL of 10% (~5,000 mg/kg/day) based on decreased body weight gain in males.

An 18-month dietary study assessed groups of 15 Sprague-Dawley rats fed a basal diet or a diet with 1.0% konjac flour (~500 mg/kg/day). There was no difference in body weight gain, absolute or relative organ weights or femur weights and no evidence of treatment-related pathological changes or effects on calcium and phosphorus metabolism. Treated male rats had significantly lower serum cholesterol levels at 9 and 18 months and lower triglycerides at 3 and 9 weeks but not 12 months. In female rats, the only difference from the control was a lower triglyceride level at 18 months. The liver of treated rats had smaller more lightly stained nuclei and reduced bile duct proliferation in the portal area. Certain cells (not specified) of treated rats displayed fewer signs of senescence compared to controls. There was no evidence that 1% konjac flour in the diet (~500 mg/kg/day) was toxic to rats.

Two groups of 15 adult pregnant British short-hair cats were fed diets containing either 2% carob gum or 2% konjac flour (0.98 to 3.08 mg/kg/day prior to parturition) for eight weeks. There were no significant changes in body weight between controls and treated animals. Biochemical and hematological parameters were reported to be within normal ranges throughout the study. Mean birth weight of kittens born to control cats was statistically significantly lower ($p \leq 0.01$) than kittens born to konjac fed cats; however, the standard deviation was within the range of controls and therefore, these effects are not considered adverse. All cats in the study completed lactation and reared successfully.

There is no evidence that konjac glucomannan suppresses or otherwise harms immune function in mammalian systems. No signs of neurotoxicity were reported in the studies of acute or repeat-dose oral exposure to konjac glucomannan.

Genotoxicity tests of konjac flour include an Ames test, a mouse lymphoma assay, and an *in vivo* mouse micronucleus test. All genotoxicity assays were negative. Konjac was not mutagenic in the Ames test and did not induce mutations in cultured mouse lymphoma cells or cause clastogenicity in the *in vivo* micronucleus study in the presence or absence of S–9 activation.

Konjac glucomannan is not expected to be carcinogenic. In addition to showing negative results in genotoxicity and mutagenicity tests, a 20-week and a 1-year feeding study were conducted and no evidenced of carcinogenicity was observed. In fact, the incidence of colon tumors in 1,2-dimethylhydrazine DMH treated animals was significantly reduced with konjac glocomannan consumption. Similarly, spontaneous liver tumors in C3H/He mice were inhibited by maintaining the mice on a diet containing 10% glucomannan.

B. Toxicological Points of Departure/Levels of Concern

No toxicological endpoint of concern has been identified for konjac glucomannan. Based on the available information as discussed in Unit IV.A., it is concluded that there is no end point of concern identified and therefore, quantitative risk assessment is not warranted.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to konjac glucomannan, EPA considered exposure under the proposed exemption from the requirement of a tolerance. EPA assessed dietary exposures from konjac glucomannan in food as follows:

Dietary exposure (food and drinking water) to konjac glucomannan may occur following ingestion of foods with residues from treated crops. Additional dietary exposure may result from the use of konjac glucomannan as a food additive; it has been used as a thickener, texture stabilizer, emulsifier, and gelling agent in foods and beverages, as well as agriculture and animal feed. However, a quantitative dietary exposure assessment was not conducted since a toxicological endpoint for risk assessment was not identified.

2. *Dietary exposure from drinking water.* Since a hazard endpoint of concern was not identified for the acute and chronic dietary assessment, a quantitative dietary exposure risk assessment for drinking water was not conducted, although exposures may be expected from use on food crops.

3. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables). Although currently, there are no uses for konjac glucomannan in products that might result in residential exposure, it is possible that some may be requested in the future. Additional non-dietary exposure may occur from use of konjac glucomannan in pharmaceutical products and cosmetics. Based on the discussion above, a quantitative residential exposure assessment for konjac glucomannan was not conducted.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

EPA has not found konjac glucomannan to share a common mechanism of toxicity with any other substances, and konjac glucomannan does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that konjac glucomannan does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at *http://www.epa.gov/pesticides/cumulative.*

D. Safety Factor for Infants and Children

Section 408(b)(2)(C) requires EPA to retain an additional tenfold margin of safety in the case of threshold effects to ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. As noted in Unit IV.B., there is no indication of threshold effects being caused by konjac glucomannan. Therefore, this requirement does not

apply to the present analysis. Moreover, due to the lack of any toxicological endpoints of concern, EPA is conducting a qualitative assessment of konjac glucomannan, which does not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Taking into consideration all available information on konjac glucomannan, EPA has determined that there is a reasonable certainty that no harm to any population subgroup will result from aggregate exposure to konjac glucomannan. Therefore, EPA concludes that the exemption from the requirement of a tolerance as requested by the petitioner—for residues of konjac glucomannan on growing crops when used as an inert ingredient (thickener), in pesticide formulations at a concentration not to exceed 1.0% by weight of the pesticide formulation is safe under FFDCA section 408.

V. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is not establishing a numerical tolerance for residues of konjac glucomannan in or on any food commodities. EPA is establishing limitations on the amount of konjac glucomannan that may be used in pesticide formulations applied to growing crops. These limitations will be enforced through the pesticide registration process under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. 136 *et seq.* EPA will not register any pesticide formulation for use on growing crops for sale or distribution that exceeds 1% by weight of konjac glucomannan.

B. Response to Comments

One comment was received in response to the Notice of Filing. The comment was received from a private citizen who opposed the authorization to sell any pesticide that leaves a residue on food. The Agency recognizes that some individuals believe that no residue of pesticides should be allowed. However, under the existing legal framework provided by section 408 of the Federal Food, Drug and Cosmetic Act (FFDCA) EPA is authorized to establish pesticide tolerances or exemptions where persons seeking such tolerances or exemptions have demonstrated that the pesticide meets the safety standard imposed by the statute. EPA has evaluated all the available data and concluded that there is a reasonable certainty of no harm from the limited use of konjac glucomannan as inert ingredients in pesticide formulations. The commenter has not provided any information supporting a conclusion that this exemption would not be safe.

VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established under 40 CFR 180.920 for konjac glucomannan (CAS Reg. No. 37220–17–0) when used as an inert ingredient (thickener) in pesticide formulations applied to growing crops only at a concentration not to exceed 1.0% by weight of the pesticide formulation.

VII. Statutory and Executive Order Reviews

This action establishes an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001); Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997); or Executive Order 13771, entitled ''Reducing Regulations and Controlling Regulatory Costs'' (82 FR 9339, February 3, 2017). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 12, 2018.

Donna Davis,

Acting Division Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.920, add alphabetically the inert ingredient ''Konjac glucomannan (CAS Reg. No. 37220–17–0)'' to the table to read as follows:

§ 180.920 Inert ingredients used pre-harvest; exemptions from the requirement of a tolerance.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 2 and 90

[DA 18–282]

Modification of Rules To Codify New Procedure for Non-Federal Public Safety Entities To License Federal Interoperability Channels

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document adopts changes to the Commission's rules to conform them to a streamlining modification recently made by the National Telecommunications and Information Administration (NTIA). NTIA streamlined the coordination process which enables the Commission to grant licenses to non-federal public safety entities who seek to operate on forty federal government interoperability channels over which NTIA has jurisdiction.

DATES: Effective June 6, 2018, except for the addition of § 90.25, which contains a new information collection that requires review by the Office of Management and Budget under the Paperwork Reduction Act of 1995. The FCC will publish a document in the **Federal Register** announcing the effective date of that rule section.

FOR FURTHER INFORMATION CONTACT: Brian Marenco, Policy and Licensing Division, Public Safety and Homeland Security Bureau, (202) 418–0838.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Order, DA 18–282, released on March 22, 2018. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street SW, Room CY–A257, Washington, DC 20554. To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to *FCC504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY). The complete text of this document is also available on the Commission's website at *http://www.fcc.gov.*

1. NTIA designated forty channels for interoperability communications among federal agencies and between federal agencies and non-federal entities with which federal agencies have a requirement to interoperate. A non-federal public safety entity may communicate on the federal interoperability channels for joint federal/non-federal operations, provided it first obtains a license from the Commission authorizing use of the channels.

2. In September 2015, NTIA streamlined the process which enables non-federal agencies to obtain an FCC license to use the federal interoperability channels. Under the new process, the Statewide Interoperability Coordinator (SWIC) or state appointed official in each state is responsible for coordinating access to the federal interoperability channels by non-federal public safety entities. Each SWIC/official will sign an agreement with a federal user with a valid assignment. The agreement may specify which federal interoperability channels are available for use in a particular state or territory and establish the conditions for their use by non-federal public safety entities.

3. Once the federal-state agreement for a given state is signed, non-federal public safety entities in that state may file an application with the Commission to license the designated federal interoperability channels under the new streamlined process. Before filing with the Commission, a non-federal public safety entity seeking to license mobile and portable units on the federal government interoperability channels must first obtain written concurrence from its SWIC/official. The non-federal agency must then include a copy of the written concurrence with its license application to the Commission.

4. NTIA's streamlined process eliminates the need for non-federal public safety entities to obtain written certification from a federal government agency and for the Commission to refer applications for the federal interoperability channels to the Interdepartment Radio Advisory Committee's (IRAC) Frequency Assignment Subcommittee for approval.

5. On March 22, 2018, the Public Safety and Homeland Security Bureau and the Office of Engineering and Technology, on delegated authority, jointly released an Order amending §§ 2.102(c)(4) and 90.173(c) and adopting new § 90.25 in order to conform the Commission's rules to the new streamlined process established by NTIA.

Procedural Matters

A. Paperwork Reduction Act of 1995 Analysis

6. The requirement in new § 90.25 that non-federal public safety agencies obtain written concurrence from the SWIC/official constitutes a new information collection subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. It will be submitted to the Office of Management and Budget (OMB) for review and public comment under section 3507(d) of the PRA.

7. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198 (see 44 U.S.C. 3506(c)(4)), the Commission's Public Safety and Homeland Security Bureau will seek specific comment on how it might further reduce the information collection burden for small business concerns with fewer than 25 employees.

B. Congressional Review Act

8. The Commission will not send a copy of this Order pursuant to the Congressional Review Act, see 5 U.S.C.

801(a)(1)(A), because the adopted rules are rules of agency organization, procedure, or practice that do not ''substantially affect the rights or obligations of non-agency parties.

Ordering Clauses

9. Accordingly, *it is ordered*, pursuant to sections 4(i), 303(c) and 332 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 303(c), and 332, this *order is hereby adopted.*

10. *It is further ordered* that the rules and requirements adopted herein *will become* effective June 6, 2018, except for new § 90.25 that contains a new or modified information collection requirement that requires review by the OMB under the PRA. Section 90.25 *will become effective* after OMB review and approval, on the effective date specified in a notice that the Commission will publish in the **Federal Register** announcing such approval and effective date.

11. This action is taken under delegated authority pursuant to section 155(c) of the Communications Act of 1934, as amended, 47 U.S.C. 155(c) and §§ 0.31, 0.191, 0.241, and 0.392 of the Commission's rules, 47 CFR 0.31, 0.191, 0.241, and 0.392.

Chief, Public Safety and Homeland Security Bureau.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR parts 2 and 90 as follows.

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

■ 1. The authority citation for part 2 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, and 336, unless otherwise noted.

■ 2. Amend § 2.102 by revising paragraph (c) to read as follows:

§ 2.102 Assignment of frequencies.

* * * * *

(c) Non-Federal stations may be authorized to use Federal frequencies in the bands above 25 MHz:

(1) If the Commission finds, after consultations with the appropriate Federal agency or agencies, that such use is necessary for coordination of Federal and non-Federal activities. Such operations must meet the following requirements:

(i) Non-Federal operation on Federal frequencies shall conform with the conditions agreed upon by the Commission and NTIA;

(ii) Such operations shall be in accordance with NTIA rules governing the service to which the frequencies involved are allocated;

(iii) Such operations shall not cause harmful interference to Federal stations and, should harmful interference result, that the interfering non-Federal operation shall immediately terminate; and

(iv) Non-Federal operation has been certified as necessary by the Federal agency involved and this certification has been furnished, in writing, to the non-Federal licensee with which communication is required; or

(2) Pursuant to the provisions of § 90.25 of this chapter, provided that such operations shall not cause harmful interference to Federal stations and, should harmful interference result, that the interfering non-Federal operation shall immediately terminate.

* * * * *

■ 3. Amend § 2.106 by revising pages 24 and 27 of the Table of Frequency Allocations, and by adding footnote US55 to the list of United States (US) Footnotes to read as follows:

§ 2.106 Table of Frequency Allocations.

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 660

[Docket No. 171026999–8408–02]

RIN 0648–BH36

Fisheries Off West Coast States; Highly Migratory Fisheries; Amendment 4 to Fishery Management Plan for West Coast Highly Migratory Species Fisheries; Revisions to the Biennial Management Cycle

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: Based on recommendations from the Pacific Fishery Mangement Council (Council), NMFS is issuing regulations under the Magnuson-Stevens Fishery Conservation and Management Act (MSA) to implement Amendment 4 to the Fishery Management Plan for U.S. West Coast Highly Migratory Species (HMS FMP). The intent of Amendment 4 is to bring descriptions of the management context for HMS fisheries up to date, to better describe the Council's role in the process of making stock status determinations for highly migratory species (HMS), including the Council's evaluations of the best scientific information available (BSIA), and to change the schedule of the Council's three-meeting biennial management cycle for HMS stocks. This rule updates and amends the descriptions of biennial management cycle activities in the regulations for the HMS FMP to allow the Council to shift the schedule of Council meetings for the consideration of HMS stock status updates and management recommendations in response to instances in which a stock or stocks is determined to be subject to overfishing, overfished, or both. The changes to the Council's biennial management cycle activities and the schedule are intended to better streamline international and domestic management processes for HMS. This rule is administrative in nature and is not expected to affect activities authorized under the FMP or harvest levels of HMS.

DATES: This rule is effective June 6, 2018.

ADDRESSES: Copies of the Amendment 4, the Regulatory Impact Review (RIR) and other supporting documents are available via the Federal eRulemaking Portal: *http://www.regulations.gov,* docket NOAA–NMFS–2017–0138, or contact Amber Rhodes, NMFS West Coast Region, 562–980–3231, *Amber.Rhodes@noaa.gov* or Heidi Taylor, NMFS West Coast Region, 562–980–4039, *Heidi.Taylor@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Amber Rhodes, NMFS, 562–980–3231, *Amber.Rhodes@noaa.gov* or Heidi Taylor, NMFS, 562–980–4039, *Heidi.Taylor@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Background

In a January 23, 2018, Notice of Availability (83 FR 3108), NMFS announced that the Council submitted Amendment 4 to the Secretary of Commerce for approval, and requested comments on Amendment 4. The 60-day public comment period ended on March 26, 2018. NMFS approved Amendment 4 to the HMS FMP on April 24, 2018.

On February 27, 2018, NMFS published a proposed rule in the **Federal Register** (83 FR 8414) to implement Amendment 4 by revising regulations at 50 CFR 660.709 contingent upon approval of Amendment 4. The proposed rule contains additional background information on Amendment 4. The 45-day public comment period for the proposed rule closed on April 13, 2018.

Amendment 4 is intended to better align the Council's biennial management cycle for HMS with the timing of international stock assessments and stock status determinations for these species. The changes to the current biennial management cycle included in Amendment 4 and implemented by this rule would allow the Council to streamline domestic and international management activities, such as stock assessment and biological reference point reviews, and to better align schedules to meet statutory timelines in section 304(e) and (i) of the MSA (16 U.S.C. 1854(e) and (i)) for making recommendations for domestic regulations and international measures when stocks are determined to be overfished or subject to overfishing. Additionally, this rule would ensure that the meeting schedule is not codified in regulations, thus allowing the Council to make changes to the schedule for its meetings in the biennial management cycle, consistent with the HMS FMP, without needing to seek a change in the regulatory language. Allowing the Council to make this type of adjustment without seeking a regulatory change improves the efficiency with which future changes to the biennial management cycle can be implemented.

Content of Regulations

This rule amends 50 CFR 660.709 to remove a specific schedule for the Council's biennial management cycle (*i.e.,* during June, September, and November Council meetings) from codified text and replace it with a reference to a biennial management cycle schedule specified in the FMP (*i.e.,* during September, November, and March Council meetings under Amendment 4). Thus, future schedule changes to the Council's biennial management cycle will not require a rulemaking. The rule also provides the Council's Science and Statistical Committee greater discretion over whether to review, and make recommendations on, the estimates in the annual stock assessment and fishery evaluation report.

NMFS did not make any changes in this final rule to the regulatory text of the proposed rule.

Public Comments and Responses

A total of 13 comments were received in response to either the Notice of Availability for the Amendment or the proposed rule. All comments remarked solely on issues beyond the scope of the proposed rule and lacked any specific remarks on NMFS' decision to approve, disapprove, or partially approve the amendment. Because 10 of the comments contained inappropriate content, NMFS made only three of the comments available on the Federal eRulemaking Portal (see **ADDRESSES**).

Classification

The Administrator of the West Coast Region, NMFS, determined that Amendment 4 to the HMS FMP and this final rule are necessary for the conservation and management of U.S. West Coast HMS fisheries and are consistent with the MSA and other applicable laws.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

There are no new collection-of-information requirements associated with this action that are subject to the Paperwork Reduction Act; however, existing collection-of-information requirements associated with the HMS FMP still apply. These requirements have been approved by the Office of Management and Budget (OMB control numbers 0648–0204, 0648–0223, 0648–0361, 0648–0498). Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection-of-information subject to the requirements of the PRA, unless that collection-of-information displays a currently valid OMB control number.

List of Subjects in 50 CFR Part 660

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: May 1, 2018.

Alan D. Risenhoover,

Acting Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 660 is amended as follows:

PART 660—FISHERIES OFF WEST COAST STATES

Subpart K—Highly Migratory Fisheries

■ 1. The authority citation for part 660, subpart K, continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 660.709, remove paragraphs (a)(2) and (a)(3), redesignate paragraph (a)(4) as (a)(2), and revise paragraphs (a)(1) and (d) to read as follows:

§ 660.709 Annual specifications.

(a) * * *

(1) Each year, the HMSMT will deliver a stock assessment and fishery evaluation report to the Council for all HMS with any necessary recommendations for harvest guidelines, quotas or other management measures to protect HMS, including updated maximum sustainable yield (MSY) and optimum yield (OY) estimates based on the best available science. The Council's Scientific and Statistical Committee may review the estimates and make a recommendation on their suitability for management. As described in the fishery management plan, the Council will periodically review these recommendations and decide whether to adopt updated numerical estimates of MSY and OY, which are then submitted as recommendations for NMFS to review as part of the management measures review process.

* * * * *

(d) Irrespective of the normal review process, the Council may propose management action to protect HMS at any time. The Council may adopt a management cycle different from the one described in the fishery management plan provided that such change is made by a majority vote of the Council and a 6-month notice of the change is given.

[FR Doc. 2018–09584 Filed 5–4–18; 8:45 am]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 83, No. 88
Monday, May 7, 2018

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2017–0867; Product Identifier 2017–CE–021–AD]

RIN 2120–AA64

Airworthiness Directives; Viking Air Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Supplemental notice of proposed rulemaking (SNPRM); reopening of the comment period.

SUMMARY: We are revising an earlier proposal for all Viking Air Limited Models DHC–2 Mk. I, DHC–2 Mk. II, and DHC–2 Mk. III airplanes. This proposed airworthiness directive (AD) results from mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and address an unsafe condition on an aviation product. The MCAI describes the unsafe condition as cracking found in the wing rear spar web at the wing station where the flap outboard hinge is attached. This action revises the proposal by issuing an SNPRM that changes the compliance times to more closely match the compliance times in the MCAI. We are proposing this AD to address the unsafe condition on these products. Since these actions may impose an additional burden over those in the notice of proposed rulemaking (NPRM), we are reopening the comment period to allow the public the opportunity to comment on these changes.

DATES: We must receive comments on this proposed AD by June 21, 2018.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Viking Air Limited Technical Support, 1959 De Havilland Way, Sidney, British Columbia, Canada, V8L 5V5; telephone: (North America) (800) 663–8444; fax: (250) 656–0673; email: *technical.support@vikingair.com;* internet: *http://www.vikingair.com/support/service-bulletins.* You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0867; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations (telephone (800) 647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Aziz Ahmed, Aerospace Engineer, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, New York 11590; telephone: (516) 228–7329; fax: (516) 794–5531; email: *aziz.ahmed@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2017–0867; Product Identifier 2017–CE–021–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We proposed to amend 14 CFR part 39 with an NPRM for all Viking Air Limited Models DHC–2 Mk. I, DHC–2 Mk. II, and DHC–2 Mk. III airplanes, which was published in the **Federal Register** on September 8, 2017 (82 FR 42489). The NPRM proposed to require actions intended to address the unsafe condition for the products listed above and was based on MCAI originated by another country.

Since the NPRM was issued, we received a comment to change the compliance time for the inspections in the NPRM to be in line with the compliance times stated in Transport Canada, which is the aviation authority for Canada, AD Number CF–2017–17, dated May 18, 2017 (referred to after this as ''the MCAI'').

Comments

We have considered the following comment received on the NPRM.

Request To Change the Compliance Times for the Inspections

Adam Geber stated that the compliance times in the NPRM for the inspections specified in paragraphs (f)(1) and (f)(2) should be changed to match the compliance times stated in the MCAI AD and the related service information.

Adam Geber requested including the 6-month compliance time from the MCAI AD into the proposed AD.

We agree with the commenter. We have changed paragraphs (f)(1) and (f)(2) in this SNPRM from ''within the next 400 hours TIS after the effective date of this AD'' to ''within the next 400 hours TIS after the effective date of this AD or within the next 6 months after the effective date of this AD, whichever occurs first.''

Related Service Information Under 1 CFR Part 51

Viking Air Limited has issued DHC–2 Beaver Service Bulletin Number: V2/0009, Revision A, dated February 10, 2017. The service information describes procedures for inspecting the left-hand and right-hand wing rear spars, the flap/aileron hinge brackets, and the exterior store support bracket for cracks, damage, and discrepancies and specifies repairing or replacing any cracked, damaged, or discrepant parts. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of the Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with this State of Design Authority, they have notified us of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all information and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

The change described above expands the scope of the NPRM. As a result, we have determined that it is necessary to reopen the comment period to provide additional opportunity for the public to comment on the proposed AD.

Interim Action

We consider this SNPRM interim action. The inspection report required by this SNPRM allows us to obtain better information into the nature, cause, and extent of the damage to the wing rear spars and flap/aileron hinge arm support brackets and to develop final action to address the unsafe condition. Once final action has been identified, we may consider further rulemaking.

Costs of Compliance

We estimate that this SNPRM will affect 140 products of U.S. registry. We also estimate that it would take about 11 work-hours per product to comply with the basic inspection requirements of this SNPRM. The average labor rate is $85 per work-hour.

Based on these figures, we estimate the basic cost of this proposed AD on U.S. operators to be $130,900, or $935 per product.

In addition, the following is an estimate of possible necessary follow-on replacement actions. We have no way of determining the number of products that may need these actions.

Part No.	Left-hand (LH) or right-hand (RH) wing	Description	Number per airplane	Parts cost	Number of work-hours to replace
C2W123A	Both (one per wing)	Hinge bracket LH inboard (flap)/RH outboard (aileron).	2	$288 for both	12 for both.
C2W124A	Both (one per wing)	Hinge bracket RH inboard (flap)/LH outboard (aileron).	2	$288 for both	12 for both.
C2W143	Both (four per wing)	Hinge bracket, flap and aileron (common part—multiple wing stations (WS)).	8	$271 for all eight	12 for all eight.
C2W143A (Agricultural Option).	Both (one per wing)	Agricultural (optional configuration)—hinge bracket, support arm (IPC PSM 1–2–4 Figure 128, Item 15).	2 (if applies)	$271 for both	12 for both.
C2W63	LH	Inboard spar, rear spar		$277	60.
C2W64	RH	Inboard spar, rear spar		$277	60.
C2W155	Both (one per wing)	Intermediate spar	2	$563 for both	60 for both.
C2W65A	LH	Spar WS 89.16 to WS 170.16	1*	$835	60.
C2W66A	RH	Spar WS 89.16 to WS 170.16	1*	$835	60.
C2W67A	LH	Outboard spar, WS 170.16 to WS 245.75	1*	$835	60.
C2W68A	RH	Outboard spar, WS 170.16 to WS 245.75	1*	$835	60.

*To replace any wing spar section takes 60 work-hours.

To replace all four wing spar sections per wing takes 240 work-hours.

There has been no change in the Cost of Compliance section in this SNPRM.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number. The control number for the collection of information required by this AD is 2120–0056. The paperwork cost associated with this AD has been detailed in the Costs of Compliance section of this document and includes time for reviewing instructions, as well as completing and reviewing the collection of information. Therefore, all reporting associated with this AD is mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at 800 Independence Ave. SW, Washington, DC 20591. ATTN: Information Collection Clearance Officer, AES–200.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs

applicable to small airplanes, gliders, balloons, airships, domestic business jet transport airplanes, and associated appliances to the Director of the Policy and Innovation Division.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by Reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new AD:

Viking Air Limited: Docket No. FAA–2017–0867; Product Identifier 2017–CE–021–AD.

(a) Comments Due Date

We must receive comments by June 21, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Viking Air Limited Models DHC–2 Mk. I, DHC–2 Mk. II, and DHC–2 Mk. III airplanes, all serial numbers, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 57: Wings.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and address an unsafe condition on an aviation product. The MCAI describes the unsafe condition as cracking found in the wing rear spar web at the wing station (WS) where the flap outboard hinge is attached. We are issuing this AD to detect and correct cracks in the wing rear spars and the flap/aileron hinge arm support brackets, which could cause these parts to fail. Failure of the wing rear spars and the flap/aileron hinge arm support brackets could result in loss of control.

(f) Actions and Compliance

Unless already done, do the actions in paragraphs (f)(1) through (5) of this AD:

(1) Within the next 400 hours time-in-service (TIS) after the effective date of this AD or within the next 6 months after the effective date of this AD, whichever occurs first, visually inspect the left-hand and right-hand wing rear spar and flap/aileron hinge arm support brackets following the Accomplishment Instructions of Viking DHC–2 Beaver Service Bulletin Number: V2/0009, Revision A, dated February 10, 2017 (SB V2/0009, Revision A).

(2) For airplanes with agricultural configuration installed (SOO Mod 2/984), within the next 400 hours TIS after the effective date of this AD or within the next 6 months after the effective date of this AD, whichever occurs first, inspect the exterior store support arm bracket at wing station (WS) 101.24 following the Accomplishment Instructions of SB V2/0009, Revision A.

(3) If any discrepancies are found during the inspections required in paragraphs (f)(1) and (2) of this AD, before further flight, repair or replace using a method approved by the Manager, New York ACO Branch, FAA; or Transport Canada; or Viking Air Limited's Transport Canada Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(4) Within 30 days after completing the inspections required in paragraphs (f)(1) and (2) of this AD, using the Operator Reply Form on page 7 of SB V2/0009, Revision A, report the inspection results to Viking Air Limited at the address specified in paragraph (h) of this AD.

(5) As of the effective date of this AD, do not install a wing on any airplane affected by this AD unless it has been inspected as specified in paragraph (f)(1) of this AD and paragraph (f)(2) of this AD, as applicable, and is found free of any discrepancies.

(g) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, New York ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Aziz Ahmed, Aerospace Engineer, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, New York 11590; telephone: (516) 228–7329; fax: (516) 794–5531; email: *aziz.ahmed@faa.gov.* Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, New York ACO Branch, FAA; or Transport Canada; or Viking Air Limited's Transport Canada Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Reporting Requirements:* For any reporting requirement in this AD, a federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 5 minutes per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW, Washington, DC 20591, Attn: Information Collection Clearance Officer, AES–200.

(h) Related Information

Refer to MCAI Transport Canada AD Number CF–2017–17, dated May 18, 2017, for related information. You may examine the MCAI on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0867. For service information related to this AD, contact Viking Air Limited Technical Support, 1959 De Havilland Way, Sidney, British Columbia, Canada, V8L 5V5; telephone: (North America) (800) 663–8444; fax: (250) 656–0673; email: *technical.support@vikingair.com;* internet: *http://www.vikingair.com/support/service-bulletins.* You may review copies of the referenced service information at the You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

Issued in Kansas City, Missouri, on April 20, 2018.

Melvin Johnson,

Deputy Director, Policy and Innovation Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2017–1051; Airspace Docket No. 17–AGL–21]

RIN 2120–AA66

Proposed Revocation of Class E Airspace; Springfield, OH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to remove Class E airspace areas designated as an extension to a Class D surface area at Springfield-Beckley Municipal Airport, Springfield, OH. The FAA is proposing this action as a result of an airspace review, which inadvertently overlooked the removal of the associated Class E airspace extensions when the Class D airspace was removed.

DATES: Comments must be received on or before June 21, 2018.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366–9826, or (800) 647–5527. You must identify FAA Docket No. FAA–2017–1051; Airspace Docket No. 17–AGL–21, at the beginning of your comments. You may also submit comments through the internet at *http://www.regulations.gov.* You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741–6030, or go to *http://www.archives.gov/federal_register/cfr/ibr_locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Rebecca Shelby, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5857.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would remove Class E airspace designated as an extension to a Class D surface area no longer needed at Springfield-Beckley Municipal Airport, Springfield, OH.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2017–1051/Airspace Docket No. 17–AGL–21.'' The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *http://www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA published a final rule in the **Federal Register** (80 FR 63090, October 19, 2015), removing Class D airspace at Springfield, as a result of the air traffic control tower closure. The FAA did not remove the Class E extensions to the Class D airspace with that final rule.

The Proposal

The FAA is proposing an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 by removing the Class E airspace extending upward from the surface at Springfield-Beckley Municipal Airport, Springfield, OH. Since the Class D airspace was removed with the closing of the air traffic control tower, the Class E extension airspace is also removed, as the airport no longer qualifies for controlled airspace.

Class E airspace designations are published in paragraph 6004 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR

71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2017–1187; Airspace Docket No. 17–AGL–25]

RIN 2120–AA66

Proposed Amendment of Class D and Class E Airspace and Proposed Revocation of Class E Airspace; Jackson, MI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to modify Class D airspace, Class E airspace designated as a surface area, and Class E airspace extending upward from 700 feet above the surface, and remove Class E airspace designated as an extension to Class D or Class E surface area at Jackson County Airport-Reynolds Field, Jackson MI. The FAA is proposing this action due to the decommissioning of the Jackson VHF omnidirectional range (VOR) which provided navigation guidance for the instrument procedures to this airport. The VOR is being decommissioned as part of the VOR Minimum Operational Network (MON) Program. The name and the geographic coordinates of the airport would also be updated to coincide with the FAA's aeronautical database. Additionally, this action would replace the outdated term ''Airport/Facility Directory'' with the term ''Chart Supplement'' in the associated airspace legal descriptions.

DATES: Comments must be received on or before June 21, 2018.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366–9826, or (800) 647–5527. You must identify FAA Docket No. FAA–2017–1187; Airspace Docket No. 17–AGL–25, at the beginning of your comments. You may also submit comments through the internet at *http://www.regulations.gov.* You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays.

FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11A at NARA, call (202) 741–6030, or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would amend Class D airspace, Class E airspace designated as a surface area, and Class E airspace extending upward from 700 feet above the surface, and remove Class E airspace designated as an extension to Class D or Class E surface area at Jackson County Airport-Reynolds Field, Jackson MI to support

instrument flight rules (IFR) operations at the airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2017–1187; Airspace Docket No. 17–AGL–25.'' The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *http://www.regulations.gov*. Recently published rulemaking documents can also be accessed through the FAA's web page at *http://www.faa.gov/air_traffic/publications/airspace_amendments/*.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 by:

Modifying the Class D airspace at Jackson County Airport-Reynolds Field, Jackson, MI, by updating the geographic coordinates of the airport to coincide with the FAA's aeronautic database and replacing the outdated term ''Airport/Facility Directory'' with the term ''Chart Supplement'' in the airspace legal description;

Modifying the Class E airspace designated as a surface area at Jackson County Airport-Reynolds Field (formerly Jackson County-Reynolds Field) by removing all airspace extensions from the 4-mile radius in the airspace legal description, updating the name and geographic coordinates of the airport to coincide with the FAA's aeronautical database, and making an editorial change to the airspace legal description replacing ''Airport/Facility Directory'' with the term ''Chart Supplement'';

Removing the Class E airspace designated as an extension to Class D or Class E airspace designated as a surface area at Jackson County-Reynolds Field, MI, as it is no longer required; and

Modifying the Class E airspace area extending upward from 700 feet above the surface to within a 6.5-mile radius (decreased from a 7-mile radius) of Jackson County Airport-Reynolds Field (formerly Jackson County-Reynolds Field), removing the Jackson VOR/DME from the airspace legal description, and updating the name and geographic coordinates to coincide with the FAA's aeronautical database.

Airspace reconfiguration is necessary due to the decommissioning of the Jackson VOR, which provided navigation guidance for the instrument procedures to this airport, as part of the VOR MON Program and to bring the airspace in compliance with FAA Order 7400.2L, Procedures for Handling Airspace Matters. This action would enhance safety and the management of IFR operations at this airport.

Class D and E airspace designations are published in paragraph 5000, 6002, 6004, and 6005, respectively, of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class D and E airspace designations listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting

Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 5000 Class D Airspace.

* * * * *

AGL MI D Jackson, MI [Amended]

Jackson County Airport-Reynolds Field, MI
(Lat. 42°15′38″ N, long. 84°27′44″ W)

That airspace extending upward from the surface to and including 3,500 feet MSL within a 4-mile radius of Jackson County Airport-Reynolds Field. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6002 Class E Airspace Areas Designated as Surface Areas.

* * * * *

AGL MI E2 Jackson, MI [Amended]

Jackson County Airport-Reynolds Field, MI
(Lat. 42°15′38″ N, long. 84°27′44″ W)

That airspace extending upward from the surface to and including 3,500 feet MSL within a 4-mile radius of Jackson County Airport-Reynolds Field. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6004 Class E Airspace Designates as an Extension to Class D and Class E Surface Areas.

* * * * *

AGL MI E4 Jackson, MI [Removed]

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL MI E5 Jackson, MI [Amended]

Jackson County Airport-Reynolds Field, MI
(Lat. 42°15′38″ N, long. 84°27′44″ W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Jackson County Airport-Reynolds Field.

Issued in Fort Worth, Texas, on April 30, 2018.

Christopher L. Southerland,

Acting Manager, Operations Support Group, ATO Central Service Center.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. OSHA–2018–0003]

RIN 1218–AB76

Revising the Beryllium Standard for General Industry

AGENCY: Occupational Safety and Health Administration (OSHA); Department of Labor.

ACTION: Proposed rule.

SUMMARY: On January 9, 2017, the Occupational Safety and Health Administration (OSHA) issued a final rule adopting a comprehensive general industry standard for exposure to beryllium and beryllium compounds. In this proposed rule, OSHA is proposing to adopt a number of clarifying amendments to address the application of the standard to materials containing trace amounts of beryllium. OSHA believes this proposal will maintain safety and health protections for workers while reducing the burden to employers of complying with the current rule.

DATES: Comments to this proposal, hearing requests, and other information must be submitted (transmitted, postmarked, or delivered) by June 6, 2018. All submissions must bear a postmark or provide other evidence of the submission date.

ADDRESSES: The public can submit comments, hearing requests, and other material, identified by Docket No. OSHA–2018–0003, using any of the following methods:

Electronically: Submit comments and attachments, as well as hearing requests and other information, electronically at *http://www.regulations.gov,* which is the Federal e-Rulemaking Portal. Follow the instructions online for submitting comments. Note that this docket may include several different **Federal Register** notices involving active rulemakings, so it is extremely important to select the correct notice or its ID number when submitting comments for this rulemaking. After accessing ''all documents and comments'' in the docket (OSHA–2018–0003), check the ''proposed rule'' box in the column headed ''Document Type,'' find the document posted on the date of publication of this document, and click the ''Submit a Comment'' link. Additional instructions for submitting comments are available from the *http://www.regulations.gov* homepage.

Facsimile: OSHA allows facsimile transmission of comments that are 10 pages or fewer in length (including attachments). Fax these documents to the OSHA Docket Office at (202) 693–1648. OSHA does not require hard copies of these documents. Instead of transmitting facsimile copies of attachments that supplement these documents (*e.g.,* studies, journal articles), commenters must submit these attachments to the OSHA Docket Office, Docket No. OSHA–2018–0003, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3653, 200 Constitution Avenue NW, Washington, DC 20210. These attachments must clearly identify the sender's name, the date, the subject, and the docket number (OSHA–2018–0003) so that the Docket Office can attach them to the appropriate document.

Regular mail, express delivery, hand delivery, and messenger (courier) service: Submit comments and any additional material to the OSHA Docket Office, Docket No. OSHA–2018–0003, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3653, 200 Constitution Avenue NW, Washington, DC 20210; telephone: (202) 693–2350. (OSHA's TTY number is (877) 889–5627.) Contact the OSHA Docket Office for information about security procedures concerning delivery of materials by express delivery, hand delivery, and messenger service. The Docket Office will accept deliveries (express delivery, hand delivery, messenger service) during the Docket Office's normal business hours, 10:00 a.m. to 3:00 p.m., ET.

Instructions: All submissions must include the Agency's name, the title of the rulemaking (Beryllium Standard: Notice of Proposed Rulemaking), and the docket number (OSHA–2018–0003). OSHA will place comments and other material, including any personal information, in the public docket without revision, and the comments and other material will be available online at *http://www.regulations.gov.* Therefore, OSHA cautions commenters about submitting statements they do not want made available to the public, or submitting comments that contain personal information (either about themselves or others), such as Social Security Numbers, birth dates, and medical data.

Docket: To read or download comments or other material in the docket, go to *http://www.regulations.gov* or to the OSHA Docket Office at the above address. The electronic docket for this proposed rule established at *http://www.regulations.gov* contains most of

the documents in the docket. However, some information (*e.g.,* copyrighted material) is not available publicly to read or download through this website. All submissions, including copyrighted material, are available for inspection at the OSHA Docket Office. Contact the OSHA Docket Office for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT:

Press inquiries: Mr. Frank Meilinger, OSHA Office of Communications, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3647, 200 Constitution Avenue NW, Washington, DC 20210; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

General information and technical inquiries: William Perry or Maureen Ruskin, Directorate of Standards and Guidance, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3718, 200 Constitution Avenue NW, Washington, DC 20210; telephone (202) 693–1950.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background

On January 9, 2017, OSHA published its final rule Occupational Exposure to Beryllium and Beryllium Compounds in the **Federal Register** (82 FR 2470). OSHA concluded that employees exposed to beryllium and beryllium compounds at the preceding permissible exposure limits (PELs) were at significant risk of material impairment of health, specifically chronic beryllium disease and lung cancer. OSHA concluded that the new 8-hour time-weighted average (TWA) PEL of 0.2 μg/m^3 reduced this significant risk to the maximum extent feasible. Based on information submitted to the record, in the final rule OSHA issued three separate standards—general industry, shipyards, and construction. In addition to the revised PEL, the final rule established a new short-term exposure limit (STEL) of 2.0 μg/m^3 over a 15-minute sampling period and an action level of 0.1 μg/m^3 as an 8-hour TWA, along with a number of ancillary provisions intended to provide additional protections to employees, such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, personal protective clothing and equipment, housekeeping, medical surveillance, hazard communication, and recordkeeping similar to those found in other OSHA health standards.

This proposal would amend the text of the beryllium standard for general industry to clarify OSHA's intent with respect to certain terms in the standard, including the definition of Beryllium Work Area (BWA), the definition of emergency, and the meaning of the terms dermal contact and beryllium contamination. It also would clarify OSHA's intent with respect to provisions for disposal and recycling and with respect to provisions that the Agency intends to apply only where skin can be exposed to materials containing at least 0.1% beryllium by weight.

This proposed rule is expected to be an Executive Order (E.O.) 13771 deregulatory action. Details on OSHA's cost/cost savings estimates for this proposed rule can be found in the rule's preliminary economic analysis. OSHA has estimated that, at a 3 percent discount rate over 10 years, there are net annual cost savings of $0.36 million per year for this proposed rule; at a discount rate of 7 percent there are net annual cost savings of $0.37 million per year. When the Department uses a perpetual time horizon, the annualized cost savings of the proposed rule is $0.37 million with 7 percent discounting. While the 2017 Beryllium Final Rule went into effect on May 20, 2017, compliance obligations do not begin until May 11, 2018.

OSHA has preliminarily determined that the standard as modified by this rulemaking would provide equivalent protection to the standard as promulgated. Accordingly, while this rulemaking is pending, OSHA will consider compliance with the standard as modified by this proposal to be a de minimis condition and will not issue a citation or penalty to employers in compliance with the proposed standard, in accordance with the Agency's de minimis citation policy.

II. Consideration of Comments

OSHA requests comment on all issues related to this proposed rule. As discussed more fully below, this proposed rule is the companion document to a direct final rule published in the ''Rules'' section of this issue of the **Federal Register**. If OSHA receives no significant adverse comment on the proposal or direct final rule, OSHA will publish a **Federal Register** document confirming the effective date of the direct final rule and withdrawing this companion Notice of Proposed Rulemaking (NPRM). Such confirmation may include minor stylistic or technical changes to the direct final rule. For the purpose of judicial review, OSHA views the date of confirmation of the effective date of the direct final rule as the date of promulgation. If, however, OSHA receives a significant adverse comment on the direct final rule or proposal, the Agency will publish a timely withdrawal of the direct final rule and proceed with the proposed rule, which addresses the same revisions to the beryllium standard for general industry.

III. Direct Final Rulemaking

As noted above, in addition to publishing this NPRM, OSHA is concurrently publishing a companion direct final rule (DFR) in the **Federal Register**. In direct final rulemaking, an agency publishes a DFR in the **Federal Register**, with a statement that the rule will go into effect unless the agency receives significant adverse comment within a specified period. The agency may publish an identical concurrent NPRM. If the agency receives no significant adverse comment in response to the DFR, the rule goes into effect. OSHA typically confirms the effective date of a DFR through a separate **Federal Register** document. If the agency receives a significant adverse comment, the agency withdraws the DFR and treats such comment as a response to the NPRM. An agency typically uses direct final rulemaking when an agency anticipates that a rule will not be controversial.

For purposes of the DFR, a significant adverse comment is one that explains why the amendments to OSHA's beryllium standard would be inappropriate. In determining whether a comment necessitates withdrawal of the DFR, OSHA will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process. OSHA will not consider a comment recommending an additional amendment to this rule to be a significant adverse comment unless the comment states why the DFR would be ineffective without the addition.

The comment period for this NPRM runs concurrently with that of the DFR. OSHA will treat comments received on the NPRM as comments also regarding the companion DFR. Similarly, OSHA will consider significant adverse comment submitted to the companion DFR as comment to the NPRM. Therefore, if OSHA receives a

significant adverse comment on either the DFR or this NPRM, it will withdraw the companion DFR and proceed with the NPRM. In the event OSHA withdraws the DFR because of significant adverse comment, OSHA will consider all timely comments received in response to the DFR when it continues with the NPRM. After carefully considering all comments to the DFR and the NPRM, OSHA will decide whether to publish a new final rule.

OSHA determined that the subject of this rulemaking is suitable for direct final rulemaking. This proposed amendment to the standard is clarifying in nature and does not adversely impact the safety or health of employees. The amended standard would clarify OSHA's intent regarding certain terms in the standard, including the definition of Beryllium Work Area (BWA), the definition of emergency, and the meaning of the terms dermal contact and beryllium contamination. It also would clarify OSHA's intent with respect to provisions for disposal and recycling and with respect to provisions that the Agency intends to apply only where skin can be exposed to materials containing at least 0.1% beryllium by weight. The revisions would not impose any new costs or duties. For these reasons, OSHA does not anticipate objections from the public to this rulemaking action.

IV. Discussion of Proposed Changes

On January 9, 2017, OSHA adopted comprehensive standards addressing exposure to beryllium and beryllium compounds in general industry, construction, and shipyards. 82 FR 2470. Beryllium ''occurs naturally in rocks, soil, coal, and volcanic dust,'' but can cause harm to workers through exposure in the workplace. 80 FR 47579. OSHA has thus set a general industry exposure limit for beryllium and beryllium compounds since 1971, modified most recently in 2017. *See* 80 FR 47578–47579; 82 FR 2471. This proposal would amend that 2017 general industry beryllium standard (codified at 29 CFR 1910.1024) to clarify its applicability to materials containing trace amounts of beryllium and to make related changes. This proposal would not affect the construction and shipyard standards, which are being addressed in a separate rulemaking. See 82 FR 29182.

During the last rulemaking, OSHA addressed the issue of trace amounts of beryllium. In its notice of proposed rulemaking, OSHA proposed to exempt from its beryllium standard materials containing less than 0.1% beryllium by weight on the premise that workers in exempted industries are not exposed at levels of concern, 80 FR 47775, but noted evidence of high airborne exposures in some of those industries, in particular the primary aluminum production and coal-fired power generation industries. 80 FR 47776. Therefore, OSHA proposed for comment several regulatory alternatives, including an alternative that would ''expand the scope of the proposed standard to also include all operations in general industry where beryllium exists only as a trace contaminant.'' 80 FR 47730. After receiving comment, OSHA adopted in the final rule an alternative limiting the exemption for materials containing less than 0.1% beryllium by weight to where the employer has objective data demonstrating that employee exposure to airborne beryllium will remain below the action level (AL) of 0.1 $\mu g/m^3$, measured as an 8-hour TWA, under any foreseeable conditions. 29 CFR 1910.1024(a)(2). In doing so, OSHA noted that the AL exception ensured that workers with airborne exposures of concern were covered by the standard:

> OSHA agrees with the many commenters and testimony expressing concern that materials containing trace amounts of beryllium (less than 0.1 percent by weight) can result in hazardous [airborne] exposures to beryllium. We disagree, however, with those who supported completely eliminating the exemption because this could have unintended consequences of expanding the scope to cover minute amounts of naturally occurring beryllium (Ex 1756 Tr. 55). Instead, we believe that alternative #1b—essentially as proposed by Materion and USW [United Steelworkers] and acknowledging that workers can have significant [airborne] beryllium exposures even with materials containing less than 0.1%—is the most appropriate approach. Therefore, in the final standard, it is exempting from the standard's application materials containing less than 0.1% beryllium by weight only where the employer has objective data demonstrating that employee [airborne] exposure to beryllium will remain below the action level as an 8-hour TWA under any foreseeable conditions. 82 FR 2643.

As the regulatory history makes clear, OSHA intended to protect employees working with trace beryllium only when it caused airborne exposures of concern. OSHA did not intend for provisions aimed at protecting workers from the effects of dermal contact to apply in the case of materials containing only trace amounts of beryllium. Since the publication of the final rule, however, stakeholders have suggested that an unintended consequence of the final rule's revision of the trace exemption is that provisions designed to protect workers from dermal contact with beryllium-contaminated material could be read as applying to materials with only trace amounts of beryllium.

This proposal would adjust the regulatory text of the general industry beryllium standard to clarify that OSHA does not intend for requirements that primarily address dermal contact to apply in processes, operations, or areas involving only materials containing less than 0.1% beryllium by weight. These proposed clarifications would be made through changes to the definition of beryllium work area; the addition of definitions of dermal contact, beryllium-contaminated, and contaminated with beryllium; clarifications of certain hygiene provisions with respect to beryllium contamination; and the clarifications to provisions for disposal and recycling. In addition, because under these changes it is possible to have a regulated area that is not a beryllium work area, this proposal would make changes to certain housekeeping provisions to ensure they apply in all regulated areas. Finally, this proposal also includes a change to the definition of ''emergency'', adding detail to the definition so as to clarify the nature of the circumstances OSHA intends to be considered an emergency for the purposes of the standard.

Definition of beryllium work area. Paragraph (b) of the beryllium standard published in January 2017 defined a beryllium work area as any work area containing a process or operation that can release beryllium where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium. This proposal would amend the definition as follows: ''Beryllium work area means any work area: (1) Containing a process or operation that can release beryllium and that involves materials that contain at least 0.1% beryllium by weight; and (2) where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium.'' This change would clarify OSHA's intent that many of the provisions associated with beryllium work areas should only apply to areas where there are processes or operations involving materials at least 0.1% beryllium by weight.

Specifically, this proposed change to the beryllium work area definition would clarify OSHA's intent that the following provisions associated with beryllium work areas do not apply where processes and operations involve only materials containing trace amounts of beryllium (less than 0.1% beryllium by weight): Establishing and

demarcating beryllium work areas (paragraphs (e)(1)(i) and (e)(2)(i)); including procedures for minimizing cross-contamination within (paragraph (f)(1)(i)(D)) or minimizing migration of beryllium out of (paragraph (f)(1)(i)(F)) such areas in the written exposure control plan; ensuring that at least one engineering or process control is in place to reduce beryllium exposure where airborne beryllium levels meet or exceed the AL (revised paragraph (f)(2)(ii)).[1] Additionally, for areas where beryllium is only present in materials at concentrations of less than 0.1% beryllium by weight, unless that area is also a regulated area, employers are not required to ensure that all surfaces in such areas are as free as practicable of beryllium (paragraph (j)(1)(i)); ensure that all surfaces in such areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure (paragraph (j)(2)(i)); or prohibit dry sweeping or brushing for cleaning surfaces in such areas (paragraph (j)(2)(ii)).

This proposal also includes conforming changes to maintain the January 2017 rule's requirements for housekeeping in regulated areas. Because all regulated areas were also beryllium work areas under the January 2017 beryllium standard, OSHA did not specify whether requirements for beryllium work areas should also apply in regulated areas (areas in which airborne beryllium exposure meets or exceeds the TWA PEL or STEL). This proposal's clarification to the definition of beryllium work area, however, means that it is possible for a work area to be a regulated area, but not a beryllium work area. This would occur when processes that involve only materials containing less than 0.1% beryllium by weight nevertheless create airborne beryllium exposures at or above the TWA PEL or STEL. 82 FR 2583.

It is thus important to clarify that housekeeping (paragraph (j)) requirements continue to apply in regulated areas, even if the processes or operations in these areas involve materials with only trace beryllium. Operations or processes involving trace beryllium materials must generate extremely high dust levels in order to exceed the TWA PEL or STEL. Following the housekeeping methods required by paragraph (j) will help to protect workers against resuspension of surface beryllium accumulations from extremely dusty operations and limit workers' airborne exposure to beryllium.

The proposal accordingly would amend paragraphs (j)(1)(i), (j)(2)(i), and (j)(2)(ii) to state explicitly that they apply to regulated areas, as follows. Paragraph (j)(1)(i), as amended, would state that ''[t]he employer must maintain all surfaces in beryllium work areas and regulated areas as free as practicable of beryllium and in accordance with the written exposure control plan required under paragraph (f)(1) and the cleaning methods required under paragraph (j)(2) of this standard.'' Paragraph (j)(2)(i), as amended, would state that ''[t]he employer must ensure that surfaces in beryllium work areas and regulated areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure.'' Paragraph (j)(2)(ii), as amended, would state that ''[t]he employer must not allow dry sweeping or brushing for cleaning surfaces in beryllium work areas or regulated areas unless HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure are not safe or effective.''

This proposal would also make conforming changes to the engineering controls requirements to ensure that the hierarchy of controls continues to apply in all regulated areas. Paragraph (f)(2) of the January 2017 beryllium standard provided that, if airborne exposures still exceed the PEL or STEL after implementing at least one control for each operation in a beryllium work area that releases airborne beryllium, the employer must implement additional or enhanced engineering and work practice controls to reduce airborne exposure to or below the limit exceeded. OSHA intended this provision to apply to all operations within the scope of the standard that can release airborne beryllium. 82 FR 2671–72. Because, under these proposed revisions, not all regulated areas would be beryllium work areas, this proposal would rearrange the regulatory text of paragraph (f)(2) to make clear that the hierarchy of controls will continue to apply in regulated areas that are not beryllium work areas.

Definitions related to beryllium contamination. To further clarify OSHA's intent that the standard's requirements aimed at reducing the effect of dermal contact with beryllium should not apply to areas where there are no processes or operations involving materials containing at least 0.1% beryllium by weight, this proposal would define ''beryllium-contaminated or contaminated with beryllium'' and add those terms to certain provisions in the standard. This proposal would define those terms as follows: ''Contaminated with beryllium and beryllium-contaminated mean contaminated with dust, fumes, mists, or solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight.'' This proposal would add the terms to certain provisions in the standard's requirements for hygiene areas and disposal and recycling.

The use of this proposed definition accordingly would clarify OSHA's intent that the following provisions, which apply where clothing, hair, skin, or work surfaces are beryllium-contaminated, do not apply where the contaminating material contains less than 0.1% beryllium by weight: Paragraph (h)(2)(i) and paragraph (h)(2)(ii), which require the employer to ensure that each employee removes all beryllium-contaminated personal protective clothing and equipment at the appropriate time and as specified in the written exposure control plan required by paragraph (f)(1); and paragraph (h)(2)(iii) and paragraph (h)(2)(iv), which require the employer to ensure that measures to prevent cross contamination between beryllium-contaminated personal protective clothing and equipment and street clothing are observed and that beryllium-contaminated personal protective clothing and equipment are not removed from the workplace. This proposal would also amends paragraph (h)(3)(ii), which requires the employer to ensure that beryllium is properly removed from PPE, by adding the term ''beryllium-contaminated'' so that this requirement would apply only where the contaminating material contains at least 0.1% beryllium by weight. The amended paragraph (h)(3)(ii) would read as follows: ''The employer must ensure that beryllium is not removed from beryllium-contaminated personal protective clothing and equipment by blowing, shaking, or any other means that disperses beryllium into the air.''

Similarly, this proposal's inclusion of the term ''contaminated with beryllium'' in (i)(3)(i)(B) and (i)(3)(ii)(B) clarifies OSHA's intent that those provisions,

[1] As explained in the preamble to the January 2017 rule, in industries that process or handle materials with only trace amounts of beryllium and that encounter exposures to beryllium above the action level, the PEL would ''be exceeded only during operations that generate [an] excessive amount of visible airborne dust.'' 82 FR 2583. OSHA therefore expects that if exposures in such a facility are below the PEL but above the AL, there is already at least one engineering or process control in place, so this requirement had no effect on primary aluminum production or coal-fired utilities. The 2017 FEA explained that this provision would only require additional controls in two job categories in two application groups, neither of which are in primary aluminum production or coal-fired utilities. (Document ID OSHA–H005C–2006–0870–2042, p. V–12).

which require employers to provide and ensure use of showers where employees' hair or body parts other than hands, face, and neck can reasonably be expected to become contaminated with beryllium, would not apply where the contaminating material contains less than 0.1% beryllium by weight.

The proposed adoption of the definition of ''beryllium-contaminated'' would further clarify the application of certain requirements that are meant to minimize re-entrainment of airborne beryllium and reduce the effect of dermal contact with beryllium. Specifically, it would clarify that paragraph (j)(2)(iii), which prohibits the use of compressed air for cleaning beryllium-contaminated surfaces except where used in conjunction with an appropriate ventilation system, and paragraph (j)(2)(iv), which requires the use of respiratory protection and PPE in accordance with paragraphs (g) and (h) of the standard when dry sweeping, brushing, or compressed air are used to clean beryllium-contaminated surfaces, do not apply where the contaminating material contains less than 0.1% beryllium by weight. OSHA does not expect the additional airborne exposure from dry brushing, sweeping, or using compressed air to significantly increase the levels of airborne exposure outside regulated areas when working with trace beryllium. This is because for trace beryllium to generate airborne exposures of concern, excessive amounts of dust would need to be generated, and this would not happen outside of regulated areas.

This proposal would also add the term ''beryllium-contaminated'' to certain requirements pertaining to eating and drinking areas to clarify that hygiene requirements in these areas apply only where materials containing more than 0.1% beryllium by weight may contaminate such areas. Paragraph (i)(4)(i), as amended by this proposal, would state that wherever the employer allows employees to consume food or beverages at a worksite where beryllium is present, the employer must ensure that ''[b]eryllium-contaminated surfaces in eating and drinking areas are as free as practicable of beryllium.'' Paragraph (i)(4)(ii), as amended by this proposal, would require employers to ensure that ''[n]o employees enter any eating or drinking area with beryllium-contaminated personal protective clothing or equipment unless, prior to entry, surface beryllium has been removed from the clothing or equipment by methods that do not disperse beryllium into the air or onto an employee's body.''

Definition of dermal contact with beryllium. To clarify OSHA's intent that requirements of the standard associated with dermal contact with beryllium should not apply to areas where there are no processes or operations involving materials at least 0.1% beryllium by weight, this proposal would also add a definition for dermal contact with beryllium. This new definition would provide: ''Dermal contact with beryllium means skin exposure to: (1) Soluble beryllium compounds containing beryllium in concentrations greater than or equal to 0.1 percent by weight; (2) solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight; or (3) dust, fumes, or mists containing beryllium in concentrations greater than or equal to 0.1 percent by weight.'' Accordingly, the proposed definition would clarify that paragraph (h)(1)(ii), which requires an employer to provide and ensure the use of personal protective clothing and equipment where there is a reasonable expectation of dermal contact with beryllium, applies only where contact may occur with materials containing at least 0.1% beryllium by weight. This definition would also clarify that the requirements related to dermal contact in the written exposure control plan, washing facilities, medical examinations, and training provisions only apply where contact may occur with materials containing at least 0.1% beryllium by weight.

Definition of emergency. This proposal also would clarify the definition of ''emergency'' in paragraph (b) of the beryllium standard published in January 2017. That paragraph defined an emergency as ''any uncontrolled release of airborne beryllium.'' This proposal would amend the definition as follows: ''Emergency means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which may or does result in an uncontrolled and unintended release of airborne beryllium that presents a significant hazard.'' This change would clarify the circumstances under which the provisions associated with emergencies should apply, including the requirements that employers provide and ensure employee use of respirators and that employers provide medical surveillance to employees exposed in an emergency. This proposed change is consistent with OSHA's intent as explained in the preamble to the 2017 final rule. 82 FR 2690 (''An emergency could result from equipment failure, rupture of containers, or failure of control equipment, among other causes.''). These examples show OSHA's intent to define an ''emergency'' as something unintended as well as uncontrolled, and including the examples in the new definition make that clear. It is also consistent with other OSHA standards, such as methylenedianiline (1910.1050), vinyl chloride (1910.1017), acrylonitrile (1910.1045), benzene (1910.1028), and ethylene oxide (1910.1047).

Disposal and recycling. Finally, this proposal would clarify the application of the disposal and recycling provisions. Paragraph (j)(3) of the beryllium standard published in January 2017 required employers to ensure that materials designated for disposal that contain or are contaminated with beryllium are disposed of in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of the standard. It also required that materials designated for recycling which contain or are contaminated with beryllium are cleaned to be as free as practicable of surface beryllium contamination and labeled in accordance with paragraph (m)(3) of the standard, or placed in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of the standard. These provisions were designed to protect workers from dermal contact with beryllium dust generated during processing, where there is a risk of beryllium sensitization. See 82 FR 2694, 2695. This proposal accordingly would limit those requirements to ''materials that contain beryllium in concentrations of 0.1 percent by weight or more or are contaminated with beryllium,'' consistent with OSHA's intention that provisions aimed at protecting workers from the effects of dermal contact do not apply in the case of materials containing only trace amounts of beryllium The hazard communication standard would continue to apply according to its terms. See 29 CFR 1910.1200.

V. Legal Considerations

The purpose of the Occupational Safety and Health Act of 1970) (''OSH Act''; 29 U.S.C. 651 *et seq.*) is ''to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources.'' 29 U.S.C. 651(b). To achieve this goal, Congress authorized the Secretary of Labor to promulgate and enforce occupational safety and health standards. 29 U.S.C. 655(b), 658. A safety or health standard is a standard that ''requires conditions, or the

adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment.'' 29 U.S.C. 652(8). A standard is reasonably necessary or appropriate when a significant risk of material harm exists in the workplace and the standard would substantially reduce or eliminate that workplace risk. See *Industrial Union Dept., AFL–CIO* v. *Am. Petroleum Inst.,* 448 U.S. 607, 641–42 (1980) (plurality opinion).

OSHA need not make additional findings on risk for this proposal. As discussed above, this proposal would not diminish the employee protections put into place by the standard being amended. And because OSHA previously determined that the beryllium standard substantially reduces a significant risk (82 FR 2545–52), it is unnecessary for the Agency to make additional findings on risk for the minor changes and clarifications proposed by this rulemaking. See, *e.g., Public Citizen Health Research Group* v. *Tyson,* 796 F.2d 1479, 1502 n.16 (DC Cir. 1986) (rejecting the argument that OSHA must ''find that each and every aspect of its standard eliminates a significant risk.'').

OSHA has determined that these minor changes and clarifications are technologically and economically feasible. All OSHA standards must be both technologically and economically feasible. See *United Steelworkers* v. *Marshall,* 647 F.2d 1189, 1264 (DC Cir. 1980) (''*Lead I*''). The Supreme Court has defined feasibility as ''capable of being done.'' *Am. Textile Mfrs. Inst.* v. *Donovan,* 452 U.S. 490, 509–10 (1981) (''*Cotton Dust*''). Courts have further clarified that a standard is technologically feasible if OSHA proves a reasonable possibility, ''within the limits of the best available evidence . . . that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations.'' *Lead I,* 647 F.2d at 1272. With respect to economic feasibility, courts have held that ''a standard is feasible if it does not threaten massive dislocation to or imperil the existence of the industry.'' *Id.* at 1265 (internal quotation marks and citations omitted). In the final economic analysis (FEA) for the 2017 beryllium rule, OSHA concluded that the rule was economically and technologically feasible. OSHA has preliminarily determined that this proposal is also economically and technologically feasible, because it does not impose any new requirements or costs.

VI. Preliminary Economic Analysis and Regulatory Flexibility Act Certification

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposal is not an ''economically significant regulatory action'' under Executive Order 12866, or a ''major rule'' under the Congressional Review Act (5 U.S.C. 801 *et seq.*), and its impacts do not trigger the analytical requirements of UMRA. Neither the benefits nor the costs of this proposal would exceed $100 million in any given year. This proposal would, however, result in a net cost savings for employers in primary aluminum production and coal-fired utilities, which are the only industries in General Industry covered by the 2017 Beryllium Final Rule that OSHA identified with operations involving materials containing only trace beryllium (less than 0.1% beryllium by weight).

Several calculations illustrate the expected cost savings. At a discount rate of 3 percent, this proposal would yield annualized cost savings of $0.36 million per year for 10 years. At a discount rate of 7 percent, this proposal would yield an annualized cost savings of $0.37 million per year for 10 years. These net cost savings amount to approximately 0.6 percent of the original estimated cost of the 2017 Beryllium Final Rule for General Industry at discount rates of either 3 or 7 percent; to approximately 5.3 percent of the original estimated cost of the 2017 Beryllium Final Rule for primary aluminum production and coal-fired utilities only at a discount rate of 3 percent and 5.2 percent of the original estimated cost of the 2017 Beryllium Final Rule for primary aluminum production and coal-fired utilities only at a discount rate of 7 percent.[2] Under a perpetual time horizon, the annualized cost savings of this proposal is $0.37 million at a discount rate of 7 percent.

[2] The original estimated cost of the 2017 beryllium final rule for General Industry, and separately for primary aluminum production and coal-fired utilities, was updated to 2017 dollars and additionally adjusted and corrected, as subsequently explained in the text.

1. Changes to the Baseline: Updating to 2017 Dollars and Removing Familiarization Costs

Because baseline costs typically reflect the costs of compliance *without* the changes set forth in an agency's action—in this case, the proposal—OSHA has revised the baseline costs, as displayed in the FEA in support of the beryllium standard of January 9, 2017, in two ways. First, OSHA updated the projected costs for general industry contained in the FEA that accompanied the rule from 2015 to 2017 dollars, using the latest Occupational Employment Statistics (OES) wage data (for 2016) and inflating them to 2017 dollars. Second, OSHA excluded certain familiarization costs, included in the cost estimates developed in the beryllium FEA for the 2017 Beryllium Final Rule, because OSHA expects that those costs have already been incurred by affected employers. Thus, the baseline costs for this Preliminary Economic Analysis (PEA) are the projected costs from the 2017 FEA, updated to 2017 dollars, less familiarization costs in the 2017 beryllium final rule (but including some new familiarization costs for employers to become familiar with the revised provisions). Throughout this analysis of costs and cost savings, the context is limited to employers in primary aluminum production and coal-fired utilities.

2. Discussion of Overhead Costs

As in the 2017 FEA, OSHA has not accounted for overhead labor costs in its analysis of the cost savings for this proposal due to concerns about consistency. There are several ways to look at the cost elements that fit the definition of overhead, and there is a range of overhead estimates currently used within the federal government—for example, the Environmental Protection Agency has used 17 percent,[3] and government contractors have been reported to use an average of 77 percent.[4] Some overhead costs, such as

[3] See Grant Thornton LLP. 2015 Government Contractor Survey (Document ID OSHA–H005C–2006–0870–2153). The application of this overhead rate was based on an approach used by the Environmental Protection Agency, as described in EPA's ''Wage Rates for Economic Analyses of the Toxics Release Inventory Program,'' June 10, 2002. This analysis itself was based on a survey of several large chemical manufacturing plants: Heiden Associates, Final Report: A Study of Industry Compliance Costs Under the Final Comprehensive Assessment Information Rule, Prepared for the Chemical Manufacturers Association, December 14, 1989.

[4] For further examples of overhead cost estimates, please see the Employee Benefits Security Administration's guidance at *https://www.dol.gov/sites/default/files/ebsa/laws-and-regulations/rules-and-regulations/technical-appendices/labor-cost-*

advertising and marketing, may be more closely correlated with output than with labor. Other overhead costs vary with the number of new employees. For example, rent or payroll processing costs may change little with the addition of 1 employee in a 500-employee firm, but may change substantially with the addition of 100 employees. If an employer is able to rearrange current employees' duties to implement a rule, then the marginal share of overhead costs, such as rent, insurance, and major office equipment (*e.g.,* computers, printers, copiers) would be very difficult to measure with accuracy.

If OSHA had included an overhead rate when estimating the marginal cost of labor, without further analyzing an appropriate quantitative adjustment, and adopted for these purposes an overhead rate of 17 percent on base wages, the cost savings of this proposal would increase to approximately $0.39 million per year, at discount rates of either 3 percent or 7 percent.[5] The addition of 17 percent overhead on base wages would therefore increase cost savings by approximately 7 percent above the primary estimate at either discount rate.

3. Cost Impact of the Changes to the Standard

OSHA preliminarily estimates a net cost savings from this proposal for employers at primary aluminum production and coal-fired utilities, which again are the only two industries identified in the 2017 FEA as having costs associated with exposure to trace beryllium materials.[6] Annualizing the present value of net cost savings over ten years, the result is an annualized net cost savings of $0.36 million per year at a discount rate of 3 percent, or $0.37 million per year at a discount rate of 7 percent. When the Department uses a perpetual time horizon, the annualized net cost savings of this proposal is $0.37 million at a discount rate of 7 percent.

The undiscounted cost savings by provision and year are presented below in Table 1, and the cost savings by provision and discount rate are shown below in Tables 2 and 3. As described elsewhere in this document, the cost savings described in this PEA reflect savings only for provisions covered by the changes in this proposal as well as added familiarization costs. OSHA estimated no cost savings for the PEL, respiratory protection, exposure assessment, regulated areas, medical surveillance, medical removal protection, written exposure control plan, or training provisions because the proposal would make no changes of substance to those provisions.

a. Beryllium work areas. OSHA is proposing to limit the definition of ''beryllium work area'' to any work area containing a process or operation ''that involves materials that contain at least 0.1% beryllium by weight. . . .'' OSHA has preliminarily determined that affected establishments in primary aluminum production and coal-fired utilities would thus no longer need to designate and demarcate beryllium work areas because their materials would not meet that threshold outside of the ''regulated areas'' in primary aluminum production where employee exposures to airborne beryllium would exceed the PEL. In its previous economic analysis, OSHA had estimated that each of the establishments in these categories required beryllium work areas in addition to ''regulated areas,'' which were costed separately. The removal of these beryllium work area designations results in an annualized cost savings of $12,913 using a 3 percent discount rate and $15,682 using a 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

b. Protective work clothing and equipment. OSHA is recognizing no cost savings in this proposal for the elimination of PPE requirements associated with dermal contact in coal-fired utilities. In its 2017 FEA, OSHA listed the PPE compliance rate for utility workers at coal-fired utilities at 75 percent and therefore estimated PPE costs for the residual 25 percent of utility workers in the industry (where airborne exposures exceed the PEL or STEL or where there is dermal contact with beryllium). But upon further review, OSHA has preliminarily determined that it should not have included those costs because affected employers in coal-fired utilities were already required to wear PPE under 29 CFR 1910.1018(j) to prevent skin and eye irritation from exposure to trace inorganic arsenic found in coal ash. As OSHA noted in its technological feasibility analysis, inorganic arsenic is often found in coal fly ash in ''concentrations 10 to 1,000 times greater than beryllium,'' fly ash is the primary source of beryllium exposure for employees in coal-fired utilities, and employers in this application group indicated that they were already following a majority of the provisions of the rule to comply with OSHA requirements for other hazardous substances, such as arsenic (p. IV–652). Thus, in all of the areas within a facility in which employees are likely to be exposed to beryllium, they are also likely to be exposed to concentrations of arsenic significantly high so as to trigger the arsenic PPE requirements. Accordingly, coal-fired utility compliance rates with the PPE requirement for affected workers should have been 100 percent in the prior FEA, and no costs for PPE for these workers should have been included in OSHA's cost estimates. Because OSHA should not have included new beryllium PPE costs for this group, OSHA is recognizing no cost savings in this proposal for the elimination of PPE requirements associated with dermal contact in coal-fired utilities.

There are, however, some small PPE cost savings for primary aluminum production. The January 2017 rule requires employers to provide PPE in two situations: (1) Where airborne exposure exceeds, or can reasonably be expected to exceed, the TWA PEL or STEL; and (2) where there is a reasonable expectation of dermal contact with beryllium. 29 CFR 1910.1024(h)(1). It is the second of these two situations which OSHA believes will trigger cost savings. Because this proposal would clarify that ''dermal contact with beryllium'' does not include contact with beryllium in concentrations less than 0.1% beryllium by weight, gloves and other PPE requirements would be triggered by a reasonable expectation of dermal contact only with materials containing more than 0.1% beryllium by weight. In primary aluminum production, there is no dermal contact with materials containing beryllium above this threshold. As a result, the Agency has preliminarily determined that in primary aluminum production, additional PPE is only necessary for workers exposed over the PEL. This change results in an annualized cost savings for employers in primary aluminum production of $35,023 using

inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-august-2016.pdf.

[5] OSHA used an overhead rate of 17 percent on base wages in a sensitivity analysis in the FEA (OSHA–2010–0034–4247, p. VII–65) in support of the March 25, 2016 final respirable crystalline silica standards (81 FR 16286) and in the PEA in support of the June 27, 2017 proposed beryllium standards in construction and shipyard sectors (82 FR 29201).

[6] As noted in Section IV of this preamble, coverage of dermal contact with trace beryllium materials was an unintended consequence of OSHA's decision to cover airborne exposures to beryllium above the action level caused by operations that generate excessive amounts of dust from trace beryllium materials. Likewise, in the 2017 FEA supporting OSHA's Beryllium Final Rule, through an oversight, OSHA made no distinction between trace and non-trace beryllium materials when determining the cost of requirements triggered by dermal contact with beryllium. The cost savings generated by this PEA are a result of correcting these oversights.

a 3 or 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

c. Hygiene areas and practices. The proposed adoption of a definition for ''contaminated with beryllium'' would also reduce the costs of complying with the Hygiene Areas and Practices provision in primary aluminum production (the costs for coal-fired utilities would not be affected). The 2017 Final Beryllium Rule requires employers to provide showers where both of two conditions are met:

(A) Airborne exposure exceeds, or can reasonably be expected to exceed, the TWA PEL or STEL; and

(B) Beryllium can reasonably be expected to contaminate employees' hair or body parts other than hands, face, and neck.

29 CFR 1910.1024(i)(3)(i). By proposing to revise (B) to incorporate the newly defined term ''contaminated with beryllium,'' the condition in paragraph (B) would not be met in primary aluminum production because no employees in this application group can reasonably be expected to become ''contaminated with beryllium.'' Thus, the beryllium standard would not require employers in this application group to provide showers. Similarly, employers need not provide the estimated lower-cost alternative of head coverings, discussed in the 2017 FEA.[7] Removing the cost of head coverings for workers in this application group results in an annualized cost savings for employers in primary aluminum production of $415 using a 3 or 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3.

d. Housekeeping. Similar to the above discussion about PPE in coal-fired utilities, OSHA is recognizing no cost savings in this proposal for coal-fired utilities as a result of the modification of the housekeeping requirements. In the FEA in support of 2017 Beryllium Final Rule, the Agency listed the housekeeping compliance rate for affected workers at coal-fired utilities at 75 percent and therefore estimated housekeeping costs for the residual 25 percent of utility workers in a beryllium work area. But upon further review, OSHA has preliminarily determined that affected employers in coal-fired utilities were already required to perform comparable housekeeping duties under 29 CFR 1910.1018(k) to prevent accumulations of inorganic arsenic found in coal ash. Accordingly, coal-fired utility compliance rates with the housekeeping requirements for affected workers should have been 100 percent in the prior FEA, and no costs for housekeeping for these workers should have been included in OSHA's cost estimates. Consequently, OSHA is recognizing no cost savings in this proposal for coal-fired utilities as a result of the modification of the housekeeping requirements.

The proposed rule clarification also means that employers in primary aluminum production facilities would typically only be required to comply with the beryllium housekeeping provisions in ''regulated areas,'' which for cost purposes OSHA identified as employees exposed over the PEL in its exposure profile. There are several exceptions, none of which have a quantifiable impact on costs: employers in this industry would still need to follow the housekeeping requirements when cleaning up spills and emergency releases of beryllium (paragraph (j)(1)(ii)), handling and maintaining cleaning equipment (paragraph (j)(2)(v)), and when necessary to reduce some workers exposures below the PEL (serving as an engineering control to prevent over-exposure to beryllium within regulated areas or the need for regulated areas). OSHA did not identify separate costs in its prior FEA for this use of housekeeping as a form of engineering control and does not do so here. Thus, for cost calculation purposes in this new PEA, OSHA removed housekeeping costs for all employees exposed below the PEL in its exposure profile. This proposed change results in an annualized cost savings for employers in primary aluminum production of $323,664 using a 3 percent discount rate and $330,324 using a 7 percent discount rate. Annualized costs by provision and discount rate can be seen below in Tables 2 and 3. OSHA believes that these estimated cost savings might be slightly overstated to the extent that some housekeeping outside of the regulated areas would still be needed to perform an engineering-control function in some facilities, but the Agency is unable to quantify them now because of the variability among facilities and controls that employers may implement to comply with the standard.

e. Additional familiarization. In the FEA in support of OSHA's 2017 Beryllium Final Rule, the Agency determined that employers would need to spend time familiarizing themselves with the rule and allocated 4, 8, and 40 hours, depending on establishment size (fewer than 20 employees, between 20 and 499 employees, and 500 or more employees, respectively). OSHA has similarly preliminarily determined that establishments would need to spend time familiarizing themselves with this proposal. As the affected provisions in this proposal are only a fraction of all the provisions in the 2017 final rule and would not require any new actions on the part of employers, the Agency has estimated familiarization time of 2, 4, and 20 hours per employer, depending on establishment size, for a supervisor to review the changes to the beryllium rule reflected in this proposal. This results in an annualized cost of $9,404 using a 3 percent discount rate and $11,421 using a 7 percent discount rate. Annualized costs by provision and discount rate—3 and 7 percent—can be seen below in Tables 2 and 3, respectively.

f. Unchanged provisions. As discussed earlier, this proposal would primarily serve to clarify OSHA's intent with respect to certain terms and requirements in OSHA's 2017 beryllium general industry standard. These proposed changes largely deal with clarifying the application of various requirements to trace beryllium. The triggers for most provisions in the standard—the PEL, respiratory protection, exposure assessment, regulated areas, medical surveillance, medical removal protection, written exposure control plan, and training provisions[8]—are determined by factors other than beryllium concentration and would be unchanged by this proposal. Similarly, the revised definition of ''emergency'' in this proposal would not affect the costs estimated for the other provisions in the standard.

4. Economic and Technological Feasibility

In the FEA for the 2017 beryllium standard, OSHA concluded that the rule was economically and technologically feasible. This proposal would not impose any new requirements and has the net impact of removing a small amount of cost, so OSHA has preliminarily determined that this proposed rule is also economically and technologically feasible.

5. Effects on Benefits

This proposal would clarify aspects of the 2017 general industry beryllium standard to address unintended

[7] In the previous FEA, OSHA had included costs for head coverings in lieu of showers, reasoning that employees could avoid the need for showers because the head coverings and other PPE would prevent their hair or body parts from becoming contaminated with beryllium.

[8] While the proposed changes in the standard do not mandate any additional employee training, OSHA notes that it had previously accounted for costs of annual re-training required by the standard (Document ID OSHA–H005C–2006–0870–2042, p. V–221).

consequences regarding the applicability of provisions designed to protect workers from dermal contact with beryllium-containing materials and trace amounts of beryllium. This proposal would make clear that OSHA did not, and does not, intend to apply the provisions aimed at protecting workers from the effects of dermal contact to industries that only work with beryllium in trace amounts where there is limited or no airborne exposure. In the prior FEA, OSHA did not identify any quantifiable benefits from avoiding beryllium sensitization from dermal contact (see discussion at p. VII–16 through VII–18). Thus, the revisions in this proposal, which are focused on dermal contact, would not have any impact on OSHA's previous benefit estimates.

6. Regulatory Flexibility Act Certification

This proposal would result in cost savings for affected small entities, and those savings fall below levels that could be said to have a significant positive economic impact on a substantial number of small entities.[9] Therefore, OSHA preliminarily certifies that this proposal would not have a significant impact on a substantial number of small entities.

TABLE 1—TOTAL UNDISCOUNTED NET COST SAVINGS OF THE PROPOSED BERYLLIUM STANDARD BY YEAR
[2017 Dollars]

Application Group	Year									
	1	2	3	4	5	6	7	8	9	10
Aluminum Production	$613,367	$328,053	$328,053	$328,053	$328,053	$328,053	$328,053	$328,053	$328,053	$328,053
Coal Fired Utilities	9,461	0	0	0	0	0	0	0	0	0
Total	622,828	328,053	328,053	328,053	328,053	328,053	328,053	328,053	328,053	328,053

[9] OSHA investigated whether the projected cost savings would exceed 1 percent of revenues or 5 percent of profits for small entities and very small entities for every industry. To preliminarily determine if this was the case, OSHA returned to its original regulatory flexibility analysis (in the 2017 FEA) for small entities and very small entities. OSHA found that the cost savings of this proposal are such a small percentage of revenues and profits for every affected industry that OSHA's criteria would not be exceeded for any industry.

VII. OMB Review Under the Paperwork Reduction Act of 1995

This proposal contains no information collection requirements subject to OMB approval under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* and its implementing regulations at 5 CFR part 1320. The PRA defines a *collection of information* as *the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public of facts or opinions by or for an agency regardless of form or format.* See 44 U.S.C. 3502(3)(A). While not affected by this rulemaking, the Department has cleared information collections related to occupational exposure to beryllium standards—general industry, 29 CFR 1910.1024; construction, 29 CFR 1926.1124; and shipyards, 29 CFR 1915.1024—under control number 1218–0267. The existing approved information collections are unchanged by this rulemaking. The Department welcomes comments on this determination.

VIII. Federalism

OSHA reviewed this proposal in accordance with the Executive Order on Federalism (E.O. 13132, 64 FR 43255, August 10, 1999), which requires that Federal agencies, to the extent possible, refrain from limiting State policy options, consult with States prior to taking any actions that would restrict State policy options, and take such actions only when clear constitutional and statutory authority exists and the problem is national in scope. E.O. 13132 provides for preemption of State law only with the expressed consent of Congress. Any such preemption is to be limited to the extent possible.

Under Section 18 of the OSH Act, 29 U.S.C. 651 *et seq.,* Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards; States that obtain Federal approval for such a plan are referred to as ''State Plan States'' (29 U.S.C. 667). Occupational safety and health standards developed by State Plan States must be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. Subject to these requirements, State Plan States are free to develop and enforce under State law their own requirements for safety and health standards.

This proposal complies with E.O. 13132. In States without OSHA approved State Plans, Congress expressly provides for OSHA standards to preempt State occupational safety and health standards in areas addressed by the Federal standards. In these States, this proposal would limit State policy options in the same manner as every standard promulgated by OSHA. In States with OSHA approved State Plans, this rulemaking would not significantly limit State policy options.

IX. State Plan States

When Federal OSHA promulgates a new standard or more stringent amendment to an existing standard, the 28 States and U.S. Territories with their own OSHA approved occupational safety and health plans (''State Plan States'') must amend their standards to reflect the new standard or amendment, or show OSHA why such action is unnecessary, *e.g.,* because an existing State standard covering this area is ''at least as effective'' as the new Federal standard or amendment. 29 CFR 1953.5(a). The State standard must be at least as effective as the final Federal rule, must be applicable to both the private and public (State and local government employees) sectors, and must be completed within six months of the promulgation date of the final Federal rule. When OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plan States are not required to amend their standards, although the Agency may encourage them to do so. The 28 States and U.S. Territories with OSHA approved occupational safety and health plans are: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming; Connecticut, Illinois, Maine, New Jersey, New York, and the Virgin Islands have OSHA approved State Plans that apply to State and local government employees only.

This proposal would clarify requirements and address the unintended consequences associated with provisions intended to address the effects of dermal contact with beryllium as applied to trace beryllium. It would impose no new requirements. Therefore, no new State standards would be required beyond those already required by the promulgation of the January 2017 beryllium standard for general industry. State-Plan States may nonetheless choose to conform to these proposed revisions.

X. Unfunded Mandates Reform Act

OSHA reviewed this proposal according to the Unfunded Mandates Reform Act of 1995 (''UMRA''; 2 U.S.C. 1501 *et seq.*) and Executive Order 12875 (58 FR 58093). As discussed above in Section VI (''Economic Analysis and Regulatory Flexibility Certification'') of this preamble, the Agency preliminarily determined that this proposal would not impose significant additional costs on any private- or public-sector entity. Accordingly, this proposal would not require significant additional expenditures by either public or private employers.

As noted above under Section IX (''State-Plan States''), the Agency's standards do not apply to State and local governments except in States that have elected voluntarily to adopt a State Plan approved by the Agency. Consequently, this proposal does not meet the definition of a ''Federal intergovernmental mandate'' (see Section 421(5) of the UMRA (2 U.S.C. 658(5))). Therefore, for the purposes of the UMRA, the Agency certifies that this proposal would not mandate that State, local, or Tribal governments adopt new, unfunded regulatory obligations. Further, OSHA concludes that the rule would not impose a Federal mandate on the private sector in excess of $100 million (adjusted annually for inflation) in expenditures in any one year.

List of Subjects in 29 CFR Part 1910

Beryllium, General industry, Health, Occupational safety and health.

Signed at Washington, DC, on April 27, 2018.

Loren Sweatt,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

Proposed Amendments to Standards

For the reasons stated in the preamble, OSHA proposes to amend 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority section for subpart Z of part 1910 continues to read as follows:

Authority: 29 U.S.C. 653, 655, 657) Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Section 1910.1030 also issued under Pub. L. 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 5101 *et seq.*

■ 2. Amend § 1910.1024 as follows:
■ a. Revise the definition of ''Beryllium work area'' in paragraph (b);
■ b. Add definitions for ''Contaminated with beryllium and beryllium-contaminated'' and ''Dermal contact with beryllium'' in alphabetical order in paragraph (b);
■ c. Revise the definition of ''Emergency'' in paragraph (b);
■ d. Revise paragraph (f)(2);
■ e. Revise paragraph (h)(3)(ii);
■ f. Revise paragraphs (i)(3)(i)(B), (i)(3)(ii)(B), (i)(4)(i) and (ii); and
■ g. Revise paragraphs (j)(1)(i), (j)(2)(i) and (ii), and (j)(3).

The revisions and additions read as follows:

§ 1910.1024 Beryllium.

* * * * *

(b) * * *

Beryllium work area means any work area:

(i) Containing a process or operation that can release beryllium and that involves material that contains at least 0.1 percent beryllium by weight; and

(ii) Where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level or where there is the potential for dermal contact with beryllium.

* * * * *

Contaminated with beryllium and beryllium-contaminated mean contaminated with dust, fumes, mists, or solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight.

Dermal contact with beryllium means skin exposure to:

(i) Soluble beryllium compounds containing beryllium in concentrations greater than or equal to 0.1 percent by weight;

(ii) Solutions containing beryllium in concentrations greater than or equal to 0.1 percent by weight; or

(iii) Dust, fumes, or mists containing beryllium in concentrations greater than or equal to 0.1 percent by weight.

* * * * *

Emergency means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which may or does result in an uncontrolled and unintended release of airborne beryllium that presents a significant hazard.

* * * * *

(f) * * *

(2) *Engineering and work practice controls.* (i) The employer must use engineering and work practice controls to reduce and maintain employee airborne exposure to beryllium to or below the PEL and STEL, unless the employer can demonstrate that such controls are not feasible. Wherever the employer demonstrates that it is not feasible to reduce airborne exposure to or below the PELs with engineering and work practice controls, the employer must implement and maintain engineering and work practice controls to reduce airborne exposure to the lowest levels feasible and supplement these controls using respiratory protection in accordance with paragraph (g) of this standard.

(ii) For each operation in a beryllium work area that releases airborne beryllium, the employer must ensure that at least one of the following is in place to reduce airborne exposure:

(A) Material and/or process substitution;

(B) Isolation, such as ventilated partial or full enclosures;

(C) Local exhaust ventilation, such as at the points of operation, material handling, and transfer; or

(D) Process control, such as wet methods and automation.

(iii) An employer is exempt from using the controls listed in paragraph (f)(2)(ii) of this standard to the extent that:

(A) The employer can establish that such controls are not feasible; or

(B) The employer can demonstrate that airborne exposure is below the action level, using no fewer than two representative personal breathing zone samples taken at least 7 days apart, for each affected operation.

* * * * *

(h) * * *

(3) * * *

(ii) The employer must ensure that beryllium is not removed from beryllium-contaminated personal protective clothing and equipment by blowing, shaking, or any other means that disperses beryllium into the air.

* * * * *

(i) * * *

(3) * * *

(i) * * *

(B) Employee's hair or body parts other than hands, face, and neck can reasonably be expected to become contaminated with beryllium.

(ii) * * *

(B) The employee's hair or body parts other than hands, face, and neck could reasonably have become contaminated with beryllium.

(4) * * *

(i) Beryllium-contaminated surfaces in eating and drinking areas are as free as practicable of beryllium;

(ii) No employees enter any eating or drinking area with beryllium-contaminated personal protective clothing or equipment unless, prior to entry, surface beryllium has been removed from the clothing or equipment by methods that do not disperse beryllium into the air or onto an employee's body; and

* * * * *

(j) * * *

(1) * * *

(i) The employer must maintain all surfaces in beryllium work areas and regulated areas as free as practicable of beryllium and in accordance with the written exposure control plan required under paragraph (f)(1) and the cleaning methods required under paragraph (j)(2) of this standard; and

* * * * *

(2) * * *

(i) The employer must ensure that surfaces in beryllium work areas and regulated areas are cleaned by HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure.

(ii) The employer must not allow dry sweeping or brushing for cleaning surfaces in beryllium work areas or regulated areas unless HEPA-filtered vacuuming or other methods that minimize the likelihood and level of airborne exposure are not safe or effective.

* * * * *

(3) *Disposal and recycling.* For materials that contain beryllium in concentrations of 0.1 percent by weight or more or are contaminated with beryllium, the employer must ensure that:

(i) Materials designated for disposal are disposed of in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of this standard; and

(ii) Materials designated for recycling are cleaned to be as free as practicable of surface beryllium contamination and labeled in accordance with paragraph (m)(3) of this standard, or place in sealed, impermeable enclosures, such as bags or containers, that are labeled in accordance with paragraph (m)(3) of this standard.

* * * * *

[FR Doc. 2018–09307 Filed 5–4–18; 8:45 am]

BILLING CODE 4510–26–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R03–OAR–2017–0601; FRL–9977–42—Region 3]

Approval and Promulgation of Air Quality Implementation Plans; Virginia; Regional Haze Plan and Visibility for the 2010 Sulfur Dioxide and 2012 Fine Particulate Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; supplemental.

SUMMARY: The Environmental Protection Agency (EPA) is issuing a supplement to its March 1, 2018 proposed approval of the Commonwealth of Virginia's (the Commonwealth or Virginia) request to change reliance on the Clean Air Interstate Rule (CAIR) to reliance on the Cross-State Air Pollution Rule (CSAPR) to address certain regional haze requirements and to convert the Agency's limited approval/limited disapproval of Virginia's regional haze SIP to a full approval. EPA's March 1, 2018 notice of proposed rulemaking (NPR) also proposed to approve the ''visibility element'' of Virginia's infrastructure SIP submittals for the 2010 sulfur dioxide (SO_2) and 2012 fine particulate matter ($PM_{2.5}$) national ambient air quality standards (NAAQS). This supplemental proposal clarifies the infrastructure elements the Agency is proposing to approve for the 2010 SO_2 National Ambient Air Quality Standards (NAAQS) and proposes to remove EPA's June 7, 2012 federal implementation plan (FIP) for Virginia which replaced reliance on CAIR with reliance on CSAPR to address certain deficient regional haze requirements identified in the Commonwealth's regional haze state implementation plan (SIP). EPA is seeking comment only on the issues raised in this supplemental proposal and is not reopening for comment other issues raised in its prior proposal. This action is being taken under the Clean Air Act (CAA).

DATES: Written comments must be received on or before June 6, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R03–OAR–2017–0601 at *http://www.regulations.gov,* or via email to *spielberger.susan@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Ellen Schmitt, (215) 814–5787, or by email at *schmitt.ellen@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On July 16, 2015, the Virginia Department of Environmental Quality (VA DEQ) submitted a revision to the Virginia SIP to update its regional haze plan to change reliance from CAIR to CSAPR and to meet visibility requirements in section 110(a)(2)(D) of the CAA. On March 1, 2018 (83 FR 8814), EPA published a notice of proposed rulemaking (March 1, 2018 NPR) proposing to take the following actions: (1) Approve Virginia's July 16, 2015 SIP submission that changes reliance on CAIR to reliance on CSAPR for certain elements of Virginia's regional haze program; (2) convert EPA's limited approval/limited disapproval of Virginia's regional haze program to a full approval; and (3) approve the prong 4 portions of Virginia's June 18, 2014 infrastructure SIP submission for the 2010 SO_2 NAAQS and of its July 16, 2015 infrastructure SIP submission for the 2012 $PM_{2.5}$ NAAQS. EPA is not reopening the public comment period to submit comment on the issues addressed in the March 1, 2018 NPR.

II. Specific Issues Addressed in This Supplemental NPR

Removal of Partial Regional Haze FIP

On June 7, 2012, EPA finalized a limited approval and a limited disapproval of several SIP revisions submitted by VA DEQ meant to address regional haze program requirements.[1] The limited disapproval of these SIP revisions was based upon Virginia's reliance on CAIR as an alternative to best available retrofit technology (BART) and as a measure for reasonable progress. To address deficiencies in CAIR-dependent regional haze SIPs for several states, including Virginia, EPA promulgated FIPs that replace reliance on CAIR with reliance on CSAPR to meet BART and reasonable progress requirements in Virginia and other states in that same action. Consequently, for these states, this particular aspect of their regional haze requirements was satisfied by a FIP (hereafter referred to as partial RH FIP). On July 16, 2015, the Commonwealth of Virginia submitted a SIP revision changing its reliance from CAIR to CSAPR in its SIP to meet BART for visibility purposes and for addressing reasonable progress requirements, thereby removing Virginia's need for the partial RH FIP.

In its March 1, 2018 NPR, EPA proposed to approve the July 16, 2015 SIP revision which would change Virginia's reliance upon CAIR to reliance upon CSAPR for the BART and reasonable progress elements of Virginia's regional haze program. EPA also proposed to convert EPA's limited approval/limited disapproval of Virginia's regional haze program to a full approval based on Virginia's SIP revision changing reliance upon CAIR to reliance upon CSAPR. In this action, EPA proposes to remove the Agency's partial RH FIP for Virginia which replaced reliance on CAIR with reliance on CSAPR to address certain deficient regional haze requirements identified in the Commonwealth's regional haze SIP. EPA's proposed action to remove this FIP for Virginia is in accordance with section 110(l) of the CAA and will not impact any regional requirements as Virginia will have, when this action is final, a fully approved regional haze program and the ability to rely on CSAPR for certain regional haze requirements, incorporated in its SIP.

Section 110(a)(2)(J) Visibility Requirement

The CAA requires states to submit, within three years after promulgation of a new or revised NAAQS, SIP revisions meeting the applicable elements of sections 110(a)(1) and (2). SIP revisions that are intended to meet the requirements of section 110(a) of the CAA are often referred to as

[1] 77 FR 33643. Virginia's SIP revisions are dated July 17, 2008, March 6, 2009, January 14, 2010, October 4, 2010, November 19, 2010, and May 6, 2011.

infrastructure SIPs and the elements under 110(a) are referred to as infrastructure requirements. EPA acted on the majority of the infrastructure elements within Virginia's infrastructure SIP submittals for the 2010 SO_2 and 2012 $PM_{2.5}$ NAAQS, but concluded that it would take separate action on 110(a)(2)(J) for visibility for 2010 SO_2 as well as on 110(a)(2)(D)(i)(II) for visibility (also known as prong 4) for both the 2010 SO_2 and 2012 $PM_{2.5}$.[2] [3]

In its March 1, 2018 NPR, EPA proposed to approve prong 4 for both the 2010 SO_2 and 2012 $PM_{2.5}$ NAAQS,[4] however the Agency did not address section 110(a)(2)(J) of the CAA as it relates to visibility protection. For this section, EPA recognizes that states are subject to visibility and regional haze program requirements under part C of the CAA. In the event of the establishment of a new NAAQS, the visibility and regional haze program requirements under part C do not change. Therefore, when EPA took action on Virginia's infrastructure SIP submittal for the 2010 SO_2 NAAQS,[5] the Agency could have approved 110(a)(2)(J) for visibility; however, it inadvertently neglected to do so at that time. EPA is now taking action to remedy this unintentional omission by proposing approval of Virginia's June 18, 2014 infrastructure SIP submittal for the 2010 SO_2 NAAQS specifically for section 110(a)(2)(J) for visibility as well as for prong 4 which we proposed for approval on March 1, 2018.

EPA is soliciting comments on the specific issues discussed in this document referring to the proposed: (1). Removal of the partial regional haze FIP which replaced reliance on CAIR with reliance on CSPAR to address certain regional haze requirements as finalizing our March 1, 2018 NPR will give Virginia's regional haze SIP full approval; and (2). approval of Virginia's June 18, 2014 infrastructure SIP submittal for the 2010 SO_2 NAAQS section 110(a)(2)(J) for visibility (in addition to approval for 110(a)(2)(D)(i)(II)). These comments and those received during the comment period for the March 1, 2018 NPR will be considered before taking final action.

III. Proposed Action

EPA is proposing removal of the partial regional haze FIP which replaced reliance on CAIR with reliance on CSPAR to address certain regional haze requirements and approval of Virginia's June 18, 2014 infrastructure SIP submittal for the 2010 SO_2 NAAQS for section 110(a)(2)(J) for visibility.

IV. General Information Pertaining to SIP Submittals From the Commonwealth of Virginia

In 1995, Virginia adopted legislation that provides, subject to certain conditions, for an environmental assessment (audit) ''privilege'' for voluntary compliance evaluations performed by a regulated entity. The legislation further addresses the relative burden of proof for parties either asserting the privilege or seeking disclosure of documents for which the privilege is claimed. Virginia's legislation also provides, subject to certain conditions, for a penalty waiver for violations of environmental laws when a regulated entity discovers such violations pursuant to a voluntary compliance evaluation and voluntarily discloses such violations to the Commonwealth and takes prompt and appropriate measures to remedy the violations. Virginia's Voluntary Environmental Assessment Privilege Law, Va. Code Sec. 10.1–1198, provides a privilege that protects from disclosure documents and information about the content of those documents that are the product of a voluntary environmental assessment. The Privilege Law does not extend to documents or information that: (1) Are generated or developed before the commencement of a voluntary environmental assessment; (2) are prepared independently of the assessment process; (3) demonstrate a clear, imminent and substantial danger to the public health or environment; or (4) are required by law.

On January 12, 1998, the Commonwealth of Virginia Office of the Attorney General provided a legal opinion that states that the Privilege law, Va. Code Sec. 10.1–1198, precludes granting a privilege to documents and information ''required by law,'' including documents and information ''required by federal law to maintain program delegation, authorization or approval,'' since Virginia must ''enforce federally authorized environmental programs in a manner that is no less stringent than their federal counterparts. . . .'' The opinion concludes that ''[r]egarding § 10.1–1198, therefore, documents or other information needed for civil or criminal enforcement under one of these programs could not be privileged because such documents and information are essential to pursuing enforcement in a manner required by federal law to maintain program delegation, authorization or approval.''

Virginia's Immunity law, Va. Code Sec. 10.1–1199, provides that ''[t]o the extent consistent with requirements imposed by federal law,'' any person making a voluntary disclosure of information to a state agency regarding a violation of an environmental statute, regulation, permit, or administrative order is granted immunity from administrative or civil penalty. The Attorney General's January 12, 1998 opinion states that the quoted language renders this statute inapplicable to enforcement of any federally authorized programs, since ''no immunity could be afforded from administrative, civil, or criminal penalties because granting such immunity would not be consistent with federal law, which is one of the criteria for immunity.''

Therefore, EPA has determined that Virginia's Privilege and Immunity statutes will not preclude the Commonwealth from enforcing its regional haze program consistent with the federal requirements. In any event, because EPA has also determined that a state audit privilege and immunity law can affect only state enforcement and cannot have any impact on federal enforcement authorities, EPA may at any time invoke its authority under the CAA, including, for example, sections 113, 167, 205, 211 or 213, to enforce the requirements or prohibitions of the state plan, independently of any state enforcement effort. In addition, citizen enforcement under section 304 of the CAA is likewise unaffected by this, or any, state audit privilege or immunity law.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *http://www2.epa.gov/laws-regulations/laws-and-executive-orders.*

- Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and

[2] On March 4, 2015 (80 FR 11557), EPA approved portions of Virginia's June 18, 2014 submittal for the 2010 SO_2 NAAQS addressing the following: CAA section 110(a)(2)(A), (B), (C), (D)(i)(II) for prevention of significant deterioration, (D)(ii), (E), (F), (G), (H), (J) (consultation, public notification, and prevention of significant deterioration), (K), (L), and (M).

[3] On June 16, 2016 (81 FR 39208), EPA approved portions of Virginia's July 16, 2015 submittal for the 2012 $PM_{2.5}$ NAAQS addressing the following: CAA section 110(a)(2)(A), (B), (C), (D)(i)(II) for prevention of significant deterioration, (D)(ii), (E), (F), (G), (H), (J), (K), (L), and (M).

[4] In its analysis for the March 1, 2018 NPR, EPA proposed to find that if revisions to the Commonwealth's regional haze SIP were fully approved, then the prong 4 portions of Virginia's infrastructure SIP submittal for the 2010 SO_2 and 2012 $PM_{2.5}$ NAAQS meet applicable requirements of the CAA.

[5] *See* 80 FR 11557. (approving Virginia's June 18, 2014 submittal for the 2010 SO_2 NAAQS for CAA section 110(a)(2)(A), (B), (C), (D)(i)(II) for prevention of significant deterioration, (D)(ii), (E), (F), (G), (H), (J) (consultation, public notification, and prevention of significant deterioration), (K), (L), and (M)).

Regulatory Review. This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

• Paperwork Reduction Act (PRA). This action does not impose an information collection burden under the PRA. Therefore, its recordkeeping and reporting provisions do not constitute a ''collection of information'' as defined under 44 U.S.C. 3502(3) and 5 CFR 1320.3(c).

• Regulatory Flexibility Act (RFA). This action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities.

• Unfunded Mandates Reform Act (UMRA). This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments.

• Executive Order 13132: Federalism. This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

• Executive Order 13175: Consultation and Coordination with Indian Tribal Governments. This action does not have tribal implications, as specified in Executive Order 13175. It will not have substantial direct effects on any Indian tribes, on the relationship between the federal government and Indian tribes, or on the distribution of power and responsibilities between the federal government and Indian tribes. Thus, Executive Order 13175 does not apply to this action.

• Executive Order 13045: Protection of Children from Environmental Health Risks and Safety Risks. EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045.

The SIP is not approved to apply on any Indian reservation land as defined in 18 U.S.C. 1151 or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

In addition, pursuant to CAA section 307(d)(1)(B), EPA proposes to determine that this action is subject to the provisions of section 307(d). Section 307(d) establishes procedural requirements specific to certain rulemaking actions under the CAA. Pursuant to CAA section 307(d)(1)(B), the withdrawal of the provisions of the Virginia regional haze regional FIP that apply to changing reliance on CAIR to reliance on CSAPR to address certain deficient regional haze requirements is subject to the requirements of CAA section 307(d), as it constitutes a revision to a FIP under section 110(c) of the CAA. Furthermore, section 307(d)(1)(V) of the CAA provides that the provisions of section 307(d) apply to ''such other actions as the Administrator may determine.'' EPA proposes that the provisions of 307(d) apply to EPA's action on the Virginia SIP revision.

Withdrawal of Proposed Rules; Discontinuing Several Rulemaking Efforts Listed in the Semiannual Regulatory Agenda

AGENCY: Environmental Protection Agency (EPA).

ACTION: Withdrawal of proposed rules.

SUMMARY: EPA is withdrawing several proposed regulatory requirements described in the proposed rules identified in this document for which the Agency no longer intends to issue a final regulatory action. This document identifies the proposed rules and provides a brief explanation for the Agency's decision not to pursue a final action. The withdrawal of these proposed rules does not preclude the Agency from initiating the same or a similar rulemaking at a future date. It does, however, close out the entry for these rulemakings in EPA's Semiannual Regulatory Agenda. Should the Agency decide at some future date to initiate the same or similar rulemaking, it will add an appropriate new entry to EPA's Semiannual Regulatory Agenda to reflect the initiation of the action, and EPA will issue a new notice of proposed rulemaking.

DATES: As of May 7, 2018, the proposed rules published on November 23, 1994, at 59 FR 60519; November 23, 1994, at 59 FR 60525; June 26, 1996, at 61 FR 33260; and September 17, 1999, at 64 FR 50671, are withdrawn.

ADDRESSES: The docket for this action, identified under docket identification (ID) number EPA–HQ–OPPT–2012–0423, is available at *http://www.regulations.gov* or at the EPA Docket Center (EPA/DC), 1301 Constitution Ave. NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, for the OPP Docket it is (703) 305–5805, and the telephone number for the OPPT Docket is (202) 566–0280. For more information about the docket and instructions about visiting the EPA/DC, go to *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Angela Hofmann, Director, Regulatory Coordination Staff (7101M), Office of Chemical Safety and Pollution Prevention, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–0258; email address: *hofmann.angela@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Does this action apply to me?

This action is directed to the public in general, and may be of particular interest to those persons who follow proposed rules issued under the Toxic Substances Control Act (TSCA), the Federal Food, Drug, and Cosmetic Act (FFDCA), or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since others may also be interested, the Agency has not attempted to describe all the specific entities potentially interested.

II. Why is EPA issuing this withdrawal of proposed rules?

This document serves two purposes:

1. It announces to the public that EPA is withdrawing certain proposed rules

for which the Agency no longer intends to issue a final rule.

2. It officially terminates the ongoing rulemaking activities, which allows the Agency to close out the individual rulemaking entries for these actions that appear in EPA's Semiannual Regulatory Agenda.

All agencies publish Semiannual Regulatory Agendas describing regulatory actions they are developing or have recently completed. These agendas are published in the **Federal Register**, usually during the spring and fall of each year, as part of the Unified Agenda of Federal Regulatory and Deregulatory Actions (Semiannual Regulatory Agenda). The Agency publishes the EPA Semiannual Regulatory Agenda to update the public about: Regulations and major policies currently under development, reviews of existing regulations and major policies, and rules and major policies completed or canceled since the last Semiannual Regulatory Agenda.

The Semiannual Regulatory Agenda is often used as a tool to solicit interest and participation from stakeholders. As such, EPA believes that the public is best served by a Semiannual Regulatory Agenda that reflects active rulemaking efforts. The withdrawal of these inactive rulemaking efforts will streamline EPA's Semiannual Regulatory Agenda and allow the public to better identify and focus on those rulemaking activities that are active.

For the individual reasons described in this document, the Agency has decided not to complete these actions at this time. By withdrawing the proposed rules, the Agency is eliminating the pending nature of that regulatory action. Should the Agency determine to pursue anything in these areas in the future, it will create a new entry in EPA's Semiannual Regulatory Agenda and issue a new proposed rule.

III. Which proposed rules are being withdrawn?

This Unit identifies the proposed regulatory actions that are being withdrawn, provides a summary of what was proposed, and a brief explanation for the Agency's withdrawal. The ''RIN'' refers to the regulatory identification number assigned to the rulemaking effort in the Semiannual Regulatory Agenda.

A. Groundwater and Pesticide Management Plan Rule (PMP); RIN 2070–AC46

1. *What was proposed?* On June 26, 1996 (61 FR 33260; FRL–4981–9), EPA issued a proposed rule to implement a key component of the Agency's 1991 Pesticides and Ground Water Strategy, and it reflected many years of discussions and input from States and other stakeholders. Through the development and use of State Management Plans (SMPs), EPA proposed to restrict the use of certain pesticides by providing States with the flexibility to protect the ground water in the most appropriate way for local conditions. This approach capitalized on the most effective and efficient roles for State and Federal Government to collaborate in the protection of the nation's ground water resources. Using the proposed SMP approach, EPA proposed to restrict the legal sale and use of five pesticides that have been identified as either ''probable'' or ''possible'' human carcinogens—alachlor, atrazine, cyanazine, metolachlor, and simazine. Because of their potential to contaminate ground water, EPA had determined that these pesticides may cause unreasonable adverse effects on the environment in the absence of effective management measures provided by a SMP. The proposed rule announced that the labels of these pesticides would be changed to require use in accordance with an EPA-approved SMP, after a period of time allowed for development and approval of these SMPs. The proposed rule also contained proposed revisions to pesticide labeling regulations, in order to clarify general labeling requirements.

On February 23, 2000 (65 FR 8925; FRL–6491–1), EPA solicited public comments on additional information about metolachlor, which was one of the four pesticides in the proposed rule. In the proposed PMP rule, the Agency proposed, as a condition of continued use, that States and Tribes prepare chemical-specific management plans for four herbicides that have been shown to persist in the environment and leach to ground water, creating a potential unreasonable adverse effect on human health and the environment. Specifically, EPA sought comment on data provided to EPA pertaining to the products containing metolachlor, *S*-metolachlor, and *R*-metolachlor.

2. *Why is it being withdrawn*? Action on the proposal was delayed while the scope of the program described in the proposed rule was reconsidered to determine whether the program could be expanded to address water quality issues in addition to ground water, and to determine the best partnership approach to implementation. More important, the risk level associated with the named pesticides in the proposed rule was also reexamined as part of the FIFRA reregistration process concluded in 2006. As part of that process, EPA determined that all five of the chemicals identified in the SMP proposal met the ''no unreasonable adverse effects on the environment'' standard for FIFRA registration without the steps identified in the proposed rule. These reregistration determinations necessarily mean that the rule is unnecessary to prevent unreasonable adverse effects on the environment, and EPA is therefore withdrawing its proposed rule.

3. *Where can I get more information about this action?* The docket for this action is available under docket ID number OPP–36190.

B. Pesticides; Registration Requirements for Antimicrobial Pesticide Products; RIN 2070–AD14

1. *What was proposed?* On September 17, 1999, (64 FR 50671; FRL–5570–6), EPA issued a proposed rule to establish procedures for the registration of antimicrobial products, as well as implement certain new provisions of FIFRA, as amended by the Food Quality Protection Act (FQPA). In addition to registration procedures for antimicrobial products, EPA also proposed to establish labeling standards for antimicrobial public health products, which would ensure that these products are appropriately labeled for the level of antimicrobial activity they demonstrate; to modify its notification process for antimicrobial products to conform to the statutorily prescribed process; and to exempt certain antimicrobial products from FIFRA regulation. EPA proposed new procedures and provisions to streamline and improve the registration process, increase consistency and certainty for antimicrobial producers, reduce the timeframes for EPA decisions on antimicrobial registrations, increase public health protection by ensuring the continued efficacy of antimicrobial public health pesticides, and promote international harmonization efforts. EPA proposed to interpret the applicability of the new FIFRA definition of ''pesticide'' that excludes liquid chemical sterilants from FIFRA regulation and includes nitrogen stabilizers, and to describe requirements pertaining to use dilution labeling. EPA anticipated the proposed rule would provide technical, conforming and organizational changes to portions of its regulations on pesticide registration and labeling for clarity and understanding. On November 16, 1999, (64 FR 62145; FRL–6393–8), EPA extended the comment period for the original proposed rule.

2. *Why is it being withdrawn*? On December 14, 2001 (66 FR 64759; FRL–6752–1) EPA issued a final rule, entitled

''Pesticide Labeling and Other Regulatory Revisions,'' effective February 12, 2002, revising certain labeling regulations for pesticide products for clarity and published an interpretation of the FIFRA as it applies to nitrogen stabilizers. The final rule also revised regulations that contain statutory provisions excluding certain types of products from regulation as pesticides.

The Pesticide Registration Improvement Act (PRIA), which was enacted in 2003, reauthorized October 1, 2007, by the Pesticide Registration Improvement Renewal Act (PRIA 2), and reauthorized again on October 1, 2012 by the Pesticide Registration Improvement Act (PRIA 3), established deadlines and pesticide registration service fees for registration actions. The category of action, the amount of the pesticide registration service fee, and the corresponding decision review periods by year are prescribed in these statutes. These statutory enactments were intended to create a more predictable evaluation process for affected pesticide decisions, and couple the collection of individual fees with specific decision review periods. They also promote shorter decision review periods for reduced-risk applications. EPA now actively provides guidance for PRIA-driven streamlined regulatory determinations for most major pesticide registration actions that is applicable to all pesticide registration types, not just antimicrobial products. (see PRIA guidance *http://www.epa.gov/pesticides/regulating/fees/index.htm*).

The passage and implementation of PRIA and the implementation of the Agency's final rule regarding pesticide labeling and other regulatory revisions of December 14, 2001, have rendered the remainder of what was proposed in the proposed rule moot. For these reasons, EPA is withdrawing the remainder of what was proposed in its proposed rule.

3. *Where can I get more information about this action?* The docket for this action is available under docket ID number OPP–36190.

C. Plant-Incorporated Protectants (PIPs); Exemption for Those Derived Through Genetic Engineering From Sexually Compatible Plants; RIN 2070–AD55

1. *What was proposed?* On November 23, 1994 (59 FR 60519; FRL–4755–3) (when proposed, the RIN was 2070–AC02), EPA proposed to exempt from FIFRA regulation those plant-incorporated protectants (then called plant-pesticides) that are not likely to present new exposures to non-target organisms. This exemption was proposed based on the assumption that if a plant normally produces a pesticidal substance, organisms that normally come into contact with the plant have likely been exposed to the substance in the past, perhaps over long periods of time. No new exposures would be likely to occur, and based on long experience with plants in conventional agriculture, such PIPs would meet the FIFRA section 25(b)(2) exemption standard. In defining, for regulatory purposes, those substances for which no new exposures would occur, the Agency proposed to base its approach on the concept of sexual compatibility. Sexually compatible plants are more likely to share common traits than are unrelated plants. If the donor of the genetic material is sexually compatible with the recipient plant, it can be assumed that the genetic material is already present in the sexually compatible plant population and there would be no novel exposures. In the 1994 proposal, the proposed regulatory text did not specify how the genetic material of a plant-incorporated protectant or ''PIP'' could be moved from the donor to the sexually compatible recipient plant, whether through conventional breeding or genetic engineering techniques.

On July 19, 2001 (66 FR 37855; FRL–6760–4), EPA finalized part of its 1994 proposal thereby exempting certain plant-incorporated protectants moved among plants in a sexually compatible population. The 2001 rule defined sexually compatible as meaning a viable zygote is formed only through the union of two gametes through conventional breeding. EPA did not in 2001 finalize that part of the proposal dealing with PIPs moved among plants in a sexually compatible population through genetic engineering but rather requested additional public comment on the issues raised by scientific information discovered between 1994 in 2001, in 1994 in public comment, and by issues raised by the 2000 report of the National Academies of Science (NAS) National Research Council (NRC).

2. *Why is it being withdrawn?* EPA is withdrawing this proposed action because as the Agency's experience with PIPs and greater scientific knowledge have increased, it has become evident to the Agency that were EPA to pursue an exemption for certain PIPs moved among plants in sexually compatible populations through genetic engineering, more appropriate, scientifically current criteria for describing the exempted PIPs should be developed rather than relying on the criteria proposed in 1994.

In 2001, EPA concluded that a high probability exists that PIPs moved between plants in sexually compatible populations through conventional breeding would not present novel exposures to nontarget organisms. Notwithstanding that conclusion, EPA could not (with the same level of confidence) draw the same conclusion for PIPs moved between plants in sexually compatible plant populations through genetic engineering given the limitations of the modification techniques available at that time. In addition, EPA came to agree with the 2000 NRC report that recommended that ''[g]iven that transfer and manipulation of genes between sexually compatible plants could potentially result in adverse effects in some cases . . . EPA should reconsider its *categorical* exemption of *transgenic* [plant-incorporated protectants] derived from sexually compatible plants.'' (NRC 2000 at p. 131, emphasis in original). The NRC report pointed out for example that the Agency's proposed language would exempt genetic material moved among plants in sexually compatible populations through genetic engineering without taking into consideration whether the moved genetic material would be expressed in the same pattern and at the same levels as occurs naturally in the plant (NRC 2000 at p. 129). The proposal is not supported by a sufficient basis to finalize the proposed exemption, especially in light of the scientific developments that have taken place in the last decade.

Recently, newer, more precise techniques of genetic engineering have been developed based on scientific discoveries in genetics and molecular biology since the 1994 proposal and the 2001 rule were issued. These developments will allow the Agency to craft criteria that are scientifically more current and that more accurately describe the PIPs that would be exempted as well as procedures to better ensure that all the PIPs in an exempted category meet the FIFRA section 25(b)(2) exemption standard. Consequently, if EPA were to pursue such an exemption today, the Agency would issue a new proposed rule, based on knowledge of the types of products possible with the newest technology rather than issuing a final rule based on the previous proposals. Withdrawing the 1994 proposal does not preclude the Agency from initiating the same or similar regulatory action in the future. At that time, the Agency will initiate a new regulatory action and create a new entry for the Semiannual Regulatory Agenda. It is also worth noting that the Agency's proposal to exempt certain types of pesticide products from

regulation under FIFRA is entirely a discretionary action; there is no requirement in FIFRA that the Agency promulgate a regulation to exempt products that might satisfy the exemption standard in FIFRA section 25(b)(2). EPA is therefore withdrawing the remainder of this proposal.

3. *Where can I get more information about this action?* The docket for this action is available under docket ID number OPP–300369.

D. Plant-Incorporated Protectants (PIPs); Exemption for PIPs That Act by Primarily Affecting the Plant; RIN 2070–AD56

1. *What was proposed?* On November 23, 1994 (59 FR 60519; FRL–4755–3) (when proposed, the RIN was 2070–AC02), EPA proposed, under FIFRA section 25(b)(2), to exempt from most of the requirements of FIFRA those Plant-Incorporated Protectants (PIPs) (in 1994, PIPs were called plant-pesticides (see 59 FR 60525; November 23, 1994)) that act primarily by affecting the plant under the assumption that such PIPs are less likely to be directly toxic to either target pests or to nontarget organisms. The criteria proposed at 40 CFR 174.5(b)(2) describe PIPs that act primarily by affecting the plant as a pesticidal substance so that the target pest is inhibited from attaching to the plant, penetrating the plant, or invading the plant's tissue in at least one of three ways: (a) The pesticidal substance acts as a structural barrier to attachment of the pest to the host plant, a structural barrier to penetration of the pest into the host plant, or a structural barrier to spread of the pest in the host plant, for example, through the production of wax or lignin, or length of trichomes (plant hairs); (b) The pesticidal substance acts in the host plant to inactivate or resist toxins or other disease-causing substances produced by the target pest; or (c) The pesticidal substance acts by creating a deficiency of a plant nutrient or chemical component essential for pest growth on/in the host plant.

EPA also indicated in 1994 that it was considering whether to extend this exemption to include substances such as plant hormones, because plant hormones act within the plant to ''primarily affect the plant'' and do not act directly on a target pest.

On July 19, 2001 (66 FR 37855; FRL–6760–4), EPA reopened the comment period on the proposed exemption to allow the public an opportunity to comment on the information, analyses, and conclusions pertaining to PIPs that act primarily by affecting the plant in the report issued in 2000 by the NRC of the NAS entitled ''Genetically Modified Pest-Protected Plants: Science and Regulation'' (National Research Council. 2000. National Academies Press, Washington, DC), and to comment on several risk issues received in public comment on the 1994 proposal (59 FR 60525, November 23, 1994).

2. *Why is it being withdrawn*? Because of new scientific discoveries in the area of genetics and molecular biology the Agency has concluded that neither the original 1994 proposal nor the subsequent 2001 supplemental proposal present a sufficient basis for making the statutory finding required under FIFRA section 25(b)(2) to exempt this class of PIPs. Given the current state of genetic technology, it is possible that the exemption criteria set out in 1994 could exempt PIP products available today that pose different risks than the Agency envisioned when it initially proposed the criteria. In essence, the more limited technological capabilities and understanding of science in 1994 led EPA to propose criteria for a generic exemption that current technologies and scientific understanding have rendered inappropriate. While there may be some PIPs that act primarily by affecting the plant that would meet the FIFRA section 25(b)(2) standard for exemption, the Agency no longer considers its proposed criteria for a generic exemption to fairly restrict available products to only those that ''are of a character which is unnecessary to be subject to'' regulation under FIFRA. 7 U.S.C. 136w(b)(2). EPA is therefore withdrawing this proposal.

The decision to exempt pesticides under section 25(b) of FIFRA is entirely discretionary; there is no requirement that EPA promulgate pesticide exemptions. Withdrawing the proposal does not preclude the Agency from initiating regulatory action in the future for PIPs that act primarily by affecting the plant, *e.g.,* exempting on a case-by-case basis a PIP that acts primarily by affecting the plant when that PIP can be shown to meet the FIFRA section 25(b)(2) exemption standard. At that time, the Agency would initiate a new regulatory action and create a new entry for EPA's Semiannual Regulatory Agenda.

i. *Why the Proposed Exemption Criteria Would Exempt Pesticides that Do Not Meet FIFRA Section 25(b)(2) Safety Standard.* A number of advances in scientific knowledge accumulated since publication of the 1994 proposal to exempt PIPs that act primarily by affecting the plant have contributed to an understanding of how the proposed criteria would exempt from FIFRA requirements PIPs that do not meet the FIFRA 25(b)(2) exemption standard. For example, recent research into plant regulatory mechanisms, *e.g.,* the discovery of, and elucidation of the role of interfering RNAs (RNAi), in gene expression, not available at the time the 1994 proposal was published, contributed to the Agency's determination that the proposed exemption categories were constructed such that there are PIPs in the exempted categories that would not meet the FIFRA section 25(b)(2) standard. RNAi plays a key role in directing development of an organism, as well as controlling the various biological functions necessary to maintaining the life of an organism. RNAi is triggered by dsRNA, and while dsRNA can be native to the cell it can also be introduced from an external source. At the time the exemption was proposed, the role of dsRNA in controlling biological functions in the cell was unknown and the possibility that dsRNA could be introduced into the plant to affect the plant's behavior was not taken into consideration. Had such knowledge been available, the proposed criteria would have been based on substantively different logic.

ii. Consideration of the points made in the 2000 NRC Report. In withdrawing this proposal, EPA has also taken into consideration the points the 2000 NRC report made on the Agency's 1994 proposal to exempt from FIFRA requirements PIPs that act primarily by affecting the plant. The NRC report noted that the Agency's analysis did not consider all of the potential impacts on non-target species of all of the PIPs proposed for exemption, including the possibility that in some instances secondary metabolites affecting non-target organisms could be a by-product of a modification to create a PIP that acts primarily by affecting the plant. The NRC report concluded that based on its considerations a ''[C]ategorical exemption under FIFRA might not be scientifically justifiable'' (NRC 2000 at p. 133). Finally, the NRC report also cautioned the Agency that ''genetic changes that result in production of a specific plant protectant can result in production of biologically active compounds other than the intended plant protectants'' and cautioned that ''EPA should be aware of those unintended changes'' (NRC 2000 at p. 134). Upon further analysis, EPA has concluded that the generic criteria proposed in 1994 to allow exemption of PIPs, did not meet the FIFRA section 25(b)(2) exemption standard.

Given the large number of potential PIPs displaying a wide range of modes of action in the categories circumscribed by each of the proposed exemption

criteria, and advances in knowledge showing scientific concerns with the logic underpinning the criteria as constructed in 1994, the Agency cannot utilize the proposed criteria as a basis for this rulemaking. EPA is therefore withdrawing this proposal.

3. *Where can I get more information about this action?* The docket for this action is available under docket ID number OPP–300369. See also related dockets identified by the docket ID numbers OPP–300370 and OPP–300371.

Receipt of a Pesticide Petition Filed for Residues of Diquat in or on Crop Group 6C, Dried Shelled Pea and Bean (Except Soybean); Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; correction.

SUMMARY: EPA issued a notice in the **Federal Register** of September 15, 2017, announcing the initial filing of a pesticide petition requesting the establishment or modification of regulations for residues of pesticide chemicals in or on various commodities.

DATES: Comments must be received on or before June 6, 2018.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2017–0291, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Michael Goodis, Director, Registration Division (RD) (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through *regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *http://www.epa.gov/dockets/comments.html.*

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. What Does this Correction Do?

This notice is being issued to correct PP 7E8571. (EPA–HQ–OPP–2017–0291) in FR Doc. 2017–19692, published in the **Federal Register** of September 15, 2017 (82 FR 43352) (FRL–9965–43) is corrected as follows:

PP 7E8571. (EPA–HQ–OPP–2017–0291). Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419, requests to establish a tolerance in 40 CFR 180.226 for residues of the herbicide, diquat (6,7-dihydrodipyrido [1,2-a:2′1′-c] pyrazinediium), and its metabolites in or on Crop Group 6C, dried shelled pea and bean (except soybean) at 0.9 parts per million (ppm). The Method GRM012.03A is used to measure and evaluate the chemical residues of diquat dibromide in commodities. Contact: RD.

Authority: 21 U.S.C. 346a.

Dated: April 26, 2018.

Michael Goodis,

Director, Registration Division, Office of Pesticide Programs.

RIN 0906–AB18

340B Drug Pricing Program Ceiling Price and Manufacturer Civil Monetary Penalties Regulation

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice of proposed rulemaking; further delay of effective date.

SUMMARY: The Health Resources and Services Administration (HRSA) administers section 340B of the Public Health Service Act, referred to as the ''340B Drug Pricing Program'' or the ''340B Program.'' HHS is soliciting comments on further delaying the

effective date of the January 5, 2017, final rule that sets forth the calculation of the ceiling price and application of civil monetary penalties, and applies to all drug manufacturers that are required to make their drugs available to covered entities under the 340B Program. HHS proposes to further delay the effective date of the final rule published in the **Federal Register** from July 1, 2018, to July 1, 2019. HHS proposes this action to allow a more deliberate process of considering alternative and supplemental regulatory provisions and to allow for sufficient time for additional rulemaking.

DATES: Submit comments on or before May 22, 2018.

ADDRESSES: You may submit comments, identified by the Regulatory Information Number (RIN) 0906–AB18, by any of the following methods. Please submit your comments in only one of these ways to minimize the receipt of duplicate submissions.

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow instructions for submitting comments. This is the preferred method for the submission of comments.
- *Email: 340BCMPNPRM@hrsa.gov.* Include 0906–AB11in the subject line of the message.
- *Mail:* Office of Pharmacy Affairs (OPA), Healthcare Systems Bureau (HSB), Health Resources and Services Administration (HRSA), 5600 Fishers Lane, Mail Stop 08W05A, Rockville, MD 20857.

All comments submitted will be available to the public in their entirety. Please do not submit confidential commercial information or personally identifying information that you do not want in the public domain.

FOR FURTHER INFORMATION CONTACT: CAPT Krista Pedley, Director, OPA, HSB, HRSA, 5600 Fishers Lane, Mail Stop 08W05A, Rockville, MD 20857, or by telephone at 301–594–4353.

SUPPLEMENTARY INFORMATION:

I. Background

HHS published a notice of proposed rulemaking (NPRM) on June 17, 2015, to implement civil monetary penalties (CMPs) for manufacturers that knowingly and intentionally charge a covered entity more than the ceiling price for a covered outpatient drug; to provide clarity regarding the requirement that manufacturers calculate the 340B ceiling price on a quarterly basis; and to establish the requirement that a manufacturer charge $.01 (penny pricing) for each unit of a drug when the ceiling price calculation equals zero (80 FR 34583, June 17, 2015). After review of the initial comments, HHS reopened the comment period (81 FR 22960, April 19, 2016) to invite additional comments on the following areas of the NPRM: 340B ceiling price calculations that result in a ceiling price that equals zero (penny pricing); the methodology that manufacturers use when estimating the ceiling price for a new covered outpatient drug; and the definition of the ''knowing and intentional'' standard to be applied when assessing a CMP for manufacturers that overcharge a covered entity.

On January 5, 2017, HHS published a final rule in the **Federal Register** (82 FR 1210, January 5, 2017); comments from both the original comment period established in the NPRM and the reopened comment period announced in the April 19, 2016, notice were considered in the development of the final rule. The provisions of that final rule were to be effective March 6, 2017; however, HHS issued a subsequent final rule (82 FR 12508, March 6, 2017) delaying the effective date to March 21, 2017, in accordance with a January 20, 2017, memorandum from the Assistant to the President and Chief of Staff, titled ''Regulatory Freeze Pending Review.'' [1]

To provide affected parties sufficient time to make needed changes to facilitate compliance, and because questions were raised, HHS issued an interim final rule (82 FR 14332, March 20, 2017) to delay the effective date of the final rule to May 22, 2017. HHS solicited additional comments on whether that date should be further extended to October 1, 2017. After careful consideration of the comments received, HHS delayed the effective date of the January 5, 2017, final rule to October 1, 2017 (82 FR 22893, May 19, 2017).

HHS later solicited comment on delaying the effective date of the January 5, 2017, final rule to July 1, 2018 (82 FR 39553, August 21, 2017). After consideration of the comments received, HHS delayed the effective date of the January 5, 2017, final rule to July 1, 2018 (82 FR 45511, September 29, 2017).

II. Proposal To Delay the Effective Date of the Final Rule

HHS proposes to further delay the effective date of the January 5, 2017, final rule as HHS intends to engage in additional or alternative rulemaking on these issues, and as discussed in more detail on page 5, the Department believes it would be counterproductive to effectuate the final rule prior to issuance of additional or alternative rulemaking on these issues. HHS is in the process of developing new comprehensive policies to address the rising costs of prescription drugs. Those policies will address drug pricing in government programs, such as Medicare Parts B & D, Medicaid, and the 340B discount drug program. Accordingly, we are proposing to delay the effective date of the final rule entitled ''340B Drug Pricing Ceiling Price and Manufacturer Civil Monetary Penalties Regulation.'' See 82 FR 1210 (Jan. 5, 2017).

This rule is currently scheduled to go into effect on July 1, 2018; we are proposing to delay further the effective date to July 1, 2019. We do not believe that this delay will adversely affect any of the stakeholders in a meaningful way. The final rule implements both penny pricing and a provision in the Affordable Care Act contemplating civil money penalties for those who fail to provide the proper 340B discounts to covered entities. The so-called penny pricing provision would allow manufacturers to charge $0.01 for a drug with when the ceiling price calculation results in a zero amount. As discussed in the January 5, 2017 final rule, a small number of manufacturers have informed HHS over the last several years that they charge more than $0.01 for a drug with a ceiling price below $0.01. However, this is a long-standing HHS policy, and HHS believes the majority of manufacturers currently follow the practice of charging a $0.01. Therefore, the delay of this portion of the regulation would not result in a significant economic impact.

Delaying implementation of the 340B-specific CMPs should have no adverse effect given that other more significant remedies are available to entities that believe that they have not been provided the full discount that they are entitled to receive under the program. This proposed delay, though, will save the healthcare sector compliance costs, as described in the January 5, 2017 issuance of the final rule.

HHS believes that the proposed delay would allow necessary time to consider more fully the substantial questions of fact, law, and policy identified by the Department during its review of the rule pursuant to the aforementioned ''Regulatory Freeze Pending Review,'' memorandum. Requiring manufacturers to make targeted and potentially costly changes to pricing systems and business procedures to comply with a rule that is under further consideration would be disruptive.

[1] See: *https://www.whitehouse.gov/the-press-office/2017/01/20/memorandum-heads-executive-departments-and-agencies.*

As background, the January 20, 2017, Executive Order entitled, ''Minimizing the Economic Burden of the Patient Protection and Affordable Care Act Pending Repeal,'' specifically instructs HHS and all other heads of executive offices to utilize all authority and discretion available to delay the implementation of certain provisions or requirements of the Patient Protection and Affordable Care Act.[2] The January 5, 2017, final rule is based on changes made to the 340B Program by the Patient Protection and Affordable Care Act. HHS is proposing to further delay the effective date of the January 5, 2017, final rule to July 1, 2019, to more fully consider the regulatory burdens that may be posed by this final rule.

At this time, HHS seeks public comment regarding the impact of delaying the effective date of the final rule, published January 5, 2017, for an additional 12 months from the current effective date of July 1, 2018, to Ju1y 1, 2019, while a more deliberate rulemaking process is undertaken. HHS is soliciting public comments for a shortened 15-day period because parties have had ample opportunity to comment on the two prior delays of the effective date of the underlying 340B regulation, and the impact of this delay on the regulated community is de minimis. Given the prior opportunities to comment on the underlying proposed regulation and the delays, we do not envision receiving any novel comments. Moreover, we believe that the delay of the CMP authority can be issued without the opportunity for public comment because it delays the effective date of a regulatory restriction. HHS encourages all stakeholders to provide comments on this proposed rule.

III. Regulatory Impact Analysis

HHS has examined the effects of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 8, 2011), the Regulatory Flexibility Act (Pub. L. 96–354, September 19, 1980), the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866, 13563, and 13771

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 is supplemental to and reaffirms the principles, structures, and definitions governing regulatory review as established in Executive Order 12866, emphasizing the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) Having an annual effect on the economy of $100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities (also referred to as ''economically significant''); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. A regulatory impact analysis must be prepared for major rules with economically significant effects ($100 million or more in any one year), and a ''significant'' regulatory action is subject to review by the Office of Management and Budget (OMB).

HHS does not believe that the proposal to further delay the effective date of the January 5, 2017, final rule will have an economic impact of $100 million or more, and therefore, this NPRM has not been designated as an ''economically significant'' proposed rule under section 3(f)(1) of the Executive Order 12866. The economic impact of having no rule in place related to the policies addressed in the final rule is believed to be minimal.

Executive Order 13771, entitled Reducing Regulation and Controlling Regulatory Costs, was issued on January 30, 2017. This action's designation as regulatory or deregulatory will be discussed in the final rule and be informed by comments received in response to this proposed rule.

The Regulatory Flexibility Act (RFA)

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) and the Small Business Regulatory Enforcement and Fairness Act of 1996, which amended the RFA, require HHS to analyze options for regulatory relief for small businesses. If a rule has a significant economic effect on a substantial number of small entities, the Secretary must specifically consider the economic effect of the rule on small entities and analyze regulatory options that could lessen the impact of the rule. HHS will use an RFA threshold of at least a 3 percent impact on at least 5 percent of small entities.

For purposes of the RFA, HHS considers all health care providers to be small entities either by meeting the Small Business Administration (SBA) size standard for a small business, or by being a nonprofit organization that is not dominant in its market. The current SBA size standard for health care providers ranges from annual receipts of $7 million to $35.5 million. As of January 1, 2018, over 12,800 covered entities participate in the 340B Program, representing safety-net health care providers across the country. HHS has determined, and the Secretary certifies, that this proposed rule would not have a significant impact on the operations of a substantial number of small manufacturers; therefore, we are not preparing an analysis of impact for this RFA. HHS estimates that the economic impact on small entities and small manufacturers would be minimal. HHS welcomes comments concerning the impact of this proposed rule on small manufacturers.

Unfunded Mandates Reform Act

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing ''any rule that includes any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year.'' In 2017, the threshold level was approximately $148 million. HHS does not expect this rule to exceed the threshold.

Executive Order 13132—Federalism

HHS has reviewed this proposed rule in accordance with Executive Order 13132 regarding federalism, and has determined that it does not have ''federalism implications.'' This proposed rule would not ''have substantial direct effects on the States, or on the relationship between the national government and the States, or on the distribution of power and

[2] See: *https://www.gpo.gov/fdsys/pkg/FR-2017-01-24/pdf/2017-01799.pdf.*

responsibilities among the various levels of government.''

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that OMB approve all collections of information by a federal agency from the public before they can be implemented. This proposed rule is projected to have no impact on current reporting and recordkeeping burden for manufacturers under the 340B Program. This proposed rule would result in no new reporting burdens. Comments are welcome on the accuracy of this statement.

Dated: May 1, 2018.

George Sigounas,

Administrator, Health Resources and Services Administration.

Approved: May 2, 2018.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

BILLING CODE 4165–15–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 0, 2, 90

[WP Docket No. 07–100; FCC 18–33]

4.9 GHz Band

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In 2002, the Commission allocated the 4940–4990 MHz (4.9 GHz) band for fixed and mobile use and designated the band for public safety broadband communications. Since then, the band has experienced relatively light usage compared to the heavy use of other public safety bands. In this document, the Commission proposes several rule changes and seeks comment on alternatives with the goal of promoting increased public safety use of the band while opening up the spectrum to additional uses that will encourage a more robust market for equipment and greater innovation. The Commission proposes rules on channel aggregation, aeronautical mobile use, frequency coordination, site-based licensing, regional planning, and technical rule changes with the goal of promoting increased use of the band. The Commission seeks comment on alternatives such as expanding eligibility, spectrum leasing, sharing, and redesignating the band for commercial use.

DATES: Submit comments on or before July 6, 2018. Submit reply comments August 6, 2018.

ADDRESSES: You may submit comments, identified by WP Docket No. 07–100 by any of the following methods:

- *Federal Communications Commission's website: http://apps.fcc.gov/ecfs/.* Follow the instructions for submitting comments.
- *Mail:* U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW, Washington, DC 20554. Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- *Hand or Messenger Delivery:* 445 12th St., SW, Room TW–A325, Washington, DC 20554.
- *People with Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: *FCC504@fcc.gov* or phone: 202–418–0530 or TTY: 202–418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Thomas Eng, Policy and Licensing Division, Public Safety and Homeland Security Bureau, Federal Communications Commission, 445 12th Street SW, Washington, DC 20554, at (202) 418–0019, TTY (202) 418–7233, or via email at *Thomas.Eng@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Sixth Further Notice of Proposed Rulemaking (*Sixth FNPRM*) in WP Docket No. 07–100, adopted on March 22, 2018 and released as FCC 18–33 on March 23, 2018. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street SW, Room CY–A257, Washington, DC 20554. Alternative formats (computer diskette, large print, audio cassette, and Braille) are available to persons with disabilities or by sending an email to *FCC504@fcc.gov* or calling the Consumer and Governmental Affairs Bureau at (202) 418–0530, TTY (202) 418–0432. This document is also available on the Commission's website at *http://www.fcc.gov.*

Comments

Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). See *Electronic Filing of Documents in Rulemaking Proceedings,* 63 FR 24121, May 1 (1998).

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *http://apps.fcc.gov/ecfs/.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St., SW, Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of *before* entering the building.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street, SW, Washington DC 20554.

Introduction

The Commission has allocated and designated 50 megahertz of spectrum in the 4.9 GHz band (4940–4990 MHz) to public safety. Although nearly 90,000 public safety entities are eligible under our rules to obtain licenses in the band, there were only 2,442 licenses in use in 2012 and only 3,174 licenses in use nearly six years later in 2018. With no more than 3.5% of potential licensees using the band, we remain concerned that, as the Commission stated in 2012, the band has ''fallen short of its potential.''

Public safety entities have offered several reasons why the band has seen less use than expected. One reason cited is the difficulty of acquiring equipment and the cost of deployment. According

to the Association of Public-Safety Communications Officials International's (APCO) 4.9 GHz Task Force Report (APCO Report), ''the public safety user community remains small relative to the greater consumer marketplace,'' which ''has historically resulted in a limited vendor ecosystem, specialized devices, and higher costs.'' We also believe that a lack of available equipment for mobile applications has impeded widespread use of the band by public safety. The National Public Safety Telecommunications Council (NPSTC) has argued that interference concerns have also suppressed use of the 4.9 GHz band. In its 4.9 GHz NPSTC Plan Recommendations Final Report (NPSTC Plan), NPSTC notes that because the Commission's current rules ''allow geographically based licensing with little documentation on system design and transmitter location,'' public safety ''contemplating new service in this band cannot determine if other agencies in their area might cause harmful interference today or in the future.''

In this *Sixth FNPRM,* we seek comment on several alternatives to stimulate expanded use of and investment in the 4.9 GHz band, drawing on comments in the record as well as the NPSTC Plan submitted in 2013 and the APCO Report submitted in 2015. Our goal is to ensure that public safety continues to have priority in the band while opening up the band to additional uses that will facilitate increased usage, including more prominent mobile use, and encourage a more robust market for equipment and greater innovation, while protecting primary users from harmful interference. We believe that with an appropriate sharing mechanism in place, which we discuss in further detail below, our proposed approach will promote more opportunistic use of the 4.9 GHz band without compromising the integrity and security of public safety operations.

Background

In June 2012, the Commission released the Fifth Further Notice of Proposed Rulemaking (*Fifth FNPRM)* in which it sought comment on rule changes intended to establish frequency coordination procedures for 4.9 GHz operations and to encourage spectrum efficiency and greater use of the 4.9 GHz band. It sought comment on how 4.9 GHz licensees currently use this spectrum, what applications and uses are best suited for the band, and what are the most cost-effective ways to improve accessibility to the band while minimizing adverse impact on incumbent operations. The Commission sought views on alternative frequency coordination proposals for 4.9 GHz licensees. The Commission also sought comment on specific proposals regarding expanded eligibility for critical infrastructure industry (CII) entities, for commercial entities on a secondary basis, subject to a shutdown feature, and for the First Responder Network Authority (FirstNet). The Commission also sought comment about the impact of the Middle Class Tax Relief and Job Creation Act of 2012 (Spectrum Act) on broadband uses of the 4.9 GHz band by public safety entities. Finally, the Commission sought comment on whether to allow aeronautical mobile use in the 4.9 GHz band.

The responsive comments to the *Fifth FNPRM* illustrate the wide variety of existing systems operating in the 4.9 GHz band and underscore the importance of developing rules that promote flexible use and maximize spectrum efficiency. Since the *Fifth FNPRM* the Commission has continued to build the record on the 4.9 GHz band. In October 2013, NPSTC submitted detailed recommendations in the NPSTC Plan, and the Public Safety and Homeland Security Bureau (Bureau) released a Public Notice seeking comment on the proposals in the NPSTC Plan. In September 2015, the APCO Report provided additional recommendations on how to increase public safety use of the band, reduce equipment costs, and drive investment in up-to-date technology in the band.

Sixth Further Notice of Proposed Rulemaking

Taking into consideration the record in response to the *Fifth FNPRM,* comments on the NPSTC Plan, the APCO Report, and more recent *ex parte* filings, we now propose a limited set of rules for the 4.9 GHz band to promote more flexible and intensive use of this spectrum while preventing interference. We also seek comment on current usage and what types of services are being provided. Our goals are (a) to support the needs of public safety while opening the band to other compatible uses, (b) to maximize spectral efficiency and usage, (c) to promote a common equipment ecosystem that will drive down equipment costs and stimulate investment through economies of scale, (d) to encourage innovation, and (e) to ensure that secondary users do not cause interference to primary users.

In this *Sixth FNPRM,* we review the major issues previously identified in the *Fifth FNPRM;* in the NPSTC Plan and the APCO Report and in comments on both of these evaluations; and in subsequent ex parte proposals. We then propose and seek comment on specific rules and policies intended to address each issue, and seek comment on and solicit alternative proposals.

Band Plan

In the *Fifth FNPRM,* the Commission sought comment on the current 4.9 GHz band plan, which divides the band into ten one-megahertz channels (Channels 1–5 and 14–18) and eight five-megahertz channels (Channels 6–13), and limits channel aggregation bandwidth to 20 megahertz. The NPSTC Plan proposes to keep this channelization, but recommends aggregating Channels 1–5 into a single 5 megahertz channel designated for air-to-ground communications and robotic use and proposes to reduce the current channel aggregation limit from 20 to 10 megahertz. The APCO Report proposes no band plan changes but calls for relaxing the 20 megahertz channel aggregation limit, arguing that this would enable the band to accommodate 40 megahertz products that are currently available only outside the U.S., which relaxation could ''create a better business case for manufacturers,'' and would ''provide more options for rural deployments.''

Discussion. Most commenters express support for the NPSTC band plan proposal. Based in part on the NPSTC band plan, we propose to retain the existing channelization plan for the band, but we seek comment below on more flexible aggregation limits, and in the Aeronautical Mobile and Robotic Use section, we propose to modify the 4.9 GHz band plan by aggregating Channels 1–5 to form a five-megahertz bandwidth channel for aeronautical mobile and robotic use. Although current geographic licenses authorize use of the entire 50 megahertz by all qualified services, we envision that under our revised rules we would grant licenses for specific uses that would authorize specific channels. We are concerned that the current geographic licensing model does not provide sufficient information on specific channel usage to facilitate effective frequency coordination, which we propose below for the 4.9 GHz band. For example, we seek comment on licensing base stations and hot spots site-by-site rather than blanket geographic licensing, and licensing these stations and mobiles for a specific channel or channels instead of the entire band, to the extent that channel use is static. Does 4.9 GHz equipment dynamically change channels as needed throughout

the band to avoid interference? We seek comment on these proposals.

We further propose to expand the existing channel aggregation bandwidth limit to 40 megahertz and seek comment on that proposal, which could provide more options of the type advocated in the APCO Report, such as new rural deployments, and may enable public-safety access to 5G technologies. We seek comment on this proposal. We are concerned that narrowing the limit to 10 megahertz as proposed in the NPSTC Plan would constrain flexibility and discourage use of innovative broadband technologies. We nonetheless propose to allow Regional Planning Committees (RPCs) to submit plans to limit aggregations to 20 megahertz. We solicit alternative band plan suggestions or modifications to the above. For example, should we permanently aggregate Channels 6–9 and 10–13 to form two 20-megahertz channels? We seek comment about the relative costs and benefits of wider channels. Are wider channels needed to drive innovation of equipment in the band, or are the current aggregation limits sufficient?

We agree with commenters that any reconfiguration or repurposing of the 4.9 GHz band should not force incumbent licensees to modify, abandon, or replace existing 4.9 GHz facilities, which would impose technical, operational, and financial burdens on those incumbents. Therefore, we propose to grandfather all incumbent users as of the date any final rules become effective. As we discuss below in the Database and Existing Licensees section, we further propose that those incumbent licensees whose authorizations currently encompass the entire 4.9 GHz band must certify the channels they actually use when they input their transmitter and receiver parameters into the Commission's Universal Licensing System (ULS) database. Only those channels for which operating parameters have been supplied would receive protection. We seek comment on this approach, under which all new primary and secondary users of the band will be required to coordinate around and protect incumbent users. We also seek comment on whether a temporary licensing freeze before the release date of a report and order in this proceeding and lasting until the effective date of the final rules would be necessary to prevent the filing of applications for systems that are incompatible with the modified band plan.

Aeronautical Mobile and Robotic Use

In the *Fifth FNPRM,* the Commission sought comment on whether to lift the general prohibition on aeronautical mobile operations in the 4.9 GHz band. The Commission proposed to revise § 90.1205(c) to permit aeronautical mobile operation in the band on a secondary, non-interference basis to 4.9 GHz terrestrial services and subject to demonstrating interference protection to radio astronomy (RAS) operations. The Commission sought comment on whether to impose restrictions or conditions on aeronautical mobile use, such as an altitude limit of 1500 feet above ground.

Eight parties filed comments to the *Fifth FNPRM* in support of allowing aeronautical mobile operations under such conditions. The National Academy of Sciences Committee on Radio Frequencies (CORF), an organization representing RAS observatories, requests the following conditions: (1) Make the aeronautical use secondary to terrestrial services, including RAS; (2) limit the altitude of use of this band to 1500 feet above the altitude of the observatory and limit operation to greater than 50 miles from observatories; (3) require aeronautical mobile applicants within 50 miles of protected observatories to demonstrate that the former will protect the latter from interference; and (4) require applicants within 50 miles of protected observatories to certify that they have served a copy of their application on such observatories. AASHTO recommends that air-to-ground operations that employ omnidirectional antennas should be limited to low power, while operations using steerable directional antennas that minimize interference to terrestrial users could employ higher power. FCCA/IAFC/IMSA recommend a maximum altitude of ''500 feet above ground for direct, non-directional air-to-ground video feeds,'' a maximum bandwidth of five megahertz for a video feed, and a requirement that ''aircraft providing video feeds to fixed remote receive sites must use steerable antennas and be limited to 1500 feet above ground level.''

The NPSTC Plan recommends aggregating Channels 1–5 into a five-megahertz channel to be used for air-to-ground communications and robotic communications. The NPSTC Plan would permit transmissions at altitudes up to 400 feet above ground level, and at higher altitudes if the licensee has a waiver. The proposal would require aeronautical mobile operations with an area of operation less than 80.5 km from listed RAS sites to obtain concurrence from the affected RAS site. NPSTC proposes licensing robotic operations on Channels 1–5 on a shared basis with air-to-ground operations, not allowing Channels 1–5 to be used for point-to-point (P–P) communications, and migrating existing users to other channels. APCO also supports these proposals, noting that ''modification of the existing rules, using the guidelines proposed in the NPSTC recommendations, would allow use of the 4.9 GHz band for air to ground communications, would add to the available public safety portfolio, and would assist with increasing public safety use of the spectrum.'' APCO also supports ''following the proposal contained in the NPSTC report with regard to robotic operations to allow for use of 4.9 GHz spectrum on a controlled and limited basis for robotic applications.''

Discussion. We propose to designate Channels 1–5 as aeronautical mobile channels in the 4.9 GHz band. The proposed channel selection provides spectral separation from RAS operations in the 4950–4990 MHz band. As NPSTC notes, the 4.9 GHz band is an ideal short range band with the bandwidth required to transmit video from air to ground. Moreover, many law enforcement agencies operate helicopters and planes using video cameras and so could benefit from this rule change.

We also propose to designate Channels 1–5 for robotic use. Although law enforcement has been using robots for several years, these devices currently operate on an unlicensed basis and are unprotected from interference. Modifying our rules to allow robotic operations could thus improve public safety. We seek comment on the relative costs and benefits of adding robotic use to this band. Is interference likely to be a problem for public safety robots? We propose to limit aerial transmitted information to video payload and to prohibit use of the 4.9 GHz band for aircraft (including unmanned aircraft systems) command and control. We seek comment on these proposals and also request commenting parties to address whether similar restrictions on payload and command and control frequencies should be imposed on robotic uses.

One of the potential cost of these rules would be that, for other than grandfathered licensees, the public safety use of Channels 1–5 would be limited to aeronautical mobile and robotic operations. We seek comment on the extent to which limiting the flexibility of spectrum use in this manner imposes costs by, *e.g.,* creating cumbersome regulatory obstacles to repurposing the spectrum for alternative public safety needs that may become more pressing as circumstances change. Are there any countervailing benefits in

establishing these proposed use restrictions? We also seek comment on the potential benefits of the proposed rule apart from such restrictions. Such benefits, which may be significant, would include that aeronautical mobile functionality would provide to first responders, who could use Channels 1–5 to transmit airborne video of emergency scenes such as wildfires, vehicle pursuits, and other events to assist in response and recovery efforts. A benefit of using these channels for robotic operations would be to enhance first responder safety by allowing users to send remote controlled, camera-equipped mobile devices into potentially dangerous situations. We seek comment on the magnitude of these and any other relative costs and benefits.

Because we decline to propose mandatory relocation of incumbent terrestrial users on Channels 1–5, we therefore propose to require aeronautical mobile and robotic operations to be frequency coordinated around incumbent terrestrial users of Channels 1–5, consistent with the frequency coordination procedures proposed in the Coordination section below, including RPC review. We seek comment on the relative costs and benefits of this coordination requirement. Once aeronautical mobile and robotic operations are licensed, we propose to grant them co-primary status on Channels 1–5. Therefore, during an incident or emergency requiring such use, they would be able to operate on an equal basis with terrestrial users, around which they have already been coordinated, presenting a minimal risk of interference. To prevent future terrestrial licensing in the 4940–4945 MHz segment, we propose to revise § 90.1207 so terrestrial-based licenses are only available in the 4945–4990 MHz segment rather than the entire band. We seek comment on the relative costs and benefits of these proposals and alternative approaches.

While we propose to allow manned aeronautical use of Channels 1–5, we believe it would be premature at this time to permit unmanned aerial systems (UAS) to transmit in the 4.9 GHz band. The Federal Aviation Administration's (FAA) part 107 rules limit small UAS operations to 400 feet altitude above ground, require visual line of sight aircraft operation, prohibit operations over people, and prohibit operation in certain airspace, among other restrictions. The FAA's UAS altitude limit is well below our proposal of 1500 feet above ground, and the other restrictions may present impediments to effective public safety use of UAS. Moreover, the Commission has not yet issued service rules for UAS operations in any specific spectrum band. Nevertheless, we seek comment on the potential for the 4.9 GHz band to support possible future UAS payload operations.

We propose to establish a maximum altitude limit of 1500 feet (457 meters) above ground level (AGL) for manned airborne operations on Channels 1–5. We believe this limit allows greater flexibility than NPSTC's proposal of 400 feet and is consistent with the altitude limit adopted for air-to-ground communications in the 700 MHz narrowband spectrum. However, because FAA rules require fixed-wing aircraft to maintain certain clearances around structures, we propose to allow fixed-wing aircraft to transmit at altitudes exceeding 1500 feet AGL, but only to avoid obstructions, and then only in the immediate area of the obstruction. We seek comment on the terrestrial interference potential and coverage of fixed-wing aircraft compared to the interference potential and coverage of helicopters, and whether any restrictions or prohibitions should apply to either group of aircraft.

We propose to allow air-to-ground and robotic transmissions only from low power devices as defined in § 90.1215 of our rules, which limits maximum conducted output power to 14 dBm per 5 megahertz bandwidth and use of a directional antenna to confine radiation to the direction of the associated receiving antenna. We seek comment on this proposed power limit, as well as on other techniques to minimize interference. For example, AASHTO and LA County propose to allow use of higher powered steerable directional antennas for air-to-ground communications, while Vislink contends that some air-ground communications will require omnidirectional antennas. We seek comment on the current state of aerial steerable directional antenna technology and the associated cost of such equipment.

To minimize the impact of 4.9 GHz aeronautical and robotic operations on the important work being done by RAS observatories, we propose that aeronautical mobile and robotic operations, as with all other 4.9 GHz band operations, make every effort to protect the RAS observatories listed in our rules. We propose that aeronautical mobile use shall generally be prohibited within 80.5 kilometers from a listed RAS site. Public safety entities seeking authorization for aeronautical mobile operations fewer than 80.5 kilometers from a listed RAS site would be required to submit a waiver request and notify and obtain concurrence from the affected observatory. Next, we propose to apply the L emission mask to aeronautical mobile devices on Channels 1–5, which will provide attenuation of 40 dB at 4950 MHz and above to minimize emissions into RAS. We do not propose to require robotic operations to maintain 80.5 km spacing to RAS sites. Robotic operations are transient and, because of their lower antenna elevations relative to airborne operations, do not pose an equivalent interference issue. Moreover, RAS sites are typically located in remote areas where robotic operations are unlikely to take place. We seek comment on our conclusion concerning the interference potential of robotic operations to RAS operations and on any burdens that these proposed RAS protection rules would impose, including the burden placed on small entities.

Next, we propose to amend § 2.106 of the Commission's rules to remove the prohibition on aeronautical mobile service use from the 4940–4950 MHz band in the non-Federal Table of Frequency Allocations, *i.e.,* we propose to reallocate the lower 10 megahertz segment of the 4940–4990 MHz band from the ''mobile except aeronautical mobile'' service to the ''mobile'' service. This action would parallel the International Table and provide the Commission with additional flexibility with regard to the future use of the mobile service. We request comment on this proposal.

Finally, we remind commenters that the United States has border agreements with Canada and Mexico for the 4.9 GHz band that limit potential air-ground operations in border areas. In the Canada Agreement, the Commission agrees not to authorize aeronautical mobile stations within 160 kilometers of the border area without the written consent of Innovation, Science and Economic Development Canada (ISED). In the Mexico Agreement, for stations operated in aircraft, power flux density shall not exceed −114 dBW/m2 in any 1 MHz bandwidth at or beyond the common border. Thus, any rules we may adopt authorizing aeronautical use will be subject to these restrictions in border areas. However, we retain the option of seeking future revision of these cross-border agreements through appropriate international channels. The limits arising from these international agreements would continue to apply to all licensees in the 4.9 GHz band, including aeronautical and robotic uses.

Coordination

Our rules currently require 4.9 GHz licensees to ''cooperate in the selection and use of channels in order to reduce interference and make the most effective use of the authorized facilities,'' but do not require prior frequency coordination. We note that current 4.9 GHz band licenses authorize use of the entire band and are geographic rather than site-based. Thus, they allow licensees to deploy base stations, mobile units, and temporary fixed stations anywhere within the licensee's jurisdiction using any part of the spectrum band by informally coordinating with other uses, and without having to obtain prior clearance from the Commission. In the 2009 FNPRM in this proceeding, the Commission expressed concern that informal self-coordination ''may not ensure that applicants for primary permanent fixed stations offer sufficient protection to other primary permanent fixed stations and other co-primary users.'' Accordingly, the Commission proposed a notice-and-response coordination procedure conducted among applicants and licensees similar to the procedure used for point-to-point (P–P) microwave applications under part 101 of the Commission's rules. However, in the *Fifth FNPRM,* the Commission acknowledged the views of the majority of commenters that notice-and-response coordination ''may not be appropriate for this band because [it] would add a level of uncertainty and complexity to the coordination process,'' and sought comment on requiring 4.9 GHz applications to be submitted to a third party such as a certified public safety frequency coordinator or an RPC. Most commenters to the *Fifth FNPRM* supported certified frequency coordination for the 4.9 GHz band, although a few commenters argued that the status quo of self-coordination is working.

NPSTC's Plan proposes that 4.9 GHz applications be coordinated by a certified public safety frequency coordinator. APCO supports NPSTC's recommendation because ''many public safety users and manufacturers choose not to invest in the 4.9 GHz band because it is not coordinated.'' Specifically, APCO reports that ''the current jurisdictional licensing model is viewed within the public safety community as too similar to an unlicensed structure to provide the degree of confidence needed for mission critical communications, including sensitive transmissions.'' APCO asserts that ''new frequency coordination procedures designed to improve usage, performance, and interference protection would encourage public safety entities that have been reluctant in the past to begin utilizing the 4.9 GHz Band.''

Discussion. We propose to require certified frequency coordination for licensing in the 4.9 GHz band. Given that our goal is to encourage a wide variety of uses of the 4.9 GHz band, we agree with NPSTC, APCO, and the majority of commenters that neither self-coordination nor a notice-and-response coordination procedure is likely to be sufficient to ensure interference protection to primary users in a mixed use environment. We seek comment on this view. We do not propose to require incumbent 4.9 GHz licensees to submit to frequency coordination for their existing operations. Rather, as noted above, we propose to grandfather incumbent operations provided that they file certain technical information on P–P, point-to-multipoint (P–MP), base, and mobile operations in our licensing database as discussed infra in the Database and Existing Licensees section.

We propose that, subject to qualification criteria, Public Safety Pool frequency coordinators which the Commission has certified to coordinate in other part 90 spectrum bands should be eligible to coordinate applications in the 4.9 GHz band. We seek comment on whether to limit 4.9 GHz band coordination to public safety coordinators or whether to allow coordination by non-public safety coordinators as well. To ensure that coordinators are qualified to address band-specific coordination issues, we propose to require all frequency coordinators seeking to coordinate in the 4.9 GHz band to submit a qualification showing, which would include a coordination plan and a showing of expertise specifically for the 4.9 GHz band. We further propose to direct the Public Safety and Homeland Security Bureau to certify coordinators for the band. We seek comment on these proposals, including whether a qualification showing would place a burden on small entities. Current public safety frequency coordinator fees for frequency pair/site combinations range from $60 to $315 depending on the frequency band. We seek comment on the relative costs and benefits of frequency coordination.

The NPSTC Plan proposed that frequency coordinators would send each application to the applicant's home RPC for a five-business day review. We believe this particular proposal is burdensome on RPCs and redundant with the frequency coordinator's function and invite comment on this tentative conclusion. However, NPSTC also proposed that any application where the power flux density (PFD) into an adjacent region border exceeds −109 dBW/m2 would be flagged to be sent to the adjacent RPC to review. We believe this proposal may help prevent interference between regions, so we propose to adopt it. We seek comment on whether this PFD is an appropriate threshold, how PFD should be calculated and predicted, and how a PFD dispute would be resolved. We seek comment on what reference bandwidth should apply to this proposed PFD limit, *e.g.,* is a 5 megahertz bandwidth appropriate?

Finally, we seek comment on whether waiving frequency coordination for certain technology could serve as incentive for manufacturers and licensees to use such technology in the 4.9 GHz band without creating harmful interference. Should we exempt certain short term uses from frequency coordination, such as public safety robotic uses or ad hoc mobile networks? If so, how could such users minimize interference potential to existing operations in the same areas?

Database and Existing Licensees

In the *Fifth FNPRM,* the Commission noted that ULS does not contain information specifying receiver location for 4.9 GHz band P–P or P–MP links, geographically licensed base station coordinates, antenna gain, output power, and antenna height. Because a frequency coordinator lacking this information would have difficulty protecting incumbent primary fixed links and base stations from interference from new operations, the *Fifth FNPRM* proposed to require all current 4.9 GHz licensees to register the technical parameters of their permanent fixed P–P, P–MP, and base-to-mobile stations, including permanent fixed receivers when applicable, into a coordination database to ensure that primary operations receive proper interference protection. The Commission ''tentatively concluded that the most cost-effective option is for the Commission to create and maintain a 4.9 GHz registration database that is modeled after an existing database,'' such as the millimeter wave band registration database in ULS. The Commission also sought comment on whether to use a third party database such as the Computer-Assisted Pre-Coordination Resource and Database (CAPRAD) or a dynamic database similar to the Television White Space (WS) database.

Commenters generally agree that the 4.9 GHz band is hampered by lack of a reliable database that provides technical information about current licensee deployments. The APCO Report concludes that wider use of the 4.9 GHz band is inhibited by ''blanket geographical licensing for fixed and mobile operations on any channel across the band,'' and therefore proposes that ''all fixed locations be identified and licensed for a specific channel or channels.'' The NPSTC Plan proposes that incumbent licensees be required to ''relicense using the proposed frequency coordination process and appropriate ULS schedules'' within one year from when ULS is ready to accept applications using the new process. It also proposes that incumbent licensees that do not conform to the new band plan (including any region-specific variations) must modify their licenses within five years of the adoption of new rules.

The NPSTC Plan recommends using ULS to compile the information needed for coordination because ''ULS is already funded'' and ''data required for coordination is already collected by ULS in the application process.'' NPSTC opposes using a private database that would ''require the applicants to fund the entire cost of capturing, storing, and making data available to coordinators.'' However, other commenters suggest establishing a geo-location database similar to the WS database, so that commercial and unlicensed users could use the 4.9 GHz band on a secondary basis.

Discussion. Our rules specify that 4.9 GHz licensees encountering or causing harmful interference are expected to cooperate and resolve the problem by mutually satisfactory arrangements. Based on the record in this proceeding, we believe that concerns from public safety users of this band regarding resolution of interference issues in the 4.9 GHz band would be addressed if more complete technical information is available to all affected parties. Therefore, we propose to require incumbent licensees and new applicants to provide technical information that will enhance frequency coordination and help mitigate the possibility of interference, while permitting more new users, thereby promoting more efficient use of spectrum that has long been underutilized. We solicit alternative suggestions that would achieve these goals.

We believe ULS provides the most efficient and cost-effective means to facilitate certified frequency coordination in the 4.9 GHz band because it is both flexible and easily accessible to frequency coordinators, incumbent licensees, applicants, and other interested parties. While the Commission relies on private databases in other select spectrum bands, ULS is already set up for licensing in the 4.9 GHz band, and the Commission can use existing form schedules to capture P–P, P–MP, fixed receiver, base station, and mobile station data. Accordingly, we propose to add the 4.9 GHz band to the microwave schedule for P–P, P–MP, and fixed receiver stations. We also propose to uncouple base and mobile stations from geographic licenses and instead require that base and mobile technical parameters be entered on the existing location and technical data schedules. Thus, we propose to maintain ULS as the comprehensive licensing database for the 4.9 GHz band, which frequency coordinators will use to base their coordination. This proposal would not affect or restrict frequency coordinators' use of their own internal databases, which draw licensing data from ULS on a regular basis. We propose to modify ULS as necessary to accept the necessary licensing data, prepare application instructions, and release a public notice to announce when ULS is ready to accept such applications. Regarding the burdens associated with the Commission's application for radio service authorization, the Commission has estimated that ''each response to this collection of information will take on average 1.25 hours.'' The estimate ''includes the time to read the instructions, look through existing records, gather and maintain required data, and actually complete and review the form or response.'' We seek comment on whether these time and cost burdens are accurate, and on the number of entities (incumbents and new entrants) likely to be subject to this requirement. We also seek comment on how best to measure the benefits emanating from this filing requirement in order to determine whether its benefits exceed its relative costs. For example, what is the cost of resolving current and potential interference problems in the absence of such a filing requirement? We seek comment on this proposal, and on the feasibility of alternative database solutions.

We propose to set a one-year timetable, starting on the release date of the ULS public notice described above, for incumbent licensees to provide data, as recommended in the NPSTC Plan. We propose one year because we believe this gives licensees sufficient time to gather technical information about their site-based facilities and file applications, while providing a reasonable date certain that ULS will be sufficiently populated with site-based data to enable accurate frequency coordination. We propose to establish an application process for existing licensees with geographic licenses to identify P–P, P–MP, fixed receivers, base stations, and mobiles that are not licensed site-by-site. Under this process, incumbent licensees would file one or more applications, and update or delete the existing licenses as necessary to eliminate redundancy following a Public Notice announcing that ULS is ready to accept such applications. There would be no fee for the application process since only public safety eligible entities are currently authorized in the band, and the Commission does not charge application fees for public safety entities. We seek comment on this proposal.

AASHTO suggests that incumbent licensees should be required to submit to frequency coordination either when their licenses are set for renewal or within one calendar year of the Commission's adoption of coordination requirements. We disagree because the purpose of the application process is to collect missing incumbent data so that fixed operations would be visible in the database. Although a richer database will better aid future coordinations, coordination of incumbents is not necessary to accomplish this goal and would impose unnecessary cost. Accordingly, for this incumbent application process, we propose to grant NYCTA's request to waive frequency coordination requirements for one year following the effective date of those rules. However, we propose that after the one-year deadline, an application from an incumbent licensee to supply the required database information would be treated as any other application for a new license or modification, *i.e.,* it would require frequency coordination. We seek comment about whether the status of a license should become secondary if the incumbent licensee does not meet the one-year deadline.

Finally, we decline to propose that incumbent licensees modify their licenses to conform to the new proposed rules and band plan. We agree with commenters such as Region 8 and King County/Seattle that such action would be unduly burdensome and inequitable to incumbent licensees, which already use the band for mission critical public safety operations. Instead, we propose to grandfather existing licensees from having to make any technical modifications to conform to the new rules and band plan, other than

providing more sufficient data as we discussed above, as of the effective date of new rules adopted in this proceeding. However, applications from incumbent licensees submitted more than one year after the new rules are in effect would be subject to the new proposed rules and band plan.

Regional Planning

Section 90.1211(a) of the Commission's rules provides that each RPC region may submit a plan with guidelines to be used for sharing spectrum in the 4.9 GHz band. The rules list elements to be included in regional plans and provide instructions for the plan's modification. Although the Commission originally set a deadline for all RPCs to submit 4.9 GHz regional plans, it subsequently decided to make plan submission voluntary and stayed the deadline. To date, only 10 out of 55 RPC regions have submitted 4.9 GHz regional plans. In the *Fifth FNPRM,* the Commission sought comment on whether it should lift the stay and amend § 90.1211 to require Regional Plans to cover permanent fixed links and base stations, as well as mobile and temporary fixed links.

NPSTC's Plan states that ''a single national plan for 4.9 GHz will meet most regions' needs,'' but ''some regions will need some different parameters to better meet needs of users in their regions. NPSTC proposes to allow RPCs to file amended regional plans specific to 4.9 GHz to reflect regional considerations, including a required showing of need, within 120 days after the Commission adopts new rules for the band. Several commenters support RPC involvement in the 4.9 GHz band.

Discussion. We believe that RPCs should play an integral role in shaping use of the 4.9 GHz band through regional planning. In this connection, we propose to afford RPCs the flexibility to file new and amended regional plans for Commission review and approval to reflect their region-specific needs or considerations as supported by a showing of need. Alternately, RPCs would have the option to default to the national rules without regional variation by taking no action. We seek comment on this proposal, and on how to implement regional variations.

NPSTC recommends that RPCs be able to make region-specific changes in the following four areas: (i) Enabling additional channel aggregation; (ii) incorporating an additional channel designated for specialized use; (iii) placing limits on the use of P–P links in urban areas or imposing more stringent antenna requirements or other technical parameters to allow greater channel reuse; and (iv) in rural areas, allowing higher radiated power for longer path lengths and non-line of sight paths. We tentatively disagree with the NPSTC Plan's proposals for item (i) because we propose to allow 40 megahertz channel aggregation, and for item (iv) because we believe that the upper equivalent isotropically radiated power (EIRP) limits should be codified in our rules rather than left to the discretion of the RPCs. We propose to allow regional plans to be submitted for Commission approval that include variations for items (ii) and (iii) as well as for polarization. In lieu of item (i), we propose to allow RPCs to limit aggregations to 20 megahertz as discussed above. We also propose to limit the ability of RPCs to restrict non-public safety licensing eligibility to a greater degree than is provided in the Commission's rules. In general, we believe that providing these areas in which a regional plan can deviate from the national plan, combined with the overall flexibility of the band plan we propose, will enable regions to meet most needs of their users without threatening investments in existing deployments. Because we cannot foresee all areas in which RPCs may need flexibility, we propose to allow RPCs to request changes outside these areas pursuant to a waiver request. We are mindful that regional variations add a challenge to frequency coordination, but we believe that frequency coordinators have the tools to keep track of these variations. We seek comment on relative costs and benefits arising from this approach, which would not change the status of regional plans as optional.

We seek comment on when RPCs should be required to submit regional plans. Comments on this issue were mixed, with suggested deadlines of 180 days, 240 days, and 12 months after final rules are effective. Considering the resource constraints on RPCs, we propose a deadline of six months after the effective date of final rules for each RPC to notify the Commission either that it intends to file a regional plan or that the region will default to the general rules, and a deadline of one year after rules adopted in this proceeding become effective for the filing of regional plans. Prior to Commission acceptance of any regional plan, we propose to allow new applications for 4.9 GHz licenses to be filed consistent with updated general rules. These licenses would be grandfathered for the duration of the license period. We would lift the current stay on § 90.1211(a) once the proposed rule modification becomes effective. We propose to continue to accept regional plans and amendments after the one-year deadline for the benefit of those RPCs that lack the resources to file timely regional plans or are not yet formed, but the purpose of the deadline is to provide a goal to commence licensing based on regional plan considerations. The Public Safety and Homeland Security Bureau would place any submitted regional plans on public notice for comment. With regard to Plan Amendments, we seek comment on establishing a streamlined process for staff review of such modifications, including defining ''major'' and ''minor'' plan modifications as defined by § 90.527(b) of the rules. We seek comment on these proposals and solicit alternative suggestions, especially from the individual RPCs. We seek comment on any burdens that the regional plan filing deadline may place on small entities.

Finally, we decline the NPSTC Plan's recommendation to permanently waive the existing requirement to obtain concurrence from adjacent regions for plan amendments. The NPSTC Plan makes no mention of the existing adjacent region coordination requirement for initial regional plans, and we do not see why regional plan amendments should not also be subject to adjacent region review. This adjacent region review process for plan amendments has worked in the 700 MHz and 800 MHz bands, and we do not believe the process which is currently in place is unduly burdensome on RPCs for the 4.9 GHz band. We seek comment on whether adjacent region review requirements would place undue burdens on small entities.

Technical Standards

In the *Fifth FNPRM,* the Commission sought comment on whether to adopt technical standards for 4.9 GHz band equipment. While acknowledging that the Commission previously had declined to mandate such a technical standard, the Commission sought comment on using IEEE 802.11 as a potential standard solution, given the standard's worldwide availability and flexibility in supporting various applications. Some commenters to the *Fifth FNPRM* assert that mandatory technical standards would inhibit technological development in the band, restrict local flexibility and control, and render existing equipment obsolete. Other commenters contend that standards would promote national interoperability and lend certainty to the marketplace for 4.9 GHz equipment.

A number of these commenters express specific support for an 802.11-based standard.

Discussion. Since the Commission adopted service rules for the 4.9 GHz band in 2003, the 4.9 GHz band has not fostered a market for diverse technology or inexpensive equipment, which in turn has led to underutilization and a slow influx of users. In general, the Commission has favored technology-neutral rules and has avoided adoption of mandatory standards, a model that has worked in many spectrum bands. However, the record in this proceeding suggests that some public safety users may desire greater certainty regarding technical standards to stimulate investment in the band. While we tentatively conclude that we should not adopt mandatory technical standards for the 4.9 GHz band and seek comment on this view, we seek comment on how to encourage voluntary implementation of technical standards for equipment in the band that can provide certainty for public safety users while also providing appropriate incentives for manufacturers to develop innovative and cost-effective equipment that will encourage interoperability, discourage fragmentation, and reduce equipment costs through higher economies of scale. Would a voluntary industry standard/framework that would not be promulgated in our rules be appropriate and preferable to incorporating such a standard (or any other) in our rules? Are there industry standards available in the 4.9 GHz band, and if not, what is the likelihood that applicable standards could be extended to the 4.9 GHz band? What would be the relative cost and benefit of different voluntary standards for high-power and low-power systems?

Point-to-Point and Point-to-Multipoint

Until 2009, permanent fixed P–P and P–MP stations in the 4.9 GHz band were secondary to base, mobile, and temporary fixed operations. In 2009, the Commission permitted licensing of permanent fixed P–P and P–MP stations that deliver broadband services on a primary basis, while those stations that deliver narrowband traffic remain secondary to other operations in the 4.9 GHz band. In the *Fifth FNPRM,* the Commission sought comment on whether to license all permanent fixed P–P stations on a primary basis, regardless of whether they support broadband or narrowband traffic, or whether permanent fixed P–MP stations not delivering broadband service should remain secondary.

Discussion. Secondary status requires the user to accept the risk of interference and to cease operation if it causes interference to a primary licensee. The supporting commenters persuade us that primary status for P–P and P–MP links that carry or support narrowband traffic would resolve this risk and increase usage of the 4.9 GHz band because it would give potential users confidence to invest in the band. Given the divided comment record on primary status for narrowband P–P and P–MP links, we propose to allow licensees to use individual 1–MHz bandwidth Channels 14–18 for permanent fixed P–P and P–MP operations on a primary basis, while existing permanent fixed P–P and P–MP operations on individual 1–MHz bandwidth Channels 1–5 would remain secondary, with no such further licensing allowed on those channels due to the proposed aeronautical mobile and robotic designation. We seek comment on this proposal, including its relative costs and benefits. Under the status quo, any competing public safety organization in dense urban areas could obtain secondary licenses for P–P and P–MP links on channels 14–18 with no obligation to protect each other from interference. Accordingly, one potential cost of a proposal to license these links on a primary basis is that it could increase the difficulty of competing public safety organizations in dense urban areas to obtain primary licenses for base, mobile, and temporary fixed operations in channels 14–18 because primary users are entitled to interference protection and cannot be licensed with overlapping channel assignments and areas of operation as secondary use may allow. How likely is this to occur, and what would be the cost of a work-around?

The NPSTC Plan recommends that applications for P–P licenses include a showing as to the need for the bandwidth requested, to address the potential of P–P links to cause interference. At this time, we do not propose to impose such a requirement, which no other commenter has suggested, because the record does not contain objective benchmarks for correlating various uses with bandwidth needs. We have found that no evidence of P–P interference in the record, and we invite commenters to submit any such evidence. Further, we believe that technical rule changes we propose below in the Power Limits section may reduce interference potential by producing more directional P–P links. We seek comment on our view and on these concerns.

Next, in order to limit ''temporary'' links to truly temporary uses, we propose to adopt the NPSTC Plan's recommendation that temporary P–P links may only be operated for thirty days maximum over a given path in a one-year period. Any application for longer operation would require a showing why longer duration is needed and how the link is supporting public safety protection of life and property. We seek comment on whether the number of days should be reduced or increased and the reasons therefor. We seek comment on the relative costs and benefits of the limitation proposed here, as well as any alternate proposals. We solicit alternative suggestions and solicit comment on burdens that a timeframe limitation on temporary P–P links would place on small entities.

Finally, we decline to consider a request from the comment record that the band be used only for fixed uses. The band supports substantial mobile use, and it would be contrary to the public interest to force such operations to relocate from the 4.9 GHz band or cease operation. We believe that with the regional planning process combined with frequency coordination, the goal of increased density of fixed link deployment can occur with rule changes regardless of mobile presence. We seek comment on this tentative conclusion.

Power Limits

The 4.9 GHz rules contain power output limits that depend on the channel bandwidth for both low power and high power transmitters. High power P–P and P–MP links may use directional antennas with gains greater than 9 dBi and up to 26 dBi with no reduction in conducted output power, but if antennas with a gain of more than 26 dBi are used, the maximum conducted output power and peak power spectral density must be reduced by the amount in decibels that the directional gain exceeds 26 dBi. The Commission imposed the antenna gain rule ''in order to avoid interference from fixed operations to mobile operations.''

In the *Fifth FNPRM,* the Commission sought recommendations for an effective radiated power (ERP) limit for high power, permanent and temporary fixed transmitters, and whether to impose a maximum ERP limit on point-to-point links. Going forward, we will discuss radiated power levels in the 4.9 GHz band in terms of EIRP, rather than ERP, because antenna gains in the 4.9 GHz band rules are conventionally specified in terms of gain relative to an isotropic reference (dBi). To make point-to-point use in the band more efficient, the Commission also sought comment on whether it should establish a different minimum gain for P–P transmitting antennas and, if so, what value of gain

would be appropriate and what power reduction, if any, should be required.

The NPSTC Plan does not address ERP limits, but it notes that § 101.143 of the Commission's rules specifies a formula for reducing the maximum EIRP for short path lengths and proposes ''that the frequency coordinators use a similar reduction in maximum EIRP for short path lengths with formulas developed based on transmit powers allowed in this band.'' The NPSTC Plan further recommends that for P–P links an antenna with a minimum gain of 26 dBi, a maximum of 5.5 degree beamwidth and a minimum 25 dB front-to-back ratio be required. The NPSTC Plan also recommends that frequency coordinators be allowed to impose tighter specifications for the antenna if that allows assignment of a channel that otherwise would cause interference. NPSTC states that equipment using ''multiple modulation rates and/or MIMO [multiple-input and multiple-output] antenna technologies'' is inefficient and proposes that ''they normally not be allowed in the band.'' NPSTC recommends that requests for higher EIRP levels only be granted under waiver and receive full coordination so that both frequency coordinators and RPCs can comment.

The APCO Report argues for ''increasing the size of the antennas supporting 4.9 GHz operations.'' APCO states that ''larger directional antennas (*i.e.* 4′ diameter and above) have more discriminatory ''off-path'' antenna patterns and FB (Front-to-Back) ratios which allow the coordinator to assign frequencies closer together and permit more systems to co-exist, interference-free, within a given frequency band.'' APCO also contends that ''there are cases where a larger antenna may allow the coordinator to assign a frequency to a system where a smaller antenna may not have an efficient enough antenna pattern.''

Discussion. We propose to allow P–P transmitting antennas to operate with a minimum directional gain of 26 dBi, maximum 5.5 degree beamwidth and minimum 25 dB front-to-back ratio. Antenna physical size, or area, is related to antenna gain. Although the rules do not contain restrictions on physical antenna size, we believe this proposal will enable users to deploy larger directional antennas, as recommended in the APCO Report, and to produce narrower beam widths and more directional P–P links, which should enable co-channel users in congested areas to place links closer together and achieve greater frequency reuse. Moreover, the higher gain would increase the EIRP so that P–P links can cover longer distances, which could save users the expense of deploying multiple, low EIRP links. Further, the record indicates that several low cost antennas that meet these requirements are already available. We seek comment on the relative costs and benefits of this proposal. We invite commenters to provide additional information about these antennas and associated costs in the record and we seek comment on the levels of directional antenna gains that licensees are using today. We also seek comment about burdens that a change to the antenna gain rules would place on small entities, notwithstanding that we propose to grandfather existing P–P and P–MP installations from having to replace antennas.

We seek comment on whether the rules should contain a maximum EIRP limit for directional links. Although the NPSTC Plan proposes no maximum EIRP, three commenters suggest power levels equivalent to maximum EIRP levels of 65.15 dBm for P–P and 55.15 dBm for P–MP to ''promote the use of the band for longer range communications . . . , particularly in rural areas.'' Accordingly, we seek comment on these EIRP limits. Since we noted above that the upper power limits need to be codified in the rules, we seek comment on whether these proposed power limits are adequate to meet the needs of regions whose users would deploy links with long path lengths in rural areas. We also seek comment on whether such an increase in maximum power levels for directional links creates any additional interference concerns and how it might affect the ability to coordinate additional links. Similarly, what effect might such an increase have on the ability for continued mobile operations in the band? We seek comment on whether emission mask M is sufficient, or whether a tighter emission mask should be imposed for these higher power operations. We seek further comment on other power suggestions in the record and how they would fit with the above proposals.

Finally, we decline to propose restrictions on multiple modulation rates and MIMO antenna technologies as proposed by the NPSTC Plan. We agree with the City of New York that ''Multiple Input Multiple Output (MIMO) technology is a key element of both the 802.11n standard and LTE standards. Rather than being less spectrally efficient, it is more so as it provides for increased throughput and range.'' Similarly, multiple modulation rates are more spectrally efficient and offer licenses additional flexibility in the planning and operation of their systems.

Polarization

The *Fifth FNPRM* sought comment on requiring P–P links to use a specific polarization, *e.g.,* horizontal or vertical, to reduce potential interference to other links or to portable or mobile devices. The Commission sought comment on the costs of changing an antenna's polarization and whether polarization diversity would increase throughput.

Discussion. Given the mixed comment record, we decline to propose any polarization requirements in our rules. However, we still believe that polarization can be a tool to increase density of P–P links in a given area and to address cases of actual interference between two or more P–P links. We note that side-by-side co-channel P–P links with orthogonal (opposite) polarizations could operate with minimized interference because each receive antenna would reject signals of the opposite polarization. We are also encouraged that dual polarization together with polarization multiplexing can increase capacity in a P–P link, as Cambium suggests. As discussed above, we propose to allow regional plans submitted for Commission review pursuant to § 90.1211 to propose any polarization schemes for new applications within their regions as necessary to maximize frequency reuse, manage interference, and increase throughput. As part of the application frequency coordination process, frequency coordinators would be able to recommend a particular polarization for a proposed P–P link in those regions. We seek comment on this proposal.

Deployment Reports, Construction Deadlines

The *Fifth FNPRM* sought comment on whether to require 4.9 GHz licensees to file periodic deployment reports to better inform the Commission about usage of the band. The Commission indicated that reports could include information such as status of equipment development and purchase, including number of devices and users; site development, including use of existing towers; deployments and upgrades (commencement and completion), including site information and location; and applications in development or in use. The Commission also sought comment on reporting frequency.

Discussion. Although a deployment report requirement had some support in the record, we agree with the opposing comments regarding burdens on licensees and decline to propose requiring deployment reports. In addition to imposing a burden, such reports would be superfluous given our

database proposal discussed above, in which existing licensees would file certain additional information on their operating parameters.

However, we propose to establish a one-year construction deadline for all 4.9 GHz licensees, with a corresponding construction reporting requirement. The current rules impose an 18-month construction deadline only on fixed P–P stations that are licensed on a site-by-site basis, and no construction deadline for base and temporary fixed stations. We believe that shortening the construction period to one year for all 4.9 GHz licenses will lead to more timely use of the spectrum and reduce the possibility of spectrum warehousing. Accordingly, we propose to require all 4.9 GHz geographic licensees to place at least one base or temporary fixed station in operation within 12 months of license grant and file a standard construction notification with the Commission. We also propose to reduce the construction period for fixed point-to-point stations from 18 months to 12 months. These proposed rule changes will also harmonize the construction deadlines for the 4.9 GHz band with the deadlines of § 90.155, which is the analogous rule for the majority of part 90 radio services. We note that we have received no objections to this construction deadline change. We seek comment on these proposals, on their relative costs and benefits, on the burdens that the proposed construction deadline would place on small entities, and on alternative solutions that would achieve the same goal.

Eligibility, Shared Use, and Other Alternatives

Currently, only entities providing public safety services are eligible for licenses in the 4.9 GHz band. Non-public safety entities—including CII entities—may use the 4.9 GHz spectrum by entering into sharing agreements with eligible public safety licensees, but only for ''operations in support of public safety.'' In light of the limited use of the band to date by public safety, the *Fifth FNPRM* sought comment on whether expanding eligibility to non-public safety users might lead to increased use and reduction in equipment costs that would benefit public safety. Specifically, the Commission sought comment on whether CII entities should be eligible to hold primary 4.9 GHz licenses, thus removing the requirement for a sharing agreement, and also whether the band should be opened to commercial users on a secondary or non-interfering basis subject to a shutdown mechanism to enable priority access by public safety entities. In response to the *Fifth FNPRM,* the NPSTC Plan proposed to extend primary 4.9 GHz eligibility to CII. More recently, other *ex parte* filers have recommended various secondary spectrum sharing approaches combined with maintaining priority status for public safety in the 4.9 GHz band.

In this *Sixth FNPRM,* we seek to further discuss these alternative eligibility and spectrum sharing approaches and other alternatives for the band. We seek comment on four specific alternatives outlined below, and on whether the four alternatives or elements thereof could be combined. We also solicit comment on any other sharing approaches that would meet the Commission's goals for the band.

Extending Eligibility to CII

The NPSTC Plan proposes to expand eligibility to afford CII co-primary status with public safety in the 4.9 GHz band and allow CII entities immediate access to two five-megahertz channels (Channels 6 and 7). On the remaining channels in the band, NPSTC proposes to preserve public safety's licensing priority for three years, but would allow CII to seek access on a notice basis. Under the proposed notice procedure, a CII entity's application to use unoccupied channels would be put on public notice, and any public safety entity in the same geographic area as the CII entity's planned system would have 30 days to file an application for the same channels, in which case the public safety applicant would prevail. This notice process would expire after three years after the Commission's rules become effective, at which point public safety and CII would have equal access to all channels in the band with no required notice.

The majority of commenters responding to both the *Fifth FNPRM* and the NPSTC Plan support expanding 4.9 GHz band eligibility to CII entities. APCO and FCCA/IAFC/IMSA assert that CII eligibility would enhance interoperability between utilities and public safety agencies during and immediately following major emergencies, although APCO cautions that CII use should be ''carefully monitored to ensure that public safety needs are considered in every potential conflicting filing.'' The Utilities Telecom Council (UTC) states that CII primary eligibility ''could provide capacity and coverage for smart grid and other applications . . . [and] would promote investment in and more effective use of the spectrum.''

Some public safety commenters oppose direct licensing of CII entities and advocate retaining the requirement that CII entities may only use the 4.9 GHz band pursuant to sharing agreements with public safety licensees. In response, Southern Company contends that ''the current eligibility rules for the 4.9 GHz band do not correlate with marketplace or political realities,'' because CII entities are ''understandably reluctant to enter agreements whereby their investment in infrastructure, and their use of a vital communications resource, could be rendered worthless at any time, including when that resource is needed most.''

Some commenters advocate expanding CII eligibility to include additional categories of potential users. The Enterprise Wireless Alliance (EWA) proposes extending 4.9 GHz band eligibility to ''all private internal systems'' that ''have defined areas of operation not necessarily focused on population centers, often conducted in a campus-type environment that can be coordinated with public safety usage.'' The Alarm Industry Communications Committee (AICC) argues that alarm companies should have primary access to the 4.9 GHz band in order to allow them ''to more efficiently and rapidly gather and forward to PSAPs information about emergencies.''

Discussion. We seek comment on whether offering CII co-primary status with public safety is likely to create incentives for increased investment in the 4.9 GHz band. The Commission has recognized that railroad, power, and petroleum entities use radio communications ''as a critical tool for responding to emergencies that could impact hundreds or even thousands of people.'' Extending eligibility to CII could encourage collaborative investment by public safety and CII users of the 4.9 GHz band to improve response to emergencies that affect both public safety and critical infrastructure. We seek comment on this approach, including its potential relative costs and benefits.

We also seek comment on whether eligibility for CII entities should be conditioned on using the band to provide ''public safety services'' as that term is defined in Section 337(f)(1)(A) of the Communications Act of 1934, as amended. For example, API requests that CII entities be permitted to use the band for any purpose, not just in support of public safety. Would eliminating the requirement that the band be used for ''public safety services'' by CII users increase use of the band, lowering equipment costs and facilitating the other benefits of CII access to the band? Or would it unduly

increase congestion? Considering the public safety focus of the 4.9 GHz band, should we limit CII use of the 4.9 GHz band to communications related to the protection of life, safety, and property, as opposed to general business purposes? If we maintain the requirement, how should the Commission ensure compliance by CII users (and what are the costs of doing so)? Given public safety's relatively modest use of 4.9 GHz spectrum to date, we think there is sufficient remaining spectrum in the band to accommodate both expanded use by public safety and CII co-primary use. Stated otherwise, we think the benefits of co-primary use of the band by both CII and public safety can be realized at slight or no cost to public safety. We seek comment on this characterization. Is there reason to elevate public safety communications in the band over other uses? If so, would preferential algorithms built into equipment ensure priority of public safety communications? How would that priority be achieved? Would such priority be sufficient to ensure that public safety traffic would not be interfered with? We seek comment on affording public safety priority over other users and how priority would be achieved.

If we grant co-primary eligibility to CII entities without the need for a sharing agreement with a public safety entity, we seek comment on NPSTC's proposal to provide CII immediate, co-primary access to Channels 6 and 7 during the first three years, to establish a notice procedure for CII access to the remainder of the band during the three-year period, and to open up the entire band to CII thereafter. Should we consider alternative access arrangements, such as providing CII immediate access to Channels 12 and 13, which could be coupled with access to narrowband Channels 14–18 to create 15 megahertz of contiguous spectrum for CII to access on a co-primary basis? Should we exclude Channels 1–5 from CII eligibility in light of our proposal to dedicate this segment to public safety aeronautical mobile and robotic use? We seek comment on these options and solicit any alternative suggestions.

We in turn seek comment on extending 4.9 GHz band co-primary eligibility to all private internal systems, as EWA requests. Would doing so be consistent with our core goal of supporting critical public safety needs? Similarly, we seek comment on extending primary eligibility to alarm companies as advocated by AICC. Does the fact that the Commission's recent review of ULS in another proceeding suggesting that certain frequencies designated for central alarm operations may be underutilized affect how we should approach this request? Finally, we note that the Commission's general approach to making spectrum available in recent years has leaned toward flexible use rather than allocations to specific industries. We seek comment on how granting CII entities eligibility for co-primary status is consistent with this approach. We also ask how CII entities' need for co-primary use of this band can be differentiated from the needs of other critical and safety-related industries that may seek access to this band in the future.

Leasing

In the 2003 *4.9 GHz Third Report and Order,* the Commission allowed non-public safety entities engaged in providing public safety-related services to be licensed in the 4.9 GHz band to support public safety operations. In 2004, the Commission permitted public safety licensees with ''exclusive spectrum rights'' to lease their spectrum to other public safety entities eligible for such a license authorization and to entities providing communications in support of public safety operations. Based on the record at that time, the Commission declined to permit public safety licensees to lease 4.9 GHz spectrum for commercial or non-public safety operations. Specifically, the Commission noted that commenters expressed concern that such leasing could face statutory barriers or result in abuse without the implementation of regulatory safeguards. In the *Secondary Markets Order,* the Commission also noted that allowing such leasing could be premature given the then-nascent state of ''interruptible use'' technology that would enable public safety licenses to immediately reclaim the use of any leased spectrum for public safety emergencies.

Discussion. In this *Sixth FNPRM,* we seek to establish new licensing and service rules for the 4.9 GHz band that will spur investment and innovation while furthering public safety use of the band. We seek comment on whether these objectives could be facilitated by expanding the leasing alternatives available to public safety in the band. In particular, should we remove the current limitation and allow public safety licensees that have obtained exclusive spectrum rights in the 4.9 GHz band to lease spectrum capacity to CII or to commercial entities generally? Would such expanded leasing flexibility stimulate investment in equipment and networks that would benefit public safety and further our objectives for increased use of the band? Would such leasing opportunities present public safety entities with new potential revenue streams that could be used to increase investment in NG911 operations or to purchase new 4.9 GHz equipment? What rule changes, if any, would best facilitate bringing the economies of scope and scale that come with commercial use of a band to this public safety spectrum? How would a leasing alternative lead to increased use of the band compared to the current environment, where non-public safety entities can to enter into sharing agreements with public safety licensees? What are the relative costs and benefits of expanding leasing alternatives?

We also seek comment on how best to ensure that public safety would retain priority access to 4.9 GHz spectrum in any commercial leasing framework. As noted above, the Commission cited a dearth of technology in 2004 that would support ''interruptible'' spectrum leasing. In light of the significant technological advances that have occurred since then, does technology now exist that would enable public safety to interrupt other spectrum users and reclaim leased spectrum capacity in emergencies? Should non-public safety entities that lease spectrum capacity have primary status because they entered agreements with specific public safety licensees? If so, how would public safety priority function?

As noted above, in the *Secondary Markets Order* the Commission cited to comments expressing concern that the Communication Act might be a barrier to allowing public safety entities to lease spectrum that had been designated for public safety for non-public safety operations. Those comments suggested that because Section 337 of the Communications Act of 1934 defines ''public safety services'' as services that ''are not made commercially available to the public by the provider,'' the Commission could be limited in its ability to allow non-public safety services on bands designated for public safety services. However, Section 337's proscription on commercial operations is expressly limited to 24 megahertz of spectrum in the 700 MHz band, and there is no equivalent statutory limitation on the 4.9 GHz band. Section 90.1203 of our rules, which governs eligibility for 4.9 GHz licenses, incorporates the requirements and conditions set forth in § 90.523 of our rules, which in turn implements Section 337 of the Act, and provides that applications in this band are limited to operations in support of public safety. The Commission tentatively concludes that it has authority to modify § 90.1203 to allow public safety licensees to enter

into leases for non-public safety or commercial uses in the 4.9 GHz band. We seek comment on this tentative conclusion. Are there any other potential jurisdictional barriers to adopting the rules proposed here?

If we authorize expanded leasing by public safety in the 4.9 GHz band, should there be conditions or limitations on use of leased spectrum or expenditure of leasing revenues to safeguard against potential abuse? For example, should use of leased spectrum be limited to communications in support of public safety or should all communications be allowed regardless of whether they have a public safety nexus? Can or should we require public safety licensees that receive leasing revenues to invest such revenues solely for public safety purposes, *e.g.,* for procurement of public safety equipment or maintenance and operational costs of the network? Would such a requirement be consistent with the Miscellaneous Receipts Act? Are there provisions of state or local law relating to use of funds by local public safety entities that the Commission should take into consideration here? How would compliance with such a requirement be audited and enforced?

We seek comment on the relative costs and benefits of a commercial-leasing options vis-à-vis the CII co-primary option discussed above. Which option would bring the greatest innovation to the 4.9 GHz band? Which option would best facilitate the introduction of new, lower cost equipment? Which option would best empower public safety users—the case-by-case leasing to commercial entities where public safety users must sign off on each use or the ability of CII users to gain co-primary access to the spectrum without further public safety input? In short, which of these options would best serve our goals in increasing shared use of this band at the lowest cost? As noted above, given public safety's relatively modest use of 4.9 GHz spectrum to date, we think that allowing leasing would not impose any cost on public safety. Stated otherwise, we think the benefits of allowing more efficient spectrum use through leasing can be realized at no cost to public safety. We note that there are potential revenue streams from leasing, further supporting our judgement that allowing leasing would be produce benefits that exceed relative costs. We seek comment on this characterization.

Two-Tiered Sharing on a Secondary Basis

In the *Fifth FNPRM,* the Commission sought comment on whether to open 4.9 GHz band eligibility to commercial users on a secondary or non-interfering basis, while ensuring priority access for public safety entities by means of a sharing mechanism, such as dynamic access control based on a database similar to that used for TV white spaces devices. In response, some commenters support extending eligibility to commercial entities on a secondary basis. Carlson, AICC, Spectrum Bridge, SSC, and WISPA suggest that adopting an intelligent, dynamic database system as the sharing mechanism could allow non-public safety to use the 4.9 GHz band on a secondary basis. The APCO Report recommends that the Commission consider ''build[ing] upon the 'white space' model and apply[ing] it to the 4.9 GHz arena to spur development by increasing the potential customer base, including within the CII segment.'' APCO recommends that the Commission study ''[a]n innovative approach that incorporates essential features such as frequency coordination, with newer spectrum management tools that could expand the user base while preserving reliable access for public safety.''

However, many public safety commenters oppose opening the band to commercial users, even on a secondary basis. These commenters express concern that because public safety generally requires greater lead time than commercial entities to secure funding to construct communications systems, commercial operations could foreclose public safety use and increase the risk of interference and congestion. Commenters also express skepticism about the feasibility of a using a dynamic database as a sharing mechanism. FCCA/IMSA/IAFC argue that ''white space-style databases are not appropriate for the 4.9 GHz band'' because they rely on equipment that employs geo-location or similar technologies, and ''requiring 4.9 GHz devices to incorporate geo-location or similar capabilities will unnecessarily impede the development of equipment for the band.'' Southern similarly ''does not believe the database paradigm used for TV White Spaces . . . devices would be appropriate for the 4.9 GHz band,'' citing the risk to public safety that could be caused by ''loss of critical communications service due to database errors, malfunctions of the coordination system, or loss of connectivity with the database.''

Discussion. As a third option, we seek comment on the feasibility of a two-tiered sharing approach, in which Tier 1 would consist of primary licensees in the band (including all incumbent users), while Tier 2 would allow other non-public safety users to access the band on a secondary basis, with safeguards to ensure priority and interference protection for Tier 1 operations. We seek comment on potential mechanisms that could facilitate two-tiered sharing in the 4.9 GHz band while protecting primary users.

For example, could we implement Tier 2 secondary access to the 4.9 GHz band using frequency coordination and licensing procedures similar to those we are proposing for primary licensing? The public safety community has long relied on frequency coordination in other spectrum bands to protect mission-critical communications from interference. While this system has worked well in other bands, frequency coordination in the 4.9 GHz band would typically take place before deployment and does not take into account the dynamically changing environment of real-time spectrum usage. We seek comment on whether a frequency coordination approach to Tier 2 secondary use would provide sufficient flexibility to support dynamic spectrum use while protecting Tier 1 users. Would real-time coordination be feasible if we required Tier 2 users to provide digital identification and/or geo-location so that Tier 1 users could readily identify potential sources of interference to their systems? We seek comment on relative costs and benefits that a digital ID and/or geolocation requirement on Tier 2 users would have, especially for Tier 2 small businesses.

We also seek comment on the feasibility of developing an automated database system to enable dynamic Tier 2 secondary use of the 4.9 GHz band while protecting Tier 1 operations. We acknowledge the concerns raised by commenters that ''white-spaces'' databases previously developed for commercial bands might not provide sufficient assurance of real-time protection for mission-critical public safety operations. We seek comment on what capabilities an automated system would need to support the public safety requirements of the 4.9 GHz band. Should the database be centralized or distributed? What would it cost to design, build, and operate such a system, and who should be responsible for such costs? What information would Tier 1 and Tier 2 users need to enter and update in the database to facilitate dynamic spectrum sharing? What would be the cost and burden of providing such information? How would an automated system communicate with users' devices to help minimize interference and facilitate registration, coordination, and dynamic access?

What capabilities would be required to identify potentially interfering Tier 2 users in real time and to direct them to move to a non-interfering channel or to shut down? We seek comment on these issues and on alternative models for spectrum sharing that would achieve these goals. Beyond the upfront cost of designing, building and operating the automated database system, and recurring database maintenance costs—both necessary to enable dynamic Tier 2 secondary use—such dynamic spectrum sharing would appear to impose few costs on public safety because it would retain primary access to the spectrum as needed. These costs would be the costs of entering and updating information to the automated database. We seek comment on whether the benefits to secondary users would outweigh the upfront, recurring, and database entry relative costs, and any other appreciable costs that we may not have taken into account.

Redesignation of the Band

As this spectrum has been underutilized, we request comment on redesignating the 4.9 GHz band, wholly or partially, to support commercial wireless use. Are the bases for the Commission's decision in 2002 to allocate the entire band for public safety purposes still valid, or does the public interest now call for a change? For example, would the public interest be best served if this spectrum could be used for commercial applications, such as 5G, or would it be better to strike a balance between public safety and commercial uses? What are the relative costs and benefits of a commercial use of this spectrum as weighed against the band plan we propose above or the sharing use alternatives on which we seek comment? If only a portion of the band were to be redesignated, how should the band be divided between public safety and commercial use? If any or all of the spectrum is redesignated for commercial wireless purposes, should the Commission consider auctioning the redesignated spectrum, making licenses available on some other basis, or authorizing the spectrum for unlicensed use under part 15 of the Rules? We seek comment on any other alternatives to support commercial wireless use of the 4.9 GHz band. If the band were made available for licensed or unlicensed use, we seek comment on what the technical rules would be appropriate. Specifically, if the band were made available for licensed use, should we apply the power levels, emissions limits, and other technical requirements that are in the existing 4.9 GHz band technical rules, the Citizen's Broadband Radio Service (CBRS) as reflected in part 96 subpart E, or the technical rules for the AWS–3 spectrum as reflected in part 27 for the 1710–1780 MHz and 2110–2170 MHz bands? The CBRS rules assume time division duplex operation while the AWS–3 rules assume frequency division duplex operation, with each set of rules specifying separate technical requirements for base stations and mobile devices. If the band were made available for unlicensed use, we specifically invite comment on whether we should apply the same technical rules that exist for the U–NII band at 5150–5250 MHz under part 15 subpart E. If the Commission allows commercial use in all or part of the 4.9 GHz band, should it allow both mobile and fixed use? When considering whether to designate all or part of the band for commercial users, should the Commission consider designating the entire band in markets where there are no existing public safety 4.9 GHz facilities? In markets where there are public safety incumbents, should public safety use be limited to those incumbents or should a specified amount of the 4.9 GHz band be reserved for public safety use? If the Commission divides the band into commercial and public safety segments, would it need to establish guard bands or would in-band and out-of-band emission limits suffice to guard against harmful interference? Commenters should address how the loss of opportunities for public safety spectrum use in the 4.9 GHz band might affect congestion in other bands currently allocated for public safety use.

In the event that the Commission redesignates any of the spectrum in the 4.9 GHz band, how should the Commission treat existing public safety systems operating in the band? Should public safety systems simply be grandfathered on their current frequencies? If so, should it be based on the frequencies licensed or those actually deployed and used? If the band is divided into public safety and commercial segments, should public safety licensees be required to relocate their facilities into the public safety segment? In the event the Commission elects to designate the entire band for commercial use, is there alternative spectrum to which existing public safety 4.9 GHz licensees can be relocated? If so, who should pay the relocation cost, *e.g.,* if the Commission decides to auction the redesignated spectrum? Should auction proceeds be used to pay public safety's cost to relocate its systems? We seek comment on the relative costs and benefits of all of these options.

Procedural Matters

Ex Parte Presentations

The proceeding shall be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during ex parte meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

Regulatory Flexibility Analysis

As required by the Regulatory Flexibility Act of 1980, see 5 U.S.C. 603, the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities of the policies and rules addressed in this document. IRFA is set forth in Appendix C of the *Sixth FNPRM.* Written public comments are requested on the IRFA. These

comments must be filed in accordance with the same filing deadlines as comments filed in response to this *Sixth FNPRM* as set forth herein, and they should have a separate and distinct heading designating them as responses to the IRFA. The Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, will send a copy of the *Sixth FNPRM,* including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

Initial Paperwork Reduction Act Analysis

This document contains proposed new and modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget (OMB) to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995 (PRA). In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), we seek specific comment on how we might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

Ordering Clauses

Accordingly, *It is ordered*, pursuant to sections 1, 4(i), 4(j), 4(o), 301, 303(b), 303(g), 303(r), 316, 332, and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 154(j), 154(o), 301, 303(b), 303(g), 303(r), 316, 332, and 403, that this Sixth Further Notice of Proposed Rulemaking is *hereby adopted.*

It is further ordered that the Commission's Consumer and Governmental Affairs Bureau, Reference Center, *shall send* a copy of this Sixth Further Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Parts 0, 2, and 90

Organization and functions (Government agencies); Communications equipment; Radio; Reporting and recordkeeping requirements.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR parts 0, 2 and 90 as follows:

PART 0—COMMISSION ORGANIZATION

■ 1. The authority citation for part 0 continues to read as follows:

Authority: Sec. 5, 48 Stat. 1068, as amended; 47 U.S.C. 155, 225, unless otherwise noted.

■ 2. Section 0.392 is amended by adding paragraph (k) to read as follows:

§ 0.392 Authority Delegated.

* * * * *

(k) Certifies frequency coordinators; considers petitions seeking review of coordinator actions; and engages in oversight of coordinator actions and practices.

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

■ 3. The authority citation for part 2 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, and 336, unless otherwise noted.

■ 4. Section 2.106, the Table of Frequency Allocations, is amended by revising page 41 to read as follows:

§ 2.106 Table of Frequency Allocations.

* * * * *

PART 90—PRIVATE LAND MOBILE RADIO SERVICES

■ 5. The authority citation for part 90 continues to read as follows:

Authority: Sections 4(i), 11, 303(g), 303(r), and 332(c)(7) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 161, 303(g), 303(r), and 332(c)(7), and Title VI of the Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. 112–96, 126 Stat. 156.

■ 6. Section 90.175 is amended by removing paragraph (j)(22) and adding paragraph (k) to read as follows:

§ 90.175 Frequency coordinator requirements.

* * * * *

(k) *For frequencies in the 4940–4990 MHz band:* See § 90.1209 of this chapter for further information.

■ 7. Section 90.1205 is amended by revising paragraph (c) to read as follows:

§ 90.1205 Permissible operations.

* * * * *

(c) Aeronautical mobile and robotic station operations are permitted subject to § 90.1219.

■ 8. Section 90.1207 is revised to read as follows:

§ 90.1207 Licensing.

(a) A 4945–4990 MHz band geographic license gives the licensee authority to operate temporary (1 year or less) fixed stations on any authorized channel in this band within its licensed area of operation. See § 90.1213. A 4945–4990 MHz band license will be issued for the geographic area encompassing the legal jurisdiction of the licensee or, in case of a nongovernmental organization, the legal jurisdiction of the state or local governmental entity supporting the nongovernmental organization.

(1) A temporary fixed station is required to be individually licensed if:

(i) International agreements require coordination;

(ii) Submission of an environmental assessment is required under § 1.1307 of this chapter; or

(iii) The station would affect areas identified in § 1.924 of this chapter.

(2) Any antenna structure that requires notification to the Federal Aviation Administration (FAA) must be registered with the Commission prior to construction under § 17.4 of this chapter.

(b) Subject to § 90.1209, base stations and mobile units (including portable and handheld units) in the 4945–4990 MHz band are required to be licensed on a site-by-site basis. All existing licensees that operate such stations shall seek licenses for such stations in the Commission's Universal Licensing System database by filing new or modification applications within one year after the Public Safety and Homeland Security Bureau and the Wireless Telecommunications Bureau announce by public notice that the database is ready to accept such applications. Any antenna structure that requires notification to the Federal Aviation Administration (FAA) must be registered with the Commission prior to construction under § 17.4 of this chapter.

(c) Permanent fixed point-to-point transmitters and receivers, permanent fixed point-to-multipoint transmitters and fixed receivers in the 4945–4990 MHz band must be licensed individually on a site-by-site basis. All existing licensees that operate such stations shall seek individual licenses for such stations in the Commission's Universal Licensing System database by filing new applications within one year after the Public Safety and Homeland Security Bureau and the Wireless Telecommunications Bureau announce by public notice that the database is ready to accept such applications. Primary permanent fixed point-to-point and point-to-multipoint transmitters must use directional antennas with gains equal to or greater than 26 dBi. All such stations in the 4945–4990 MHz band are accorded primary status.

(d) A 4940–4945 MHz license gives the licensee authority to operate aeronautical mobile or robotic stations subject to § 90.1219 on any authorized channel in this band within its licensed area of operation. *See* § 90.1213. Geographic area licenses and individually licensed stations issued before the effective date of this rule that use spectrum overlapping or within the 4940–4945 MHz band segment are grandfathered.

(e) Existing 4940–4990 MHz band licenses as of the effective date of this rule are grandfathered from revisions to § 90.1215(a)(2).

■ 9. Section 90.1209 is amended by revising paragraphs (b) through (d), and adding paragraph (e) to read as follows:

§ 90.1209 Policies governing the use of the 4940–4990 MHz band.

* * * * *

(b) Each application for a new frequency assignment or for a change in existing facilities must include a showing of frequency coordination. A database of licenses is available at *http://wireless.fcc.gov/uls.* Frequency coordinators and potential applicants should examine this database before seeking station authorization, and make every effort to ensure that their fixed and base stations operate at a location, and with technical parameters, that will minimize the potential to cause and receive interference. Licensees of stations suffering or causing harmful interference are expected to cooperate and resolve this problem by mutually satisfactory arrangements. If licensees are unable to do so, frequency coordinators may adjudicate such matters and recommend solutions to the Commission. The Commission may impose restrictions including specifying the transmitter power, antenna height, or area or hours of operation of the stations concerned. Within one day of making a frequency recommendation, the lead frequency coordinator must send a copy of the application to other certified frequency coordinators. Concurrently, the lead frequency coordinator must send a copy of the application to the adjacent 700 MHz Regional Planning Committee where the signal at the region border exceeds −109 dBW/m2/5 MHz.

(c) Licensees will make every practical effort to protect radio astronomy operations as specified in § 2.106, footnote US385 of this chapter.

(d) Licensees of base or temporary fixed stations must place at least one such station in operation within twelve (12) months of the license grant date, or the license cancels automatically as of the expiration of such twelve-month period, without specific Commission action. Fixed point-to-point and point-to-multipoint stations which are licensed on a site-by-site basis must be placed in operation within twelve (12) months of the grant date or the authorization for that station cancels automatically as of the expiration of such twelve-month period, without specific Commission action.

(e) Temporary fixed point-to-point stations may only be operated for thirty days maximum over a given path over a one-year time frame.

■ 10. Section 90.1211 is amended by revising paragraph (a), (b)(4), and (c) and adding paragraph (d) to read as follows:

§ 90.1211 Regional plan.

(a) To facilitate the shared use of the 4.9 GHz band, each region may submit a plan on guidelines to be used for sharing the spectrum within the region.

(b) * * *

(4) A description of the coordination procedures for permanent fixed point-to-point and point-to-multipoint stations, base stations, temporary fixed stations, and mobile operations. The procedures shall include, but are not limited to, mechanisms for incident

management protocols, interference avoidance, and interoperability.

(c) Regional plans may vary from the band plan in the following areas:

(1) Limit channel aggregation to 20 megahertz bandwidth.

(2) Designate one or more channels for specialized use.

(3) Place limits on the use of point-to-point links in urban areas or impose more stringent limits on antenna gain, maximum conducted output power, power spectral density, or other technical parameters of point-to-point systems relative to the limits of § 90.1215.

(4) Require polarization for point-to-point links.

(d) Regional plans may be modified by submitting a written request, signed by the regional planning committee, to the Chief, Public Safety and Homeland Security Bureau. The request must contain the full text of the modification, and a certification that all eligible entities had a chance to participate in discussions concerning the modification and that any changes have been coordinated with adjacent regions.

■ 11. Section 90.1213 is revised to read as follows:

§ 90.1213 Band plan.

(a) Upon the effective date of this rule, Channel numbers 1 through 5 are aggregated for a channel bandwidth of 5 MHz and may be subsequently licensed for use only in accordance with § 90.1219 of this chapter; any existing operations on these channels prior to the effective date of this rule are grandfathered. Channel numbers 6 through 13 are 5 MHz bandwidth channels and Channel numbers 14 through 18 are 1 MHz bandwidth channels. The following channel center frequencies are permitted to be aggregated for channel bandwidths of 5, 10, 15 or 20 MHz as described in paragraph (b) of this section. Channel numbers 14 through 18 should be used for narrow bandwidth operations and should be used in aggregations only if all other 5 MHz channels are blocked.

Center frequency (MHz)	Bandwidth (MHz)	Channel Nos.
4942.5	5	1–5
4947.5	5	6
4952.5	5	7
4957.5	5	8
4962.5	5	9
4967.5	5	10
4972.5	5	11
4977.5	5	12
4982.5	5	13
4985.5	1	14
4986.5	1	15
4987.5	1	16
4988.5	1	17
4989.5	1	18

(b) The following tables list center frequencies to be licensed for aggregated channels only. A license may contain any combination of bandwidths from aggregated channels provided that the bandwidths do not overlap. The bandwidth edges (lower and upper frequencies) are provided to aid in planning.

(1) 5 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4942.5	1 to 5 *	4940	4945
4947.5	6	4945	4950
4952.5	7	4950	4955
4957.5	8	4955	4960
4962.5	9	4960	4965
4967.5	10	4965	4970
4972.5	11	4970	4975
4977.5	12	4975	4980
4982.5	13	4980	4985
4987.5	14 to 18 **	4985	4990

* Licensees for these channels granted after the effective date of this rule may use these channels only in accordance with § 90.1219 of this chapter.

** Licensees should avoid using these channels in aggregations unless all other channels are blocked.

(2) 10 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4950	6 & 7	4945	4955
4955	7 & 8	4950	4960
4960	8 & 9	4955	4965
4965	9 & 10	4960	4970

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4970	10 & 11	4965	4975
4975	11 & 12	4970	4980
4980	12 &13	4975	4985
4985	13 to 18*	4980	4990

* Licensees should avoid using these channels in aggregations unless all other channels are blocked.

(3) 15 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4952.5	6 to 8	4945	4960
4957.5	7 to 9	4950	4965
4962.5	8 to 10	4955	4970
4967.5	9 to 11	4960	4975
4972.5	10 to 12	4965	4980
4977.5	11 to 13	4970	4985
4982.5	12 to 18*	4975	4990

* Licensees should avoid using these channels in aggregations unless all other channels are blocked.

(4) 20 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4955	6 to 9	4945	4965
4960	7 to 10	4950	4970
4965	8 to 11	4955	4975
4970	9 to 12	4960	4980
4975	10 to 13	4965	4985
4980	11 to 18*	4970	4990

* Licensees should should avoid using these channels in aggregations unless all other channels are blocked.

(5) 30 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4960	6 to 11	4945	4975
4965	7 to 12	4950	4980
4970	8 to 13	4955	4985
4975	9 to 18*	4960	4990

* Licensees should avoid using these channels in aggregations unless all other channels are blocked.

(6) 40 MHz bandwidth aggregation:

Center frequency (MHz)	Channel Nos. employed	Lower frequency (MHz)	Upper frequency (MHz)
4965	6 to 13	4945	4985
4970	7 to 18*	4950	4990

* Licensees should avoid using these channels in aggregations unless all other channels are blocked.

■ 12. Section 90.1215 is amended by revising paragraphs (a)(1) and (2) to read as follows:

§ 90.1215 Power limits.

* * * * *

(a)(1) The maximum conducted output power should not exceed:

Channel bandwidth (MHz)	Low power maximum conducted output power (dBm)	High power maximum conducted output power (dBm)
1	7	20
5	14	27
10	17	30
15	18.8	31.8
20	20	33
30	21.8	34.8
40	23	36

(2) High power devices are also limited to a peak power spectral density of 21 dBm per one MHz. High power devices using channel bandwidths other than those listed above are permitted; however, they are limited to peak power spectral density of 21 dBm/MHz. If transmitting antennas of directional gain greater than 9 dBi are used, both the maximum conducted output power and the peak power spectral density should be reduced by the amount in decibels that the directional gain of the antenna exceeds 9 dBi. However, high power point-to-point transmitting antennas (both fixed and temporary-fixed rapid deployment) shall operate with minimum directional gain of 26 dBi, maximum 5.5 degree beamwidth and 25 dB front-to-back ratio. For point-to-point systems, the maximum equivalent isotropically radiated power (EIRP) is 65.15 dBm. High power point-to-multipoint operations (both fixed and temporary-fixed rapid deployment) may employ transmitting antennas with directional gain exceeding 26 dBi. For point-to-multipoint systems, the maximum EIRP is 55.15 dBm. Frequency coordinators may recommend reduction to the EIRP on a case-by-case basis, through reduction of the maximum conducted output power, spectral density, and/or antenna gain. Further, under § 90.1211(c)(3) thorough (4), Regional Planning Committees may recommend alternate lower limits to the allowed antenna gain, maximum conducted output power, or power spectral density of point-to-point systems.

* * * * *

■ 13. Section 90.1219 is added to Subpart Y to read as follows:

§ 90.1219 Aeronautical mobile and robotic operation.

Entities eligible pursuant to § 90.1203(a) may conduct manned aeronautical mobile and robotic terrestrial operations on Channels 1 through 5 (4940–4945 MHz) to transmit video payload on a primary basis to terrestrial services under the following restrictions.

(a) Airborne use of these channels is limited to aircraft flying at or below 457 meters (1500 feet) above ground level. Fixed wing aircraft may use these channels at altitudes exceeding 457 meters above ground level as necessary to comply with 14 CFR 91.119(b) through (c).

(b) Licensees may use only low power devices as defined by § 90.1215 that use Emission Mask L as defined by § 90.210(l) for aeronautical mobile use.

(c) Licensees may use only low power devices as defined by § 90.1215 for robotic applications.

(d) The applicant shall provide a description of proposed operation to demonstrate that the proposed aeronautical mobile operations protect radio astronomy operations and terrestrial services from interference.

(e) Aeronautical mobile and robotic applications must be approved in writing by the 700 MHz Regional Planning Committee or the National Regional Planning Council as part of the frequency coordination Regional Planning Committee review process before the coordinator can submit the application to the Commission.

(f) Aeronautical mobile operations are prohibited within 80.5 kilometers (50 miles) of radio astronomy sites listed in § 2.106 US385 or US131. The coordinates to be used for the Allen Telescope Array are 40° 49' 01'' North latitude, 121° 28' 12'' West longitude. An applicant for aeronautical mobile use whose geographic boundaries fall within 80.5 kilometers of any of these radio astronomy sites may request a waiver, but shall certify that it has served a copy of the application on affected radio astronomy observatories.

(g) The Commission has the discretion to impose special conditions and operating restrictions on individual licenses as necessary to reduce risk of interference to radio astronomy operations and terrestrial services.

(h) Transmissions in the 4940–4990 MHz band to or from unmanned aerial systems are prohibited.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Agency Information Collection Activities; Comment Request: National Universal Product Code (NUPC) Database

AGENCY: Food and Nutrition Service (FNS), USDA.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and other public agencies to comment on this proposed information collection. This collection is an extension, without change, of a currently approved collection for the maintenance of a central repository containing information about authorized foods in the Special Supplemental Nutrition Program for Women, Infants and Children (WIC), as approved by various WIC State agencies.

DATES: Written comments must be received on or before July 6, 2018.

ADDRESSES: Comments may be sent to: Kurtria Watson, Food and Nutrition Service, U.S. Department of Agriculture, 3101 Park Center Drive, Room 524, Alexandria, VA 22302. Comments may also be submitted via fax to the attention of Kurtria Watson at 703–305–2196 or via email to *Kurtria.Watson@fns.usda.gov.* Comments will also be accepted through the Federal eRulemaking Portal. Go to *http://www.regulations.gov,* and follow the online instructions for submitting comments electronically.

All responses to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will be a matter of public record.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this information collection should be directed to Kurtria Watson at 703–605–4387.

SUPPLEMENTARY INFORMATION: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions that were used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title: National Universal Product Code (NUPC) Database.

Form Number: N/A.

OMB Number: 0584–0552.

Expiration Date: August 31, 2018.

Type of Request: Extension, without change, of a currently approved collection.

Abstract: The Special Supplemental Nutrition Program for Women, Infants and Children (WIC), (Pub. L. 109–85) provides low-income pregnant, breastfeeding, and postpartum women, infants, and children up to age five with nutritious supplemental foods, nutrition education, including breastfeeding promotion and support, and referrals to health and social services. The WIC Program is administered by the USDA Food and Nutrition Service (FNS). FNS provides grant funding and issues regulations which are utilized by WIC State agencies to operate the WIC Program and distribute benefits through local WIC clinics. The program operates throughout the 50 States, the District of Columbia, Guam, Puerto Rico, American Samoa, Commonwealth of the Northern Mariana Islands, the U.S. Virgin Islands, and in 34 Indian Tribal Organizations.

The reporting and record-keeping associated with WIC State agencies and their management of the NUPC database is not included in this burden calculation. Burden hours associated with WIC State agencies and their management of the NUPC database is included in the burden calculation associated with the WIC program regulations, OMB Control Number 0584–0043.

WIC Regulations at 7 CFR part 246 require State agencies to authorize eligible foods for their WIC food list. Under these regulations, State agencies must review food products for eligibility in accordance with Federal regulations and State agency policies. State agencies are not required to authorize all food products eligible under federal regulations, but generally select foods based on factors such as cost, availability and acceptability to participants. After review, the State agency develops a list of food items available for WIC participants for purchase. This food list is known as the Authorized Products List (APL). State agencies require authorized vendors (*i.e.,* stores authorized to provide WIC foods) to ensure only approved food items are purchased. In State agencies that have transitioned to Electronic Benefit Transfer (EBT) systems, authorized vendors must program their point of sale systems to identify WIC approved foods and their associated Universal Product Code (UPC) or Price Look-Up (PLU) code as individual products are scanned at the checkout. Vendors in State agencies that have not transitioned to EBT rely on their checkout clerks to ensure only authorized WIC products are approved for purchase.

WIC State agencies operating EBT systems provide their authorized vendors with an electronic file containing the State agency's current list of authorized foods. As products are scanned at the checkout lane, the UPC or PLU is matched to the State specific APL. Food items matching the APL, and which are presented in quantities less than or equal to the remaining benefit balance associated with the participant's WIC EBT card, are approved for purchase. Unmatched items, or items in excess of the available account balance, may not be purchased with WIC benefits.

The Healthy, Hunger-Free Kids Act of 2010 directed the Secretary of Agriculture to establish a National Universal Product Code (NUPC) database for use by all WIC State agencies as they implement EBT statewide. As a result of this legislation, FNS expanded the number of data elements contained in the existing NUPC database while simultaneously

reducing the burden on WIC State agency employees by assembling food product information in an easily accessible repository. NUPC database modifications and expansion activities have allowed for the storage and retrieval of additional data elements for each WIC authorized food to include: Nutrition facts panel information, ingredients, special processing practices (*i.e.,* Kosher or Halal), and a free form comments field. The NUPC retained all previously used product identifier fields. Responsibility for populating the NUPC database resides with an independent contractor who serves as the single point of entry for all information entering the NUPC database. This contractor ensures NUPC data is captured with a high level of accuracy while preserving data integrity in a standardized format. The NUPC database provides all WIC State agencies with access to a central repository containing comprehensive information about authorized WIC foods. State agencies may choose to use the NUPC database to create an initial list of authorized foods eligible for redemption by WIC Program participants. Subsequently, State agencies may use the NUPC database to maintain their list of authorized foods, and to create an APL for distribution to authorized vendors when operating in the EBT environment.

Affected Public: Businesses or Other For Profit Organizations. Respondent groups identified include: (1) Food Manufacturers and Distributors; (2) Authorized Vendors.

Estimated Number of Respondents: The total estimated number of respondents is 360. This includes 240 food manufacturers or distributors and 120 authorized vendors.

Estimated Number of Responses per Respondent: 3.33. The 240 food manufacturers or distributors will be asked to provide product information in electronic format (.doc, .xls, .pdf). All responses are voluntary. FNS estimates that each of the food manufacturers or distributors will be asked to provide product information 4 times per year on average and that each of the 120 authorized vendors will be asked to provide product information 2 times per year on average.

Estimated Total Annual Responses: The total number of responses is estimated to be 1,200. FNS estimates food manufacturers or distributors will be asked to respond a total of 960 times per year (240 food manufacturers or distributors × 4 responses per year each = 960). FNS estimates authorized vendors will be asked to respond a total of 240 times per year (120 authorized vendors × 2 responses per year each = 240). All responses are voluntary.

Estimated Time per Response: The estimated time per response varies by type of respondent. FNS expects all respondents will expend 12 hours per respondent per year to develop, maintain, and troubleshoot the electronic systems for use in transmitting information. The estimated time required to develop, maintain, and troubleshoot electronic systems is amortized over the expected number of responses. FNS also expects all respondents will expend 2 seconds per response to transmit information to FNS electronically. Since the time required to actually transmit the information to FNS is considered negligible (total of 40 minutes per year for all respondents), it was omitted from the burden calculation. FNS expects that food manufacturers or distributors will expend 6 hours per response to gather and format the requested information. Authorized vendors are expected to expend 1 hour per response to gather and format the requested information. The estimated time per response for food manufacturers or distributors is expected to be 9 hours per response ((12 hours per year/4 responses per year) + 6 hours per response = 9 hours per response). The estimated time per response for authorized vendors is expected to be 7 hours per response ((12 hours per year/2 responses per year) + 1 hour per response = 7 hours per response).

Estimated Total Annual Burden on Respondents: 10,320 hours. The table below provides an estimated total annual burden for each type of respondent:

Respondent	Estimated number of respondents	Response annually per respondent	Total annual responses	Estimated average number of hours per response	Estimated total annual burden (hours)
Food Manufacturers and Distributors	240	4	960	9	8,640
Authorized Vendors	120	2	240	7	1,680
Total	360	3.33	1,200	8.6	10,320

Dated: April 27, 2018.

Brandon Lipps,

Administrator, Food and Nutrition Service.

BILLING CODE 3410–30–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–28–2018]

Foreign-Trade Zone (FTZ) 37—Orange County, New York; Notification of Proposed Production Activity; Takasago International Corp. (U.S.A.) (Fragrances); Harriman, New York

Takasago International Corp. (U.S.A.) (Takasago) submitted a notification of proposed production activity to the FTZ Board for its facility in Harriman, New York. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on April 30, 2018.

Takasago already has authority to produce fragrances within Site 10 of FTZ 37. The current request would add additional foreign status components of essential oils and aromatic chemicals to the scope of authority. Pursuant to 15 CFR 400.14(b), additional FTZ authority would be limited to the specific foreign-status components described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt Takasago from customs duty payments on the foreign-status components used in export production. On its domestic sales, for the foreign-status components noted below,

Takasago would be able to choose the duty rate during customs entry procedures that applies to fragrances (duty-free). Takasago would be able to avoid duty on foreign-status components which become scrap/waste. Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

The materials/components sourced from abroad include: Decanoyl and Octanoyl Glycerides; Beeswax Absolute; Cinnamyl Isovalerate; Camphene; Farnesene; Galbanolene Super (Ethyl Citrate); Ocimene; Dimethyl Benzyl Carbinol; Lily Propanol; Phenyl Ethyl Methyl Ethyl Carbinol; Grapefruit Pentanol; Styrallyl Alcohol; Isobutyl Benzyl Carbinol; Diola; Woody Epoxide; Ocimene Oxirane; Rhubarb Oxirane; Caryophyllene Oxide; Citral Dimethyl Acetal Extra; Elintaal Forte; Floropal; Hyacinth Body; Hydratropic Aldehyde; Hydratropic Aldehyde Dimetheyl Acetal; Indoletal; Karanal; Methyl Pamplemousse; Octacetal; Phenyl Acetald Glyceryl Acetal; Syvertal; Phenyl Ethyl Acetal; Alpha-Amyl Cinnamic Aldehyde; 2(1)-Orris Butanal; Cinnamic Aldehyde; Cyclovertal; Muguet Carbaldehyde; Dupical; Floralozone; Hexyl Cinnamic Aldehyde; Hydroxyambran; Iso Cyclo Citral; Alpha-Methyl Cinnamic Aldehyde; Mefranal; Perilla Aldehyde; Para-Tolyl Aldehyde; Ligustral; Vernaldehyde; Hinokitiol Crystal; Methyl Lavender Ketone; Citronellyl Isovalerate; Para-Cresyl Isobutyrate; Dimethyl Benzyl Carbinyl Butyrate; Geranyl Butyrate; Isoamyl Butyrate; Isoamyl Isobutyrate; Isobutyl Lignate; Linalyl Butyrate; Methyl Isovalerate; Phenyl Ethyl Pivalate; Methyl Cinnamate; Phenyl Ethyl Cinnamate; Benzyl Cinnamate; Diethyl Tartrate; Methyl Jasmonate; Ethyl 3-Hydroxy Butyrate; Ethyl Levulinate; Ethyl Decadienoate; Methyl Dihydrojasmonate; Allyl Amyl Glycolate; Berry Hexanoate; Aurantiol Pure; Agrumea; Lyrame; Methional; Corps Pamplemousse; Dibutyl Sulfide; Dimethyl Sulfide; 2-Methyl-4-Propyl-1 3-Oxathiane; Ambrettolide; Gamma-Decalactone; Jasmolactone; Delta-Octalactone; Cyclohexyl Lactone; Delta-Decalactone; Gamma-Decalactone; Cyclopentadecanolide; Gamma-Heptalactone; Gamma-Hexalactone; Jasmin Lactone; Lactone of CIS Jasmone; Lactone of Dihydro Jasmone; Musk R-1; Delta-Nonalactone; Delta-Undecalactone; Gamma-Undecalactone; Gamma-Valerolactone; Whiskey Lactone (Methyl Octalactone); Gamma-Nonalactone; Methyl Nonyl Acetaldehyde; Watermelon Ketone; Dulcinyl; Galaxolide Pure; Galaxolide 50% Dipropylene Glycol; Methyl Dioxolan; Woody Dioxolane; Spirambrene; Floropal; Glycolierral; Grisalva; Gyrane; Ocean Propanal; Floral Pyranol; Maltol Isobutyrate; Magnolan; 10-Oxahexadecanolide; Pelargene; Rose Oxide; Reseda Body; Laevo Rose Oxide; Isobutyl Quinoline; Isopropyl Quinoline; 2-Isobutyl Quinoline; Marine Pyridine; Mandarin Oil Cravo Brazil; Orange Juice Carbonyls Low Valencene; Orange Oil Terpenes; Neroli Oil; Orange Isolate; Linalool; Orange Flower Absolute Carbon Dioxide; Orange Sweet Oil; Orange Leaf Water Tunisia Absolute Natural; Tangerine Oil; Orange Bigarade (Bitter) Molecular Distilled; Peppermint Oil Chinese Natural; Benzoin Resin Siam Natural; Benzoin Resin Sumatra Super Natural; Elemi Gum; Ginger Oil Indian; Hydrocarboresin; Myrrh Resin; Myrrh Resin Coeur; Oakmoss Absolute; Opoponax Oil; Styrax Oil; Tolu Balsam (Benzoic Acid); Nutmeg Oil; Ambroxide; Iris Pallida; and, Opoponax Resin Natural Extract (duty rate ranges from duty-free to 6.5%, as well as 8.8 ¢/kg).

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is June 18, 2018.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Juanita Chen at *juanita.chen@trade.gov* at 202–482–1378.

Dated: May 2, 2018.

Andrew McGilvray,

Executive Secretary.

Foreign-Trade Zones Board

[S–66–2018]

Foreign-Trade Zone 29—Louisville, Kentucky; Application for Subzone; Amcor Flexibles LLC; Shelbyville, Kentucky

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the Louisville & Jefferson County Riverport Authority, grantee of FTZ 29, requesting subzone status for the facility of Amcor Flexibles LLC, located in Shelbyville, Kentucky. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally docketed on May 1, 2018.

The proposed subzone site (14.364 acres) is located at 6850 Midland Industrial Drive, Shelbyville, Shelby County. Limited production activity was authorized for the company within FTZ 29 on May 11, 2017 (Doc. B–7–2017). The proposed subzone would be subject to the existing activation limit of FTZ 29.

In accordance with the Board's regulations, Elizabeth Whiteman of the FTZ Staff is designated examiner to review the application and make recommendations to the Executive Secretary.

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is June 18, 2018. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to July 2, 2018.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Elizabeth Whiteman at *Elizabeth.Whiteman@trade.gov* or (202) 482–0473.

Dated: May 1, 2018.

DEPARTMENT OF COMMERCE

International Trade Administration

Subsidy Programs Provided by Countries Exporting Softwood Lumber and Softwood Lumber Products to the United States; Request for Comment

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) seeks public comment on any subsidies, including stumpage subsidies, provided by certain countries exporting softwood lumber or softwood lumber products to the United States during the period July 1, 2017, through December 31, 2017.

DATES: Comments must be submitted within 30 days after publication of this notice.

ADDRESSES: *See* the Submission of Comments section below.

FOR FURTHER INFORMATION CONTACT: James Terpstra or Brendan Quinn, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3965 or (202) 482–5848, respectively.

SUPPLEMENTARY INFORMATION:

Background

On June 18, 2008, section 805 of Title VIII of the Tariff Act of 1930 (the Softwood Lumber Act of 2008) was enacted into law. Under this provision, the Secretary of Commerce is mandated to submit to the appropriate Congressional committees a report every 180 days on any subsidy provided by countries exporting softwood lumber or softwood lumber products to the United States, including stumpage subsidies.

Commerce submitted its last subsidy report on December 16, 2017. As part of its newest report, Commerce intends to include a list of subsidy programs identified with sufficient clarity by the public in response to this notice.

Request for Comments

Given the large number of countries that export softwood lumber and softwood lumber products to the United States, we are soliciting public comment only on subsidies provided by countries the exports of which accounted for at least one percent of total U.S. imports of softwood lumber by quantity, as classified under Harmonized Tariff Schedule code 4407.1001 (which accounts for the vast majority of imports), during the period July 1, 2017, through December 31, 2017. Official U.S. import data published by the United States International Trade Commission Tariff and Trade DataWeb indicate that four countries (Brazil, Canada, Germany and Sweden) exported softwood lumber to the United States during that time period in amounts sufficient to account for at least one percent of U.S. imports of softwood lumber products. We intend to rely on similar previous six-month periods to identify the countries subject to future reports on softwood lumber subsidies. For example, we will rely on U.S. imports of softwood lumber and softwood lumber products during the period January 1, 2018 through June 30, 2018, to select the countries subject to the next report.

Under U.S. trade law, a subsidy exists where an authority: (i) Provides a financial contribution; (ii) provides any form of income or price support within the meaning of Article XVI of the GATT 1994; or (iii) makes a payment to a funding mechanism to provide a financial contribution to a person, or entrusts or directs a private entity to make a financial contribution, if providing the contribution would normally be vested in the government and the practice does not differ in substance from practices normally followed by governments, and a benefit is thereby conferred.[1]

Parties should include in their comments: (1) The country which provided the subsidy; (2) the name of the subsidy program; (3) a brief description (no more than 3–4 sentences) of the subsidy program; and (4) the government body or authority that provided the subsidy.

Submission of Comments

As specified above, to be assured of consideration, comments must be received no later than 30 days after the publication of this notice in the **Federal Register**. All comments must be submitted through the Federal eRulemaking Portal at *http://www.regulations.gov,* Docket No. ITA–2018–0002, unless the commenter does not have access to the internet. The materials in the docket will not be edited to remove identifying or contact information, and Commerce cautions against including any information in an electronic submission that the submitter does not want publicly disclosed. Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF formats only.

Commenters who do not have access to the internet may submit the original and one electronic copy of each set of comments by mail or hand delivery/courier.

All comments should be addressed to Gary Taverman, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance, Room 18022, Department of Commerce, 1401 Constitution Ave. NW, Washington, DC 20230.

Dated: May 1, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Polytetrafluoroethylene Resin From India: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Extension of Provisional Measures

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that polytetrafluoroethylene (PTFE) resin from India is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is July 1, 2016, through June 30, 2017. Interested parties are invited to comment on this preliminary determination.

DATES: Applicable May 7, 2018.

FOR FURTHER INFORMATION CONTACT: Nicholas Czajkowski or Mark Kennedy, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1395 or (202) 482–7883, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 733(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on October 26, 2017.[1]

Commerce exercised its discretion to toll all deadlines affected by the closure of the Federal Government from January 20 through 22, 2018.[2] Accordingly, the

[1] *See Polytetrafluoroethylene Resin from India and the People's Republic of China: Initiation of Less-Than-Fair-Value Investigations,* 82 FR 49587 (October 26, 2017) (*Initiation Notice*).

[2] *See* Memorandum, ''Deadlines Affected by the Shutdown of the Federal Government,'' dated

Continued

revised deadline for the preliminary determination of this investigation became March 12, 2018.[3] Subsequently, on February 20, 2018, Commerce postponed the preliminary determination of this investigation and the revised deadline is now April 30, 2018.[4] For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.[5] A list of topics addressed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov,* and to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.*

Scope of the Investigation

The product covered by this investigation is PTFE resin from India. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the preamble to Commerce's regulations,[6] the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (scope).[7] Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice.* For a summary of the product coverage comments and rebuttal responses submitted to the record for this investigation, and accompanying discussion and analysis of all comments timely received, *see* the Preliminary Scope Decision Memorandum.[8] *See* the scope in Appendix I to this notice. The scope case briefs were due on April 9, 2018, 30 days after the publication of *PTFE Resin from India CVD.*[9] There will be no further opportunity for comments on scope-related issues.[10]

Methodology

Commerce is conducting this investigation in accordance with section 731 of the Act. Commerce has calculated export prices in accordance with section 772(a) of the Act. Constructed export prices have been calculated in accordance with section 772(b) of the Act. Normal value (NV) is calculated in accordance with section 773 of the Act. For a full description of the methodology underlying Commerce's preliminary determination, *see* the Preliminary Decision Memorandum.

All-Others Rate

Sections 733(d)(1)(ii) and 735(c)(5)(A) of the Act provide that in the preliminary determination Commerce shall determine an estimated all-others rate for all exporters and producers not individually examined. This rate shall be an amount equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually examined, excluding all rates that are zero, *de minimis,* or determined entirely under section 776 of the Act.

In this investigation, Commerce has preliminarily determined a calculated rate for Gujarat Fluorochemicals Limited, the one mandatory respondent in this investigation, that is not zero, *de minimis,* or based entirely on facts otherwise available. Consequently, the rate calculated for this respondent is also assigned as the rate for all-other producers and exporters in this investigation.

Preliminary Determination

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist:

Exporter/producer	Estimated weighted-average dumping margin (percent *ad valorem*)	Cash deposit rate (adjusted for export subsidy offset) (percent *ad valorem*)
Gujarat Fluorochemicals Limited	18.49	[11] 17.16
All-Others	18.49	[12] 17.16

Suspension of Liquidation

In accordance with section 733(d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise, as described in Appendix I, entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**, as discussed below. Further, pursuant to section 733(d)(1)(B) of the Act and 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping

January 23, 2018. All deadlines in this segment of the proceeding have been extended by 3 days.

[7] *See Initiation Notice.*

[8] *See* Memorandum, ''Polytetrafluoroethylene Resin from India and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated February 28, 2018 (Preliminary Scope Decision Memorandum).

[9] The scope case briefs were due 30 days after the publication of *Polytetrafluoroethylene Resin from India: Preliminary Affirmative Countervailing Duty Determination,* 83 FR 9842 (March 8, 2018) (*PTFE Resin from India CVD*), which was Saturday, April 7, 2018. *See* the Preliminary Scope Decision Memorandum at 2. Therefore, the actual deadline for the scope case briefs was Monday, April 9, 2018. *See* 19 CFR 351.303(b)(1) (''For both electronically filed and manually filed documents, if the applicable due date falls on a non-business day, the Secretary will accept documents that are filed on the next business day.''). The deadline for scope rebuttal briefs was Monday, April 16, 2018.

[10] *See* Preliminary Scope Decision Memorandum at 3 (''Parties should include all arguments about scope-related issues in the scope case and scope rebuttal briefs. Commerce does not intend to permit arguments about scope-related issues in the investigation-specific case and rebuttal briefs regarding other issues.'')

[11] *See Polytetrafluoroethylene Resin from India: Preliminary Affirmative Countervailing Duty Determination,* 83 FR 9842 (March 8, 2018) and accompanying Preliminary Decision Memorandum at ''Programs Preliminarily Determined to Be Countervailable'' (specifically, Export Promotion of Capital Goods Scheme (EPCGS); Advance Authorization Program (AAP) aka Advance License Program (ALP); and Status Holders Incentive Scrip (SHIS)).

[12] *Id.*

margin or the estimated all-others rate, adjusted for export subsidies, as follows: (1) The cash deposit rate for the respondent listed above will be equal to the company-specific estimated weighted-average dumping margins determined in this preliminary determination, adjusted for export subsidies; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise, adjusted for export subsidies; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin, adjusted for export subsidies.

For cash deposits, Commerce normally adjusts the estimated weighted-average dumping margins by the amount of export subsidies countervailed in a companion countervailing duty (CVD) proceeding, when CVD provisional measures are in effect. Accordingly, where Commerce has preliminarily made an affirmative determination that there are countervailable export subsidies, Commerce has offset the estimated weighted-average dumping margin by the appropriate CVD rate attributable to export subsidies. Any such cash deposit rate may be found in the Preliminary Determination section above.

Should provisional measures in the companion CVD investigation expire prior to the expiration of provisional measures in this LTFV investigation, Commerce will direct CBP to begin collecting estimated antidumping duty cash deposits unadjusted for the countervailable export subsidies at the time that the provisional CVD measures expire.[13]

These suspension of liquidation instructions will remain in effect until further notice.

Disclosure

Commerce intends to disclose to interested parties the calculations performed in connection with this preliminary determination within five days of its public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, Commerce intends to verify information relied upon in making its final determination.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last final verification report is issued in this investigation.[14] Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.[15] Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Postponement of Final Determination and Extension of Provisional Measures

Section 735(a)(2) of the Act provides that a final determination may be postponed until not later than 135 days after the date of the publication of the preliminary determination if, in the event of an affirmative preliminary determination, a request for such postponement is made by exporters who account for a significant proportion of exports of the subject merchandise, or in the event of a negative preliminary determination, a request for such postponement is made by the petitioners. Pursuant to 19 CFR 351.210(e)(2), Commerce requires that requests by respondents for postponement of a final antidumping determination be accompanied by a request for extension of provisional measures from a four-month period to a period not more than six months in duration.

On March 28, 2018, pursuant to 19 CFR 351.210(e), GFL requested that Commerce postpone the final determination and that provisional measures be extended to a period not to exceed six months.[16] In accordance with section 735(a)(2)(A) of the Act and 19 CFR 351.210(b)(2)(ii), because (1) the preliminary determination is affirmative; (2) the requesting exporter accounts for a significant proportion of exports of the subject merchandise; and (3) no compelling reasons for denial exist, Commerce is postponing the final determination and extending the provisional measures from a four-month period to a period not greater than six months. Accordingly, Commerce's final determination will be published no later than 135 days after the date of publication of this preliminary determination.

International Trade Commission Notification

In accordance with section 733(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its preliminary determination of sales at LTFV. If the final determination is affirmative, the ITC will determine before the later of 120 days after the date of this preliminary determination or 45 days after the final determination whether imports of the subject merchandise are materially injuring, or threaten material injury to, the U.S. industry.

Notification to Interested Parties

This determination is issued and published in accordance with sections 733(f) and 777(i)(1) of the Act and 19 CFR 351.205(c).

Dated: April 30, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix I—Scope of the Investigation

The product covered by this investigation is polytetrafluoroethylene (PTFE) resin, including but not limited to granular, dispersion, or coagulated dispersion (also

[13] *See Polytetrafluoroethylene Resin from India: Preliminary Affirmative Countervailing Duty Determination,* 83 FR 9842 (March 8, 2018).

[14] Case briefs, other written comments, and rebuttal briefs should not include scope-related issues. *See* Preliminary Scope Decision Memorandum at 2–3. Parties were already permitted the opportunity to file scope case briefs. *Id.*

[16] *See* Letter from GFL, ''Polytetrafluoroethylene (PTFE) Resin from India: Gujarat Fluorochemicals Ltd.'s Request to Postpone Final Determination,'' dated March 28, 2018.

known as fine powder). PTFE is covered by the scope of this investigation whether filled or unfilled, whether or not modified, and whether or not containing co-polymer additives, pigments, or other materials. Also included is PTFE wet raw polymer. The chemical formula for PTFE is C2F4, and the Chemical Abstracts Service Registry number is 9002–84–0.

PTFE further processed into micropowder, having particle size typically ranging from 1 to 25 microns, and a melt-flow rate no less than 0.1 gram/10 minutes, is excluded from the scope of this investigation.

PTFE is classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 3904.61.0010 and 3904.61.0090. Subject merchandise may also be classified under HTSUS subheading 3904.69.5000. Although the HTSUS subheadings and CAS Number are provided for convenience and Customs purposes, the written description of the scope is dispositive.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Meeting of the United States Travel and Tourism Advisory Board

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of an open meeting.

SUMMARY: The United States Travel and Tourism Advisory Board (Board or TTAB) will hold a meeting on Thursday, May 24, 2018. The Board advises the Secretary of Commerce on matters relating to the U.S. travel and tourism industry. The purpose of the meeting is for Board members to discuss recommendations related to the importance of international travel and tourism to the United States. The final agenda will be posted on the Department of Commerce website for the Board at *http://trade.gov/ttab* at least one week in advance of the meeting.

DATES: Thursday, May 24, 2018, 3:00 p.m.–4:30 p.m. EDT. The deadline for members of the public to register, including requests to make comments during the meeting and for auxiliary aids, or to submit written comments for dissemination prior to the meeting, is 5:00 p.m. EDT on Thursday, May 17, 2018.

ADDRESSES: The meeting will be held in Washington, DC. The exact location will be provided by email to registrants.

Requests to register (including to speak or for auxiliary aids) and any written comments should be submitted to: National Travel and Tourism Office, U.S. Department of Commerce, 1401 Constitution Ave. NW, Room 10003, Washington, DC 20230 or by email to *TTAB@trade.gov.* Members of the public are encouraged to submit registration requests and written comments via email to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT: Brian Beall, the United States Travel and Tourism Advisory Board, National Travel and Tourism Office, U.S. Department of Commerce, 1401 Constitution Ave. NW, Room 10003, Washington, DC 20230; telephone: 202–482–0140; email: *TTAB@trade.gov.*

SUPPLEMENTARY INFORMATION:

Background: The Board advises the Secretary of Commerce on matters relating to the U.S. travel and tourism industry.

Public Participation: The meeting will be open to the public and will be accessible to people with disabilities. Any member of the public requesting to join the meeting is asked to register in advance by the deadline identified under the **DATES** caption. Requests for auxiliary aids must be submitted by the registration deadline. Last minute requests will be accepted, but may not be possible to fill. There will be fifteen (15) minutes allotted for oral comments from members of the public joining the meeting. To accommodate as many speakers as possible, the time for public comments may be limited to three (3) minutes per person. Members of the public wishing to reserve speaking time during the meeting must submit a request at the time of registration, as well as the name and address of the proposed speaker. If the number of registrants requesting to make statements is greater than can be reasonably accommodated during the meeting, the International Trade Administration may conduct a lottery to determine the speakers. Speakers are requested to submit a written copy of their prepared remarks by 5:00 p.m. EDT on Thursday, May 17, 2018, for inclusion in the meeting records and for circulation to the members of the Board.

In addition, any member of the public may submit pertinent written comments concerning the Board's affairs at any time before or after the meeting. Comments may be submitted to Brian Beall at the contact information indicated above. To be considered during the meeting, comments must be received no later than 5:00 p.m. EDT on Thursday, May 17, 2018, to ensure transmission to the Board prior to the meeting. Comments received after that date and time will be distributed to the members but may not be considered during the meeting. Copies of Board meeting minutes will be available within 90 days of the meeting.

Brian Beall,

Designated Federal Officer, United States Travel and Tourism Advisory Board.

BILLING CODE 3510–DR–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–552–812]

Steel Wire Garment Hangers From the Socialist Republic of Vietnam: Rescission of Antidumping Duty Administrative Review; 2017–2018

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is rescinding the administrative review of the antidumping duty (AD) order on steel wire garment hangers from the Socialist Republic of Vietnam (Vietnam) for the period of review (POR) February 1, 2017, through January 31, 2018.

DATES: Applicable May 7, 2018.

FOR FURTHER INFORMATION CONTACT: Trenton Duncan or Kabir Archuletta, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3539 or (202) 482–2593, respectively.

Background

On February 1, 2018, Commerce published in the **Federal Register** a

notice of opportunity to request an administrative review of the AD order on steel wire garment hangers from Vietnam for the period February 1, 2017, through January 31, 2018.[1] On February 28, 2018, M&B Metal Products Company, Inc. (the petitioner), timely requested a review of the AD order with respect to 66 companies.[2] On April 16, 2018, Commerce initiated an administrative review with respect to these companies, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i).[3] On April 24, 2018, the petitioner timely withdrew its request for an administrative review of all 66 companies listed in the *Initiation Notice*.[4] No other party requested a review of these exporters or any other exporters of subject merchandise.

Rescission of Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested the review withdraws its request within 90 days of the publication date of the notice of initiation of the requested review. In this case, the petitioner timely withdrew its requests for review within the 90-day deadline. Because Commerce received no other requests for review of the above-referenced companies, and no other requests were made for a review of the AD order on steel wire garment hangers from Vietnam with respect to other companies, we are rescinding the administrative review covering the period February 1, 2017, through January 31, 2018, in its entirety, in accordance with 19 CFR 351.213(d)(1).

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries of steel wire garment hangers from Vietnam during the POR at rates equal to the cash deposit rate for estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after publication of this notice in the **Federal Register**.

Notification to Importers

This notice serves as the only reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Order

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.213(d)(4).

Dated: May 1, 2018.

James Maeder,

Associate Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations performing the duties of Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Polytetrafluoroethylene Resin From the People's Republic of China: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Extension of Provisional Measures

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that polytetrafluoroethylene (PTFE) resin from the People's Republic of China (China) is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2017, through June 30, 2017. Interested parties are invited to comment on this preliminary determination.

DATES: Applicable May 7, 2018.

FOR FURTHER INFORMATION CONTACT: Thomas Schauer or Michael Romani, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0410 or (202) 482–0198, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 733(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on October 26, 2017.[1]

Commerce exercised its discretion to toll all deadlines affected by the closure of the Federal Government from January 20 through 22, 2018.[2] Accordingly, the revised deadline for the preliminary determination of this investigation became March 12, 2018.[3] Subsequently, on February 20, 2018, Commerce postponed the preliminary determination of this investigation and the revised deadline is now April 30, 2018.[4] For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.[5] A list of topics addressed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's

Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov,* and to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.*

Scope of the Investigation

The product covered by this investigation is PTFE resin from China. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the preamble to Commerce's regulations,[6] the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (scope).[7] Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice.* For a summary of the product coverage comments and rebuttal responses submitted to the record for this investigation, and accompanying discussion and analysis of all comments timely received, *see* the Preliminary Scope Decision Memorandum.[8] *See* the scope in Appendix I to this notice. The scope case briefs were due on April 9, 2018, 30 days after the publication of *PTFE Resin from India CVD.*[9] There will be no further opportunity for comments on scope-related issues.[10]

Methodology

Commerce is conducting this investigation in accordance with section 731 of the Act. Export prices were calculated in accordance with section 772(a) of the Act; constructed export prices were calculated in accordance with section 772(b) of the Act. Because China is a non-market economy, within the meaning of section 771(18) of the Act, Commerce calculated normal value (NV) in accordance with section 773(c) of the Act. In addition, pursuant to section 776(a) and (b) of the Act, Commerce preliminarily relied on facts otherwise available, with adverse inferences, for the China-wide entity. For a full description of the methodology underlying Commerce's preliminary determination, *see* the Preliminary Decision Memorandum.

Combination Rates

In the *Initiation Notice,*[11] we stated that we would calculate producer/exporter combination rates for the respondents that are eligible for a separate rate in this investigation. Policy Bulletin 05.1 describes this practice.[12] In this investigation, we calculated producer/exporter combination rates for respondents eligible for separate rates.

Preliminary Determination

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist:

Exporter	Producer	Estimated weighted-average dumping margin (percent *ad valorem*)
Daikin Fluorochemicals (China) Co., Ltd	Daikin Fluorochemicals (China) Co., Ltd	84.75
Shandong Dongyue Polymer Material Co., Ltd	Shandong Dongyue Polymer Material Co., Ltd	69.34
Hangzhou Fine Fluorotech Co., Ltd	Qingdao Orientalflon New Materials Co., Ltd	78.74
Hangzhou Fine Fluorotech Co., Ltd	Zhejiang Juhua Co., Ltd. Fluor-Polymeric Plant	78.74
Shanghai Huayi 3f New Materials Sales Co., Ltd	Shanghai 3f New Materials Co., Ltd	78.74
China-Wide Entity		208.16

Suspension of Liquidation

In accordance with section 733(d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in Appendix I entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**, as discussed below. Further, pursuant to section 733(d)(1)(B) of the Act and 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the weighted-average amount by which NV exceeds U.S. price, as indicated in the chart above as follows: (1) For the exporter/producer combinations listed in the table above, the cash deposit rate is equal to the estimated weighted-average dumping margin listed for that combination in the table; (2) for all combinations of China producers/exporters of merchandise under consideration that have not established eligibility for their own separate rates, the cash deposit rate will be equal to the estimated weighted-average dumping margin established for the China-wide entity; and (3) for all third-county exporters of merchandise under consideration not listed in the table above, the cash deposit rate is the cash deposit rate applicable to the China exporter/producer combination (or the China-wide entity) that supplied that third-country exporter.

These suspension of liquidation instructions will remain in effect until further notice.

Disclosure

Commerce intends to disclose to interested parties the calculations performed in connection with this

preliminary determination within five days of its public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, Commerce intends to verify information relied upon in making its final determination.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last final verification report is issued in this investigation.[13] Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.[14] Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Postponement of Final Determination and Extension of Provisional Measures

Section 735(a)(2) of the Act provides that a final determination may be postponed until not later than 135 days after the date of the publication of the preliminary determination if, in the event of an affirmative preliminary determination, a request for such postponement is made by exporters who account for a significant proportion of exports of the subject merchandise, or in the event of a negative preliminary determination, a request for such postponement is made by the petitioners. Pursuant to 19 CFR 351.210(e)(2), Commerce requires that requests by respondents for postponement of a final antidumping determination be accompanied by a request for extension of provisional measures from a four-month period to a period not more than six months in duration.

In March 2018, pursuant to 19 CFR 351.210(e), Shandong Dongyue Polymer Material Co., Ltd., and Daikin Fluorochemicals (China) Co., Ltd., requested that Commerce postpone the final determination and that provisional measures be extended to a period not to exceed six months.[15] In accordance with section 735(a)(2)(A) of the Act and 19 CFR 351.210(b)(2)(ii), because (1) the preliminary determination is affirmative; (2) the requesting exporters account for a significant proportion of exports of the subject merchandise; and (3) no compelling reasons for denial exist, Commerce is postponing the final determination and extending the provisional measures from a four-month period to a period not greater than six months. Accordingly, Commerce's final determination will be published no later than 135 days after the date of publication of this preliminary determination.

International Trade Commission Notification

In accordance with section 733(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its preliminary determination of sales at LTFV. If the final determination is affirmative, the ITC will determine before the later of 120 days after the date of this preliminary determination or 45 days after the final determination whether imports of the subject merchandise are materially injuring, or threaten material injury to, the U.S. industry.

Notification to Interested Parties

This determination is issued and published in accordance with sections 733(f) and 777(i)(1) of the Act and 19 CFR 351.205(c).

Dated: April 30, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The product covered by this investigation is polytetrafluoroethylene (PTFE) resin, including but not limited to granular, dispersion, or coagulated dispersion (also known as fine powder). PTFE is covered by the scope of this investigation whether filled or unfilled, whether or not modified, and whether or not containing co-polymer additives, pigments, or other materials. Also included is PTFE wet raw polymer. The chemical formula for PTFE is C2F4, and the Chemical Abstracts Service Registry number is 9002–84–0.

PTFE further processed into micropowder, having particle size typically ranging from 1 to 25 microns, and a melt-flow rate no less than 0.1 gram/10 minutes, is excluded from the scope of this investigation.

PTFE is classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 3904.61.0010 and 3904.61.0090. Subject merchandise may also be classified under HTSUS subheading 3904.69.5000. Although the HTSUS subheadings and CAS Number are provided for convenience and Customs purposes, the written description of the scope is dispositive.

SUPPLEMENTARY INFORMATION:

ESA-Listed Species Covered in This Notice

Chinook salmon (*Oncorhynchus tshawytscha*): threatened, naturally produced and artificially propagated Central Valley spring-run (CVSR).

Steelhead (*O. mykiss*): threatened, naturally produced and artificially propagated California Central Valley (CCV).

Background

The USFWS and CDFW, under the auspices of the San Joaquin River Restoration Program (SJRRP), are working to restore a CVSR Chinook salmon population in the San Joaquin River. The reintroduced CVSR Chinook salmon, taken from one or more out-of-basin stocks, are designated as a non-essential, experimental population under section 10(j) of the Endangered Species Act (ESA), and have associated 4(d) take provisions (78 FR 79622). The SJRRP determined that a conservation hatchery would be the preferred and primary strategy for reintroducing CVSR Chinook salmon to the San Joaquin River. The San Joaquin River Salmon Conservation and Research Program (Conservation Program) involves the operation of two facilities: the Salmon Conservation and Research Facility (SCARF) currently under construction, with completion expected summer of 2018, and an interim SCARF (Interim Facility) currently in operation. The Conservation Program is operated as an Integrated-Recovery hatchery program, intended to help meet fisheries management objectives while achieving restoration and recovery goals.

This CVSR Chinook salmon HGMP submitted by the USFWS and CDFW, pursuant to section 10(a)(1)(A) of the ESA (16 U.S.C. 1531 *et seq.*) and regulations governing listed fish and wildlife permits (50 CFR part 222), provides guidance on the management and operation of the SCARF and Interim Facility in the San Joaquin River Basin. The HGMP and the associated section 10(a)(1)(A) enhancement permit application (20571) were made available for public review and comment on July 27, 2017 (82 FR 34931). On August 8, 2017, NMFS determined that the submitted HGMP was sufficient for consideration under section 10(a)(1)(A) of the ESA. The draft environmental assessment available for comment evaluates the potential effects of approving the CVSR Chinook salmon HGMP and issuing an ESA section 10(a)(1)(A) Permit 20571 to the USFWS and CDFW.

Authority

NEPA requires Federal agencies to conduct an environmental analysis of their proposed actions to determine if the actions may affect the human environment. Therefore, NMFS is seeking public input on the scope of the required NEPA analysis, including the range of reasonable alternatives and associated impacts of any alternatives.

Dated: May 1, 2018.

Angela Somma,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

National Process for Permit Applications To Retain Releasable Rehabilitated Marine Mammals for Public Display

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; response to comments.

SUMMARY: The National Marine Fisheries Service (NMFS) announces the availability of its final Procedural Directive clarifying the process for eligible permit applicants to obtain releasable marine mammals for public display purposes under the Marine Mammal Protection Act (MMPA). NMFS will no longer grant permits for the specific purpose of retaining releasable marine mammals for public display. Instead, applicants will now need to apply for a permit to take (collect) animals from the wild pursuant to the MMPA.

DATES: This final Procedural Directive will be applicable as of May 7, 2018.

ADDRESSES: The Procedural Directive is available in electronic form via the internet at *https://www.fisheries.noaa.gov/national/laws-and-policies/protected-resources-policy-directives.*

FOR FURTHER INFORMATION CONTACT: Jaclyn Taylor, NMFS, Office of Protected Resources, (301) 427–8402, *Jaclyn.Taylor@noaa.gov.*

SUPPLEMENTARY INFORMATION: NMFS developed a national Procedural Directive clarifying the process for eligible permit applicants to obtain releasable marine mammals for public display purposes under the MMPA.

NMFS will no longer accept applications for MMPA section 104 permits that specifically seek to obtain releasable rehabilitated marine mammals for public display purposes. NMFS will instead require prospective

applicants to apply for a permit authorizing actual take (collect) from the wild. In the event NMFS grants a permit for take from the wild, the NMFS OPR Director may then, at his or her discretion, require that a releasable rehabilitated marine mammal be substituted for the authorized capture from the wild, in accordance with 50 CFR 216.27.

On November 15, 2017, NMFS published the draft national Procedure for Permit Applications to Retain Releasable Rehabilitated Marine Mammals for Public Display for a 30-day public comment period (82 FR 52880). Comments received are available on regulations.gov at *https://www.regulations.gov/docket?D=NOAA-NMFS-2017-0096.* Substantive and relevant comments and NMFS' responses are included below.

General Comments

Comment 1: Several commenters expressed support for the draft Procedural Directive, stating that it provides clarity and reflects concerns offered during public comment periods in 2010 and 2015 regarding the Office of Protected Resource's issuance of permits authorizing the acquisition of stranded, releasable California sea lions (*Zalophus californianus*) from the National Marine Mammal Health and Stranding Response Program for the purposes of public display. The commenters opined that the directive aligns more clearly with the stated goals of the Marine Mammal Health and Stranding Response Program by requiring the application for a permit to ''take'' marine mammals from the wild, leaving potential sourcing of releasable marine mammals from rehabilitation facilities, appropriately, to the discretion of the Director of the Office of Protected Resources.

Response: NMFS acknowledges this comment and has finalized the Procedural Directive as proposed.

Comment 2: One commenter recommended NMFS provide additional explanation and rationale for finding that either its existing practice or the procedural directive is consistent with MMPA section 109(h)(3).

Response: NMFS's rationale for both the existing practice and this Procedural Directive is described in the Additional Background and Rationale section in the Directive. The rationale outlines each of the following, which contribute to the rationale: the preamble to the 1993 proposed rule (58 FR 53320) for 50 CFR 216.27, the implementing regulations allowing the Office Director broad discretion to direct a releasable animal to be used for a MMPA section 104 purpose in lieu of being released, and the three relevant permit decisions.

Comment 3: One commenter stated that it is incumbent on NOAA to provide a certification that a rehabilitated animal will not carry back into the wild any communicable disease. Additionally, NOAA should ensure the released marine mammal will become part of the stock or group that it originally came from.

Response: The Standards for Release, as described in this Directive, provide an evaluative process to determine if a stranded marine mammal is suitable for release back to the wild in accordance with MMPA implementing regulations at 50 CFR 216.27. As part of this process the attending veterinarian reviews the animal's complete history including all stranding information, diagnostic test results required by NMFS, and medical and husbandry records. The goal of required diagnostic testing is to safeguard the health of wild marine mammal populations by testing for diseases that pose a significant morbidity or mortality risk to wild populations. With regards to the released animal becoming part of the stock or group that it originally came from, the Standards for Release specify that rehabilitated animals should be released in a location and at a time of year to maintain stock fidelity and ensure proximity to conspecifics.

Comment 4: One commenter objected to the draft Directive, suggesting NMFS instead propose a new process that is compatible with the principles of the MMPA and is reasonably targeted to and appropriate for rehabilitated marine mammals deemed releasable.

Response: NMFS believes that this Procedural Directive is compatible with the principles of the MMPA. The purpose of this Procedural Directive is to explain that NMFS will no longer accept applications that specifically seek to obtain releasable rehabilitated marine mammals, which, as described in the Directive, is consistent with the goals of both the MMPA's stranding response mandate and the public display permit provisions.

Procedural Directive Scope

Comment 5: One commenter recommended that NMFS clarify how it is defining the term ''feasible'' in the context of section 109(h)(3) of the MMPA—*e.g.,* does it mean that release can be accomplished, or that release is reasonable or sensible given the entirety of the facts of the particular situation? Specifically, NMFS should explain the basis for concluding that the issuance of a permit under section 104(c) somehow overrides the release mandate under section 109(h).

Response: The MMPA implementing regulations at 50 CFR 216.27 allow the Office Director broad discretion to direct that a rehabilitated animal to be used for a MMPA section 104 purpose in lieu of being released. As described in the Directive, the preamble to the 1993 proposed rule addressed the ''feasibility'' determination. Contrary to the commenter's suggestion, NMFS has not concluded in this Directive that issuance of a permit under section 104 ''overrides'' the release mandate under section 109(h). In fact, this directive is intended to separate ''takes'' for public display purposes (which are permitted under section 104) from the rehabilitation-and-release objectives of section 109(h), while still retaining the Office Director's discretion, as provided by the regulations, to direct a substitution in certain circumstances not enumerated in this directive.

As for the commenter's other questions regarding the releasability determination, as noted above, NMFS has established an evaluative process (the Standards for Release) to determine if a marine mammal is suitable for release back to the wild.

Comment 6: One commenter expressed support for NMFS's proposal to strengthen its analysis of population effects of retaining a releasable marine mammal as part of its permit application review. The commenter questioned whether similar scrutiny needs to be given to all aspects of a permit authorizing the removal of a marine mammal from the wild, if what the applicant is seeking or what NMFS plans to grant is authority to retain a releasable animal and not to remove animals from the wild population. The commenter recommended that NMFS clarify whether all of the information identified in the application instructions must be provided if the applicant is seeking a removal permit only as a means to obtain releasable rehabilitated animals and whether all of those details will be reflected in the requirements of the permit.

Response: The purpose of this Procedural Directive is to explain that NMFS will no longer accept applications that specifically seek to obtain releasable rehabilitated marine mammals. Applicants will be instructed to submit ''take from the wild'' permit applications with all required information for that take activity included in the permit application. If such permit is issued, the Office Director, in his or her sole discretion, will be responsible for the decision as to whether a releasable rehabilitated

animal be substituted for a take from the wild, depending on the circumstances before the Office Director at the time. This Procedural Directive is not intended to prescribe the situations, if any, in which the Office Director would in fact choose to exercise that discretion.

Comment 7: One commenter recommended that NMFS provide additional guidance on what releasable marine mammals can be used in place of animals authorized to be removed from the wild under the associated public display permit.

Response: As noted above and in the Procedural Directive itself, the purpose of this Directive is to explain that NMFS will no longer accept permit applications seeking to obtain releasable marine mammals from the stranding network. The Directive is not intended to prescribe criteria for what situations, if any, the Office Director would in fact exercise their discretion to direct a releasable rehabilitated animal be used for a MMPA section 104 purpose in lieu of being released.

Comment 8: One commenter recommended that the procedural directive be expanded to address the roles, rights, and responsibilities of rehabilitation facilities in implementing this policy. The district court in *IMMS* v. *NMFS, No. 1:11CV318–LG–JMR* (S.D.Miss.2014) found that NMFS could not delegate its authority to the rehabilitation facility to determine when releasable marine mammals are sent to a public display facility under NMFS' regulations. However, the court did not go so far as to say that the rehabilitation facility has no role in this process, provided that NMFS retains the ultimate decision-making authority.

Response: As noted above, the purpose of this Procedural Directive is to explain NMFS will no longer accept permit applications seeking to obtain releasable marine mammals from the stranding network. The Directive is not intended to prescribe criteria for what situations, if any, the Office Director would in fact exercise their discretion to direct a releasable rehabilitated animal be used for a MMPA section 104 purpose in lieu of being released.

Comment 9: One commenter stated that allowing a public display facility to substitute a stranded releasable marine mammal instead of ''taking'' from the wild is consistent with the requirements of the MMPA and should not be left to the discretion of the Agency.

Response: As noted above, NMFS' regulations at 50 CFR 216.27 allow the Office Director (as opposed to permittees or rehabilitation facilities) broad discretion to direct that a rehabilitated animal to be used for a MMPA section 104 purpose in lieu of being released.

Comment 10: One commenter expressed concern that the Proposed Directive would make it nearly impossible for a public display facility to obtain a releasable marine mammal under any circumstances because it would expose both the agency and the facility to the very likely risk of costly litigation initiated by those who oppose any animals in human care.

Response: The MMPA section 104 allows for permits to be issued for ''take'' of marine mammals for public display purposes provided that the applicant meets the issuance criteria as outlined in NMFS implementing regulations (50 CFR part 216, subpart D). As noted above, NMFS' regulations at 50 CFR 216.27 allow the Office Director broad discretion to direct that a rehabilitated animal to be used for a MMPA section 104 purpose (*e.g.,* a permitted use) in lieu of being released.

MMPA Permit Application Process

Comment 11: Several commenters expressed concern that the process set forth in the Directive (requiring prospective applicants to submit ''take from the wild'' permit applications) would be burdensome because it would require preparation of an Environmental Assessment and/or an Environmental Impact Statement under the National Environmental Policy Act (NEPA).

Response: All MMPA permits require appropriate analysis under NEPA. Environmental Assessments were prepared for the three permits NOAA issued authorizing the retention of releasable marine mammals.

Comment 12: A commenter expressed concern that requiring a zoo, aquarium or marine park that is only interested in retaining a releasable marine mammal to respond to a multitude of capture from the wild questions that fail to assess the suitability of the specific request to retain a releasable marine mammal would impose a regulatory burden that is unreasonable and unrelated to the best interests of the animal or the environment. The commenter also commented that requirements, as described in the Application Instructions and Supplemental Information for Public Display Permits under the MMPA (OMB No. 0648–0084), do not make sense with respect to a stranded and rehabilitated animal.

Response: The purpose of this Procedural Directive is to explain that NMFS will no longer accept applications that specifically seek to obtain releasable rehabilitated marine mammals. Applicants will be instructed to submit ''take from the wild'' permit applications with all required information for that take activity included in the permit application, as described in the Application Instructions and Supplemental Information for Public Display Permits under the MMPA (OMB No. 0648–0084).

The applications for the three permits NOAA issued authorizing the retention of releasable marine mammals followed the Application Instructions and Supplemental Information for Public Display Permits under the MMPA (OMB No. 0648–0084). These applications addressed all the applicable questions including the status of the affected stocks and the anticipated impacts on the species or stocks. Given that these applications did not propose directly capturing marine mammals from the wild, the applications referenced the authority of the stranding network and their procedures when addressing the questions specifically related to capture from the wild. Under this Procedural Directive, permit applications will continue to address the status of the species and the impacts of the removal of the desired number of animals from the stock or population.

Non-Releasable Rehabilitated Marine Mammals

Comment 14: One commenter recommended NMFS ensure the wording of this procedural directive adequately take into account the practice of declaring healthy ice seals non-releasable if they are removed from their home range for rehabilitation per NOAA's agreement with co-management groups.

Response: This Procedural Directive does not affect NMFS's process for making release determinations and the placement process for non-releasable marine mammals. Additional text was added to the Directive to clarify.

Dated: May 1, 2018.

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Seabird and Pinniped Research Activities in Central California

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments.

SUMMARY: NMFS has received a request from Point Blue Conservation Science (Point Blue) for authorization to take marine mammals incidental to seabird and pinniped research activities in central California. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorizations and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than June 6, 2018.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service. Physical comments should be sent to 1315 East-West Highway, Silver Spring, MD 20910 and electronic comments should be sent to *ITP.pauline@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/node/23111* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Rob Pauline, Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-research-and-other-activities.* In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term ''take'' means to harass, hunt, capture, kill or attempt to harass, hunt, capture, or kill any marine mammal.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NOAA Administrative Order 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

We will review all comments submitted in response to this notice prior to concluding our NEPA process or making a final decision on the IHA request.

Summary of Request

On January 4, 2018, NMFS received a request from Point Blue for an IHA to take marine mammals incidental to seabird and marine mammal research monitoring taking place at three locations in central California. Point Blue's request is for take of California sea lions (*Zalophus californianus*), Pacific harbor seals *(Phoca vitulina*), northern elephant seals (*Mirounga angustirostris*), and Steller sea lions (*Eumetopias jubatus*) by Level B harassment only. Neither Point Blue nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

NMFS previously issued eight IHAs to Point Blue for similar work from 2006 through 2017 (72 FR 71121; December 14, 2007, 73 FR 77011; December 18, 2008, 75 FR 8677; February 19, 2010, 77 FR 73989; December 7, 2012, 78 FR 66686; November 6, 2013, 80 FR 80321; December 24, 2015, 81 FR 34978; June 1, 2016, 82 FR 31759; July 7, 2017). Point Blue complied with all the requirements (*e.g.,* mitigation, monitoring, and reporting) of the previous IHAs and information regarding their monitoring results may be found in the Estimated Take section. The proposed seabird and marine mammal research activities will occur on Southeast Farallon Island (SEFI), Año Nuevo Island (ANI), and Point

Reyes National Seashore (PRNS). Point Blue, along with partners Oikonos Ecosystem Knowledge and PRNS, plan to conduct the proposed activities for one year. These partners are conducting this research under cooperative agreements with the U.S. Fish and Wildlife Service (USFWS) in consultation with the Gulf of the Farallones National Marine Sanctuary. We considered the renewal for request for 2018–2019 activities as adequate and complete on February 28, 2018.

Description of Proposed Activity

Overview

Point Blue proposes to monitor and census seabird colonies; observe seabird nesting habitat; restore nesting burrows; observe breeding elephant and harbor seals; and resupply a field station annually in central California (*i.e.,* SEFI, ANI, and PRNS). The purpose of the seabird research is to continue a 30-year monitoring program of the region's seabird populations. Point Blue's long-term pinniped research program monitors pinniped colonies to understand elephant and harbor seal population dynamics and to contribute to the conservation of both species. Level B take may occur due to incidental disturbance of pinnipeds by researchers during monitoring activities.

Dates and Duration

The proposed authorization would be effective from July 7, 2018 through July 6, 2019. Research on SEFI is conducted year round. Most intertidal areas of the island, where marine mammals are present, are rarely visited in seabird research. Most potential for incidental take will occur at the island's 2 landings, North Landing and East Landing. At SEFI, seabird monitoring sites are visited ~1–3 times per day for a maximum of 500 visits per year. Most seabird monitoring visits are brief (~15 minutes), though seabird observers are present from 2–5 hours daily at North Landing from early April—early August each year to conduct observational studies on breeding common murres. Boat landings to re-supply the field station, lasting 1–3 hours, are conducted once every two weeks. At ANI, research is conducted approximately once/week from April–August, with occasional intermittent visits made during the rest of the year. The maximum number of visits per year would be 20. Landings and visits to nest boxes are brief (~15 minutes).

Research at PRNS is conducted year round, with an emphasis during the seabird nesting season with occasional intermittent visits the rest of the year. The maximum number of visits per year is 20. A component of the seabird research involves habitat restoration and monitoring which requires sporadic visits from September–November, between the seabird breeding season and the elephant seal pupping season. Most areas where research occurs and where marine mammals are present are not ever visited, excepting the landing beaches along Point Reyes Headland.

Specific Geographic Region

Point Blue will conduct their research activities within the vicinity of pinniped haul-out sites in the following locations:

- *South Farallon Islands:* SEFI is located at 37°41′54.32″ N; 123°0′8.33″ W and West End Island. The South Farallon Islands have a land area of approximately 120 acres (0.49 square kilometers (km^2)) and are part of the Farallon National Wildlife Refuge. The islands are located near the edge of the continental shelf 28 miles (mi) (45.1 km) west of San Francisco, CA, and lie within the waters of the Gulf of the Farallones National Marine Sanctuary;
- *Año Nuevo Island:* ANI is located at 37°6′29.25″ N; 122°20′12.20″ W is one-quarter mile (402 meters m) offshore of Año Nuevo Point in San Mateo County, CA. The island lies within the Monterey Bay National Marine Sanctuary and the Año Nuevo State Marine Conservation Area; and
- *Point Reyes National Seashore:* PRNS is approximately 40 miles (64.3 km) north of San Francisco Bay and lies within the Gulf of the Farallones National Marine Sanctuary.

Detailed Description of Specific Activity

Southeast Farallon Islands—Point Blue has conducted year round wildlife research and monitoring activities at SEFI, part of the Farallon National Wildlife Refuge, since 1968. This work is conducted through a collaborative agreement with the USFWS. Research focuses on marine mammals and seabirds and includes procedures involved in maintaining the SEFI field station. These activities may involve the incidental take of marine mammals.

Seabird research activities involve observational and marking (*i.e.,* netting and banding for capture-mark-recapture) studies of breeding seabirds. Occasionally researchers may travel to coastal areas of the island to conduct observational seabird research where non-breeding marine mammals are present, which includes viewing breeding seabirds from an observation blind or censusing shorebirds, and usually involves one or two observers. Access to the refuge involves landing in 14–18 feet (ft) open motorboats, which are hoisted onto the island using a derrick system.

Most intertidal areas of the island, where marine mammals are present, are rarely visited in seabird research. Most potential for incidental take will occur at the island's two landings, North Landing and East Landing. At both landings, research stations are located more than 50 ft above any pinnipeds that may be present and are visited 1–3 times per day. These pinnipeds are primarily California sea lions or northern elephant seals. Harbor seals are also present on these landings to a lesser extent and there are rare instances of Steller sea lions. Boat landings to re-supply the field station, lasting 1–3 hours, are conducted once every two weeks at either the North or East Landing. Activities involve launching of the boat with one operator, with 2–4 other researchers assisting with the operations from land. At East Landing, the primary landing site, all personnel assisting with the landing stay on the loading platform 30 ft above the water. At North Landing, loading operations occur at the water level in the intertidal zone.

Año Nuevo Island—Point Blue has also conducted seabird research and monitoring activities on ANI, part of the Año Nuevo State Reserve, since 1992. Collaborations with Oikonos Ecosystem Knowledge began in 2001 to research seabird burrow nesting habitat quality and restoration. All work is conducted through a collaborative agreement with California State Parks. The island is accessed by a 12 ft Zodiac boat. Non-breeding pinnipeds may occasionally be present on the small beach in the center of the island where the boat is landed. California sea lions may also occasionally be present near a small group of subterranean seabird nest boxes on the island terrace. There are usually 2–3 researchers involved in island visits.

Point Reyes National Seashore—The National Park Service (NPS) conducts research, resource management and routine maintenance services at PRNS. This involves both marine mammal research and seabird research and includes maintaining the facilities around the seashore. Habitat restoration of the seashore occurs and includes restoration and removal of non-native invasive plants and coastal dune habitat. Non-native plant removal is timed to avoid the breeding seasons of pinnipeds; however, on occasion, non-breeding animals may be present at various beaches throughout the year. Additionally, elephant seals will haul out on human structures and block

access to facilities. They are known to haul out on a boat ramp at the Life Boat Station and in various car parking lots around the seashore.

Research along the seashore includes monitoring seabird breeding and roosting colonies. Seabird monitoring usually involves one or two observers. Surveys are conducted by 14–22 ft open motorboats that survey along the shoreline.

Most areas where marine mammals are present are never visited, excepting the landing beaches along Point Reyes headland. In all locations, researchers are located more than 50 ft away from any pinnipeds that may be hauled out. Elephant seals may haul out on boat ramps and parking lots year round.

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see ''Proposed Mitigation'' and ''Proposed Monitoring and Reporting'').

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history, of the potentially affected species. Additional information regarding population trends and threats may be found in NMFS's Stock Assessment Reports (SAR; *www.nmfs.noaa.gov/pr/sars/*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS's website (*www.nmfs.noaa.gov/pr/species/mammals/*).

Table 1 lists all species with expected potential for occurrence at SEFI, ANI, and PRNS and summarizes information related to the population or stock, including regulatory status under the MMPA and ESA and potential biological removal (PBR), where known. For taxonomy, we follow the Committee on Taxonomy (2017). PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS's SARs). While no mortality is anticipated or authorized here, PBR and annual serious injury and mortality from anthropogenic sources are included here as gross indicators of the status of the species and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS's stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS's U.S. 2016 U.S. Pacific Stock Assessment Report (Carretta *et al.,* 2017) or the 2016 Alaska Stock Assessment Report (Muto *et al.,* 2017). All values presented in Table 1 are the most recent available at the time of publication and are available in the 2016 SARs (Carretta *et al.,* 2017; Muto *et al.,* 2017).

TABLE 1—MARINE MAMMALS POTENTIALLY PRESENT IN THE VICINITY OF STUDY AREAS

Species	Scientific name	Stock	ESA/ MMPA status; Strategic (Y/N) [1]	Stock abundance (CV, N_{min}, most recent abundance survey) [2]	PBR	Annual M/SI [3]
Order Carnivora—Superfamily Pinnipedia						
Family Otariidae (eared seals and sea lions)						
California sea lion	*Zalophus californianus* ..	U.S.	-; N	296,750 (n/a; 153,337; 2011).	9,200	389
Steller sea lion	*Eumetopias jubatus*	Eastern U.S.	D; Y	71,562 (n/a; 41,638; 2015).	2,498	108
Family Phocidae (earless seals)

[1] Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[2] NMFS marine mammal stock assessment reports online at: *www.nmfs.noaa.gov/pr/sars/.* CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance. In some cases, CV is not applicable [explain if this is the case]

[3] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

Northern Elephant Seal

Northern elephant seals range in the eastern and central North Pacific Ocean, from as far north as Alaska to as far south as Mexico. Northern elephant seals spend much of the year, generally about nine months, in the ocean. They are usually underwater, diving to depths of about 1,000 to 2,500 ft (330–800 m) for 20- to 30-minute intervals with only short breaks at the surface. They are rarely seen out at sea for this reason. While on land, they prefer sandy beaches.

The northern elephant breeding population is distributed from central Baja California, Mexico to the Point Reyes Peninsula in northern California. Along this coastline, there are 13 major breeding colonies. Northern elephant seals breed and give birth primarily on offshore islands (Stewart *et al.,* 1994), from December to March (Stewart and Huber, 1993). Males feed near the eastern Aleutian Islands and in the Gulf of Alaska, and females feed farther

south, south of 45° N (Stewart and Huber, 1993; Le Boeuf *et al.,* 1993). Adults return to land between March and August to molt, with males returning later than females. Adults return to their feeding areas again between their spring/summer molting and their winter breeding seasons.

At SEFI, the population consists of approximately 500 animals (FNMS 2013). Northern elephant seals began recolonizing the South Farallon Islands in the early 1970s (Stewart *et al.,* 1994) at which time the colony grew rapidly. In 1983 a record 475 pups were born on the South Farallones (Stewart *et al.,* 1994). Since then, the size of the South Farallones colony has declined, stabilizing in the early 2000s and then declining further over the past 6 years (USFWS 2013). In 2012, a total of 90 cows were counted on the South Farallones, and 60 pups were weaned (USFWS 2013). Point Blue's average monthly counts from 2000 to 2009 ranged from 20 individuals in July to nearly 500 individuals in November (USFWS 2013).

Northern elephant seals are present on the islands and in the waters surrounding the South Farallones year-round for either breeding or molting; however, they are more abundant during breeding and peak molting seasons (Le Boeuf and Laws, 1994; Sydeman and Allen, 1999). They live and feed in deep, offshore waters the remainder of the year.

In mid-December, adult males begin arriving on the South Farallones, closely followed by pregnant females on the verge of giving birth. Females give birth to a single pup, generally in late December or January (Le Boeuf and Laws, 1994) and nurse their pups for approximately four weeks (Reiter *et al.,* 1991). Upon pup weaning, females mate with an adult male and then depart the islands. The last adult breeders depart the islands in mid-March. The spring peak of elephant seals on the rookery occurs in April, when females and immature seals (approximately one to four years old) arrive at the colony to molt (a one-month process) (USFWS 2013). The year's new pups remain on the island throughout both of these peaks, generally leaving by the end of April (USFWS 2013).

The lowest numbers of elephant seals present on the rookery occurs during June, July, and August, when sub-adult and adult males molt. Another peak of young seals return to the rookery for a haul-out period in October, and at that time some individuals undergo partial molt (Le Boeuf and Laws, 1994). At ANI the population ranges from 900 to 1,000 adults.

California Sea Lion

California sea lion breeding areas are on islands located in southern California, in western Baja California, Mexico, and the Gulf of California. Rookery sites in southern California are limited to the San Miguel Islands and the southerly Channel Islands of San Nicolas, Santa Barbara, and San Clemente (Carretta *et al.,* 2017). Males establish breeding territories during May through July on both land and in the water. Females come ashore in mid-May and June where they give birth to a single pup approximately four to five days after arrival and will nurse pups for about a week before going on their first feeding trip. Females will alternate feeding trips with nursing bouts until the pup is weaned between four and 10 months of age (NMML 2010).

Adult and juvenile males will migrate as far north as British Columbia, Canada while females and pups remain in southern California waters in the non-breeding season. In warm water (El Niño) years, some females are found as far north as Washington and Oregon, presumably following prey.

On the Farallon Islands, California sea lions haul out in many intertidal areas year round, fluctuating from several hundred to several thousand animals. California sea lions at PRNS haul out at only a few locations, but will occur on human structures such as boat ramps. The annual population averages around 300 to 500 during the fall through spring months, although on occasion, several thousand sea lions can arrive depending upon local prey resources (S. Allen, unpublished data). On ANI, California sea lions may haul out at one of eight beach areas on the perimeter of the island. The island's average population ranges from 4,000 to 9,500 animals (M. Lowry, unpublished data).

Pacific Harbor Seal

Harbor seals inhabit near-shore coastal and estuarine areas from Baja California, Mexico, to the Pribilof Islands in Alaska. Pacific harbor seals are divided into two subspecies: *P.* v. *stejnegeri* in the western North Pacific, near Japan, and *P.* v. *richardsi* in the northeast Pacific Ocean. The California stock ranges from north of Baja, California to the Oregon-California border. Other stocks recognized along the U.S. west coast include: (1) Southern Puget Sound; (2) Washington Northern Inland Waters; (3) Hood Canal; and (4) Oregon/Washington Coast.

In California, 400–600 harbor seal haul-out sites are widely distributed along the mainland and offshore islands, and include rocky shores, beaches and intertidal sandbars (Lowry *et al.,* 2008). On the Farallon Islands, approximately 40 to 120 Pacific harbor seals haul out in the intertidal areas (Point Blue unpublished data). Harbor seals at PRNS haul out at nine locations with an annual population of up to 4,000 animals (M. Lowry, unpublished data). On ANI, harbor seals may haul out at one of eight beach areas on the perimeter of the island and the island's average population ranges from 100 to 150 animals (M. Lowry, unpublished data).

Steller Sea Lion

Steller sea lions consist of two distinct population segments: The western and eastern distinct population segments (DPS) divided at 144° W longitude (Cape Suckling, Alaska). The western segment of Steller sea lions inhabit central and western Gulf of Alaska, Aleutian Islands, as well as coastal waters and breed in Asia (*e.g.,* Japan and Russia). The eastern segment includes sea lions living in southeast Alaska, British Columbia, California, and Oregon. The eastern DPS includes animals born east of Cape Suckling, AK (144° W) and the latest abundance estimate for the stock is 71,562 animals (Muto *et al.,* 2017).

Despite the wide-ranging movements of juveniles and adult males in particular, exchange between rookeries by breeding adult females and males (other than between adjoining rookeries) appears low, although males have a higher tendency to disperse than females (NMFS, 1995; Trujillo *et al.,* 2004; Hoffman *et al.,* 2006). A northward shift in the overall breeding distribution has occurred, with a contraction of the range in southern California and new rookeries established in southeastern Alaska (Pitcher *et al.,* 2007).

An estimated 50–150 Steller sea lions are located along the Farallon Islands while 400–600 may be found on ANI (Point Blue, unpublished data; Lowry, unpublished data). None are present at PRNS (NPS, unpublished data). Overall, counts of non-pups at trend sites in California and Oregon have been relatively stable or increasing slowly since the 1980s (Muto *et al.,* 2017).

Point Blue estimates that between 50 and 150 Steller sea lions live on the Farallon Islands. On SEFI, the abundance of females declined an average of 3.6 percent per year from 1974 to 1997 (Sydeman and Allen, 1999).

NMFS' Southwest Fisheries Science Center estimates between 400 and 600 live on ANI (Point Blue unpublished data, 2008; Southwest Fisheries Science

Center unpublished data, 2008). At ANI, a steady decline in ground counts started around 1970, and there was an 85 percent reduction in the breeding population by 1987 (LeBoeuf *et al.,* 1991). Pup counts at ANI declined five percent annually through the 1990s and stabilized between 2001 and 2005 (M. Lowry, SWFSC unpublished data). Pups have not been born at PRNS since the 1970s and Steller sea lions are seen in very low numbers there currently (S. Allen, unpublished data). SEFI is one of two breeding colonies at the southern end of the Steller sea lion's range. On the Farallon and Año Nuevo Islands, Steller sea lion breeding colonies are located in closed areas where researchers never visited, eliminating any risk of disturbing breeding animals.

All species that could potentially occur in the proposed survey areas are included in Table 1.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section includes a summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat. The ''Estimated Take by Incidental Harassment'' section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The ''Negligible Impact Analysis and Determination'' section considers the content of this section, the ''Estimated Take by Incidental Harassment'' section, and the ''Proposed Mitigation'' section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and how those impacts on individuals are likely to impact marine mammal species or stocks.

Visual and acoustic stimuli generated by the appearance of researchers and motorboat operations may have the potential to cause Level B harassment of pinnipeds hauled out on SEFI, ANI, or PRNS. This section includes a summary and discussion of the ways that the types of stressors associated with the specified activity (*e.g.,* personnel presence and motorboats) have been observed to impact marine mammals. This discussion may also include reactions that we consider to rise to the level of a take and those that we do not consider to rise to the level of a take. This section is intended as a background of potential effects and does not consider either the specific manner in which this activity will be carried out or the mitigation that will be implemented, and how either of those will shape the anticipated impacts from this specific activity.

The appearance of researchers may have the potential to cause Level B harassment of any pinnipeds hauled out at survey sites. Disturbance may result in reactions ranging from an animal simply becoming alert to the presence of researchers (*e.g.,* turning the head, assuming a more upright posture) to flushing from the haul-out site into the water. NMFS does not consider the lesser reactions to constitute behavioral harassment, or Level B harassment take. NMFS rather assumes that pinnipeds that flee some distance or change the speed or direction of their movement in response to the presence of researchers are behaviorally harassed, and thus subject to Level B taking. Animals that respond to the presence of researchers by becoming alert, but do not move or change the nature of locomotion as described, are not considered to have been subject to behavioral harassment. A more detailed description later in the document in Table 4.

Reactions to human presence, if any, depend on species, state of maturity, experience, current activity, reproductive state, time of day, and many other factors (Richardson *et al.,* 1995; Southall *et al.,* 2007; Weilgart 2007). These behavioral reactions from marine mammals are often shown as: Changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior; avoidance of areas; and/or flight responses (*e.g.,* pinnipeds flushing into the water from haulouts or rookeries). If a marine mammal does react briefly to human presence by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if visual stimuli from human presence displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (*e.g.,* Lusseau and Bejder 2007; Weilgart, 2007). Numerous studies have shown that human activity can flush harbor seals off haul-out sites (Allen *et al.,* 1985; Calambokidis *et al.,* 1991; Suryan and Harvey, 1999). The Hawaiian monk seal (*Neomonachus schauinslandi*) has been shown to avoid beaches that have been disturbed often by humans (Kenyon 1972). In one case, human disturbance appeared to cause Steller sea lions to desert a breeding area at Northeast Point on St. Paul Island, Alaska (Kenyon 1962).

In cases where vessels actively approached marine mammals (*e.g.,* whale watching or dolphin watching boats), scientists have documented that animals exhibit altered behavior such as increased swimming speed, erratic movement, and active avoidance behavior (Acevedo, 1991; Trites and Bain, 2000; Williams *et al.,* 2002; Constantine *et al.,* 2003), reduced blow interval, disruption of normal social behaviors (Lusseau 2003; 2006), and the shift of behavioral activities which may increase energetic costs (Constantine *et al.,* 2003).

In 1997, Henry and Hammil (2001) conducted a study to measure the impacts of small boats (*i.e.,* kayaks, canoes, motorboats and sailboats) on harbor seal haul-out behavior in Metis Bay, Quebec, Canada. During that study, the authors noted that the most frequent disturbances (n = 73) were caused by lower speed, lingering kayaks, and canoes (33.3 percent) as opposed to motorboats (27.8 percent) conducting high-speed passes. The seal's flight reactions could be linked to a surprise factor by kayaks and canoes, which approach slowly, quietly, and low on the water making them look like predators. However, the authors note that once the animals were disturbed, there did not appear to be any significant lingering effect on the recovery of numbers to their pre-disturbance levels. In conclusion, the study showed that boat traffic at current levels had only a temporary effect on the haul-out behavior of harbor seals in the Metis Bay area.

In 2004, Acevedo-Gutierrez and Johnson (2007) evaluated the efficacy of buffer zones for watercraft around harbor seal haul-out sites on Yellow Island, Washington. The authors estimated the minimum distance between the vessels and the haul-out sites; categorized the vessel types; and evaluated seal responses to the disturbances. During the course of the seven-weekend study, the authors recorded 14 human-related disturbances that were associated with stopped powerboats and kayaks. During these events, hauled out seals became noticeably active and moved into the water. The flushing occurred when stopped kayaks and powerboats were at distances as far as 453 and 1,217 ft (138 and 371 m) respectively. The authors note that the seals were unaffected by passing powerboats, even those approaching as close as 128 ft (39 m), possibly indicating that the animals had become tolerant of the brief presence of the vessels and ignored them. The

authors reported that on average, the seals quickly recovered from the disturbances and returned to the haul-out site in less than or equal to 60 minutes. Seal numbers did not return to pre-disturbance levels within 180 minutes of the disturbance less than one quarter of the time observed. The study concluded that the return of seal numbers to pre-disturbance levels and the relatively regular seasonal cycle in abundance throughout the area counter the idea that disturbances from powerboats may result in site abandonment (Johnson and Acevedo-Gutierrez, 2007). As a general statement from the available information, pinnipeds exposed to intense (approximately 110 to 120 decibels re: 20 µPa) non-pulsed sounds often leave haul-out areas and seek refuge temporarily (minutes to a few hours) in the water (Southall *et al.,* 2007).

The potential for striking marine mammals is a concern with vessel traffic. Typically, the reasons for vessel strikes are fast transit speeds, lack of maneuverability, or not seeing the animal because the boat is so large. Point Blue's researchers will access areas at slow transit speeds in small boats that are easily maneuverable, minimizing any chance of an accidental strike.

There are other ways in which disturbance, as described previously, could result in more than Level B harassment of marine mammals. They are most likely to be consequences of stampeding, a potentially dangerous occurrence in which large numbers of animals succumb to mass panic and rush away from a stimulus. These situations are: (1) Falling when entering the water at high-relief locations; (2) extended separation of mothers and pups; and (3) crushing of pups by larger animals during a stampede. However, NMFS does not expect any of these scenarios to occur at SEFI, ANI, or PRNS. There is the risk of injury if animals stampede towards shorelines with precipitous relief (*e.g.,* cliffs). Researchers will take precautions, such as moving slowly and staying close to the ground, to ensure that flushes do not result in a stampede of pinnipeds heading to the sea. Point Blue reports that stampedes are extremely rare at their survey locations. Furthermore, no research activities would occur at or near pinniped rookeries. Breeding animals are concentrated in areas where researchers would not visit so NMFS does not expect mother and pup separation or crushing of pups during flushing. Furthermore, if pups should be present at Point Blue, researchers will avoid visiting that particular site.

Given the nature of the proposed activities (*i.e.* animal observations from a distance and limited motorboat operations) in conjunction with proposed mitigation measures, NMFS is confident that any anticipated effects would be in the form of behavioral disturbance only. NMFS considers the risk of injury, serious injury, or mortality to marine mammals to be very low.

There are no habitat modifications associated with the proposed activity other than the presence of existing observation blinds by researchers to monitor animals. These blinds disturb only a few square feet of habitat. The presence of the blinds will likely result in a net decrease in disturbance since the researchers will only be visible briefly as they enter and exit the blind. Thus, NMFS does not expect that the proposed activity would have any effects on marine mammal habitat and NMFS expects that there will be no long- or short-term physical impacts to pinniped habitat on SEFI, ANI, or PRNS.

Estimated Take

This section provides an estimate of the number of incidental takes proposed for authorization through this IHA, which will inform both NMFS' consideration of ''small numbers'' and the negligible impact determination.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would be by Level B harassment only, in the form of disruption of behavioral patterns for individual marine mammals resulting from exposure to pedestrian researchers. Based on the nature of the activity, Level A harassment is neither anticipated nor proposed to be authorized.

As described previously, no mortality is anticipated or proposed to be authorized for this activity. Below we describe how the take is estimated. NMFS bases these take estimates on historical data from the five previous monitoring reports to generate 95 percent confidence interval maximums (assuming normal distribution) using STATA, a general-purpose statistical computer software package. Results are shown in Table 2. Takes recorded in all previous monitoring reports were based on occurrences that are consistent with Levels 2 and 3 of the three-point-scale (See Table 4). Note that Point Blue has never exceeded authorized take levels under any previously issued IHA. For California sea lions and harbor seals, NMFS elected to use the values projected as shown in Table 2. However, since the projected take numbers for northern elephant seals and Steller sea lions were very close to recorded takes in 2017–2018, NMFS increased the proposed take numbers for these species by 20 percent over the actual 2017–2018 take numbers shown in Table 2. This provides a buffer so Point Blue can continue their work if recorded takes for those two species exceeded take numbers generated by the STATA program. Proposed authorized take numbers are shown in Table 3.

TABLE 2—PAST REPORTED TAKE OBSERVATIONS AND ESTIMATED TAKE FOR PROPOSED 2018–2019 POINT BLUE ACTIVITIES ACCORDING TO STATISTICAL ANALYSIS

Species	Reported take observations from past seasons [1]					Projected Take 2018–2019 IHA
	IHA (2013–2014)	IHA (2014–2015)	IHA (2015–2016)	IHA (2016–2017)	IHA (2017–2018	
California Sea Lions	3,610	2,254	4,646	36,397 [1]	22,612	32,623
Northern Elephant Seals	67	30	97	169	198	199
Harbor Seals	109	141	259	292	234	304
Steller Sea Lions (E–DPS)	4	12	6	31	35	36

[1] Large increase in California sea lions likely due to El Niño event.

TABLE 3—POPULATION ABUNDANCE ESTIMATES, TOTAL PROPOSED LEVEL B TAKE, AND PERCENTAGE OF POPULATION THAT MAY BE TAKEN

Species	Stock	Stock abundance	Total proposed Level B take	Percentage of stock or population
California sea lion	U.S.	296,750	32,623	10.9
Northern elephant seal	California breeding stock	179,000	238	0.13
Harbor seal	California	30,968	304	0.98
Steller sea lion	Eastern U.S.	71,562	42	0.05

Proposed Mitigation

In order to issue an IHA under Section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, we carefully consider two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned) the likelihood of effective implementation (probability implemented as planned); and

(2) the practicability of the measures for applicant implementation, which may consider such things as cost, impact on operations, and, in the case of a military readiness activity, personnel safety, practicality of implementation, and impact on the effectiveness of the military readiness activity.

Mitigation for Marine Mammals and Their Habitat

Point Blue has based the mitigation measures, which they will employ during the research, on the implementation of protocols used during previous Point Blue research activities under previous authorizations for these activities. Note that Point Blue and NMFS have refined mitigation requirements over the years in an effort to reduce behavioral disturbance impacts to marine mammals.

To reduce the potential for disturbance from acoustic and visual stimuli associated with survey activities Point Blue will implement the following mitigation measures for marine mammals:

(1) Slow approach to beaches for boat landings to avoid stampede, provide animals opportunity to enter water, and avoid vessel strikes;

(2) Observe a site from a distance, using binoculars if necessary, to detect any marine mammals prior to approach to determine if mitigation is required (*i.e.,* site surveys will not be conducted if northern fur seals, or Guadalupe fur seals are present; if other pinnipeds are present, researchers will approach with caution, walking slowly, quietly, and close to the ground to avoid surprising any hauled-out individuals and to reduce flushing/stampeding of individuals);

(3) Avoid pinnipeds along access ways to sites by locating and taking a different access way. Researchers will keep a safe distance from and not approach any marine mammal while conducting research, unless it is absolutely necessary to flush a marine mammal in order to continue conducting research (*i.e.,* if a site cannot be accessed or sampled due to the presence of pinnipeds);

(4) Avoid visits to sites when pups are present or when species for which authorization has not been granted (*e.g.,* northern fur seals and Guadalupe fur seals) are present;

(5) Monitor for offshore predators and do not approach hauled out pinnipeds if great white sharks (*Carcharodon carcharias*) or killer whales (*Orcinus orca*) are present. If Point Blue and/or its designees see pinniped predators in the area, they must not disturb the pinnipeds until the area is free of predators;

(6) Keep voices hushed and bodies low to the ground in the visual presence of pinnipeds;

(7) Conduct seabird observations at North Landing on SEFI in an observation blind, shielded from the view of hauled out pinnipeds;

(8) Crawl slowly to access seabird nest boxes on ANI if pinnipeds are within view;

(9) Coordinate research visits to intertidal areas of SEFI (to reduce potential take) and coordinate research goals for ANI to minimize the number of trips to the island;

(10) Require beach landings on ANI only occur after any pinnipeds that might be present on the landing beach have entered the water; and

(11) Have the lead biologist serve as an observer to record incidental take.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has determined that the prescribed mitigation measures provide the means effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, Section 101(a)(5)(D) of the MMPA states that NMFS must set forth, requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
- How anticipated responses to stressors impact either: (1) Long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
- Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and
- Mitigation and monitoring effectiveness.

Point Blue will contribute to the knowledge of pinnipeds in California by noting observations of: (1) Unusual behaviors, numbers, or distributions of pinnipeds, such that any potential follow-up research can be conducted by the appropriate personnel; (2) tag-bearing pinnipeds or carcasses, allowing transmittal of the information to appropriate agencies and personnel; and (3) rare or unusual species of marine mammals for agency follow-up.

Required monitoring protocols for Point Blue will include the following:

(1) Record of date, time, and location (or closest point of ingress) of each visit to the research site;

(2) Composition of the marine mammals sighted, such as species, gender and life history stage (*e.g.,* adult, sub-adult, pup);

(3) Information on the numbers (by species) of marine mammals observed during the activities;

(4) Estimated number of marine mammals (by species) that may have been harassed during the activities;

(5) Behavioral responses or modifications of behaviors that may be attributed to the specific activities and a description of the specific activities occurring during that time (*e.g.,* pedestrian approach, vessel approach); and

(6) Information on the weather, including the tidal state and horizontal visibility.

For consistency, any reactions by pinnipeds to researchers will be recorded according to a three-point scale shown in Table 4. Note that only observations of disturbance noted in Levels 2 and 3 should be recorded as takes.

TABLE 4—LEVELS OF PINNIPED BEHAVIORAL DISTURBANCE

Level	Type of response	Definition
1	Alert	Seal head orientation or brief movement in response to disturbance, which may include turning head towards the disturbance, craning head and neck while holding the body rigid in a u-shaped position, changing from a lying to a sitting position, or brief movement of less than twice the animal's body length.
2*	Movement	Movements in response to the source of disturbance, ranging from short withdrawals at least twice the animal's body length to longer retreats over the beach, or if already moving a change of direction of greater than 90 degrees.
3*	Flush	All retreats (flushes) to the water.

*Only observations of disturbance Levels 2 and 3 are recorded as takes.

This information will be incorporated into a monitoring report for NMFS. The monitoring report will cover the period from January 1, 2018 through December 31, 2018. NMFS has requested that Point Blue submit annual monitoring report data on a calendar year schedule, regardless of the current IHA's initiation or expiration dates. This will ensure that data from all consecutive months will be collected and, therefore, can be analyzed to estimate authorized take for future IHA's regardless of the existing IHA's issuance date. Point Blue will submit a draft monitoring report to NMFS Office of Protected Resources by April 1, 2018. A final report will be prepared and submitted within 30 days following resolution of any comments on the draft report from NMFS. If no comments are received from NMFS, the draft final report will be considered to be the final report. This report must contain the informational elements described above, at minimum.

Point Blue must also report observations of unusual pinniped behaviors, numbers, or distributions and tag-bearing carcasses to NMFS West Coast Region office.

If at any time the specified activity clearly causes the take of a marine mammal in a manner prohibited by this IHA, such as an injury (Level A harassment), serious injury, or mortality, Point Blue will immediately cease the specified activities and report the incident to the Office of Protected Resources, NMFS, and the West Coast Regional Stranding Coordinator, NMFS. The report must include the following information:

(1) Time and date of the incident;

(2) Description of the incident;

(3) Environmental conditions (*e.g.,* wind speed and direction, Beaufort sea state, cloud cover, and visibility);

(4) Description of all marine mammal observations in the 24 hours preceding the incident;

(5) Species identification or description of the animal(s) involved;

(6) Fate of the animal(s); and

(7) Photographs or video footage of the animal(s).

Activities will not resume until NMFS is able to review the circumstances of the prohibited take. NMFS will work with Point Blue to determine what measures are necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. Point Blue may not resume the activities until notified by NMFS.

In the event that an injured or dead marine mammal is discovered and it is determined that the cause of the injury or death is unknown and the death is relatively recent (*e.g.,* in less than a moderate state of decomposition), Point Blue will immediately report the

incident to the Office of Protected Resources, NMFS, and the West Coast Regional Stranding Coordinator, NMFS. The report must include the same information identified in the paragraph above IHA. Activities may continue while NMFS reviews the circumstances of the incident. NMFS will work with Point Blue to determine whether additional mitigation measures or modifications to the activities are appropriate.

In the event that an injured or dead marine mammal is discovered and it is determined that the injury or death is not associated with or related to the activities authorized in the IHA (*e.g.,* previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage), Point Blue will report the incident to the Office of Protected Resources, NMFS, and the West Coast Regional Stranding Coordinator, NMFS, within 24 hours of the discovery. Point Blue will provide photographs or video footage or other documentation of the stranded animal sighting to NMFS. Activities may continue while NMFS reviews the circumstances of the incident.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any responses (*e.g.,* intensity, duration), the context of any responses (*e.g.,* critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS's implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the environmental baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

For reasons stated previously in this document and based on the following factors, NMFS does not expect Point Blue's specified activities to cause long-term behavioral disturbance that would negatively impact an individual animal's fitness, or result in injury, serious injury, or mortality. Although Point Blue's survey activities may disturb marine mammals, NMFS expects those impacts to occur to localized groups of animals at or near survey sites. Behavioral disturbance would be limited to short-term startle responses and localized behavioral changes due to the short duration (ranging from <15 minutes for visits at most locations up to 2–5 hours from April-August at SEFI) of the research activities. At some locations, where resupply activities occur, visits will occur once every two weeks. Minor and brief responses including short-duration startle reactions, are not likely to constitute disruption of behavioral patterns, such as migration, nursing, breeding, feeding, or sheltering. These short duration disturbances (in many cases animals will return in 30 minutes or less) will generally allow marine mammals to reoccupy haulouts relatively quickly; therefore, these disturbances would not be anticipated to result in long-term disruption of important behaviors. No surveys will occur at or near rookeries as researchers will have limited access to SEFI, ANI, and PRNS during the pupping season and will not approach sites should pups be observed. Furthermore, breeding animals tend to be concentrated in areas that researchers are not scheduled to visit. Therefore, NMFS does not expect mother and pup separation or crushing of pups during stampedes.

Level B behavioral harassment of pinnipeds may occur during the operation of small motorboats. However, exposure to boats and associated engine noise would be brief and would not occur on a frequent basis. Results from studies demonstrate that pinnipeds generally return to their sites and do not permanently abandon haul-out sites after exposure to motorboats. The chance of a vessel strike is very low due to small boat size and slow transit speeds. Researchers will delay ingress into the landing areas until after the pinnipeds enter the water and will cautiously operate vessels at slow speeds.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from this activity are not expected to adversely affect the species or stock through effects on annual rates of recruitment or survival:

- No serious injury or mortality is anticipated or authorized.
- Only limited behavioral disturbance in the form of short-duration startle reactions is expected while mitigation requirements employed by researchers (*e.g.* move slowly, use hushed voices) should further decrease disturbance levels.
- There is no activity near rookeries and researchers will avoid pups.
- There is likely to be limited impact from boats due to their small size, maneuverability and the requirement to delay ingress until after hauled out pinnipeds have entered the water.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted above, only small numbers of incidental take may be authorized under Section 101(a)(5)(D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

As mentioned previously, NMFS estimates that four marine mammal stocks could potentially be affected by Level B harassment under the proposed authorization. For each stock, these numbers are small relative to the population size. As shown previously in Table 3, these incidental harassment numbers represent approximately 10.9 percent of the U.S. stock of California sea lion, 0.98 percent of the California stock of Pacific harbor seal, 0.13 percent of the California breeding stock of northern elephant seal, and 0.05 percent of the eastern distinct population segment of Steller sea lion. Note that the number of individual marine mammals

taken is assumed to be less than the take estimate (number of exposures) since we assume that the same animals may be behaviorally harassed over multiple days.

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals will be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has preliminarily determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA: 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally, in this case with West Coast Region Protected Resources Division Office, whenever we propose to authorize take for endangered or threatened species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to Point Blue Conservation Science for conducting research surveys at SEFI, ANI, and PRNS from June July 7, 2018 through July 6, 2019 provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. This section contains a draft of the IHA itself. The wording contained in this section is proposed for inclusion in the IHA (if issued).

1. This Incidental Harassment Authorization (IHA) is valid for a period of one year from July 7, 2018 through July 6, 2019.

2. This IHA is valid only for specified activities associated with seabird research and resupply activities located on or near Southeast Farallon Island, Año Nuevo Island, and Point Reyes National Seashore in central California.

3. General Conditions.

(a) A copy of this IHA must be in the possession of Point Blue, its designees, and work crew personnel operating under the authority of this IHA.

(b) The incidental taking of marine mammals, by Level B harassment only, is limited to the following species and associated authorized take numbers as shown below:

(i) 304 harbor seal; *(Phoca vitulina richardii);*

(ii) 32,623 California sea lions *(Zalophus californianus);*

(iii) 42 Steller sea lions *(Eumetopias jubatus);* and

(iv) 238 northern elephant seals *(Mirounga angustirostris).*

(c) The taking by injury (Level A harassment), serious injury, or death of any of the species listed in condition 3(b) of the Authorization or any taking of any other species of marine mammal is prohibited and may result in the modification, suspension, or revocation of this IHA.

4. Mitigation Measures.

The holder of this Authorization is required to implement the following mitigation measures:

(a) Researchers shall slowly approach beaches for boat landings to avoid stampede, provide animals opportunity to enter water, and avoid vessel strikes.

(b) Researchers shall observe a site from a distance, using binoculars if necessary, to detect any marine mammals prior to approach to determine if mitigation is required (*i.e.,* site surveys shall not be conducted if northern fur seals, or Guadalupe fur seals are present; if other pinnipeds are present, researchers shall approach with caution, walking slowly, quietly, and close to the ground to avoid surprising any hauled-out individuals and to reduce flushing/stampeding of individuals).

(c) Researchers shall avoid pinnipeds along access ways to sites by locating and taking a different access way. Researchers shall keep a safe distance from and not approach any marine mammal while conducting research, unless it is absolutely necessary to flush a marine mammal in order to continue conducting research (*i.e.,* if a site cannot be accessed or sampled due to the presence of pinnipeds).

(d) Researchers shall avoid visits to sites when pups are present or when species for which authorization has not been granted (*e.g.,* northern fur seals and Guadalupe fur seals) are present.

(e) Researchers shall monitor for offshore predators and shall not approach hauled-out pinnipeds if great white sharks *(Carcharodon carcharias)* or killer whales *(Orcinus area)* are observed. If Point Blue and/or its designees see pinniped predators in the area, they must not disturb the pinnipeds until the area is free of predators.

(f) Researchers shall keep voices hushed and bodies low to the ground in the visual presence of pinnipeds.

(g) Researchers shall conduct seabird observations at North Landing on Southeast Farallon Island in an observation blind, shielded from the view of hauled out pinnipeds.

(h) Researchers shall crawl slowly to access seabird nest boxes on Año Nuevo Island if pinnipeds are within view.

(i) Researchers shall coordinate research visits to intertidal areas of Southeast Farallon Island (to reduce potential take) and coordinate research goals for Año Nuevo Island to minimize the number of trips to the island.

(j) Beach landings shall be required on Año Nuevo Island and shall only occur after any pinnipeds that might be present on the landing beach have entered the water.

(k) The lead biologist shall serve as an observer to record incidental take.

5. Monitoring.

The holder of this IHA is required to:

(a) Record the date, time, and location (or closest point of ingress) of each visit to the research site.

(b) Collect the following information for each visit:

(i) Composition of the marine mammals sighted, such as species, gender and life history stage *(e.g.,* adult, sub-adult, pup);

(ii) Information on the numbers (by species) of marine mammals observed during the activities;

(iii) Estimated number of marine mammals (by species) that may have been harassed during the activities;

(iv) Behavioral responses or modifications of behaviors that may be attributed to the specific activities and a description of the specific activities occurring during that time *(e.g.,* pedestrian approach, vessel approach); and

(v) Information on the weather, including the tidal state and horizontal visibility.

(c) Researchers shall record marine mammal disturbances according to a three-point scale of intensity including:

(i) Seal head orientation or brief movement in response to disturbance, which may include turning head

towards the disturbance, craning head and neck while holding the body rigid in a u-shaped position, changing from a lying to a sitting position, or brief movement of less than twice the animal's body length ''alert'';

(ii) Movements in response to source of disturbance, ranging from short withdrawals at least twice the animal's body length to longer retreats over the beach, or if already moving a change of direction of greater than 90 degrees, ''movement''; and

(iii) All retreats (flushes) to the water, ''flush''.

(iv) Observations of disturbance Levels (ii) and (iii) shall be recorded as takes.

(d) If applicable, note observations of marked or tag-bearing pinnipeds or carcasses, as well as any rare or unusual species of marine mammal which should be reported to the West Coast Regional Office.

(e) If applicable, note the presence of any offshore predators (date, time, number, and species).

6. Reporting.

The holder of this Authorization is required to:

(a) Report observations of unusual behaviors or numbers of pinnipeds to the NMFS West Coast Region Office so that the appropriate personnel NMFS personnel may conduct any potential follow-up observations.

(b) Submit a draft monitoring report to NMFS Office of Protected Resources by April 1, 2018 covering the time period of January 1, 2018 through December 31, 2018. A final report shall be prepared and submitted within 30 days following resolution of any comments on the draft report from NMFS. If no comments are received from NMFS, the draft final report will be considered to be the final report.

(c) Reporting injured or dead marine mammals:

(i) In the unanticipated event that the specified activity clearly causes the take of a marine mammal in a manner prohibited by this IHA, such as an injury (Level A harassment), serious injury, or mortality, Point Blue shall immediately cease the specified activities and report the incident to the Incidental Take Program Supervisor, Permits and Conservation Division, Office of Protected Resources, and the West Coast Regional Stranding Coordinator. The report must include the following information:

1. Time and date of the incident;

2. Description of the incident;

3. Environmental conditions *(e.g.,* wind speed and direction, Beaufort sea state, cloud cover, and visibility);

4. Description of all marine mammal observations in the 24 hours preceding the incident;

5. Species identification or description of the animal(s) involved;

6. Fate of the animal(s); and

7. Photographs or video footage of the animal(s).

8. Activities shall not resume until NMFS is able to review the circumstances of the prohibited take. NMFS shall work with Point Blue to determine what measures are necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. Point Blue may not resume their activities until notified by NMFS.

(ii) In the event that Point Blue discovers an injured or dead marine mammal, and the lead observer determines that the cause of the injury or death is unknown and the death is relatively recent *(e.g.,* in less than a modest state of decomposition), Point Blue shall immediately report the incident to the NMFS contacts listed in 6(c)(i). The report must include the same information identified in 6(c)(i). Activities may continue while NMFS reviews the circumstances of the incident. NMFS will work with Point Blue to determine whether additional mitigation measures or modifications to the activities are appropriate.

(iii) In the event that Point Blue discovers an injured or dead marine mammal, and the lead observer determines that the injury or death is not associated with or related to the activities authorized in the IHA (*e.g.,* previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage), Point Blue shall report the incident to the NMFS contacts listed in 6(c)(i). Point Blue shall provide photographs, video footage or other documentation of the stranded animal sighting to NMFS.

7. This Authorization may be modified, suspended or withdrawn if the holder fails to abide by the conditions prescribed herein, or if NMFS determines the authorized taking is having more than a negligible impact on the species or stock of affected marine mammals.

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this Notice of Proposed IHA for the proposed action. We also request comment on the potential for renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform our final decision on the request for MMPA authorization.

On a case-by-case basis, NMFS may issue a second one-year IHA without additional notice when 1) another year of identical or nearly identical activities as described in the Specified Activities section is planned or 2) the activities would not be completed by the time the IHA expires and a second IHA would allow for completion of the activities beyond that described in the Dates and Duration section, provided all of the following conditions are met:

- A request for renewal is received no later than 60 days prior to expiration of the current IHA.
- The request for renewal must include the following:

(1) An explanation that the activities to be conducted beyond the initial dates either are identical to the previously analyzed activities or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, take estimates, or mitigation and monitoring requirements.

(2) A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

- Upon review of the request for renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures remain the same and appropriate, and the original findings remain valid.

Dated: May 2, 2018.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

COMMISSION OF FINE ARTS

Notice of Meeting

The next meeting of the U.S. Commission of Fine Arts is scheduled for 17 May 2018, at 9:00 a.m. in the Commission offices at the National Building Museum, Suite 312, Judiciary Square, 401 F Street NW, Washington DC 20001–2728. Items of discussion may include buildings, parks and memorials.

Draft agendas and additional information regarding the Commission are available on our website: *www.cfa.gov.* Inquiries regarding the agenda and requests to submit written or oral statements should be addressed

to Thomas Luebke, Secretary, U.S. Commission of Fine Arts, at the above address; by emailing *staff@cfa.gov;* or by calling 202–504–2200.

Individuals requiring sign language interpretation for the hearing impaired should contact the Secretary at least 10 days before the meeting date.

Dated: April 25, 2018 in Washington, DC.

Thomas Luebke,

Secretary.

[FR Doc. 2018–09334 Filed 5–4–18; 8:45 am]

BILLING CODE 6330–01–M

DELAWARE RIVER BASIN COMMISSION

Notice of Public Hearing and Business Meeting

May 16 and June 13, 2018.

Notice is hereby given that the Delaware River Basin Commission will hold a public hearing on Wednesday, May 16, 2018. A business meeting will be held the following month on Wednesday, June 13, 2018. The hearing and meeting are open to the public and will be held at the West Trenton Volunteer Fire Company Ballroom, 40 West Upper Ferry Road, West Trenton, New Jersey.

Public Hearing. The public hearing on May 16, 2018 will begin at 1:30 p.m. Hearing items subject to the Commission's review will include draft dockets for withdrawals, discharges, and other water-related projects, as well as resolutions to: (a) Adopt the Commission's annual Current Expense and Capital Budgets for the fiscal year ending June 30, 2019 (July 1, 2018 through June 30, 2019); (b) apportion among the signatory parties the amounts required for the support of the Current Expense and Capital Budgets for the fiscal year ending June 30, 2019 (July 1, 2018 through June 30, 2019); (c) clarify and restate the Commission's policy for the replacement of water consumptively used by electric generating or cogenerating facilities during critical hydrologic conditions; and (d) authorize the Executive Director to enter into a contract for professional engineering services for technical evaluations and cost estimations for upgrades of wastewater treatment plants discharging to the Delaware River Estuary.

The list of projects scheduled for hearing, including project descriptions, and the text of the proposed resolutions will be posted on the Commission's website, *www.drbc.net,* in a long form of this notice at least ten days before the hearing date.

Written comments on matters scheduled for hearing on May 16 will be accepted through 5:00 p.m. on May 21.

The public is advised to check the Commission's website periodically prior to the hearing date, as items scheduled for hearing may be postponed if additional time is deemed necessary to complete the Commission's review, and items may be added up to ten days prior to the hearing date. In reviewing docket descriptions, the public is also asked to be aware that project details commonly change in the course of the Commission's review, which is ongoing.

Public Meeting. The public business meeting on June 13, 2018 will begin at 10:30 a.m. and will include: adoption of the Minutes of the Commission's March 14, 2018 Business Meeting, announcements of upcoming meetings and events, a report on hydrologic conditions, reports by the Executive Director and the Commission's General Counsel, and consideration of any items for which a hearing has been completed or is not required. The latter are expected to include resolutions: (a) Authorizing the Executive Director to revise the *Administrative Manual—By-Laws, Management and Personnel;* and (b) providing for election of the Commission Chair, Vice Chair and Second Vice Chair for the year commencing July 1, 2018 and ending June 30, 2019.

After all scheduled business has been completed and as time allows, the Business Meeting will be followed by up to one hour of Open Public Comment, an opportunity to address the Commission on any topic concerning management of the basin's water resources, outside the context of a duly noticed, on-the-record public hearing.

There will be no opportunity for additional public comment for the record at the June 13 Business Meeting on items for which a hearing was completed on May 16 or a previous date. Commission consideration on June 13 of items for which the public hearing is closed may result in approval of the item (by docket or resolution) as proposed, approval with changes, denial, or deferral. When the Commissioners defer an action, they may announce an additional period for written comment on the item, with or without an additional hearing date, or they may take additional time to consider the input they have already received without requesting further public input. Any deferred items will be considered for action at a public meeting of the Commission on a future date.

Advance Sign-Up for Oral Comment. Individuals who wish to comment on the record during the public hearing on May 16 or to address the Commissioners informally during the Open Public Comment portion of the meeting on June 13 as time allows, are asked to sign-up in advance through EventBrite. Links to EventBrite for the Public Hearing and the Business Meeting are available at *drbc.net.* For assistance, please contact Ms. Paula Schmitt of the Commission staff, at *paula.schmitt@drbc.nj.gov.*

Submitting Written Comment. Written comment on items scheduled for hearing may be made through SmartComment, the web-based comment system introduced by the Commission, a link to which is provided at *drbc.net.* Use of SmartComment ensures that all submissions are captured in a single location and their receipt is acknowledged. Exceptions to the use of SmartComment are available based on need, by writing to the attention of the Commission Secretary, DRBC, P.O. Box 7360, 25 Cosey Road, West Trenton, NJ 08628. For assistance, please contact Paula Schmitt at *paula.schmitt@drbc.nj.gov.*

Accommodations for Special Needs. Individuals in need of an accommodation as provided for in the Americans with Disabilities Act who wish to attend the meeting or hearing should contact the Commission Secretary directly at 609–883–9500 ext. 203 or through the Telecommunications Relay Services (TRS) at 711, to discuss how we can accommodate your needs.

Additional Information, Contacts. Additional public records relating to hearing items may be examined at the Commission's offices by appointment by contacting Denise McHugh, 609–883–9500, ext. 240. For other questions concerning hearing items, please contact Judith Scharite, Project Review Section assistant at 609–883–9500, ext. 216.

Dated: April 30, 2018.

Pamela M. Bush,

Commission Secretary and Assistant General Counsel.

BILLING CODE 6360–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Assistance for Arts Education Program—Arts in Education National Program

AGENCY: Office of Innovation and Improvement, Department of Education

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for fiscal year (FY) 2018 for the Assistance for Arts Education Program (AAE)—Arts in Education National Program (AENP) Grants, Catalog of Federal Domestic Assistance (CFDA) number 84.351F.

DATES:

Applications Available: May 7, 2018.

Deadline for Notice of Intent to Apply: June 6, 2018.

Deadline for Transmittal of Applications: July 6, 2018.

Deadline for Intergovernmental Review: September 4, 2018.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 12, 2018 (83 FR 6003) and available at *www.gpo.gov/fdsys/pkg/FR-2018-02-12/pdf/2018-02558.pdf.*

FOR FURTHER INFORMATION CONTACT: Asheley McBride, U.S. Department of Education, 400 Maryland Avenue SW, Room 4W240, Washington, DC 20202–5950. Telephone: (202) 453–6398. Email: *Asheley.McBride@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The AENP—part of the Assistance for Arts Education (AAE) program—is authorized under Title IV, part F, subpart 4 of the Elementary and Secondary Education Act (ESEA), as amended by the Every Student Succeeds Act (ESSA).[1] In general, the purpose of the AAE program is to promote arts (as defined in this notice) education for students, including disadvantaged students and students who are children with disabilities (as defined in this notice). Specifically, the AENP supports national-level (as defined in this notice), high-quality arts education projects and services for children and youth, with special emphasis on serving children from low-income families (as defined in this notice) and children with disabilities through community and national outreach activities that strengthen and expand partnerships among schools, local educational agencies, communities, or centers for the arts, including national centers for the arts.

Background: Since 2001, the Department has invested over $300 million in arts education and arts integration (as defined in this notice). The AENP, under its new authorization, will continue to build on the Department's contributions to the arts. The new authorization of the AENP emphasizes projects that support community and national outreach activities that strengthen and expand partnerships among schools, local educational agencies (LEAs), communities, or centers for the arts, including national centers for the arts.

In addition, under the new authorization, the AENP will continue to support activities and services that were previously funded through this program including: developing and updating standards-aligned, arts-based and arts-integrated curriculum and programming; professional development for educators, including special educators and arts educators; dissemination of instructional materials and online resources; and other high-quality projects for children and youth, with special emphasis on serving children from low-income families and children with disabilities.

Priorities: This notice includes one absolute priority. We are establishing this priority for the FY 2018 grant competition and any subsequent years in which we make awards from the list of unfunded applications from this competition, in accordance with section 437(d)(1) of the General Education Provisions Act (GEPA), 20 U.S.C. 1232(d)(1).

Absolute Priority: For FY 2018 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3) we consider only applications that meet this priority.

This priority is:

One or more high-quality arts education projects that (1) support community and national outreach activities that strengthen and expand partnerships among schools, local educational agencies (LEAs), communities, or centers for the arts, including national centers for the arts; (2) are designed to implement, or expand, initiatives in arts education and arts integration; and (3) have a special emphasis on serving children from low-income families and children with disabilities. To meet part 3 of this priority, applicants must submit supporting data identifying the population of students that meet the definition of ''child from a low-income family'' and the population of students that meet the definition of ''child with a disability.'' The supporting data for a child from a low-income family will reflect the data used by the LEA referred to in the definition of ''child from a low-income family'' in this notice.

Definitions: We are establishing the definitions of ''arts,'' ''arts educator,'' ''arts integration,'' and ''child from a low-income family'' for the FY 2018 grant competition and any subsequent year in which we make awards from the list of unfunded applications from this competition, in accordance with section 437(d)(1) of GEPA. The definition of ''child with a disability'' is from section 8101 of the ESEA (20 U.S.C. 7801). The definitions of ''demonstrates a rationale,'' ''experimental study,'' ''logic model,'' ''project component,'' ''national level,'' ''promising evidence,'' ''quasi-experimental design study,'' ''relevant outcome'' and ''What Works Clearinghouse Handbook (WWC Handbook)'' are from 34 CFR 77.1(c).

Arts means music, dance, theater, media arts, and visual arts, including folk arts.

Arts educator means a teacher or other instructional staffer who works in music, dance, theater, media arts, or visual arts, including folk arts.

Arts integration means (1) strengthening the use of high-quality arts instruction in other academic/content areas, and (2) strengthening the place of the arts as a part of a well-rounded education.

Child from a low-income family means a child who is determined by a state or local educational agency to be a child, in pre-kindergarten through grade 12 (a) who is in poverty counted in the most recent census data, (b) who is eligible for free or reduced-price lunches under the Richard B. Russell National School Lunch Act, (c) whose family is receiving assistance under the State program funded under part A of title IV of the Social Security Act, (d) who is eligible to receive medical assistance under the Medicaid program, or (e) a composite of such indicators.

Child with a disability means—

(a) A child (i) with intellectual disabilities, hearing impairments (including deafness), speech or language impairments, visual impairments (including blindness), serious emotional disturbance (referred to as ''emotional disturbance''), orthopedic impairments, autism, traumatic brain injury, other health impairments, or specific learning disabilities; and (ii) who, by reason thereof, needs special education and related services.

[1] Unless otherwise indicated, all references to the ESEA are to the ESEA, as amended by the ESSA.

(b) For a child aged 3 through 9 (or any subset of that age range, including ages 3 through 5), may, at the discretion of the State and the local educational agency, include a child (i) experiencing developmental delays, as defined by the State and as measured by appropriate diagnostic instruments and procedures, in one or more of the following areas: physical development; cognitive development; communication development; social or emotional development; or adaptive development; and (ii) who, by reason thereof, needs special education and related services.

Demonstrates a rationale means a key project component (as defined in this notice) included in the project's logic model (as defined in this notice) is informed by research or evaluation findings that suggest the project component is likely to improve relevant outcomes (as defined in this notice).

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of experimental studies that, depending on their design and implementation (*e.g.,* sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the WWC Handbook (as defined in this notice):

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the project component being evaluated (the treatment group) or not to receive the project component (the control group).

(ii) A regression discontinuity design study assigns the project component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

National level describes the level of scope or effectiveness of a process, product, strategy, or practice that is able to be effective in a wide variety of communities, including rural and urban areas, as well as with different groups (*e.g.,* economically disadvantaged, racial and ethnic groups, migrant populations, individuals with disabilities, English learners, and individuals of each gender).

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Promising evidence means that there is evidence of the effectiveness of a key project component in improving a relevant outcome, based on a relevant finding from one of the following:

(i) A practice guide prepared by WWC reporting a ''strong evidence base'' or ''moderate evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC reporting a ''positive effect'' or ''potentially positive effect'' on a relevant outcome with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single study assessed by the Department, as appropriate, that—

(A) Is an experimental study, a quasi-experimental design study, or a well-designed and well-implemented correlational study with statistical controls for selection bias (*e.g.,* a study using regression methods to account for differences between a treatment group and a comparison group); and

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome.

Quasi-experimental design study means a study using a design that attempts to approximate an experimental study by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation (*e.g.,* establishment of baseline equivalence of the groups being compared), can meet WWC standards with reservations, but cannot meet WWC standards without reservations, as described in the WWC Handbook.

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program.

What Works Clearinghouse Handbook (WWC Handbook) means the standards and procedures set forth in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (incorporated by reference, see 34 CFR 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the Handbook documentation.

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed priorities, definitions and selection criteria. Section 437(d)(1) of GEPA, however, allows the Secretary to exempt from rulemaking requirements, regulations governing the first grant competition under a new or substantially revised program authority. This is the first grant competition for this program under section 4642 of the ESSA (20 U.S.C. 7292) and therefore qualifies for this exemption. In order to ensure timely grant awards, the Secretary has decided to forgo public comment on the priority, definitions, and one of the selection criteria, under section 437(d)(1) of GEPA. This priority, these definitions and this selection criterion will apply to the FY 2018 grant competition and any subsequent year in which we make awards from the list of unfunded applications from this competition.

Program Authority: 20 U.S.C. 7291–7292.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education only.

II. Award Information

Type of Award: Discretionary grants.
Estimated Available Funds: $8,000,000.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Number of Awards: 1.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 36 months (subject to availability of funds).

III. Eligibility Information

1. *Eligible Applicants:* Eligible national nonprofit organizations. ''Eligible national nonprofit organization'' means an organization of national scope that—

(A) Is supported by staff, which may include volunteers, or affiliates at the State and local levels; and

(B) Demonstrates effectiveness or high-quality plans for addressing arts education activities for disadvantaged students or students who are children with disabilities.

2. a. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

b. *Supplement-Not-Supplant:* This program involves supplement-not-supplant funding requirements. In accordance with section 4642(b)(2)of the ESEA, funds made available under this subpart shall be used only to supplement, and not to supplant, any other assistance or funds made available from non-Federal sources for the activities assisted under this subpart.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

4. *Coordination Requirement:* In accordance with section 4642(b)(1) of the ESEA, grantees are required to coordinate, to the extent practicable, each project or program carried out with such assistance with appropriate activities of public or private cultural agencies, institutions, and organizations, including museums, arts education associations, libraries, and theaters.

IV. Application and Submission Information

1. *Application Submission Instructions:* For information on how to submit an application please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 12, 2018 (83 FR 6003) and available at *www.gpo.gov/fdsys/pkg/FR-2018-02-12/pdf/2018-02558.pdf.*

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for the AENP, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

We plan on posting the project narrative section of funded AENP applications on the Department's website. Accordingly, you may wish to request confidentiality of business information. Identifying proprietary information in the submitted application will help facilitate this public disclosure process.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit:* The application narrative (Part III of the application) is where you, the applicant, address the absolute priority and the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to no more than 50 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1'' margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the one-page abstract, the resumes, the bibliography, or the letters of support. However, the recommended page limit does apply to all of the application narrative.

6. *Notice of Intent to Apply:* We will be able to develop a more efficient process for reviewing grant applications if we know the approximate number of applicants that intend to apply for funding under this competition. Therefore, the Secretary strongly encourages each potential applicant to notify us of the applicant's intent to submit an application for funding by sending a short email message. This email should only indicate the applicant organization's name and address. Please send this email notification to *Asheley.McBride@ed.gov* with ''Intent to Apply'' in the email subject line. Applicants that do not provide this email notification may still apply for funding.

7. *Informational Webinar:* The AENP staff intends to hold a webinar designed to provide technical assistance to all interested grant applicants. Detailed information regarding this webinar will be provided on the AENP web page at: *https://innovation.ed.gov/what-we-do/arts/arts-in-education-national-program/.*

V. Application Review Information

1. *Selection Criteria:* We are establishing selection criterion (b) under the *Quality of the project design* for the FY 2018 grant competition and any subsequent years in which we make awards from the list of unfunded applications from this competition, in accordance with section 437(d)(1) of the General Education Provisions Act (GEPA), 20 U.S.C. 1232(d)(1). Selection criterion (a) under the *Quality of the project design* is from section 4642(a)(1)(C) of the ESEA. The rest of the selection criteria for this competition are from 34 CFR 75.210.

The points assigned to each criterion are indicated in the parentheses next to the criterion. An applicant may earn up to a total of 100 points based on the selection criteria for the application.

The selection criteria are as follows:

(1) *Significance* (20 points).

The Secretary reviews each application to determine—

(a) The national significance of the proposed project.

(b) The extent to which the results of the proposed project are to be disseminated in ways that will enable others to use the information or strategies.

(c) The importance or magnitude of the results or outcomes likely to be attained by the proposed project, especially improvements in teaching and student achievement.

(2) *Quality of the project design* (35 points). The Secretary reviews each application to determine the extent to which—

(a) The proposed project will provide community and national outreach activities that strengthen and expand partnerships among schools, local educational agencies, communities, or centers for the arts, including national centers for the arts.

(b) The proposed project is appropriate to, and will successfully address, the arts education needs of pre-kindergarten-through-grade-12 children and youth, with special emphasis on serving children from low-income families and children with disabilities;

(c) The proposed project will integrate with or build on similar or related efforts to improve relevant outcomes (as defined in this notice), using existing funding streams from other programs or policies supported by community, State, and Federal resources.

(d) The proposed project demonstrates a rationale (as defined in this notice).

Note: The Secretary encourages applicants to consider measures and targets tied to their grant activities. The measures and targets should be sufficient to gauge the progress throughout the grant period, and show results by the end of the grant period. For technical assistance in developing effective measures and targets, applicants are encouraged to review information provided by the Department's Regional Educational Laboratories (RELs). The RELs seek to build the capacity of States and school districts to incorporate data and research into education decision making. Each REL provides research support and technical assistance to its region but makes learning opportunities available to educators everywhere. For example, the REL Northeast and Islands has created the following resources on logic models: *http://relpacific.mcrel.org/resources/elm-app/; https://ies.ed.gov/ncee/edlabs/regions/pacific/pdf/REL_2014025.pdf; https://ies.ed.gov/ncee/edlabs/regions/pacific/pdf/REL_2014007.pdf;* and *https://ies.ed.gov/ncee/edlabs/regions/northeast/pdf/REL_2015057.pdf.*

(3) *Quality of project services* (25 points).

In determining the quality of the services to be provided by the proposed project, the Secretary considers the following factors:

(a) The likely impact of the services to be provided by the proposed project on the intended recipients of those services.

(b) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services.

(c) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners for maximizing the effectiveness of project services.

(4) *Quality of the project evaluation* (20 points).

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the project evaluation, the Secretary considers the following factors:

(a) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible.

(b) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes.

(c) The extent to which the methods of evaluation will, if well implemented, produce promising evidence (as defined in this notice) about the project's effectiveness.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.205, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose specific conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $150,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other

requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

5. *Performance Measures:* Under the Government Performance and Results Act (GPRA), we have established four performance measures to assess the effectiveness of this program. Projects funded under this competition will be expected to collect and report to the Department data related to these measures. Applicants should, but are not required to, discuss in the application narrative how they propose to collect these data. The four GPRA performance measures are: (1) The total number of students who participate in arts education sponsored by the grantee; (2) the number of teachers participating in the grantee's program who receive professional development; (3) the total number of low-income students who participate in arts education sponsored by the grantee; and (4) the total number of children with disabilities who participate in arts education sponsored by the grantee.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation grant, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: May 2, 2018.

Margo Anderson,

Acting Assistant Deputy Secretary for Innovation and Improvement.

[FR Doc. 2018–09669 Filed 5–4–18; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Update on Reimbursement for Costs of Remedial Action at Uranium and Thorium Processing Sites

AGENCY: Department of Energy.

ACTION: Notice of the Title X claims during fiscal year (FY) 2018.

SUMMARY: This Notice announces the Department of Energy's (DOE) acceptance of claims in FY 2018 from eligible uranium and thorium processing site licensees for reimbursement under Title X of the Energy Policy Act of 1992. The FY 2019 Department of Energy Office of Environmental Management's Congressional Budget Request included $30 million for the Title X Program.

DATES: The closing date for the submission of FY 2018 Title X claims is September 14, 2018. The claims will be processed for payment together with any eligible unpaid approved claim balances from prior years, based on the availability of funds from congressional appropriations. If the total approved claim amounts exceed the available funding, the approved claim amounts will be reimbursed on a prorated basis. All reimbursements are subject to the availability of funds from congressional appropriations.

ADDRESSES: Claims should be forwarded by certified or registered mail, return receipt requested, to U.S. Department of Energy, Office of Legacy Management, Attn: Mark Kautsky, Lead for Review of Title X Reimbursement of Claims, U.S. Department of Energy, Office of Legacy Management, 2597 Legacy Way, Grand Junction, Colorado 81503. Two copies of the claim should be included with each submission.

FOR FURTHER INFORMATION CONTACT: Jaffet Ferrer-Torres, Title X Program Lead and Coordinator, at (202) 586–0730, of the U.S. Department of Energy, Office of Environmental Management, Office of Waste Disposal.

SUPPLEMENTARY INFORMATION: DOE published a final rule under 10 CFR part 765 in the **Federal Register** on May 23, 1994, (59 FR 26714) to carry out the

requirements of Title X of the Energy Policy Act of 1992 (sections 1001–1004 of Public Law 102–486, 42 U.S.C. 2296a *et seq.*) and to establish the procedures for eligible licensees to submit claims for reimbursement. DOE amended the final rule on June 3, 2003, (68 FR 32955) to adopt several technical and administrative amendments (*e.g.,* statutory increases in the reimbursement ceilings). Title X requires DOE to reimburse eligible uranium and thorium licensees for certain costs of decontamination, decommissioning, reclamation, and other remedial action incurred by licensees at uranium and thorium processing sites to remediate byproduct material generated resulting from the sales to the United States Government. To be reimbursable, costs of remedial action must be for work that is necessary to comply with applicable requirements of the Uranium Mill Tailings Radiation Control Act of 1978 (42 U.S.C. 7901 *et seq.*) or, where appropriate, with requirements established by a State pursuant to a discontinuance agreement under section 274 of the Atomic Energy Act of 1954 (42 U.S.C. 2021). Claims for reimbursement must be supported by reasonable documentation as determined by DOE in accordance with 10 CFR part 765. Funds for reimbursement will be provided from the Uranium Enrichment Decontamination and Decommissioning Fund established at the Department of Treasury pursuant to section 1801 of the Atomic Energy Act of 1954 (42 U.S.C. 2297g). Payment or obligation of funds shall be subject to the requirements of the Anti-Deficiency Act (31 U.S.C. 1341).

Authority: Section 1001–1004 of Public Law 102–486, 106 Stat. 2776 (42 U.S.C. 2296a *et seq.*).

Issued in Washington, DC, on May 1, 2018.

Jaffet Ferrer-Torres,

Title X Program Lead and Coordinator, Office of Waste Disposal, Office of Environmental Management.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER18–1471–000]

Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization: ACT Commodities, Inc.

This is a supplemental notice in the above-referenced proceeding of ACT Commodities, Inc.'s application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is May 21, 2018.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the website that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: May 1, 2018.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[Docket No. ER18–1470–000]

Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization: Pine River Wind Energy LLC

This is a supplemental notice in the above-referenced proceeding of Pine River Wind Energy LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is May 21, 2018.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the

Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the website that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication, and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. The communications listed are grouped by docket numbers in ascending order. These filings are available for electronic review at the Commission in the Public Reference Room or may be viewed on the Commission's website at *http://www.ferc.gov* using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

For TTY, call (202) 502–8659.

Dated: May 1, 2018.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[FR Doc. 2018–09614 Filed 5–4–18; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Western Area Power Administration

Olmsted Powerplant Replacement Project-Rate Order No. WAPA–177

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of order concerning final rate for the Olmsted Powerplant Replacement Project.

SUMMARY: The Deputy Secretary of Energy confirmed and approved Rate Order No. WAPA–177 and Rate Schedule F–1, placing the formula rate for the Western Area Power Administration (WAPA) Olmsted Powerplant Replacement Project (Olmsted) into effect on an interim basis (Provisional Formula Rate).

DATES: The Provisional Formula Rate Schedule Olmsted F–1 is effective on the first day of the first, full billing period beginning on or after June 6, 2018, and will remain in effect through May 6, 2023, pending confirmation and

approval by the Federal Energy Regulatory Commission (FERC) on a final basis or until superseded.

FOR FURTHER INFORMATION CONTACT: Mr. Brent Osiek, Power Marketing Manager, Colorado River Storage Project Management Center, Western Area Power Administration, 299 South Main Street, Suite 200, Salt Lake City, UT 84111, telephone (801) 524–5495, or Mr. Thomas Hackett, Rates Manager, Colorado River Storage Project Management Center, Western Area Power Administration, 299 South Main Street, Suite 200, Salt Lake City, UT 84111, telephone (801) 524–5503, email *hackett@wapa.gov.*

SUPPLEMENTARY INFORMATION: Olmsted is located at the mouth of Provo Canyon in northern Utah and is a part of the Central Utah Project, a participating project of the Colorado River Storage Project (CRSP). In order to secure water rights necessary for the Central Utah Project, the United States Department of the Interior initiated condemnation proceedings in 1987 to acquire the Olmsted facility from Utah Power and Light (now PacifiCorp). Under the terms of the condemnation settlement agreement, PacifiCorp was allowed to operate the Olmsted facility until September 2015. Upon expiration of the settlement agreement, replacement construction began due to the age and condition of the existing generating plant. The Project is scheduled to begin commercial service on August 1, 2018.

Olmsted is a ''take all, pay all'' project; *i.e.,* the annual revenue requirement is not dependent upon the amount of energy available each year. Customers with an allocation, as determined by the marketing plan process, will receive a proportional share of the energy and will annually pay a proportional share of the operation, maintenance, and replacement (OM&R) expenses in 12 monthly installments. This Notice establishes the initial formula rate for Olmsted under Rate Schedule F–1. The initial formula rate is as follows: Annual Revenue Requirement = Projected OM&R Costs + Projected Interest + Projected Principal Payments ± True-Up Adjustment.

Legal Authority

By Delegation Order No. 00–037.00B, effective November 19, 2016, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of WAPA; (2) the authority to confirm, approve, and place such rates into effect on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve, and place into effect on a final basis, to remand, or to disapprove such rates to FERC. Federal rules (10 CFR part 903) govern DOE procedures for public participation in power rate adjustments.

Under Delegation Order Nos. 00–037.00B and 00–001.00F and in compliance with 10 CFR part 903 and 18 CFR part 300, I hereby confirm, approve, and place Rate Order No. WAPA–177, Olmsted Powerplant Replacement Project, into effect on an interim basis. The new Rate Schedule F–1 will be submitted to FERC for confirmation and approval on a final basis.

Dated: April 30, 2018.

Dan Brouillette,

Deputy Secretary of Energy.

DEPARTMENT OF ENERGY DEPUTY SECRETARY

In the matter of: Western Area Power Administration, Rate Order for the Olmsted Powerplant Replacement Project.

Rate Order No. WAPA–177

ORDER CONFIRMING, APPROVING, AND PLACING THE OLMSTED POWERPLANT REPLACEMENT PROJECT FORMULA RATE INTO EFFECT ON AN INTERIM BASIS

The formula rate for the Olmsted Powerplant Replacement Project (Olmsted) set forth in this order is established in accordance with section 302 of the Department of Energy (DOE) Organization Act (42 U.S.C. 7152). This Act transferred to, and vested in, the Secretary of Energy the power marketing functions of the Secretary of the Department of the Interior and the Bureau of Reclamation (Reclamation) under the Reclamation Act of 1902 (ch. 1093, 32 Stat. 388), as amended and supplemented by subsequent laws, particularly section 9(c) of the Reclamation Act of 1939 (43 U.S.C. 485h(c)); and other acts that specifically apply to the projects involved.

By Delegation Order No. 00–037.00B, effective November 19, 2016, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of Western Area Power Administration (WAPA); (2) the authority to confirm, approve, and place such rates into effect on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve, and place into effect on a final basis, to remand, or to disapprove such rates to the Federal Energy Regulatory Commission (FERC). Federal rules (10 CFR part 903) govern DOE procedures for public participation in power rate adjustments.

Acronyms, Terms, and Definitions

As used in this Rate Order, the following acronyms, terms, and definitions apply:

Allocation: A portion of Olmsted generation assigned a particular customer.

CRSP Act Section 5(c): All revenues collected in connection with the operation of the Colorado River Storage Project and participating projects shall be credited to the Basin Fund, and shall be available, without further appropriation, for (1) defraying the costs of operation, maintenance, and replacements of, and emergency expenditures for, all facilities of the Colorado River Storage Project and participating projects, within such separate limitations as may be included in annual appropriation acts; *lrovided, that* with respect to each participating projects, such costs shall be paid from revenues received from each such project; (2) payment as required by subsection (d) of this section; and (3) payment as required by subsection (e) of this section. Revenues credited to the Basin Fund shall not be available for appropriation for construction of the units and participating projects authorized by or pursuant to this Act.

Customer: An entity with a contract that is receiving an allocation of the Olmsted generation.

DOE Order RA 6120.2: An order outlining power marketing administration financial reporting and ratemaking procedures.

Energy: Measured in terms of the work it is capable of doing over a period of time. Electric energy is expressed in kilowatt-hours.

Environmental Documentation: Includes the Olmsted Hydroelectric Powerplant Replacement Project Final Environmental Assessment, Finding of No Significant Impact (FONSI) and the Memorandum of Agreement among the CUWCD, Interior, and the Utah State Historical Preservation Officer regarding the Olmsted Hydroelectric Powerplant Replacement Project.

FY: Fiscal year; October 1 to September 30.

Funding Agreement: Parties to the agreement are United States Department of the Interior—Bureau of Reclamation (Reclamation), United States Department of the Interior—Central Utah Project Completion Act Office, and Central Utah Water Conservancy District (District). The agreement describes the sources of funding for the project including non-Federal contributed

funds and provides for the transfer of funds from Reclamation to the District.

Implementation Agreement: Memorandum of Understanding among the United States Department of the Interior—Bureau of Reclamation (Reclamation), United States Department of the Interior—Central Utah Project Completion Act Office, Central Utah Water Conservancy District, and Western Area Power Administration. It describes the proposed project and responsibilities of the parties.

Installment: Annual Revenue Requirement billed to customers in 12 equal monthly payments.

M&I: Municipal and Industrial water supplies and uses.

MW: Megawatt—the electrical unit of capacity that equals 1 million watts or 1,000 kilowatts.

O&M: Operation and Maintenance.

OM&R: Operation, Maintenance, and Replacements.

Power: Rate at which electric energy is transferred. Electric power is measured by capacity and is commonly expressed in megawatts.

Provisional Formula Rate: A formula rate confirmed, approved, and placed into effect on an interim basis by the Deputy Secretary of Energy.

PRS: Power Repayment Study.

Revenue Requirement: The revenue required by the PRS to recover annual expenses (such as O&M, transmission service expenses, interest, and deferred expenses) and repay Federal investments and other assigned costs.

Effective Date

The Provisional Olmsted Formula Rate Schedule F–1 will take effect on the first day of the first, full billing period beginning on or after June 6, 2018, and will remain in effect through May 6, 2023, pending approval by FERC on a final basis or until superseded.

Public Notice and Comment

WAPA followed the Procedures for Public Participation in Power and Transmission Rate Adjustments and Extensions, 10 CFR part 903, in developing this rate and schedule. The steps WAPA took to involve interested parties in the rate process were:

1. A **Federal Register** notice (FRN), published on October 12, 2017 (82 FR 47506) (Proposal FRN), announced the proposed rate for Olmsted and began the 90-day public consultation and comment period.

2. On October 17, 2017, WAPA's CRSP MC emailed an announcement of the November 17, 2017, public information and public comment forums to power customers of the CRSP MC, CRSP transmission customers, and interested parties, along with the Rate Brochure, which contained a copy of the published FRN proposal. This information was also posted to website: *https://www.wapa.gov/regions/CRSP/rates/Pages/rates.aspx.*

3. On November 17, 2017, at 10 a.m. (MST), WAPA held a public information forum at the CRSP MC, 299 South Main Street, Suite 200, Salt Lake City, Utah. WAPA provided information about the proposed Olmsted formula rate. WAPA also answered questions and gave notice that more information was available in the customer rate brochure and on the website located at *https://www.wapa.gov/regions/CRSP/rates/Pages/rate-order-177.aspx.*

4. On November 17, 2017, directly following the public information forum, WAPA held a public comment forum at the same location to provide an opportunity for customers and other interested parties to comment for the record. Three verbal comments were received at this forum.

5. WAPA posted critical dates, customer letters, presentations, FRNs, customer brochure, and other information about this rate process at the website located at: *https://www.wapa.gov/regions/CRSP/rates/Pages/rate-order-177.aspx.* Updates to the site were posted as follows:

October 17, 2017: Olmsted Customer Brochure, Customer Letter for Proposed FRN, and the Published FRN—Olmsted Proposed Rates.

November 15, 2017: Updated Customer Brochure with updated Table 1 (pg. 7) and Schedule (pg. 16).

November 17, 2017: Public Information Forum Presentation.

December 4, 2017: Implementation Agreement, Memorandum of Concurrence, Funding Agreement, Table A & Olmsted Costs.

December 6, 2017: Public Information Forum and Public Comment Forum transcripts.

January 25, 2018: Letter Agreement No: 92–SLC–0208, Olmsted Final Environmental Assessment, comment letters received during the public comment period.

6. During the 90-day consultation and comment period that ended on January 10, 2018, WAPA received three verbal comments and five comment letters. The comments and WAPA's responses are addressed below. All comments have been considered in the preparation of this Rate Order.

Three representatives from the following organizations made verbal comments:

Central Utah Water Conservancy District, Utah
Colorado River Energy Distributors Association, Arizona
Utah Associated Municipal Power Systems, Utah

Five representatives from the following organizations provided written comments:

Central Utah Project Completion Act Office, Utah
Central Utah Water Conservancy District, Utah
Colorado River Energy Distributors Association, Arizona
Utah Associated Municipal Power Systems, Utah
Utah Municipal Power Agency

Project Description

Olmsted is located at the mouth of Provo Canyon in northern Utah and is a part of the Central Utah Project, a participating project of the Colorado River Storage Project (CRSP). In order to secure water rights necessary for the Central Utah Project, the United States Department of the Interior initiated condemnation proceedings in 1987 to acquire the Olmsted facility from Utah Power and Light (now PacifiCorp). Under the terms of the condemnation settlement agreement, PacifiCorp was allowed to operate the Olmsted facility until September 2015. Upon expiration of the settlement agreement, replacement construction began due to the age and condition of the existing generating plant. Olmsted is scheduled to begin commercial service on August 1, 2018.

Olmsted is a ''take all, pay all'' project; *i.e.,* the annual revenue requirement is not dependent on the amount of energy available each year. Customers with an allocation, as determined by the marketing plan process, will receive a proportional share of the energy and will annually pay a share of the operation, maintenance, and replacement (OM&R) expenses in 12 monthly installments.

Power Repayment Study—Formula Rate

Repayment criteria are based on applicable laws and legislation as well as policies including DOE Order RA 6120.2. To meet the Cost Recovery Criteria outlined in DOE Order RA 6120.2, WAPA will prepare a Power Repayment Study (PRS) each FY to determine if revenues will be sufficient to repay, within the required time, all costs assigned to Olmsted.

Under the provisional rate methodology, the formula rate for Olmsted is designed to recover an annual revenue requirement that includes power investment repayment,

interest, O&M, and other expenses within the allowable period. The annual revenue requirement is proportionally distributed among all customers that have an allocated portion of Olmsted energy production. Annual OM&R obligations and related costs for Olmsted will be paid by designated revenues deposited in the Basin Fund, pursuant to the authority of Section 5(c) of the CRSP Act, attributable to the Central Utah Project including the OM&R costs of Olmsted Facilities; OM&R costs for the Olmsted Facilities located upstream of Olmsted Facilities; and costs associated with preservation of the historic power house that will be preserved and maintained as a museum as agreed with the Utah Division of State History (State Historic Preservation Office) as part of the National Environmental Policy Act (NEPA) process associated with Olmsted. The actual and projected investment and OM&R costs requiring repayment are shown in Table 1.

TABLE 1—PROJECTED INVESTMENT AND OM&R COSTS REIMBURSABLE BY POWER CUSTOMERS

FY	2018	2019	2020	2021	2022	2023	2024
Capitalized							
Generation/SCADA	.....	$5,815,169	.....	.....	.....	.....	.....
Historic Preservation	.....	.....	$500,000	$500,000	$500,000	.....	.....
Total Capitalized	.....	5,815,169	500,000	500,000	500,000	.....	.....
Expensed							
Historic Preservation	$10,000	10,000	20,000	20,000	20,000	$50,000	$30,000
Powerplant	0	100,000	175,000	180,250	185,658	191,227	196,964
Intake & Pipeline	0	39,054	277,724	352,976	206,070	177,754	342,087
USBR O&M	10,000	27,500	10,000	10,000	27,500	10,000	10,000
WAPA O&M	10,000	10,000	10,000	10,000	10,000	10,000	10,000
Wheeling Charge	50,000	200,000	200,000	200,000	200,000	200,000	200,000
Total O&M	80,000	386,554	692,724	773,226	649,227	638,981	789,051

WAPA will calculate the annual revenue requirement based on 2 years of data. The calculation includes the projected costs of the rate installment year (future FY) and an adjustment from the last historic FY. Annual revenues pay the annual amortized portion of the United States' investment in Olmsted with interest and the associated OM&R. The adjustment is the surplus or deficit that occurs in the last historic year when actual costs and repayment obligations are subtracted from actual revenues. This surplus or deficit is combined with the projected rate installment year costs to arrive at the revenue requirement. To date, all investments are accounted for as Construction in Progress (CIP) costs and have not been transferred to plant accounts for capitalization. Once transferred, a straight-line amortization schedule will be calculated for repayment. Historical financial data are only available through FY 2016, and projections are based on the FY 2019 Reclamation and WAPA work plans received in April 2017, as indicated in Table 1.

WAPA will provide Olmsted power customers with the initial installment information at least 30 days prior to initiation of service. The FY 2018 annual installment will include all projected FY 2018 OM&R costs requiring repayment through FY 2018. The FY 2018 installment amount will be divided by the number of months of service, which is anticipated to be 3 months. Thereafter, the annual installment amount, billed in 12 monthly payments, will be established in advance by WAPA and submitted to Olmsted power customers on or before August 31 prior to the new FY. The FY 2019 annual installment will include the projected FY 2019 OM&R costs in addition to amortized payments on capital investments plus interest. The FY 2020 annual installment will be similar to FY 2019; however, it will include the FY 2018 final financial data and any True-Up between the FY 2018 projected costs and the actual FY 2018 costs.

Existing and Provisional Formula Rates

There is no existing rate for the Project. This Notice establishes the initial formula rate for Olmsted under Rate Schedule F–1. The initial formula rate is as follows: Annual Revenue Requirement = Projected OM&R Costs + Projected Interest + Projected Principal Payments ± True-Up Adjustment.

Certification of Rates

WAPA's Administrator certified that the Provisional Formula Rate for the Olmsted Powerplant Replacement Project under Rate Schedule F–1 results in the lowest possible rate consistent with sound business principles.

Basis for Rate Development

The Provisional Formula Rate under Rate Schedule F–1 will provide sufficient revenue to pay all annual costs, including interest expenses, and repay investments within the allowable periods.

Comments

WAPA received three verbal comments and five comment letters during the public consultation and comment period. The comments expressed have been paraphrased, where appropriate, without compromising the meaning of the comments. Direct quotes from comment letters are used for clarity where necessary.

Comment: One commenter stated they are contributing up to 15 million of local tax revenues to support this project and are counting on power revenues to reimburse O&M expenses.

Response: WAPA's rate captures the yearly O&M expenses related to power, and those expenses will be included in the rate as will the repayment of funds from Section 5(c) of the CRSP Act contributed to the project. WAPA acknowledges that the cost of the Olmsted Project is being supported by local tax dollars as well from other funding sources.

Comment: Commenter appreciated the information provided by WAPA during the public information and

comment forum as well as on the website.

Response: WAPA will continue its efforts to provide transparency throughout the process.

Comment: Commenter supports the proposed rate formula, which is consistent with the rate structure of the Provo River Project, including the true-up provisions to ensure only actual costs are attributed to the project and billed to customers.

Response: WAPA acknowledges the comment.

Comment: Commenter requested to be kept apprised of any revisions to Table A of the implementation agreement and to be notified and included in the annual customer/stakeholder meetings due to their relationship with Reclamation and WAPA. Commenter suggested that all attendees at the forum(s) be notified of the availability of updated and additional information.

Response: A list of updates is posted in the ''Public Notice and Comment'' section of this document. WAPA sends out notifications when uploading data to the website so all participants have equitable access to the same information. Olmsted customers will be invited to annual rate meetings to discuss yearly repayment expenses as well as planned O&M costs.

Comment: A commenter stated given the successful customer/agency partnership model of Agreement No. 92–SLC–0208, WAPA, Reclamation, and CUWCD should consider a similar process/agreement with the ultimate allottees of the Olmsted Project as a complement to Olmsted Implementation Agreement (Contract WS15–100).

Response: While this comment is not within the scope of this rate process, WAPA has posted a copy of Agreement No. 92–SLC–0208 to the Olmsted Rate website located at *https://www.wapa.gov/regions/CRSP/rates/Pages/rate-order-177.aspx* for informational purposes and for consideration in future discussions about whether a similar partnership agreement would be appropriate.

Comment: Commenter asked whether the WAPA O&M rate component includes appropriate overhead/loading costs to ensure there is no subsidy between other WAPA projects and the Olmsted Project.

Response: In addition to power marketing labor costs, the work plan includes depreciation expense (ADEPR), and applies both a headquarters' and regional Administrative & General Expense (AGE) overhead burden similar to all CRSP MC projects.

Comment: Commenter questioned the difference between the cost table in the Proposal FRN and the one presented at the public information forum. Additionally, there was a request to provide additional delineation in the Olmsted O&M table including which costs associated with the historic preservation of the Olmsted Powerhouse would be capitalized versus expensed.

Response: WAPA used the cost table from the Implementation Agreement in the Proposal FRN. WAPA subsequently received an update from CUWCD with additional construction costs that increased the total estimated project by 12 million and that cost table was introduced at the public information forum. However, of the differences noted between the tables, only the 300,000 increase in CRSP Act Section 5(c) funding is reimbursable by power customers. The capitalized and expensed costs for historic preservation are segregated in Table 1.

Comment: A commenter stated, that: ''The annual revenues projected from the power revenue for each annual installment, adjusted as provided in the rate order, must be sufficient to reimburse the annual O&M expenses for operation of the Olmsted Project and must not be decreased on account of other revenue also deposited into the Basin Fund. The CUWCD anticipates participating in annual customer meetings and coordinating, more often outside those annual customer meetings, with the CUPCA office of the Department of Interior, Reclamation Power office and WAPA, to provide budget work plans and capital improvement and rehabilitation plans that can be used for calculating the most accurate annual installments by WAPA.''

Response: Revenues received from the sale of Olmsted power will be deposited in the Basin Fund and identified as being associated with the Central Utah Project. Funds are available for the O&M and the annual rate update will provide sufficient funding for those activities associated with Olmsted operations without negatively affecting funding available for other CUP activities. WAPA welcomes continued coordination and participation of interested parties in the development and application of the Olmsted rate.

Comment: Commenters questioned how much of the $837,670 is associated with historic preservation costs for converting the original power plant into a museum, as well as details of that work; the specific requirement(s) for preservation; the legal authority for including the costs as O&M; whether costs could be capitalized and repaid over forty years instead of expensed and repaid over 3 years; the intent regarding use of the facility as a museum and if it is intended to be accessible by the public.

Response: Upon review of future cost estimates, it has been determined that historic preservation costs, estimated at $500,000 per year for FY 2020 thru FY 2022, should be capitalized rather than expensed as initially presented at the November 17, 2017, public information forum. This is reflected in Table 1 and was posted to the website on February 14, 2018. The original Olmsted Powerhouse is listed on the National Register of Historic Places and scheduled tours will be conducted in the renovated museum. The structural improvements to the existing Powerhouse are outlined in Section 5 of the Memorandum of Agreement among CUWCD, Interior, and the Utah State Historic Preservation Officer that was signed in October 2014 and was posted along with the Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) to the website on January 25, 2018.

Comment: Commenters questioned the funding source for the historical preservation work and whether non-reimbursable appropriations have been or could be requested/obtained in accordance with Section 8 of the CRSP Act.

Response: CRSP Act Section 8 funding will not be available. The Bureau of Reclamation's authorized construction cost ceiling for the Bonneville Unit M&I System was fully utilized. As a result, Olmsted is not authorized for additional construction appropriations.

Comment: Commenter expressed concern about a statement by WAPA during the public information forum that at the end of the contract period in 2024, the Olmsted Project may be included into CRSP. Customers asked for clarification and an explanation of what options WAPA is currently contemplating for Olmsted. Customers oppose any changes that would shift costs to CRSP.

Response: The marketing plan is not within the scope of this process. WAPA will seek public comments when it conducts a public process for the Post-2024 Marketing Plan prior to the end of the current Marketing Plan.

Availability of Information

Information about this rate schedule, including the customer rate brochure, PRSs, comments, letters, memorandums, and other supporting materials that were used to develop the Provisional Formula Rates, is available for inspection and copying at the Colorado River Storage Project

Management Center, 299 South Main Street, Suite 200, Salt Lake City, Utah. Many of these documents are also available on WAPA's website at *https://www.wapa.gov/regions/CRSP/rates/Pages/rate-order-177.aspx.*

Ratemaking Procedure Requirements

Environmental Compliance

In compliance with the National Environmental Policy Act (NEPA) of 1969, 42 U.S.C. 4321–4347; the Council on Environmental Quality Regulations for implementing NEPA (40 CFR parts 1500–1508); and DOE NEPA Implementing Procedures and Guidelines (10 CFR part 1021), WAPA adopted the EA and FONSI prepared by the Central Utah Water District for the Olmsted Powerplant Replacement Project. In addition, WAPA has determined that the marketing of Olmsted power and the establishment of power rates for the marketing of that power are Federal actions that are categorically excluded from the preparation of an EA or an environmental impact statement. A copy of the categorical exclusion determination is available on WAPA's website at *https://www.wapa.gov/regions/RM/environment/Pages/CX2017.aspx.*

Determination Under Executive Order 12866

WAPA has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no review of this Notice by the Office of Management and Budget is required.

Submission to the Federal Energy Regulatory Commission

The Provisional Formula Rates herein confirmed, approved, and placed into effect on an interim basis, together with supporting documents, will be submitted to FERC for confirmation and final approval.

Order

In view of the foregoing and under the authority delegated to me, I confirm and approve on an interim basis, effective the first full billing period on or after June 6, 2018, Rate Schedule F–1 for the Olmsted Powerplant Replacement Project of the Western Area Power Administration. This rate schedule shall remain in effect on an interim basis, pending the Federal Energy Regulatory Commission's confirmation and approval of it, or substitute rate, on a final basis through May 6, 2023, or until superseded.

Dated: April 30, 2018.

Dan Brouillette,

Deputy Secretary of Energy.

United States Department of Energy Western Area Power Administration

Colorado River Storage Project Management Center Olmsted Powerplant Replacement Project

Electric Power Service, (Approved Under Rate Order No. WAPA–177)

Effective

The first day of the first, full billing period beginning on or after June 6, 2018, and extending through May 6, 2023, or until superseded by another rate schedule, whichever occurs earlier.

Available

Within the marketing area served by the Colorado River Storage Project; parts of Northern Utah.

Applicable

To the sale of total plant generation to all customers with an Olmsted allocation.

Character

Alternating current, 60 hertz, three-phase, delivered and metered at the voltages and points established by contract.

Formula Rate

Annual Revenue Requirement = Projected OM&R Costs + Projected Interest + Projected Principal Payments ± True-Up Adjustment.

Adjustments

True-Up Adjustment: The surplus or deficit that occurred in the last historic year when actual costs and repayment obligations are subtracted from actual revenues.

Adjustment for Power Factor: The customer will be required to maintain a power factor at all points of measurement between 95 percent lagging and 95 percent leading.

[FR Doc. 2018–09623 Filed 5–4–18; 8:45 am]

BILLING CODE 6450–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2018–0192; FRL–9976–55]

Dinotefuran; Receipt of Applications for Emergency Exemptions, Solicitation of Public Comment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received specific exemption requests from the Delaware Department of Agriculture (DDA), the Maryland Department of Agriculture (MDA), the Pennsylvania Department of Agriculture (PDA) and the Virginia Department of Agriculture and Consumer Services (VDACS) to use the insecticide dinotefuran (CAS No. 165252–70–0) to treat up to 58,118 acres of pome and stone fruits to control the brown marmorated stinkbug. The applicants propose uses which are supported by the Interregional Research Project Number 4 (IR–4) and have been requested in 5 or more previous years, and petitions for tolerances have not yet been submitted to the Agency. Therefore, EPA is soliciting public comment before making the decision whether to grant the exemptions.

DATES: Comments must be received on or before May 22, 2018.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2018–0192, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Michael L. Goodis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).

• Pesticide manufacturing (NAICS code 32532).

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through *www.regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticide(s) discussed in this document, compared to the general population.

II. What action is the agency taking?

Under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), at the discretion of the EPA Administrator, a Federal or State agency may be exempted from any provision of FIFRA if the EPA Administrator determines that emergency conditions exist which require the exemption. The DDA, MDA, PDA and VDACS have requested the EPA Administrator to issue specific exemptions for the use of dinotefuran on pome and stone fruits to control the brown marmorated stinkbug. Information in accordance with 40 CFR part 166 was submitted as part of the requests.

As part of the requests, the applicants assert that the rapid spread of large outbreaks of the brown marmorated stinkbug (a recent invasive species) resulted in an urgent and non-routine pest control situation that is expected to cause significant economic losses without the requested uses. The Applicants propose to make no more than two applications at a rate of 0.203 to 0.304 lb. (maximum of 0.608 lb.) of dinotefuran per acre, on up to 58,118 acres of pome and stone fruit grown in Delaware, Maryland, Pennsylvania and Virginia from April 1 to October 15, 2018. A total of 35,335 lbs. of dinotefuran could be used (maximum acreage at highest rate).

This notice does not constitute a decision by EPA on the applications themselves. The regulations governing FIFRA section 18 at 40 CFR 166.24(7), require publication of a notice of receipt of an application for a specific exemption proposing a use which is supported by the Interregional Research Project Number 4 (IR–4) and has been requested in 5 or more previous years, and a petition for tolerance has not yet been submitted to the Agency. The notice provides an opportunity for public comment on the application. The Agency, will review and consider all comments received during the comment period in determining whether to issue the specific exemptions requested by the DDA, MDA, PDA and VDACS.

Authority: 7 U.S.C. 136 *et seq.*

Dated: April 17, 2018.

Michael L. Goodis,

Director, Registration Division, Office of Pesticide Programs.

[FR Doc. 2018–09650 Filed 5–4–18; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[9975–98–OEI]

Cross-Media Electronic Reporting: Authorized Program Revision Approval, State of Tennessee

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's approval of the State of Tennessee's request to revise one of its EPA-authorized air programs to allow electronic reporting.

DATES: EPA approves of the State of Tennessee's air authorized program revision as of May 7, 2018].

FOR FURTHER INFORMATION CONTACT: Karen Seeh, U.S. Environmental Protection Agency, Office of Environmental Information, Mail Stop 2823T, 1200 Pennsylvania Avenue NW, Washington, DC 20460, (202) 566–1175, *seeh.karen@epa.gov.*

SUPPLEMENTARY INFORMATION: On October 13, 2005, the final Cross-Media Electronic Reporting Rule (CROMERR) was published in the **Federal Register** (70 FR 59848) and codified as part 3 of title 40 of the CFR. CROMERR establishes electronic reporting as an acceptable regulatory alternative to paper reporting and establishes requirements to assure that electronic documents are as legally dependable as their paper counterparts. Subpart D of CROMERR requires that state, tribal or local government agencies that receive, or wish to begin receiving, electronic reports under their EPA-authorized programs must apply to EPA for a revision or modification of those programs and obtain EPA approval. Subpart D provides standards for such approvals based on consideration of the electronic document receiving systems that the state, tribe, or local government will use to implement the electronic reporting. Additionally, § 3.1000(b) through (e) of 40 CFR part 3, subpart D provides special procedures for program revisions and modifications to allow electronic reporting, to be used at the option of the state, tribe or local government in place of procedures available under existing program-specific authorization regulations. An application submitted under the subpart D procedures must show that the state, tribe or local government has sufficient legal authority to implement the electronic reporting components of the programs covered by the application and will use electronic document receiving systems that meet the applicable subpart D requirements.

On March 9, 2018, the Tennessee Department of Environment and Conservation (TDEC) submitted an application titled ''State and Local Emissions Inventory System'' for revision to its EPA-approved program under title 40 CFR to allow new electronic reporting. EPA reviewed TDEC's request to revise its EPA-authorized Part 52—Approval and Promulgation of Implementation Plans program and, based on this review, EPA determined that the application met the standards for approval of authorized program revision set out in 40 CFR part 3, subpart D. In accordance with 40 CFR 3.1000(d), this notice of EPA's decision to approve Tennessee's request to revise/modify its Part 52—Approval and Promulgation of Implementation Plans program to allow electronic reporting

under 40 CFR parts 50–52 is being published in the **Federal Register**.

TDEC was notified of EPA's determination to approve its application with respect to the authorized program listed above.

Matthew Leopard,

Director, Office of Information Management.

Cross-Media Electronic Reporting: Authorized Program Revision Approval, State of North Dakota

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's approval of the State of North Dakota's request to revise its National Primary Drinking Water Regulations Implementation EPA-authorized program to allow electronic reporting.

DATES: EPA approves the authorized program revision for the State of North Dakota's National Primary Drinking Water Regulations Implementation as of June 6, 2018, if no timely request for a public hearing is received and accepted by the Agency.

FOR FURTHER INFORMATION CONTACT: Karen Seeh, U.S. Environmental Protection Agency, Office of Environmental Information, Mail Stop 2823T, 1200 Pennsylvania Avenue NW, Washington, DC 20460, (202) 566–1175, *seeh.karen@epa.gov.*

SUPPLEMENTARY INFORMATION: On October 13, 2005, the final Cross-Media Electronic Reporting Rule (CROMERR) was published in the **Federal Register** (70 FR 59848) and codified as part 3 of title 40 of the CFR. CROMERR establishes electronic reporting as an acceptable regulatory alternative to paper reporting and establishes requirements to assure that electronic documents are as legally dependable as their paper counterparts. Subpart D of CROMERR requires that state, tribal or local government agencies that receive, or wish to begin receiving, electronic reports under their EPA-authorized programs must apply to EPA for a revision or modification of those programs and obtain EPA approval. Subpart D provides standards for such approvals based on consideration of the electronic document receiving systems that the state, tribe, or local government will use to implement the electronic reporting. Additionally, § 3.1000(b) through (e) of 40 CFR part 3, subpart D provides special procedures for program revisions and modifications to allow electronic reporting, to be used at the option of the state, tribe or local government in place of procedures available under existing program-specific authorization regulations. An application submitted under the subpart D procedures must show that the state, tribe or local government has sufficient legal authority to implement the electronic reporting components of the programs covered by the application and will use electronic document receiving systems that meet the applicable subpart D requirements.

On March 22, 2018, the North Dakota Department of Health (ND DOH) submitted an application titled ''Compliance Monitoring Data Portal'' for revision to its EPA-approved drinking water program under title 40 CFR to allow new electronic reporting. EPA reviewed ND DOH's request to revise its EPA-authorized program and, based on this review, EPA determined that the application met the standards for approval of authorized program revision set out in 40 CFR part 3, subpart D. In accordance with 40 CFR 3.1000(d), this notice of EPA's decision to approve North Dakota's request to revise its Part 142—National Primary Drinking Water Regulations Implementation program to allow electronic reporting under 40 CFR part 141 is being published in the **Federal Register**.

ND DOH was notified of EPA's determination to approve its application with respect to the authorized program listed above.

Also, in today's notice, EPA is informing interested persons that they may request a public hearing on EPA's action to approve the State of North Dakota's request to revise its authorized public water system program under 40 CFR part 142, in accordance with 40 CFR 3.1000(f). Requests for a hearing must be submitted to EPA within 30 days of publication of today's **Federal Register** notice. Such requests should include the following information:

(1) The name, address and telephone number of the individual, organization or other entity requesting a hearing;

(2) A brief statement of the requesting person's interest in EPA's determination, a brief explanation as to why EPA should hold a hearing, and any other information that the requesting person wants EPA to consider when determining whether to grant the request;

(3) The signature of the individual making the request, or, if the request is made on behalf of an organization or other entity, the signature of a responsible official of the organization or other entity.

In the event a hearing is requested and granted, EPA will provide notice of the hearing in the **Federal Register** not less than 15 days prior to the scheduled hearing date. Frivolous or insubstantial requests for hearing may be denied by EPA. Following such a public hearing, EPA will review the record of the hearing and issue an order either affirming today's determination or rescinding such determination. If no timely request for a hearing is received and granted, EPA's approval of the State of North Dakota's request to revise its part 142—National Primary Drinking Water Regulations Implementation program to allow electronic reporting will become effective 30 days after today's notice is published, pursuant to CROMERR section 3.1000(f)(4).

Matthew Leopard,

Director, Office of Information Management.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2018–0013, FRL–9977–63–OEI]

Agency Information Collection Activities; Submission to OMB for Review and Approval; Comment Request; Revisions to the RCRA Definition of Solid Waste (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an

information collection request (ICR), Revisions to the RCRA Definition of Solid Waste (EPA ICR No. 2310.06, OMB Control No. 2050–0202) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2018. Public comments were previously requested via the **Federal Register** on February 26, 2018 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before June 6, 2018.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OLEM–2018–0013, to (1) EPA, either online using *www.regulations.gov* (our preferred method), or by email to *rcra-docket@epa.gov,* or by mail to: RCRA Docket (2822T), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; and (2) OMB via email to *oira_submission@omb.eop.gov.* Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Tracy Atagi, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 703–308–8672; fax number: 703–308–8880; email address: *atagi.tracy@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: In 2015, the EPA published final revisions to the definition of solid waste that exclude certain hazardous secondary materials from regulation. The information requirements help ensure that (1) entities operating under the regulatory exclusions contained in today's action are held accountable to the applicable requirements; (2) state inspectors can verify compliance with the restrictions and conditions of the exclusions when needed; and (3) hazardous secondary materials exported for recycling are actually handled as commodities abroad. The United States Court of Appeals for the District of Columbia Circuit on July 7, 2017, and amended on March 6, 2018, issued orders vacating certain provisions of the 2015 rule and reinstated corresponding provisions from the 2008 rule. The vacatur went into effect when the court issued its mandate on March 14, 2018. Paperwork requirements finalized in the 2015 rule, as amended by the court-issued mandate, include:

- Under the generator-controlled exclusion at 40 CFR 261.4(a)(23), the tolling contractor has to maintain at its facility for no less than three years records of hazardous secondary materials received pursuant to its written contract with the tolling manufacturer, and the tolling manufacturer must maintain at its facility for no less than three years records of hazardous secondary materials shipped pursuant to its written contract with the tolling contractor. In addition, facilities performing the recycling of hazardous secondary materials under the generator-controlled exclusions at 40 CFR 261.4(a)(23) to maintain documentation of their legitimacy determination onsite.
- Under the transfer-based exclusion at 40 CFR 261.4(a)(24), a generator sending secondary hazardous materials to a facility that does not have a permit, would be required to conduct a ''reasonable efforts'' environmental audit of the receiving facility; and a hazardous secondary materials recycler must meet the following conditions: having financial assurance in place, having trained personnel, and meeting emergency preparedness and response conditions.
- Under the export requirements of the transfer-based exclusion at 40 CFR 261.4(a)(25), exporters of hazardous secondary material must provide notice and obtain consent of the receiving country, and file an annual report.
- Under the remanufacturing exclusion at 40 CFR 261.4(a)(27), both the hazardous secondary material generator and the remanufacturer must maintain records of shipments and confirmations of receipts for a period of three years from the dates of the shipments.
- Under the revised speculative accumulation requirement in 261.1(c)(8), all persons subject to the speculative accumulation requirements must label the storage unit by indicating the first date that the material began to be accumulated.

This ICR renewal does not include the burden associated with filling out form 8700–12 because that burden is included under OMB Control Number 2050–0024. The remaining burden will eventually be included in ICR 2050–0053, at which time this ICR will be discontinued.

Form Numbers: None.

Respondents/affected entities: Private business or other for-profit entities, as well as State, Local, or Tribal governments.

Respondent's obligation to respond: Required to obtain or retain a benefit (42 U.S.C. 6921, 6922, 6923, and 6924).

Estimated number of respondents: 7,674.

Frequency of response: On occasion.

Total estimated burden: 34,883 hours per year. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $2,752,557 (per year), which includes $15,475 annualized capital or operation & maintenance costs.

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560–50–P

FEDERAL DEPOSIT INSURANCE CORPORATION

Notice to All Interested Parties of Intent To Terminate Receiverships

Notice is hereby given that the Federal Deposit Insurance Corporation (FDIC or Receiver), as Receiver for the institutions listed below, intends to terminate its receivership for said institutions.

Fund	Receivership name	City	State	Date of appointment of receiver
10460	Excel Bank	Sedalia	MO	10/19/2012
10035	Alliance Bank	Culver City	CA ..	02/06/2009
10459	First United Bank	Crete	IL	09/28/2012

The liquidation of the assets for each receivership has been completed. To the extent permitted by available funds and in accordance with law, the Receiver will be making a final dividend payment to proven creditors.

Based upon the foregoing, the Receiver has determined that the continued existence of the receiverships will serve no useful purpose. Consequently, notice is given that the receiverships shall be terminated, to be effective no sooner than thirty days after the date of this notice. If any person wishes to comment concerning the termination of any of the receiverships, such comment must be made in writing, identify the receivership to which the comment pertains, and be sent within thirty days of the date of this notice to: Federal Deposit Insurance Corporation, Division of Resolutions and Receiverships, Attention: Receivership Oversight Department 34.6, 1601 Bryan Street, Dallas, TX 75201.

No comments concerning the termination of the above-mentioned receiverships will be considered which are not sent within this time frame.

Dated at Washington, DC, on May 2, 2018.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

BILLING CODE 6715–01–P

FEDERAL RESERVE SYSTEM

[Docket No. OP–1607]

Policy on Payment System Risk and Expanded Real-Time Monitoring

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice; request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is requesting comment on the benefits and drawbacks of a potential change to part II of the Federal Reserve Policy on Payment System Risk (PSR policy). The potential change would entail the Federal Reserve Banks (Reserve Banks) monitoring in real time all Fedwire Funds transfers and rejecting those transfers that would breach the Fedwire sender's net debit cap, that is, the ceiling on its total daylight overdraft position that it is permitted to incur in its Federal Reserve account during any given day. If, after an evaluation of the public comments on this notice, the Board concludes that an expansion of real-time monitoring is desirable, the Board will request public comment on specific proposed changes to the PSR policy.

DATES: *Applicable Date:* Comments must be received by July 6, 2018.

ADDRESSES: You may submit comments, identified by Docket No. OP–1607, by any of the following methods:

- *Agency website: http://www.federalreserve.gov.* Follow the instructions for submitting comments at *http://www.federalreserve.gov/apps/foia/proposedregs.aspx.*
- *Email: regs.comments@federalreserve.gov.* Include docket number in the subject line of the message.
- *FAX:* (202) 452–3819 or (202) 452–3102.
- *Mail:* Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.

All public comments are available from the Board's website at *http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm* as submitted, unless modified for technical reasons or to remove sensitive personal information at the commenter's request. Public comments may also be viewed electronically or in paper form in Room 3515, 1801 K Street NW (between 18th and 19th Streets NW), Washington, DC 20006 between 9:00 a.m. and 5:00 p.m. on weekdays.

FOR FURTHER INFORMATION CONTACT: Jeff Walker, Assistant Director (202–721–4559), Jason Hinkle, Manager (202–912–7805), or Michelle D. Olivier, Senior Financial Services Analyst (202–452–2404), Division of Reserve Bank Operations and Payment Systems; Evan Winerman, Counsel (202–872–7578), Legal Division.

SUPPLEMENTARY INFORMATION:

I. Background

Part II of the Board's PSR policy seeks to balance the costs and risks associated with the provision of Federal Reserve intraday credit (or daylight overdrafts) against the benefits of intraday liquidity. The PSR policy recognizes that the Federal Reserve has an important role in providing intraday credit to foster the smooth functioning of the overall payment system and also seeks to control the risks assumed by the Reserve Banks in providing this intraday credit.

The Reserve Banks provide intraday liquidity by way of supplying temporary, intraday credit to healthy depository institutions, and the Reserve Banks could face direct risk of loss should institutions be unable to settle their daylight overdrafts in their Federal Reserve accounts before the end of the day. The Reserve Banks control their exposures through several methods, including by incentivizing institutions to voluntarily collateralize daylight

overdrafts, setting limits (net debit caps) on daylight overdrafts in institutions' Federal Reserve accounts, and requiring collateral in certain situations. In addition, Reserve Banks have the ability to monitor an institution's Federal Reserve account activity in real time and reject certain transactions that would cause an overdraft in excess of the institution's net debit cap; this capability is known as ''real-time monitoring.'' [1] Real-time monitoring allows the Reserve Banks to prevent an institution from transferring funds from an account that lacks sufficient funds or overdraft capacity to cover the payment(s).[2]

The Board is conducting a review of the Federal Reserve's intraday credit policies related to real-time monitoring and is exploring the potential benefits that expanded real-time monitoring for Fedwire Funds may have in reducing the risk that payments activity, including errant or fraudulent payments, poses to any institution that maintains a Federal Reserve account. A risk-focused expansion in the use of the real-time monitor may provide additional account protection against mismanagement or misuse of payment services and could help mitigate risks for both institutions and the Reserve Banks.

In 2001, the Board requested comment on expanding real-time monitoring capabilities to all transactions subject to settlement-day finality for all institutions but ultimately decided not to pursue the expansion.[3] At the time of the previous request for comment, applying the real-time monitoring technology to an institution's account would have resulted in both Fedwire funds transfers and National Settlement Service (NSS) transactions being rejected, and would have necessitated that the institution prefund its automated clearinghouse (ACH) credit originations. Commenters indicated that monitoring ACH credit originations and requiring institutions to prefund them might be overly burdensome to institutions and disruptive to the payment system overall. Since the 2001 proposal, the Federal Reserve has enhanced the functionality of the real-time monitoring technology to permit more selective application by payment type. During this period, depository institutions and their supervisors have dedicated greater attention to the risks associated with fraudulent transactions, notably those stemming from illicit or unauthorized penetration of institutions' information processing systems.

The Reserve Banks recently implemented a voluntary, no-cost pilot program for the real-time monitoring of Fedwire funds transfers, available to institutions with total assets under $50 billion.[4] Effective October 2, 2017, any Fedwire funds transfer that would cause (or increase) an overdraft in a participating institution's Federal Reserve account in excess of its net debit cap is rejected, unless the institution has specifically opted out of the program. A rejection gives the participating institution an additional opportunity to verify authorization and authenticity and to fund the transaction, and limits the associated financial risk to both the institution and its Reserve Bank. The Reserve Banks expect this program will provide risk mitigation benefits for the participating institutions as well as the Reserve Banks. In addition, the program should allow Reserve Banks and institutions to assess the potential benefits and drawbacks of routine real-time monitoring of all Fedwire funds transfers.

The policy change under consideration by the Board would amend the PSR policy to apply real-time monitoring as a mandatory practice for all institutions, regardless of total asset size. The potential policy change, as discussed below, would apply real-time monitoring only to institutions' outgoing Fedwire funds transfers.

II. Potential Policy Change: Monitoring in Real Time All Institutions' Fedwire Funds Payments

The Board is exploring the benefits and drawbacks of a real-time monitoring expansion for Fedwire funds transfers (RTME), which is defined as using the Reserve Banks' real-time monitoring technology to reject any outgoing Fedwire funds transfer that would cause any institution's overdrafts to exceed its net debit cap.[5] Taking a risk-focused approach, the Board is only considering real-time monitoring for Fedwire funds transfers because these transactions can be high-value and settle immediately and irrevocably, and therefore represent a potentially greater credit risk to both the Reserve Banks and Fedwire senders than transactions with typically lower per-transfer values or without settlement-day finality. Fedwire funds payments represent the majority of the dollar value of payments that the Reserve Banks process, and in 2016, Fedwire funds activity totaled approximately $767 trillion, with an average transaction value of $5.2 million.[6] If a payor institution does not fund its settlement with the Reserve Bank for transactions that do not have settlement-day finality, such as checks and ACH debit transactions, the Reserve Bank may return or reverse the transactions. As a consequence, those transactions pose less risk to the Reserve Banks in the event the payor institution defaults. The Board is not at this time considering monitoring and rejecting payments other than Fedwire funds, such as Fedwire securities transfers, NSS transactions, ACH credit transactions, or cash withdrawals. Furthermore, the Board is not seeking comment on existing policies related to real-time monitoring and rejecting payments for institutions that fall within established parameters for such treatment, including those in weakened financial condition.

RTME could benefit institutions and the Reserve Banks by providing additional account management and cyber, fraud, and credit risk controls for Fedwire funds transfers, supplementing institutions' internal account management and risk controls.[7] Specifically, RTME could assist institutions in managing their Federal Reserve accounts in compliance with the PSR policy by preventing

[1] The Reserve Banks monitor all institutions' account activity for compliance with the daylight overdraft posting rules on an after-the-fact or ex post basis. Real-time monitoring supplements but does not replace Reserve Banks' ex post monitoring.

[2] Under the current PSR policy, a Reserve Bank will apply real-time monitoring selectively to an individual institution's position when the Reserve Bank believes that it faces excessive risk exposure, for example, from a problem institution or an institution with chronic overdrafts in excess of what the Reserve Bank determines is prudent. An institution not considered to pose an excessive risk exposure may voluntarily elect to have its account monitored in real time, subject to approval by its Reserve Bank.

[3] The request for comment and the subsequent notice of the Board's decision not to pursue the proposed real-time monitoring changes can be found, respectively, at 66 FR 30208 (June 5, 2001) and 67 FR 54424 (August 22, 2002).

[4] Participation in the pilot program is restricted to institutions not currently on the monitor at the direction of their Reserve Bank. The Reserve Banks continue to apply real-time monitoring on an involuntary basis to individual institutions when the account-holding Reserve Bank believes that the account relationship poses an excessive risk exposure.

[5] In certain circumstances and subject to Reserve Bank approval, institutions may pledge collateral to their Reserve Banks to secure daylight overdraft capacity in excess of their debit caps, known as maximum overdraft capacity or max cap. For purposes of this notice, net debit cap refers to both institutions' standard net debit caps as well as any additional collateralized capacity approved by their Reserve Banks.

[6] For comparison, the average transaction values for commercial ACH and check transactions processed by the Reserve Banks were approximately $1,700 and $1,500, respectively.

[7] Account management tools provided by the Reserve Banks, including real-time monitoring, are intended to supplement rather than replace institutions' independent account management and risk controls.

institutions from breaching their net debit caps with Fedwire funds payments. Because of the heightened cyber risk environment and unexpected nature of fraudulent funds transactions, an institution's overdraft could exceed its net debit cap and the institution might not have the resources to cover the overdraft. RTME would protect against both fraudulent and authorized Fedwire funds transfers that would result in an overdraft in excess of an institution's net debit cap. Expansion of the current limited real-time monitoring pilot to all institutions would provide these account management and risk mitigation benefits to more institutions' Federal Reserve accounts. By further transitioning to a mandatory program, RTME would ensure consistent treatment of all institutions' Fedwire funds activity. Additionally, a mandatory program would make certain that the Reserve Banks' risk of loss from a defaulting institution's Fedwire funds transfers would be restricted to each account's established net debit cap.

While RTME could mitigate risks for the Reserve Banks and institutions that hold Federal Reserve accounts, the Board is interested in understanding any concerns about potential negative consequences. For example, RTME could increase the risk of payment delays or gridlock. In the event of a rejected Fedwire funds transfer, RTME would require an institution to review and, if appropriate, fund and resubmit the transfer, requiring prompt account management to avoid delay. A delay caused by a rejected transfer may adversely affect the intended receiver and similarly require account management adjustments should the funds fail to arrive when expected. An institution that is closely managing to its net debit cap to avoid the rejection of Fedwire funds transfers may choose to throttle payments during the day, restricting and delaying funds transfers until sufficient funds are available. As a consequence, the receiver of these Fedwire funds transfers will not obtain the funds until later than it otherwise would have and may likewise choose to throttle payments.

To analyze the potential for rejected payments, the Board reviewed institutions' recent Fedwire funds activity against their net debit caps. Analysis of 2016 annual payment data indicates that RTME would have rejected less than 0.003 percent of the approximately 133 million Fedwire funds transfers sent by institutions that may be covered by the program.[8] In terms of value, only 0.002 percent of the over $484 trillion of Fedwire funds transfers sent by these institutions would have been affected. Approximately 5 percent of these institutions would have had at least one Fedwire funds transfer rejected per year under RTME.[9] As a result of this initial analysis, the Board estimates that under current conditions and payment activities, most institutions covered by the proposed RTME program would not experience rejected payments.

Although RTME appears unlikely to disrupt the payment system in the aggregate, the Board recognizes the potential for unintended consequences that may not be evident by analyzing historical payments data, possibly associated with certain institution types or payments activity functioned through Federal Reserve accounts. To better assess the potential benefits and negative effects of such a program, the Board is soliciting feedback on expanding real-time monitoring to all Fedwire funds transfers and is particularly interested in any negative consequences of RTME not identified in this notice. Should the Board choose to move forward with developing and implementing an RTME program, the Board will request public comment on a specific RTME proposal.

III. Request for Comment

The Board is seeking comment on all aspects of a potential mandatory, expanded real-time monitoring program that would monitor and reject Fedwire funds payments sent by all institutions. As described previously, an RTME program would reject any Fedwire funds transfer that would breach the Fedwire funds sender's net debit cap, as established under part II of the PSR policy.

The Board also requests comment on the following specific questions regarding a potential RTME program:

1. What would be the benefits and drawbacks of a mandatory RTME program to institutions' operations and funding? Are there characteristics of an RTME program that could mitigate any potential drawbacks?

2. Would RTME lead to significantly greater payment delays, or would it have a negligible effect? Would real-time monitoring of Fedwire funds transfers at the net debit cap level affect the way institutions manage their Federal Reserve accounts with respect to daylight overdrafts? Would an RTME program cause institutions to delay sending payments?

3. Would RTME lead your institution to apply for a higher net debit cap in order to avoid rejection of Fedwire funds transfers?

4. If your institution participates or participated in the Enhanced Overdraft Protection Tool (EOPT) pilot program, please describe your experience.

5. If the Federal Reserve implemented a mandatory RTME program, how would this action affect your institution's payments business going forward? Would RTME encourage institutions to move their large-dollar payments activity from Fedwire funds to other payment channels? What operational or risk challenges would this movement present?

6. Does your institution currently have programs and practices in place that address the risk of an errant or fraudulent payment, particularly those that might result in an excessive overdraft? If a mandatory RTME policy were adopted, would those programs and practices be kept or replaced? Does having certain programs and practices in place provide the institution or Federal Reserve a sufficient reduction in risk to warrant exclusion from a mandatory RTME program?

IV. Competitive Impact Analysis

The Board has established procedures for assessing the competitive impact of rule or policy changes that have a substantial impact on payment system participants.[10] Under these procedures, the Board will assess whether a change would have a direct and material adverse effect on the ability of other service providers to compete effectively

[8] Analysis excludes the secondary impact that a rejected Fedwire funds transfer might have on the funding of the receiving institution's outgoing Fedwire funds transfers.

[9] The Board also reviewed institutions' intraday credit use in 2016 and found that most institutions did not fully use their daylight overdraft capacity—in fact, approximately 80 percent of institutions used less than 25 percent of their capacity for their peak overdraft. The Board recognizes that historically high levels of reserve balances have decreased the need for intraday credit for some institutions. For comparison, the Board reviewed peak cap utilization in 2007, during which approximately 50 percent of institutions used less than 25 percent of their capacity for their peak overdraft and the vast majority of institutions, over 80 percent, never exceeded their net debit cap at any time during the year. In addition, many institutions currently maintain net debit caps below the maximum level that would be permitted under the PSR policy; such institutions could request a higher net debit cap, which would likely alleviate potential payment disruptions as the institutions adjust their account management behavior or balances in response to RTME. For example, approximately 80 percent of institutions with a positive net debit cap have an exempt cap, and these institutions could double their daylight overdraft capacity by requesting a *de minimis* cap with only a marginal increase in administrative burden to the institution.

[10] These procedures are described in the Board's policy statement ''The Federal Reserve in the Payments System,'' as revised in March 1990. 55 FR 11648 (March 29, 1990).

with the Federal Reserve in providing similar services due to differing legal powers or constraints, or due to a dominant market position of the Federal Reserve deriving from such differences. If no reasonable modifications would mitigate the adverse competitive effects, the Board will determine whether the anticipated benefits are significant enough to proceed with the change despite the adverse effects.

The Board does not anticipate that RTME would have a direct and material impact on the ability of other service providers to compete effectively with the Reserve Banks' payment services but requests comment on that issue and on whether, even if there are adverse competitive effects, they are outweighed by the potential benefits of RTME. If the Board chooses to move forward with developing and implementing an RTME program, the Board will evaluate these options under its competitive impact procedures.

By order of the Board of Governors of the Federal Reserve System, May 2, 2018.

Michele Taylor Fennell,

Assistant Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than June 5, 2018.

A. Federal Reserve Bank of Minneapolis (Mark A. Rauzi, Vice President), 90 Hennepin Avenue, Minneapolis, Minnesota 55480–0291:

1. *Benc Holdings, Inc., Coon Rapids, Minnesota;* to become a bank holding company by acquiring up to 100 percent of KES Bancshares, Inc., Virginia, Minnesota, and thereby indirectly acquire shares of Northern State Bank, Virginia, Minnesota.

Board of Governors of the Federal Reserve System, May 2, 2018.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Savings and Loan Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*) (HOLA), Regulation LL (12 CFR part 238), and Regulation MM (12 CFR part 239), and all other applicable statutes and regulations to become a savings and loan holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a savings association and nonbanking companies owned by the savings and loan holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the HOLA (12 U.S.C. 1467a(e)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 10(c)(4)(B) of the HOLA (12 U.S.C. 1467a(c)(4)(B)). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than June 5, 2018.

A. Federal Reserve Bank of Cleveland (Nadine Wallman, Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101–2566. Comments can also be sent electronically to *Comments.applications@clev.frb.org:*

1. *Dollar Mutual Bancorp, Pittsburgh, Pennsylvania;* to acquire 100 percent of the voting shares of Dollar Bank, FSB, Pittsburgh, Pennsylvania, upon its conversion from mutual to stock form.

Board of Governors of the Federal Reserve System, May 2, 2018.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than May 21, 2018.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198–0001:

1. *Ann R. Mock, Edmond, Oklahoma, Barry W. Mock, Altus, Oklahoma, and the Mock Irrecocable Trust and its co-trustee Rick Cheanye, both of Altus, Oklahoma;* to retain shares of First Altus Bancorp, and thereby retain shares of Frazer Bank, both of Altus, Oklahoma.

Board of Governors of the Federal Reserve System, May 2, 2018.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE 6210–01–P

GENERAL SERVICES ADMINISTRATION

[Notice–MA–2018–02; Docket No. 2018–0002; Sequence No. 6]

Request for Comment: New Federal Real Property Profile Information for Communications Facility Installation

AGENCY: Office of Government-wide Policy (OGP), General Services Administration (GSA).

ACTION: Request for comment.

SUMMARY: The General Services Administration is seeking input on the inclusion of communications facility installation information into the Federal Real Property Profile (FRPP).

DATES: This notice is effective July 6, 2018.

ADDRESSES: Submit comments in response to Notice-MA–2018–02 by any of the following methods:

- *Regulations.gov*: *http://www.regulations.gov.* Submit comments via the Federal Rulemaking portal by entering ''Notice-MA–2018–02'', under the heading ''Keyword or ID'' and select ''Search''. Select the link ''Submit a Comment Now'' that corresponds with ''Notice–MA–2018–02, and follow the instructions provided on the screen. Please include your name, company name (if applicable), and ''Notice–MA–2018–02'' on your attached document.
- *Mail:* General Services Administration, Regulatory Secretariat Division (MVCB), ATTN: Ms. Lois Mandell, 1800 F Street NW, Washington, DC 20405.

GSA requests that comments be as specific as possible, include any supporting data, detailed justification for your specific suggestions regarding information to add to the FRPP related to the installation of communications facilities on Federal real property.

FOR FURTHER INFORMATION CONTACT: For further information on this document, please contact Chris Coneeney, Realty Specialist, Office of Government-wide Policy, 202–208–2956 or *chris.coneeney@gsa.gov.*

For information pertaining to the status or publication schedules, contact the Regulatory Secretariat Division (MVCB), 1800 F Street NW, Washington, DC 20405, 202–501–4755. Please cite Notice MA–2018–02.

SUPPLEMENTARY INFORMATION: On March 23, 2018, the President signed HR 1625, ''Consolidated Appropriations Act, 2018,'' which provided appropriations through fiscal year 2018. Section 608 of the law directs GSA to issue a notice for public comment regarding the inclusion of a communications facility installation under section 21 of the Federal Assets Sale and Transfer Act of 2016 (40 U.S.C. 1303 note) (FASTA).

The statute defines communications facility installation as any infrastructure, including any transmitting device, tower, or support structure, and any equipment, switches, wiring, cabling, power sources, shelters, or cabinets associated with the licensed or permitted unlicensed wireless or wireline transmission of writings, signs, signals, data, images, pictures, and sounds of any kind; and any antenna or apparatus that is designed for the purpose of emitting radio frequency; is designed to be operated, or is operating, from a fixed location pursuant to authorization by the Federal Communications Commission or is using duly authorized devices that do not require individual licenses; and is added to a tower, building, or other structure.

This Notice is requesting recommendations on (a) the criteria that make Federal real property capable of supporting communications facility installations; (b) the types of information related to the Federal real property that should be included in the Federal Real Property Profile (FRPP) database; (c) additional data related to installing a communication facility on Federal real property that should be considered, such as the types of real property best suited for a communication facility installation; and (d) locations that may be a higher priority based on market needs or gaps in various communication services, such as broadband or cellular services.

The FRPP is a centralized database containing descriptive information on Federal real property owned, leased or otherwise managed by executive branch agencies. Executive agencies submit real property data to the FRPP pursuant to section 21 of FASTA. A current list and associated definitions of FRPP data elements and reporting requirements are contained in the Federal Real Property Council Guidance on Real Property Inventory Reporting and can be found at: *https://www.gsa.gov/cdnstatic/FY%202017%20FRPP%20DATA%20DICTIONARY%20V2_0.pdf.*

Although the agency may not respond to each individual comment, GSA may follow-up with respondents to clarify comments. GSA values public feedback and will consider all input that it receives.

Dated: May 2, 2018.

Alexander J. Kurien,

Deputy Associate Administrator, Office of Asset and Transportation Management, Office of Government-wide Policy.

[FR Doc. 2018–09671 Filed 5–4–18; 8:45 am]

BILLING CODE 6820–14–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects

Title: Plan for Foster Care and Adoption Assistance: Title IV–E of the Social Security Act OMB No.: 0970–0433.

Description

A title IV–E plan is required by section 471, part IV–E of the Social Security Act (the Act) for each public child welfare agency requesting Federal funding for foster care, adoption assistance and guardianship assistance under the Act. Section 479B of the Act provides for an Indian tribe, tribal organization or tribal consortium (Tribe) to operate a title IV–E program in the same manner as a State with minimal exceptions. The Tribe must have an approved title IV–E Plan. The title IV–E plan provides assurances the programs will be administered in conformity with the specific requirements stipulated in title IV–E. The plan must include all applicable State or Tribal statutory, regulatory, or policy references and citations for each requirement as well as supporting documentation. A title IV–E agency may use the pre-print format prepared by the Children's Bureau of the Administration for Children and Families or a different format, on the condition that the format used includes all of the title IV–E plan requirements of the law.

Respondents: Title IV–E agencies administering or supervising the administration of the title IV–E programs.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Title IV–E Plan	17	1	16	272

Estimated Total Annual Burden Hours: 272.

In compliance with the requirements of the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chap 35), the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 330 C Street SW, Washington DC 20201. Attn: ACF Reports Clearance Officer. Email address: *infocollection@acf.hhs.gov.* All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Robert Sargis,

Reports Clearance Officer.

BILLING CODE 4184–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request; Small Health Care Provider Quality Improvement Program, OMB No. 0915–0387—Revision

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with of the Paperwork Reduction Act of 1995, HRSA has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. HRSA published the 60-Day notice on January 8, 2018, FR Doc. 2018–00173. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period.

DATES: Comments on this ICR should be received no later than June 6, 2018.

ADDRESSES: Submit your comments, including the ICR Title, to the desk officer for HRSA, either by email to *OIRA_submission@omb.eop.gov* or by fax to 202–395–5806.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email Lisa Wright-Solomon, the HRSA Information Collection Clearance Officer at *paperwork@hrsa.gov* or call (301) 443–1984.

SUPPLEMENTARY INFORMATION: When submitting comments or requesting information, please include the information request collection title for reference, in compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995.

Information Collection Request Title: Small Health Care Provider Quality Improvement Program, OMB No. 0915–0387—Revision.

Abstract: This program is authorized by Title III, Public Health Service Act, Section 330A(g) (42 U.S.C. 254c(g)), as amended. This authority permits the Federal Office of Rural Health Policy (FORHP) to support grants that expand access to, coordinate, contain the cost of, and improve the quality of essential health care services, including preventive and emergency services, through the development of health care networks in rural and frontier areas and regions. The authority also allows HRSA to provide funds to rural and frontier communities to support the direct delivery of health care and related services, expand existing services, or enhance health service delivery through education, promotion, and prevention programs.

The purpose of the Small Health Care Provider Quality Improvement Grant (Rural Quality) Program is to provide support to rural primary care providers for implementation of quality improvement activities. The program promotes the development of an evidence-based culture and delivery of coordinated care in the primary care setting. Additional objectives of the program include improved health outcomes for patients, enhanced chronic disease management, and better engagement of patients and their caregivers. Organizations participating in the program are required to use an evidence-based quality improvement model; develop, implement and assess effectiveness of quality improvement initiatives; and use health information technology (HIT) to collect and report data. HIT may include an electronic patient registry or an electronic health record, and is a critical component for improving quality and patient outcomes. With HIT, it is possible to generate timely and meaningful data, which helps providers track and plan care.

Need and Proposed Use of the Information: FORHP collects this information to quantify the impact of grant funding on access to health care, quality of services, and improvement of health outcomes. FORHP uses the data for program improvement, and grantees use the data for performance tracking. The measures encompass access to care, population demographics, consortium/network, sustainability, quality improvement implementation strategies, clinical; and optional topic utilization.

The proposed Rural Quality draft measures reflect a reduced number of required measures and improvements to the number of optional measures including the following: 24 total measures (previously 43), which includes 16 required measures applicable to all awardees in addition to improved optional measure choices for 8 total optional measures (previously 4). Proposed revisions specifically include the following: (1) Alignment of clinical measures to current National Quality Forum endorsement recommendations and (2) broadened orientation of measures for improved applicability across variety of rural quality improvement project topic areas.

With the continuing shift in the healthcare environment towards provision of value-based care and utilization of reimbursement strategies through Centers for Medicare and Medicaid quality reporting programs, the latest competitive cohort also aligns with this shift. An increased number of sophisticated applicants leveraging increasingly intricate reporting methodologies for quality data collection, utilization, and analysis has resulted in an estimate of burden hours more in line with the realities of the health care landscape.

Likely Respondents: The respondents would be award recipients of the Small Health Care Provider Quality Improvement Program.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Small Health Care Provider Quality Improvement Program Performance Improvement Measurement System (PIMS) Measurement	32	1	32	22	704
	32	.....	32	.....	704

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request; Rural Health Opioid Program Grant Performance Measures, OMB No. 0906–xxxx—NEW

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, HRSA has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. HRSA published the 60-day notice on December 15, 2017, FR Doc. 2017–27013. HRSA received one comment. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period.

DATES: Comments on this ICR should be received no later than June 6, 2018.

ADDRESSES: Submit your comments, including the ICR Title, to the desk officer for HRSA, either by email to *OIRA_submission@omb.eop.gov* or by fax to (202) 395–5806.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email Lisa Wright-Solomon, the HRSA Information Collection Clearance Officer at *paperwork@hrsa.gov* or call (301) 443–1984.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: Rural Health Opioid Program Grant Performance Measures

OMB No. 0906–xxxx—NEW

Abstract: The Rural Health Opioid Program aims to promote rural health care services outreach by expanding the delivery of opioid related health care services to rural communities. The program will work to reduce the morbidity and mortality related to opioid overdoses in rural communities through the development of broad community consortiums to prepare individuals with opioid-use disorder to start treatment, implement care coordination practices to organize patient care activities, and support individuals in recovery through the enhancement of behavioral counselling and peer support activities.

Need and Proposed Use of the Information: For this program, performance measures were drafted to provide data to the program and to enable HRSA to provide aggregate program data required by Congress under the Government Performance and Results Act of 1993. These measures cover the principal topic areas of interest to the Federal Office of Rural Health Policy (FORHP), including: (a) Target population demographics; (b) referrals to substance abuse treatment; (c) substance abuse treatment process and outcomes; (d) education of health care providers and community members; and (e) rates of fatal and non-fatal opioid-related overdose. All measures will speak to FORHP's progress toward meeting the goals set.

Likely Respondents: The respondents would be recipients of the Rural Health Opioid Program grant funding.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and

maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Rural Health Opioid Program Grant Performance Measures	10	1	10	11	110
Total	10		10		110

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive Patent License: Antibodies Against TL1A, a TNF-Family Cytokine, for the Treatment and Diagnosis of Crohn's Disease, Ulcerative Colitis, Asthma, Psoriasis and Biliary Cirrhosis

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung, and Blood Institute (''NHLBI''), an institute of the National Institutes of Health; an agency within the Department of Health and Human Services, is contemplating the grant of an exclusive patent license to commercialize the invention(s) embodied in the intellectual property estate stated in the Summary Information section of this notice to Precision IBD, Inc., located in San Diego, California, and incorporated under the laws of Delaware.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development on or before May 22, 2018 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, and comments relating to the contemplated exclusive license should be directed to: Cristina Thalhammer-Reyero, Ph.D., MBA, Senior Licensing and Patenting Manager, NHLBI Office of Technology Transfer and Development, 31 Center Drive Room 4A29, MSC2479, Bethesda, MD 20892–2479; Telephone: +1–301–435–4507; Fax: +1–301–594–3080; Email: *thalhamc@mail.nih.gov.*

SUPPLEMENTARY INFORMATION: The following represents the intellectual property to be licensed under the prospective agreement:

U.S. Provisional Patent Application No. 61/488,671, filed May 20, 2011; PCT Application. No. PCT/US2012/028926, filed March 13, 2012; U.S. Patent No. 9,068,003, issued June 30, 2015; U.S. Patent No. 9,896,511, issued February 20, 2018; and U.S. Patent Application No. 15/872,592, filed January 16, 2018, ''Antibodies Against TL1A, a TNF-Family Cytokine, for the Treatment and Diagnosis of Autoimmune Inflammatory Diseases'', NIH Reference No. E–073–2011/0,1,2.

With respect to persons who have an obligation to assign their right, title and interest to the Government of the United States of America, the patent rights in these inventions have been assigned to the Government of the United States of America.

The prospective exclusive license territory may be worldwide and the field of use may be limited to the use of Licensed Patent Rights for the following: ''Development and commercialization of antibodies against TL1A for the treatment and diagnosis of Crohn's Disease, Ulcerative Colitis, Asthma, Psoriasis and Biliary Cirrhosis''

The subject technology is based on the use of antibodies against TL1A, a TNF-Family cytokine, for the treatment and diagnosis of autoimmune inflammatory diseases. Autoimmune inflammatory diseases occur in greater than five percent of the U.S. population. Treatments generally include immunosuppressants or anti-inflammatory drugs, which can have serious side effects. Recently, more specific immunomodulatory therapies such as TNF-alpha antagonists have been developed. In experiments with

mice, NIAMS inventors have shown that the interaction between the TNF family ligand TL1A with its receptor, DR3, is critical for development of disease in asthma, inflammatory bowel disease and multiple sclerosis. They have also developed anti-TL1A antibodies that prevent disease in mouse models of rheumatoid arthritis and inflammatory bowel disease. This invention describes anti-human TL1A monoclonal antibodies that may be useful for the development of diagnostics and therapeutics for autoimmune inflammatory diseases, as well as methods of treating such diseases by blocking the interaction between TL1A and DR3 by the described antibodies. This specific immunomodulatory effect provides potential for potent therapy without inducing global immunosuppression.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective Exclusive Patent License will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the NHLBI Office of Technology Transfer and Development receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

The public may file comments or objections in response to this Notice. Comments and objections, other than those in the form of a license application, will not be treated confidentially and may be made publicly available.

License applications submitted in response to this Notice will be presumed to contain business confidential information and any release of information in these license applications will be made only as required and upon a request under the Freedom of Information Act, 5 U.S.C. 552.

Dated: April 27, 2018.

Cristina Thalhammer-Reyero,

Senior Licensing and Patenting Manager, Office of Technology Transfer and Development, National Heart, Lung, and Blood Institute.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Request for Data and Information on Technologies Used for Identifying Potential Developmental Toxicants

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Toxicology Program (NTP) Interagency Center for the Evaluation of Alternative Toxicological Methods (NICEATM) requests available data and information on approaches and/or technologies currently used for identifying potential developmental toxicants. Submitted information will be used to assess the state of the science and determine technical needs for non-animal test methods used to evaluate the potential of chemicals to induce adverse effects in offspring.

DATES: Receipt of information: Deadline for receipt of information is June 15, 2018.

ADDRESSES: Data and information should be submitted electronically to *niceatm@niehs.nih.gov.*

FOR FURTHER INFORMATION CONTACT: Dr. Nicole Kleinstreuer, Deputy Director, NICEATM; email: *nicole.kleinstreuer@nih.gov;* telephone: (984) 287–3150.

SUPPLEMENTARY INFORMATION:

Background: NICEATM fosters the evaluation and promotion of alternative test methods for regulatory use and supports efforts to develop, validate, and implement alternative approaches for identifying potential developmental toxicants that replace, reduce, or refine animal use. Testing a chemical's potential to cause developmental toxicity is required by multiple federal agencies for regulatory and other decision contexts, and can use large numbers of animals.

Request for Information: NICEATM requests available data and information on approaches and/or technologies currently used to identify potential developmental toxicants. Respondents should provide information on any activities relevant to the development or validation of alternatives to in vivo developmental toxicity test methods currently used by federal agencies for regulatory and other decision contexts. NICEATM also requests available data from in vivo developmental studies, human or animal studies, or accidental human exposures, using the same chemicals used to evaluate the alternative developmental toxicity test methods.

Respondents to this request for information should include their name, affiliation (if applicable), mailing address, telephone, email, and sponsoring organization (if any) with their communications. The deadline for receipt of the requested information is June 15, 2018. Responses to this notice will be posted at: *https://ntp.niehs.nih.gov/go/dev-nonanimal.* Persons submitting responses will be identified on the web page by name and affiliation or sponsoring organization, if applicable.

Responses to this request are voluntary. No proprietary, classified, confidential, or sensitive information should be included in responses. This request for information is for planning purposes only and is not a solicitation for applications or an obligation on the part of the U.S. Government to provide support for any ideas identified in response to the request. Please note that the U.S. Government will not pay for the preparation of any information submitted or for its use of that information.

Background Information on NICEATM: NICEATM conducts data analyses, workshops, independent validation studies, and other activities to assess new, revised, and alternative test methods and strategies. NICEATM also provides support for the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM). The ICCVAM Authorization Act of 2000 (42 U.S.C. 285*l*–3) provides authority for ICCVAM and NICEATM involvement in activities relevant to the development of alternative test methods. Information about NICEATM and ICCVAM can be found at *http://ntp.niehs.nih.gov/go/niceatm* and *http://ntp.niehs.nih.gov/go/iccvam.*

Dated: April 27, 2018.

Brian R. Berridge,

Associate Director, National Toxicology Program.

Center For Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections

552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Surgical Sciences, Biomedical Imaging and Bioengineering Integrated Review Group, Clinical Molecular Imaging and Probe Development.

Date: May 31–June 1, 2018.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Crown Plaza Hotel, 11228 Lone Eagle Dr., Bridgeton, MO 63044.

Contact Person: Donald Scott Wright, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5108, MSC 7854, Bethesda, MD 20892, (301) 435–8363, *wrightds@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel, PAR 15–326: I/START R03 Grants Program.

Date: June 1, 2018.

Time: 12:00 p.m. to 3:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: Yvonne Bennett, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5199, MSC 7846, Bethesda, MD 20892, 301–379–3793, *bennetty@csr.nih.gov.*

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group, Sensorimotor Integration Study Section.

Date: June 5, 2018.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Washington Plaza Hotel, 10 Thomas Circle NW, Washington, DC 20005.

Contact Person: John Bishop, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5182, MSC 7844, Bethesda, MD 20892, (301) 408–9664, *bishopj@csr.nih.gov.*

Name of Committee: Biological Chemistry and Macromolecular Biophysics Integrated Review Group, Synthetic and Biological Chemistry A Study Section.

Date: June 5–6, 2018.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Beacon Hotel and Corporate Quarters, 1615 Rhode Island Avenue NW, Washington, DC 20036.

Contact Person: Anita Szajek, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4187, Bethesda, MD 20892, 301–827–6276, *anita.szajek@nih.gov.*

Name of Committee: Cardiovascular and Respiratory Sciences Integrated Review Group, Lung Cellular, Molecular, and Immunobiology Study Section.

Date: June 5–6, 2018.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Radisson Baltimore Harbor Hotel, 101 West Fayette Street, Baltimore, MD.

Contact Person: George M. Barnas, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2180, MSC 7818, Bethesda, MD 20892, 301–435–0696, *barnasg@csr.nih.gov.*

National Institutes of Health

National Institute of Environmental Health Sciences; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Environmental Health Sciences Council.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Environmental Health Sciences Council.

Date: June 4–5, 2018.

Closed: June 04, 2018, 8:30 a.m. to 9:15 a.m.

Agenda: To review and evaluate grant applications.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Open: June 04, 2018, 9:30 a.m. to 4:30 p.m.

Agenda: Discussion of Program and Issues.

Place: Nat. Inst. of Environmental Health Sciences Building 101, Rodbell Auditorium, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Open: June 05, 2018, 8:30 a.m. to 10:30 a.m.

Agenda: Discussion of Program and Issues.

Place: Nat. Inst. of Environmental Health Sciences Building 101, Rodbell Auditorium, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Contact Person: Gwen W. Collman, Ph.D., Interim Director, Division of Extramural Research & Training, National Institutes of Health, Nat. Inst. of Environmental Health Sciences, 615 Davis Dr., KEY615/3112, Research Triangle Park, NC 27709, (919) 541–4980, *collman@niehs.nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *www.niehs.nih.gov/dert/c-agenda.htm,* where an agenda and any additional information for the meeting will be posted when available.

(Catalogue of Federal Domestic Assistance Program Nos. 93.115, Biometry and Risk Estimation—Health Risks from Environmental Exposures; 93.142, NIEHS Hazardous Waste Worker Health and Safety Training; 93.143, NIEHS Superfund Hazardous Substances—Basic Research and Education; 93.894, Resources and Manpower Development in the Environmental Health Sciences; 93.113, Biological Response to Environmental Health Hazards; 93.114, Applied Toxicological Research and Testing, National Institutes of Health, HHS)

Dated: May 2, 2018.

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S.

FOR FURTHER INFORMATION CONTACT: Licensing information and copies of the patent applications listed below may be obtained by emailing the indicated licensing contact at the National Heart, Lung, and Blood, Office of Technology Transfer and Development Office of Technology Transfer, 31 Center Drive Room 4A29, MSC2479, Bethesda, MD 20892–2479; telephone: 301–402–5579. A signed Confidential Disclosure Agreement may be required to receive copies of the patent applications.

SUPPLEMENTARY INFORMATION: This notice is in accordance with 35 U.S.C. 209 and 37 CFR part 404 to achieve commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing. A description of the technology follows.

Inner Curvature Charge Concentration Device For Tissue Laceration

Description of Technology: Left ventricular outflow tract obstruction is a life-threatening complication of transcatheter mitral valve replacement caused by septal displacement of the anterior mitral leaflet (AML). The AML is a mobile structure that physically separates inflow and outflow zones of the left ventricle. Preserving the AML during surgical mitral valve replacement can cause left ventricular outflow tract obstruction, either when the prosthesis struts protrude into the left ventricular outflow tract or when along redundant anterior leaflet prolapses into the left ventrical outflow tract. The invention relates to devices having monopolar or bipolar tissue lacerators for efficiently and safely cutting AMLs percutaneously by vaporizing target tissue with electrical energy. Exemplary devices include a wire partially covered by electrical insulation, where the wire is kinked and where the wire is exposed through the insulation at one or more exposed regions along or near the inner curvature of the kink. The wire is configured to conduct electrical energy through the exposed region(s) and through a tissue target positioned adjacent the inner curvature to lacerate the tissue target via the electrical energy. The tissue target can be a native or prosthetic heart valve leaflet in a patient's heart. An optional feature of the device also includes an irrigation catheter to displace blood from the electrode, concentrating current at the tissue and reducing char and coagulum formation.

Potential Commercial Applications:

- Prevention of iatrogenic left ventricular outflow tract obstruction following transcatheter mitral valve replacement
- Bioprosthetic aortic scallop intentional laceration

Development Stage:

- In vivo data available

Inventors: Robert Lederman, Jaffar Khan, Toby Rogers (all of NHLBI).

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The invention listed below is owned by an agency of the U.S. Government and is available for licensing to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

FOR FURTHER INFORMATION CONTACT: Peter Soukas, J.D., 301–594–8730; *peter.soukas@nih.gov.* Licensing information and copies of the patent applications listed below may be obtained by communicating with the indicated licensing contact at the Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases, 5601 Fishers Lane, Rockville, MD, 20852; tel. 301–496–2644. A signed Confidential Disclosure Agreement will be required to receive copies of unpublished patent applications.

SUPPLEMENTARY INFORMATION: Technology description follows.

***Mononegavirales* Vectors Expressing Chimeric Antigens**

Description of Technology

Human respiratory syncytial virus (RSV) continues to be the leading viral cause of severe acute lower respiratory tract disease in infants and children

worldwide. A licensed vaccine or antiviral drug suitable for routine use remains unavailable. This invention relates to the use of murine pneumonia virus (MPV), a virus to which humans normally are not exposed to and that is not cross-protected with RSV, as a vector to express the RSV fusion (F) glycoprotein as an RSV vaccine candidate. The RSV F ORF was codon optimized. The RSV F ORF was placed under the control of MPV transcription signals and inserted at the first (rMPV–F1), third (rMPV29 F3), or fourth (rMPV–F4) gene position of a version of the MPV genome that contained a codon pair optimized L polymerase gene. The recovered viruses replicated *in vitro* as efficiently as the empty vector, with stable expression of RSV F protein. Replication and immunogenicity of rMPV–F1 and rMPV–F3 were evaluated in rhesus macaques following administration by the combined intranasal and intratracheal routes. Both viruses replicated at low levels in the upper and lower respiratory tract, maintained stable RSV F expression, and induced similar high levels of RSV-neutralizing serum antibodies that reached peak titers by fourteen (14) days post-vaccination. rMPV provides a highly attenuated yet immunogenic vector for the expression of RSV F protein, with potential application in RSV-naïve and RSV experienced populations.

The invention relates to live, chimeric non-human *Mononegavirales* vectors that allow a cell to express at least one protein from at least one human pathogen as well as compositions comprising the vectors, methods and kits for eliciting an immune response in a host, and methods of making the vectors.

This technology is available for licensing for commercial development in accordance with 35 U.S.C. 209 and 37 CFR part 404, as well as for further development and evaluation under a research collaboration.

Potential Commercial Applications

- Viral diagnostics
- Vaccine research

Competitive Advantages

- Ease of manufacture
- Multivalent live attenuated vaccines
- B cell and T cell activation
- Low-cost vaccines

Development Stage

- In vivo data assessment (animal)

Inventors: Shirin Munir (NIAID), Linda Brock (NIAID), Ursula Buchholz (NIAID), Peter Collins (NIAID).

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2017–0289]

Cook Inlet Regional Citizens' Advisory Council (CIRCAC) Recertification

AGENCY: Coast Guard, DHS.

ACTION: Notice of recertification.

SUMMARY: This notice informs the public that the Coast Guard has completed its triennial recertification of the Cook Inlet Regional Citizens' Advisory Council (CIRCAC) as an alternative voluntary advisory group for Cook Inlet, Alaska. The certification allows the CIRCAC to monitor the activities of terminal facilities and crude oil tankers under an alternative composition other than prescribed Cook Inlet Program established by statute.

DATES: This recertification is effective for the period from September 1st, 2017, through August 31st, 2018.

FOR FURTHER INFORMATION CONTACT: LT Jonathan Dale, Seventeenth Coast Guard District (dpi), by phone at (907)463–2812, email at *jonathan.dale@uscg.mil.*

SUPPLEMENTARY INFORMATION:

Background and Purpose

As part of the Oil Pollution Act of 1990, Congress passed the Oil Terminal and Oil Tanker Environmental Oversight and Monitoring Act of 1990 (the Act), 33 U.S.C. 2732, to foster a long-term partnership among industry, government, and local communities in overseeing compliance with environmental concerns in the operation of crude oil terminals and oil tankers.

The President has delegated his authority under 33 U.S.C 2732(o) respecting certification of advisory councils, or groups, subject to the Act to the Secretary of the Department of Homeland Security. Section 8(g) of Executive Order 12777, (56 FR 54757, October 22, 1991), as amended by section 34 of Executive Order 13286 (68 FR 10619, March 5, 2003). The Secretary redelegated that authority to the Commandant of the USCG. Department of Homeland Security Delegation No. 0170.1, paragraph 80 of section II. The Commandant redelegated that authority to the Chief, Office of Marine Safety, Security and Environmental Protection (G–M) on March 19, 1992 (letter #5402).

The Assistant Commandant for Marine Safety and Environmental Protection (G–M), redelegated recertification authority for advisory councils, or groups, to the Commander, Seventeenth Coast Guard District on February 26, 1999 (letter #16450).

On July 7, 1993, the USCG published a policy statement, ''Alternative Voluntary Advisory Groups, Prince William Sound and Cook Inlet'' (58 FR 36504), to clarify the factors considered in making the determination as to whether advisory councils, or groups, should be certified in accordance with the Act.

On September 16, 2002, the USCG published a policy statement, 67 FR 58440, which changed the recertification procedures such that applicants are required to provide the USCG with comprehensive information every three years (triennially). For each of the two years between the triennial application procedures, applicants submit a letter requesting recertification that includes a description of any substantive changes to the information provided at the previous triennial recertification. Further, public comment is only solicited during the triennial comprehensive review.

Discussion of Comments

On June 29th, 2017, the USCG published a ''Notice; request for comments for recertification of Cook Inlet Regional Citizens' Advisory Council'' in the **Federal Register** (82 FR 29572). We received 43 letters commenting on the proposed action. No public meeting was requested. One comment was received questioning CIRCAC's recent changes to its by laws governing the Tourism Group. Through coordination of the involved parties, the Coast Guard is satisfied that the concern

is now resolved. All of the other submissions were positive comments, and supported recertification. These letters consistently cited CIRCAC's broad representation of the respective community's interest, appropriate actions to keep the public informed, improvements to both spill response preparation and spill prevention, and oil spill industry monitoring efforts that combat complacency—as intended by the Act.

Recertification

By letter dated August 22, 2017, the Commander, Seventeenth Coast Guard certified that the CIRCAC qualifies as an alternative voluntary advisory group under 33 U.S.C. 2732(o). While the triennial review is valid until August 31, 2020, the annual recertification terminates on August 31, 2018.

April 20, 2018.

Michael F. McAllister,

Rear Admiral, U.S. Coast Guard Commander, Seventeenth Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2018–0027]

Committee Name: Homeland Security Academic Advisory Council

AGENCY: Department of Homeland Security.

ACTION: Notice of Federal Advisory Committee Reestablishment.

SUMMARY: The Secretary of Homeland Security has determined that the reestablishment of the Homeland Security Academic Advisory Council (HSAAC) is necessary and in the public interest in connection with the performance of her duties as Secretary of the U.S. Department of Homeland Security (DHS). This determination follows consultation with the Committee Management Secretariat, General Services Administration.

DATES: Interested persons are invited to submit comments by 15 days after publication of this notice.

ADDRESSES: If you desire to submit comments on this action, they must be submitted within 15 days after publication of Notice. Comments must be identified by Docket Number: DHS–2018–0027 and may be submitted by *one* of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: AcademicEngagement@hq.dhs.gov.* Include the docket number DHS–2018–0027 in the subject line of the message. Include the docket number in the subject line of the message.
- *Fax:* 202–282–1044. Include ''ATTN: Office of Academic Engagement'' on the cover page of the document.
- *Mail:* Academic Engagement; Office of Academic Engagement/Mailstop 0385, Department of Homeland Security, 245 Murray Lane SW, Washington, DC 20528–0440.

Instructions: All submissions received must include the words ''Department of Homeland Security'' and docket number DHS–2017–0016. Comments received will be posted without alteration at *http://www.regulations.gov,* including any personal information provided.

Docket: For access to the docket, to read background documents or comments received by the Homeland Security Academic Advisory Council, go to *http://www.regulations.gov* and search for ''Homeland Security Academic Advisory Council.''

FOR FURTHER INFORMATION CONTACT: Trent Frazier, Office of Academic Engagement/Mailstop 0385, Department of Homeland Security, 245 Murray Lane SW, Washington, DC 20528–0440, email: *AcademicEngagement@hq.dhs.gov,* tel: 202–447–4686 and fax: 202–282–1044.

SUPPLEMENTARY INFORMATION: For the reasons set forth below, the Secretary of Homeland Security has determined that the reestablishment of the HSAAC is necessary and in the public interest. This determination follows consultation with the Committee Management Secretariat, General Services Administration.

The HSAAC is being reestablished in accordance with the provisions of the Federal Advisory Committee Act (FACA) 5 U.S.C. App. (Pub. L. 92–463). The HSAAC will provide advice and recommendations to the Secretary and senior leadership on matters relating to student and recent graduate recruitment; international students; academic research; campus and community resiliency, security and preparedness; faculty exchanges; and cybersecurity.

Balanced Membership Plans: The HSAAC is composed of up to 23 members who are appointed by and serve at the pleasure of the Secretary of Homeland Security. To ensure a diverse, balanced membership on the HSAAC, the members serve as representatives, representing the viewpoints of institutions of higher education, community colleges, elementary and secondary education (K–12), school systems, and/or partnership groups.

Duration: Continuing.

Responsible DHS Official: Trent Frazier, *AcademicEngagement@hq.dhs.gov,* 202–447–4686.

Dated: May 1, 2018.

Trent Frazier,

Executive Director for Academic Engagement.

BILLING CODE 4410–10–P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

Revision of Agency Information Collection Activity Under OMB Review: Airport Security Part 1542

AGENCY: Transportation Security Administration, DHS.

ACTION: 30-Day notice.

SUMMARY: This notice announces that the Transportation Security Administration (TSA) has forwarded the Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652–0002, abstracted below to OMB for review and approval of a revision of the currently approved collection under the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection includes requirements for airport operators to submit certain information to TSA, as well as to maintain and update records to ensure compliance with security provisions.

DATES: Send your comments by June 6, 2018. A comment to OMB is most effective if OMB receives it within 30 days of publication.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, OMB. Comments should be addressed to Desk Officer, Department of Homeland Security/TSA, and sent via electronic mail to *dhsdeskofficer@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh, TSA PRA Officer, Office of Information Technology (OIT), TSA–11, Transportation Security Administration, 601 South 12th Street, Arlington, VA 20598–6011; telephone (571) 227–2062; email *TSAPRA@tsa.dhs.gov.*

SUPPLEMENTARY INFORMATION: TSA published a **Federal Register** notice, with a 60-day comment period soliciting

comments, of the following collection of information on September 7, 2017, 82 FR 42356.

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at *http://www.reginfo.gov* upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Consistent with the requirements of Executive Order (E.O.) 13771, Reducing Regulation and Controlling Regulatory Costs, and E.O. 13777, Enforcing the Regulatory Reform Agenda, TSA is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents.

Information Collection Requirement

Title: Airport Security Part 1542.

Type of Request: Extension of a currently approved collection.

OMB Control Number: 1652–0002.

Forms(s): NA.

Affected Public: Airport operators.

Abstract: The information collection is used to determine compliance with 49 CFR part 1542 and to ensure passenger safety and security by monitoring airport operator security procedures. The following information collections and other recordkeeping requirements with which respondent covered airport operators must comply fall under this OMB control number: (1) Development of an Airport Security Program (ASP) and submission to TSA; (2) as applicable, development of airport operator requested or TSA-required ASP amendments, submission to TSA, and implementation; (3) collection of data necessary to complete a criminal history records check (CHRC) for those individuals with unescorted access authority to a Security Identification Display Area (SIDA); (4) submission to TSA of identifying information about individuals to whom the airport operator has issued identification media, such as name, address, and country of birth, in order for TSA to conduct a Security Threat Assessment (STA); (5) information collection and recordkeeping requirements associated with airport operator compliance with Security Directives (SDs) issued pursuant to the regulation; and (6) watch list matching of individuals subject to TSA's regulatory requirements against government watch lists.

TSA is revising this information collection by modifying the type of information collected. TSA previously collected information relating to a since-discontinued requirement that airport operators verify the employment histories of certain applicants, TSA has relieved the airport operators of this burden.

Number of Respondents: 438.

Estimated Annual Burden Hours: An estimated 1,786,924 hours annually.[1]

Dated: May 1, 2018.

Christina A. Walsh,

TSA Paperwork Reduction Act Officer, Office of Information Technology.

Draft Restoration Plan and Environmental Assessment for the Cardinal Valley Natural Habitat Restoration Project, Oronogo-Duenweg Mining Belt Superfund Site, Missouri

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: In accordance with the Comprehensive Environmental Response, Compensation and Liability Act and the National Environmental Policy Act, the natural resource Trustees for the Tri-State Mining District (TSMD) site announce the availability for public comment of a Draft Restoration Plan and Environmental Assessment (Draft RP/EA) for TSMD natural resource damage restoration. The Draft RP/EA presents a restoration project the Trustees are proposing to implement to restore natural resources and services injured by hazardous substances released in and around the TSMD site.

DATES: Written comments must be received by June 6, 2018.

ADDRESSES: *Submitting Comments:* Send written comments to one of the following addresses:

- *U.S. mail:* Scott Hamilton; U.S. Fish and Wildlife Service, Missouri Ecological Services Field Office, 101 Park DeVille Dr., Suite A, Columbia, MO 65203; or
- *Email: scott_hamilton@fws.gov;* put ''TSMD RP/EA'' in the email subject line.

Obtaining the Draft Restoration Plan/Environmental Assessment: The Draft RP/EA is available for download from the U.S. Fish and Wildlife Service Midwest Region Natural Resource Damage Assessment website, at: *https://www.fws.gov/midwest/es/ec/nrda/motristate/index.html.*

FOR FURTHER INFORMATION CONTACT: Scott Hamilton, U.S. Fish and Wildlife Service, at 573–234–2132, extension 122 (phone) or *scott_hamilton@fws.gov* (email).

SUPPLEMENTARY INFORMATION:

Introduction

The U.S. Department of the Interior (U.S. Fish and Wildlife Service) and the State of Missouri (Missouri Department of Natural Resources) are natural resource trustees (Trustees) for natural resources and services injured by hazardous substances at the Tri-State Mining District (TSMD) site, located in southwest Missouri. The Trustees have prepared a Draft Restoration Plan and Environmental Assessment (Draft RP/EA) to restore injured natural resources and services at the TSMD site pursuant to both the Comprehensive Environmental Response, Compensation and Liability Act natural resource damages assessment and restoration (NRDAR) regulations at 43 CFR part 11 and the National Environmental Policy Act of 1969, as amended (NEPA; 42 U.S.C. 4321 *et seq.*), and its implementing regulations at 40 CFR parts 1500–1508. NEPA requires Federal agencies to conduct environmental reviews of proposed actions to consider the potential impacts on the environment.

Draft Restoration Plan Alternatives

Consistent with the U.S. Department of the Interior NRDAR regulations and

[1] Since the publication of the 60-day notice, the estimate has been updated from 1,618,268 to 1,786,924 annual burden hours

NEPA, the Trustees evaluated a suite of five alternatives for conducting the type and scale of restoration sufficient to compensate the public for natural resource injuries and service losses. Based on selection factors, including location, technical feasibility, cost effectiveness, provision of natural resource services similar to those lost due to contamination, and net environmental consequences, the Trustees have identified a preferred alternative. Under this preferred alternative, the Trustees would use a combination of biosolids, manure, and woody material to return soil fertility to areas where remedial work removed mine waste and contaminated soil, leaving behind degraded soils and residual metals. Following application of soil amendments, native seed would be applied to the landscape in an attempt to restore prairie habitat and associated natural resource services. Prescribed fire, mowing, and other weed management techniques would be used to maintain desirable habitat conditions. Conservation easements would be placed on restoration parcels, and areas would be managed for wildlife habitat and limited recreation.

Public Comments

Comments are specifically requested regarding the alternatives, proposed restoration techniques and projects, scope of analysis, and assessment of impacts. Please see the **ADDRESSES** section for how to submit information.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

The authority of this action is the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and the implementing NRDAR regulations found at 43 CFR part 11.

Dated: February 16, 2018.

Charles Wooley,

Acting Regional Director, Midwest Region, U.S. Fish and Wildlife Service.

Endangered and Threatened Wildlife and Plants; Initiation of 5-Year Status Reviews for 156 Species in Oregon, Washington, Hawaii, Palau, Guam, and the Northern Mariana Islands

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of initiation of reviews; request for information.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), are initiating 5-year status reviews for 156 species in Oregon, Washington, Hawaii, Palau, Guam, and the Northern Mariana Islands under the Endangered Species Act of 1973, as amended (Act). A 5-year review is based on the best scientific and commercial data available at the time of the review; therefore, we are requesting submission of any new information on these species that has become available since the last review.

DATES: To ensure consideration in our reviews, we are requesting submission of new information no later than July 6, 2018. However, we will continue to accept new information about any species at any time.

ADDRESSES: Submit information on the Hutton tui chub and Nelson's checker-mallow (of Oregon and Washington) via U.S. mail to Field Supervisor, Attention: 5-Year Review, U.S. Fish and Wildlife Service, Oregon Fish and Wildlife Office, 2600 SE 98th Ave., Suite 100, Portland, OR 97266.

Submit information on any of the 154 species in Hawaii, Palau, Guam, or the Northern Mariana Islands via U.S. mail to Field Supervisor; Attention: 5-Year Review; U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, 300 Ala Moana Blvd., Room 3– 122 Honolulu, HI 96850; or by email to *pifwo_admin@fws.gov.*

FOR FURTHER INFORMATION CONTACT: For Hutton tui chub and Nelson's checker-mallow (of Oregon and Washington), contact Michele Zwartjes, U.S. Fish and Wildlife Service, Oregon Fish and Wildlife Office, at 503–231–6179.

For the 154 species in Hawaii, Palau, Guam, or the Northern Mariana Islands, contact Gregory Koob, U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, at 808–792–9400.

Individuals who are hearing impaired or speech impaired may call the Federal Relay Service at 800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION:

Why do we conduct 5-year reviews?

Under the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531 *et seq.*), we maintain lists of endangered and threatened wildlife and plant species (referred to as the List) in the Code of Federal Regulations (CFR) at 50 CFR 17.11 (for wildlife) and 17.12 (for plants). Section 4(c)(2) of the Act requires us to review each listed species' status at least once every 5 years. For additional information about 5-year reviews, refer to our factsheet at *http://www.fws.gov/endangered/what-we-do/recovery-overview.html.*

What information do we consider in our review?

A 5-year review considers all new information available at the time of the review. In conducting these reviews, we consider the best scientific and commercial data that have become available since the listing determination or most recent status review, such as:

(A) Species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics;

(B) Habitat conditions, including but not limited to amount, distribution, and suitability;

(C) Conservation measures that have been implemented that benefit the species;

(D) Threat status and trends in relation to the five listing factors (as defined in section 4(a)(1) of the Act); and

(E) Other new information, data, or corrections, including but not limited to taxonomic or nomenclatural changes, identification of erroneous information contained in the List, and improved analytical methods.

Any new information will be considered during the 5-year review and will also be useful in evaluating the ongoing recovery programs for these species.

Which species are under review?

This notice announces our active review of the 156 species listed in the table below.

Common name	Scientific name	Status	Known range of species occurrence	Final listing rule and publication date
Animals				
Mammals				
Pacific sheath-tailed bat (Mariana subspecies) (Payeyi, Paischeey).	*Emballonura semicaudata rotensis.*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Mariana fruit bat	*Pteropus mariannus mariannus*	Threatened	Guam, Northern Mariana Islands.	49 FR 33881, 8/27/1984; 70 FR 1190, 1/6/2005.
Little Mariana fruit bat	*Pteropus tokudae*	Endangered	Guam	49 FR 33881, 8/27/1984.
Birds				
Nightingale reed warbler	*Acrocephalus luscinia*	Endangered	Guam, Northern Mariana Islands.	35 FR 8491, 6/2/1970; 35 FR 18319, 12/2/1970.
Mariana gray swiftlet	*Aerodramus vanikorensis bartschi.*	Endangered	Guam, Northern Mariana Islands, Hawaii.	49 FR 33881, 8/27/1984.
Hawaiian crow (Alala)	*Corvus hawaiiensis*	Endangered	Hawaii	32 FR 4001, 3/11/1967.
Mariana crow (Aga)	*Corvus kubaryi*	Endangered	Guam, Northern Mariana Islands.	49 FR 33881, 8/27/1984.
Mariana common moorhen	*Gallinula chloropus guami*	Endangered	Guam, Northern Mariana Islands.	49 FR 33881, 8/27/1984.
Akiapolaau	*Hemignathus wilsoni*	Endangered	Hawaii	32 FR 4001, 3/11/1967.
Palila	*Loxioides bailleui*	Endangered	Hawaii	32 FR 4001, 3/11/1967.
Hawaii akepa	*Loxops coccineus*	Endangered	Hawaii	35 FR 16047, 10/13/1970.
Micronesian megapode	*Megapodius laperouse*	Endangered	Guam, Northern Mariana Islands, Palau.	35 FR 8491, 6/2/1970.
Hawaii creeper	*Oreomystis mana*	Endangered	Hawaii	40 FR 44149, 9/25/1975.
Guam rail	*Rallus owstoni*	Endangered	Guam	49 FR 14354, 4/11/1984; 49 FR 33881, 8/27/1984; 54 FR 43966, 10/30/1989.
Guam kingfisher	*Todiramphus cinnamominus*	Endangered	Guam	49 FR 33881, 8/27/1984; 69 FR 62943, 10/28/2004.
Bridled white-eye	*Zosterops conspicillatus conspicillatus.*	Endangered	Guam	49 FR 33881, 8/27/1984.
Rota bridled white-eye	*Zosterops rotensis*	Endangered	Northern Mariana Islands	69 FR 3022, 1/22/2004.
Reptiles				
Slevin's skink	*Emoia slevini*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Fishes				
Hutton tui chub	*Gila bicolor* ssp.	Threatened	Oregon	50 FR 12302, 3/28/1985.
Snails				
Newcomb's tree snail	*Newcombia cumingi*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Humped tree snail (Akaleha, Denden).	*Partula gibba*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Langford's tree snail (Akaleha, Denden).	*Partula langfordi*	Endangered	Northern Mariana Islands	80 FR 59423, 10/1/2015.
Guam tree snail (Akaleha, Denden).	*Partula radiolata*	Endangered	Guam	80 FR 59423, 10/1/2015.
Lanai tree snail	*Partulina semicarinata*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Lanai tree snail	*Partulina variabilis*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Fragile tree snail (Akaleha dogas, Denden).	*Samoana fragilis*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Crustaceans				
Anchialine pool shrimp	*Procaris hawaiana*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
Anchialine pool shrimp	*Vetericaris chaceorum*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Insects				
Hawaiian picture-wing fly	*Drosophila digressa*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Hawaiian picture-wing fly	*Drosophila heteroneura*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila mulli*	Threatened	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila ochrobasis*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Rota blue damselfly (Dulalas Luta, Dulalas Luuta).	*Ischnura luta*	Endangered	Northern Mariana Islands	80 FR 59423, 10/1/2015.

Common name	Scientific name	Status	Known range of species occurrence	Final listing rule and publication date
Mariana wandering butterfly (Ababbang, Libweibwogh).	*Vagrans egistina*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
		Plants		
		Flowering Plants		
Liliwai	*Acaena exigua*	Endangered	Hawaii	57 FR 20772, 5/15/1992.
No common name	*Achyranthes mutica*	Endangered	Hawaii	61 FR 53108, 10/10/1996.
Round-leaved chaff-flower	*Achyranthes splendens* var. *rotundata*.	Endangered	Hawaii	51 FR 10518, 3/26/1986.
Mauna Loa silversword (Kau).	*Argyroxiphium kauense*	Endangered	Hawaii	58 FR 18029, 4/7/1993.
Ahinahina	*Argyroxiphium sandwicense* ssp. *sandwicense*.	Endangered	Hawaii	51 FR 9814, 3/1/1986.
Kookoolau	*Bidens campylotheca pentamera*.	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Kookoolau	*Bidens campylotheca waihoiensis*.	Endangered	Hawaii	8 FR 32013, 5/28/2013.
Kookoolau	*Bidens conjuncta*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Bidens hillebrandiana* ssp. *hillebrandiana*.	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Kookoolau	*Bidens micrantha ctenophylla*	Endangered	Hawaii	8 FR 64637, 10/29/2013.
Siboyas halumtanu, Siboyan halom tano.	*Bulbophyllum guamense*	Threatened	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Oha wai	*Clermontia drepanomorpha*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Oha wai	*Clermontia lindseyana*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Oha wai	*Clermontia peleana*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Oha wai	*Clermontia pyrularia*	Endangered	Hawaii	9 FR 10305, 3/4/1994.
Haha	*Cyanea asplenifolia*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea copelandii* ssp. *copelandii*.	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Haha	*Cyanea duvalliorum*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea hamatiflora* ssp. *carlsonii*.	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Nui, Haha	*Cyanea horrida*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea kunthiana*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea maritae*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea marksii*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Haha	*Cyanea mauiensis*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea munroi*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea obtusa*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Akuaku	*Cyanea platyphylla*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
No common name	*Cyanea profuga*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea shipmanii*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Popolo	*Cyanea solanacea*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haha	*Cyanea stictophylla*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Haha	*Cyanea tritomantha*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Fadang	*Cycas micronesica*	Threatened	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
No common name	*Cyperus fauriei*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Puukaa	*Cyperus trachysanthos*	Endangered	Hawaii	61 FR 53108, 10/10/1996.
Haiwale	*Cyrtandra ferripilosa*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haiwale	*Cyrtandra filipes*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haiwale	*Cyrtandra giffardii*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
No common name	*Cyrtandra nanawaleensis*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Haiwale	*Cyrtandra oxybapha*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Haiwale	*Cyrtandra tintinnabula*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
No common name	*Cyrtandra wagneri*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
No common name	*Delissea undulata*	Endangered	Hawaii	61 FR 53124, 10/10/1996.
No common name	*Dendrobium guamense*	Threatened	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
No common name	*Eugenia bryanii*	Endangered	Guam	80 FR 59423, 10/1/2015.
No common name	*Festuca molokaiensis*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Nohoanu	*Geranium hanaense*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Nohoanu	*Geranium hillebrandii*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Gouania vitifolia*	Endangered	Hawaii	59 FR 32932, 6/27/1994.
Honohono	*Haplostachys haplostachya*	Endangered	Hawaii	44 FR 62468, 10/30/1979.
Paudedo	*Hedyotis megalantha*	Endangered	Guam	80 FR 59423, 10/1/2015.
Ufa-halomtano	*Heritiera longipetiolata*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
No common name	*Hesperomannia arbuscula*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Hau kuahiwi	*Hibiscadelphus giffardianus*	Endangered	Hawaii	61 FR 53137, 10/10/1996.

Common name	Scientific name	Status	Known range of species occurrence	Final listing rule and publication date
Hau kuahiwi	*Hibiscadelphus hualalaiensis*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Aupaka	*Isodendrion hosakae*	Endangered	Hawaii	56 FR 1454, 1/14/1991.
Kioele	*Kadua coriacea*	Endangered	Hawaii	57 FR 20772, 5/15/1992.
Kohe malama malama o kanaloa.	*Kanaloa kahoolawensis*	Endangered	Hawaii	64 FR 48307, 9/3/1999.
Koki'o	*Kokia drynarioides*	Endangered	Hawaii	49 FR 47397, 12/4/1984.
No common name	*Lepidium orbiculare*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
No common name	*Lipochaeta venosa*	Endangered	Hawaii	44 FR 62468, 10/30/1979.
No common name	*Maesa walkeri*	Threatened	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Alani	*Melicope zahlbruckneri*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Sea bean	*Mucuna sloanei* var. *persericea*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Kolea	*Myrsine vaccinioides*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Neraudia ovata*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
No common name	*Nervilia jacksoniae*	Threatened	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
No common name	*Nesogenes rotensis*	Endangered	Northern Mariana Islands	69 FR 18499; 04/08/2004.
Aiea	*Nothocestrum breviflorum*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Kului	*Nototrichium humile*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Osmoxylon mariannense*	Endangered	Northern Mariana Islands	69 FR 18499; 04/08/2004.
Ala ala wai nui	*Peperomia subpetiolata*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Phyllanthus saffordii*	Endangered	Guam	80 FR 59423, 10/1/2015.
No common name	*Phyllostegia bracteata*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Phyllostegia floribunda*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
No common name	*Phyllostegia haliakalae*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Phyllostegia helleri*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
No common name	*Phyllostegia pilosa*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Kiponapona	*Phyllostegia racemosa*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
No common name	*Phyllostegia stachyoides*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
No common name	*Phyllostegia velutina*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
No common name	*Phyllostegia warshaueri*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
No common name	*Pittosporum halophilum*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Pittosporum hawaiiense*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Kuahiwi laukahi	*Plantago hawaiensis*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
No common name	*Platydesma remyi*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Hala pepe	*Pleomele fernaldii*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Hala pepe	*Pleomele hawaiiensis*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Poe	*Portulaca sclerocarpa*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Loulu	*Pritchardia lanigera*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Loulu	*Pritchardia maideniana*	Endangered	Hawaii	59 FR 10305, 3/4/1994.
Loulu	*Pritchardia schattaueri*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Aplokating-palaoan	*Psychotria malaspinae*	Endangered	Guam	80 FR 59423, 10/1/2015.
No common name	*Schiedea diffusa* ssp. *macraei*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
Maolioli	*Schiedea hawaiiensis*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
No common name	*Schiedea jacobii*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Schiedea laui*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
No common name	*Schiedea nuttallii*	Endangered	Hawaii	61 FR 53108, 10/10/1996.
No common name	*Schiedea salicaria*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Hayun lagu, Tronkon guafi	*Serianthes nelsonii*	Endangered	Guam, Northern Mariana Islands.	52 FR 4907; 02/18/1997.
Anunu	*Sicyos albus*	Endangered	Hawaii	61 FR 53137, 10/10/1996.
Nelson's checker-mallow	*Sidalcea nelsoniana*	Threatened	Oregon, Washington	58 FR 8235, 2/12/1993.
No common name	*Silene hawaiiensis*	Threatened	Hawaii	59 FR 10305, 3/4/1994.
Halomtano, Berenghenas	*Solanum guamense*	Endangered	Guam, Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Popolo ku mai	*Solanum incompletum*	Endangered	Hawaii	59 FR 56333, 10/10/1994.
No common name	*Stenogyne angustifolia* var. *angustifolia.*	Endangered	Hawaii	44 FR 62468, 10/30/1979.
No common name	*Stenogyne cranwelliae*	Endangered	Hawaii	78 FR 64637, 10/29/2013.
No common name	*Stenogyne kaalae* ssp. *sherffii*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
No common name	*Stenogyne kauaulaensis*	Endangered	Hawaii	78 FR 32013, 5/28/2013.

Request for New Information

To ensure that a 5-year review is complete and based on the best available scientific and commercial information, we request new information from all sources. See What Information Do We Consider in Our Review? for specific criteria. If you submit information, please support it with documentation such as maps, bibliographic references, methods used to gather and analyze the data, and/or copies of any pertinent publications, reports, or letters by knowledgeable sources.

If you wish to provide information for any species listed in the table, please submit your comments and materials to the appropriate contact in **ADDRESSES**.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Comments and materials received will be available for public inspection, by appointment, during normal business hours at the offices to which the comments are submitted.

Completed and Active Reviews

A list of all completed and currently active 5-year reviews addressing species for which the Pacific Region of the Service has lead responsibility is available at *http://www.fws.gov/pacific/ecoservices/endangered/recovery/5year.html.*

Authority

This document is published under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq*.).

Theresa E. Rabot,

Acting Regional Director, Pacific Region, U.S. Fish and Wildlife Service.

Endangered and Threatened Wildlife and Plants; 5-Year Status Reviews for 35 Southeastern Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of initiation of reviews; request for information.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), are initiating 5-year status reviews of 35 species under the Endangered Species Act of 1973, as amended. A 5-year review is an assessment of the best scientific and commercial data available at the time of the review. We are requesting submission of information that has become available since the last reviews of these species.

DATES: To allow us adequate time to conduct these reviews, we must receive your comments or information on or before July 6, 2018. However, we will continue to accept new information about any listed species at any time.

ADDRESSES: For instructions on how to submit information and review information that we receive on these species, see Request for New Information under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: For species-specific information, see Request for New Information under **SUPPLEMENTARY INFORMATION**.

SUPPLEMENTARY INFORMATION:

Why do we conduct 5-year reviews?

Under the Endangered Species Act of 1973, as amended, (ESA 16 U.S.C. 1531 *et seq*.), we maintain lists of endangered and threatened wildlife and plant species (referred to as the Lists) in title 50 of the Code of Federal Regulations (CFR) at 50 CFR 17.11 (for wildlife) and 17.12 (for plants). Section 4(c)(2)(A) of the ESA requires us to review each listed species' status at least once every 5 years. Our regulations at 50 CFR 424.21 require that we publish a notice in the **Federal Register** announcing those species under active review. For additional information about 5-year reviews, go to *http://www.fws.gov/endangered/what-we-do/recovery-overview.html,* scroll down to ''Learn More about 5-Year Reviews,'' and click on our factsheet.

Species Under Review

This notice announces our active review of 28 species that are currently listed as endangered:

Fish and Wildlife

Ivory-billed woodpecker (*Campephilus principalis*)
Bermuda petrel (=cahow) (*Pterodroma cahow*)
Laurel dace (*Chrosomus saylori*)
Yellowcheek darter (*Etheostoma moorei*)
Watercress darter (*Etheostoma nuchale*)
Smoky madtom (*Noturus baileyi*)
Chucky madtom (*Noturus crypticus*)
Alabama sturgeon (*Scaphirhynchus suttkusi*)
Dromedary pearlymussel (*Dromus dromas*)
Cumberlandian combshell (*Epioblasma brevidens*)
Cracking pearlymussel (*Hemistena lata*)
Alabama lampmussel (*Lampsilis virescens*)
Birdwing pearlymussel (*Lemiox rimosus*)
Alabama pearlshell (*Margaritifera marrianae*)
Fat pocketbook (*Potamilus capax*)
Pale lilliput (*Toxolasma cylindrellus*)
Slender campeloma (*Campeloma decampi*)

Armored snail (*Pyrgulopsis (=Marstonia) pachyta*)

Plants

Arenaria cumberlandensis (Cumberland sandwort)
Astralagus bibullatus (Guthrie's (=Pyne's) ground plum)
Baptisia arachnifera (Hairy rattleweed)
Campanula robinsiae (Brooksville bellflower)
Cyathea dryopteroides (Elfin tree fern)
Harrisia aboriginum (Aboriginal prickly-apple)
Justicia cooleyi (Cooley's water-willow)
Lesquerella perforata (Spring Creek bladderpod)
Nolina brittoniana (Britton's beargrass)
Trillium persistens (Persistent trillium)

This notice announces our active review of 7 species that are currently listed as threatened:

Fish and Wildlife

Eastern indigo snake (*Drymarchon corais couperi*)
Ringed map turtle (=sawback) (*Graptemys oculifera*)
Slackwater darter (*Etheostoma boschungi*)
Yellowfin madtom (*Noturus flavipinnis*)
Pygmy sculpin (*Cottus pygmaeus*)

Plants

Macbridea alba (White birds in a nest)
Scutellaria floridana (Florida skullcap)

What information do we consider in our review?

A 5-year review considers the best scientific and commercial data that have become available since the current listing determination or most recent status review of each species, such as:

A. Species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics;

B. Habitat conditions, including but not limited to amount, distribution, and suitability;

C. Conservation measures that have been implemented to benefit the species;

D. Threat status and trends (see the five factors under the heading How Do We Determine Whether A Species Is Endangered or Threatened?); and

E. Other new information, data, or corrections, including but not limited to taxonomic or nomenclatural changes, identification of erroneous information contained in the List, and improved analytical methods.

We request any new information concerning the status of any of these 35 species. Information submitted should be supported by documentation such as maps, bibliographic references, methods used to gather and analyze the data, and/or copies of any pertinent publications, reports, or letters by knowledgeable sources.

We have completed 5-year review documents for the majority of our listed species in the Southeast. In many cases, we will only have to update previous 5-year reviews, but we could possibly conduct a species status assessment (SSA) for some species. An SSA is a compilation of the best available information on the species, as well as its ecological needs based on environmental factors. Next, an SSA describes the current condition of the species' habitat and demographics, and the probable explanations for past and ongoing changes in abundance and distribution within the species' range. Last, an SSA forecasts the species' response to probable future scenarios of environmental conditions and conservation efforts. Overall, an SSA uses the conservation biology principles of resiliency, redundancy, and representation (collectively known as the ''3 Rs'') to evaluate the current and future condition of the species. As a result, the SSA characterizes a species' ability to sustain populations in the wild over time based on the best scientific understanding of current and future abundance and distribution within the species' ecological settings.

An SSA is a biological risk assessment to aid decision makers who must use the best available scientific information to make policy decisions under the ESA. The SSA provides decision makers with a scientifically rigorous characterization of a species' status that and the likelihood that the species will sustain populations, along with key uncertainties in that characterization.

Definitions

A. *Species* means any species or subspecies of fish, wildlife, or plant, and any distinct population segment of any species of vertebrate which interbreeds when mature.

B. *Endangered* means any species that is in danger of extinction throughout all or a significant portion of its range.

C. *Threatened* means any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

How do we determine whether a species is endangered or threatened?

Section 4(a)(1) of the ESA requires that we determine whether a species is endangered or threatened based on one or more of the following five factors:

A. The present or threatened destruction, modification, or curtailment of its habitat or range;

B. Overutilization for commercial, recreational, scientific, or educational purposes;

C. Disease or predation;

D. The inadequacy of existing regulatory mechanisms; or

E. Other natural or manmade factors affecting its continued existence.

Request for New Information

To do any of the following, contact the person associated with the species you are interested in below:

A. To get more information on a species;

B. To submit information on a species; or

C. To review information we receive, which will be available for public inspection by appointment, during normal business hours, at the listed addresses.

Fish and Wildlife

- *Ivory-billed woodpecker:* Amy Trahan, by mail at Louisiana Ecological Services Field Office, U.S. Fish and Wildlife Service, 646 Cajundome Blvd., Suite 400, Lafayette, LA 70506; by fax 337–291–3139, by phone at 337–291–3100, or by email at *lafayette@fws.gov.*
- *Cahow (Bermuda petrel):* John Hammond, by mail at the Raleigh Ecological Services Field Office, U.S. Fish and Wildlife Service, 551 Pylon Drive, #F, Raleigh, NC 27606; by fax at 919–856–4556; by phone at 919–856–4520; or by email at *raleigh_es@fws.gov.*
- *Yellowfin madtom, smoky madtom, and laurel dace:* Warren Stiles; and Chucky madtom, Cumberlandian combshell, birdwing pearlymussel, cracking pearlymussel, and dromedary pearlymussel: Stephanie Chance, both by mail at the Tennessee Ecological Services Field Office, U.S. Fish and Wildlife Service, 446 Neal Street, Cookeville, TN 38501; by fax at 931–528–7075; by phone at 931–528–6481; or by email at *cookeville@fws.gov.*
- *Yellowcheek darter:* Chris Davidson, by mail at Arkansas Ecological Services Field Office, U.S. Fish and Wildlife Service, 110 South Amity Road, Suite 300, Conway, AR 72032; by fax at 501–513–4480; by phone at 501–513–4481; or by email at *arkansas-es_recovery@fws.gov.*
- *Ringed map turtle:* Linda Laclaire; fat pocketbook: Paul Hartfield; and slackwater darter, pygmy sculpin, and watercress darter: Daniel Drennen, all three by mail at the Mississippi Ecological Services Field Office, U.S. Fish and Wildlife Service, 6578 Dogwood View Parkway, Jackson, MS

39213; by fax at 601–965–4340; by phone at 601–965–4900; or by email at *Mississippi_field_office@fws.gov.*

• *Alabama sturgeon:* Jennifer Grunewald; Alabama pearlshell: Anthony Ford; Alabama lampmussel, pale lilliput, slender campeloma, and armored snail: Evan Collins, all three by mail at Alabama Ecological Services Field Office, U.S. Fish and Wildlife Service, 1208B Main St., Daphne, AL 36526; by fax at 251–441–6222; by phone at 251–441–5184; or by email at *Alabama@fws.gov.*

• *Eastern indigo snake:* Michele Elmore, by mail at Georgia Ecological Services Field Office, U.S. Fish and Wildlife Service, P.O. Box 52560, Fort Benning, GA 31995; by fax at 706–544–6419; by phone at 706–544–6428; or by email at *georgiaes@fws.gov.*

Plants

• *Cumberland sandwort, Pyne's ground plum, and Spring Creek bladderpod:* Geoff Call, by mail at the Tennessee Ecological Services Field Office, U.S. Fish and Wildlife Service (see contact information above).

• *Hairy rattleweed:* April Punsulan, by mail at Charleston Ecological Services Field Office, U.S. Fish and Wildlife Service, 176 Croghan Spur Road, Suite 200, Charleston, SC 29412; by fax at 843–727–4218; by phone at 843–727–4707; or by email at *charleston_recovery@fws.gov.*

• *Brooksville bellflower, Cooley's water-willow, and Britton's beargrass:* Todd Mecklenborg, by mail at North Florida Ecological Services Field Office, U.S. Fish and Wildlife Service, 7915 Baymeadows Way, Suite 200, Jacksonville, FL 32256; by fax 904–731–3045, by phone at 904–731–3336, or by email at *northflorida@fws.gov.*

• *Elfin tree fern:* Angel Colon, by mail at the Caribbean Ecological Services Field Office, U.S. Fish and Wildlife Service, Road 301, Km. 5.1, P.O. Box 491, Boquerón, PR 00622; by fax at 787–851–7440; by phone at 787–851–7297; or by email at *caribbean_es@fws.gov.*

• *Aboriginal prickly-apple:* David Bender, by mail at South Florida Ecological Services Field Office, U.S. Fish and Wildlife Service, 1339 20th Street, Vero Beach, FL 32960; by fax 772–562–4288; by phone at 772–562–3909 extension 294; or by email at *SFESO_plant_5-year_reviews@fws.gov.*

• *White birds in a nest and Florida skullcap:* Vivian Negron-Ortiz, by mail at the Panama City Ecological Services Field Office, U.S. Fish and Wildlife Service, 1601 Balboa Ave., Panama City, FL 32405; by fax at 850–769–2177; by phone at 850–769–0552; or by email at *panamacity@fws.gov.*

• *Persistent trillium:* David Caldwell, by mail at Georgia Ecological Services Field Office, U.S. Fish and Wildlife Service (see contact information above).

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that the entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Availability of Status Reviews

All completed status reviews under the ESA are available via the Service website: *https://www.fws.gov/endangered/species/us-species.html.*

Authority

We publish this document under the authority of the Endangered Species Act (16 U.S.C. 1531 *et seq.*).

Dated: March 20, 2018.

Mike Oetker,

Acting Regional Director, Southeast Region.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–NER–FIIS–24967; PS.SNELA0076.00.1]

Minor Boundary Revision at Fire Island National Seashore

AGENCY: National Park Service, Interior.

ACTION: Notification of boundary revision.

SUMMARY: The boundary of Fire Island National Seashore is modified to include 0.23 acres of land, more or less. Fee simple interest in the parcel will be donated to the United States from the National Park Foundation. The property is located in Suffolk County, New York, immediately adjacent to the northwestern boundary of the William Floyd Estate on the mainland portion of Fire Island National Seashore.

DATES: The effective date of this boundary revision is May 7, 2018.

ADDRESSES: The map depicting this boundary revision is available for inspection at the following locations: National Park Service, Land Resources Program Center, Northeast Region, 200 Chestnut Street, Philadelphia, PA 19106–2878, and National Park Service, Department of the Interior, 1849 C Street NW, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Deputy Realty Officer Jennifer Cherry, National Park Service, Land Resources Program Center, Northeast Region, New England Office, 115 John Street, 5th Floor, Lowell, MA 01852, telephone (978) 970–5260.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, pursuant to 54 U.S.C. 100506(c), the boundary of Fire Island National Seashore is modified to include one adjoining tract containing 0.23 acres of land, more or less. The boundary revision is depicted on Map No. 615/137,241, dated March 2017.

Specifically, 54 U.S.C. 100506(c) provides that, after notifying the Committee on Natural Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, the Secretary of the Interior is authorized to make this boundary revision upon publication of notice in the **Federal Register**. The Committees have been notified of this boundary revision. This boundary revision and subsequent acquisition will ensure preservation and protection of the Park's historic and natural resources.

Dated: March 5, 2018.

Debbie Conway,

Acting Regional Director, Northeast Region.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

Public Availability of FY 2016 Service Contracts Inventory Analysis, and Planned Analysis of FY 2017 Service Contracts Inventory

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: In accordance with Section 743 of Division C of the Consolidated Appropriations Act of 2010, the U.S. International Trade Commission is publishing this notice to advise the public of the availability of the FY 2016 Service Contracts Inventory Analysis, and Planned Analysis of FY 2017 Service Contracts Inventory. The FY 2016 inventory analysis provides information on specific service contract actions that were analyzed as part of the FY 2016 inventory. The 2016 inventory provides information on service contract actions over $25,000, which were made in FY 2016. The inventory information

is organized by function to show how contracted resources are distributed throughout the agency. The inventory has been developed in accordance with guidance issued on November 5, 2010 and December 19, 2011, by the Office of Management and Budget's Office of Federal Procurement Policy (OFPP). OFPP's guidance is available at *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/procurement/memo/service-contract-inventory-guidance.pdf.*

The FY 2017 inventory planned analysis provides information on which functional areas will be reviewed by the agency. The United States International Trade Commission has posted its FY 2016 inventory, FY 2017 planned analysis at the following link: *https://www.usitc.gov/procurement.htm*.

FOR FURTHER INFORMATION CONTACT: Questions regarding the service contract inventory should be directed to Debra Bridge, U.S. International Trade Commission, Office of Procurement, 500 E Street SW, Washington, DC 20436; *debra.bridge@usitc.gov;* (202) 205–2004.

By order of the Commission.

Issued: May 2, 2018.

Katherine Hiner,

Supervisory Attorney.

[FR Doc. 2018–09673 Filed 5–4–18; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Blood Cholesterol Testing Strips and Associated Systems Containing the Same, DN 3313;* the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov,* and will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000.

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at *https://www.usitc.gov*. The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Polymer Technology Systems, Inc. on April 30, 2018. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain blood cholesterol testing strips and associated systems containing the same. The complaint names as respondents: ACON Laboratories, Inc. of San Diego, CA; and ACON Biotech (Hangzhou) Co., Ltd of China. The complainant requests that the Commission issue an exclusion order, cease and desist orders, and impose a bond upon respondents' alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments, not to exceed five (5) pages in length, inclusive of attachments, on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to § 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the docket number (Docket No. 3313) in a prominent place on the cover page and/or the first page. (*See* Handbook for Electonic Filing Procedures, Electronic Filing Procedures [1]). Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be

[1] Handbook for Electronic Filing Procedures: *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf.*

treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel,[2] solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[3]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: May 1, 2018.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2018–09569 Filed 5–4–18; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Blow-Molded Bag-In-Container Devices, Associated Components, and End Products Containing or Using Same, DN 3312;* the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov,* and will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000.

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at *https://www.usitc.gov* . The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Anheuser-Busch InBev S.A. and Anheuser-Busch, LLC on April 30, 2018. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain blow-molded bag-in-container devices, associated components, and end products containing or using same. The complaint names as respondents: Heineken International B.V. of the Netherlands; Heineken N.V. of the Netherlands; Heineken USA Inc. of White Plains, NY; Heineken Holding N.V. of the Netherlands; Heineken Beer Systems B.V. of the Netherlands; Heineken Brouwerijen B.V. of the Netherlands; Heineken Export Americas B.V. of the Netherlands; and Heineken Global Procurement B.V. of the Netherlands. The complainant requests that the Commission issue an exclusion order, cease and desist orders, and impose a bond upon respondents' alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments, not to exceed five (5) pages in length, inclusive of attachments, on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to § 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the docket number (''Docket No. 3312) in a prominent place on the cover page and/or the first page. (*See* Handbook for Electonic Filing Procedures, Electronic Filing Procedures [1]). Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full

[2] All contract personnel will sign appropriate nondisclosure agreements.

[3] Electronic Document Information System (EDIS): *https://edis.usitc.gov.*

[1] Handbook for Electronic Filing Procedures: *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf.*

statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel,[2] solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[3]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: May 1, 2018.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (OJP) Docket No. 1745]

Meeting of the Global Justice Information Sharing Initiative Federal Advisory Committee

AGENCY: Office of Justice Programs (OJP), Justice.

ACTION: Notice of meeting.

SUMMARY: This is an announcement of a meeting of the Global Justice Information Sharing Initiative (Global) Federal Advisory Committee (GAC) to discuss the Global Initiative, as described at *www.it.ojp.gov/global.*

DATES: The meeting will take place on Wednesday, August 29, 2018, from 9:00 a.m. to 4:00 p.m. ET.

ADDRESSES: The meeting will take place at the Office of Justice Programs offices (in the Main Conference Room), 810 7th Street, Washington, DC 20531; Phone: (202) 514–2000 [*Note:* this is not a toll-free number].

FOR FURTHER INFORMATION CONTACT: Tracey Trautman, Global Designated Federal Employee (DFE), Bureau of Justice Assistance, Office of Justice Programs, 810 7th Street, Washington, DC 20531; Phone (202) 305–1491 [*Note:* this is not a toll-free number]; Email: *tracey.trautman@ojp.usdoj.gov.*

SUPPLEMENTARY INFORMATION: This meeting is open to the public. Due to security measures, however, members of the public who wish to attend this meeting must register with Ms. Tracey Trautman at the above address at least (7) days in advance of the meeting. Registrations will be accepted on a space available basis. Access to the meeting will not be allowed without registration. All attendees will be required to sign in at the meeting registration desk. Please bring photo identification and allow extra time prior to the meeting. Anyone requiring special accommodations should notify Ms. Trautman at least seven (7) days in advance of the meeting.

Purpose: The GAC will act as the focal point for justice information systems integration activities in order to facilitate the coordination of technical, funding, and legislative strategies in support of the Administration's justice priorities.

The GAC will guide and monitor the development of the Global information sharing concept. It will advise the Assistant Attorney General, OJP; the Attorney General; the President (through the Attorney General); and local, state, tribal, and federal policymakers in the executive, legislative, and judicial branches. The GAC will also advocate for strategies for accomplishing a Global information sharing capability.

Interested persons whose registrations have been accepted may be permitted to participate in the discussions at the discretion of the meeting chairman and with approval of the DFE.

Tracey Trautman,

Global DFE, Deputy Director, Bureau of Justice Assistance Office of Justice Programs, U.S. Department of Justice.

BILLING CODE 4410–18–M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 18–040]

Notice of Information Collection

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of information collection.

SUMMARY: The National Aeronautics and Space Administration, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public to take this opportunity to comment on the ''Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery'' for approval under the Paperwork Reduction Act (PRA). This collection was developed as part of a Federal Government-wide effort to streamline the process for seeking feedback from the public on service delivery. This notice announces our intent to submit this collection to OMB for approval and solicits comments on specific aspects for the proposed information collection,

DATES: All comments should be submitted within 60 calendar days from the date of this publication.

ADDRESSES: All comments should be addressed to Lori Parker, National Aeronautics and Space Administration, 300 E Street SW, Washington, DC 20546–0001.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Lori Parker, NASA Clearance Officer, NASA Headquarters, 300 E Street SW, JF0000, Washington, DC 20546, (202) 358–1351.

SUPPLEMENTARY INFORMATION:

I. Abstract

The proposed information collection activity provides a means to garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield

[2] All contract personnel will sign appropriate nondisclosure agreements.

[3] Electronic Document Information System (EDIS): *https://edis.usitc.gov.*

quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

The solicitation of feedback will target areas such as: Timeliness, appropriateness, accuracy of information, courtesy, efficiency of service delivery, and resolution of issues with service delivery. Responses will be assessed to plan and inform efforts to improve or maintain the quality of service offered to the public. If this information is not collected, vital feedback from customers and stakeholders on the Agency's services will be unavailable.

II. Methods of Collection

The Agency will only submit a collection for approval under this generic clearance if it meets the following conditions:

The collections are voluntary;

The collections are low-burden for respondents (based on considerations of total burden hours, total number of respondents, or burden-hours per respondent) and are low-cost for both the respondents and the Federal Government;

The collections are non-controversial and do not raise issues of concern to other Federal agencies;

Any collection is targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future;

Information gathered will be used only internally for general service improvement and program management purposes and is not intended for release outside of the agency;

Information gathered will not be used for the purpose of substantially informing influential policy decisions; and

Information gathered will yield qualitative information; the collections will not be designed or expected to yield statistically reliable results or used as though the results are generalizable to the population of study.

Feedback collected under this generic clearance provides useful information, but it does not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: The target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior to fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

As a general matter, information collections will not result in any new system of records containing privacy information and will not ask questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.

III. Data

Title: Extension of the Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

OMB Number: 2700–0153.

Type of Review: Extension of approval for a collection of information.

Affected Public: Individuals and Households, Businesses and Organizations, State, Local, or Tribal Government.

Average Expected Annual Number of Activities: 60.

Average Number of Respondents per Activity: 300.

Annual Responses: 18,000.

Frequency of Responses: Once per request.

Average Minutes per Response: 5.

Burden Hours: 1,500.

IV. Request for Comments

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of NASA, including whether the information collected has practical utility; (2) the accuracy of NASA's estimate of the burden (including hours and cost) of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including automated collection techniques or the use of other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

Lori Parker,

NASA PRA Clearance Officer.

[FR Doc. 2018–09672 Filed 5–4–18; 8:45 am]

BILLING CODE 7510–13–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

[NARA–2018–037]

Records Schedules; Availability and Request for Comments

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice of availability of proposed records schedules; request for comments.

SUMMARY: The National Archives and Records Administration (NARA) publishes notice at least once monthly of certain Federal agency requests for records disposition authority (records schedules). Once approved by NARA, records schedules provide mandatory instructions on what happens to records when agencies no longer need them for current Government business. The records schedules authorize agencies to preserve records of continuing value in the National Archives of the United States and to destroy, after a specified period, records lacking administrative, legal, research, or other value. NARA publishes notice in the **Federal Register** for records schedules in which agencies propose to destroy records they no longer need to conduct agency business. NARA invites public comments on such records schedules.

DATES: NARA must receive requests for copies in writing by June 6, 2018. Once NARA finishes appraising the records, we will send you a copy of the schedule you requested. We usually prepare appraisal memoranda that contain additional information concerning the records covered by a proposed schedule. You may also request these. If you do, we will also provide them once we have completed the appraisal. You have 30 days after we send to you these requested documents in which to submit comments.

ADDRESSES: You may request a copy of any records schedule identified in this

notice by contacting Records Appraisal and Agency Assistance (ACRA) using one of the following means:

Mail: NARA (ACRA); 8601 Adelphi Road; College Park, MD 20740–6001.

Email: request.schedule@nara.gov.

FAX: 301–837–3698.

You must cite the control number, which appears in parentheses after the name of the agency that submitted the schedule, and a mailing address. If you would like an appraisal report, please include that in your request.

FOR FURTHER INFORMATION CONTACT: Margaret Hawkins, Director, by mail at Records Appraisal and Agency Assistance (ACRA); National Archives and Records Administration; 8601 Adelphi Road; College Park, MD 20740–6001, by phone at 301–837–1799, or by email at *request.schedule@nara.gov.*

SUPPLEMENTARY INFORMATION: NARA publishes notice in the **Federal Register** for records schedules they no longer need to conduct agency business. NARA invites public comments on such records schedules, as required by 44 U.S.C. 3303a(a).

Each year, Federal agencies create billions of records on paper, film, magnetic tape, and other media. To control this accumulation, agency records managers prepare schedules proposing records retention periods and submit these schedules for NARA's approval. These schedules provide for timely transfer into the National Archives of historically valuable records and authorize the agency to dispose of all other records after the agency no longer needs them to conduct its business. Some schedules are comprehensive and cover all the records of an agency or one of its major subdivisions. Most schedules, however, cover records of only one office or program or a few series of records. Many of these update previously approved schedules, and some include records proposed as permanent.

The schedules listed in this notice are media neutral unless otherwise specified. An item in a schedule is media neutral when an agency may apply the disposition instructions to records regardless of the medium in which it creates or maintains the records. Items included in schedules submitted to NARA on or after December 17, 2007, are media neutral unless the item is expressly limited to a specific medium. (See 36 CFR 1225.12(e).)

Agencies may not destroy Federal records without Archivist of the United States' approval. The Archivist approves destruction only after thoroughly considering the records' administrative use by the agency of origin, the rights of the Government and of private people directly affected by the Government's activities, and whether or not the records have historical or other value.

In addition to identifying the Federal agencies and any subdivisions requesting disposition authority, this notice lists the organizational unit(s) accumulating the records (or notes that the schedule has agency-wide applicability when schedules cover records that may be accumulated throughout an agency); provides the control number assigned to each schedule, the total number of schedule items, and the number of temporary items (the records proposed for destruction); and includes a brief description of the temporary records. The records schedule itself contains a full description of the records at the file unit level as well as their disposition. If NARA staff has prepared an appraisal memorandum for the schedule, it also includes information about the records. You may request additional information about the disposition process at the addresses above.

Schedules Pending

1. Department of Agriculture, Foreign Agricultural Service (DAA–0166–2018–0005, 2 items, 2 temporary items). Agricultural Attachés records documenting visitors programs, agency sponsored public representation functions, staffing information, and administrative records pertaining to established attaché posts.

2. Department of Agriculture, Foreign Agricultural Service (DAA–0166–2018–0015, 3 items, 3 temporary items). Budget records documenting budget formulation, estimates, and enactment. Information includes projections, allowances, preparation papers, justification statements, and supporting documentation.

3. Department of Agriculture, Foreign Agricultural Service (DAA–0166–2018–0017, 2 items, 2 temporary items). Agricultural import records documenting sugar and dairy import assistance to developing countries. Information includes applications, agreements, and related background information for participants in the two programs.

4. Department of Homeland Security, United States Citizenship and Immigration Services (DAA–0566–2018–0001, 2 items, 2 temporary items). Records of the Outstanding American by Choice initiative, which includes case files related to recognizing the contributions and achievements of individual naturalized U.S. citizens.

Laurence Brewer,

Chief Records Officer for the U.S. Government.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Arts

Arts Advisory Panel Meetings

AGENCY: National Endowment for the Arts, National Foundation on the Arts and Humanities.

ACTION: Notice of meetings.

SUMMARY: Pursuant to the Federal Advisory Committee Act, as amended, notice is hereby given that 16 meetings of the Arts Advisory Panel to the National Council on the Arts will be held by teleconference.

DATES: See the **SUPPLEMENTARY INFORMATION** section for individual meeting times and dates. All meetings are Eastern time and ending times are approximate:

ADDRESSES: National Endowment for the Arts, Constitution Center, 400 7th St. SW, Washington, DC 20506.

FOR FURTHER INFORMATION CONTACT: Further information with reference to these meetings can be obtained from Ms. Sherry P. Hale, Office of Guidelines & Panel Operations, National Endowment for the Arts, Washington, DC 20506; *hales@arts.gov,* or call 202/682–5696.

SUPPLEMENTARY INFORMATION: The closed portions of meetings are for the purpose of Panel review, discussion, evaluation, and recommendations on financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including information given in confidence to the agency. In accordance with the determination of the Chairman of July 5, 2016, these sessions will be closed to the public pursuant to subsection (c)(6) of section 552b of title 5, United States Code.

The upcoming meetings are:

Dance (review of applications): This meeting will be closed.

Date and time: June 4, 2018; 12:00 p.m. to 2:00 p.m.

Dance (review of applications): This meeting will be closed.

Date and time: June 4, 2018; 3:00 p.m. to 5:00 p.m.

Dance (review of applications): This meeting will be closed.

Date and time: June 5, 2018; 12:00 p.m. to 2:00 p.m.

Opera (review of applications): This meeting will be closed.

Date and time: June 6, 2018; 1:00 p.m. to 3:00 p.m.

Opera (review of applications): This meeting will be closed.

Date and time: June 7, 2018; 1:00 p.m. to 3:00 p.m.

Arts Education (review of applications): This meeting will be closed.

Date and time: June 12, 2018; 1:30 p.m. to 3:30 p.m.

Arts Education (review of applications): This meeting will be closed.

Date and time: June 14, 2018; 1:30 p.m. to 3:30 p.m.

Folk and Traditional Arts (review of applications): This meeting will be closed.

Date and time: June 18, 2018; 1:00 p.m. to 3:00 p.m.

Folk and Traditional Arts (review of applications): This meeting will be closed.

Date and time: June 19, 2018; 1:00 p.m. to 3:00 p.m.

Design (review of applications): This meeting will be closed.

Date and time: June 19, 2018; 1130 a.m. to 1:30 p.m.

BILLING CODE 7537–01–P

NATIONAL FOUNDATION OF THE ARTS AND THE HUMANITIES

Sunshine Act Meeting; National Museum and Library Services Board

AGENCY: Institute of Museum and Library Services (IMLS), NFAH.

ACTION: Notice of meeting.

SUMMARY: This notice sets forth the agenda of the forthcoming meeting of the National Museum and Library Services Board. This notice also describes the function of the Board. Notice of the meeting is required under the Sunshine in Government Act.

DATES: Wednesday, May 23, 2018 from 9:00 a.m. to 12:30 p.m. and 1:30 p.m. to 3:00 p.m. EST

ADDRESSES: The meeting will be held at the IMLS Offices, Panel Room, Suite 4000, 955 L'Enfant Plaza North SW, Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Katherine Maas, Program Specialist, Institute of Museum and Library Services, Suite 4000, 955 L'Enfant Plaza North SW, Washington, DC 20024. Telephone: (202) 653–4798.

SUPPLEMENTARY INFORMATION: The National Museum and Library Services Board, which advises the Director of the Institute of Museum and Library Services on general policies with respect to the duties, powers, and authority of the Institute relating to museum, library and information services, will meet on May 23, 2018. The Thirty-Seventh Meeting on Wednesday, May 23, 2018 from 9:00 a.m. to 12:30 p.m., is open to the public. The Executive Session, which will be held from 1:30–3:00 p.m., will be closed pursuant to subsections (c)(4) and (c)(9) of section 552b of Title 5, United States Code because the Board will consider information that may disclose: Trade secrets and commercial or financial information obtained from a person and privileged or confidential; and information the premature disclosure of which would be likely to significantly frustrate implementation of a proposed agency action.

If you need special accommodations due to a disability, please contact: Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024, Telephone: (202) 653–4796, at least seven (7) days prior to the meeting date.

Agenda

Thirty-Seventh Meeting of the National Museum and Library Service Board Meeting:

9:00 a.m.–12:30 p.m. Thirty-Seventh Meeting of the National Museum and Library Service Board Meeting:

I. Welcome and Director's Report
II. Approval of Minutes
III. Guest Speaker: Mayor Stephen K. Benjamin, Vice President, United States Conference of Mayors
IV. Financial and Operations Report
V. Office of Museum Services Report
VI. Office of Library Services Report
VII. Office of Digital and Information Strategy Report
VIII. Quest Speaker: Dr. Kathleen Annette, President, Blandin Foundation: Community Leadership Capacity-Building for Rural and Tribal
IX. Adjourn

(Open to the Public)

1:30 p.m. to 3:00 p.m. Executive Session

(Closed to the Public)

Dated: May 1, 2018.

Danette Hensley,

Office of the General Counsel.

NATIONAL SCIENCE FOUNDATION

Astronomy and Astrophysics Advisory Committee: Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–

463, as amended), the National Science Foundation (NSF) announces the following meeting:

NAME AND COMMITTEE CODE: Astronomy and Astrophysics Advisory Committee (#13883) (Teleconference).

DATE AND TIME: June 27, 2018; 12:00 p.m.–4:00 p.m.

PLACE: National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314, Room W2180 (Teleconference).

TYPE OF MEETING: Open.

Attendance information for the meeting will be forthcoming on the website: *https://www.nsf.gov/mps/ast/aaac.jsp.*

CONTACT PERSON: Dr. Christopher Davis, Program Director, Division of Astronomical Sciences, Suite W 9136, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Telephone: 703–292–4910.

PURPOSE OF MEETING: To provide advice and recommendations to the National Science Foundation (NSF), the National Aeronautics and Space Administration (NASA) and the U.S. Department of Energy (DOE) on issues within the field of astronomy and astrophysics that are of mutual interest and concern to the agencies.

AGENDA: To provide updates on Agency activities.

Dated: May 2, 2018.

NATIONAL SCIENCE FOUNDATION

Sunshine Act Meetings; National Science Board

The National Science Board, pursuant to NSF regulations (45 CFR part 614), the National Science Foundation Act, as amended, (42 U.S.C. 1862n–5), and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice of a revision to an announcement of meetings for the transaction of National Science Board business.

FEDERAL REGISTER CITATION OF PREVIOUS ANNOUNCEMENT: 83 FR 18351–53, published on April 26, 2018.

PREVIOUSLY ANNOUNCED TIME AND DATE OF THE MEETINGS:

Committee on Awards and Facilities (A&F)

Wednesday, May 2, 2018

Closed session: 2:00–4:00 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- Action Item: Ocean Observatories Initiative (OOI) Operations and Management
- Information Item: Geodesy Advancing Geosciences (GAGE) Facility and the Seismological Facilities for the Advancement of Geosciences (SAGE)
- Action Item: Laser Interferometer Gravitational-Wave Observatory (LIGO) Operations and Maintenance
- Information Item: Candidate MREFC-funded Upgrades of the ATLAS and CMS Detectors at the Large Hadron Collider

CHANGES IN THE MEETINGS:

Wednesday, May 2, 2018

Closed session: 2:00–4:00 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- Action Item: Ocean Observatories Initiative (OOI) Operations and Management
- Information Item: Geodesy Advancing Geosciences (GAGE) Facility and the Seismological Facilities for the Advancement of Geosciences (SAGE)

Thursday, May 3, 2018

Closed session: 8:00–8:30 a.m.

- Action Item: Laser Interferometer Gravitational-Wave Observatory (LIGO) Operations and Maintenance
- Information Item: Candidate MREFC-funded Upgrades of the ATLAS and CMS Detectors at the Large Hadron Collider

CONTACT PERSON FOR MORE INFORMATION: Brad Gutierrez, *bgutierr@nsf.gov,* 703/292–7000. Please refer to the National Science Board website for additional information. NUCLEAR REGULATORY COMMISSION

[NRC–2018–0001]

Sunshine Act Meeting Notice

DATE: Weeks of May 7, 14, 21, 28, June 4, 11, 2018.

PLACE: Commissioners' Conference Room, 11555 Rockville Pike, Rockville, Maryland.

STATUS: Public and Closed.

Week of May 7, 2018

Thursday, May 10, 2018

10:00 a.m. Briefing on Security Issues (Closed Ex. 1)

2:00 p.m. Briefing on Security Issues (Closed Ex. 1)

Week of May 14, 2018—Tentative

There are no meetings scheduled for the week of May 14, 2018.

Week of May 21, 2018—Tentative

There are no meetings scheduled for the week of May 21, 2018.

Week of May 28, 2018—Tentative

There are no meetings scheduled for the week of May 28, 2018.

Week of June 4, 2018—Tentative

Wednesday, June 6, 2018

2:00 p.m. Briefing on Human Capital and Equal Employment Opportunity (Public Meeting) (Contact: Sally Wilding: 301–287–0596)

Week of June 11, 2018—Tentative

There are no meetings scheduled for the week of June 11, 2018.

* * * * *

The schedule for Commission meetings is subject to change on short notice. For more information or to verify the status of meetings, contact Denise McGovern at 301–415–0681 or via email at *Denise.McGovern@nrc.gov.*

* * * * *

The NRC Commission Meeting Schedule can be found on the internet at: *http://www.nrc.gov/public-involve/public-meetings/schedule.html.*

* * * * *

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings, or need this meeting notice or the transcript or other information from the public meetings in another format (*e.g.,* braille, large print), please notify Kimberly Meyer-Chambers, NRC Disability Program Manager, at 301–287–0739, by videophone at 240–428–3217, or by email at *Kimberly.Meyer-Chambers@nrc.gov.* Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

* * * * *

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the

Secretary, Washington, DC 20555 (301–415–1969), or you may email *Patricia.Jimenez@nrc.gov or Wendy.Moore@nrc.gov.*

Dated: May 3, 2018.

Denise L. McGovern,

Policy Coordinator, Office of the Secretary.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2018–0006]

Information Collection: 10 CFR Part 95, Facility Security Clearance and Safeguarding of National Security Information and Restricted Data

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''10 CFR part 95, Facility Security Clearance and Safeguarding of National Security Information and Restricted Data.''

DATES: Submit comments by July 6, 2018. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods:

• *Federal Rulemaking website:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2018–0006. Address questions about NRC dockets to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

• *Mail comments to:* David C. Cullison, Office of the Chief Information Officer, Mail Stop: T–2 F43, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *INFOCOLLECTS.Resource@NRC.GOV.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2018–0006 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

• *Federal Rulemaking website:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2018–0006. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2018–0006 on this website.

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''*ADAMS Public Documents*'' and then select ''*Begin Web-based ADAMS Search.*'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The supporting statement is available in ADAMS under Accession No. ML17311A846.

• *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

• *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David C. Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *INFOCOLLECTS.Resource@NRC.GOV.*

B. Submitting Comments

Please include Docket ID NRC–2018–0006 in the subject line of your comment submission in order to ensure that the NRC is able to make your comment submission available to the public in this docket.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *http://www.regulations.gov* as well as enter the comment submissions into ADAMS, and the NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below.

1. *The title of the information collection:* 10 CFR part 95, ''Facility Security Clearance and Safeguarding of National Security Information and Restricted Data''.

2. *OMB approval number:* 3150–0047.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* NA.

5. *How often the collection is required or requested:* On occasion and every 5 years.

6. *Who will be required or asked to respond:* NRC-regulated facilities and their contractors who require access to, and possession of NRC classified information.

7. *The estimated number of annual responses:* 340.

8. *The estimated number of annual respondents:* 189.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 503.

10. *Abstract:* The NRC-regulated facilities and their contractors who are authorized to access and possess classified matter are required to provide information and maintain records to ensure an adequate level of protection is provided to NRC classified information and material.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?

2. Is the estimate of the burden of the information collection accurate?

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

Dated at Rockville, Maryland, this 1st day of May, 2018.

For the Nuclear Regulatory Commission.

David Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2018–0089]

Acceptance Sampling Procedures for Exempted and Generally Licensed Items Containing Byproduct Material

AGENCY: Nuclear Regulatory Commission.

ACTION: Regulatory guide; withdrawal.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is withdrawing Regulatory Guide (RG) 6.6, ''Acceptance Sampling Procedures for Exempted and Generally Licensed Items Containing Byproduct Material.'' RG 6.6 is being withdrawn because the NRC amended its regulations regarding acceptance sampling procedures for exempted and generally licensed items containing byproduct material.

DATES: The effective date of the withdrawal of RG 6.6 is May 7, 2018.

ADDRESSES: Please refer to Docket ID NRC–2018–0089 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

• *Federal Rulemaking website*: Go to *http://www.regulations.gov* and search for Docket ID NRC–2018–0089. Address questions about NRC dockets to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

• *NRC's Agencywide Documents Access and Management System (ADAMS)*: You may obtain publicly-available documents online in the ADAMS Public Documents collection at NRC Library at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''*ADAMS Public Documents*'' and then select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document. The basis for withdrawal is located at ADAMS Accession No. ML18057A304.

• *NRC's PDR*: You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Harriet Karagiannis, Office of Nuclear Regulatory Research, telephone: 301–415–2493: email: *Harriet.Karagiannis@nrc.gov* or Richard Struckmeyer, Office of Nuclear Material Safety and Safeguards, telephone: (301) 415–5477: email: *Richard.Struckmeyer@nrc.gov.* Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Background

Regulatory Guide 6.6 was published in June 1974 to provide guidance on meeting the requirements in § 32.110 of title 10 of the *Code of Federal Regulations* (10 CFR). The RG 6.6 describes a prescriptive methodology for determining whether a product should be accepted or rejected based on statistical sampling methods. The NRC is withdrawing RG 6.6 because in 2012, the regulations in part 32 of 10 CFR were amended to remove § 32.110 of 10 CFR (77 FR 43673; July 25, 2012). The amendment occurred because the Commission determined that the requirements for manufacturers or initial distributors of exempt and generally licensed products were in some cases overly prescriptive, particularly in the areas of prototype testing and acceptance sampling/quality control procedures. The new rule was intended to focus the regulations on performance rather than procedures. Therefore, the guidance contained in RG 6.6 became obsolete and RG 6.6 needs to be withdrawn.

II. General Considerations

The NRC is withdrawing RG 6.6 because it is no longer needed. Withdrawal of an RG means that the guide no longer provides useful information or has been superseded by other guidance, technological innovations, Congressional actions, or other events. The withdrawal of RG 6.6 does not alter any prior or existing NRC licensing approval or the acceptability of licensee commitments to RG 6.6. Although RG 6.6 is withdrawn, current licensees may continue to use it, and withdrawal does not affect any existing licenses or agreements. However, RG. 6.6 should not be used in future requests or applications for NRC licensing actions.

Dated at Rockville, Maryland, this 1st day of May, 2018.

For the Nuclear Regulatory Commission.

Thomas H. Boyce,

Chief, Regulatory Guidance and Generic Issues Branch, Division of Engineering, Office of Nuclear Regulatory Research.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83146; File No. SR–CboeBZX–2018–029]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Allow the Horizons Cadence Hedged U.S. Dividend Yield ETF, a Series of the Horizons ETF Trust I, To Hold Listed Options Contracts in a Manner That Does Not Comply With Rule 14.11(i), Managed Fund Shares

May 1, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 17, 2018, Cboe BZX Exchange, Inc. (''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a ''non-controversial'' proposed rule change pursuant to Section 19(b)(3)(A) of the Act[3] and Rule 19b–4(f)(6)(iii) thereunder,[4] which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A).

[4] 17 CFR 240.19b–4(f)(6)(iii).

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to allow the Horizons Cadence Hedged US Dividend Yield ETF (the ''Fund''), a series of the Horizons ETF Trust I (the ''Trust''), to hold listed options contracts in a manner that does not comply with Rule 14.11(i) (''Managed Fund Shares''). The shares of the Fund are referred to herein as the ''Shares.''

The text of the proposed rule change is available at the Exchange's website at *www.markets.cboe.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Fund is currently listed on the Exchange pursuant to the generic listing standards under Rule 14.11(i) governing Managed Fund Shares.[5] The Exchange proposes to continue listing and trading the Shares. The Shares would continue to comply with all of the generic listing standards with the exception of the requirement of Rule 14.11(i)(4)(C)(iv)(b) that prevents the aggregate gross notional value of listed derivatives based on any single underlying reference asset from exceeding 30% of the weight of the portfolio (including gross notional exposures) (the ''30% Restriction'').[6] [7]

The Shares are offered by the Trust, which was established as a Delaware statutory trust on May 17, 2012. The Trust is registered with the Commission as an open-end investment company and has filed a registration statement on behalf of the Fund on Form N–1A with the Commission.[8] The Fund's adviser, Horizons ETFs Management (US) LLC (the ''Adviser''), is not registered as a broker-dealer, but is affiliated with two broker-dealers. The Adviser represents that a fire wall exists and will be maintained between the respective personnel at the Adviser and affiliated broker-dealers with respect to access to information concerning the composition and/or changes to the Fund's portfolio. Personnel who make decisions on the Fund's portfolio composition are currently and shall continue to be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio. The Fund's sub-adviser, Cadence Capital Management LLC (the ''Sub-Adviser''), is not registered as a broker-dealer and is not affiliated with a broker-dealer. Sub-Adviser personnel who make decisions on the Fund's portfolio composition are currently and shall continue to be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio. In the event that (a) the Adviser or Sub-Adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer; or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer; the Adviser, Sub-Adviser, or such new adviser or sub-adviser will implement and maintain a fire wall with respect to its relevant personnel or such broker-dealer affiliate, as applicable, regarding access to information concerning the composition and/or changes to the Fund's portfolio, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio.

The Fund intends to qualify each year as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended.

Horizons Cadence Hedged US Dividend Yield ETF

The Fund seeks income and long-term growth of capital. In order to achieve its investment objective, under Normal Market Conditions,[9] the Fund will invest at least 80% of its assets in equity securities of U.S. exchange-listed companies that pay regular dividends (''U.S. Equities''). The Fund's holdings in U.S. Equities currently meet and will continue to meet the generic listing standards for U.S. Component Stocks in Rule 14.11(i)(4)(C)(i)(a). The Fund has the ability to buy and sell call and put options on the S&P 500 Index (''S&P 500 Index Options''). The S&P 500 Index is the index most correlated to the Fund's underlying equity holdings. The options overlay seeks to potentially provide a measure of downside protection and an additional component to the Fund's risk management. The options overlay is actively managed by the Adviser and will adapt to both changing market environments and shifts in the underlying equity holdings of the Fund, but is currently limited by the requirement under Rule 14.11(i)(4)(C)(iv)(b) that prevents the aggregate gross notional exposure of listed derivatives based on any single underlying reference asset from exceeding 30% of the weight of the portfolio (including gross notional exposures).

As noted above, Rule 14.11(i)(4)(C)(iv)(b) prevents the Fund from holding listed derivatives based on

[5] The Commission originally approved BZX Rule 14.11(i) in Securities Exchange Act Release No. 65225 (August 30, 2011), 76 FR 55148 (September 6, 2011) (SR–BATS–2011–018) and subsequently approved generic listing standards for Managed Fund Shares under Rule 14.11(i) in Securities Exchange Act Release No. 78396 (July 22, 2016), 81 FR 49698 (July 28, 2016) (SR–BATS–2015–100).

[6] Rule 14.11(i)(4)(C)(iv)(b) provides that ''the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets shall not exceed 65% of the weight of the portfolio (including gross notional exposures), and the aggregate gross notional value of listed derivatives based on any single underlying reference asset shall not exceed 30% of the weight of the portfolio (including gross notional exposures).'' The Exchange is proposing that the Fund be exempt only from the requirement of Rule 14.11(i)(4)(C)(iv)(b) that prevents the aggregate gross notional value of listed derivatives based on any single underlying reference asset from exceeding 30% of the weight of the portfolio (including gross notional exposures). The Fund will meet the requirement that the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets shall not exceed 65% of the weight of the portfolio (including gross notional exposures).

[7] The Exchange notes that this proposal is very similar to a previously approved proposal to list and trade a series of Managed Fund Shares on the Exchange with similar exposures to a single underlying reference asset and U.S. exchange-listed equity securities. *See* Securities Exchange Act Release No. 80529 (April 26, 2017), 82 FR 20506 (May 2, 2017) (SR–BatsBZX–2017–14).

[8] The Trust filed a post-effective amendment to the Registration Statement on February 9, 2018 (the ''Registration Statement''). *See* Registration Statement on Form N–1A for the Trust (File Nos. 333–183155 and 811–22732). The descriptions of the Fund and the Shares contained herein are based, in part, on information included in the Registration Statement. The Commission has issued an order granting certain exemptive relief to the Trust and affiliated persons under the Investment Company Act of 1940 (15 U.S.C. 80a-1). *See* Investment Company Act Release No. 30695 (September 24, 2013) (File No. 812–14178).

[9] The term ''Normal Market Conditions'' includes, but is not limited to, the absence of trading halts in the applicable financial markets generally; operational issues causing dissemination of inaccurate market information or system failures; or force majeure type events such as natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption, or any similar intervening circumstance.

any single underlying reference asset in excess of 30% of the weight of its portfolio (including gross notional exposures). As proposed, the Fund would hold up to 50% of the weight of its portfolio (including gross notional exposures) in S&P 500 Index Options, which are traded on Cboe Exchange, Inc. (''Cboe Options'').[10] The Fund will utilize S&P 500 Index Options to create a collar strategy through selling call options and buying protective put options. This may serve as a buffer to market selloffs, which may lower the volatility of the portfolio. Greater exposure to the S&P 500 through the options would allow the Fund the flexibility to fully implement its risk mitigation strategy. The Exchange notes that the Fund may also hold cash and Cash Equivalents [11] in compliance with Rule 14.11(i)(4)(C)(iii).

As noted above, the Fund's investment in U.S. Equities under Normal Market Conditions constitutes at least 80% of the Fund's assets and such holdings will meet the requirements for U.S. Component Stocks in Rule 14.11(i)(4)(C)(i)(a). In addition to such U.S. Equities holdings, the Fund may hold up to 20% of its assets in cash, Cash Equivalents, and the value of S&P 500 Index Options positions under Normal Market Conditions. The combination of U.S. Equities, cash, Cash Equivalents, and the cash value of S&P 500 Index Options will constitute the entirety of the Fund's holdings and the cash value of these holdings will be used to form the basis for these calculations. The Exchange notes that this is different than the calculation used to measure the Fund's holdings in S&P 500 Index Options as it relates to the Fund holding up to 50% of the weight of its portfolio, which, as noted above, is calculated using gross notional exposures gained through the S&P 500 Index Options in both the numerator and denominator, which is consistent with the derivatives exposure calculation under Rule 14.11(i)(4)(C)(iv). The Exchange represents that, except for the 30% Restriction in Rule 14.11(i)(4)(C)(iv)(b), the Fund's investments will continue to satisfy all of the generic listing standards under BZX Rule 14.11(i)(4)(C) and all other applicable requirements for Managed Fund Shares under Rule 14.11(i).

The Trust is required to comply with Rule 10A–3 under the Act for the initial and continued listing of the Shares of the Fund. In addition, the Exchange represents that the Shares of the Fund will continue to comply with all other requirements applicable to Managed Fund Shares, which include the dissemination of key information such as the Disclosed Portfolio,[12] Net Asset Value,[13] and the Intraday Indicative Value,[14] suspension of trading or removal,[15] trading halts,[16] surveillance,[17] minimum price variation for quoting and order entry,[18] the information circular,[19] and firewalls [20] as set forth in Exchange rules applicable to Managed Fund Shares and the orders approving such rules. Moreover, all of the U.S. Equities and S&P 500 Index Options held by the Fund will trade on markets that are a member of Intermarket Surveillance Group (''ISG'') or affiliated with a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.[21] All statements and representations made in this filing regarding the description of the portfolio or reference assets, limitations on portfolio holdings or reference assets, dissemination and availability of reference asset and intraday indicative values (as applicable), or the applicability of Exchange listing rules specified in this filing shall constitute continued listing requirements for the Shares. The Fund has represented to the Exchange that it will advise the Exchange of any failure by the Fund or Shares to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will surveil for compliance with the continued listing requirements. FINRA conducts certain cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures with respect to such Fund under Exchange Rule 14.12.

Availability of Information

As noted above, the Fund will comply with the requirements under the Rule 14.11(i) related to Disclosed Portfolio, NAV, and the intraday indicative value. Additionally, the intra-day, closing and settlement prices of exchange-traded portfolio assets, specifically the U.S. Equities and S&P 500 Index Options, will be readily available from the exchanges trading such securities or derivatives, as the case may be, automated quotation systems, published or other public sources, or online information services such as Bloomberg or Reuters. Quotation and last sale information for S&P 500 Index Options will be available via the Options Price Reporting Authority. Price information for Cash Equivalents will be available from major market data vendors. The Disclosed Portfolio will be available on the Fund's website (*www.horizonsetfs.com*) free of charge. The Fund's website will include a form of the prospectus for the Fund and additional information related to NAV and other applicable quantitative information. Information regarding market price and trading volume of the Shares will be continuously available throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume for the Shares will be published daily in the financial section of newspapers. Trading in the Shares may be halted for market conditions or for reasons that, in the view of the Exchange, make trading inadvisable. The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. The Exchange has appropriate rules to facilitate trading in the Shares during all trading sessions. The Exchange prohibits the distribution of material non-public information by

[10] The Commission has previously approved a series of Managed Fund Shares that can hold up to 60% of the weight of its portfolio in listed derivatives based on the S&P 500 Index as the only underlying reference asset. *See* Securities Exchange Act Release No. 82906 (March 20, 2018), 83 FR 12992 (March 26, 2018) (SR–CboeBZX–2017–012) (order approving the listing and trading of the LHA Market State Tactical U.S. Equity ETF).

[11] As defined in Exchange Rule 14.11(i)(4)(C)(iii)(b), Cash Equivalents are short-term instruments with maturities of less than three months, which includes only the following: (i) U.S. Government securities, including bills, notes, and bonds differing as to maturity and rates of interest, which are either issued or guaranteed by the U.S. Treasury or by U.S. Government agencies or instrumentalities; (ii) certificates of deposit issued against funds deposited in a bank or savings and loan association; (iii) bankers acceptances, which are short-term credit instruments used to finance commercial transactions; (iv) repurchase agreements and reverse repurchase agreements; (v) bank time deposits, which are monies kept on deposit with banks or savings and loan associations for a stated period of time at a fixed rate of interest; (vi) commercial paper, which are short-term unsecured promissory notes; and (vii) money market funds.

[12] *See* Rule 14.11(i)(4)(A)(ii) and 14.11(i)(4)(B)(ii).

[13] *See* Rule 14.11(i)(4)(A)(ii).

[14] *See* Rule 14.11(i)(4)(B)(i).

[15] *See* Rule 14.11(i)(4)(B)(iii).

[16] *See* Rule 14.11(i)(4)(B)(iv).

[17] *See* Rule 14.11(i)(2)(C).

[18] *See* Rule 14.11(i)(2)(B).

[19] *See* Rule 14.11(i)(6).

[20] *See* Rule 14.11(i)(7).

[21] For a list of the current members of ISG, *see www.isgportal.com*. The Exchange notes that not all components of the Disclosed Portfolio for the Fund may trade on markets that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

its employees. Quotation and last sale information for the Shares and U.S. Equities will be available via the CTA high-speed line.

2. Statutory Basis

The Exchange believes that the proposal is consistent with Section 6(b) of the Act [22] in general and Section 6(b)(5) of the Act [23] in particular in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest in that the Shares will meet each of the continued listing criteria in BZX Rule 14.11(i) with the exception of the 30% Restriction in Rule 14.11(i)(4)(C)(iv)(b), which requires that the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets shall not exceed 65% of the weight of the portfolio (including gross notional exposures), and the aggregate gross notional value of listed derivatives based on any single underlying reference asset shall not exceed 30% of the weight of the portfolio (including gross notional exposures).[24] The Exchange believes that the liquidity in the S&P 500 Index Options markets mitigates the concerns that Rule 14.11(i)(4)(C)(iv)(b) is intended to address and that such liquidity would prevent the Shares from being susceptible to manipulation.[25] Further, allowing the Fund to hold a greater portion of its portfolio in S&P 500 Index Options would mean that the Fund would not be required to use over-the-counter (''OTC'') derivatives if the Adviser deemed it necessary to get exposure in excess of the 30% Restriction in Rule 14.11(i)(4)(C)(iv)(b), which would reduce the Fund's operational burden by allowing the Fund to use listed options contracts to achieve its investment objective and would eliminate the counter-party risk associated with holding OTC derivative instruments. The Exchange further believes that the diversity, liquidity, and market cap of the securities underlying the S&P 500 Index are sufficient to protect against market manipulation of both the Fund's holdings and the Shares as it relates to the S&P 500 Index Options holdings.

The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of the Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws. All of the U.S. Equities and S&P 500 Index Options contracts held by the Fund will trade on markets that are a member of ISG or affiliated with a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. The Exchange may obtain information regarding trading in the Shares, U.S. Equities, and the S&P 500 Index Options held by the Fund via the ISG from other exchanges who are a member of ISG or affiliated with a member of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement.[26] The Exchange further notes that the Fund will meet and be subject to all other requirements of the generic listing rules and other applicable continued listing requirements for Managed Fund Shares under Rule 14.11(i), including those requirements regarding the dissemination of key information such as the Disclosed Portfolio, Net Asset Value, and the Intraday Indicative Value, suspension of trading or removal, trading halts, surveillance, minimum price variation for quoting and order entry, the information circular, and firewalls as set forth in Exchange rules applicable to Managed Fund Shares.

For the above reasons, the Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange notes that the proposed rule change, rather will facilitate the options strategy of an actively-managed exchange-traded product that will allow the Fund to better compete in the marketplace, thus enhancing competition among both market participants and listing venues, to the benefit of investors and the marketplace.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act [27] and Rule 19b–4(f)(6) thereunder.[28]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act [29] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [30] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change may become operative upon filing. The Commission notes that waiver of the operative delay would allow the Fund to hold up to 50% of the weight of its portfolio (including gross notional exposures) in S&P 500 Index Options without delay, and thus allow the Fund to fully implement its risk mitigation strategy without delay. The Commission notes that, other than the 30% Restriction with respect to S&P 500 Index Options, the Fund would continue to satisfy all of the generic listing standards under BZX Rule 14.11(i)(4)(C) and all other requirements applicable to Managed Fund Shares. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest.

[22] 15 U.S.C. 78f(b).

[23] 15 U.S.C. 78f(b)(5).

[24] As noted above, the Exchange is proposing that the Fund be exempt only from the 30% Restriction of Rule 14.11(i)(4)(C)(iv)(b) that prevents the aggregate gross notional value of listed derivatives based on any single underlying reference asset from exceeding 30% of the weight of the portfolio (including gross notional exposures). The Fund will continue to meet the requirement that the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets shall not exceed 65% of the weight of the portfolio (including gross notional exposures).

[25] In February 2018, the total notional volume traded was approximately $9.4 trillion in S&P 500 Index Options.

[26] *See* note 21, supra.

[27] 15 U.S.C. 78s(b)(3)(A).

[28] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[29] 17 CFR 240.19b–4(f)(6).

[30] 17 CFR 240.19b–4(f)(6)(iii).

Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[31]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–CboeBZX–2018–029 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR-CboeBZX–2018–029. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CboeBZX–2018–029 and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[32]

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011–01–P

[31] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[32] 17 CFR 200.30–3(a)(12).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83144; File No. SR–ISE–2018–38]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Add Pricing for P.M. Settled Options on Broad-Based Indexes With Nonstandard Expiration Dates

May 1, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 17, 2018, Nasdaq ISE, LLC (''ISE'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's Schedule of Fees to add pricing for P.M. settled options on broad-based indexes with nonstandard expiration dates, as described further below.

The text of the proposed rule change is available on the Exchange's website at *http://ise.cchwallstreet.com/,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange recently received approval to list P.M. settled options on broad-based indexes with nonstandard expiration dates on a twelve month pilot basis, beginning on February 1, 2018.[3] This pilot permits both Weekly Expirations and End of Month expirations similar to those of A.M. settled broad-based index options, except that the exercise settlement value will be based on the index value derived from the closing prices of component stocks.[4] The Exchange proposes to list these aforementioned options, commencing on April 19, 2018, with the symbol ''NDXP.''

The Exchange now proposes to adopt the index pricing applicable to NDX[5] today to NDXP. Accordingly, the Exchange proposes to add the following definition in its Schedule of Fees: '''NDX' will mean A.M. or P.M settled options on the full value of the Nasdaq 100® Index.'' Therefore, each reference to NDX pricing currently in the Schedule of Fees will likewise apply to NDXP under this proposal, as further discussed below. The Exchange initially filed the proposed pricing changes on April 9, 2018 (SR–ISE–2018–33). On April 17, 2018, the Exchange withdrew that filing and submitted this filing.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 82612 (February 1, 2018), 83 FR 5470 (February 7, 2018) (SR–ISE–2017–111).

[4] *Id.*

[5] NDX represents A.M. settled options on the full value of the Nasdaq 100® Index and is traded under the symbol NDX.

Section I: Transaction Fees for Index Options

Today, the Exchange charges a uniform transaction fee of $0.75 per contract for Non-Priority Customer [6] orders in NDX. These fees are assessed to all executions in NDX, including Non-Priority Customer Crossing Orders [7] in NDX. No transaction fee is assessed to Priority Customer [8] orders in NDX. The Exchange now proposes to apply these transaction fees to NDXP.

Section II: Priority Customer Complex Rebates

Today, the tiered Priority Customer Complex Rebates in Section II of the Schedule of Fees are not paid for NDX. As proposed, the Priority Customer Complex Rebates will likewise not be paid for NDXP.

Section IV.C: Non-Priority Customer License Surcharge

Today, the Exchange charges a $0.25 per contract license surcharge for all Non-Priority Customer orders in NDX, which applies to all executions in NDX, including executions of NDX orders that are routed to away markets in connection with the Options Order Protection and Locked/Crossed Market Plan (the ''Plan'').[9] The Exchange currently assesses a $0.25 per contract license surcharge as well as a route-out fee of $0.95 per contract for those Non-Priority Customer NDX orders that are executed on an away market in connection with the Plan. Under the Exchange's proposal, the $0.25 per contract Non-Priority Customer license surcharge for NDX will likewise apply to all executions in NDXP, including executions of NDXP orders that are routed to away markets in connection the Plan. For those NDXP orders that are routed away, the Exchange will also charge the $0.95 per contract route-out fee in addition to the $0.25 per contract license surcharge under this proposal.[10]

Section IV.E: Marketing Fee

By way of background, the Exchange administers a marketing fee program that helps Market Makers (*i.e.,* Primary Market Makers and Competitive Market Makers) establish marketing fee arrangements with Electronic Access Members (''EAMs'') in exchange for those EAMs routing some or all of their order flow to the Market Maker. This program is funded through a fee of $0.70 per contract, which is paid by Market Makers for each regular Priority Customer contract executed in Non-Select Symbols. This fee is currently waived for NDX orders. As proposed, the marketing fee will similarly be waived for NDXP orders.

Section IV.H: Crossing Fee Cap

Today, the Exchange caps Crossing Order fees at $90,000 per month per member on all Firm Proprietary and Non-Nasdaq ISE Market Maker transactions that are part of the originating or contra side of a Crossing Order. Surcharge fees charged by the Exchange for licensed products (*e.g.,* the $0.25 per contract license surcharge for NDX) and the fees for index options as set forth in Section I (*e.g.,* the $0.75 per contract fees for NDX) are currently excluded from the calculation of this monthly fee cap. As proposed, the license surcharge and fees for NDXP will likewise be excluded from the calculation of the monthly Crossing Fee Cap.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[11] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[12] in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. In general, the Exchange believes that its proposal is reasonable, equitable and not unfairly discriminatory because NDX and NDXP represent similar options on the same underlying Nasdaq 100® Index and the Exchange therefore desires to apply pricing for NDXP in a similar manner as NDX.

Section I: Transaction Fees for Index Options

The Exchange's proposal to assess the same transaction fees for NDXP as it currently assesses for NDX is reasonable as NDXP will be an exclusively listed product on Nasdaq, Inc.-owned exchanges only.[13] Similar to NDX, the Exchange seeks to recoup the operational costs for listing proprietary products.[14] Also, pricing by symbol is a common practice on many U.S. options exchanges as a means to incentivize order flow to be sent to an exchange for execution in particular products. Other options exchanges price by symbol.[15] Further, the Exchange notes that with its products, market participants are offered an opportunity to either transact NDXP or separately execute PowerShares QQQ Trust (''QQQ'') options.[16] Offering products such as QQQ provides market participants with a variety of choices in selecting the product they desire to utilize to transact the Nasdaq 100® Index.[17] When exchanges are able to recoup costs associated with offering proprietary products, it incentivizes growth and competition for the innovation of additional products.

Furthermore, the Exchange believes that its proposal to assess a $0.75 per contract transaction fee for Non-Priority Customer orders in NDXP and no fee for Priority Customer orders, in each case identical to NDX, is reasonable because the fees are in line with its affiliate, Phlx. Phlx assesses a $0.75 per contract electronic options transaction charge for all non-customer orders in NDX and NDXP, and does not assess an electronic

[6] Non-Priority Customer includes Market Maker, Non-Nasdaq ISE Market Maker, Firm Proprietary/Broker-Dealer, and Professional Customer.

[7] A ''Crossing Order'' is an order executed in the Exchange's Facilitation Mechanism, Solicited Order Mechanism, Price Improvement Mechanism (PIM) or submitted as a Qualified Contingent Cross order. For purposes of the Fee Schedule, orders executed in the Block Order Mechanism are also considered Crossing Orders.

[8] A ''Priority Customer'' is a person or entity that is not a broker/dealer in securities, and does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s), as defined in Nasdaq ISE Rule 100(a)(37A).

[9] The Exchange applies a route-out fee to executions of orders in all symbols that are routed to away markets in connection with the Plan. Specifically, Non-Priority Customer orders in Non-Select Symbols (*i.e.,* options overlying all symbols that are not in the Penny Program) pay a route-out fee of $0.95 per contract. NDX is a Non-Select Symbol. *See* Schedule of Fees, Section IV.F. *See also* Securities Exchange Act Release No. 80249 (March 15, 2017), 82 FR 14586 (March 21, 2017) (SR–ISE–2017–23) (establishing the $0.25 per contract Non-Priority Customer license surcharge for NDX, among other pricing changes); and Securities Exchange Act Release No. 81024 (June 26, 2017), 82 FR 29964 (June 30, 2017) (SR–ISE–2017–54) (applying the Non-Priority Customer license surcharge to orders in licensed products, including NDX, that are routed to away markets in connection with the Plan).

[10] NDXP is a Non-Select Symbol.

[11] 15 U.S.C. 78f(b).

[12] 15 U.S.C. 78f(b)(4) and (5).

[13] NDXP is also currently listed on ISE's affiliated exchange, Nasdaq PHLX LLC (''Phlx'').

[14] For example, in analyzing an obvious error, the Exchange would have additional data points available in establishing a theoretical price for a multiply listed option as compared to a proprietary product, which requires additional analysis and administrative time to comply with Exchange rules to resolve an obvious error.

[15] *See* pricing for Russell 2000 Index (''RUT'') on Chicago Board Options Exchange, Incorporated's (''CBOE'') Fees Schedule and on CBOE C2 Exchange, Inc.'s (''C2'') Fees Schedule.

[16] QQQ is an exchange-traded fund based on the Nasdaq 100® Index.

[17] QQQ options overlie the same index as NDX, namely the Nasdaq 100® Index. This relationship between QQQ options and NDX options is similar to the relationship between RUT and the iShares Russell 2000 Index (''IWM''), which is the ETF on RUT.

options transaction charge for customer orders in NDX and NDXP.[18]

The Exchange believes that the proposed transaction fees for Non-Priority Customer orders in NDXP are equitable and not unfairly discriminatory because the Exchange will uniformly assess the $0.75 per contract fee to all such market participants. The Exchange also believes that it is equitable and not unfairly discriminatory to assess no transaction fees to Priority Customer orders in NDXP because Priority Customer orders bring valuable liquidity to the market, which in turn benefits other market participants.

Section II: Priority Customer Complex Rebates

The Exchange believes that its proposal to eliminate the Priority Customer Complex Rebates for NDXP, similar to NDX, is reasonable because even after the elimination of the rebate, Priority Customer complex orders in NDXP will not be assessed any complex order transaction fees. By contrast, public customer executions on C2 in RUT are subject to a $0.15 per contract transaction fee.[19]

The Exchange's proposal to eliminate the Priority Customer Complex Rebates for NDXP is equitable and not unfairly discriminatory because the Exchange will eliminate the rebate for all similarly situated members.

Section IV.C: Non-Priority Customer License Surcharge

The Exchange believes that its proposal to charge a $0.25 per contract Non-Priority Customer license surcharge for NDXP, similar to NDX, is reasonable because it is in line with the options surcharge of $0.25 per contract for non-customer transactions in NDX and NDXP on Phlx,[20] and is lower than the $0.45 per contract surcharge C2 applies to non-public customer transactions in RUT.[21] The Exchange also believes that its proposal to apply the Non-Priority Customer license surcharge to all executions in NDXP orders, including those orders that are routed to away markets in connection with the Plan, is reasonable because it will offset the costs associated with executing orders on away markets as well as the operational costs associated with listing proprietary products.

Further, the Exchange believes that its proposal to charge the Non-Priority Customer license surcharge for all executions in NDXP orders, including those orders that are executed on away markets in connection with the Plan is equitable and not unfairly discriminatory because the Exchange will apply the same surcharge for all similarly situated members in a similar manner. The Exchange also believes that it is equitable and not unfairly discriminatory to not assess the surcharge to Priority Customer orders in NDXP because Priority Customer orders bring valuable liquidity to the market, which in turn benefits other market participants.

Section IV.E: Marketing Fee

The Exchange believes that its proposal to exclude NDXP from the $0.70 per contract marketing fee is reasonable because the purpose of the marketing fee is to attract order flow to the Exchange. Because NDXP will be an exclusively listed product, a marketing fee whose purpose is to attract order flow to the Exchange is no longer necessary for NDXP.

The Exchange's proposal to exclude NDXP from the marketing fee is equitable and not unfairly discriminatory because the Exchange will apply this exclusion to all similarly situated members.

Section IV.H: Crossing Fee Cap

The Exchange believes that its proposal to exclude the Non-Priority Customer license surcharge and transaction fees for NDXP from the calculation of the monthly Crossing Fee Cap is reasonable because NDXP will be an exclusively listed product. Similar to NDX, which is also excluded from the Crossing Fee Cap, the Exchange seeks to recoup the operational costs for listing proprietary products.

The Exchange further believes that the proposed exclusion of NDXP from the Crossing Fee Cap is equitable and not unfairly discriminatory because the Exchange will apply the exclusion all similarly situated members.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. All of the proposed changes are to adopt the current pricing applicable to NDX to NDXP, and the Exchange believes that the pricing for its proprietary products remains competitive with other options exchanges, as discussed above. In addition, the Exchange notes that with its products, market participants are offered an opportunity to either transact NDXP or separately execute QQQ options. Offering products such as QQQ provides market participants with a variety of choices in selecting the product they desire to utilize to transact the Nasdaq 100® Index.[22] Furthermore, the proposed pricing changes will apply uniformly to all similarly situated market participants, as discussed above. For the foregoing reasons, the Exchange does not believe that the proposed changes to apply the current pricing applicable to NDX to NDXP will impose an undue burden on competition.

The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[23] and Rule 19b–4(f)(2)[24] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ISE–2018–38 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2018–38. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2018–38 and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83145; File No. SR–NYSE–2018–16]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Make a Non-Substantive, Clarifying Change To Footnote 10 of Its Price List

May 1, 2018.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the ''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 19, 2018, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to make a non-substantive, clarifying change to footnote 10 of its Price List. The Exchange proposes to implement these changes to its Price List effective April 20, 2018. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to make a non-substantive, clarifying change to footnote 10 of its Price List.

The Exchange proposes to implement this change to its Price List effective April 20, 2018.

Proposed Rule Change

Footnote 10 of the current Price List provides the following definition of ''last modified'' in connection with fees for Discretionary e-Quotes (''d-Quotes'') differentiated by time of entry (or last modification) above the first 750,000 average daily volume (''ADV'') of aggregate executions at the close based on the time of d-Quote entry:

> As used herein, ''last modified'' means the later of the order's entry time or the final modification or cancellation time for any d-Quote order with the same broker badge, entering firm mnemonic, symbol, and side.

The Exchange proposes a non-substantive change to clarify that the final modification or cancellation time in the second clause relates to d-Quotes designated for the closing auction.[4]

To effect this change, the Exchange would add the phrase ''designated for the close'' following ''d-Quote order.''

* * * * *

The proposed changes are not otherwise intended to address any other issues, and the Exchange is not aware of any problems that member organizations would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[5] in general, and furthers the objectives of Section 6(b)(4) of the Act[6] in that it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers, and Section 6(b)(5) of the Act[7] in that it is designed to prevent fraudulent and manipulative

[7] 15 U.S.C. 78f(b)(5).

acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to, and perfect the mechanisms of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed non-substantive change would remove impediments to, and perfect the mechanisms of, a free and open market and a national market system and, in general, protect investors and the public interest because they are designed to provide greater specificity and clarity to the Price List, thereby removing impediments to and perfecting the mechanism of a free and open market and a national market system, and, in general, protecting investors and the public interest. The proposed change to footnote 10 would not alter the application of any fees or rebates on the Price List. As such, the proposed changes would foster cooperation and coordination with persons engaged in facilitating transactions in securities and would remove impediments to and perfect the mechanism of a free and open market and a national exchange system. In particular, the Exchange believes that the proposed change would provide greater clarity to members and member organizations and the public regarding the Exchange's Rules. It is in the public interest for rules to be accurate and concise so as to eliminate the potential for confusion.

For the foregoing reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[8] the Exchange believes that the proposed rule change would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the proposed changes will have no impact on competition as they are not designed to address any competitive issues but rather are designed to make non-substantive technical corrections and update the Exchange's Price List.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)[9] of the Act and subparagraph (f)(2) of Rule 19b–4[10] thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[11] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSE–2018–16 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2018–16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSE–2018–16 and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[12]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83142; File No. SR–NASDAQ–2018–032]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Exchange-Traded Managed Fund Shares of the Gabelli Pet Parent Fund Under Nasdaq Rule 5745

May 1, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 18, 2018, The Nasdaq Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade under Nasdaq Rule 5745 (Exchange-Traded Managed Fund Shares) the common shares (''Shares'') of the exchange-traded managed fund described herein (the ''Fund'').[3]

The text of the proposed rule change is available on the Exchange's website at *http://nasdaq.cchwallstreet.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to list and trade the Shares of the Fund under Nasdaq Rule 5745, which governs the listing and trading of exchange-traded managed fund shares, as defined in Nasdaq Rule 5745(c)(1), on the Exchange.[4] The Fund listed below is registered with the Commission as an open-end investment company and has filed a registration statement on Form N–1A (''Registration Statement'') with the Commission. The Fund is a series of the Gabelli NextShares™ Trust (the ''Trust'') and will be advised by an investment adviser registered under the Investment Advisers Act of 1940 (''Adviser''), as described below. The Fund will be actively managed and will pursue the principal investment strategy noted below.[5]

Gabelli NextShares™ Trust

The Trust is registered with the Commission as an open-end investment company and has filed a Registration Statement with the Commission.[6] The following Fund is a series of the Trust.[7]

Gabelli Funds, LLC will be the Adviser to the Fund. The Adviser is not a registered broker-dealer, although it is affiliated with a broker-dealer. Gabelli Funds, LLC will also act as administrator to the Fund. The Adviser has implemented and will maintain a firewall with respect to its affiliated broker-dealer regarding access to information concerning the composition of and/or changes to the Fund's portfolio.[8] In addition, personnel who make decisions on the Fund's portfolio composition must be subject to procedures designed to prevent the use and dissemination of material, non-public information regarding the open-end fund's portfolio.

In the event that (a) the Adviser registers as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or a sub-adviser to the Fund is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement and maintain a firewall with respect to its relevant personnel and/or such broker-dealer affiliate, if applicable, regarding access to information concerning the composition of and/or changes to the relevant Fund's portfolio and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio. G.distributors, LLC, will be the principal underwriter and distributor of the Fund's Shares. The Bank of New York Mellon will act as custodian and transfer agent. BNY Mellon Investment Servicing (US) Inc. will act as the sub-administrator to the Fund. Interactive Data Pricing and Reference Data, Inc. will be the IIV calculator to the Fund.

The Fund will be actively managed and will pursue the principal investment strategy described below.[9]

1. Gabelli Pet Parent Fund™—Companion Pets, Their Parents, and The Ecosystems (the ''Gabelli Pet Parent Fund'')

The Gabelli Pet Parent Fund seeks to provide capital appreciation. Under normal market conditions, the Gabelli Pet Parent Fund invests at least 80% of its net assets, plus borrowings for investment purposes, in common and preferred shares of publicly traded domestic and foreign companies of all capitalization ranges in the pet industry. The pet industry includes companies that offer services, support, and products for pets and pet parents including, without limitation, the following specific sectors: Food, healthcare, veterinary services, pharmaceuticals, wellness, nutrition, equipment, medical and dental supplies and services, recreation and entertainment, agriculture, infrastructure related to parks, toys and games, exercise, consumer products that support these sectors, and any other sector which supports the well-being of pets and pet parents.

Creations and Redemptions of Shares

Shares will be issued and redeemed on a daily basis for the Fund at the next-

[3] Except for the specific Fund information set forth below, this rule filing conforms to the rule filing, as modified by amendments 1 and 2 thereto, relating to the listing and trading on Nasdaq of the shares of 18 series of the Eaton Vance ETMF Trust and the Eaton Vance ETMF Trust II, as approved by the Commission in Securities Exchange Act Release No. 75499 (Jul. 21, 2015) (SR–NASDAQ–2015–036) and to the rule filing, as modified by amendment 1 thereto, relating to the listing and trading on Nasdaq of the shares of 5 series of the Gabelli NextShares Trust, as approved by the Commission in Securities Exchange Act Release No. 79377 (Nov. 22, 2016) (SR–NASDAQ–2016–134).

[4] The Commission approved Nasdaq Rule 5745 in Securities Exchange Act Release No. 34–73562 (Nov. 7, 2014), 79 FR 68309 (Nov. 14, 2014) (SR–NASDAQ–2014–020).

[5] Additional information regarding the Fund will be available on one of two free public websites (*www.gabelli.com* or *www.nextshares.com,* as indicated more fully below), as well as in the Registration Statement for the Fund.

[6] *See* Registration Statement on Form N–1A for the Trust dated April 4, 2018 (File Nos. 333–211881 and 811–23160). The descriptions of the Fund and the Shares contained herein conform to the Registration Statement.

[7] The Commission has issued an order granting the Trust and certain affiliates exemptive relief under the Investment Company Act. *See* Investment Company Act Release No. 31608 (May 19, 2015) (File No. 812–14438).

[8] An investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 (the ''Advisers Act''). As a result, the Adviser and its related personnel are subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violation, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above.

[9] *See* footnote 5.

determined net asset value (''NAV'')[10] in specified blocks of Shares called ''Creation Units.'' A Creation Unit will consist of at least 25,000 Shares. Creation Units may be purchased and redeemed by or through ''Authorized Participants.''[11] Purchases and sales of Shares in amounts less than a Creation Unit may be effected only in the secondary market, as described below, and not directly with the Fund.

The creation and redemption process for Funds [sic] may be effected ''in kind,'' in cash, or in a combination of securities and cash. Creation ''in kind'' means that an Authorized Participant—usually a brokerage house or large institutional investor— purchases the Creation Unit with a basket of securities equal in value to the aggregate NAV of the Shares in the Creation Unit. When an Authorized Participant redeems a Creation Unit in kind, it receives a basket of securities equal in value to the aggregate NAV of the Shares in the Creation Unit.[12]

Composition File

As defined in Nasdaq Rule 5745(c)(3), the Composition File is the specified portfolio of securities and/or cash that the Fund will accept as a deposit in issuing a Creation Unit of Shares, and the specified portfolio of securities and/or cash that the Fund will deliver in a redemption of a Creation Unit of Shares. The Composition File will be disseminated through the NSCC once each business day before the open of trading in Shares on such day and also will be made available to the public each day on a free website.[13] Because the Fund seeks to preserve the confidentiality of its current portfolio trading program, the Fund's Composition File generally will not be a pro rata reflection of the Fund's investment positions. Each security included in the Composition File will be a current holding of the Fund, but the Composition File generally will not include all of the securities in the Fund's portfolio or match the weightings of the included securities in the portfolio. Securities that the Adviser is in the process of acquiring for the Fund generally will not be represented in the Fund's Composition File until their purchase has been completed. Similarly, securities that are held in the Fund's portfolio but in the process of being sold may not be removed from its Composition File until the sale program is substantially completed. When creating and redeeming Shares in kind, the Fund will use cash amounts to supplement the in-kind transactions to the extent necessary to ensure that Creation Units are purchased and redeemed at NAV. The Composition File also may consist entirely of cash, in which case it will not include any of the securities in the Fund's portfolio.[14]

Transaction Fees

All persons purchasing or redeeming Creation Units of the Fund are expected to incur a transaction fee to cover the estimated cost to that Fund of processing the transaction, including the costs of clearance and settlement charged to it by NSCC or DTC, and the estimated trading costs (*i.e.,* brokerage commissions, bid-ask spread, and market impact) to be incurred in converting the Composition File to or from the desired portfolio holdings. The transaction fee is determined daily and will be limited to amounts determined by the Adviser to be appropriate to defray the expenses that the Fund incurs in connection with the purchase or redemption of Creation Units.

The purpose of transaction fees is to protect the Fund's existing shareholders from the dilutive costs associated with the purchase and redemption of Creation Units. Transaction fees will differ among funds and may vary over time for a given fund depending on the estimated trading costs for its portfolio positions and Composition File, processing costs and other considerations. Funds that specify greater amounts of cash in their Composition File may impose higher transaction fees.

In addition, funds that include in their Composition File instruments that clear through DTC may impose higher transaction fees than funds with a Composition File consisting solely of instruments that clear through NSCC, because DTC may charge more than NSCC in connection with Creation Unit transactions.[15] The transaction fees applicable to the Fund's purchases and redemptions on a given business day will be disseminated through the NSCC prior to the open of market trading on that day and also will be made available to the public each day on a free website.[16] In all cases, the transaction fees will be limited in accordance with the requirements of the Commission applicable to open-end management investment companies offering redeemable securities.

NAV-Based Trading

Because Shares will be listed and traded on the Exchange, Shares will be available for purchase and sale on an intraday basis. Shares will be purchased and sold in the secondary market at prices directly linked to the Fund's next-determined NAV using a new trading protocol called ''NAV-Based Trading.''[17] All bids, offers, and execution prices of Shares will be expressed as a premium/discount (which may be zero) to the Fund's next-determined NAV (*e.g.,* NAV-$0.01, NAV+$0.01). The Fund's NAV will be determined each business day, normally

[10] As with other registered open-end investment companies, NAV generally will be calculated daily Monday through Friday as of the close of regular trading on the New York Stock Exchange, normally 4:00 p.m. Eastern Time (''E.T.''). NAV will be calculated by dividing the Fund's net asset value by the number of Shares outstanding. Information regarding the valuation of investments in calculating the Fund's NAV will be contained in the Registration Statement for its Shares.

[11] ''Authorized Participants'' will be either: (1) ''participating parties,'' *i.e.,* brokers or other participants in the Continuous Net Settlement System (''CNS System'') of the National Securities Clearing Corporation (''NSCC''), a clearing agency registered with the Commission and affiliated with the Depository Trust Company (''DTC''), or (2) DTC participants, which in either case have executed participant agreements with the Fund's distributor and transfer agent regarding the creation and redemption of Creation Units. Investors will not have to be Authorized Participants in order to transact in Creation Units, but must place an order through and make appropriate arrangements with an Authorized Participant for such transactions.

[12] In compliance with Nasdaq Rule 5745(b)(5), which applies to Shares based on an international or global portfolio, the Trust's application for exemptive relief under the Investment Company Act states that the Fund will comply with the federal securities laws in accepting securities for deposits and satisfying redemptions with securities, including that the securities accepted for deposits and the securities used to satisfy redemption requests are sold in transactions that would be exempt from registration under the Securities Act of 1933, as amended (15 U.S.C. 77a).

[13] The free website containing the Composition File will be *www.nextshares.com.*

[14] In determining whether the Fund will issue or redeem Creation Units entirely on a cash basis, the key consideration will be the benefit that would accrue to the Fund and its investors. For instance, in bond transactions, the Adviser may be able to obtain better execution for the Fund than Authorized Participants because of the Adviser's size, experience and potentially stronger relationships in the fixed-income markets.

[15] Authorized Participants that participate in the CNS System of the NSCC are expected to be able to use the enhanced NSCC/CNS process for effecting in-kind purchases and redemptions of ETFs (the ''NSCC Process'') to purchase and redeem Creation Units of the Fund that limit the composition of their baskets to include only NSCC Process-eligible instruments (generally domestic equity securities and cash). Because the NSCC Process is generally more efficient than the DTC clearing process, NSCC is likely to charge the Fund less than DTC to settle purchases and redemptions of Creation Units.

[16] The free website will be *www.nextshares.com.*

[17] Aspects of NAV-Based Trading are protected intellectual property subject to issued and pending U.S. patents held by NextShares Solutions LLC (''NextShares Solutions''), a wholly owned subsidiary of Eaton Vance Corp. Nasdaq has entered into a license agreement with NextShares Solutions to allow for NAV-Based Trading on the Exchange of exchange-traded managed funds that have themselves entered into license agreements with NextShares Solutions.

as of 4:00 p.m., E.T. Trade executions will be binding at the time orders are matched on Nasdaq's facilities, with the transaction prices contingent upon the determination of NAV.

Trading Premiums and Discounts

Bid and offer prices for Shares will be quoted throughout the day relative to NAV. The premium or discount to NAV at which Share prices are quoted and transactions are executed will vary depending on market factors, including the balance of supply and demand for Shares among investors, transaction fees, and other costs in connection with creating and redeeming Creation Units of Shares, the cost and availability of borrowing Shares, competition among market makers, the Share inventory positions and inventory strategies of market makers, the profitability requirements and business objectives of market makers, and the volume of Share trading. Reflecting such market factors, prices for Shares in the secondary market may be above, at or below NAV. Funds with higher transaction fees may trade at wider premiums or discounts to NAV than other funds with lower transaction fees, reflecting the added costs to market makers of managing their Share inventory positions through purchases and redemptions of Creation Units.

Because making markets in Shares will be simple to manage and low risk, competition among market makers seeking to earn reliable, low-risk profits should enable the Shares to routinely trade at tight bid-ask spreads and narrow premiums/discounts to NAV. As noted below, the Fund will maintain a public website that will be updated on a daily basis to show current and historical trading spreads and premiums/discounts of Shares trading in the secondary market.[18]

Transmitting and Processing Orders

Member firms will utilize certain existing order types and interfaces to transmit Share bids and offers to Nasdaq, which will process Share trades like trades in shares of other listed securities.[19] In the systems used to transmit and process transactions in Shares, the Fund's next-determined NAV will be represented by a proxy price (*e.g.,* 100.00) and a premium/discount of a stated amount to the next-determined NAV to be represented by the same increment/decrement from the proxy price used to denote NAV (*e.g.,* NAV–$0.01 would be represented as 99.99; NAV+$0.01 as 100.01).

To avoid potential investor confusion, Nasdaq will work with member firms and providers of market data services to seek to ensure that representations of intraday bids, offers, and execution prices of Shares that are made available to the investing public follow the ''NAV–$0.01/NAV+$0.01'' (or similar) display format. All Shares listed on the Exchange will have a unique identifier associated with their ticker symbols, which would indicate that the Shares are traded using NAV-Based Trading. Nasdaq makes available to member firms and market data services certain proprietary data feeds that are designed to supplement the market information disseminated through the consolidated tape (''Consolidated Tape'').

Specifically, the Exchange will use the Nasdaq Basic and Nasdaq Last Sale data feeds to disseminate intraday price and quote data for Shares in real time in the ''NAV–$0.01/NAV+$0.01'' (or similar) display format. Member firms could use the Nasdaq Basic and Nasdaq Last Sale data feeds to source intraday Share prices for presentation to the investing public in the ''NAV–$0.01/NAV+$0.01'' (or similar) display format.

Alternatively, member firms could source intraday Share prices in proxy price format from the Consolidated Tape and other Nasdaq data feeds (*e.g.,* Nasdaq TotalView and Nasdaq Level 2) and use a simple algorithm to convert prices into the ''NAV–$0.01/NAV+$0.01'' (or similar) display format. As noted below, prior to the commencement of trading in the Fund, the Exchange will inform its members in an Information Circular of the identities of the specific Nasdaq data feeds from which intraday Share prices in proxy price format may be obtained.

Intraday Reporting of Quotes and Trades

All bids and offers for Shares and all Share trade executions will be reported intraday in real time by the Exchange to the Consolidated Tape[20] and separately disseminated to member firms and market data services through the Exchange data feeds listed above. The Exchange will also provide the member firms participating in each Share trade with a contemporaneous notice of trade execution, indicating the number of Shares bought or sold and the executed premium/discount to NAV.[21]

Final Trade Pricing, Reporting, and Settlement

All executed Share trades will be recorded and stored intraday by Nasdaq to await the calculation of the Fund's end-of- day NAV and the determination of final trade pricing. After the Fund's NAV is calculated and provided to the Exchange, Nasdaq will price each Share trade entered into during the day at the Fund's NAV plus/minus the trade's executed premium/discount. Using the final trade price, each executed Share trade will then be disseminated to member firms and market data services via an FTP file to be created for exchange-traded managed funds and confirmed to the member firms participating in the trade to supplement the previously provided information to include final pricing.[22] After the pricing is finalized, Nasdaq will deliver the Share trading data to NSCC for clearance and settlement, following the same processes used for the clearance and settlement of trades in other exchange-traded securities.

Availability of Information

Prior to the commencement of market trading in Shares, the Fund will be required to establish and maintain a public website through which its current prospectus may be downloaded.[23] In addition, a separate website (*www.nextshares.com*) will include additional information concerning the Fund updated on a daily basis, including the prior business day's NAV, and the following trading information for such business day expressed as premiums/discounts to NAV: (a) Intraday high, low, average, and closing prices of Shares in Exchange trading; (b) the midpoint of the highest bid and lowest offer prices as of the close of Exchange trading, expressed as a premium/discount to NAV (the ''Closing Bid/Ask Midpoint''); and (c) the spread between highest bid and lowest offer prices as of the close of Exchange trading (the ''Closing Bid/Ask

[18] The website containing this information will be *www.gabelli.com.*

[19] As noted below, all orders to buy or sell Shares that are not executed on the day the order is submitted will be automatically cancelled as of the close of trading on such day. Prior to the commencement of trading in the Fund, the Exchange will inform its members in an Information Circular of the effect of this characteristic on existing order types.

[20] Due to systems limitations, the Consolidated Tape will report intraday execution prices and quotes for Shares using a proxy price format. As noted, Nasdaq will separately report real-time execution prices and quotes to member firms and providers of market data services in the ''NAV–$0.01/NAV+$0.01'' (or similar) display format, and otherwise seek to ensure that representations of intraday bids, offers and execution prices for Shares that are made available to the investing public follow the same display format.

[21] All orders to buy or sell Shares that are not executed on the day the order is submitted will be automatically cancelled as of the close of trading on such day.

[22] File Transfer Protocol (''FTP'') is a standard network protocol used to transfer computer files on the internet. Nasdaq will arrange for the daily dissemination of an FTP file with executed Share trades to member firms and market data services.

[23] *See* footnote 18.

Spread.''). The *www.nextshares.com* website will also contain charts showing the frequency distribution and range of values of trading prices, Closing Bid/Ask Midpoints, and Closing Bid/Ask Spreads over time.

The Composition File will be disseminated through the NSCC before the open of trading in Shares on each business day and also will be made available to the public each day on a free website as noted above.[24] Consistent with the disclosure requirements that apply to traditional open-end investment companies, a complete list of current Fund portfolio positions will be made available at least once each calendar quarter, with a reporting lag of not more than 60 days. The Fund may provide more frequent disclosures of portfolio positions at their discretion.

Reports of Share transactions will be disseminated to the market and delivered to the member firms participating in the trade contemporaneous with execution. Once the Fund's daily NAV has been calculated and disseminated, Nasdaq will price each Share trade entered into during the day at the Fund's NAV plus/minus the trade's executed premium/discount. Using the final trade price, each executed Share trade will then be disseminated to member firms and market data services via an FTP file to be created for exchange-traded managed funds and confirmed to the member firms participating in the trade to supplement the previously provided information to include final pricing.

Information regarding NAV-based trading prices, best bids and offers for Shares, and volume of Shares traded will be continuously available on a real-time basis throughout each trading day on brokers' computer screens and other electronic services.

Initial and Continued Listing

Shares will conform to the initial and continued listing criteria as set forth under Nasdaq Rule 5745. A minimum of 50,000 Shares and no less than two Creation Units of the Fund will be outstanding at the commencement of trading on the Exchange. The Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily (on each business day that the New York Stock Exchange is open for trading) and provided to Nasdaq via the Mutual Fund Quotation Service (''MFQS'') by the fund accounting agent. As soon as the NAV is entered into MFQS, Nasdaq will disseminate the NAV to market participants and market data vendors via the Mutual Fund Dissemination Service (''MFDS'') so all firms will receive the NAV per share at the same time. The Reporting Authority [25] also will implement and maintain, or ensure that the Composition File will be subject to, procedures designed to prevent the use and dissemination of material non-public information regarding the Fund's portfolio positions and changes in the positions.

For the Fund, an estimated value of an individual Share, defined in Nasdaq Rule 5745(c)(2) as the ''Intraday Indicative Value,'' will be calculated and disseminated at intervals of not more than 15 minutes throughout the Regular Market Session [26] when Shares trade on the Exchange. The Exchange will obtain a representation from the issuer of the Shares that the IIV will be calculated on an intraday basis and provided to Nasdaq for dissemination via the Nasdaq Global Index Service (''GIDS'').

The IIV will be based on current information regarding the value of the securities and other assets held by the Fund.[27] The purpose of the IIVs is to enable investors to estimate the next-determined NAV so they can determine the number of Shares to buy or sell if they want to transact in an approximate dollar amount (*e.g.,* if an investor wants to acquire approximately $5,000 of the Fund, how many Shares should the investor buy?).[28]

The Adviser is not a registered broker-dealer, although it is affiliated with a broker-dealer. The Adviser has implemented and will maintain a firewall with respect to its broker-dealer affiliate regarding access to information concerning the composition of and/or changes to the Fund's portfolio. In addition, personnel who make decisions on the Fund's portfolio composition must be subject to procedures designed to prevent the use and dissemination of material, non-public information regarding the open-end fund's portfolio.

In the event that (a) the Adviser registers as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or a sub-adviser to the Fund is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement and will maintain a firewall with respect to its relevant personnel and/or such broker-dealer affiliate, if applicable, regarding access to information concerning the composition of and/or changes to the Fund's portfolio and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio.

Trading Halts

The Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in Shares. Nasdaq will halt trading in Shares under the conditions specified in Nasdaq Rule 4120 and in Nasdaq Rule 5745(d)(2)(C). Additionally, Nasdaq may cease trading Shares if other unusual conditions or circumstances exist which, in the opinion of Nasdaq, make further dealings on Nasdaq detrimental to the maintenance of a fair and orderly market. To manage the risk of a non-regulatory Share trading halt, Nasdaq has in place back-up processes and procedures to ensure orderly trading. Because, in NAV-Based Trading, all trade execution prices are linked to end-of-day NAV, buyers and sellers of Shares should be less exposed to risk of loss due to intraday trading halts than buyers and sellers of conventional exchange-traded funds (''ETFs'') and other exchange-traded securities.

Trading Rules

Nasdaq deems Shares to be equity securities, thus rendering trading in Shares to be subject to Nasdaq's existing rules governing the trading of equity securities. Nasdaq will allow trading in Shares from 9:30 a.m. until 4:00 p.m. E.T.

Every order to trade Shares of the Fund is subject to the proxy price protection threshold of plus/minus $1.00, which determines the lower and upper threshold for the life of the order and whereby the order will be cancelled at any point if it exceeds $101.00 or falls below $99.00, the established thresholds.[29] With certain exceptions,

[24] *See* footnote 13.

[25] *See* Nasdaq Rule 5745(c)(4).

[26] *See* Nasdaq Rule 4120(b)(4) (describing the three trading sessions on the Exchange: (1) Pre-Market Session from 4 a.m. to 9:30 a.m. E.T.; (2) Regular Market Session from 9:30 a.m. to 4 p.m. or 4:15 p.m. E.T.; and (3) Post-Market Session from 4 p.m. or 4:15 p.m. to 8 p.m. E.T.).

[27] IIVs disseminated throughout each trading day would be based on the same portfolio as used to calculate that day's NAV. The Fund will reflect purchases and sales of portfolio positions in its NAV the next business day after trades are executed.

[28] Because, in NAV-Based Trading, prices of executed trades are not determined until the reference NAV is calculated, buyers and sellers of Shares during the trading day will not know the final value of their purchases and sales until the end of the trading day. The Fund's Registration Statement, website and any advertising or marketing materials will include prominent disclosure of this fact. Although IIVs may provide useful estimates of the value of intraday trades, they cannot be used to calculate with precision the dollar value of the Shares to be bought or sold.

[29] *See* Nasdaq Rule 5745(h).

each order also must contain the applicable order attributes, including routing instructions and time-in-force information, as described in Nasdaq Rule 4703.[30]

Surveillance

The Exchange represents that trading in Shares will be subject to the existing trading surveillances, administered by both Nasdaq and the Financial Industry Regulatory Authority, Inc. (''FINRA'') on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.[31] The Exchange represents that these procedures are adequate to properly monitor trading of Shares on the Exchange and to deter and detect violations of Exchange rules and applicable federal securities laws.

The surveillances referred to above generally focus on detecting securities trading outside their normal patterns, which could be indicative of manipulative or other violative activity. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations.

FINRA, on behalf of the Exchange, will communicate as needed with other markets and other entities that are members of the Intermarket Surveillance Group (''ISG'') [32] regarding trading in Shares, and in exchange-traded securities and instruments held by the Fund (to the extent such exchange-traded securities and instruments are known through the publication of the Composition File and periodic public disclosures of the Fund's portfolio holdings), and FINRA may obtain trading information regarding such trading from other markets and other entities.

In addition, the Exchange may obtain information regarding trading in Shares, and in exchange-traded securities and instruments held by the Fund (to the extent such exchange-traded securities and instruments are known through the publication of the Composition File and periodic public disclosures of the Fund's portfolio holdings), from markets and other entities that are members of ISG, which includes securities and futures exchanges, or with which the Exchange has in place a comprehensive surveillance sharing agreement.

In addition, the Exchange also has a general policy prohibiting the distribution of material non-public information by its employees.

Information Circular

Prior to the commencement of trading in the Fund, the Exchange will inform its members in an Information Circular of the special characteristics and risks associated with trading the Shares. Specifically, the Information Circular will discuss the following: (1) The procedures for purchases and redemptions of Shares in Creation Units (and noting that Shares are not individually redeemable); (2) Nasdaq Rule 2111A, which imposes suitability obligations on Nasdaq members with respect to recommending transactions in Shares to customers; (3) how information regarding the IIV and Composition File is disseminated; (4) the requirement that members deliver a prospectus to investors purchasing Shares prior to or concurrently with the confirmation of a transaction; and (5) information regarding NAV-Based Trading protocols.

As noted above, all orders to buy or sell Shares that are not executed on the day the order is submitted will be automatically cancelled as of the close of trading on such day. The Information Circular will discuss the effect of this characteristic on existing order types. The Information Circular also will identify the specific Nasdaq data feeds from which intraday Share prices in proxy price format may be obtained.

In addition, the Information Circular will advise members, prior to the commencement of trading, of the prospectus delivery requirements applicable to the Fund. Members purchasing Shares from the Fund for resale to investors will deliver a summary prospectus to such investors. The Information Circular will also discuss any exemptive, no-action and interpretive relief granted by the Commission from any rules under the Act.

The Information Circular also will reference that the Fund is subject to various fees and expenses described in the Registration Statement. The Information Circular will also disclose the trading hours of the Shares and the applicable NAV calculation time for the Shares. The Information Circular will disclose that information about the Shares will be publicly available at *www.nextshares.com.*

Information regarding the Fund's trading protocols will be disseminated to Nasdaq members in accordance with current processes for newly listed products. Nasdaq intends to provide its members with a detailed explanation of NAV-Based Trading through a Trading Alert issued prior to the commencement of trading in Shares on the Exchange.

Continued Listing Representations

All statements and representations made in this filing regarding (a) the description of the portfolio, (b) limitations on portfolio holdings or reference assets, (c) dissemination and availability of the reference asset or intraday indicative values, or (d) the applicability of Exchange listing rules shall constitute continued listing requirements for listing the Shares on the Exchange. In addition, the issuer has represented to the Exchange that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under the Nasdaq 5800 Series.

2. Statutory Basis

Nasdaq believes that the proposal is consistent with Section 6(b) of the Act,[33] in general, and Section 6(b)(5) of the Act,[34] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanism of a free and open market and a national market system.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares would be listed and traded on the Exchange pursuant to the initial and continued listing criteria in Nasdaq Rule 5745. The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of Shares on Nasdaq and to deter and detect violations of Exchange rules and the applicable federal securities laws. The Adviser is not registered as a broker-dealer, but it is affiliated with a broker-dealer. The Adviser has implemented

[30] *See* Nasdaq Rule 5745(b)(6).

[31] FINRA provides surveillance of trading on the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

[32] For a list of the current members of ISG, *see www.isgportal.org.* The Exchange notes that not all components of the Fund's portfolio may trade on markets that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

[33] 15 U.S.C. 78f(b).

[34] 15 U.S.C. 78f(b)(5).

and will maintain a ''firewall'' between the Adviser and its broker-dealer affiliate with respect to access to information concerning the composition of and/or changes to the Fund's portfolio holdings. The Exchange may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement, to the extent necessary.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest. The Exchange will obtain a representation from the issuer of Shares that the NAV per Share will be calculated on each business day that the New York Stock Exchange is open for trading and that the NAV will be made available to all market participants at the same time. In addition, a large amount of information would be publicly available regarding the Fund and the Shares, thereby promoting market transparency.

Prior to the commencement of market trading in Shares, the Fund will be required to establish and maintain a public website through which its current prospectus may be downloaded.[35] In addition, a separate website (*www.nextshares.com*) will display additional information concerning the Fund updated on a daily basis, including the prior business day's NAV, and the following trading information for such business day expressed as premiums/discounts to NAV: (a) Intraday high, low, average and closing prices of Shares in Exchange trading; (b) the Closing Bid/Ask Midpoint; and (c) the Closing Bid/Ask Spread.

The *www.nextshares.com* website will also contain charts showing the frequency distribution and range of values of trading prices, Closing Bid/Ask Midpoints, and Closing Bid/Ask Spreads over time. The Composition File will be disseminated through the NSCC before the open of trading in Shares on each business day and also will be made available to the public each day on a free website, as noted above.[36] The Exchange will obtain a representation from the issuer of the Shares that the IIV will be calculated and disseminated on an intraday basis at intervals of not more than 15 minutes during trading on the Exchange and provided to Nasdaq for dissemination via GIDS. A complete list of current portfolio positions for the Fund will be made available at least once each calendar quarter, with a reporting lag of not more than 60 days. The Fund may provide more frequent disclosures of portfolio positions at its discretion.

Transactions in Shares will be reported to the Consolidated Tape at the time of execution in proxy price format and will be disseminated to member firms and market data services through Nasdaq's trading service and market data interfaces, as defined above. Once the Fund's daily NAV has been calculated and the final price of its intraday Share trades has been determined, Nasdaq will deliver a confirmation with final pricing to the transacting parties. At the end of the day, Nasdaq will also post a newly created FTP file with the final transaction data for the trading and market data services.

The Exchange expects that information regarding NAV-based trading prices and volumes of Shares traded will be continuously available on a real-time basis throughout each trading day on brokers' computer screens and other electronic services. Because Shares will trade at prices based on the next-determined NAV, investors will be able to buy and sell individual Shares at a known premium or discount to NAV that they can limit by using limit orders at the time of order entry. Trading in Shares will be subject to Nasdaq Rules 5745(d)(2)(B) and (C), which provide for the suspension of trading or trading halts under certain circumstances, including if, in the view of the Exchange, trading in Shares becomes inadvisable.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of the Fund, which seeks to provide investors with access to a broad range of actively managed investment strategies in a structure that offers the cost and tax efficiencies and shareholder protections of ETFs, while removing the requirement for daily portfolio holdings disclosure to ensure a tight relationship between market trading prices and NAV.

For the above reasons, Nasdaq believes the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the introduction of the Fund will promote competition by making available to investors an actively managed investment strategy in a structure that offers the cost and tax efficiencies and shareholder protections of ETFs, while removing the requirement for daily portfolio holdings disclosure to ensure a tight relationship between market trading prices and NAV. Moreover, the Exchange believes that the proposed method of Share trading would provide investors with transparency of trading costs, and the ability to control trading costs using limit orders, that is not available for conventionally traded ETFs.

These developments could significantly enhance competition to the benefit of the markets and investors.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[37] and Rule 19b–4(f)(6) thereunder.[38]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[39] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)[40] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change may become operative upon filing. The Commission notes that it has approved a number of filings by the Exchange to list and trade NextShares filings under Exchange Rule

[35] *See* footnote 18.

[36] *See* footnote 13.

[37] 15 U.S.C. 78s(b)(3)(A).

[38] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[39] 17 CFR 240.19b–4(f)(6).

[40] 17 CFR 240.19b–4(f)(6)(iii).

5745.[41] This proposed rule change is consistent with those filings and raises no novel issues. The Shares will be purchased and sold in the secondary market at prices directly linked to the Fund's next-determined NAV using the trading protocol called ''NAV-Based Trading,'' and the Fund's permitted investments will be consistent with those approved in prior filings. Accordingly, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest and hereby waives the operative delay and designates the proposed rule change operative upon filing.[42]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NASDAQ–2018–032 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NASDAQ–2018–032. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NASDAQ–2018–032, and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[43]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83147; File No. SR–IEX–2018–09]

Self-Regulatory Organizations; Investors Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify its Fee Schedule To Charge a More Deterministic Fee of $0.0003 Per Share for Executions at or Above $1.00 That Result From Removing Liquidity With an Order That is Executable at the Far Side of the NBBO

May 1, 2018.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 20, 2018, the Investors Exchange LLC (''IEX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) under the Securities Exchange Act of 1934 (''Act''),[4] and Rule 19b–4 thereunder,[5] Investors Exchange LLC (''IEX'' or ''Exchange'') is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to modify its Fee Schedule, pursuant to IEX Rule 15.110(a) and (c), to charge a more deterministic fee of $0.0003 per share for executions at or above $1.00 that result from removing liquidity with an order that is executable at the far side of the NBBO [6] (the ''Spread-Crossing Remove Fee''). Consistent with the Exchange's existing Fee Schedule, executions below $1.00 will be 0.30% of the total dollar value of the transaction. Changes to the Fee Schedule pursuant to this proposal are effective upon filing and will be operative on May 1, 2018.

The text of the proposed rule change is available at the Exchange's website at *www.iextrading.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statement may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[5] 17 CFR 240.19b–4.

[6] As defined by Regulation NMS Rule 600(b)(42). 17 CFR 242.600.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify its Fee Schedule, pursuant to IEX Rule 15.110(a) and (c), to charge a more deterministic fee of $0.0003 per share for executions at or above $1.00 that result from removing liquidity with an order that is executable at the far side of the NBBO (*i.e.,* a buy order that is executable at the NBO or higher, or a sell order that is executable at the NBB or lower). In an effort to incentivize Members to submit displayed orders to the Exchange, the Exchange currently charges a fee of $0.0003 per share (or 0.30% of the total dollar value of the transaction for securities priced below $1.00) to Members for executions on IEX that provide or take resting interest with displayed priority (*i.e.,* an order or portion of a reserve order that is booked and ranked with display priority on the Order Book).[7] Furthermore, the Exchange currently charges $0.0009 per share (or 0.30% of the total dollar value of the transaction for securities priced below $1.00) to Members for executions on IEX that provide or take resting interest with non-displayed priority (*i.e.,* an order or portion of a reserve order that is booked and ranked with non-displayed priority on the Order Book).[8] The Exchange does not charge any fee to Members for executions on IEX when the adding and removing order originated from the same Exchange Member.[9]

After informal discussions with various Members, the Exchange recognizes that some Members may be dissuaded from seeking to access IEX quotations at the NBBO due to the variability in execution fees when routing orders to the Exchange that are executable at the far side of the NBBO and intended to trade against the Exchange's displayed quotation, but inadvertently remove non-displayed liquidity resting at or within the spread. While such spread-crossing orders would receive price improvement equal to the delta between the execution price and the far side quotation (*i.e.,* the difference between the trade price and the NBO (NBB) for buy (sell) orders),[10] the potential for interacting with non-displayed liquidity resting within the spread, and therefore being assessed the Non-Displayed Match Fee of $0.0009 versus the Displayed Match Fee of $0.0003, makes it difficult for Members to estimate access fees on a pre-trade basis, which the Exchange believes thereby presents difficulties for some Members when determining which venues to route marketable orders to.[11]

In order to reduce the variability in fees to access liquidity on the Exchange and thereby incentivize Members to route more orders to the Exchange that are executable at the far side of the NBBO, the Exchange is proposing to offer a more deterministic Spread-Crossing Remove Fee of $0.0003 per share to all executions at or above $1.00 that result from removing liquidity with a buy (sell) order that is executable at the NBO (NBB). Consistent with the Exchange's existing Fee Schedule, executions below $1.00 will be 0.30% of the total dollar value of the transaction. Members will receive a Fee Code of ''N'' on execution reports provided by the Exchange for transactions that receive the Spread-Crossing Remove Fee.[12]

The Exchange believes that incentivizing additional spread-crossing interest by offering the proposed Spread-Crossing Remove Fee will enhance public price discovery and overall execution quality on the Exchange in several ways. First, as described above, to the extent spread-crossing interest removes non-displayed liquidity within the spread, the spread-crossing orders will receive price improvement equal to the delta between the execution price and the far side quotation, while the non-displayed resting interest will have received the benefit of trading passively and also capturing the spread in part. Similarly, to the extent spread-crossing interest removes displayed liquidity resting at the NBBO, such resting displayed liquidity will have increased opportunities to capture the full spread. If market makers and other Members are more frequently capturing the spread when resting displayed orders on the Exchange, such Members may be incentivized to enter additional aggressively priced displayed orders on the Exchange, thereby contributing to public price discovery, consistent with the overall goal of enhancing market quality.

Pursuant to Rules 11.190(a)(1)–(3), the Exchange offers three general order types—market orders, limit orders, and pegged orders—each of which have distinct functional behaviors, and are further controlled by various User-defined order parameters that dictate additional functional behaviors of the order within the Exchange's System.[13] Orders entered on the Exchange are eligible to remove liquidity on entry pursuant to the distinct behavior of the User-selected order type and order parameters. In addition, non-displayed orders that are resting on the Order Book and eligible to trade at least as aggressively as the Midpoint Price are eligible to remove liquidity on Order Execution Recheck, or ''Book Recheck'', pursuant to Rule 11.230(a)(4)(d). Book Recheck is a process within the IEX System that detects new trading opportunities for resting orders upon a change to the Order Book, the NBBO, or as part of processing inbound messages, resulting in an invitation for non-displayed orders to attempt to remove liquidity from the contra side.[14]

Pursuant to the Exchange's Rules, in addition to the terms of each order type and order parameter, every order is subject to various legal and technical constraints that are designed to optimize order interactions within the System, and to comply with the Act and the rules and regulations thereunder. Rule

[7] This pricing is referred to by the Exchange as ''Displayed Match Fee'' with a Fee Code of 'L' provided by the Exchange on execution reports. *See* the Investors Exchange Fee Schedule, available on the Exchange public website.

[8] This pricing is referred to by the Exchange as ''Non-Displayed Match Fee'' with a Fee Code of 'I' provided by the Exchange on execution reports. *See* the Investors Exchange Fee Schedule, available on the Exchange public website.

[9] This pricing is referred to by the Exchange as ''Internalization Fee'' with a Fee Code of 'S' provided by the Exchange on execution reports. Orders from different market participant identifiers of the same broker dealer, with the same Central Registration Depository registration number, are treated as originating from the same Exchange Member. *See* the Investors Exchange Fee Schedule, available on the Exchange public website.

[10] The Exchange notes that when handling client orders as agent, IEX Members must ensure they are satisfying their duty of best execution, which requires that in any transaction for or with a customer or a customer of another broker-dealer, a member and persons associated with a member shall use reasonable diligence to ascertain the best market for the subject security and buy or sell in such market so that the resultant price to the customer is as favorable as possible under prevailing market conditions. Members must also conduct regular and rigorous reviews of execution quality in order to determine which market center to route customer orders, and should explicitly consider the extent to which an order may obtain price improvement at other venues. *See* FINRA Rule 5310, including Supplementary Material .09 thereto.

[11] The Exchange notes that FINRA has released guidance clarifying that firms should not allow access fees charged by venues to inappropriately affect their routing decisions, and, in general, a firm's routing decisions should not be unduly influenced by a particular venue's fee or rebate structure. *See* FINRA Regulatory Notice 15–46 (November 2015) at 6.

[12] Pursuant to the Exchange's existing Fee Schedule, a Fee Code of ''N'' applies to executions that are part of an IPO Auction. Accordingly, the Exchange is proposing to replace the Fee Code for executions in an IPO Auction with a Fee Code of ''P''.

[13] *See* Rule 11.190(b) (Order Parameters) for a full description of the available order parameters.

[14] *See* Rule 11.230(a)(4)(d), which provides a complete description of Book Recheck.

11.190(f)(1)(Order Collars) describes the IEX Order Collar, which prevents any incoming order or order resting on the Order Book, including those marked ISO, from executing at a price outside of the Order Collar price range (*i.e.,* prevents buy orders from trading at prices above the collar and prevents sell orders from trading at prices below the collar).[15] Furthermore, Rule 11.190(h)(Price Sliding) describes the Exchange's price sliding processes that are designed to ensure compliance with Regulation NMS (including the Plan to Address Extraordinary Market Volatility pursuant to Rule 608 thereunder (the ''LULD Plan''),[16] as well as Rule 201 of Regulation SHO.[17]

If an order—based on market conditions, User instructions, applicable IEX Rules and/or the Act and the rules and regulations thereunder—is not executable at the far side of the NBBO, such order will not be eligible for the Spread-Crossing Remove Fee. Specifically, for a buy (sell) order to be deemed ''executable'' at the NBO (NBB), in the case of a market order, the applicable IEX Order Collar and the price of the Upper (Lower) LULD Price Band, as well as the result of any other price sliding necessary pursuant to Rule 11.190(h), must be marketable to the NBO (NBB) upon entry, because market orders, despite not having a maximum (minimum) price at which the User is willing to buy (sell), remain constrained by the least aggressive of the IEX Order Collar and the LULD Price Band, as well as the result of any other price sliding necessary pursuant to Rule 11.190(h). For example, in a Tier 1 security, if the NBBO is $10.10 by $10.20, the IEX Order Collar is $9.13 by $11.16, and the LULD Price Band is $9.64 by $10.65, a market order to buy (sell) that removes liquidity from the Order Book (against either displayed or non-displayed liquidity on the Order Book) will receive the Spread-Crossing Remove Fee, because the Upper (Lower) LULD Price Band of $10.65 ($9.64) (which is less aggressive than the IEX Order Collar, and therefore controlling), is marketable to the NBO (NBB) of $10.20 ($10.10).

In the case of a limit order, the User-defined and System-adjusted limit price (*i.e.,* the price at which the order is eligible to execute after accounting for the User-defined limit price, the IEX Order Collar, and the LULD Price Band, as well as the result of any other price sliding necessary pursuant to Rule 11.190(h)) must be executable at the NBO (NBB) upon entry, or on Book Recheck. For example, in a Tier 1 security, if the NBBO is $10.10 by $10.20, the IEX Order Collar is $9.13 by $11.16, and the LULD Price Band is $9.64 by $10.65, a limit order to buy with a limit price of $10.20 that removes liquidity from the Order Book (against either displayed or non-displayed liquidity on the Order Book) will receive the Spread-Crossing Remove Fee, because the User-defined limit price is marketable to the NBO, and less aggressive than the IEX Order Collar and the LULD Price Band, and does not otherwise necessitate additional price sliding pursuant to Rule 11.190(h)(4).

As a general matter, pegged orders do not qualify for the Spread-Crossing Remove Fee, because such orders, by their terms, are explicitly designed to capture the spread in full or in part by executing at prices that are equal to or more passive than the Midpoint Price. However, pursuant to Rule 11.190(h)(3)(C)(i), in the event the market becomes locked (*i.e.,* the price of the NBB is equal to the price of NBO), the Exchange considers the Midpoint Price to be equal to the locking price. Therefore, in a locked market, Midpoint Peg[18] and Discretionary Peg[19] orders that remove liquidity at the locking price on entry or on Book Recheck will receive the Spread-Crossing Remove Fee. For example, if the NBBO is locked at $10.10 by $10.10, a Midpoint Peg order to buy (sell) that removes liquidity at $10.10 will receive the Spread-Crossing Remove Fee. In contrast, Primary Peg orders are never eligible to remove liquidity, and therefore will never receive the Spread-Crossing Remove Fee.[20]

Similarly, when a short sale price test restriction[21] is in effect, short sale orders not marked short exempt that are priced at or more aggressive than the NBB are subject to the short sale price sliding process pursuant to Rule 11.190(h)(4) and are therefore never executable at or below the NBB. Accordingly, when a short sale price test restriction is in effect, short sale orders not marked short exempt that are priced to execute at or below the NBB will not receive the Spread-Crossing Remove Fee. For example, for a security subject to the short sale price test restriction, if the NBBO is $10.10 by $10.20, and IEX receives a non-displayed short sale limit order not marked short exempt with a limit price of $10.10, such order is ineligible for execution at its limit price pursuant to Rule 11.190(h)(4)(B), would only be executable above the current NBB upon entry or on Book Recheck, and would otherwise be repriced and ranked by the System on the Order Book non-displayed pursuant to the Midpoint Price Constraint at the current Midpoint Price.[22] Accordingly, such order is never executable at the NBB, and therefore would not receive the Spread-Crossing Remove Fee.

Finally, in the case of a crossed market (*i.e.,* when the price of the NBB is higher than the NBO), all removers of liquidity will receive the Spread-Crossing Remove Fee. For example, if the NBBO is crossed at $10.13 by

[15] The Order Collar price range is calculated by applying the numerical guidelines for clearly erroneous executions to the ''Order Collar Reference Price'', which is defined as the most current of (i) the last sale price disseminated during the Regular Market Session on the current trade date; (ii) last trade price disseminated outside of the Regular Market Session (Form T, as communicated by the relevant SIP) on trade date which other than for the Form T designation would have been considered a valid last sale price; or (iii) if neither of the prices above are available, the prior days Official Closing Price from the listing exchange, adjusted to account for corporate actions, news events, etc. In the event there is no valid Order Collar Reference Price or Router Constraint Reference Price, the Exchange generally rejects orders for the security.

[16] *See* Securities Exchange Act Release No. 67091 (May 31, 2012), 77 FR 33498 (June 6, 2012). Note, unless otherwise specified, capitalized terms used in reference to the LULD Plan have the same meaning as set forth in the LULD Plan or in Exchange rules. *See also* Rule 11.280(e)(Limit Up-Limit Down Mechanism), which sets forth the Exchange's methodology for re-pricing and canceling interest pursuant to the LULD Plan.

[17] 17 CFR 242.201. *See also* Rule 11.190(h)(4)(Short Sale Price Sliding).

[18] Pursuant to Rule 11.190(b)(9), upon entry and on Book Recheck, Midpoint Peg orders attempt to remove all available liquidity at the less aggressive of the Midpoint Price or the orders limit price, if any.

[19] Pursuant to Rule 11.190(b)(10), upon entry and on Book Recheck, Discretionary Peg orders attempt to remove all available liquidity at the less aggressive of the Midpoint Price or the orders limit price, if any.

[20] Pursuant to Rule 11.190(b)(8), upon entry, Primary Peg orders attempt to remove liquidity at the less aggressive of one (1) MPV less aggressive than the NBB (NBO) for buy (sell) orders or the orders limit price, if any. Therefore, because the System will not generate an internally locked or crossed book (as a result of execution and price sliding logic, including the Exchange's price sliding processes for non-displayed orders (the ''Midpoint Price Constraint''), which restricts non-displayed orders from resting on the Order Book at a price more aggressive than the midpoint of the NBBO, Primary Peg orders Primary Peg orders are never eligible to remove liquidity. Accordingly, Primary Peg orders are not eligible for Book Recheck.

[21] Generally, if the current NBB for a covered security decreased by 10% or more from the security's closing price as determined by the listing market, Rule 201 of Regulation SHO prohibits the execution or display of a short sale order not marked short exempt at a price that is less than or equal to the NBB. *See* 17 CFR 242.201.

[22] To continue to this example, if the Exchange has non-displayed liquidity to buy resting on the Order Book at $10.11, a short sale order not marked short exempt would be eligible to remove such interest upon entry (or, if such interest was entered after the short sale order, on Book Recheck), but would not receive the Spread-Crossing Remove Fee, because such order is not executable at the NBB.

$10.10, and IEX has a displayed offer at $10.10, a limit order to buy with a limit price of $10.10 or higher that removes liquidity will receive the Spread-Crossing Remove Fee. While the Exchange believes the arbitrage opportunity provides a natural incentive for market participants to resolve the crossing quotation, the Exchange intends to further incentivize such market improving behavior by charging such removers the proposed Spread-Crossing Remove Fee.

The Exchange notes that executions subject to the Crumbling Quote Remove Fee are not eligible for the Spread-Crossing Remove Fee.[23] Accordingly, transactions that are subject to the Crumbling Quote Remove Fee that remove liquidity with an order executable at the far side of the NBBO will be charged the Crumbling Quote Remove Fee, rather than the Spread-Crossing Remove Fee. Furthermore, the Exchange is not proposing any change to the Internalization Fee whereby no fee is charged for executions when the adding and removing order originated from the same Exchange Member. Thus, transactions that qualify for the Internalization Fee and the proposed Spread-Crossing Remove Fee will be charged the Internalization Fee rather than the Spread-Crossing Remove Fee, since the IEX Fee Schedule provides that to the extent a Member receives multiple Fee Codes on an execution, the lower fee shall apply.[24]

2. Statutory Basis

IEX believes that the proposed rule change is consistent with the provisions of Section 6(b)[25] of the Act in general, and furthers the objectives of Sections 6(b)(4)[26] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. The Exchange believes that the proposed fee change is reasonable, fair and equitable, and non-discriminatory. The Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive.

As proposed, the Spread-Crossing Remove Fee is designed to reduce the variability in fees to access liquidity on the Exchange, therefore making the Exchange's Fee Schedule more clear and predictable to the benefit of all market participants. Furthermore, as discussed in the Purpose section, the Exchange believes that to the extent the proposed Spread-Crossing Remove Fee incentivizes additional spread-crossing orders on the Exchange, resting displayed interest will have enhanced opportunities to capture the spread, which may result in additional aggressively priced orders being entered on the Exchange, thereby contributing to public price discovery, consistent with the overall goal of enhancing market quality.

The Exchange does not believe that the proposed change represents a significant departure from pricing currently offered by the Exchange. As described in the Purpose section, the proposed Spread-Crossing Remove Fee is equal to the Displayed Match Fee, and less than the Non-Displayed Match Fee, thus falling within the range of transaction fees currently charged by the Exchange. Furthermore, the proposed Spread-Crossing Remove Fee is substantially lower than the fee for removing liquidity on competing exchanges with a ''maker-taker'' fee structure (*i.e.,* that provide a rebate to liquidity adders and charge liquidity removers).[27]

As proposed, Members that remove non-displayed liquidity on the Exchange will be charged disparate fees depending on whether or not the removing order was executable at the far side of the NBBO. For example, a limit order with a User-defined and system-adjusted limit price that is marketable to the Midpoint Price that removes non-displayed liquidity at the Midpoint Price will be charged the Non-Displayed Match Fee, whereas a limit order with a User-defined and system-adjusted limit price that is executable at the far side of the NBBO that removes non-displayed liquidity at the Midpoint Price will be charged the Spread-Crossing Remove Fee. The Exchange believes it is reasonable, equitable and not unfairly discriminatory to charge disparate fees for removing liquidity on the Exchange depending on whether or not the removing order was executable at the far side of the NBBO, because spread-crossing orders are willing to interact with the Exchange's resting displayed orders, thereby potentially incentivizing Members to enter more aggressively priced displayed orders by enhancing opportunities for such orders to capture the full spread.

The Exchange believes incentivizing market makers and other Members to enter more aggressively priced displayed orders on the Exchange by enhancing trading opportunities at the NBBO significantly contributes to public price discovery, consistent with the overall goal of enhancing market quality. Furthermore, removers of non-displayed liquidity that are not willing to cross the spread are receiving the benefit of trading more passively and receiving price improvement, which the Exchange believes is a substantial incentive and benefit in and of itself.[28] Similarly, non-displayed orders resting on the Exchange are receiving the benefit of resting passively on the Order Book and capturing the spread in whole or in part. Therefore, the Exchange believes it is reasonable, equitable and not unfairly discriminatory to charge Members that add non-displayed liquidity a different fee then Members that remove non-displayed liquidity with an order that is executable at the far side of the NBBO.[29]

[23] *See* Fee Code Q (Crumbling Quote Remove Fee Indicator), along with the footnote appurtenant thereto in the Investors Exchange Fee Schedule, available on the Exchange public website, which together describe the applicable fee for executions that take liquidity during periods of quote instability as defined in Rule 11.190(g) that exceed the CQRF Threshold, which is equal to is equal to 5% of the sum of a Member's total monthly executions on IEX if at least 1,000,000 shares during the calendar month, measured on an MPID basis. See also Securities and Exchange Act Release No. 81484 (August 25, 2017) 82 FR 41446 (August 31, 2017) (SR–IEX–2017–27). *See also* footnote three under Transaction Fees in the Investors Exchange Fee Schedule, which specifies that, except for the Crumbling Quote Remove Fee Code of Q, to the extent a Member receives multiple Fee Codes on an execution, the lower fee shall apply.

[24] *See* footnote three under Transaction Fees in the Investors Exchange Fee Schedule, which specifies that, except for the Crumbling Quote Remove Fee Code of Q, to the extent a Member receives multiple Fee Codes on an execution, the lower fee shall apply.

[25] 15 U.S.C. 78f.

[26] 15 U.S.C. 78f(b)(4).

[27] *See, e.g.,* the New York Stock Exchange (''NYSE'') trading fee schedule on its public website reflects fees to ''take'' liquidity ranging from $0.0024–$0.0030 depending on the type of market participant, order and execution; the Nasdaq Stock Market (''Nasdaq'') trading fee schedule on its public website reflects fees to ''remove'' liquidity ranging from $0.0025–$0.0030 per share for shares executed in continuous trading at or above $1.00 or 0.30% of total dollar volume for shares executed below $1.00; the Cboe BZX Exchange (''Cboe BZX'') trading fee schedule on its public website reflects fees for ''removing'' liquidity ranging from $0.0025–$0.0030, for shares executed in continuous trading at or above $1.00 or 0.30% of total dollar volume for shares executed below $1.00.

[28] The Exchange notes the spread-crossing removers may also receive such price improvement to the extent they remove non-displayed liquidity resting within the spread. However, such price improvement is not guaranteed, and spread-crossing removers consciously choose to pay the full spread with only the possibility of price improvement.

[29] The Exchange also notes that it is common for Exchange's to charge Members different fees for adding and removing liquidity, and thus the Exchange's proposal is not novel in this regard. *See, e.g.,* the New York Stock Exchange (''NYSE'') trading fee schedule on its public website which reflects fees to ''take'' liquidity ranging from $0.0024–$0.0030 depending on the type of market participant, order and execution. Additionally,

Continued

The Exchange also believes that it is reasonable, fair and equitable, and non-discriminatory to not offer the proposed Spread-Crossing Remove Fee to orders that are subject to the Crumbling Quote Remove Fee because such executions are necessarily a part of a trading strategy that the Exchange believes evidences a form of predatory latency arbitrage that leverages low latency proprietary market data feeds and connectivity along with predictive models to chase short-term price momentum and successfully target resting orders at unstable prices. Furthermore, if the Exchange were to apply the Spread-Crossing Remove Fee to executions that are subject to the Crumbling Quote Remove Fee, it would frustrate its fundamental purpose of disincentivizing predatory trading strategies to further incentivize additional resting liquidity, including displayed liquidity, on IEX. Thus, a Member that removes liquidity with spread-crossing orders that are subject to the Crumbling Quote Remove Fee, should not be afforded the benefit of the proposed Spread-Crossing Remove Fee on such executions.

The Exchange also notes that the Crumbling Quote Remove Fee, in combination with the proposed Spread-Crossing Remove Fee, is designed to incentivize spread-crossing interest that is not part of what the Exchange believes is a predatory trading strategy, therefore potentially increasing the entry of orders executable at the far side of the NBBO during periods of relative market stability. If the Spread-Crossing Remove Fee is successful in this regard, the opportunity for execution and the resultant execution performance for non-displayed resting orders within the spread, as well as displayed orders resting at the NBBO, would be significantly enhanced. Consequently, enhanced trading opportunities may incentivize the entry of non-displayed orders resting at or within the spread, as well as displayed order resting at the NBBO, thereby contributing to the post-trade and pre-trade public price discovery process, respectively. Accordingly, the Exchange believes that the Crumbling Quote Remove Fee, in combination with the proposed Spread-Crossing Remove Fee, is reasonable, fair and equitable, and non-discriminatory.

Additionally, the Exchange believes that it is reasonable, fair and equitable, and non-discriminatory to continue to charge the Internalization Fee rather than the Spread-Crossing Remove Fee when the adding and removing order originated from the same Exchange Member. IEX believes that the same factors that support not charging fees for such transactions, as described in its rule filing adopting this fee structure, continue to be relevant.[30] Specifically, not charging a fee is designed to incentivize Members (and their customers) to send orders to IEX that may otherwise be internalized off exchange, with the goal of increasing order interaction on IEX. Internalization on IEX is not guaranteed, and the additional order flow that does not internalize is available to trade by all Members.

Finally, the Exchange believes that the proposed fees are nondiscriminatory because they will apply uniformly to all Members.

B. Self-Regulatory Organization's Statement on Burden on Competition

IEX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange operates in a highly competitive market in which market participants can readily favor competing venues if fee schedules at other venues are viewed as more favorable. Consequently, the Exchange believes that the degree to which IEX fees could impose any burden on competition is extremely limited and does not believe that such fees would burden competition between Members or competing venues in a manner that is not necessary or appropriate in furtherance of the purposes of the Act. Moreover, as noted in the Statutory Basis section, the Exchange does not believe that the proposed changes represent a significant departure from its current fee structure, and competing venues are able to adopt comparable pricing.

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because, while different fees are assessed in some circumstances, these different fees are not based on the type of Member entering the orders that match but on the type of order entered and the market conditions in which such order was entered. Moreover, the proposed Spread-Crossing Remove Fee will apply equally to all Members that remove liquidity with an order executable at the far side of the NBBO. The Exchange notes that all Members can submit any of the Exchange's approved order types and order parameters, including orders that are executable at the far side of the NBBO. Further, the proposed fee changes continue to be intended to encourage market participants to bring increased order flow to the Exchange, which benefits all market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) [31] of the Act.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [32] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File No. SR–IEX–2018–09 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange

NYSE fees to ''add'' liquidity range from $0.0018–$0.0030 per share for shares executed in continuous trading; [sic]

Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File No. SR–IEX–2018–09. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–IEX–2018–09, and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[33]

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83143; File No. SR–CHX–2018–001]

Self-Regulatory Organizations; Chicago Stock Exchange, Inc.; Notice of Designation of a Longer Period on Commission Action on a Proposed Rule Change To Adopt the Route QCT Cross Routing Option

May 1, 2018.

On March 6, 2018, the Chicago Stock Exchange, Inc. (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b-4 thereunder,[2] a proposed rule change to adopt the Route QCT Cross routing option. The proposed rule change was published for comment in the **Federal Register** on March 20, 2018.[3] The Commission has received no comment letters on the proposed rule change.

Section 19(b)(2) of the Act [4] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding, or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is May 4, 2018. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider this proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[5] designates June 18, 2018, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–CHX–2018–001).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[6]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83141; File No. SR–Phlx–2018–32]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Adopt a New Market Order Spread Protection

May 1, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 20, 2018, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to adopt a new Market Order Spread Protection.

The text of the proposed rule change is available on the Exchange's website at *http://nasdaqphlx.cchwallstreet.com/,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this rule change is to adopt a new Market Order Spread Protection rule similar to The Nasdaq

[33] 17 CFR 200.30–3(a)(12).

[2] 17 CFR 240.19b–4.

Options Market LLC (''NOM'').[3] The Exchange also proposes an amendment to Rule 1099, entitled ''Order Protections.''

Today, Phlx Rule 1099 includes various order protections which apply only to simple orders. The Exchange is proposing to amend Rule 1099 to include rule text which makes clear that the order protections within Rule 1099 apply only to simple orders. Further, the Exchange proposes to adopt Market Order Spread Protection functionality within Rule 1099(d), which protection would similarly apply only to simple orders.

This new mandatory risk protection entitled Market Order Spread Protection protects Market Orders [4] from being executed in very wide markets. This feature would be set at the same preset threshold [5] for all options traded on Phlx. The proposed new rule provides that a Market Order will be rejected if the best of the NBBO and the internal market PBBO [6] is wider than a preset threshold, which is selected by the Exchange and announced to members, at the time the Market Order is received by the System. NOM has two non-displayed order types, Price-Improving and Post-Only Orders, which may cause the order book on NOM to be better than the NBBO. Phlx similarly has non-displayed order types, all-or-none,[7] stop orders [8] and legging orders [9] (collectively ''Non-Displayed Orders''). These Non-Displayed Orders may cause the order book on Phlx to be better than the NBBO. The Exchange also notes that orders which lock or cross another market [10] will cause the PBBO to reprice and also could result in the internal market PBBO being better than the NBBO. The Exchange notes that Non-Displayed Orders would be considered when validating orders on entry for the proposed Market Order Spread Protection, except for all-or-none orders. All-or-none orders have a quantity contingency requiring the full quantity of the order to execute in order for any trade to take place, which may cause the order to not execute. If an all-or-none contingency cannot be met, the all-or-none order would be bypassed until such time as the contingency could be met. For this reason, an all-or-none order will not be considered during the validation of orders on entry for purposes of Market Order Spread Protection. Below are some examples:

Example No. 1

If the Market Order Spread Protection threshold is set to $5.00, and a Market Order to buy is received while the NBBO and internal PBBO are both $1.00–$6.05 and there are no Non-Displayed Orders resting on the book, such Market Order will be rejected. . [sic]

Example No. 2

The following is an example of how a legging order interacts with the Market Order Spread Protection. Assume an option minimum price increment (MPV) is scaled in $0.05 increments and a limit buy order of $0.05 exists on the Exchange. If the system generates a legging order to sell at $ 0.11, this order will not be displayed at its limit of $0.11, because the order is priced at a non-MPV increment. This order will be displayed at the nearest MPV price of $0.15 (because of the option's $0.05 MPV increment). Thus, the displayed spread is $0.10; however the PBBO is $0.06. Assume this order makes up the best offer on the Exchange. For this example, assume the Market Order Spread Threshold in the System is set at $ 0.09. Further assume a Market Order to buy is submitted to the Exchange. Based on the Exchange's proposed implementation of Market Order Spread Protection, the Market Order to buy would execute against the resting sell order at $0.11, since $0.11 is the best available offer and the internal market PBBO spread is $0.06 (spread between the best bid of $0.05 and the best offer of $ 0.11) which is less than the Market Order Spread Threshold of $0.09.

Example No. 3

The following is an example of how an all-or-none order interacts with Market Order Spread Protection. Assume an NBBO: 0×5.50 and a PBBO of 0×5.45. Also assume an all-or-none order is resting in the order book to sell 1000 at 4.95 and an incoming Market Order to buy 10. The all-or-none order would not be considered in the validation and the incoming Market Order would be rejected. In this example, if the all-or-none order had been considered in the validation that Market Order would have executed at 5.45, an inferior price because the full quantity of the resting all-or-none order could not be satisfied.

The proposed feature would assist with the maintenance of fair and orderly markets by ensuring that the best bid and offer displayed on the Exchange are within a reasonable range and preventing market orders from trading outside of the reasonable range when the best bid and offer displayed are not within the allowable range. The Exchange proposes this feature to avoid executions of Market Orders when the market is too wide for a reasonable execution.

Today, the NOM threshold is set at $5. Phlx will initially set the threshold to $5. Similar to NOM, the Exchange will notify Members of the threshold with advanced notice to members through an Options Trader Alert, and, thereafter, members will be notified in advance of any subsequent changes to the threshold. NOM set the differential at $5 to match the bid/ask differential permitted for quotes on the Exchange.[11] The Exchange would consider a subsequent change to the threshold if it believed that the $5 initial threshold was too wide or too restrictive as between the bid and offer to create a reasonable range for executions. Phlx has the same differential.[12] Thus, the presence of a quote on the Exchange will ensure the NBBO is at least $5 wide. The Exchange believes the

[3] *See* NOM Rules at Chapter VI, Section 6(c).

[4] Market Orders are orders to buy or sell at the best price available at the time of execution.

[5] This preset threshold would initially be $5, as explained in more detail below.

[6] This is the best bid and offer on the Phlx order book including non-displayed legging and stop orders. Resting AON orders are not considered as part of the internal market PBBO in applying the Market Order Spread Protection. Resting AON orders may be passed by in allocation if the incoming order does have sufficient quantity to satisfy the resting AON.

[7] An all-or-none order is a limit or market order that is to be executed in its entirety or not at all.

[8] A stop order is a limit or market order to buy or sell at a limit price when a trade or quote on the Exchange for a particular option contract reaches a specified price. A stop-market or stop-limit order shall not be elected by a trade that is reported late or out of sequence or by a complex order trading with another complex order.

[9] A legging order is a limit order on the regular order book in an individual series that represents one leg of a two-legged Complex Order (which improves the cPBBO) that is to buy or sell an equal quantity of two options series resting on the CBOOK. Legging orders are firm orders that are included in the Exchange's displayed best bid or offer. Legging orders are not routable and are limit orders with a time-in-force of DAY, as they represent an individual component of a Complex Order. Legging orders are non-displayed orders that are automatically generated. *See* Phlx Rule 1098(f)(iii)(C).

[10] Options Order Protection and Locked and Crossed Market Rules are located at Phlx Rule 1083. In the event of a locked and crossed market, the PBBO will be repriced and displayed in accordance with Phlx Rule 1082(a)(ii)(3)(g)(v).

[11] *See* Chapter VII, Section 6(d)(ii) of NOM Rules which describes the bid/ask differentials. Options on equities (including Exchange-Traded Fund Shares), and on index options must be quoted with a difference not to exceed $5 between the bid and offer regardless of the price of the bid, including before and during the opening. However, respecting in-the-money series where the market for the underlying security is wider than $5, the bid/ask differential may be as wide as the quotation for the underlying security on the primary market. The Exchange may establish differences other than the above for one or more series or classes of options.

[12] *See* Phlx Rule 1014(c)(i)(A)(2).

presence of a quote on the Exchange, or a bid/ask differential of the NBBO, which is no more than $5 wide affords Market Orders proper protection against erroneous execution and in the event a bid/ask differential is more than $5, then a Market Order is rejected. The threshold is appropriate because it seeks to ensure that the displayed bid and offer are within reasonable ranges and do not represent erroneous prices. The protection would reject Market Orders which are outside of the parameters of the Market Order Spread Protection. The Exchange's proposed threshold is a reasonable measure to ensure prices remain within the preset threshold set by the Exchange, which will be initially set at $5. This protection will bolster the normal resilience and market behavior that persistently produces robust reference prices. This feature should create a level of protection that prevents Market Orders from entering the Order Book outside of an acceptable range for the Market Order to execute.

Finally, the Market Order Spread Protection will be the same for all options traded on the Exchange, and is applicable to all Members that submit Market Orders. The Market Order Spread Protection would not apply during the Opening Process and trading halts, similar to the manner in which it operates today on NOM. Both the Opening Process and trading halts have their own more restrictive boundaries than those proposed for the Market Order Spread Protection. With respect to the Opening Process, a Quality Opening Market is required. A Quality Opening Market requires a bid/ask differential applicable to the best bid and offer from all Valid Width Quotes defined in a table [13] to be determined by the Exchange.[14] The Exchange's requirements during the Opening Process are more restrictive than the proposed initial setting for the Market Order Spread Protection, which is proposed at $5. As provided in Phlx Rule 1047(g), trading halts are subject to the reopening process as provided for in Phlx Rule 1017(e). The same protections noted for the Opening Process above will apply for trading halts. The Exchange believes that the Market Order Spread Protection is unnecessary during the Opening Process and during a trading halt because other protections are in place to ensure that the best bid and offer displayed on the Exchange are within a reasonable range.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[15] in general, and furthers the objectives of Section 6(b)(5) of the Act,[16] in particular, in that it is designed to promote just and equitable principles of trade and to protect investors and the public interest by mitigating risk to market participants. By adopting this mandatory risk protection, similar to NOM, the Exchange will protect market participants from the execution of erroneous Market Orders. The proposed feature would assist with the maintenance of fair and orderly markets by ensuring that the best bid and offer displayed on the Exchange are within a reasonable range and further the protection would prevent market orders from trading outside of the reasonable range when the best bid and offer displayed are not within the allowable range.

This feature should create a level of protection that prevents erroneous Market Orders from entering the Order Book and thereby reduce the negative impacts of sudden, unanticipated volatility, and serve to preserve an orderly market in a transparent and uniform manner, increase overall market confidence, and promote fair and orderly markets and the protection of investors. This feature is not optional and is applicable to all members submitting Market Orders.

Permitting the rejection of the Market Order at the better of the NBBO or Reference PBBO does not otherwise create an impediment to a free and open market because Non-Displayed Orders exist today on NOM with this same protection and provide investors the opportunity to trade at a better price than would otherwise be available, *e.g.,* inside the disseminated best bid and offer for a security, which could result in better executions for investors. The Exchange's exclusion of all-or-none orders when validating orders on entry for purposes of Market Order Spread Protection is consistent with the protection of investors and the public interest. This contingency order is already bypassed today for purposes of priority when the contingency cannot be satisfied. The Exchange notes that because all-or-none orders have a size contingency, which may cause this order type not to execute, the result of including the all-or-none order in the validation of incoming orders could result in executions at inferior prices.

The Exchange's proposal to not apply the Market Order Spread Protection during the Opening Process and during is consistent with the Act because protections exist within those mechanisms to ensure that the best bid and offer displayed on the Exchange are within a reasonable range. The Exchange's Opening Process Rule 1017 [17] and the Trading Halt Rule 1047 [18] both contain more restrictive boundaries than those proposed for the Market Order Spread Protection. With respect to the Opening Process, a Quality Opening Market is required. A Quality Opening Market requires a bid/ask differential applicable to the best bid and offer from all Valid Width Quotes defined in a table to be determined by the Exchange. The Exchange's requirements during the Opening Process are more restrictive than the proposed initial setting for the Market Order Spread Protection, which is proposed at $5. As provided in Phlx Rule 1047(g), trading halts are subject to the reopening process as provided for in Phlx Rule 1017(e). The same protections noted for the Opening Process above will apply for trading halts. The Exchange believes that the Market Order Spread Protection is unnecessary during the Opening Process and during a trading halt because other protections are in place to ensure that the best bid and offer displayed on the Exchange are within a reasonable range.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed amendments do not impose an undue burden on competition because the Market Order Spread Protection will be mandatory for all market participants.

[13] The table is published on the Exchange's website at: *http://www.nasdaqtrader.com/content/phlx/phlx_systemtime.pdf.*

[14] The calculation of Quality Opening Market is based on the best bid and offer of Valid Width Quotes. The differential between the best bid and offer are compared to reach this determination. The allowable differential, as determined by the Exchange, takes into account the type of security (for example, Penny Pilot versus non-Penny Pilot issue), volatility, option premium, and liquidity. The Quality Opening Market differential is intended to ensure the price at which the Exchange opens reflects current market conditions. *See* Phlx Rule 1017(a)(viiii).

[15] 15 U.S.C. 78f(b).

[16] 15 U.S.C. 78f(b)(5).

[17] With respect to the Opening Process, a Quality Opening Market is required. A Quality Opening Market a bid/ask differential applicable to the best bid and offer from all Valid Width Quotes defined in a table to be determined by the Exchange and published on the Exchange's website. *See* Phlx Rule 1017(a)(viiii).

[18] With respect to trading halts, Opening Process procedures will be used to reopen an option series after a trading halt, therefore, the same protections noted for the Opening Process will apply for a trading halt and the same restrictive boundaries would apply. *See* Phlx Rule 1017(e).

The Marker Order Spread Protection feature will provide market participants with additional price protection from anomalous executions. The Exchange does not believe the proposal creates any significant impact on competition.

The Exchange does not believe that accounting for Non-Displayed Orders, except for all-or-none orders, or repricing due to trade-through and locked and crossed market restrictions creates an undue burden on competition because it will serve to provide members with additional information in the rule text to anticipate the impact of the Market Order Spread Protection feature. Today, members are able to submit orders or quotes priced between the MPV for display at the nearest MPV.

The Exchange does not believe that not applying the Market Order Spread Protection during the Opening Process and during a trading halt creates an undue burden on competition because these mechanisms offer more restrictive protections than the proposed initial setting for the Market Order Spread Protection, which is proposed at $5.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [19] and subparagraph (f)(6) of Rule 19b–4 thereunder.[20]

A proposed rule change filed under Rule 19b–4(f)(6) normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [21] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change will become operative on filing. The Exchange states that waiver of the 30-day operative delay would allow the Exchange to immediately offer a mandatory risk protection, similar to NOM, for all market participants transacting in simple orders to protect market participants from entering Market Orders outside of a reasonable range for execution. Based on the foregoing, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.[22]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–Phlx–2018–32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–Phlx–2018–32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–Phlx–2018–32, and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83148; File No. SR–CTA/CQ–2018–01]

Consolidated Tape Association; Order of Summary Abrogation of the Twenty-Third Charges Amendment to the Second Restatement of the CTA Plan and the Fourteenth Charges Amendment to the Restated CQ Plan

May 1, 2018.

I. Introduction

Notice is hereby given that the Securities and Exchange Commission (''Commission''), pursuant to Section 11A of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 608 thereunder,[2] is summarily abrogating the Twenty-Third Charges Amendment

[1] 15 U.S.C. 78k–1.

[2] 17 CFR 242.608.

to the Second Restatement of the Consolidated Tape Association (''CTA'') Plan and the Fourteenth Charges Amendment to the Restated Consolidated Quotation (''CQ'') Plan (collectively, ''Plans'').[3]

On March 5, 2018 [4] the participants of the Plans (''Participants'') [5] filed with the Commission a proposal to amend the Plans (''Amendment''), pursuant to Section 11A of the Act,[6] and Rule 608 thereunder.[7] The Amendment, which was effective upon filing pursuant to Rule 608(b)(3)(i) of Regulation NMS,[8] modified the Plans' fee schedules to adopt changes to the Broker-Dealer Enterprise Maximum Monthly Charge and Per-Quote-Packet Charges.

II. Description of the Amendment

A. Amendments to Enterprise Cap

The Amendment modified the Plans' fee schedules to increase the Broker-Dealer Enterprise Maximum Monthly Charge (''Enterprise Cap'') from $686,400 to $1,260,000 for Network A and from $520,000 to $680,000 for Network B. The Participants stated that as a result of industry consolidation, the Nonprofessional Subscriber base for entities subject to the Enterprise Cap may suddenly increase, and whereas before two entities may have benefited slightly from the Enterprise Cap, a combined entity could achieve a substantial decrease in fees by using the Enterprise Cap. Consequently, the Participants stated, the increase of the Enterprise Cap was designed to maintain the status quo and should not have, in conjunction with the Per-Quote-Packet Charges described below, resulted in an increase of revenue to the Plans or fees for any particular entity.[9]

In addition, the Amendment modified the Plans to remove a provision relating to annual increases of the Enterprise Cap after a two-thirds vote of the Participants. In 2013,[10] the Participants amended the mechanism by which the Enterprise Cap would increase, from an automatic increase based on volume, to a requirement for an affirmative vote of the Participants. The Participants have not used this mechanism to increase the Enterprise Cap. The Participants believe that any future changes to the Enterprise Cap should be filed with the Commission and subject to public comment. Consequently, the Participants proposed to delete this provision.

B. Amendments to the Per-Quote-Packet Charges

The Participants stated that because of the increase in the Enterprise Cap, there could have been broker-dealers that used the Enterprise Cap that, without a corresponding offset, could have faced an increase in fees. To offset the potential fee increase, the Amendment modified the text of the Plans' fee schedules to reduce the Plans' Per-Quote-Packet Charges for broker-dealers with 500,000 or more Nonprofessional Subscribers from $.0075 to $.0025.

The Participants stated that by implementing a tiered structure for Per-Quote-Packet Charges, the proposal was designed to provide an offset to those firms most likely affected by the Enterprise Cap increase (*i.e.,* those with a large Nonprofessional Subscriber base). Additionally, the Participants stated that the proposal would align the tiered structures for Networks A and B with those of Network C.

Pursuant to Rule 608(b)(3)(i) under Regulation NMS,[11] the Participants designated the Amendment as establishing or changing a fee or other charge collected on their behalf in connection with access to, or use of, the facilities contemplated by the Plans. As a result, the Amendment was effective upon filing with the Commission. The Amendment was published for comment in the **Federal Register** on March 29, 2018.[12]

III. Summary of Comments

The Commission received two comment letters in response to the Notice of Filing,[13] and a response thereto from the Participants.[14] Healthy Markets [15] urged the Commission to summarily abrogate the Amendment on grounds that it is not appropriately justified, is discriminatory, and is contrary to the original purpose of the Enterprise Cap. Healthy Markets also stated that the Enterprise Cap should be eliminated as part of the broader process of modernizing the CTA and CQ fee schedules.

Specifically, Healthy Markets stated that the Participants failed to support their representations regarding industry consolidation and noted that the Amendment lacks any detailed justification or analysis.[16] In addition, Healthy Markets stated that the Participants' representation that the Amendment may be revenue neutral does not demonstrate that the Amendment is consistent with the Act whose goal is to protect the public interest by, amongst other things, promoting competition, the reasonable allocation of fees, and non-discrimination.[17] Healthy Markets also argues that the Amendment is discriminatory in that it appears to target a very small segment of firms, possibly a single firm.[18] Lastly, Healthy Market stated that the Enterprise Cap should be eliminated as part of the broader process of modernizing the CTA and CQ fee schedules to simply allow for the non-discriminatory, consistent access and pricing of public market data.[19]

In its comment letter, SIFMA stated that the information provided by the Participants in the Amendment with respect to, among other things, cost, revenue, and customer data, is insufficient to permit the Commission to determine whether the Amendment is

[3] *See* Securities Exchange Act Release Nos. 10787 (May 10, 1974), 39 FR 17799 (May 20, 1974) (declaring the CTA Plan effective); 15009 (July 28, 1978), 43 FR 34851 (August 7, 1978) (temporarily authorizing the CQ Plan); and 16518 (January 22, 1980), 45 FR 6521 (January 28, 1980) (permanently authorizing the CQ Plan). The most recent restatement of both Plans was in 1995. The CTA Plan, pursuant to which markets collect and disseminate last sale price information for non-NASDAQ listed securities, is a ''transaction reporting plan'' under Rule 601 under the Act, 17 CFR 242.601, and a ''national market system plan'' under Rule 608 under the Act, 17 CFR 242.608. The CQ Plan, pursuant to which markets collect and disseminate bid/ask quotation information for listed securities, is a national market system plan.

[19] *See id.* at 8.

consistent with the Act.[20] SIFMA stated that only the Participants, and not SIFMA or other market participants, possess the information necessary to evaluate the Amendment.[21] SIFMA also stated that, costs, and not revenue neutrality as the Participants suggest, is the relevant factor in assessing whether the Amendment is consistent with the Act.[22]

In response, the Participants stated that the comments received are misguided or incorrect, and require no further response from the Participants.[23] In addition, the Participants stated that market participants have access to the information necessary to assess the impact of the Amendments on revenue,[24] asserting that data subscribers can readily apply the new fee schedule to their historical usage to project future usage and thereby determine whether the Participants' representations concerning the effect on revenue hold true.[25] The Participants also noted that only industry associations commented on the Amendments, and that individual market data subscribers could have commented on the Amendments had the Participants'analysis been incorrect.[26]

IV. Discussion

Pursuant to Section 11A of the Act [27] and Rule 608(b)(3)(iii) of Regulation NMS thereunder,[28] at any time within 60 days of the filing of any such amendment, the Commission may summarily abrogate the amendment and require that the amendment be re-filed in accordance with paragraph (a)(1) of Rule 608 [29] and reviewed in accordance with paragraph (b)(2) of Rule 608,[30] if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system or otherwise in furtherance of the purposes of the Act. The Commission is concerned that the information and justifications provided by the Participants are not sufficient for the Commission to determine whether the Amendment is consistent with the Act. Accordingly, the Commission believes that the procedures set forth in Rule 608(b)(2) [31] will provide a more appropriate mechanism for determining whether the Amendment is consistent with the Act.

The Commission believes that the Amendment raises questions as to whether the changes will result in fees that are fair and reasonable, not unreasonably discriminatory,[32] and that will not impose an undue or inappropriate burden on competition under Section 11A of the Act.[33]

The Commission does not believe that the Participants have provided sufficient information regarding, or adequate justification for, the changes described in the Amendment. While the Participants represent that they used certain data to calibrate the fee changes to achieve a revenue neutral outcome [34] none of that data is provided in the Amendment, nor do the Participants provide any such information in their response.[35] The Commission is also concerned that the Participants provided little information concerning the basis for, the anticipated revenue effects of, and the effects on market participants from, the Amendment. The Participants have not provided sufficient information for the changes to be closely scrutinized for fairness and reasonableness and the Amendment lacks support for the basis of, as well as the application and likely effect of, the fees to determine that the Amendment is not unreasonably discriminatory.

In addition, the Enterprise Cap is approximately doubled for Network A, while it is being raised by substantially less than half from $520,000 to $680,000 for Network B. The Participants have provided no justification for this difference. Similarly, the Participants did not provide information to support their assertion that the increase of the Enterprise Cap is designed to maintain the status quo and should not, in conjunction with the Per-Quote Packet fee changes, result in an increase of revenue to the Plans or of fees to any particular entity.[36] The Participants lowered the Per-Quote Packet fee for firms with at least 500,000 non-professional accounts. However, the filing does not indicate why the Participants chose to limit the lower fee to firms that have 500,000 non-professional subscribers. The Participants state that the Amendment does not impose any burden on competition that is not necessary or appropriate because the fees are revenue neutral and maintain the status quo. Because the Participants did not provide the Commission with sufficient data to support their assertion that the fee change should not result in an increase of revenue to the Plans or to fees for any particular entity, the Commission is unable to evaluate the Participants' assertions that the Amendment does not impose any burden on competition that is not necessary or appropriate.

V. Conclusion

For the reasons stated above, the Commission believes it necessary or appropriate to summarily abrogate the Amendment and terminate its status as immediately effective. The Commission believes that the procedures set forth in Rule 608(b)(2) of Regulation NMS [37] will provide a more appropriate mechanism for determining whether the Amendment is consistent with the Act. Therefore, the Commission believes that it is necessary or appropriate in the public interest, for the protection of investors, or the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system or otherwise in furtherance of the purposes of the Act, to summarily abrogate the Amendment.

It is therefore ordered, pursuant to Section 11A of the Act,[38] and Rule 608 thereunder,[39] that the Twenty-Third Charges Amendment to the CTA Plan and the Fourteenth Charges Amendment to the Restated CQ Plan (SR–CTA/CQ–2018–01) be, and hereby is, summarily abrogated. If the Participants choose to re-file the Amendment, they must do so pursuant to Section 11A of the Act and the Amendment must be re-filed in accordance with paragraph (a)(1) of Rule 608 of Regulation NMS [40] for review in accordance with paragraph (b)(2) of Rule 608 of Regulation NMS.[41]

---

[20] *See* SIFMA Letter, *supra* note 13 at 1–3. SIFMA also stated that absent data demonstrating a reasonable relationship between core data revenues and the costs of collecting and disseminating data, it is doubtful that maintaining the status quo with respect to market data fees is consistent with the Act. According to SIFMA, the governance structure for NMS plans is broken and market data fees are not restrained by competitive forces, thus maintaining the status quo with respect to market data fees could impose a burden on competition. *See id.* at 3.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83149; File No. S7–24–89]

Joint Industry Plan; Order of Summary Abrogation of the Forty-Second Amendment to the Joint Self-Regulatory Organization Plan Governing the Collection, Consolidation and Dissemination of Quotation and Transaction Information for Nasdaq-Listed Securities Traded on Exchanges on an Unlisted Trading Privileges Basis

May 1, 2018.

I. Introduction

Notice is hereby given that the Securities and Exchange Commission (''Commission''), pursuant to Section 11A of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 608 thereunder,[2] is summarily abrogating the Forty-Second Amendment to the Joint Self-Regulatory Organization Plan Governing the Collection, Consolidation and Dissemination of Quotation and Transaction Information for Nasdaq-Listed Securities Traded on Exchanges on an Unlisted Trading Privileges Basis (''Nasdaq/UTP Plan'' or ''Plan'').[3]

On March 5, 2018 [4] the participants of the Plans (''Participants'') [5] filed with the Commission a proposal to amend the Nasdaq/UTP Plan (''Amendment''), pursuant to Section 11A of the Act,[6] and Rule 608 thereunder.[7] The Amendment, which was effective upon filing pursuant to Rule 608(b)(3)(i) of Regulation NMS,[8] modified the Plan's fee schedule to adopt changes to the Nonprofessional Subscriber Enterprise Cap and Per Query Fees.

II. Description of the Amendment

A. Amendments to Enterprise Cap

The Amendment modified the Plan's fee schedule to increase the Nonprofessional Subscriber Enterprise Cap (''Enterprise Cap'') from $686,400 to $1,260,000. The Participants stated that as a result of industry consolidation, the non-professional subscriber base for entities subject to the Enterprise Cap may suddenly increase, and whereas before two entities may have benefited slightly from the Enterprise Cap, a combined entity could achieve a substantial decrease in fees by using the Enterprise Cap. Consequently, the Participants stated, the increase of the Enterprise Cap was designed to maintain the status quo and should not have, in conjunction with the Per-Query Fee change described below, resulted in an increase of revenue to the Plan or fees for any particular entity.[9]

In addition, the Amendment modified the Plan to remove a provision relating to annual increases of the Enterprise Cap after a two-thirds vote of the Participants. In 2014 [10] the Participants amended the mechanism by which the Enterprise Cap would increase, from an automatic increase based on volume, to a requirement for an affirmative vote of the Participants. The Participants have not used this mechanism to increase the Enterprise Cap. The Participants believe that any future changes to the Enterprise Cap should be filed with the Commission and subject to public comment. Consequently, the Participants proposed to delete this provision.

B. Amendments to the Per-Query Fee

The Participants stated that because of the increase in the Enterprise Cap, there could have been broker-dealers that used the Enterprise Cap that, without a corresponding offset, could have faced an increase in fees. To offset the potential fee increase, the Amendment modified the text of the Plan's fee schedule to reduce the Plan's Per-Query Fee for broker-dealers with 500,000 or more non-professional subscribers from $.0075 to $.0025.

The Participants stated that by implementing a tiered structure for Per-Query Fees, the proposal was designed to provide an offset to those firms most likely affected by the Enterprise Cap increase (*i.e.,* those with a large non-professional subscriber base). Additionally, the Participants stated that the proposal would align the tiered structures for Network C with those of Networks A and B.

Pursuant to Rule 608(b)(3)(i) under Regulation NMS,[11] the Participants designated the Amendment as establishing or changing a fee or other charge collected on their behalf in connection with access to, or use of, the facilities contemplated by the Plan. As a result, the Amendment was effective upon filing with the Commission. The Amendment was published for comment in the **Federal Register** on March 29, 2018.[12]

III. Summary of Comments

The Commission received two comment letters in response to the Notice of Filing [13] and a response thereto from the Participants.[14] In its comment letter, SIFMA stated that the information provided by the Participants in the Amendment with respect to, among other things, cost, revenue, and customer data, is insufficient to permit the Commission to determine whether the Amendment is consistent with the Act.[15] SIFMA stated that only the Participants, and not SIFMA or other market participants, possess the information necessary to

[3] The Plan governs the collection, processing, and dissemination on a consolidated basis of quotation information and transaction reports in Eligible Securities for each of its Participants. This consolidated information informs investors of the current quotation and recent trade prices of Nasdaq securities. It enables investors to ascertain from one data source the current prices in all the markets trading Nasdaq securities. The Plan serves as the required transaction reporting plan for its Participants, which is a prerequisite for their trading Eligible Securities. *See* Securities Exchange Act Release No. 55647 (April 19, 2007), 72 FR 20891 (April 26, 2007).

[12] *See* Notice of Filing, *supra* note 4.

[13] *See* letters from Melissa MacGregor, Managing Director, Securities Industry and Financial Markets Association (''SIFMA''), dated April 19, 2018 (''SIFMA Letter''), and Tyler Gellasch, Executive Director, Healthy Markets Association (''Healthy Markets''), dated April 30, 2018 (''Healthy Markets Letter''), to Brent J. Fields, Secretary, Commission.

[14] *See* Letter from Emily Kasparov to Brent J. Fields, Secretary, Commission, dated April 27, 2018 (''Participants' Response''). The Participants responded to the comments received on this Amendment, as well as on SR–CTA/CQ–2018–01, which amended the CTA/CQ plan in a parallel fashion.

[15] *See* SIFMA Letter, *supra* note 13 at 1–3. SIFMA also stated that absent data demonstrating a reasonable relationship between core data revenues and the costs of collecting and disseminating data, it is doubtful that maintaining the status quo with respect to market data fees is consistent with the Act. According to SIFMA, the governance structure for NMS plans is broken and market data fees are not restrained by competitive forces, thus maintaining the status quo with respect to market data fees could impose a burden on competition. *See id.* at 3.

evaluate the Amendment.[16] SIFMA also stated that, costs, and not revenue neutrality as the Participants suggest, is the relevant factor in assessing whether the Amendment is consistent with the Act.[17]

Healthy Markets[18] urged the Commission to summarily abrogate the Amendment on grounds that it is not appropriately justified, is discriminatory, and is contrary to the original purpose of the Enterprise Cap. Healthy Markets also stated that the Enterprise Cap should be eliminated as part of the broader process of modernizing the UTP fee schedules.

Specifically, Healthy Markets stated that the Participants failed to support their representations regarding industry consolidation and noted that the Amendment lacks any detailed justification or analysis.[19] In addition, Healthy Markets stated that the Participants' representation that the Amendment may be revenue neutral does not demonstrate that the Amendment is consistent with the Act whose goal is to protect the public interest by, amongst other things, promoting competition, the reasonable allocation of fees, and non-discrimination.[20] Healthy Markets also states that the Amendment is discriminatory, and that it adds complexity to an already complex process.[21] Lastly, Healthy Market stated that the Enterprise Cap should be eliminated as part of the broader process of modernizing the UTP fee schedules to simply allow for the non-discriminatory, consistent access and pricing of public market data.[22]

In response, the Participants stated that the comments received are misguided or incorrect, and require no further response from the Participants.[23] In addition, the Participants stated that market participants have access to the information necessary to assess the impact of the Amendment on revenue,[24] asserting that data subscribers can readily apply the new fee schedule to their historical usage to project future usage and thereby determine whether the Participants' representations concerning the effect on revenue hold true.[25] The Participants also noted that only industry associations commented on the Amendment, and that individual market data subscribers could have commented on the Amendment had the Participants' analysis been incorrect.[26]

IV. Discussion

Pursuant to Section 11A of the Act[27] and Rule 608(b)(3)(iii) of Regulation NMS thereunder,[28] at any time within 60 days of the filing of any such amendment, the Commission may summarily abrogate the amendment and require that the amendment be re-filed in accordance with paragraph (a)(1) of Rule 608[29] and reviewed in accordance with paragraph (b)(2) of Rule 608,[30] if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system or otherwise in furtherance of the purposes of the Act. The Commission is concerned that the information and justifications provided by the Participants are not sufficient for the Commission to determine whether the Amendment is consistent with the Act. Accordingly, the Commission believes that the procedures set forth in Rule 608(b)(2)[31] will provide a more appropriate mechanism for determining whether the Amendment is consistent with the Act.

The Commission believes that the Amendment raises questions as to whether the changes will result in fees that are fair and reasonable, not unreasonably discriminatory,[32] and that will not impose an undue or inappropriate burden on competition under Section 11A of the Act.[33]

The Commission does not believe that the Participants have provided sufficient information regarding, or adequate justification for, the changes described in the Amendment. While the Participants represent that they used certain data to calibrate the fee changes to achieve a revenue neutral outcome[34] none of that data is provided in the Amendment, nor do the Participants provide any such information in their response.[35] The Commission is also concerned that the Participants provided little information concerning the basis for, the anticipated revenue effects of, and the effects on market participants from, the Amendment. The Participants have not provided sufficient information for the changes to be closely scrutinized for fairness and reasonableness and the Amendment lacks support for the basis of, as well as the application and likely effect of, the fees to determine that the Amendment is not unreasonably discriminatory.

In addition, the Participants did not provide information to support their assertion that the increase of the Enterprise Cap is designed to maintain the status quo and should not, in conjunction with the Per-Query fee changes, result in an increase of revenue to the Plan or of fees to any particular entity.[36] The Participants lowered the Per-Query fee for firms with at least 500,000 non-professional accounts. However the filing does not indicate why the Participants chose to limit the lower fee to firms that have 500,000 non-professional subscribers. The Participants state that the Amendment does not impose any burden on competition that is not necessary or appropriate because it is revenue neutral and maintains the status quo. Because the Participants did not provide the Commission with sufficient data to support their assertion that the fee change should not result in an increase of revenue to the Plan or to fees for any particular entity, however, the Commission is unable to evaluate the Participants' assertions that the Amendment does not impose any burden on competition that is not necessary or appropriate.

V. Conclusion

For the reasons stated above, the Commission believes it necessary or appropriate to summarily abrogate the Amendment and terminate its status as immediately effective. The Commission believes that the procedures set forth in Rule 608(b)(2) of Regulation NMS[37] will provide a more appropriate mechanism for determining whether the Amendment is consistent with the Act. Therefore, the Commission believes that it is necessary or appropriate in the public interest, for the protection of investors, or the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system or otherwise in furtherance of the purposes of the Act, to summarily abrogate the Amendment.

It is therefore ordered, pursuant to Section 11A of the Act,[38] and Rule 608 thereunder,[39] that the Forty-Second Amendment to the Nasdaq/UTP Plan (File No. S7–24–89) be, and hereby is, summarily abrogated. If the Participants choose to re-file the Amendment, they must do so pursuant to Section 11A of the Act and the Amendment must be re-filed in accordance with paragraph (a)(1) of Rule 608 of Regulation NMS [40] for review in accordance with paragraph (b)(2) of Rule 608 of Regulation NMS.[41]

By the Commission.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83129; File No. SR–FINRA–2018–015]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing of a Proposed Rule Change To Amend FINRA Rule 6433 To Adopt the OTC Quotation Tier Pilot as Permanent

April 30, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 20, 2018, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is proposing to amend FINRA Rule 6433 (Minimum Quotation Size Requirements for OTC Equity Securities) to adopt as permanent the minimum quotation sizes for OTC equity securities currently operating on a pilot basis, scheduled to expire on June 7, 2018.

The text of the proposed rule change is available on FINRA's website at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FINRA proposes to amend Rule 6433 (Minimum Quotation Size Requirements for OTC Equity Securities) (the ''Rule'') to adopt as permanent the minimum quotation sizes applicable to quotations in OTC equity securities [3] that were proposed pursuant to File No. SR–FINRA–2011–058 and implemented on a pilot basis on November 12, 2012 (''Tier Size Pilot'' or ''Pilot'').[4] The Pilot was initially approved for a one-year term, has been extended ten times, and currently is scheduled to expire on June 7, 2018.[5]

The Pilot tiers were designed to: (1) Simplify the structure of the minimum quotation sizes; (2) facilitate the display of customer limit orders under Rule 6460 (Display of Customer Limit Orders) (''limit order display rule''); and (3) expand the scope of the Rule to provide for uniform treatment of the types and sources of quotations that would be subject to the Rule.[6] FINRA believes the Pilot has resulted in its intended objectives, and particularly notes that the Pilot has yielded a significant positive result with regard to increased display of customer limit orders. At the same time, market quality measures have been neutral (*i.e.,* unchanged) or slightly positive (*i.e.,* slightly improved) overall during the Pilot, as compared to the pre-Pilot period, as discussed more fully below. Accordingly, FINRA believes it is appropriate and consistent with the Act to adopt the Pilot tier sizes on a permanent basis.

Objectives of the Pilot

FINRA Rule 6433 sets forth the minimum quotation sizes applicable to the display of quotations in OTC equity securities on any inter-dealer quotation system that permits quotation updates on a real-time basis. The Rule provides different minimum quotation sizes that apply depending upon the price level of the bid or offer in the security.

Prior to the Pilot, which has been in effect since November 12, 2012,[7] Rule

6433 provided for nine tier sizes that applied only to market makers' proprietary quotes. The pre-Pilot tiers ranged in price points from $0.00 through $2,500.01, and are shown below in Table 1.

TABLE 1

Price (bid or offer)	Minimum quote size (# of shares)
$0 to $0.50	5,000
$0.51 to $1.00	2,500
$1.01 to $10.00	500
$10.01 to $100.00	200
$100.01 to $200.00	100
$200.01 to $500.00	25
$500.01 to $1,000.00	10
$1,000.01 to $2,500.00	5
$2,500.01 +	1

Under the Pilot, the number of tiers was reduced from nine to six, and the tiers apply to all quotations displayed by market makers, whether representing proprietary or customer interest, as well as quotations displayed by non-market makers (*i.e.,* alternative trading systems or any other member firm).[8] The Pilot tiers ultimately adopted are shown below in Table 2.

TABLE 2

Price (bid or offer)	Minimum quote size (# of shares)
$0.0001 to $0.0999	10,000
$0.10 to $0.1999	5,000
$0.20 to $0.5099	2,500
$0.51 to $0.9999	1,000
$1.00 to $174.99	100
$175.00 +	1

The Pilot tiers simplified the tier structure by reducing the number of tiers from nine to six. In addition, for price points between $1.00 and $174.99, the Pilot established a minimum quotation size of 100 shares, which is comparable to the minimums generally applicable to quotations in securities on equity exchanges. The Pilot also revised the smallest price point from $0.00 to $0.0001 to conform to the minimum quotation increments under Rule 6434 (Minimum Pricing Increment for OTC Equity Securities).[9]

Importantly, the Pilot was designed to facilitate the display of customer limit orders under FINRA's limit order display rule, which generally requires that OTC market makers fully display better-priced customer limit orders (or same-priced customer limit orders that are at the best bid or offer and that increase the OTC market maker's size by more than a *de minimis* amount). Pursuant to the limit order display rule, OTC market makers are not required to display a customer limit order on an inter-dealer quotation system unless doing so would comply with the minimum quotation size applicable to the price of the quotation under the Rule. Therefore, although a customer limit order may otherwise have been required to be displayed under the limit order display rule—for example, because it improved price or the size (more than a *de minimis* amount)—if the order is less than the minimum quotation size prescribed by Rule 6433, the member is not required to display the order. Thus, FINRA believed that the revisions implemented by the Pilot would improve overall display of customer limit orders.

For example, because the Pilot would reduce the minimum quotation size from 2,500 to 100 shares for securities priced at or above $1.00, FINRA believed that competitively priced customer limit orders, which tend to be smaller-sized orders, would more likely be displayed and potentially yield a variety of benefits, including improved price transparency, enhanced execution of customer limit orders, and narrower spreads. In addition, in a memorandum on potential effects of the Pilot, SEC staff economists noted that enhanced visibility of customer limit orders could reduce customers' execution costs.[10]

An additional objective of the Pilot was to expand the Rule's scope to apply to all member quotations on an inter-dealer quotation system. Prior to the Pilot, the Rule applied only to market makers' proprietary quotes in OTC equity securities on an inter-dealer quotation system. Under the Pilot, the minimum tier sizes apply to any member quotations entered on an inter-dealer quotation system (including quotes representing customer interest and quotations entered by non-market makers).

Concerns Raised During the Proposal Process and Data Commitment

The Commission received several comments in response to FINRA's Tier Size Pilot proposal. Commenters generally were supportive of the goal of increased customer limit order display;[11] however, commenters also raised concerns regarding the impact of revised tiers. Specifically, certain commenters questioned whether the Pilot might harm market quality by permitting market makers to post quotes representing minimum dollar value commitments that are not financially meaningful, or otherwise eroding market maker liquidity in OTC equity securities.[12] In addition, some commenters believed that there was not sufficient data analysis to support the proposed changes to the tier sizes.[13]

In response to commenters' concerns, FINRA filed Amendment No. 1 to the Original Proposal to increase the minimum quotation sizes for most price points between $0.02 and $1.00, and proposed that the revised tiers operate as a one-year pilot instead of as a permanent amendment. FINRA also submitted Amendment No. 2 to the Original Proposal to, among other things, specify the items of data that FINRA would collect and provide to the Commission during the duration of the Pilot; specifically:

1. The price of the first trade of each trading day executed at or after 9:30:00 a.m., based on execution time.
2. The price of the last trade of each trading day executed at or before 4:00:00 p.m., based on execution time.
3. Daily share volume.
4. Daily dollar volume.
5. Number of limit orders from customers and in total.
6. Percentage of the day that the size of the BBO equals the minimum quote size.
7. Number of market makers actively quoting.
8. Number of executions from a limit order and number of limit orders at the BBO or better by tier size from a customer and in total.
9. Liquidity/BBO metrics
a. Time-weighted quoted spread.
b. Effective spread.
c. Time-weighted quoted depth (number of shares) at the inside.

[8] FINRA initially proposed six tiers, some of which were different from those ultimately adopted. However, in response to comments received, FINRA amended the filing to increase the minimum quotation size for most price points between $0.02 and $1.00. FINRA stated that the amended tiers were intended to facilitate the display of additional liquidity by market makers. *See* Securities Exchange Act Release No. 66819 (April 17, 2012), 77 FR 23770 (April 20, 2012) (Amendment No. 1 to File No. SR–FINRA–2011–058); *see also* Original Proposal.

[9] Rule 6434, among other things, prohibits members from displaying a bid or offer in an OTC equity security in an increment smaller than $0.01 if the bid or offer is priced $1.00 or greater per share, or in an increment smaller than $0.0001 if the bid or offer is priced below $1.00.

d. Time-weighted quoted depth (dollar value of shares) at the inside.

FINRA also committed to submitting an assessment, at least 60 days before the end of the Pilot, that addressed the impact of the Pilot, the concerns raised by commenters during the rule filing process, and whether the Pilot resulted in the desired effects.[14]

Pilot Assessment

FINRA submitted its assessment on the operation of the Tier Size Pilot on September 13, 2013, which utilized pilot data covering the period from November 12, 2012 through June 30, 2013.[15] The 2013 Assessment, discussed in greater detail below, included a recommendation, based on the extensive analysis conducted, that the Pilot tiers be adopted as permanent. Nonetheless, FINRA extended the Pilot duration to allow the effects of the Pilot to be more thoroughly reviewed.[16] During this extension, the Staff of the Division of Economic and Risk Analysis (''DERA'') of the SEC conducted a study, which assessed the impact of the Pilot on liquidity. The study was published as a memorandum to file (''DERA Memo to File'').[17] And while the two studies covered different time periods and employed different methods, the DERA Memo to File reported findings consistent with those of the FINRA 2013 Assessment. In light of the 2013 Assessment, FINRA's further observations, and the DERA Memo to File, FINRA continues to believe that it is appropriate to permanently adopt the tier sizes that have been in operation since November 12, 2012, and is proposing to do so at this time.

FINRA believes the 2013 Assessment demonstrated that the Pilot accomplished its objectives, including increased customer limit order display, and that key market quality indicators have been unchanged or have slightly improved overall. FINRA continued to collect and provide Pilot data to the SEC since the 2013 Assessment. In addition, FINRA has continued to monitor the impact of the operation of the Pilot on market quality metrics for the over-the-counter marketplace, which FINRA generally believes indicate positive trends overall, providing continued support for permanent adoption of the Pilot tiers.[18] Moreover, the DERA Memo to File provided further evidence, in a regression framework, that supports the conclusion that the Pilot had a neutral to positive impact on market quality.

Specifically, FINRA believes that the 2013 Assessment demonstrated that the Pilot has resulted in a meaningful increase in the display of customer limit orders. Moreover, FINRA believes the data collected during the Pilot also supports that market quality has not been harmed, as suggested by the analysis of market quality measures such as spreads and market depth.

(A) Enhanced Customer Limit Order Display

When the Commission approved the Pilot, it recognized the potential benefits of enhancing customer limit order display. Notably, the Commission found that ''[i]n the Commission's view, FINRA's proposed revisions are designed to protect investors by revising the Rule's tier thresholds such that a larger percentage of customer limit orders are reflected in quotations for OTC equity securities, thereby potentially improving the prices at which customer limit orders will be executed, consistent with the protection of investors and the public interest.'' [19] FINRA believes the Pilot clearly has achieved the objective of increased customer limit order display.

As noted in FINRA's September 2013 Assessment, between November 1, 2012 and June 30, 2013, for all tier sizes combined, there was a 13% increase in the number of customer limit orders that met the minimum quotation sizes to be eligible for display under the Pilot tiers. FINRA also observed a significant increase in the number of customer limit orders in securities priced between $0.20 and $100.00 that became eligible for display. This trend continued through July 31, 2014. Specifically, between July 1, 2013 and July 31, 2014, FINRA observed, for all tier sizes combined, an 18.45% increase in the number of customer limit orders that met the minimum quotation sizes and, therefore, eligible for display—also with the most significant increase observed for securities priced between $0.20 and $100.00.

Tables 3 and 4 below show the percentage of customer limit orders that were equal to or greater than the minimum quotation size under both the Pilot and pre-Pilot tier sizes for the specified price ranges for the periods of November 1, 2012 through June 30, 2013, and from July 1, 2013 through July 31, 2014, respectively.

TABLE 3

[November 1, 2012 through June 30, 2013]

Price range	Pilot tier size	Customer limit orders ≥ tier size (%)	Pre-pilot tier size	Customer limit orders ≥ tier size (%)
0.0001–0.0999	10,000	78.29	5,000	86.30
0.10–0.1999	5,000	56.89	5,000	56.89

500.01–1,000.00	1	100	10	66.65
1,000.00–2,500.00	1	100	5	65.58
2,500.00+	1	100	1	100.00

As was noted in the 2013 Assessment, of the 301,628,686 customer limit orders in OTC equity securities reported to FINRA's Order Audit Trail System (''OATS'') between November 1, 2012 and June 30, 2013, over 86.6% were priced between $0.20 and $100.00. Of particular note, 58.7 million customer limit orders, or almost 20% of all customer limit orders, were priced between $1.00 and $10.00. This price range experienced an increase of almost 24% in the number of customer limit orders that met the minimum quotation size to be eligible for display under the Pilot. Further, 181.6 million customer limit orders, or over 60% of all customer limit orders, were priced between $10.01 and $100.00. This price range experienced an increase of over 10% in the number of customer limit orders that met the tier sizes and were eligible for display under the Pilot tier sizes. Consequently, the 2013 Assessment found that an additional 32 million customer limit orders priced between $1.00 and $100.00 became eligible for display during the Pilot that otherwise would not have been eligible for display.

The trends during the period since the 2013 Assessment are similar. Specifically, of the 573,973,197 customer limit orders in OTC equity securities reported to OATS between July 1, 2013 and July 31, 2014, 81.4% were priced between $0.20 and $100.00. Of particular note, 114.5 million customer limit orders, or almost 20% of all customer limit orders, were priced between $1.00 and $10.00. From July 1, 2013 through July 31, 2014, this price range experienced an increase of over 29% in the number of customer limit orders that met the minimum quotation size to be eligible for display under the Pilot than would have been eligible in the absence of the Pilot. Further, 312.1 million customer limit orders, or over 54% of all customer limit orders, were priced between $10.01 and $100.00. This price range experienced an increase of over 19% in the number of customer limit orders that met the tier sizes and were eligible for display under the Pilot tier sizes. Consequently, an additional 94.9 million customer limit orders priced between $1.00 and $100.00 became eligible for display during the Pilot between June 30, 2013 and July 31, 2014 than otherwise would have been eligible for display.

Thus, with an aggregate overall increase in displayed customer limit orders in OTC equity securities over the period from November 12, 2012 through July 31, 2014 of 16.24%, representing approximately 142 million additional orders than otherwise would have been eligible for display, FINRA believes that the impact of the Pilot on limit order display has clearly been positive, with stronger than average results concentrated in the price points ranging from $10.01 and $100.00 (the range in which the majority of all customer limit orders fell (approximately 57%)).

(B) Impact on Market Quality

When the Commission approved the Pilot, it acknowledged that the Pilot may raise issues of ''potentially competing forces''—enhanced customer limit order display on the one hand, and potential harm to OTC equity market quality (liquidity, efficiency, and volatility) on the other.[20] On balance, however, the Commission expressed the view that ''as well as increasing the number of customer limit orders eligible for display and the potential for better executions, arguments can be made that FINRA's proposal will benefit the OTC market by facilitating market making activity, narrowing spreads and increasing liquidity.'' [21]

FINRA believes that analysis of the Pilot and pre-Pilot data generally shows that the market quality measures the Commission identified—*i.e.,* market maker activity, spreads and liquidity [22]—were unchanged to slightly improved, and that, therefore, there has been an overall neutral to positive impact on OTC market quality for the

[20] *See* Order Approving File No. SR–FINRA–2011–058, 77 FR at 37467.

[21] *See* Order Approving File No. SR–FINRA–2011–058, 77 FR at 37467.

[22] To the extent the Commission expressed concern about volatility when it approved the Pilot, its concern was premised on the Pilot's impact on liquidity. *See, e.g.,* Order Approving File No. SR–FINRA–2011–058, 77 FR at 37470 (''[I]f the revised tier sizes result in less activity by market makers, overall liquidity in the marketplace could decline. Such a decline could result in increased volatility and less efficient pricing for OTC equity securities.'') (internal citation omitted).

majority of tiers as compared to the pre-Pilot data.[23]

As noted in the 2013 Assessment, where minimum quotation size decreased under the Pilot, effective spreads generally remained the same or narrowed, quoted spreads narrowed, and price impact generally decreased. The 2013 Assessment also stated that some of the market quality metrics provided inconclusive results, specifically for Tier 1 securities, where the minimum quote size requirement increased. The 2013 Assessment documented that effective spreads had widened, but with no significant reduction in quoted depth.[24]

In the post-2013 Assessment period of July 1, 2013 through July 31, 2014, FINRA has observed that the number of stocks quoted in the OTC market has remained relatively constant [25] and market makers continued to provide liquidity.[26] The number of BBO quotes also significantly increased throughout 2014, the second year of the Pilot; as it generally hovered around 2 million per day during the Pre-Pilot period, but steadily increased, reaching a high of approximately 6 million per day in early 2014 and leveling off to an average of 5 million per day during the month of July 2014. The average number of trades per day was higher during the first two years of the Pilot compared to the pre-Pilot level, and more than tripled by March 2014.[27] However, trading activity appears to have leveled-off in mid-2014, albeit still at levels above the pre-Pilot trading.[28] Liquidity continued to be provided at levels greater than the minimum required depth, evidenced by executions at sizes greater than the required minimums, which enabled the execution of large trades in the OTC market. For example, for Tier 1 securities where the minimum quotation size increased, the number of trades executed above the minimum size increased by approximately 75%. While there was virtually no change in the frequency of trades above the minimum size for Tiers 2 and 3, all the other tiers experienced a positive change. Trading in sizes greater than the minimum quotation occurred infrequently in these tiers both prior to and during the pilot.

The analysis of data from the second year of the Pilot also confirms FINRA's position that the impact of the change in the minimum quotation size on the market quality metrics is generally positive. FINRA staff analyzed the change in five measures to evaluate the impact of the Pilot on market quality—time-weighted quoted spreads, volume-weighted spreads, time-weighted quoted depth at the BBO, time-weighted quoted depth around the BBO, and price impact. Time-weighted quoted spreads continued to narrow during the first two years of the Pilot and these positive changes in time-weighted quoted spreads between the pre-Pilot and the first two years of the Pilot were statistically significant for all tiers.[29] Similarly, volume-weighted spreads were unchanged (or slightly narrowed) for all tiers between the pre-Pilot period and the first two years of the Pilot when accounting for the longer Pilot period.

The displayed depth decreased slightly for most tiers, but a consideration of depth beyond the BBO demonstrated that any declines were mostly statistically insignificant across tiers in the first two years of the Pilot. FINRA believes that consideration of depth beyond the BBO is a useful additional measure for assessing market depth.

In addition, based on a data review using the same methodology as was employed for the 2013 Assessment, subsequent to the completion of the 2013 Assessment, FINRA observed that the price impact of hypothetical market orders continued to remain lower during the second year of the Pilot period than during the pre-Pilot period.[30] For example, the following two tables present the price impact for hypothetical market buy and sell orders with sizes five times larger than the minimum size requirement for each tier. The price impact associated with the hypothetical orders is estimated to have declined for all tiers, which is an indication of improved market quality. The decline is significant for all levels except for Tiers 5b and 5c (for buy trades) and Tier 1 (for sell trades).[31]

[Content of footnote 31: The t-statistic is designed to measure whether the price impact associated with a trade of a given (relative) size is different between the pre-Pilot and Pilot sample periods. The difference is tested for significance by calculating the two-sample un-pooled Student's t-statistic,

$$t = \frac{\bar{X}_1 - \bar{X}_2}{s_{\bar{X}_1 - \bar{X}_2}}, \text{ where } s_{\bar{X}_1 - \bar{X}_2} = \sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}.$$

The null hypothesis (*i.e.,* that price impact is unchanged between the two sample periods) is rejected at the 90% and 95% confidence levels, if the t-statistics are greater than 1.65 and 1.96, respectively.]

[23] FINRA notes that, from an analytical perspective, changes in market quality measures may not be attributable solely due to the Pilot, since they may also be impacted by other contemporaneous market factors.

[24] For Tier 1 securities, the DERA Memo to File finds that both quoted and effective spreads increase between the pre-Pilot period (November 14, 2011 through October 31, 2012) and the Pilot period (November 12, 2012 through November 28, 2014) covered by the analysis. However, the DERA Memo to File does not find sufficient evidence that these increases in spreads were caused by the Pilot, as spreads started to widen at least six months prior to the implementation of the Pilot.

[25] The number of stocks quoted on the OTC market remained stable at around 10,000 throughout the pre-Pilot period, and during the period covered in the 2013 Assessment and FINRA's subsequent observations (November 1, 2012 through July 31, 2014).

[26] There was an average of nine market-makers for each symbol with no significant change in the number between the pre-Pilot period, and during the period covered in the 2013 Assessment and FINRA's subsequent observations (November 1, 2012 through July 31, 2014).

[27] The daily number of trades executed during the year prior to the Pilot is estimated at approximately 75,000, and reached around 250,000 trades by the end of the first quarter in 2014.

[28] The daily average number of trades was approximately 100,000 by July 2014.

[29] For stocks in price tiers where the minimum quotation size requirement decreased, the DERA Memo to File also finds that both quoted and effective spreads decrease between the pre-Pilot period (from November 14, 2011 to October 31, 2012) and the Pilot period (November 12, 2012 to November 28, 2014) covered by the analysis. Furthermore, the DERA Memo to File's analysis suggests that these decreases in spreads may reflect causal effects of the Pilot. In contrast, for stocks in price tiers where the minimum quotation size requirement increased or remained the same, the DERA Memo to File does not find sufficient evidence that the Pilot had a causal impact on spreads.

[30] As discussed in the 2013 Assessment, the price impact of hypothetical market orders is the effective half spread for a hypothetical market ''sweep'' order of a particular size. In other words, it is an estimate of what the volume-weighted average effective half spread would have been had a market order been broken up and routed to the market makers based on price priority.

[31] [Content of footnote 31 moved to the body of the text due to **Federal Register** requirements.]

TABLE 5

[Price Impact for Hypothetical Large Market Buy Orders]

4	Decreased	1,676	0.1214	0.0656	−0.0558	(4.95)
5a	Decreased	3,059	0.4170	0.1500	−0.2670	(6.01)
5b	Decreased	2,145	2.3563	0.4214	−1.9349	(6.79)
5c	Maintained	288	14.8135	4.2683	−10.5452	(3.13)

As noted above, the 2013 Assessment was not conclusive as to the impact of the Pilot on market quality for Tier 1 securities, the only tier where the minimum quotation size increased. For example, the 2013 Assessment indicated that the time-weighted quoted spread was unchanged for Tier 1 securities in the Pilot period. However, from June 30, 2013 to July 2014, there was a statistically significant narrowing of time-weighted quoted spreads in this tier. Evidence from the second year of the Pilot suggests that volume-weighted effective spreads and depth beyond the BBO were unchanged from pre-Pilot levels, but there was a statistically significant increase in depth at the BBO. Therefore, the updated analysis provides reliable evidence that market quality for Tier 1 securities has also improved during the Pilot.[32] The data for other tiers, however, continue to provide reliable evidence that market quality has been unchanged or slightly improved under the Pilot. Thus, because the Pilot had a demonstrable positive impact on customer limit order display, and appears to have had an overall neutral to positive impact on market quality, FINRA believes it is appropriate and in the best interest of investors to adopt the Pilot tiers as permanent.

As noted in Item 2 of this filing, because the filing would allow Rule 6433 to continue to operate without interruption, if the Commission approves the proposed rule change, the implementation date of the proposed rule change shall be the date of approval by the Commission.

(C) Alternatives Considered

In developing the proposed rule change, FINRA considered several alternatives to the proposed rule change, to ensure that it (1) simplifies the structure of the minimum quotation sizes; and (2) facilitates the display of customer limit orders under Rule 6460 (Display of Customer Limit Orders) (''limit order display rule'') without having a negative impact on market quality and the number of customer limit orders that are eligible for display. Accordingly, FINRA considered alternative price points and minimum quotation sizes in forming the tiers and evaluated the number of customer limit orders that would be eligible for display. FINRA also assessed the potential impact associated with alternative price bands across multiple sample periods, and concluded that the tier structure that was adopted under the Pilot resulted in the maximum number of customer limit orders that would be eligible for display without harming competition in the OTC equity securities market. In addition, FINRA staff revised the smallest price point to conform to the minimum quotation increments under FINRA Rule 6434 and increased the minimum quotation sizes for most price points between $0.02 and $1.00. FINRA believes that the pilot tiers continue to be appropriate and should be adopted on a permanent basis.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,[33] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. FINRA also believes that the proposed rule change is consistent with the provisions of Section 15A(b)(11) of the Act.[34] Section 15A(b)(11) requires that FINRA rules include provisions governing the form and content of quotations relating to securities sold otherwise than on a national securities exchange which may be distributed or published by any member or person associated with a member, and the persons to whom such quotations may be supplied.

FINRA believes that adopting the Pilot tiers as permanent would promote just and equitable principles of trade

[32] As noted in note 24, *supra,* the DERA Memo to File finds that quoted and effective spreads for Tier 1 securities increase between the pre-Pilot period of November 14, 2011 to October 31, 2012 and the Pilot period of November 12, 2012 to November 28, 2014 covered by the analysis, but it does not find sufficient evidence that these increases in spreads were caused by the Pilot.

[33] 15 U.S.C. 78*o*–3(b)(6).

[34] 15 U.S.C. 78*o*–3(b)(11).

and protect investors and the public interest. The 2013 Assessment and subsequent observations clearly demonstrate that the Pilot has resulted in increased display of customer limit orders. The 2013 Assessment found a 13% increase in the number of customer limit orders that met the minimum quotation sizes to be eligible for display across all Pilot tiers, and the updated data through July 2014 shows an even greater increase of 18.45% than otherwise would have been eligible for display. Notably, the increase in customer limit orders eligible for display was significant in tiers that make up substantial percentages of the overall volume transacted in OTC equity securities.

FINRA further believes that any concerns about market quality raised by public commenters prior to the Commission's approval of Pilot have not materialized. In fact, FINRA believes that the Pilot has had a positive impact on OTC market quality for the majority of OTC equity securities and tiers. As more fully detailed above, FINRA believes the Pilot data shows overall a slight reduction in spreads for most OTC equity securities with no negative (and perhaps a positive) impact on liquidity.

As noted previously, when the Commission approved the Pilot, it emphasized the potential benefits of increasing customer limit order display. For instance, the Commission noted that increased limit order display could potentially improve the prices at which customer limit orders will be executed, consistent with the protection of investors and the public interest.[35] The Commission also has stated its belief that greater customer limit order display could increase quote competition, narrow spreads, and increase the likelihood of price improvement for OTC equity securities.[36] The Commission had maintained a longstanding view that there are benefits to promoting customer limit order display.[37]

Accordingly, FINRA believes that the Pilot accomplished its intended objectives and realized benefits anticipated in its adoption, including greater customer limit order display. At the same time, market quality indicators during the Pilot suggest that the revised tiers and greater customer limit order display did not result in a harmful reduction in liquidity for OTC equity securities. As a result, FINRA believes it is consistent with the Act to adopt the Pilot tiers as permanent.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Despite some initial concerns from commenters that the Pilot may have negative effects on market makers who quote OTC equity securities, as the Pilot has progressed, FINRA observed an overall increase in the number of market makers quoting OTC equity securities across the duration of the Pilot. Accordingly, given the increase in the number of market makers quoting OTC equity securities, as demonstrated by the analysis using the first two years of data from the Pilot, and the increased display of customer limit orders, FINRA believes the Pilot has generated evidence that support the Commission's preliminary view ''that the [Pilot] could enhance competition.'' [38]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–FINRA–2018–015 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2018–015. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing will also be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2018–015 and should be submitted on or before May 29, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[39]

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE P

SURFACE TRANSPORTATION BOARD

Release of Waybill Data

The Surface Transportation Board has received a joint request from the Illinois Department of Transportation and the Missouri Department of Transportation (WB18–15—4/13/18) for permission to use data from the Board's 2014–2016 Masked Carload Waybill Samples. A copy of this request may be obtained from the Office of Economics.

The waybill sample contains confidential railroad and shipper data; therefore, if any parties object to these requests, they should file their objections with the Director of the Board's Office of Economics within 14 calendar days of the date of this notice. The rules for release of waybill data are codified at 49 CFR 1244.9.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Commercial Space Transportation Advisory Committee—Open Meeting

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Commercial Space Transportation Advisory Committee Meeting.

SUMMARY: Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act, notice is hereby given of a meeting of the Commercial Space Transportation Advisory Committee (COMSTAC).

DATES AND ADDRESSES: The meeting will take place on Thursday, June 14th from 10:00 a.m. to 5:00 p.m. in the atrium of the Department of Transportation Headquarters, located at 1200 New Jersey Ave SE, Washington, DC 20590. Guests should allow time for security screening when entering the building.

SUPPLEMENTARY INFORMATION: This will be the 65th meeting of the COMSTAC. The preliminary schedule for the COMSTAC meetings on June 14th is below:

—Arrival and Check-in at DOT HQ (9:30–10:00 a.m.)
—Remarks from Invited Guests (10:00 a.m.–12:00 p.m.)
—Lunch Break (12:00–1:30 p.m.)
—Committee Business and Public Comments (1:30–5:00 p.m.)

The invited guest speakers will discuss issues and topics relevant to the commercial space transportation industry, such as Congressional activity, and updates from the FAA, NASA, and National Space Council.

This meeting is open to the public. Interested members of the public may submit relevant written statements for the COMSTAC members to consider under the advisory process. Statements may concern the issues and agenda items mentioned above and/or additional issues that may be relevant for the U.S. commercial space transportation industry. Interested parties wishing to submit written statements should contact the points of contact listed below in writing (mail or email) by May 31st so that the information can be made available to COMSTAC members for their review and consideration before the June 14th meeting. Written statements should be supplied in the following formats: one hard copy with original signature and/or one electronic copy via email. Portable Document Format (PDF) attachments are preferred for email submissions.

An agenda will be posted on the FAA website at *www.faa.gov/go/ast.* For specific information concerning the times and locations of the COMSTAC working group meetings, contact the contact person listed below.

Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should inform the contact person listed below in advance of the meeting.

FOR FURTHER INFORMATION CONTACT: Di Reimold, COMSTAC Executive Director; telephone (202) 267–7635; email *dorothy.reimold@faa.gov,* and Nate McIntyre, COMSTAC Designated Federal Officer; telephone (202) 267–8464; email *nathanael.mcintyre@faa.gov;* FAA Office of Commercial Space Transportation, 800 Independence Avenue SW, Room 331, Washington, DC 20591.

Complete information regarding COMSTAC is available on the FAA website at: *http://www.faa.gov/about/office_org/headquarters_offices/ast/advisory_committee/.*

Issued in Washington DC, May 1, 2018.

Kelvin B. Coleman,

Acting Associate Administrator for Commercial Space Transportation.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Summary Notice No. 2018–44]

Petition for Exemption; Summary of Petition Received; Ameriflight

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Federal Aviation Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before May 29, 2018.

ADDRESSES: Send comments identified by docket number FAA–2014–0278 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the

public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *http://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *http://www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Clarence Garden (202) 267–7489, Office of Rulemaking, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591.

This notice is published pursuant to 14 CFR 11.85.

Lirio Liu,

Executive Director, Office of Rulemaking.

Petition for Exemption

Docket No.: FAA–2014–0278.

Petitioner: Ameriflight.

Section(s) of 14 CFR Affected: 135.243(c)(2).

Description of Relief Sought: Ameriflight, LLC seeks relief to allow an incremental reduction of the current 14 CFR 135.243(c)(2) 1,200 hour minimum flight time requirement for pilots in command of aircraft under instrument flight rules (IFR), to 1,000 flight hours provided specific operational restrictions, training using a ''cockpit procedures trainer''. Additional checking, operating experience under the supervision of an instructor, and monitoring requirements are complied with as necessary to ensure an equivalent level of safety. The relief would apply exclusively to pilots in command engaged in Ameriflight, LLC cargo-only operations conducted under 14 CFR part 135 in propeller-powered airplanes that do not require a type rating.

[FR Doc. 2018–09608 Filed 5–4–18; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Bureau of Transportation Statistics

[Docket Number DOT–OST–2017–0043

Agency Information Collection Activity; Notice of Request for Approval To Collect New Information: Oil and Gas Industry Safety Data Program

AGENCY: Office of the Assistant Secretary for Research and Technology (OST–R), Bureau of Transportation Statistics (BTS), U.S. Department of Transportation.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the requirements of section 3506(c)(2)(A) of Title 44 of the U.S. Code (Pub. L. 104–13, the Paperwork Reduction Act of 1995), this notice announces the intention of BTS to request the Office of Management and Budget (OMB) to approve a new data collection: Oil and Gas Industry Safety Data.

In August 2013, the Bureau of Safety and Environmental Enforcement (BSEE) and BTS signed an Interagency Agreement to develop and implement SafeOCS, a voluntary program for confidential reporting of 'near misses' occurring on the Outer Continental Shelf (OCS). The Oil and Gas Industry Safety Data (ISD) program, is a component of BTS's SafeOCS data sharing framework, that provides a trusted, proactive means for the oil and gas industry to report sensitive and proprietary safety information, and to identify early warnings of safety problems and potential safety issues by uncovering hidden, at-risk conditions not previously exposed from analysis of reportable accidents and incidents. Companies participating in the ISD are voluntarily submitting safety data. There is no regulatory requirement to submit such data.

The ISD identifies a broader range of data categories to ensure safe performance and appropriate risk management, which adds a learning component to assist the oil and gas industry in achieving improved safety performance. BTS will be the repository for the data, and will analyze and aggregate information proffered under this program, and publish reports providing identification of potential causal factors and trends or patterns before safety is compromised, and affording continuous improvement opportunities by focusing on repairing impediments to safety.

DATES: Written comments should be submitted by July 6, 2018.

ADDRESSES: To ensure that your comments are not entered more than once into the docket, submit comments by only one of the following methods:

- *Federal e-Rulemaking Portal:* Go to *http://www.regulations.gov* and follow the instructions for sending your comments electronically. Docket Number: DOT–OST–2017–0043.
- *Mail:* Docket Services, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* Deliver to mail address above between 9 a.m. and 5 p.m. EST, Monday through Friday, except Federal holidays.
- *Fax:* (202) 493–2251.

Identify all transmissions with ''Docket Number DOT–OST–2017–0043'' at the beginning of each page of the document.

Instructions: All comments must include the agency name and docket number for this notice. Paper comments should be submitted in duplicate. The Docket Management Facility is open for examination and copying, at the above address from 9 a.m. to 5 p.m. EST, Monday through Friday, except Federal holidays. If you wish to receive confirmation of receipt of your written comments, please include a self-addressed, stamped postcard with the following statement: ''Comments on Docket Number DOT–OST–2017–0043.'' The Docket Clerk will date stamp the postcard prior to returning it to you via the U.S. mail.

Privacy Act: Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). Please note that all comments received including any personal information, will be posted and will be publicly viewable, without change, at *www.regulations.gov*. You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Demetra V. Collia, Bureau of Transportation Statistics, Office of the Assistant Secretary for Research and Technology, U.S. Department of Transportation, Office of Statistical and Economic Analysis, RTS–31, E36–302, 1200 New Jersey Avenue SE, Washington, DC 20590–0001; Phone No. (202) 366–1610; Fax No. (202) 366–3383; email: *demetra.collia@dot.gov.* Office hours are from 8:30 a.m. to 5

p.m., EST, Monday through Friday, except Federal holidays.

Data Confidentiality Provisions: The confidentiality of oil and gas industry safety data information submitted to BTS is protected under the BTS confidentiality statute (49 U.S.C. 6307) and the Confidential Information Protection and Statistical Efficiency Act (CIPSEA) of 2002 (Pub. L. 107–347, Title V). In accordance with these confidentiality statutes, only statistical (aggregated) and non-identifying data will be made publicly available by BTS through its reports. BTS will not release to BSEE or any other public or private entity any information that might reveal the identity of individuals or organizations mentioned in failure notices or reports without explicit consent of the respondent and any other affected entities.

SUPPLEMENTARY INFORMATION:

I. The Data Collection

The Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35; as amended) and 5 CFR part 1320 require each Federal agency to obtain OMB approval to initiate an information collection activity. BTS is seeking OMB approval to collect the following new data:

Title: Oil and Gas Industry Safety Data (ISD) Program.

OMB Control Number:

Type of Review: Approval of data collection. This information collection for Oil and Gas Industry Safety Data is to ensure the safe performance and appropriate risk management within the oil and gas industry, including but not limited to exploration and production.

Respondents: Oil and gas industry companies involved in the exploration and/or production working in the Gulf of Mexico (GOM). Responsibility for establishing the actual scope and burden for this collection resides with BTS.

Number of Potential Responses: One hundred.

Estimated Time per Response: 40 hours.

Frequency: Annual.

Total Annual Burden: 400 hours.

Abstract: The Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) (44 U.S.C. 3501 note), can provide strong confidentiality protection for information acquired for statistical purposes under a pledge of confidentiality. CIPSEA Guidance from the Office of Management and Budget advises that a non-statistical agency or unit (BSEE) that wishes to acquire information with CIPSEA protection, may consider entering an agreement with a Federal statistical agency or unit (BTS). BTS and BSEE have determined that it is in the public interest to collect, and process ISD reports and any other data deemed necessary to administer the Oil and Gas Industry Safety Data Program under a pledge of confidentiality for statistical purposes only.

Working with subject matter experts BTS will then aggregate and further analyze these reports to identify potential causal factors and trends. All data reviewers would be subject to non-disclosure requirements mandated by CIPSEA. The results of these aggregated analyses will be distributed by BTS through public reports, workshops, and other forms. Periodic industry workshops may be scheduled by BSEE/industry to discuss the data analysis and trend results, as well as share ideas and process improvements for preventing recurrence.

II. Background

The goal of the Oil and Gas Industry Safety Data program is to provide BTS with essential information about accident precursors and other hazards associated with Outer Continental Shelf (OCS) oil and gas operations including but not limited to exploration and production (E&P.) This program collects voluntarily reported safety data.

A related goal of the ISD is to provide a mechanism whereby participating companies can submit safety data in whatever format they currently use to minimize incremental effort on the company's part. To realize the optimum benefits from an industrywide framework, all organizations associated with offshore E&P operations (operators, contractors, subcontractors, suppliers/OEMs) and/or regulatory agencies are encouraged to submit data voluntarily. BTS is conducting an Industry Safety Data (ISD) program pilot, in 2017–2018 with data from nine companies.

The value proposition of the ISD program is its focus on the continual improvement in safety performance, and its implementation of lessons learned from incidents and events that occur within the oil and gas industry. This is particularly important for major hazards and associated prevention/mitigation barriers. Several key aspects of this effort includes:

- Providing a solution for a central repository for collection, collaboration, and sharing of lessons learned from collected safety-related data,
- Identifying the type of data that will provide valuable information,
- Gaining alignment on incident and indicator definitions,
- Utilizing a secure process for collection and analysis of the data,
- Implementing a robust methodology for identifying systemic issues,
- Disseminating the results to stakeholders who can then take actions to reduce or eliminate the risk of recurrence through greater barrier integrity,
- Providing opportunities for stakeholders to network and benchmark performance, both individually and as an organization, and
- Establishing a framework wherein adverse actions cannot legally be taken against data submitters nor can raw data be used for regulatory development purposes.

One other related goal of the ISD program is to provide a mechanism whereby participating companies can submit safety data in whatever format they currently use to minimize incremental effort on the company's part.

One of the key benefits associated with submitting safety data directly to BTS for review and analysis, is that it addresses concerns related to protection of the data source. SafeOCS, including the ISD, operates under a Federal law, the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA), which requires the program to protect the identity of the reporter and treat reports confidentially. Information submitted under CIPSEA is also protected from release to other government agencies, Freedom of Information Act (FOIA) requests, and subpoena. Even regulatory agencies, such as BSEE, cannot have access to the identity of those submitting reports under the program. In addition, the information from individual records cannot be used for enforcement purposes. CIPSEA is subject to strict criminal and civil penalties for noncompliance.

Once data is aggregated, BTS will analyze safety data reports submitted by companies involved in OCS activities. BTS will also work with subject matter experts to further analyze these reports to identify potential causal factors and trends. The results of these aggregated analyses will be distributed by BTS through public reports. Industry workshops may then be scheduled to allow operators, service companies, drilling contractors, regulators, and other stakeholders to discuss the results and share lessons learned.

This data collection will provide participating members within the oil and gas industry, a trusted means to report sensitive proprietary and safety information related to operations in the OCS, and to foster trust in the confidential collection, handling, and storage of the raw data. BTS will use the

data collected to establish a comprehensive source of the safety related data for statistical purposes. With input from subject matter experts, BTS will process and analyze information on Safety Data and associated metadata, and publish the results of such analyses in public reports. These reports will provide the industry, all OCS stakeholders and BSEE with essential information about critical safety issues for offshore operations and production.

The BTS Director or Deputy Director will review all analyses and reports, and issue approval for publication. While BTS's direct involvement will end after the aggregated trends report is published, the ISD program may form a committee to address the analytical findings.

III. Request for Public Comment

BTS requests comments on any aspects of this information collection request, including: (1) Ways to enhance the quality, usefulness, and clarity of the collected information; and (2) ways to minimize the collection burden without reducing the quality of the information collected, including additional use of automated collection techniques or other forms of information technology.

Patricia Hu,

Director, Bureau of Transportation Statistics, Office of the Assistant Secretary for Research and Technology, U.S. Department of Transportation.

[FR Doc. 2018–09613 Filed 5–4–18; 8:45 am]

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 1098–C

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Form 1098–C, Contributions of Motor Vehicles, Boats, and Airplanes.

DATES: Written comments should be received on or before July 6, 2018 to be assured of consideration.

ADDRESSES: Direct all written comments to Laurie Brimmer, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Sandra Lowery at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or at (202) 317–5754 or through the internet, at *Sandra.J.Lowery@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Contributions of Motor Vehicles, Boats, and Airplanes.

OMB Number: 1545–1959.

Form Number: Form 1098–C.

Abstract: Section 884 of the American Jobs Creation Act of 2004 (Pub. L. 108–357) added new paragraph 12 to section 170(f) for contributions of used motor vehicles, boats, and airplanes. Section 170(f)(12) requires that a donee organization provide an acknowledgement to the donor of this type of property and is required to file the same information to the Internal Revenue Service. 1098–C may be used as the acknowledgement and it, or an acceptable substitute, must be filed with the IRS.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Not for-profit organizations.

Estimated Number of Respondents: 151,000.

Estimated Time per Respondent: 18 minutes.

Estimated Total Annual Burden Hours: 46,810.00.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 23, 2018.

Laurie Brimmer,

Senior Tax Analyst.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 8693

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Low-Income Housing Credit Disposition Bond.

DATES: Written comments should be received on or before July 6, 2018 to be assured of consideration.

ADDRESSES: Direct all written comments to Laurie Brimmer, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Martha R. Brinson, at (202) 317–5753, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Martha.R.Brinson@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Low-Income Housing Credit Disposition Bond.

OMB Number: 1545–1029.

Form Number: 8693.

Abstract: Form 8693 is needed per IRC section 42(j)(6) to post bond or establish a Treasury Direct Account and waive the recapture requirements under section 42(j) for certain disposition of a building on which the low-income housing credit was claimed. Internal Revenue regulations section 301.7101–1 requires that the posting of a bond must be done on the appropriate form as determined by the Internal Revenue Service.

Current Actions: There are no changes being made to Form 8693 at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Respondents: 667.

Estimated Time Per Respondent: 5 hrs., 23 mins.

Estimated Total Annual Burden Hours: 3,589.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments will be of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 26, 2018.

Title: Special Valuation Rules.

OMB Number: 1545–1241.

Regulation Project Number: PS–92–90 [TD 8395].

Abstract: Section 2701 of the Internal Revenue Code allows various elections by family members who make gifts of common stock or partnership interests and retain senior interests in the same entity. This regulation provides guidance on how taxpayers make these elections, what information is required, and how the transfer is to be disclosed on the gift tax return (Form 709).

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 1,200.

Estimated Time Per Respondent: 25 minutes.

Estimated Total Annual Burden Hours: 496.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 23, 2018.

Laurie Brimmer,

Senior Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Guidance on Passive Foreign Investment Company (PFIC) Purging Elections.

DATES: Written comments should be received on or before July 6, 2018 to be assured of consideration.

ADDRESSES: Direct all written comments to Laurie Brimmer, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulation should be directed to Martha R. Brinson, at (202) 317–5753, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Martha.R.Brinson@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Guidance on Passive Foreign Investment Company (PFIC) Purging Elections.

OMB Number: 1545–1965.

Regulation Project Number: TD 9360.

Abstract: The IRS needs the information to substantiate the taxpayer's computation of the taxpayer's share of the PFIC's post-1986 earning and profits.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Respondents: 250.

Estimated Time Per Respondent: 1 hour.

Estimated Total Annual Burden Hours: 250.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments will be of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 30, 2018.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Rev. Proc. 99–17

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Mark to Market Election for Commodities Dealers and Securities and Commodities Traders.

DATES: Written comments should be received on or before July 6, 2018 to be assured of consideration.

ADDRESSES: Direct all written comments to Laurie Brimmer, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this revenue procedure should be directed to Martha R. Brinson, at (202) 317–5753, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Martha.R.Brinson@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Mark to Market Election for Commodities Dealers and Securities and Commodities Traders.

OMB Number: 1545–1641.

Revenue Procedure Number: Rev. Proc. 99–17 (Revenue Procedure 99–17 is modified by Revenue Procedure 99–49).

Abstract: The revenue procedure prescribes the time and manner for dealers in commodities and traders in securities or commodities to elect to use the mark-to-market method of accounting under Sec. 475(e) or (f) of the Internal Revenue Code. The collections of information of this revenue procedure are required by the IRS in order to facilitate monitoring taxpayers changing accounting methods resulting from making the elections under Sec. 475(e) or (f).

Current Actions: There are no changes being made to this Rev. Proc. at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 1,000.

Estimated Time Per Respondent: 30 mins.

Estimated Total Annual Burden Hours: 500.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. SUPPLEMENTARY INFORMATION:

Title: Regulations Under Section 382 of the Internal Revenue Code of 1986; Application of Section 382 in Short Taxable Years and With Respect to Controlled Groups.

OMB Number: 1545–1434.

Regulation Project Number: TD 8825.

Abstract: Section 382 limits the amount of income that can be offset by loss carryovers after an ownership change. These regulations provide rules for applying section 382 in the case of short taxable years and with respect to controlled groups.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 3,500.

Estimated Time Per Respondent: 15 mins.

Estimated Total Annual Burden Hours: 875.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

United States Mint

Request for Applications for Appointment to the Citizens Coinage Advisory Committee

AGENCY: United States Mint, Treasury.

ACTION: Request for applications for appointment to the Citizens Coinage Advisory Committee.

SUMMARY: Pursuant to United States Code, the United States Mint is accepting applications for appointment to the Citizens Coinage Advisory Committee (CCAC) as a member representing the *interests of the general public* in the coinage of the United States.

FOR FURTHER INFORMATION CONTACT: Betty Birdsong, Acting United States Mint Liaison to the CCAC; 801 9th Street NW; Washington, DC 20220, or call 202–354–7770.

SUPPLEMENTARY INFORMATION:

The CCAC was established to:

- Advise the Secretary of the Treasury on any theme or design proposals relating to circulating coinage, bullion coinage, Congressional Gold Medals, and national and other medals produced by the United States Mint.
- Advise the Secretary of the Treasury with regard to the events, persons, or places that the CCAC recommends to be commemorated by the issuance of commemorative coins in each of the five calendar years succeeding the year in which a commemorative coin designation is made.
- Make recommendations with respect to the mintage level for any commemorative coin recommended.

Total membership consists of eleven voting members appointed by the Secretary of the Treasury:

- One person specially qualified by virtue of his or her education, training, or experience as nationally or internationally recognized curator in the United States of a numismatic collection;
- One person specially qualified by virtue of his or her experience in the medallic arts or sculpture;
- One person specially qualified by virtue of his or her education, training, or experience in American history;
- One person specially qualified by virtue of his or her education, training, or experience in numismatics;
- Three persons who can represent the interests of the general public in the coinage of the United States; and
- Four persons appointed by the Secretary of the Treasury on the basis of the recommendations by the House and Senate leadership.

Members are appointed for a term of four years. No individual may be appointed to the CCAC while serving as an officer or employee of the Federal Government.

The CCAC is subject to the direction of the Secretary of the Treasury. Meetings of the CCAC are open to the public and are held approximately four to six times per year. The United States Mint is responsible for providing the necessary support, technical services, and advice to the CCAC. CCAC members are not paid for their time or services, but, consistent with Federal Travel Regulations, members are reimbursed for their travel and lodging expenses to attend meetings. Members are Special Government Employees and are subject to the Standards of Ethical Conduct for Employees of the Executive Branch (5 CFR part 2653).

The United States Mint will review all submissions and will forward its recommendations to the Secretary of the Treasury for appointment consideration. Candidates should include specific skills, abilities, talents, and credentials to support their applications. The United States Mint is interested in candidates who are recognized as having unique and valued talents or as an accomplished professional; have demonstrated experience, knowledge, interest, or background in a variety of fields, including numismatics, art, education, working with youth, or American heritage and culture; have demonstrated interest and a commitment to actively participate in meetings and activities, and a demonstrated understanding of the role of the CCAC and the obligations of a Special Government Employee; possess demonstrated leadership skills in their fields of expertise or discipline; possess a demonstrated desire for public service and have a history of honorable professional and personal conduct, as well as successful standing in their communities; and who are free of professional, political, or financial interests that could negatively affect their ability to provide impartial advice.

Application Deadline: Friday, May 18, 2018.

Receipt of Applications: Any member of the public wishing to be considered for participation on the CCAC should submit a resume and cover letter describing his or her reasons for seeking and qualifications for membership, by email to *info@ccac.gov* or by mail to the United States Mint; 801 9th Street NW; Washington, DC 20220; Attn: Greg Weinman. Submissions must be postmarked no later than Friday, May 18, 2018.

Notice Concerning Delivery of First-Class and Priority Mail: First-class mail to the United States Mint is put through an irradiation process to protect against biological contamination. Support materials put through this process may suffer irreversible damage. We encourage you to consider using alternate delivery services, especially when sending time-sensitive material.

Dated: May 1, 2018.

David J. Ryder,

Director, United States Mint.

BILLING CODE P

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of submission to Congress of amendments to the sentencing guidelines effective November 1, 2018.

SUMMARY: Pursuant to its authority, the Commission has promulgated amendments to the sentencing guidelines, policy statements, commentary, and statutory index. This notice sets forth the amendments and the reason for each amendment.

DATES: The Commission has specified an effective date of November 1, 2018, for the amendments set forth in this notice.

FOR FURTHER INFORMATION CONTACT: Christine Leonard, Director, Office of

Legislative and Public Affairs, (202) 502–4500, *pubaffairs@ussc.gov.*

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and generally submits guideline amendments to the Congress pursuant to 28 U.S.C. 994(p) not later than the first day of May each year. Absent action of the Congress to the contrary, submitted amendments become effective by operation of law on the date specified by the Commission (generally November 1 of the year in which the amendments are submitted to Congress).

Notices of the proposed amendments were published in the **Federal Register** on August 25, 2017 (*see* 82 FR 40651) and January 26, 2018 (*see* 83 FR 3869). The Commission held public hearings on the proposed amendments in Washington, DC, on February 8 and March 14, 2018. On April 30, 2018, the Commission submitted these amendments to the Congress and specified an effective date of November 1, 2018.

The text of the amendments to the sentencing guidelines, policy statements, commentary, and statutory index, and the reason for each amendment, are set forth below. Additional information pertaining to the amendments described in this notice may be accessed through the Commission's website at *www.ussc.gov*.

Authority: 28 U.S.C. 994(a), (o), and (p); USSC Rules of Practice and Procedure 2.2, 4.1.

William H. Pryor Jr.,

Acting Chair.

Amendments to the Sentencing Guidelines, Policy Statements, and Official Commentary

1. *Amendment:* The Commentary to § 1B1.1 captioned ''Application Notes'' is amended in Note 1 by redesignating paragraphs (D) through (L) as paragraphs (E) through (M), respectively; and by inserting the following new paragraph (D):

''(D) 'Court protection order' means 'protection order' as defined by 18 U.S.C. 2266(5) and consistent with 18 U.S.C. 2265(b).''.

The Commentary to § 2B3.1 captioned ''Application Notes'' is amended in Note 2 by striking ''Application Note 1(D)(ii) of § 1B1.1'' and inserting ''Application Note 1(E)(ii) of § 1B1.1''.

The Commentary to § 2L1.1 captioned ''Application Notes'' is amended in Note 4 by striking ''Application Note 1(L) of § 1B1.1'' and inserting ''Application Note 1(M) of § 1B1.1''.

Section 4A1.3(a)(2) is amended by striking ''subsection (a)'' and inserting ''subsection (a)(1)''; and by striking ''sentences for foreign and tribal offenses'' and inserting ''sentences for foreign and tribal convictions''.

The Commentary to § 4A1.3 captioned ''Application Notes'' is amended—

in Note 2 by inserting at the end the following new paragraph (C):

''(C) *Upward Departures Based on Tribal Court Convictions.*—In determining whether, or to what extent, an upward departure based on a tribal court conviction is appropriate, the court shall consider the factors set forth in § 4A1.3(a) above and, in addition, may consider relevant factors such as the following:

(i) The defendant was represented by a lawyer, had the right to a trial by jury, and received other due process protections consistent with those provided to criminal defendants under the United States Constitution.

(ii) The defendant received the due process protections required for criminal defendants under the Indian Civil Rights Act of 1968, Public Law 90–284, as amended.

(iii) The tribe was exercising expanded jurisdiction under the Tribal Law and Order Act of 2010, Public Law 111–211.

(iv) The tribe was exercising expanded jurisdiction under the Violence Against Women Reauthorization Act of 2013, Public Law 113–4.

(v) The tribal court conviction is not based on the same conduct that formed the basis for a conviction from another jurisdiction that receives criminal history points pursuant to this Chapter.

(vi) The tribal court conviction is for an offense that otherwise would be counted under § 4A1.2 (Definitions and Instructions for Computing Criminal History).'';

and in Note 3 by striking ''A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(B)'' and inserting ''A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(A)''.

Reason for Amendment: This two-part amendment addresses federal sentencing issues related to offenses committed in Indian country. The amendment responds to the findings and recommendations made by the Commission's *ad hoc* Tribal Issues Advisory Group in its report to the Commission. *See Report of the Tribal Issues Advisory Group* (May 16, 2016), *http://www.ussc.gov/research/research-publications/report-tribal-issues-advisory-group.*

The amendment adds a definition of ''court protection order'' in the guidelines. This issue was initially raised by the Commission's Victims Advisory Group and subsequently addressed in the Tribal Issues Advisory Group's May 2016 report. The amendment amends § 1B1.1 (Application Instructions) to add a definition of ''court protection order'' that incorporates by reference the statutory definition of a ''protection order'' as set forth in 18 U.S.C. 2266(5) and consistent with 18 U.S.C. 2265(b). Under the *Guidelines Manual,* the violation of a court protection order is a specific offense characteristic in three Chapter Two offense guidelines. *See* USSG §§ 2A2.2 (Aggravated Assault), 2A6.1 (Threatening or Harassing Communications; Hoaxes; False Liens), and 2A6.2 (Stalking or Domestic Violence).

The amendment responds to concerns that the term ''court protection order'' has not been defined in the guidelines and should be clarified. Providing a clear definition of a ''court protection order'' in the *Guidelines Manual* will ensure that orders used for sentencing enhancements are the result of court proceedings assuring appropriate due process protections, that there is a consistent identification and treatment of such orders, and that such orders issued by tribal courts receive treatment consistent with that of other issuing jurisdictions. The amendment also makes conforming technical changes to the Commentary of §§ 2B1.3 (Robbery) and 2L1.1 (Smuggling, Transporting, or Harboring an Unlawful Alien).

The amendment addresses the treatment of tribal court convictions in Chapter Four (Criminal History and Criminal Livelihood) of the *Guidelines Manual.* Subsection (i) of § 4A1.2 (Definitions and Instructions for Computing Criminal History) provides that sentences resulting from tribal court convictions are not counted in calculating a defendant's criminal history score but may be considered for an upward departure under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)). Section 4A1.3 provides for an upward departure for prior sentences that are not used in computing the

criminal history category, such as sentences for tribal convictions, where reliable information suggests that the defendant's criminal history category under-represents the seriousness of the defendant's prior record.

Tribal court convictions have been excluded from the criminal history score but have been a legitimate basis for upward departure since the original guidelines were promulgated in 1987. In recent years, some tribal courts have gained enhanced sentencing authority under the Tribal Law and Order Act of 2010, Public Law 111–211 (July 29, 2010), and expanded jurisdiction over non-Indian defendants in domestic abuse cases under the Violence Against Women Act Reauthorization Act of 2013, Public Law 113–4 (Mar. 7, 2013). Many tribal courts have also begun to increase due process protections and reliable record-keeping.

In recognition of these developments, the amendment provides additional guidance to courts on how to apply the departure provision at § 4A1.3 in cases involving a defendant with a history of tribal convictions. Specifically, the amendment amends the Commentary to § 4A1.3 at Application Note 2(c) to provide the following non-exhaustive list of six factors that courts may consider in deciding whether or to what extent an upward departure based on a tribal conviction may be appropriate:

(i) The defendant was represented by a lawyer, had the right to a trial by jury, and received other due process protections consistent with those provided to criminal defendants under the United States Constitution.

(ii) The defendant received the due process protections required for criminal defendants under the Indian Civil Rights Act of 1968, Public Law 90–284, as amended.

(iii) The tribe was exercising expanded jurisdiction under the Tribal Law and Order Act of 2010, Public Law 111–211.

(iv) The tribe was exercising expanded jurisdiction under the Violence Against Women Reauthorization Act of 2013, Public Law 113–4.

(v) The tribal court conviction is not based on the same conduct that formed the basis for a conviction from another jurisdiction that receives criminal history points pursuant to this Chapter.

(vi) The tribal court conviction is for an offense that otherwise would be counted under § 4A1.2 (Definitions and Instructions for Computing Criminal History).

Because of the many cultural and historical differences among federally-recognized tribes, and especially among their tribal court systems, the Commission determined that—despite recent developments in Indian law to enlarge the scope of tribal court jurisdiction and the availability of due process in tribal court proceedings—a single approach to the consideration of tribal convictions would be difficult and could potentially lead to a disparate result among Indian defendants in federal courts. The amendment, therefore, reflects the Commission's view that additional guidance about how to apply the departure provision at § 4A1.3 in cases involving a defendant with a history of tribal convictions is appropriate, and that the non-exhaustive list of factors provides appropriate guidance and a more structured analytical framework under § 4A1.3. The Commission intends, as informed by the Tribal Issues Advisory Group Report and public comment, that none of the factors should be determinative, but collectively the factors reflect important considerations to help courts balance the rights of defendants, the unique and important status of tribal courts, the need to avoid disparate sentences because of varying tribal court practices and circumstances, and the goal of accurately assessing a defendant's criminal history.

The amendment also includes two technical changes to § 4A1.3. First, the amendment amends § 4A1.3(a)(2)(A) to change the phrase ''sentences for foreign and tribal offenses'' to ''sentences for foreign and tribal convictions'' to track the parallel language in § 4A1.2(h) and (i). Second, the amendment makes a clerical change in Application Note 3 to correct an inaccurate reference to § 4A1.3(b)(2)(B).

2. *Amendment:* Section 2B1.1(b) is amended by redesignating paragraphs (13) through (19) as paragraphs (14) through (20), respectively; and by inserting the following new paragraph (13):

''(13) If the defendant was convicted under 42 U.S.C. 408(a), 1011(a), or 1383a(a) and the statutory maximum term of ten years' imprisonment applies, increase by 4 levels. If the resulting offense level is less than 12, increase to level 12.'';

and in paragraph (17) (as so redesignated) by striking ''subsections (b)(2) and (b)(16)(B)'' and inserting ''subsections (b)(2) and (b)(17)(B)''.

The Commentary to § 2B1.1 captioned ''Application Notes'' is amended—

by redesignating Notes 11 through 20 as Notes 12 through 21, respectively; and by inserting the following new Note 11:

''11. *Interaction of Subsection (b)(13) and § 3B1.3 (Abuse of Position of Trust or Use of Special Skill).*—If subsection (b)(13) applies, do not apply § 3B1.3.'';

in Note 12 (as so redesignated) by striking ''(b)(14)'' both places such term appears and inserting ''(b)(15)'';

in Note 13 (as so redesignated) by striking ''(b)(16)(A)'' both places such term appears and inserting ''(b)(17)(A)'';

in Note 14 (as so redesignated) by striking ''(b)(16)(B)'' and inserting ''(b)(17)(B)''; by striking ''(b)(16)(B)(i)'' and inserting ''(b)(17)(B)(i)''; and by striking ''(b)(16)(B)(ii)'' and inserting ''(b)(17)(B)(ii)'';

in Note 15 (as so redesignated) by striking ''(b)(18)'' both places such term appears and inserting ''(b)(19)''; by striking ''(b)(18)(A)(iii)'' both places such term appears and inserting ''(b)(19)(A)(iii)''; and by striking ''(b)(16)(B)'' both places such term appears and inserting ''(b)(17)(B)'';

in Note 16 (as so redesignated) by striking ''(b)(19)'' each place such term appears and inserting ''(b)(20)'';

and in Note 21(B) (as so redesignated) by striking ''(b)(18)(A)(iii)'' and inserting ''(b)(19)(A)(iii)''.

The Commentary to § 2B1.1 captioned ''Background'' is amended by striking ''(b)(13)'' and inserting ''(b)(14)''; by striking ''(b)(15)(B)'' and inserting ''(b)(16)(B)''; by striking ''(b)(16)(A)'' and inserting ''(b)(17)(A)''; by striking ''(b)(16)(B)(i)'' and inserting ''(b)(17)(B)(i)''; by striking ''Subsection (b)(17) implements the directive in section 209'' and inserting ''Subsection (b)(18) implements the directive in section 209''; by striking ''Subsection (b)(18) implements the directive in section 225(b)'' and inserting ''Subsection (b)(19) implements the directive in section 225(b)''; and by striking ''(b)(18)(B)'' and inserting ''(b)(19)(B)''.

Appendix A (Statutory Index) is amended in the line referenced to 42 U.S.C. 408 by inserting '', 2X1.1'' at the end; in the line referenced to 42 U.S.C. 1011 by inserting '', 2X1.1'' at the end; and in the line referenced to 42 U.S.C. 1383a(a) by inserting '', 2X1.1'' at the end.

Reason for Amendment: This amendment responds to the Bipartisan Budget Act of 2015 (''the Act''), Public Law 114–74 (Nov. 2, 2015), which made numerous changes to the statutes governing Social Security fraud offenses at 42 U.S.C. 408, 1011, and 1383a. The Act added new subsections criminalizing conspiracy to commit fraud for selected substantive offenses already proscribed in Title 42 and added an increased statutory penalty provision for certain persons who

commit fraud offenses under the relevant Social Security programs.

In response to these statutory changes, the amendment makes changes to both § 2B1.1 (Theft, Property Destruction, and Fraud) and Appendix A (Statutory Index). The amendment to § 2B1.1 addresses the increased penalty provisions of the Act by adding a new specific offense characteristic with a 4-level enhancement and a minimum offense level of 12 for those defendants subject to a 10-year statutory maximum, and adds commentary precluding the application of an adjustment under § 3B1.3 (Abuse of Position of Trust or Use of Special Skill) when the new enhancement applies. The amendment to Appendix A references the new conspiracy subsections to the appropriate guidelines.

First, the amendment adds a specific offense characteristic to § 2B1.1 in response to the enhanced penalty provisions of the Act. The new enhancement provides for a 4-level increase, as well as a minimum offense level of 12, for those defendants convicted under the relevant statutes and subject to the 10-year statutory maximum. The enhancement reflects both Congress's and the Commission's determination regarding the seriousness of these offenses, and further reflects the difficulty in calculating the true harm caused by such defendants, including the harm to the integrity and financial strength of the Social Security program and to legitimate Social Security program benefit recipients who face delays as a result of the review of claims submitted in these cases. The Commission was also persuaded in its determination by the significant administrative efforts and costs resulting from the regulatory requirement that the Social Security Administration review and redetermine the benefit eligibility for every benefit recipient associated with the defendant, whether part of the fraudulent conduct or not. The new enhancement reflects the increased harm caused by these types of cases compared to those types of fraud sentenced under § 2B1.1 for which the loss table more appropriately reflects the severity of the offense.

Similar to other minimum offense levels in § 2B1.1, the minimum offense level is intended to account for the difficulty in calculating the amount of loss, as well as the unique and non-monetary harms associated with offenses sentenced under the Act. As previously explained in similar contexts, ''[t]he Commission frequently adopts a minimum offense level in circumstances in which, as in these cases, loss as calculated by the guidelines is difficult to compute or does not adequately account for the harm caused by the offense.'' USSG, App. C, Amendment 719 (effective Nov. 1, 2008).

In establishing the 4-level increase, the Commission also added commentary precluding the application of an adjustment under § 3B1.3 to those defendants who are subject to the Act's increased statutory maximum penalty. In the Act, Congress specifically defined positions of trust in the context of Social Security fraud by subjecting to the increased statutory maximum penalties those defendants who were:

a person who receives a fee or other income for services performed in connection with any determination with respect to benefits under this subchapter (including a claimant representative, translator, or current or former employee of the Social Security Administration), or who is a physician or other health care provider who submits, or causes the submission of, medical or other evidence in connection with any such determination. . . .

The Commission precluded application of § 3B1.3 to these defendants because the new 4-level enhancement fully accounts for their special position. Addressing the abuse of special position in this manner will avoid uncertainty, prolonged sentencing hearings, and appeals regarding application of the abuse of trust adjustment to offenders subject to the increased statutory maximum penalties of the Act.

Second, the amendment amends Appendix A to reference the new conspiracy offenses under 42 U.S.C. 408, 1011, and 1383a to § 2X1.1 (Attempt, Solicitation, or Conspiracy (Not Covered by a Specific Offense Guideline)). The Commission determined that referencing these conspiracy provisions to § 2X1.1, as well as the guideline referenced in the statutory index for the substantive offense, is consistent with the instructions at § 1B1.2 (Applicable Guidelines).

3. *Amendment:* Section 2D1.1 is amended—

by redesignating subsections (b)(13) through (b)(17) as subsections (b)(14) through (b)(18), respectively; and by inserting the following new subsection (b)(13):

''(13) If the defendant knowingly misrepresented or knowingly marketed as another substance a mixture or substance containing fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide) or a fentanyl analogue, increase by 4 levels.'';

and in each of subsections (c)(1) through (c)(14) by striking ''of Fentanyl'' each place such term appears and inserting ''of Fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] Propanamide)''.

The annotation to § 2D1.1(c) captioned ''Notes to Drug Quantity Table'' is amended by inserting at the end the following new Note (J):

''(J) Fentanyl analogue, for the purposes of this guideline, means any substance (including any salt, isomer, or salt of isomer thereof), whether a controlled substance or not, that has a chemical structure that is similar to fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide).''.

The Commentary to § 2D1.1 captioned ''Application Notes'' is amended—

in Note 6 by striking ''Any reference to a particular controlled substance in these guidelines includes all salts, isomers, all salts of isomers, and, except as otherwise provided, any analogue of that controlled substance'' and inserting ''Except as otherwise provided, any reference to a particular controlled substance in these guidelines includes all salts, isomers, all salts of isomers, and any analogue of that controlled substance''; and by striking ''For purposes of this guideline 'analogue' has the meaning'' and inserting ''Unless otherwise specified, 'analogue,' for purposes of this guideline, has the meaning'';

in Note 8(D)—

in the table under the heading ''Schedule I or II Opiates*''—

by striking the following two lines:

''1 gm of Alpha-Methylfentanyl = 10 kg of marihuana''

''1 gm of 3-Methylfentanyl = 10 kg of marihuana'';

and by inserting after the line referenced to Fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] Propanamide) the following line:

''1 gm of a Fentanyl Analogue = 10 kg of marihuana'';

in the table under the heading ''Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)*'', by striking the following line:

''1 gm of Methcathinone = 380 gm of marihuana'';

by inserting after the table under the heading ''Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)*'' the following new table:

''*Synthetic Cathinones (except Schedule III, IV, and V Substances)**

1 gm of a synthetic cathinone (except a Schedule III, IV, or V substance) = 380 gm of marihuana

Provided, that the minimum offense level from the Drug Quantity Table for any synthetic cathinone (except a Schedule III, IV, or V substance) individually, or in combination with another controlled substance, is level 12.'';

by inserting after the table under the heading ''Schedule I Marihuana'' the following new table:

''*Synthetic Cannabinoids (except Schedule III, IV, and V Substances)**

1 gm of a synthetic cannabinoid (except a Schedule III, IV, or V substance) = 167 gm of marihuana

Provided, that the minimum offense level from the Drug Quantity Table for any synthetic cannabinoid (except a Schedule III, IV, or V substance) individually, or in combination with another controlled substance, is level 12.

'Synthetic cannabinoid,' for purposes of this guideline, means any synthetic substance (other than synthetic tetrahydrocannabinol) that binds to and activates type 1 cannabinoid receptors (CB_1 receptors).'';

in Note 16 by striking ''§ 2D1.1(b)(15)(D)'' and inserting ''§ 2D1.1(b)(16)(D)'';

in Note 18 by striking ''(b)(13)'' and inserting ''(b)(14)''; by striking ''(b)(13)(A)'' each place such term appears and inserting ''(b)(14)(A)''; by striking ''(b)(13)(C)–(D)'' and inserting ''(b)(14)(C)–(D)''; by striking ''(b)(13)(C)(ii)'' and inserting ''(b)(14)(C)(ii)''; and by striking ''(b)(13)(D)'' and inserting ''(b)(14)(D)''.

in Note 19 by striking ''(b)(14)'' each place such term appears and inserting ''(b)(15)''; and by striking ''(b)(13)(A)'' and inserting ''(b)(14)(A)'';

in Note 20 by striking ''(b)(15)'' and inserting ''(b)(16)''; by striking ''(b)(15)(B)'' both places such term appears and inserting ''(b)(16)(B)''; by striking ''(b)(15)(C)'' each place such term appears and inserting ''(b)(16)(C)''; and by striking ''(b)(15)(E)'' both places such term appears and inserting ''(b)(16)(E)'';

in Note 21 by striking ''(b)(17)'' each place such term appears and inserting ''(b)(18)'';

and in Note 27 by inserting at the end the following new paragraphs:

''(D) *Departure Based on Potency of Synthetic Cathinones.*—In addition to providing marihuana equivalencies for specific controlled substances and groups of substances, the Drug Equivalency Tables provide marihuana equivalencies for certain classes of controlled substances, such as synthetic cathinones. In the case of a synthetic cathinone that is not specifically referenced in this guideline, the marihuana equivalency for the class should be used to determine the appropriate offense level. However, there may be cases in which a substantially lesser or greater quantity of a synthetic cathinone is needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cathinone in the class, such as methcathinone or alpha-PVP. In such a case, a departure may be warranted. For example, an upward departure may be warranted in cases involving MDPV, a substance of which a lesser quantity is usually needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cathinone. In contrast, a downward departure may be warranted in cases involving methylone, a substance of which a greater quantity is usually needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cathinone.

(E) *Departures for Certain Cases involving Synthetic Cannabinoids.*—

(i) *Departure Based on Concentration of Synthetic Cannabinoids.*—Synthetic cannabinoids are manufactured as powder or crystalline substances. The concentrated substance is then usually sprayed on or soaked into a plant or other base material, and trafficked as part of a mixture. Nonetheless, there may be cases in which the substance involved in the offense is a synthetic cannabinoid not combined with any other substance. In such a case, an upward departure would be warranted.

There also may be cases in which the substance involved in the offense is a mixture containing a synthetic cannabinoid diluted with an unusually high quantity of base material. In such a case, a downward departure may be warranted.

(ii) *Downward Departure Based on Potency of Synthetic Cannabinoids.*—In the case of a synthetic cannabinoid that is not specifically referenced in this guideline, the marihuana equivalency for the class should be used to determine the appropriate offense level. However, there may be cases in which a substantially greater quantity of a synthetic cannabinoid is needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cannabinoid in the class, such as JWH–018 or AM–2201. In such a case, a downward departure may be warranted.''.

The Commentary to § 2D1.1 captioned ''Background'' is amended by striking ''(b)(13)(A)'' and inserting ''(b)(14)(A)''; by striking ''(b)(13)(C)(ii)'' and inserting ''(b)(14)(C)(ii)''; by striking ''Subsection (b)(15) implements the directive to the Commission in section 6(3)'' and inserting ''Subsection (b)(16) implements the directive to the Commission in section 6(3)''; and by striking ''Subsection (b)(16) implements the directive to the Commission in section 7(2)'' and inserting ''Subsection (b)(17) implements the directive to the Commission in section 7(2)''.

The Commentary to § 2D1.6 captioned ''Application Note'' is amended in Note 1 by striking '', fentanyl'' and inserting '', fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide)''.

Section 2D1.14(a)(1) is amended by striking ''(b)(17)'' and inserting ''(b)(18)''.

The Commentary to § 3B1.4 captioned ''Application Notes'' is amended in Note 2 by striking ''§ 2D1.1(b)(15)(B)'' and inserting ''§ 2D1.1(b)(16)(B)''.

The Commentary to § 3C1.1 captioned ''Application Notes'' is amended in Note 7 by striking ''§ 2D1.1(b)(15)(D)'' and inserting ''§ 2D1.1(b)(16)(D)''.

Reason for Amendment: This amendment is a result of the Commission's multi-year study of offenses involving synthetic cathinones (such as methylone, MDPV, and mephedrone) and synthetic cannabinoids (such as JWH–018 and AM–2201), as well as tetrahydrocannabinol (THC), fentanyl, and fentanyl analogues. The study included extensive data collection, review of scientific literature, multiple public comment periods, and four public hearings. The resulting amendment makes various changes to § 2D1.1 pertaining to synthetic controlled substances.

The amendment first addresses fentanyl and fentanyl analogues. The Commission learned that while fentanyl has long been a drug of abuse, there are several indications that its abuse has become both more prevalent and more dangerous in recent years. For example, the Drug Enforcement Administration observed a dramatic increase in fentanyl reports between 2013 and 2015, and the Centers for Disease Control and Prevention reported that there were 9,580 deaths involving synthetic opioids (a category including fentanyl) in 2015, a 72.2 percent increase from 2014. The Commission received testimony and other information indicating that fentanyl and its analogues are often trafficked mixed with other controlled substances, including heroin and cocaine. In other instances, fentanyl is placed in pill or tablet form by drug traffickers. Although some purchasers of these substances may be aware that they

contain fentanyl (or even seek them out for that reason), others may believe that they are purchasing heroin or pharmaceutically manufactured opioid pain relievers.

Because of fentanyl's extreme potency, the risk of overdose death is great, particularly when the user is inexperienced or unaware of what substance he or she is using. To address this harm, the amendment adds a new specific offense characteristic at § 2D1.1(b)(13) to provide for a 4-level increase whenever the defendant knowingly misrepresented or knowingly marketed as another substance a mixture or substance containing fentanyl or a fentanyl analogue. The Commission determined that it is appropriate for traffickers who knowingly misrepresent fentanyl or a fentanyl analogue as another substance to receive additional punishment. If an offender does not know the substance contains fentanyl or a fentanyl analogue, the enhancement does not apply. The specific offense characteristic includes a *mens rea* requirement to ensure that only the most culpable offenders are subjected to these increased penalties.

The amendment also makes a definitional change in the *Guidelines Manual.* Title 21, United States Code, refers to fentanyl by reference to its chemical name (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide) and sets mandatory minimum penalties for certain quantities of this substance and for analogues of N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide, although lesser quantities of the analogues are required to trigger the mandatory minimum penalties. *See, e.g.,* 21 U.S.C. 841(b)(1)(A)(vi). Consistent with its past practice concerning setting drug-trafficking penalties, the Commission relied upon the statutory framework in setting penalties for fentanyl and fentanyl analogues. Fentanyl has a marihuana equivalency of 1:2,500, while fentanyl analogues have a marihuana equivalency of 1:10,000. In the *Guidelines Manual,* however, the Commission did not use the chemical name for fentanyl reflected in Title 21. Instead, the Commission used the terms ''fentanyl'' and ''fentanyl analogue'' in the Drug Quantity Table.

Commission data suggests that offenses involving fentanyl analogues are increasing in the federal caseload. In studying these cases, the Commission has learned that the reference to ''fentanyl analogue'' in the Drug Quantity Table may interact in an unintended way with the definition of ''analogue'' provided by Application Note 6 and Section 802(32) of Title 21, United States Code. Because the guideline incorporates by reference the statutory definition of ''controlled substance analogue,'' and that definition specifically excludes already listed ''controlled substances,'' it appears that a scheduled fentanyl analogue cannot constitute a ''controlled substance analogue,'' and thus does not constitute a fentanyl ''analogue'' for purposes of § 2D1.1. This may have the result that, at sentencing, fentanyl analogues that have already been scheduled must go through the Application Note 6 process to determine the substance most closely related to them.

Additionally, based on implementation of Application Note 6, many courts have then sentenced such analogue cases at the lower fentanyl ratio rather than the higher ratio applicable to fentanyl analogues in the Drug Quantity Table. To address this problem, the amendment adopts a new definition of ''fentanyl analogue'' as ''any substance (including any salt, isomer, or salt of isomer), whether a controlled substance or not, that has a chemical structure that is similar to fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide).'' This portion of the amendment also amends the Drug Quantity Table to clarify that § 2D1.1 uses the term ''fentanyl'' to refer to the chemical name identified by statute and deletes the current listings for alpha-methylfentanyl and 3-methylfentanyl from the Drug Equivalency Tables.

The Commission determined that adopting this definition of ''fentanyl analogue'' will create a class of fentanyl analogues identical to that already created by statute, clarify the legal confusion that has resulted from the current definition of ''analogue'' in § 2D1.1, and reaffirm that fentanyl analogues are treated differently than fentanyl under the guidelines as well as the statute. Striking the separate references to alpha-methylfentanyl and 3-methylfentanyl will result in the treatment of these substances in common with all other fentanyl analogues. This change, in combination with the adoption of the definition of ''fentanyl analogue'' and addition of fentanyl analogue to the Drug Equivalency Tables, will limit the use of the listing for ''fentanyl'' to those cases involving the specific substance named in Title 21.

Next, the amendment addresses synthetic cathinones and synthetic cannabinoids. The Commission received comment from the Department of Justice and others expressing concern that the guidelines do not contain specific ''marihuana equivalencies'' for synthetic cathinones, such as methylone, mephedrone, and MDPV, or synthetic cannabinoids, such as JWH–018 and AM–2201. For substances that do not appear in either the Drug Quantity Table or the Drug Equivalency Table, Application Note 6 provides courts the process for calculating drug quantities. The note directs courts to identify the ''most closely related controlled substance referenced in [§ 2D1.1]'' and to then use that drug's ratio to marihuana to calculate the quantity for purposes of determining the base offense level. Commenters advised that this process is a time-consuming, burdensome task that leads to sentencing disparities. Because Commission data indicated that the majority of cases relying on the Application Note 6 process involved synthetic cathinones and synthetic cannabinoids, the Commission concluded that this amendment will alleviate the burden associated with its application.

Synthetic cathinones, also known as ''bath salts,'' are human-made substances chemically related to cathinone, a stimulant found in the khat plant. Although the Commission's study originally focused on specified cathinones, such as methylone, MDPV, and mephedrone, the Commission received comments indicating that new substances are regularly developed and trafficked and that it would not be feasible to establish a new ratio as each new substance enters the market. Given the large number of potential substances, the Commission found it impracticable to add individual marihuana equivalencies for every synthetic cathinone. In contrast, the Commission determined a class-based approach for synthetic cathinones should capture both current and future synthetic cathinones.

The Commission has determined that synthetic cathinones constitute a well-defined class. Specifically, testimony and comment presented to the Commission consistently indicated that the whether a substance is a synthetic cathinone is not subject to debate. Likewise, comments and testimony made clear that synthetic cathinones share stimulant characteristics and hallucinogenic effects. The Commission determined that a precise definition is not necessary for such substances and that a class-based structure could be reasonably adopted. The Commission likewise determined that, because the class would encompass methcathinone, currently the lone specifically listed synthetic cathinone, the separate reference to methcathinone in the Drug

Equivalency Table should be deleted. Given the Commission's priority to alleviate the burdens associated with the Application Note 6 process and the impracticality of adding many new marihuana equivalencies, the Commission concluded the class-based approach strikes a middle ground between precision and ease of guideline application.

The amendment creates an entry in the Drug Equivalency Tables for the class of synthetic cathinones, providing a marihuana equivalency of 1 gram of a synthetic cathinone (except a Schedule III, IV, or V substance) equals 380 grams of marihuana and applies a minimum base offense level of 12 to the class of synthetic cathinones. The Commission set a minimum base offense level of 12 for the class of synthetic cathinones to maintain consistency with the treatment of other controlled substances. With limited exceptions, all other Schedule I and II controlled substances are subject to the same minimum base offense level. The Commission was not presented with testimony or commentary that indicated a compelling basis to except synthetic cathinones from the minimum offense level.

The Commission adopted the 380-gram equivalency for three reasons. First, a review of the Commission's data indicated that the 380-gram equivalency was both the median and approximate mean ratio utilized by the courts when sentencing synthetic cathinone cases pursuant to Application Note 6. Thus, the Commission determined that the 380-gram equivalency best reflects the current sentencing practices for courts engaging in the Application Note 6 analysis.

Second, the Commission concluded that a ratio consistent with the existing methcathinone ratio was appropriate. The Commission set the methcathinone ratio based upon a scientific study that found that methcathinone was approximately 1.92 times more potent than amphetamine. At the time, amphetamine had a marihuana equivalency of 1:200, equivalent to the current marihuana equivalency of cocaine. The Commission's current study of cathinones did not uncover any new scientific evidence undermining its rationale for setting the methcathinone ratio.

Third, the Commission was presented with substantial information about synthetic cathinones' risks. Testimony before the Commission established that the effects and potencies of synthetic cathinones range from ''at least as dangerous as cocaine'' to methamphetamine-like. Medical experts discussed the substantial potential health impacts of cathinone use, while law enforcement witnesses offered reports of cathinone users' aggressive behavior posing threats to first responders. With cocaine at a 1:200 ratio and methamphetamine at a 1:2,000 ratio, the Commission concluded that the ratio of 1:380 minimized the risk of frequent over-punishment for substances in this class while providing penalty levels sufficient to account for the specific harms caused by distribution of these substances.

In adopting a class-based approach for both ease of application and because of the impracticability of listing every new substance in the class as it enters the market, the Commission recognizes, however, that some substances may be significantly more or less potent than the typical substances in the class that the ratio was intended to reflect. Therefore, the Commission added a departure provision to address those substances for which a greater or lesser quantity is needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cathinone.

To provide guidance to the court in determining whether to apply the departure, the departure provision identifies substances that the Commission found to be fair representatives of the synthetic cathinones that would fall within the spectrum of substances included in the class, as well as those that may warrant a departure. Specifically, the departure provision notes that: A typical cathinone has a potency comparable to methcathinone or alpha-PVP; methylone is an example of a lower potency substance; and MDPV is an example of a higher potency substance.

Synthetic cannabinoids mimic the effects of tetrahydrocannabinol (''THC''), the main psychoactive chemical in marihuana. Unlike THC, however, most synthetic cannabinoids are ''full agonists.'' That is, they activate the body's type 1 cannabinoid receptors (CB_1) to a greater degree (*i.e.,* at 100%) than THC, which activates the CB_1 receptors only at 30 to 50 percent. Additionally, unlike THC, synthetic cannabinoids do not contain the additional substances that moderate their adverse effects. To the contrary, they may contain additional substances that augment their hallucinogenic effects. Further, some forms of packaged mixtures (*e.g.,* ''K2'', ''Spice'') may contain preservatives, additives, and other chemicals such as benzodiazepines that may compound the adverse effects caused by the cannabinoids. Also unlike THC, synthetic cannabinoids have been associated with physical harms such as organ failure and death.

Through the Commission's multi-year synthetic drug study, the Commission learned that hundreds of synthetic cannabinoids exist. When first marketed, synthetic cannabinoids generally have not yet been scheduled as controlled substances. Often, once a synthetic cannabinoid is scheduled, a new one is created to replace it. Given the large number of potential substances, the Commission found it impracticable to add individual marihuana equivalencies for every synthetic cannabinoid. In contrast, the Commission determined that a class-based approach for synthetic cannabinoids would be a better means to capture both current and future synthetic cannabinoids.

Based on hearing testimony, the scientific literature, and public comment, the Commission determined that all synthetic cannabinoids can be covered by a single class because these substances share a similar pharmacological effect: All synthetic cannabinoids bind to and activate the CB_1 receptor. Given the Commission's priority to alleviate the burdens associated with the Application Note 6 process and the impracticality of adding many new marihuana equivalencies, the Commission concluded the class-based approach strikes a middle ground between precision and ease of guideline application.

The amendment defines the term ''synthetic cannabinoid'' as ''any synthetic substance (other than synthetic tetrahydrocannabinol) that binds to and activates type 1 cannabinoid receptors (CB_1 receptors).'' The amendment establishes a marihuana equivalency for the class of synthetic cannabinoids of 1 gram of a synthetic cannabinoid (except a Schedule III, IV, or V substance) equals 167 grams of marihuana and applies a minimum base offense level of 12 to the class.

The marihuana equivalency selected for the class is identical to the existing marihuana equivalencies for both organic and synthetic tetrahydrocannabinol (THC). The Commission originally derived the organic and synthetic THC equivalencies from a comparison of standard dosage units of THC (3 mg) and marihuana (500 mg) and the relationship between the two, rather than the actual amount of THC commonly found in a dose of marihuana. During its current study, the Commission considered whether to incorporate THC (synthetic) into the new synthetic cannabinoid class. As

noted, the new synthetic cannabinoid class will be subject to the minimum base offense level of 12 applicable to most Schedule I and II controlled substances. The Commission set a minimum base offense level of 12 to the class for consistency with other Schedule I and II controlled substances. THC (synthetic) is not currently subject to the same minimum offense level. Thus, incorporating THC (synthetic) into the synthetic cannabinoid class would effectively change penalties for certain THC (synthetic) offenses, an outcome contrary to the Commission's intent. Consequently, THC (synthetic) is exempted from the class, its separate marihuana equivalency is retained, and that equivalency is applicable only in cases involving THC (synthetic).

Nevertheless, the Commission used the same marihuana equivalency for the class of synthetic cannabinoids. Commission data for cases involving synthetic cannabinoids indicates that the courts almost uniformly apply the marihuana equivalency for THC to such cases. Hence, the 1:167 ratio for the synthetic cannabinoid class reflects the courts' current sentencing practices. Although synthetic cannabinoids activate the CB_1 receptor to a greater degree than THC, the evidence also established that synthetic cannabinoids exhibit a range of potencies. Those most frequently encountered in the Commission's data exhibited potencies ranging from one to six times that of THC. Adoption of the existing THC marihuana equivalency minimizes the risk of frequent over-punishment for substances in this class while providing penalty levels that are sufficient to account for the specific harms caused by distribution of these substances.

Finally, the amendment provides two departure provisions addressing synthetic cannabinoids. First, the amendment provides for a departure based on the concentration of a synthetic cannabinoid. The Commission learned that synthetic cannabinoids are manufactured as a powder or crystalline substance and are typically sprayed on or mixed with inert material (such as plant matter) before retail sale. As a result, a synthetic cannabinoid seized after it has been prepared for retail sale will typically weigh significantly more than the undiluted form of the same controlled substance.

Given the central role of drug quantity in setting the base offense level, an individual convicted of an offense involving a synthetic cannabinoid mixture would likely be subject to a guideline penalty range significantly higher than another individual convicted of an offense involving an undiluted synthetic cannabinoid (but who could nevertheless produce an equivalent amount of consumable product). In a case involving undiluted synthetic cannabinoid, an upward departure may be appropriate for that reason. By contrast, in a case where the mixture containing synthetic cannabinoids contained a high quantity of inert material, a downward departure may be warranted.

The second departure provision provides that a downward departure may be appropriate where a substantially greater quantity of the synthetic cannabinoid involved in the offense is needed to produce an effect on the central nervous system similar to the effect produced by a typical synthetic cannabinoid in the class. The two synthetic cannabinoids specifically cited in the Commission's priority, JWH–018 and AM–2201, are three and a half times and five times more potent, respectively, than THC. If an offense involves a substantially less potent synthetic cannabinoid than JWH–018 or AM–2201, the court may wish to consider whether a downward departure is appropriate.

4. *Amendment:* The Commentary to § 1B1.10 captioned ''Application Notes'' is amended in Note 5 by striking ''Drug Equivalency Tables'' and inserting ''Drug Equivalency Tables (currently called Drug Conversion Tables)''.

Section 2D1.1(c)(1), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • 90,000 KG or more of *Converted Drug Weight.*''.

Section 2D1.1(c)(2), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 30,000 KG but less than 90,000 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(3), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 10,000 KG but less than 30,000 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(4), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 3,000 KG but less than 10,000 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(5), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 1,000 KG but less than 3,000 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(6), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 700 KG but less than 1,000 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(7), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 400 KG but less than 700 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(8), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 100 KG but less than 400 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(9), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 80 KG but less than 100 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(10), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 60 KG but less than 80 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(11), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 40 KG but less than 60 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(12), as amended by Amendment 3 of this document, is

further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 20 KG but less than 40 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(13), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon; and by adding at the end the following:

'' • At least 10 KG but less than 20 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(14), as amended by Amendment 3 of this document, is further amended by striking the period at the end of the line referenced to Schedule IV substances (except Flunitrazepam) and inserting a semicolon; and by adding at the end the following:

'' • At least 5 KG but less than 10 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(15) is amended by striking the period at the end of the line referenced to Schedule IV substances (except Flunitrazepam) and inserting a semicolon, and by adding at the end the following:

'' • At least 2.5 KG but less than 5 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(16) is amended by striking the period at the end of the line referenced to Schedule V substances and inserting a semicolon; and by adding at the end the following:

'' • At least 1 KG but less than 2.5 KG of *Converted Drug Weight.*''.

Section 2D1.1(c)(17) is amended by striking the period at the end of the line referenced to Schedule V substances and inserting a semicolon; and by adding at the end the following:

'' • Less than 1 KG of *Converted Drug Weight.*''.

The annotation to § 2D1.1(c) captioned ''Notes to Drug Quantity Table'', as amended by Amendment 3 of this document, is further amended by inserting at the end the following new Note (K):

''(K) The term 'Converted Drug Weight,' for purposes of this guideline, refers to a nominal reference designation that is used as a conversion factor in the Drug Conversion Tables set forth in the Commentary below, to determine the offense level for controlled substances that are not specifically referenced in the Drug Quantity Table or when combining differing controlled substances.''.

The Commentary to § 2D1.1 captioned ''Application Notes'', as amended by Amendment 3 of this document, is further amended—

in Note 6 by striking ''marihuana equivalency'' and inserting ''converted drug weight''; and by inserting after ''the most closely related controlled substance referenced in this guideline.'' the following: ''*See* Application Note 8.'';

in the heading of Note 8 by striking ''Drug Equivalency Tables'' and inserting ''Drug Conversion Tables'';

in Note 8(A) by striking ''Drug Equivalency Tables'' both places such term appears and inserting ''Drug Conversion Tables''; by striking ''to convert the quantity of the controlled substance involved in the offense to its equivalent quantity of marihuana'' and inserting ''to find the converted drug weight of the controlled substance involved in the offense''; by striking ''Find the equivalent quantity of marihuana'' and inserting ''Find the corresponding converted drug weight''; by striking ''Use the offense level that corresponds to the equivalent quantity of marihuana'' and inserting ''Use the offense level that corresponds to the converted drug weight determined above''; by striking ''an equivalent quantity of 5 kilograms of marihuana'' and inserting ''5 kilograms of converted drug weight''; and by striking ''the equivalent quantity of marihuana would be 500 kilograms'' and inserting ''the converted drug weight would be 500 kilograms'';

in Note 8(B) by striking ''Drug Equivalency Tables'' each place such term appears and inserting ''Drug Conversion Tables''; by striking ''convert each of the drugs to its marihuana equivalent'' and inserting ''convert each of the drugs to its converted drug weight''; by striking ''For certain types of controlled substances, the marihuana equivalencies'' and inserting ''For certain types of controlled substances, the converted drug weights assigned''; by striking ''*e.g.,* the combined equivalent weight of all Schedule V controlled substances shall not exceed 2.49 kilograms of marihuana'' and inserting ''*e.g.,* the combined converted weight of all Schedule V controlled substances shall not exceed 2.49 kilograms of converted drug weight''; by striking ''determine the marihuana equivalency for each schedule separately'' and inserting ''determine the converted drug weight for each schedule separately''; and by striking ''Then add the marihuana equivalencies to determine the combined marihuana equivalency'' and inserting ''Then add the converted drug weights to determine the combined converted drug weight'';

in Note 8(C)(i) by striking ''of marihuana'' each place such term appears and inserting ''of converted drug weight''; and by striking ''The total is therefore equivalent to 95 kilograms'' and inserting ''The total therefore converts to 95 kilograms'';

in Note 8(C)(ii) by striking the following:

''The defendant is convicted of selling 500 grams of marihuana (Level 6) and 10,000 units of diazepam (Level 6). The diazepam, a Schedule IV drug, is equivalent to 625 grams of marihuana. The total, 1.125 kilograms of marihuana, has an offense level of 8 in the Drug Quantity Table.'',

and inserting the following:

''The defendant is convicted of selling 500 grams of marihuana (Level 6) and 10,000 units of diazepam (Level 6). The marihuana converts to 500 grams of converted drug weight. The diazepam, a Schedule IV drug, converts to 625 grams of converted drug weight. The total, 1.125 kilograms of converted drug weight, has an offense level of 8 in the Drug Quantity Table.'';

in Note 8(C)(iii) by striking ''is equivalent'' both places such term appears and inserting ''converts''; by striking ''of marihuana'' each place such term appears and inserting ''of converted drug weight''; and by striking ''The total is therefore equivalent'' and inserting ''The total therefore converts'';

in Note 8(C)(iv) by striking ''marihuana equivalency'' each place such term appears and inserting ''converted drug weight''; by striking ''76 kilograms of marihuana'' and inserting ''76 kilograms''; by striking ''79.99 kilograms of marihuana'' both places such term appears and inserting ''79.99 kilograms of converted drug weight''; by striking ''equivalent weight'' each place such term appears and inserting ''converted weight''; by striking ''9.99 kilograms of marihuana'' and inserting ''9.99 kilograms''; and by striking ''2.49 kilograms of marihuana'' and inserting ''2.49 kilograms'';

in Note 8(D)—

in the heading, by striking ''Drug Equivalency Tables'' and inserting ''Drug Conversion Tables'';

under the heading relating to Schedule I or II Opiates, by striking the heading as follows:

''*Schedule I or II Opiates**'',

and inserting the following new heading:

''*Schedule I or II Opiates* Converted Drug Weight*'';

and by striking ''of marihuana'' each place such term appears;

under the heading relating Cocaine and Other Schedule I and II Stimulants (and their immediate precursors), by striking the heading as follows:

''*Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)**'',

and inserting the following new heading:

''*Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)** Converted Drug Weight*'';

and by striking ''of marihuana'' each place such term appears;

under the heading relating to Synthetic Cathinones (except Schedule III, IV, and V Substances), by striking the heading as follows:

''*Synthetic Cathinones (except Schedule III, IV, and V Substances)**'',

and inserting the following new heading:

''*Synthetic Cathinones (except Schedule III, IV, and V Substances)* Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors), by striking the heading as follows:

''*LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors)**'',

and inserting the following new heading:

''*LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors)* Converted Drug Weight*'';

and by striking ''of marihuana'' each place such term appears;

under the heading relating to Schedule I Marihuana, by striking the heading as follows:

''*Schedule I Marihuana*'',

and inserting the following new heading:

''*Schedule I Marihuana Converted Drug Weight*'';

and by striking ''of marihuana'' each place such term appears;

under the heading relating to Synthetic Cannabinoids (except Schedule III, IV, and V Substances), by striking the heading as follows:

''*Synthetic Cannabinoids (except Schedule III, IV, and V Substances)**'',

and inserting the following new heading:

''*Synthetic Cannabinoids (except Schedule III, IV, and V Substances)* Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to Flunitrazepam, by striking the heading as follows:

''*Flunitrazepam***'',

and inserting the following new heading:

''*Flunitrazepam** Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to Schedule I or II Depressants (except gamma-hydroxybutyric acid), by striking the heading as follows:

''*Schedule I or II Depressants (except gamma-hydroxybutyric acid)*'',

and inserting the following new heading:

''*Schedule I or II Depressants (except gamma-hydroxybutyric acid) Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to Gamma-hydroxybutyric Acid, by striking the heading as follows:

''*Gamma-hydroxybutyric Acid*'',

and inserting the following new heading:

''*Gamma-hydroxybutyric Acid Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to Schedule III Substances (except ketamine), by striking the heading as follows:

''*Schedule III Substances (except ketamine)****'',

and inserting the following new heading:

''*Schedule III Substances (except ketamine)*** Converted Drug Weight*'';

by striking ''1 gm of marihuana'' and inserting ''1 gm''; by striking ''equivalent weight'' and inserting ''converted weight''; and by striking ''79.99 kilograms of marihuana'' and inserting ''79.99 kilograms of converted drug weight'';

under the heading relating to Ketamine, by striking the heading as follows:

''*Ketamine*'',

and inserting the following new heading:

''*Ketamine Converted Drug Weight*'';

and by striking ''of marihuana'';

under the heading relating to Schedule IV Substances (except flunitrazepam), by striking the heading as follows:

''*Schedule IV Substances (except flunitrazepam)*****'',

and inserting the following new heading:

''*Schedule IV Substances (except flunitrazepam)**** Converted Drug Weight*'';

by striking ''0.0625 gm of marihuana'' and inserting ''0.0625 gm''; and by striking ''*****Provided, that the combined equivalent weight of all Schedule IV (except flunitrazepam) and V substances shall not exceed 9.99 kilograms of marihuana.'' and inserting ''*****Provided, that the combined converted weight of all Schedule IV (except flunitrazepam) and V substances shall not exceed 9.99 kilograms of converted drug weight.'';

under the heading relating to Schedule V Substances, by striking the heading as follows:

''*Schedule V Substances******'',

and inserting the following new heading:

''*Schedule V Substances***** Converted Drug Weight*'';

by striking ''0.00625 gm of marihuana'' and inserting ''0.00625 gm''; and by striking ''******Provided, that the combined equivalent weight of Schedule V substances shall not exceed 2.49 kilograms of marihuana.'' and inserting ''*****Provided, that the combined converted weight of Schedule V substances shall not exceed 2.49 kilograms of converted drug weight.'';

under the heading relating to List I Chemicals (relating to the manufacture of amphetamine or methamphetamine), by striking the heading as follows:

''*List I Chemicals (relating to the manufacture of amphetamine or methamphetamine)*******'',

and inserting the following new heading:

''*List I Chemicals (relating to the manufacture* of amphetamine or methamphetamine)****** *Converted Drug Weight*'';

by striking ''of marihuana'' each place such term appears; and by striking ''*******Provided, that in a case involving'' and inserting ''******Provided, that in a case involving'';

under the heading relating to Date Rape Drugs (except flunitrazepam, GHB, or ketamine), by striking the heading as follows:

''*Date Rape Drugs (except flunitrazepam, GHB, or ketamine)*'',

and inserting the following new heading:

''*Date Rape Drugs (except flunitrazepam, GHB, or ketamine) Converted Drug Weight*'';

and by striking ''marihuana'' both places such term appears;

and in the text before the heading relating to Measurement Conversion Table, by striking ''To facilitate

conversions to drug equivalencies'' and inserting ''To facilitate conversions to converted drug weight'';

in Note 27(D) by striking ''marihuana equivalencies'' both place such term appears and inserting ''converted drug weights''; by striking ''Drug Equivalency Tables'' and inserting ''Drug Conversion Tables''; and by striking ''marihuana equivalency'' and inserting ''converted drug weight'';

and in Note 27(E)(ii) by striking ''marihuana equivalency'' and inserting ''converted drug weight''.

The Commentary to § 2D1.1 captioned ''Background'', as amended by Amendment 3 of this document, is further amended by adding at the end the following new paragraph:

''The Drug Conversion Tables set forth in Application Note 8 were previously called the Drug Equivalency Tables. In the original 1987 *Guidelines Manual,* the Drug Equivalency Tables provided four conversion factors (or 'equivalents') for determining the base offense level in cases involving either a controlled substance not referenced in the Drug Quantity Table or multiple controlled substances: heroin, cocaine, PCP, and marihuana. In 1991, the Commission amended the Drug Equivalency Tables to provide for one substance, marihuana, as the single conversion factor in § 2D1.1. *See* USSG App. C, Amendment 396 (effective November 1, 1991). In 2018, the Commission amended § 2D1.1 to replace marihuana as the conversion factor with the new term 'converted drug weight' and to change the title of the Drug Equivalency Tables to the 'Drug Conversion Tables.' ''.

The Commentary to § 2D1.11 captioned ''Application Notes'' is amended in Note 9 by striking ''Drug Equivalency Table'' and inserting ''Drug Conversion Table''.

The Concluding Commentary to Part D of Chapter Three is amended in Example 2 by striking ''marihuana equivalents'' and inserting ''converted drug weight''; by striking ''Drug Equivalency Tables'' and inserting ''Drug Conversion Tables''; and by striking ''of marihuana'' each place such term appears and inserting ''of converted drug weight''.

Reason for Amendment: This amendment makes technical changes to § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy). It replaces the term ''marihuana equivalency,'' which is used in the Drug Equivalency Tables for determining penalties for controlled substances that are not specifically referenced in the Drug Quantity Table or when combining differing controlled substances, with the term ''converted drug weight.''

The Commission received comment expressing concern that the term ''marihuana equivalency'' is misleading and results in confusion for individuals not fully versed in the guidelines. Some commenters suggested that the Commission should replace ''marihuana equivalency'' with another term.

Specifically, the amendment adds the new term ''converted drug weight'' to all provisions of the Drug Quantity Table at § 2D1.1(c) and changes the title of the ''Drug Equivalency Tables'' to ''Drug Conversion Tables.'' In addition, the amendment makes technical changes throughout the *Guidelines Manual* to account for the new term.

This amendment is not intended as a substantive change in policy for § 2D1.1.

5. *Amendment:* Section 2L1.2(b)(2) is amended by striking ''If, before the defendant was ordered deported or ordered removed from the United States for the first time, the defendant sustained—'' and inserting ''If, before the defendant was ordered deported or ordered removed from the United States for the first time, the defendant engaged in criminal conduct that, at any time, resulted in—''.

Section 2L1.2(b)(3) is amended by striking ''If, at any time after the defendant was ordered deported or ordered removed from the United States for the first time, the defendant engaged in criminal conduct resulting in—'' and inserting ''If, after the defendant was ordered deported or ordered removed from the United States for the first time, the defendant engaged in criminal conduct that, at any time, resulted in—''.

The Commentary to § 2L1.2 captioned ''Application Notes'' is amended—

in Note 2 in the paragraph that begins '''Sentence imposed' has the meaning'' by striking ''includes any term of imprisonment given upon revocation of probation, parole, or supervised release'' and inserting ''includes any term of imprisonment given upon revocation of probation, parole, or supervised release, regardless of when the revocation occurred'';

in Note 4 by striking ''subsection (b)(3),'' and inserting ''subsection (b)(2) or (b)(3), as appropriate,'';

and by redesignating Notes 5 through 7 as Notes 6 through 8, respectively; and by inserting the following new Note 5:

''5. *Cases in Which the Criminal Conduct Underlying a Prior Conviction Occurred Both Before and After the Defendant Was First Ordered Deported or Ordered Removed.*—There may be cases in which the criminal conduct underlying a prior conviction occurred both before and after the defendant was ordered deported or ordered removed from the United States for the first time. For purposes of subsections (b)(2) and (b)(3), count such a conviction only under subsection (b)(2).''

Reason for Amendment: This amendment responds to two application issues that arose after § 2L1.2 (Unlawfully Entering or Remaining in the United States) was extensively amended in 2016. *See* USSG, App. C, Amendment 802 (effective Nov. 1, 2016).

The specific offense characteristic at § 2L1.2(b)(2) applies a sliding scale of enhancements, based on sentence length, if the ''defendant sustained'' a ''conviction'' before being ordered removed for the first time. Correspondingly, § 2L1.2(b)(3) applies a parallel scale of enhancements if the defendant ''engaged in criminal conduct resulting in'' a conviction ''at any time after'' the first order of removal. In most situations, any prior felony conviction that received criminal history points will qualify under either subsection (b)(2) or (b)(3), with the extent of the increase depending on the length of the sentence imposed. In some scenarios, a felony will not qualify for an upward adjustment under either subsection (b)(2) or (b)(3) even though it received criminal history points. Those scenarios occur when a defendant committed a crime before being ordered removed for the first time but was not convicted (or sentenced) for that crime until after that first order of removal.

The amendment addresses this issue by establishing that the application of the § 2L1.2(b)(2) enhancement depends on the timing of the underlying ''criminal conduct,'' and not on the timing of the resulting conviction. It does so by amending the first paragraph of subsection (b)(2) to state that the enhancement applies if pre-first removal conduct resulted in a conviction ''at any time,'' and makes a conforming change to the first paragraph of subsection (b)(3). In order to address how to treat an offense involving conduct that occurred both before and after a defendant's first order of removal, the amendment adds a new Application Note 5 explaining that an offense involving such conduct should be counted only under subsection (b)(2). The Commission determined that a defendant with a prior non-illegal reentry felony conviction that received criminal history points should receive

an enhancement for that conviction under either subsection (b)(2) or (b)(3). A defendant should not avoid an enhancement for an otherwise qualifying conviction because the conviction occurred after a defendant's first order of removal or deportation but was premised on conduct that occurred before that order. Because a conviction could be premised on conduct that occurred both before and after the first order of removal or deportation, the Commission adopted Application Note 5 to explain that such convictions are only counted once, under subsection (b)(2).

The specific offense characteristics at § 2L1.2(b)(2) and (b)(3) increase a defendant's offense level based on the length of the ''sentence imposed'' for a prior felony conviction. An application note defines ''sentence imposed'' to mean ''sentence of imprisonment'' as that term is used in the criminal history guideline, § 4A1.2. *See* USSG § 2L1.2, comment. (n.2.). Consistent with that definition, the application note also directs that ''[t]he length of the sentence imposed includes any term of imprisonment given upon revocation of probation, parole, or supervised release.'' *Id.*

Another part of the commentary to § 2L1.2 directs that only convictions receiving criminal history points under ''§ 4A1.1(a), (b), or (c)'' (which assign points based on the length of the prior sentence imposed) are to be counted under § 2L1.2(b). *See* USSG § 2L1.2, comment. (n.3). In determining the length of a sentence for purposes of Chapter Four (and thus the number of criminal history points to be applied), the length of any term imposed on revocation of probation, parole, supervised release, or other similar status is added to the original term of imprisonment and the total term is used to calculate criminal history points under § 4A1.1(a), (b), or (c). *See* USSG § 4A1.2(k)(1).

A Fifth Circuit opinion interpreted § 2L1.2(b)(2) to bar consideration of a revocation that did not occur until *after* a defendant's first order of removal, even if the defendant was convicted prior to the first order of the removal. *See United States* v. *Franco-Galvan,* 864 F.3d 338 (5th Cir. 2017). The court found that Application Note 2, despite its instruction that ''the length of the sentence imposed includes any term of imprisonment given upon revocation of probation, parole, or supervised release,'' was insufficiently clear to resolve the ''temporal'' question of when a revocation must occur, given that the Commission had resolved a prior circuit conflict in 2012 by directing that revoked time should not be counted in the situation. *See* USSC, App. C, Amendment 764 (effective Nov. 1, 2012). A subsequent decision of the Ninth Circuit reached the same result. *See United States* v. *Martinez,* 870 F.3d 1163 (9th Cir. 2017). Although both cases involved an enhancement under subsection (b)(2), the same logic would seem to apply to enhancements under subsection (b)(3) when the conviction and revocation were separated by an intervening order of removal or deportation.

The amendment resolves this issue by adding the clarifying phrase ''regardless of when the revocation occurred'' to the definition of ''sentence imposed'' in Application Note 2. The Commission determined that, consistent with the purposes of the 2016 amendment to § 2L1.2, the data underlying it, and the statement in Application Note 2, the length of a sentence imposed for purposes of § 2L1.2(b)(2) and (b)(3) should include any additional term of imprisonment imposed upon revocation of probation, suspended sentence, or supervised release, regardless of whether the revocation occurred before or after the defendant's first (or any subsequent) order of removal. As the reason for amendment for Amendment 802 explained, ''[t]he Commission determined that a sentence-imposed approach is consistent with the Chapter Four criminal history rules, easily applied, and appropriately calibrated to account for the seriousness of prior offenses.'' USSC, App. C, Amendment 802 (effective Nov. 1, 2016). Excluding sentence length added by post-removal revocations would be inconsistent with the purpose of Amendment 802 and its underlying data analysis. *Id.*

6. *Amendment:* The Commentary to § 3E1.1 captioned ''Application Notes'' is amended in Note 1(A) by striking ''However, a defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility'' and inserting ''A defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility, but the fact that a defendant's challenge is unsuccessful does not necessarily establish that it was either a false denial or frivolous''.

Reason for Amendment: This amendment responds to concerns that some courts have interpreted the commentary to § 3E1.1 (Acceptance of Responsibility) to automatically preclude application of the 2-level reduction for acceptance of responsibility when the defendant makes an unsuccessful good faith, non-frivolous challenge to relevant conduct. Application Note 1 provides a non-exhaustive list of appropriate considerations in determining whether a defendant has clearly demonstrated acceptance of responsibility. Among those considerations is whether the defendant truthfully admitted the conduct comprising the offense(s) of conviction and truthfully admitted or did not falsely deny any additional relevant conduct for which the defendant is accountable under § 1B1.3 (Relevant Conduct). *See* USSG § 3E1.1, comment. (n.1(A)). The application note further provides that ''a defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility.'' The amendment clarifies that an unsuccessful challenge to relevant conduct does not necessarily establish that the challenge was either a false denial or frivolous. Specifically, the amendment adds ''but the fact that a defendant's challenge is unsuccessful does not necessarily establish that it was either a false denial or frivolous'' to the end of Application Note 1(A).

7. *Amendment:* The Commentary to § 5C1.1 captioned ''Application Notes'' is amended by redesignating Notes 4 through 9 as Notes 5 through 10, respectively; and by inserting the following new Note 4:

''4. If the defendant is a nonviolent first offender and the applicable guideline range is in Zone A or B of the Sentencing Table, the court should consider imposing a sentence other than a sentence of imprisonment, in accordance with subsection (b) or (c)(3). *See* 28 U.S.C. 994(j). For purposes of this application note, a 'nonviolent first offender' is a defendant who has no prior convictions or other comparable judicial dispositions of any kind and who did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense of conviction. The phrase 'comparable judicial dispositions of any kind' includes diversionary or deferred dispositions resulting from a finding or admission of guilt or a plea of *nolo contendere* and juvenile adjudications.''.

The Commentary to § 5F1.2 captioned ''Application Notes'' is amended in Note 1 by striking ''Electronic monitoring is an appropriate means of surveillance and ordinarily should be used in connection with home detention'' and inserting ''Electronic monitoring is an appropriate means of

surveillance for home detention''; and by striking ''alternative means of surveillance may be used so long as they are as effective as electronic monitoring'' and inserting ''alternative means of surveillance may be used if appropriate''.

The Commentary to § 5F1.2 captioned ''Background'' is amended by striking ''The Commission has concluded that the surveillance necessary for effective use of home detention ordinarily requires electronic monitoring'' and inserting ''The Commission has concluded that electronic monitoring is an appropriate means of surveillance for home detention''; and by striking ''the court should be confident that an alternative form of surveillance will be equally effective'' and inserting ''the court should be confident that an alternative form of surveillance is appropriate considering the facts and circumstances of the defendant's case''.

Section 5H1.3 is amended by striking ''*See* § 5C1.1, Application Note 6'' and inserting ''*See* § 5C1.1, Application Note 7''.

Section 5H1.4 is amended by striking ''*See* § 5C1.1, Application Note 6'' and inserting ''*See* § 5C1.1, Application Note 7''.

Reason for Amendment: The amendment adds a new application note to the Commentary at § 5C1.1 (Imposition of a Term of Imprisonment), which states that if a defendant is a ''nonviolent first offender and the applicable guideline range is in Zone A or B of the Sentencing Table, the court should consider imposing a sentence other than a sentence of imprisonment.'' This new application note is consistent with the statutory language in 28 U.S.C. 994(j) regarding the ''general appropriateness of imposing a sentence other than imprisonment'' for ''a first offender who has not been convicted of a crime of violence or an otherwise serious offense'' and cites the statutory provision in support. It also is consistent with a recent Commission recidivism study, which demonstrated that offenders with zero criminal history points have a lower recidivism rate than offenders with one criminal history point, and that offenders with zero criminal history points and no prior contact with the criminal justice system have an even lower recidivism rate. *See* Tracey Kyckelhahn & Trishia Cooper, U.S. Sentencing Comm'n, *The Past Predicts the Future: Criminal History and Recidivism of Federal Offenders* at 6–9 (2017).

Where permitted by statute, the *Guidelines Manual* provides for non-incarceration sentences for offenders in Zones A and B of the Sentencing Table. Zone A (in which all sentencing ranges are zero to six months regardless of criminal history category) permits the full spectrum of sentencing options: (1) A fine only; (2) a term of probation only; (3) probation with conditions of confinement (home detention, community confinement, or intermittent confinement); (4) a ''split sentence'' (a term of imprisonment followed by a term of supervised release with condition of confinement that substitutes for a portion of the guideline term); or (5) a term of imprisonment only. Zone B (which includes sentencing ranges that have a low-end of one month and a high-end of 15 months, and vary by criminal history category) also authorizes non-prison sentences. However, Zone B sentencing options are more restrictive, authorizing (1) probation with conditions of confinement; (2) a ''split sentence''; or (3) a term of imprisonment only. Consistent with the statutory mandate in section 994(j), the application note is intended to serve as a reminder to courts to consider imposing non-incarceration sentences for a defined class of ''nonviolent first offenders'' whose applicable guideline ranges are in Zones A or B of the Sentencing Table.

For purposes of the new application note, the amendment defines a ''nonviolent first offender'' as a defendant who (1) has no prior convictions or other comparable judicial dispositions of any kind; and (2) did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense. It explains that ''comparable judicial dispositions of any kind'' includes ''diversionary or deferred dispositions resulting from a finding or admission of guilt or a plea of *nolo contendere* and juvenile adjudications.''

The amendment adopts language from the statutory and guidelines ''safety-valve'' provisions to exclude offenders who ''use[d] violence or credible threats of violence or possess[ed] a firearm or other dangerous weapon in connection with the offense.'' *See* 18 U.S.C. 3553(f)(2); USSG § 5C1.2(a)(2). This real-offense definition of ''violent'' offense avoids the complicated application of the ''categorical approach'' to determine whether an offense qualifies as ''violent.'' *See United States* v. *Starks,* 861 F.3d 306, 324 (1st Cir. 2017) (describing the ''immensely complicated analysis required by the categorical approach''); *see also* USSG § 5C1.2, comment. (n.3) (noting that the determination of whether ''the offense'' was violent or involved a firearm requires a court to consider not only the offense of conviction but also ''all relevant conduct''). It also ensures that only nonviolent offenders are covered by the new application note.

The amendment also deletes language from the commentary to § 5F1.2 (Home Detention) that generally encouraged courts to use electronic monitoring (also called location monitoring) when home detention is made a condition of supervision, and instead instructs that electronic monitoring or any alternative means of surveillance may each be used, as ''appropriate.'' The goal of this change is to increase the use of probation with home detention as an alternative to incarceration. The Commission received testimony indicating that location monitoring is resource-intensive and otherwise demanding on probation officers. Additionally, it heard testimony that imposing location monitoring by default is inconsistent with the evidence-based ''risk-needs-responsivity'' (RNR) model of supervision and may be counterproductive for certain lower-risk offenders. For many low-risk offenders, less intensive surveillance methods (*e.g.,* telephonic contact, video conference, unannounced home visits by probation officers) are sufficient to enforce home detention. The revised language would allow probation officers and courts to exercise discretion to use surveillance methods that they deem appropriate in light of evidence-based practices.

8. *Amendment:* The Commentary to § 2A3.5 captioned ''Statutory Provision'' is amended by striking ''§ 2250(a)'' and inserting ''§ 2250(a), (b)''.

The Commentary to § 2A3.5 captioned ''Application Notes'' is amended by redesignating Note 2 as Note 3; and by inserting the following new Note 2:

''2. *Application of Subsection (b)(1).*— For purposes of subsection (b)(1), a defendant shall be deemed to be in a 'failure to register status' during the period in which the defendant engaged in conduct described in 18 U.S.C. 2250(a) or (b).''.

Section 2A3.6(a) is amended by striking ''§ 2250(c)'' and inserting ''§ 2250(d)''.

The Commentary to § 2A3.6 captioned ''Statutory Provisions'' is amended by striking ''2250(c)'' and inserting ''2250(d)''.

The Commentary to § 2A3.6 captioned ''Application Notes'' is amended—

in Note 1 by striking ''Section 2250(c)'' and inserting ''Section 2250(d)''; and by inserting after ''18 U.S.C. 2250(a)'' the following: ''or (b)'';

in Note 3 by striking ''§ 2250(c)'' and inserting ''§ 2250(d)'';

and in Note 4 by striking ''§ 2250(c)'' and inserting ''§ 2250(d)''.

Section 2B5.3(b)(5) is amended by striking ''counterfeit drug'' and inserting ''drug that uses a counterfeit mark on or in connection with the drug''.

The Commentary to § 2B5.3 captioned ''Application Notes'' is amended in Note 1 by striking the third undesignated paragraph as follows:

'' 'Counterfeit drug' has the meaning given that term in 18 U.S.C. 2320(f)(6).'';

and by inserting after the paragraph that begins '' 'Counterfeit military good or service' has the meaning'' the following new paragraph:

'' 'Drug' and 'counterfeit mark' have the meaning given those terms in 18 U.S.C. 2320(f).''.

The Commentary to § 2G1.3 captioned ''Application Notes'' is amended in Note 4 by striking ''(b)(3)'' each place such term appears and inserting ''(b)(3)(A)''.

Section 5D1.3(a)(6)(A) is amended by striking ''18 U.S.C. 2248, 2259, 2264, 2327, 3663, 3663A, and 3664'' and inserting ''18 U.S.C. 3663 and 3663A, or any other statute authorizing a sentence of restitution''.

Appendix A (Statutory Index) is amended—

in the line referenced to 15 U.S.C. 2615 by striking ''§ 2615'' and inserting ''§ 2615(b)(1)'';

by inserting before the line referenced to 15 U.S.C. 6821 the following new line reference:

''15 U.S.C. 2615(b)(2) 2Q1.1'';

in the line referenced to 18 U.S.C. 2250(a) by striking ''§ 2250(a)'' and inserting ''§ 2250(a), (b)'';

and in the line referenced to 18 U.S.C. 2250(c) by striking ''§ 2250(c)'' and inserting ''§ 2250(d)''.

Reason for Amendment: This multi-part amendment responds to recently enacted legislation and miscellaneous guideline application issues.

First, the amendment responds to section 6 of the International Megan's Law to Prevent Child Exploitation and Other Sexual Crimes Through Advanced Notification of Traveling Sex Offenders, Public Law 114–119 (Feb. 8, 2016), which added a new registration requirement for certain sex offenders required to register under the Sex Offender Registration and Notification Act (SORNA) at 34 U.S.C. 20914. SORNA requires sex offenders to register in the sex offender registry, and keep their registration current, by providing certain identifying information including names, addresses, and Social Security Numbers. The new requirement at 34 U.S.C. 20914(7) directs sex offenders to provide information relating to intended travel outside the United States, including any anticipated dates and places of departure, arrival or return, air carrier and flight numbers, and destination country. The Act also established a new offense at 18 U.S.C. 2250(b). For those required to register under SORNA, knowingly failing to provide this travel-related information and engaging or attempting to engage in the intended travel outside of the United States, carries a statutory maximum of 10 years of imprisonment. Section 2250 offenses are referenced in Appendix A (Statutory Index) to § 2A3.5 (Failure to Register as a Sex Offender). The amendment amends Appendix A so the new offense at 18 U.S.C. 2250(b) is referenced to § 2A3.5. The amendment also adds a new Application Note 2 to the Commentary to § 2A3.5 providing that for purposes of § 2A3.5(b)(1), a defendant shall be considered in a ''failure to register status'' during the time the defendant engaged in conduct described in either section 2250(a) (failing to register or update registration) or section 2250(b) (failing to provide required travel-related information). This application note reflects the Commission's determination that failing to provide information about intended foreign travel meets the definition of failing to update registration information in the sex offender registry. In addition, the amendment makes clerical changes to § 2A3.6 (Aggravated Offenses Relating to Registration as a Sex Offender) to reflect the adoption of section 2250(b) and the associated redesignation of section 2250(c) as section 2250(d).

Second, the amendment responds to section 3 of the Transnational Drug Trafficking Act of 2016, Public Law 114–154 (May 16, 2016), which made changes relating to the trafficking of counterfeit drugs by amending the language in the penalty provision at 18 U.S.C. 2320. The Act amended section 2320(b)(3) to replace the term ''counterfeit drug'' with the phrase ''a drug that uses a counterfeit mark on or in connection with the drug.'' The Act also revised section 2320(f) to define the term ''drug'' by reference to the term as defined in the Federal Food, Drug, and Cosmetic Act found at 21 U.S.C. 321. Section 2320 offenses are referenced in Appendix A (Statutory Index) to § 2B5.3 (Criminal Infringement of Copyright or Trademark). The amendment replaces the term ''counterfeit drug'' at § 2B5.3(b)(5) with the new phrase in the revised section 2320(b)(3), to remain consistent with the language of the statute. Similarly, the amendment amends the commentary to § 2B5.3 to remove a definition for the obsolete term ''counterfeit drug'' and replace it with definitions of the terms ''drug'' and ''counterfeit mark'' as found in the revised statute.

Third, the amendment responds to section 12 of the Frank R. Lautenberg Chemical Safety for the 21st Century Act of 2016, Public Law 114–182 (June 22, 2016), which amended section 16 of the Toxic Substances Control Act (15 U.S.C. 2615) by adding a new provision at section 2615(b)(2). The new provision prohibits any person from knowingly and willfully violating specific provisions of the Toxic Substances Control Act, knowing at the time of the violation that the violation puts a person in imminent danger of death or bodily injury, with a maximum penalty of 15 years of imprisonment. The Toxic Substances Control Act is referenced in Appendix A (Statutory Index) to § 2Q1.2 (Mishandling of Hazardous or Toxic Substances of Pesticides; Recordkeeping, Tampering, and Falsification; Unlawfully Transporting Hazardous Materials in Commerce). The amendment continues to reference the preexisting offense, now codified at section 2615(b)(1), to § 2Q1.2, but references the new offense, codified at section 2615(b)(2), to § 2Q1.1 (Knowing Endangerment Resulting From Mishandling Hazardous or Toxic Substances, Pesticides or Other Pollutants). The Commission determined § 2Q1.1 is the most analogous guideline because it covers similar ''knowing endangerment'' provisions and has a similar *mens rea* element found in similar statutes referenced in Appendix A to § 2Q1.1.

Fourth, the amendment responds to section 2 of the Justice for All Reauthorization Act of 2016, Public Law 114–324 (Dec. 16, 2016), which amended 18 U.S.C. 3583(d) (relating to conditions of supervised release) to require a court, when imposing a sentence of supervised release, to include as a condition that the defendant make restitution in accordance with sections 3663 and 3663A of Title 18 of the United States Code, or any other statute authorizing a sentence of restitution. The amendment amends subsection (a)(6)(A) of § 5D1.3 (Conditions of Supervised Release) to include a mandatory condition of supervised release in conformance with the new statutory requirement. The amendment also parallels the Judicial Conference of the United States' recent revision of the Judgment in a Criminal Case form to include a new mandatory condition of supervised release.

Fifth, the amendment clarifies an application issue that has arisen with respect to § 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor), which applies to several offenses involving the transportation of a minor for illegal sexual activity. A two-level enhancement at § 2G1.3(b)(3) applies if the offense involved the use of a computer to either (A) persuade, entice or coerce a minor, or to facilitate the travel of a minor, to engage in prohibited sexual conduct, or (B) to entice, offer, or solicit a person to engage in prohibited sexual conduct with a minor. While Application Note 4 sets forth guidance on this enhancement, it fails to distinguish between the two prongs of subsection (b)(3). As a result, an application issue has arisen regarding whether the note prohibits application of the enhancement where a computer was used to solicit a third party to engage in prohibited sexual conduct with a minor, as set out in subsection (b)(3)(B). Courts have concluded that the application note is inconsistent with the language of § 2G1.3(b)(3), and that application of the enhancement for the use of a computer in third party solicitation cases is proper. *See e.g., United States* v. *Cramer,* 777 F.3d 597, 606 (2d Cir. 2015); *United States* v. *McMillian,* 777 F.3d 444, 449–50 (7th Cir. 2015); *United States* v. *Hill,* 782 F.3d 842, 846 (11th Cir. 2015); *United States* v. *Pringler,* 765 F.3d 455 (5th Cir. 2014). The amendment is intended to clarify the Commission's original intent that Application Note 4 apply only to subsection (b)(3)(A).

9. *Amendment:* Chapter One, Part A is amended—

in Subpart 1(4)(b) (Departures) by inserting an asterisk after ''§ 5K2.19 (Post-Sentencing Rehabilitative Efforts)''; and by inserting after the first paragraph the following note:

''*Note: Section 5K2.19 (Post-Sentencing Rehabilitative Efforts) was deleted by Amendment 768, effective November 1, 2012. (*See* USSG App. C, amendment 768.)'';

and in the note at the end of Subpart 1(4)(d) (Probation and Split Sentences) by striking ''Supplement to Appendix C'' and inserting ''USSG App. C''.

The Commentary to § 1B1.13 captioned ''Application Notes'' is amended in Note 4 by striking ''factors set forth 18 U.S.C. 3553(a)'' and inserting ''factors set forth in 18 U.S.C. 3553(a)''.

The Commentary to § 2A3.5 captioned ''Application Notes'' is amended in Note 1 in the paragraph that begins '' 'Sex offense' has the meaning'' by striking ''42 U.S.C. 16911(5)'' and inserting ''34 U.S.C. 20911(5)''; and in the paragraph that begins '' 'Tier I offender', 'Tier II offender', and 'Tier III offender' have the meaning'' by striking ''42 U.S.C. 16911'' and inserting ''34 U.S.C. 20911''.

The Commentary to § 2B1.1 captioned ''Application Notes'' is amended in Note 2(A)(i) by striking ''as determined under the provisions of § 1B1.2 (Applicable Guidelines) for the offense of conviction'' and inserting the following: ''specifically referenced in Appendix A (Statutory Index) for the offense of conviction, as determined under the provisions of § 1B1.2 (Applicable Guidelines)''.

The Commentary to § 2B1.5 captioned ''Application Notes'' is amended—

in Note 1(A) by striking clause (ii) and redesignating clauses (iii) through (vii) as clauses (ii) through (vi), respectively;

in Note 1(A)(i) by striking ''16 U.S.C. 470w(5)'' and inserting ''54 U.S.C. 300308'';

in Note 3(C) by striking ''16 U.S.C. 470a(a)(1)(B)'' and inserting ''54 U.S.C. 302102'';

in Note 3(E) by striking ''the Antiquities Act of 1906 (16 U.S.C. 431)'' and inserting ''54 U.S.C. 320301'';

and in Note 3(F) by striking ''16 U.S.C. 1c(a)'' and inserting ''54 U.S.C. 100501''.

Section 2D1.11 is amended in subsection (d)(6) by striking ''Pseuodoephedrine'' and inserting ''Pseudoephedrine''; and in subsection (e)(2), under the heading relating to List I Chemicals, by striking the period at the end and inserting a semicolon.

The Commentary to § 2M2.1 captioned ''Statutory Provisions'' is amended by striking ''§ 2153'' and inserting ''§§ 2153''; and by inserting at the end the following: ''For additional statutory provision(s), *see* Appendix A (Statutory Index).''.

The Commentary to § 2Q1.1 captioned ''Statutory Provisions'' is amended by striking ''42 U.S.C. 6928(e)'' and inserting ''42 U.S.C. 6928(e), 7413(c)(5)''; and by inserting at the end the following: ''For additional statutory provision(s), *see* Appendix A (Statutory Index).''.

The Commentary to § 2Q1.2 captioned ''Statutory Provisions'' is amended by striking ''7413'' and inserting ''7413(c)(1)–(4)''.

The Commentary to § 2Q1.3 captioned ''Statutory Provisions'' is amended by striking ''7413'' and inserting ''7413(c)(1)–(4)''.

The Commentary to § 2Q1.3 captioned ''Application Notes'' is amended in Note 8 by striking ''Adequacy of Criminal History Category'' and inserting ''Departures Based on Inadequacy of Criminal History Category (Policy Statement)''.

The Commentary to § 2R1.1 captioned ''Application Notes'' is amended in Note 7 by striking ''Adequacy of Criminal History Category'' and inserting ''Departures Based on Inadequacy of Criminal History Category (Policy Statement)''.

The Commentary to § 2X5.2 captioned ''Statutory Provisions'' is amended by striking ''42 U.S.C. 14133'' and inserting ''34 U.S.C. 12593''.

Section 4A1.2 is amended in subsections (h), (i), and (j) by striking ''Adequacy of Criminal History Category'' each place such term appears and inserting ''Departures Based on Inadequacy of Criminal History Category (Policy Statement)''.

The Commentary to § 4A1.2 captioned ''Application Notes'' is amended in Notes 6 and 8 by striking ''Adequacy of Criminal History Category'' both places such term appears and inserting ''Departures Based on Inadequacy of Criminal History Category (Policy Statement)''.

The Commentary to § 4B1.4 captioned ''Background'' is amended by striking ''Adequacy of Criminal History Category'' and inserting ''Departures Based on Inadequacy of Criminal History Category (Policy Statement)''.

Section 5B1.3(a)(10) is amended by striking ''42 U.S.C. 14135a'' and inserting ''34 U.S.C. 40702''.

Section 5D1.3 is amended in subsection (a)(4) by striking ''release on probation'' and inserting ''release on supervised release''; and in subsection (a)(8) by striking ''42 U.S.C. 14135a'' and inserting ''34 U.S.C. 40702''.

Section 8C2.1(a) is amended by striking ''§§ 2C1.1, 2C1.2, 2C1.6'' and inserting ''§§ 2C1.1, 2C1.2''.

Appendix A (Statutory Index) is amended—

by striking the line referenced to 16 U.S.C. 413;

in the line referenced to 18 U.S.C. 371 by rearranging the guidelines to place them in proper numerical order;

in the line referenced to 18 U.S.C. 1591 by rearranging the guidelines to place them in proper numerical order;

by inserting after the line referenced to 18 U.S.C. 1864 the following new line reference:

''18 U.S.C. 1865(c)	2B1.1'';

by inserting after the line referenced to 33 U.S.C. 3851 the following new line references:

''34 U.S.C. 10251	2B1.1
34 U.S.C. 10271	2B1.1
34 U.S.C. 12593	2X5.2
34 U.S.C. 20962	2H3.1
34 U.S.C. 20984	2H3.1'';

and by striking the lines referenced to 42 U.S.C. 3791, 42 U.S.C. 3795, 42 U.S.C. 14133, 42 U.S.C. 16962, and 42 U.S.C. 16984.

Reason for Amendment: This amendment makes various technical changes to the *Guidelines Manual.*

First, the amendment sets forth clarifying changes to two guidelines. The amendment amends Chapter One, Part A, Subpart 1(4)(b) (Departures) to provide an explanatory note addressing the fact that § 5K2.19 (Post-Sentencing Rehabilitative Efforts) was deleted by Amendment 768, effective November 1, 2012. The amendment also makes minor clarifying changes to Application Note 2(A) to § 2B1.1 (Theft, Property Destruction, and Fraud), to make clear that, for purposes of subsection (a)(1)(A), an offense is ''referenced to this guideline'' if § 2B1.1 is the applicable Chapter Two guideline specifically referenced in Appendix A (Statutory Index) for the offense of conviction.

Second, the amendment makes technical changes to provide updated references to certain sections in the United States Code that were restated in legislation. As part of an Act to codify existing law relating to the National Park System, Congress repealed numerous sections in Title 16 of the United States Code, and restated them in Title 18 and a newly enacted Title 54. *See* Public Law 113–287 (Dec. 19, 2014). The amendment amends the Commentary to § 2B1.5 (Theft of, Damage to, or Destruction of, Cultural Heritage Resources or Paleontological Resources; Unlawful Sale, Purchase, Exchange, Transportation, or Receipt of Cultural Heritage Resources or Paleontological Resources) to correct outdated references to certain sections in Title 16 that were restated, with minor revisions, when Congress enacted Title 54. It also deletes from the Commentary to § 2B1.5 the provision relating to the definition of ''historic resource,'' as that term was omitted from Title 54. In addition, the amendment makes a technical change to Appendix A (Statutory Index), to correct an outdated reference to 16 U.S.C. 413 by replacing it with the appropriate reference to 18 U.S.C. 1865(c).

Third, the amendment makes additional technical changes to reflect the editorial reclassification of certain sections in the United States Code. Effective September 1, 2017, the Office of Law Revision Counsel transferred certain provisions bearing on crime control and law enforcement, previously scattered throughout various parts of the United States Code, to a new Title 34. To reflect the new section numbers of the reclassified provisions, the amendment makes changes to: The Commentary to § 2A3.5 (Failure to Register as a Sex Offender); the Commentary to § 2X5.2 (Class A Misdemeanors (Not Covered by Another Specific Offense Guideline)); subsection (a)(10) of § 5B1.3 (Conditions of Probation); subsection (a)(8) of § 5D1.3 (Conditions of Supervised Release); and Appendix A (Statutory Index).

Fourth, the amendment makes clerical changes in §§ 2Q1.3 (Mishandling of Other Environmental Pollutants; Recordkeeping, Tampering, and Falsification), 2R1.1 (Bid-Rigging, Price-Fixing or Market-Allocation Agreements Among Competitors), 4A1.2 (Definitions and Instructions for Computing Criminal History), and 4B1.4 (Armed Career Criminal), to correct title references to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)).

Finally, the amendment also makes clerical changes to—

- the Commentary to § 1B1.13 (Reduction in Term of Imprisonment Under 18 U.S.C. 3582(c)(1)(A) (Policy Statement)), by inserting a missing word in Application Note 4;
- subsection (d)(6) to § 2D1.11 (Unlawfully Distributing, Importing, Exporting or Possessing a Listed Chemical; Attempt or Conspiracy), by correcting a typographical error in the line referencing Pseudoephedrine;
- subsection (e)(2) to § 2D1.11 (Unlawfully Distributing, Importing, Exporting or Possessing a Listed Chemical; Attempt or Conspiracy), by correcting a punctuation mark under the heading relating to List I Chemicals;
- the Commentary to § 2M2.1 (Destruction of, or Production of Defective, War Material, Premises, or Utilities) captioned ''Statutory Provisions,'' by adding a missing section symbol and a reference to Appendix A (Statutory Index);
- the Commentary to § 2Q1.1 (Knowing Endangerment Resulting From Mishandling Hazardous or Toxic Substances, Pesticides or Other Pollutants) captioned ''Statutory Provisions,'' by adding a missing reference to 42 U.S.C. 7413(c)(5) and a reference to Appendix A (Statutory Index);
- the Commentary to § 2Q1.2 (Mishandling of Hazardous or Toxic Substances or Pesticides; Recordkeeping, Tampering, and Falsification; Unlawfully Transporting Hazardous Materials in Commerce) captioned ''Statutory Provisions,'' by adding a specific reference to 42 U.S.C. 7413(c)(1)–(4);
- the Commentary to § 2Q1.3 (Mishandling of Other Environmental Pollutants; Recordkeeping, Tampering, and Falsification) captioned ''Statutory Provisions,'' by adding a specific reference to 42 U.S.C. 7413(c)(1)–(4);
- subsection (a)(4) to § 5D1.3. (Conditions of Supervised Release), by changing an inaccurate reference to ''probation'' to ''supervised release'';
- subsection (a) of § 8C2.1 (Applicability of Fine Guidelines), by deleting an outdated reference to § 2C1.6, which was deleted by consolidation with § 2C1.2 (Offering, Giving, Soliciting, or Receiving a Gratuity) effective November 1, 2004; and
- the lines referencing ''18 U.S.C. 371'' and ''18 U.S.C. 1591'' in Appendix A (Statutory Index), by rearranging the order of certain Chapter Two guidelines references to place them in proper numerical order.

BILLING CODE 2210–40–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0232]

Agency Information Collection Activity: Application for Burial in a National Cemetery

AGENCY: National Cemetery Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: National Cemetery Administration (NCA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before July 6, 2018.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Willie Lewis, National Cemetery Administration (43D3), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to *willie.lewis@va.gov.* Please refer to ''OMB Control No. 2900–0232'' in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Willie Lewis at (202) 461–4242 or FAX (202) 501–2240.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, NCA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of NCA's functions, including whether the information will have practical utility; (2) the accuracy of NCA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Authority: Public Law 104–13; 44 U.S.C. 3501–3521.

Title: Application for Burial in a National Cemetery.

OMB Control Number: 2900–0232.

Type of Review: Reinstatement, with change, of a previously approved collection.

Abstract: VA requires applicants for national cemetery burial to provide information to verify eligibility for burial in a national cemetery, to schedule interment and to provide services requested by the decedent's family or personal representative. This information is also used for planning and scheduling cemetery services and to provide for specific requests from family members or the personal representative.

Affected Public: Individuals and households.

Estimated Annual Burden: 33,750.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One-time.

Estimated Number of Respondents: 135,000.

By direction of the Secretary.

Cynthia D. Harvey-Pryor,

Department Clearance Officer, Office of Quality and Compliance, Department of Veterans Affairs.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Proposed Policy Changes and Fiscal Year 2019 Rates; Proposed Quality Reporting Requirements for Specific Providers; Proposed Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs (Promoting Interoperability Programs) Requirements for Eligible Hospitals, Critical Access Hospitals, and Eligible Professionals; Medicare Cost Reporting Requirements; and Physician Certification and Recertification of Claims

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: We are proposing to revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems for FY 2019. Some of these proposed changes implement certain statutory provisions contained in the 21st Century Cures Act and the Bipartisan Budget Act of 2018, and other legislation. We also are proposing to make changes relating to Medicare graduate medical education (GME) affiliation agreements for new urban teaching hospitals. In addition, we are proposing to provide the market basket update that would apply to the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis subject to these limits for FY 2019. We are proposing to update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) for FY 2019.

In addition, we are proposing to establish new requirements or revise existing requirements for quality reporting by specific Medicare providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs). We also are proposing to establish new requirements or revise existing requirements for eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs) participating in the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs (now referred to as the Promoting Interoperability Programs). In addition, we are proposing changes to the requirements that apply to States operating Medicaid Promoting Interoperability Prrograms. We are proposing to update policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

We also are proposing to make changes relating to the required supporting documentation for an acceptable Medicare cost report submission and the supporting information for physician certification and recertification of claims.

DATES: *Comment Period:* To be assured consideration, comments must be received at one of the addresses provided in the **ADDRESSES** section, no later than 5 p.m. on June 25, 2018.

ADDRESSES: In commenting, please refer to file code CMS–1694–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov*. Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1694–P, P.O. Box 8011, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1694–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, we refer readers to the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *http://www.regulations.gov*. Follow the search instructions on that website to view public comments.

Electronic Access

This **Federal Register** document is available from the **Federal Register** online database through Federal Digital System (FDsys), a service of the U.S. Government Printing Office. This database can be accessed via the Internet at: *http://www.gpo.gov/fdsys*.

Tables Available Only Through the Internet on the CMS Website

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to the proposed rule and the final rule were published in the **Federal Register** as part of the annual proposed and final rules. However, beginning in FY 2012, the majority of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables generally will be available only through the Internet. The IPPS tables for this proposed rule are available through the Internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled, ''FY 2019 IPPS Proposed Rule Home Page'' or ''Acute Inpatient—Files for Download''. The LTCH PPS tables for this FY 2019 proposed rule are available through the Internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1694–P. For further details on the contents of the tables referenced in this proposed rule, we refer readers to section VI. of the Addendum to this proposed rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified above should contact Michael Treitel at (410) 786–4552.

Table of Contents

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This proposed rule would make payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule also would make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs.

We are proposing to establish new requirements and revise existing requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs) that are participating in Medicare. We also are proposing to establish new requirements and revise existing requirements for eligible professionals (EPs), eligible hospitals, and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs. We are proposing to update policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

We also are proposing to make changes relating to the supporting documentation required for an acceptable Medicare cost report submission and the supporting information for physician certification and recertification of claims.

Under various statutory authorities, we are proposing to make changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2019 and subsequent fiscal years. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands,

Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

- Sections 123(a) and (c) of the BBRA (Pub. L. 106-113) and section 307(b)(1) of the BIPA (Pub. L. 106-554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.
- Section 1866(k) of the Act, as added by section 3005 of the Affordable Care Act, which establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.
- Section 1886(p) of the Act, as added by section 3008 of the Affordable Care Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act and amended by section 10309 of the Affordable Care Act and section 15002 of the 21st Century Cures Act, which establishes the ''Hospital Readmissions Reduction Program.'' Under the program, payments for discharges from an ''applicable hospital'' under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act requires the Secretary to compare cohorts of hospitals to each other in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured (minus 0.2 percentage point for FY 2018 through FY 2019); and (3) a hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(6) of the Act, as added by section 1206(c) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS with implementation beginning in FY 2016, and provides for a 4-year transitional blended payment rate for discharges occurring in LTCH cost reporting periods beginning in FYs 2016 through 2019. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B)(ii) by adding new clause (iv), which specifies that the IPPS comparable amount defined in subclause (I) shall be reduced by 4.6 percent for FYs 2018 through 2026.
- Section 1886(m)(6) of the Act, as amended by section 15009 of the 21st Century Cures Act (Pub. L. 114–255), which provides for a temporary exception to the application of the site neutral payment rate under the LTCH PPS for certain spinal cord specialty hospitals for discharges in cost reporting periods beginning during FYs 2018 and 2019.
- Section 1886(m)(6) of the Act, as amended by section 15010 of the 21st Century Cures Act (Pub. L. 114–255), which provides for a temporary exception to the application of the site neutral payment rate under the LTCH PPS for certain LTCHs with certain discharges with severe wounds occurring in cost reporting periods beginning during FY 2018.
- Section 1886(m)(5)(D)(iv) of the Act, as added by section 1206(c) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which provides for the establishment of a functional status quality measure in the LTCH QRP for change in mobility among inpatients requiring ventilator support.
- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act, Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.

2. Improving Patient Outcomes and Reducing Burden Through Meaningful Measures

Regulatory reform and reducing regulatory burden are high priorities for CMS. To reduce the regulatory burden on the healthcare industry, lower health care costs, and enhance patient care, in October 2017, we launched the Meaningful Measures Initiative.[1] This initiative is one component of our agency-wide Patients Over Paperwork Initiative,[2] which is aimed at evaluating and streamlining regulations with a goal to reduce unnecessary cost and burden, increase efficiencies, and improve beneficiary experience. The Meaningful Measures Initiative is aimed at identifying the highest priority areas for quality measurement and quality improvement in order to assess the core quality of care issues that are most vital

[1] Meaningful Measures webpage: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html*.

[2] Remarks by Administrator Seema Verma at the Health Care Payment Learning and Action Network (LAN) Fall Summit, as prepared for delivery on October 30, 2017. Available at: *https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2017-Fact-Sheet-items/2017-10-30.html*.

to advancing our work to improve patient outcomes. The Meaningful Measures Initiative represents a new approach to quality measures that will foster operational efficiencies and will reduce costs, including collection and reporting burden while producing quality measurement that is more focused on meaningful outcomes.

The Meaningful Measures framework has the following objectives:

- Address high-impact measure areas that safeguard public health;
- Patient-centered and meaningful to patients;
- Outcome-based where possible;
- Fulfill each program's statutory requirements;
- Minimize the level of burden for health care providers (for example, through a preference for EHR-based measures where possible, such as electronic clinical quality measures; [3]
- Significant opportunity for improvement;
- Address measure needs for population based payment through alternative payment models; and
- Align across programs and/or with other payers.

In order to achieve these objectives, we have identified 19 Meaningful Measures areas and mapped them to six overarching quality priorities as shown in the following table:

Quality priority	Meaningful measure area
Making Care Safer by Reducing Harm Caused in the Delivery of Care	Healthcare-Associated Infections
	Preventable Healthcare Harm
Strengthen Person and Family Engagement as Partners in Their Care	Care is Personalized and Aligned with Patient's Goals
	End of Life Care According to Preferences
	Patient's Experience of Care
	Patient Reported Functional Outcomes
Promote Effective Communication and Coordination of Care	Medication Management
	Admissions and Readmissions to Hospitals
	Transfer of Health Information and Interoperability
Promote Effective Prevention and Treatment of Chronic Disease	Preventive Care
	Management of Chronic Conditions
	Prevention, Treatment, and Management of Mental Health
	Prevention and Treatment of Opioid and Substance Use Disorders
	Risk Adjusted Mortality
Work with Communities to Promote Best Practices of Healthy Living	Equity of Care
	Community Engagement
Make Care Affordable	Appropriate Use of Healthcare
	Patient-focused Episode of Care
	Risk Adjusted Total Cost of Care

By including Meaningful Measures in our programs, we believe that we can also address the following cross-cutting measure criteria:

- Eliminating disparities;
- Tracking measurable outcomes and impact;
- Safeguarding public health;
- Achieving cost savings;
- Improving access for rural communities; and
- Reducing burden.

We believe that the Meaningful Measures Initiative will improve outcomes for patients, their families, and health care providers while reducing burden and costs for clinicians and providers as well as promoting operational efficiencies.

3. Summary of the Major Provisions

Below we provide a summary of the major provisions in this proposed rule. In general, these major provisions are being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the proposed changes included in this proposed rule is presented below in section I.D. of this preamble.

a. MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling $11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2019, we are proposing to make an adjustment of +0.5 percent to the standardized amount.

b. Expansion of the Postacute Care Transfer Policy

Section 53109 of the Bipartisan Budget Act of 2018 amended section 1886(d)(5)(J)(ii) of the Act to also include discharges to hospice care by a hospice program as a qualified discharge, effective for discharges occurring on or after October 1, 2018. Accordingly, we are proposing to make conforming amendments to § 412.4(c) of the regulation, effective for discharges on or after October 1, 2018, to specify that if a discharge is assigned to one of the MS–DRGs subject to the postacute care transfer policy and the individual is transferred to hospice care by a hospice program, the discharge would be subject to payment as a transfer case.

c. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare

[3] Refer to section VIII.A.9.c.of the preamble of this proposed rule where we are seeking public comment on the potential future development and adoption of eCQMs.

disproportionate share hospital (DSH) payment methodology beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, DSHs receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this proposed rule, we are proposing to update our estimates of the three factors used to determine uncompensated care payments for FY 2019. We are continuing to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in the calculation of Factor 2. We also are continuing to incorporate data from Worksheet S–10 in the calculation of hospitals' share of the aggregate amount of uncompensated care by combining data on uncompensated care costs from Worksheet S–10 for FYs 2014 and 2015 with proxy data regarding a hospital's share of low-income insured days for FY 2013 to determine Factor 3 for FY 2019. In addition, we are proposing to use only data regarding low-income insured days for FY 2013 to determine the amount of uncompensated care payments for Puerto Rico hospitals, Indian Health Service and Tribal hospitals, and all-inclusive rate providers. For this proposed rule, we also are proposing the following policies: (1) For providers with multiple cost reports beginning in the same fiscal year, to use the longest cost report and annualize Medicaid data and uncompensated care data if a hospital's cost report does not equal 12 months of data; (2) in the rare case where a provider has multiple cost reports beginning in the same fiscal year, but one report also spans the entirety of the following fiscal year such that the hospital has no cost report for that fiscal year, the cost report that spans both fiscal years would be used for the latter fiscal year; and (3) to apply statistical trim methodologies to potentially aberrant cost-to-charge ratios (CCRs) and potentially aberrant uncompensated care costs reported on the Worksheet S–10.

d. Proposed Changes to the LTCH PPS

In this proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2019. In addition, we are proposing to eliminate the 25-percent threshold policy, and under this proposal we would apply a one-time permanent adjustment of approximately −0.9 percent to the LTCH PPS standard Federal payment rate to ensure this proposed elimination of the 25-percent threshold policy is budget neutral.

e. Reduction of Hospital Payments for Excess Readmissions

We are proposing to make changes to policies for the Hospital Readmissions Reduction Program, which is established under section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, as amended by section 10309 of the Affordable Care Act and further amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2018 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG). In this proposed rule, we are proposing to establish the applicable periods for FY 2019, FY 2020, and FY 2021. We are also proposing to codify the definitions of dual-eligible patients, the proportion of dual-eligibles, and the applicable period for dual-eligibility.

f. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. As part of agency-wide efforts under the Meaningful Measures Initiative to use a parsimonious set of the most meaningful measures for patients, clinicians, and providers in our quality programs and the Patients Over Paperwork Initiative to reduce costs and burden and program complexity as discussed in section I.A.2. of the preamble of this proposed rule, we are proposing to remove a total of 10 measures from the Hospital VBP Program, all of which would continue to be used in the Hospital IQR Program or the HAC Reduction Program, in order to reduce the costs and complexity of tracking these measures in multiple programs. We also are proposing to adopt measure removal factors for the Hospital VBP Program. Specifically, we are proposing to remove six measures beginning with the FY 2021 program year: (1) Elective Delivery (NQF #0469) (PC–01); (2) National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138); (3) National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139); (4) American College of Surgeons-Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure (NQF #0753); (5) National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* Bacteremia (MRSA) Outcome Measure (NQF #1716); and (6) National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717). We are also proposing to remove four measures from the Hospital VBP Program effective with the effective date of the FY 2019 IPPS/LTCH PPS final rule: (1) Patient Safety and Adverse Events (Composite) (NQF #0531) (PSI 90); (2) Hospital-Level, Risk-Standardized Payment Associated With a 30-Day Episode-of-Care for Acute Myocardial Infarction (NQF #2431) (AMI Payment); (3) Hospital-Level, Risk-Standardized Payment Associated With a 30-Day Episode-of-Care for Heart Failure (NQF #2436) (HF Payment); and (4) Hospital-Level, Risk-Standardized Payment Associated With a 30-Day Episode-of-Care for Pneumonia (PN Payment) (NQF #2579). In addition, we are proposing to rename the Clinical Care domain as the Clinical Outcomes domain beginning with the FY 2020 program year; we are proposing to remove the Safety domain from the Hospital VBP Program, if our proposals to removal all of the measures in this domain are finalized, and to weight the three remaining domains as follows: Clinical Outcomes domain—50 percent; Person and Community Engagement domain—25 percent; and Efficiency and Cost Reduction domain—25 percent.

g. Hospital-Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act, as added under section 3008(a) of the Affordable Care Act, establishes an incentive to hospitals to reduce the incidence of hospital-acquired conditions by requiring the Secretary to make an adjustment to payments to applicable hospitals effective for discharges beginning on October 1, 2014. This 1-percent payment reduction applies to a hospital whose ranking in the worst-performing quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital's discharges for the specified fiscal year. As part of our agency-wide Patients over Paperwork and Meaningful Measures Initiatives, discussed in section I.A.2. of the preamble of this proposed rule, we are proposing that the measures currently included in the HAC Reduction Program should be retained because the measures address a performance gap in patient safety and reducing harm caused in the delivery of care. In this proposed rule, we are proposing to: (1) Establish administrative policies to collect, validate, and publicly report NHSN healthcare-associated infection (HAI) quality measure data that facilitate a seamless transition, independent of the Hospital IQR Program, beginning with January 1, 2019 infectious events; (2) change the scoring methodology by removing domains and assigning equal weighting to each measure for which a hospital has a measure; and (3) establish the applicable period for FY 2021. In addition, we are seeking stakeholder comment regarding the potential future inclusion of additional measures, including eCQMs.

h. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase that would otherwise apply to the standardized amount applicable to discharges occurring in that fiscal year.

In this proposed rule, we are proposing several changes. As part of agency-wide efforts under the Meaningful Measures Initiative to use a parsimonious set of the most meaningful measures for patients and clinicians in our quality programs and the Patients Over Paperwork initiative to reduce burden, cost, and program complexity as discussed in section I.A.2. of the preamble of this proposed rule, we are proposing to add a new measure removal factor and to remove a total of 39 measures from the Hospital IQR Program. For a full list of measures proposed for removal, we refer readers to section VIII.A.4.b. of the preamble of this proposed rule. Beginning with the CY 2018 reporting period/FY 2020 payment determination and subsequent years, we are proposing to remove 17 claims-based measures and two structural measures. Beginning with the CY 2019 reporting period/FY 2021 payment determination and subsequent years, we are proposing to remove eight chart-abstracted measures and two claims-based measures. Beginning with the CY 2020 reporting period/FY 2022 payment determination and subsequent years, we are proposing to remove one chart-abstracted measure, one claims-based measure, and seven eCQMs from the Hospital IQR Program measure set. Beginning with the CY 2021 reporting period/FY 2023 payment determination, we are proposing to remove one claims-based measure.

In addition, for the CY 2019 reporting period/FY 2021 payment determination, we are proposing to: (1) Require the same eCQM reporting requirements that were adopted for the CY 2018 reporting period/FY 2020 payment determination (82 FR 38355 through 38361), such that hospitals submit one, self-selected calendar quarter of 2019 discharge data for 4 eCQMs in the Hospital IQR Program measure set; and (2) require that hospitals use the 2015 Edition certification criteria for CEHRT. These proposals are in alignment with proposals or current established policies under the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs). In addition, we are seeking public comment on two measures for potential future inclusion in the Hospital IQR Program, as well as the potential future development and adoption of electronic clinical quality measures generally.

i. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

The LTCH QRP is authorized by section 1886(m)(5) of the Act and applies to all hospitals certified by Medicare as long-term care hospitals (LTCHs). Under the LTCH QRP, the Secretary reduces by 2 percentage points the annual update to the LTCH PPS standard Federal rate for discharges for an LTCH during a fiscal year if the LTCH fails to submit data in accordance with the LTCH QRP requirements specified for that fiscal year. As part of agency-wide efforts under the Meaningful Measures Initiative to use a parsimonious set of the most meaningful measures for patients and clinicians in our quality programs and the Patients Over Paperwork Initiative to reduce cost and burden and program complexity as discussed in section I.A.2. of the preamble of this proposed rule, we are proposing to remove three measures from the LTCH QRP. We also are proposing to adopt a new measure removal factor and are proposing to codify the measure removal factors in our regulations. In addition, we are proposing to update our regulations to change methods by which an LTCH is notified of noncompliance with the requirements of the LTCH QRP for a program year; and how CMS will notify an LTCH of a reconsideration decision.

4. Summary of Costs and Benefits

- *Adjustment for MS–DRG Documentation and Coding Changes.* Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) For FY 2019, we are proposing to make an adjustment of +0.5 percent to the standardized amount consistent with the MACRA.
- *Expansion of the Postacute Care Transfer Policy.* Section 53109 of the Bipartisan Budget Act of 2018 amended section 1886(d)(5)(J)(ii) of the Act to also include discharges to hospice care by a hospice program as a qualified discharge, effective for discharges occurring on or after October 1, 2018. Accordingly, we are proposing to make conforming amendments to § 412.4(c) of the regulation to specify that, effective for discharges on or after October 1, 2018, if a discharge is assigned to one of the MS–DRGs subject to the postacute care transfer policy and the individual is transferred to hospice care by a hospice program, the discharge would be subject to payment as a transfer case. We estimate that this statutory expansion to the postacute care transfer policy will reduce Medicare payments under the IPPS by approximately $240 million in FY 2019.
- *Proposed Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care.* Under section 1886(r) of the Act (as added by section 3133 of the Affordable Care Act), DSH payments to hospitals under section

1886(d)(5)(F) of the Act are reduced and an additional payment for uncompensated care is made to eligible hospitals beginning in FY 2014. Hospitals that receive Medicare DSH payments receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, is the basis for determining the additional payments for uncompensated care after the amount is reduced for changes in the percentage of individuals that are uninsured and additional statutory adjustments. Each hospital that receives Medicare DSH payments will receive an additional payment for uncompensated care based on its share of the total uncompensated care amount reported by Medicare DSHs. The reduction to Medicare DSH payments is not budget neutral.

For FY 2019, we are proposing to update our estimates of the three factors used to determine uncompensated care payments. We are continuing to use uninsured estimates produced by OACT as part of the development of the NHEA in the calculation of Factor 2. We also are continuing to incorporate data from Worksheet S–10 in the calculation of hospitals' share of the aggregate amount of uncompensated care by combining data on uncompensated care costs from Worksheet S–10 for FY 2014 and FY 2015 with proxy data regarding a hospital's share of low-income insured days for FY 2013 to determine Factor 3 for FY 2019. To determine the amount of uncompensated care for Puerto Rico hospitals, Indian Health Service and Tribal hospitals, and all-inclusive rate providers, we are proposing to use only the data regarding low-income insured days for FY 2013. In addition, in this proposed rule, we are proposing the following policies: (1) For providers with multiple cost reports beginning in the same fiscal year, to use the longest cost report and annualize Medicaid data and uncompensated care data if a hospital's cost report does not equal 12 months of data; (2) in the rare case where a provider has multiple cost reports beginning in the same fiscal year, but one report also spans the entirety of the following fiscal year such that the hospital has no cost report for that fiscal year, the cost report that spans both fiscal years would be used for the latter fiscal year; and (3) to apply statistical trim methodologies to potentially aberrant CCRs and potentially aberrant uncompensated care costs.

We are projecting that proposed estimated Medicare DSH payments, and additional payments for uncompensated care made for FY 2019, would increase payments overall by approximately 1.3 percent as compared to the estimate of overall payments, including Medicare DSH payments and uncompensated care payments that will be distributed in FY 2018. The additional payments have redistributive effects based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are estimated to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges.

- *Proposed Update to the LTCH PPS Payment Rates and Other Payment Policies.* Based on the best available data for the 409 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we are presenting in the preamble and Addendum of this proposed rule, which reflects the continuation of the transition of the statutory application of the site neutral payment rate, the update to the LTCH PPS standard Federal payment rate for FY 2019, and the proposed one-time permanent adjustment of approximately-0.9 percent to the LTCH PPS standard Federal payment rate to ensure this proposed elimination of the 25-percent threshold policy is budget neutral would result in an estimated decrease in payments in FY 2019 of approximately $5 million.
- *Proposed Changes to the Hospital Readmissions Reduction Program.* For FY 2019 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG). Overall, in this proposed rule, we estimate that 2,610 hospitals would have their base operating DRG payments reduced by their determined proposed proxy FY 2019 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately $566 million in FY 2019.
- *Value-Based Incentive Payments under the Hospital VBP Program.* We estimate that there will be no net financial impact to the Hospital VBP Program for the FY 2019 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS–DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS–DRG payment amount reductions for the FY 2019 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2019 discharges is approximately $1.9 billion.
- *Proposed Changes to the HAC Reduction Program.* A hospital's Total HAC score and its ranking in comparison to other hospitals in any given year depend on several different factors. Any significant impact due to the proposed HAC Reduction Program changes for FY 2019, including which hospitals would receive the adjustment, would depend on actual experience.

The proposed removal of NHSN HAI measures from the Hospital IQR Program and the subsequent cessation of its validation processes for NHSN HAI measures and proposed creation of a validation process for the HAC Reduction program represent no net change in reporting burden across CMS hospital quality programs. However, if our proposal to remove HAI chart-abstracted measures from the Hospital IQR Program is finalized, we anticipate a total burden shift of 43,200 hours and approximately $1.6 million as a result of no longer needing to validate those HAI measures under the Hospital IQR Program and beginning the validation process under the HAC Reduction Program.

- *Proposed Changes to the Hospital Inpatient Quality Reporting (IQR) Program.* Across 3,300 IPPS hospitals, we estimate that our proposed requirements for the Hospital IQR Program would result in the following changes to costs and burdens related to information collection for this program compared to previously adopted requirements: (1) A total collection of information burden reduction of 1,046,071 hours and a total cost reduction of approximately $38.3 million for the CY 2019 reporting period/FY 2021 payment determination, due to the proposed removal of ED–1, IMM–2, and VTE–6 measures; and (2) a total collection of information burden reduction of 901,200 hours and a total cost reduction of $33 million for the CY 2020 reporting period/FY 2022 payment determination, due to: (a) The proposed removal of ED–2, and (b) validation of the NHSN HAI measures no longer being conducted under the Hospital IQR Program once the HAC Reduction Program begins validating these measures, as proposed in the preamble

of this proposed rule for the HAC Reduction Program.

Further, we anticipate that the proposed removal of 39 measures would result in a reduction in costs unrelated to information collection. For example, it may be costly for health care providers to track the confidential feedback, preview reports, and publicly reported information on a measure where we use the measure in more than one program. Also, when measures are in multiple programs, maintaining the specifications for those measures, as well as the tools we need to collect, validate, analyze, and publicly report the measure data may result in costs to CMS. In addition, beneficiaries may find it confusing to see public reporting on the same measure in different programs. We anticipate that our proposals will reduce the above-described costs.

• *Proposed Changes Related to the LTCH QRP.* In this proposed rule, we are proposing to remove three measures from the LTCH QRP, two measures beginning with the FY 2020 LTCH QRP and one measure beginning with the FY 2021 LTCH QRP. We also are proposing a new quality measure removal factor for the LTCH QRP. We estimate that the impact of these proposed changes is a reduction in costs of approximately $1,148 per LTCH annually or approximately $482,469 for all LTCHs annually.

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment that considers the amount of uncompensated care beginning on October 1, 2013.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. Through and including FY 2006, an MDH received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate was exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH's payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006 through September 30, 2016, all LTCHs were paid 100 percent of the Federal rate. Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, based on a rolling effective date that is linked to the date on which a given LTCH's Federal FY 2016 cost reporting period begins, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation Proposed To Be Implemented in This Proposed Rule

1. Pathway for SGR Reform Act of 2013 (Pub. L. 113–67)

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) introduced new payment rules in the LTCH PPS. Under section 1206 of this law, discharges in cost reporting periods beginning on or after October 1, 2015 under the LTCH PPS will receive payment under a site neutral rate unless the discharge meets certain patient-specific criteria. In this proposed rule, we are continuing to update certain policies that implemented provisions under section 1206 of the Pathway for SGR Reform Act.

2. Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185)

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), enacted on October 6, 2014, made a number of changes that affect the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). In this proposed rule, we are proposing to continue to implement portions of section 1899B of the Act, as added by section 2(a) of the IMPACT Act, which, in part, requires LTCHs, among other postacute care providers, to report standardized patient assessment data, data on quality measures, and data on resource use and other measures.

3. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through 2017 to fully offset $11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

4. The 21st Century Cures Act (Pub. L. 114–255)

The 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, contained the following provision affecting payments under the Hospital Readmissions Reduction Program,

which we are proposing to continue to implement in this proposed rule:

• Section 15002, which amended section 1886(q)(3) of the Act by adding subparagraphs (D) and (E), which requires the Secretary to develop a methodology for calculating the excess readmissions adjustment factor for the Hospital Readmissions Reduction Program based on cohorts defined by the percentage of dual-eligible patients (that is, patients who are eligible for both Medicare and full-benefit Medicaid coverage) cared for by a hospital. In this proposed rule, we are proposing to continue to implement changes to the payment adjustment factor to assess penalties based on a hospital's performance relative to other hospitals treating a similar proportion of dual-eligible patients.

5. The Bipartisan Budget Act of 2018 (Pub. L. 115–123)

The Bipartisan Budget Act of 2018 (Pub. L. 115–123), enacted on February 9, 2018, contains provisions affecting payments under the IPPS and the LTCH PPS, which we are proposing to implement or continue to implement in this proposed rule:

• Section 50204 amended section 1886(d)(12) of the Act to provide for certain temporary changes to the low-volume hospital payment adjustment policy for FYs 2018 through 2022. For FY 2018, this provision extends the qualifying criteria and payment adjustment formula that applied for FYs 2011 through 2017. For FYs 2019 through 2022, this provision modifies the discharge criterion and payment adjustment formula. In FY 2023 and subsequent fiscal years, the qualifying criteria and payment adjustment revert to the requirements that were in effect for FYs 2005 through 2010.

• Section 50205 extends the MDH program through FY 2022. It also provides for an eligible hospital that is located in a State with no rural area to qualify for MDH status under an expanded definition if the hospital satisfies any of the statutory criteria at section 1886(d)(8)(E)(ii)(I), (II) (as of January 1, 2018), or (III) of the Act to be reclassified as rural.

• Section 51005(a) modified section 1886(m)(6) of the Act by extending the blended payment rate for site neutral payment rate LTCH discharges for cost reporting periods beginning in FY 2016 by an additional 2 years (FYs 2018 and 2019). In addition, section 51005(b) reduces the LTCH IPPS comparable per diem amount used in the site neutral payment rate for FYs 2018 through 2026 by 4.6 percent. In this proposed rule, we are proposing to make conforming changes to the existing regulations.

• Section 53109 modified section 1886(d)(5)(J) of the Act to require that, beginning in FY 2019, discharges to hospice care will also qualify as a postacute care transfer and be subject to payment adjustments.

D. Summary of the Provisions of This Proposed Rule

In this proposed rule, we are setting forth proposed payment and policy changes to the Medicare IPPS for FY 2019 operating costs and for capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we are setting forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2019.

Below is a general summary of the proposed changes included in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include—

• Proposed changes to MS–DRG classifications based on our yearly review for FY 2019.

• Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2019 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.

• Proposed recalibration of the MS–DRG relative weights.

• A discussion of the proposed FY 2019 status of new technologies approved for add-on payments for FY 2018 and a presentation of our evaluation and analysis of the FY 2019 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to this proposed rule, we are proposing to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

• The proposed FY 2019 wage index update using wage data from cost reporting periods beginning in FY 2015.

• Proposal regarding other wage-related costs in the wage index.

• Calculation of the proposed occupational mix adjustment for FY 2019 based on the 2016 Occupational Mix Survey.

• Analysis and implementation of the proposed FY 2019 occupational mix adjustment to the wage index for acute care hospitals.

• Proposed application of the rural floor and the frontier State floor and the proposed expiration of the imputed floor.

• Proposals to codify policies regarding multicampus hospitals.

• Proposed revisions to the wage index for acute care hospitals based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.

• The proposed adjustment to the wage index for acute care hospitals for FY 2019 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.

• Determination of the labor-related share for the proposed FY 2019 wage index.

• Public comment solicitation on wage index disparities.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section IV. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

• Proposed changes to MS–DRGs subject to the postacute care transfer policy and special payment policy and implementation of the statutory changes to the postacute care transfer policy.

• Proposed changes to the inpatient hospital update for FY 2019.

• Proposed changes related to the statutory changes to the low-volume hospital payment adjustment policy.

• Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.

• The statutorily required IME adjustment factor for FY 2019.

• Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.

• Proposed changes to the effective date of SCH and MDH classification status determinations.

• Proposed changes related to the extension of the MDH program.

• Proposed changes to the rules for payment adjustments under the Hospital Readmissions Reduction Program based on hospital readmission

measures and the process for hospital review and correction of those rates for FY 2019.

- Proposed changes to the requirements and provision of value-based incentive payments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2019.
- Proposed changes to Medicare GME affiliation agreements for new urban teaching hospitals.
- Discussion of and proposals relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2019.
- Proposed revisions of the hospital inpatient admission orders documentation requirements.

4. Proposed FY 2019 Policy Governing the IPPS for Capital-Related Costs

In section V. of the preamble to this proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2019.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VI. of the preamble of this proposed rule, we discuss—

- Proposed changes to payments to certain excluded hospitals for FY 2019.
- Proposed changes to the regulations governing satellite facilities.
- Proposed changes to the regulations governing excluded units of hospitals.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VII. of the preamble of the proposed rule, we set forth—

- Proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2019.
- Proposed changes to the blended payment rate for site neutral payment rate cases.
- Proposed elimination of the 25-percent threshold policy.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section VIII. of the preamble of the proposed rule, we address—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- Proposed changes to the requirements under the LTCH Quality Reporting Program (LTCH QRP).
- Proposed changes to requirements pertaining to the clinical quality measurement for eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs.

8. Proposed Revision to the Supporting Documentation Requirements for an Acceptable Medicare Cost Report Submission

In section IX. of the preamble of this proposed rule, we set forth proposed revisions to the supporting documentation required for an acceptable Medicare cost report submission.

9. Requirements for Hospitals To Make Public List of Standard Charges

In section X. of the preamble of this proposed rule, we discuss our efforts to further improve the public accessibility of hospital standard charge information, effective January 1, 2019, in accordance with section 2718(e) of the Public Health Service Act.

10. Proposed Revisions Regarding Physician Certification and Recertification of Claims

In section XI. of the preamble of this proposed rule, we set forth proposed revisions to the requirements for supporting information used for physician certification and recertification of claims.

11. Request for Information

In section XII. of the preamble of this proposed rule, we include a request for information on possible establishment of CMS patient health and safety requirements for hospitals and other Medicare- and Medicaid-participating providers and suppliers for interoperable electronic health records and systems for electronic health care information exchange.

12. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In section V. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2019 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We are proposing to establish the threshold amounts for outlier cases. In addition, we address the update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2019 for certain hospitals excluded from the IPPS.

13. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2019 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2019. We are proposing to establish the adjustments for wage levels, the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

14. Impact Analysis

In Appendix A of this proposed rule, we set forth an analysis of the impact that the proposed changes would have on affected acute care hospitals, CAHs, LTCHs, and PCHs.

15. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of this proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2019 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

16. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2018 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under

the IPPS. We address these recommendations in Appendix B of this proposed rule. For further information relating specifically to the MedPAC March 2018 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at: *http://www.medpac.gov*.

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS–DRG Reclassifications

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2018 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; and 82 FR 38010 through 38085, respectively).

C. Adoption of the MS–DRGs in FY 2008

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

D. Proposed FY 2019 MS–DRG Documentation and Coding Adjustment

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110–90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of −4.8 percentage points to the national standardized amount. We provided for phasing in this −4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of −1.2 percentage points for FY 2008, −1.8 percentage points for FY 2009, and −1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to −0.6 percentage point for FY 2008 and −0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013, but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90.

In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling $11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustment Made for FY 2018 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point to a 0.4588 percentage point. As we discussed in the FY 2018

rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. This is a permanent adjustment to payment rates. While we did not address future adjustments required under section 414 of the MACRA and section 15005 of Public Law 114–255 at that time, we stated that we expected to propose positive 0.5 percentage point adjustments to the standardized amounts for FYs 2019 through 2023.

3. Proposed Adjustment for FY 2019

Consistent with the requirements of section 414 of the MACRA, we are proposing to implement a positive 0.5 percentage point adjustment to the standardized amount for FY 2019. This would be a permanent adjustment to payment rates. We plan to propose future adjustments required under section 414 of the MACRA for FYs 2020 through 2023 in future rulemaking.

E. Refinement of the MS–DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS DRGs and MS–DRGs. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785 through 56787) for a detailed discussion of the history of changes to the number of cost centers used in calculating the DRG relative weights. Since FY 2014, we calculate the IPPS MS–DRG relative weights using 19 CCRs, which now include distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization.

2. Discussion of Policy for FY 2019

Consistent with our established policy, we are calculating the proposed MS–DRG relative weights for FY 2019 using two data sources: The MedPAR file as the claims data source and the HCRIS as the cost report data source. We adjusted the charges from the claims to costs by applying the 19 national average CCRs developed from the cost reports. The description of the calculation of the proposed 19 CCRs and the proposed MS–DRG relative weights for FY 2019 is included in section II.G. of the preamble to this FY 2019 IPPS/LTCH PPS proposed rule. As we did with the FY 2018 IPPS/LTCH PPS final rule, for this proposed rule, we are providing the version of the HCRIS from which we calculated these proposed 19 CCRs on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled ''FY 2019 IPPS Proposed Rule Home Page'' or ''Acute Inpatient Files for Download.''

F. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2019 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for Proposed FY 2019 MS–DRG Updates

CMS has previously encouraged input from our stakeholders concerning the annual IPPS updates when that input was made available to us by December 7 of the year prior to the next annual proposed rule update. As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38010), as we work with the public to examine the ICD–10 claims data used for updates to the ICD–10 MS DRGs, we would like to examine areas where the MS–DRGs can be improved, which will require additional time for us to review requests from the public to make specific updates, analyze claims data, and consider any proposed updates. Given the need for more time to carefully evaluate requests and propose updates, we changed the deadline to request updates to the MS–DRGs to November 1 of each year. This will provide an additional 5 weeks for the data analysis and review process. Interested parties had to submit any comments and suggestions for FY 2019 by November 1, 2017, and are encouraged to submit any comments and suggestions for FY 2020 by November 1, 2018 via the CMS MS–DRG Classification Change Request Mailbox located at: *MSDRGClassificationChange@cms.hhs.gov.* The comments that were submitted in a timely manner for FY 2019 are discussed in this section of the preamble of this proposed rule.

Following are the changes that we are proposing to the MS–DRGs for FY 2019 in this FY 2019 IPPS/LTCH PPS proposed rule. We are inviting public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in this proposed rule. In some cases, we are proposing changes to the MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we are proposing to maintain the existing MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. For this FY 2019 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2017 update of the FY 2017 MedPAR file, which contains hospital bills received through September 30, 2017, for discharges occurring through September 30, 2017. In our discussion of the proposed MS–DRG reclassification changes, we refer to our analysis of claims data from the ''September 2017 update of the FY 2017 MedPAR file.''

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs

between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In our examination of the claims data, we apply the following criteria established in FY 2008 (72 FR 47169) to determine if the creation of a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG is warranted:

- A reduction in variance of costs of at least 3 percent;
- At least 5 percent of the patients in the MS–DRG fall within the CC or MCC subgroup;
- At least 500 cases are in the CC or MCC subgroup;
- There is at least a 20-percent difference in average costs between subgroups; and
- There is a $2,000 difference in average costs between subgroups.

In order to warrant creation of a CC or MCC subgroup within a base MS–DRG, the subgroup must meet all five of the criteria.

2. Pre-MDC

a. Heart Transplant or Implant of Heart Assist System

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), we stated our intent to review the ICD–10 logic for Pre-MDC MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with and without MCC, respectively), as well as MS–DRG 215 (Other Heart Assist System Implant) and MS–DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with and without MCC, respectively) where procedures involving heart assist devices are currently assigned. We also encouraged the public to submit any comments on restructuring the MS–DRGs for heart assist system procedures to the CMS MS–DRG Classification Change Request Mailbox located at: *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2017.

The logic for Pre-MDC MS–DRGs 001 and 002 is comprised of two lists. The first list includes procedure codes identifying a heart transplant procedure, and the second list includes procedure codes identifying the implantation of a heart assist system. The list of procedure codes identifying the implantation of a heart assist system includes the following three codes.

ICD–10–PCS code	Code description
02HA0QZ	Insertion of implantable heart assist system into heart, open approach.
02HA3QZ	Insertion of implantable heart assist system into heart, percutaneous approach.
02HA4QZ	Insertion of implantable heart assist system into heart, percutaneous endoscopic approach.

In addition to these three procedure codes, there are also 33 pairs of code combinations or procedure code ''clusters'' that, when reported together, satisfy the logic for assignment to MS–DRGs 001 and 002. The code combinations are represented by two procedure codes and include either one code for the insertion of the device with one code for removal of the device or one code for the revision of the device with one code for the removal of the device. The 33 pairs of code combinations are listed below.

Code	Code description		Code	Code description
02HA0RS	Insertion of biventricular short-term external heart assist system into heart, open approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02HA0RS	Insertion of biventricular short-term external heart assist system into heart, open approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA0RS	Insertion of biventricular short-term external heart assist system into heart, open approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02HA0RZ	Insertion of short-term external heart assist system into heart, open approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02HA0RZ	Insertion of short-term external heart assist system into heart, open approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA0RZ	Insertion of short-term external heart assist system into heart, open approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02HA3RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02HA3RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA3RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.

Code	Code description		Code	Code description
02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02HA4RZ	Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02HA4RZ	Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA4RZ	Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA0QZ	Revision of implantable heart assist system in heart, open approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA0QZ	Revision of implantable heart assist system in heart, open approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA0QZ	Revision of implantable heart assist system in heart, open approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA0RZ	Revision of short-term external heart assist system in heart, open approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA0RZ	Revision of short-term external heart assist system in heart, open approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA0RZ	Revision of short-term external heart assist system in heart, open approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA3RZ	Revision of short-term external heart assist system in heart, percutaneous approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA3RZ	Revision of short-term external heart assist system in heart, percutaneous approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA3RZ	Revision of short-term external heart assist system in heart, percutaneous approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA4QZ	Revision of implantable heart assist system in heart, percutaneous endoscopic approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA4QZ	Revision of implantable heart assist system in heart, percutaneous endoscopic approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA4QZ	Revision of implantable heart assist system in heart, percutaneous endoscopic approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA4RZ	Revision of short-term external heart assist system in heart, percutaneous endoscopic approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA4RZ	Revision of short-term external heart assist system in heart, percutaneous endoscopic approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02WA4RZ	Revision of short-term external heart assist system in heart, percutaneous endoscopic approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.

In response to our solicitation for public comments on restructuring the MS–DRGs for heart assist system procedures, commenters recommended that CMS maintain the current logic under the Pre-MDC MS–DRGs 001 and 002. Similar to the discussion in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38011 through 38012) involving MS–DRG 215 (Other Heart Assist System Implant), the commenters provided examples of common clinical scenarios involving a left ventricular assist device (LVAD) and included the procedure codes that were reported under the ICD–9 based MS–DRGs in comparison to the procedure codes reported under the ICD–10 MS–DRGs, which are reflected in the following table.

Procedure	ICD–9–CM procedure code	ICD–9 MS–DRG	ICD–10–PCS codes	ICD–10 MS–DRG
New LVAD inserted	37.66 (Insertion of implantable heart assist system).	001 or 002	02WA0QZ (Insertion of implantable heart assist system into heart, open approach). 02WA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach). 02WA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach).	001 or 002
LVAD Exchange—existing LVAD is removed and replaced with either new LVAD system or new LVAD pump.	37.63 (Repair of heart assist system).	215	02PA0QZ (Removal of implantable heart assist system from heart, open approach). 02PA3QZ (Removal of implantable heart assist system from heart, percutaneous approach). 02PA4QZ (Removal of implantable heart assist system from heart, percutaneous endoscopic approach) and. 02WA0QZ (Insertion of implantable heart assist system into heart, open approach). 02WA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach). 02WA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach).	001 or 002
LVAD revision and repair—existing LVAD is adjusted or repaired without removing the existing LVAD device.	37.63 (Repair of heart assist system).	215	02WA0QZ (Revision of implantable heart assist system in heart, open approach). 02WA3QZ (Revision of implantable heart assist system in heart, percutaneous approach). 02WA4QZ (Revision of implantable heart assist system in heart, percutaneous endoscopic approach).	215

The commenters noted that, for Pre-MDC MS–DRGs 001 and 002, the procedures involving the insertion of an implantable heart assist system, such as the insertion of a LVAD, and the procedures involving exchange of an LVAD (where an existing LVAD is removed and replaced with either a new LVAD or a new LVAD pump) demonstrate clinical similarities and utilize similar resources. Although the commenters recommended that CMS maintain the current logic under the Pre-MDC MS–DRGs 001 and 002, they also recommended that CMS continue to monitor the data in these MS–DRGs for future consideration of distinctions (for example, different approaches and evolving technologies) that may impact the clinical and resource use of patients undergoing procedures utilizing heart assist devices. The commenters also requested that coding guidance be issued for assignment of the correct ICD–10–PCS procedure codes describing LVAD exchanges to encourage accurate reporting of these procedures.

We agree with the commenters that we should continue to monitor the data in Pre-MDC MS–DRGs 001 and 002 for future consideration of distinctions (for example, different approaches and evolving technologies) that may impact the clinical and resource use of patients undergoing procedures utilizing heart assist devices. In response to the request that coding guidance be issued for assignment of the correct ICD–10–PCS procedure codes describing LVAD exchanges to encourage accurate reporting of these procedures, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), coding advice is issued independently from payment policy. We also noted that, historically, we have not provided coding advice in rulemaking with respect to policy (82 FR 38045). We collaborate with the American Hospital Association (AHA) through the Coding Clinic for ICD–10–CM and ICD–10–PCS to promote proper coding. We recommend that the requestor and other interested parties submit any questions pertaining to correct coding for these technologies to the AHA.

In response to the public comments we received on this topic, we are providing the results of our claims analysis from the September 2017 update of the FY 2017 MedPAR file for cases in Pre-MDC MS–DRGs 001 and 002. Our findings are shown in the following table.

MS–DRGs FOR HEART TRANSPLANT OR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 001—All cases	1,993	35.6	$185,660
MS–DRG 002—All cases	179	18.3	99,635

As shown in this table, for MS–DRG 001, there were a total of 1,993 cases with an average length of stay of 35.6 days and average costs of $185,660. For MS–DRG 002, there were a total of 179 cases with an average length of stay of 18.3 days and average costs of $99,635.

We then examined claims data in Pre-MDC MS–DRGs 001 and 002 for cases that reported one of the three procedure codes identifying the implantation of a heart assist system such as the LVAD. Our findings are shown in the following table.

MS–DRGs FOR HEART TRANSPLANT OR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 001—All cases	1,993	35.6	$185,660
MS–DRG 001—Cases with procedure code 02HA0QZ (Insertion of implantable heart assist system into heart, open approach)	1,260	35.5	206,663
MS–DRG 001—Cases with procedure code 02HA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach)	1	8	33,889
MS–DRG 001—Cases with procedure code 02HA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach)	0	0	0
MS–DRG 002—All cases	179	18.3	99,635
MS–DRG 002—Cases with procedure code 02HA0QZ (Insertion of implantable heart assist system into heart, open approach)	82	19.9	131,957
MS–DRG 002—Cases with procedure code 02HA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach)	0	0	0
MS–DRG 002—Cases with procedure code 02HA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach)	0	0	0

As shown in this table, for MS–DRG 001, there were a total of 1,260 cases reporting procedure code 02HA0QZ (Insertion of implantable heart assist system into heart, open approach) with an average length of stay of 35.5 days and average costs of $206,663. There was one case that reported procedure code 02HA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach) with an average length of stay of 8 days and average costs of $33,889. There were no cases reporting procedure code 02HA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach). For MS–DRG 002, there were a total of 82 cases reporting procedure code 02HA0QZ (Insertion of implantable heart assist system into heart, open approach) with an average length of stay of 19.9 days and average costs of $131,957. There were no cases reporting procedure codes 02HA3QZ (Insertion of implantable heart assist system into heart, percutaneous approach) or 02HA4QZ (Insertion of implantable heart assist system into heart, percutaneous endoscopic approach).

We also examined the cases in MS–DRGs 001 and 002 that reported one of the possible 33 pairs of code combinations or clusters. Our findings are shown in the following 8 tables. The first table provides the total number of cases reporting a procedure code combination (or cluster) compared to all of the cases in the respective MS–DRG, followed by additional detailed tables showing the number of cases, average length of stay, and average costs for each specific code combination that was reported in the claims data.

HEART TRANSPLANT OR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG 001 and 002	Number of cases	Average length of stay	Average costs
MS–DRG 001—All cases	1,993	35.6	$185,660
MS–DRG 001—Cases with a procedure code combination (cluster)	149	28.4	179,607
MS–DRG 002—All cases	179	18.3	99,635
MS–DRG 002—Cases with a procedure code combination (cluster)	6	3.8	57,343

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG 001	Number of cases	Average length of stay	Average costs
Cases with a procedure code combination of 02HA0RS (Insertion of biventricular short-term external heart assist system into heart, open approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	3	20.3	$121,919
Cases with a procedure code combination of 02HA0RS (Insertion of biventricular short-term external heart assist system into heart, open approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	2	12	114,688
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	5	17	119,027

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

	Number of cases	Average length of stay	Average costs
MS–DRG 001			
Cases with a procedure code combination of 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	30	55.6	$351,995
Cases with a procedure code combination of 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	19	29.8	191,163
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	49	45.6	289,632
MS–DRG 002			
Cases with a procedure code combination of 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	1	4	48,212
Cases with a procedure code combination of 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	2	4.5	66,386
All cases reporting one or more of the above procedure code combinations in MS–DRG 002	3	4.3	60,328
All cases reporting one or more of the above procedure code combinations across both MS–DRGs 001 and 002	52	43.3	276,403

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

	Number of cases	Average length of stay	Average costs
MS–DRG 001			
Cases with a procedure code combination of 02HA3RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	3	43.3	$233,330
Cases with a procedure code combination of 02HA3RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	24	14.8	113,955
Cases with a procedure code combination of 02HA3RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous approach) *with* 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach)	1	44	153,284
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	28	18.9	128,150
MS–DRG 002			
Cases with a procedure code combination of 02HA3RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	2	4	$30,954
All cases reporting one of the above procedure code combinations in MS–DRG 002	2	4	30,954
All cases reporting one or more of the above procedure code combinations across both MS-DRGs 001 and 002	30	17.9	121,670

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG 001	Number of cases	Average length of stay	Average costs
Cases with a procedure code combination of 02HA4RZ (Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	4	17.3	$154,885
Cases with a procedure code combination of 02HA4RZ (Insertion of short-term external heart assist system into heart, open approach) *with* 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach)	2	15.5	80,852
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	6	16.7	130,207

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG 001	Number of cases	Average length of stay	Average costs
Cases with a procedure code combination of 02WA0QZ (Revision of implantable heart assist system in heart, open approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	1	105	$516,557

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

MS–DRG 001	Number of cases	Average length of stay	Average costs
Cases with a procedure code combination of 02WA0RZ (Revision of short-term external heart assist system in heart, open approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	2	40	$285,818
Cases with a procedure code combination of 02WA0RZ (Revision of short-term external heart assist system in heart, open approach) *with* 02PA03Z (Removal of short-term external heart assist system from heart, percutaneous approach)	1	43	372,673
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	3	41	314,770

PROCEDURE CODE COMBINATIONS FOR IMPLANT OF HEART ASSIST SYSTEM

	Number of cases	Average length of stay	Average costs
MS–DRG 001			
Cases with a procedure code combination of 02WA3RZ (Revision of short-term external heart assist system in heart, percutaneous approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	2	24	$123,084
Cases with a procedure code combination of 02WA3RZ (Revision of short-term external heart assist system in heart, percutaneous approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	55	14.7	104,963
All cases reporting one or more of the above procedure code combinations in MS–DRG 001	57	15	105,599
MS–DRG 002			
Cases with a procedure code combination of 02WA3RZ (Revision of short-term external heart assist system in heart, percutaneous approach) *with* 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	1	2	101,168
All cases reporting one or more of the above procedure code combinations across both MS–DRGs 001 and 002	58	14.8	105,522
MS–DRG 001			
Cases with a procedure code combination of 02WA4RZ (Revision of short-term external heart assist system in heart, percutaneous endoscopic approach) *with* 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	1	10	112,698

We did not find any cases reporting the following procedure code combinations (clusters) in the claims data.

02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.
02HA4RS	Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.
02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA0RZ	Removal of short-term external heart assist system from heart, open approach.
02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA3RZ	Removal of short-term external heart assist system from heart, percutaneous approach.

02WA3QZ	Revision of implantable heart assist system in heart, percutaneous approach.	with	02PA4RZ	Removal of short-term external heart assist system from heart, percutaneous endoscopic approach.

The data show that there are differences in the average length of stay and average costs for cases in Pre-MDC MS–DRGs 001 and 002 according to the type of procedure (insertion, revision, or removal), the type of device (biventricular short-term external heart assist system, short-term external heart assist system or implantable heart assist system), and the approaches that were utilized (open, percutaneous, or percutaneous endoscopic). We agree with the commenters' recommendation to maintain the structure of Pre-MDC MS–DRGs 001 and 002 for FY 2019 and will continue to analyze the claims data. We are inviting public comments on our decision to maintain the current structure of Pre-MDC MS–DRGs 001 and 002 for FY 2019.

Commenters also suggested that CMS maintain the current logic for MS–DRG 215 (Other Heart Assist System Implant), but they recommended that CMS continue to monitor the data in MS–DRG 215 for future consideration of distinctions (for example, different approaches and evolving technologies) that may impact the clinical and resource use of procedures utilizing heart assist devices. We also received a request to review claims data for procedures involving extracorporeal membrane oxygenation (ECMO) in combination with the insertion of a percutaneous short-term external heart assist device to determine if the current MS–DRG assignment is appropriate.

The logic for MS–DRG 215 is comprised of the procedure codes shown in the following table, for which we examined claims data in the September 2017 update of the FY 2017 MedPAR file in response to the commenters' requests. Our findings are shown in the following table.

MS–DRG 215

[Other heart assist system implant]

	Number of cases	Average length of stay	Average costs
All cases	3,428	8.7	$68,965
Cases with procedure code 02HA0RJ (Insertion of short-term external heart assist system into heart, intraoperative, open approach)	0	0	0
Cases with procedure code 02HA0RS (Insertion of biventricular short-term external heart assist system into heart, open approach)	9	10	118,361
Cases with procedure code 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach)	66	11.5	99,107
Cases with procedure code 02HA3RJ (Insertion of short-term external heart assist system into heart, intraoperative, percutaneous approach)	0	0	0
Cases with procedure code 02HA3RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous approach)	117	7.2	64,302
Cases with procedure code 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach)	3,136	8.4	67,670
Cases with procedure code 02HA4RJ (Insertion of short-term external heart assist system into heart, intraoperative, percutaneous endoscopic approach)	0	0	0
Cases with procedure code 02HA4RS (Insertion of biventricular short-term external heart assist system into heart, percutaneous endoscopic approach)	1	2	43,988
Cases with procedure code 02HA4RZ (Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach)	31	5.3	57,042
Cases with procedure code 02WA0JZ (Revision of synthetic substitute in heart, open approach)	1	84	366,089
Cases with procedure code 02WA0QZ (Revision of implantable heart assist system in heart, open approach)	56	25.1	123,410
Cases with procedure code 02WA0RS (Revision of biventricular short-term external heart assist system in heart, open approach)	0	0	0
Cases with procedure code 02WA0RZ (Revision of short-term external heart assist system in heart, open approach)	8	13.5	99,378
Cases with procedure code 02WA3QZ (Revision of implantable heart assist system in heart, percutaneous approach)	0	0	0
Cases with procedure code 02WA3RS (Revision of biventricular short-term external heart assist system in heart, percutaneous approach)	0	0	0
Cases with procedure code 02WA3RZ (Revision of short-term external heart assist system in heart, percutaneous approach)	80	10	71,077
Cases with procedure code 02WA4QZ (Revision of implantable heart assist system in heart, percutaneous endoscopic approach)	0	0	0
Cases with procedure code 02WA4RS (Revision of biventricular short-term external heart assist system in heart, percutaneous endoscopic approach)	0	0	0
Cases with procedure code 02WA4RZ (Revision of short-term external heart assist system in heart, percutaneous endoscopic approach)	0	0	0

As shown in this table, for MS–DRG 215, we found a total of 3,428 cases with an average length of stay of 8.7 days and average costs of $68,965. For procedure codes describing the insertion of a biventricular short-term external heart

assist system with open, percutaneous or percutaneous endoscopic approaches, we found a total of 127 cases with an average length of stay ranging from 2 to 10 days and average costs ranging from $43,988 to $118,361. For procedure codes describing the insertion of a short-term external heart assist system with open, percutaneous or percutaneous endoscopic approaches, we found a total of 3,233 cases with an average length of stay ranging from 5.3 days to 11.5 days and average costs ranging from $57,042 to $99,107. For procedure codes describing the revision of a short-term external heart assist system with open or percutaneous approaches, we found a total of 88 cases with an average length of stay ranging from 10 to 13.5 days and average costs ranging from $71,077 to $99,378. We found 1 case reporting procedure code 02WA0JZ (Revision of synthetic substitute in heart, open approach), with an average length of stay of 84 days and average costs of $366,089. Lastly, we found 56 cases reporting procedure code 02WA0QZ (Revision of implantable heart assist system in heart, open approach) with an average length of stay of 25.1 days and average costs of $123,410.

As the data show, there is a wide range in the average length of stay and the average costs for cases reporting procedures that involve a biventricular short-term external heart assist system versus a short-term external heart assist system. There is an even greater range in the average length of stay and the average costs when comparing the revision of a short-term external heart assist system to the revision of a synthetic substitute in the heart or to the revision an implantable heart assist system.

We agree with the commenters that continued monitoring of the data and further analysis is necessary prior to proposing any modifications to MS–DRG 215. As stated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), we are aware that the AHA published Coding Clinic advice that clarified coding and reporting for certain external heart assist devices due to the technology being approved for new indications. The current claims data do not yet reflect that updated guidance. We also note that there have been recent updates to the descriptions of the codes for heart assist devices in the past year. For example, the qualifier ''intraoperative'' was added effective October 1, 2017 (FY 2018) to the procedure codes describing the insertion of short-term external heart assist system procedures to distinguish between procedures where the device was only used intraoperatively and was removed at the conclusion of the procedure versus procedures where the device was not removed at the conclusion of the procedure and for which that qualifier would not be reported. The current claims data do not yet reflect these new procedure codes, which are displayed in the following table and are assigned to MS–DRG 215.

ICD–10–PCS code	Code description
02HA0RJ	Insertion of short-term external heart assist system into heart, intraoperative, open approach.
02HA3RJ	Insertion of short-term external heart assist system into heart, intraoperative, percutaneous approach.
02HA4RJ	Insertion of short-term external heart assist system into heart, intraoperative, percutaneous endoscopic approach.

Our clinical advisors agree that additional claims data are needed for analysis prior to proposing any changes to MS–DRG 215. Therefore, we are proposing not to make any modifications to MS–DRG 215 for FY 2019. We are inviting public comments on our proposal.

As stated earlier in this section, we also received a request to review cases reporting the use of ECMO in combination with the insertion of a percutaneous short-term external heart assist device. Under ICD–10–PCS, ECMO is identified with procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) and the insertion of a percutaneous short-term external heart assist device is identified with procedure code 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach). According to the commenter, when ECMO procedures are performed percutaneously, they are less invasive and less expensive than traditional ECMO. The commenter also noted that, currently under ICD–10–PCS, there is not a specific procedure code to identify percutaneous ECMO, and providers are only able to report ICD–10–PCS procedure code 5A15223, which may be inappropriately resulting in a higher paying MS–DRG. Therefore, the commenter submitted a separate request to create a new ICD–10–PCS procedure code specifically for percutaneous ECMO which was discussed at the March 6–7, 2018 ICD–10 Coordination and Maintenance Committee Meeting. We refer readers to section II.F.18. of the preamble of this proposed rule for further information regarding this meeting and the discussion for a new procedure code.

The requestor suggested that cases reporting a procedure code for ECMO in combination with the insertion of a percutaneous short-term external heart assist device could be reassigned from Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure) to MS–DRG 215. Our analysis involved examining cases in Pre-MDC MS–DRG 003 in the September 2017 update of the FY 2017 MedPAR file for cases reporting ECMO with and without the insertion of a percutaneous short-term external heart assist device. Our findings are shown in the following table.

ECMO AND PERCUTANEOUS SHORT-TERM EXTERNAL HEART ASSIST DEVICE

Pre-MDC MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 003—All cases	14,383	29.5	$118,218
MS–DRG 003—Cases with procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous)	1,786	19	119,340
MS–DRG 003—Cases with procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) and 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach)	94	11.4	110,874

ECMO AND PERCUTANEOUS SHORT-TERM EXTERNAL HEART ASSIST DEVICE—Continued

Pre-MDC MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 003—Cases with procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) and 02HA4RZ (Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach)	1	1	64,319

As shown in this table, we found a total of 14,383 cases with an average length of stay of 29.5 days and average costs of $118,218 in Pre-MDC MS–DRG 003. We found 1,786 cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) with an average length of stay of 19 days and average costs of $119,340. We found 94 cases reporting procedure code 5A15223 and 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach) with an average length of stay of 11.4 days and average costs of $110,874. Lastly, we found 1 case reporting procedure code 5A15223 and 02HA4RZ (Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach) with an average length of stay of 1 day and average costs of $64,319.

We also reviewed the cases in MS–DRG 215 for procedure codes 02HA3RZ and 02HA4RZ. Our findings are shown in the following table.

PERCUTANEOUS SHORT-TERM EXTERNAL HEART ASSIST DEVICE

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 215—All cases	3,428	8.7	$68,965
MS–DRG 215—Cases with procedure code 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach)	3,136	8.4	67,670
MS–DRG 215—Cases with procedure code 02HA4RZ (Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach)	31	5.3	57,042

As shown in this table, we found a total of 3,428 cases with an average length of stay of 8.7 days and average costs of $68,965. We found a total of 3,136 cases reporting procedure code 02HA3RZ with an average length of stay of 8.4 days and average costs of $67,670. We found a total of 31 cases reporting procedure code 02HA4RZ with an average length of stay of 5.3 days and average costs of $57,042.

For Pre-MDC MS–DRG 003, while the average length of stay and average costs for cases where procedure code 5A15223 was reported with procedure code 02HA3RZ or procedure code 02HA4RZ are lower than the average length of stay and average costs for cases where procedure code 5A15223 was reported alone, we are unable to determine from the data if those ECMO procedures were performed percutaneously in the absence of a unique code. In addition, the one case reporting procedure code 5A15223 with 02HA4RZ only had a 1 day length of stay and it is unclear from the data what the circumstances of that case may have involved. For example, the patient may have been transferred or may have expired. Therefore, we are proposing to not reassign cases reporting procedure code 5A15223 when reported with procedure code 02HA3RZ or procedure code 02HA4RZ for FY 2019. Our clinical advisors agree that until there is a way to specifically identify percutaneous ECMO in the claims data to enable further analysis, a proposal at this time is not warranted. We are inviting public comments on our proposal.

A commenter also suggested that CMS maintain the current logic for MS–DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with and without MCC, respectively), but recommended that CMS continue to monitor the data in these MS–DRGs for future consideration of distinctions (for example, different approaches and evolving technologies) that may impact the clinical and resource use of procedures involving heart assist devices.

The logic for heart assist system devices in MS–DRGs 268 and 269 is comprised of the procedure codes shown in the following table, for which we examined claims data in the September 2017 update of the FY 2017 MedPAR file in response to the commenter's request. Our findings are shown in the following table.

MS–DRGS FOR AORTIC AND HEART ASSIST PROCEDURES EXCEPT PULSATION BALLOON

	Number of cases	Average length of stay	Average costs
MS–DRG 268—All cases	3,798	9.6	$49,122
MS–DRG 268—Cases with procedure code 02PA0QZ (Removal of implantable heart assist system from heart, open approach)	16	23.4	79,850
MS–DRG 268—Cases with procedure code 02PA0RS (Removal of biventricular short-term external heart assist system from heart, open approach)	0	0	0
MS–DRG 268—Cases with procedure code 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	0	0	0
MS–DRG 268—Cases with procedure code 02PA3QZ (Removal of implantable heart assist system from heart, percutaneous approach)	28	10.5	31,797

MS–DRGs for Aortic and Heart Assist Procedures Except Pulsation Balloon—Continued

	Number of cases	Average length of stay	Average costs
MS–DRG 268—Cases with procedure code 02PA3RS (Removal of biventricular short-term external heart assist system from heart, percutaneous approach)	0	0	0
MS–DRG 268—Cases with procedure code 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	96	12.4	51,469
MS–DRG 268—Cases with procedure code 02PA4QZ (Removal of implantable heart assist system from heart, percutaneous endoscopic approach)	5	7.8	37,592
MS–DRG 268—Cases with procedure code 02PA4RS (Removal of biventricular short-term external heart assist system from heart, percutaneous endoscopic approach)	0	0	0
MS–DRG 268—Cases with procedure code 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach)	0	0	0
MS–DRG 269—All cases	16,900	2.4	30,793
MS–DRG 269—Cases with procedure code 02PA0QZ (Removal of implantable heart assist system from heart, open approach)	10	8	23,741
MS–DRG 269—Cases with procedure code 02PA0RS (Removal of biventricular short-term external heart assist system from heart, open approach)	0	0	0
MS–DRG 269—Cases with procedure code 02PA0RZ (Removal of short-term external heart assist system from heart, open approach)	0	0	0
MS–DRG 269—Cases with procedure code 02PA3QZ (Removal of implantable heart assist system from heart, percutaneous approach)	6	5	19,421
MS–DRG 269—Cases with procedure code 02PA3RS (Removal of biventricular short-term external heart assist system from heart, percutaneous approach)	0	0	0
MS–DRG 269—Cases with procedure code 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach)	11	4	25,719
MS–DRG 269—Cases with procedure code 02PA4QZ (Removal of implantable heart assist system from heart, percutaneous endoscopic approach)	1	3	14,415
MS–DRG 269—Cases with procedure code 02PA4RS (Removal of biventricular short-term external heart assist system from heart, percutaneous endoscopic approach)	0	0	0
MS–DRG 269—Cases with procedure code 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach)	0	0	0

As shown in this table, for MS–DRG 268, there were a total of 3,798 cases, with an average length of stay of 9.6 days and average costs of $49,122. There were 16 cases reporting procedure code 02PA0QZ (Removal of implantable heart assist system from heart, open approach), with an average length of stay of 23.4 days and average costs of $79,850. There were no cases that reported procedure codes 02PA0RS (Removal of biventricular short-term external heart assist system from heart, open approach), 02PA0RZ (Removal of short-term external heart assist system from heart, open approach), 02PA3RS (Removal of biventricular short-term external heart assist system from heart, percutaneous approach), 02PA4RS (Removal of biventricular short-term external heart assist system from heart, percutaneous endoscopic approach) or 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach). There were 28 cases reporting procedure code 02PA3QZ (Removal of implantable heart assist system from heart, percutaneous approach), with an average length of stay of 10.5 days and average costs of $31,797. There were 96 cases reporting procedure code 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach), with an average length of stay of 12.4 days and average costs of $51,469. There were 5 cases reporting procedure code 02PA4QZ (Removal of implantable heart assist system from heart, percutaneous endoscopic approach), with an average length of stay of 7.8 days and average costs of $37,592. For MS–DRG 269, there were a total of 16,900 cases, with an average length of stay of 2.4 days and average costs of $30,793. There were 10 cases reporting procedure code 02PA0QZ (Removal of implantable heart assist system from heart, open approach), with an average length of stay of 8 days and average costs of $23,741. There were no cases reporting procedure codes 02PA0RS (Removal of biventricular short-term external heart assist system from heart, open approach), 02PA0RZ (Removal of short-term external heart assist system from heart, open approach), 02PA3RS (Removal of biventricular short-term external heart assist system from heart, percutaneous approach), 02PA4RS (Removal of biventricular short-term external heart assist system from heart, percutaneous endoscopic approach) or 02PA4RZ (Removal of short-term external heart assist system from heart, percutaneous endoscopic approach). There were 6 cases reporting procedure code 02PA3QZ (Removal of implantable heart assist system from heart, percutaneous approach), with an average length of stay of 5 days and average costs of $19,421. There were 11 cases reporting procedure code 02PA3RZ (Removal of short-term external heart assist system from heart, percutaneous approach), with an average length of stay of 4 days and average costs of $25,719. There was 1 case reporting procedure code 02PA4QZ (Removal of implantable heart assist system from heart, percutaneous endoscopic approach), with an average length of stay of 3 days and average costs of $14,415.

The data show that there are differences in the average length of stay and average costs for cases in MS–DRGs 268 and 269 according to the type of device (short-term external heart assist system or implantable heart assist system), and the approaches that were utilized (open, percutaneous, or percutaneous endoscopic). We agree with the recommendation to maintain the structure of MS–DRGs 268 and 269 for FY 2019 and will continue to analyze the claims data for possible future updates. As such, we are proposing to not make any changes to the structure of MS–DRGs 268 and 269

for FY 2019. We are inviting public comments on our proposal.

b. Brachytherapy

We received a request to create a new Pre-MDC MS–DRG for all procedures involving the CivaSheet® technology, an implantable, planar brachytherapy source designed to enable delivery of radiation to the site of the cancer tumor excision or debulking, while protecting neighboring tissue. The requestor stated that physicians have used the CivaSheet® technology for a number of indications, such as colorectal, gynecological, head and neck, soft tissue sarcomas and pancreatic cancer. The requestor noted that potential uses also include nonsmall-cell lung cancer, ocular melanoma, and atypical meningioma. Currently, procedures involving the CivaSheet® technology are reported using ICD–10–PCS Section D—Radiation Therapy codes, with the root operation ''Brachytherapy.'' These codes are non-O.R. codes and group to the MS–DRG to which the principal diagnosis is assigned.

In response to this request, we have analyzed claims data from the September 2017 update of the FY 2017 MedPAR file for cases representing patients who received treatment that reported low dose rate (LDR) brachytherapy procedure codes across all MS–DRGs. We refer readers to Table 6P.—ICD–10–CM and ICD–10–PCS Codes for Proposed MS–DRG Changes associated with this proposed rule, which is available via the Internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* A detailed list of these procedure codes are shown in Table 6P.1. Our findings are reflected in the following table.

CASES REPORTING LOW DOSE RATE (LDR) BRACHYTHERAPY PROCEDURE CODES ACROSS ALL MS–DRGS

ICD–10–PCS procedures	Number of cases	Average length of stay	Average costs
MS–DRG 129 (Major Head and Neck Procedures with CC/MCC or Major Device)—Cases with procedure code D710BBZ (Low dose rate (LDR) brachytherapy of bone marrow using Palladium-103 (Pd-103))	1	7	$10,357
MS–DRG 724 (Malignancy, Male Reproductive System without CC/MCC)—Cases with procedure code DV10BBZ (Low dose rate (LDR) brachytherapy of prostate using Palladium-103 (Pd-103))	1	7	32,298
MS–DRG 129—Cases with procedure code DW11BBZ (Low dose rate (LDR) brachytherapy of head and neck using Palladium-103 (Pd-103))	1	3	42,565
MS–DRG 330 (Major Small and Large Bowel Procedures with CC)—Cases with procedure code DW16BBZ (Low dose rate (LDR) brachytherapy of pelvic region using Palladium-103 (Pd-103))	1	8	74,190

As shown in the immediately preceding table, we identified 4 cases reporting one of these LDR brachytherapy procedure codes across all MS–DRGs, with an average length of stay of 6.3 days and average costs of $39,853. We believe that creating a new Pre-MDC MS–DRG based on such a small number of cases could lead to distortion in the relative payment weights for the Pre-MDC MS–DRG. Having a larger number of clinically cohesive cases within the Pre-MDC MS–DRG provides greater stability for annual updates to the relative payment weights. Therefore, we are not proposing to create a new Pre-MDC MS–DRG for procedures involving the CivaSheet® technology for FY 2019. We are inviting public comments on our proposal to maintain the current MS-DRG structure for procedures involving the CivaSheet® technology.

c. Laryngectomy

The logic for case assignment to Pre-MDC MS–DRGs 11, 12, and 13 (Tracheostomy for Face, Mouth and Neck Diagnoses with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD–10 MS–DRG Version 35 Definitions Manual, which is available via the Internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2018-IPPS-Final-Rule-Home-Page-Items/FY2018-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending,* is comprised of a list of procedure codes for laryngectomies, a list of procedure codes for tracheostomies, and a list of diagnosis codes for conditions involving the face, mouth, and neck. The procedure codes for laryngectomies are listed separately and are reported differently from the procedure codes listed for tracheostomies. The procedure codes listed for tracheostomies must be reported with a diagnosis code involving the face, mouth, or neck as a principal diagnosis to satisfy the logic for assignment to Pre-MDC MS–DRG 11, 12, or 13. Alternatively, any principal diagnosis code reported with a procedure code from the list of procedure codes for laryngectomies will satisfy the logic for assignment to Pre-MDC MS–DRG 11, 12, or 13.

To improve the manner in which the logic for assignment is displayed in the ICD–10 MS–DRG Definitions Manual and to clarify how it is applied for grouping purposes, we are proposing to reorder the lists of the diagnosis and procedure codes. The list of principal diagnosis codes for face, mouth, and neck would be sequenced first, followed by the list of the tracheostomy procedure codes and, lastly, the list of laryngectomy procedure codes.

We also are proposing to revise the titles of Pre-MDC MS–DRGs 11, 12, and 13 from ''Tracheostomy for Face, Mouth and Neck Diagnoses with MCC, with CC and without CC/MCC, respectively'' to ''Tracheostomy for Face, Mouth and Neck Diagnoses or Laryngectomy with MCC'', ''Tracheostomy for Face, Mouth and Neck Diagnoses or Laryngectomy with CC'', and ''Tracheostomy for Face, Mouth and Neck Diagnoses or Laryngectomy without CC/MCC'', respectively, to reflect that laryngectomy procedures may also be assigned to these MS–DRGs.

We are inviting public comments on our proposals.

d. Chimeric Antigen Receptor (CAR) T-Cell Therapy

Chimeric Antigen Receptor (CAR) T-cell therapy is a cell-based gene therapy in which a patient's own T-cells are genetically engineered in a laboratory and used to assist in the patient's treatment to attack certain cancerous cells. Blood is drawn from the patient and the T-cells are separated. The laboratory then utilizes the CAR process to genetically engineer the T-cells,

resulting in the addition of a chimeric antigen receptor that will bind to a certain protein on the patient's cancerous cells. The CAR T-cells are then administered to the patient by infusion.

Two CAR T-cell therapy drugs received FDA approval in 2017. KYMRIAH™ (manufactured by Novartis Pharmaceuticals Corporation) was approved for the use in the treatment of patients up to 25 years of age with B-cell precursor acute lymphoblastic leukemia (ALL) that is refractory or in second or later relapse. YESCARTA™ (manufactured by Kite Pharma, Inc.) was approved for use in the treatment of adult patients with relapsed or refractory large B-cell lymphoma and who have not responded to or who have relapsed after at least two other kinds of treatment.

Procedures involving the CAR T-cell therapy drugs are currently identified with ICD–10–PCS procedure codes XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3) and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3), which both became effective October 1, 2017. Procedures described by these two ICD–10–PCS procedure codes are designated as non-O.R. procedures that have no impact on MS–DRG assignment.

We have received many inquiries from the public regarding payment of CAR T-cell therapy under the IPPS. Suggestions for the MS–DRG assignment for FY 2019 ranged from assigning ICD–10–PCS procedure codes XW033C3 and XW043C3 to an existing MS–DRG to the creation of a new MS–DRG for CAR T-cell therapy. In the context of the recommendation to create a new MS–DRG for FY 2019, we also received suggestions that payment should be established in a way that promotes comparability between the inpatient setting and outpatient setting.

As part of our review of these suggestions, we examined the existing MS–DRGs to identify the MS–DRGs that represent cases most clinically similar to those cases in which the CAR T-cell therapy procedures would be reported. The CAR T-cell procedures involve a type of autologous immunotherapy in which the patient's cells are genetically transformed and then returned to that patient after the patient undergoes cell depleting chemotherapy. Our clinical advisors believe that patients receiving treatment utilizing CAR T-cell therapy procedures would have similar clinical characteristics and comorbidities to those seen in cases representing patients receiving treatment for other hematopoietic carcinomas who are treated with autologous bone marrow transplant therapy that are currently assigned to MS–DRG 016 (Autologous Bone Marrow Transplant with CC/MCC). Therefore, after consideration of the inquiries received as to how the IPPS can appropriately group cases reporting the use of CAR T-cell therapy, we are proposing to assign ICD–10–PCS procedure codes XW033C3 and XW043C3 to Pre-MDC MS–DRG 016 for FY 2019. In addition, we are proposing to revise the title of MS–DRG 016 from ''Autologous Bone Marrow Transplant with CC/MCC'' to ''Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy.''

However, we note that, as discussed in greater detail in section II.H.5.a. of the preamble of this proposed rule, the manufacturer of KYMRIAH™ and the manufacturer of YESCARTA™ submitted applications for new technology add-on payments for FY 2019. We also recognize that many members of the public have noted that the combination of the new technology add-on payment applications, the extremely high-cost of these CAR T-cell therapy drugs, and the potential for volume increases over time present unique challenges with respect to the MS–DRG assignment for procedures involving the utilization of CAR T-cell therapy drugs and cases representing patients receiving treatment involving CAR T-cell therapy. We believe that, in the context of these pending new technology add-on payment applications, there may also be merit in the alternative suggestion we received to create a new MS–DRG for procedures involving the utilization of CAR T-cell therapy drugs and cases representing patients receiving treatment involving CAR T-cell therapy to which we could assign ICD–10–PCS procedure codes XW033C3 and XW043C3, effective for discharges occurring in FY 2019. As noted in section II.H.5.a. of the preamble of this proposed rule, if a new MS–DRG were to be created then consistent with section 1886(d)(5)(K)(ix) of the Act there may no longer be a need for a new technology add-on payment under section 1886(d)(5)(K)(ii)(III) of the Act.

We are inviting public comments on our proposed approach of assigning ICD–10–PCS procedure codes XW033C3 and XW043C3 to Pre-MDC MS–DRG 016 for FY 2019. We also are inviting public comments on alternative approaches, including in the context of the pending KYMRIAH™ and YESCARTA™ new technology add-on payment applications, and the most appropriate way to establish payment for FY 2019 under any alternative approaches. Such payment alternatives may include using a CCR of 1.0 for charges associated with ICD–10–PCS procedure codes XW033C3 and XW043C3, given that many public inquirers believed that hospitals would be unlikely to set charges different from the costs for KYMRIAH™ and YESCARTA™ CAR T-cell therapy drugs, as discussed further in section II.A.4.g.2. of the Addendum of this proposed rule. These payment alternatives, including payment under any potential new MS–DRG, also could take into account an appropriate portion of the average sales price (ASP) for these drugs, including in the context of the pending new technology add-on payment applications.

We are inviting comments on how these payment alternatives would affect access to care, as well as how they affect incentives to encourage lower drug prices, which is a high priority for this Administration. In addition, we are considering approaches and authorities to encourage value-based care and lower drug prices. We solicit comments on how the payment methodology alternatives may intersect and affect future participation in any such alternative approaches.

As stated in section II.F.1.b. of the preamble of this proposed rule, we described the criteria used to establish new MS–DRGs. In particular, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to decide whether patients are clinically distinct or similar to other patients in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider whether observed average differences are consistent across patients or attributable to cases that were extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases. Based on the principles typically used to establish a new MS–DRG, we are soliciting comments on how the administration of the CAR T-cell

therapy drugs and associated services meet the criteria for the creation of a new MS–DRG. Also, section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. Given that a new MS–DRG must be established in a budget neutral manner, we are concerned with the redistributive effects away from core hospital services over time toward specialized hospitals and how that may affect payment for these core services. Therefore, we are soliciting public comments on our concerns with the payment alternatives that we are considering for CAR T-cell therapy drugs and therapies.

3. MDC 1 (Diseases and Disorders of the Nervous System)

a. Epilepsy With Neurostimulator

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019), based on a request we received and our review of the claims data, the advice of our clinical advisors, and consideration of public comments, we finalized our proposal to reassign all cases reporting a principal diagnosis of epilepsy and one of the following ICD–10–PCS code combinations, which capture cases involving neurostimulator generators inserted into the skull (including cases involving the use of the RNS© neurostimulator), to retitled MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator), even if there is no MCC reported:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

The finalized listing of epilepsy diagnosis codes (82 FR 38018 through 38019) contained codes provided by the requestor (82 FR 38016), in addition to diagnosis codes organized in subcategories G40.A– and G40.B– as recommended by a commenter in response to the proposed rule (82 FR 38018) because the diagnosis codes organized in these subcategories also are representative of diagnoses of epilepsy.

For FY 2019, we received a request to include two additional diagnosis codes organized in subcategory G40.1– in the listing of epilepsy diagnosis codes for cases assigned to MS–DRG 023 because these diagnosis codes also represent diagnoses of epilepsy. The two additional codes identified by the requestor are:

- G40.109 (Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, not intractable, without status epilepticus); and
- G40.111 (Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, intractable, with status epilepticus).

We agree with the requestor that diagnosis codes G40.109 and G40.111 also are representative of epilepsy diagnoses and should be added to the listing of epilepsy diagnosis codes for cases assigned to MS–DRG 023 because they also capture a type of epilepsy. Our clinical advisors reviewed this issue and agree that adding the two additional epilepsy diagnosis codes is appropriate. Therefore, we are proposing to add ICD–10–CM diagnosis codes G40.109 and G40.111 to the listing of epilepsy diagnosis codes for cases assigned to MS–DRG 023, effective October 1, 2018.

We are inviting public comments on our proposal.

b. Neurological Conditions With Mechanical Ventilation

We received two separate, but related requests to create new MS–DRGs for cases that identify patients who have been diagnosed with neurological conditions classified under MDC 1 (Diseases and Disorders of the Nervous System) and who require mechanical ventilation with and without a thrombolytic and in the absence of an O.R. procedure. The requestors suggested that CMS consider when mechanical ventilation is reported with a neurological condition for the ICD–10 MS–DRG GROUPER assignment logic, similar to the current logic for MS–DRGs 207 and 208 (Respiratory System Diagnosis with Ventilator Support >96 Hours and <=96 Hours, respectively) under MDC 4 (Diseases and Disorders of the Respiratory System), which consider respiratory conditions that require mechanical ventilation and are assigned a higher relative weight.

The requestors stated that patients with a principal diagnosis of respiratory failure requiring mechanical ventilation are currently assigned to MS–DRG 207 (Respiratory System Diagnoses with Ventilator Support >96 Hours), which has a relative weight of 5.4845, and to MS–DRG 208 (Respiratory System Diagnoses with Ventilator Support <=96 Hours), which has a relative weight of 2.3678. The requestors also stated that patients with a principal diagnosis of ischemic cerebral infarction who received a thrombolytic agent during the hospital stay and did not undergo an O.R. procedure are assigned to MS–DRGs 061, 062, and 063 (Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC, with CC, and without CC/MCC, respectively) under MDC 1, while patients with a principal diagnosis of intracranial hemorrhage or ischemic cerebral infarction who did not receive a thrombolytic agent during the hospital stay and did not undergo an O.R. procedure are assigned to MS–DRGs 064, 065 and 66 (Intracranial Hemorrhage or Cerebral Infarction with MCC, with CC or TPA in 24 Hours, and without CC/MCC, respectively) under MDC 1.

The requestors provided the current FY 2018 relative weights for these MS–DRGs as shown in the following table.

MS–DRG	MS–DRG title	Relative weight
MS–DRG 061	Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC	2.7979
MS–DRG 062	Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with CC	l.9321
MS–DRG 063	Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent without CC/MCC ..	l.6169
MS–DRG 064	Intracranial Hemorrhage or Cerebral Infarction with MCC	l.7685
MS–DRG 065	Intracranial Hemorrhage or Cerebral Infarction with CC or TPA in 24 hours	1.0311
MS–DRG 066	Intracranial Hemorrhage or Cerebral Infarction with MCC	.7466

The requestors stated that although the ICD–10–CM Official Guidelines for Coding and Reporting allow sequencing of acute respiratory failure as the principal diagnosis when it is jointly responsible (with an acute neurologic event) for admission, which would result in assignment to MS–DRGs 207 or 208 when the patient requires mechanical ventilation, it would not be appropriate to sequence acute respiratory failure as the principal diagnosis when it is secondary to intracranial hemorrhage or ischemic cerebral infarction.

The requestors also stated that reporting for other purposes, such as quality measures, clinical trials, and Joint Commission and State certification or survey cases, is based on the principal diagnosis, and it is important, from a quality of care perspective, that the intracranial hemorrhage or cerebral infarction codes continue to be sequenced as principal diagnosis. The requestors believed that cases of patients who present with cerebral infarction or cerebral hemorrhage and acute respiratory failure are currently in conflict for principal diagnosis sequencing because the cerebral infarction or cerebral hemorrhage code is needed as the principal diagnosis for quality reporting and other purposes. However, acute respiratory failure is needed as the principal diagnosis for purposes of appropriate payment under the MS–DRGs.

The requestors stated that by creating new MS–DRGs for neurological conditions with mechanical ventilation, those patients who require mechanical ventilation for airway protection on admission and those patients who develop acute respiratory failure requiring mechanical ventilation after admission can be grouped to MS–DRGs that provide appropriate payment for the mechanical ventilation resources. The requestors suggested two new MS–DRGs, citing as support that new MS–DRGs were created for patients with sepsis requiring mechanical ventilation greater than and less than 96 hours.

As discussed earlier in this section, the requests we received were separate, but related requests. The first request was to specifically identify patients presenting with intracranial hemorrhage or cerebral infarction with mechanical ventilation and create two new MS–DRGs as follows:

- Suggested new MS–DRG XXX (Intracranial Hemorrhage or Cerebral Infarction with Mechanical Ventilation >96 Hours); and
- Suggested new MS–DRG XXX (Intracranial Hemorrhage or Cerebral Infarction with Mechanical Ventilation <=96 Hours).

The second request was to consider *any* principal diagnosis under the current GROUPER logic for MDC 1 with mechanical ventilation and create two new MS–DRGs as follows:

- Suggested New MS–DRG XXX (Neurological System Diagnosis with Mechanical Ventilation 96+ Hours); and
- Suggested New MS–DRG XXX (Neurological System Diagnosis with Mechanical Ventilation ≤96 Hours).

Both requesters suggested that CMS use the three ICD–10–PCS codes identifying mechanical ventilation to assign cases to the respective suggested new MS–DRGs. The three ICD–10–PCS codes are shown in the following table.

ICD–10–PCS code	Code description
5A1935Z	Respiratory ventilation, less than 96 consecutive hours.
5A1945Z	Respiratory ventilation, 24–96 consecutive hours.
5A1955Z	Respiratory ventilation, greater than 96 consecutive hours.

Below we discuss the different aspects of each request in more detail.

The first request involved two aspects: (1) Analyzing patients diagnosed with cerebral infarction and required mechanical ventilation who received a thrombolytic (for example, TPA) and did not undergo an O.R. procedure; and (2) analyzing patients diagnosed with intracranial hemorrhage or ischemic cerebral infarction and required mechanical ventilation who did not receive a thrombolytic (for example, TPA) during the current episode of care and did not undergo an O.R. procedure.

For the first subset of patients, we analyzed claims data from the September 2017 update of the FY 2017 MedPAR file for MS–DRGs 061, 062, and 063 because cases that are assigned to these MS–DRGs specifically identify patients who were diagnosed with a cerebral infarction and received a thrombolytic. The 90 ICD–10–CM diagnosis codes that specify a cerebral infarction and were included in our analysis are listed in Table 6P.1a associated with this proposed rule (which is available via the Internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html).*

The ICD–10–PCS procedure codes displayed in the following table describe use of a thrombolytic agent.

ICD–10–PCS code	Code description
3E03017	Introduction of other thrombolytic into peripheral vein, open approach.
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach.
3E04017	Introduction of other thrombolytic into central vein, open approach.
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach.
3E05017	Introduction of other thrombolytic into peripheral artery, open approach.
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach.
3E06017	Introduction of other thrombolytic into central artery, open approach.
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach.
3E08017	Introduction of other thrombolytic into heart, open approach.
3E08317	Introduction of other thrombolytic into heart, percutaneous approach.

We examined claims data in MS–DRGs 061, 062, and 063 and identified cases that reported mechanical ventilation of any duration with a principal diagnosis of cerebral infarction where a thrombolytic agent was administered and the patient did not undergo an O.R. procedure. Our

findings are shown in the following table.

CEREBRAL INFARCTION WITH THROMBOLYTIC AND MV

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 061—All cases	5,192	6.4	$20,097
MS–DRG 061—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	166	12.8	41,691
MS–DRG 061—Cases with principal diagnosis of cerebral infarction and mechanical ventilation =24–96 hours	378	7.5	26,368
MS–DRG 061—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <24 hours	214	4.9	19,795
MS–DRG 062—All cases	9,730	3.9	13,865
MS–DRG 062—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	0	0.0	0
MS–DRG 062—Cases with principal diagnosis of cerebral infarction and mechanical ventilation =24–96 hours	10	5.3	19,817
MS–DRG 062—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <24 hours	23	3.8	14,026
MS–DRG 063—All cases	1,984	2.7	11,771
MS–DRG 063—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	0	0.0	0
MS–DRG 063—Cases with principal diagnosis of cerebral infarction and mechanical ventilation =24–96 hours	3	2.7	14,588
MS–DRG 063—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <24 hours	5	2.0	11,195

As shown in this table, there were a total of 5,192 cases in MS–DRG 061 with an average length of stay of 6.4 days and average costs of $20,097. There were a total of 758 cases reporting the use of mechanical ventilation in MS–DRG 061 with an average length of stay ranging from 4.9 days to 12.8 days and average costs ranging from $19,795 to $41,691. For MS–DRG 062, there were a total of 9,730 cases with an average length of stay of 3.9 days and average costs of $13,865. There were a total of 33 cases reporting the use of mechanical ventilation in MS–DRG 062 with an average length of stay ranging from 3.8 days to 5.3 days and average costs ranging from $14,026 to $19,817. For MS-DRG 063, there were a total of 1,984 cases with an average length of stay of 2.7 days and average costs of $11,771. There were a total of 8 cases reporting the use of mechanical ventilation in MS–DRG 063 with an average length of stay ranging from 2.0 days to 2.7 days and average costs ranging from $11,195 to $14,588.

We then compared the total number of cases in MS–DRGs 061, 062, and 063 specifically reporting mechanical ventilation >96 hours with a principal diagnosis of cerebral infarction where a thrombolytic agent was administered and the patient did not undergo an O.R. procedure against the total number of cases reporting mechanical ventilation <=96 hours with a principal diagnosis of cerebral infarction where a thrombolytic agent was administered and the patient did not undergo an O.R. procedure. Our findings are shown in the following table.

CEREBRAL INFARCTION WITH THROMBOLYTIC AND MV

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 061—All cases	5,192	6.4	$20,097
MS–DRG 061—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	166	12.8	41,691
MS–DRG 061—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <=96 hours	594	6.5	23,780
MS–DRG 062—All cases	9,730	3.9	13,865
MS–DRG 062—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	0	0.0	0
MS–DRG 062—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <=96 hours	34	4.2	15,558
MS–DRG 063—All cases	1,984	2.7	11,771
MS–DRG 063—Cases with principal diagnosis of cerebral infarction and mechanical ventilation >96 hours	0	0.0	$0
MS–DRG 063—Cases with principal diagnosis of cerebral infarction and mechanical ventilation <=96 hours	8	2.3	12,467

As shown in this table, the total number of cases reported in MS–DRG 061 was 5,192, with an average length of stay of 6.4 days and average costs of $20,097. There were 166 cases that reported mechanical ventilation >96

hours, with an average length of stay of 12.8 days and average costs of $41,691. There were 594 cases that reported mechanical ventilation <=96 hours, with an average length of stay of 6.5 days and average costs of $23,780.

The total number of cases reported in MS–DRG 062 was 9,730, with an average length of stay of 3.9 days and average costs of $13,865. There were no cases identified in MS–DRG 062 where mechanical ventilation >96 hours was reported. However, there were 34 cases that reported mechanical ventilation <=96 hours, with an average length of stay of 4.2 days and average costs of $15,558.

The total number of cases reported in MS–DRG 63 was 1,984 with an average length of stay of 2.7 days and average costs of $11,771. There were no cases identified in MS–DRG 063 where mechanical ventilation >96 hours was reported. However, there were 8 cases that reported mechanical ventilation <=96 hours, with an average length of stay of 2.3 days and average costs of $12,467.

For the second subset of patients, we examined claims data for MS–DRGs 064, 065, and 066. We identified cases reporting mechanical ventilation of any duration with a principal diagnosis of cerebral infarction or intracranial hemorrhage where a thrombolytic agent was not administered during the current hospital stay and the patient did not undergo an O.R. procedure. The 33 ICD–10–CM diagnosis codes that specify an intracranial hemorrhage and were included in our analysis are listed in Table 6P.1b associated with this proposed rule (which is available via the Internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html).*

We also used the list of 90 ICD–10–CM diagnosis codes that specify a cerebral infarction listed in Table 6P.1a associated with this proposed rule for our analysis. We note that the GROUPER logic for case assignment to MS–DRG 065 includes that a thrombolytic agent (for example, TPA) was administered within 24 hours of the current hospital stay. The ICD–10–CM diagnosis code that describes this scenario is Z92.82 (Status post administration of tPA (rtPA) in a different facility within the last 24 hours prior to admission to current facility). We did not review the cases reporting that diagnosis code for our analysis. Our findings are shown in the following table.

CEREBRAL INFARCTION OR INTRACRANIAL HEMORRHAGE WITH MV AND WITHOUT THROMBOLYTIC

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 064—All cases	76,513	6.0	$12,574
MS–DRG 064—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	2,153	13.4	38,262
MS–DRG 064—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation =24–96 hours	4,843	6.6	18,119
MS–DRG 064—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <24 hours	4,001	3.1	8,675
MS–DRG 065—All cases	106,554	3.7	7,236
MS–DRG 065—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	22	10.2	20,759
MS–DRG 065—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation =24–96 hours	127	4.2	12,688
MS–DRG 065—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <24 hours	301	2.1	6,145
MS–DRG 066—All cases	34,689	2.5	5,321
MS–DRG 066—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	1	4.0	3,426
MS–DRG 066—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation =24–96 hours	31	3.7	10,364
MS–DRG 066—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <24 hours	163	1.4	4,148

The total number of cases reported in MS–DRG 064 was 76,513, with an average length of stay of 6.0 days and average costs of $12,574. There were a total of 10,997 cases reporting the use of mechanical ventilation in MS–DRG 064 with an average length of stay ranging from 3.1 days to 13.4 days and average costs ranging from $8,675 to $38,262. For MS–DRG 065, there were a total of 106,554 cases with an average length of stay of 3.7 days and average costs of $7,236. There were a total of 450 cases reporting the use of mechanical ventilation in MS–DRG 065 with an average length of stay ranging from 2.1 days to 10.2 days and average costs ranging from $6,145 to $20,759. For MS–DRG 066, there were a total of 34,689 cases with an average length of stay of 2.5 days and average costs of $5,321. There were a total of 195 cases reporting the use of mechanical ventilation in MS–DRG 066 with an average length of stay ranging from 1.4 days to 4.0 days and average costs ranging from $3,426 to $10,364.

We then compared the total number of cases in MS–DRGs 064, 065, and 066 specifically reporting mechanical ventilation >96 hours with a principal diagnosis of cerebral infarction or intracranial hemorrhage where a thrombolytic agent was not administered and the patient did not undergo an O.R. procedure against the total number of cases reporting mechanical ventilation <=96 hours with a principal diagnosis of cerebral infarction or intracranial hemorrhage where a thrombolytic agent was not administered and the patient did not undergo an O.R. procedure. Our findings are shown in the following table.

CEREBRAL INFARCTION OR INTRACRANIAL HEMORRHAGE WITH MV AND WITHOUT THROMBOLYTIC

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 064—All cases	76,513	6.0	$12,574
MS–DRG 064—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	2,153	13.4	38,262
MS–DRG 064—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <=96 hours	8,794	4.9	13,704
MS–DRG 065—All cases	106,554	3.7	7,236
MS–DRG 065—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	22	10.2	20,759
MS–DRG 065—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <=96 hours	428	2.7	8,086
MS–DRG 066—All cases	34,689	2.5	5,321
MS–DRG 066—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation >96 hours	1	4.0	3,426
MS–DRG 066—Cases with principal diagnosis of cerebral infarction or intracranial hemorrhage and mechanical ventilation <=96 hours	194	1.8	5,141

The total number of cases reported in MS–DRG 064 was 76,513, with an average length of stay of 6.0 days and average costs of $12,574. There were 2,153 cases that reported mechanical ventilation >96 hours, with an average length of stay of 13.4 days and average costs of $38,262, and there were 8,794 cases that reported mechanical ventilation <=96 hours, with an average length of stay of 4.9 days and average costs of $13,704.

The total number of cases reported in MS–DRG 65 was 106,554, with an average length of stay of 3.7 days and average costs of $7,236. There were 22 cases that reported mechanical ventilation >96 hours, with an average length of stay of 10.2 days and average costs of $20,759, and there were 428 cases that reported mechanical ventilation<=96 hours, with an average length of stay of 2.7 days and average costs of $8,086.

The total number of cases reported in MS–DRG 66 was 34,689, with an average length of stay of 2.5 days and average costs of $5,321. There was one case that reported mechanical ventilation >96 hours, with an average length of stay of 4.0 days and average costs of $3,426, and there were 194 cases that reported mechanical ventilation <=96 hours, with an average length of stay of 1.8 days and average costs of $5,141.

We also analyzed claims data for MS–DRGs 207 and 208. As shown in the following table, there were a total of 19,471cases found in MS–DRG 207 with an average length of stay of 13.8 days and average costs of $38,124. For MS–DRG 208, there were a total of 55,802 cases found with an average length of stay of 6.7 days and average costs of $17,439.

RESPIRATORY SYSTEM DIAGNOSIS WITH VENTILATOR SUPPORT

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 207—All cases	19,471	13.8	$38,124
MS–DRG 208—All cases	55,802	6.7	17,439

Our analysis of claims data relating to the first request for MS–DRGs 061, 062, 063, 064, 065, and 066 and consultation with our clinical advisors do not support creating new MS–DRGs for cases that identify patients diagnosed with cerebral infarction or intracranial hemorrhage who require mechanical ventilation with or without a thrombolytic and in the absence of an O.R. procedure.

For the first subset of patients (in MS–DRGs 061, 062 and 063), our data findings for MS–DRG 061 demonstrate the 166 cases that reported mechanical ventilation >96 hours had a longer average length of stay (12.8 days versus 6.4 days) and higher average costs ($41,691 versus $20,097) compared to all the cases in MS–DRG 061. However, there were no cases that reported mechanical ventilation >96 hours for MS–DRG 062 or MS–DRG 063. For the 594 cases that reported mechanical ventilation <=96 hours in MS-DRG 061, the data show that the average length of stay was consistent with the average length of stay of all of the cases in MS–DRG 061 (6.5 days versus 6.4 days) and the average costs were also consistent with the average costs of all of the cases in MS-DRG 061 ($23,780 versus $20,097). For the 34 cases that reported mechanical ventilation <=96 hours in MS–DRG 062, the data show that the average length of stay was consistent with the average length of stay of all of the cases in MS–DRG 062 (4.2 days versus 3.9 days) and the average costs were also consistent with the average costs of all of the cases in MS DRG 062 ($15,558 versus $13,865). Lastly, for the 8 cases that reported mechanical ventilation <=96 hours in MS–DRG 063, the data show that the average length of stay was consistent with the average length of stay of all of the cases in MS–DRG 063 (2.3 days versus 2.7 days) and the average costs were also consistent with the average costs of all of the cases in MS DRG 063 ($12,467 versus $11,771).

For the second subset of patients (in MS–DRGs 064, 065 and 066), the data findings for the 2,153 cases that reported mechanical ventilation >96 hours in MS–DRG 064 showed a longer average length of stay (13.4 days versus 6.0 days) and higher average costs ($38,262 versus $12,574) compared to all of the cases in MS–DRG 064. However, the 2,153 cases represent only 2.8 percent of all the cases in MS–DRG

064. For the 22 cases that reported mechanical ventilation >96 hours in MS–DRG 065, the data showed a longer average length of stay (10.2 days versus 3.7 days) and higher average costs ($20,759 versus $7,236) compared to all of the cases in MS–DRG 065. However, the 22 cases represent only 0.02 percent of all the cases in MS–DRG 065. For the one case that reported mechanical ventilation >96 hours in MS–DRG 066, the data showed a longer average length of stay (4.0 days versus 2.5 days) and lower average costs ($3,426 versus $5,321) compared to all of the cases in MS–DRG 066. For the 8,794 cases that reported mechanical ventilation <=96 hours in MS–DRG 064, the data showed that the average length of stay was shorter than the average length of stay for all of the cases in MS–DRG 064 (4.9 days versus 6.0 days) and the average costs were consistent with the average costs of all of the cases in MS–DRG 064 ($13,704 versus $12,574). For the 428 cases that reported mechanical ventilation <=96 hours in MS–DRG 065, the data showed that the average length of stay was shorter than the average length of stay for all of the cases in MS–DRG 065 (2.7 days versus 3.7 days) and the average costs were consistent with the average costs of all the cases in MS–DRG 065 ($8,086 versus $7,236). For the 194 cases that reported mechanical ventilation <=96 hours in MS–DRG 066, the data showed that the average length of stay was shorter than the average length of stay for all of the cases in MS–DRG 066 (1.8 days versus 2.5 days) and the average costs were less than the average costs of all of the cases in MS–DRG 066 ($5,141 versus $5,321).

Based on the analysis described above, the current MS–DRG assignment for the cases in MS–DRGs 061, 062, 063, 064, 065 and 066 that identify patients diagnosed with cerebral infarction or intracranial hemorrhage who require mechanical ventilation with or without a thrombolytic and in the absence of an O.R. procedure appears appropriate.

Our clinical advisors also noted that patients requiring mechanical ventilation (in the absence of an O.R. procedure) are known to be more resource intensive and it would not be practical to create new MS–DRGs specifically for this subset of patients diagnosed with an acute neurologic event, given the various indications for which mechanical ventilation may be utilized. If we were to create new MS–DRGs for patients diagnosed with an intracranial hemorrhage or cerebral infarction who require mechanical ventilation, it would not address all of the other patients who also utilize mechanical ventilation resources. It would also necessitate further extensive analysis and evaluation for several other conditions that require mechanical ventilation across each of the 25 MDCs under the ICD–10 MS–DRGs.

To evaluate the frequency in which the use of mechanical ventilation is reported for different clinical scenarios, we examined claims data across each of the 25 MDCs to determine the number of cases reporting the use of mechanical ventilation >96 hours. Our findings are shown in the table below.

MECHANICAL VENTILATION >96 HOURS ACROSS ALL MDCS

MDC	Number of cases	Average length of stay	Average costs
All cases with mechanical ventilation >96 hours	127,626	18.4	$61,056
MDC 1 (Diseases and Disorders of the Nervous System)—Cases with mechanical ventilation >96 hours	13,668	18.3	61,234
MDC 2 (Disease and Disorders of the Eye)—Cases with mechanical ventilation >96 hours	33	22.7	79,080
MDC 3 (Diseases and Disorders of the Ear, Nose, Mouth and Throat)—Cases with mechanical ventilation >96 hours	602	20.3	62,625
MDC 4 (Diseases and Disorders of the Respiratory System)—Cases with mechanical ventilation >96 hours	27,793	16.6	48,869
MDC 5 (Diseases and Disorders of the Circulatory System)—Cases with mechanical ventilation >96 hours	16,923	20.7	84,565
MDC 6 (Diseases and Disorders of the Digestive System)—Cases with mechanical ventilation >96 hours	6,401	22.4	73,759
MDC 7 (Diseases and Disorders of the Hepatobiliary System and Pancreas)—Cases with mechanical ventilation >96 hours	1,803	24.5	80,477
MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)—Cases with mechanical ventilation >96 hours	2,780	22.3	83,271
MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast)—Cases with mechanical ventilation >96 hours	390	22.2	68,288
MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders)—Cases with mechanical ventilation >96 hours	1,168	20.9	60,682
MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract)—Cases with mechanical ventilation >96 hours	2,325	19.6	57,893
MDC 12 (Diseases and Disorders of the Male Reproductive System)—Cases with mechanical ventilation >96 hours	54	26.8	95,204
MDC 13 (Diseases and Disorders of the Female Reproductive System)—Cases with mechanical ventilation >96 hours	89	24.6	83,319
MDC 14 (Pregnancy, Childbirth and the Puerperium)—Cases with mechanical ventilation >96 hours	22	17.4	56,981
MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, Immunologic Disorders)—Cases with mechanical ventilation >96 hours	468	20.1	68,658
MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms)—Cases with mechanical ventilation >96 hours	538	29.7	99,968
MDC 18 (Infectious and Parasitic Diseases, Systemic or Unspecified Sites)—Cases with mechanical ventilation >96 hours	48,176	17.3	55,022
MDC 19 (Mental Diseases and Disorders)—Cases with mechanical ventilation >96 hours	54	29.3	52,749
MDC 20 (Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental Disorders)—Cases with mechanical ventilation >96 hours	312	20.5	47,637

MECHANICAL VENTILATION >96 HOURS ACROSS ALL MDCS—Continued

MDC	Number of cases	Average length of stay	Average costs
MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs)—Cases with mechanical ventilation >96 hours	2,436	18.2	57,712
MDC 22 (Burns)—Cases with mechanical ventilation >96 hours	242	34.8	188,704
MDC 23 (Factors Influencing Health Status and Other Contacts with Health Services)—Cases with mechanical ventilation >96 hours	64	17.7	50,821
MDC 24 (Multiple Significant Trauma)—Cases with mechanical ventilation >96 hours	922	17.6	72,358
MDC 25 (Human Immunodeficiency Virus Infections)—Cases with mechanical ventilation >96 hours	363	19.1	56,688

As shown in the table, the top 5 MDCs with the largest number of cases reporting mechanical ventilation >96 hours are MDC 18, with 48,176 cases; MDC 4, with 27,793 cases; MDC 5, with 16,923 cases; MDC 1, with 13,668 cases; and MDC 6, with 6,401 cases. We note that the claims data demonstrate that the average length of stay is consistent with what we would expect for cases reporting the use of mechanical ventilation >96 hours across each of the 25 MDCs. The top 5 MDCs with the highest average costs for cases reporting mechanical ventilation >96 hours were MDC 22, with average costs of $188,704; MDC 17, with average costs of $99,968; MDC 12, with average costs of $95,204; MDC 5, with average costs of $84,565; and MDC 13, with average costs of $83,319. We note that the data for MDC 8 demonstrated similar results compared to MDC 13 with average costs of $83,271 for cases reporting mechanical ventilation >96 hours. In summary, the claims data reflect a wide variance with regard to the frequency and average costs for cases reporting the use of mechanical ventilation >96 hours.

We also examined claims data across each of the 25 MDCs for the number of cases reporting the use of mechanical ventilation <=96 hours. Our findings are shown in the table below.

MECHANICAL VENTILATION <=96 HOURS ACROSS ALL MDCS

MDC	Number of cases	Average length of stay	Average costs
All cases with mechanical ventilation <=96 hours	266,583	8.5	$26,668
MDC 1 (Diseases and Disorders of the Nervous System)—Cases with mechanical ventilation <=96 hours	29,896	7.4	22,838
MDC 2 (Disease and Disorders of the Eye)—Cases with mechanical ventilation <=96 hours	60	8.4	29,708
MDC 3 (Diseases and Disorders of the Ear, Nose, Mouth and Throat)—Cases with mechanical ventilation <=96 hours	1,397	9.8	29,479
MDC 4 (Diseases and Disorders of the Respiratory System)—Cases with mechanical ventilation <=96 hours	64,861	7.8	20,929
MDC 5 (Diseases and Disorders of the Circulatory System)—Cases with mechanical ventilation <=96 hours	45,147	8.8	35,818
MDC 6 (Diseases and Disorders of the Digestive System)—Cases with mechanical ventilation <=96 hours	15,629	11.3	33,660
MDC 7 (Diseases and Disorders of the Hepatobiliary System and Pancreas)—Cases with mechanical ventilation <=96 hours	4,678	10.5	31,565
MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)—Cases with mechanical ventilation <=96 hours	7,140	10.4	40,183
MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast)—Cases with mechanical ventilation <=96 hours	1,036	10.7	26,809
MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders)—Cases with mechanical ventilation <=96 hours	3,591	9.0	23,863
MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract)—Cases with mechanical ventilation <=96 hours	5,506	10.2	27,951
MDC 12 (Diseases and Disorders of the Male Reproductive System)—Cases with mechanical ventilation <=96 hours	168	11.5	35,009
MDC 13 (Diseases and Disorders of the Female Reproductive System)—Cases with mechanical ventilation <=96 hours	310	10.8	32,382
MDC 14 (Pregnancy, Childbirth and the Puerperium)—Cases with mechanical ventilation <=96 hours	55	7.6	21,785
MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, Immunologic Disorders)—Cases with mechanical ventilation <=96 hours	1,171	8.7	26,138
MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms)—Cases with mechanical ventilation <=96 hours	1,178	15.3	46,335
MDC 18 (Infectious and Parasitic Diseases, Systemic or Unspecified Sites)—Cases with mechanical ventilation <=96 hours	69,826	8.5	25,253
MDC 19 (Mental Diseases and Disorders)—Cases with mechanical ventilation <=96 hours	264	10.4	18,805
MDC 20 (Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental Disorders)—Cases with mechanical ventilation <=96 hours	918	8.3	19,376
MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs)—Cases with mechanical ventilation <=96 hours	10,842	6.5	17,843

MECHANICAL VENTILATION <=96 HOURS ACROSS ALL MDCS—Continued

MDC	Number of cases	Average length of stay	Average costs
MDC 22 (Burns)—Cases with mechanical ventilation <=96 hours	353	9.7	45,557
MDC 23 (Factors Influencing Health Status and Other Contacts with Health Services)—Cases with mechanical ventilation <=96 hours	307	6.6	16,159
MDC 24 (Multiple Significant Trauma)—Cases with mechanical ventilation <=96 hours	1,709	8.8	36,475
MDC 25 (Human Immunodeficiency Virus Infections)—Cases with mechanical ventilation <=96 hours	541	10.4	29,255

As shown in the table, the top 5 MDCs with the largest number of cases reporting mechanical ventilation <=96 hours are MDC 18, with 69,826 cases; MDC 4, with 64,861 cases; MDC 5, with 45,147 cases; MDC 1, with 29,896 cases; and MDC 6, with 15,629 cases. We note that the claims data demonstrate that the average length of stay is consistent with what we would expect for cases reporting the use of mechanical ventilation <=96 hours across each of the 25 MDCs. The top 5 MDCs with the highest average costs for cases reporting mechanical ventilation <=96 hours are MDC 17, with average costs of $46,335; MDC 22, with average costs of $45,557; MDC 8, with average costs of $40,183; MDC 24, with average costs of $36,475; and MDC 5, with average costs of $35,818. Similar to the cases reporting mechanical ventilation >96 hours, the claims data for cases reporting the use of mechanical ventilation <=96 hours also reflect a wide variance with regard to the frequency and average costs. Depending on the number of cases in each MS–DRG, it may be difficult to detect patterns of complexity and resource intensity.

With respect to the requestor's statement that reporting for other purposes, such as quality measures, clinical trials, and Joint Commission and State certification or survey cases, is based on the principal diagnosis, and their belief that patients who present with cerebral infarction or cerebral hemorrhage and acute respiratory failure are currently in conflict for principal diagnosis sequencing because the cerebral infarction or cerebral hemorrhage code is needed as the principal diagnosis for quality reporting and other purposes (however, acute respiratory failure is needed as the principal diagnosis for purposes of appropriate payment under the MS–DRGs), we note that providers are required to assign the principal diagnosis according to the ICD–10–CM Official Guidelines for Coding and Reporting and these assignments are not based on factors such as quality measures or clinical trials indications. Furthermore, we do not base MS–DRG reclassification decisions on those factors. If the cerebral hemorrhage or ischemic cerebral infarction is the reason for admission to the hospital, the cerebral hemorrhage or ischemic cerebral infarction diagnosis code should be assigned as the principal diagnosis.

We acknowledge that new MS–DRGs were created for cases of patients with sepsis requiring mechanical ventilation greater than and less than 96 hours. However, those MS–DRGs (MS–DRG 575 (Septicemia with Mechanical Ventilation 96+ Hours Age >17) and MS–DRG 576 (Septicemia without Mechanical Ventilation 96+ Hours Age >17)) were created several years ago, in FY 2007 (71 FR 47938 through 47939) in response to public comments suggesting alternatives for the need to recognize the treatment for that subset of patients with severe sepsis who exhibit a greater degree of severity and resource consumption as septicemia is a systemic condition, and also as a preliminary step in the transition from the CMS DRGs to MS–DRGs.

We believe that additional analysis and efforts toward a broader approach to refining the MS–DRGs for cases of patients requiring mechanical ventilation across the MDCs involves carefully examining the potential for instability in the relative weights and disrupting the integrity of the MS–DRG system based on the creation of separate MS-DRGs involving small numbers of cases for various indications in which mechanical ventilation may be required.

The second request focused on patients diagnosed with *any* neurological condition classified under MDC 1 requiring mechanical ventilation in the absence of an O.R. procedure and without having received a thrombolytic agent. Because the first request specifically involved analysis for the acute neurological conditions of cerebral infarction and intracranial hemorrhage under MDC 1 and our findings do not support creating new MS–DRGs for those specific conditions, we did not perform separate claims analysis for other conditions classified under MDC 1.

Therefore, we are not proposing to create new MS–DRGs for cases that identify patients diagnosed with neurological conditions classified under MDC 1 who require mechanical ventilation with or without a thrombolytic and in the absence of an O.R. procedure. We are inviting public comments on our proposal.

4. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Pacemaker Insertions

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56804 through 56809), we discussed a request to examine the ICD–10–PCS procedure code combinations that describe procedures involving pacemaker insertions to determine if some procedure code combinations were excluded from the Version 33 ICD–10 MS–DRG assignments for MS–DRGs 242, 243, and 244 (Permanent Cardiac Pacemaker Implant with MCC, with CC, and without CC/MCC, respectively) under MDC 5. We finalized our proposal to modify the Version 34 ICD–10 MS–DRG GROUPER logic so the specified procedure code combinations were no longer required for assignment into those MS–DRGs. As a result, the logic for pacemaker insertion procedures was simplified by separating the procedure codes describing cardiac pacemaker device insertions into one list and separating the procedure codes describing cardiac pacemaker lead insertions into another list. Therefore, when any ICD–10–PCS procedure code describing the insertion of a pacemaker device is reported from that specific logic list with any ICD–10–PCS procedure code describing the insertion of a pacemaker lead from that specific logic list (81 FR 56804 through 56806), the case is assigned to MS–DRGs 242, 243, and 244 under MDC 5.

We then discussed our examination of the Version 33 GROUPER logic for MS-DRGs 258 and 259 (Cardiac Pacemaker Device Replacement with and without MCC, respectively) because assignment of cases to these MS–DRGs

also included qualifying ICD–10–PCS procedure code combinations involving pacemaker insertions (81 FR 56806 through 56808). Specifically, the logic for Version 33 ICD–10 MS–DRGs 258 and 259 included ICD–10–PCS procedure code combinations describing the removal of pacemaker devices and the insertion of new pacemaker devices. We finalized our proposal to modify the Version 34 ICD–10 MS–DRG GROUPER logic for MS–DRGs 258 and 259 to establish that a case reporting any procedure code from the list of ICD–10–PCS procedure codes describing procedures involving pacemaker device insertions without any other procedure codes describing procedures involving pacemaker leads reported would be assigned to MS–DRGs 258 and 259 (81 FR 56806 through 56807) under MDC 5. In addition, we pointed out that a limited number of ICD–10–PCS procedure codes describing pacemaker insertion are classified as non-operating room (non-O.R.) codes within the MS–DRGs and that the Version 34 ICD–10 MS–DRG GROUPER logic would continue to classify these procedure codes as non-O.R. codes. We noted that a case reporting any one of these non-O.R. procedure codes describing a pacemaker device insertion without any other procedure code involving a pacemaker lead would be assigned to MS–DRGs 258 and 259. Therefore, the listed procedure codes describing a pacemaker device insertion under MS–DRGs 258 and 259 are designated as non-O.R. affecting the MS–DRG.

Lastly, we discussed our examination of the Version 33 GROUPER logic for MS–DRGs 260, 261, and 262 (Cardiac Pacemaker Revision Except Device Replacement with MCC, with CC, and without CC/MCC, respectively), and noted that cases assigned to these MS–DRGs also included lists of procedure code combinations describing procedures involving the removal of pacemaker leads and the insertion of new leads, in addition to lists of single procedure codes describing procedures involving the insertion of pacemaker leads, removal of cardiac devices, and revision of cardiac devices (81 FR 56808). We finalized our proposal to modify the ICD–10 MS–DRG GROUPER logic for MS–DRGs 260, 261, and 262 so that cases reporting any one of the listed ICD–10–PCS procedure codes describing procedures involving pacemakers and related procedures and associated devices are assigned to MS DRGs 260, 261, and 262 under MDC 5. Therefore, the GROUPER logic that required a combination of procedure codes be reported for assignment into MS–DRGs 260, 261 and 262 under Version 33 was no longer required effective with discharges occurring on or after October 1, 2016 (FY 2017) under Version 34 of the ICD–10 MS–DRGs.

We note that while the discussion in the FY 2017 IPPS/LTCH PPS final rule focused on the MS–DRGs involving pacemaker procedures under MDC 5, similar GROUPER logic exists in Version 33 of the ICD–10 MS–DRGs under MDC 1 (Diseases and Disorders of the Nervous System) in MS–DRGs 040, 041 and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator and without CC/MCC, respectively) and MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without MCC, respectively) where procedure code combinations involving cardiac pacemaker device insertions or removals and cardiac pacemaker lead insertions or removals are required to be reported together for assignment into those MS–DRGs. We also note that, with the exception of when a principal diagnosis is reported from MDC 1, MDC 5, or MDC 21, the procedure codes describing the insertion, removal, replacement, or revision of pacemaker devices are assigned to a medical MS–DRG in the absence of another O.R. procedure according to the GROUPER logic. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 33, which is available via the Internet on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2016-IPPS-Final-Rule-Home-Page-Items/FY2016-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending* for complete documentation of the GROUPER logic that was in effect at that time for the Version 33 ICD–10 MS–DRGs discussed earlier.

For FY 2019, we received a request to assign all procedures involving the insertion of pacemaker devices to surgical MS–DRGs, regardless of the principal diagnosis. The requestor recommended that procedures involving pacemaker insertion be grouped to surgical MS–DRGs within the MDC to which the principal diagnosis is assigned, or that they group to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively). Currently, in Version 35 of the ICD–10 MS–DRGs, procedures involving pacemakers are assigned to MS–DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator and without CC/MCC, respectively) under MDC 1 (Diseases and Disorders of the Nervous System), to MS–DRGs 242, 243, and 244 (Permanent Cardiac Pacemaker Implant with MCC, with CC, and without CC/MCC, respectively), MS–DRGs 258 and 259 (Cardiac Pacemaker Device Replacement with MCC and without MCC, respectively), and MS–DRGs 260, 261 and 262 (Cardiac Pacemaker Revision Except Device Replacement with MCC, with CC, and without CC/MCC, respectively) under MDC 5 (Diseases and Disorders of the Circulatory System), and to MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively), under MDC 21 (Injuries, Poisoning and Toxic Effects of Drugs), with all other unrelated principal diagnoses resulting in a medical MS–DRG assignment. According to the requestor, the medical MS–DRGs do not provide adequate payment for the pacemaker device, specialized operating suites, time, skills, and other resources involved for pacemaker insertion procedures. Therefore, the requestor recommended that procedures involving pacemaker insertions be grouped to surgical MS–DRGs. We refer readers to the ICD–10 MS–DRG Definitions Manual Version 35, which is available via the Internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2018-IPPS-Final-Rule-Home-Page-Items/FY2018-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending* for complete documentation of the GROUPER logic for the MS–DRGs discussed earlier.

The following procedure codes describe procedures involving the insertion of a cardiac rhythm related device which are classified as a type of pacemaker insertion under the ICD–10 MS–DRGs. These four codes are assigned to MS–DRGs 040, 041, and 042, as well as MS–DRGs 907, 908, and 909, and are designated as O.R. procedures.

ICD–10–PCS code	Code description
0JH60PZ	Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach.
0JH63PZ	Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach.
0JH80PZ	Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach.
0JH83PZ	Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach.

We examined cases from the September update of the FY 2017 MedPAR claims data for cases involving pacemaker insertion procedures reporting the above ICD–10–PCS codes in MS–DRGs 040, 041 and 042 under MDC 1. Our findings are shown in the following table.

CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 1

MS–DRG in MDC 1	Number of cases	Average length of stay	Average costs
MS–DRG 040—All cases	4,462	10.4	$26,877
MS–DRG 040—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	13	14.2	55,624
MS–DRG 040—Cases with procedure code 0JH63PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach)	2	3.5	15,826
MS–DRG 040—Cases with procedure code 0JH80PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach)	0	0	0
MS–DRG 040—Cases with procedure code 0JH83PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach)	0	0	0
MS–DRG 041—All cases	5,648	5.2	16,927
MS–DRG 041—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	12	6.4	22,498
MS–DRG 041—Cases with procedure code 0JH63PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach)	4	5	17,238
MS–DRG 041—Cases with procedure code 0JH80PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach)	0	0	0
MS–DRG 041—Cases with procedure code 0JH83PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach)	0	0	0
MS–DRG 042—All cases	2,154	3.1	13,730
MS–DRG 042—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	5	8	18,183
MS–DRG 042—Cases with procedure code 0JH83PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach)	0	0	0
MS–DRG 042—Cases with procedure code 0JH80PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach)	0	0	0
MS–DRG 042—Cases with procedure code 0JH83PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach)	0	0	0

The following table is a summary of the findings shown above from our review of MS–DRGs 040, 041 and 042 and the total number of cases reporting a pacemaker insertion procedure.

MS–DRGS FOR CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 1

MS–DRG in MDC 1	Number of cases	Average length of stay	Average costs
MS–DRGs 040, 041, and 042—All cases	12,264	6.7	$19,986
MS–DRGs 040, 041, and 042—Cases with a pacemaker insertion procedure	36	9.1	32,906

We found a total of 12,264 cases in MS–DRGs 040, 041, and 042 with an average length of stay of 6.7 days and average costs of $19,986. We found a total of 36 cases in MS–DRGs 040, 041, and 042 reporting procedure codes describing the insertion of a pacemaker device with an average length of stay of 9.1 days and average costs of $32,906.

We then examined cases involving pacemaker insertion procedures reporting those same four ICD–10–PCS procedure codes 0JH60PZ, 0JH63PZ, 0JH80PZ and 0JH83PZ in MS–DRGs 907, 908, and 909 under MDC 21. Our findings are shown in the following table.

MS–DRGs FOR CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 21

MS–DRG in MDC 21	Number of cases	Average length of stay	Average costs
MS–DRG 907—All cases	7,405	10.1	$28,997
MS–DRG 907—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	7	11.1	60,141
MS–DRG 908—All cases	8,519	5.2	14,282
MS–DRG 908—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	4	3.8	35,678
MS–DRG 909—All cases	3,224	3.1	9,688
MS–DRG 909—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	2	2	42,688

We note that there were no cases found where procedure codes 0JH63PZ, 0JH80PZ or 0JH83PZ were reported in MS–DRGs 907, 908 and 909 under MDC 21 and, therefore, they are not displayed in the table.

The following table is a summary of the findings shown above from our review of MS–DRGs 907, 908, and 909 and the total number of cases reporting a pacemaker insertion procedure.

MS–DRGs FOR CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 21

MS–DRG in MDC 21	Number of cases	Average length of stay	Average costs
MS–DRGs 907, 908 and 909—All cases	19,148	6.7	$19,199
MS–DRGs 907, 908 and 909—Cases with a pacemaker insertion procedure	13	7.5	49,929

We found a total of 19,148 cases in MS–DRGs 907, 908, and 909 with an average length of stay of 6.7 days and average costs of $19,199. We found a total of 13 cases in MS–DRGs 907, 908, and 909 reporting pacemaker insertion procedures with an average length of stay of 7.5 days and average costs of $49,929.

We also examined cases involving pacemaker insertion procedures reporting the following procedure codes that are assigned to MS–DRGs 242, 243, and 244 under MDC 5.

ICD–10–PCS code	Code description
0JH604Z	Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, open approach.
0JH605Z	Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, open approach.
0JH606Z	Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, open approach.
0JH607Z	Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, open approach.
0JH60PZ	Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach.
0JH634Z	Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, percutaneous approach.
0JH635Z	Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, percutaneous approach.
0JH636Z	Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, percutaneous approach.
0JH637Z	Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, percutaneous approach.
0JH63PZ	Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach.
0JH804Z	Insertion of pacemaker, single chamber into abdomen subcutaneous tissue and fascia, open approach.
0JH805Z	Insertion of pacemaker, single chamber rate responsive into abdomen subcutaneous tissue and fascia, open approach.
0JH806Z	Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, open approach.
0JH807Z	Insertion of cardiac resynchronization pacemaker pulse generator into abdomen subcutaneous tissue and fascia, open approach.
0JH80PZ	Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach.
0JH834Z	Insertion of pacemaker, single chamber into abdomen subcutaneous tissue and fascia, percutaneous approach.
0JH835Z	Insertion of pacemaker, single chamber rate responsive into abdomen subcutaneous tissue and fascia, percutaneous approach.
0JH836Z	Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, percutaneous approach.
0JH837Z	Insertion of cardiac resynchronization pacemaker pulse generator into abdomen subcutaneous tissue and fascia, percutaneous approach.
0JH83PZ	Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, percutaneous approach.

Our data findings are shown in the following table. We note that procedure codes displayed with an asterisk (*) in the table are designated as non-O.R. procedures affecting the MS–DRG.

CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 5

MS–DRG in MDC 5	Number of cases	Average length of stay	Average costs
MS–DRG 242—All cases	18,205	6.9	$26,414
MS–DRG 242—Cases with procedure code 0JH604Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, open approach)	2,518	7.7	25,004
MS–DRG 242—Cases with procedure code 0JH605Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, open approach)	306	7.7	24,454
MS–DRG 242—Cases with procedure code 0JH606Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, open approach)	13,323	6.7	25,497
MS–DRG 242—Cases with procedure code 0JH607Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, open approach)	1,528	8.1	37,060
MS–DRG 242—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	5	16.6	59,334
MS–DRG 242—Cases with procedure code 0JH634Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, percutaneous approach)	65	8.5	26,789
MS–DRG 242—Cases with procedure code 0JH635Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, percutaneous approach)	10	7	35,104
MS–DRG 242—Cases with procedure code 0JH636Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, percutaneous approach)	313	6.4	23,699
MS–DRG 242—Cases with procedure code 0JH637Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest Subcutaneous tissue and fascia, percutaneous approach)	82	7.1	35,382
MS–DRG 242—Cases with procedure code 0JH63PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach)	2	12.5	32,405
MS–DRG 242—Cases with procedure code 0JH804Z* (Insertion of pacemaker, single chamber into abdomen subcutaneous tissue and fascia, open approach)	25	14.4	43,080
MS–DRG 242—Cases with procedure code 0JH805Z* (Insertion of pacemaker, single chamber rate responsive into abdomen subcutaneous tissue and fascia, open approach)	2	4	26,949
MS–DRG 242—Cases with procedure code 0JH806Z* (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, open approach)	50	6.8	25,306
MS–DRG 242—Cases with procedure code 0JH807Z (Insertion of cardiac resynchronization pacemaker pulse generator into abdomen subcutaneous tissue and fascia, open approach)	5	21.2	67,908
MS–DRG 242—Cases with procedure code 0JH836Z (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, percutaneous approach)	1	5	36,111
MS–DRG 243—All cases	24,586	4	18,669
MS–DRG 243—Cases with procedure code 0JH604Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, open approach)	2,537	4.7	17,118
MS–DRG 243—Cases with procedure code 0JH605Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, open approach)	271	4.4	17,268
MS–DRG 243—Cases with procedure code 0JH606Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, open approach)	19,921	3.9	18,306
MS–DRG 243—Cases with procedure code 0JH607Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, open approach)	1,236	4.4	28,658
MS–DRG 243—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	6	4.2	20,994
MS–DRG 243—Cases with procedure code 0JH634Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, percutaneous approach)	55	5.2	16,784
MS–DRG 243—Cases with procedure code 0JH635Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, percutaneous approach)	15	4.1	17,938
MS–DRG 243—Cases with procedure code 0JH636Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, percutaneous approach)	431	3.7	16,164
MS–DRG 243—Cases with procedure code 0JH637Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, percutaneous approach)	58	5	28,926
MS–DRG 243—Cases with procedure code 0JH63PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach)	3	8.3	23,717
MS–DRG 243—Cases with procedure code 0JH804Z* (Insertion of pacemaker, single chamber into abdomen subcutaneous tissue and fascia, open approach)	10	8.2	20,871
MS–DRG 243—Cases with procedure code 0JH805Z* (Insertion of pacemaker, single chamber rate responsive into abdomen subcutaneous tissue and fascia, open approach)	1	4	15,739
MS–DRG 243—Cases with procedure code 0JH806Z* (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, open approach)	57	4.4	18,787
MS–DRG 243—Cases with procedure code 0JH807Z (Insertion of cardiac resynchronization pacemaker pulse generator into abdomen subcutaneous tissue and fascia, open approach)	3	4	19,653
MS–DRG 243—Cases with procedure code 0JH80PZ (Insertion of cardiac rhythm related device into abdomen subcutaneous tissue and fascia, open approach)	1	7	16,224
MS–DRG 243—Cases with procedure code 0JH836Z* (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, percutaneous approach)	1	2	14,005
MS–DRG 244—All cases	15,974	2.7	15,670
MS–DRG 244—Cases with procedure code 0JH604Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, open approach)	1,045	3.2	14,541

CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 5—Continued

MS–DRG in MDC 5	Number of cases	Average length of stay	Average costs
MS–DRG 244—Cases with procedure code 0JH605Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, open approach)	127	3	13,208
MS–DRG 244—Cases with procedure code 0JH606Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, open approach)	14,092	2.7	15,596
MS–DRG 244—Cases with procedure code 0JH607Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, open approach)	303	2.8	26,221
MS–DRG 244—Cases with procedure code 0JH60PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, open approach)	2	4.5	9,248
MS–DRG 244—Cases with procedure code 0JH634Z* (Insertion of pacemaker, single chamber into chest subcutaneous tissue and fascia, percutaneous approach)	32	2.8	11,525
MS–DRG 244—Cases with procedure code 0JH635Z* (Insertion of pacemaker, single chamber rate responsive into chest subcutaneous tissue and fascia, percutaneous approach)	1	2	30,100
MS–DRG 244—Cases with procedure code 0JH636Z* (Insertion of pacemaker, dual chamber into chest subcutaneous tissue and fascia, percutaneous approach)	320	2.6	13,670
MS–DRG 244—Cases with procedure code 0JH637Z (Insertion of cardiac resynchronization pacemaker pulse generator into chest subcutaneous tissue and fascia, percutaneous approach)	20	2.7	19,218
MS–DRG 244—Cases with procedure code 0JH63PZ (Insertion of cardiac rhythm related device into chest subcutaneous tissue and fascia, percutaneous approach)	1	3	12,120
MS–DRG 244—Cases with procedure code 0JH805Z* (Insertion of pacemaker, single chamber rate responsive into abdomen subcutaneous tissue and fascia, open approach)	1	1	21,604
MS–DRG 244—Cases with procedure code 0JH806Z* (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, open approach)	36	3.2	16,492
MS–DRG 244—Cases with procedure code 0JH836Z* (Insertion of pacemaker, dual chamber into abdomen subcutaneous tissue and fascia, percutaneous approach)	1	3	12,160

The following table is a summary of the findings shown above from our review of MS–DRGs 242, 243, and 244 and the total number of cases reporting a pacemaker insertion procedure.

CASES INVOLVING PACEMAKER INSERTION PROCEDURES IN MDC 5

MS–DRG in MDC 5	Number of cases	Average length of stay	Average costs
MS–DRGs 242, 243 and 244—All cases	58,765	4.6	$20,253
MS–DRGs 242, 243, and 244—Cases with a pacemaker insertion procedure	*58,822	4.6	20,270

*The figure is not adjusted for cases reporting more than one pacemaker insertion procedure code. The figure represents the frequency in which the number of pacemaker insertion procedures was reported.

We found a total of 58,765 cases in MS–DRGs 242, 243, and 244 with an average length of stay of 4.6 days and average costs of $20,253. We found a total of 58,822 cases reporting pacemaker insertion procedures in MS–DRGs 242, 243, and 244 with an average length of stay of 4.6 days and average costs of $20,270. We note that the analysis performed is by procedure code, and because multiple pacemaker insertion procedures may be reported on a single claim, the total number of these pacemaker insertion procedure cases exceeds the total number of all cases found across MS–DRGs 242, 243, and 244 (58,822 procedures versus 58,765 cases).

We then analyzed claims for cases reporting a procedure code describing (1) the insertion of a pacemaker device only, (2) the insertion of a pacemaker lead only, and (3) both the insertion of a pacemaker device and a pacemaker lead across all the MDCs except MDC 5 to determine the number of cases currently grouping to medical MS–DRGs and the potential impact of these cases moving into the surgical unrelated MS–DRGs 981, 982 and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively). Our findings are shown in the following table.

PACEMAKER INSERTION PROCEDURES IN MEDICAL MS–DRGS

All MDCs except MDC 5	Number of cases	Average length of stay	Average costs
Procedures for insertion of pacemaker device	2,747	9.5	$29,389
Procedures for insertion of pacemaker lead	2,831	9.4	29,240
Procedures for insertion of pacemaker device with insertion of pacemaker lead	2,709	9.4	29,297

We found a total of 2,747 cases reporting the insertion of a pacemaker device in 177 medical MS–DRGs with an average length of stay of 9.5 days and average costs of $29,389 across all the MDCs except MDC 5. We found a total of 2,831 cases reporting the insertion of a pacemaker lead in 175 medical MS–DRGs with an average length of stay of 9.4 days and average costs of $29,240 across all the MDCs except MDC 5. We found a total of 2,709 cases reporting both the insertion of a pacemaker device and the insertion of a pacemaker lead in 170 medical MS–DRGs with an average length of stay of 9.4 days and average costs of $29,297 across all the MDCs except MDC 5.

We also analyzed claims for cases reporting a procedure code describing the insertion of a pacemaker device with a procedure code describing the insertion of a pacemaker lead in all the surgical MS–DRGs across all the MDCs except MDC 5. Our findings are shown in the following table.

PACEMAKER INSERTION PROCEDURES IN MEDICAL MS–DRGS

All MDCs except MDC 5	Number of cases	Average length of stay	Average costs
Procedures for insertion of pacemaker device with insertion of pacemaker lead	3,667	12.8	$48,856

We found a total of 3,667 cases reporting the insertion of a pacemaker device and the insertion of a pacemaker lead in 194 surgical MS–DRGs with an average length of stay of 12.8 days and average costs of $48,856 across all the MDCs except MDC 5.

For cases where the insertion of a pacemaker device, the insertion of a pacemaker lead or the insertion of both a pacemaker device and lead were reported on a claim grouping to a medical MS–DRG, the average length of stay and average costs were generally higher for these cases when compared to the average length of stay and average costs for all the cases in their assigned MS–DRGs. For example, we found 113 cases reporting both the insertion of a pacemaker device and lead in MS–DRG 378 (G.I. Hemorrhage with CC), with an average length of stay of 7.1 days and average costs of $23,711. The average length of stay for all cases in MS–DRG 378 was 3.6 days and the average cost for all cases in MS–DRG 378 was $7,190. The average length of stay for cases reporting both the insertion of a pacemaker device and lead were twice as long as the average length of stay for all the cases in MS–DRG 378 (7.1 days versus 3.6 days). In addition, the average costs for the cases reporting both the insertion of a pacemaker device and lead were approximately $16,500 higher than the average costs of all the cases in MS–DRG 378 ($23,711 versus $7,190). We refer readers to Table 6P.1c associated with this proposed rule (which is available via the internet on the CMS website) for the detailed report of our findings across the other medical MS–DRGs. We note that the average costs and average length of stay for cases reporting the insertion of a pacemaker device, the insertion of a pacemaker lead or the insertion of both a pacemaker device and lead are reflected in Columns D and E, while the average costs and average length of stay for all cases in the respective MS–DRG are reflected in Columns I and J.

The claims data results from our analysis of this request showed that if we were to support restructuring the GROUPER logic so that pacemaker insertion procedures that include a combination of the insertion of the pacemaker device with the insertion of the pacemaker lead are designated as an O.R. procedure across all the MDCs, we would expect approximately 2,709 cases to move or ''shift'' from the medical MS–DRGs where they are currently grouping into the surgical unrelated MS–DRGs 981, 982, and 983.

Our clinical advisors reviewed the data results and recommended that pacemaker insertion procedures involving a complete pacemaker system (insertion of pacemaker device combined with insertion of pacemaker lead) warrant classification into surgical MS–DRGs because the patients receiving these devices demonstrate greater treatment difficulty and utilization of resources when compared to procedures that involve the insertion of only the pacemaker device or the insertion of only the pacemaker lead. We note that the request we addressed in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24981 through 24984) was to determine if some procedure code combinations were excluded from the ICD–10 MS–DRG assignments for MS–DRGs 242, 243, and 244. We proposed and, upon considering public comments received, finalized an alternate approach that we believed to be less complicated. We also stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56806) that we would continue to monitor the MS–DRGs for pacemaker insertion procedures as we receive ICD–10 claims data. Upon further review, we believe that recreating the procedure code combinations for pacemaker insertion procedures would allow for the grouping of these procedures to the surgical MS–DRGs, which we believe is warranted to better recognize the resources and complexity of performing these procedures. Therefore, we are proposing to recreate pairs of procedure code combinations involving both the insertion of a pacemaker device with the insertion of a pacemaker lead to act as procedure code combination pairs or ''clusters'' in the GROUPER logic that are designated as O.R. procedures outside of MDC 5 when reported together. We are inviting public comments on our proposal.

We also are proposing to designate all the procedure codes describing the insertion of a pacemaker device or the insertion of a pacemaker lead as non-O.R. procedures when reported as a single, individual stand-alone code based on the recommendation of our clinical advisors as noted earlier in this section and consistent with how these procedures were classified under the Version 33 ICD–10 MS–DRG GROUPER logic. We are inviting public comments on our proposal.

We refer readers to Table 6P.1d, Table 6P.1e, and Table 6P.1f associated with this proposed rule (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) for (1) a complete list of the proposed procedure code combinations or ''pairs''; (2) a complete list of the procedure codes describing the insertion of a pacemaker device; and (3) a complete list of the procedure codes describing the insertion of a pacemaker lead. We are inviting public comments on our lists of procedure codes that we are proposing to include for restructuring the ICD–10 MS–DRG GROUPER logic for pacemaker insertion procedures.

In addition, we are proposing to maintain the current GROUPER logic for MS–DRGs 258 and 259 (Cardiac

Pacemaker Device Replacement with MCC and without MCC, respectively) where the listed procedure codes as shown in the ICD–10 MS–DRG Definitions Manual Version 35, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2018-IPPS-Final-Rule-Home-Page-Items/FY2018-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending,* describing a pacemaker device insertion, continue to be designated as ''non-O.R. affecting the MS–DRG'' because they are reported when a pacemaker device requires replacement and have a corresponding diagnosis from MDC 5. Also, we are proposing to maintain the current GROUPER logic for MS–DRGs 260, 261, and 262 (Cardiac Pacemaker Revision Except Device Replacement with MCC, with CC, and without CC/MCC, respectively) so that cases reporting any one of the listed ICD–10–PCS procedure codes as shown in the ICD–10 MS–DRG Definitions Manual Version 35 describing procedures involving pacemakers and related procedures and associated devices will continue to be assigned to those MS–DRGs under MDC 5 because they are reported when a pacemaker device requires revision and they have a corresponding circulatory system diagnosis. We are inviting public comments on our proposal.

We note that, while the requestor did not include the following procedure codes in its request, these codes are also currently designated as O.R. procedure codes and are assigned to MS–DRGs 260, 261, and 262 under MDC 5.

ICD–10–PCS code	Code description
02PA0MZ	Removal of cardiac lead from heart, open approach.
02PA3MZ	Removal of cardiac lead from heart, percutaneous approach.
02PA4MZ	Removal of cardiac lead from heart, percutaneous endoscopic approach.
02WA0MZ	Revision of cardiac lead in heart, open approach.
02WA3MZ	Revision of cardiac lead in heart, percutaneous approach.
02WA4MZ	Revision of cardiac lead in heart, percutaneous endoscopic approach.
0JPT0PZ	Removal of cardiac rhythm related device from trunk subcutaneous tissue and fascia, open approach.
0JPT3PZ	Removal of cardiac rhythm related device from trunk subcutaneous tissue and fascia, percutaneous approach.
0JWT0PZ	Revision of cardiac rhythm related device in trunk subcutaneous tissue and fascia, open approach.
0JWT3PZ	Revision of cardiac rhythm related device in trunk subcutaneous tissue and fascia, percutaneous approach.

We are soliciting public comments on whether these procedure codes describing the removal or revision of a cardiac lead and removal or revision of a cardiac rhythm related (pacemaker) device should also be designated as non-O.R. procedure codes for FY 2019 when reported as a single, individual stand-alone code with a principal diagnosis outside of MDC 5 for consistency in the classification among these devices.

We also note that, while the requestor did not include the following procedure codes in its request, the codes in the following table became effective October 1, 2016 (FY 2017) and also describe procedures involving the insertion of a pacemaker. Specifically, the following list includes procedure codes that describe an intracardiac or ''leadless'' pacemaker. These procedure codes are designated as O.R. procedure codes and are currently assigned to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with MCC and without MCC, respectively) under MDC 5.

ICD–10–PCS code	Code description
02H40NZ	Insertion of intracardiac pacemaker into coronary vein, open approach.
02H43NZ	Insertion of intracardiac pacemaker into coronary vein, percutaneous approach.
02H44NZ	Insertion of intracardiac pacemaker into coronary vein, percutaneous endoscopic approach.
02H60NZ	Insertion of intracardiac pacemaker into right atrium, open approach.
02H63NZ	Insertion of intracardiac pacemaker into right atrium, percutaneous approach.
02H64NZ	Insertion of intracardiac pacemaker into right atrium, percutaneous endoscopic approach.
02H70NZ	Insertion of intracardiac pacemaker into left atrium, open approach.
02H73NZ	Insertion of intracardiac pacemaker into left atrium, percutaneous approach.
02H74NZ	Insertion of intracardiac pacemaker into left atrium, percutaneous endoscopic approach.
02HK0NZ	Insertion of intracardiac pacemaker into right ventricle, open approach.
02HK3NZ	Insertion of intracardiac pacemaker into right ventricle, percutaneous approach.
02HK4NZ	Insertion of intracardiac pacemaker into right ventricle, percutaneous endoscopic approach.
02HL0NZ	Insertion of intracardiac pacemaker into left ventricle, open approach.
02HL3NZ	Insertion of intracardiac pacemaker into left ventricle, percutaneous Approach.
02HL4NZ	Insertion of intracardiac pacemaker into left ventricle, percutaneous endoscopic approach.
02WA0NZ	Revision of intracardiac pacemaker in heart, open approach.
02WA3NZ	Revision of intracardiac pacemaker in heart, percutaneous approach.
02WA4NZ	Revision of intracardiac pacemaker in heart, percutaneous endoscopic approach.
02WAXNZ	Revision of intracardiac pacemaker in heart, external approach.
02H40NZ	Insertion of intracardiac pacemaker into coronary vein, open approach.
02H43NZ	Insertion of intracardiac pacemaker into coronary vein, percutaneous approach.

We examined claims data for procedures involving an intracardiac pacemaker reporting any of the above codes across all MS–DRGs. Our findings are shown in the following table.

INTRACARDIAC PACEMAKER PROCEDURES

Across all MS–DRGs	Number of cases	Average length of stay	Average costs
Procedures for intracardiac pacemaker	1,190	8.6	$38,576

We found 1,190 cases reporting a procedure involving an intracardiac pacemaker with an average length of stay of 8.6 days and average costs of $38,576. Of these 1,190 cases, we found 1,037 cases in MS–DRGs under MDC 5. We also found that the 153 cases that grouped to MS–DRGs outside of MDC 5 grouped to surgical MS–DRGs; therefore, another O.R. procedure was also reported on the claim. However, we are soliciting public comments on whether these procedure codes describing the insertion and revision of intracardiac pacemakers should also be considered for classification into all surgical unrelated MS–DRGs outside of MDC 5 for FY 2019.

b. Drug-Coated Balloons in Endovascular Procedures

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38111), we discontinued new technology add-on payments for the LUTONIX® and IN.PACT™ Admiral™ drug-coated balloon (DCB) technologies, effective for FY 2018, because the technology no longer met the newness criterion for new technology add-on payments. For FY 2019, we received a request to reassign cases that utilize a drug-coated balloon in the performance of an endovascular procedure involving the treatment of superficial femoral arteries for peripheral arterial disease from the lower severity level MS–DRG 254 (Other Vascular Procedures without CC/MCC) and MS–DRG 253 (Other Vascular Procedures with CC) to the highest severity level MS–DRG 252 (Other Vascular Procedures with MCC). We also received a request to revise the title of MS–DRG 252 to ''Other Vascular Procedures with MCC or Drug-Coated Balloon Implant''.

There are currently 36 ICD–10–PCS procedure codes that describe the performance of endovascular procedures involving treatment of the superficial femoral arteries that utilize a drug-coated balloon, which are listed in the following table.

ICD–10–PCS code	Code description
047K041	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047K0D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, open approach.
047K0Z1	Dilation of right femoral artery using drug-coated balloon, open approach.
047K341	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047K3D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, percutaneous approach.
047K3Z1	Dilation of right femoral artery using drug-coated balloon, percutaneous approach.
047K441	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047K4D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047K4Z1	Dilation of right femoral artery using drug-coated balloon, percutaneous endoscopic approach.
047L041	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047L0D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, open approach.
047L0Z1	Dilation of left femoral artery using drug-coated balloon, open approach.
047L341	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047L3D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, percutaneous approach.
047L3Z1	Dilation of left femoral artery using drug-coated balloon, percutaneous approach.
047L441	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047L4D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047L4Z1	Dilation of left femoral artery using drug-coated balloon, percutaneous endoscopic approach.
047M041	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047M0D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, open approach.
047M0Z1	Dilation of right popliteal artery using drug-coated balloon, open approach.
047M341	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047M3D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, percutaneous approach.
047M3Z1	Dilation of right popliteal artery using drug-coated balloon, percutaneous approach.
047M441	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047M4D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047M4Z1	Dilation of right popliteal artery using drug-coated balloon, percutaneous endoscopic approach.
047N041	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047N0D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, open approach.
047N0Z1	Dilation of left popliteal artery using drug-coated balloon, open approach.
047N341	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047N3D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, percutaneous approach.
047N3Z1	Dilation of left popliteal artery using drug-coated balloon, percutaneous approach.
047N441	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047N4D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047N4Z1	Dilation of left popliteal artery using drug-coated balloon, percutaneous endoscopic approach.

The requestor performed its own analysis of claims data and expressed concern that it found that the average costs of cases using a drug-coated balloon in the performance of percutaneous endovascular procedures involving treatment of patients who have been diagnosed with peripheral arterial disease are significantly higher than the average costs of all of the cases in the MS–DRGs where these procedures are currently assigned. The requestor also expressed concern that payments may no longer be adequate because the new technology add-on payments have been discontinued and may affect patient access to these procedures.

We first examined claims data from the September 2017 update of the FY 2017 MedPAR file for cases reporting any 1 of the 36 ICD–10–PCS procedure codes listed in the immediately preceding table that describe the use of a drug-coated balloon in the performance of endovascular procedures in MS–DRGs 252, 253, and 254. Our findings are shown in the following table.

MS–DRGs FOR OTHER VASCULAR PROCEDURES WITH DRUG-COATED BALLOON

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 252—All cases	33,583	7.6	$23,906
MS–DRG 252—Cases with drug-coated balloon	870	8.8	30,912
MS–DRG 253—All cases	25,714	5.4	18,986
MS–DRG 253—Cases with drug-coated balloon	1,532	5.4	23,051
MS–DRG 254—All cases	12,344	2.8	13,287
MS–DRG 254—Cases with drug-coated balloon	488	2.4	17,445

As shown in this table, there were a total of 33,583 cases in MS–DRG 252, with an average length of stay of 7.6 days and average costs of $23,906. There were 870 cases in MS–DRG 252 reporting the use of a drug-coated balloon in the performance of an endovascular procedure, with an average length of stay of 8.8 days and average costs of $30,912. The total number of cases in MS–DRG 253 was 25,714, with an average length of stay of 5.4 days and average costs of $18,986. There were 1,532 cases in MS–DRG 253 reporting the use of a DCB in the performance of an endovascular procedure, with an average length of stay of 5.4 days and average costs of $23,051. The total number of cases in MS–DRG 254 was 12,344, with an average length of stay of 2.8 days and average costs of $13,287. There were 488 cases in MS–DRG 254 reporting the use of a DCB in the performance of an endovascular procedure, with an average length of stay of 2.4 days and average costs of $17,445.

The results of our data analysis show that there is not a very high volume of cases reporting the use of a drug-coated balloon in the performance of endovascular procedures compared to all of the cases in the assigned MS–DRGs. The data results also show that the average length of stay for cases reporting the use of a drug-coated balloon in the performance of endovascular procedures in MS–DRGs 253 and 254 is lower compared to the average length of stay for all of the cases in the assigned MS–DRGs, while the average length of stay for cases reporting the use of a drug-coated balloon in the performance of endovascular procedures in MS–DRG 252 is slightly higher compared to all of the cases in MS–DRG 252 (8.8 days versus 7.6 days). Lastly, the data results showed that the average costs for cases reporting the use of a drug-coated balloon in the performance of percutaneous endovascular procedures were higher compared to all of the cases in the assigned MS–DRGs. Specifically, for MS–DRG 252, the average costs for cases reporting the use of a DCB in the performance of endovascular procedures were $30,912 versus the average costs of $23,906 for all cases in MS–DRG 252, a difference of $7,006. For MS–DRG 253, the average costs for cases reporting the use of a drug-coated balloon in the performance of endovascular procedures were $23,051 versus the average costs of $18,986 for all cases in MS–DRG 253, a difference of $4,065. For MS–DRG 254, the average costs for cases reporting the use of a drug-coated balloon in the performance of endovascular procedures were $17,445 versus the average costs of $13,287 for all cases in MS–DRG 254, a difference of $4,158.

The following table is a summary of the findings discussed above from our review of MS–DRGs 252, 253 and 254 and the total number of cases that used a drug-coated balloon in the performance of the procedure across MS–DRGs 252, 253, and 254.

MS–DRGs FOR OTHER VASCULAR PROCEDURES AND CASES WITH DRUG-COATED BALLOON

MS–DRG	Number of cases	Average Length of stay	Average costs
MS–DRGs 252, 253, and 254—All cases	71,641	6.0	$20,310
MS–DRGs 252, 253, and 254—Cases with drug-coated balloon	2,890	6.0	24,569

As shown in this table, there were a total of 71,641 cases across MS–DRGs 252, 253, and 254, with an average length of stay of 6.0 days and average costs of $20,310. There were a total of 2,890 cases across MS–DRGs 252, 253, and 254 reporting the use of a drug-coated balloon in the performance of the procedure, with an average length of stay of 6.0 days and average costs of $24,569. The data analysis showed that cases reporting the use of a drug-coated balloon in the performance of the procedure across MS–DRGs 252, 253 and 254 have similar lengths of stay (6.0 days) compared to the average length of stay for all of the cases in MS–DRGs 252, 253, and 254. The data results also showed that the cases reporting the use of a drug-coated balloon in the performance of the procedure across

these MS–DRGs have higher average costs ($24,569 versus $20,310) compared to the average costs for all of the cases across these MS–DRGs.

The results of our claims data analysis and the advice from our clinical advisors do not support reassigning cases reporting the use of a drug-coated balloon in the performance of these procedures from the lower severity level MS–DRGs 253 and 254 to the highest severity level MS–DRG 252 at this time. If we were to reassign cases that utilize a drug-coated balloon in the performance of these types of procedures from MS–DRG 254 to MS–DRG 252, the cases would result in overpayment and also would have a shorter length of stay compared to all of the cases in MS–DRG 252. While the cases reporting the use of a drug-coated balloon in the performance of these procedures are higher compared to the average costs for all cases in their assigned MS–DRGs, it is not by a significant amount. We believe that as use of a drug-coated balloon becomes more common, the costs will be reflected in the data. Our clinical advisors also agreed that it would not be clinically appropriate to reassign cases for patients from the lowest severity level (without CC/MCC) MS–DRG to the highest severity level (with MCC) MS–DRG in the absence of additional data to better determine the resource utilization for this subset of patients. Therefore, for these reasons, we are proposing to not reassign cases reporting the use of a drug-coated balloon in the performance of endovascular procedures from MS–DRGs 253 and 254 to MS–DRG 252. We are inviting public comments on our proposal.

We note that because 24 of the 36 ICD–10–PCS procedure codes describing the use of a drug-coated balloon in the performance of endovascular procedures also include the use of an intraluminal device, we conducted further analysis to determine the number of cases reporting an intraluminal device with the use of a drug-coated balloon in the performance of the procedure versus the number of cases reporting the use of a drug-coated balloon alone. We analyzed the number of cases across MS–DRGs 252, 253, and 254 reporting: (1) The use of an intraluminal device (stent) with use of a drug-coated balloon in the performance of the procedure; (2) the use of a drug-eluting intraluminal device (stent) with the use of a drug-coated balloon in the performance of the procedure; and (3) the use of a drug-coated balloon only in the performance of the procedure. Our findings are shown in the following table.

MS–DRGs FOR OTHER VASCULAR PROCEDURES AND CASES WITH DRUG-COATED BALLOON

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRGs 252, 253 and 254—All cases	71,641	6.0	$20,310
MS–DRGs 252, 253 and 254—Cases with intraluminal device with drug-coated balloon	522	6.0	28,418
MS–DRGs 252, 253 and 254—Cases with drug-eluting intraluminal device with drug-coated balloon	447	6.0	26,098
MS–DRGs 252, 253 and 254—Cases with drug-coated balloon only	2,705	6.1	24,553

As shown in this table, there were a total of 71,641 cases across MS–DRGs 252, 253, and 254, with an average length of stay of 6.0 days and average costs of $20,310. There were 522 cases across MS–DRGs 252, 253, and 254 reporting the use of an intraluminal device with use of a drug-coated balloon in the performance of the procedure, with an average length of stay of 6.0 days and average costs of $28,418. There were 447 cases across MS–DRGs 252, 253, and 254 reporting the use of a drug-eluting intraluminal device with use of a drug-coated balloon in the performance of the procedure, with an average length of stay of 6.0 days and average costs of $26,098. Lastly, there were 2,705 cases across MS–DRGs 252, 253, and 254 reporting the use of a drug-coated balloon alone in the performance of the procedure, with an average length of stay of 6.1 days and average costs of $24,553.

The data showed that the 2,705 cases in MS–DRGs 252, 253, and 254 reporting the use of a drug-coated balloon alone in the performance of the procedure have lower average costs compared to the 969 cases in MS–DRGs 252, 253, and 254 reporting the use of an intraluminal device (522 cases) or a drug-eluting intraluminal device (447 cases) with a drug-coated balloon in the performance of the procedure ($24,553 versus $28,418 and $26,098, respectively). The data also showed that the cases reporting the use of a drug-coated balloon alone in the performance of the procedure have a comparable average length of stay compared to the cases reporting the use of an intraluminal device or a drug-eluting intraluminal device with a drug-coated balloon in the performance of the procedure (6.1 days versus 6.0 days).

In summary, we believe that further analysis of endovascular procedures involving the treatment of superficial femoral arteries for peripheral arterial disease that utilize a drug-coated balloon in the performance of the procedure would be advantageous. As additional claims data become available, we will be able to more fully evaluate the differences in cases where a procedure utilizes a drug-coated balloon alone in the performance of the procedure versus cases where a procedure utilizes an intraluminal device or a drug-eluting intraluminal device in addition to a drug-coated balloon in the performance of the procedure.

5. MDC 6 (Diseases and Disorders of the Digestive System)

a. Benign Lipomatous Neoplasm of Kidney

We received a request to reassign ICD–10–CM diagnosis code D17.71 (Benign lipomatous neoplasm of kidney) from MDC 06 (Diseases and Disorders of the Digestive System) to MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract). The requestor stated that this diagnosis code is used to describe a kidney neoplasm and believed that because the ICD–10–CM code is specific to the kidney, a more appropriate assignment would be under MDC 11. In FY 2015, under the ICD–9–CM classification, there was not a specific diagnosis code for a benign lipomatous neoplasm of the kidney. The only diagnosis code available was ICD–9–CM diagnosis code 214.3 (Lipoma of intra-abdominal organs), which was assigned to MS–DRGs 393, 394, and 395 (Other Digestive System Diagnoses with MCC, with CC, and without CC/MCC, respectively) under MDC 6. Therefore, when we converted from the ICD–9 based MS-DRGs to the ICD-10 MS-DRGs, there was not a specific code available that identified the kidney from which to

replicate. As a result, ICD–10–CM diagnosis code D17.71 was assigned to those same MS–DRGs (MS–DRGs 393, 394, and 395) under MDC 6.

While reviewing the MS–DRG classification of ICD–10–CM diagnosis code D17.71, we also reviewed the MS–DRG classification of another diagnosis code organized in subcategory D17.7, ICD–10–CM diagnosis code D17.72 (Benign lipomatous neoplasm of other genitourinary organ). ICD–10–CM diagnosis code D17.72 is currently assigned under MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) to MS–DRGs 606 and 607 (Minor Skin Disorders with and without MCC, respectively). Similar to the replication issue with ICD–10–CM diagnosis code D17.71, with ICD–10–CM diagnosis code D17.72, under the ICD–9–CM classification, there was not a specific diagnosis code to identify a benign lipomatous neoplasm of genitourinary organ. The only diagnosis code available was ICD–9–CM diagnosis code 214.8 (Lipoma of other specified sites), which was assigned to MS–DRGs 606 and 607 under MDC 09. Therefore, when we converted from the ICD–9 based MS-DRGs to the ICD–10 MS-DRGs, there was not a specific code available that identified another genitourinary organ (other than the kidney) from which to replicate. As a result, ICD–10–CM diagnosis code D17.72 was assigned to those same MS–DRGs (MS–DRGs 606 and 607) under MDC 9.

We are proposing to reassign ICD–10–CM diagnosis code D17.71 from MS–DRGs 393, 394, and 395 (Other Digestive System Diagnoses with MCC, with CC, and without CC/MCC, respectively) under MDC 06 to MS–DRGs 686, 687, and 688 (Kidney and Urinary Tract Neoplasms with MCC, with CC, and without CC/MCC, respectively) under MDC 11 because this diagnosis code is used to describe a kidney neoplasm. We also are proposing to reassign ICD–10–CM diagnosis code D17.72 from MS–DRGs 606 and 607 under MDC 09 to MS–DRGs 686, 687, and 688 under MDC 11 because this diagnosis code is used to describe other types of neoplasms classified to the genitourinary tract that do not have a specific code identifying the site. Our clinical advisors agree that the conditions described by the ICD–10–CM diagnosis codes provide specific anatomic detail involving the kidney and genitourinary tract and, therefore, if reclassified under this proposed MDC and reassigned to these MS–DRGs, would improve the clinical coherence of the patients assigned to these groups.

We are inviting public comments on our proposals.

b. Bowel Procedures

We received a request to reassign the following 8 ICD–10–PCS procedure codes that describe repositioning of the colon and takedown of end colostomy from MS–DRGs 344, 345, and 346 (Minor Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively):

ICD–10–PCS code	Code description
0DSK0ZZ	Reposition ascending colon, open approach.
0DKL4ZZ	Reposition ascending colon, percutaneous endoscopic approach.
0DSL0ZZ	Reposition transverse colon, open approach.
0DSL4ZZ	Reposition transverse colon, percutaneous endoscopic approach.
0DSM0ZZ	Reposition descending colon, open approach.
0DSM4ZZ	Reposition descending colon, percutaneous endoscopic approach.
0DSN0ZZ	Reposition sigmoid colon, open approach.
0DSN4ZZ	Reposition sigmoid colon, percutaneous endoscopic approach.

The requestor indicated that the resources required for procedures identifying repositioning of specified segments of the large bowel are more closely aligned with other procedures that group to MS–DRGs 329, 330, and 331, such as repositioning of the large intestine (unspecified segment).

We analyzed the claims data from the September 2017 update of the FY 2017 Med PAR file for MS–DRGs 344, 345 and 346 for all cases reporting the 8 ICD-10–PCS procedure codes listed in the table above. Our findings are shown in the following table:

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 344—All cases	1,452	9.5	$20,609
MS–DRG 344—All cases with a specific large bowel reposition procedure	52	9.6	23,409
MS–DRG 345—All cases	2,674	5.6	11,552
MS–DRG 345—All cases with a specific large bowel reposition	246	6	14,915
MS–DRG 346—All cases	990	3.8	8,977
MS–DRG 346—All cases with a specific large bowel reposition procedure	223	4.5	12,279

The data showed that the average length of stay and average costs for cases that reported a specific large bowel reposition procedure were generally consistent with the average length of stay and average costs for all of the cases in their assigned MS–DRG.

We then examined the claims data in the September 2017 update of the FY 2017 MedPAR file for MS–DRGs 329, 330 and 331. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRGs 329, 330, and 331—All cases	112,388	8.4	$21,382
MS–DRG 329—All cases	33,640	13.3	34,015
MS–DRG 330—All cases	52,644	7.3	17,896
MS–DRG 331—All cases	26,104	4.1	12,132

As shown in this table, across MS–DRGs 329, 330, and 331, we found a total of 112,388 cases, with an average length of stay of 8.4 days and average costs of $21,382. The results of our analysis indicate that the resources required for cases reporting the specific large bowel repositioning procedures are more aligned with those resources required for all cases assigned to MS–DRGs 344, 345, and 346, with the average costs being lower than the average costs for all cases assigned to MS–DRGs 329, 330, and 331. Our clinical advisors also indicated that the 8 specific bowel repositioning procedures are best aligned with those in MS–DRGs 344, 345, and 346. Therefore, we are proposing to maintain the current assignment of the 8 specific bowel repositioning procedures in MS-DRGs 344, 345, and 346 for FY 2019. We are inviting public comments on this proposal.

In conducting our analysis of MS–DRGs 329, 330, and 331, we also examined the subset of cases reporting one of the bowel procedures listed in the following table as the only O.R. procedure.

ICD–10–PCS code	Code description
0DQK0ZZ	Repair ascending colon, open approach.
0DQK4ZZ	Repair ascending colon, percutaneous endoscopic approach.
0DQL0ZZ	Repair transverse colon, open approach.
0DQL4ZZ	Repair transverse colon, percutaneous endoscopic approach.
0DQM0ZZ	Repair descending colon, open approach.
0DQM4ZZ	Repair descending colon, percutaneous endoscopic approach.
0DQN0ZZ	Repair sigmoid colon, open approach.
0DQN4ZZ	Repair sigmoid colon, percutaneous endoscopic approach.
0DSB0ZZ	Reposition ileum, open approach.
0DSB4ZZ	Reposition ileum, percutaneous endoscopic approach.
0DSE0ZZ	Reposition large intestine, open approach.
0DSE4ZZ	Reposition large intestine, percutaneous endoscopic approach.

This approach can be useful in determining whether resource use is truly associated with a particular procedure or whether the procedure frequently occurs in cases with other procedures with higher than average resource use. As shown in the following table, we identified 398 cases reporting a bowel procedure as the only O.R. procedure, with an average length of stay of 6.3 days and average costs of $13,595 across MS–DRGs 329, 330, and 331, compared to the overall average length of stay of 8.4 days and average costs of $21,382 for all cases in MS–DRGs 329, 330, and 331.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRGs 329, 330 and 331—All cases	112,388	8.4	$21,382
MS–DRGs 329, 330 and 331—All cases with a bowel procedure as only O.R. procedure	398	6.3	13,595
MS–DRG 329—All cases	33,640	13.3	34,015
MS–DRG 329—Cases with a bowel procedure as only O.R. procedure	86	8.3	19,309
MS–DRG 330—All cases	52,644	7.3	17,896
MS–DRG 330—Cases with a bowel procedure as only O.R. procedure	183	6.9	13,617
MS–DRG 331—All cases	26,104	4.1	12,132
MS–DRG 331—Cases with a bowel procedure as only O.R. procedure	129	4.3	9,754

The resources required for these cases are more aligned with the resources required for cases assigned to MS–DRGs 344, 345, and 346 than with the resources required for cases assigned to MS–DRGs 329, 330, and 331. Our clinical advisors also agreed that these cases are more clinically aligned with cases in MS–DRGs 344, 345, and 346, as they are minor procedures relative to the major bowel procedures assigned to MS–DRGs 329, 330, and 331. Therefore, we are proposing to reassign the 12 ICD–10–PCS procedure codes listed above from MS–DRGs 329, 330, and 331 to MS–DRGs 344, 345, and 346. We are inviting public comments on this proposal.

6. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue): Spinal Fusion

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38036), we announced our plans to review the ICD–10 logic for the MS–DRGs where procedures involving spinal fusion are currently assigned for FY 2019. After publication of the FY 2018 IPPS/LTCH PPS final rule, we

received a comment suggesting that CMS publish findings from this review and discuss possible future actions. The commenter agreed that it is important to be able to fully evaluate the MS–DRGs to which all spinal fusion procedures are currently assigned with additional claims data, particularly considering the 33 clinically invalid codes that were identified through the rulemaking process (82 FR 38034 through 38035) and the 87 codes identified from the upper and lower joint fusion tables in the ICD–10–PCS classification and discussed at the September 12, 2017 ICD–10 Coordination and Maintenance Committee that were proposed to be deleted effective October 1, 2018 (FY 2019). The agenda and handouts from that meeting can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html.*

According to the commenter, deleting the 33 procedure codes describing clinically invalid spinal fusion procedures for FY 2018 partially resolves the issue for data used in setting the FY 2020 payment rates. However, the commenter also noted that the problem will not be fully resolved until the FY 2019 claims are available for FY 2021 ratesetting (due to the 87 codes identified at the ICD–10 Coordination and Maintenance Committee meeting for deletion effective October 1, 2018 (FY 2019)).

The commenter noted that it analyzed claims data from the FY 2016 MedPAR data set and was surprised to discover a significant number of discharges reporting 1 of the 87 clinically invalid codes that were identified and discussed by the ICD–10 Coordination and Maintenance Committee among the following spinal fusion MS–DRGs.

MS–DRG	Description
453	Combined Anterior/Posterior Spinal Fusion with MCC.
454	Combined Anterior/Posterior Spinal Fusion with CC.
455	Combined Anterior/Posterior Spinal Fusion without CC/MCC.
456	Spinal Fusion Except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC.
457	Spinal Fusion Except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with CC.
458	Spinal Fusion Except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions without CC/MCC.
459	Spinal Fusion Except Cervical with MCC.
460	Spinal Fusion Except Cervical without MCC.
471	Cervical Spinal Fusion with MCC.
472	Cervical Spinal Fusion with CC.
473	Cervical Spinal Fusion without CC/MCC.

In addition, the commenter noted that it also identified a number of discharges for the 33 clinically invalid codes we identified in the FY 2018 IPPS/LTCH PPS final rule in the same MS–DRGs listed above. According to the commenter, its findings of these invalid spinal fusion procedure codes in the FY 2016 claims data comprise approximately 30 percent of all discharges for spinal fusion procedures.

The commenter expressed its appreciation that CMS is making efforts to address coding inaccuracies within the classification and suggested that CMS publish findings from its own review of spinal fusion coding issues in those MS–DRGs where cases reporting spinal fusion procedures are currently assigned and include a discussion of possible future actions in the FY 2019 IPPS/LTCH PPS proposed rule. The commenter believed that such an approach would allow time for stakeholder input on any possible proposals along with time for the invalid codes to be worked out of the datasets. The commenter also noted that publishing CMS' findings will put the agency, as well as the public, in a better position to address any potential payment issues for these services beginning in FY 2021.

We thank the commenter for acknowledging the steps we have taken in our efforts to address coding inaccuracies within the classification as we continue to refine the ICD–10 MS–DRGs. We are not proposing any changes to the MS–DRGs involving spinal fusion procedures for FY 2019. However, in response to the commenter's suggestion and findings, we are providing the results from our analysis of the September 2017 update of the FY 2017 MedPAR claims data for the MS–DRGs involving spinal fusion procedures.

We note that while the commenter stated that 87 codes were identified from the upper and lower joint fusion tables in the ICD–10–PCS classification and discussed at the September 12, 2017 ICD–10 Coordination and Maintenance Committee meeting to be deleted effective October 1, 2018 (FY 2019), there were 99 spinal fusion codes identified in the meeting materials, as shown in Table 6P.1g associated with this proposed rule (which is available via the Internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*).

As shown in Table 6P.1g associated with this proposed rule, the 99 procedure codes describe spinal fusion procedures that have device value ''Z'' representing No Device for the 6th character in the code. Because a spinal fusion procedure always requires some type of device (for example, instrumentation with bone graft or bone graft alone) to facilitate the fusion of vertebral bones, these codes are considered clinically invalid and were proposed for deletion at the September 12, 2017 ICD–10 Coordination and Maintenance Committee meeting. We received public comments in support of the proposal to delete the 99 codes describing a spinal fusion without a device, in addition to receiving support for the deletion of other procedure codes describing fusion of body sites other than the spine. A total of 213 procedure codes describing fusion of a specific body part with device value ''Z'' No Device are being deleted effective October 1, 2018 (FY 2019) as shown in Table 6D.—Invalid Procedure Codes associated with this proposed rule (which is available via the Internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html).*

We examined claims data from the September 2017 update of the FY 2017 MedPAR file for cases reporting any of the clinically invalid spinal fusion procedures with device value ''Z'' No Device in MS–DRGs 028 (Spinal Procedures with MCC), 029 (Spinal Procedures with CC or Spinal Neurostimulators), and 030 (Spinal Procedures without CC/MCC) under

MDC 1 and MS–DRGs 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473 under MDC 8 (that are listed and shown earlier in this section). Our findings are shown in the following tables.

SPINAL FUSION PROCEDURES

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 028—All cases	1,927	11.7	$37,524
MS–DRG 028—Cases with invalid spinal fusion procedures	132	13	52,034
MS–DRG 029—All cases	3,426	5.7	22,525
MS–DRG 029—Cases with invalid spinal fusion procedures	171	7.4	33,668
MS–DRG 030—All cases	1,578	3	15,984
MS–DRG 030—Cases with invalid spinal fusion procedures	52	2.6	22,471
MS–DRG 453—All cases	2,891	9.5	70,005
MS–DRG 453—Cases with invalid spinal fusion procedures	823	10.1	84,829
MS–DRG 454—All cases	12,288	4.7	47,334
MS–DRG 454—Cases with invalid spinal fusion procedures	2,473	5.4	59,814
MS–DRG 455—All cases	12,751	3	37,440
MS–DRG 455—Cases with invalid spinal fusion procedures	2,332	3.2	45,888
MS–DRG 456—All cases	1,439	11.5	66,447
MS–DRG 456—Cases with invalid spinal fusion procedures	404	12.5	71,385
MS–DRG 457—All cases	3,644	6	48,595
MS–DRG 457—Cases with invalid spinal fusion procedures	960	6.7	53,298
MS–DRG 458—All cases	1,368	3.6	37,804
MS–DRG 458—Cases with invalid spinal fusion procedures	244	4.1	43,182
MS–DRG 459—All cases	4,904	7.8	43,862
MS–DRG 459—Cases with invalid spinal fusion procedures	726	9	49,387
MS–DRG 460—All cases	59,459	3.4	29,870
MS–DRG 460—Cases with invalid spinal fusion procedures	5,311	3.9	31,936
MS–DRG 471—All cases	3,568	8.4	36,272
MS–DRG 471—Cases with invalid spinal fusion procedures	389	9.9	43,014
MS–DRG 472—All cases	15,414	3.2	21,836
MS–DRG 472—Cases with invalid spinal fusion procedures	1,270	4	25,780
MS–DRG 473—All cases	18,095	1.8	17,694
MS–DRG 473—Cases with invalid spinal fusion procedures	1,185	2.3	19,503

SUMMARY TABLE FOR SPINAL FUSION PROCEDURES

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRGs 028, 029, 030, 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473—All cases	142,752	3.9	$31,788
MS–DRGs 028, 029, 030, 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473—Cases with invalid spinal fusion procedures	16,472	5.1	42,929

As shown in this summary table, we found a total of 142,752 cases in MS–DRGs 028, 029, 030, 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473 with an average length of stay of 3.9 days and average costs of $31,788. We found a total of 16,472 cases reporting a procedure code for an invalid spinal fusion procedure with device value ''Z'' No Device across MS–DRGs 028, 029, and 030 under MDC 1 and MS–DRGs 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473 under MDC 8, with an average length of stay of 5.1 days and average costs of $42,929. The results of the data analysis demonstrate that these invalid spinal fusion procedures represent approximately 12 percent of all discharges across the spinal fusion MS–DRGs. Because these procedure codes describe clinically invalid procedures, we would not expect these codes to be reported on any claims data. It is unclear why providers assigned procedure codes for spinal fusion procedures with the device value ''Z'' No Device. Our analysis did not examine whether these claims were isolated to a specific provider or whether this inaccurate reporting was widespread among a number of providers.

With regard to possible future action, we will continue to monitor the claims data for resolution of the coding issues previously identified. Because the procedure codes that we analyzed and presented findings for in this FY 2019 IPPS/LTCH PPS proposed rule are no longer in the classification effective October 1, 2018 (FY 2019), the claims data that we examine for FY 2020 may still contain claims with the invalid codes. As such, we will continue to collaborate with the AHA as one of the four Cooperating Parties through the AHA's *Coding Clinic for ICD–10–CM/PCS* and provide further education on spinal fusion procedures and the proper reporting of the ICD–10–PCS spinal fusion procedure codes. We agree with the commenter that until these coding inaccuracies are no longer reflected in the claims data, it would be premature to propose any MS–DRG modifications for spinal fusion procedures. Possible MS–DRG modifications may include taking into account the approach that was utilized in performing the spinal fusion procedure (for example, open versus percutaneous).

For the reasons described, stated earlier in our discussion, we are proposing to not make any changes to the spinal fusion MS–DRGs for FY 2019.

We are inviting public comments on our proposal.

7. MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast): Cellulitis With Methicillin Resistant Staphylococcus Aureus (MSRA) Infection

We received a request to reassign ICD–10–CM diagnosis codes reported with a primary diagnosis of cellulitis and a secondary diagnosis code of B95.62 (Methicillin resistant Staphylococcus aureus infection as the cause of diseases classified elsewhere) or A49.02 (Methicillin resistant Staphylococcus aureus infection, unspecified site). Currently, these cases are assigned to MS–DRG 602 (Cellulitis with MCC) and MS–DRG 603 (Cellulitis without MCC) in MDC 9. The requestor believed that cases of cellulitis with MSRA infection should be reassigned to MS–DRG 867 (Other Infectious and Parasitic Diseases Diagnoses with MCC) because MS–DRGs 602 and 603 include cases that do not accurately reflect the severity of illness or risk of mortality for patients diagnosed with cellulitis and MRSA. The requestor acknowledged that the organism is not to be coded before the localized infection, but stated in its request that patients diagnosed with cellulitis and MRSA are entirely different from patients diagnosed only with cellulitis. The requestor stated that there is a genuine threat to life or limb in these cases. The requestor further stated that, with the opioid crisis and the frequency of MRSA infection among this population, cases of cellulitis with MRSA should be identified with a specific combination code and assigned to MS–DRG 867.

We analyzed claims data from the September 2017 update of the FY 2017 MedPAR file for all cases assigned to MS–DRGs 602 and 603 and subsets of these cases reporting a primary ICD–10–CM diagnosis of cellulitis and a secondary diagnosis code of B95.62 or A49.02. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 602—All cases	26,244	5.8	$10,034
MS–DRG 603—All cases	104,491	3.9	6,128
MS–DRGs 602 and 603—Cases reported with a primary diagnosis of cellulitis and a secondary diagnosis of B95.62	5,364	5.3	8,245
MS–DRGs 602 and 603—Cases reported with a primary diagnosis of cellulitis and a secondary diagnosis of A49.02	309	5.4	8,832

As shown in this table, we examined the subsets of cases in MS–DRGs 602 and 603 reported with a primary diagnosis of cellulitis and a secondary diagnosis code B95.62 or A49.02. Both of these subsets of cases had an average length of stay that was comparable to the average length of stay for all cases in MS–DRG 602 and greater than the average length of stay for all cases in MS–DRG 603, and average costs that were lower than the average costs of all cases in MS–DRG 602 and higher than the average costs of all cases in MS–DRG 603. As we have discussed in prior rulemaking (77 FR 53309), it is a fundamental principle of an averaged payment system that half of the procedures in a group will have above average costs. It is expected that there will be higher cost and lower cost subsets, especially when a subset has low numbers.

To examine the request to reassign ICD–10–CM diagnosis codes reported with a primary diagnosis of cellulitis and a secondary diagnosis code of B95.62 or A49.02 from MS–DRGs 602 and 603 to MS–DRG 867 (which would typically involve also reassigning those cases to the two other severity level MS–DRGs 868 and 869 (Other Infectious and Parasitic Diseases Diagnoses with CC and Other Infectious and Parasitic Diseases Diagnoses without CC/MCC, respectively)), we then analyzed the data for all cases in MS–DRGs 867, 868 and 869. The results of our analysis are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 867–All cases	2,653	7.5	$14,762
MS–DRG 868–All cases	2,096	4.4	7,532
MS–DRG 869–All cases	499	3.3	5,624

We compared the average length of stay and average costs for MS–DRGs 867, 868, and 869 to the average length of stay and average costs for the subsets of cases in MS–DRGs 602 and 603 reported with a primary diagnosis of cellulitis and a secondary diagnosis code of B95.62 or A49.02. We found that the average length of stay for these subsets of cases was shorter and the average costs were lower than those for all cases in MS–DRG 867, but that the average length of stay and average costs were higher than those for all cases in MS–DRG 868 and MS–DRG 869. Our findings from the analysis of claims data do not support reassigning cellulitis cases reported with ICD–10–CM diagnosis code B95.62 or A49.02 from MS–DRGs 602 and 603 to MS–DRGs 867, 868 and 869. Our clinical advisors noted that when a primary diagnosis of cellulitis is accompanied by a secondary diagnosis of B95.62 or A49.02 in MS–DRGs 602 or 603, the combination of these primary and secondary diagnoses is the reason for the hospitalization, and the level of acuity of these subsets of patients is similar to other patients in MS–DRGs 602 and 603. Therefore, these cases are more clinically aligned with all cases in MS–DRGs 602 and 603. For these reasons, we are not proposing to reassign cellulitis cases reported with ICD–10–CM diagnosis code of B95.62 or A49.02 to MS–DRG 867, 868, or 869 for FY 2019. We are inviting public comments on our proposal to maintain the current MS–DRG assignment for ICD–10–CM codes B95.62 and A49.02 when reported as secondary diagnoses with a primary diagnosis of cellulitis.

8. MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders): Acute Intermittent Porphyria

We received a request to revise the MS–DRG classification for cases of

patients diagnosed with porphyria and reported with ICD–10–CM diagnosis code E80.21 (Acute intermittent (hepatic) porphyria) to recognize the resource requirements in caring for these patients, to ensure appropriate payment for these cases, and to preserve patient access to necessary treatments. Porphyria is defined as a group of rare disorders (''porphyrias'') that interfere with the production of hemoglobin that is needed for red blood cells. While some of these disorders are genetic (inborn) and others are acquired, they all result in the abnormal accumulation of hemoglobin building blocks, called porphyrins, which can be deposited in the tissues where they particularly interfere with the functioning of the nervous system and the skin. Treatment for patients suffering from disorders of porphyrin metabolism consists of an intravenous injection of Panhematin® (hemin for injection). ICD–10–CM diagnosis code E80.21 is currently assigned to MS–DRG 642 (Inborn and Other Disorders of Metabolism). (We note that this issue has been discussed previously in the FY 2013 IPPS/LTCH PPS proposed and final rules (77 FR 27904 through 27905 and 77 FR 53311 through 53313, respectively) and the FY 2015 IPPS/LTCH PPS proposed and final rules (79 FR 28016 and 79 FR 49901, respectively).)

We analyzed claims data from the September 2017 update of the FY 2017 MedPAR file for cases assigned to MS–DRG 642. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 642—All cases	1,801	4.3	$9,157
MS–DRG 642—Cases reporting diagnosis code E80.21 as principal diagnosis	183	5.6	19,244
MS–DRG 642—Cases not reporting diagnosis code E80.21 as principal diagnosis	1,618	4.1	8,016

As shown in this table, cases reporting diagnosis code E80.21 as the principal diagnosis in MS–DRG 642 had higher average costs and longer average lengths of stay compared to the average costs and lengths of stay for all other cases in MS–DRG 642.

To examine the request to reassign cases with ICD–10–CM diagnosis code E80.21 as the principal diagnosis, we analyzed claims data for all cases in MS–DRGs for endocrine disorders, including MS–DRG 643 (Endocrine Disorders with MCC), MS-DRG 644 (Endocrine Disorders with CC), and MS–DRG 645 (Endocrine Disorders without CC/MCC). The results of our analysis are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 643—All cases	9,337	6.3	$11,268
MS–DRG 644—All cases	11,306	4.2	7,154
MS–DRG 645—All cases	4,297	3.2	5,406

The data results showed that the average length of stay for the subset of cases reporting ICD–10–CM diagnosis code E80.21 as the principal diagnosis in MS–DRG 642 is lower than the average length of stay for all cases in MS–DRG 643, but higher than the average length of stay for all cases in MS–DRGs 644 and 645. The average costs for the subset of cases reporting ICD–10–CM diagnosis code E80.21 as the principal diagnosis in MS–DRG 642 are much higher than the average costs for all cases in MS–DRGs 643, 644, and 645. However, after considering these findings in the context of the current MS–DRG structure, we were unable to identify an MS–DRG that would more closely parallel these cases with respect to average costs and length of stay that would also be clinically aligned. Our clinical advisors believe that, in the current MS–DRG structure, the clinical characteristics of patients in these cases are most closely aligned with the clinical characteristics of patients in all cases in MS–DRG 642. Moreover, given the small number of porphyria cases, we do not believe there is justification for creating a new MS–DRG. Basing a new MS–DRG on such a small number of cases could lead to distortions in the relative payment weights for the MS–DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS–DRG provides greater stability for annual updates to the relative payment weights. In summary, we are not proposing to revise the MS–DRG classification for porphyria cases. We are inviting public comments on our proposal to maintain porphyria cases in MS–DRG 642.

9. MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract): Admit for Renal Dialysis

We received a request to review the codes assigned to MS–DRG 685 (Admit for Renal Dialysis) to determine if the MS–DRG should be deleted, or if it should remain as a valid MS–DRG. Currently, the ICD–10–CM diagnosis codes shown in the table below are assigned to MS–DRG 685:

ICD–10–CM code	ICD–CM code title
Z49.01	Encounter for fitting and adjustment of extracorporeal dialysis catheter.
Z49.02	Encounter for fitting and adjustment of peritoneal dialysis catheter.
Z49.31	Encounter for adequacy testing for hemodialysis.
Z49.32	Encounter for adequacy testing for peritoneal dialysis.

The requestor stated that, under ICD–9–CM, diagnosis code V56.0 (Encounter for extracorporeal dialysis) was reported as the principal diagnosis to identify patients who were admitted for an encounter for dialysis. However, under ICD–10–CM, there is no comparable code in which to replicate such a diagnosis. The requestor noted that, while patients continue to be admitted under inpatient status (under certain circumstances) for dialysis services, there is no existing ICD–10–CM diagnosis code within the classification that specifically identifies a patient being admitted for an encounter for dialysis services.

The requestor also noted that three of the four ICD–10–CM diagnosis codes currently assigned to MS–DRG 685 are on the ''Unacceptable Principal Diagnosis'' edit code list in the Medicare Code Editor (MCE). Therefore, these codes are not allowed to be reported as a principal diagnosis for an inpatient admission.

We examined claims data from the September 2017 update of the FY 2017 MedPAR file for cases reporting ICD–10–CM diagnosis codes Z49.01, Z49.02, Z49.31, and Z49.32. Our findings are shown in the following table.

ADMIT FOR RENAL DIALYSIS ENCOUNTER

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 685—All cases	78	4	$8,871
MS–DRG 685—Cases reporting ICD–10–CM diagnosis code Z49.01	78	4	8,871
MS–DRG 685—Cases reporting ICD–10–CM diagnosis code Z49.02	0	0	0
MS–DRG 685—Cases reporting ICD–10–CM diagnosis code Z49.31	0	0	0
MS–DRG 685—Cases reporting ICD–10–CM diagnosis code Z49.32	0	0	0

As shown in the table above, for MS–DRG 685, there were a total of 78 cases reporting ICD–10–CM diagnosis code Z49.01, with an average length of stay of 4 days and average costs of $8,871. There were no cases reporting ICD–10–CM diagnosis code Z49.02, Z49.31, or Z49.32.

Our clinical advisors reviewed the clinical issues, as well as the claims data for MS–DRG 685. Based on their review of the data analysis, our clinical advisors recommended that MS–DRG 685 be deleted and ICD–10–CM diagnosis codes Z49.01, Z49.02, Z49.31, and Z49.32 be reassigned. Historically, patients were admitted as inpatients to receive hemodialysis services. However, over time, that practice has shifted to outpatient and ambulatory settings. Because of this change in medical practice, we do not believe that it is appropriate to maintain a vestigial MS–DRG, particularly due to the fact that the transition to ICD–10 has resulted in three out of four codes that map to the MS–DRG being precluded from being used as principal diagnosis codes on the claim. In addition, our clinical advisors believe that reassigning the ICD–10–CM diagnosis codes from MS–DRG 685 to MS–DRGs 698, 699, and 700 (Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC\MCC, respectively) is clinically appropriate because the reassignment will result in an accurate MS–DRG assignment of a specific case or inpatient service and encounter based on acceptable principal diagnosis codes under these MS–DRGs.

Therefore, for FY 2019, because there is no existing ICD–10–CM diagnosis code within the classification system that specifically identifies a patient being admitted for an encounter for dialysis services and three of the four ICD–10–CM diagnosis codes, Z49.02, Z49.31, and Z49.32, currently assigned to MS–DRG 685 are on the Unacceptable Principal Diagnosis edit code list in the Medicare Code Editor (MCE), we are proposing to delete MS–DRG 685 and reassign ICD–10–CM diagnosis codes Z49.01, Z49.02, Z49.31, and Z49.32 from MS–DRG 685 to MS–DRGs 698, 699, and 700.

We are inviting public comments on our proposals.

10. MDC 14 (Pregnancy, Childbirth and the Puerperium)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19834) and final rule (82 FR 38036 through 38037), we noted that the MS–DRG logic involving a vaginal delivery under MDC 14 is technically complex as a result of the requirements that must be met to satisfy assignment to the affected MS–DRGs. As a result, we solicited public comments on further refinement to the following four MS–DRGs related to vaginal delivery: MS–DRG 767 (Vaginal Delivery with Sterilization and/or D&C); MS–DRG 768 (Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C); MS–DRG 774 (Vaginal Delivery with Complicating Diagnosis); and MS–DRG 775 (Vaginal Delivery without Complicating Diagnosis). In addition, we sought public comments on further refinements to the conditions defined as a complicating diagnosis in MS–DRG 774 and MS–DRG 781 (Other Antepartum Diagnoses with Medical Complications). We indicated that we would review public comments received in response to the solicitation as we continued to evaluate these MS–DRGs under MDC 14 and, if warranted, we would propose refinements for FY 2019. Commenters were instructed to direct comments for consideration to the CMS MS–DRG Classification Change Request Mailbox located at *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2017.

In response to our solicitation for public comments on the MS–DRGs related to vaginal delivery, one commenter recommended that CMS convene a workgroup that would include hospital staff and physicians to systematically review the MDC 14 MS–DRGs and to identify which conditions should appropriately be considered complicating diagnoses. As an interim step, this commenter recommended that CMS consider the following suggestions as a result of its own evaluation of MS–DRGs 767, 774 and 775.

For MS–DRG 767, the commenter recommended that the following ICD–10–CM diagnosis codes and ICD–10–PCS procedure code be removed from the GROUPER logic and provided the rationale for why the commenter suggested removing each code.

SUGGESTIONS FOR MS–DRG 767

[Vaginal delivery with sterilization and/or D&C]

ICD–10–CM code	Code description	Rationale for removing code from MS–DRG 767
O66.41	Failed attempted vaginal birth after previous cesarean delivery.	This code indicates that the attempt at vaginal delivery has failed.
O71.00	Rupture of uterus before onset of labor, unspecified trimester.	This code indicates that the uterus has ruptured before onset of labor and therefore, a vaginal delivery would not be possible.
O82	Encounter for cesarean delivery without indication	This code indicates the encounter is for a cesarean delivery.
O75.82	Onset (spontaneous) of labor after 37 weeks of gestation but before 39 completed weeks, with delivery by (planned) C-section.	This code indicates this is a cesarean delivery.

SUGGESTIONS FOR MS–DRG 767

[Vaginal delivery with sterilization and/or D&C]

ICD–10–PCS code	Code description	Rationale for removing code from MS–DRG 767
10A07Z6	Abortion of products of conception, vacuum, via natural or artificial opening.	This code indicates the procedure to be an abortion rather than a vaginal delivery.

For MS–DRG 774, the commenter recommended that the following ICD–10–CM diagnosis codes be removed from the GROUPER logic and provided the rationale for why the commenter suggested removing each code.

SUGGESTIONS FOR MS–DRG 774

[Vaginal delivery with Complicating Diagnoses]

ICD–10–CM code	Code description	Rationale for removing code from MS–DRG 774
O66.41	Failed attempted vaginal birth after previous cesarean delivery.	This code indicates that the attempt at vaginal delivery has failed.
O71.00	Rupture of uterus before onset of labor, unspecified trimester.	This code indicates that the uterus has ruptured before onset of labor and therefore, a vaginal delivery would not be possible.
O75.82	Onset (spontaneous) of labor after 37 weeks of gestation but before 39 completed weeks, with delivery by (planned) C-section.	This code indicates this is a planned cesarean delivery.
O82	Encounter for cesarean delivery without indication	This code indicates the encounter is for a cesarean delivery.
O80	Encounter for full-term uncomplicated delivery	According to the Official Guidelines for Coding and Reporting, ''Code O80 should be assigned when a woman is admitted for a full term normal delivery and delivers a single, healthy infant without any complications antepartum, during the delivery, or postpartum during the delivery episode.''

For MS–DRG 775, the commenter recommended that the following ICD–10–CM diagnosis codes and ICD–10–PCS procedure code be removed from the GROUPER logic and provided the rationale for why the commenter suggested removing each code.

SUGGESTIONS FOR MS–DRG 775

[Vaginal delivery without complicating diagnoses]

ICD–10–CM code	Code description	Rationale for removing code from MS–DRG 775
O66.41	Failed attempted vaginal birth after previous cesarean delivery.	This code indicates that the attempt at vaginal delivery has failed.
O69.4XX0	Labor and delivery complicated by vasa previa, not applicable or unspecified.	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.

SUGGESTIONS FOR MS–DRG 775—Continued

[Vaginal delivery without complicating diagnoses]

ICD–10–CM code	Code description	Rationale for removing code from MS–DRG 775
O69.4XX2	Labor and delivery complicated by vasa previa, fetus 2	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.
O69.4XX3	Labor and delivery complicated by vasa previa, fetus 3	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.
O69.4XX4	Labor and delivery complicated by vasa previa, fetus 4	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.
O69.4XX5	Labor and delivery complicated by vasa previa, fetus 5	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.
O69.4XX9	Labor and delivery complicated by vasa previa, other fetus	According to the physicians consulted, vasa previa always results in C-section. Research indicates that when vasa previa is diagnosed, C-section before labor begins can save the baby's life.
O71.00	Rupture of uterus before onset of labor, unspecified trimester.	This code indicates that the uterus has ruptured before onset of labor and therefore, a vaginal delivery would not be possible.
O82	Encounter for cesarean delivery without indication	This code indicates the encounter is for a cesarean delivery.

SUGGESTIONS FOR MS–DRG 775

[Vaginal delivery without Complicating Diagnosis]

ICD–10–CM code	Code description	Rationale for removing code from MS–DRG 775
10A07Z6	Abortion of Products of Conception, Vacuum, Via Natural or Artificial Opening.	This code indicates the procedure to be an abortion rather than a vaginal delivery.

Another commenter agreed that the MS–DRG logic for a vaginal delivery under MDC 14 is technically complex and provided examples to illustrate these facts. For instance, the commenter noted that the GROUPER logic code lists appear redundant with several of the same codes listed for different MS–DRGs and that the GROUPER logic code list for a vaginal delivery in MS–DRG 774 is comprised of diagnosis codes while the GROUPER logic code list for a vaginal delivery in MS–DRG 775 is comprised of procedure codes. The commenter also noted that several of the ICD–10–CM diagnosis codes shown in the table below that became effective with discharges on and after October 1, 2016 (FY 2017) or October 1, 2017 (FY 2018) appear to be missing from the GROUPER logic code lists for MS–DRGs 781 and 774.

ICD–10–CM code	Code description
O11.4	Pre-existing hypertension with pre-eclampsia, complicating childbirth.
O11.5	Pre-existing hypertension with pre-eclampsia, complicating the puerperium.
012.04	Gestational edema, complicating childbirth.
012.05	Gestational edema, complicating the puerperium.
012.14	Gestational proteinuria, complicating childbirth.
012.15	Gestational proteinuria, complicating the puerperium.
012.24	Gestational edema with proteinuria, complicating childbirth.
012.25	Gestational edema with proteinuria, complicating the puerperium.
O13.4	Gestational [pregnancy-induced] hypertension without significant proteinuria, complicating childbirth.
O13.5	Gestational [pregnancy-induced] hypertension without significant proteinuria, complicating the puerperium.
O14.04	Mild to moderate pre-eclampsia, complicating childbirth.
O14.05	Mild to moderate pre-eclampsia, complicating the puerperium.
O14.14	Severe pre-eclampsia, complicating childbirth.
O14.15	Severe pre-eclampsia, complicating the puerperium.
O14.24	HELLP syndrome, complicating childbirth.
O14.25	HELLP syndrome, complicating the puerperium.
O14.94	Unspecified pre-eclampsia, complicating childbirth.
O14.95	Unspecified pre-eclampsia, complicating the puerperium.
O15.00	Eclampsia complicating pregnancy, unspecified trimester.

ICD–10–CM code	Code description
O15.02	Eclampsia complicating pregnancy, second trimester.
O15.03	Eclampsia complicating pregnancy, third trimester.
O15.1	Eclampsia complicating labor.
O15.2	Eclampsia complicating puerperium, second trimester.
O16.4	Unspecified maternal hypertension, complicating childbirth.
O16.5	Unspecified maternal hypertension, complicating the puerperium.
O24.415	Gestational diabetes mellitus in pregnancy, controlled by oral hypoglycemic drugs.
O24.425	Gestational diabetes mellitus in childbirth, controlled by oral hypoglycemic drugs.
O24.435	Gestational diabetes mellitus in puerperium, controlled by oral hypoglycemic drugs.
O44.20	Partial placenta previa NOS or without hemorrhage, unspecified trimester.
O44.21	Partial placenta previa NOS or without hemorrhage, first trimester.
O44.22	Partial placenta previa NOS or without hemorrhage, second trimester.
O44.23	Partial placenta previa NOS or without hemorrhage, third trimester.
O44.30	Partial placenta previa with hemorrhage, unspecified trimester.
O44.31	Partial placenta previa with hemorrhage, first trimester.
O44.32	Partial placenta previa with hemorrhage, second trimester.
O44.33	Partial placenta previa with hemorrhage, third trimester.
O44.40	Low lying placenta NOS or without hemorrhage, unspecified trimester.
O44.41	Low lying placenta NOS or without hemorrhage, first trimester.
O44.42	Low lying placenta NOS or without hemorrhage, second trimester.
O44.43	Low lying placenta NOS or without hemorrhage, third trimester.
O44.50	Low lying placenta with hemorrhage, unspecified trimester.
O44.51	Low lying placenta with hemorrhage, first trimester.
O44.52	Low lying placenta with hemorrhage, second trimester.
O44.53	Low lying placenta with hemorrhage, third trimester.
O70.20	Third degree perineal laceration during delivery, unspecified.
O70.21	Third degree perineal laceration during delivery, IIIa.
O70.22	Third degree perineal laceration during delivery, IIIb.
O70.23	Third degree perineal laceration during delivery, IIIc.
O86.11	Cervicitis following delivery.
O86.12	Endometritis following delivery.
O86.13	Vaginitis following delivery.
O86.19	Other infection of genital tract following delivery.
O86.20	Urinary tract infection following delivery, unspecified.
O86.21	Infection of kidney following delivery.
O86.22	Infection of bladder following delivery.
O86.29	Other urinary tract infection following delivery.
O86.81	Puerperal septic thrombophlebitis.
O86.89	Other specified puerperal infections.

Lastly, the commenter stated that the list of ICD–10–PCS procedure codes appears comprehensive, but indicated that inpatient coding is not their expertise. We note that it was not clear which list of procedure codes the commenter was specifically referencing. The commenter did not provide a list of any procedure codes for CMS to review or reference a specific MS–DRG in its comment.

Another commenter expressed concern that ICD–10–PCS procedure codes 10D17Z9 (Manual extraction of products of conception, retained, via natural or artificial opening) and 10D18Z9 (Manual extraction of products of conception, retained, via natural or artificial opening endoscopic) are not assigned to the appropriate MS–DRG. ICD–10–PCS procedure codes 10D17Z9 and 10D18Z9 describe the manual removal of a retained placenta and are currently assigned to MS–DRG 767 (Vaginal Delivery with Sterilization and/or D&C). According to the commenter, a patient that has a vaginal delivery with manual removal of a retained placenta is not having a sterilization or D&C procedure. The commenter noted that, under ICD–9–CM, a vaginal delivery with manual removal of retained placenta grouped to MS–DRG 774 (Vaginal Delivery with Complicating Diagnosis) or MS–DRG 775 (Vaginal Delivery without Complicating Diagnosis). The commenter suggested CMS review these procedure codes for appropriate MS–DRG assignment under the ICD–10 MS–DRGs.

We thank the commenters and appreciate the recommendations and suggestions provided in response to our solicitation for comments on the GROUPER logic for the MS–DRGs involving a vaginal delivery or complicating diagnosis under MDC 14. With regard to the commenter who recommended that we convene a workgroup that would include hospital staff and physicians to systematically review the MDC 14 MS–DRGs and to identify which conditions should appropriately be considered complicating diagnoses, we note that we formed an internal workgroup comprised of clinical advisors that included physicians, coding specialists, and other IPPS policy staff that assisted in our review of the GROUPER logic for a vaginal delivery and complicating diagnoses. We also received clinical input from 3M/Health Information Systems (HIS) staff, which, under contract with CMS, is responsible for updating and maintaining the GROUPER program. We note that our analysis involved other MS–DRGs under MDC 14, in addition to those for which we specifically solicited public comments. As one of the other commenters correctly pointed out, there is redundancy, with several of the same codes listed for different MS–DRGs. Below we provide a summary of our internal analysis with responses to the commenters' recommendations and suggestions incorporated into the applicable sections. We refer readers to the ICD–10 MS–DRG Version 35 Definitions Manual located via the Internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-*

for-Service-Payment/AcuteInpatientPPS/FY2018-IPPS-Final-Rule-Home-Page-Items/FY2018-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending for documentation of the GROUPER logic associated with the MDC 14 MS–DRGs to assist in the review of our discussion that follows.

We started our evaluation of the GROUPER logic for the MS–DRGs under MDC 14 by first reviewing the current concepts that exist. For example, there are ''groups'' for cesarean section procedures, vaginal delivery procedures, and abortions. There also are groups where no delivery occurs, and lastly, there are groups for after the delivery occurs, or the ''postpartum'' period. These groups are then further subdivided based on the presence or absence of complicating conditions or the presence of another procedure. We examined how we could simplify some of the older, complex GROUPER logic and remain consistent with the structure of other ICD–10 MS–DRGs. We identified the following MS–DRGs for closer review, in addition to MS–DRG 767, MS–DRG 768, MS–DRG 774, MS–DRG 775 and MS–DRG 781.

MS–DRG	Description
MS–DRG 765	Cesarean Section with CC/MCC.
MS–DRG 766	Cesarean Section without CC/MCC.
MS–DRG 769	Postpartum and Post Abortion Diagnoses with O.R. Procedure.
MS–DRG 770	Abortion with D&C, Aspiration Curettage or Hysterotomy.
MS–DRG 776	Postpartum and Post Abortion Diagnoses without O.R. Procedure.
MS–DRG 777	Ectopic Pregnancy.
MS–DRG 778	Threatened Abortion.
MS–DRG 779	Abortion without D&C.
MS–DRG 780	False Labor.
MS–DRG 782	Other Antepartum Diagnoses without Medical Complications.

The first issue we reviewed was the GROUPER logic for complicating conditions (MS–DRGs 774 and 781). Because one of the main objectives in our transition to the MS–DRGs was to better recognize the severity of illness of a patient, we believed we could structure the vaginal delivery and other MDC 14 MS–DRGs in a similar way. Therefore, we began working with the concept of vaginal delivery ''with MCC, with CC and without CC/MCC'' to replace the older, ''complicating conditions'' logic.

Next, we compared the additional GROUPER logic that exists between the vaginal delivery and the cesarean section MS–DRGs (MS–DRGs 765, 766, 767, 774, and 775). Currently, the vaginal delivery MS–DRGs take into account a sterilization procedure; however, the cesarean section MS–DRGs do not. Because a patient can have a sterilization procedure performed along with a cesarean section procedure, we adopted a working concept of ''cesarean section with and without sterilization with MCC, with CC and without CC/MCC'', as well as ''vaginal delivery with and without sterilization with MCC, with CC and without CC/MCC''.

We then reviewed the GROUPER logic for the MS–DRGs involving abortion and where no delivery occurs (MS–DRGs 770, 777, 778, 779, 780, and 782). We believed that we could consolidate the groups in which no delivery occurs.

Finally, we considered the GROUPER logic for the MS–DRGs related to the postpartum period (MS–DRGs 769 and 776) and determined that the structure of these MS–DRGs did not appear to require modification.

After we established those initial working concepts for the MS–DRGs discussed above, we examined the list of the ICD–10–PCS procedure codes that comprise the sterilization procedure GROUPER logic for the vaginal delivery MS–DRG 767. We identified the two manual extraction of placenta codes that the commenter had brought to our attention (ICD–10–PCS codes 10D17Z9 and 10D18Z9). We also identified two additional procedure codes, ICD–10–PCS codes 10D17ZZ (Extraction of products of conception, retained, via natural or artificial opening) and 10D18ZZ (Extraction of products of conception, retained, via natural or artificial opening endoscopic) in the list that are not sterilization procedures. Two of the four procedure codes describe manual extraction (removal) of retained placenta and the other two procedure codes describe dilation and curettage procedures. We then identified four more procedure codes in the list that do not describe sterilization procedures. ICD–10–PCS procedure codes 0UDB7ZX (Extraction of endometrium, via natural or artificial opening, diagnostic), 0UDB7ZZ (Extraction of endometrium, via natural or artificial opening), 0UDB8ZX (Extraction of endometrium, via natural or artificial opening endoscopic, diagnostic), and 0UDB8ZZ (Extraction of endometrium, via natural or artificial opening endoscopic) describe dilation and curettage procedures that can be performed for diagnostic or therapeutic purposes. We believe that these ICD–10–PCS procedure codes would be more appropriately assigned to MDC 13 (Diseases and Disorders of the Female Reproductive System) in MS–DRGs 744 and 745 (D&C, Conization, Laparascopy and Tubal Interruption with and without CC/MCC, respectively) and, therefore, removed them from our working list of sterilization and/or D&C procedures. Because the GROUPER logic for MS–DRG 767 includes both sterilization and/or D&C, we agreed that all the other procedure codes currently included under that logic list of sterilization procedures should remain, with the exception of the two identified by the commenter. Therefore, we agree with the commenter that the manual extraction of retained placenta procedure codes should be reassigned to a more clinically appropriate vaginal delivery MS–DRG because they are not describing sterilization procedures.

Our attention then turned to other MDC 14 GROUPER logic code lists starting with the ''CC for C-section'' list under MS–DRGs 765 and 766 (Cesarean Section with and without CC/MCC, respectively). As noted earlier in this section, in conducting our review, we considered how we could utilize the severity level concept (with MCC, with CC, and without CC/MCC) where applicable. Consistent with this approach, we removed the ''CC for C-section'' logic from these MS–DRGs as part of our working concept and efforts to refine MDC 14. We determined it would be less complicated to simply allow the existing ICD–10 MS-DRG CC and MCC code list logic to apply for these MS–DRGs. Next, we reviewed the logic code lists for ''Malpresentation'' and ''Twins'' and concluded that this logic was not necessary for the cesarean section MS–DRGs because these are

describing antepartum conditions and it is the procedure of the cesarean section that determines whether or not a patient would be classified to these MS–DRGs. Therefore, those code lists were also removed for purposes of our working concept. With regard to the ''Operating Room Procedure'' code list, we agreed there should be no changes. However, we note that the title to ICD–10–PCS procedure code 10D00Z0 (Extraction of products of conception, classical, open approach) is being revised effective October 1, 2018, to replace the term ''classical'' with ''high'' and ICD–10–PCS procedure code 10D00Z1 (Extraction of products of conception, low cervical, open approach) is being revised to replace the term ''low cervical'' to ''low''. These revisions are also shown in Table 6F—Revised Procedure Code Titles available via the Internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

Next, we reviewed the ''Delivery Procedure'' and ''Delivery Outcome'' GROUPER logic code lists for the vaginal delivery MS–DRGs 767, 768, 774, and 775. We identified ICD–10–PCS procedure code 10A0726 (Abortion of products of conception, vacuum, via natural or artificial opening) and ICD–10–PCS procedure code 10S07ZZ (Reposition products of conception, via natural or artificial opening) under the ''Delivery Procedure'' code list as procedure codes that should not be included because ICD–10–PCS procedure code 10A07Z6 describes an abortion procedure and ICD–10–PCS procedure code 10S07ZZ describes repositioning of the fetus and does not indicate a delivery took place. We also note that, as described earlier in this discussion, a commenter recommended that ICD–10–PCS procedure code 10A07Z6 be removed from the GROUPER logic specifically for MS–DRGs 767 and 775. Therefore, we removed these two procedure codes from the logic code list for ''Delivery Procedure'' in MS–DRGs 767, 768, 774, and 775. We agreed with the commenter that ICD–10–PCS procedure code 10A07Z6 would be more appropriately assigned to one of the Abortion MS–DRGs. For the remaining procedures currently included in the ''Delivery Procedure'' code list we considered which procedures would be expected to be performed during the course of a standard, uncomplicated delivery episode versus those that would reasonably be expected to require additional resources outside of the delivery room. The list of procedure codes we reviewed is shown in the following table.

ICD–10–PCS code	Code description
0DQP7ZZ	Repair rectum, via natural or artificial opening.
0DQQ0ZZ	Repair anus, open approach.
0DQQ3ZZ	Repair anus, percutaneous approach.
0DQQ4ZZ	Repair anus, percutaneous endoscopic approach.
0DQQ7ZZ	Repair anus, via natural or artificial opening.
0DQQ8ZZ	Repair anus, via natural or artificial opening endoscopic.
0DQR0ZZ	Repair anal sphincter, open approach.
0DQR3ZZ	Repair anal sphincter, percutaneous approach.
0DQR4ZZ	Repair anal sphincter, percutaneous endoscopic approach.

While we acknowledge that these procedures may be performed to treat obstetrical lacerations as discussed in prior rulemaking (81 FR 56853), we also believe that these procedures would reasonably be expected to require a separate operative episode and would not be performed immediately at the time of the delivery. Therefore, we removed those procedure codes describing repair of the rectum, anus, and anal sphincter shown in the table above from our working concept list of procedures to consider for a vaginal delivery. Our review of the list of diagnosis codes for the ''Delivery Outcome'' as a secondary diagnosis did not prompt any changes. We agreed that the current list of diagnosis codes continues to appear appropriate for describing the outcome of a delivery.

As the purpose of our analysis and this review was to clarify what constitutes a vaginal delivery to satisfy the ICD–10 MS–DRG logic for the vaginal delivery MS–DRGs, we believed it was appropriate to expect that a procedure code describing the vaginal delivery or extraction of ''products of conception'' procedure and a diagnosis code describing the delivery outcome should be reported on every claim in which a vaginal delivery occurs. This is also consistent with Section I.C.15.b.5 of the ICD–10–CM Official Guidelines for Coding and Reporting, which states ''A code from category Z37, Outcome of delivery, should be included on every maternal record when a delivery has occurred. These codes are not to be used on subsequent records or on the newborn record.'' Therefore, we adopted the working concept that, regardless of the principal diagnosis, if there is a procedure code describing the vaginal delivery or extraction of ''products of conception'' procedure and a diagnosis code describing the delivery outcome, this logic would result in assignment to a vaginal delivery MS–DRG. We note that, as a result of this working concept, there would no longer be a need to maintain the ''third condition'' list under MS–DRG 774. In addition, as noted earlier in this discussion, because we were working with the concept of vaginal delivery ''with MCC, with CC, and without CC/MCC'' to replace the older, ''complicating conditions'' logic, there would no longer be a need to maintain the ''second condition'' list of complicating diagnosis under MS–DRG 774.

We then reviewed the GROUPER logic code list of ''Or Other O.R. procedures'' (MS–DRG 768) to determine if any changes to these lists were warranted. Similar to our analysis of the procedures listed under the ''Delivery Procedure'' logic code list, our examination of the procedures currently described in the ''Or Other O.R. procedures'' procedure code list also considered which procedures would be expected to be performed during the course of a standard, uncomplicated delivery episode versus those that would reasonably be expected to require additional resources outside of the delivery room. Our analysis of all the procedures resulted in the working concept to allow all O.R. procedures to be applicable for assignment to MS–DRG 768, with the exception of the procedure codes for sterilization and/or D&C and ICD–10–PCS procedure codes 0KQM0ZZ (Repair perineum muscle, open approach) and 0UJM0ZZ (Inspection of vulva, open approach),

which we determined would be reasonably expected to be performed during a standard delivery episode and, therefore, assigned to MS–DRG 774 or MS–DRG 775. We also note that, this working concept for MS–DRG 768 would eliminate vaginal delivery cases with an O.R. procedure grouping to the unrelated MS-DRGs because all O.R. procedures would be included in the GROUPER logic procedure code list for ''Or Other O.R. Procedures''.

The next set of MS–DRGs we examined more closely included MS–DRGs 777, 778, 780, 781, and 782. We believed that, because the conditions in these MS–DRGs are all describing antepartum related conditions, we could group the conditions together clinically. Diagnoses described as occurring during pregnancy and diagnoses specifying a trimester or maternal care in the absence of a delivery procedure reported were considered antepartum conditions. We also believed we could better classify these groups of patients based on the presence or absence of a procedure. Therefore, we worked with the concept of ''antepartum diagnoses with and without O.R. procedure''.

As noted earlier in the discussion, we adopted a working concept of ''cesarean section with and without sterilization with MCC, with CC, and without CC/MCC.'' This concept is illustrated in the following table and includes our suggested modifications.

SUGGESTED MODIFICATIONS TO MS–DRGS FOR MDC 14

[Pregnancy, childbirth and the puerperium]

DELETE 2 MS–DRGs:
MS–DRG 765 (Cesarean Section with CC/MCC).
MS–DRG 766 (Cesarean Section without CC/MCC).
CREATE 6 MS–DRGs:
MS–DRG XXX (Cesarean Section with Sterilization with MCC).
MS–DRG XXX (Cesarean Section with Sterilization with CC).
MS–DRG XXX (Cesarean Section with Sterilization without CC/MCC).
MS–DRG XXX (Cesarean Section without Sterilization with MCC).
MS–DRG XXX (Cesarean Section without Sterilization with CC).
MS–DRG XXX (Cesarean Section without Sterilization without CC/MCC).

As shown in the table, we suggest deleting MS–DRGs 765 and 766. We also suggest creating 6 new MS–DRGs that are subdivided by a 3-way severity level split that includes ''with Sterilization'' and ''without Sterilization''.

We also adopted a working concept of ''vaginal delivery with and without sterilization with MCC, with CC, and without CC/MCC''. This concept is illustrated in the following table and includes our suggested modifications.

SUGGESTED MODIFICATIONS TO MS–DRGS FOR MDC 14

[Pregnancy, childbirth and the puerperium]

DELETE 3 MS–DRGs:
MS–DRG 767 (Vaginal Delivery with Sterilization and/or D&C).
MS–DRG 774 (Vaginal Delivery with Complicating Diagnosis).
MS–DRG 775 (Vaginal Delivery without Complicating Diagnosis).
CREATE 6 MS–DRGs:
MS–DRG XXX (Vaginal Delivery with Sterilization/D&C with MCC).
MS–DRG XXX (Vaginal Delivery with Sterilization/D&C with CC).
MS–DRG XXX (Vaginal Delivery with Sterilization/D&C without CC/MCC).
MS–DRG XXX (Vaginal Delivery without Sterilization/D&C with MCC).
MS–DRG XXX (Vaginal Delivery without Sterilization/D&C with CC).
MS–DRG XXX (Vaginal Delivery without Sterilization/D&C without CC/MCC).

As shown in the table, we suggest deleting MS–DRGs 767, 774, and 775. We also suggest creating 6 new MS–DRGs that are subdivided by a 3-way severity level split that includes ''with Sterilization/D&C'' and ''without Sterilization/D&C''.

In addition, as indicated above, we believed that we could consolidate the groups in which no delivery occurs. We believe that consolidating MS–DRGs where clinically coherent conditions exist is consistent with our approach to MS–DRG reclassification and our continued refinement efforts. This concept is illustrated in the following table and includes our suggested modifications.

SUGGESTED MODIFICATIONS TO MS–DRGS FOR MDC 14

[Pregnancy, childbirth and the puerperium]

DELETE 5 MS–DRGs:
MS–DRG 777 (Ectopic Pregnancy).
MS–DRG 778 (Threatened Abortion).
MS–DRG 780 (False Labor).
MS–DRG 781 (Other Antepartum Diagnoses with Medical Complications).
MS–DRG 782 (Other Antepartum Diagnoses without Medical Complications).
CREATE 6 MS–DRGs:
MS–DRG XXX (Other Antepartum Diagnoses with O.R. Procedure with MCC).
MS–DRG XXX (Other Antepartum Diagnoses with O.R. Procedure with CC).
MS–DRG XXX (Other Antepartum Diagnoses with O.R. Procedure without CC/MCC).
MS–DRG XXX (Other Antepartum Diagnoses without O.R. Procedure with MCC).
MS–DRG XXX (Other Antepartum Diagnoses without O.R. Procedure with CC).
MS–DRG XXX (Other Antepartum Diagnoses without O.R. Procedure without CC/MCC).

As shown in the table, we suggest deleting MS–DRGs 777, 778, 780, 781, and 782. We also suggest creating 6 new MS–DRGs that are subdivided by a 3-way severity level split that includes ''with O.R. Procedure'' and ''without O.R. Procedure''.

Once we established each of these fundamental concepts from a clinical perspective, we were able to analyze the data to determine if our initial suggested modifications were supported.

To analyze our suggested modifications for the cesarean section and vaginal delivery MS–DRGs, we examined the claims data from the September 2017 update of the FY 2017 MedPAR file for MS–DRGs 765, 766, 767, 768, 774, and 775.

MS–DRGS FOR MDC 14 PREGNANCY, CHILDBIRTH AND THE PUERPERIUM

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 765 (Cesarean Section with CC/MCC)—All cases	3,494	4.6	$8,929
MS–DRG 766 (Cesarean Section without CC/MCC)—All cases	1,974	3.1	6,488
MS–DRG 767 (Vaginal Delivery with Sterilization and/or D&C)—All cases	351	3.2	7,886
MS–DRG 768 (Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C)—All cases	17	6.2	26,164
MS–DRG 774 (Vaginal Delivery with Complicating Diagnosis)—All cases	1,650	3.3	6,046
MS–DRG 775 (Vaginal Delivery without Complicating Diagnosis)—All cases	4,676	2.4	4,769

As shown in the table, there were a total of 3,494 cases in MS–DRG 765, with an average length of stay of 4.6 days and average costs of $8,929. For MS–DRG 766, there were a total of 1,974 cases, with an average length of stay of 3.1 days and average costs of $6,488. For MS–DRG 767, there were a total of 351 cases, with an average length of stay of 3.2 days and average costs of $ 7,886. For MS–DRG 768, there were a total of 17 cases, with an average length of stay of 6.2 days and average costs of $26,164. For MS–DRG 774, there were a total of 1,650 cases, with an average length of stay of 3.3 days and average costs of $6,046. Lastly, for MS–DRG 775, there were a total of 4,676 cases, with an average length of stay of 2.4 days and average costs of $4,769.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the Version 35 ICD–10 MS–DRG GROUPER. The following table reflects our findings for the suggested Cesarean Section MS–DRGs with a 3-way severity level split.

SUGGESTED MS–DRGS FOR CESAREAN SECTION

MS–DRG	Number of cases	Average Length of stay	Average costs
MS–DRG 783 (Cesarean Section with Sterilization with MCC)	178	6.4	$12,977
MS–DRG 784 (Cesarean Section with Sterilization with CC)	511	4.1	8,042
MS–DRG 785 (Cesarean Section with Sterilization without CC/MCC)	475	3.0	6,259
MS–DRG 786 (Cesarean Section without Sterilization with MCC)	707	5.9	11,515
MS–DRG 787 (Cesarean Section without Sterilization with CC)	1,887	4.2	7,990
MS–DRG 788 (Cesarean Section without Sterilization without CC/MCC)	1,710	3.3	6,663

As shown in the table, there were a total of 178 cases for the cesarean section with sterilization with MCC group, with an average length of stay of 6.4 days and average costs of $12,977. There were a total of 511 cases for the cesarean section with sterilization with CC group, with an average length of stay of 4.1 days and average costs of $8,042. There were a total of 475 cases for the cesarean section with sterilization without CC/MCC group, with an average length of stay of 3.0 days and average costs of $6,259. For the cesarean section without sterilization with MCC group there were a total of 707 cases, with an average length of stay of 5.9 days and average costs of $11,515. There were a total of 1,887 cases for the cesarean section without sterilization with CC group, with an average length of stay of 4.2 days and average costs of $7,990. Lastly, there were a total of 1,710 cases for the cesarean section without sterilization without CC/MCC group, with an average length of stay of 3.3 days and average costs of $6,663.

The following table reflects our findings for the suggested Vaginal Delivery MS–DRGs with a 3-way severity level split.

SUGGESTED MS–DRGS FOR VAGINAL DELIVERY

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 796 (Vaginal Delivery with Sterilization/D&C with MCC)	25	6.7	$11,421
MS–DRG 797 (Vaginal Delivery with Sterilization/D&C with CC)	63	2.4	6,065
MS–DRG 798 (Vaginal Delivery with Sterilization/D&C without CC/MCC)	126	2.3	6,697
MS–DRG 805 (Vaginal Delivery without Sterilization/D&C with MCC)	406	5.0	9,605
MS–DRG 806 (Vaginal Delivery without Sterilization/D&C with CC)	1,952	2.9	5,506
MS–DRG 807 (Vaginal Delivery without Sterilization/D&C without CC/MCC)	4,105	2.3	4,601

As shown in the table, there were a total of 25 cases for the vaginal delivery with sterilization/D&C with MCC group, with an average length of stay of 6.7 days and average costs of $11,421. There were a total of 63 cases for the vaginal delivery with sterilization/D&C with CC group, with an average length of stay of 2.4 days and average costs of $6,065. There were a total of 126 cases for vaginal delivery with sterilization/D&C without CC/MCC group, with an average length of stay of 2.3 days and average costs of $6,697. There were a total of 406 cases for the vaginal delivery without sterilization/D&C with MCC group, with an average length of stay of 5.0 days and average costs of $9,605. There were a total of 1,952 cases for the vaginal delivery without sterilization/D&C with CC group, with an average length of stay of 2.9 days and average costs of $5,506. There were a total of 4,105 cases for the vaginal delivery without sterilization/D&C without CC/MCC group, with an average length of stay of 2.3 days and average costs of $4,601.

We then reviewed the claims data from the September 2017 update of the FY 2017 MedPAR file for MS–DRGs 777, 778, 780, 781, and 782. Our findings are shown in the following table.

MS–DRGS FOR MDC 14 PREGNANCY, CHILDBIRTH AND THE PUERPERIUM

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 777 (Ectopic Pregnancy)—All cases	72	1.9	$7,149
MS–DRG 778 (Threatened Abortion)—All cases	205	2.7	4,001

MS–DRGs FOR MDC 14 PREGNANCY, CHILDBIRTH AND THE PUERPERIUM—Continued

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 780 (False Labor)—All cases	41	2.1	3,045
MS–DRG 781 (Other Antepartum Diagnoses with Medical Complications)—All cases	2,333	3.7	5,817
MS–DRG 782 (Other Antepartum Diagnoses without Medical Complications)—All cases	70	2.1	3,381

As shown in the table, there were a total of 72 cases in MS–DRG 777, with an average length of stay of 1.9 days and average costs of $7,149. For MS–DRG 778, there were a total of 205 cases, with an average length of stay of 2.7 days and average costs of $4,001. For MS–DRG 780, there were a total of 41 cases, with an average length of stay of 2.1 days and average costs of $3,045. For MS–DRG 781, there were a total of 2,333 cases, with an average length of stay of 3.7 days and average costs of $5,817. Lastly, for MS–DRG 782, there were a total of 70 cases, with an average length of stay of 2.1 days and average costs of $3,381.

To compare and analyze the impact of deleting those 5 MS–DRGs and creating 6 new MS–DRGs, we ran a simulation using the Version 35 ICD–10 MS–DRG GROUPER. Our findings below represent what we found and would expect under the suggested modifications. The following table reflects the MS–DRGs for the suggested Other Antepartum Diagnoses MS–DRGs with a 3-way severity level split.

SUGGESTED MS–DRGs FOR OTHER ANTEPARTUM DIAGNOSES

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 817 (Other Antepartum Diagnoses with O.R. Procedure with MCC)	60	5.1	$13,117
MS–DRG 818 (Other Antepartum Diagnoses with O.R. Procedure with CC)	66	4.2	10,483
MS–DRG 819 (Other Antepartum Diagnoses with O.R. Procedure without CC/MCC)	44	1.7	5,904
MS–DRG 831 (Other Antepartum Diagnoses without O.R. Procedure with MCC)	786	4.3	7,248
MS–DRG 832 (Other Antepartum Diagnoses without O.R. Procedure with CC)	910	3.5	4,994
MS–DRG 833 (Other Antepartum Diagnoses without O.R. Procedure without CC/MCC)	855	2.7	3,843

Our analysis of claims data from the September 2017 update of the FY 2017 MedPAR file recognized that when the criteria to create subgroups were applied for the 3-way severity level splits for the suggested MS–DRGs, those criteria were not met in all instances. For example, the criteria that there are at least 500 cases in the MCC or CC group was not met for the suggested Vaginal Delivery with Sterilization/D&C 3-way severity level split or the suggested Other Antepartum Diagnoses with O.R. Procedure 3-way severity level split.
