Centers for Medicare & Medicaid Services

42 CFR Part 412

[CMS–1690–P]

RIN 0938–AT32

Medicare Program; FY 2019 Inpatient Psychiatric Facilities Prospective Payment System and Quality Reporting Updates for Fiscal Year Beginning October 1, 2018 (FY 2019)

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This proposed rule would update the prospective payment rates for Medicare inpatient hospital services provided by inpatient psychiatric facilities (IPFs), which include psychiatric hospitals and excluded psychiatric units of an acute care hospital or critical access hospital. These changes would be effective for IPF discharges occurring during the fiscal year (FY) beginning October 1, 2018 through September 30, 2019 (FY 2019). This rule also proposes to update the IPF labor-related share, to update the IPF wage index for FY 2019, update the International Classification of Diseases 10th Revision, Clinical Modification (ICD–10–CM) codes for FY 2019, make technical corrections to the IPF regulations, and update quality measures and reporting requirements under the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program. In addition, it would update providers on the status of IPF PPS refinements. Finally, this proposed rule includes a Request for Information related to health information technology.

DATES: Comment Date: To be assured consideration, comments must be received at one of the addresses provided in the ADDRESSES section, no later than 5 p.m. on June 26, 2018.

ADDRESSES: In commenting, refer to file code CMS–1690–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. Electronically. You may submit electronic comments on this regulation to http://www.regulations.gov. Follow the “Submit a Comment” instructions.

2. By regular mail. You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1690–P, P.O. Box 8010, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. By express or overnight mail. You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1690–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850. For information on viewing public comments, see the beginning of the SUPPLEMENTARY INFORMATION section.

FOR FURTHER INFORMATION CONTACT:
The IPF Payment Policy mailbox at IPPPaymentPolicy@cms.hhs.gov for general information.

Mollie Knight (410) 786–7948 or Hudson Osgood (410) 786–7897, for information regarding the market basket update or the labor related share.

Theresa Bean (410) 786–2287 or James Hardesty (410) 786–2629, for information regarding the regulatory impact analysis.

James Poyer (410) 786–2261 or Jeffrey Buck (410) 786–0407, for information regarding the inpatient psychiatric facility quality reporting program.

Scott Cooper (410) 786–9465, for information regarding the health information technology Request for Information.

SUPPLEMENTARY INFORMATION: Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: http://www.regulations.gov. Follow the search instructions on that website to view public comments.

Availability of Certain Tables Exclusively Through the Internet on the CMS Website

Tables setting forth the fiscal year (FY) 2019 Wage Index for Urban Areas Based on Core-Based Statistical Area (CBSA) Labor Market Areas and the FY 2019 Wage Index Based on CBSA Labor Market Areas for Rural Areas are available exclusively through the internet, on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html.

In addition, tables showing the complete listing of ICD–10 Clinical Modification (CM) and Procedure Coding System (PCS) codes underlying the FY 2019 Inpatient Psychiatric Facilities (IPF) Prospective Payment System (PPS) for comorbidity adjustment, code first, and electroconvulsive therapy (ECT) are available online at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html. Addenda B–1 to B–4 to this proposed rule show the tables of the ICD–10–CM/PCS codes, which affect FY 2019 IPF PPS comorbidity categories, code first, and non-specific codes with regards to laterality.

I. Executive Summary

A. Purpose

This proposed rule would update the prospective payment rates, the outlier threshold, and the wage index for Medicare inpatient hospital services provided by Inpatient Psychiatric Facilities (IPFs) for discharges occurring during the Fiscal Year (FY) beginning October 1, 2018 through September 30, 2019. Additionally, this proposed rule would make technical corrections to the IPF regulations and would propose updates to the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program.

B. Summary of the Major Provisions

1. Inpatient Psychiatric Facilities Prospective Payment System (IPF PPS)

In this proposed rule, we would update the IPF PPS, as specified in 42 CFR 412.428. The proposed updates include the following:

• For FY 2019, we would adjust the 2012-based IPF market basket update (currently estimated to be 2.8 percent) by a reduction for economy-wide productivity (currently estimated to be 0.8 percentage point) as required by section 1886(s)(2)(A)(i) of the Social Security Act (the Act). We would further reduce the 2012-based IPF market basket update by 0.75 percentage point as required by section 1886(s)(2)(A)(ii) of the Act, resulting in a proposed estimated IPF payment rate update of 1.25 percent for FY 2019.

• The 2012-based IPF market basket would result in a labor-related share of 74.8 percent for FY 2019.

• We propose to update the IPF PPS federal per diem base rate from $771.35 to $782.01.

• We propose that providers who failed to report quality data for FY 2019 payment would receive a FY 2019 federal per diem base rate of $766.56.
• We propose to update the electroconvulsive therapy (ECT) payment per treatment from $332.08 to $336.67. We propose that providers who failed to report quality data for FY 2019 payment would receive a FY 2019 ECT payment per treatment of $330.02.
• We propose an updated labor-related share of 74.8 percent (based on the 2012-based IPF market basket) and core base statistical area (CBSA) rural and urban wage indices for FY 2019, and propose a wage index neutrality adjustment of 1.0013.
• We propose to update the fixed dollar loss threshold amount from $11,425 to $12,935 to maintain estimated outlier payments at 2 percent of total estimated aggregate IPF PPS payments.

II. Background

A. Overview of the Legislative Requirements

Section 124 of the Medicare, Medicaid, and State Children’s Health Insurance Program Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) required the establishment and implementation of an IPF PPS. Specifically, section 124 of the BBRA mandated that the Secretary of the Department of Health and Human Services (the Secretary) develop a per diem PPS for inpatient hospital services furnished in psychiatric hospitals and excluded psychiatric units including an adequate patient classification system that reflects the differences in patient resource use and costs among psychiatric hospitals and excluded psychiatric units. “Excluded” psychiatric unit mean a psychiatric unit in an acute care hospital that is excluded from the Inpatient Prospective Payment System (IPPS), or a psychiatric unit in a Critical Access Hospital (CAH) that is excluded from the CAH payment system. These excluded psychiatric units would be paid under the IPF PPS.

Section 405(g)(2) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) extended the IPPS to psychiatric distinct part units of CAHs.

Sections 3401(f) and 10922 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by section 10319(e) of that Act and by section 1105(d) of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (hereafter referred to jointly as “the Affordable Care Act”) added subsection (s) to section 1886 of the Social Security Act (the Act).

Section 1886(s)(1) of the Act titled “Reference to Establishment and Implementation of System,” refers to section 124 of the BBRA, which relates to the establishment of the IPF PPS.

Section 1886(s)(2)(A)(ii) of the Act for the RY beginning in 2010 through 2012, requires the application of an “other adjustment” that reduces any update to an IPF PPS base rate by percentages specified in section 1886(s)(3) of the Act for the RY beginning in 2010 through the RY beginning in 2019.

Section 1886(s)(2)(A)(ii) of the Act for the RY beginning in 2010 through 2012, requires the application of an “other adjustment” that reduces any update to an IPF PPS base rate by percentages specified in section 1886(s)(3) of the Act for the RY beginning in 2010 through the RY beginning in 2019. As noted in the FY 2018 IPPS notice, for the RY beginning in 2017, section 1886(s)(3)(D) of the Act requires that the reduction currently in place be equal to 0.75 percentage point. Section 1886(s)(4)(A) and 1886(s)(4)(B) of the Act require that for FY 2014 and each subsequent rate year, IPPFs that fail to report required quality data with respect to such a RY shall have their annual update to a standard federal rate for discharges reduced by 0.0 for a RY, and may result in payment rates for the upcoming rate year being less than such payment rates for the preceding rate year. Any reduction for failure to report required quality data shall apply only to the RY involved, and the Secretary shall not take into account such reduction in computing the payment amount for a subsequent RY. Please see section II.B of this proposed rule for an explanation of the IPF RY.

More information about the specifics of the current IPFQR Program is available in the FY 2018 IPPS/Long-Term Care Hospital (LTCH) PPS final rule (82 FR 38461 through 38471).

To implement and periodically update these provisions, we have published various proposed and final rules and notices in the Federal Register. For more information regarding these documents, see the Center for Medicare & Medicaid (CMS) website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/index.html?redirect=%2FInpatientPsychFacilIPPS/.

B. Overview of the IPF PPS

The November 2004 IPPS final rule (69 FR 66922) established the IPF

II. Background

A. Overview of the Legislative Requirements

Section 124 of the Medicare, Medicaid, and State Children’s Health Insurance Program Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) required the establishment and implementation of an IPF PPS. Specifically, section 124 of the BBRA mandated that the Secretary of the Department of Health and Human Services (the Secretary) develop a per diem PPS for inpatient hospital services furnished in psychiatric hospitals and excluded psychiatric units including an adequate patient classification system that reflects the differences in patient resource use and costs among psychiatric hospitals and excluded psychiatric units. “Excluded” psychiatric unit mean a psychiatric unit in an acute care hospital that is excluded from the Inpatient Prospective Payment System (IPPS), or a psychiatric unit in a Critical Access Hospital (CAH) that is excluded from the CAH payment system. These excluded psychiatric units would be paid under the IPF PPS.

Section 405(g)(2) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) extended the IPPS to psychiatric distinct part units of CAHs.

Sections 3401(f) and 10922 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by section 10319(e) of that Act and by

II. Background

A. Overview of the Legislative Requirements

Section 124 of the Medicare, Medicaid, and State Children’s Health Insurance Program Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) required the establishment and implementation of an IPF PPS. Specifically, section 124 of the BBRA mandated that the Secretary of the Department of Health and Human Services (the Secretary) develop a per diem PPS for inpatient hospital services furnished in psychiatric hospitals and excluded psychiatric units including an adequate patient classification system that reflects the differences in patient resource use and costs among psychiatric hospitals and excluded psychiatric units. “Excluded” psychiatric unit mean a psychiatric unit in an acute care hospital that is excluded from the Inpatient Prospective Payment System (IPPS), or a psychiatric unit in a Critical Access Hospital (CAH) that is excluded from the CAH payment system. These excluded psychiatric units would be paid under the IPF PPS.

Section 405(g)(2) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) extended the IPPS to psychiatric distinct part units of CAHs.

Sections 3401(f) and 10922 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by section 10319(e) of that Act and by
The IPF PPS established the federal per diem base rate for each patient day in an IPF derived from the national average daily routine operating, ancillary, and capital costs in IPFs in FY 2002. The average per diem cost was updated to the midpoint of the first year under the IPF PPS, standardized to account for the overall positive effects of the IPF PPS payment adjustments, and adjusted for budget-neutrality.

The federal per diem payment under the IPF PPS is comprised of the federal per diem base rate described previously and certain patient- and facility-level payment adjustments that were found in the regression analysis to be associated with statistically significant per diem cost differences.

The patient-level adjustments include age, Diagnosis-Related Group (DRG) assignment, and comorbidities; additionally, there are variable per diem adjustments to reflect higher per diem costs at the beginning of a patient’s IPF stay. Facility-level adjustments include adjustments for the IPF’s wage index, rural location, teaching status, a cost-of-living adjustment for IPFs located in Alaska and Hawaii, and an adjustment for the presence of a qualifying emergency department (ED).

The IPF PPS provides additional payment policies for outlier cases, interrupted stays, and a per treatment payment for patients who undergo electroconvulsive therapy (ECT). During the IPF PPS mandatory 3-year transition period, stop-loss payments were also provided; however, since the transition ended as of January 1, 2008, these payments are no longer available.

A complete discussion of the regression analysis that established the IPF PPS adjustment factors can be found in the November 2004 IPF PPS final rule (69 FR 66933 through 66936).

Section 124 of the BBRA did not specify an annual rate update strategy for the IPF PPS and was broadly written to give the Secretary discretion in establishing an update methodology. Therefore, in the November 2004 IPF PPS final rule, we implemented the IPF PPS using the following update strategy:

- Calculate the federal per diem base rate to be budget-neutral for the 18-month period of January 1, 2005 through June 30, 2006.
- Use a July 1 through June 30 annual update cycle.
- Allow the IPF PPS first update to be effective for discharges on or after July 1, 2006 through June 30, 2007.

In May 2010, we proposed and finalized switching the IPF PPS payment rate update from a RY that begins on July 1 and ends on June 30, to one that coincides with the federal FY that begins October 1 and ends on September 30. In order to transition from one timeframe to another, the RY 2012 IPF PPS covered a 15-month period from July 1, 2011 through September 30, 2012. Therefore, the IPF PPS established the federal per diem base rate to be budget-neutral for the 18-month period of January 1, 2005 through June 30, 2006.

In RY 2012, we proposed and finalized switching the IPF PPS payment rate update from a RY that begins on July 1 and ends on June 30, to one that coincides with the federal FY that begins October 1 and ends on September 30. In order to transition from one timeframe to another, the RY 2012 IPF PPS covered a 15-month period from July 1, 2011 through September 30, 2012. Therefore, the IPF PPS established the federal per diem base rate to be budget-neutral for the 18-month period of January 1, 2005 through June 30, 2006.

In November 2004, we implemented the IPF PPS in a final rule that published on November 15, 2004 in the Federal Register (69 FR 66922). In developing the IPF PPS, and to ensure that the IPF PPS is able to account adequately for each IPF’s case-mix, we performed an extensive regression analysis of the relationship between the per diem costs and certain patient and facility characteristics to determine those characteristics associated with statistically significant cost differences on a per diem basis. For characteristics with statistically significant cost differences, we used the regression coefficients of those variables to determine the size of the corresponding payment adjustments.

In that final rule, we explained the reasons for delaying an update to the adjustment factors, derived from the regression analysis, including waiting until we have IPF PPS data that yields as much information as possible regarding the patient-level characteristics of the population that each IPF serves. We indicated that we did not intend to update the regression analysis and the patient-level and facility-level adjustments until we complete that analysis. Until that analysis is complete, we stated our intention to publish a notice in the Federal Register each spring to update the IPF PPS (69 FR 66966).

On May 6, 2011, we published a final rule in the Federal Register titled, “Inpatient Psychiatric Facilities Prospective Payment System—Update for Rate Year Beginning July 1, 2011 (RY 2012)” (76 FR 26432), which changed the payment rate update period to a RY that coincides with a FY update.

Therefore, final rules are now published in the Federal Register in the summer to be effective on October 1. When proposing changes in IPF payment policy, a proposed rule would be issued in the spring and the final rule in the summer to be effective on October 1. For further discussion on changing the IPF PPS payment rate update period to a RY that coincides with a FY, we refer readers to our RY 2012 IPF PPS final rule (76 FR 26434 through 26435). For a detailed list of updates to the IPF PPS, we refer readers to our regulations at 42 CFR 412.428.

Our most recent IPF PPS annual update was published in a notice with comment period on August 7, 2017 in the Federal Register titled, “Medicare Program; FY 2018 Inpatient Psychiatric Facilities Prospective Payment System—Rate Update” (82 FR 36771), which updated the IPF PPS payment rates for FY 2018. That notice with comment period updated the IPF PPS federal per diem base rates that were published in the FY 2017 IPF PPS notice (81 FR 50502) in accordance with our established policies.

III. Provisions of the FY 2019 IPF PPS Proposed Rule

A. Proposed Update to the FY 2019 Market Basket for the IPF PPS

1. Background

The input price index that was used to develop the IPF PPS was the “Excluded Hospital with Capital” market basket. This market basket was based on 1997 Medicare cost reports for Medicare participating inpatient rehabilitation facilities (IRFs), IPFs, LTCHs, cancer hospitals, and children’s hospitals. Although “market basket” technically describes the mix of goods and services used in providing health care at a given point in time, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies) derived from that market basket. Accordingly, the term “market basket,” as used in this document, refers to an input price index.
Since the IPF PPS inception, the market basket used to update IPF PPS payments has been rebased and revised to reflect more recent data on IPF cost structures. We last rebased and revised the IPF market basket in the FY 2016 IPF PPS rule, where we adopted a 2012-based IPF market basket, using Medicare cost report data for both Medicare participating psychiatric hospitals and excluded psychiatric units. We refer readers to the FY 2016 IPF PPS final rule for a detailed discussion of the 2012-based IPF PPS Market Basket and its development (80 FR 46656 through 46679). The FY 2016 IPFS final rule also includes references to the historical market baskets used to update IPF PPS payments since PPS implementation.

2. Proposed FY 2019 IPF Market Basket Update

For FY 2019 (beginning October 1, 2018 and ending September 30, 2019), we propose to use an estimate of the 2012-based IPF market basket increase factor to update the IPF PPS base payment rate. Consistent with historical practice, we propose to estimate the market basket update for the IPF PPS based on IHS Global, Inc.’s (IGI) forecast. IGI is a nationally recognized economic and financial forecasting firm that contracts with the CMS to forecast the components of the market baskets and multifactor productivity (MFP). Based on IGI’s first quarter 2018 forecast with historical data through the fourth quarter of 2017, the 2012-based IPF market basket increase factor for FY 2019 is 2.8 percent.

Section 1886(s)(2)(A)(i) of the Act requires the application of the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act to the IPF PPS for the RY beginning in 2012 (a RY that coincides with a FY) and each subsequent RY. For this FY 2019 IPF PPS proposed rule, based on IGI’s first quarter 2018 forecast, the proposed MFP adjustment for FY 2019 (the 10-year moving average of MFP for the period ending FY 2019) is projected to be 0.8 percent. We reduced the 2.8 percent IPF market basket update by this 0.8 percentage point productivity adjustment, as mandated by the Act. For more information on the productivity adjustment, we refer reader to the discussion in the FY 2016 IPF PPS final rule (80 FR 46675).

In addition, for FY 2019 the 2012-based IPF PPS market basket update is further reduced by 0.75 percentage point as required by sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act. The proposed estimated FY 2019 IPF PPS payment rate update of 1.25 percent (2.8 - 0.8 - 0.75 = 1.25). We also are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2019 IPF market basket update and MFP adjustment for the final rule.

3. Proposed IPF Labor-Related Share

Due to variations in geographic wage levels and other labor-related costs, we believe that payment rates under the IPF PPS should continue to be adjusted by a geographic wage index, which would apply to the labor-related portion of the federal per diem base rate (hereafter referred to as the labor-related share). The labor-related share is determined by identifying the national average proportion of total costs that are related to, influenced by, or vary with the local labor market. We continue to classify a cost category as labor-related if the costs are labor-intensive and vary with the local labor market.

Based on our definition of the labor-related share and the cost categories in the 2012-based IPF market basket, we are proposing to continue to include in the labor-related share the sum of the relative importance of Wages and Salaries; Employee Benefits; Professional Fees; Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair; All Other: Labor-related Services; and a portion (46 percent) of the Capital-Related cost weight from the 2012-based IPF market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (FY 2012) and FY 2019. Using IGI’s first quarter 2018 forecast for the 2012-based IPF market basket, the proposed IPF labor-related share for FY 2019 is the sum of the FY 2019 relative importance of each labor-related cost category. For more information on the labor-related share and its calculation, we refer readers to the FY 2016 IPF PPS final rule (80 FR 46676 through 46679). For FY 2019, the proposed update to the labor-related share based on IGI’s first quarter 2018 forecast of the 2012-based IPF PPS market basket is 74.8 percent. We are also proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2019 labor-related share for the final rule.

B. Proposed Updates to the IPF PPS Rates for FY Beginning October 1, 2018

The IPF PPS is based on a standardized federal per diem base rate calculated from the IPF average per diem cost category weights and the budget-neutrality adjustment in the implementation year. The federal per diem base rate is used as the standard payment per day under the IPF PPS and is adjusted by the patient-level and facility-level adjustments that are applicable to the IPF stay. A detailed explanation of how we calculated the average per diem cost appears in the November 2004 IPF PPS final rule (69 FR 66926).
through 27046). The final standardized budget-neutral federal per diem base rate established for cost reporting periods beginning on or after January 1, 2005 was calculated to be $575.95.

The federal per diem base rate has been updated in accordance with applicable statutory requirements and §412.428 through publication of annual notices or proposed and final rules. A detailed discussion on the standardized budget-neutral federal per diem base rate and the electroconvulsive therapy (ECT) payment per treatment appears in the FY 2014 IPF PPS update notice (78 FR 46738 through 46739). These documents are available on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPPS/index.html.

IPFs must include a valid procedure code for ECT services provided to IPF beneficiaries in order to bill for ECT services, as described in our Medicare Claims Processing Manual, Chapter 3, Section 190.7.3 (available at https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf.) There were no changes to the ECT procedure codes used on IPF claims as a result of the preliminary update to the ICD–10–PCS code set for FY 2019.

2. Proposed Update of the Federal Per Diem Base Rate and Electroconvulsive Therapy Payment Per Treatment

The current (FY 2018) federal per diem base rate is $771.35 and the ECT payment per treatment is $782.01 for FY 2019. Similarly, we would apply the proposed payment rate update of 1.25 percent (that is, the 2012-based IPF market basket increase for FY 2019 of 2.8 percent less the productivity adjustment of 0.8 percentage point, further reduced by the 0.75 percentage point for a proposed update of 1.25 percent, and further reduced by 2 percentage points in accordance with section 1886(s)(4)(B)(ii) of the Act, which results in a negative update percentage) and the proposed wage index budget-neutrality factor of 1.0013 to the FY 2018 federal per diem base rate of $771.35, yielding a federal per diem base rate of $766.56 for FY 2019.

For IPFs that fail to meet requirements under the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program, we would apply a −0.75 percent payment rate update (that is, the IPF market basket increase for FY 2019 of 2.8 percent less the productivity adjustment of 0.8 percentage point, further reduced by the 0.75 percentage point for a proposed update of 1.25 percent, and further reduced by 2 percentage points in accordance with section 1886(s)(4)(A)(ii) of the Act, which results in a negative update percentage) and the proposed wage index budget-neutrality factor of 1.0013 to the FY 2018 federal per diem base rate of $771.35, yielding a federal per diem base rate of $766.56 for FY 2019.

• For IPFs that fail to meet requirements under the IPFQR Program, we would apply the proposed −0.75 percent annual payment rate update and the proposed 1.0013 wage index budget-neutrality factor to the FY 2018 ECT payment per treatment of $332.08, yielding a proposed ECT payment per treatment of $330.02 for FY 2019.

C. Proposed Updates to the IPF PPS Patient-Level Adjustment Factors

1. Overview of the IPF PPS Adjustment Factors

The IPF PPS payment adjustments were derived from a regression analysis of 100 percent of the FY 2002 Medicare Provider and Analysis Review (MedPAR) data file, which contained 483,036 cases.

For a detailed description of the mapping changes from the original DRG adjustment categories to the current MS–DRG adjustment categories, we refer readers to the RY 2009 IPF PPS notice (73 FR 25714).

The IPF PPS includes payment adjustments for designated psychiatric DRGs assigned to the claim based on the patient’s principal diagnosis. The DRG adjustment factors were expressed relative to the most frequently reported psychiatric DRG in FY 2002, that is, DRG 430 (psychoses). The coefficients and adjustment factors were derived from the regression analysis. Mapping the DRGs to the MS–DRGs resulted in the current 17 IPF MS–DRGs, instead of the original 15 DRGs, for which the IPF PPS provides an adjustment. For FY 2019, we are not proposing any changes to the IPF MS–DRG adjustment factors but propose to maintain the existing IPF MS–DRG adjustment factors.

In the FY 2015 IPF PPS final rule published August 6, 2014 in the Federal Register titled, “Inpatient Psychiatric Facilities Prospective Payment System—Update for FY Beginning October 1, 2014 (FY 2015)” (79 FR 45945 through 45947), we finalized conversions of the ICD–9–CM-based MS–DRGs to ICD–10–CM/PCS-based MS–DRGs, which were implemented on October 1, 2015. Further information on the ICD–10–CM/PCS MS–DRGs can be found on the CMS ICD–10–CM website at https://www.cms.gov/Medicare/Coding/ICD10/...
ICD-10-MS-DRG-Conversion-Project.html.

For FY 2019, we propose to continue to make the existing payment adjustment for psychiatric diagnoses that group to one of the existing 17 IPF MS–DRGs listed in Addendum A. Addendum A is available on our website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html. Psychiatric principal diagnoses that do not group to one of the 17 designated MS–DRGs would still receive the federal per diem base rate and all other applicable adjustments, but the payment would not include an MS–DRG adjustment.

The diagnoses for each IPF MS–DRG will be updated as of October 1, 2018, using the final IPPS FY 2019 ICD–10–CM/PCS code sets. The FY 2019 IPPS proposed rule includes tables of the changes to the ICD–10–CM/PCS code sets which underlie the FY 2019 IPPS MS–DRGs. Both the FY 2019 IPPS proposed rule and the tables of changes to the ICD–10–CM/PCS code sets which underlie the FY 2019 MS–DRGs are available on the IPPS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

Code First

As discussed in the ICD–10–CM Official Guidelines for Coding and Reporting, certain conditions have both an underlying etiology and multiple body system manifestations due to the underlying etiology. For such conditions, the ICD–10–CM has a coding convention that requires the underlying condition be sequenced first followed by the manifestation. Wherever such a combination exists, there is a “use additional code” note at the etiology code, and a “code first” note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes (etiology followed by manifestation). In accordance with the ICD–10–CM Official Guidelines for Coding and Reporting, when a primary (psychiatric) diagnosis code has a “code first” note, the provider would follow the instructions in the ICD–10–CM text. The submitted claim goes through the CMS processing system, which will identify the primary diagnosis code as non-psychiatric and search the secondary codes for a psychiatric code to assign a DRG code for adjustment. The system will continue to search the secondary codes for those that are appropriate for comorbidity adjustment. For more information on the code first policy, see our November 2004 IPPS final rule (69 FR 66945). In the FY 2015 IPPS final rule, we provided a code first table for reference that highlights the same or similar manifestation codes where the code first instructions apply in ICD–10–CM that were present in ICD–9–CM (79 FR 46009). In the FY 2019 update to the ICD–10–CM/PCS code sets, there were no changes from the FY 2018 ICD–10–CM/PCS code sets that affect the IPF code first policy. The Code First list is shown in Addendum B–2 on our website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html.

b. Proposed Payment for Comorbid Conditions

The intent of the comorbidity adjustments is to recognize the increased costs associated with comorbid conditions by providing additional payments for certain existing medical or psychiatric conditions that are expensive to treat. In our FY 2012 IPPS final rule (76 FR 26451 through 26452), we explained that the IPPS includes 17 comorbidity categories and identified the new, revised, and deleted ICD–9–CM diagnosis codes that generate a comorbid condition payment adjustment under the IPPS for FY 2012 (76 FR 26451).

Comorbidities are specific patient conditions that are secondary to the patient’s principal diagnosis and that require treatment during the stay. Diagnoses that relate to an earlier episode of care and have no bearing on the current hospital stay are excluded and must not be reported on IPPS claims. Comorbid conditions must exist at the time of admission or develop subsequently, and affect the treatment received, length of stay (LOS), or both treatment and LOS.

For each claim, an IPPS may receive only one comorbidity adjustment within a comorbidity category, but it may receive an adjustment for more than one comorbidity category. Current billing instructions for discharge claims, on or after October 1, 2015, require IPPSs to enter the complete ICD–10–CM codes for up to 24 additional diagnoses if they co-exist at the time of admission, or develop subsequently and impact the treatment provided.

The comorbidity adjustments were determined based on the regression analysis using the diagnoses reported by IPPSs in FY 2002. The principal diagnoses were used to establish the DRG adjustments and were not accounted for in establishing the comorbidity category adjustments, except where ICD–9–CM code first instructions applied. In a code first situation, the submitted claim goes through the CMS processing system, which will identify the principal diagnosis code as non-psychiatric and search the secondary codes for a psychiatric code to assign an MS–DRG code for adjustment. The system will continue to search the secondary codes for those that are appropriate for comorbidity adjustment.

As noted previously, it is our policy to maintain the same diagnostic coding set for IPPSs that is used under the IPPS for providing the same psychiatric care. The 17 comorbidity categories formerly defined using ICD–9–CM codes were converted to ICD–10–CM/PCS in our FY 2015 IPPS final rule (79 FR 45947 through 45955). The goal for converting the comorbidity categories is referred to as replication, meaning that the payment adjustment for a given patient encounter is the same after ICD–10–CM implementation as it would be if the same record had been coded in ICD–9–CM and submitted prior to ICD–10–CM/PCS implementation on October 1, 2015. All conversion efforts were made with the intent of achieving this goal. For FY 2019, we propose to use the same comorbidity adjustment factors in effect in FY 2018, which are found in Addendum A, available on our website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html.

We have updated the ICD–10–CM/PCS codes which are associated with the existing IPPS comorbidity categories, based upon the preliminary FY 2019 update to the ICD–10–CM/PCS code set. The FY 2019 ICD–10–CM/PCS updates included ICD–10–CM/PCS codes added to the Drug and/or Alcohol Abuse, Gangrene, Oncology Treatment, and Poisoning comorbidity categories, and codes deleted from the Oncology Treatment comorbidity category. These updates are detailed in Addendum B–3 of this proposed rule, which is available on our website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilIPPS/tools.html.

In accordance with the policy established in the FY 2015 IPPS final rule (79 FR 45949 through 45952), we reviewed all FY 2019 ICD–10–CM codes to remove site unspecified codes from the FY 2019 ICD–10–CM/PCS codes in instances where more specific codes are available. As we stated in the FY 2015 IPPS final rule, we believe that specific diagnosis codes that narrowly identify anatomical sites where disease, injury, or condition exist should be used when coding patients’ diagnoses whenever these codes are available. We finalized that we would remove site
unspecified codes from the IPF PPS ICD–10–CM/PCS codes in instances in which more specific codes are available, as the clinician should be able to identify a more specific diagnosis based on clinical assessment at the medical encounter. Therefore, we are proposing to remove 3 site unspecified codes from the list of Oncology Treatment Diagnosis codes. See Addendum B–4 to this proposed rule for a listing of the 3 ICD–10–CM/PCS site unspecified codes proposed to be removed. Addendum B–4 is available on our website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/tools.html.

c. Proposed Patient Age Adjustments

As explained in the November 2004 IPF PPS final rule (69 FR 66922), we analyzed the impact of age on per diem cost by examining the age variable (range of ages) for payment adjustments. In general, we found that the cost per day increases with age. The older age group is more costly than the under 45 age group, the differences in per diem cost increase for each successive age group, and the differences are statistically significant. For FY 2019, we propose to continue to use the patient age adjustments currently in effect in FY 2018, as shown in Addendum A of this proposed rule (see https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/tools.html).

d. Proposed Variable per Diem Adjustments

We explained in the November 2004 IPF PPS final rule (69 FR 66946) that the regression analysis indicated that per diem cost declines as the length of stay (LOS) increases. The variable per diem adjustments to the federal per diem base rate account for ancillary and administrative costs that occur disproportionately in the first days after admission to an IPF. We used a regression analysis to estimate the average differences in per diem cost among stays of different lengths. As a result of this analysis, we established variable per diem adjustments that begin on day 1 and decline gradually until day 21 of a patient’s stay. For day 22 and thereafter, the variable per diem adjustment remains the same each day for the remainder of the stay. However, the adjustment applied to day 1 depends upon whether the IPF has a qualifying ED. If an IPF has a qualifying ED, it receives a 1.31 adjustment factor for day 1 of each stay. If an IPF does not have a qualifying ED, it receives a 1.19 adjustment factor for day 1 of the stay. The ED adjustment is explained in more detail in section III.D.4 of this proposed rule.

For FY 2019, we propose to continue to use the variable per diem adjustment factors currently in effect as shown in Addendum A of this proposed rule (available at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/tools.html). A complete discussion of the variable per diem adjustments appears in the November 2004 IPF PPS final rule (69 FR 66946).

D. Proposed Updates to the IPF PPS Facility-Level Adjustments

The IPF PPS includes facility-level adjustments for the wage index, IPFs located in rural areas, teaching IPFs, cost of living adjustments for IPFs located in Alaska and Hawaii, and IPFs with a qualifying ED.

1. Wage Index Adjustment

a. Background

As discussed in our RY 2007 IPF PPS final rule (71 FR 27061) and in our RY 2009 IPF PPS (73 FR 25719) and RY 2010 IPF PPS notices (74 FR 20373), in order to provide an adjustment for geographic wage levels, the labor-related portion of an IPF’s payment is adjusted using an appropriate wage index. Currently, an IPF’s geographic wage index value is determined based on the actual location of the IPF in an urban or rural area, as defined in §412.64(b)(1)(ii)(A) and (C).

b. Updated Wage Index for FY 2019

Since the inception of the IPF PPS, we have used the pre-floor, pre-reclassified acute care hospital wage index in developing a wage index to be applied to IPFs, because there is not an IPF-specific wage index available. We believe that IPFs compete in the same labor markets as acute care hospitals, so the pre-floor, pre-reclassified hospital wage index should reflect IPF labor costs. As discussed in our RY 2007 IPF PPS final rule (71 FR 27061 through 27067), for RY 2007, under the IPF PPS, the wage index is calculated using the IPFS wage index for the labor market area in which the IPF is located, without taking into account geographic reclassifications, floors, and other adjustments made to the wage index under the IPPS. For a complete description of these IPPS wage index adjustments, we refer readers to the FY 2013 IPPS/LTC PPS final rule (77 FR 53365 through 53374). For FY 2019, we propose to continue to apply the most recent hospital wage index (the FY 2018 pre-floor, pre-reclassified hospital wage index, which is the most appropriate index as it best reflects the variation in local labor costs of IPFs in the various geographic areas) using the most recent hospital wage data (data from hospital cost reports for the cost reporting period beginning during FY 2014) without any geographic reclassifications, floors, or other adjustments. We would apply the FY 2019 IPF wage index to payments beginning October 1, 2018.

We would apply the wage index adjustment to the labor-related portion of the federal rate, which is proposed to change from 75.0 percent in FY 2018 to 74.8 percent in FY 2019. This percentage reflects the labor-related share of the 2012-based IPF market basket for FY 2019 (see section III.A.3 of this proposed rule).

c. Office of Management and Budget Bulletins

Office of Management and Budget (OMB) publishes bulletins regarding Core-Based Statistical Area (CBSA) changes, including changes to CBSA numbers and titles. In the FY 2017 IPF PPS final rule (71 FR 27061 through 27067), we adopted the changes discussed in the OMB Bulletin No. 03–04 (June 6, 2003), which announced revised definitions for Metropolitan Statistical Areas (MSAs), and the creation of Micropolitan Statistical Areas and Combined Statistical Areas. In adopting the OMB CBSA geographic designations in RY 2007, we did not provide a separate transition for the CBSA-based wage index since the IPF PPS was already in a transition period from TEFRA payments to PPS payments.

In the FY 2009 IPF PPS notice, we incorporated the CBSA nomenclature changes published in the most recent OMB bulletin that applies to the hospital wage index used to determine the current IPF wage index and stated that we expect to continue to do the same for all the OMB CBSA nomenclature changes in future IPF PPS rules and notices, as necessary (73 FR 25721). The OMB bulletins may be accessed online at https://www.whitehouse.gov/omb/bulletins/.

In accordance with our established methodology, we have historically adopted any CBSA changes that are published in the OMB bulletin that corresponds with the hospital wage index used to determine the IPF wage index. For the FY 2015 IPF wage index, we used the FY 2014 pre-floor, pre-reclassified hospital wage index to adjust the IPF PPS payments. On February 28, 2013, OMB issued OMB Bulletin No. 13–01, which established the current CBSA definitions for MSAs, Micropolitan Statistical Areas, and Combined Statistical Areas, and
provided guidance on the use of the delineations of these statistical areas. A copy of this bulletin may be obtained at https://www.whitehouse.gov/omb/bulletins/.

Because the FY 2014 pre-floor, pre-reclassified hospital wage index was finalized before the issuance of this Bulletin, the FY 2015 IPF wage index, which was based on the FY 2014 pre-floor, pre-reclassified hospital wage index, did not reflect OMB’s new area delineations based on the 2010 Census. According to OMB, “[t]his bulletin provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010, in the Federal Register (75 FR 37246 through 37252) and Census Bureau data.” These OMB Bulletin changes are reflected in the FY 2015 pre-floor, pre-reclassified hospital wage index, upon which the FY 2016 IPF wage index was based. We adopted these new OMB CBSA delineations in the FY 2016 IPF wage index and subsequent IPF wage indexes.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provides minor and supersedes, OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provides detailed information on the update to statistical areas since February 28, 2013. The updates provided in the attachment to OMB Bulletin No. 15–01 are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012 and July 1, 2013. The complete list of statistical areas incorporating these changes is provided in OMB Bulletin No. 15–01. A copy of this bulletin may be obtained at https://www.whitehouse.gov/omb/bulletins/.

OMB Bulletin No. 15–01 establishes revised delineations for the Nation’s Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas. The bulletin also provides delineations of Metropolitan Divisions as well as delineations of New England City and Town Areas.

In accordance with our longstanding policy, the IPF PPS continues to use the latest labor market area delineations available as soon as is reasonably possible to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. As discussed in the FY 2017 IPPS/LTC PPS final rule (81 FR 56913), the updated labor market area definitions from OMB Bulletin 15–01 were implemented under the IPPS beginning on October 1, 2016 (FY 2017).

Therefore, we implemented these revisions for the IPF PPS beginning October 1, 2017 (FY 2018), consistent with our historical practice of modeling IPF PPS adoption of the labor market area delineations after IPPS adoption of these delineations.

In summary, the FY 2018 pre-floor, pre-reclassified hospital wage index, which is proposed to be used to determine the FY 2019 IPF wage index, has no changes to its OMB designations and already includes changes adopted in previous FYs. Therefore, the proposed FY 2019 IPF wage index is located on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilityPPS/WageIndex.html.

d. Proposed Adjustment for Rural Location

In the November 2004 IPF PPS final rule, we provided a 17 percent payment adjustment for IPFs located in a rural area. This adjustment was based on the regression analysis, which indicated that the per diem cost of rural facilities was 17 percent higher than that of urban facilities after accounting for the influence of the other variables included in the regression. For FY 2019, we propose to continue to apply a 17 percent payment adjustment for IPFs located in a rural area as defined at §412.64(b)(1)(ii)(C). A complete discussion of the adjustment for rural locations appears in the November 2004 IPF PPS final rule (69 FR 66954).

e. Proposed Budget Neutrality Adjustment

Changes to the wage index are made in a budget-neutral manner so that updates do not increase expenditures. Therefore, for FY 2019, we propose to continue to apply a budget-neutrality adjustment in accordance with our existing budget-neutrality policy. This policy requires us to update the wage index in such a way that total estimated payments to IPFs for FY 2019 are the same with or without the changes (that is, in a budget-neutral manner) by applying a budget neutrality factor to the IPF PPS rates. We use the following steps to ensure that the rates reflect the update to the wage indexes (based on the FY 2014 hospital cost report data) and the labor-related share in a budget-neutral manner:

Step 1. Simulate estimated IPF PPS payments, using the FY 2018 IPF wage index values (available on the CMS website) and labor-related share (as published in the FY 2018 IPF PPS notice with comment period (82 FR 35771)).

Step 2. Simulate estimated IPF PPS payments using the proposed FY 2019 IPF wage index values (available on the CMS website) and proposed FY 2019 labor-related share (based on the latest available data as discussed previously).

Step 3. Divide the amount calculated in step 1 by the amount calculated in step 2. The resulting quotient is the proposed FY 2019 budget-neutral wage adjustment factor of 1.0013.

Step 4. Apply the FY 2019 budget-neutral wage adjustment factor from step 3 to the FY 2018 IPF PPS federal per diem base rate after the application of the market basket update described in section III.A.2 of this proposed rule, to determine the FY 2019 IPF PPS federal per diem base rate.

2. Proposed Teaching Adjustment

In the November 2004 IPF PPS final rule, we implemented regulations at §412.424(d)(1)(iii) to establish a facility-level adjustment for IPFs that are, or are part of teaching hospitals. The teaching adjustment accounts for the higher indirect operating costs experienced by hospitals that participate in graduate medical education (GME) programs. The payment adjustments are made based on the ratio of the number of full-time equivalent (FTE) interns and residents training in the IPF and the IPF’s average daily census (ADC).

Medicare makes direct GME payments (for direct costs such as resident and teaching physician salaries, and other direct teaching costs) to all teaching hospitals including those paid under a PPS, and those paid under the TEFRA rate-of-increase limits. These direct GME payments are made separately from payments for hospital operating costs and are not part of the IPF PPS. The direct GME payments do not address the estimated higher indirect operating costs teaching hospitals may face.

The results of the regression analysis of FY 2002 IPF data established the basis for the payment adjustments included in the November 2004 IPF PPS final rule. The results showed that the indirect teaching cost variable is significant in explaining the higher costs of IPFs that have teaching...
programs. We calculated the teaching adjustment based on the IPF’s “teaching variable,” which is one plus the ratio of the number of FTE residents training in the IPF (subject to limitations described in this section of this proposed rule to the IPF’s ADC).

We established the teaching adjustment in a manner that limited the incentives for IPFs to add FTE residents for the purpose of increasing their teaching adjustment. We imposed a cap on the number of FTE residents that may be counted for purposes of calculating the teaching adjustment. The cap limits the number of FTE residents that teaching IPFs may count for the purpose of calculating the IPF PPS teaching adjustment, not the number of residents teaching institutions can hire or train. We calculated the number of FTE residents that trained in the IPF during a “base year” and used that FTE resident number as the cap. An IPF’s FTE resident cap is ultimately determined based on the final settlement of the IPF’s most recent cost report filed before November 15, 2004 (publication date of the IPF PPS final rule). A complete discussion of the temporary adjustment to the FTE cap to reflect residents added due to hospital closure and by residency program appears in the FY 2012 IPF PPS proposed rule (76 FR 5018 through 5020) and the FY 2012 IPF PPS final rule (76 FR 26453 through 26456).

In the regression analysis, the logarithm of the teaching variable had a coefficient value of 0.5150. We converted this cost effect to a teaching payment adjustment by treating the regression coefficient as an exponent and raising the teaching variable to a power equal to the coefficient value. We note that the coefficient value of 0.5150 was based on the regression analysis holding all other components of the payment system constant. A complete discussion of how the teaching adjustment was calculated appears in the November 2004 IPF PPS final rule (69 FR 66954 through 66957) and the FY 2009 IPF PPS notice (73 FR 25721).

As with other adjustment factors derived through the regression analysis, we do not plan to rerun the teaching adjustment factors in the regression analysis until we more fully analyze IPF PPS data. Therefore, in this FY 2019 proposed rule, we propose to continue to retain the coefficient value of 0.5150 for the teaching adjustment to the federal per diem base rate.

3. Proposed Cost of Living Adjustment for IPFs Located in Alaska and Hawaii

The IPF PPS includes a payment adjustment for IPFs located in Alaska and Hawaii based upon the county in which the IPF is located. As we explained in the November 2004 IPF PPS final rule, the FY 2002 data demonstrated that IPFs in Alaska and Hawaii had per diem costs that were disproportionately higher than other IPFs. Other Medicare prospective payment systems (for example: The IPPS and LTCH PPS) adopted a cost of living adjustment (COLA) to account for the cost differential of care furnished in Alaska and Hawaii.

We analyzed the effect of applying a COLA to payments for IPFs located in Alaska and Hawaii. The results of our analysis demonstrated that a COLA for IPFs located in Alaska and Hawaii would improve payment equity for these facilities. As a result of this analysis, we provided a COLA in the November 2004 IPF PPS final rule.

A COLA for IPFs located in Alaska and Hawaii is made by multiplying the non-labor-related portion of the federal per diem base rate by the applicable COLA factor based on the COLA area in which the IPF is located.

The COLA factors through 2009 (before being reduced by locality payments) are published on the Office of Personnel Management (OPM) website (https://www.opm.gov/oca/cola/rates.asp).

We note that the COLA areas for Alaska are not defined by county as the COLA areas for Hawaii. In 5 CFR 501.207, the OPM established the following COLA areas:

- City of Anchorage, and 80-kilometer (50-mile) radius by road, as measured from the federal courthouse.
- City of Fairbanks, and 80-kilometer (50-mile) radius by road, as measured from the federal courthouse.
- City of Juneau, and 80-kilometer (50-mile) radius by road, as measured from the federal courthouse.
- Rest of the State of Alaska.

As stated in the November 2004 IPF PPS final rule, we update the COLA factors according to updates established by the OPM. However, sections 1911 through 1919 of the Nonforeign Area Retirement Equity Assurance Act, as contained in subtitle B of title XIX of the National Defense Authorization Act (NDAA) for FY 2010 (Pub. L. 111–84, October 28, 2009), transitions the Alaska and Hawaii COLAs to locality pay. Under section 1914 of NDAA, locality pay was phased in over a 3-year period beginning in January 2010, with COLA rates frozen as of the date of enactment, October 28, 2009, and then proportionately reduced to reflect the phase-in of locality pay.

When we published the proposed COLA factors in the FY 2012 IPF PPS proposed rule (76 FR 4998), we inadvertently selected the FY 2010 COLA rates, which had been reduced to account for the phase-in of locality pay. We did not intend to propose the reduced COLA rates because that would have understated the adjustment. Since the 2009 COLA rates did not reflect the phase-in of locality pay, we finalized the FY 2009 COLA rates for FY 2010 through FY 2014.

In the FY 2013 IPPS/LTCH final rule (77 FR 53700 through 53701), we established a new methodology to update the COLA factors for Alaska and Hawaii, and adopted this methodology for the IPF PPS in the FY 2015 IPF final rule (79 FR 45958 through 45960). We adopted this new COLA methodology for the IPF PPS because IPFs are hospitals with a similar mix of commodities and services. We think it is appropriate to have a consistent policy approach with that of other hospitals in Alaska and Hawaii. Therefore, the IPF COLAs for FY 2015 through FY 2017 were the same as those applied under the IPPS in those years. As finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), the COLA updates are determined every 4 years, when the IPPS market basket labor-related share is updated during rebasing. Because the labor-related share of the IPPS market basket was updated for FY 2018, the COLA factors were updated in FY 2018 IPPS/LTCH rulemaking (82 FR 38529). As such, we also updated the IPF PPS COLA factors for FY 2018 (82 FR 36780 through 36782) to reflect the updated COLA factors finalized in the FY 2018 IPPS/LTCH rulemaking.

For FY 2019, we propose to continue to use the COLA factors established for the IPF PPS in FY 2018 to adjust the nonlabor-related portion of the per diem amount for IPFs located in Alaska and Hawaii. These factors are shown in Table 1. For comparison purposes, we also are showing the FY 2015 through FY 2017 COLA factors.
The proposed IPF PPS COLA factors for FY 2019 are shown in Addendum A of this proposed rule, available at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/tools.html.

4. Proposed Adjustment for IPFs With a Qualifying Emergency Department (ED)

The IPF PPS includes a facility-level adjustment for IPFs with qualifying EDs. We provide an adjustment to the federal per diem base rate to account for the costs associated with maintaining a full-service ED. The adjustment is intended to account for ED costs incurred by a psychiatric hospital with a qualifying ED or an excluded psychiatric unit of an acute care hospital or a CAH, for preadmission services otherwise payable under the Medicare Hospital Outpatient Prospective Payment System (OPPS), furnished to a beneficiary on the date of the beneficiary’s admission to the hospital and during the day immediately preceding the date of admission to the IPF (see § 413.40(c)(2)), and the overhead cost of maintaining the ED. This payment is a facility-level adjustment that applies to all IPF admissions (with one exception described below), regardless of whether a particular patient receives preadmission services in the hospital’s ED.

The ED adjustment is incorporated into the variable per diem adjustment for the first day of each stay for IPFs with a qualifying ED. Those IPFs with a qualifying ED receive an adjustment factor of 1.31 as the variable per diem adjustment for day 1 of each patient stay. If an IPF does not have a qualifying ED, it receives an adjustment factor of 1.19 as the variable per diem adjustment for day 1 of each patient stay.

The ED adjustment is made on every discharge from an acute care hospital or CAH, for preadmission services in the hospital’s ED, it receives an adjustment factor of 1.31 as the variable per diem adjustment for the first day of the patient’s stay in the IPF. For FY 2019, we propose to continue to retain the 1.31 adjustment factor for IPFs with qualifying EDs. A complete discussion of the steps involved in the calculation of the ED adjustment factor in our November 2004 IPF PPS final rule (69 FR 69659 through 69660) and the FY 2007 IPF PPS final rule (71 FR 27070 through 27072).

E. Proposed Other Payment Adjustments and Policies

1. Outlier Payment Overview

The IPF PPS includes an outlier adjustment to promote access to IPF care for those patients who require expensive care and to limit the financial risk of IPFs treating unusually costly patients. In the November 2004 IPF PPS final rule, we implemented regulations at § 412.424(d)(3)(i) to provide a per-case payment for IPF stays that are extraordinarily costly. Providing additional payments to IPFs for extremely costly cases strongly improves the accuracy of the IPF PPS in determining resource costs at the patient and facility level. These additional payments reduce the financial losses that would otherwise be incurred in treating patients who require more costly care and, therefore, reduce the incentives for IPFs to under-serve these patients.

We make outlier payments for discharges in which an IPF’s estimated total cost for a case exceeds a fixed dollar loss threshold amount (multiplied by the IPF’s facility-level adjustments) plus the federal per diem payment amount for the case. In instances when the case qualifies for an outlier payment, we pay 80 percent of the difference between the estimated cost for the case and the adjusted threshold amount for days 1 through 9 of the stay (consistent with the median LOS for IPFs in FY 2002), and 60 percent of the difference for day 10 and thereafter. We established the 80 percent and 60 percent loss sharing ratios because we were concerned that a single ratio established at 80 percent (like other Medicare PPSs) might provide an incentive under the IPF per diem payment system to increase LOS in order to receive additional payments.

After establishing the loss sharing ratios, we determined the current fixed dollar loss threshold amount through payment simulations designed to compute a dollar loss beyond which payments are estimated to meet the 2 percent outlier spending target. Each year when we update the IPF PPS, we simulate payments using the latest available data to compute the fixed dollar loss threshold so that outlier payments represent 2 percent of total projected IPF PPS payments.

2. Proposed Update to the Outlier Fixed Dollar Loss Threshold Amount

In accordance with the update methodology described in § 412.428(d), we are proposing to update the fixed dollar loss threshold amount used under the IPF PPS outlier policy. Based on the regression analysis and payment simulations used to develop the IPF PPS, we established a 2 percent outlier policy, which strikes an appropriate balance between protecting IPFs from extraordinarily costly cases while ensuring the adequacy of the federal per diem base rate for all other cases that are not outlier cases.
Based on an analysis of the latest available data (the December 2017 update of FY 2017 IPF claims) and rate increases, we believe it is necessary to update the fixed dollar loss threshold amount to maintain an outlier percentage that equals 2 percent of total estimated IPF PPS payments. We propose to update the IPF outlier threshold amount for FY 2019 using FY 2017 claims data and the same methodology that we used to set the initial outlier threshold amount in the FY 2007 IPF PPS final rule (71 FR 27072 and 27073), which is also the same methodology that we used to update the outlier threshold amounts for years 2008 through 2018. Based on an analysis of these updated data, we estimate that IPF outlier payments as a percentage of total estimated payments are approximately 2.27 percent in FY 2018. Therefore, we propose to update the outlier threshold amount to $12,935 to maintain estimated outlier payments at 2 percent of total estimated aggregate IPF payments for FY 2019.

3. Proposed Update to IPF Cost-to-Charge Ratio Ceilings

Under the IPF PPS, an outlier payment is made if an IPF’s cost for a stay exceeds a fixed dollar loss threshold amount plus the IPF PPS amount. In order to establish an IPF’s cost for a particular case, we multiply the IPF’s reported charges on the discharge bill by its overall cost-to-charge ratio (CCR). This approach to determining an IPF’s cost is consistent with the approach used under the IPPS and other PPSs. In the FY 2004 IPPS final rule (68 FR 34494), we implemented changes to the IPPS policy used to determine CCRs for acute care hospitals, because we became aware that payment vulnerabilities resulted in inappropriate outlier payments. Under the IPPS, we established a statistical measure of accuracy for CCRs to ensure that aberrant CCR data did not result in inappropriate outlier payments. Under the IPPS, we established a statistical measure of accuracy for CCRs to ensure that aberrant CCR data did not result in inappropriate outlier payments. As we indicated in the November 2004 IPPS final rule (69 FR 66961), we believe that the IPF outlier policy is susceptible to the same payment vulnerabilities as the IPPS; therefore, we adopted a method to ensure the statistical accuracy of CCRs under the IPPS. Specifically, we adopted the following procedure in the November 2004 IPPS final rule:

- Calculated two national ceilings, one for IPFs located in rural areas and one for IPFs located in urban areas.
- Computed the ceilings by first calculating national average and the standard deviation of the CCR for both urban and rural IPFs using the most recent CCRs entered in the CY 2018 Provider Specific File.
- For FY 2019, we propose to continue to follow this methodology.

To determine the proposed rural and urban ceilings, we multiplied each of the standard deviations by 3 and added the result to the appropriate national CCR average (either rural or urban). The proposed upper threshold CCR for IPFs in FY 2019 is 2.0255 for rural IPFs, and 1.7550 for urban IPFs, based on CBSA-based geographic designations. If an IPF’s CCR is above the applicable ceiling, the ratio is considered statistically inaccurate, and we assign the appropriate national (either rural or urban) median CCR to the IPF.

We apply the national CCRs to the following situations:

- New IPFs that have not yet submitted their first Medicare cost report. We continue to use these national CCRs until the facility’s actual CCR can be computed using the first tentatively or final settled cost report.
- IPFs whose overall CCR is in excess of three standard deviations above the corresponding national geometric mean (that is, above the ceiling).
- Other IPFs for which the Medicare Administrative Contractor (MAC) obtains inaccurate or incomplete data with which to calculate a CCR.

We propose to continue to update the FY 2019 national median and ceiling CCRs for urban and rural IPFs based on the CCRs entered in the latest available IPF PPS Provider Specific File. Specifically, for FY 2019, to be used in each of the situations listed previously, using the most recent CCRs entered in the CY 2018 Provider Specific File, we propose an estimated national median CCR of 0.5870 for rural IPFs and a national median CCR of 0.4395 for urban IPFs. These calculations are based on the IPF’s location (either urban or rural) using the CBSA-based geographic designations.

A complete discussion regarding the national median CCRs appears in the November 2004 IPPS final rule (69 FR 66961 through 66964).

IV. Proposed Technical Corrections to the IPF Regulations

We are proposing to make minor technical corrections to the IPF payment regulations at § 412.27(a), § 412.402 and § 412.428 to update, correct, or clarify existing regulations text. We note that these are technical corrections and they do not affect or change any existing policies.

Excluded Psychiatric Units: Additional Requirements (§ 412.27)

At § 412.27, we set forth additional requirements for excluded psychiatric units. In paragraph (a) we detail admission requirements and state that eligible patients must have a psychiatric principal diagnosis that is listed in the Fourth Edition of the American Psychiatric Association’s Diagnostic and Statistical Manual (DSM) or Chapter Five (“Mental Disorders”) of the International Classification of Diseases, Ninth Revision, Clinical Modification. This language has been in place since 2006, but there have since been updates to the versions of these code sets.

In a final rule published on September 5, 2012 (77 FR 54664), the Secretary of HHS adopted ICD–10–CM and ICD–10–PCS, in place of ICD–9–CM, as standard medical data code sets under the Health Insurance Portability and Accountability Act of 1996 (HIPAA). This change is reflected in the HIPAA regulations at 45 CFR 162.1002(c). In an August 4, 2014 final rule (79 FR 45128), the Secretary set October 1, 2015 as the compliance date for HIPAA covered entities to use the ICD–10 code sets. Because we are required to use the HIPAA standards, in the FY 2015 IPF PPS final rule published August 6, 2014 in the Federal Register titled, “Inpatient Psychiatric Facilities Prospective Payment System—Update for FY Beginning October 1, 2014 (FY 2015)” (79 FR 45945 through 45947), we finalized conversions of the ICD–9–CM-based MS–DRGs to ICD–10–CM/PCS-based MS–DRGs. However, we neglected to make a conforming change to § 412.27(a). Therefore, we are proposing to correct § 412.27(a) to state that eligible patients must have a psychiatric principal diagnosis that is listed in ICD–10–CM.

The proposed revision to § 412.27(a) would simply continue our longstanding policy of recognizing psychiatric diagnoses that are DSM diagnosis codes. We note that the DSM diagnosis codes map to ICD–10–CM codes, but the mapping is not exclusive to chapter 5 of the ICD–10–CM, as it was with ICD–9–CM; rather, they map to other chapters in ICD–10–CM as well. Therefore, the proposed correction to § 412.27(a) would no longer reference the DSM and would not specifically mention chapter 5 of ICD–10–CM.

Definitions (§ 412.402)

At § 412.402, there is a typographical error in the definition of “Principal Diagnosis.” We inadvertently repeat the language that a principal diagnosis is...
also referred to as a primary diagnosis. We propose to correct this error by removing the duplicate language.

Publication of Changes to the Inpatient Psychiatric Facility Prospective Payment System (§ 412.428)

In the FY 2016 IPF PPS regulations, we proposed and finalized an IPF-specific market basket for updating the annual IPF payment rates (80 FR 46656 through 46679). This new IPF-specific market basket replaced the Rehabilitation, Psychiatric, and Long-Term Care (RPL) market basket, which had been in place for discharges occurring from July 1, 2006 through September 30, 2015. However, in our FY 2016 IPF PPS final rule, we did not update the regulations text at § 412.428 to reflect the adoption of the IPF-specific market basket. Therefore, we propose to update § 412.428 to indicate that the use of the RPL market basket ended as of September 30, 2015, and that the IPF market basket was implemented for use in updating IPF PPS payment rates for discharges occurring on or after October 1, 2015. In addition, we propose to make other technical changes to this section for clarification and consistency.

We solicit public comments on these technical corrections and request that when commenting on this section to reference “proposed technical corrections.”

V. Update on IPF PPS Refinements and Comment Solicitation

For RY 2012, we identified several areas of concern for future refinement, and we invited comments on these issues in the FY 2012 IPF PPS proposed and final rules. For further discussion of these issues and to review the public comments, we refer readers to the FY 2012 IPF PPS proposed rule (76 FR 4998) and final rule (76 FR 26432).

We have delayed making refinements to the IPF PPS until we have completed a thorough analysis of IPF PPS data on which to base those refinements. Specifically, we will delay updating the adjustment factors derived from the regression analysis until we have IPF PPS data that include as much information as possible regarding the patient-level characteristics of the population that each IPF serves. We have begun and will continue the necessary analysis to better understand IPF industry practices so that we may refine the IPF PPS in the future, as appropriate. Our preliminary analysis has also revealed variation in cost and claim data, particularly related to labor costs, drugs costs, and laboratory services. Some providers have very low labor costs, or very low or missing drug or laboratory costs or charges, relative to other providers. We are soliciting comments about differences in the IPF labor mix, differences in IPF patient mix, and differences in provision of drugs and laboratory services. We anticipate that these comments will better inform our refinement process.

As we noted in the FY 2016 IPF PPS final rule (80 FR 46693 through 46694), our preliminary analysis of 2012 to 2013 IPF data found that over 20 percent of IPF stays reported no ancillary costs, such as laboratory and drug costs, in their cost reports, or laboratory or drug charges on their claims. Because we expect that most patients requiring hospitalization for active psychiatric treatment will need drugs and laboratory services, we again remind providers that the IPF PPS federal per diem base rate includes the cost of all ancillary services, including drugs and laboratory services. On November 17, 2017, we issued Transmittal 12, which made changes to the hospital cost report form CMS–2552–10, and included cost report Level I edit 10710S, effective for cost reporting periods ending on or after August 31, 2017. Edit 10710S now requires that cost reports from psychiatric hospitals include certain ancillary costs, or the cost report will be rejected. On January 30, 2018, we issued Transmittal 13, which changed the implementation date for Transmittal 12 to be for cost reporting periods ending on or after September 30, 2017. For details, we refer readers to see these Transmittals, which are available at the CMS website at https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/index.html.

We pay only the IPF for services furnished to a Medicare beneficiary who is an inpatient of that IPF (except for certain professional services), and payments are considered to be payments in full for all inpatient hospital services provided directly or under arrangement (see 42 CFR 412.404(d)), as specified in 42 CFR 409.10.

We will continue to analyze data from claims and cost reports that do not include ancillary charges or costs, and will be sharing our findings with CMS Office of the Center for Program Integrity and CMS Office of Financial Management for further investigation, as the results warrant. Our refinement analysis is dependent on recent precise data for costs, including ancillary costs. We will continue to collect these data and analyze them for both timeliness and accuracy with the expectation that these data will be used in future refinement. It is currently our intent to explore proposing refinements to the adjustments in future rulemaking. Since we are not proposing refinements in this rule, for FY 2019 we will continue to use the existing adjustment factors.

VI. Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program

A. Background and Statutory Authority

Section 1886(s)(4) of the Act, requires the Secretary to implement a quality reporting program for inpatient psychiatric hospitals and psychiatric units. Section 1886(s)(4)(A)(i) of the Act requires that, for FY 2014 and each subsequent FY, the Secretary must reduce any annual update to a standard federal rate for discharges occurring during the FY by 2.0 percentage points in the case of a psychiatric hospital or psychiatric unit that does not comply with quality data submission requirements with respect to an applicable FY.

As provided in section 1886(s)(4)(A)(ii) of the Act, the application of the reduction for failure to report under section 1886(s)(4)(A)(i) of the Act may result in an annual update of less than 0.0 percent for a FY, and may result in payment rates under section 1886(s)(1) of the Act being less than the payment rates for the preceding year. In addition, section 1886(s)(4)(B) of the Act requires that the application of the reduction to a standard federal rate update be noncumulative across FYs. Thus, any reduction applied under section 1886(s)(4)(A) of the Act will apply only with respect to the FY rate involved and the Secretary may not take into account the reduction in computing the payment amount under the system described in section 1886(s)(1) of the Act for subsequent years.

Section 1886(s)(4)(C) of the Act requires that, for FY 2014 and each subsequent year, each psychiatric hospital and psychiatric unit must

1 The statute uses the term “rate year” (RY).

However, beginning with the annual update of the inpatient psychiatric facility prospective payment system (IPF PPS) that took effect on July 1, 2011 (FY 2012), we aligned the IPF PPS update with the annual update of the ICD codes, effective on October 1 of each year. This change allowed for annual payment updates and the ICD coding update to occur on the same schedule and appear in the same Federal Register document, promoting administrative efficiency. To reflect the change to the annual payment rate update cycle, we revised the regulations at 42 CFR 412.402 to specify that, beginning October 1, 2012, the RY update period would be the 12-month period from October 1 through September 30, which we refer to as a “fiscal year” (FY) (76 FR 26435). Therefore, with respect to the IPFQR Program, the terms “rate year,” as used in the statute, and “fiscal year” as used in the regulation, both refer to the period from October 1 through September 30. For more information regarding this terminology change, we refer readers to section III. of the FY 2012 IPF PPS final rule (76 FR 26434 through 26435).
submit to the Secretary data on quality measures as specified by the Secretary. The data must be submitted in a form and manner and at a time specified by the Secretary. Under section 1886(s)(4)(D)(i) of the Act, unless the exception of subclause (ii) applies, measures selected for the quality reporting program must have been endorsed by the entity with a contract under section 1890(a) of the Act. The National Quality Forum (NQF) currently holds this contract.

Section 1886(s)(4)(D)(ii) of the Act provides an exception to the requirement for NQF endorsement of measures: In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretaries may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. Section 1886(s)(4)(E) of the Act requires the Secretary to establish procedures for making public the data submitted by inpatient psychiatric hospitals and psychiatric units under the IPFQR Program. These procedures must ensure that an inpatient psychiatric facility or unit has the opportunity to review its data before the data are made public. The Secretary must report quality measures that relate to services furnished in inpatient settings and psychiatric hospitals and units on the CMS website.

B. Covered Entities

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645), we established that the IPFQR Program’s quality reporting requirements cover those psychiatric hospitals and psychiatric units paid under Medicare’s IPF PPS (§ 412.404(b)). Generally, psychiatric hospitals and psychiatric units within acute care and critical access hospitals that treat Medicare patients are paid under the IPP PPS. Consistent with previous IPPS rules, we continue to use the term “inpatient psychiatric facility” (IPF) to refer to both inpatient psychiatric hospitals and psychiatric units. This usage follows the terminology in our IPP PPS regulations at § 412.402. For more information on covered entities, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645).

C. Previously Finalized Measures and Administrative Procedures

The current IPFQR Program includes 18 measures. For more information on these measures, we refer readers to the following final rules:

- The FY 2013 IPPS/LTCH PPS final rule (77 FR 53646 through 53652);
- The FY 2014 IPPS/LTCH PPS final rule (78 FR 50889 through 50897);
- The FY 2015 IPP PPS final rule (79 FR 45963 through 45975);
- The FY 2016 IPP PPS final rule (80 FR 46695 through 46714); and
- The FY 2017 IPPS/LTCH PPS final rule (81 FR 57238 through 57247).

For more information on previously adopted procedural requirements, we refer readers to the following rules:

- The FY 2013 IPPS/LTCH PPS final rule (77 FR 53653 through 53660);
- The FY 2014 IPPS/LTCH PPS final rule (78 FR 50897 through 50903);
- The FY 2015 IPP PPS final rule (79 FR 45975 through 45978);
- The FY 2016 IPP PPS final rule (80 FR 46715 through 46719);
- The FY 2017 IPPS/LTCH PPS final rule (81 FR 57248 through 57249); and
- The FY 2018 IPPS/LTCH PPS final rule (82 FR 38471 through 38474).

D. Accounting for Social Risk Factors

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38462 through 38463), we discussed the importance of improving beneficiary outcomes including reducing health disparities. We also discussed our commitment to ensuring that medically complex patients, as well as those with social risk factors, receive excellent care. We discussed how studies show that social risk factors, such as being near or below the poverty level as determined by HHS, belonging to a racial or ethnic minority group, or living with a disability, can be associated with poor health outcomes and how some of this disparity is related to the quality of health care. Among our core objectives, we aim to improve health outcomes, attain health equity for all beneficiaries, and ensure that complex patients as well as those with social risk factors receive excellent care. Within this context, reports by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) and the National Academy of Medicine have examined the influence of social risk factors in CMS value-based purchasing programs. As we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38404), ASPE’s report to Congress found that, in the context of value-based purchasing programs, dual eligibility was the most powerful predictor of poor health care outcomes among those social risk factors that they examined and tested. In addition, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38241), the National Quality Forum (NQF) undertook a 2-year trial period in which certain new measures and measures undergoing maintenance review have been assessed to determine if risk adjustment for social risk factors is appropriate for those measures. The trial period ended in April 2017 and a final report is available at: http://www.qualityforum.org/SES_Trial_Period.aspx. The trial concluded that “measures with a conceptual basis for adjustment generally did not demonstrate an empirical relationship” between social risk factors and the outcomes measured. This discrepancy may be explained in part by the methods used for adjustment and the limited availability of robust data on social risk factors. NQF has extended the socioeconomic status (SES) trial, allowing further examination of social risk factors in outcome measures.

In the FY 2018 and CY 2018 proposed rules for our quality reporting and value-based purchasing programs, we solicited feedback on which social risk factors provide the most valuable information to stakeholders and the methodology for illuminating differences in outcomes rates among patient groups within a hospital or provider that would also allow for a comparison of those differences, or disparities, across providers. Feedback we received across our quality reporting programs included encouraging CMS to explore whether factors that could be used to stratify or risk adjust the measures (beyond dual eligibility); considering the full range of differences in patient backgrounds that might affect outcomes; exploring risk adjustment approaches; and to offer careful consideration of what type of information display would be most useful to the public. We also sought public comment on confidential reporting and future public reporting of
some of our measures stratified by patient dual eligibility. In general, commenters stated that stratified measures could serve as tools for hospitals to identify gaps in outcomes for different groups of patients, improve the quality of health care for all patients, and empower consumers to make informed decisions about health care. Commenters encouraged us to stratify measures by other social risk factors such as age, income, and educational attainment. With regard to value-based purchasing programs, commenters also cautioned to balance fair and equitable payment while avoiding payment penalties that mask health disparities or discourage the provision of care to more medically complex patients.

Commenters also noted that value-based payment program measure selection, domain weighting, performance scoring, and payment methodology must account for social risk.

As a next step, we are considering options to improve health disparities among patient groups within and across hospitals by increasing the transparency of disparities as shown by quality measures. We also are considering how this work applies to other CMS quality programs in the future. We refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38403 through 38409) and the FY 2019 IPPS/LTCH PPS Proposed Rule published in the May 7, 2018 Federal Register for more details, where we discuss the potential stratification of certain Hospital IQR Program outcome measures. Furthermore, we continue to consider options to address equity and disparities in our value-based purchasing programs.

We plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify policy solutions that achieve the goals of attaining health equity for all beneficiaries and minimizing unintended consequences.

### E. Improving Patient Outcomes and Reducing Burden Through Meaningful Measures

Regulatory reform and reducing regulatory burden are high priorities for CMS. To reduce the regulatory burden on the healthcare industry, lower health care costs, and enhance patient care, in October 2017, we launched the Meaningful Measures Initiative. This initiative is one component of our agency-wide Patients Over Paperwork Initiative, which is aimed at evaluating and streamlining regulations with a goal to reduce unnecessary cost and burden, increase efficiency, and improve beneficiary experience. The Meaningful Measures Initiative is aimed at identifying the highest priority areas for quality measurement and quality improvement in order to assess the core quality of care issues that are most vital to advancing our work to improve patient outcomes. The Meaningful Measures Initiative represents a new approach to quality measures that fosters operational efficiencies, and will reduce costs including collection and reporting burden while producing quality measurement that is more focused on meaningful outcomes.

The Meaningful Measures Framework has the following objectives:

- **Address high-impact measure areas that safeguard public health:**
- **Patient-centered and meaningful to patients:**
- **Outcome-based where possible:**
- **Fulfill each program’s statutory requirements:**
- **Minimize the level of burden for health care providers (for example, through a preference for EHR-based measures where possible, such as electronic clinical quality measures):**
- **Significant opportunity for improvement:**
- **Address measure needs for population based payment through alternative payment models and,**
- **Align across programs and/or with other payers:**

In order to achieve these objectives, we have identified 19 Meaningful Measures areas and mapped them to six overarching quality priorities as shown in Table 2:

### Table 2—Mapping of Meaningful Measures Areas to Quality Priorities

---

7 Remarks by Administrator Seema Verma at the Health Care Payment Learning and Action Network (LAN) Fall Summit, as prepared for delivery on October 30, 2017. Available at: https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2017-Fact-Sheet-items/2017-10-30.html.
We believe that the Meaningful Measures Initiative will improve outcomes for patients, families, and health care providers while reducing burden and costs for clinicians and providers, as well as promoting operational efficiencies.

F. Proposed Removal or Retention of IPFQR Program Measures

1. Considerations for Removing or Retaining Measures

- Measure supports efforts to move IPFs towards reporting electronic measures.
- We are not proposing any changes to these previously finalized measure removal or retention factors, or our criteria for determining when a measure is "topped-out." However, we are proposing to add an additional measure removal factor. This is discussed in more detail below.

a. Proposed New Removal Factor

We are proposing to adopt the following additional factor to consider when evaluating measures for removal from the IPFQR Program measure set: Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program.

As we discussed in section VI.E. of the preamble of this proposed rule on our new Meaningful Measures Initiative, we are engaging in efforts to ensure that the IPFQR Program measure set continues to promote improved health outcomes for beneficiaries while minimizing the overall costs associated with the program. We believe these costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining the program. We have identified several different types of costs, including, but not limited to: (1) Provider and clinician information collection burden and related cost and burden associated with the submitting/reporting of quality measures to CMS; (2) the provider and clinician cost associated with complying with other IPFQR programmatic requirements; (3) the provider and clinician cost associated with participating in multiple quality programs, and tracking multiple similar or duplicative measures within or across those programs; (4) the CMS cost associated with the program oversight of the measure, including maintenance and public display; and/or (5) the provider and clinician cost associated with compliance to other federal and/or State regulations (if applicable). For example, it may be needlessly costly and/or of limited benefit to retain or maintain a measure which our analyses show no longer meaningfully supports program objectives (for example, informing beneficiary choice or payment scoring). It may also be costly for health care providers to track confidential feedback preview reports, and publicly reported information on a measure where we use the measure in more than one program. CMS may also have to expend unnecessary resources to maintain the specifications for the measure, as well as the tools needed to collect, validate, analyze, and publicly report the measure data. Furthermore, beneficiaries may find it confusing to see public reporting on the same measure in different programs.

When these costs outweigh the evidence supporting the continued use of a measure in the IPFQR Program, we believe it may be appropriate to remove the measure from the program.

Although we recognize that one of the main goals of the IPFQR Program is to improve beneficiary outcomes by incentivizing health care providers to focus on specific care issues and making public data related to those issues, we also recognize that those goals can have limited utility where, for example, the publicly reported data are of limited use because they cannot be easily interpreted by beneficiaries to influence their choice of providers. In these cases, removing the measure from the IPFQR Program may better accommodate the costs of program administration and compliance without sacrificing improved health outcomes and beneficiary choice.

We are proposing that we would remove measures based on this factor on a case-by-case basis. We might, for example, decide to retain a measure that is burdensome for health care providers to report if we conclude that the benefit to beneficiaries justifies the reporting burden. Our goal is to move the program forward in the least burdensome manner possible, while maintaining a parsimonious set of meaningful quality measures and continuing to incentivize improvement in the quality of care provided to patients.

We are soliciting public comments on our proposal to adopt an additional measure removal factor, "the costs associated with a measure outweigh the benefit of its continued use in the program," effective upon publication of the FY 2019 IPF PPS Final Rule. We refer readers to section VI.F.2.a of the preamble of this proposed rule where we are proposing to remove five measures based on this proposed removal factor.

2. Proposed Measures for Removal

In this proposed rule, we are proposing to remove eight measures from the IPFQR Program. We developed these proposals after conducting an overall review of the program under the Framework associated with our new Meaningful Measures Initiative, which is discussed in more detail in section VI.E. of this proposed rule. We believe that the Framework will allow IPFs and patients to continue to obtain meaningful information about IPF performance and incentivize quality...
improvement, while streamlining the measure sets to reduce program complexity so that the costs do not outweigh the benefits of improving beneficiary care. In addition, we note that in the FY 2018 IPPS/LTC PPS final rule (82 FR 38464), several commenters requested that we evaluate the current measures in the IPFQR Program using the removal and retention factors that we finalized in that rule.

In evaluating the IPFQR Program measure set under our Meaningful Measures Framework and according to our measure removal and retention factors, we identified eight measures which we believe are appropriate to propose for removal from the IPFQR Program for the FY 2020 program year and subsequent years. First, we identified five measures for which the costs associated with each measure outweigh the benefit of its continued use in the program, under new measure removal Factor 8 proposed for adoption in section VI.F.1.a of this proposed rule. We note that if the proposed removal factor is not finalized, removal of these measures would not be finalized. Second, we identified three measures that meet our topped-out criteria. These proposals are discussed in more detail below.

a. Proposed Removal of Measures in Which Costs Outweigh Benefits

i. Proposed Removal of Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431)

We are proposing to remove the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure from the IPFQR Program beginning with FY 2020 payment determination under our proposed measure removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program. We initially adopted the Influenza Vaccination Coverage Among Healthcare Personnel measure because we recognize that influenza immunization is an important public health issue, especially for vulnerable patients who may have limited access to the healthcare system, such as patients in IPFs. We are proposing to remove the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure, a National Healthcare Safety Network (NHSN) measure, based on the proposed removal factor: The costs associated with a measure outweigh the benefit of its continued use in the program.

We adopted the Influenza Vaccination Coverage Among Healthcare Personnel measure (NQF #0431) in in the FY 2015 IPF PPS final rule (79 FR 45968 through 45970) due to public health concerns regarding influenza virus infection among the IPF population. We believe that the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) addresses this public health concern by assessing influenza vaccination in the IPF among healthcare personnel (HCP), who can serve as vectors for influenza transmission. We also adopted Influenza Immunization (IMM–2, NQF #1659) in the FY 2015 IPF PPS final rule (79 FR 45967 through 45968) to address the same public health concern of influenza virus infection in the IPF patient population by assessing patient screening for and provision of influenza vaccinations.

The information collection burden for the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure is less than for measures that require chart abstraction of patient data because influenza vaccination among healthcare personnel can be calculated through review of records maintained in administrative systems and because facilities have fewer healthcare personnel than patients and therefore the measure does not require review of as many records; however, this measure does still pose some information collection burden on facilities due to the requirement to identify personnel who have been vaccinated against influenza, and the reason that unvaccinated personnel have not been vaccinated.

Furthermore, as we stated in section VI.F.1.a of this proposed rule, costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining the program. For example, it may be costly for health care providers to maintain general administrative knowledge to report these measures. Additionally, CMS must expend resources in maintaining information collection systems, analyzing reported data, and providing public reporting of the collected information. In our analysis of the IPFQR Program measure set, we recognized that some facilities face challenges with the administrative requirements of the NHSN for reporting the Influenza Vaccination Coverage Among Healthcare Personnel measure (NQF #0431). These administrative requirements (which are unique to the NHSN) include annually completing NHSN system user authentication. Enrolling in NHSN is a five-step process that the CDC estimates takes an average of 263 minutes per facility.8

Furthermore, submission via NHSN requires the system security administrator of participating facilities to re-consent electronically, ensure that contact information is kept current, ensure that the IPF has an active facility administrator account, keep Secure Access Management Service (SAMS) credentials active by logging in approximately every 2 months and changing their password, create a monthly reporting plan, and ensure that the facility’s CCN information is up-to-date. Unlike acute care hospitals which participate in other quality reporting programs which may require NHSN reporting, such as the Hospital IQR Program and HAC Reduction Program, IPFs are only required to participate in NHSN to submit data for this one measure. This may unduly disadvantage smaller IPFs, specifically those that are not part of larger hospital systems, because these IPFs do not have NHSN access for other quality reporting or value-based payment programs. It is our goal to ensure that the IPFQR Program is equitable to all providers and this measure may disproportionately affect small, independent IPFs. Especially for these small, independent IPFs, the incremental costs of this measure over the rest of the IPFQR Program measure set are significant because of the requirements of NHSN participation. As a result, we believe that the costs and burdens associated with this chart-abstracted measure outweigh the benefit of its continued use in the program.

We continue to believe that the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure provides the benefit of protecting IPF patients against influenza; however, we believe that these benefits are offset by other efforts to reduce influenza infection among IPF patients, such as numerous healthcare employer requirements for healthcare personnel to be vaccinated against influenza.9

We also believe that by continuing to include the Influenza Immunization (IMM–2, NQF #1659) measure in the IPFQR program, the measure set remains responsive to the public health concern of influenza infection within the IPF population by collecting data on ...
rates of influenza immunization among IPF patients. Further, we believe that while the Influenza Immunization (IMM–2, NQF #1659) measure has information collection burden associated with chart abstracting data, this measure is less costly than the NHSN Participation required for the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) in the IPF context.

We wish to minimize the level of cost of our programs for providers, as discussed under the Meaningful Measures Initiative in section VI.E. of this proposed rule. In our assessment of the IPFQR measure set, we prioritized measures that align with this Framework, as the most important to the IPF population. Our assessment concluded that while the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure continues to provide benefits, these benefits are diminished by other efforts and are outweighed by the significant costs of reporting this measure.

For these reasons, we are proposing to remove the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure from the IPFQR Program for the FY 2020 payment determination and subsequent years. We solicit public comments on this proposal.

i. Proposed Removal of Alcohol Use Screening Measure (NQF #1661)

We are proposing to remove the Alcohol Use Screening, SUB–1 (NQF #1661) measure from the IPFQR Program beginning with the FY 2020 payment determination under our proposed measure removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program. We adopted the Alcohol Use Screening (SUB–1, NQF #1661) measure in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50890 through 50892) because we believe it is important to address the common

<table>

</tbody>
</table>

These data further show that there is little room for improvement in the Alcohol Use Screening Measure (NQF #1661) measure, and that the benefit from this measure has greatly diminished. Based on these data, we believe that IPFs no longer meaningfully supports the program objectives of informing beneficiary choice and driving improvement in IPF screening for alcohol use.

Furthermore, as we stated in section VLF.1.a of this proposed rule, costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining the program. For example, it may be costly for health care providers to maintain general administrative knowledge to report these measures. Additionally, CMS must expend resources in maintaining information collection systems, analyzing reported data, and providing public reporting of the collected information. Here, IPF information collection burden and related costs associated with reporting this measure to CMS is high because the measure is a chart-abstracted measure. Furthermore, CMS incurs costs associated with the program oversight of the measure for public display. As a result, we believe that the costs and burdens associated with this chart-abstracted measure outweigh the benefit of its continued use in the program.

Therefore, we are proposing to remove the Alcohol Use Screening measure (SUB–1, NQF #1661) from the IPFQR Program beginning with the FY 2020 payment determination.

We solicit public comments on this proposal.

iii. Proposed Removal of the Assessment of Patient Experience of Care Measure and Use of an Electronic Health Record (EHR) Measure

We are proposing to remove two measures: (1) Assessment of Patient Experience of Care measure; and (2) Use of an EHR measure from the IPFQR Program beginning with the FY 2020 payment determination under our proposed measure removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program.

We adopted the Assessment of Patient Experience of Care measure as a voluntary information collection in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50896 through 50897) and adopted it as a measure for the IPFQR Program in the FY 2015 IPPS PPS final rule (79 FR 45964 through 45965). The Assessment of Patient Experience of Care measure collects data on whether each facility administers a patient experience of care survey. However, it does not provide data on the results of this survey, or the percentage of patients to whom the survey was administered. The measure was adopted in part to inform potential future development of patient experience of care measures. We believe that we have now collected sufficient information to inform development of such a measure and, therefore, the comorbidity of alcohol use among IPF patients. This measure requires facilities to chart-abstract measure data on a sample of IPF patient records, in accordance with established sampling policies (FY 2016 IPPS PPS final rule, 80 FR 46717 through 46719). We have previously stated our intent to move away from chart-abstracted measures in order to reduce information collection burden in other CMS quality programs (78 FR 50808; 79 FR 50242; 80 FR 49693).

When we introduced the measure to the IPFQR Program, the benefits of this measure were high, because facility performance was not consistent and therefore the measure provided a means of distinguishing facility performance and incentivized facilities to improve rates of screening for this common comorbidity.

Now, data collected for the FY 2016 through FY 2018 payment determinations show high levels of measure performance, as indicated in Table 3.
benefit of collecting this measure has been significantly reduced.

Similarly, we adopted the Use of an EHR measure in the FY 2015 IPF PPS final rule (79 FR 45965 through 45967) because of evidence demonstrating the positive effects of EHRs on multiple aspects of medical care. The Use of an EHR measure requires facilities to select between the following three statements:

- The facility most commonly used paper documents or other forms of information exchange (for example, email) not involving the transfer of health information using EHR technology at times of transitions in care;
- The facility most commonly exchanged health information using non-certified EHR technology (that is, not certified under the ONC HIT Certification Program) at times of transitions in care; and
- The facility most commonly exchanged health information using certified EHR technology (certified under the ONC HIT Certification Program) at times of transitions in care.

The measure then requires the facility to provide a “yes” or “no” answer to the following question: “Did the transfers of health information at times of transitions in care include the exchange of interoperable health information with a health information service provider (HISP)?”

As discussed in section VI.E of the preamble of this proposed rule, one of the goals of the Meaningful Measures Initiative is to reduce costs associated with payment policy, quality measures, documentation requirements, conditions of participation, and health information technology. Another goal of the Meaningful Measures Initiative is to utilize measures that are “outcome-based where possible.” As shown above, the Use of an EHR measure is a structural measure that tracks facility-level use of EHR technology, but does not directly measure patient outcomes.

Furthermore, performance on this measure has remained relatively static for the past two program years. We believe that we have now collected sufficient data to inform potential future development of measures that more directly target the aspects of medical care addressed using EHRs (for example, care coordination, care transitions, and care provided to individual patients).

While some of the intended objectives of both the Assessment of Patient Experience of Care measure and Use of an EHR measure have been met, keeping both measures in the IPFQR Program’s measure set creates administrative cost to hospitals associated with reporting these measures. We believe that removing these measures would alleviate some administrative cost.

While the information collection burden associated with these measures is relatively low, as we stated in section VI.F.1.a of this proposed rule, costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining the program. For example, it may be costly for health care providers to maintain general administrative knowledge to report these measures. Additionally, CMS must expend resources in maintaining information collection systems, analyzing reported data, and providing public reporting of the collected information.

In light of the fact that the benefits for both the Assessment of Patient Experience of Care measure and Use of an EHR measure have been significantly reduced, the costs of these measures now outweigh their benefits.

Therefore, beginning with the FY 2020 payment determination and subsequent years, we are proposing to remove the IPFQR Program: (1) Assessment of Patient Experience of Care; and (2) Use of an EHR.

We solicit public comments on this proposal.

iv. Proposed Removal of Tobacco Use Treatment Provided or Offered at Discharge (TOB–3 and TOB–3a, NQF #1656) Measure

We are proposing to remove the Tobacco Use Treatment Provided or Offered at Discharge (TOB–3 and TOB–3a, NQF #1656) from the IPFQR Program beginning with the FY 2020 payment determination under our proposed measure removal Factor 8, the costs associated with a measure outweigh the benefits of its continued use in the program.

Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (TOB–3 and TOB–3a, NQF #1656) measures whether patients were referred to or refused evidence-based outpatient counseling and received or refused a prescription for FDA-approved cessation medication upon discharge and also identifies those IPF patients who were referred to or refused evidence-based outpatient counseling and received a prescription for FDA-approved cessation medication upon discharge. This measure requires facilities to chart-abstract measure data on a sample of IPF patient records, in accordance with established sampling policies (FY 2016 IPF PPS’s final rule, 80 FR 46717 through 46719). When we introduced the measure to the IPFQR Program, the benefits of this measure were great, because facility performance was not consistent and the measure provided a means of distinguishing facility performance and incentivizing facilities to improve rates of providing treatment for this common comorbidity.

However, we believe the benefit of keeping the Tobacco Use Treatment Provided or Offered at Discharge (TOB–3 and TOB–3a, NQF #1656) measure in the IPFQR Program has now become limited because the same measure data is captured in the data elements required by the Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647) measure, which was more recently added to the IPFQR Program (80 FR 46701 through 46706). The transition record created to meet the requirements for inclusion in the numerator of the Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647) includes elements on major procedures and tests performed during inpatient stay, summary of results, a current medication list, and post-discharge patient instructions. To meet the inclusion criteria for the numerator of this measure, the post-discharge patient instructions must provide information on all recommended actions for the patient after discharge. These post-discharge patient instructions would include tobacco use treatment, if appropriate, and therefore, would capture the same information as the numerator of the Tobacco Use Treatment Provided or Offered at Discharge (TOB–3 and TOB–3a, NQF #1656) measure. Additionally, because the transition record created to meet the requirements for inclusion in the numerator of the Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647) must include a current medication list, this medication list could capture a prescription for an FDA approved cessation medication at discharge, if appropriate, the second element of tobacco use treatment measured by the Tobacco Use Treatment Provided or Offered at Discharge (TOB–3 and TOB–3a, NQF #1656) measure.

Furthermore, as we stated in section VI.F.1.a of this proposed rule, costs are multi-faceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining the program. For example, it may be costly...
for health care providers to maintain general administrative knowledge to report these measures. Additionally, CMS must expend resources in maintaining information collection systems, analyzing reported data, and providing public reporting of the collected information. For this measure, provider and clinician information collection burden and related cost and burden associated with the submitting of quality measures to CMS is high because it is a chart-abstracted measure. Additionally, CMS incurs costs associated with the program oversight of the measure, including public display.

Therefore, we believe that the benefits provided by the Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge and Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (TOB–3 and TOB–3a, NQF #1656) measure have been reduced to the point that they are now outweighed by the costs of the measure. As such, we are proposing to remove the Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (TOB–3 and TOB–3a, NQF #1656) measure from the IPFQR Program beginning with the FY 2020 payment determination and subsequent years.

We solicit public comments on this proposal.

We are proposing to remove the Tobacco Use Screening, TOB–1 (NQF #1651) measure from the IPFQR Program beginning with FY 2020 payment determination under our previously finalized measure removal Factor 1, measure performance among IPFs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (“topped-out” measures). Based on our analysis of IPFQR Program measure data for January 1, 2015 through December 31, 2015 (that is, FY 2017 payment determination data), IPF performance on Tobacco Use Screening (TOB–1, NQF #1651) is statistically indistinguishable at the 75th and 90th percentiles and the TCV is less than or equal to 0.10. This analysis is captured in Table 4:

<table>
<thead>
<tr>
<th>Measure</th>
<th>Mean</th>
<th>Median</th>
<th>75th percentile</th>
<th>90th percentile</th>
<th>TCV</th>
<th>Topped-out</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOB–1</td>
<td>93.32</td>
<td>98.79</td>
<td>100</td>
<td>100</td>
<td>0.066</td>
<td>Yes.</td>
</tr>
</tbody>
</table>

The Tobacco Use Screening (TOB–1, NQF #1651) measure meets both of the statistical criteria for topped-out status. Our analysis shows that tobacco use screening is widely in practice and there is little room for improvement. We believe that IPFs will continue this practice even after the measure is removed because we believe that the high performance on this measure shows that this practice has become an embedded part of clinical workflows. Therefore, we believe that utility in the program is limited because measure performance among IPFs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made. Therefore, we are proposing to remove the Tobacco Use Screening (TOB–1) measure from the IPFQR Program beginning with the FY 2020 payment determination.

We solicit public comments on this proposal.

We are proposing to remove two measures: (1) Hours of Physical Restraint Use, HBIPS–2 (NQF #0640); and (2) Hours of Seclusion Use, HBIPS–3 (NQF #0641) from the IPFQR Program for the FY 2020 payment determination and subsequent years under our previously finalized measure removal Factor 1, measure performance among IPFs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (“topped-out” measures). Our finalized policy states that a measure is topped out if there is statistically indistinguishable performance at the 75th and 90th percentiles and the TCV is less than or equal to 0.10. This policy is designed to compare performance at the 75th and 90th percentile of top performing facilities. Because lower results are better for HBIPS–2 and HBIPS–3, the top performing facilities are those at the 25th and 10th percentile. Therefore, we evaluated the 25th and 10th percentile of measure results, which is equivalent to the 75th and 90th percentile of facility performance.

Due to the design of these measures—that lower results are better—we could not apply the second criterion, a TCV that is less than or equal to 0.10. The coefficient of variation is calculated by dividing the standard deviation by the mean. Because the mean is near zero for these measures, this leads to division by a number near zero, which results in a large coefficient of variation, and therefore a large TCV. This means that for measures with a target performance of zero, the second topped-out criterion “the truncated coefficient of variation is less than or equal to 0.10” is not applicable. While different than our established topped-out criteria, we believe that our approach for evaluating data for these measures is appropriate because it applies the relevant criterion in a way that assesses performance among the top performing facilities.

Our analysis for Hours of Physical Restraint Use (HBIPS–2, NQF #0640) is captured in Table 5:
Our analysis for Hours of Seclusion Use (HBIPS–3, NQF #0641) is captured in Table 6:

<table>

We continue to believe that the use of physical restraints and seclusion as clinical interventions are important patient safety issues because of the severity of these interventions. However, we note that Hours of Physical Restraint Use (HBIPS–2) and Hours of Seclusion Use (HBIPS–3) have only been one element of the coordinated approach to minimizing the use of physical restraint and seclusion. They are not the primary method by which CMS monitors or assesses the appropriateness of their use. IPFs are subject to the Conditions of Participation concerning patient’s rights, which include an extensive section on the use of seclusion and restraints (42 CFR 482.13(e), (f), and (g)). Unannounced surveys by state surveyors and surveys by CMS-approved accreditation organizations (for example, The Joint Commission (TJC)) for deeming purposes are the primary means by which CMS enforces these provisions, which assess compliance with these requirements on a case-by-case basis. This focus on the appropriate use of these interventions has led to consistently high performance on these measures for several years. Our “topped-out” analyses of the measures shows that meaningful distinctions and improvements in performance can no longer be made through continued use of these measures in the IPFQR Program, and thus, utility in the program is limited. However, we believe that the continued monitoring of the use of seclusion and restraint by surveyors will continue to protect against patient harm related to inappropriate use of seclusion and restraint.

Therefore, we are proposing to remove from the IPFQR Program beginning with the FY 2020 payment determination both: (1) Hours of Physical Restraint Use (HBIPS–2); and (2) Hours of Seclusion use (HBIPS–3).

We solicit public comments on these proposals.

G. Previously Finalized and Proposed Measure Sets for the FY 2020 Payment Determination and Subsequent Years

1. Previously Finalized Measures for the FY 2020 Payment Determination and Subsequent Years

We previously finalized 18 measures for the FY 2020 payment determination and subsequent years. These measures are set forth in Table 7.

Management of Mental Health and

Meaningful Measures Initiative, proposed rule, we recognized the process and outcomes measures related to treatment and management of depression. In our assessment of the current IPFQR measure set under the Meaningful Measures Initiative, described in section VI.E. of this proposed rule, we recognized the importance of developing a measure that fits into the meaningful measure areas of Prevention, Treatment, and Management of Mental Health and adoption of a patient reported outcome measure that could replace this measure with a standardized assessment instrument, we believe that it may be necessary to first standardize assessment instruments between admission and discharge. To ensure that facilities are consistently using a standardized assessment instrument, we believe that it may be necessary to first standardize assessment instruments between admission and discharge.

We ultimately wish to adopt a patient reported outcome measure related to treatment and management of depression; however, such a measure would require consistent administration of a standardized assessment instrument at admission and discharge. To ensure that facilities are consistently using a standardized assessment instrument, we believe that it may be necessary to first adopt a process measure that assesses facility administration of a standardized depression assessment, such as the PHQ–9, at both admission and discharge for adult inpatient admissions, thereby, encouraging facilities that do not currently consistently use such an instrument to use one. In the future, we could replace this measure with a patient reported outcome measure that standardizes the use of a standardized assessment instrument between admission and discharge.

H. Possible IPFQR Program Measures and Measure Topics for Future Consideration

As we have previously indicated (79 FR 45974 through 45975), we seek to develop a comprehensive set of quality measures to be available for widespread use for informed decision-making and quality improvement in the IPF setting. We are considering development of process and outcomes measures related to treatment and management of depression. In our assessment of the current IPFQR measure set under the Meaningful Measures Initiative, described in section VI.E. of this proposed rule, we recognized the importance of developing a measure that fits into the meaningful measure areas of Prevention, Treatment, and Management of Mental Health and...
we would develop to compare the patient’s responses to the standardized depression assessment instrument at admission with the patient’s results on the same assessment instrument at discharge. We believe this potential future patient reported outcome measure for patients with depression would address the meaningful measure areas of Prevention, Treatment, and Management of Mental Health, and Patient Experience and Functional Outcomes.

We solicit public comments on: (1) Future development and adoption of a process measure that measures the number of facilities that administer a standardized assessment instrument; (2) future development and adoption of an outcome measure related to treatment and management of depression; and (3) any other possible new measures or new measure topics.

I. Public Display and Review Requirements

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53653 through 53654), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50897 through 50899), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57248 through 57249). In this proposed rule, we are not proposing any changes to these policies. However, we note that in section VI.D of the preamble of this proposed rule, we discuss potential considerations to provide stratified data by patient dual eligibility status in IPF confidential feedback reports and considerations to make stratified data publicly available on the Hospital Compare website in the future.

J. Form, Manner, and Timing of Quality Data Submission for the FY 2020 Payment Determination and Subsequent Years

1. Procedural Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654 through 53655), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50898 through 50899), and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38471 through 38472) for our previously finalized procedural requirements. In this proposed rule, we are not proposing any changes to these policies.

2. Data Submission Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53657), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50899 through 50900), and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38472 through 38473) for our previously finalized data submission requirements. In this proposed rule, we are not proposing any changes to the data submission requirements.

3. Reporting Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53656 through 53657), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50900 through 50901), and the FY 2015 IPPS final rule (79 FR 45976 through 45977 for our previously finalized reporting requirements. In this proposed rule, we are not proposing any changes to these policies; however, we are requesting public comment on our consideration to potentially require patient-level measure data in the future. This is discussed in more detail below.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53656 through 53656), we finalized that for the FY 2014 payment determination and subsequent years, IPFs must submit aggregated numerator and denominator data for all age groups for all measures on an annual basis, and that the data input forms on the QualityNet website for such submission will require aggregate data for each separate quarter. In the FY 2016 IPPS final rule (80 FR 46715 through 46717), we finalized that for the FY 2017 payment determination and subsequent years, facilities would only be required to report data for chart-abstracted measures on an aggregate basis by year, rather than by quarter. In addition, we finalized that facilities would no longer be required to report by age group.

Although we are not proposing any changes to these requirements in this proposed rule, we recognize that reporting aggregate measure data increases the possibility of human error, such as making typographical errors while entering data, which cannot be detected by CMS or by data submission systems. Unlike patient-level data reporting, aggregate measure data reporting does not allow for data accuracy validation (77 FR 53656 through 53656). Therefore, the ability to detect error is lower for aggregate measure data reporting than for patient-level data reporting. For this reason, we are considering requiring patient-level data reporting that is, data regarding each patient included in a measure and whether the patient was included in each the numerator and denominator of the measure) of IPFQR Program measure data in the future. We note that in the FY 2013 IPPS/LTCH PPS final rule, we previously indicated that we would consider requiring patient-level data in the future and that we would use notice and comment rulemaking to establish any requirements (77 FR 53656).

In this proposed rule, while we are not proposing any changes to the reporting requirements, we are soliciting public comments on the consideration for requiring patient-level measure data in the future.

4. Quality Measure Sampling Requirements

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53657 through 53658), we finalized that participating IPFs must meet specific population, sample size, and minimum reporting case threshold requirements for individual measures as specified in TJC’s Specifications Manual for the FY 2014 payment determination and subsequent years. The Specifications Manual is updated at least twice a year (and may be updated more often as necessary), and IPFs must follow the requirements in the most recent manual. We finalized that the target population for the measures includes all patients, not solely Medicare beneficiaries, to improve quality of care. We believe it is important to require IPFs to submit measures on all patients because quality improvement is of industry-wide importance and should not be focused exclusively on a certain subset of patients. We noted that the Specifications Manual gives IPFs the option of sampling their data quarterly or monthly. We also finalized our policy that IPFs that have no data to report for a given measure must enter zero for the population and sample counts. For example, an IPF that has no hours of physical restraint use (HBIPS–2) to report for a given quarter is still required to submit a zero for its quarterly aggregate population for HBIPS–2 in order to meet the reporting requirement. We note that at the time we finalized this policy, the only measures in the IPFQR Program were HBIPS measures (77 FR 53652).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901 through 50902), we stated that for the existing HBIPS measures, we continue to apply our finalized policies for population, sampling, and minimum case threshold as discussed above. However, in that rule, we finalized a new policy for new measures. For new measures finalized for the FY 2016 payment determination and subsequent years, we finalized that

IPFs must follow sampling and population requirements as specified by the appropriate measure steward (78 FR 50901 through 50902).

In that rule, we also made clear that the Follow-Up After Hospitalization for Mental Illness (FUH, NQF #0576) measure is not eligible for sampling because CMS calculates the measure using administrative claims data, and sampling is not applicable to claims-based measures. We finalized that IPFs must follow the population requirements outlined at: http://www.qualitynet.org/portals/0/Follow-Up%20After%20Hospitalization%20for%20Mental%20Illness.pdf.

In the FY 2014 IPPS/LTCH PPS final rule, some commenters noted that different sampling requirements in the measures could increase burden on facilities because these differences will require IPFs to have varying policies and procedures in place for each measure (78 FR 50901). Therefore, in the FY 2016 IPPS PPS final rule (80 FR 46717 through 46719), in order to provide facilities greater flexibility, we expanded our sampling policy to allow sampling either through: (1) Previously finalized requirements for individual measures as discussed above; or (2) through the use of a uniform sampling methodology beginning with the FY 2018 payment determination. We finalized a uniform sampling methodology that could be applied to both measures that allow sampling and for certain other measures (specifically those measures not previously included in TJC’s Specifications Manuals, such as Screening for Metabolic Disorders, Patients Discharged on Multiple Antipsychotic Medications with Appropriate Justification, HBIPS–5). Specifically, we finalized use of The Joint Commission/CMS Global Initial Patient Population sampling methodology found at: https://www.qualitynet.org/docs/BlobServer?blobkey=id&blobsource=userid&trueblobwhere=1228890321190&blobheader=multpart%2Fpostc-stream&blobheadername1=Content-Disposition&blobheadervalue1=attachment%3Bfilename%3D%2B9_Global_v4_4.pdf&blobcol=urldata&blobtable=MungoBlobs. This uniform sampling methodology allows IPFs to utilize one sampling methodology and apply it to all IPFQR Program measures for which sampling is allowed. The Joint Commission/CMS Global Initial Patient Population sampling methodology, as developed, ensures that enough data is represented in the sample to determine accurate measure rates (80 FR 46718).

Therefore currently, IPFs can choose from two options to sample quality measures: (1) Sampling and population requirements as specified by the appropriate measure steward; or (2) a uniform sampling methodology (that is, The Joint Commission/CMS Global Initial Patient Population methodology). These population and sampling options currently apply to the following measures in the IPFQR Program measure set:

- Patients Discharged on Multiple Antipsychotic Medications with Appropriate Justification (HBIPS–5, NQF #0560).
- Alcohol Use Screening (SUB–1, NQF #1661) (Proposed for removal in this rule).
- Alcohol Use Screening and Brief Intervention Provided or Offered and Alcohol Use Brief Intervention (SUB–2 and SUB–2a, NQF #1663).
- Alcohol & Other Drug Use Disorder Treatment Provided or Offered at Discharge and Alcohol & Other Drug Use Disorder Treatment at Discharge (SUB–3 and SUB–3a, NQF #1664).
- Tobacco Use Screening (TOB–1, NQF #1651) (Proposed for removal in this rule).
- Tobacco Use Treatment Provided or Offered and Tobacco Use Treatment Provided (TOB–2 and TOB–2a, NQF #1654).
- Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (TOB–3 and TOB–3a, NQF #1656) (Proposed for removal in this rule).
- Influenza Immunization (IMM–2, NQF #1659).
- Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647).
- Timely Transmission of Transition Record (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0648).
- Screening for Metabolic Disorders. We are not proposing any changes to our quality measure sampling policies. 5. Non-Measure Data Collection

In the FY 2015 IPPS final rule (79 FR 54973), we finalized that IPPS must submit aggregate population counts for Medicare and non-Medicare discharges by age group, diagnostic group, and quarter, as well as (2) sample size counts for sampled measures) to relate to the IPFs entire patient population, rather than the IPFs performance on specific measures, we refer to this data collectively as “non-measure data.” When adopting this requirement we expressed our belief that it is vital for IPFs to accurately determine and submit this non-measure data to CMS in order for CMS to assess IPFs data reporting completeness for their total population, both Medicare and non-Medicare (79 FR 54973). We also stated that in addition to helping to better assess the quality and completeness of measure data, we expected that this information would improve our ability to assess the relevance and impact of potential future measures.

In the FY 2016 IPPS PPS final rule (80 FR 46717), we finalized a change to the frequency with which we collect this non-measure data, such that beginning with the FY 2017 payment determination and subsequent years, we require non-measure data to be submitted as an aggregate, yearly count rather than by quarter. Therefore, there are currently five components to the non-measure data that facilities are required to submit on an annual basis: (1) Total annual discharges; (2) annual discharges stratified by age; (3) annual discharges stratified by diagnostic category; (4) annual discharges stratified by Medicare versus non-Medicare payer; (5) the sample size counts for measures for which sampling is performed.

However, the requirement to submit the sample size counts has created confusion for some facilities (for example, for facilities that used more than one sampling methodology such as applying the global sample to some measures and measure specific sampling procedures to others). Therefore, in an effort to reduce confusion and information collection burden, in line with our Meaningful Measures and Patients over Paperwork Initiatives, in this proposed rule we are proposing to no longer require facilities to report the sample size counts for measures for which sampling is performed (that is, item (5) listed above) beginning with the FY 2020 payment determination and subsequent years.

Our data indicate that most facilities avail themselves of the global sampling option (as discussed in section VI.J.4 above). We believe that for most facilities which use sampling, the size of the global sample can be compiled by other means, since information in the global sample size can still be inferred from the denominator values that are
already reported as part of measure data submission. This is because for measures in which the denominator represents the entire patient population (except for any denominator exclusions) the denominator is a good approximation for the global sample size count. Any denominator exclusions represent only a small proportion of the patient population and would not significantly affect the global sample size approximation. Since the global sample applies to all measures for which sampling is performed, the global sample size is consistent across all measures for which sampling is performed, and therefore, can be inferred from the denominator of any measure for which the denominator represents the entire patient population (such as the Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647) measure). We note that this proposal does not in any way change or affect our requirements concerning quality measure sampling outlined in section VI.J.4 above and would only change the information that IFPs report to CMS on the size of samples used.

Therefore, we are proposing to no longer require facilities to report sample size counts for measures for which sampling is performed as discussed above for the FY 2020 payment determination and subsequent years.

We solicit public comments on this proposal.

6. Data Accuracy and Completeness

Acknowledgement (DACA) Requirements

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658) for our previously finalized DACA requirements. In this proposed rule, we are not proposing any changes to the DACA requirements.

K. Reconsideration and Appeals Procedures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658 through 53659) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903) for our previously finalized reconsideration and appeals procedures. In this proposed rule, we are not proposing any changes to these procedures.

L. Extraordinary Circumstances

Exceptions (ECE) Policy

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903), the FY 2015 IPF PPS final rule (79 FR 45978), and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38473 through 38474) for our previously finalized ECE policies. In this proposed rule, we are not proposing any changes to these policies.

VII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), we are required to publish a 60-day notice in the Federal Register and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the section 3506(c)(2)(A)-required issues for the following information collection requirements (ICRs).

A. Collection of Information Requirements for the IPFQR Program

1. Wage Estimates

Consistent with the FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266) and our FY 2016 IPF PPS final rule (80 FR 46720), to derive average costs, we used data from the United States Bureau of Labor Statistics (BLS) National Occupational Employment and Wage Estimates for all salary estimates (in this case the May 2016 report).12 The BLS is the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.13 Acting as an independent agency, the BLS provides objective information for not only the government, but also for the public. The BLS describes Medical Records and Health Information Technicians as those responsible for organizing and managing health information data. We believe it is reasonable to assume that these individuals would be tasked with abstracting clinical data for these measures. The most recent data from the BLS reflects a median hourly wage of $18.29 for a Medical Records and Health Information Technician.14 We note that we have already incorporated this updated wage data into other quality reporting programs, for example the Hospital Inpatient Quality Reporting (IQR) Program uses this wage to calculate its burden estimates (82 FR 38501). Therefore, we are updating our wage estimate to reflect this hourly wage for the IPFQR Program.

Table 9 presents the median hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 9—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

<table>
<thead>
<tr>
<th>Occupation title</th>
<th>Occupation code</th>
<th>Median hourly wage ($/hr)</th>
<th>Fringe benefits and overhead ($/hr)</th>
<th>Adjusted hourly wage ($/hr)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medical Records and Health Information Technician</td>
<td>29–2071</td>
<td>$18.29</td>
<td>$18.29</td>
<td>$36.58</td>
</tr>
</tbody>
</table>

Under OMB Circular A–76, in calculating direct labor, agencies should not only include salaries and wages, but also “other entitlements” such as fringe benefits,15 As indicated in Table 9 and consistent with our past approach, we have chosen to calculate the cost of overhead at 100 percent of the median hourly wage (81 FR 57266). This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and methods of estimating these costs vary widely from study to study. Nonetheless, there is no practical

15 http://www.whitehouse.gov/omb/circulars/a076_a76_incl_tech_correction.
alternative and we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

2. Proposed ICs Regarding the IPFQR Program

   For a detailed discussion of the information collection burden for the program requirements that we have previously adopted, we refer readers to the currently approved burden estimates under the OMB control number 0938–1171 (CMS–10432) and the following rules:

   • The FY 2013 IPPS/LTCH PPS final rule (77 FR 53673);
   • The FY 2014 IPPS/LTCH PPS final rule (78 FR 50964);
   • The FY 2015 IPPS PPS final rule (79 FR 45978 through 45980);
   • The FY 2016 IPPS PPS final rule (80 FR 46720 through 46721);
   • The FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266); and
   • The FY 2018 IPPS/LTCH PPS final rule (82 FR 38507 through 38508).

   The following requirements and burden estimates will be submitted to OMB for approval under control number 0938–1171 (CMS–10432). We are soliciting public comments for the information collection in its entirety, that is, both for this rule’s proposed changes and for the requirements and burden that are currently approved by OMB under the 0938–1171 control number.

   We discuss only the changes in burden resulting from the provisions in this proposed rule. In section VI. of this proposed rule, we propose provisions that impact the FY 2020 payment determination. All of these proposals apply to data collected in CY 2018 and reported in FY 2019. For purposes of calculating burden, we will attribute the costs associated with the proposals to the FY in which these costs begin; for the purposes of all of the provisions in this proposed rule, that year is FY 2018.

   a. Estimated Change in Information Collection Burden Due to Proposed Adoption of a New Measure Removal Factor

   In section VI.F.1. of this preamble, we proposed to adopt a new measure removal factor, “the costs associated with a measure outweigh the benefit of its continued use in the program.” As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38507 through 38508), the adoption of measure removal or retention factors does not affect the data submission requirements for IPFs. These factors are intended to improve transparency of our measure review and evaluation process, and have no effect on the data collection or submission requirements for IPFs. Therefore, we do not believe there will be any change of burden associated with the proposal to adopt the new measure removal factor.

   b. Estimated Change in Information Collection Burden Due to Proposed Removal of Eight Measures

   In section VI.F.2. of this preamble, we are proposing to remove the following eight measures for FY 2020 payment determination and subsequent years:

   • Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431);
   • SUB—1—Alcohol Use Screening (NQF #1661);
   • Assessment of Patient Experience of Care;
   • Use of an Electronic Health Record;
   • TOB—1—Tobacco Use Screening (NQF #1651);
   • Hospital-Based Inpatient Psychiatric Services (HBIPS)–2—Hours of Physical Restraint Use (NQF #0640);
   • HBIPS–3—Hours of Seclusion Use (NQF #0641); and
   • TOB—3—Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (NQF #1656).

   For the FY 2020 payment determination, CY 2018 data would be reported during the summer of CY 2019. Therefore, for the FY 2020 payment determination proposals, we are correlating the burden reduction to the FY 2018 burden calculation. We believe that approximately 1,734 IPFs will participate in the IPFQR Program for requirements occurring in FY 2018 and subsequent years. Based on data from CY 2017, we believe that each IPF will submit measure data based on approximately 1,213 discharges per year.

   i. Chart-Abstracted Measures Estimated Information Collection Burden

   We have previously estimated that the reporting burden for chart-abstracted measures is 15 minutes (0.25 hours) per measure per case (81 FR 57265). We continue to use that time estimate to calculate the burden pertaining to this proposed rule. Of the measures we are proposing to remove from the program, the following five are chart-abstracted:

   • Hours of Seclusion Use (HBIPS–3, NQF #0641);
   • Alcohol Use Screening (SUB–1, NQF #1661);
   • Tobacco Use Screening (TOB–1, NQF #1651);
   • Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (TOB–3 and TOB–3a, NQF #1656).

   The first two measures, Hours of Seclusion Use (NQF #0641) and Hours of Physical Restraint Use (NQF #0640) require abstraction for all discharges. We estimate that removing these two measures would result in a decrease in burden of 606.5 hours per IPF (2 measures × 1,213 cases/measure × 0.25 hours/case) or 1,051,671 hours across all IPFs (606.5 hours/IPF × 1,734 IPFs). The decrease in costs is approximately $22,185.77 per IPF ($36.58/hour × 606.5 hours) or $38,470,125.18 across all IPFs ($22,185.77/IPF × 1,734 IPFs).

   The remaining three measures, Alcohol Use Screening (NQF #1661), Tobacco Use Screening (NQF #1651), and Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (NQF #1656), fall under our previously finalized “global sample,” (80 FR 46717 through 46718). Under the global sample, we allow facilities to apply the same sampling methodology to all measures eligible for sampling. In the FY 2016 IPF PPS final rule (80 FR 46718), we finalized that facilities with between 609 and 3,056 cases and choose to participate in the global sample would be required to report data for 609 cases. Because most facilities choose to apply the global sample, rather than abstracting data for all patients or applying measure specific sampling methodologies, we believe that the number of cases under the global sample is a good approximation of facility burden associated with these measures. Therefore, for the average IPF discharge rate of 1,213 discharges, the global sample requires abstraction of 609 records. We estimate that removing these three measures would result in a decrease in burden of 456.75 hours per IPF (3 measures × 609 cases/measure × 0.25 hours/case) or 792,004.5 hours across all IPFs (456.75 hours/IPF × 1,734 IPFs). The decrease in costs is approximately $16,707.92 per IPF ($36.58/hour × 456.75 hours) or $28,971,524.61 across all IPFs ($16,707.92/IPF × 1,734 IPFs).

   ii. NHSN Measure Estimated Information Collection Burden

   We have previously estimated that the reporting burden for the Influenza Vaccination Coverage Among
Healthcare Personnel (NQF #0431) is 15 minutes (0.25 hours) per measure per case and that the average IPF will report on 40 cases per year (79 FR 45979). Therefore, we estimate that removing this measure will result in a decrease in burden of 10 hours per IPF (40 cases × 0.25 hours/case) or 17,340 hours across all IPFs (40 cases × 0.25 hours/case × 1,734 IPFs). The decrease in costs is approximately $365.80 per IPF (10 hours × $36.58/hour) or $634,297.20 across all IPFs ($365.80/IPF × 1,734 IPFs).

We also anticipate cost reduction unrelated to the information collection burden associated with these proposals, and refer readers to section IX.C.5.b for a discussion of these costs.

iii. Attestation Measures Estimated Information Collection Burden

We have previously estimated that the Assessment of Patient Experience of Care measure and the Use of an Electronic Health Record (EHR) measure have no measurable information collection burden because both of these measures require only attestation (79 FR 45979). Therefore, we do not anticipate a reduction in IPF information collection burden associated with the removal of these measures. However, we anticipate cost reduction unrelated to the information collection burden associated with these proposals, and refer readers to section IX.C.5.b for a discussion.

The information collection burden reduction associated with the proposed removal of these eight measures would be 1,861,016 hours at a cost of $68,075,946.99 (total) or $39,259 (per IPF) as summarized in Table 10.

**Table 10—Total Information Collection Burden Reduction Associated With Proposed Removal of Eight Measures**

**Total Burden Reduction ..........................................................**

1,073.25 1,861,015.5 39,259.49 68,075,946.99

We solicit public comments on the burden reduction estimate of $68,075,946.99 across all IPFs related to our proposals to remove eight measures from the IPFQR program.

c. Estimated Change in Information Collection Burden Due to Proposed Removal of Sample Size Count Requirement

In section VI.J.4. of this proposed rule, we are proposing to remove the requirement to report the sample size count for measures for which sampling is performed beginning with the FY 2020 payment determination and subsequent years (that is, data collected during CY 2018 and reported during summer of CY 2019). Previously, we estimated that the total burden of reporting non-measure data to be 2.5 hours per IPF (79 FR 45979 through 45980). As discussed in section VI.J.5, the non-measure data encompasses five reporting requirements: (1) Total annual discharges; (2) annual discharges stratified by age; (3) annual discharges stratified by diagnostic category; (4) annual discharges stratified by Medicare versus non-Medicare payer; and (5) the sample size count for measures for which sampling is performed.

We estimate that, because the sample size count is one-fifth of the non-measure data collection, removing this requirement will reduce the non-measure collection burden by one-fifth, (that is, 20 percent) or 0.5 hours per facility (0.20 × 2.5 hours). This results in a reduction of information collection burden of 867 hours across all IPFs (0.5 hours per IPF × 1,734 IPFs). The decrease in costs is approximately $18.29 per IPF (0.5 hours × $36.58/hour) or $31,714.86 across all IPFs ($18.29 per IPF × 1,734 IPFs).

We solicit public comments on the information collection burden reduction estimate of 867 hours and $31,714.86 across all IPFs related to our proposal to no longer require facilities to report sample size counts beginning with the FY 2020 payment determination.

d. Summary of Annual Information Collection Burden Estimates for Proposed Requirements

If our proposals to adopt a new measure removal factor, to remove eight measures from the IPFQR Program, and to no longer require IPFs to the size of the global sample if they apply the global sampling methodology are finalized, we estimate that burden would be reduced by a total of 1,861,882.50 hours or $68,107,661.85, as described in Table 11.

We solicit public comments on these information collection requirements. If you wish to comment, identify the rule (CMS–1690–P) and, where applicable, the preamble section, and the ICR section. See the DATES and ADDRESSES sections of this proposed rule for the comment due date and for additional instructions.

VIII. Response to Comments

Because of the large number of public comments we normally receive on Federal Register documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the DATES section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

IX. Regulatory Impact Analysis

A. Statement of Need

This rule proposes updates to the prospective payment rates for Medicare inpatient hospital services provided by IPFs for discharges occurring during FY 2019 (October 1, 2018 through September 30, 2019). We propose to apply the 2012-based IPF market basket increase of 2.8 percent, less the productivity adjustment of 0.8 percentage point as required by 1866(s)[2](A)[i] of the Act, and further reduced by 0.75 percentage point as required by sections 1886(s)[2](A)[ii] and 1886(s)[3](E) of the Act, for a proposed total FY 2019 payment rate update of 1.25 percent. In this proposed rule, we are proposing updates to the IPF labor-related share and updating the IPF wage index for FY 2019. We are also proposing minor technical corrections to three IPF regulations, and proposing updates to the IPF Quality Reporting Program. Finally, we have included a Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers.

B. Overall Impact

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) Having an annual effect on the economy of $100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition,
jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). This proposed rule is not economically significant under Executive Order 12866.

We estimate that the total impact of these proposed changes for FY 2019 payments compared to FY 2018 payments will be a net increase of approximately $50 million. This reflects a $60 million increase from the update to the payment rates ($plus;$130 million from the first quarter 2018 IGI forecast of the 2012-based IPF market basket of 2.8 percent, -$40 million for the productivity adjustment of 0.8 percentage point, and -$30 million for the other adjustment of 0.75 percentage point), as well as a $10 million decrease as a result of the update to the outlier threshold amount. Outlier payments are estimated to decrease from 2.27 percent in FY 2018 to 2.00 percent of total estimated IPF payments in FY 2019. We also estimate a total decrease in burden of 1,073.75 hours per IPF or 1,861,882.5 hours across all IPFs, resulting in a total decrease in financial burden of $39,277.78 per IPF or $68,107,661.85 across all IPFs.

C. Anticipated Effects

In this section, we discuss the historical background of the IPF PPS and the impact of this proposed rule on the Federal Medicare budget and on IPFs.

1. Budgetary Impact

As discussed in the November 2004 and FY 2007 IPF PPS final rules, we applied a budget neutrality factor to the federal per diem base rate and ECT payment per treatment to ensure that total estimated payments under the IPF PPS in the implementation period would equal the amount that would have been paid if the IPF PPS had not been implemented. The budget neutrality factor includes the following components: outlier adjustment, stop-loss adjustment, and the behavioral offset. As discussed in the FY 2009 IPF PPS notice (73 FR 25711), the stop-loss adjustment is no longer applicable under the IPF PPS.

As discussed in section III.D.1 of this proposed rule, we are using the wage index and labor-related share in a budget neutral manner by applying a wage index budget neutrality factor to the federal per diem base rate and ECT payment per treatment. Therefore, the budgetary impact to the Medicare program of this proposed rule will be due to the market basket update for FY 2019 of 2.8 percent (see section III.A.2 of this proposed rule) less the productivity adjustment of 0.8 percentage point required by section 1886(s)(2)(A)(i) of the Act; further reduced by the “other adjustment” of 0.75 percentage point under sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act; and the update to the outlier fixed dollar loss threshold amount.

We estimate that the FY 2019 impact will be a net increase of $50 million in payments to IPF providers. This reflects an estimated $60 million increase from the update to the payment rates and a $10 million decrease due to the update to the outlier threshold amount to set total estimated outlier payments at 2.0 percent of total estimated payments in FY 2019.

The RFA requires agencies to analyze options for regulatory relief of small entities if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most IPFs and most other providers and suppliers are small entities, either by nonprofit status or having revenues of $7.5 million to $38.5 million or less in any 1 year, depending on industry classification (for details, refer to the SBA Small Business Size Standards found at http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf). Individuals and states are not included in the definition of a small entity.

Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary IPFs or the proportion of IPFs’ revenue derived from Medicare payments. Therefore, we assume that all IPFs are considered small entities.

The Department of Health and Human Services generally uses a revenue impact of 3 to 5 percent as a significance threshold under the RFA. As shown in Table 12, we estimate that the overall revenue impact of this proposed rule on all IPFs is to increase estimated Medicare payments by approximately 0.98 percent. As a result, since the estimated impact of this proposed rule is a net increase in revenue across almost all categories of IPFs, the Secretary has determined that this proposed rule will have a positive revenue impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. As discussed in section IX.C.1. of this proposed rule, the rates and policies set forth in this proposed rule will not have an adverse impact on the rural hospitals based on the data of the 272 rural excluded psychiatric units and 67 rural psychiatric hospitals in our database of 1,636 IPFs for which data were available. Therefore, the Secretary has determined that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. Currently, that threshold is approximately $148 million. This proposed rule does not impose spending costs on state, local, or tribal governments in the aggregate, or by the private sector of $148 million or more.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. This proposed rule will not have a substantial effect on state and local governments.
2. Impact on Providers

To show the impact on providers of the changes to the IPF PPS discussed in this proposed rule, we compare estimated payments under the IPF PPS rates and factors for FY 2019 versus those under FY 2018. We determined the percent change of estimated FY 2019 IPF PPS payments compared to FY 2018 IPF PPS payments for each category of IPFs. In addition, for each category of IPFs, we have included the estimated percent change in payments resulting from the update to the outlier fixed dollar loss threshold amount; the updated wage index data including the updated labor-related share; and the market basket update for FY 2019, as adjusted by the productivity adjustment according to section 1886(s)(2)(A)(i) of the Act, and the “other adjustment” according to sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act.

To illustrate the impacts of the FY 2019 changes in proposed rule, our analysis begins with a FY 2018 baseline simulation model based on FY 2017 IPF payments inflated to the midpoint of FY 2018 using IHS Global Inc.’s most recent forecast of the market basket update (see section III.A.2. of this proposed rule); the estimated outlier payments in FY 2018; the FY 2017 pre-floor, pre-reclassified hospital wage index; the FY 2018 labor-related share; and the FY 2018 percentage amount of the rural adjustment. During the simulation, total outlier payments are maintained at 2 percent of total estimated IPF PPS payments.

Each of the following changes is added incrementally to this baseline model in order for us to isolate the effects of each change:

- The proposed update to the outlier fixed dollar loss threshold amount.
- The FY 2018 pre-floor, pre-reclassified hospital wage index and the proposed FY 2019 labor-related share.
- The proposed market basket update for FY 2019 of 2.8 percent less the productivity adjustment of 0.8 percentage point in accordance with section 1886(s)(2)(A)(i) of the Act and further reduced by the “other adjustment” of 0.75 percentage point in accordance with sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act, for a proposed payment rate update of 1.25 percent.

Our final column comparison in Table 12 illustrates the percent change in payments from FY 2018 (that is, October 1, 2017, to September 30, 2018) to FY 2019 (that is, October 1, 2018, to September 30, 2019) including all the changes in this proposed rule.

1 This column reflects the payment update impact of the IPF market basket update for FY 2019 of 2.8 percent, a 0.8 percentage point reduction for the productivity adjustment as required by section 1886(s)(2)(A)(i) of the Act, and a 0.75 percentage point reduction in accordance with sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act.
2 Percent changes in estimated payments from FY 2018 to FY 2019 include all of the changes presented in this proposed rule. Note, the products of these impacts may be different from the percentage changes shown here due to rounding effects.

3. Impact Results

Table 12 displays the results of our analysis. The table groups IPFs into the categories listed here based on characteristics provided in the Provider of Services (POS) file, the IPF provider specific file, and cost report data from the Healthcare Cost Report Information System:

- Facility Type
- Location
- Teaching Status Adjustment
- Census Region
- Size

The top row of the table shows the overall impact on the 1,636 IPFs included in this analysis. In column 3, we present the effects of the update to the outlier fixed dollar loss threshold amount. We estimate that IPF outlier payments as a percentage of total IPF payments are 2.27 percent in FY 2018. Thus, we are adjusting the outlier threshold amount in this proposed rule to set total estimated outlier payments equal to 2.00 percent of total payments in FY 2019. The estimated change in total IPF payments for FY 2019, therefore, includes an approximate 0.27 percent decrease in payments because the outlier portion of total payments is expected to decrease from approximately 2.27 percent to 2.0 percent.

The overall impact of this outlier adjustment update (as shown in column 3 of Table 12), across all hospital groups, is to decrease total estimated payments to IPFs by 0.27 percent. The largest decrease in payments is estimated to be a 0.69 percent decrease in payments for teaching hospitals with 10 to 30 percent interns and residents to beds.

In column 4, we present the effects of the budget-neutral update to the IPF wage index and the Labor-Related Share (LRS). This represents the effect of using the most recent wage data available and taking into account the updated OMB delineations. That is, the impact represented in this column reflects the update from the FY 2018 IPF wage index to the proposed FY 2019 IPF wage index, which includes the LRS update from 75.0 percent in FY 2018 to 74.8 percent in FY 2019. We note that there is no projected change in aggregate payments to IPFs, as indicated in the first row of column 4, however, there will be distributional effects among different categories of IPFs. For example, we estimate the largest increase in payments to be 0.49 percent for rural government psychiatric hospitals, and the largest decrease in payments to be 0.81 percent for for-profit rural psychiatric hospitals.

In column 5, we present the estimated effects of the proposed update to the IPF PPS payment rates of 1.25 percent, which are based on the 2012-based IPF market basket update of 2.8 percent, less the productivity adjustment of 0.8 percentage point in accordance with section 1886(s)(2)(A)(i) of the Act, and further reduced by 0.75 percentage point in accordance with sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act.

Finally, column 6 compares our estimates of the total proposed changes reflected in this proposed rule for FY 2019 to the estimates for FY 2018 (without these changes). The average estimated increase for all IPFs is approximately 0.98 percent. This estimated net increase includes the effects of the proposed 2.8 percent market basket update reduced by the productivity adjustment of 0.8 percentage point, as required by section 1886(s)(2)(A)(i) of the Act and further reduced by the “other adjustment” of 0.75 percentage point, as required by sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act. It also includes the overall estimated 0.27 percent decrease in estimated IPF outlier payments as a percent of total payments from the proposed update to the outlier fixed dollar loss threshold amount.

4. Effect on Beneficiaries

Under the IPF PPS, IPFs will receive payment based on the average resources consumed by patients for each day. We do not expect changes in the quality of care or access to services for Medicare beneficiaries under the FY 2019 IPF PPS, but we continue to expect that paying prospectively for IPF services will enhance the efficiency of the Medicare program.

5. Effects of Updates to the IPFQR Program

As discussed in section VI of this proposed rule and in accordance with section 1886(s)(4)(A)(i) of the Act, and a 0.75 percentage point reduction in accordance with sections 1886(s)(2)(A)(ii) and 1886(s)(3)(E) of the Act.
reduction in the FY 2020 annual update to the standard Federal rate for IPFs that have failed to comply with the IPFQR Program requirements for FY 2020. In section VI of this proposed rule, we discuss how the 2 percentage point reduction will be applied. For FY 2018, of the 1,758 IPFs eligible for the IPFQR Program, 59 IPFs (3.4 percent) did not receive the full market basket update for failure to meet program requirements; of those 59, 24 chose not to participate in the program. We anticipate that even fewer IPFs would receive the reduction for FY 2020 as IPFs become more familiar with the requirements. Thus, we estimate that the policy to apply a 2 percentage point reduction to the annual update for the IPFs that have failed to comply with IPFQR Program requirements will have a negligible impact on overall IPF payments for FY 2020.

a. Effects Related to Information Collection Burden

Based on the proposals made in this rule, we estimate the total decrease in information collection burden to be 1,073.75 hours per IPF or 1,861,882.5 hours across all IPFs, resulting in a total decrease in financial burden of $39,277.78 per IPF or $68,107,661.85 across all IPFs. As discussed in section VII. of this proposed rule, we will attribute the savings associated with the proposals to the year in which those savings begin; for the purposes of all the proposals in this proposed rule, that year is FY 2018. Further information on these estimates can be found in section VII. of this proposed rule.

b. Effects other than Burden related to Information Collection

As stated in section VI.F.1.a and VI.A of the preamble of this rule, we anticipate that in addition to the reduction in information collection burden discussed above, there will be unrelated cost reduction associated with some of our proposals. One example of this cost reduction is that IPFs will no longer have to register with and maintain accounts with NHSN. Because of the administrative complexity of NHSN participation, we believe this will be a substantial reduction in costs. Furthermore, we believe that costs related to reviewing and tracking measure information in feedback reports will be reduced.

In addition to reducing costs to providers, we believe that our proposed policies may simplify use of IPFQR Program data for beneficiaries. For example, by no longer reporting data on both the Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647) and the Tobacco Use Treatment Provided or Offered at Discharge and Tobacco Use Treatment at Discharge (NQF #1656), beneficiaries will still be able to identify IPFs that provide high quality discharge information with less data to analyze and evaluate.

Finally, we believe that by no longer maintaining data submission mechanisms, public reporting infrastructure, and program materials for measures which are no longer providing significant benefit, we will be able to better utilize CMS’s resources to support quality reporting and quality improvement initiatives among IPFs.

We intend to closely monitor the effects of this quality reporting program on IPFs and help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, and a technical help desk.

6. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this proposed rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the proposed rule, we assume that the total number of unique commenters on the most recent IPF proposed rule from FY 2016 will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this proposed rule. It is possible that some reviewers commented on that proposed rule; therefore, for the purposes of our estimate, we assume that each reviewer reads approximately 50 percent of the proposed rule. We solicit public comments on this assumption.

Using the mean (average) wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this proposed rule is $105.16 per hour, including overhead and fringe benefits (https://www.bls.gov/oes/2016/may/oes_nat.htm). Assuming an average reading speed of 250 words per minute, we estimate that it would take approximately 1.10 hours for the staff to review half of this proposed rule. For each IPF that reviews the proposed rule, the estimated cost is $115.68 (1.10 hours × $105.16). Therefore, we estimate that the total cost of reviewing this proposed rule is $8,791.68 ($115.68 × 76 reviewers).

D. Alternatives Considered

The statute does not specify an update strategy for the IPF PPS and is broadly written to give the Secretary discretion in establishing an update methodology. Therefore, we are updating the IPF PPS using the methodology published in the November 2004 IPF PPS final rule; applying the proposed FY 2019 2012-based IPF PPS market basket update of 2.8 percent, reduced by the statutorily required multifactor productivity adjustment of 0.8 percentage point and the other adjustment of 0.75 percentage point, along with the proposed wage index budget neutrality adjustment to update the payment rates: proposing a FY 2019 IPF wage index which is fully based upon the latest OMB CBSA designations; and proposing changes to the IPF Quality Reporting Program.

E. Accounting Statement

As required by OMB Circular A–4 (available at www.whitehouse.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf), in Table 13, we have prepared an accounting statement showing the classification of the expenditures associated with the proposed updates to the IPF wage index and payment rates in this proposed rule. Table 13 provides our best estimate of the increase in Medicare payments under the IPF PPS as a result of the changes presented in this proposed rule and based on the data for 1,636 IPFs in our database.
Executive Order 13771, titled Reducing Regulation and Controlling Regulatory Costs, was issued on January 30, 2017 and requires that the costs associated with significant new regulations “shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least two prior regulations.” This proposed rule, if finalized, is considered an Executive Order 13771 deregulatory action. We estimate that this rule generates $59 million in annualized cost savings, discounted at 7 percent relative to year 2016, over a perpetual time horizon. This $59 million is equal to the estimated $68.1 million in annual cost savings which would begin in 2018, discounted to 2016 for Executive Order 13771 accounting purposes using a 7 percent discount rate. Details on the estimated costs of this rule can be found in the preceding and subsequent analyses.

G. Conclusion

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

X. Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange Through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers

Currently, Medicare- and Medicaid-participating providers and suppliers are at varying stages of adoption of health information technology (health IT). Many hospitals have adopted electronic health records (EHRs), and CMS has provided incentive payments to eligible hospitals, critical access hospitals (CAHs), and eligible professionals who have demonstrated meaningful use of certified EHR technology (CEHRT) under the Medicare EHR Incentive Program. As of 2015, 96 percent of Medicare- and Medicaid-participating non-Federal acute care hospitals had adopted certified EHRs with the capability to electronically export a summary of clinical care. While both adoption of EHRs and electronic exchange of information have grown substantially among hospitals, significant obstacles to exchanging electronic health information across the continuum of care persist. Routine electronic transfer of information post-discharge has not been achieved by providers and suppliers in many localities and regions throughout the nation.

CMS is firmly committed to the use of certified health IT and interoperable EHR systems for electronic healthcare information exchange to effectively help hospitals and other Medicare- and Medicaid-participating providers and suppliers improve internal care delivery practices, support the exchange of important information across care team members during transitions of care, and enable reporting of electronically specified clinical quality measures (eCQMs). The Office of the National Coordinator for Health Information Technology (ONC) acts as the principal federal entity charged with coordination of nationwide efforts to implement and use health information technology and the electronic exchange of health information on behalf of the Department of Health and Human Services.

In 2015, ONC finalized the 2015 Edition health IT certification criteria (2015 Edition), the most recent criteria for health IT to be certified to under the ONC Health IT Certification Program. The 2015 Edition facilitates greater interoperability for several clinical health information purposes and enables health information exchange through new and enhanced certification criteria, standards, and implementation specifications. CMS requires eligible hospitals and CAHs in the Medicare and Medicaid EHR Incentive Programs and eligible clinicians in the Quality Payment Program (QPP) to use EHR technology certified to the 2015 Edition beginning in CY 2019.

In addition, several important initiatives will be implemented over the next several years to provide hospitals and other participating providers and suppliers with access to robust infrastructure that will enable routine electronic exchange of health information. Section 4003 of the 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, and amending section 3000 of the Public Health Service Act (42 U.S.C. 300j), requires HHS to take steps to advance the electronic exchange of health information and interoperability for participating providers and suppliers in various settings across the care continuum. Specifically, Congress directed that ONC “...for the purpose of ensuring full network-to-network exchange of health information, convene public-private and public-public partnerships to build consensus and develop or support a trusted exchange framework, including a common agreement among health information networks nationally.” In January 2018, ONC released a draft version of its proposal for the Trusted Exchange Framework and Common Agreement, which outlines principles and minimum terms and conditions for trusted exchange to enable interoperability across disparate health information networks (HINs). The Trusted Exchange Framework (TEF) is focused on achieving the following four important outcomes in the long-term:

- Professional care providers, who deliver care across the continuum, can access health information about their patients, regardless of where the patient received care.
- Patients can find all of their health information from across the care continuum, even if they do not remember the name of the professional care provider they saw.

• Professional care providers and health systems, as well as public and private health care organizations and public and private payer organizations accountable for managing benefits and the health of populations, can receive necessary and appropriate information on groups of individuals without having to access one record at a time, allowing them to analyze population health trends, outcomes, and costs; identify at-risk populations; and track progress on quality improvement initiatives.

• The health IT community has open and accessible application programming interfaces (APIs) to encourage entrepreneurial, user-focused innovation that will make health information more accessible and improve EHR usability.

ONC will revise the draft TEF based on public comment and ultimately release a final version of the TEF that will subsequently be available for adoption by HINs and their participants seeking to participate in nationwide health information exchange. The goal for stakeholders that participate in, or serve as, a HIN is to ensure that participants will have the ability to seamlessly share and receive a core set of data from other network participants in accordance with a set of permitted purposes and applicable privacy and security requirements. Broad adoption of this framework and its associated exchange standards is intended to both achieve the outcomes described above while creating an environment more conducive to innovation.

In light of the widespread adoption of EHRs along with the increasing availability of health information exchange infrastructure predominantly among hospitals, we are interested in hearing from stakeholders on how we could use the CMS health and safety standards that are required for providers and suppliers participating in the Medicare and Medicaid programs (that is, the Conditions of Participation (CoPs), Conditions for Coverage (CfCs), and Requirements for Participation (RPs) for Long-Term Care Facilities to further advance electronic exchange of information that supports safe, effective transitions of care between hospitals and community providers. Specifically, CMS might consider revisions to the current CMS CoPs for hospitals such as: Requiring that hospitals transferring medically necessary information to another facility upon a patient transfer or discharge do so electronically; requiring that hospitals electronically send required discharge information to a community provider via electronic means if possible and if a community provider can be identified; and requiring that hospitals make certain information available to patients or a specified third-party application (for example, required discharge instructions) via electronic means if requested.

On November 3, 2015, we published a proposed rule (80 FR 68126) to implement the provisions of the IMPACT Act and to revise the discharge planning CoP requirements that hospitals (including Short-Term Acute-Care Hospitals, Long-Term Care Hospitals (LTCs), Inpatient Rehabilitation Hospitals (IRFs), Inpatient Psychiatric Hospitals (IPFs), Children’s Hospitals, and Cancer Hospitals), critical access hospitals (CAHs), and home health agencies (HHAs) must meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. However, several of the proposed requirements directly address the issue of communication between providers and between providers and patients, as well as the issue of interoperability:

• Hospitals and CAHs would be required to transfer certain necessary medical information and a copy of the discharge instructions and discharge summary to the patient’s practitioner, if the practitioner is known and has been clearly identified;

• Hospitals and CAHs would be required to send certain necessary medical information to the receiving facility/post-acute care providers, at the time of discharge; and

• Hospitals, CAHs and HHAs, would need to comply with the IMPACT Act requirements that would require hospitals, CAHs, and certain post-acute care providers to use data on quality measures and data on resource use measures to assist patients during the discharge planning process, while taking into account the patient’s goals of care and treatment preferences.

We published another proposed rule (81 FR 39448), on June 16, 2016, that updated a number of CoP requirements that hospitals and CAH must meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. One of the proposed hospital CoP revisions in that rule directly addresses the issues of communication between providers and patients, patient access to their medical records, and interoperability. We proposed that patients have the right to access their medical records, upon an oral or written request, in the form and format requested by such patients, if it is recorded electronically in such form and format (including in an electronic form or format when such medical records are maintained electronically); or, if not, in a readable hard copy form or such other form and format as agreed to by the facility and the individual, including current medical records, within a reasonable time frame. The hospital must not frustrate the legitimate efforts of individuals to gain access to their own medical records and must actively seek to meet these requests as quickly as its record keeping system permits.

We also published a final rule (81 FR 68688), on October 4, 2016, that revised the requirements that LTC facilities must meet to participate in the Medicare and Medicaid programs, where we made a number of revisions based on the importance of effective communication between providers during transitions of care, such as transfers and discharges of residents to other facilities or providers, or to home. Among these revisions was a requirement that the transferring LTC facility must provide all necessary information to the resident’s receiving provider, whether it is an acute care hospital, a LTC hospital, a psychiatric facility, another LTC facility, a hospice, home health agency, or another community-based provider or practitioner. We specified that necessary information must include the following:

• Contact information of the practitioner responsible for the care of the resident;

• Resident representative information including contact information;

• Advance directive information;

• Special instructions or precautions for ongoing care;

• The resident’s comprehensive care plan goals; and

• All other necessary information, including a copy of the resident’s discharge or transfer summary and any other documentation to ensure a safe and effective transition of care.

We note that the discharge summary mentioned above must include reconciliation of the resident’s medications, as well as a recapitulation of the resident’s stay, a final summary of the resident’s status, and the post-discharge plan of care. And in the preamble to the rule, we encouraged LTC facilities to electronically exchange this information if possible and to identify opportunities to streamline the collection and exchange of resident information by using information that the facility is already capturing electronically.

Additionally, we specifically invite stakeholder feedback on the following questions regarding possible new or revised CoPs/CfCs/RPs for interoperability and electronic exchange of health information:
• If CMS were to propose a new CoP/CfC/RfP standard to require electronic exchange of medically necessary information, would this help to reduce information blocking as defined in section 4004 of the 21st Century Cures Act?
• Should CMS propose new CoPs/CfCs/RfPs for hospitals and other participating providers and suppliers to ensure a patient’s or resident’s (or his or her caregiver’s or representative’s) right and ability to electronically access his or her health information without undue burden? Would existing portals or other electronic means currently in use by many hospitals satisfy such a requirement regarding patient/resident access as well as interoperability?
• Are new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information necessary to ensure patients/residents and their treating providers routinely receive relevant electronic health information from hospitals on a timely basis or will this be achieved in the next few years through existing Medicare and Medicaid policies, HIPAA, and implementation of relevant policies in the 21st Century Cures Act?
• What would be a reasonable implementation timeframe for compliance with new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information if CMS were to propose and finalize such requirements? Should these requirements have delayed implementation dates for specific participating providers and suppliers, or types of participating providers and suppliers (for example, participating providers and suppliers that are not eligible for the Medicare and Medicaid EHR Incentive Programs)?
• Do stakeholders believe that new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information would help improve routine electronic transfer of health information as well as overall patient/resident care and safety?
• Under new or revised CoPs/CfCs/RfPs, should non-electronic forms of sharing Medically necessary information (for example, printed copies of patient/resident discharge/transfer summaries shared directly with the patient/resident or with the receiving provider or supplier, either directly transferred with the patient/resident or by mail or fax to the receiving provider or supplier) be permitted to continue if the receiving provider, supplier, or patient/resident cannot receive the information electronically?
• Are there any other operational or legal considerations (for example, HIPAA), obstacles, or barriers that hospitals and other providers and suppliers would face in implementing changes to meet new or revised interoperability and health information exchange requirements under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future?
• What types of exceptions, if any, to meeting new or revised interoperability and health information exchange requirements, should be allowed under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future? Should exceptions under the QPP including CEHRT hardship or small practices be extended to new requirements? Would extending such exceptions impact the effectiveness of these requirements?

We would also like to directly address the issue of communication between hospitals (as well as the other providers and suppliers across the continuum of patient care) and their patients and caregivers. MyHealthEData is a government initiative aimed at breaking down barriers that contribute to preventing patients from being able to access and control their medical records. Privacy and security of patient data will be at the center of all CMS efforts in this area. CMS must protect the confidentiality of patient data, and CMS is completely aligned with the Department of Veterans Affairs (VA), the National Institutes of Health (NIH), ONC, and the rest of the federal government, on this objective.

While some Medicare beneficiaries have had, for quite some time, the ability to download their Medicare claims information, in pdf or Excel formats, through the CMS Blue Button platform, the information was provided without any context or other information that would help beneficiaries understand what the data was really telling them. For beneficiaries, their claims information is useless if it is either too hard to obtain or, as was the case with the information provided through previous versions of Blue Button, hard to understand. In an effort to fully contribute to the federal government’s MyHealthEData initiative, CMS developed and launched the new Blue Button 2.0, which represents a major step toward giving patients meaningful control of their health information in an easy-to-access and understandable way. Blue Button 2.0 is a developer-friendly, standards-based API that enables Medicare beneficiaries to connect their claims data to secure applications, services, and research programs through electronic healthIT and interoperability among these types of providers and suppliers as well. We note that this is a Request for Information only. Respondents are encouraged to provide complete but concise and organized responses, including any relevant data and specific examples. However, respondents are not required to address every issue or respond to every question discussed in this Request for Information to have their responses considered. In accordance with the implementing regulations of the Paperwork Reduction Act at 5 CFR 1320.3(h)(4), all responses will be considered provided they contain information CMS can use to identify and contact the commenter, if needed.

This Request for Information is issued solely for information and planning purposes; it does not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. This Request for Information
This information includes:

- A description of the methodology and data used to calculate the federal per diem base payment amount for the subsequent fiscal year.

For reasons stated in the preamble of this document, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

**PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES**

1. The authority citation for part 412 continues to read as follows:

2. Section 412.27 is amended by revising paragraph (a) to read as follows:

   **§ 412.27 Excluded psychiatric units: Additional requirements.**

   (a) Admit only patients whose admission to the unit is required for active treatment, of an intensity that can be provided appropriately only in an inpatient hospital setting, of a psychiatric principal diagnosis that is listed in the International Classification of Diseases, Tenth Revision, Clinical Modification.

3. Section 412.402 is amended by revising the definition of “Principal diagnosis” to read as follows:

   **§ 412.402 Definitions.**

   Principal diagnosis means the condition established after study to be chiefly responsible for occasioning the admission of the patient to the inpatient psychiatric facility. Principal diagnosis is also referred to as the primary diagnosis.

4. Section 412.428 is amended by revising the section heading, the introductory text, and paragraphs (a) and (b) to read as follows:

   **§ 412.428 Publication of changes to the inpatient psychiatric facility prospective payment system.**

   CMS will issue annually in the Federal Register information pertaining to changes to the inpatient psychiatric facility prospective payment system. This information includes:
