Fishhook Cactus From Endangered to
Threatened and Adopting a New
Scientific Name
AGENCY: Fish and Wildlife Service,
Interior.
ACTION: Final rule.

SUMMARY: We, the U.S. Fish and
Wildlife Service (Service), reclassify
Tobusch fishhook cactus (Sclerocactus
brevihamatus ssp. tobuschii; currently
listed as Ancistrocactus tobuschii), from
endangered to threatened on the Federal
List of Endangered and Threatened
Plants. This determination is based on a
thorough review of the best available
scientific and commercial information,
which indicates that the threats to this
plant have been reduced to the point
that it is no longer in danger of
extinction throughout all or a significant
portion of its range, but it remains
threatened with becoming endangered
within the foreseeable future. In
addition, we accept the new taxonomic
classification for Tobusch fishhook
cactus as the subspecies Sclerocactus
brevihamatus ssp. tobuschii.
DATES: This rule becomes effective June
14, 2018.

SUPPLEMENTARY INFORMATION:

Background

Under the Endangered Species Act of
et seq.), a species is an endangered or
threatened species based on any one or
a combination of the five listing factors
established under section 4(a)(1) of the
Act: (A) The present or threatened
destruction, modification, or
curtailment of its habitat or range; (B)
Overutilization for commercial,
recreational, scientific, or educational
purposes; (C) Disease or predation; (D)
The inadequacy of existing regulatory
mechanisms; or (E) Other natural or
manmade factors affecting its continued
existence.

After conducting a review of its
biological status and threats, we have
determined that Tobusch fishhook
cactus is no longer in danger of
extinction throughout all or a
signification portion of its range;
however, the subspecies is likely to
become endangered within the
foreseeable future as a result of changes
in vegetation and wildfire frequency
(Factor A), insect parasites and feral hog
rooting (Factor C), and the demographic
and genetic consequences of small
population sizes and densities (Factor
E).

We sought comments from
independent specialists to ensure that
our determination is based on
scientifically sound data, assumptions,
and analyses. We invited these peer
reviewers to comment on our
reclassification proposal, and we
considered all comments and
information received during the public
comment period.

This rule finalizes the reclassification
of Tobusch fishhook cactus from an
endangered to a threatened species, and
adopts the latest taxonomic assignment
of the scientific name, changing it from
Ancistrocactus tobuschii to Sclerocactus
brevihamatus ssp. tobuschii on the
Federal List of Endangered and
Threatened Plants.
