Background

Automated vehicles have the potential to significantly transform the Nation's roadways. They could help save lives, expand access to transportation, and improve the convenience of travel. However, even as these technologies offer new opportunities, they may introduce new challenges for those responsible for the planning, design, construction, operation, and maintenance of the Nation's roadway infrastructure. As a result, FHWA is interested in better understanding the implications of highway automation for its stakeholders and the Agency.

As the effect of automation on the Nation's roadways becomes clearer, FHWA will define its role in further facilitating innovation and enabling the benefits of the capabilities. This National Dialogue on Highway Automation is an opportunity to engage the public and broad stakeholder community to understand their key areas of interest. These stakeholders will include original equipment manufacturers, technology suppliers, transportation network companies, associations, and public-sector partners. The National Dialogue will help inform national research, policy, and implementation assistance activities to support highway automation readiness. This meeting is one in a series of related public meetings being conducted during 2018.
