BILLING CODE 7710-FW-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R08-OAR-2018-0309 and EPA-R10-OAR-2018-0316; FRL-9980-88—Region 8]

Determination of Attainment by the Attainment Date and Clean Data Determination for the Logan, UT-ID 2006 24-Hour PM_{2.5} Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing a determination of attainment by the attainment date and a clean data determination (CDD) for the 2006 24-hour fine particulate matter (PM_{2.5}) Logan, Utah (UT)-Idaho (ID) nonattainment area. The determination is based upon quality-assured, quality-controlled and certified ambient air monitoring data showing that the area has attained the 2006 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) based on 2015–2017 data available in the EPA’s Air Quality System (AQS) database. Based on the proposed determination that the Logan, UT-ID nonattainment area is currently attaining the 24-hour PM_{2.5} NAAQS, the EPA is also proposing to determine that the obligation for Utah and Idaho to make submissions to meet certain Clean Air Act (CAA or the Act) requirements related to attainment of the NAAQS for this area is not applicable for as long as the area continues to attain the NAAQS. **DATES:** Comments must be received on or before August 17, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R08-OAR-2018-0309 and/or Docket ID No. EPA-R10-OAR-2018-0316 at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from www.regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information the disclosure of which is restricted by

statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Crystal Ostigaard, Air Program, EPA, Region 8, Mailcode 8P-AR, 1595 Wynkoop Street, Denver, Colorado 80202-1129, (303) 312-6602, ostigaard.crystal@epa.gov, or Matthew Jentgen, Air Planning Unit, Office of Air and Waste (OAW-150), EPA, Region 10, 1200 Sixth Avenue, Suite 900, Seattle, Washington 98101; (206) 553-0340; jentgen.matthew@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, wherever “we”, “us” or “our” is used, it is intended to refer to the EPA.

I. Background

A. Designation and Classification of PM_{2.5} Nonattainment Areas

On October 17, 2006 (71 FR 61144), the EPA revised the level of the 24-hour PM_{2.5} NAAQS, lowering the primary and secondary standards from the 1997 standard of 65 micrograms per cubic meter (µg/m³) to 35 µg/m³. The EPA

retained the form of the 1997 24-hour standard, that is, the 98th percentile of the annual 24-hour concentrations at each population-oriented monitor within an area, averaged over 3 years. 71 FR 61164–5 (October 17, 2006).

On November 13, 2009 (74 FR 58688), the EPA designated a number of areas as nonattainment for the 24-hour PM_{2.5} NAAQS of 35 µg/m³, including the Logan, UT-ID nonattainment area. The EPA originally designated these areas under the general provisions of CAA title I, part D, subpart 1 (“subpart 1”), under which attainment plans must provide for the attainment of a specific NAAQS (in this case, the 2006 PM_{2.5} standards) as expeditiously as practicable, but no later than 5 years from the date the areas were designated nonattainment.

Subsequently, on January 4, 2013, the U.S. Court of Appeals for the District of Columbia Circuit held in *NRDC v. EPA*¹ that the EPA should have implemented the 2006 24-hour PM_{2.5} standard based on both the general nonattainment area requirements in subpart 1 and the PM-specific requirements of CAA title I, part D, subpart 4 (“subpart 4”). In response to the Court’s decision in *NRDC v. EPA*, on June 2, 2014 (79 FR 31566), the EPA finalized the “Identification of Nonattainment Classification and Deadlines for Submission of State Implementation Plan (SIP) Provisions for the 1997 Fine Particulate (PM_{2.5}) NAAQS and 2006 PM_{2.5} NAAQS.” This rule classified the areas that were designated in 2009 as nonattainment to Moderate, and set the attainment SIP submittal due date for those areas at December 31, 2014.

After the court’s decision, on December 16, 2014, the Utah Department of Air Quality (UDAQ) withdrew all prior Logan, UT-ID PM_{2.5} SIP submissions and submitted a new SIP to address both the general requirements of subpart 1 and the PM-specific requirements of subpart 4 for Moderate areas. Additionally, on December 24, 2014, the Idaho Department of Environmental Quality (IDEQ) submitted a supplement to the 2012 SIP submission (“2014 amendment”) that included additional analyses intended to meet CAA subpart 4 requirements.

On August 24, 2016, the EPA finalized the Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements (“PM_{2.5} SIP Requirements Rule”), 81 FR 58010, which addressed the January 4, 2013 court ruling. The final PM_{2.5} SIP Requirements Rule

provides the EPA’s interpretation of the requirements applicable to PM_{2.5} nonattainment areas and explains how air agencies can meet the statutory SIP requirements that apply under subparts 1 and 4 to areas designated nonattainment for any PM_{2.5} NAAQS.

B. Two, 1-Year Extensions for the Logan, UT-ID Nonattainment Area

Under CAA section 188(d) and 40 CFR 51.1005, the EPA may grant a state’s request to extend the attainment date for a Moderate area for a 24-hour PM_{2.5} standard if: “(1) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan; and (2) the 98th percentile 24-hour concentration at each monitor in the area for the calendar year that includes the applicable attainment date is less than or equal to the level of the applicable 24-hour standard.” The EPA cannot issue more than two, 1-year extensions for a single Moderate area.

Both the State of Utah and the State of Idaho submitted requests to extend the attainment date to December 31, 2016, and then to December 31, 2017.² The EPA granted those requests on September 8, 2017 (82 FR 42447). As a result, the EPA must examine monitor data values from 2015–2017 to determine whether the Logan, UT-ID area attained the NAAQS by the extended attainment date.

C. Prior Actions on the Utah Portion of the Logan, UT-ID Nonattainment Area

The EPA previously acted on the area source rules and reasonably available control measure (RACM) analyses of the Utah Moderate PM_{2.5} nonattainment area plan on September 9, 2015 (80 FR 54237), February 25, 2016 (81 FR 9343), October 19, 2016 (81 FR 71988) and September 14, 2017 (82 FR 43205). We have not acted on, approved or disapproved, any other portion of the Logan, UT-ID PM_{2.5} attainment plan submitted by UDAQ. Since the EPA has not disapproved any portion of the plan, the clocks for sanctions under 179(a) and for a FIP under 110(c) are not in effect for the Utah portion of the Logan, UT-ID nonattainment area. Additionally, we proposed to approve the attainment demonstration and motor vehicle emission budgets (MVEB) for the Utah portion on December 4, 2017 (82 FR 57183).

² Each of the extension requests from Idaho and Utah can be found in the Region 8 and Region 10 dockets for the Logan, UT-ID nonattainment area proposed extension request actions. See EPA–R08–OAR–2017–0216 and EPA–R10–OAR–2017–0193.

D. Prior Action on the Idaho Portion of the Logan, UT-ID Nonattainment Area

Initially, the EPA approved Idaho’s baseline emissions inventory on July 18, 2014 (79 FR 41904), and also approved certain control measures, including local ordinances and road sanding agreements, submitted in Idaho’s attainment plan on March 24, 2014 (79 FR 16201). Subsequently, on January 4, 2017 (82 FR 729), the EPA published a partial approval and partial disapproval of the attainment plan for the Idaho portion of the Logan, UT-ID PM_{2.5} nonattainment area. Specifically, the EPA approved Idaho’s determination of which pollutants must be evaluated for control in the Idaho portion of the nonattainment and Idaho’s RACM and reasonably available control technology (RACT) provisions. The EPA deferred action on the attainment demonstration, reasonable further progress (RFP), quantitative milestone, and MVEB requirements. Additionally, we disapproved the contingency measure element of Idaho’s attainment plan.³ Since the EPA has disapproved this portion of the plan, the clocks for sanctions under 179(a) and for a FIP under 110(c) are in effect for the Idaho portion of the Logan, UT-ID nonattainment area. As discussed below, if the EPA finalizes this action, the clocks for sanctions and for a FIP will be deferred.

On August 8, 2017 (82 FR 37025), based on newly available air quality monitoring data, the EPA approved Idaho’s attainment demonstration and approved Idaho’s 2014 MVEB as early progress budgets. Additionally, the EPA conditionally approved the RFP, quantitative milestone and revised MVEB requirements. Idaho committed to submit revisions for the conditionally approved elements by August 1, 2018.

II. Determination of Attainment by the Attainment Date

Under CAA section 188(b)(2), the EPA is required to determine within 6 months of the applicable attainment date whether a nonattainment area attained the standard by that date. As discussed above, on September 8, 2017, the EPA extended the attainment date for the Logan, UT-ID area to December 31, 2017. Under the EPA regulations at 40 CFR 50.13 and part 50, appendix N, section 4.2, the 2006 primary and secondary 24-hour PM_{2.5} NAAQS are met when the 24-hour PM_{2.5} NAAQS design value at each eligible monitoring site is less than or equal to 35 µg/m³.

³ The EPA extended the effective date of this partial approval and partial disapproval to April 20, 2017. See 82 FR 14463.

¹ 706 F.3d 428 (D.C. Cir. 2013).

For the 24-hour PM_{2.5} standards, appendix N defines eligible monitoring sites as those that meet the technical requirements in 40 CFR 58.11 and 58.30. Three years of valid annual PM_{2.5} 98th percentile mass concentrations are required to produce a valid 24-hour PM_{2.5} NAAQS design value. A year meets data completeness requirements when quarterly data capture rates for all four quarters are at least 75%. Nonetheless, where the 75% data capture requirement is not met, the 24-hour PM_{2.5} NAAQS design value shall still be considered valid if it passes the maximum quarterly value data substitution test.

In accordance with the EPA regulations at 40 CFR part 50, appendix N, a finding of attainment of the 2006 24-hour PM_{2.5} NAAQS must be based upon complete, quality-assured data gathered at established state and local air monitoring stations (SLAMS) and national air monitoring stations (NAMS) in the nonattainment area and entered in the EPA Air Quality System (AQS). Data from air monitors operated by state/local/tribal agencies in compliance with the EPA monitoring requirements must be submitted to AQS. Monitoring agencies annually certify that these data are accurate to the best of their knowledge. Accordingly, the EPA relies primarily on data in AQS when determining the attainment status of areas. See 40 CFR 50.13; 40 CFR part 50, appendix L; 40 CFR part 53; 40 CFR part 58, and 40 CFR part 58, appendices A, C, D, and E. All data are reviewed to determine the area's air quality status in accordance with 40 CFR 50, appendix N.

Additionally, a determination of attainment is not equivalent to a redesignation, and the state must still meet the statutory requirements for redesignation in order to be redesignated to attainment.

A. Monitoring Network and Data Considerations

Determining whether an area has attained the NAAQS pursuant to CAA section 188(b)(2) is based on monitored air quality data. Thus, the validity of a determination of attainment depends in part on whether the monitoring network adequately measures ambient PM_{2.5} levels in the nonattainment area. The UDAQ and the IDEQ are the governmental agencies with the authority and responsibilities under each state's laws for collecting ambient air quality data for the Logan, UT-ID nonattainment area. Annually, UDAQ and IDEQ submit monitoring network plans to the EPA. These plans document the establishment and maintenance of

the air monitoring network, as required under 40 CFR part 58. With respect to PM_{2.5} monitoring in the Logan, UT-ID nonattainment area, the EPA Regional offices for Region 8 and Region 10 have found that UDAQ's and IDEQ's annual network plans, respectively, met the applicable requirements under 40 CFR part 58 for the relevant period, 2015–2017, with the exception (discussed below) of UDAQ's 2015 network plan. Also, UDAQ and IDEQ annually certify that the data they submit to AQS are quality assured.

The UDAQ and IDEQ each operated PM_{2.5} SLAMS monitors during the 2015–2017 period within the Logan, UT-ID PM_{2.5} nonattainment area. In 2015, UDAQ operated two PM_{2.5} monitoring sites, at Logan and Smithfield, and in 2016 and 2017, UDAQ operated only the Smithfield monitoring site. The IDEQ monitoring site for 2015, 2016 and 2017 was located in Franklin, Idaho.

B. Logan/Smithfield, Utah Monitoring

The 2015 Annual Monitoring Network Plan (AMNP) and Five-Year Network Assessment was submitted by UDAQ in June 2015. This plan and assessment was not reviewed and acted on by Region 8 due to Region 8's Technical Support Audit (TSA), which was completed in August 2015, and found major and minor/observation issues with the network. The objective of a TSA is to review a quality assurance (QA) system in order to evaluate the system's ability to ensure quality, in this case, the reporting of valid data to the EPA's AQS database. The QA requirements of 40 CFR part 58, appendices A through E pertain to regulatory air monitoring at SLAMS. A major finding may indicate that invalid data have been loaded in AQS or, if not corrected, future operations may result in collection of invalid data, and a minor/observation finding will not necessarily lead to data loss or invalidation, but warrant investigation, appropriate follow-up and audit response. Additional details pertaining to the major and minor findings can be found in the 2015 TSA in the Region 8 docket (EPA–R08–OAR–2018–0309).

Due to these monitoring issues, the EPA was not able to approve UDAQ's 2015 AMNP and a large number of samples from the filter-based Federal Reference Method (FRM) monitor in Logan and Smithfield were invalidated.⁴ The EPA worked with UDAQ to correct these deficiencies found in the August 2015 TSA and after their review of the

PM_{2.5} data for 2015, UDAQ removed the invalid samples for the Logan FRM monitor and left the valid samples in the AQS database. Additionally, some continuous sampler data from the Logan co-located Federal Equivalent Method (FEM) monitor were determined to have sufficient QA to meet NAAQS comparison requirements. Data from this co-located monitor were used to fill in some of the missing days in 2015, adding to the total number of samples that can be used to determine a 98th percentile value for that year and providing for a complete 2015 monitoring year. Utah used the methodology found in 40 CFR part 50, appendix N sections 3.0(d)(2) and 3.0(e) to substitute FEM data for the days without FRM data.

The EPA has reviewed the Logan site and, using the criteria found in 40 CFR part 58, appendix A, has determined that the QA for the continuous FEM monitor is acceptable. We therefore agree that the data from the FEM monitor can be substituted for the days for which the FRM monitor data was invalid, which would provide for a complete year in 2015 to be used in showing attainment. Pursuant to 40 CFR 50, appendix N, the standard must be met at each "eligible monitoring site," where an "eligible [monitoring] site" is defined in appendix N as a site that meets the requirements of 40 CFR 58.11 and 58.30. Thus, appendix N does not require AMNP approval, only that the monitoring site meets the substantive requirements. Upon reviewing the Logan and Smithfield sites, despite the EPA not formally approving the 2015 AMNP, the EPA finds that the Logan and Smithfield sites met the requirements of 40 CFR 58.11 during 2015. On November 29, 2016, UDAQ submitted a letter that contained the AMP 430, AMP 450, AMP 256 and AMP 450NC reports required to certify the 2015 air quality data in Utah. UDAQ completed the data certification process in AQS and with the November 29, 2016 letter, certified that the 2015 air quality data is accurate. Additional information related to these monitors can be found in the November 23, 2016 memoranda found in the Region 8 docket (EPA–R08–OAR–2018–0309).

On March 14, 2017, the EPA approved Utah's 2016 AMNP. As part of the approval, we approved the closing of the Logan monitoring station on December 31, 2015 (AQS ID #49–005–0004) and the establishment of the Smithfield monitoring station (AQS ID #49–005–0007) as a maximum concentration site. Additionally, on April 20, 2017, UDAQ submitted a letter that contained the AMP 600 and AMP

⁴ May 8, 2017 EPA Region 8 Memorandum; Logan, Utah PM_{2.5} 2015 Design Value.

450NC reports required to certify the 2016 air quality data in Utah. UDAQ completed the data certification process in AQS and with the April 20, 2017 letter, certified that the 2016 air quality data is accurate.

On October 27, 2017, the EPA approved Utah's 2017 AMNP, and on April 10, 2018, the UDAQ submitted a letter that contained the AMP 600 and AMP 450NC reports required to certify the 2017 air quality data in Utah. With the April 10, 2018 letter, UDAQ completed the data certification process in AQS and certified that the 2017 air quality data is accurate.

The Smithfield monitoring site data was incomplete for 2015 because the station, including the co-located continuous monitor, was not operating in January of that year. Thus, in order to establish 3 years of valid data at the Smithfield monitoring site, the EPA proposes to combine the January 2015 Logan data with Smithfield's February through December 2015 data. In doing so, we are considering not only our approval of the replacement of the Logan monitor with the Smithfield monitor in the monitoring network, but also the consistency of the data from the two monitors. During 2015, data from the two monitors on days above 10 $\mu\text{g}/\text{m}^3$ was well correlated. For details, please see the June 13, 2018 memorandum to the docket entitled "Logan, Utah $\text{PM}_{2.5}$ Monitoring Data Set Determination Memo."

C. Franklin, ID Monitoring

Idaho submitted its 2015 AMNP on August 12, 2015. Until June 30, 2015, Idaho had two regulatory air quality monitors running at the Franklin, ID site. As part of the network plan, Idaho proposed to replace the very sharp cut cyclone (VSCC) on its FEM continuous monitor with a sharp cut cyclone (SCC), making it a special purpose monitor for Air Quality Index (AQI) reporting. This change resulted in the FEM continuous monitor becoming non-regulatory, as of June 30, 2015. The EPA approved Idaho's 2015 AMNP on October 28, 2015.⁵

Idaho submitted its 2016 AMNP on July 28, 2016. The EPA approved Idaho's network plan on December 13, 2016. The regulatory FRM monitor at the Franklin, ID site did not meet the completeness requirements in Quarter 2 of 2016. Per 40 CFR part 50, appendix N, 4.2(c), when a monitor has less than

75% capture in a quarter (but greater than 50%), a substitution test can be performed to determine the validity of the data. The Franklin monitor had 70% completeness in Quarter 2 of 2016. Per the substitution test, the highest Quarter 2 value for the 3-year period under consideration is substituted for all missing data in the deficient quarter. The 2015–2017 design value is the 3-year period under consideration in this case. The highest value is 10.3 $\mu\text{g}/\text{m}^3$ within the 3-year period during that quarter of the year. Applying the maximum 10.3 $\mu\text{g}/\text{m}^3$ $\text{PM}_{2.5}$ value to the missing data for the deficient quarter (Quarter 2, 2016) does not affect the 2015–2017 design value at the Franklin monitor.

Idaho submitted its initial 2017 AMNP on June 29, 2017, and submitted an addendum on October 31, 2017. The addendum requested changing the run schedule of the regulatory FRM monitor at the Franklin, ID site from every third day to daily. The EPA approved the 2017 AMNP, including the run schedule change, on November 8, 2017.⁶

D. Evaluation of Current Attainment

As discussed above, the EPA's evaluation of whether the Logan, UT-ID $\text{PM}_{2.5}$ nonattainment area has attained the 2006 24-hour $\text{PM}_{2.5}$ NAAQS is based on our review of the monitoring data, and takes into account the adequacy of the $\text{PM}_{2.5}$ monitoring network in the nonattainment area and the reliability of the data collected by the network as discussed in the previous section of this document.

Based on our review, the $\text{PM}_{2.5}$ monitoring network for the Logan, UT-ID nonattainment area meets the requirements stated above and is therefore adequate for use in determining whether the area attained the 2006 24-hour $\text{PM}_{2.5}$ NAAQS. Additionally, the EPA has reviewed the data for the most recent 3-year period (2015–2017) for completeness and has determined that the data collected by UDAQ and IDEQ meets the completeness criterion for all 12 quarters at the Smithfield, Utah and Franklin, Idaho monitors.

The EPA reviewed the $\text{PM}_{2.5}$ ambient air monitoring data from the Smithfield, Utah (AQS site 49–005–0007) and Franklin, Idaho (AQS site 16–041–0001) monitoring sites consistent with the

requirements contained in 40 CFR part 50, as recorded in the EPA AQS database for the Logan, UT-ID nonattainment area. For purposes of determining attainment by the December 31, 2017 extended attainment date, the EPA determined that the data recorded in the AQS database was certified and complete.

Additionally, UDAQ submitted exceptional events demonstrations for the year 2017. The $\text{PM}_{2.5}$ SIP Requirements Rule (81 FR 58010, August 24, 2016) states:

Air quality monitoring data that the EPA determines to have been influenced by an exceptional event under the procedural steps, substantive criteria, and schedule specified in the Exceptional Events Rule may be excluded from regulatory decisions such as initial area designations decisions and decisions associated with implementing the $\text{PM}_{2.5}$ NAAQS such as clean data determinations (CDD), evaluation of attainment demonstrations, and discretionary or mandatory reclassifications of nonattainment areas from Moderate to Serious. While the EPA may agree with the state's request to exclude event-influenced air quality monitoring data from regulatory decisions, these regulatory actions require the EPA to provide an opportunity for public comment on the claimed exceptional event and all supporting data prior to the EPA taking final agency action.

The EPA concurred on these exceptional events on June 15, 2018, and the concurrence is included in the Region 8 docket for this action (EPA–R08–OAR–2018–0309). This proposed determination of attainment and CDD provides the public with an opportunity to comment on the claimed exceptional events, all supporting documents and the EPA's concurrence with the State of Utah's requests.

The design value for the 2006 24-hour $\text{PM}_{2.5}$ NAAQS for the years 2015–2017 at the Smithfield, Utah site was 33 $\mu\text{g}/\text{m}^3$ and 30 $\mu\text{g}/\text{m}^3$ at the Franklin, Idaho site, which is less than the standard of 35 $\mu\text{g}/\text{m}^3$. See Table 1 below for the annual 98th percentiles and 3-year design value for the 2015–2017 monitoring period. On the basis of this review, we are proposing to determine that the Logan, UT-ID nonattainment area attained the 2006 24-hour $\text{PM}_{2.5}$ NAAQS by the attainment date.

⁵ In the approval letter, the EPA noted that since the alteration of the FEM continuous monitor did not change the SLAMS network, the EPA approval is not needed.

⁶ The November 8, 2017 AMNP approval letter noted monitoring network deficiencies related to ozone monitoring and deficiencies in Idaho's network monitoring plan, but these were not deficiencies specific to $\text{PM}_{2.5}$ air quality monitoring in the Logan, UT-ID Metropolitan Statistical Area.

TABLE 1—2015–2017 LOGAN UT-ID NONATTAINMENT AREA PM_{2.5} MONITORING DATA

Monitor name	AQS site ID	98th percentile (µg/m ³)			2015–2017 24-hour design value (µg/m ³)
		2015	2016	2017	
Smithfield, UT	49–005–0007	^a 28.9	34.4	36.0	^a 33
Franklin, ID	16–041–0001	18.8	33.3	^b 38.3	^b 30

^a This value combines monitor data from the Logan, UT and Smithfield, UT monitors. The EPA concurred exceptional events are excluded.

^b This value includes 1 in 3 monitoring frequency from January 1–August 9, 2017, and daily monitoring frequency from August 10–December 31, 2017.

III. Clean Data Determination

Over the past 2 decades, the EPA has consistently applied its “Clean Data Policy” interpretation to attainment related provisions of subparts 1, 2, and 4 of the CAA. The EPA codified the approach in the Clean Data Policy in the PM_{2.5} SIP Requirements Rule (40 CFR 51.1015(a)) for the implementation of current and future PM_{2.5} NAAQS. *See* 81 FR 58010, 58161 (August 24, 2016). For a complete discussion of the Clean Data Policy’s history and the EPA’s longstanding interpretation under the CAA, please refer to the August 24, 2016 PM_{2.5} SIP Requirements Rule (81 FR 58010).

The general requirements of subpart 1 apply in conjunction with the more specific requirements of subpart 4, to the extent they are not superseded or subsumed by the subpart 4 requirements. Subpart 1 contains general air quality planning requirements for areas designated nonattainment. *See* section 172(c). Subpart 4 itself contains specific planning and scheduling requirements for particulate matter nonattainment areas. *See* section 188. The final PM_{2.5} SIP Requirements Rule interprets the CAA specific to PM_{2.5} and provides information on the statutory requirements for SIPs for PM_{2.5} nonattainment areas. *See* 81 FR 58010 (August 24, 2016).

As provided in 40 CFR 51.1015, so long as an area continues to meet the standard, finalization of a CDD suspends the requirements for a nonattainment area to submit an attainment demonstration, associated RACM, RFP plan, contingency measures and any other planning SIP requirements related to the attainment of the 2006 PM_{2.5} NAAQS. For purposes of this NAAQS, the requirement to submit a projected attainment inventory as part of an attainment demonstration or RFP is also suspended by this determination. As discussed in the 2016 PM_{2.5} SIP Requirements Rule, the nonattainment base emissions inventory required by section 172(c)(3) is not suspended by this determination

because the base inventory is a requirement independent of planning for an area’s attainment. *See* 81 FR 58009 at 58028 and 58127–8 and 80 FR 15340 at 15441–2. Additionally, nonattainment New Source Review (NNSR) requirements are discussed in the PM_{2.5} SIP Requirements Rule, and required by CAA sections 110(a)(2)(C); 172(c)(5); 173; 189(a); and 189(e), as not being suspended by a CDD because this requirement is independent of the area’s attainment planning. *See* 81 FR 58010 at 58107 and 58127.

By extension, the requirement to submit a MVEB for the attainment year for the purposes of transportation conformity is also suspended. A MVEB is that portion of the total allowable emissions defined in the submitted or approved control strategy implementation plan revision or maintenance plan for a certain date for the purpose of meeting RFP milestones or demonstrating attainment or maintenance of the NAAQS, for any criteria pollutant or its precursors, allocated to highway and transit vehicle use and emissions.⁷ For the purposes of the transportation conformity regulations, the control strategy implementation plan revision is the implementation plan which contains specific strategies for controlling the emissions of and reducing ambient levels of pollutants in order to satisfy CAA requirements for demonstrations of RFP and attainment.⁸ Given that MVEBs are required to support the RFP and attainment demonstration requirements in the attainment plan, suspension of the RFP and attainment demonstration requirements through a CDD, also suspends the requirement to submit MVEBs for the attainment and RFP years. The suspension of planning requirements pursuant to 40 CFR 51.1015, does not preclude the state from submitting suspended elements of its moderate area attainment plan for EPA approval for the purposes of strengthening the state’s SIP.

⁷ 40 CFR 93.101.

⁸ 40 CFR 93.101.

The suspension of the obligation to submit such requirements applies regardless of when the plan submissions are due. The CDD does not suspend CAA requirements that are independent of helping the area achieve attainment, such as the requirements to submit an emissions inventory and NNSR requirements. A clean data determination is not equivalent to a redesignation, and the state must still meet the statutory requirements for redesignation in order to be redesignated to attainment.

In accordance with 40 CFR 51.1015(a)(1) and (2), the CDD suspends the aforementioned SIP obligations until such time as the area is redesignated to attainment, after which such requirements are permanently discharged; or the EPA determines that the area has re-violated the PM_{2.5} NAAQS, at which time the state shall submit such attainment plan elements for the Moderate nonattainment area by a future date to be determined by the EPA and announced through publication in the **Federal Register** at the time the EPA determines the area is violating the PM_{2.5} NAAQS.

A. Clean Data Determination for the Logan, UT-ID Nonattainment Area

Based on the same monitoring data for the period 2015–2017, the EPA is also proposing to determine that the area has clean data for demonstrating attainment of the 2006 24-hour PM_{2.5} NAAQS. In accordance with 40 CFR 51.1015, a CDD can be made upon a determination by the EPA that a Moderate PM_{2.5} NAA is attaining the PM_{2.5} NAAQS. As provided in 40 CFR 51.1015, so long as the EPA does not determine that the area has re-violated the standard, finalization of this determination suspends the requirements for this area to submit an attainment demonstration, associated RACM, RFP plan, contingency measures, and any other SIP planning requirements related to the attainment of the 2006 PM_{2.5} NAAQS. For purposes of this NAAQS, the requirement to submit an attainment year projected inventory for the nonattainment area as part of an

attainment demonstration or RFP as well as MVEB are also suspended by this determination. As discussed in the PM_{2.5} SIP Requirements Rule, the base year inventory for the nonattainment area required by section 172(c)(3) is not suspended by this determination because the base year inventory is a requirement independent of planning for an area's attainment. See 81 FR 58009 at 58028 and 58127–8 and 80 FR 15340 at 15441–2. Additionally, NNSR requirements are discussed in the PM_{2.5} SIP Requirements Rule, and required by CAA sections 110(a)(2)(C); 172(c)(5); 173; 189(a); and 189(e), as not being suspended by this determination because this requirement is independent of the area's attainment planning. See 81 FR 58010 at 58107 and 58127.

Under a CDD, the planning requirements noted above shall be suspended until such time as the area is redesignated to attainment, after which such requirements are permanently discharged. Specific to Idaho, we are proposing to suspend the requirements to submit RFP, quantitative milestones, attainment year MVEB⁹ and contingency measures.¹⁰ If we finalize today's proposed CDD, any sanctions clocks under CAA section 179(a) or requirements that we promulgate a Federal Implementation Plan (FIP) under CAA section 110(c) for these SIP requirements will be suspended for the pendency of the CDD. If the EPA subsequently determines that the area is in violation of the 2006 24-hour PM_{2.5} NAAQS, the EPA would rescind the CDD, the states would again be required to submit the suspended attainment plan elements to the EPA, and the FIP and sanctions clocks would resume. See 40 CFR 51.1015(a)(2).

Neither the proposed finding of attainment by the attainment date nor the proposed CDD is equivalent to the redesignation of the area to attainment. This proposed action, if finalized, will not constitute a redesignation to attainment under CAA section 107(d)(3)(E), because the states must have an approved maintenance plan for the area as required under section 175A of the CAA, and the EPA must determine that the area has met the

other requirements for redesignation in order to be redesignated to attainment. The designation status of the area will remain nonattainment for the 2006 PM_{2.5} NAAQS until such time as the EPA determines that the area meets the CAA requirements for redesignation to attainment in CAA section 107(d)(3)(E).

It is possible, although not expected, that the Logan, UT-ID area could violate the 24-hour PM_{2.5} NAAQS before a maintenance plan is adopted, submitted and approved, and the area is redesignated to attainment. Pursuant to 40 CFR 51.1015(a)(2), if the EPA determines that the area has re-violated the 24-hour PM_{2.5} NAAQS, the states shall be required to submit the suspended attainment plan elements. Even so, submission of the suspended elements may be insufficient to eliminate future violations.¹¹ Therefore, the issuance of a SIP call under section 110(k)(5) could be an appropriate response. This SIP call could require the states to submit, by a reasonable deadline not to exceed 18 months, a revised plan demonstrating expeditious attainment and complying with other requirements applicable to the area at the time of such finding. Under CAA section 172(d), the EPA may reasonably adjust the dates applicable to these requirements.

IV. Proposed Action

Pursuant to CAA section 188(b)(2), the EPA is proposing to determine, based on the most recent 3 years (2015–2017) of valid data,¹² that the Logan, UT-ID nonattainment area has attained the 2006 primary and secondary 24-hour PM_{2.5} NAAQS by the December 31, 2017, attainment date.

In addition, pursuant to the Clean Data Policy codified at 40 CFR 51.1015(a), and based upon our proposed determination that the Logan, UT-ID nonattainment area has attained the standard, the EPA proposes to determine that the obligation to submit any remaining attainment-related SIP revisions arising from classification of the Logan, UT-ID area as a Moderate nonattainment area under subpart 4 of part D (of title I of the Act) for the 2006 24-hour PM_{2.5} NAAQS is not applicable for so long as the area continues to attain the 2006 24-hour PM_{2.5} NAAQS. If today's action is finalized as proposed, the sanctions and FIP clocks triggered by the partial disapproval of

the contingency measure element of the Idaho portion of the Logan, UT-ID PM_{2.5} SIP will be suspended. This proposed action, if finalized, would not constitute a redesignation to attainment under CAA section 107(d)(3).

IV. Statutory and Executive Order Reviews

This action proposes to make a determination of attainment based on air quality and to suspend certain federal requirements, and thus would not impose additional requirements beyond those imposed by state law. For this reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- is not expected to be an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because this action is not significant under Executive Order 12866;
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed action does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP

⁹ In accordance with 40 CFR 93.109(c)(5), Idaho will rely on the 2014 early progress MVEB approved on August 8, 2017, for the purposes of transportation conformity. 82 FR 37025.

¹⁰ Pursuant to CAA section 110(k)(4), the EPA conditionally approved the RFP, quantitative milestones, and attainment year MVEB elements based on an April 25, 2017, commitment from the IDEQ to submit the elements by August 1, 2018. 82 FR 37028. If finalized, the CDD would suspend the state's obligation to meet this commitment.

However, the CDD does not preclude the state from submitting the suspended elements.

¹¹ As discussed in sections I.C. and I.D. of this **Federal Register** action, both Utah and Idaho have implemented RACM. In addition, Idaho has not adopted contingency measures as part of its Moderate area SIP.

¹² Meeting the requirements of 40 CFR part 50, appendix N, and part 58.

obligations discussed herein do not apply to Indian tribes and thus this proposed action will not impose substantial direct costs on tribal governments or preempt tribal law.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R10-OAR-2018-0509; FRL-9980-89-Region 10]

Air Plan Approval; Idaho; Interstate Transport Requirements for the 2012 PM_{2.5} NAAQS

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Clean Air Act (CAA) requires each State Implementation Plan (SIP) to contain adequate provisions prohibiting emissions that will have certain adverse air quality effects in other states. On December 23, 2015, the State of Idaho made a submission to the Environmental Protection Agency (EPA) to address these requirements. The EPA is proposing to approve the submission as meeting the requirement that each SIP contain adequate provisions to prohibit emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2012 annual fine particulate matter (PM_{2.5}) national ambient air quality standard (NAAQS) in any other state.

DATES: Comments must be received on or before August 17, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R10-OAR-2018-0509 at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment

received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information the disclosure of which is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever “we,” “us,” or “our” is used, we mean the EPA. This supplementary information section is arranged as follows:

Table of Contents

- I. What is the background of this SIP submission?
- II. What guidance or information is the EPA using to evaluate this SIP submission?
- III. The EPA’s Review
- IV. What action is the EPA taking?
- V. Statutory and Executive Order Reviews

I. What is the background of this SIP submission?

This rulemaking addresses a submission from the Idaho Department of Environmental Quality (IDEQ) assessing interstate transport requirements for the 2012 annual PM_{2.5} NAAQS. The requirement for states to make a SIP submission of this type arises from section 110(a)(1) of the CAA. Pursuant to section 110(a)(1), states must submit within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof), a plan that provides for the implementation, maintenance, and enforcement of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon

the EPA taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that “[e]ach such plan” submission must address. The EPA commonly refers to such state plans as “infrastructure SIPs.” Specifically, this rulemaking addresses the requirements under CAA section 110(a)(2)(D)(i)(I), otherwise known as the “good neighbor” provision, which requires SIPs to contain adequate provisions to prohibit emissions that will contribute significantly to nonattainment or interfere with maintenance of the NAAQS in any other state.

II. What guidance or information is the EPA using to evaluate this SIP submission?

The most recent relevant document was a memorandum published on March 17, 2016, titled “Information on the Interstate Transport ‘Good Neighbor’ Provision for the 2012 Fine Particulate Matter National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I)” (memorandum). The memorandum describes the EPA’s past approach to addressing interstate transport, and provides the EPA’s general review of relevant modeling data and air quality projections as they relate to the 2012 annual PM_{2.5} NAAQS. The memorandum provides information relevant to the EPA regional office review of the CAA section 110(a)(2)(D)(i)(I) “good neighbor” provision in infrastructure SIPs with respect to the 2012 annual PM_{2.5} NAAQS. This rulemaking considers information provided in that memorandum.

The memorandum also provides states and the EPA regional offices with future year annual PM_{2.5} design values for monitors in the United States based on quality assured and certified ambient monitoring data and air quality modeling. The memorandum describes how these projected potential design values can be used to help determine which monitors should be further evaluated to potentially address whether emissions from other states significantly contribute to nonattainment or interfere with maintenance of the 2012 annual PM_{2.5} NAAQS at those sites. The memorandum explains that the pertinent year for evaluating air quality for purposes of addressing interstate transport for the 2012 PM_{2.5} NAAQS is 2021, the attainment deadline for 2012 PM_{2.5} NAAQS nonattainment areas classified as Moderate.
