We considered two possible scenarios in which an ACO might seek to re-enter the program. In one case, a re-entering ACO would be a previously participating ACO, identified by a TIN (see definition of ACO under § 425.20), that applies to re-enter the program after its prior participation agreement expired without having been renewed, or after the ACO was terminated under § 425.218 or § 425.220 and did not immediately enter a new agreement period (that is, an ACO with prior participation in the program that does not meet the proposed definition of renewing ACO). In this case, it is clear that the ACO is a previous participant in the program. In the other scenario, an entity applies under a TIN that is not previously associated with a Shared Savings Program ACO, but the entity is composed of ACO participants that previously participated together in the same Shared Savings Program ACO in a previous performance year. Under the current regulations, there is no mechanism in place to prevent a terminated ACO from re-forming under a different TIN and applying to re-enter the program, or for a new legal entity to be formed from ACO participants in a currently participating ACO. Doing so could allow an ACO to avoid accountability for the experience and prior participation of its ACO participants, and to avoid the application of policies that phase-in over time (the application of equal weights to the benchmark years and the higher weighted regional adjustment that applies in later agreement periods, or the pay-for-performance quality performance standard that is phased in over an ACO's first agreement period in the program). We are also concerned that, under the current regulations, Track 1 ACOs would be able to re-form to take advantage of the BASIC track's glide path, which allows for 2 years under a one-sided model for new ACOs only. We are therefore interested in adopting an approach to better identify prior participation and to specify participation options and program requirements applicable to re-entering ACOs.

We propose to define ''re-entering ACO'' to mean an ACO that does not meet the definition of a ''renewing ACO'' and meets either of the following conditions:

(1) Is the same legal entity as an ACO, identified by TIN according to the definition of ACO in § 425.20, that previously participated in the program and is applying to participate in the program after a break in participation, because it is either: (a) An ACO whose participation agreement expired without having been renewed; or (b) an ACO whose participation agreement was terminated under § 425.218 or § 425.220.

(2) Is a new legal entity that has never participated in the Shared Savings Program and is applying to participate in the program and more than 50 percent of its ACO participants were included on the ACO participant list under § 425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date.

We note that a number of proposed policies depend on the prior participation of an ACO or the experience of its ACO participants. As discussed elsewhere in section II.A of this proposed rule, these include: (1) Using the ACO's and its ACO participants' experience or inexperience with performance-based risk Medicare ACO initiatives to determine the participation options available to the ACO (proposed in § 425.600(d)); (2) identifying ACOs experienced with Track 1 to determine the amount of time an ACO may participate under a one-sided model of the BASIC track's glide path (proposed in § 425.600(d)); (3) determining how many agreement periods an ACO has participated under the BASIC track as eligible ACOs are allowed a maximum of two agreement periods under the BASIC track (proposed in § 425.600(d)); (4) assessing the eligibility of the ACO to participate in the program (proposed revisions to § 425.224); and (5) determining the applicability of program requirements that phase-in over multiple agreement periods (proposed in § 425.600(f)). The proposed revisions to the regulations to establish these requirements would apply directly to an ACO that is the same legal entity as a previously participating ACO. We also discuss throughout the preamble how these requirements would apply to new ACOs that are identified as re-entering ACOs because greater than 50 percent of their ACO participants have recent prior participation in the same ACO.

Several examples illustrate the application of the proposed definition of re-entering ACO. For example, if ACO A is applying to the program for an agreement period beginning on July 1, 2019, and ACO A is the same legal entity as an ACO whose previous participation agreement expired without having been renewed (that is, ACO A has the same TIN as the previously participating ACO) we would treat ACO A as the previously participating ACO, regardless of what share of ACO A's ACO participants previously participated in the ACO. As another example, if ACO A were a different legal entity (identified by a different TIN) from any ACO that previously participated in the Shared Savings Program, we would also treat ACO A as if it were an ACO that previously participated in the program (ACO B) if more than 50 percent of ACO A's ACO participants participated in ACO B in any of the 5 most recent performance years (that is, performance year 2015, 2016, 2017, 2018, or the 6-month performance year from January 1, 2019 through June 30, 2019), even though ACO A and ACO B are not the same legal entity.

We believe that looking at the experience of the ACO participants, in addition to the ACO legal entity, would be a more robust check on prior participation. It would also help to ensure that ACOs re-entering the program are treated comparably regardless of whether they are returning as the same legal entity or have re-formed as a new entity. With ACOs allowed to make changes to their certified ACO participant list for each performance year, we have observed that many ACOs make changes to their ACO participants over time. For example, among ACOs that participated in the Shared Savings Program as the same legal entity in both PY 2014 and PY 2017, only around 60 percent of PY 2017 ACO participants had also participated in the same ACO in PY 2014, on average. For this reason, we believe that the ACO legal entity alone does not always capture the ACO's experience in the program and therefore it is also important to look at the experience of ACO participants.

We chose to propose a 5 performance year look back period for determining prior participation by ACO participants as it would align with the look back period for determining whether an ACO is experienced or inexperienced with performance-based risk Medicare ACO initiatives as discussed elsewhere in this section of this proposed rule. We wish to clarify that the threshold for prior participation by ACO participants is not cumulative when determining whether an ACO is a re-entering ACO. For example, assume 22 percent of applicant ACO A's ACO participants participated in ACO C in the prior 5

performance years, 30 percent participated in ACO D, and the remaining 48 percent did not participate in any ACO during this period. ACO A would not be considered a re-entering ACO (assuming that ACO A is a new legal entity), because more than 50 percent of its ACO participants did not participate in the same ACO during the 5-year look back period. Although unlikely, we recognize the possibility that an ACO could quickly re-form multiple times and therefore more than 50 percent of its ACO participants may have been included on the ACO participant list of more than one ACO in the 5 performance year look back period. In these cases we believe the most recent experience of the ACO participants in the new ACO is most relevant to determining the applicability of policies to the re-entering ACO. We therefore propose that the ACO in which more than 50 percent of the ACO participants most recently participated would be used in identifying the participation options available to the new ACO.

We opted to propose a threshold of greater than 50 percent because we believe that it will identify ACOs with significant participant overlap and would allow us to more clearly identify a single, Shared Savings Program ACO in which at least the majority of ACO participants recently participated. We also considered whether to use a higher or lower threshold percentage threshold. A lower threshold, such as 20, 30 or 40 percent, would further complicate the analysis for identifying the ACO or ACOs in which the ACO participants previously participated, and the ACO whose prior performance should be evaluated in determining the eligibility of the applicant ACO. On the other hand, using a higher percentage for the threshold would identify fewer ACOs that significantly resemble ACOs with experience participating in the Shared Savings Program.

We considered alternate approaches to identifying prior participation other than the overall percentage of ACO participants that previously participated in the same ACO, including using the percentage of ACO participants weighted by the paid claim amounts, the percentage of individual practitioners (NPIs) that had reassigned their billing rights to ACO participants, or the percentage of assigned beneficiaries the new legal entity has in common with the assigned beneficiaries of a previously participating ACO. While we believe that these alternative approaches have merit, we concluded that they would be less transparent to ACOs than using a straight percentage of TINs, as well as more operationally complex to compute.

We seek comment on these proposed definitions and on the alternatives considered.

(b) Eligibility Requirements and Application Procedures for Renewing and Re-Entering ACOs

We believe it would be useful to revise our regulations to clearly set forth the eligibility requirements and application procedures for renewing ACOs and re-entering ACOs. Therefore, we propose to revise § 425.222 to address limitations on the ability of re-entering ACOs to participate in the Shared Savings Program for agreement periods beginning before July 1, 2019. In addition, we propose to revise § 425.224 to address general application requirements and procedures for all re-entering ACOs and all renewing ACOs.

In revising § 425.222 (which consists of paragraphs (a) through (c)), we considered that removing the required ''sit-out'' period for terminated ACOs under § 425.222(a) would facilitate transition of ACOs within current 3-year agreement periods to new agreements under the participation options proposed in this rule. As discussed elsewhere in this section, we propose to retain policies similar to those under § 425.222(b) for evaluating the eligibility of ACOs to participate in the program after termination. Further, instead of the approach used for determining participation options for ACOs that re-enter the program after termination described in § 425.222(c), our proposed approach to making these determinations is described in detail in section II.A.5.c.5 of this proposed rule.

The ''sit-out'' period policy restricts the ability of ACOs in current agreement periods to transition to the proposed participation options under new agreements. For example, if left unchanged, the ''sit-out'' period would prevent existing, eligible Track 1 ACOs from quickly entering an agreement period under the proposed BASIC track and existing Track 2 ACOs from quickly entering a new agreement period under either the BASIC track at the highest level of risk (Level E), if available to the ACO, or the ENHANCED track. Participating under Levels C, D, or E of the BASIC track or under the ENHANCED track could allow eligible physicians and practitioners billing under ACO participant TINs in these ACOs to provide telehealth services under section 1899(l) of the Act (discussed in section II.B.2.b. of this proposed rule), the ACO could apply for a SNF 3-day rule waiver (as proposed in section II.B.2.a. of this proposed rule), and the ACO could elect to offer incentive payments to beneficiaries under a CMS-approved beneficiary incentive program (as proposed in section II.C.2. of this proposed rule).

The ''sit-out'' period also applies to ACOs that deferred renewal in a second agreement period under performance-based risk as specified in § 425.200(e)(2)(ii), a participation option we propose to discontinue (as described in section II.A.2 of this proposed rule). Therefore, by eliminating the ''sit-out'' period, ACOs that deferred renewal may more quickly transition to the BASIC track (Level E), if available to the ACO, or the ENHANCED track. An ACO that deferred renewal and is currently participating in Track 2 or Track 3 may terminate its current agreement to enter a new agreement period under the BASIC track (Level E), if eligible, or the ENHANCED track. Similarly, an ACO that deferred renewal and is currently participating in Track 1 for a fourth performance year may terminate its current agreement and the participation agreement for its second agreement period under Track 2 or Track 3 that it deferred for 1 year. In either case, the ACO may immediately apply to re-enter the BASIC track (Level E), if eligible, or the ENHANCED track without having to wait until the date on which the term of its second agreement would have expired if the ACO had not terminated.

We note that, to avoid interruption in program participation, an ACO that seeks to terminate its current agreement and enter a new agreement in the BASIC track or ENHANCED track beginning the next performance year should ensure that there is no gap in time between when it concludes its current agreement period and when it begins the new agreement period so that all related program requirements and policies would continue to apply. For an ACO that is completing a 12 month performance year and is applying to enter a new agreement period beginning January 1 of the following year, the effective termination date of its current agreement should be the last calendar day of its current performance year, to avoid an interruption in the ACO's program participation. For instance, for a 2018 starter ACO applying to enter a new agreement beginning on January 1, 2020, the effective termination date of its current agreement should be December 31, 2019. For an ACO that starts a 12-month performance year on January 1, 2019, that is applying to enter a new agreement period beginning on July 1, 2019 (as discussed in section II.A.7 of this proposed rule), the effective termination date of its current agreement should be June 30, 2019.

We propose to amend § 425.224 to make certain policies applicable to both renewing ACOs and re-entering ACOs and to incorporate certain other technical changes, as follows:

(1) Revisions to refer to the ACO's ''application'' more generally, instead of specifically referring to a ''renewal request,'' so that the requirements would apply to both renewing ACOs and re-entering ACOs.

(2) Addition of a requirement, consistent with the current provision at § 425.222(c)(3), for ACOs previously in a two-sided model to reapply to participate in a two-sided model. We further propose that a renewing or re-entering ACO that was previously under a one-sided model of the BASIC track's glide path may only reapply for participation in a two-sided model for consistency with our proposal to include the BASIC track within the definition of a performance-based risk Medicare ACO initiative. This includes a new ACO identified as a re-entering ACO because greater than 50 percent of its ACO participants have recent prior participation in the same ACO that was previously under a two-sided model or a one-sided model of the BASIC track's glide path (Level A or Level B).

(3) Revision to § 425.224(b)(1)(iv) (as redesignated from § 425.224(b)(1)(iii)) to cross reference the requirement that an ACO establish an adequate repayment mechanism under § 425.204(f), to clarify our intended meaning with respect to the current requirement that an ACO demonstrate its ability to repay losses.

(4) Modifications to the evaluation criteria specified in § 425.224(b) for determining whether an ACO is eligible for continued participation in the program in order to permit them to be used in evaluating both renewing ACOs and re-entering ACOs, to adapt some of these requirements to longer agreement periods (under the proposed approach allowing for agreement periods of at least 5 years rather than 3-year agreements), and to prevent ACOs with a history of poor performance from participating in the program. As described in detail, as follows, we address: (1) Whether the ACO has a history of compliance with the program's quality performance standard; (2) whether an ACO under a two-sided model repaid shared losses owed to the program; (3) the ACO's history of financial performance; and (4) whether the ACO has demonstrated in its application that it has corrected the deficiencies that caused it perform poorly or to be terminated.

First, we propose modifications to the criterion governing our evaluation of whether the ACO has a history of compliance with the program's quality performance standard. We propose to revise the existing provision at § 425.224(b)(1)(iv), which specifies that we evaluate whether the ACO met the quality performance standard during at least 1 of the first 2 years of the previous agreement period, to clarify that this criterion is used in evaluating ACOs that entered into a participation agreement for a 3-year period. We propose to add criteria for evaluating ACOs that entered into a participation agreement for a period longer than 3 years by considering whether the ACO was terminated under § 425.316(c)(2) for failing to meet the quality performance standard or whether the ACO failed to meet the quality performance standard for 2 or more performance years of the previous agreement period, regardless of whether the years were consecutive.

In proposing this approach, we considered that the current policy is specified for ACOs with 3-year agreements. With the proposal to shift to agreement periods of not less than 5 years, additional years of performance data would be available at the time of an ACO's application to renew its agreement, and may also be available for evaluating ACOs re-entering after termination (depending on the timing of their termination) or the expiration of their prior agreement, as well as being available to evaluate new ACOs identified as re-entering ACOs because greater than 50 percent of their ACO participants have recent prior participation in the same ACO.

Further, under the program's monitoring requirements at § 425.316(c), ACOs with 2 consecutive years of failure to meet the program's quality performance standard will be terminated. However, we are concerned about a circumstance where an ACO that fails to meet the quality performance standard for multiple, non-consecutive years may remain in the program by seeking to renew its participation for a subsequent agreement period, seeking to re-enter the program after termination or expiration of its prior agreement, or by re-forming to enter under a new legal entity (identified as a re-entering ACO based on the experience of its ACO participants).

Second, we propose to revise the criterion governing the evaluation of whether an ACO under a two-sided model repaid shared losses owed to the program that were generated during the first 2 years of the previous agreement period (§ 425.224(b)(1)(v)), to instead consider whether the ACO failed to repay shared losses in full within 90 days in accordance with subpart G of the regulations for any performance year of the ACO's previous agreement period. In section II.A.7 we propose a 6-month performance year for ACOs that started a first or second agreement period on January 1, 2016, that elect an extension of their agreement period by 6 months from January 1, 2019 through June 30, 2019, and a 6-month first performance year for ACOs entering agreement periods beginning on July 1, 2019. We have also proposed to reconcile these ACOs, and ACOs that start a 12-month performance year on January 1, 2019, and terminate their participation agreement with an effective date of termination of June 30, 2019, and enter a new agreement period beginning on July 1, 2019, separately for the 6-month periods from January 1, 2019, to June 30, 2019, and from July 1, 2019, to December 31, 2019, as described in section II.A.7 of this proposed rule. In evaluating this proposed criterion on repayment of losses, we would consider whether the ACO timely repaid any shared losses for these 6-month performance years, or the 6-month performance period for ACOs that elect to voluntarily terminate their existing participation agreement, effective June 30, 2019, and enter a new agreement period starting on July 1, 2019, which we propose would be determined according to the methodology specified under a new section of the regulations at § 425.609.

The current policy regarding repayment of shared losses is specified for ACOs with 3-year agreements. With the proposal to shift to agreement periods of at least 5 years, we believe it is appropriate to broaden our evaluation of the ACO's timely repayment of shared losses beyond the first 2 years of the ACO's prior agreement period. For instance, without modification, this criterion could have little relevance when evaluating the eligibility of ACOs in the BASIC track's glide path that elect to participate under a one-sided model for their first 2 performance years (or 3 performance years for ACOs that start an agreement period in the BASIC track's glide path on July 1, 2019).

We note that timely repayment of shared losses is required under subpart G of the regulations (§§ 425.606(h)(3) and 425.610(h)(3)), and non-compliance with this requirement may be the basis for pre-termination actions or termination under §§ 425.216 and 425.218. A provision that permits us to consider more broadly whether an ACO failed to timely repay shared losses for any performance year in the previous agreement period would be relevant to all renewing and re-entering ACOs that may have unpaid shared losses, as well

as all re-entering ACOs that may have been terminated for non-compliance with the repayment requirement. This includes ACOs that have participated under Track 2, Track 3, and ACOs that would participate under the BASIC track or ENHANCED track for a new agreement period. For ACOs that have participated in two-sided models authorized under section 1115A of the Act, including the Track 1+ Model, we also propose to consider whether an ACO failed to repay shared losses for any performance year under the terms of the ACO's participation agreement for such model.

Third, we propose to add a financial performance review criterion to § 425.224(b) to allow us to evaluate whether the ACO generated losses that were negative outside corridor for 2 performance years of the ACO's previous agreement period. We propose to use this criterion to evaluate the eligibility of ACOs to enter agreement periods beginning on July 1, 2019 and in subsequent years. For purposes of this proposal, an ACO is negative outside corridor when its benchmark minus performance year expenditures are less than or equal to the negative MSR for ACOs in a one-sided model, or the MLR for ACOs in a two-sided model. This proposed approach relates to our proposal to monitor for financial performance as described in section II.A.5.d of this proposed rule.

Lastly, we propose to add a review criterion to § 425.224(b), which would allow us to consider whether the ACO has demonstrated in its application that it has corrected the deficiencies that caused it to fail to meet the quality performance standard for 2 or more years, fail to timely repay shared losses, or to generate losses outside its negative corridor for 2 years, or any other factors that may have caused the ACO to be terminated from the Shared Savings Program. We propose to require that the ACO also demonstrate it has processes in place to ensure that it will remain in compliance with the terms of the new participation agreement.

We propose to discontinue use of the requirement at § 425.600(c), under which an ACO with net losses during a previous agreement period must identify in its application the causes for the net loss and specify what safeguards are in place to enable it to potentially achieve savings in its next agreement period. We believe the proposed financial performance review criterion (discussed in this section of this proposed rule) would be more effective in identifying ACOs with a pattern of poor financial performance. An approach that accounts for financial performance year after year allows ACOs to understand if their performance is triggering a compliance concern and take action to remedy their performance during the remainder of their agreement period. Further, an approach that only considers net losses across performance years may not identify as problematic an ACO that generates losses in multiple years which in aggregate are canceled out by a single year with large savings. Although uncommon, such a pattern of performance, where an ACO's results change rapidly and dramatically, is concerning and warrants consideration in evaluating the ACO's suitability to continue its participation in the program.

This proposed requirement is similar to the current provision at § 425.222(b), which specifies that a previously terminated ACO must demonstrate that it has corrected deficiencies that caused it to be terminated from the program and has processes in place to ensure that it will remain in compliance with the terms of its new participation agreement. As we discussed previously, we propose to discontinue use of § 425.222. We believe adding a similar requirement to § 425.224 would allow us to more consistently apply policies to renewing and re-entering ACOs. Further, we believe applying this requirement to both re-entering and renewing ACOs would safeguard the program against organizations that have not met the program's goals or complied with program requirements and that may not be qualified to participate in the program, and therefore we believe this approach would be protective of the program, the Trust Funds, and Medicare FFS beneficiaries.

For ACOs identified as re-entering ACOs because greater than 50 percent of their ACO participants have recent prior participation in the same ACO, we would determine the eligibility of the ACO to participate in the program based on the past performance of this other entity. For example, if ACO A is identified as a re-entering ACO because more than 50 percent of its ACO participants previously participated in ACO B during the relevant look back period, we would consider ACO B's financial performance, quality performance, and compliance with other program requirements (as discussed in this section of this proposed rule) in determining the eligibility of ACO A to enter a new participation agreement in the program.

(5) Proposed Evaluation Criteria for Determining Participation Options

We have a number of concerns about the vulnerability of certain program policies to gaming by ACOs seeking to continue in the program under the BASIC track's glide path, as well as the need to ensure that an ACO's participation options are commensurate with the experience of the organization and its ACO participants with the Shared Savings Program and other performance-based risk Medicare ACO initiatives.

First, as the program matures and ACOs become more prevalent throughout the country, and as an increasing number of ACO participants become experienced in different Medicare ACO initiatives with differing levels of risk, we believe the regulations as currently written create flexibilities that would allow more experienced ACOs to take advantage of the opportunity to participate under the proposed BASIC track's glide path.

There are many Medicare ACO initiatives in which organizations may gain experience, specifically: Shared Savings Program Track 1, Track 2 and Track 3, as well as the proposed BASIC track and ENHANCED track, and the Track 1+ Model, Pioneer ACO Model, Next Generation ACO Model, and the Comprehensive End-Stage Renal Disease (ESRD) Care (CEC) Model. All but Shared Savings Program Track 1 ACOs and non-Large Dialysis Organization (LDO) End-Stage Renal Disease Care Organizations (ESCOs) participating in the one-sided risk track of the CEC Model participate in a degree of performance-based risk within an ACO's agreement period in the applicable program or model.

As discussed elsewhere in this section (II.A.5.c of this proposed rule), we are proposing to discontinue application of the policies in § 425.222(a). As a result of this change, we will allow ACOs currently participating in Track 1, Track 2, Track 3, or the Track 1+ Model, to choose whether to finish their current agreement or to terminate and apply to immediately enter a new agreement period through an early renewal. We are concerned that removing the existing safeguard under § 425.222(a) without putting in place other policies that assess an ACO's experience with performance-based risk would enable ACOs to participate in the BASIC track's glide path in Level A and Level B, under a one-sided model, terminate, and enter a one-sided model of the glide path again.

We are also concerned that existing and former Track 1 ACOs would have

the opportunity to gain additional time under a one-sided model of the BASIC track's glide path before accepting performance-based risk. Under the current regulations, Track 1 ACOs are limited to two agreement periods under a one-sided model before transitioning to a two-sided model beginning with their third agreement period (see § 425.600(b)). Without some restriction, Track 1 ACOs that would otherwise be required to assume performance-based risk at the start of their third agreement period in the program could end up continuing to participate under a one-sided model (BASIC track's Levels A and B) for 2 additional performance years, or 3 additional performance years in the case of ACOs that enter the BASIC track's glide path for an agreement period of 5 years and 6 months beginning July 1, 2019. We believe the performance-based risk models within the BASIC track's glide path would offer former Track 1 ACOs an opportunity to continue participation within the program under relatively low levels of two-sided risk and that these ACOs have sufficient experience with the program to begin the gradual transition to performance-based risk. Therefore we believe some restriction is needed to prevent all current and previously participating Track 1 ACOs from taking advantage of additional time under a one-sided model in the BASIC track's glide path and instead to encourage their more rapid progression to performance-based risk. For similar reasons we also believe it is important to prevent new ACOs identified as re-entering ACOs because greater than 50 percent of their ACO participants have recent prior participation in a Track 1 ACO from also taking advantage of additional time under a one-sided model in the BASIC track's glide path. This restriction would help to ensure that ACOs do not re-form as new legal entities to maximize the time allowed under a one-sided model.

We also considered that currently § 425.202(b) of the program's regulations addresses application requirements for organizations that were previous participants in the Physician Group Practice (PGP) demonstration, which concluded in December 2012 with the completion of the PGP Transition Demonstration, and the Pioneer ACO Model, which concluded in December 2016, as described elsewhere in this section. We believe it is appropriate to propose to eliminate these provisions, while at the same time proposing criteria for identifying ACOs and ACO participants with previous experience in Medicare ACO initiatives as part of a broader approach to determining available participation options for applicants.

Second, we believe that using prior participation by ACO participant TINs in Medicare ACO initiatives along with the prior participation of the ACO legal entity is important when gauging the ACO's experience, given the observed churn in ACO participants over time and our experience with determining eligibility to participate in the Track 1+ Model. ACOs are allowed to make changes to their certified ACO participant list for each performance year, and we have observed that, each year, about 80 percent of ACOs make ACO participant list changes. We also considered CMS's recent experience with determining the eligibility of ACOs to participate in the Track 1+ Model. The Track 1+ Model is designed to encourage more group practices, especially small practices, to advance to performance-based risk. As such, it does not allow participation by current or former Shared Savings Program Track 2 or Track 3 ACOs, Pioneer ACOs, or Next Generation ACOs. As outlined in the Track 1+ Model Fact Sheet, the same legal entity that participated in any of these performance-based risk ACO initiatives cannot participate in the Track 1+ Model. Furthermore, an ACO would not be eligible to participate in the Track 1+ Model if 40 percent or more of its ACO participants had participation agreements with an ACO that was participating in one of these performance-based risk ACO initiatives in the most recent prior performance year.

Third, any approach to determining participation options relative to the experience of ACOs and ACO participants must also factor in our proposals to differentiate between low revenue and high revenue ACOs, as previously discussed in this section.

Fourth, and lastly, we believe the experience of ACOs and their ACO participants in Medicare ACO initiatives should be considered in determining which track (BASIC track or ENHANCED track) the ACO is eligible to enter as well as the applicability of policies that phase-in over time, namely the equal weighting of benchmark year expenditures, the policy of adjusting the benchmark based on regional FFS expenditures (which, for example, applies different weights in calculating the regional adjustment depending upon the ACO's agreement period in the program) and the phase-in of pay-for-performance under the program's quality performance standards.

Although § 425.222(c) specifies whether a former one-sided model ACO can be considered to be entering its first or second agreement period under Track 1 if it is re-entering the program after termination, the current regulations do not otherwise address how we should determine the applicable agreement period for a previously participating ACO after termination or expiration of its previous participation agreement.

We prefer an approach that would help to ensure that ACOs, whether they are initial applicants to the program, renewing ACOs or re-entering ACOs, would be treated comparably. Any approach should also ensure eligibility for participation options reflects the ACO's and ACO participants' experience with the program and other Medicare ACO initiatives and be transparent. Therefore, we propose to identify the available participation options for an ACO (regardless of whether it is applying to enter, re-enter, or renew its participation in the program) by considering all of the following factors: (1) Whether the ACO is a low revenue ACO or a high revenue ACO; and (2) the level of risk with which the ACO or its ACO participants has experience based on participation in Medicare ACO initiatives in recent years.

As a factor in determining an ACO's participation options, we propose to establish requirements for evaluating whether an ACO is inexperienced with performance-based risk Medicare ACO initiatives such that the ACO would be eligible to enter into an agreement period under the BASIC track's glide path or whether the ACO is experienced with performance-based risk Medicare ACO initiatives and therefore limited to participating under the higher-risk tracks of the Shared Savings Program (either an agreement period under the maximum level of risk and potential reward for the BASIC track (Level E), or the ENHANCED track).

To determine whether an ACO is inexperienced with performance-based risk Medicare ACO initiatives, we propose that both of the following requirements would need to be met: (1) The ACO legal entity has not participated in any performance-based risk Medicare ACO initiative (for example, the ACO is a new legal entity identified as an initial applicant or the same legal entity as a current or previously participating Track 1 ACO); and (2) CMS determines that less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative in each of the 5 most recent performance years prior to the agreement start date.

We propose that CMS would determine that an ACO is experienced with performance-based risk Medicare ACO initiatives if either of the following criteria are met: (1) The ACO is the same legal entity as a current or previous participant in a performance-based risk Medicare ACO initiative; or (2) CMS determines that 40 percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative in any of the 5 most recent performance years prior to the agreement start date.

We propose to specify these requirements in a new provision at § 425.600(d). This provision would be used to evaluate eligibility for specific participation options for any ACO that is applying to enter the Shared Savings Program for the first time or to re-enter after termination or expiration of its previous participation agreement, or any ACO that is renewing its participation. As specified in the proposed definition of re-entering ACO, we also propose to apply the provisions at § 425.600(d) to new ACOs identified as re-entering ACOs because greater than 50 percent of their ACO participants have recent prior participation in the same ACO. Thus, the proposed provision at § 425.600(d) would also apply in determining eligibility for these ACOs to enter the BASIC track's glide path for agreement periods beginning on July 1, 2019, and in subsequent years. Because the 40 percent threshold that we are proposing to use to identify ACOs as experienced or inexperienced with performance-based risk on the basis of their ACO participants' prior participation in certain Medicare ACO initiatives is lower than the 50 percent threshold that would be used to identify new legal entities as re-entering ACOs based on the prior participation of their ACO participants in the same ACO, this proposed policy would automatically capture new legal entities identified as re-entering ACOs that have experience with performance-based risk based on the experience of their ACO participants.

We also propose to add new definitions at § 425.20 for ''Experienced with performance-based risk Medicare ACO initiatives'', ''Inexperienced with performance-based risk Medicare ACO initiatives'' and ''Performance-based risk Medicare ACO initiative''.

We propose to define ''performance-based risk Medicare ACO initiative'' to mean an initiative implemented by CMS that requires an ACO to participate under a two-sided model during its agreement period. We propose this would include Track 2, Track 3 or the ENHANCED track, and the proposed BASIC track (including Level A through Level E) of the Shared Savings Program. We also propose this would include the following Innovation Center ACO Models involving two-sided risk: The Pioneer ACO Model, Next Generation ACO Model, the performance-based risk tracks of the CEC Model (including the two-sided risk tracks for LDO ESCOs and non-LDO ESCOs), and the Track 1+ Model. The proposed definition also includes such other Medicare ACO initiatives involving two-sided risk as may be specified by CMS.

We propose to define ''experienced with performance-based risk Medicare ACO initiatives'' to mean an ACO that CMS determines meets either of the following criteria:

(1) The ACO is the same legal entity as a current or previous ACO that is participating in, or has participated in, a performance-based risk Medicare ACO initiative as defined under § 425.20, or that deferred its entry into a second Shared Savings Program agreement period under Track 2 or Track 3 in accordance with § 425.200(e).

(2) 40 percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative as defined under § 425.20, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under Track 2 or Track 3 in accordance with § 425.200(e), in any of the 5 most recent performance years prior to the agreement start date.

As we previously discussed, we are proposing to discontinue use of the ''sit-out'' period under § 425.222(a) as well as the related ''sit-out'' period for ACOs that deferred renewal under § 425.200(e). Thus, we propose to identify all Track 1 ACOs that deferred renewal as being experienced with performance-based risk Medicare ACO initiatives. This includes ACOs that are within a fourth and final year of their first agreement period under Track 1 because they were approved to defer entry into a second agreement period under Track 2 or Track 3, and ACOs that have already entered their second agreement period under a two-sided model after a one year deferral. Under § 425.200(e)(2), in the event that a Track 1 ACO that has deferred its renewal terminates its participation agreement before the start of the first performance year of its second agreement period under a two-sided model, the ACO is considered to have terminated its participation agreement for its second agreement period under § 425.220. In this case, when the ACO seeks to re-enter the program after termination, it would need to apply for a two-sided model. We believe our proposal to consider ACOs that deferred renewal to be experienced with performance-based risk Medicare ACO initiatives and therefore eligible for either the BASIC track's Level E (if a low revenue ACO and certain other requirements are met) or the ENHANCED track, is necessary to ensure that ACOs that deferred renewal continue to be required to participate under a two-sided model in all future agreement periods under the program consistent with our current policy under § 425.200(e)(2).

We propose to define ''inexperienced with performance-based risk Medicare ACO initiatives'' to mean an ACO that CMS determines meets all of the following requirements:

(1) The ACO is a legal entity that has not participated in any performance-based risk Medicare ACO initiative as defined under § 425.20, and has not deferred its entry into a second Shared Savings Program agreement period under Track 2 or Track 3 in accordance with § 425.200(e); and

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative as defined under § 425.20, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under Track 2 or Track 3 in accordance with § 425.200(e), in each of the 5 most recent performance years prior to the agreement start date.

Under our proposed approach, for an ACO to be eligible to enter an agreement period under the BASIC track's glide path, less than 40 percent of its ACO participants can have participated in a performance-based risk Medicare ACO initiative in each of the five prior performance years. This proposed requirement is modeled after the threshold currently used in the Track 1+ Model (see Track 1+ Model Fact Sheet), although with a longer look back period. Based on experience with the Track 1+ Model during the 2018 application cycle, we do not believe that the proposed parameters are excessively restrictive. We considered the following issues in developing our proposed approach: (1) Whether to consider participation of ACO participants in a particular ACO, or cumulatively across multiple ACOs, during the 5-year look back period; (2) whether to use a shorter or longer look back period; and (3) whether to use a threshold amount lower than 40 percent.

We propose that in applying this threshold, we would not limit our consideration to ACO participants that participated in the same ACO or the same performance-based risk Medicare ACO initiative during the look back

period. Rather, we would determine, cumulatively, what percentage of ACO participants were in any performance-based risk Medicare ACO initiative in each of the 5 most recent performance years prior to the agreement start date. We believe the following illustrations help to clarify the use of the proposed threshold for determining ACO participants' experience with performance-based risk Medicare ACO initiatives.

For applicants applying to enter the BASIC track for an agreement period beginning on July 1, 2019, for example, we would consider what percentage of the ACO participants participated in any of the following during 2019 (January—June), 2018, 2017, 2016, and 2015: Track 2 or Track 3 of the Shared Savings Program, the Track 1+ Model, the Pioneer ACO Model, the Next Generation ACO Model, or the performance-based risk tracks of the CEC Model. In future years (in determining eligibility for participation options for agreement periods starting in 2020 and subsequent years), we would also consider prior participation in the BASIC track and ENHANCED track (which are proposed to become available for agreement periods beginning on July 1, 2019 and in subsequent years).

An ACO would be ineligible for the BASIC track's glide path if, for example, in the performance year prior to the start of the agreement period, 20 percent of its ACO participants participated in a Track 3 ACO and 20 percent of its ACO participants participated in a Next Generation ACO, even if the ACO did not meet or exceed the 40 percent threshold in any of the remaining 4 performance years of the 5-year look back period.

We considered a number of alternatives for the length of the look back period for determining an ACO's experience or inexperience with performance-based risk Medicare ACO initiatives. For example, we considered using a single performance year look back period, as used under the Track 1+ Model. We also considered using a longer look back period, for example of greater than 5 performance years, or a shorter look back period that would be greater than 1 performance year, but less than 5 performance years, such as a 3 performance year look back period.

A number of considerations informed our proposal to use a 5 performance year look back period. For one, we believe a longer look back period would help to guard against a circumstance where an ACO enters the BASIC track's glide path, terminates its agreement after one or 2 performance years under a one-sided model and seeks to enter the program under the one-sided model of the glide path. Whether or not the ACO applies to enter the program as the same legal entity or a new legal entity, the proposed eligibility criteria would identify this ACO as experienced with performance-based risk Medicare ACO initiatives if the ACO's ACO participant list remains relatively unchanged. Second, we believe a longer look back period may reduce the incentive for organizations to wait out the period in an effort to re-form as a new legal entity with the same or very similar composition of ACO participants for purposes of gaming program policies. Third, we believe a longer look back period also recognizes that new ACOs composed of ACO participants that were in performance-based risk Medicare ACO initiatives many years ago (for instance more than 5 performance years prior to the ACO's agreement start date) may benefit from gaining experience with the program's current requirements under the glide path (if our proposal is finalized), prior to transitioning to higher levels of risk and reward. Fourth, and lastly, in using the 5 most recent performance years prior to the start date of an ACO's agreement period, for ACOs applying to enter an agreement period beginning on July 1, 2019, we would consider the participation of ACO participants during the first 6 months of 2019. This would allow us to capture the ACO participants' most recent prior participation in considering an ACO's eligibility for participation options for an agreement period beginning July 1, 2019. An alternative approach that bases the look back period on prior calendar years would overlook this partial year of participation in 2019.

We also considered using a threshold amount lower than 40 percent. Based on checks performed during the 2018 application cycle, for the average Track 1+ Model applicant, less than 2 percent of ACO participants had participated under performance-based risk in the prior year. The maximum percentage observed was 30 percent. In light of these findings, we considered whether to propose a lower threshold for eligibility to participate in the BASIC track's glide path. However, our goal is not to be overly restrictive, but rather to ensure that ACOs with significant experience with performance-based risk are appropriately placed. While we favor 40 percent for its consistency with the Track 1+ Model requirement, we also seek comment on other numeric thresholds.

As previously discussed in this section, we believe some restriction is needed to prevent all current and previously participating Track 1 ACOs, and new ACOs identified as re-entering ACOs because of their ACO participants' prior participation in a Track 1 ACO, from taking advantage of additional time under a one-sided model in the BASIC track's glide path. We believe an approach that restricts the amount of time a former Track 1 ACO or a new ACO, identified as a re-entering ACO because of its ACO participants' prior participation in a Track 1 ACO, may participate in the one-sided models of the BASIC track's glide path (Level A and Level B) would balance several concerns. Allowing Track 1 ACOs and eligible re-entering ACOs some opportunity to continue participation in a one-sided model within the BASIC track's glide path could smooth their transition to performance-based risk. For example, it would provide these ACOs a limited time under a one-sided model in a new agreement period under the BASIC track, during which they could gain experience with their rebased historical benchmark, and prepare for the requirements of participation in a two-sided model (such as establishing a repayment mechanism arrangement). Limiting time in the one-sided models of the BASIC track's glide path for former Track 1 ACOs and new ACOs that are identified as re-entering ACOs because of their ACO participants' recent prior participation in the same Track 1 ACO would also allow these ACOs to progress more rapidly to performance-based risk, and therefore further encourage accomplishment of the program's goals.

After weighing these considerations, we propose that ACOs that previously participated in Track 1 of the Shared Savings Program or new ACOs, for which the majority of their ACO participants previously participated in the same Track 1 ACO, that are eligible to enter the BASIC track's glide path, may enter a new agreement period under either Level B, C, D or E. Former Track 1 ACOs and new ACOs identified as re-entering ACOs because of their ACO participants' prior participation in a Track 1 ACO would not be eligible to participate under Level A of the glide path. Therefore, if an ACO enters the glide path at Level B and is automatically transitioned through the levels of the glide path, the ACO would participate in Level E for the final 2 performance years of its agreement period. For a former Track 1 ACO or a new ACO identified as a re-entering ACO because of its ACO participants' prior participation in a Track 1 ACO that enters an agreement period in the

BASIC track's glide path beginning on July 1, 2019, the ACO could participate under Level B for a 6-month performance year from July 1, 2019 through December 31, 2019 and the 12 month performance year 2020 (as discussed in section II.A.7.c of this proposed rule). A former Track 1 ACO or a new ACO identified as a re-entering ACO because of its ACO participants' prior participation in a Track 1 ACO that begins an agreement period in the BASIC track's glide path in any subsequent year (2020 and onward) could participate in Level B for 1 performance year before advancing to a two-sided model within the glide path.

We also considered a more aggressive approach to transitioning ACOs with experience in Track 1 to performance-based risk. Specifically, we considered whether the one-sided models of the BASIC track's glide path should be unavailable to current or previously participating Track 1 ACOs and new ACOs identified as re-entering ACOs because of their ACO participants' prior participation in a Track 1 ACO. Under this alternative, ACOs that are experienced with Track 1, would be required to enter the BASIC track's glide path under performance-based risk at Level C, D or E. This alternative would more aggressively transition ACOs along the glide path. This approach would recognize that some of these ACOs may have already had the opportunity to participate under a one-sided model for 6 performance years (or 7 performance years for ACOs that elect to extend their agreement period for the 6-month performance year from January 1, 2019 through June 30, 2019), and should already have been taking steps to prepare to enter performance-based risk to continue their participation in the program under the current requirements, and therefore should not be allowed to take advantage of additional time under a one-sided model. For ACOs that have participated in a single agreement period in Track 1, an approach that requires transition to performance-based risk at the start of their next agreement period would be more consistent with the proposed redesign of participation options, under which ACOs would be allowed only 2 years, or 2 years and 6 months in the case of July 1, 2019 starters, under the one-sided models of the BASIC track's glide path. We seek comment on this alternative approach.

In summary, in combination with determining an whether ACOs are low revenue versus high revenue, we propose to add a new paragraph (d) under § 425.600, to provide that CMS will identify ACOs as inexperienced or experienced with performance-based risk Medicare ACO initiatives for purposes of determining an ACO's eligibility for certain participation options, as follows:

- If an ACO is identified as high revenue, the following options would apply:

++ If we determine the ACO is inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter the BASIC track's glide path, or the ENHANCED track. With the exception of ACOs that previously participated in Track 1 and new ACOs identified as re-entering ACOs because of their ACO participants' prior participation in a Track 1 ACO, an ACO may enter the BASIC track's glide path at any level (Level A through Level E). Therefore, eligible ACOs that are new to the program, identified as initial applicants and not as re-entering ACOs, would have the flexibility to enter the glide path at any one of the five levels. An ACO that previously participated in Track 1 or a new ACO identified as a re-entering ACO because more than 50 percent of its ACO participants have recent prior experience in the same Track 1 ACO may enter the glide path under either Level B, C, D or E.

++ If we determine the ACO is experienced with performance-based risk Medicare ACO initiatives, the ACO may only enter the ENHANCED track.

- If an ACO is identified as low revenue, the following options would apply:

++ If we determine the ACO is inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter the BASIC track's glide path, or the ENHANCED track. With the exception of ACOs that previously participated in Track 1 and new ACOs identified as re-entering ACOs because of their ACO participants' prior participation in a Track 1 ACO, an ACO may enter the BASIC track's glide path at any level (Level A through Level E). Therefore, eligible ACOs that are new to the program, identified as initial applicants and not re-entering ACOs, would have the flexibility to enter the glide path at any one of the five levels. An ACO that previously participated in Track 1 or a new ACO identified as a re-entering ACO because more than 50 percent of its ACO participants have recent prior experience in the same Track 1 ACO may enter the glide path under either Level B, C, D or E.

++ If we determine the ACO is experienced with performance-based risk Medicare ACO initiatives, the ACO may enter the BASIC track Level E (highest level of risk and potential reward) or the ENHANCED track. As discussed in section II.A.3.b of this proposed rule, low revenue ACOs are limited to two agreement periods of participation under the BASIC track.

We propose to specify these requirements in revisions to the regulations under § 425.600, which would be applicable for determining participation options for agreement periods beginning on July 1, 2019, and in subsequent years. We seek comment on these proposals for determining an ACO's participation options by evaluating the ACO legal entity's and ACO participants' experience or inexperience with performance-based risk Medicare ACO initiatives. In particular, we welcome commenters' input on our proposal to assess ACO participants' experience with performance-based risk Medicare ACOs using a 40 percent threshold, and the alternative of employing a threshold other than 40 percent, for example, 30 percent. We welcome comments on the proposed 5 performance year look back period for determining whether an ACO is experienced or inexperienced with performance-based risk Medicare ACO initiatives, and our consideration of a shorter look back period, such as 3 performance years. We also welcome comments on our proposal to limit former Track 1 ACOs and new ACOs identified as re-entering ACOs because more than 50 percent of their ACO participants have recent prior experience in a Track 1 ACO to a single performance year under the one-sided models of the BASIC track's glide path (two performance years, in the case of an ACO starting its agreement period under the BASIC track on July 1, 2019), and the alternative approach that would preclude such ACOs from participating in one-sided models of the BASIC track's glide path.

We also believe it is appropriate to consider an ACO's experience with the program or other performance-based risk Medicare ACO initiatives in determining which agreement period an ACO should be considered to be entering for purposes of applying policies that phase-in over the course of the ACO's first agreement period and subsequent agreement periods: (1) The weights applied to benchmark year expenditures (equal weighting in second or subsequent agreement periods instead of weighting the 3 benchmark years (BYs) at 10 percent (BY1), 30 percent (BY2), and 60 percent (BY3)); (2) the weights used in calculating the regional adjustment to an ACO's historical benchmark, which phase in over multiple agreement periods; and (3) the quality performance standard, which phases in from complete and

accurate reporting of all quality measures in the first performance year of an ACO's first agreement period to pay-for-performance over the remaining years of the ACO's first agreement period, and ACOs continue to be assessed on performance in all subsequent performance years under the program (including subsequent agreement periods). We note that for purposes of this discussion, we consider agreement periods to be sequential and consecutive. For instance, after an ACO participates in its first agreement period, the ACO would enter a second agreement period, followed by a third agreement period, and so on.

We propose to specify under § 425.600(f)(1) that an ACO entering the program for the first time (an initial entrant) would be considered to be entering a first agreement period in the Shared Savings Program for purposes of applying program requirements that phase-in over time, regardless of its experience with performance-based risk Medicare ACO initiatives. Under this approach, in determining the ACO's historical benchmark, we would weight the benchmark year expenditures as follows: 10 percent (BY1), 30 percent (BY2), and 60 percent (BY3). We would apply a weight of either 25 percent or 35 percent in determining the regional adjustment amount (depending on whether the ACO is higher or lower spending compared to its regional service area) under the proposed approach to applying factors based on regional FFS expenditures beginning with the ACO's first agreement period (see section II.D of this proposed rule). Further, under § 425.502, an initial entrant would be required to completely and accurately report all quality measures to meet the quality performance standard (referred to as pay-for-reporting) in the first performance year of its first agreement period, and for subsequent years of the ACO's first agreement period the pay-for-performance quality performance standard would phase-in.

We propose to divide re-entering ACOs into three categories in order to determine which agreement period an ACO will be considered to be entering for purposes of applying program requirements that phase-in over time, and to specify this policy at § 425.600(f)(2). For an ACO whose participation agreement expired without having been renewed, we propose the ACO would re-enter the program under the next consecutive agreement period. For example, if an ACO completed its first agreement period and did not renew, upon re-entering the program, the ACO would participate in its second agreement period.

For an ACO whose participation agreement was terminated under § 425.218 or § 425.220, we propose the ACO re-entering the program would be treated as if it is starting over in the same agreement period in which it was participating at the time of termination, beginning with the first performance year of the new agreement period. For instance, if an ACO terminated at any time during its second agreement period, the ACO would be considered participating in a second agreement period upon re-entering the program, beginning with the first performance year of their new agreement period. Alternatively, we considered determining which performance year a terminated ACO should re-enter within the new agreement period, in relation to the amount of time the ACO participated during its most recent prior agreement period. For example, under this approach, an ACO that terminated its participation in the program in the third performance year of an agreement period would be treated as re-entering the program in performance year three of the new agreement period. However, we believe this alternative approach could be complicated given the proposed transition from 3-year agreements to agreement periods of at least 5 years.

For a new ACO identified as a re-entering ACO because greater than 50 percent of its ACO participants have recent prior participation in the same ACO, we would consider the prior participation of the ACO in which the majority of the ACO participants in the new ACO were participating in order to determine the agreement period in which the new ACO would be considered to be entering the program. That is, we would determine the applicability of program policies to the new ACO based on the number of agreement periods the other entity participated in the program. If the participation agreement of the other ACO was terminated or expired, the previously described rules for re-entering ACOs would also apply. For example, if ACO A is identified as a re-entering ACO because more than 50 percent of its ACO participants previously participated in ACO B during the relevant look back period, we would consider ACO B's prior participation in the program. For instance, if ACO B terminated during its second agreement period in the program, we would consider ACO A to be entering a second agreement period in the program, beginning with the first performance year of that agreement period. However, if the other ACO is currently participating in the program, the new ACO would be considered to be entering into the same agreement period in which this other ACO is currently participating, beginning with the first performance year of that agreement period. For example, if ACO A is identified as a re-entering ACO because more than 50 percent of its ACO participants previously participated in ACO C during the relevant look back period, and ACO C is actively participating in its third agreement period in the program, ACO A would be considered to be participating in a third agreement period, beginning with the first performance year of that agreement period.

We propose to specify at § 425.600(f)(3) that renewing ACOs would be considered to be entering the next consecutive agreement period for purposes of applying program requirements that phase-in over time. This proposed approach is consistent with current program policies for ACOs whose participation agreements expire and that immediately enter a new agreement period to continue their participation in the program. For example, an ACO that entered its first participation agreement on January 1, 2017, and concludes this participation agreement on December 31, 2019, would renew to enter its second agreement period beginning on January 1, 2020. Further, under the proposed definition of ''Renewing ACO'', an ACO that terminates its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program would also be considered to be entering the next consecutive agreement period. For example, an ACO that entered its first participation agreement on January 1, 2018, and terminates its agreement effective June 30, 2019, to enter a new participation agreement beginning on July 1, 2019, would be considered to be a renewing ACO that is renewing early to enter its second agreement period beginning on July 1, 2019. This approach would ensure that an ACO that terminates from a first agreement period and immediately enters a new agreement period in the program could not take advantage of program flexibilities aimed at ACOs that are completely new to the Shared Savings Program, such as the pay-for-reporting quality performance standard available to ACOs in their first performance year of their first agreement period under the program. We would therefore apply a consistent approach among renewing ACOs by

placing these ACOs in the next agreement period in sequential order.

This proposed approach would replace the current approach to determining which agreement period an ACO is considered to be entering into, for a subset of ACOs, as specified in the provision at § 425.222(c), which we are proposing to discontinue using. We believe this proposed approach ensures that ACOs that are experienced with the program or with performance-based risk Medicare ACO initiatives are not participating under policies designed for ACOs inexperienced with the program's requirements or similar requirements under other Medicare ACO initiatives, and also helps to preserve the intended phase-in of requirements over time by taking into account ACOs' prior participation in the program.

The proposed approach would help to ensure that ACOs that are new to the program are distinguished from renewing ACOs and ACOs that are re-entering the program, and would also ensure that program requirements are applied in a manner that reflects ACOs' prior participation in the program, which we believe would limit the opportunity for more experienced ACOs to seek to take advantage of program policies. These policies protect against ACOs terminating or discontinuing their participation, and potentially re-forming as a new legal entity, simply to be able to apply to re-enter the program in a way that could allow for the applicability of lower weights used in calculating the regional adjustment to the benchmark or to avoid moving to performance-based risk more quickly on the BASIC track's glide path or under the ENHANCED track.

We believe the proposed approach to determining ACO participation options and the proposal to limit access the BASIC track's glide path to ACOs that are inexperienced with performance-based risk, in combination with the rebasing of ACO benchmarks at the start of each new agreement period, mitigate our concerns regarding ACO gaming. We believe that the requirement that ACOs' benchmarks are rebased at the start of each new agreement period, in combination with the proposed new requirements governing ACO participation options, would be sufficiently protective of the Trust Funds to guard against undesirable ACO gaming behavior. Under the policies discussed elsewhere in this section of the proposed rule for identifying ACOs that are experienced with performance-based risk Medicare ACOs initiatives, ACOs that terminate from the BASIC track's glide path (for example) and seek to re-enter the program, and renewing ACOs (including ACOs renewing early for a new agreement period beginning July 1, 2019) that are identified as experienced with performance-based risk Medicare ACO initiatives could only renew under the BASIC track Level E (if an otherwise eligible low revenue ACO) or the ENHANCED track. This mitigates our concerns about ACOs re-forming and re-entering the program, or serially terminating and immediately participating again as a renewing ACO, since there would be consequences for the ACO's ability to continue participation under lower-risk options that may help to deter these practices.

We acknowledge that under our proposals regarding early renewals (that is, our proposal that ACOs that terminate their current agreement period and immediately enter a new agreement period without interruption qualify as renewing ACOs), it is possible for ACOs to serially enter a participation agreement, terminate from it and enter a new agreement period, to be considered entering the next consecutive agreement period in order to more quickly take advantage of the higher weights used in calculating the regional adjustment to the benchmark. However, we note that these ACOs' benchmarks would be rebased, which we believe would help to mitigate this concern. We seek comment on possible approaches that would prevent ACOs from taking advantage of participation options to delay or hasten the phase-in of higher weights used in calculating the regional adjustment to the historical benchmark, while still maintaining the flexibility for existing ACOs to quickly move from a current 3-year agreement period to a new agreement period under either the BASIC track or ENHANCED track.

In the June 2016 final rule, we established the phase-in of the weights used in calculating the regional adjustment to the ACO's historical benchmark, for second or subsequent agreement periods beginning in 2017 and subsequent years. As discussed in section II.D of this proposed rule, we propose to use factors based on regional FFS expenditures in calculating an ACO's historical benchmark beginning with an ACO's first agreement period for agreement periods beginning on July 1, 2019, and in subsequent years. We would maintain the phase-in for the regional adjustment weights for ACOs with start dates in the program before July 1, 2019, according to the structure established in the earlier rulemaking (such as using these factors for the first time in resetting benchmarks for the third agreement period for 2012 and 2013 starters). Table 5 includes examples of the phase-in of the proposed regional adjustment weights based on agreement start date and applicant type (initial entrant, renewing ACO, or re-entering ACO). This table illustrates the weights that would be used in determining the regional adjustment to the ACO's historical benchmark under this proposed approach to differentiating initial entrants, renewing ACOs (including ACOs that renew early), and re-entering ACOs for purposes of policies that phase-in over time.

TABLE 5—EXAMPLES OF PHASE-IN OF PROPOSED REGIONAL ADJUSTMENT WEIGHTS BASED ON AGREEMENT START DATE AND APPLICANT TYPE

Applicant type	First time regional adjustment used: 35 percent or 25 percent (if spending above region)	Second time regional adjustment used: 50 percent or 35 percent (if spending above region)	Third and subsequent time regional adjustment used: 50 percent weight
New entrant with start date on July 1, 2019.	Applicable to first agreement period starting on July 1, 2019.	Applicable to second agreement period starting in 2025.	Applicable to third agreement period starting in 2030 and all subsequent agreement periods.
Renewing ACO for agreement period starting on July 1, 2019, with initial start date in 2012, 2013, or 2016.	Applicable to third (2012/2013) or second (2016) agreement period starting on July 1, 2019.	Applicable to fourth (2012/2013) or third (2016) agreement period starting in 2025.	Applicable to fifth (2012/2013) or fourth (2016) agreement period starting in 2030 and all subsequent agreement periods.

TABLE 5—EXAMPLES OF PHASE-IN OF PROPOSED REGIONAL ADJUSTMENT WEIGHTS BASED ON AGREEMENT START DATE AND APPLICANT TYPE—Continued

Applicant type	First time regional adjustment used: 35 percent or 25 percent (if spending above region)	Second time regional adjustment used: 50 percent or 35 percent (if spending above region)	Third and subsequent time regional adjustment used: 50 percent weight
Early renewal for agreement period starting on July 1, 2019, ACO with initial start date in 2014 that terminates effective June 30, 2019.	Currently applies to second agreement period starting in 2017.	Applicable to third agreement period starting on July 1, 2019.	Applicable to fourth agreement period starting in 2025 and all subsequent agreement periods.
Re-entering ACO with initial start date in 2014 whose agreement expired December 31, 2016 (did not renew) and *re-enters* second agreement period starting on July 1, 2019.	Applicable to second agreement period starting on July 1, 2019 (ACO considered to be re-entering a second agreement period).	Applicable to third agreement period starting in 2025.	Applicable to fourth agreement period starting in 2030 and all subsequent agreement periods.
Re-entering ACO with second agreement period start date in 2017 terminated during performance year 2 (2018) and *re-enters* second agreement period starting on July 1, 2019.	Applicable to second agreement period starting on July 1, 2019 (ACO considered to be re-entering a second agreement period).	Applicable to third agreement period starting in 2025.	Applicable to fourth agreement period starting in 2030 and all subsequent agreement periods.

As part of the development of these proposals, we also revisited our current policy that allows certain organizations with experience in Medicare ACO initiatives to use a condensed application form to apply to the Shared Savings Program. Under § 425.202(b), we allow for use of a condensed Shared Savings Program application form by organizations that participated in the PGP demonstration. Former Pioneer Model ACOs may also use a condensed application form if specified criteria are met (including that the applicant is the same legal entity as the Pioneer ACO and the ACO is not applying to participate in the one-sided model). For the background on this policy, we refer readers to discussions in earlier rulemaking. (See 76 FR 67833 through 67834, and 80 FR 32725 through 32728.)

The PGP demonstration ran for 5 years from April 2005 through March 2010, and the PGP transition demonstration began in January 2011 and concluded in December 2012.[15] The Pioneer ACO Model began in 2012 and concluded in December 2016.[16] Many former PGP demonstration sites and Pioneer ACOs have already transitioned to other Medicare ACO initiatives including the Shared Savings Program and the Next Generation ACO Model. Accordingly, we believe it is no longer necessary to maintain the provision permitting these entities to use condensed application forms. First, since establishing this policy, we have modified the program's application to reduce burden on all applicants. See 82 FR 53217 through 53222. Second, our proposed approach for identifying ACOs experienced with performance-based risk Medicare ACO initiatives for purposes of determining an ACO's participation options would require former Pioneer Model ACOs to participate under the higher levels of risk: Either the highest level of risk and potential reward in the BASIC track (Level E), or the ENHANCED track. This includes, for example, a former Pioneer ACO that applies to the Shared Savings Program using the same legal entity, or if 40 percent or more of the ACO's ACO participants are determined to be experienced with the Pioneer ACO Model or other two-sided model Medicare ACO initiatives within the 5 performance year look back period prior to the start date of the ACO's agreement period in the Shared Savings Program.

Under the proposed approach described in this section, we would identify these experienced, former Pioneer Model ACOs entering the program for the first time as participating in a first agreement period for purposes of the applicability of the program policies that phase-in over time. On the other hand, if an ACO terminated its participation in the Shared Savings Program, entered the Next Generation ACO Model, and then re-enters the Shared Savings Program, under the proposed approach we would consider the ACO to be entering either: (1) Its next consecutive agreement period in the Shared Savings Program, if the ACO had completed an agreement period in the program before terminating its prior participation; or (2) the same agreement period in which it was participating at the time of program termination. We note that commenters in earlier rulemaking suggested we apply the benchmark rebasing methodology that incorporates factors based on regional FFS expenditures to former Pioneer ACOs and Next Generation ACOs entering their first agreement period under the Shared Savings Program (see 81 FR 37990). We believe that our proposal, as discussed in section II.D of this proposed rule, to apply factors based on regional FFS expenditures to ACOs' benchmarks in their first agreement periods addresses these stakeholder concerns.

However, we also considered an alternative approach that would allow ACOs formerly participating in these Medicare ACO models to be considered to be entering a second agreement period for the purpose of applying policies that phase-in over time. We decline to propose this approach at this time, because ACOs entering the Shared Savings Program after participation in another Medicare ACO initiative may need time to gain experience with program's policies. Therefore, we prefer the proposed approach that would allow ACOs new to the Shared Savings Program to gain experience with the program's requirements, by entering the program in a first agreement period.

Therefore, we propose to amend § 425.202(b) to discontinue the option for certain applicants to use a condensed application when applying to participate in the Shared Savings Program for agreement periods beginning on July 1, 2019 and in subsequent years.

[16] See Pioneer ACO Model web page, available at *https://innovation.cms.gov/initiatives/Pioneer-aco-model/.*

We seek comment on the proposals described in this section and the alternatives considered. The participation options available to ACOs based on the policies proposed in this section are summarized in Table 6 (low revenue ACOs) and Table 7 (high revenue ACOs).

TABLE 6—PARTICIPATION OPTIONS FOR LOW REVENUE ACOS BASED ON APPLICANT TYPE AND EXPERIENCE WITH RISK

Applicant type	ACO experienced or inexperienced with performance-based risk Medicare ACO initiatives	Participation options [1]			Agreement period for policies that phase-in over time (benchmarking methodology and quality performance)
		BASIC track's glide path (option for incremental transition from one-sided to two-sided models during agreement period)	BASIC track's Level E (track's highest level of risk/reward applies to all performance years during agreement period)	ENHANCED track (program's highest level of risk/reward applies to all performance years during agreement period)	
New legal entity	Inexperienced	Yes—glide path Levels A through E.	Yes	Yes	First agreement period.
New legal entity	Experienced	No	Yes	Yes	First agreement period.
Re-entering ACO ..	Inexperienced—former Track 1 ACOs or new ACOs identified as re-entering ACOs because more than 50 percent of their ACO participants have recent prior experience in a Track 1 ACO.	Yes—glide path Levels B through E.	Yes	Yes	Either: (1) The next consecutive agreement period if the ACO's prior agreement expired; (2) the same agreement period in which the ACO was participating at the time of termination; or (3) applicable agreement period for new ACO identified as re-entering because of ACO participants' experience in the same ACO.
Re-entering ACO ..	Experienced—including former Track 1 ACOs that deferred renewal under a two-sided model.	No	Yes	Yes	Either: (1) The next consecutive agreement period if the ACO's prior agreement expired; (2) the same agreement period in which the ACO was participating at the time of termination; or (3) applicable agreement period for new ACO identified as re-entering because of ACO participants' experience in the same ACO.
Renewing ACO	Inexperienced—former Track 1 ACOs.	Yes—glide path Levels B through E.	Yes	Yes	Subsequent consecutive agreement period.
Renewing ACO	Experienced—including former Track 1 ACOs that deferred renewal under a two-sided model.	No	Yes	Yes	Subsequent consecutive agreement period.

Notes: [1] Low revenue ACOs may operate under the BASIC track for a maximum of two agreement periods.

TABLE 7—PARTICIPATION OPTIONS FOR HIGH REVENUE ACOS BASED ON APPLICANT TYPE AND EXPERIENCE WITH RISK

Applicant type	ACO experienced or inexperienced with performance-based risk Medicare ACO initiatives	Participation Options [1]			Agreement period for policies that phase-in over time (benchmarking methodology and quality performance)
		BASIC track's glide path (option for incremental transition from one-sided to two-sided models during agreement period)	BASIC track's Level E (track's highest level of risk/reward applies to all performance years during agreement period)	ENHANCED track (program's highest level of risk/reward applies to all performance years during agreement period)	
New legal entity	Inexperienced	Yes—glide path Levels A through E.	Yes	Yes	First agreement period.
New legal entity	Experienced	No	No	Yes	First agreement period.

TABLE 7—PARTICIPATION OPTIONS FOR HIGH REVENUE ACOS BASED ON APPLICANT TYPE AND EXPERIENCE WITH RISK—Continued

Applicant type	ACO experienced or inexperienced with performance-based risk Medicare ACO initiatives	Participation Options [1]			Agreement period for policies that phase-in over time (benchmarking methodology and quality performance)
		BASIC track's glide path (option for incremental transition from one-sided to two-sided models during agreement period)	BASIC track's Level E (track's highest level of risk/reward applies to all performance years during agreement period)	ENHANCED track (program's highest level of risk/reward applies to all performance years during agreement period)	
Re-entering ACO ..	Inexperienced—former Track 1 ACOs or new ACOs identified as re-entering ACOs because more than 50 percent of their ACO participants have recent prior experience in a Track 1 ACO.	Yes—glide path Levels B through E.	Yes	Yes	Either: (1) The next consecutive agreement period if the ACO's prior agreement expired; (2) the same agreement period in which the ACO was participating at the time of termination; or (3) applicable agreement period for new ACO identified as re-entering because of ACO participants' experience in the same ACO.
Re-entering ACO ..	Experienced—including former Track 1 ACOs that deferred renewal under a two-sided model.	No	No	Yes	Either: (1) The next consecutive agreement period if the ACO's prior agreement expired; (2) the same agreement period in which the ACO was participating at the time of termination; or (3) applicable agreement period for new ACO identified as re-entering because of ACO participants' experience in the same ACO.
Renewing ACO	Inexperienced—former Track 1 ACOs.	Yes—glide path Levels B through E.	Yes	Yes	Subsequent consecutive agreement period.
Renewing ACO	Experienced—including former Track 1 ACOs that deferred renewal under a two-sided model.	No	No	Yes	Subsequent consecutive agreement period.

Notes: [1] High revenue ACOs that have participated in the BASIC track are considered experienced with performance-based risk Medicare ACO initiatives and are limited to participating under the ENHANCED track for subsequent agreement periods.

d. Monitoring for Financial Performance

(1) Background

The program regulations at § 425.316 enable us to monitor the performance of ACOs. In particular, § 425.316 authorizes monitoring for performance related to two statutory provisions regarding ACO performance: Avoidance of at-risk beneficiaries (section 1899(d)(3) of the Act) and failure to meet the quality performance standard (section 1899(d)(4) of the Act). If we discover that an ACO has engaged in the avoidance of at-risk beneficiaries or has failed to meet the quality performance standard, we can impose remedial action or terminate the ACO (see § 425.316(b), (c)).

In monitoring the performance of ACOs, we can analyze certain financial data (see § 425.316(a)(2)(i)), but the regulations do not specifically authorize termination or remedial action for poor financial performance. Similarly, there are no provisions that specifically authorize non-renewal of a participation agreement for poor financial performance, although we had proposed issuing such provisions in prior rules.

In the December 2014 proposed rule (79 FR 72802 through 72806), we proposed to allow Track 1 ACOs to renew their participation in the program for a second agreement period in Track 1 if in at least one of the first 2 performance years of the previous agreement period they did not generate losses in excess of their negative MSR, among other criteria. We refer readers to the June 2015 final rule for a detailed discussion of the proposal and related comments (80 FR 32764 through 32767). Ultimately, we did not adopt a financial performance criterion to determine the eligibility of ACOs to continue in Track 1 in the June 2015 final rule. Although some commenters supported an approach for evaluating an ACO's financial performance for determining its eligibility to remain in a one-sided model, many commenters expressed opposition, citing concerns that this approach could be premature and could disadvantage ACOs that need more time to implement their care management strategies, and could discourage participation. At the time of the June 2015 final rule, we were persuaded by commenters' concerns that application of the additional proposed financial performance criterion for continued participation in Track 1 was premature for ACOs that initially struggled to demonstrate cost savings in their first years in the program. Instead, we

explained our belief that our authority to monitor ACOs (§ 425.316) allows us to take action to address ACOs that are outliers on financial performance by placing poorly performing ACOs on a special monitoring plan. Furthermore, if our monitoring reveals that an ACO is out of compliance with any of the requirements of the Shared Savings Program, we may request a corrective action plan and, if the required corrective action plan is not submitted or is not satisfactorily implemented, we may terminate the ACO's participation in the program (80 FR 32765).

Now that we have additional experience with monitoring ACO financial performance, we believe that the current regulations are insufficient to address recurrent poor financial performance, particularly for ACOs that may be otherwise in compliance with program requirements. Consequently, some ACOs may not have sufficient incentive to remain accountable for the expenditures of their assigned beneficiaries. This may leave the program, the Trust Funds, and Medicare FFS beneficiaries vulnerable to organizations that may be participating in the program for reasons other than meeting the program's goals.

We believe that a financial performance requirement is necessary to ensure that the program promotes accountability for the cost of the care furnished to an ACO's assigned patient population, as contemplated by section 1899(b)(2)(A) of the Act. We believe there is an inherent financial performance requirement that is embedded within the third component of the program's three-part aim: (1) Better care for individuals; (2) better health for populations; and (3) lower growth in Medicare Parts A and B expenditures. Therefore, just as poor quality performance can subject an ACO to remedial action or termination, an ACO's failure to lower growth in Medicare FFS expenditures should be the basis for CMS to take pre-termination actions under § 425.216, including a request for corrective action by the ACO, or termination of the ACO's participation agreement under § 425.218.

(2) Proposed Revisions

We propose to modify § 425.316 to add a provision for monitoring ACO financial performance. Specifically, we propose to monitor for whether the expenditures for the ACO's assigned beneficiary population are ''negative outside corridor,'' meaning that the expenditures for assigned beneficiaries exceed the ACO's updated benchmark by an amount equal to or exceeding either the ACO's negative MSR under a one-sided model, or the ACO's MLR under a two-sided model.[17] If the ACO is negative outside corridor for a performance year, we propose that we may take any of the pre-termination actions set forth in § 425.216. If the ACO is negative outside corridor for another performance year of the ACO's agreement period, we propose that we may immediately or with advance notice terminate the ACO's participation agreement under § 425.218.

We propose that financial performance monitoring would be applicable for performance years beginning in 2019 and subsequent years. Specifically, we would apply this proposed approach for monitoring financial performance results for performance years beginning on January 1, 2019, and July 1, 2019, and for subsequent performance years. Financial and quality performance results are typically made available to ACOs in the summer following the conclusion of the calendar year performance year. For example, we anticipate that the financial performance results for performance years beginning on January 1, 2019 and July 1, 2019, will be available for CMS review in the summer of 2020 and will be made available to ACOs when that review is complete. The one-sided model monitoring (relative to the ACO's negative MSR) would apply to ACOs in Track 1 or the first 2 years of the BASIC track's glide path, and the two-sided model monitoring (relative to the ACO's MLR) would apply to ACOs under performance-based risk in the BASIC track (including the glide path) and the ENHANCED track, as well as Track 2.

Generally, based on our experience, ACOs in two-sided models tend to terminate their participation after sharing in losses for a single year in Track 2 or Track 3. We have observed that a small, but not insignificant, number of Track 1 ACOs are negative outside corridor in their first 2 performance years in the program. Among 194 Track 1 ACOs that renewed for a second agreement period under Track 1, 19 were negative outside corridor in their first 2 performance years in their first agreement period. This includes 14 of 127 Track 1 ACOs that started their first agreement period in either 2012 or 2013 and renewed for a second agreement period in Track 1 beginning January 1, 2016, as well as 5 of 67 Track 1 ACOs that started their first agreement period in 2014 and renewed for a second agreement period in Track 1 beginning January 1, 2017. Moreover, the majority of these organizations have thus far failed to achieve shared savings in subsequent performance years. For example, of the 14 2012/2013 starters in Track 1 that were negative outside corridor for the first 2 consecutive performance years in their first agreement period, only 2 ACOs achieved shared savings in their third performance year, while 10 were still negative outside corridor and 2 were negative within corridor. All 14 ACOs entered a second agreement period in Track 1 starting on January 1, 2016: In performance year 2016, 5 shared savings, 4 were positive within corridor, 4 were negative within corridor, and 1 was negative outside corridor. While some of these ACOs appeared to show improvement, the 2016 results do not take into account ACO participant list changes for these ACOs or rebasing of the ACOs' historical benchmarks for their second agreement period. Because the benchmark years for the second agreement period correspond to the performance years of the first agreement period, ACOs that had losses in their initial years are likely to receive a higher rebased benchmark than those that shared savings. We observed similar trends following the first 2 performance years for ACOs that started their first agreement period in 2014 and 2015. Therefore, while experience does not suggest that a large share of ACOs would be affected, we believe that the proposed policy, if adopted, will help to ensure that ACOs are not allowed multiple years of losses without being held accountable for their performance.

Alternatively, we considered an approach under which we would monitor ACOs for generating any losses, beginning with first dollar losses, including monitoring for ACOs that are negative inside corridor and negative outside corridor. However, we prefer the proposed approach previously described, because the corridor (MLR threshold above the benchmark) is established to protect ACOs against sharing losses that result from random variation.

As described briefly in section II.A.2 of this proposed rule, ACOs that

[17] For purposes of this proposed rule, an ACO is considered to have shared savings when its benchmark minus performance year expenditures are greater than or equal to the MSR. An ACO is ''positive within corridor'' when its benchmark minus performance year expenditures are greater than zero, but less than the MSR. An ACO is ''negative within corridor'' when its benchmark minus performance year expenditures are less than zero, but greater than the negative MSR for ACOs in a one-sided model or the MLR for ACOs in a two-sided model. An ACO is ''negative outside corridor'' when its benchmark minus performance year expenditures are less than or equal to the negative MSR for ACOs in a one-sided model or the MLR for ACOs in a two-sided model.

continue in the program despite poor financial performance may provide little benefit to the Medicare program while taking advantage of the potential benefits of program participation, such as receipt of program data and the opportunity to enter into certain contracting arrangements with ACO participants and ACO providers/suppliers. The redesign of the program includes a number of features that may encourage continued participation by poor performing ACOs under performance-based risk: The relatively lower levels of risk under the BASIC track, the additional features available to eligible ACOs under performance-based risk (the opportunity for physicians and other practitioners participating in eligible two-sided model ACOs to furnish telehealth services under section 1899(l) of the Act, availability of a SNF 3-day rule waiver, and the ability to offer incentive payments to beneficiaries under a CMS-approved beneficiary incentive program), and the opportunity to participate in an Advanced APM for purposes of the Quality Payment Program. We are concerned that ACOs may seek to obtain reinsurance to help offset their liability for shared losses as a way of enabling their continued program participation while undermining the program's goals. Although we considered prohibiting ACOs from obtaining reinsurance to mitigate their performance-based risk, we believe that such a requirement could be overly restrictive and that the proposed financial monitoring approach would be effective in removing from the program ACOs with a history of poor financial performance. We seek comment on this issue, and on ACOs' use of reinsurance, including their ability to obtain viable reinsurance products covering a Medicare FFS population.

We seek comment on these proposals and related considerations.

6. Requirements for ACO Participation in Two-Sided Models

a. Overview

In this section, we address requirements related to an ACO's participation in performance-based risk. We propose technical changes to the program's policies on election of the MSR/MLR for ACOs in the BASIC track's glide path, and to address the circumstance of ACOs in two-sided models that elected a fixed MSR/MLR that have fewer than 5,000 assigned beneficiaries for a performance year. We propose changes to the repayment mechanism requirement to update these policies to address the new participation options included in this proposed rule, including the BASIC track's glide path under which participating ACOs must transition from a one-sided model to performance-based risk within a single agreement period. We propose to add a provision that could lower the required repayment mechanism amount for BASIC track ACOs in Levels C, D, or E. In addition, we propose to add provisions to permit recalculation of the estimated amount of the repayment mechanism each performance year to account for changes in ACO participant composition, to codify requirements on the duration of repayment mechanism arrangements, to grant a renewing ACO (as defined in proposed § 425.20) the flexibility to maintain a single, existing repayment mechanism arrangement to support its ability to repay shared losses in the new agreement period so long as it is sufficient to cover an increased repayment mechanism amount during the new agreement period (if applicable), and to establish requirements regarding the issuing institutions for a repayment mechanism arrangement. In this section, we also propose new policies to hold ACOs participating in two-sided models accountable for sharing in losses when they terminate, or CMS terminates, their agreement before the end of a performance year, while also reducing the amount of advance notice required for early termination.

b. Election of MSR/MLR by ACOs

(1) Background

As discussed in earlier rulemaking, the MSR and MLR protect against an ACO earning shared savings or being liable for shared losses when the change in expenditures represents normal, or random, variation rather than an actual change in performance (see 76 FR 67927 through 67929; and 76 FR 67936 through 67937). The MSR and MLR are calculated as a percentage of the ACO's updated historical benchmark (see §§ 425.604(b) and (c), 425.606(b), 425.610(b)).

In the June 2015 final rule, we finalized an approach to offer Track 2 and Track 3 ACOs the opportunity to select the MSR/MLR that will apply for the duration of the ACO's 3-year agreement period from several symmetrical MSR/MLR options (see 80 FR 32769 through 32771, and 80 FR 32779 through 32780; §§ 425.606(b)(1)(ii) and 425.610(b)(1)). We explained our belief that offering ACOs a choice of MSR/MLR will encourage ACOs to move to two-sided risk, and that ACOs are best positioned to determine the level of risk they are prepared to accept. For instance, ACOs that are more hesitant to enter a performance-based risk arrangement may choose a higher MSR/MLR, to have the protection of a higher threshold before the ACO would become liable to repay shared losses, thus mitigating downside risk, although the ACO would in turn have a higher threshold to meet before being eligible to receive shared savings. ACOs that are comfortable with a lower threshold of protection from risk of shared losses may select a lower MSR/MLR to benefit from a corresponding lower threshold for eligibility for shared savings. We also explained our belief that applying the same MSR/MLR methodology in both of the risk-based tracks reduces complexity for CMS's operations and establishes more equal footing between the risk models. ACOs applying to the Track 1+ Model are also allowed the same choice of MSR/MLR to be applied for the duration of the ACO's agreement period under the Model.

ACOs applying to a two-sided model (currently, Track 2, Track 3 or the Track 1+ Model) may select from the following options:

- Zero percent MSR/MLR.
- Symmetrical MSR/MLR in a 0.5 percent increment between 0.5–2.0 percent.
- Symmetrical MSR/MLR that varies based on the ACO's number of assigned beneficiaries according to the methodology established under the one-sided model under § 425.604(b). The MSR is the same as the MSR that would apply in the one-sided model, and the MLR is equal to the negative MSR.

(2) Proposals for Timing and Selection of MSR/MLR

We considered what MSR/MLR options should be available for the BASIC track's glide path, as well as the timing of selection of the MSR/MLR for ACOs entering the glide path under a one-sided model and transitioning to a two-sided model during their agreement period under the BASIC track.

We propose that ACOs under the BASIC track would have the same MSR/MLR options as are currently available to ACOs under one-sided and two-sided models of the Shared Savings Program, as applicable to the model under which the ACO is participating along the BASIC track's glide path. We believe these thresholds continue to have importance to protect against savings and losses resulting from random variation, although we describe in section II.A.5.b of this proposed rule our consideration of an alternate approach

that would lower the MSR for low revenue ACOs. Further, providing the same MSR/MLR options for BASIC track ACOs under two-sided risk as ENHANCED track ACOs would be consistent with our current policy for Track 2 and Track 3 that allows ACOs to determine the level of risk they will accept while reducing complexity for CMS's operations and establishing more equal footing between the risk models.

Specifically, we propose that ACOs in a one-sided model of the BASIC track's glide path would have a variable MSR based on the ACO's number of assigned beneficiaries. We propose to apply the same variable MSR methodology as is used under § 425.604(b) for Track 1. We propose to specify this variable MSR methodology in a proposed new section of the regulations at § 425.605(b). We also propose to specify in § 425.605(b) the MSR/MLR options for ACOs under two-sided models of the BASIC track, consistent with previously described symmetrical MSR/MLR options currently available to ACOs in two-sided models of the Shared Savings Program and the Track 1+ Model (for example, as specified in § 425.610(b)).

Because we are proposing to discontinue Track 1, we believe it is necessary to update the provision governing the symmetrical MSR/MLR options for the ENHANCED track at § 425.610(b), which currently references the variable MSR methodology under Track 1. We propose to revise § 425.610(b)(1)(iii) to reference the requirements at § 425.605(b)(1) for a variable MSR under the BASIC track's glide path rather than the variable MSR under Track 1. Because we are also proposing to discontinue Track 2, concurrently with our proposal to discontinue Track 1, we do not believe it is necessary to revise the cross-reference in § 425.606(b)(1)(ii)(C) to the variable MSR methodology under Track 1.

We continue to believe that an ACO should select its MSR/MLR before assuming performance-based risk, and this selection should apply for the duration of its agreement period under risk. We believe that a policy that allows more frequent selection of the MSR/MLR within an agreement period under two-sided risk (such as prior to the start of each performance year) could leave the program vulnerable to gaming. For example, ACOs could revise their MSR/MLR selections once they have experience under performance-based risk in their current agreement period to maximize shared savings or to avoid shared losses.

However, in light of our proposal to require ACOs to move between a one-sided model (Level A or Level B) and a two-sided model (Level C, D, or E) during an agreement period in the BASIC track's glide path, we believe it is appropriate to allow ACOs to make their MSR/MLR selection during the application cycle preceding their first performance year in a two-sided model, generally during the calendar year before entry into risk. ACOs that enter the BASIC track's glide path under a one-sided model would still be inexperienced with performance-based risk, although they will have the opportunity to gain experience with the program, prior to making this selection. This approach would be another means for BASIC ACOs in the glide path to control their level of risk exposure.

Therefore, we propose to include a policy in the proposed new section of the regulations at § 425.605(b)(2) to allow ACOs under the BASIC track's glide path in Level A or Level B to choose the MSR/MLR to be applied before the start of their first performance year in a two-sided model. This selection would occur before the ACO enters Level C, D or E of the BASIC track's glide path, depending on whether the ACO is automatically transitioned to a two-sided model (Level C) or elects to more quickly transition to a two-sided model within the glide path (Level C, D, or E).

(3) Proposals for Modifying the MSR/MLR To Address Small Population Sizes

As discussed in the introduction to this section, the MSR and MLR protect against an ACO earning shared savings or being liable for shared losses when the change in expenditures represents normal, or random, variation rather than an actual change in performance. ACOs in two-sided risk models that have opted for a fixed MSR/MLR can choose a MSR/MLR of zero percent or a symmetrical MSR/MLR equal to 0.5 percent, 1.0 percent, 1.5 percent, or 2.0 percent. As discussed elsewhere in this proposed rule, we are proposing that ACOs in a two-sided model of the new BASIC track would have the same options in selecting their MSR/MLR, including the option of a variable MSR/MLR based on the number of beneficiaries assigned to the ACO.

Under the current regulations, for all ACOs in Track 1 and any ACO in a two-sided risk model that has elected a variable MSR/MLR, we determine the MSR and MLR (if applicable) for the performance year based on the number of beneficiaries assigned to the ACO for the performance year. For ACOs with at least 5,000 assigned beneficiaries in the performance year, the variable MSR can range from a high of 3.9 percent (for ACOs with at least 5,000 assigned beneficiaries) to a low of 2.0 percent (for ACOs with approximately 60,000 or more assigned beneficiaries). See § 425.604(b). For two-sided model ACOs under a variable MSR/MLR, the MLR is equal to the negative of the MSR.

Under section 1899(b)(2)(D) of the Act, in order to be eligible to participate in the Shared Savings Program an ACO must have at least 5,000 assigned beneficiaries. In earlier rulemaking, we established the requirements under § 425.110 to address situations in which an ACO met the 5,000 assigned beneficiary requirement at the start of its agreement period, but later falls below 5,000 assigned beneficiaries during a performance year. We refer readers to the November 2011 and June 2015 final rules and the CY 2017 PFS final rule for a discussion of the relevant background and related considerations (see 76 FR 67807 and 67808, 67959; 80 FR 32705 through 32707; 81 FR 80515 and 80516). CMS deems an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries if 5,000 or more beneficiaries are historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the program's assignment methodology (§ 425.110(a)). CMS initially makes this assessment at the time of an ACO's application to the program. As specified in § 425.110(b), if at any time during the performance year, an ACO's assigned population falls below 5,000, the ACO may be subject to the pre-termination actions described in § 425.216 and termination of the participation agreement by CMS under § 425.218. As a pre-termination action, CMS may require the ACO to submit a corrective action plan (CAP) to CMS for approval (§ 425.216). While under a CAP for having an assigned population below 5,000 assigned beneficiaries, an ACO remains eligible for shared savings and losses (§ 425.110(b)(1)). If the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a CAP, CMS terminates the ACO's participation agreement and the ACO is not eligible to share in savings for that performance year (§ 425.110(b)(2)).

As specified in § 425.110(b)(1), if an ACO's performance year assigned beneficiary population falls below 5,000, the ACO remains eligible for shared savings/shared losses, but the following policies apply with respect to the ACO's MSR/MLR: (1) For ACOs subject to a variable MSR and MLR (if applicable), the MSR and MLR (if applicable) will be set at a level consistent with the number of assigned

beneficiaries; (2) For ACOs with a fixed MSR/MLR, the MSR/MLR will remain fixed at the level consistent with the choice of MSR and MLR that the ACO made at the start of the agreement period.

To implement the requirement for the variable MSR and MLR (if applicable) to be set at a level consistent with the number of assigned beneficiaries, the CMS Office of the Actuary (OACT) calculates the MSR ranges for populations smaller than 5,000 assigned beneficiaries. The following examples are based on our operational experience: If an ACO's assigned beneficiary population drops to 3,000, the MSR would be set at 5 percent; if the population falls to 1,000 or 500, the MSR would correspondingly rise to 8.7 percent or 12.2 percent, respectively. These sharp increases in the MSR reflect the greater random variation that can occur when expenditures are calculated across a small number of assigned beneficiaries.

To date, the number of ACOs that have fallen below the 5,000-beneficiary threshold for a performance year has been relatively small. Among 432 ACOs that were reconciled in PY 2016, there were 12 ACOs with fewer than 5,000 assigned beneficiaries. In PY 2015 there were 15 (out of 392 ACOs) below the threshold and in PY 2014 there were 14 (out of 333 ACOs). While the majority of these ACOs had between 4,000 and 5,000 beneficiaries, we observed the performance year population fall as low as 513 for one ACO. Based on data available from fourth quarter 2017 program reports, which tend to provide a close approximation of final performance year assignment counts, over 4 percent of ACOs participating in PY 2017 are likely to fall below 5,000 assigned beneficiaries for the performance year, with several likely to be under 1,000.

Consistent with overall program participation trends, most ACOs that have fallen below the 5,000-beneficiary threshold in prior performance years, or that are anticipated to do so for PY 2017, have been in Track 1. These ACOs have thus automatically been subject to a variable MSR. With increased participation in performance-based risk models, however, we anticipate an increased likelihood of observing ACOs below the 5,000-beneficiary threshold that have a fixed MSR/MLR of plus or minus 2 percent or less.

Indeed, program data have demonstrated the popularity of the fixed MSR/MLR among ACOs in two-sided models. In PY 2016, the first year that ACOs in two-sided models were allowed to choose their MSR/MLR, 21 of 22 eligible ACOs selected one of the fixed options. Among the 42 Track 2 and Track 3 ACOs participating in PY 2017, 38 selected a MSR/MLR that does not vary with the ACO's number of assigned beneficiaries, including 11 that are subject to a MSR or MLR of zero percent. Among 101 ACOs participating in two-sided models in PY 2018, 80 are subject to one of the fixed options, including 18 with a MSR and MLR of zero percent.

While we continue to believe that ACOs operating under performance-based risk models should have flexibility in determining their exposure to risk through the MSR/MLR selection, we are concerned about the potential for rewarding ACOs with a static MSR/MLR that are unable to maintain a minimum population of 5,000 beneficiaries through the payment of shared savings, for expenditure variation that is likely the result of normal expenditure fluctuations, rather than the performance of the ACO. If the ACO's minimum population falls below 5,000, the ACO is no longer in compliance with program requirements. The reduction in the size of the ACO's assigned beneficiary population would also raise concerns that any shared savings payments made to the ACO would not reward true cost savings, but instead would pay for normal expenditure fluctuations. We note, however, that an ACO under performance-based risk potentially would be at greater risk of being liable for shared losses, also stemming from such normal expenditure variation. If an ACO's assigned population falls below the minimum requirement of 5,000 beneficiaries, a solution to improve the confidence that shared savings and shared losses do not represent normal variation, but meaningful changes in expenditures, would be to apply a symmetrical MSR/MLR that varies based on the number of beneficiaries assigned to the ACO.

The values for the variable MSR are shown in Table 8. As previously described, the MLR is equal to the negative MSR. In this table, the MSR ranges for population sizes varying between from 5,000 to over 60,000 assigned beneficiaries are consistent with the current approach to determining a variable MSR based on the size of the ACO's population (see § 425.604(b)), and the corresponding variable MLR. We have also added new values, calculated by the CMS OACT, for population sizes varying from one to 4,999, as shown in Table 8. For ACOs with populations between 500–4,999 beneficiaries, the MSR would range between 12.2 percent (for ACOs with 500 assigned beneficiaries) and 3.9 percent (for ACOs with 4,999 assigned beneficiaries). For ACOs with populations of 499 assigned beneficiaries or fewer, we would calculate the MSR to be equal to or greater than 12.2 percent, with the MSR value increasing as the ACO's assigned population decreases.

TABLE 8—DETERMINATION OF MSR BY NUMBER OF ASSIGNED BENEFICIARIES

Number of beneficiaries	MSR (low end of assigned beneficiaries) (percent)	MSR (high end of assigned beneficiaries) (percent)
1–499	≥12.2	
500–999	12.2	8.7
1,000–2,999	8.7	5.0
3,000–4,999	5.0	3.9
5,000–5,999	3.9	3.6
6,000–6,999	3.6	3.4
7,000–7,999	3.4	3.2
8,000–8,999	3.2	3.1
9,000–9,999	3.1	3.0
10,000–14,999	3.0	2.7
15,000–19,999	2.7	2.5
20,000–49,999	2.5	2.2
50,000–59,999	2.2	2.0

TABLE 8—DETERMINATION OF MSR BY NUMBER OF ASSIGNED BENEFICIARIES—Continued

Number of beneficiaries	MSR (low end of assigned beneficiaries) (percent)	MSR (high end of assigned beneficiaries) (percent)
60,000 +	2.0	2.0

Therefore, we are proposing to modify § 425.110(b) to provide that we will use a variable MSR/MLR when performing shared savings and shared losses calculations if an ACO's assigned beneficiary population falls below 5,000 for the performance year, regardless of whether the ACO selected a fixed or variable MSR/MLR. We propose to use this approach beginning with performance years starting in 2019. The variable MSR/MLR would be determined using the same approach based on number of assigned beneficiaries that is currently used for two-sided model ACOs that have selected the variable option. If the ACO's assigned beneficiary population increases to 5,000 or more for subsequent performance years in the agreement period, the MSR/MLR would revert to the fixed level selected by the ACO at the start of the agreement period (or before moving to risk for ACOs on the BASIC track's glide path), if applicable.

While we believe this proposal would have a fairly limited reach in terms of number of ACOs impacted, we believe it is nonetheless important for protecting the integrity of the Trust Funds and better ensuring that the program is rewarding or penalizing ACOs for actual performance. The policy, if finalized, would make it more difficult for an ACO under performance-based risk that falls below the 5,000-beneficiary threshold to earn shared savings, but would also provide greater protection against owing shared losses.

We also propose to revise the regulations at § 425.110 to reorganize the provisions in paragraph (b), so that all current and proposed policies for determining the MSR and MLR would apply to all ACOs whose population fall below the 5,000-beneficiaries threshold which are reconciled for shared savings or losses, as opposed to being limited to ACOs under a CAP as provided in the existing provision at § 425.110(b)(1). Specifically we propose to move the current provisions on the determination of the MSR/MLR at paragraphs (b)(1)(i) and (ii) to a new provision at paragraph (b)(3) where we will also distinguish between the policies applicable to determining the MSR/MLR for performance years starting before January 1, 2019, and those that we are proposing to apply for performance years starting in 2019 and subsequent years.

We propose to specify the additional ranges for the MSR (when the ACO's population falls below 5,000 assigned beneficiaries) through revisions to the table at § 425.604(b), for use in determining an ACO's eligibility for shared savings for a performance year starting on January 1, 2019, and any remaining years of the current agreement period for ACOs under Track 1. We note these ranges are consistent with the program's current policy for setting the MSR and MLR (in the event a two-sided model ACO elected the variable MSR/MLR) when the population falls below 5,000 assigned beneficiaries, and therefore similar ranges would be applied in determining the MSR/MLR for performance year 2017 and 2018. These ranges in § 425.604(b) are cross-referenced in the regulations for Track 2 at § 425.606(b)(1)(ii)(C) and therefore would also apply to Track 2 ACOs if their population falls below 5,000 assigned beneficiaries. Further, as discussed in section II.A.6.b.2 of this proposed rule, we propose to specify under a new section of the regulations at § 425.605(b)(1) the range of MSR values that apply under the one-sided model of the BASIC track's glide path, which would also be used in determining the variable MSR/MLR for ACOs participating in two-sided models under the BASIC track and ENHANCED track. We seek comment on these proposals and specifically on the proposed MSR ranges for ACOs with fewer than 5,000 assigned beneficiaries, including the application of a MSR/MLR in excess of 12 percent, in the case of ACOs that have failed to meet the requirement to maintain a population of at least 5,000 assigned beneficiaries and have very small population sizes. In particular, we seek commenters' feedback on whether the proposed approach described in this section could improve accountability of ACOs.

We also note that the requirement of section 1899(b)(2)(D) of the Act, for an ACO to have at least 5,000 assigned beneficiaries, continues to apply. The additional consequences for ACOs with fewer than 5,000 assigned beneficiaries, as specified in § 425.110(b)(1) and (2) would also continue to apply. Under § 425.110(b)(2), ACOs are not eligible to share savings for a performance year in which they are terminated for noncompliance with the requirement to maintain a population of at least 5,000 assigned beneficiaries. As discussed in II.A.6.d of this proposed rule, we are proposing to revise our regulations governing the payment consequences of early termination to include policies applicable to involuntarily terminated ACOs. Under this proposed approach, two-sided model ACOs would be liable for a pro-rated share of any shared losses determined for the performance year during which a termination under § 425.110(b)(2) becomes effective.

c. ACO Repayment Mechanisms

(1) Background

We discussed in earlier rulemaking the requirement for ACOs applying to enter a two-sided model to demonstrate they have established an adequate repayment mechanism to provide CMS assurance of their ability to repay shared losses for which they may be liable upon reconciliation for each performance year.[18] The requirements for an ACO to establish and maintain an adequate repayment mechanism are described in § 425.204(f), and we have provided additional program guidance on repayment mechanism arrangements.[19] Section 425.204(f) addresses various requirements for repayment mechanism arrangements: The nature of the repayment mechanism; when documentation of the repayment mechanism must be submitted to CMS; the amount of the repayment mechanism; replenishment of the repayment mechanism funds after their use; and the duration of the repayment mechanism arrangement.

[18] See 76 FR 67937 through 67940 (establishing the requirement for Track 2 ACOs). See also 80 FR 32781 through 32785 (adopting the same general requirements for Track 3 ACOs with respect to the repayment mechanism and discussing modifications to reduce burden of the repayment requirements on ACOs).

[19] Medicare Shared Savings Program & Medicare ACO Track 1+ Model, Repayment Mechanism Arrangements, Guidance Document (July 2017, version #6), available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/Repayment-Mechanism-Guidance.pdf* (herein Repayment Mechanism Arrangements Guidance).

Consistent with the requirements set forth in § 425.204(f)(2), in establishing a repayment mechanism for participation in a two-sided model of the Shared Savings Program, ACOs must select from one or more of the following three types of repayment arrangements: Funds placed in escrow; a line of credit as evidenced by a letter of credit that the Medicare program could draw upon; or a surety bond. Currently, our regulations do not specify any requirements regarding the institutions that may administer an escrow account or issue a line of credit or surety bond. Our regulations require an ACO to submit documentation of its repayment mechanism arrangement during the application or participation agreement renewal process and upon request thereafter.

The arrangement must be adequate to repay at least the minimum dollar amount specified by CMS, which is determined based on an estimation methodology that uses historical Medicare Parts A and B FFS expenditures for the ACO's assigned population. For Track 2 and Track 3 ACOs, the repayment mechanism must be equal to at least 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, as determined based on expenditures used to establish the ACO's benchmark for the applicable agreement period, as estimated by CMS at the time of application or participation agreement renewal (see § 425.204(f)(1)(ii), see also Repayment Mechanism Arrangements Guidance). In the Repayment Mechanism Arrangements Guidance, we describe in detail our approach to estimating the repayment mechanism amount for Track 2 and Track 3 ACOs and our experience with the magnitude of the dollar amounts.

More generally, program stakeholders have continued to identify the repayment mechanism requirement as a potential barrier for some ACOs to enter into performance-based risk tracks, particularly small, physician-only and rural ACOs that may lack access to the capital that is needed to establish a repayment mechanism with a large dollar amount. We revised the Track 1+ Model design in July 2017 (See Track 1+ Model Fact Sheet (Updated July 2017)), to allow for potentially lower repayment mechanism amounts for participating ACOs under a revenue-based loss sharing limit (that is, ACOs that do not include an ACO participant that is either (i) an IPPS hospital, cancer center, or rural hospital with more than 100 beds; or (ii) an ACO participant that is owned or operated by such a hospital or by an organization that owns or operates such a hospital). This policy provides greater consistency between the repayment mechanism amount and the level of risk assumed by revenue-based or benchmark-based ACOs and helps alleviate the burden of securing a higher repayment mechanism amount based on the ACO's benchmark expenditures, as required for Track 2 and Track 3 ACOs. We believe this approach is appropriate for this subset of Track 1+ Model ACOs because they are generally at risk for repaying a lower amount of shared losses than other ACOs that are subject to a benchmark-based loss sharing limit (that is, ACOs that include the types of ACO participants previously identified in this proposed rule). Therefore, under the Track 1+ Model, a bifurcated approach is used to determine the estimated amount of an ACO's repayment mechanism for consistency with the bifurcated approach to determining the loss sharing limit under the Track 1+ Model. For Track 1+ Model ACOs, CMS estimates the amount of the ACO's repayment mechanism as follows:

- *ACOs subject to the benchmark-based loss sharing limit:* The repayment mechanism amount is 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, as determined based on expenditures used to establish the ACO's benchmark for the applicable agreement period.
- *ACOs subject to the revenue-based loss sharing limit:* The repayment mechanism amount is the lower of (1) 2 percent of the ACO participants' total Medicare Parts A and B FFS revenue, or (2) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, as determined based on expenditures used to establish the ACO's benchmark.

Under § 425.204(f)(3), an ACO must replenish the amount of funds available through the repayment mechanism within 90 days after the repayment mechanism has been used to repay any portion of shared losses owed to CMS. In addition, our regulations require a repayment mechanism arrangement to remain in effect for a sufficient period of time after the conclusion of the agreement period to permit CMS to calculate and to collect the amount of shared losses owed by the ACO. As noted in our Repayment Mechanism Arrangements Guidance, we believe that this standard would be satisfied by an arrangement that terminates 24 months following the end of the agreement period.

(2) Proposals Regarding Repayment Mechanism Amounts

As previously noted, an ACO that is seeking to participate in a two-sided model must submit for CMS approval documentation supporting the adequacy of a mechanism for repaying shared losses, including demonstrating that the value of the arrangement is at least the minimum amount specified by CMS. We propose to modify § 425.204(f) to address concerns regarding the amount of the repayment mechanism, to specify the data used by CMS to determine the repayment mechanism amount, and to permit CMS to specify a new repayment mechanism amount annually based on changes in ACO participants.

In general, we believe that, like other ACOs participating in two-sided risk tracks, ACOs applying to participate in the BASIC track under performance-based risk should be required to provide CMS assurance of their ability to repay shared losses by establishing an adequate repayment mechanism. Consistent with the approach used under the Track 1+ Model, we believe the amount of the repayment mechanism should be potentially lower for BASIC track ACOs compared to the repayment mechanism amounts required for ACOs in Track 2 or the ENHANCED track. We would calculate a revenue-based repayment mechanism amount and a benchmark-based repayment mechanism amount for each BASIC track ACO and require the ACO to obtain a repayment mechanism for the lower of the two amounts described previously. We believe this aligns with our proposed approach for determining the loss sharing limit for ACOs participating in the BASIC track, described in section II.A.3.b. of this proposed rule. In addition, this approach balances concerns about the ability of ACOs to take on performance-based risk and repay any shared losses for which they may be liable with concerns about the burden imposed on ACOs seeking to enter and continue their participation in the BASIC track.

Previously, we have used historical data to calculate repayment mechanism amounts, typically using the same reference year to calculate the estimates consistently for all applicants to a two-sided model. As a basis for the estimate, we have typically used assignment and expenditure data from the most recent prior year for which 12 months of data are available, which tends to be benchmark year 2 for ACOs applying to enter the program or renew their participation agreement (for example, calendar year 2016 data for ACOs applying to enter participation

agreements beginning January 1, 2018). The Repayment Mechanism Arrangements Guidance includes a detailed description of how we have previously estimated 1 percent of the total per capita Medicare Parts A and B FFS expenditures for an ACO's assigned beneficiaries based on the expenditures used to establish the ACO's benchmark. To continue calculating the estimates with expenditures used to calculate the benchmark, we would need to use different sets of historical data for ACOs applying to enter or renew an agreement and those transitioning to a performance-based risk track. That is because ACOs applying to start a new agreement period under the program and ACOs transitioning to risk within different years of their current agreement period will have different benchmark years. To avoid undue operational burden, we propose to use the most recent calendar year, for which 12 months of data is available to calculate repayment mechanism estimates for all ACOs applying to enter, or transitioning to, performance-based risk for a particular performance year. We believe this approach to using more recent historical data to estimate the repayment mechanism amount would more accurately approximate the level of losses for which the ACO could be liable regardless of whether the ACO is subject to a benchmark-based or revenue-based loss sharing limit.

Therefore, we are proposing to amend § 425.204(f)(4) to specify the methodologies and data used in calculating the repayment mechanism amounts for BASIC track, Track 2, and ENHANCED track ACOs. For an ACO in Track 2 or the ENHANCED track, we propose that the repayment mechanism amount must be equal to at least 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available. For a BASIC track ACO, the repayment mechanism amount must be equal to the lesser of (i) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for its assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (ii) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. For ACOs with a participant agreement start date of July 1, 2019, we also propose to calculate the repayment mechanism amount using expenditure data from the most recent calendar year for which 12 months of data are available.

Currently, we generally do not revise the estimated repayment mechanism amount for an ACO during its agreement period. For example, we typically do not revise the repayment mechanism amount during an ACO's agreement period to reflect annual changes in the ACO's certified ACO participant list. However, in the Track 1+ Model, CMS may require the ACO to adjust the repayment mechanism amount if changes in an ACO's participant composition occur within the ACO's agreement period that result in the application of relatively higher or lower loss sharing limits. As explained in the Track 1+ Model Fact Sheet, if the estimated repayment mechanism amount increases as a result of the ACO's change in composition, CMS would require the Track 1+ ACO to demonstrate its repayment mechanism is equal to this higher amount. If the estimated amount decreases as a result of its change in composition, CMS may permit the ACO to decrease the amount of its repayment mechanism (for example, if CMS also determines the ACO does not owe shared losses from the prior performance year under the Track 1+ Model).

We believe a similar approach may be appropriate to address changes in the ACO's composition over the course of an agreement period and to ensure the adequacy of an ACO's repayment mechanism as it enters higher levels of risk within the ENHANCED track or the BASIC track's glide path. During an agreement period, an ACO's composition of ACO participant TINs and the providers/suppliers enrolled in the ACO participant TINs may change. The repayment mechanism estimation methodology we previously described in this section uses data based on the ACO participant list, including estimated expenditures for the ACO's assigned population, and in the case of the proposed BASIC track, estimated revenue for ACO participant TINs. See for example, Repayment Mechanism Arrangements Guidance (describing the calculation of the repayment mechanism amount estimate). As a result, over time the initial repayment mechanism amount calculated by CMS may no longer represent the expenditure trends for the ACO's assigned population or ACO participant revenue and therefore may not be sufficient to ensure the ACO's ability to repay losses. For this reason, we believe it would be appropriate to periodically recalculate the amount of the repayment mechanism arrangement.

For agreement periods beginning on or after July 1, 2019, we propose to recalculate the estimated amount of the ACO's repayment mechanism arrangement before the second and each subsequent performance year in which the ACO is under a two-sided model in the BASIC track or ENHANCED track. If we determine the estimated amount of the ACO's repayment mechanism has increased, we may require the ACO to demonstrate the repayment mechanism arrangement covers at least an amount equal to this higher amount.

We propose to make this determination as part of the ACO's annual certification process, in which it finalizes changes to its ACO participant list prior to the start of each performance year. We would recalculate the estimate for the ACO's repayment mechanism based on the certified ACO participant list each year after the ACO begins participation in a two-sided model in the BASIC track or ENHANCED track. If the amount has increased substantially (for example, by at least 10 percent or $100,000, whichever is the lesser value), we would notify the ACO in writing and require the ACO to submit documentation for CMS approval to demonstrate that the funding for its repayment mechanism has been increased to reflect the recalculated repayment mechanism amount. We would require the ACO to make this demonstration within 90 days of being notified by CMS of the required increase.

We recognize that in some cases, the estimated amount may change insignificantly. Requiring an amendment to the ACO's arrangement (such as the case would be with a letter of credit or surety bond) would be overly burdensome and not necessary for reassuring CMS of the adequacy of the arrangement. Therefore, we propose to evaluate the amount of change in the ACO's repayment mechanism, comparing the newly estimated amount and the amount estimated for the most recent prior performance year. If this amount has increased by equal to or greater than either 10 percent or $100,000, whichever is the lesser value, we would require the ACO to demonstrate that it has increased the dollar amount of its arrangement to the recalculated amount. We solicit comments on whether a higher or lower change in the repayment mechanism estimate should trigger the ACO's obligation to increase its repayment mechanism amount.

However, unlike the Track 1+ Model, we propose that if the estimated amount decreases as a result of the ACO's

change in composition, we will not permit the ACO to decrease the amount of its repayment mechanism. The ACO repayment mechanism estimate does not account for an ACO's maximum liability amount and it is possible for an ACO to owe more in shared losses than is supported by the repayment mechanism arrangement. Because of this, we believe it is more protective of the Trust Funds to not permit decreases in the repayment mechanism amount, during an ACO's agreement period under a two-sided model, based on composition changes.

We believe the requirements for repayment mechanism amounts should account for the special circumstances of renewing ACOs, which would otherwise have to maintain two separate repayment mechanisms for overlapping periods of time. As discussed in section II.A.5.c.4, we propose to define ''renewing ACO'' to mean an ACO that continues its participation in the program for a consecutive agreement period, without a break in participation, because it is either: (1) An ACO whose participation agreement expired and that immediately enters a new agreement period to continue its participation in the program; or (2) an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program. We propose at § 425.204(f)(3)(iv) that a renewing ACO can use its existing repayment mechanism to demonstrate that it has the ability to repay losses that may be incurred for performance years in the next agreement period, as long as the ACO submits documentation that the term of the repayment mechanism has been extended and the amount of the repayment mechanism has been updated, if necessary. However, depending on the circumstances, a renewing ACO may have greater potential liability for shared losses under its existing agreement period compared to its potential liability for shared losses under a new agreement period. Therefore, we propose that if an ACO wishes to use its existing repayment mechanism to demonstrate its ability to repay losses in the next agreement period, the amount of the existing repayment mechanism must be equal to the greater of the following: (1) The amount calculated by CMS in accordance with the benchmark-based methodology or revenue-based methodology, as applicable by track (see proposed § 425.204(f)(4)(iv)); or (2) the repayment mechanism amount that the ACO was required to maintain during the last performance year of its current agreement. This proposal protects the financial integrity of the program by ensuring that a renewing ACO will remain capable of repaying losses incurred under its old agreement period.

We propose to consolidate at § 425.204(f)(4) all of our proposed policies, procedures, and requirements related to the amount of an ACO's repayment mechanism, including provisions regarding the calculation and recalculation of repayment mechanism amounts. We also propose to revise the regulations at § 425.204 to streamline and reorganize the provisions in paragraph (f), which we believe is necessary to incorporate these and other proposed requirements discussed in this proposed rule.

(3) Proposals Regarding Submission of Repayment Mechanism Documentation

Currently, ACOs applying to enter a performance-based risk track under the Shared Savings Program must meet the eligibility requirements, including demonstrating they have established an adequate repayment mechanism under § 425.204(f). We believe modifications to the existing repayment mechanism requirements are necessary to address circumstances that could arise if our proposed approach to allowing ACOs to enter or change risk tracks during the current agreement period is finalized. Specifically, we believe modifications would be necessary to reflect the possibility that an ACO that initially entered into an agreement period under the one-sided model years of the BASIC track's glide path will transition to performance-based risk within their agreement period, and thereby would become subject to the requirement to establish a repayment mechanism.

The current regulations specify that an ACO participating under a two-sided model must demonstrate the adequacy of its repayment mechanism prior to the start of each agreement period in which it takes risk and upon request thereafter (§ 425.204(f)(3)). We are revisiting this policy in light of our proposal to automatically transition ACOs in the BASIC track's glide path from a one-sided model to a two-sided model beginning in their third performance year, and also under our proposal that would allow BASIC ACOs to elect to transition to performance-based risk beginning in their second performance year of the glide path.

We believe ACOs participating in the BASIC track's glide path should be required to demonstrate they have established an adequate repayment mechanism, consistent with the requirement for ACOs applying to enter an agreement period under performance-based risk. Therefore, we are proposing to amend the regulations to provide that an ACO entering an agreement period in Levels C, D, or E of the BASIC track's glide path must demonstrate the adequacy of its repayment mechanism prior to the start of its agreement period and at such other times as requested by CMS. In addition, we are proposing that an ACO entering an agreement period in Level A or Level B of the BASIC track's glide path must demonstrate the adequacy of its repayment mechanism prior to the start of any performance year in which it either elects to participate in, or is automatically transitioned to a two-sided model (Level C, Level D, or Level E) of the BASIC track's glide path, and at such other times as requested by CMS.

We seek comment on these proposals.

(4) Proposal for Repayment Mechanism Duration

We acknowledge that the proposed change to an agreement period of at least 5 years will affect the term for the repayment mechanism. Under the program's current requirements, the repayment mechanism must be in effect for a sufficient period of time after the conclusion of the agreement period to permit CMS to calculate the amount of shared losses owed and to collect this amount from the ACO (§ 425.204(f)(4)).

We point readers to the June 2015 final rule for a discussion of the requirement for ACOs to demonstrate that they would be able to repay shared losses incurred at any time within the agreement period, and for a reasonable period of time after the end of each agreement period (the ''tail period''). We explained that this tail period must be sufficient to permit CMS to calculate the amount of any shared losses that may be owed by the ACO and to collect this amount from the ACO (see 80 FR 32783). This is necessary, in part, because financial reconciliation results are not available until the summer following the conclusion of the performance year. We have interpreted this requirement to be satisfied if the repayment mechanism arrangement will remain in effect for 24 months after the end of the agreement period (see Repayment Mechanism Arrangements Guidance). Once ACOs are notified of shared losses, based on financial reconciliation, they have 90 days to make payment in full (see §§ 425.606(h) and 425.610(h)).

We propose to specify at § 425.204(f)(6) the general rule that a repayment mechanism must be in effect for the duration of the ACO's

participation in a two-sided model plus 24 months after the conclusion of the agreement period. Based on our experience with repayment mechanisms, we believe ACOs will be able to work with financial institutions to establish repayment mechanism arrangements that will cover a 5-year agreement period plus a 24-month tail period. This proposed approach is consistent with the program's current guidance.

We propose some exceptions to this general rule. First, we propose that CMS may require an ACO to extend the duration of its repayment mechanism beyond the 24-month tail period if necessary to ensure that the ACO will repay CMS any shared losses for each of the performance years of the agreement period. We believe this may be necessary in rare circumstances to protect the financial integrity of the program.

Second, we believe the duration requirement should account for the special circumstances of renewing ACOs, which would otherwise have to maintain two separate repayment mechanisms for overlapping periods of time. As previously noted, we propose at § 425.204(f)(3)(iv) that a renewing ACO can choose to use its existing repayment mechanism to demonstrate that it has the ability to repay losses that may be incurred for performance years in the next agreement period, as long as the ACO submits documentation that the term of the repayment mechanism has been extended and the amount of the repayment mechanism has been increased, if necessary. We propose at § 425.204(f)(6) that the term of the existing repayment mechanism must be extended in these cases and that it must periodically be extended thereafter upon notice from CMS.

We are considering the amount of time by which we would require the existing repayment mechanism to be extended. As discussed in section II.A.5 of this proposed rule, renewing ACOs (as we propose to define that term at § 425.20) may have differing numbers of years remaining under their current repayment mechanism arrangements depending on whether the ACO is renewing at the conclusion of its existing agreement period or if the ACO is an early renewal (terminating its current agreement to enter a new agreement period without interruption in participation). We recognize that it may be difficult for ACOs that are completing the term of their current agreement period to extend an existing repayment mechanism by 7 years (that is, for the full 5-year agreement term plus 24 months). Therefore, we are considering whether the program would be adequately protected if we permitted the existing repayment mechanism to be extended long enough to cover the first 2 or 3 performance years of the new agreement period (that is, an extension of 4 or 5 years, respectively, including the 24-month tail period). We solicit comment on whether we should require a longer or shorter extension.

If we permit an ACO to extend its existing repayment mechanism for less than 7 years, we would require the ACO to extend the arrangement periodically upon notice from CMS. Under this approach, the ACO would eventually have a repayment mechanism arrangement that would not expire until at least 24 months after the end of the new agreement period. We seek comment on whether this approach should also apply to an ACO entering two-sided risk for the first time (that is, an ACO that is not renewing its participation agreement). We would continue to permit a renewing ACO to maintain two separate repayment mechanisms (one for the current agreement period and one for the new agreement period).

Under our proposal, if CMS notifies a renewing ACO that its repayment mechanism amount will be higher for the new agreement period, the ACO may either (i) establish a second repayment mechanism arrangement in the higher amount for 7 years (or for a lesser duration that we may specify in the final rule), or (ii) increase the amount of its existing repayment mechanism to the amount specified by CMS and extend the term of the repayment mechanism arrangement for an amount of time specified by CMS (7 years or for a lesser duration that we may specify in the final rule). On the other hand, if CMS notifies a renewing ACO that the repayment mechanism amount for its new agreement period is equal to or lower than its existing repayment mechanism amount, the ACO may similarly choose to extend the duration of its existing repayment mechanism instead of obtaining a second repayment mechanism for the new agreement period. However, in that case, the ACO would be required to maintain the repayment mechanism at the existing higher amount.

Third, we believe that the term of a repayment mechanism may terminate earlier than 24 months after the agreement period if it is no longer needed. Under certain conditions, we permit early termination of a repayment mechanism and release of the arrangement's remaining funds to the ACO. These conditions are specified in the Repayment Mechanism Arrangements Guidance, and we propose to include similar requirements at § 425.204(f)(6). Specifically, we propose that the repayment mechanism may be terminated at the earliest of the following conditions:

- The ACO has fully repaid CMS any shared losses owed for each of the performance years of the agreement period under a two-sided model;
- CMS has exhausted the amount reserved by the ACO's repayment mechanism and the arrangement does not need to be maintained to support the ACO's participation under the Shared Savings Program; or
- CMS determines that the ACO does not owe any shared losses under the Shared Savings Program for any of the performance years of the agreement period. For example, if a renewing ACO opts to establish a second repayment mechanism for its new agreement period, it may request to cancel the first repayment mechanism after reconciliation for the final performance year of its previous agreement period if it owes no shared losses for the final performance year and it has repaid all shared losses, if any, incurred during the previous agreement period.

We solicit comments on whether the provisions proposed at § 425.204(f)(6) are adequate to protect the financial integrity of the Shared Savings Program, to provide greater certainty to ACOs and financial institutions, and to facilitate the establishment of repayment mechanism arrangements.

(5) Proposals Regarding Institutions Issuing Repayment Mechanism Arrangements

We are also proposing additional requirements related to the financial institutions through which ACOs establish their repayment mechanism arrangements that would be applicable to all ACOs participating in a performance-based risk track. With the proposed changes to offer only the BASIC track and ENHANCED track for agreement periods beginning on July 1, 2019 and in subsequent years, we anticipate an increase in the number of repayment mechanism arrangements CMS will review with each annual application cycle. We believe the proposed new requirements regarding the financial institutions with which ACOs establish their repayment mechanisms would provide CMS greater certainty about the adequacy of repayment mechanism arrangements and ultimately ease the process for reviewing and approving the ACO's repayment mechanism arrangement documentation.

Currently, as described in the program's Repayment Mechanism Arrangements Guidance, CMS will accept an escrow account arrangement established with a bank that is insured by the Federal Deposit Insurance Corporation (FDIC), a letter of credit established at a FDIC-insured institution, and a surety bond issued by a company included on the U.S. Department of Treasury's list of certified (surety bond) companies (available at *https://www.fiscal.treasury.gov/fsreports/ref/suretyBnd/c570_a-z.htm*). We have found that arrangements issued by these institutions tend to be more conventional arrangements that conform to the program's requirements. However, we recognize that some ACOs may work with other types of financial institutions that may offer similarly acceptable products, but which may not conform to the standards described in our existing Repayment Mechanism Arrangements Guidance. For example, some ACOs may prefer to use a credit union to establish an escrow account or a letter of credit for purposes of meeting the repayment mechanism arrangements requirement, but credit unions are insured under the National Credit Union Share Insurance Fund program, rather than by the FDIC. Although the insuring entity is different, credit unions typically are insured up to the same insurance limit as FDIC-insured banks, and are otherwise capable of offering escrow accounts and letters of credit that meet program requirements. We also believe that incorporating more complete standards for repayment mechanisms into the regulations would provide additional clarity for ACOs regarding acceptable repayment mechanisms and will help to avoid situations where an ACO may obtain a repayment mechanism arrangement from an entity that ultimately is unable to pay CMS the value of the repayment mechanism in the event CMS seeks to use the arrangement to recoup shared losses for which the ACO is liable.

Since the June 2015 final rule, several ACO applicants have requested use of arrangements from entities other than those described in our Repayment Mechanism Arrangements Guidance, such as a letter of credit issued by the parent corporation of an ACO, and funds held in escrow by an attorney's office. In reviewing these requests, we found a similar level of complexity resulting from the suggested arrangements as we did with our earlier experiences reviewing alternative repayment arrangements, which were permitted during the initial years of the Shared Savings Program until the regulations were revised in the June 2015 final rule to remove the option to establish an appropriate alternative repayment mechanism. In proposing to eliminate this option, we explained that a request to use an alternative repayment mechanism increases administrative complexity for both ACOs and CMS during the application process and is more likely to be declined by CMS (see 79 FR 72832). Although our program guidance (as specified in Repayment Mechanism Arrangements Guidance, version 6, July 2017) encourages ACOs to obtain a repayment mechanism from a financial institution, these recent requests for approval of more novel repayment arrangements have alerted CMS to the potential risk that ACOs may seek approval of repayment mechanism arrangements from organizations other than those that CMS has determined are likely to be most financially sound and able to offer products that CMS can readily verify as appropriate repayment mechanisms that ensure the ACO's ability to repay any shared losses.

Therefore, we propose to revise § 425.204(f)(2) to specify the following requirements about the institution issuing the repayment mechanism arrangement: an ACO may demonstrate its ability to repay shared losses by placing funds in escrow with an insured institution, obtaining a surety bond from a company included on the U.S. Department of Treasury's List of Certified Companies, or establishing a line of credit (as evidenced by a letter of credit that the Medicare program can draw upon) at an insured institution. We anticipate updating the Repayment Mechanism Arrangements Guidance to specify the types of institutions that would meet these new requirements. For example, in the case of funds placed in escrow and letters of credit, the repayment mechanism could be issued by an institution insured by either the Federal Deposit Insurance Corporation or the National Credit Union Share Insurance Fund. The proposed revisions would bring clarity to the program's requirements, which will assist ACOs in selecting, and reduce burden on CMS in reviewing and approving, repayment mechanism arrangements. We welcome commenters' suggestions on these proposed requirements for ACOs regarding the issuing institution for repayment mechanism arrangements.

d. Advance Notice for and Payment Consequences of Termination

(1) Background

Sections 425.218 and 425.220 of the regulations describe the Shared Savings Program's termination policies. Section 425.221, added by the June 2015 final rule, specifies the close-out procedures and payment consequences of early termination. Under § 425.218, CMS can terminate the participation agreement with an ACO when the ACO fails to comply with any of the requirements of the Shared Savings Program. As described in § 425.220, an ACO may also voluntarily terminate its participation agreement. The ACO must provide at least 60 days advance written notice to CMS and its ACO participants of its decision to terminate the participation agreement and the effective date of its termination.

The November 2011 final rule establishing the Shared Savings Program indicated at § 425.220(b) (although this provision was subsequently revised) that ACOs that voluntarily terminated during a performance year would not be eligible to share in savings for that year (76 FR 67980). The June 2015 final rule revised this policy to specify in § 425.221(b)(1) that if an ACO voluntarily terminates with an effective termination date of December 31st of the performance year, the ACO may share in savings only if it has completed all required close-out procedures by the deadline specified by CMS and has satisfied the criteria for sharing savings for the performance year. ACOs that voluntarily terminate with an effective date of termination prior to December 31st of a performance year and ACOs that are involuntarily terminated under § 425.218 are not eligible to share in savings for the performance year.

The current regulations also do not impose any liability for shared losses on two-sided model ACOs that terminate from the program prior to December 31 of a given performance year. As explained in the June 2015 final rule, the program currently has no methodology for partial year reconciliation (80 FR 32817). As a result, ACOs that voluntarily terminate before the end of the performance year are neither eligible to share in savings nor accountable for any shared losses.

The existing policies on termination and the payment consequences of early termination raise concerns for both stakeholders and CMS. First, stakeholders have raised concerns that the current requirement for 60 days advance notice of a voluntary termination is too long because it does not allow ACOs to make timely, informed decisions about their continued participation in the program. Further, we are concerned that under the current policy, ACOs in two-sided models that are projecting losses have an incentive to leave the program prior

to the end of a performance year, whereas ACOs that are projecting savings are likely to stay. Absent a change in our current policies on early termination, these incentives could have a detrimental effect on the Medicare Trust Funds.

(2) Proposals for Advance Notice of Voluntary Termination

We are sympathetic to stakeholder concerns that the existing requirement for a 60-day notification period may hamper ACOs' ability to make timely and informed decisions about their continued participation in the program. A key factor in the timing of ACOs' participation decisions is the availability of program reports. Financial reconciliation reports (showing CMS's determination of the ACO's eligibility for shared savings or losses) are typically made available in the summer following the conclusion of the calendar year performance year (late July—August of the subsequent calendar year). Due to the timing of the production of quarterly reports (with information on the ACO's assigned beneficiary population, and expenditure and utilization trends), an ACO contemplating a year-end termination typically only has two quarters of feedback for the current performance year to consider in its decision-making process. This is because quarterly reports are typically made available approximately 6 weeks after the end of the applicable calendar year quarter. For example, quarter 3 reports would be made available to ACOs in approximately mid-November of each performance year. These dates for delivery of program reports also interact with the application cycle timeline (with ACOs typically required to notify CMS of their intent to apply in May, typically before quarter 1 reports are available, and submit applications during the month of July, prior to receiving quarter 2 reports), as applicants seek to use financial reconciliation data for the prior performance year and quarterly report data for the current performance year to make participation decisions about their continued participation, particularly ACOs applying to renew their participation for a subsequent agreement period.

We believe that adopting a shorter notice requirement would provide ACOs with more flexibility to consider their options with respect to their continued participation in the program. We are therefore proposing to revise § 425.220 to reduce the minimum notification period from 60 to 30 days. Reducing the notice requirement to 30 days would typically allow ACOs considering a year-end termination to base their decision on three quarters of feedback reports instead of two, given current report production schedules.

(3) Proposals for Payment Consequences of Termination

In this section, we discuss payment consequences of early termination of an ACO's participation agreement. We reconsidered the program's current policies on payment consequences of termination under § 425.221 in light of our proposal to reduce the amount of advance notice from ACOs of their voluntarily termination of participation under § 425.220. While we believe that the proposal to shorten the notice period for voluntary termination under § 425.220 from 60 to 30 days would be beneficial to ACOs, we recognize that it may increase gaming among risk-bearing ACOs facing losses, as ACOs would have more time and information to predict their financial performance with greater accuracy.

To deter gaming while still providing flexibility for ACOs in two-sided models to make decisions about their continued participation in the program, we considered several policy alternatives to hold these ACOs accountable for some portion of the shared losses generated during the performance year in which they terminate their participation in the program.

We first considered a policy similar to that used in the Next Generation ACO (NGACO) Model whereby ACOs may terminate without penalty if they do so by providing notice to CMS on or before February 28, with an effective date 30 days after the date of the notice (March 30). ACOs that terminate after that date are subject to financial reconciliation. These ACOs are liable for any shared losses determined and are also eligible to share in savings. The NGACO Model adopted March 30 as the deadline for the effective termination date in order to align with timelines for the Quality Payment Program. Specifically, this date ensures that clinicians affiliated with a terminating NGACO will not be included in the March 31 snapshot date for QP determinations. However, while we acknowledge the merit of reducing provider uncertainty around Quality Payment Program eligibility, we also recognize that in the early part of the performance year, ACOs have a limited amount of information on which to base termination decisions. We are especially concerned that holding ACOs accountable for full shared losses may lead many organizations to leave the program early in the performance year, including those that would have ultimately been eligible for shared savings had they continued their participation. Post-termination, Shared Savings Program ACOs no longer have access to the same program resources that can help to facilitate care management, such as beneficiary-identifiable claims data or payment rule waivers, such as the SNF 3-day rule waiver. This could make it more challenging for these entities to reduce costs, possibly offsetting any benefits to the Medicare Trust Funds from reduced gaming.

Given the drawbacks of setting an early deadline for ACOs to withdraw without financial risk, we also considered a policy under which risk-bearing ACOs that voluntarily terminate with an effective date after June 30 of a performance year would be liable for a portion of any shared losses determined for the performance year. We believe that June 30 is a reasonable deadline for the effective date of termination as it allows ACOs time to accumulate more information and make decisions regarding their continued participation in the program. As is the case under current policy, clinicians affiliated with ACOs that terminate with an effective date between March 31 and June 30 would be captured in one or more QP determination snapshots. Clinicians determined to have QP status would lose their status as a result of the termination, and would instead be scored under MIPS using the APM scoring standard.

We propose to conduct financial reconciliation for all ACOs in two-sided models that voluntarily terminate after June 30. We propose to use the full 12 months of performance year expenditure data in performing reconciliation for terminated ACOs with partial year participation. For those ACOs that generate shared losses, we will pro-rate the shared loss amount by the number of months during the year in which the ACO was in the program. To calculate the pro-rated share of losses, CMS will multiply the amount of shared losses calculated for the performance year by the quotient equal to the number of months of participation in the program during the performance year, including the month in which the termination was effective, divided by 12. We would count any month in which the ACO had at least one day of participation. Therefore, an ACO with an effective date of termination any time in July would be liable for 7/12 of any shared losses determined, while an ACO with an effective date of termination any time in August would be liable for 8/12, and so forth. An ACO with an effective date of

termination in December would be liable for the entirety of shared losses. Terminated ACOs would continue to receive aggregate data reports following termination, but, as under current policy, would lose access to beneficiary-level claims data and any payment rule waivers.

We believe this approach provides an incentive for ACOs to continue to control growth in expenditures and report quality for the relevant performance year even after they leave the program, as both can reduce the amount of shared losses owed. Increasing the proportion of shared losses owed with the number of months in the year that the ACO remains in the program also helps to counteract the potential for gaming, as ACOs that wait to base their termination decision on additional information are liable for a higher portion of any shared losses that are incurred. This approach also reflects the fact that later-terminating ACOs may have enjoyed program flexibilities (for example, the SNF 3-day rule waiver) for a longer period of time.

We also considered the payment consequences of early termination for ACOs that are involuntarily terminated by CMS under § 425.218. Although these ACOs are not choosing to leave the program of their own accord and thus are not using termination as a means of avoiding their responsibility for shared losses, we believe they should not be excused from responsibility for some portion of shared losses simply because they failed to comply with program requirements. Further, we believe it is more appropriate to hold involuntarily terminated ACOs accountable for a portion of shared losses during any portion of the performance year. Since involuntary terminations can occur throughout the performance year, establishing a cut-off date for determining the payment consequences for these ACOs could allow some ACOs to avoid accountability for their losses. Therefore, we propose to pro-rate shared losses for ACOs in two-sided models that are involuntarily terminated by CMS under § 425.218 for any portion of the performance year during which the termination becomes effective. We propose the same methodology as previously described for pro-rating shared losses for voluntarily terminated ACOs would also apply to involuntarily terminated ACOs.

We considered whether to allow ACOs voluntarily terminating after June 30 but before December 31 an opportunity to share in a portion of any shared saving earned. However, we decided to limit the proposed changes to shared losses. While we recognize that this approach may appear to favor CMS, we believe that ACOs expecting to generate savings are less likely to terminate early in the first place. Under the program's current regulations at § 425.221(b)(1), ACOs that voluntarily terminate effective December 31 and that meet the current criteria in § 425.221 may still share in savings.

We propose to amend § 425.221 to provide that ACOs in two-sided models that are terminated by CMS under § 425.218 or certain ACOs that voluntarily terminate under § 425.220 will be liable for a pro-rated amount of any shared losses determined, with the pro-rated amount reflecting the number of months during the performance year that the ACO was in the program. We propose to apply this policy to ACOs in two-sided models for performance years beginning in 2019 and subsequent performance years.

We also propose to specify in the regulations at § 425.221 the payment consequences of termination during calendar year 2019 for ACOs preparing to enter or participating under agreements beginning July 1, 2019 (see section II.A.7 of this proposed rule).

First, as discussed in detail in section II.A.7 of this proposed rule, we would reconcile ACOs based on the respective 6-month performance year methodology for their participation during a 6-month portion of 2019 in which they are either under a current agreement period beginning prior to 2019, or under a new agreement period beginning July 1, 2019. We propose an ACO would be eligible to receive shared savings for a 6-month performance year during 2019, if they complete the term of this performance year, regardless of whether they choose to continue their participation in the program. That is, we would reconcile: ACOs that started a first or second agreement period January 1, 2016 that extend their agreement period for a fourth performance year, and complete this performance year (concluding June 30, 2019); and ACOs that enter an agreement period July 1, 2019 and terminate December 31, 2019, the final calendar day of their first performance year (defined as a 6-month period).

For an ACO that participates for a portion of a 6-month performance year during 2019 (January 1, 2019 through June 30, 2019, July 1, 2019 through December 31, 2019) we propose the following: (1) If the ACO terminates its participation agreement effective before the end of the performance year, we would not reconcile the ACO for shared savings or shared losses (if a two-sided model ACO); (2) if CMS terminates a two-sided model ACO's participation agreement effective before the end of the performance year, the ACO would not be eligible for shared savings and we would reconcile the ACO for shared losses and pro-rate the amount reflecting the number of months during the performance year that the ACO was in the program.

To determine pro-rated shared losses for a portion of the 6-month performance year, we would determine shared losses incurred during calendar year 2019 and multiply this amount by the quotient equal to the number of months of participation in the program during the performance year, including the month in which the termination was effective, divided by 12. We would count any month in which the ACO had at least one day of participation. Therefore, if an ACO that started a first or second agreement period January 1, 2016 extended its agreement period for a 6-month performance year from January 1, 2019 through June 30, 2019, and was terminated by CMS with an effective date of termination of May 1, 2019 the ACO would be liable for 5/12 of any shared losses determined. If a July 1, 2019 starter was terminated by CMS with an effective date of termination of November 1, 2019, the ACO would also be liable for 5/12 of any shared losses determined. An ACO with an effective date of termination in December would be liable for the entirety of shared losses.

Second, ACOs that are starting a 12-month performance year in 2019 would have the option to participate for the first 6 months of the year prior to terminating their current agreement and enter a new agreement period beginning July 1, 2019. This includes ACOs that would be starting their 2nd or 3rd performance year of an agreement period in 2019, as well as ACOs that deferred renewal under § 425.200(e). We propose that ACOs with an effective date of termination of June 30, 2019 that enter a new agreement period beginning July 1, 2019, are eligible for pro-rated shared savings or shared losses for the 6-month period from January 1, 2019 through June 30, 2019 determined according to § 425.609.

We believe some ACOs may act quickly to enter one of the new participation options made available under the proposed redesign of the program (if finalized). ACOs that complete the 6-month period of participation in 2019 should have the opportunity to share in the savings or be accountable for the losses for this period. However, certain ACOs may ultimately realize they are not yet prepared to participate under a new

agreement beginning July 1, 2019 and seek to terminate quickly. Although we would encourage ACOs to consider making the transition to one of the newly available participation options in 2019 in order to more quickly enter a participation agreement based on the proposed polices (if finalized), we also do not want to unduly bind ACOs that aggressively pursue these new options. We believe the proposed approach provides a means for ACOs to terminate their participation prior to renewing their participation for an agreement period beginning July 1, 2019 or to quickly terminate from a new agreement period beginning July 1, 2019 without the concern of liability for shared losses for a portion of the year.

We also propose to revise the regulations at § 425.221 to streamline and reorganize the provisions in paragraph (b), which we believe is necessary to incorporate these proposed requirements. We seek comment on these proposals and the alternative policies discussed in this section.

7. Participation Options for Agreement Periods Beginning in 2019

a. Overview

In the November 2011 final rule establishing the Shared Savings Program, we implemented an approach for accepting and reviewing applications from ACOs for participation in the program on an annual basis, with agreement periods beginning January 1 of each calendar year. We also finalized an approach to offer two application periods for the first year of the program, allowing for an April 1, 2012 start date and July 1, 2012 start date. In establishing these alternative start dates for the program's first year, we explained that the statute does not prescribe a particular application period or specify a start date for ACO agreement periods (see 76 FR 67835 through 67837). We considered concerns raised by commenters about a January 1, 2012 start date, which would have closely followed the November 2011 publication of the final rule. Specifically, commenters were concerned about the ability of potential ACOs to organize, complete, and submit an application in time to be accepted into the first cohort as well as our ability to effectively review applications by January 1, 2012. Comments also suggested that larger integrated health care systems would be able to meet the application requirements on short notice while small and rural entities might find this timeline more difficult and could be unable to meet the newly-established application requirements for a January 1 start date (76 FR 67836).

We believe the considerations that informed our decision to establish alternative start dates at the inception of the Shared Savings Program also are relevant in determining the timing for making the proposed new participation options available. We believe postponing the start date for agreement periods under these new participation options until later in 2019 would allow ACOs time to consider the new participation options and prepare for program changes; make investments and other business decisions about participation; obtain buy-in from their governing bodies and executives; complete and submit an application that conforms to the new participation options if our proposals are finalized; and resolve any deficiencies and provider network issues that may be identified, including as a result of program integrity and law enforcement screening. Postponing the start date for new agreement periods would also allow both new applicants and ACOs currently participating in the program an opportunity to make any changes to the structure and composition of their ACO as may be necessary to comply with the new program requirements for the ACO's preferred participation option, if changes to the participation options are finalized as proposed.

Therefore, we propose to offer a July 1, 2019 start date as the initial opportunity for ACOs to enter an agreement period under the BASIC track or the ENHANCED track. We anticipate the application cycle for the July 1, 2019 start date would begin in early 2019. We are forgoing the application cycle that otherwise would take place during calendar year 2018 for a January 1, 2019 start date for new Shared Savings Program participation agreements, initial use of the SNF 3-day rule waiver (as further discussed in section II.A.7.c.1 of this proposed rule), and entry into the Track 1+ Model (as further discussed in section II.F of this proposed rule). Although several ACOs that entered initial agreements beginning in 2015 deferred renewal into a second agreement period by 1 year in accordance with § 425.200(e) and will begin participating in a new 3-year agreement period beginning January 1, 2019 under a performance-based risk track, applications would not be accepted from other ACOs for a new agreement period beginning on January 1, 2019. We propose the July 1, 2019 start date as a one-time opportunity, and thereafter we would resume our typical process of offering an annual application cycle that allows for review and approval of applications in advance of a January 1 agreement start date. We would therefore anticipate also offering an application cycle in 2019 for a January 1, 2020 start date for new, 5-year participation agreements, and continuing to offer an annual start date of January 1 thereafter. We are aware that a delayed application due date for an agreement period beginning in 2019 could affect parties that plan to participate in the Shared Savings Program for performance year 2019 and are relying on the pre-participation waiver. Guidance for affected parties will be posted on the CMS website.

Under the current Shared Savings Program regulations, the policies for determining financial and quality performance are based on an expectation that a performance year will have 12 months that correspond to the calendar year. Beneficiary assignment also depends on use of a 12-month assignment window, with retrospective assignment based on the 12-month calendar year performance year, and prospective assignment based on an offset assignment window before the start of the performance year. Given the calendar year basis for performance years under the current regulations, we considered how to address (1) the possible 6-month lapse in participation that could result for ACOs that entered a first or second 3-year agreement period beginning on January 1, 2016, due to the lack of availability of an application cycle for a January 1, 2019 start date, and (2) the July 1 start date for agreement periods starting in 2019.

To address the implications of a midyear start date on program participation and applicable program requirements, we considered our previous experience with the program's initial entrants, April 1, 2012 starters and July 1, 2012 starters. In particular, we considered our approach for determining these ACOs' first performance year results (see § 425.608). The first performance year for April 1 and July 1 starters was defined as 21 and 18 months respectively (see § 425.200(c)(2)). The methodology we used to determine shared savings and losses for these ACOs' first performance year consisted of an optional interim payment calculation based on the ACO's first 12 months of participation and a final reconciliation occurring at the end of the ACO's first performance year. This final reconciliation took into account the 12 months covered by the interim payment period as well as the remaining 6 or 9 months of the performance year, thereby allowing us to determine the overall savings or losses for the ACO's first performance

year. All ACOs opting for an interim payment reconciliation, including ACOs participating under Track 1, were required to assure CMS of their ability to repay monies determined to be owed upon final first year reconciliation. For Track 2 ACOs, the adequate repayment mechanism required for entry into a performance-based risk arrangement was considered to be sufficient to also assure return of any overpayment of shared savings under the interim payment calculation. Track 1 ACOs electing interim payment were similarly required to demonstrate an adequate repayment mechanism for this purpose. (See 76 FR 67942 through 67944).

This interim payment calculation approach used in the program's first year resulted in relatively few ACOs being eligible for payment based on their first twelve months of program participation. Few Track 1 ACOs established the required repayment mechanism in order to be able to receive an interim payment of shared savings, if earned. Not all Track 2 ACOs, which were required to establish repayment mechanisms as part of their participation in a two-sided model, elected to receive payment for shared savings or to be held accountable for shared losses based on an interim payment calculation. Of the 114 ACOs reconciled for a performance year beginning on April 1 or July 1, 2012, only 16 requested an interim payment calculation in combination with having established the required repayment mechanism. Of these 16 ACOs, 9 were eligible for an interim payment of shared savings, of which one Track 1 ACO was required to return the payment based on final results for the performance year. One Track 2 ACO repaid interim shared losses which were ultimately returned to the ACO based on its final results for the performance year.

This approach to interim and final reconciliation was developed for the first two cohorts of ACOs, beginning in the same year and to which the same program requirements applied. The program has since evolved to include different benchmarking methodologies (depending on whether an ACO is in its first agreement period, or second agreement period beginning in 2016 or in 2017 and subsequent years) and different assignment methodologies (prospective assignment and preliminary prospective assignment with retrospective reconciliation), among other changes. We are concerned about introducing further complexity into program calculations by proposing to follow a similar approach of offering an extended performance year with the option for an interim payment calculation with final reconciliation for ACOs affected by the delayed application cycle for agreement periods starting in 2019.

Instead, we propose to use an approach that would maintain financial reconciliation and quality performance determinations based on a 12-month calendar year period, but would pro-rate shared savings/shared losses for each potential 6-month period of participation during 2019, as described in this section. See section II.A.7.b. of this proposed rule for a detailed discussion of this methodology.

Accordingly, our proposed approach for implementing the proposed July 1, 2019 start date would include the following opportunities for ACOs, based on their agreement period start date:

ACOs entering an agreement period beginning on July 1, 2019, would be in a participation agreement for a term of 5 years and 6 months, of which the first performance year would be defined as 6 months (July 1, 2019 through December 31, 2019), and the 5 remaining performance years of the agreement period would each consist of a 12-month calendar year.

ACOs that entered a first or second agreement period with a start date of January 1, 2016, may elect to extend their agreement period for an optional fourth performance year, defined as the 6-month period from January 1, 2019 through June 30, 2019. This election to extend the agreement period is voluntary and an ACO could choose not to make this election and therefore conclude its participation in the program with the expiration of its current agreement period on December 31, 2018.

We propose that the ACO's voluntary election to extend its agreement period must be made in the form and manner and according to the timeframe established by CMS, and that an ACO executive who has the authority to legally bind the ACO must certify the election. If finalized, we anticipate this election process would begin in 2018 following the publication of the final rule, as part of the annual certification process in advance of 2019 (described in section II.A.7.c.2. of this proposed rule). We note that this optional 6-month agreement period extension is a one-time exception for ACOs with agreements expiring on December 31, 2018 and would not be available to other ACOs that are currently participating in a 3-year agreement in the program, or to future program entrants.

Under the existing provision at § 425.210, the ACO must provide a copy of its participation agreement with CMS to all ACO participants, ACO providers/suppliers, and other individuals and entities involved in ACO governance. Further, all contracts or arrangements between or among the ACO, ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities must require compliance with the requirements and conditions of the program's regulations, including, but not limited to, those specified in the participation agreement with CMS. An ACO that elects to extend its participation agreement by 6 months must notify its ACO participants, ACO providers/suppliers and other individuals or entities performing functions or services related to ACO activities of this continuation of participation and must require their continued compliance with the program's requirements for the 6-month performance year from January 1, 2019 through June 30, 2019.

An existing ACO that wants to quickly move to a new participation agreement under the BASIC track or the ENHANCED track could voluntarily terminate its participation agreement with an effective date of termination of June 30, 2019, and apply to enter a new agreement period with a July 1, 2019 start date to continue its participation in the program. This includes 2017 starters, 2018 starters, and 2015 starters that deferred renewal by 1 year, and entered into a second agreement period under Track 2 or Track 3 beginning on January 1, 2019. If the ACO's application is approved by CMS, the ACO could enter a new agreement period beginning July 1, 2019. (As discussed in section II.A.5. of this proposed rule, we would consider these ACOs to be early renewals.) ACOs currently in an agreement period that includes a 12-month performance year 2019 that choose to terminate their current participation agreement effective June 30, 2019, and enter a new agreement period beginning on July 1, 2019, would be reconciled for their performance during the first 6 months of 2019. As described in section II.A.5 of this proposed rule, an ACO's participation options for the July 1, 2019 start date would depend on whether the ACO is a low revenue or high revenue ACO and the ACO's experience with performance-based risk Medicare ACO initiatives. An early renewal ACO would be considered to be entering its next consecutive agreement period for purposes of the applicability of policies that phase-in over time (the weight used in the regional benchmark adjustment,

equal weighting of the benchmark years, and the quality performance standard).

As discussed in section II.A.2. of this proposed rule, the proposed modifications to the definition of ''agreement period'' in § 425.20 are intended to broaden the definition to generally refer to the term of the participation agreement. We propose to add a provision at § 425.200(b)(2) specifying that the term of the participation agreement is 3 years and 6 months for an ACO that entered an agreement period starting on January 1, 2016 that elects to extend its agreement period until June 30, 2019, and this election is made in the form and manner and according to the timeframe established by CMS, and certified by an ACO executive who has the authority to legally bind the ACO. For consistency, we also propose minor formatting changes to the existing provision at § 425.200(b)(2) to italicize the header text. We note that as described in section II.A.2. of this proposed rule, we are proposing modifications to § 425.200(b)(3) as part of discontinuing the deferred renewal participation option. In addition, we propose to add a provision at § 425.200(b)(4) to specify that, for agreement periods beginning in 2019 the start date is—(1) January 1, 2019 and the term of the participation agreement is 3 years for ACOs whose first agreement period began in 2015 and who deferred renewal of their participation agreement under § 425.200(e); or (2) July 1, 2019, and the term of the participation agreement is 5 years and 6 months. We propose to add a provision at § 425.200(b)(5) specifying that, for agreement periods beginning in 2020 and subsequent years, the term of the participation agreement is 5 years.

We also propose to revise the definition of ''performance year'' in § 425.20 to mean the 12-month period beginning on January 1 of each year during the agreement period, unless otherwise specified in § 425.200(c) or noted in the participation agreement. We therefore also propose revisions to § 425.200(c) to make necessary formatting changes and specify additional exceptions to the definition of performance year as a 12-month period. Specifically, we propose to add a provision specifying that for an ACO that entered a first or second agreement period with a start date of January 1, 2016, and that elects to extend its agreement period by a 6-month period, the ACO's fourth performance year is the 6-month period between January 1, 2019, and June 30, 2019. Similarly, we propose to add a provision specifying that for an ACO that entered an agreement period with a start date of July 1, 2019, the ACO's first performance year of the agreement period is defined as the 6-month period between July 1, 2019, and December 31, 2019.

In light of the proposed modifications to § 425.200(c) to establish two 6-month performance years during calendar year 2019, we believe it is also appropriate to revise the regulation at § 425.200(d), which reiterates an ACO's obligation to submit quality measures in the form and manner required by CMS for each performance year of the agreement period, to address the quality reporting requirements for ACOs participating in a 6-month performance year during calendar year 2019.

As an alternative to the proposal to offer an agreement period of 5 years and 6 months beginning July 1, 2019 (made up of 6 performance years, the first of which is 6 months in duration), we considered whether to offer instead an agreement period of five performance years (including a first performance year of 6 months). Under this alternative the agreement period would be 4 years and 6 months in duration. As previously described, in section II.A.2 of this proposed rule in connection with our proposal to extend the agreement period from 3 years to 5 years, program results have shown that ACOs tend to perform better the longer they are in the program and longer agreement periods provide additional time for ACOs to perform against a benchmark based on historical data from the 3 years prior to their start date. Further, the proposed changes to the benchmarking methodology would result in more accurate benchmarks and mitigate the effects of reliance on increasingly older historical data as the agreement period progresses. We believe these considerations are also relevant to the proposed one-time exception to allow for a longer agreement period of 5 years and 6 months for ACOs that enter a new agreement period on July 1, 2019.

We also considered forgoing an application cycle for a 2019 start date altogether and allowing ACOs to enter agreement periods for the BASIC track and ENHANCED track for the first time beginning in January 1, 2020. This approach would allow ACOs additional time to consider the redesign of the program, make organizational and operational plans, and implement business and investment decisions, and would avoid the complexity of needing to determine performance based on 6-month performance years during calendar year 2019. However, our proposed approach of offering an application cycle during 2019 for an agreement period start date of July 1, 2019, would allow for a more rapid progression of ACOs to the redesigned participation options, starting in mid-2019. Further, under this alternative, we would also want to offer ACOs that started a first or second agreement period on January 1, 2016, a means to continue their participation between the conclusion of their current 3-year agreement (December 31, 2018) and the start of their next agreement period (January 1, 2020), should the ACO wish to continue in the program. Under an alternative that would postpone the start date for the new participation options to January 1, 2020, we would allow ACOs that started a first or second agreement period on January 1, 2016, to elect a 12-month extension of their current agreement period to cover the duration of calendar year 2019.

We seek comment on these proposals and the related considerations, as well as the alternatives considered.

b. Methodology for Determining Financial and Quality Performance for the 6-Month Performance Years During 2019

(1) Overview

In this section we describe the proposed methodology for determining financial and quality performance for the two 6-month performance years during calendar year 2019: The 6-month performance year from January 1, 2019, to June 30, 2019; and the 6-month performance year from July 1, 2019, to December 31, 2019. We propose to specify the methodologies for reconciling these 6-month performance years during 2019 in a new section of the regulations at § 425.609. Although we propose to use the same overall approach to determining ACO financial and quality performance for these two periods, the specific policies used to calculate factors used in making these determinations would differ based on the ACO's track, its agreement period start date, and the agreement period in which the ACO participates (for factors that phase-in over multiple agreement periods).

We note that ACOs in an agreement period that includes a 12-month performance year 2019 would have the option to terminate their current participation agreements with an effective date of termination of June 30, 2019, and enter a new agreement period beginning on July 1, 2019. We propose to reconcile the performance of these ACOs during the first 6 months of 2019 using the same approach that we are proposing to use to determine performance for the 6-month performance year from January 1, 2019,

through June 30, 2019, for ACOs that started a first or second agreement period on January 1, 2016, that elect to extend their current agreement periods for this 6-month performance year. We propose to specify this approach to determining performance for these ACOs in a new section of the regulations at § 425.609 and in revisions to § 425.221 describing the payment consequences of early termination for ACOs that terminate their participation agreement with an effective termination date of June 30, 2019, and enter a new agreement period beginning July 1, 2019.

After the conclusion of calendar year 2019, CMS would reconcile the financial and quality performance of ACOs that participated in the Shared Savings Program during 2019. For ACOs that extended their agreement period for the 6-month performance year from January 1, 2019, through June 30, 2019, or ACOs that terminated their agreement period early on June 30, 2019, and entered a new agreement period beginning on July 1, 2019, CMS would first reconcile the ACO based on its performance during the entire 12-month calendar year, and then as discussed elsewhere in this section, pro-rate the calendar year shared savings or shared losses to reflect the ACO's participation in that 6-month period. In a separate calculation, CMS would reconcile an ACO that participated for a 6-month performance year from July 1, 2019, through December 31, 2019, for the 12-month calendar year in a similar manner, and pro-rate the shared savings or shared losses to reflect the ACO's participation during that 6-month performance year. We discuss these calculations in detail in section II.A.7.b.2. (for the 6-month period from January 1, 2019 through June 30, 2019) and section II.A.7.b.3. (for the 6-month period from July 1, 2019 through December 31, 2019). Further, we note that this proposed approach to reconciling ACO performance for a 6-month performance year (or performance period) during 2019 would not alter the methodology that would be applied to determine financial performance for ACOs that complete a 12 month performance year corresponding to calendar year 2019.

We note that in discussing these 6-month periods, we use two references, ''6-month performance year'' and ''performance period.'' According to our proposed revisions to § 425.200(c), we use the term ''6-month performance year'' to refer to the following: (1) The fourth performance year from January 1, 2019 through June 30, 2019 for ACOs that started a first or second agreement period January 1, 2016 and extend their current agreement period for this 6-month period; and (2) the first performance year from July 1, 2019 through December 31, 2019, for ACOs that enter an agreement period beginning on July 1, 2019. For an ACO starting a 12-month performance year on January 1, 2019, that terminates its participation agreement with an effective date of termination of June 30, 2019, and enters a new agreement period beginning on July 1, 2019, we refer to the 6-month period from January 1, 2019 through June 30, 2019, as a ''performance period''.

Under the proposed policies, we would calculate shared savings or shared losses applicable to an ACO, by comparing the expenditures for the ACO's performance year assigned beneficiaries for calendar year 2019 to the ACO's historical benchmark updated to calendar year 2019. If the difference is positive and is greater than or equal to the MSR and the ACO has met the quality performance standard, the ACO would be eligible for shared savings. If the ACO is in a two-sided model and the difference between the updated benchmark and assigned beneficiary expenditures is negative and is greater than or equal to the MLR (in absolute value terms), the ACO would be liable for shared losses. ACOs would share in first dollar savings and losses based on the applicable final sharing rate or loss sharing rate according to their track of participation for the applicable agreement period, and taking into account the ACO's quality performance for 2019. We would adjust the amount of shared savings for sequestration. We would cap the amount of shared savings at the applicable performance payment limit for the ACO's track and cap the amount of shared losses at the applicable loss sharing limit for the ACO's track. We would then pro-rate shared savings or shared losses by multiplying by one-half, which represents the fraction of the calendar year covered by the 6-month performance year (or performance period). This pro-rated amount would be the final amount of shared savings earned or shared losses owed by the ACO for the applicable 6-month performance year (or performance period).

We believe this proposed approach would allow continuity in program operations (including operations that occur on a calendar year basis) for ACOs that have either one or two 6-month performance years (or performance period) within calendar year 2019. Specifically, the proposed approach would allow for payment reconciliation to remain on a calendar year basis, which would be most consistent with the calendar year-based methodology for calculating benchmark expenditures, trend and update factors, risk adjustment, county expenditures and regional adjustments. Deviating from a 12 month reconciliation calculation by using fewer than 12 months of performance year expenditures could interject actuarial biases relative to the benchmark expenditures, which are based on 12 month benchmark years. As a result, we believe this approach to reconciling ACOs based on a 12 month period would protect the actuarial soundness of the financial reconciliation methodology. We also believe the alignment of the proposed approach with the standard methodology used to perform the same calculations for 12 month performance years that correspond to a calendar year will make it easier for ACOs and other program stakeholders to understand the proposed methodology.

As is the case with typical calendar year reconciliations in the Shared Savings Program, we anticipate results with respect to participation during calendar year 2019 would be made available to ACOs in summer 2020. This would allow those ACOs that are eligible to share in savings as a result of their participation in the program during calendar year 2019 to receive payment of shared savings following the conclusion of the calendar year consistent with the standard process and timing for annual payment reconciliation under the program. As discussed in detail in section II.A.7.c.6. of this proposed rule, we propose to provide separate reconciliation reports for each 6-month performance year (or performance period) and would pay shared savings or recoup shared losses separately for each 6-month performance year (or performance period) during 2019 based on these results.

Furthermore, this approach would avoid a more burdensome interim payment process that could accompany an alternative proposal to instead implement, for example, an 18-month performance year from July 1, 2019 to December 31, 2020. Consistent with the 18- and 21-month performance years offered for the first cohorts of Shared Savings Program ACOs, such a policy could require ACOs to establish a repayment mechanism that otherwise might not be required, create uncertainty over whether the ACO may ultimately need to repay CMS based on final results for the extended performance year, and delay ACOs seeing a return on their investment in

program participation if eligible for shared savings.

We believe the proposals to determine shared savings and shared losses for the 6-month performance years starting on January 1, 2019, and July 1, 2019 (or the 6-month performance period from January 1, 2019, through June 30, 2019, for ACOs that elect to voluntarily terminate their existing participation agreement, effective June 30, 2019, and enter a new agreement period starting on July 1, 2019), using expenditures for the entire calendar year 2019 and then pro-rating these amounts to reflect the shorter performance year, require the use of our authority under section 1899(i)(3) of the Act to use other payment models. Section 1899(d)(1)(B)(i) of the Act specifies that, in each year of the agreement period, an ACO is eligible to receive payment for shared savings only if the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries for Parts A and B services, adjusted for beneficiary characteristics, is at least the percent specified by the Secretary below the applicable benchmark under section 1899(d)(1)(B)(ii) of the Act. We believe the proposed approach to calculating the expenditures for assigned beneficiaries over the full calendar year, comparing this amount to the updated benchmark for 2019, and then pro-rating any shared savings (or shared losses, which already are implemented using our authority under section 1899(i)(3) of the Act) for the 6-month performance year (or performance period) involves an adjustment to the estimated average per capita Medicare Part A and Part B FFS expenditures determined under section 1899(d)(1)(B)(i) of the Act that is not based on beneficiary characteristics. Such an adjustment is not contemplated under the plain language of section 1899(d)(1)(B)(i) of the Act. As a result, we believe it is necessary to use our authority under section 1899(i)(3) of the Act to calculate performance year expenditures and determine the final amount of any shared savings (or shared losses) for a 6-month performance year (or performance period) during 2019, in the proposed manner.

In order to use our authority under section 1899(i)(3) of the Act to adopt an alternative payment methodology to calculate shared savings and shared losses for the proposed 6-month performance years (or performance period) during 2019, we must determine that the alternative payment methodology will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without additional program expenditures. We believe the proposed approach of allowing ACOs that started a first or second agreement period on January 1, 2016, to extend their agreement period for a 6-month performance year and of allowing entry into the program's redesigned participation options beginning on July 1, 2019, if finalized, would support continued participation by current ACOs that must renew their agreements, while also resulting in more rapid progression to two-sided risk by ACOs within current agreement periods and ACOs entering the program for an initial agreement period. As discussed in the Regulatory Impact Analysis (section IV. of this proposed rule), we believe this approach would continue to allow for lower growth in Medicare FFS expenditures based on projected participation trends. Therefore, we do not believe that the proposed methodology for determining shared savings or shared losses for ACOs in a 6-month performance year (or performance period) during 2019 would result in an increase in spending beyond the expenditures that would otherwise occur under the statutory payment methodology in section 1899(d) of the Act. Further, we believe that the proposed approach to measuring ACO quality performance for a 6-month performance year (or performance period) based on quality data reported for calendar year 2019 maintains accountability for the quality of care ACOs provide to their assigned beneficiaries. Participating ACOs would also have an incentive to perform well on the quality measures in order to maximize the shared savings they may receive and minimize any shared losses they must pay in tracks where the loss sharing rate is determined based on the ACO's quality performance. Therefore, we believe this proposed approach to reconciling ACOs for a 6-month performance year (or performance period) during 2019 would continue to lead to improvement in the quality of care furnished to Medicare FFS beneficiaries.

(2) Proposals for Determining Performance for the 6-Month Performance Year From January 1, 2019, Through June 30, 2019

In this section, we describe our proposed approach to determining an ACO's performance for the 6-month performance year from January 1, 2019, through June 30, 2019. These proposed policies would also apply to ACOs that begin a 12-month performance year on January 1, 2019, but elect to terminate their participation agreement with an effective date of termination of June 30, 2019, in order to enter a new agreement period starting on July 1, 2019 (early renewals). Our proposed policies address the following: (1) The ACO participant list that will be used to determine beneficiary assignment; (2) the approach to assigning beneficiaries; (3) the quality reporting period; (4) the benchmark year assignment methodology and the methodology for calculating, adjusting and updating the ACO's historical benchmark; and (5) the methodology for determining shared savings and shared losses. We propose to specify these policies for reconciling the 6-month period from January 1, 2019, through June 30, 2019 in paragraph (b) of a new section of the regulations at § 425.609.

We propose to use the ACO participant list for the performance year beginning January 1, 2019, to determine beneficiary assignment as specified in §§ 425.402 and 425.404, and according to the ACO's track as specified in § 425.400. As discussed in section II.A.7.c of this proposed rule, we propose to allow all ACOs, including ACOs entering a 6-month performance year, to make changes to their ACO participant list in advance of the performance year beginning January 1, 2019.

To determine beneficiary assignment, we propose to consider the allowed charges for primary care services furnished to the beneficiary during a 12 month assignment window, allowing for a 3 month claims run out. For the 6-month performance year from January 1, 2019 through June 30, 2019, we propose to determine the assigned population using the following assignment windows:

- For ACOs under preliminary prospective assignment with retrospective reconciliation, the assignment window would be calendar year 2019.
- For ACOs under prospective assignment, Medicare FFS beneficiaries would be prospectively assigned to the ACO based on the beneficiary's use of primary care services in the most recent 12 months for which data are available. For example, in determining prospective beneficiary assignment for the January 1, 2019 through June 30, 2019 performance year we could use an assignment window from October 1, 2017, through September 30, 2018, to align with the off-set assignment window typically used to determine prospective assignment prior to the start of a calendar year performance year. Beneficiaries would remain prospectively assigned to the ACO at the end of calendar year 2019 unless they

meet any of the exclusion criteria under § 425.401(b) during the calendar year.

We note that this is the same approach that is used to determine assignment under the program's current regulations. Therefore, it would also be used to determine assignment for the performance year beginning on January 1, 2019, for ACOs that terminate their agreement effective June 30, 2019, and enter a new agreement period starting on July 1, 2019, for purposes of determining their performance during the performance period from January 1, 2019 through June 30, 2019.

As discussed in section II.A.7.c. of this proposed rule, to determine ACO performance during a 6-month performance year, we propose to use the ACO's quality performance for the 2019 reporting period, and to calculate the ACO's quality performance score as provided in § 425.502. For early renewal ACOs that terminate their agreement effective June 30, 2019, and enter a new agreement period starting on July 1, 2019, we would determine quality performance for the performance period from January 1, 2019, through June 30, 2019, in the same manner as for ACOs with a 6-month performance year from January 1, 2019, through June 30, 2019, that enter a new agreement period beginning on July 1, 2019. As described in section II.A.7.c.4. of this proposed rule, we propose using a different quality measure sampling methodology depending on whether an ACO participates in both a 6-month performance year (or performance period) beginning January 1, 2019 and a 6-month performance year beginning July 1, 2019, or only participates in a 6-month performance year from January 1, 2019 through June 30, 2019.

Consistent with current program policy, we would determine assignment for the benchmark years based on the most recent certified ACO participant list for the ACO effective for the performance year beginning January 1, 2019. This would be the participant list the ACO certified prior to the start of its agreement period unless the ACO has made changes to its ACO participant list during its agreement period as provided in § 425.118(b). If the ACO has made subsequent changes to its ACO participant list, we would recalculate the historical benchmark using the most recent certified ACO participant list. See the Medicare Shared Savings Program, ACO Participant List and Participant Agreement Guidance (July 2018, version 5), available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/ACO-Participant-List-Agreement.pdf.*

For the 6-month performance year from January 1, 2019, through June 30, 2019, we would calculate the benchmark and assigned beneficiary expenditures as though the performance year were the entire calendar year. The ACO's historical benchmark would be determined according to the methodology applicable to the ACO based on its agreement period in the program. We would apply the methodology for establishing, updating and adjusting the ACO's historical benchmark as specified in § 425.602 (for ACOs in a first agreement period) or § 425.603 (for ACOs in a second agreement period), except that data from calendar year 2019 would be used in place of data for the 6-month performance year in certain calculations, as follows:

- The benchmark would be adjusted for changes in severity and case mix between benchmark year 3 and calendar year 2019 using the methodology that accounts separately for newly and continuously assigned beneficiaries using prospective HCC risk scores and demographic factors as described under §§ 425.604(a)(1) through (3), 425.606(a)(1) through (3), and 425.610(a)(1) through (3).
- The benchmark would be updated to calendar year 2019 according to the methodology for using growth in national Medicare FFS expenditures for assignable beneficiaries described under § 425.602(b) (for ACOs in a first agreement period) and § 425.603(b) (for ACOs in a second agreement period beginning January 1, 2016), or the methodology for using growth in regional Medicare FFS expenditures described under § 425.603(d) (for ACOs in a second agreement period beginning January 1 of 2017, 2018, or 2019).

We note this approach is already used to adjust and update the historical benchmark each performance year under the program's current regulations. Therefore we would use this same approach to determine the benchmark for the performance period from January 1, 2019, through June 30, 2019, for ACOs that terminate their agreement effective June 30, 2019, and enter a new agreement period starting on July 1, 2019.

For determining performance during the 6-month performance year (or performance period) from January 1, 2019 through June 30, 2019, we would apply the methodology for determining shared savings and shared losses according to the approach specified for the ACO's track under the terms of the participation agreement that was in effect on January 1, 2019: § 425.604 (Track 1), § 425.606 (Track 2) or § 425.610 (Track 3) and, as applicable, the terms of the ACO's participation agreement for the Track 1+ Model authorized under section 1115A of the Act. (See discussion in section II.F of this proposed rule concerning applicability of proposed policies to Track 1+ Model ACOs). However, some exceptions to the otherwise applicable methodology are needed because we are proposing to calculate the expenditures for assigned beneficiaries over the full calendar year 2019 for purposes of determining shared savings and shared losses for the 6-month performance year (or performance period) from January 1, 2019, through June 30, 2019. We propose to use the following steps to calculate shared savings and shared losses:

- Average per capita Medicare expenditures for Parts A and B services for calendar year 2019 would be calculated for the ACO's performance year assigned beneficiary population.
- We would compare these expenditures to the ACO's updated benchmark determined for the calendar year as previously described.
- We would apply the MSR and MLR (if applicable).

++ The ACO's assigned beneficiary population for the performance year starting on January 1, 2019, would be used to determine the MSR for Track 1 ACOs and the variable MSR/MLR for ACOs in a two-sided model that selected this option at the start of their agreement period. In the event a two-sided model ACO selected a fixed MSR/MLR at the start of its agreement period, and the ACO's performance year assigned population is below 5,000 beneficiaries, the MSR/MLR would be determined based on the number of assigned beneficiaries as proposed in section II.A.6.b. of this proposed rule.

++ To qualify for shared savings, the ACO's average per capita Medicare expenditures for its performance year assigned beneficiaries during calendar year 2019 must be below its updated benchmark for the year by at least the MSR established for the ACO.

++ To be responsible for sharing losses with the Medicare program, the ACO's average per capita Medicare expenditures for its performance year assigned beneficiaries during calendar year 2019 must be above its updated benchmark for the year by at least the MLR established for the ACO.

- We would determine the shared savings amount if we determine the ACO met or exceeded the MSR, and if the ACO met the minimum quality performance standards established under § 425.502 and as described in this section of this proposed rule, and

otherwise maintained its eligibility to participate in the Shared Savings Program. We would determine the shared losses amount if we determine the ACO met or exceeded the MLR. To determine these amounts, we would do the following:

++ We would apply the final sharing rate or loss sharing rate to first dollar savings or losses.

++ For ACOs that generated savings that met or exceeded the MSR, we would multiply the difference between the updated benchmark expenditures and performance year assigned beneficiary expenditures by the applicable final sharing rate based on the ACO's track and its quality performance under § 425.502.

++ For ACOs that generated losses that met or exceeded the MLR, we would multiply the difference between the updated benchmark expenditures and performance year assigned beneficiary expenditures by the applicable shared loss rate based on the ACO's track and its quality performance under § 425.502 (for ACOs in tracks where the loss sharing rate is determined based on the ACO's quality performance).

• We would adjust the shared savings amount for sequestration by reducing by 2 percent and compare the sequestration-adjusted shared savings amount to the applicable performance payment limit based on the ACO's track.

• We would compare the shared losses amount to the applicable loss sharing limit based on the ACO's track.

• We would pro-rate any shared savings amount, as adjusted for sequestration and the performance payment limit, or any shared losses amount, as adjusted for the loss sharing limit, by multiplying by one half, which represents the fraction of the calendar year covered by the 6-month performance year (or performance period). This pro-rated amount would be the final amount of shared savings that would be paid to the ACO for the 6-month performance year (or performance period) or the final amount of shared losses that would be owed by the ACO for the 6-month performance year (or performance period).

We seek comment on these proposals.

(3) Proposals for Determining Performance for the 6-Month Performance Year From July 1, 2019, Through December 31, 2019

In this section, we describe our proposed approach to determining an ACO's performance for the 6-month performance year from July 1, 2019, through December 31, 2019. Our proposed policies address the following: (1) The ACO participant list that will be used to determine beneficiary assignment; (2) the approach to assigning beneficiaries for the 6-month performance year; (3) the quality reporting period for the 6-month performance year; (4) the benchmark year assignment methodology and the methodology for calculating, adjusting and updating the ACO's historical benchmark; and (5) the methodology for determining shared savings and shared losses for the ACO for the performance year. We propose to specify the methodology for reconciling the 6-month performance year from July 1, 2019, through December 31, 2019, in paragraph (c) of a new section of the regulations at § 425.609.

We note that in determining performance for the 6-month performance year from July 1, 2019 through December 31, 2019, we would follow the same general methodological steps for calculating pro-rated shared savings and shared losses as described in section II.A.7.b.2 of this proposed rule for the 6-month performance year from January 1, 2019 through June 30, 2019. However, for example, the applicable benchmarking methodology, which is based on the ACO's agreement period in the program, and financial model, which is based on the track in which the ACO is participating, would be different.

We propose to use the ACO participant list for the performance year beginning July 1, 2019, to determine beneficiary assignment, consistent with the assignment methodology the ACO selected at the start of its agreement period under proposed § 425.400(a)(4)(ii). As discussed in section II.A.7.c of this proposed rule, this would be the ACO participant list that was certified as part of the ACO's application to enter an agreement period beginning on July 1, 2019.

To determine beneficiary assignment, we propose to consider the allowed charges for primary care services furnished to the beneficiary during a 12 month assignment window, allowing for a 3 month claims run out. For the 6-month performance year from July 1, 2019 through December 31, 2019, we propose to determine the assigned population using the following assignment windows:

• For ACOs under preliminary prospective assignment with retrospective reconciliation, the assignment window would be calendar year 2019.

• For ACOs under prospective assignment, Medicare FFS beneficiaries would be prospectively assigned to the ACO based on the beneficiary's use of primary care services in the most recent 12 months for which data are available. We would use an assignment window before the start of the agreement period on July 1, 2019. For example, we could use an assignment window from April 30, 2018, through March 31, 2019. The 3 month gap between the end of the assignment window and the start of the performance year would be consistent with the typical gap for calendar year performance years that begin on January 1. Beneficiaries would remain prospectively assigned to the ACO at the end of calendar year 2019 unless they meet any of the exclusion criteria under § 425.401(b) during the calendar year.

As discussed in section II.A.7.c of this proposed rule, to determine ACO performance during either 6-month performance year, we propose to use the ACO's quality performance for the 2019 reporting period, and to calculate the ACO's quality performance score as provided in § 425.502.

Consistent with current program policy, we would determine assignment for the benchmark years based on the ACO's certified ACO participant list for the agreement period beginning July 1, 2019.

For the 6-month performance year from July 1, 2019, through December 31, 2019, we would calculate the benchmark and assigned beneficiary expenditures as though the performance year were the entire calendar year. The ACO's historical benchmark would be determined according to the methodology applicable to the ACO based on its agreement period in the program. We would apply the methodology for establishing, updating and adjusting the ACO's historical benchmark as specified in proposed § 425.601, except that data from calendar year 2019 would be used in place of data for the 6-month performance year in certain calculations, as follows:

• The benchmark would be adjusted for changes in severity and case mix between benchmark year 3 and calendar year 2019 based on growth in prospective HCC risk scores, subject to a symmetrical cap of positive or negative 3 percent that would apply for the agreement period such that the adjustment between BY3 and any performance year in the agreement period would never be more than 3 percent in either direction. See discussion in section II.D.2 of this proposed rule.

• The benchmark would be updated to calendar year 2019 according to the methodology described under proposed § 425.601(b) using a blend of national and regional growth rates.

For determining performance during the 6-month performance year from July 1, 2019, through December 31, 2019, we would apply the methodology for determining shared savings and shared losses according to the approach specified for the ACO's track under its agreement period beginning on July 1, 2019: The proposed BASIC track (§ 425.605) or ENHANCED track (§ 425.610). However, some exceptions to the otherwise applicable methodology are needed because we are proposing to calculate the expenditures for assigned beneficiaries over the full calendar year 2019 for purposes of determining shared savings and shared losses for the 6-month performance year from July 1, 2019 through December 31, 2019. We propose to use the following steps to calculate shared savings and shared losses:

- Average per capita Medicare expenditures for Parts A and B services for calendar year 2019 would be calculated for the ACO's performance year assigned beneficiary population. Additionally, when calculating calendar year 2019 expenditures to be used in determining performance for the July 1, 2019 through December 31, 2019 performance year, we would include expenditures for all assigned beneficiaries that are alive as of January 1, 2019, including those with a date of death prior to July 1, 2019, except prospectively assigned beneficiaries that are excluded under § 425.401(b). The inclusion of beneficiaries with a date of death before July 1, 2019, is necessary to maintain consistency with benchmark year and regional expenditure adjustments and associated trend and update factor calculations.
- We would compare these expenditures to the ACO's updated benchmark determined for the calendar year as previously described.
- We would apply the MSR and MLR (if applicable).

++ The ACO's assigned beneficiary population for the performance year starting on July 1, 2019, would be used to determine the MSR for one-sided model ACOs (under Level A or Level B of the BASIC track) and the variable MSR/MLR for ACOs in a two-sided model that selected this option at the start of their agreement period. In the event a two-sided model ACO selected a fixed MSR/MLR at the start of its agreement period, and the ACO's performance year assigned population is below 5,000 beneficiaries, the MSR/MLR would be determined based on the number of assigned beneficiaries as proposed in section II.A.6.b. of this proposed rule.

++ To qualify for shared savings, the ACO's average per capita Medicare expenditures for its performance year assigned beneficiaries during calendar year 2019 must be below its updated benchmark for the year by at least the MSR established for the ACO.

++ To be responsible for sharing losses with the Medicare program, the ACO's average per capita Medicare expenditures for its performance year assigned beneficiaries during calendar year 2019 must be above its updated benchmark for the year by at least the MLR established for the ACO.

- We would determine the shared savings amount if we determine the ACO met or exceeded the MSR, and if the ACO met the minimum quality performance standards established under § 425.502 and as described in this section of this proposed rule, and otherwise maintained its eligibility to participate in the Shared Savings Program. We would determine the shared losses amount if we determine the ACO met or exceeded the MLR. To determine these amounts, we would do the following:

++ We would apply the final sharing rate or loss sharing rate to first dollar savings or losses.

++ For ACOs that generated savings that met or exceeded the MSR, we would multiply the difference between the updated benchmark expenditures and performance year assigned beneficiary expenditures by the applicable final sharing rate based on the ACO's track and its quality performance under § 425.502.

++ For ACOs that generated losses that met or exceeded the MLR, we would multiply the difference between the updated benchmark expenditures and performance year assigned beneficiary expenditures by the applicable shared loss rate based on the ACO's track and its quality performance under § 425.502 (for ACOs in the ENHANCED track where the loss sharing rate is determined based on the ACO's quality performance).

- We would adjust the shared savings amount for sequestration by reducing by 2 percent and compare the sequestration-adjusted shared savings amount to the applicable performance payment limit based on the ACO's track.
- We would compare the shared losses amount to the applicable loss sharing limit based on the ACO's track.
- We would pro-rate any shared savings amount, as adjusted for sequestration and the performance payment limit, or any shared losses amount, as adjusted for the loss sharing limit, by multiplying by one half, which represents the fraction of the calendar year covered by the 6-month performance year. This pro-rated amount would be the final amount of shared savings that would be paid to the ACO for the 6-month performance year or the final amount of shared losses that would be owed by the ACO for the 6-month performance year.

We seek comment on these proposals.

c. Applicability of Program Policies to ACOs Participating in a 6-Month Performance Year

In general, unless otherwise stated, we are proposing that program requirements under 42 CFR part 425 that are applicable to the ACO under the ACO's chosen participation track and based on the ACO's agreement start date would be applicable to an ACO participating in a 6-month performance year. This would allow routine program operations to continue to apply for ACOs participating under these shorter performance years. Further, it would ensure consistency in the applicability and implementation of our requirements across all program participants, including ACOs participating in 6-month performance years. As we described in section II.A.7.b of this proposed rule, limited exceptions to our policies for determining financial and quality performance are necessary to ensure calculations can continue to be performed on a calendar year basis and using the most relevant data.

In this section, we describe our consideration of program participation options affected by our decision to forgo an application cycle in calendar year 2018 for a January 1, 2019 start date, and the proposal to offer instead an application cycle in calendar year 2019 for a July 1, 2019 start date. We discuss program policies that would need to be modified to allow for the proposed 6-month performance years within calendar year 2019, and related proposals to revise the program's regulations to allow for these modifications.

(1) Unavailability of an Application Cycle for Use of a SNF 3-Day Rule Waiver Beginning January 1, 2019

Eligible ACOs may apply for use of a SNF 3-day rule waiver at the time of application for an initial agreement or to renew their participation. Further, ACOs within a current agreement period under Track 3, or the Track 1+ Model as described in sections II.B.2.a and II.F of this proposed rule, may apply for a SNF 3-day rule waiver, which if approved would begin at the start of their next performance year. As discussed in section II.B.2.a of this proposed rule, we propose to allow the

SNF 3-day rule waiver under the Shared Savings Program to be more broadly available to BASIC track ACOs (under a two-sided model) and ENHANCED track ACOs, regardless of their choice of beneficiary assignment methodology.

In light of our decision to forgo an application cycle in calendar year 2018 for a January 1, 2019 agreement start date, we also would not offer an opportunity for ACOs to apply for a start date of January 1, 2019, for initial use of a SNF 3-day rule waiver. The application cycle for the July 1, 2019 start date would be the next opportunity for eligible ACOs to begin use of a waiver, if they apply for and are approved to use the waiver as part of the application cycle for the July 1, 2019 start date. This would extend to ACOs within existing agreement periods in Track 3 that would, under 12 month performance years, not otherwise have the opportunity to apply to begin use of the waiver until January 1, 2020. We believe the existing regulation at § 425.612(b), which requires applications for waivers to be submitted to CMS in the form and manner and by a deadline specified by CMS, provides the flexibility to accommodate a July 1, 2019 SNF 3-day rule waiver start date for eligible ACOs in a performance year beginning on January 1, 2019. As a result, we are not proposing any corresponding revisions to this provision at this time.

(2) Annual Certifications and ACO Participant List Modifications

At the end of each performance year, ACOs complete an annual certification process. At the same time as this annual certification process, CMS also requires ACOs to review, certify and electronically sign official program documents to support the ACO's participation in the upcoming performance year.

Requirements for this annual certification, and other certifications that occur on an annual basis, continue to apply to all currently participating ACOs in advance of the performance year beginning on January 1, 2019. In the case of ACOs that participate for a portion of calendar year 2019 under one agreement and enter a new agreement period starting on July 1, 2019, the certifications made in advance of the performance year starting on January 1, 2019, would have relevance only for the 6-month period from January 1, 2019, to June 30, 2019. These ACOs would need to complete another certification as part of completing the requirements to enter a new agreement period beginning on July 1, 2019, which would be applicable for the duration of their first performance year under the new agreement period, spanning July 1, 2019 to December 31, 2019.

Each ACO certifies its list of ACO participant TINs before the start of its agreement period, before every performance year thereafter, and at such other times as specified by CMS in accordance with § 425.118(a). The addition of ACO participants must occur prior to the start of the performance year in which these additions become effective. ACO participant must be deleted from the ACO participant list within 30 days after termination of the ACO participant agreement, and such deletion is effective as of the termination date of the ACO participant agreement. Absent unusual circumstances, the ACO participant list that was certified prior to the start of the performance year is used for the duration of the performance year. An ACO's certified ACO participant list for a performance year is used, for example, to determine beneficiary assignment for the performance year and therefore also the ACO's quality reporting samples and financial performance. See § 425.118(b)(3) and see also Medicare Shared Savings Program ACO Participant List and Participant Agreement Guidance (July 2018, version 5), available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/ACO-Participant-List-Agreement.pdf.* These policies would apply for ACOs participating in a 6-month performance year consistent with the terms of the existing regulations.

ACOs that started a first or second agreement period on January 1, 2016, that extend their agreement period for a 6-month performance year beginning on January 1, 2019, would have the opportunity during 2018 to make changes to their ACO participant list to be effective for the 6-month performance year from January 1, 2019, to June 30, 2019. If these ACOs elect to continue their participation in the program for a new agreement period starting on July 1, 2019, they would have an opportunity to submit a new ACO participant list as part of their renewal application for the July 1, 2019 start date.

An ACO that enters a new agreement period beginning on July 1, 2019, would submit and certify its ACO participant list for the agreement period beginning on July 1, 2019, according to the requirements in § 425.118(a). The ACO's approved ACO participant list would remain in effect for the full performance year from July 1, 2019, to December 31, 2019. These ACOs would have the opportunity to add or delete ACO participants prior to the start of the next performance year. Any additions to the ACO participant list that are approved by CMS would become effective at the start of performance year 2020.

The program's current regulations prevent duplication of shared savings payments. Under § 425.114, ACOs may not participate in the Shared Savings Program if they include an ACO participant that participates in another Medicare initiative that involves shared savings. In addition, under § 425.306(b)(2), each ACO participant that submits claims for services used to determine the ACO's assigned population must be exclusive to one Shared Savings Program ACO. If, during a benchmark or performance year (including the 3-month claims run out for such benchmark or performance year), an ACO participant that participates in more than one ACO submits claims for services used in assignment, then: (i) CMS will not consider any services billed through the TIN of the ACO participant when performing assignment for the benchmark or performance year; and (ii) the ACO may be subject to the pre-termination actions set forth in § 425.216, termination under § 425.218, or both.

We note the following examples, regarding ACO participants that submit claims for services that are used assignment, and that are participating in a Shared Savings Program ACO for a 12-month performance year during 2019 (such as a 2017 starter, 2018 starter, or 2015 starter that deferred renewal until 2019).

If the ACO remains in the program under its current agreement past June 30, 2019, these ACO participants would not be eligible to be included on the ACO participant list of another ACO applying to enter a new agreement period under the program beginning on July 1, 2019. An ACO participant in these circumstances could be added to the ACO participant list of a July 1, 2019 starter effective for the performance year beginning on January 1, 2020, if it is no longer participating in the other Shared Savings Program ACO and is not participating in another initiative identified in § 425.114(a).

If an ACO starting a 12-month performance year on January 1, 2019, terminates its participation agreement with an effective date of termination of June 30, 2019, the effective end date of the ACO participants' participation would also be June 30, 2019. Such ACOs that elect to enter a new agreement period beginning on July 1, 2019, can make ACO participant list

changes that would be applicable for their new agreement period. This means that the ACO participants of the terminating ACO could choose to be added to the ACO participant list of another July 1, 2019 starter, effective for the performance year beginning July 1, 2019.

(3) Repayment Mechanism Requirements

ACOs must demonstrate that they have in place an adequate repayment mechanism prior to entering a two-sided model. The repayment mechanism must be in effect for the duration of an ACO's participation in a two-sided model and for 24 months following the conclusion of the agreement period. (See discussion in section II.A.6.c of this proposed rule.)

We note that ACOs that started a first or second agreement period January 1, 2016 in a two-sided model would have in place under current program policies a repayment mechanism arrangement that would cover the 3 years between January 1, 2016 and December 31, 2018 plus a 24-month tail period until December 31, 2020. In the case of an ACO with an agreement period ending December 31, 2018, that extends its agreement for the 6-month performance year from January 1, 2019 through June 30, 2019, we would require the ACO to extend the term of its repayment mechanism so that it would be in effect for the duration of the ACO's participation in a two-sided model plus 24 months following the conclusion of the agreement period (that is, until June 30, 2021). This will allow us sufficient time to perform financial calculations for the 6-month performance year from January 1, 2019 through June 30, 2019 and to use the arrangement to collect shared losses for that performance year, if necessary. This policy is consistent with the policy proposed in section II.A.6.c and at § 425.204(f)(6)(i), which provides that a repayment mechanism must be in effect for the duration of the ACO's participation in a two-sided model plus 24 months following the conclusion of the agreement period.

Consistent with our proposed policy described in section II.A.6.c and § 425.204(f)(4)(iv), a renewing ACO that is under a two-sided model and entering a new agreement period beginning July 1, 2019 would be permitted to use its existing repayment mechanism to establish its ability to repay shared losses incurred for performance years in its new agreement period. As previously described, we would require the ACO to extend the term of the existing repayment mechanism by an amount of time specified by CMS and, if necessary, to increase the amount of the repayment mechanism to reflect the new repayment mechanism amount.

We are proposing that, for agreement periods beginning on or after July 1, 2019, we would recalculate the amount of the ACO's repayment mechanism before the second and each subsequent performance year in the agreement period, based on the ACO's certified ACO participant list for the relevant performance year. Therefore, for an ACO that enters a new agreement period beginning July 1, 2019, we would calculate the amount of the repayment mechanism for the new agreement period in accordance with our proposed regulation at § 425.204(f)(4). Before the start of performance year 2020, we would recalculate the amount of the ACO's repayment mechanism. Depending on how much the recalculated amount exceeds the existing repayment mechanism amount, we would require the ACO to increase its repayment mechanism amount, consistent with our proposed approach described in section II.A.6.c of this proposed rule and § 425.204(f)(4)(iii).

(4) Proposals for Quality Reporting and Quality Measure Sampling

In order to determine an ACO's quality performance during either 6-month performance year during 2019, we propose to use the ACO's quality performance for the 2019 reporting period as determined under § 425.502. For ACOs that participate in only one of the 6-month performance years (such as ACOs that started a first or second agreement period on January 1, 2016 that extend their agreement period by 6 months and do not continue in the program past June 30, 2019, or ACOs that enter an initial agreement period beginning on July 1, 2019), we would also account for the ACO's quality performance using quality measure data reported for the 12-month calendar year. As we previously described in section II.A.7.b.2 of this proposed rule, ACOs that terminate their agreement effective June 30, 2019, and enter a new agreement period starting on July 1, 2019, would also be required to complete quality reporting for the 2019 reporting period, and we would determine quality performance for the performance period from January 1, 2019, through June 30, 2019, in the same manner as for ACOs with a 6-month performance year from January 1, 2019 through June 30, 2019, that enter a new agreement period beginning on July 1, 2019.

We believe the following considerations support this proposed approach. For one, use of a 12 month period for quality measure assessment maintains alignment with the program's existing quality measurement approach, and aligns with the proposed use of 12 months of expenditure data (for calendar year 2019) in determining the ACO's financial performance. Also, this approach would continue to align the program's quality reporting period with policies under the Quality Payment Program. ACO professionals that are MIPS eligible clinicians (not QPs based on their participation in an Advanced APM or otherwise excluded from MIPS) would continue to be scored under MIPS using the APM scoring standard that covers all of 2019. Second, the measure specifications for the quality measures used under the program require 12 months of data. See for example, the Shared Savings Program ACO 2018 Quality Measures, Narrative Specification Document (January 20, 2018), available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/2018-reporting-year-narrative-specifications.pdf.* Third, in light of our proposal to use 12 months of expenditures (based on calendar year 2019) in determining shared savings and shared losses for a 6-month performance year, we believe it is also appropriate to hold ACOs accountable for the quality of the care furnished to their assigned beneficiaries during this same time frame. Fourth, and lastly, using an annual quality reporting cycle for the 6-month performance year would avoid the need to introduce new reporting requirements, and therefore potential additional burden on ACOs, that would arise from a requirement that ACOs report quality separately for each 6-month performance year during calendar year 2019.

The ACO participant list is used to determine beneficiary assignment for purposes of generating the quality reporting samples. Beneficiary assignment is performed using the applicable assignment methodology under § 425.400, either preliminary prospective assignment or prospective assignment, with excluded beneficiaries removed under § 425.401(b), as applicable. The samples for claims-based measures are typically determined based on the assignment list for calendar year quarter 4. The sample for quality measures reported through the CMS web interface is typically determined based on the beneficiary assignment list for calendar year quarter 3. The CAHPS for ACOs survey sample is typically determined based on the beneficiary assignment list for calendar year quarter 2.

As described in section II.A.7.c.2. of this proposed rule, ACOs in either 6-

month performance year during 2019 may use a different ACO participant list for each performance year (for example, in the case of an ACO that started a first or second agreement period on January 1, 2016, that extends its current agreement period by 6 months, and then makes changes to its ACO participant list as part of its renewal application for a July 1, 2019 start date). As discussed in sections II.A.7.b.2 (January 2019–June 2019) and II.A.7.b.3 (July 2019–December 2019), different assignment methodologies and assignment windows would be used to assign beneficiaries to ACOs for the two 6-month performance years during 2019. Therefore, we considered which ACO participant list and assignment methodology to use to identify the samples of beneficiaries for quality reporting for the entire 2019 reporting period for ACOs participating in one or both of the 6-month performance years during 2019 (or performance period for ACOs that elect to voluntarily terminate their existing participation agreement, effective June 30, 2019, and enter a new agreement period starting on July 1, 2019).

For purposes of determining the quality reporting samples for the 2019 reporting period, we propose to use the ACO's most recent certified ACO participant list available at the time the quality reporting samples are generated, and the assignment methodology most recently applicable to the ACO for a 2019 performance year. We believe the use of the ACO's most recent ACO participant list to assign beneficiaries according to the assignment methodology applicable based on the ACO's most recent participation in the program during 2019 would result in the most relevant beneficiary samples for 2019 quality reporting. For instance, for purposes of measures reported by ACOs through the CMS web interface, ACOs must work together with their ACO participants and ACO providers/suppliers to abstract data from medical records for reporting. In the case of an ACO that started a new agreement period on July 1, 2019, basing assignment for the CMS web interface quality reporting sample on the most recent ACO participant list would allow this coordination to occur between the ACO and its current ACO participant TINs, rather than requiring the ACO to coordinate with ACO participants from a prior performance year that may no longer be included on the ACO participant list for the agreement period beginning on July 1, 2019. Further, basing the sample for the CAHPS for ACOs survey on the most recent ACO participant list could ensure the ACO receives feedback from the ACO's assigned beneficiaries on their experience of care with ACO participants and ACO providers/suppliers based on the ACO's current participant list, rather than based on its prior ACO participant list. This could allow for more meaningful care coordination improvements by the ACO in response to the feedback from the survey. Additionally, we believe this proposed approach to determining the ACO's quality reporting samples is also appropriate for an ACO that participates in only one 6-month performance year during 2019, because the most recent certified ACO participant list applicable for the performance year, would also be the certified ACO participant list that is used to determine financial performance.

We propose to specify the ACO participant lists that would be used in determining the quality reporting samples for measuring quality performance for the 6-month performance years in a new section of the regulations at § 425.609. Specifically we propose to use the following approach to determine the ACO participant list, assignment methodology and assignment window that would be used to generate the quality reporting samples for measuring quality performance of ACOs participating in a 6-month performance year (or performance period) during 2019.

For ACOs that enter an agreement period beginning on July 1, 2019, including new ACOs, ACOs that extended their prior participation agreement for the 6-month performance year from January 1, 2019, to June 30, 2019, and ACOs that start a 12-month performance year on January 1, 2019, and terminate their participation agreement with an effective date of termination of June 30, 2019, and enter a new agreement period beginning on July 1, 2019, we propose to use the certified ACO participant list for the performance year starting on July 1, 2019, to determine the quality reporting samples for the 2019 reporting period. This most recent certified ACO participant list would therefore be used to determine the quality reporting samples for the 2019 reporting year, which would be used to determine performance for the 6-month performance year from January 1, 2019, to June 30, 2019 (or performance period for ACOs that elect to voluntarily terminate their existing participation agreement, effective June 30, 2019, and enter a new agreement period starting on July 1, 2019) and the 6-month performance year from July 1, 2019, to December 31, 2019.

Beneficiary assignment for purposes of generating the quality reporting samples would be based on the assignment methodology applicable to the ACO during its 6-month performance year from July 1, 2019, through December 31, 2019, under § 425.400, either preliminary prospective assignment or prospective assignment, with excluded beneficiaries removed under § 425.401(b), as applicable. We anticipate the assignment windows for the quality reporting samples would be as follows based on our operational experience: (1) Samples for claims-based measures would be determined based on the assignment list for calendar year quarter 4; (2) the sample for CMS web interface measures would be determined based on the assignment list for calendar year quarter 3, which equates to the ACO's first quarter of it is 6-month performance year beginning on July 1, 2019; and (3) the sample for the CAHPS for ACOs survey would be determined based on the initial prospective or preliminary prospective assignment list for the 6-month performance year beginning on July 1, 2019.

We believe it is necessary to use the initial assignment list for the CAHPS for ACOs survey sample, to make use of the most recent available prospective assignment list data and quarterly preliminary prospective assignment data for ACOs for the 6-month performance year beginning on July 1, 2019. Further, for CMS web interface measures and claims-based measures, the proposed approach would be consistent with the current methodology for determining the samples.

If an ACO extends its participation to the first 6 months of 2019, but does not enter a new agreement period beginning on July 1, 2019, we propose to use the ACO's latest certified participant list (the ACO participant list effective on January 1, 2019) to determine the quality reporting samples for the 2019 reporting period. Beneficiary assignment for purpose of generating the quality reporting samples would be based on the assignment methodology applicable to the ACO during its 6-month performance year from January 1, 2019, through June 30, 2019, under § 425.400, either preliminary prospective assignment or prospective assignment, with excluded beneficiaries removed under § 425.401(b), as applicable. We anticipate the assignment windows for the quality reporting samples would be as follows based on our operational experience: (1) Samples for claims-based measures

would be determined based on the assignment list for calendar year quarter 4; (2) the sample for CMS web interface measures would be determined based on the assignment list for calendar year quarter 3; and (3) the sample for the CAHPS for ACOs survey would be determined based on the assignment list for calendar year quarter 2. This approach maintains alignment with the assignment windows currently used for establishing quality reporting samples for these measures.

(5) Proposals for Applicability of Extreme and Uncontrollable Circumstances Policies

We propose in section II.E.4 of this proposed rule to extend the policies for addressing the impact of extreme and uncontrollable circumstances on ACO financial and quality performance results for performance year 2017 to performance year 2018 and subsequent years. As specified in section II.E.4, if this proposal is finalized, these policies would apply to ACOs participating in each of the 6-month performance years during 2019 (or the 6-month performance period for ACOs that elect to voluntarily terminate their existing participation agreement, effective June 30, 2019, and enter a new agreement period starting on July 1, 2019). We also propose that for ACOs that are involuntarily terminated during a 6-month performance year, pro-rated shared losses for the 6-month performance year would be determined based on assigned beneficiary expenditures for the full calendar year 2019 and then would be pro-rated to account for the partial year of participation prior to the involuntary termination (according to section II.A.6.d of this proposed rule) and the impact of extreme and uncontrollable circumstances on the ACO (if applicable).

(6) Proposals for Payment and Recoupment for 6-Month Performance Years

We propose to provide separate reconciliation reports for each 6-month performance year, and we would pay shared savings or recoup shared losses separately for each 6-month performance year. Since we propose to perform financial reconciliation for both 6-month performance years during 2019 after the end of calendar year 2019, we anticipate that financial performance reports for both of these 6-month performance years would be available in Summer 2020, similar to the expected timeframe for issuing financial performance reports for the 12-month 2019 performance year (and for 12-month performance years generally).

We propose to apply the same policies regarding notification of shared savings payment and shared losses, and the timing of repayment of shared losses, to ACOs in 6-month performance years that apply under our current regulations to ACOs in 12-month performance years. We propose to specify in a new regulation at § 425.609 that CMS would notify the ACO of shared savings or shared losses for each reconciliation, consistent with the notification requirements specified in § 425.604(f), proposed § 425.605(e), § 425.606(h), and § 425.610(h). Specifically, we propose that: (1) CMS notifies an ACO in writing regarding whether the ACO qualifies for a shared savings payment, and if so, the amount of the payment due; (2) CMS provides written notification to an ACO of the amount of shared losses, if any, that it must repay to the program; (3) if an ACO has shared losses, the ACO must make payment in full to CMS within 90 days of receipt of notification.

Because we anticipate results for both 6-month performance years would be available at approximately the same time, there is a possibility that an ACO could be eligible for shared savings for one 6-month performance year and liable for shared losses for the other 6-month performance year. Although the same 12-month period would be used to determine performance, the outcome for each partial calendar year performance year could be different because of differences in the ACO's assigned population (for example, resulting from potentially different ACO participant lists and the use of different assignment methodologies), different benchmark amounts resulting from the different benchmarking methodologies applicable to each agreement period, and/or differences in the ACO's track of participation.

In earlier rulemaking, we considered the circumstance where, over the course of its participation in the Shared Savings Program, an ACO may earn shared savings in some years and incur losses in other years. We considered whether the full amount of shared savings payments should be paid in the year in which they accrue, or whether some portion should be withheld to offset potential future losses. However, we did not finalize a withhold from shared savings. See 76 FR 67941 through 67942. Instead, an ACO's repayment mechanism provides a possible source of recoupment for CMS should the ACO fail to timely pay shared losses within the 90 day repayment window.

We revisited these considerations about withholding shared savings payments in light of our proposed approach to determining ACO performance for the two 6-month performance years at approximately the same time following the conclusion of calendar year 2019. We propose to conduct reconciliation for each 6-month performance year at the same time. After reconciliation for both 6-month performance years is complete, we would furnish notice of shared savings or shared losses due for each performance year at the same time, either in a single notice or two separate notices. For ACOs that have mixed results for the two 6-month performance years of 2019, being eligible for a shared savings payment for one performance year and owing shared losses for the other performance year, we propose to reduce the shared savings payment for one 6-month performance year by the amount of any shared losses owed for the other 6-month performance year. This approach would guard against CMS making a payment to an organization that has an unpaid debt to the Medicare program, and therefore would be protective of the Trust Funds. We believe this approach would also be less burdensome for ACOs, for example, in the event that the ACO's shared losses are completely offset by the ACO's shared savings. We note that this approach to offsetting shared losses against any shared savings could result in a balance of either unpaid shared losses that must be repaid, or a remainder of shared savings that the ACO would be eligible to receive.

We propose to specify these policies on payment and recoupment for ACOs in 6-month performance years within calendar year 2019 in a new section of the regulations at § 425.609(e).

(7) Proposals for Automatic Transition of ACOs Under the BASIC Track's Glide Path

Under our proposed design of the BASIC track's glide path, ACOs that enter the glide path at Levels A through D would be automatically advanced to the next level of the glide path at the start of each subsequent performance year of the agreement period. The five levels of the glide path would phase-in over the duration of an ACO's agreement period. The design of the BASIC track's glide path is therefore tied to the duration of the agreement period.

With our proposal to offer agreement periods of 5 years and 6 months to ACOs with July 2019 start dates, we believe it is necessary to address how we would apply the policy for moving

ACOs along the glide path in an agreement period with a duration of more than 5 years. We propose a one-time exception to be specified in § 425.600, whereby the automatic advancement policy would not apply to the second performance year for an ACO entering the BASIC track's glide path for an agreement period beginning July 1, 2019. For performance year 2020, the ACO would remain in the same level of the BASIC track's glide path it entered for the 6-month performance year beginning July 1, 2019, unless the ACO uses the proposed flexibility to advance to a higher level of risk and potential reward more quickly. The ACO would automatically advance to the next level of the BASIC track's glide path at the start of performance year 2021 and all subsequent performance years of the agreement period, unless the ACO chooses to advance more quickly. This proposed approach would allow a modest increase in the amount of time initial entrants in the BASIC track's glide path could remain under a particular level, including a one-sided model.

(8) Interactions With the Quality Payment Program

We took into consideration how the proposed July 1, 2019 start date could interact with other Medicare initiatives, particularly the Quality Payment Program timelines relating to participation in APMs. In the CY 2018 Quality Payment Program final rule with comment period, we finalized a policy for APMs that start or end during the QP Performance Period. Specifically, under § 414.1425(c)(7)(i), for Advanced APMs that start during the QP Performance Period and are actively tested for at least 60 continuous days during a QP Performance Period, CMS will make QP determinations and Partial QP determinations for eligible clinicians in the Advanced APM using claims data for services furnished during those dates on which the Advanced APM is actively tested. This means that an APM (such as a two-sided model of the Shared Savings Program) would need to begin operations by July 1 of a given performance year in order to be actively tested for at least 60 continuous days before August 31—the last date on which QP determinations are made during a QP Performance Period (as specified in § 414.1425(b)(1)). We therefore believe that our proposed July 1, 2019 start date for the proposed new participation options under the Shared Savings Program would align with Quality Payment Program rules and requirements for participation in Advanced APMs.

(9) Proposals for Sharing CY 2019 Aggregate Data With ACOs in 6-month Performance Year From January 2019 Through June 2019

Under the program's current regulations in § 425.702, we share aggregate data with ACOs during the agreement period. This includes providing data at the beginning of each performance year and quarterly during the agreement period. For ACOs that started a first or second agreement period on January 1, 2016, that extend their agreement for an additional 6-month performance year from January 1, 2019, through June 30, 2019, and ACOs that participate in the first 6 months of a 12-month performance year 2019 but then terminate their participation agreement with an effective date of termination of June 30, 2019, and enter a new agreement period beginning July 1, 2019, we propose to continue to deliver aggregate reports for all four quarters of calendar year 2019 based on the ACO participant list in effect for the first 6 months of the year. This would allow ACOs a more complete understanding of the Medicare FFS beneficiary population that is the basis for reconciliation for the first 6 months of the year. This would allow ACOs to receive data including demographic characteristics and expenditure/utilization trends for their assigned population. We believe this proposed approach would allow us to maintain transparency by providing ACOs with data that relates to the entire period for which the expenditures for the beneficiaries who are assigned to the ACO for the 6-month performance year (or performance period) would be compared to the ACO's benchmark (before pro-rating any shared savings or shared losses to reflect the length of the performance year), and maintain consistency with the reports delivered to ACOs that participate in a 12-month performance year 2019. Otherwise, we could be limited to providing ACOs with aggregate reports only for the first and second quarters of 2019, even though the proposed reconciliation would involve consideration of expenditures occurring outside this period during 2019. We propose to specify this policy in revisions to § 425.702.

(10) Proposals for Technical or Conforming Changes To Allow for 6-Month Performance Years

We propose to make certain technical, conforming changes to the following provisions, including additional changes to provisions discussed elsewhere in this proposed rule, to reflect our proposal to add a new provision at § 425.609 to govern the calculation of the financial results for 6-month performance years within calendar year 2019.

We propose that the policies on reopening determinations of shared savings and shared losses to correct financial reconciliation calculations (§ 425.315) would apply with respect to applicable program determinations for performance years within calendar year 2019. We propose to amend § 425.315 to incorporate references to the methodology for determining performance for 6-month performance years within calendar year 2019, as specified in § 425.609.

We propose to add a reference to § 425.609 in § 425.100 in order to include ACOs that participate in a 6-month performance year during 2019 in the general description of ACOs that are eligible to receive payments for shared savings under the program.

In § 425.204(g), we propose to add a reference to § 425.609 to allow for consideration of claims billed under merged and acquired entities' TINs for purposes of establishing an ACO's benchmark for an agreement period that includes a 6-month performance year.

In § 425.400(a)(1)(ii), describing the step-wise process for determining beneficiary assignment for each performance year, we propose to also specify that this process would apply to ACOs participating in a 6-month performance year within calendar year 2019, and that assignment would be determined based on the beneficiary's utilization of primary care services during the entirety of calendar year 2019, as specified in § 425.609.

In § 425.400(c)(1)(iv), on the use of certain Current Procedural Terminology (CPT) codes and Healthcare Common Procedure Coding System (HCPCS) codes in determining beneficiary assignment, as proposed to be revised in section II.E.3 of this proposed rule, we propose to further revise the provision to specify that it will be used in determining assignment for performance years starting on January 1, 2019, and subsequent years.

In § 425.401(b), describing the exclusion of beneficiaries from an ACO's prospective assignment list at the end of a performance year or benchmark year and quarterly each performance year, we propose to specify that these exclusions would occur at the end of calendar year 2019 for purposes of determining assignment to an ACO in a 6-month performance year in accordance with §§ 425.400(a)(3)(ii) and 425.609.

As part of the proposed revisions to § 425.402(e)(2), which, as described in section II.E.2 of this proposed rule, specifies that beneficiaries who have designated a provider or supplier outside the ACO as responsible for coordinating their overall care will not be added to the ACO's list of assigned beneficiaries for a performance year under the claims-based assignment methodology, we propose to allow the same policy to apply to ACOs participating in a 6-month performance year during calendar year 2019.

In § 425.404(b), on the special assignment conditions for ACOs including FQHCs and RHCs that are used determining beneficiary assignment, we propose to revise the provision to specify its applicability in determining assignment for performance years starting on January 1, 2019, and subsequent performance years.

We also propose to incorporate references to § 425.609 in the regulations that govern establishing, adjusting, and updating the benchmark, including proposed § 425.601, and the existing provisions at § 425.602, and § 425.603, to specify that the annual risk adjustment and update to the ACO's historical benchmark for the 6-month performance years during 2019 would use factors based on the entirety of calendar year 2019. For clarity and simplicity, we propose to add a paragraph to each of these sections to explain the following: (1) Regarding the annual risk adjustment applied to the historical benchmark, when CMS adjusts the benchmark for the 6-month performance years described in § 425.609, the adjustment will reflect the change in severity and case mix between benchmark year 3 and calendar year 2019; (2) Regarding the annual update to the historical benchmark, when CMS updates the benchmark for the 6-month performance years described in § 425.609, the update to the benchmark will be based on growth between benchmark year 3 and calendar year 2019.

We propose to incorporate references to § 425.609 in the following provisions regarding the calculation of shared savings and shared losses, § 425.604, proposed § 425.605, § 425.606, and § 425.610. For clarity and simplicity, we propose to add a paragraph to each of these sections explaining that shared savings or shared losses for the 6-month performance years are calculated as described in § 425.609. That is, all calculations will be performed using calendar year 2019 data in place of performance year data.

B. Fee-for-Service Benefit Enhancements

1. Background

As discussed in earlier rulemaking (for example, 80 FR 32759) and previously in this proposed rule, we believe that models where ACOs bear a degree of financial risk have the potential to induce more meaningful systematic change than one-sided models. We believe that two-sided performance-based risk provides stronger incentives for ACOs to achieve savings and, as discussed in detail in the Regulatory Impact Analysis (see section IV. of this proposed rule), our experience with the program indicates that ACOs in two-sided models generally perform better than ACOs that participate under a one-sided model. We believe that ACOs that bear financial risk have a heightened incentive to restrain wasteful spending by their ACO participants and ACO providers/suppliers. This, in turn, may reduce the likelihood of over-utilization of services. We believe that relieving these ACOs of the burden of certain statutory and regulatory requirements may provide ACOs with additional flexibility to innovate further, which could in turn lead to even greater cost savings, without inappropriate risk to program integrity.

In the December 2014 proposed rule (79 FR 72816 through 72826), we discussed in detail a number of specific payment rules and other program requirements for which we believed waivers could be necessary under section 1899(f) of the Act to permit effective implementation of two-sided performance-based risk models in the Shared Savings Program. We invited comments on how these waivers could support ACOs' efforts to increase quality and decrease costs under two-sided risk arrangements. Based on review of these comments, in the June 2015 final rule (80 FR 32800 through 32808), we finalized a waiver of the requirement in section 1861(i) of the Act for a 3-day inpatient hospital stay prior to the provision of Medicare-covered post-hospital extended care services for beneficiaries who are prospectively assigned to ACOs that participate in Track 3 (§ 425.612). We refer to this waiver as the SNF 3-day rule waiver. We established the SNF 3-day rule waiver to provide an additional incentive for ACOs to take on risk by offering greater flexibility for ACOs that have accepted the higher level of performance-based risk under Track 3 to provide necessary care for beneficiaries in the most appropriate care setting.

Section 50324 of the Bipartisan Budget Act added section 1899(l) of the Act (42 U.S.C. 1395jjj(l)) to provide certain Shared Savings Program ACOs the ability to provide telehealth services. Specifically, beginning January 1, 2020, for telehealth services furnished by a physician or practitioner participating in an applicable ACO, the home of a beneficiary is treated as an originating site described in section 1834(m)(4)(C)(ii) and the geographic limitation under section 1834(m)(4)(C)(i) of the Act does not apply with respect to an originating site described in section 1834(m)(4)(C)(ii), including the home of the beneficiary.

In this proposed rule, we propose modifications to the existing SNF 3-day rule waiver and propose to establish regulations to govern telehealth services furnished in accordance with section 1899(l) of the Act to prospectively assigned beneficiaries by physicians and practitioners participating in certain applicable ACOs. We also propose to use our authority under section 1899(f) to waive the requirements of section 1834(m)(4)(C)(i) and (ii) as necessary to provide for a 90-day grace period to allow for payment for telehealth services furnished to a beneficiary who was prospectively assigned to an applicable ACO, but was subsequently excluded from assignment to the ACO. We also propose to require that ACO participants hold beneficiaries financially harmless for telehealth services that are not provided in compliance with section 1899(l) of the Act or during the 90-day grace period, as discussed below.

2. Proposed Revisions

a. Shared Savings Program SNF 3-Day Rule Waiver

(1) Background

The SNF 3-day rule waiver under § 425.612 allows for Medicare payment for otherwise covered SNF services when ACO providers/suppliers participating in eligible Track 3 ACOs admit eligible prospectively assigned beneficiaries, or certain excluded beneficiaries during a grace period, to an eligible SNF affiliate without a 3-day prior inpatient hospitalization. All other provisions of the statute and regulations regarding Medicare Part A post-hospital extended care services continue to apply. This waiver became available starting January 1, 2017, and all ACOs participating under Track 3 or applying to participate under Track 3 are eligible to apply for the waiver.

We limited the waiver to ACOs that elect to participate under Track 3 because these ACOs are participating under two-sided risk and, under the prospective assignment methodology

used in Track 3, beneficiaries are assigned to the ACO at the start of the performance year and remain assigned for the entire year, unless they are excluded. Thus it is clearer to the ACO which beneficiaries are eligible to receive services under the waiver than it would be to an ACO under Track 1 or Track 2, which use a preliminary prospective assignment methodology with retrospective reconciliation (80 FR 32804). We continue to believe that it is appropriate to limit the waiver to ACOs participating under a two-sided risk model because, as discussed in the background to this section, models under which ACOs bear a degree of financial risk hold greater potential than one-sided models to induce more meaningful systematic change, promote accountability for a patient population and coordination of patient medical care, and encourage investment in redesigned care processes. As a result, models under which ACOs bear a degree of financial risk provide a stronger incentive for ACOs not to over utilize services than do one-sided models. We also continue to believe it is important to establish clear policies as to the availability of the SNF 3-day rule waiver for coverage of SNF services furnished to a particular beneficiary without a prior 3 day inpatient stay to permit the ACOs and their SNF affiliates to comply with the conditions of the waiver and to facilitate our ability to monitor for misuse. However, we now believe it would also be feasible to establish such clarity for ACOs electing to participate in a two-sided risk model under a preliminary prospective assignment methodology with retrospective reconciliation.

Under preliminary prospective assignment with retrospective reconciliation, ACOs are given up-front information about their preliminarily assigned FFS beneficiary population. This information is updated quarterly to help ACOs refine their care coordination activities. Under the expanded criteria for sharing data with ACOs finalized in the June 2015 final rule, beginning with performance year 2016, we have provided ACOs under preliminary prospective assignment with quarterly and annual assignment lists that identify the beneficiaries who are preliminarily prospectively assigned, as well as beneficiaries who have received at least one primary care service in the most recent 12-month period from an ACO participant that submits claims for services used in the assignment methodology (see § 425.702(c)(1)(ii)(A), and related discussion in 80 FR 32734 through 32737). The specific beneficiaries preliminarily assigned to an ACO during each quarter can vary.

(2) Proposals

As described in section II.A.4.c. of this proposed rule, we propose to allow ACOs to select the beneficiary assignment methodology to be applied at the start of their agreement period (prospective assignment or preliminary prospective assignment with retrospective reconciliation) and the opportunity to elect to change this selection prior to the start of each performance year. Further, as described in sections II.A.3 and II.A.4.b of this proposed rule, we propose that BASIC track ACOs entering the track's glide path under a one-sided model will be automatically transitioned to a two-sided model during their agreement period and may elect to enter two-sided risk more quickly (prior to the start of their agreement period or as part of an annual election to move to a higher level of risk within the BASIC track).

In light of these proposed flexibilities for program participation, as well as our experience in providing ACOs under preliminary prospective assignment with data on populations of beneficiaries, we now believe it would be appropriate to expand eligibility for the SNF 3-day rule waiver to include ACOs participating in a two-sided model under preliminary prospective assignment. As explained in this section, we originally excluded Track 2 ACOs, which participate under two-sided risk, from eligibility for the SNF 3-day rule waiver because beneficiaries are assigned to Track 2 ACOs using a preliminary prospective assignment methodology with retrospective reconciliation and thus it could be unclear to ACOs which beneficiaries would be eligible to receive services under the waiver. We now believe risk-bearing ACOs selecting preliminary prospective assignment with retrospective reconciliation should be offered the same tools and flexibility to increase quality and decrease costs that are available to ACOs electing prospective assignment, to the maximum extent possible. We believe it would be possible to provide ACOs that select preliminary prospective assignment with retrospective reconciliation with more clarity regarding which beneficiaries may be eligible to receive services under the waiver if we were to establish a cumulative list of beneficiaries preliminarily assigned to the ACO during the performance year. We believe it would be appropriate to establish such a cumulative list because the beneficiaries preliminarily assigned to an ACO may vary during each quarter of a performance year.

Under preliminary prospective assignment with retrospective reconciliation, once a beneficiary receives at least one primary care service furnished by an ACO participant, the ACO has an incentive to coordinate care of the Medicare beneficiary, including SNF services, for the remainder of the performance year because of the potential for the beneficiary to be assigned to the ACO for the performance year. Under our proposed approach, we would not remove preliminarily prospectively assigned beneficiaries from the list of beneficiaries eligible to receive SNF services under the waiver on a quarterly basis. Instead, once a beneficiary is listed as preliminarily prospectively assigned to an eligible ACO for the performance year, according to the assignment lists provided by CMS to an ACO at the beginning of each performance year and for quarters 1, 2, and 3 of each performance year, then the SNF 3-day rule waiver would remain available with respect to otherwise covered SNF services furnished to that beneficiary by a SNF affiliate of the ACO, consistent with the requirements of § 425.612(a), for the remainder of the performance year.

We propose that the waiver would be limited to SNF services provided after the beneficiary first appeared on the preliminary prospective assignment list for the performance year, and that a beneficiary would no longer be eligible to receive covered services under the waiver if he or she subsequently enrolls in a Medicare group (private) health plan or is otherwise no longer enrolled in Part A and Part B. In other words, ACOs participating in a performance-based risk track and under preliminary prospective assignment with retrospective reconciliation would receive an initial performance year assignment list followed by assignment lists for quarters 1, 2, and 3 of each performance year, and the SNF 3-day rule waiver would be available with respect to all beneficiaries who have been identified as preliminarily prospectively assigned to the ACO on one or more of these four assignment lists, unless they enroll in a Medicare group health plan or are no longer enrolled in both Part A and Part B. Providers and suppliers are expected to confirm a beneficiary's health insurance coverage to determine if they are eligible for FFS benefits. In addition, we note that under existing Medicare payment policies, services furnished to Medicare beneficiaries outside the U.S. are not

payable except under very limited circumstances. Therefore, in general, a waiver-eligible beneficiary who resides outside the U.S. during a performance year would technically remain eligible to receive SNF services furnished in accordance with the waiver, but SNF services furnished to the beneficiary outside the U.S. would not be payable.

We note that our proposal to allow preliminarily prospectively assigned beneficiaries to remain eligible for the SNF 3-day rule waiver until the end of the performance year may include beneficiaries who ultimately are excluded from assignment to the ACO based upon their assignment to another Shared Savings Program ACO or their alignment with an entity participating in another shared savings initiative. Thus, a beneficiary may be eligible for admission under a SNF 3-day rule waiver based on being preliminarily prospectively assigned to more than one ACO during a performance year. As previously discussed, we believe ACOs that bear a degree of financial risk have a strong incentive to manage the care for all beneficiaries who appear on any preliminary prospective assignment list during the year and to continue to focus on furnishing appropriate levels of care because they do not know which beneficiaries ultimately will be assigned to the ACO for the performance year. Further, because there remains the possibility that a beneficiary could be preliminarily prospectively assigned to an ACO at the beginning of the year, not preliminarily assigned in a subsequent quarter, but then retrospectively assigned to the ACO at the end of the performance year, we believe it is appropriate that preliminarily prospectively assigned beneficiaries remain eligible to receive services under the SNF 3-day rule waiver for the remainder of the performance year to aid ACOs in coordinating the care of their entire beneficiary population. Because the ACO will ultimately be held responsible for the quality and costs of the care furnished to all beneficiaries who are assigned at the end of the performance year, we believe the ACO should have the flexibility to use the SNF 3-day rule waiver to permit any beneficiary who has been identified as preliminarily prospectively assigned to the ACO during the performance year to receive covered SNF services without a prior 3 day hospital stay when clinically appropriate. For this reason, we do not believe it is necessary to extend the 90-day grace period that applies to beneficiaries assigned to waiver-approved ACOs participating under the prospective assignment methodology to include beneficiaries who are preliminarily prospectively assigned to a waiver-approved ACO. Rather, beneficiaries who are preliminarily prospectively assigned a to waiver-approved ACO will remain eligible to receive services furnished in accordance with the SNF 3-day rule waiver for the remainder of that performance year unless they enroll in a Medicare group health plan or are otherwise no longer enrolled in Part A and Part B. In addition, in order to help protect beneficiaries from incurring significant financial liability for SNF services received without a prior 3-day inpatient stay after an ACO's termination date, we would also like to clarify that an ACO must include, as a part of the notice of termination to ACO participants under § 425.221(a)(1)(i), a statement that its ACO participants, ACO providers/suppliers, and SNF affiliates may no longer use the SNF 3-day rule waiver after the ACO's date of termination. We would also like to clarify that if a beneficiary is admitted to a SNF prior to an ACO's termination date, and all requirements of the SNF 3-day rule waiver are met, the SNF services furnished without a prior 3-day stay would be covered under the SNF 3-day rule waiver.

In summary, we propose to revise the regulations at § 425.612(a)(1) to expand eligibility for the SNF 3-day rule waiver to include ACOs participating in a two-sided model under preliminary prospective assignment with retrospective reconciliation. The SNF 3-day rule waiver would be available for such ACOs with respect to all beneficiaries who have been identified as preliminarily prospectively assigned to the ACO on the initial performance year assignment list or on one or more assignment lists for quarters 1, 2, and 3 of the performance year, for SNF services provided after the beneficiary first appeared on one of the assignment lists for the applicable performance year. The beneficiary would remain eligible to receive SNF services furnished in accordance with the waiver unless he or she is no longer eligible for assignment to the ACO because he or she is no longer enrolled in both Part A and Part B or has enrolled in a Medicare group health plan.

Finally, stakeholders representing rural health providers have pointed out that the SNF 3-day rule waiver is not currently available for SNF services furnished by critical access hospitals and other small, rural hospitals operating under a swing bed agreement. Section 1883 of the Act permits certain small, rural hospitals to enter into a swing bed agreement, under which the hospital can use its beds, as needed, to provide either acute or SNF care. As defined in the regulations at 42 CFR 413.114, a swing bed hospital is a hospital or CAH participating in Medicare that has CMS approval to provide post-hospital SNF care and meets certain requirements. These stakeholders indicate that because there are fewer SNFs in rural areas, there are fewer opportunities for rural ACOs to enter into agreements with SNF affiliates. These stakeholders also believe that the current policy may disadvantage beneficiaries living in rural areas who may not be in close proximity to a SNF and would need to travel longer distances to benefit from the SNF 3-day rule waiver. The stakeholders requested that we revise the regulations to permit providers that furnish SNF services under a swing bed agreement to be eligible to partner with ACOs for purposes of the SNF 3-day rule waiver.

In order to furnish SNF services under a swing bed agreement, hospitals must be substantially in compliance with the SNF participation requirements specified at 42 CFR 482.58(b), whereas CAHs must be substantially in compliance with the SNF participation requirements specified at 42 CFR 485.645(d). However, currently, providers furnishing SNF services under a swing bed agreement are not eligible to partner and enter into written agreements with ACOs for purposes of the SNF 3-day rule waiver because: (1) The SNF 3-day rule waiver under the Shared Savings Program regulations at § 425.612(a)(1) waives the requirement for a 3-day prior inpatient hospitalization only with respect to otherwise covered SNF services furnished by an eligible SNF and does not extend to otherwise covered post-hospital extended care services furnished by a provider under a swing bed agreement; and (2) CAHs and other rural hospitals furnishing SNF services under swing bed agreements are not included in the CMS 5-star Quality Rating System and, therefore, cannot meet the requirement at § 425.612(a)(1)(iii)(A) that, to be eligible to partner with an ACO for purposes of the SNF 3-day rule waiver, the SNF must have and maintain an overall rating of 3 or higher under the CMS 5-star Quality Rating System.

For the reasons described in the June 2015 final rule (80 FR 32804), we believe it is necessary to offer ACOs participating under two-sided risk models additional tools and flexibility to manage and coordinate care for their assigned beneficiaries, including the flexibility to admit a beneficiary for

SNF-level care without a prior 3-day inpatient hospital stay. We agree with stakeholders that there are fewer SNFs in rural areas. Therefore, we agree with rural stakeholders that risk-bearing ACOs in rural areas would be better able to coordinate and manage care, and thus to control unnecessary costs, if the SNF 3-day rule waiver extended to otherwise covered SNF services provided by a hospital or CAH under a swing bed agreement. We believe this proposal would primarily benefit ACOs located in rural areas because most CAHs and hospitals that are approved to furnish post-acute SNF-level care via a swing bed agreement are located in rural areas. Consistent with this proposal, we also propose to revise the regulations governing the SNF 3-day rule waiver at § 425.612(a)(1) to indicate that, for purposes of determining eligibility to partner with an ACO for the SNF 3-day rule waiver, SNFs include providers furnishing SNF services under swing bed arrangements. In addition, we propose to revise § 425.612(a)(1)(iii)(A) to specify that the minimum 3-star rating requirement applies only if the provider furnishing SNF services is eligible to be included in the CMS 5-star Quality Rating System. We do not have a comparable data element to the CMS 5-star Quality Rating System for hospitals and CAHs under swing bed agreements; however, under § 425.612(d)(2), we monitor and audit the use of payment waivers in accordance with § 425.316. We will continue to monitor the use of the SNF 3-Day Rule Waiver and reserve the right to terminate an ACO's SNF 3-day rule waiver if the waiver is used inappropriately or beneficiaries are not receiving appropriate care.

Additionally, we note the possibility that a beneficiary could be admitted to a hospital or CAH, have an inpatient stay of less than 3 days, and then be admitted to the same hospital or CAH under its swing bed agreement. As previously discussed, we believe ACOs that bear a degree of financial risk have a stronger incentive not to over utilize services and have an incentive to recommend a beneficiary for admission to a SNF only when it is medically appropriate. We also note this scenario could occur when a beneficiary meets the generally applicable 3-day stay requirement. Thus, we do not believe extending the SNF 3-day rule waiver to include services furnished by a hospital or CAH under a swing bed agreement would create a new gaming opportunity.

To reduce burden and confusion for eligible ACOs not currently approved for a SNF 3-day rule waiver, we are proposing that these revisions would be applicable for SNF 3-day rule waivers approved for performance years beginning on July 1, 2019, and in subsequent years. This would allow for one, as opposed to multiple, application deadlines thus reducing the overall burden for ACOs applying for the waiver and prevent confusion over ACO outreach and communication materials related to application deadlines. Because we are forgoing the application cycle for a January 1, 2019 start date, we are proposing to apply the revisions to ACOs approved to use the SNF 3-day rule waiver for performance years beginning on July 1, 2019, and in subsequent years. This includes both ACOs that start a new agreement period under the proposed new participation options on July 1, 2019, and those ACOs that are applying for a waiver during the term of an existing participation agreement. For ACOs currently participating in the Shared Savings Program with an agreement period beginning in 2017 or 2018, that have previously been approved for a SNF 3-day rule waiver, the proposed revisions to the SNF 3-day rule waiver would be applicable starting on July 1, 2019, and for all subsequent performance years. ACOs with an approved SNF 3-day rule waiver would be able to modify their 2019 SNF affiliate list for the performance year beginning on January 1, 2019; however, they would not be able to add a hospital or CAH operating under a swing bed agreement to their SNF affiliate list until the July 1, 2019 change request review cycle. CMS would notify all ACOs, including ACOs with a 12 month performance year 2019, of the schedule for this change request review cycle.

Consistent with these proposed revisions to the SNF 3-day rule waiver, we are proposing to add a new provision at § 425.612(a)(1)(vi) to allow ACOs participating in performance-based risk within the BASIC track or ACOs participating in Track 3 or the ENHANCED track to request to use the SNF 3-day rule waiver. We are not proposing to make the revisions to the SNF 3-day rule waiver applicable for Track 2 ACOs because we are proposing to phase out Track 2, as discussed at section II.A.2 of this proposed rule. ACOs currently participating under Track 2 that choose to terminate their existing participation agreement and reapply to the Shared Savings Program under the ENHANCED track or BASIC track, at the highest level of risk and potential reward, as described under II.A.2 of this proposed rule, would be eligible to apply for the SNF 3-day rule waiver.

For the reasons discussed in this section, we believe that the proposed modifications of the SNF 3-day rule waiver would provide additional incentives for ACOs to participate in the Shared Savings Program under performance-based risk and are necessary to support ACO efforts to increase quality and decrease costs under performance-based risk arrangements. We invite comments on these proposals and related issues.

b. Billing and Payment for Telehealth Services

(1) Background

Under section 1834(m) of the Act, Medicare pays for certain Part B telehealth services furnished by a physician or practitioner under certain conditions, even though the physician or practitioner is not in the same location as the beneficiary. As of 2018, the telehealth services must be furnished to a beneficiary located in one of the types of originating sites specified in section 1834(m)(4)(C)(ii) of the Act and the originating site must satisfy at least one of the requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act. An originating site is the location at which a beneficiary who is eligible to receive a telehealth service is located at the time the service is furnished via a telecommunications system.

Generally, for Medicare payment to be made for telehealth services under the PFS, several conditions must be met (§ 410.78(b)). Specifically, the service must be on the Medicare list of telehealth services and must meet all of the following requirements for payment:

- The telehealth service must be furnished via an interactive telecommunications system, as defined at § 410.78(a)(3). CMS pays for telehealth services provided through asynchronous (that is, store and forward) technologies, defined at § 410.78(a)(1), only for Federal telemedicine demonstration programs conducted in Alaska or Hawaii.
- The service must be furnished to an eligible beneficiary by a physician or other practitioner specified at § 410.78(b)(2) who is licensed to furnish the service under State law as specified at § 410.78(b)(1).
- The eligible beneficiary must be located at an originating site at the time the service being furnished via a telecommunications system occurs. The eligible originating sites are specified in section 1834(m)(4)(C)(ii) of the Act and § 410.78(b)(3) and, for telehealth services furnished during 2018, include the following: the office of a physician or practitioner, a CAH, RHC, FQHC,

hospital, hospital-based or CAH-based renal dialysis center (including satellites), SNF, and community mental health center.

• As of 2018, the originating site must be in a location specified in section 1834(m)(4)(C)(i) of the Act and § 410.78(b)(4). The site must be located in a health professional shortage area that is either outside of a Metropolitan Statistical Area (MSA) or within a rural census tract of an MSA, located in a county that is not included in an MSA, or be participating in a Federal telemedicine demonstration project that has been approved by, or receives funding from, the Secretary of Health and Human Services as of December 31, 2000.

When these conditions are met, Medicare pays a facility fee to the originating site and provides separate payment to the distant site practitioner for the service.

Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include professional consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. A list of Medicare telehealth services is available through the CMS website (at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes.html*). Under section 1834(m)(4)(F)(ii) of the Act, CMS has an annual process to consider additions to and deletions from the list of telehealth services. CMS does not include any services as telehealth services when Medicare does not otherwise make a separate payment for them.

Under the Next Generation ACO Model, the Innovation Center has been testing a Telehealth Expansion Benefit Enhancement under which CMS has waived the geographic and originating site requirements for services that are on the list of telehealth services when furnished to aligned beneficiaries by eligible telehealth practitioners (see the CMS website at *https://innovation.cms.gov/Files/x/nextgenaco-telehealthwaiver.pdf*). The purpose of this waiver is to test whether giving participating ACOs the flexibility to furnish telehealth services in more geographic areas and from the beneficiary's home will lower costs, improve quality, and better engage beneficiaries in their care.

Next Generation ACOs encouraged CMS to broaden the telehealth waiver under the Next Generation ACO Model to test the use of asynchronous technologies to increase access to care and further support coordination of care for certain dermatology and ophthalmology services. Therefore, effective for 2018, the Telehealth Expansion Benefit Enhancement under the Next Generation ACO Model has been amended to include a waiver of the requirement under section 1834(m)(1) and § 410.78(b) that telehealth services be furnished via a ''interactive telecommunications system'' as that term is defined under § 410.78(a)(3) in order to permit coverage of certain teledermatology and teleophthalmology services furnished using asynchronous technologies.

(2) Provisions of the Bipartisan Budget Act for Telehealth in the Shared Savings Program

Section 50324 of the Bipartisan Budget Act of 2018 amends section 1899 of the Act to add a new subsection (l) to provide certain ACOs the ability to expand the use of telehealth. The Bipartisan Budget Act provides that, with respect to telehealth services for which payment would otherwise be made that are furnished on or after January 1, 2020 by a physician or practitioner participating in an applicable ACO to a Medicare FFS beneficiary prospectively assigned to the applicable ACO, the following shall apply: (1) The home of a beneficiary shall be treated as an originating site described in section 1834(m)(4)(C)(ii) of the Act, and (2) the geographic limitation under section 1834(m)(4)(C)(i) of the Act shall not apply with respect to an originating site, including the home of a beneficiary, subject to State licensing requirements. The Bipartisan Budget Act defines the home of a beneficiary as the place of residence used as the home of a Medicare FFS beneficiary.

The Bipartisan Budget Act defines an ''applicable ACO'' as an ACO participating in a two-sided model of the Shared Savings Program (as described in § 425.600(a)) or a two-sided model tested or expanded under section 1115A of the Act, for which FFS beneficiaries are assigned to the ACO using a prospective assignment method.

The Bipartisan Budget Act also provides that, in the case where the home of the beneficiary is the originating site, there shall be no facility fee paid to the originating site. It further provides that no payment may be made for telehealth services furnished in the home of the beneficiary when such services are inappropriate to furnish in the home setting, such as services that are typically furnished in inpatient settings such as a hospital.

Lastly, the Bipartisan Budget Act requires the Secretary to conduct a study on the implementation of section 1899(l) of the Act that includes an analysis of the utilization of, and expenditures for, telehealth services under section 1899(l). No later than January 1, 2026, the Secretary must submit a report to Congress containing the results of the study, together with recommendations for legislation and administrative action as the Secretary determines appropriate.

(3) Proposals

We propose to add a new section of the Shared Savings Program regulations at § 425.613 to govern the payment for certain telehealth services furnished, in accordance with section 1899(l) of the Act, as added by the Bipartisan Budget Act. As required by section 1899(l) of the Act, we propose to treat the beneficiary's home as an originating site and not to apply the originating site geographic restrictions under section 1834(m)(4)(C)(i) of the Act for telehealth services furnished by a physician or practitioner participating in an applicable ACO. Thus, we propose to make payment to a physician or practitioner billing though the TIN of an ACO participant in an applicable ACO for furnishing otherwise covered telehealth services to beneficiaries prospectively assigned to the applicable ACO, including when the originating site is the beneficiary's home and without regard to the geographic limitations under section 1834(m)(4)(C)(i) of the Act. As we note in section II.A.4 of this proposed rule, the Shared Savings Program offers two similar, but distinct, assignment methodologies, prospective assignment and preliminary prospective assignment with retrospective reconciliation. We propose to apply these policies regarding payment for telehealth services to ACOs under a two-sided model that participate under the prospective assignment method. We believe that these ACOs meet the definition of applicable ACO under section 1899(l)(2)(A) of the Act. Because final assignment is not performed under the preliminary prospective assignment methodology until after the end of the performance year, we do not believe it is ''a prospective assignment method'' as required under section 1899(l)(2)(A)(ii). Although we do not believe that ACOs that participate under the preliminary prospective assignment with retrospective reconciliation method meet the definition of an applicable ACO, we welcome comments on our interpretation of this provision.

We propose that the policies governing telehealth services furnished in accordance with section 1899(l) of the Act would be effective for telehealth

services furnished in performance years beginning in 2020 and subsequent years by physicians or practitioners participating in ACOs that are operating under a two-sided model with a prospective assignment methodology for the applicable performance year. This would include physicians and practitioners participating in ACOs with a prospective assignment method for a performance year in the ENHANCED track (including Track 3 ACOs with an agreement period starting in 2018 or on January 1, 2019), or in levels C, D, or E of the BASIC track. Because ACOs participating in the Track 1+ Model are participating in a two-sided model tested under section 1115A and use prospective assignment, we note that physicians and practitioners participating in Track 1+ ACOs would also be able to furnish and be paid for telehealth services in accordance with section 1899(l) of the Act. Physicians and practitioners participating in Track 2 ACOs would not be able to furnish and be paid for telehealth services in accordance with section 1899(l) of the Act because Track 2 ACOs do not participate under a prospective assignment methodology. Additionally, the ability to furnish and be paid for telehealth services in accordance with section 1899(l) of the Act would not extend beyond the term of the ACO's participation agreement. If CMS terminates an ACO's participation agreement under § 425.218, then the ability of physicians and other practitioners billing through the TIN of an ACO participant to furnish and be paid for telehealth services in accordance with section 1899(l) of the Act will end on the date specified in the notice of termination. Further, to help protect beneficiaries from potential exposure to significant financial responsibility. We would also like to clarify that an ACO must include, as a part of its notice of termination to ACO participants under § 425.221(a)(1)(i), a statement that physicians and other practitioners who bill through the TIN of an ACO participant can no longer furnish and be paid for telehealth services in accordance with section 1899(l) of the Act after the ACO's date of termination.

As discussed in section II.A.4 of this proposed rule, we propose to allow ACOs in the BASIC and ENHANCED tracks the opportunity to change their beneficiary assignment methodology on an annual basis. As a result, the ability of physicians and other practitioners billing through the TIN of an ACO participant in these ACOs to furnish and be paid for telehealth services in accordance with section 1899(l) of the Act could change from year to year depending on the ACO's choice of assignment methodology. Should an ACO in the BASIC track or ENHANCED track change from the prospective assignment methodology to preliminary prospective assignment methodology with retrospective reconciliation for a performance year, the ACO would no longer satisfy the requirements to be an applicable ACO for that year and physicians and other practitioners billing through the TIN of an ACO participant in that ACO could only furnish and be paid for telehealth services if the services meet all applicable requirements, including the originating site requirements, under section 1834(m)(4)(C) of the Act.

We propose that the beneficiary's home would be a permissible originating site type for telehealth services furnished by a physician or practitioner participating in an applicable ACO. Under this proposal, in addition to being eligible for payment for telehealth services when the originating site is one of the types of originating sites specified in section 1834(m)(4)(C)(ii) of the Act, a physician or other practitioner billing through the TIN of an ACO participant in an applicable ACO could also furnish and be paid for such services when the originating site is the beneficiary's home (assuming all other requirements are met). As discussed earlier, section 1899(l)(1)(A) of the Act, as added by section 50324 of the Bipartisan Budget Act, defines a beneficiary's home to be the place of residence used as the home of the beneficiary. In addition, we propose that Medicare would not pay a facility fee when the originating site for a telehealth service is the beneficiary's home.

Further, we propose that the geographic limitations under section 1834(m)(4)(C)(i) of the Act would not apply to any originating site, including a beneficiary's home, for telehealth services furnished by a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO. This would mean that a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO could furnish and be paid for telehealth services when the beneficiary receives those services while located at an originating site in an urban area that is within an MSA, assuming all other requirements are met. We also propose to require that, consistent with section 1899(l)(1)(B) of the Act, the originating site must comply with State licensing requirements.

We propose that the treatment of the beneficiary's home as an originating site and the non-application of the originating site geographic restrictions would be applicable only to payments for services on the list of Medicare telehealth services. The approved list of telehealth services is maintained on our website and is subject to annual updates (*https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes.html*). However, as provided in section 1899(l)(3)(B) of the Act, in the case where the beneficiary's home is the originating site, Medicare will not pay for telehealth services that are inappropriate to be furnished in the home even if the services are on the approved list of telehealth services. Therefore, we propose that ACO participants must not submit claims for services specified as inpatient only when the service is furnished as a telehealth service and the beneficiary's home is the originating site. For example, CPT codes G0406, G0407, G0408, G0425, G0426, and G0427 are used for reporting inpatient hospital visits and are included on the 2018 approved telehealth list. As described in Chapter 12, section 190.3.1, of the Medicare Claims Processing Manual,[20] Medicare pays for inpatient or emergency department telehealth services furnished to beneficiaries located in a hospital or SNF; therefore, consistent with the current FFS telehealth requirements, we believe it would be inappropriate for an ACO participant to submit a claim for an inpatient telehealth visit when the originating site is the beneficiary's home.

We are concerned about potential beneficiary financial liability for telehealth services provided to beneficiaries excluded from assignment under the Shared Savings Program. A beneficiary prospectively assigned to an applicable ACO at the beginning of a performance year can subsequently be excluded from assignment if he or she meets the exclusion criteria specified under § 425.401(b). To address delays in communicating beneficiary exclusions from the assignment list, the Telehealth Expansion Benefit Enhancement under the Next Generation ACO Model provides for a 90-day grace period that functionally acts as an extension of beneficiary eligibility to receive services under the Benefit Enhancement and permits some additional time for the ACO to receive quarterly exclusion lists

[20] *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf.*

from CMS and communicate beneficiary exclusions to its participants. We also provide for a 90-day grace period with respect to the Shared Savings Program SNF 3-day rule waiver under § 425.612(a)(1), which allows for coverage of qualifying SNF services furnished to a beneficiary who was prospectively assigned to an ACO that has been approved for the waiver at the beginning of the performance year, but was excluded in the most recent quarterly update to the ACO's prospective assignment list.

Based upon the experience in the Next Generation ACO Model, we believe it would be inadvisable not to provide some protection for beneficiaries who are prospectively assigned to an applicable ACO at the start of the year, but are subsequently excluded from assignment. It is not operationally feasible for CMS to notify the ACO and for the ACO, in turn, to notify its ACO participants and ACO providers/suppliers immediately of the beneficiary's exclusion. The lag in communication may then cause a physician or practitioner billing under the TIN of an ACO participant to unknowingly furnish a telehealth service to a beneficiary who no longer qualifies to receive telehealth services under section 1899(l) of the Act. Therefore, we are proposing to use our waiver authority under section 1899(f) of the Act to waive the originating site requirements in section 1834(m)(4)(C) of the Act as necessary to provide for a 90-day grace period for payment of otherwise covered telehealth services, to allow sufficient time for CMS to notify an applicable ACO of any beneficiary exclusions, and for the ACO then to inform its ACO participants and ACO providers/suppliers of those exclusions. We believe it is necessary, to protect beneficiaries from potential financial liability related to use of telehealth services furnished by physicians and other practitioners billing through the TIN of an ACO participant in an applicable ACO, to establish this 90-day grace period in the case of a prospectively assigned beneficiary who is later excluded from assignment to an applicable ACO.

More specifically, we propose to waive the originating site requirements in section 1834(m)(4)(C) of the Act to allow for coverage of telehealth services furnished by a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO to an excluded beneficiary within 90 days following the date that CMS delivers the relevant quarterly exclusion list under § 425.401(b). We propose to amend § 425.612 to add a new paragraph (f) establishing the terms and conditions of this waiver. This waiver would permit us to make payment for otherwise covered telehealth services furnished during a 90 day grace period to beneficiaries who were initially on an applicable ACO's list of prospectively assigned beneficiaries for the performance year, but were subsequently excluded during the performance year. Under the terms of this waiver, CMS would make payments for telehealth services furnished to such a beneficiary as if they were telehealth services authorized under section 1899(l) of the Act if the following conditions are met:

- The beneficiary was prospectively assigned to an applicable ACO at the beginning of the relevant performance year, but was excluded in the most recent quarterly update to the assignment list under § 425.401(b);
- The telehealth services are furnished to the beneficiary by a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO within 90 days following the date that CMS delivers the quarterly exclusion list to the applicable ACO.
- But for the beneficiary's exclusion from the applicable ACO's assignment list, CMS would have made payment to the ACO participant for such services under section 1899(l) of the Act.

In addition, we are concerned that there could be scenarios where a beneficiary could be charged for non-covered telehealth services that were a result of an inappropriate attempt to furnish and be paid for telehealth services under section 1899(l) of the Act by a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO. Specifically, we are concerned that a beneficiary could be charged for non-covered telehealth services if a physician or practitioner billing through the TIN of an ACO participant in an applicable ACO were to attempt to furnish a telehealth service that would be otherwise covered under section 1899(l) of the Act to a FFS beneficiary who is not prospectively assigned to the applicable ACO, and payment for the telehealth service is denied because the beneficiary is not eligible to receive telehealth services furnished under section 1899(l) of the Act. We believe this situation could occur as a result of a breakdown in one or more processes of the applicable ACO and its ACO participants. For example, the ACO participant may not verify that the beneficiary appears on the ACO's prospective assignment list, as required under section 1899(l) of the Act, prior to furnishing a telehealth service. In this scenario, Medicare would deny payment of the telehealth service claim because the beneficiary did not meet the requirement of being prospectively assigned to an applicable ACO. We are concerned that, once the claim is rejected, the beneficiary may not be protected from financial liability, and thus could be charged by the ACO participant for non-covered telehealth services that were a result of an inappropriate attempt to furnish telehealth services under section 1899(l), potentially subjecting the beneficiary to significant financial liability. In this circumstance, we propose to assume that the physician or other practitioner's intent was to rely upon section 1899(l) of the Act. We believe this is a reasonable assumption because, as a physician or practitioner billing under the TIN of an ACO participant in an applicable ACO, the healthcare provider should be well aware of the rules regarding furnishing telehealth services and, by submitting the claim, demonstrated an expectation that CMS would pay for telehealth services that would otherwise have been rejected for lack of meeting the originating site requirements in section 1834(m)(4)(C) of the Act. We believe that in this scenario, the rejection of the claim could easily have been avoided if the ACO and the ACO participant had procedures in place to confirm that the requirements for furnishing such telehealth services were satisfied. Because each of these entities is in a better position than the beneficiary to know the requirements of the Shared Savings Program and to ensure that they are met, we believe that the applicable ACO and/or its ACO participants should be accountable for such denials and the ACO participant should be prevented from charging the beneficiary for the non-covered telehealth service. Therefore, we propose that in the event that CMS makes no payment for telehealth services furnished to a FFS beneficiary and billed through the TIN of an ACO participant in an applicable ACO and the only reason the claim was non-covered is because the beneficiary was not prospectively assigned to the ACO or was not in the 90 day grace period, all of the following beneficiary protections would apply:

- The ACO participant must not charge the beneficiary for the expenses incurred for such services;
- The ACO participant must return to the beneficiary any monies collected for such services; and
- The ACO may be subject to compliance actions, including being required to submit a corrective action plan (CAP) under § 425.216(b) for CMS

approval. If the ACO is required to submit a CAP and, after being given an opportunity to act upon the CAP, the ACO fails to implement the CAP or demonstrate improved performance upon completion of the CAP, we may terminate the participation agreement as specified under § 425.216(b)(2). These proposed beneficiary protections are reflected in the proposed new regulation at § 425.613, which implements the requirements of section 1899(l) of the Act and establishes the policies governing the use of telehealth services by applicable ACOs and their ACO participants and ACO providers/suppliers.

We note that we are not proposing at this time to establish any waiver of section 1834(m)(1) to permit payment for telehealth services delivered through asynchronous technologies because we do not have sufficient experience with the waiver that is being tested under the Next Generation ACO Model, to inform whether such a waiver would be necessary for purposes of implementing the Shared Savings Program. We may consider this issue further through future rulemaking after we gain additional experience with the use of asynchronous technologies through the Next Generation ACO Model. We welcome comments on these proposals for implementing the requirements of section 1899(l) of the Act, as added by the Bipartisan Budget Act, and related issues.

Our proposed policies concerning the applicability of the SNF 3-day rule waiver and expanded use of telehealth services in accordance with section 1899(l) of the Act by track are summarized in Table 9.

TABLE 9—AVAILABILITY OF PROPOSED PAYMENT AND PROGRAM POLICIES TO ACOS BY TRACK

Policy	Policy description	Track 1 (One-sided model; propose to discontinue)	Track 2 (Two-sided model; propose to discontinue)	Track 1+ model (two-sided model)	BASIC track (proposed new track)	ENHANCED track (proposed; current track 3 financial model)
Telehealth Services furnished in accordance with § 1899(l) of the Act.	Removes geographic limitations and allows the beneficiary's home to serve as originating site for prospectively assigned beneficiaries.	N/A (because this is a one-sided model under preliminary prospective assignment).	N/A (because under preliminary prospective assignment).	Proposed requirements for performance year 2020 and onward (prospective assignment) [1].	Proposed requirements for performance year 2020 and onward, applicable for performance years under a two-sided model (prospective assignment).	Proposed requirements for performance year 2020 and onward (prospective assignment)
SNF 3-Day Rule Waiver [2].	Waives the requirement for a 3-day inpatient stay prior to admission to a SNF affiliate.	N/A (unavailable under current policy).	N/A (unavailable under current policy).	Current policy (prospective assignment).	Proposed for performance years beginning on July 1, 2019 and subsequent years, eligible for performance years under a two-sided model (prospective or preliminary prospective assignment).	Proposed for performance years beginning on July 1, 2019 and subsequent years (prospective or preliminary prospective assignment)

Notes: [1] An amendment to the Track 1+ Model Participation Agreement would be required to apply the proposed policies regarding the use of telehealth services under § 1899(l) to Track 1+ Model ACOs as described in section II.F of this proposed rule.

[2] As discussed in section II.A.7.c and II.F of this proposed rule, Track 3 ACOs and Track 1+ Model ACOs participating in a performance year beginning on January 1, 2019, may apply for a SNF 3-day rule waiver effective on July 1, 2019. We expect this application cycle would coincide with the application cycle for new agreement periods beginning on July 1, 2019.

C. Providing Tools To Strengthen Beneficiary Engagement

1. Background on Beneficiary Engagement

Section 1899(b)(2)(G) of the Act requires an ACO to ''define processes to promote . . . patient engagement.'' Strengthening beneficiary engagement is one of the agency's goals to help transform our health care system into one that delivers better care, smarter spending and healthier people, and that puts the beneficiary at the center of care. We stated in the November 2011 final rule that the term ''patient engagement'' means the active participation of patients and their families in the process of making medical decisions (76 FR 67828). The regulation at § 425.112 details the patient-centeredness criteria for the Shared Savings Program, and requires that ACOs implement processes to promote patient engagement (§ 425.112(b)(2)).

In addition, Congress recently passed section 50341 of the Bipartisan Budget Act of 2018, which amends section 1899 of the Act, to allow certain ACOs to each establish a beneficiary incentive program for assigned beneficiaries who receive qualifying primary-care services in order to encourage Medicare FFS beneficiaries to obtain medically necessary primary care services. In order to implement the amendments to section 1899 of the Act, and consistent with our goal to strengthen beneficiary engagement, we are proposing policies to allow any ACO in Track 2, levels C, D, or E of the BASIC track, or the ENHANCED track to establish a CMS-approved beneficiary incentive program to provide incentive payments to

eligible beneficiaries who receive qualifying services.

Furthermore, we are proposing to revise policies related to beneficiary notifications. Specifically, we propose to require additional content for beneficiary notifications and that beneficiaries receive such notices at the first primary care visit of each performance year. Finally, we are seeking comment on whether we should create an alternative beneficiary assignment methodology, in order to promote beneficiary free choice, under which a beneficiary would be assigned to an ACO if the beneficiary has ''opted-in'' to assignment to the ACO.

2. Beneficiary Incentives

a. Overview

We believe that patient engagement is an important part of motivating and encouraging more active participation by beneficiaries in their health care. We believe ACOs that engage beneficiaries in the management of their health care may experience greater success in the Shared Savings Program. In the November 2011 final rule (see 76 FR 67958), we noted that some commenters had suggested that beneficiary engagement and coordination of care could be enhanced by providing additional incentives to beneficiaries that would potentially motivate and encourage beneficiaries to become actively involved in their care. One commenter gave the example of supplying scales to beneficiaries with congestive heart failure to help them better manage this chronic disease. Other commenters were concerned that certain beneficiary incentives such as gifts, cash, or other remuneration could be inappropriate incentives for receiving services or remaining assigned to an ACO or with a particular ACO participant or ACO provider/supplier.

In the November 2011 final rule, we finalized a provision at § 425.304(a)(1) that prohibits ACOs, ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities from providing gifts or other remuneration to beneficiaries as incentives for (i) receiving items and services from or remaining in an ACO or with ACO providers/suppliers in a particular ACO, or (ii) receiving items or services from ACO participants or ACO providers/suppliers. However, in response to comments, we finalized a provision at § 425.304(a)(2) to provide that, subject to compliance with all other applicable laws and regulations, an ACO, ACO participants, and ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities may provide in-kind items or services to beneficiaries if there is a reasonable connection between the items or services and the medical care of the beneficiary, and the items or services are preventive care items or services, or advance a clinical goal of the beneficiary, including adherence to a treatment regime; adherence to a drug regime; adherence to a follow-up care plan; or management of a chronic disease or condition. For example, an ACO provider may give a blood pressure monitor to a beneficiary with hypertension in order to encourage regular blood pressure monitoring and thus educate and engage the beneficiary to be more proactive in his or her disease management. In this instance, such a gift would not be considered an improper incentive to encourage the beneficiary to remain with an ACO, ACO participant, or ACO provider/supplier.

We note that nothing precludes ACOs, ACO participants, or ACO providers/suppliers from offering a beneficiary an incentive to promote his or her clinical care if the incentive does not violate the Federal anti-kickback statute (section 1128B(b) of the Act), the civil monetary penalties law provision relating to beneficiary inducements (section 1128A(a)(5) of the Act, known as the Beneficiary Inducements CMP), or other applicable law. For additional information on beneficiary incentives that may be permissible under the Federal anti-kickback statute and the Beneficiary Inducements CMP, see the final rule published by the Office of Inspector General (OIG) on December 7, 2016 titled ''Medicare and State Health Care Programs: Fraud and Abuse; Revisions to the Safe Harbors Under the Anti-Kickback Statute and Civil Monetary Penalty Rules Regarding Beneficiary Inducements'' (81 FR 88368), as well as other resources that can be found on the OIG website at *oig.hhs.gov.*

We believe that the regulation at § 425.304(a)(2) already provides ACOs with a considerable amount of flexibility to offer beneficiary incentives to encourage patient engagement, promote care coordination, and achieve the objectives of the Shared Savings Program. Further, ACOs, ACO participants, and ACO providers/suppliers need not furnish beneficiary incentives under § 425.304(a)(2) to every beneficiary; they have the flexibility to offer incentives on a targeted basis to beneficiaries who, for example, are most likely to achieve the clinical goal that the incentive is intended to advance. Although the appropriateness of any in-kind beneficiary incentives must be determined on a case-by-case basis, we believe a wide variety of incentives could be acceptable under § 425.304, including, for example, the following:

- Vouchers for over-the-counter medications recommended by a health care provider.
- Prepaid, non-transferable vouchers that are redeemable for transportation services solely to and from an appointment with a health care provider.
- Items and services to support management of a chronic disease or condition, such as home air-filtering systems or bedroom air-conditioning for asthmatic patients, and home improvements such as railing installation or other home modifications to prevent re-injury.
- Wellness program memberships, seminars, and classes.
- Electronic systems that alert family caregivers when a family member with dementia wanders away from home.
- Vouchers for those with chronic diseases to access chronic disease self-management, pain management and falls prevention programs.
- Vouchers for those with malnutrition to access meals programs.
- Phone applications, calendars or other methods for reminding patients to take their medications and promote patient adherence to treatment regimes.

As the previously mentioned examples indicate, we consider vouchers, that is, certificates that can be exchanged for particular goods or services (for example, a certificate for one free gym class at a local gym), to be ''in-kind items or services'' under § 425.304(a)(2). Accordingly, an ACO may offer vouchers as beneficiary incentives under § 425.304(a)(2) so long as the vouchers meet all the other requirements of § 425.304(a)(2).

In addition, for purposes of the Shared Savings Program, we consider gift cards that are in the nature of a voucher, that is, gift cards that can be used only for particular goods or services, to be ''in-kind items or services'' that can be offered under § 425.304(a)(2), provided that the requirements of § 425.304(a)(2) are satisfied. A gift card that is not in the nature of a voucher, however, such as a gift card to a general store, would not meet the requirements for ''in-kind item or service'' under § 425.304(a)(2). Furthermore, we consider a gift card that can be used like cash, for example, a VISA or Amazon ''gift card,'' to be a ''cash equivalent'' that can be offered only as an incentive payment under an approved beneficiary incentive program,

provided that all of the criteria set forth in § 425.304(c), as proposed, are satisfied. We emphasize that, as previously stated, the determination and appropriateness of any in-kind beneficiary incentive must be determined on a case-by-case basis.

Although we believe that ACOs, ACO participants, ACO providers/suppliers and other individuals or entities performing functions or services related to ACO activities are already permitted to furnish a broad range of beneficiary incentives under § 425.304(a)(2) (including the previously mentioned examples), stakeholders have advocated that ACOs be permitted to offer a more flexible, expanded range of beneficiary incentives that are not currently allowable under § 425.304. In particular, stakeholders seek to offer monetary incentives that beneficiaries could use to purchase retail items, which would not qualify as in-kind items or services under § 425.304.

b. Provisions of the Bipartisan Budget Act for ACO Beneficiary Incentive Programs

As previously noted, in order to encourage Medicare FFS beneficiaries to obtain medically necessary primary care services, the recent amendments to section 1899 of the Act permit certain ACOs to establish beneficiary incentive programs to provide incentive payments to assigned beneficiaries who receive qualifying primary care services. We believe that such amendments will empower individuals and caregivers in care delivery. Specifically, the Bipartisan Budget Act adds section 1899(m)(1)(A) of the Act, which allows ACOs to apply to operate an ACO beneficiary incentive program. The Bipartisan Budget Act also adds a new subsection (m)(2) to section 1899 of the Act, which provides clarification regarding the general features, implementation, duration, and scope of approved ACO beneficiary incentive programs. In addition, the Bipartisan Budget Act adds section 1899(b)(2)(I) of the Act, which requires ACOs that seek to operate a beneficiary incentive program to apply to operate the program at such time, in such manner, and with such information as the Secretary may require.

Section 1899(m)(1)(A) of the Act, as added by the Bipartisan Budget Act, allows ACOs participating in certain payment models described in section 1899(m)(2)(B) of the Act to apply to establish an ACO beneficiary incentive program to provide incentive payments to Medicare FFS beneficiaries who are furnished qualifying services. Section 1899(m)(1)(A) of the Act also specifies that the Secretary shall permit an ACO to establish such a program at the Secretary's discretion and subject to such requirements, including program integrity requirements, as the Secretary determines necessary.

Section 1899(m)(1)(B) of the Act requires the Secretary to implement the ACO beneficiary incentive program provisions under section 1899(m) of the Act on a date determined appropriate by the Secretary, but no earlier than January 1, 2019 and no later than January 1, 2020. In addition, section 1899(m)(2)(A) of the Act, as added by the Bipartisan Budget Act, specifies that an ACO beneficiary incentive program shall be conducted for a period of time (of not less than 1 year) as the Secretary may approve, subject to the termination of the ACO beneficiary incentive program by the Secretary.

Section 1899(m)(2)(H) of the Act provides that the Secretary may terminate an ACO beneficiary incentive program at any time for reasons determined appropriate by the Secretary. In addition, the Bipartisan Budget Act amended section 1899(g)(6) of the Act to provide that there shall be no administrative or judicial review under section 1869 or 1878 of the Act, or otherwise, of the termination of an ACO beneficiary incentive program.

Section 1899(m)(2)(B) of the Act requires that an ACO beneficiary incentive program provide incentive payments to all of the following Medicare FFS beneficiaries who are furnished qualifying services by the ACO: (1) Medicare FFS beneficiaries who are preliminarily prospectively or prospectively assigned (or otherwise assigned, as determined by the Secretary) to an ACO in a Track 2 or Track 3 payment model described in § 425.600(a) (or in any successor regulation) and (2) Medicare FFS beneficiaries who are assigned to an ACO, as determined by the Secretary, in any future payment models involving two-sided risk.

Section 1899(m)(2)(C) of the Act, as added by the Bipartisan Budget Act, defines a qualifying service, for which incentive payments may be made to beneficiaries, as a primary care service, as defined in § 425.20 (or in any successor regulation), with respect to which coinsurance applies under Medicare part B. Section 1899(m)(2)(C) of the Act also provides that a qualifying service is a service furnished through an ACO by: (1) An ACO professional described in section 1899(h)(1)(A) of the Act who has a primary care specialty designation included in the definition of primary care physician under § 425.20 (or any successor regulation) (2) an ACO professional described in section 1899(h)(1)(B) of the Act; or (3) a FQHC or RHC (as such terms are defined in section 1861(aa) of the Act).

As added by the Bipartisan Budget Act, section 1899(m)(2)(D) of the Act provides that an incentive payment made by an ACO under an ACO beneficiary incentive program shall be in an amount up to $20, with the maximum amount updated annually by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period ending with June of the previous year. Section 1899(m)(2)(D) of the Act also requires that an incentive payment be in the same amount for each Medicare FFS beneficiary regardless of the enrollment of the beneficiary in a Medicare supplemental policy (described in section 1882(g)(1) of the Act), in a State Medicaid plan under Title XIX or a waiver of such a plan, or in any other health insurance policy or health benefit plan. Finally, section 1899(m)(2)(D) of the Act requires that an incentive payment be made for each qualifying service furnished to a beneficiary during a period specified by the Secretary and that an incentive payment be made no later than 30 days after a qualifying service is furnished to the beneficiary.

Section 1899(m)(2)(E) of the Act, as added by the Bipartisan Budget Act, provides that no separate payment shall be made to an ACO for the costs, including the costs of incentive payments, of carrying out an ACO beneficiary incentive program. The section further provides that this requirement shall not be construed as prohibiting an ACO from using shared savings received under the Shared Savings Program to carry out an ACO beneficiary incentive program. In addition, section 1899(m)(2)(F) of the Act provides that incentive payments made by an ACO under an ACO beneficiary incentive program shall be disregarded for purposes of calculating benchmarks, estimated average per capita Medicare expenditures, and shared savings for purposes of the Shared Savings Program.

As added by the Bipartisan Budget Act, section 1899(m)(2)(G) of the Act provides that an ACO conducting an ACO beneficiary incentive program shall, at such times and in such format as the Secretary may require, report to the Secretary such information and retain such documentation as the Secretary may require, including the amount and frequency of incentive payments made and the number of Medicare FFS beneficiaries receiving such payments.

Finally, section 1899(m)(3) of the Act excludes payments under an ACO beneficiary incentive program from being considered income or resources or otherwise taken into account for purposes of: (1) Determining eligibility for benefits or assistance under any Federal program or State or local program financed with Federal funds; or (2) any Federal or State laws relating to taxation.

c. Proposals for Beneficiary Incentive Programs

In order to implement the changes set forth in section 1899(b)(2) and (m) of the Act, we are proposing to add regulation text at § 425.304(c) that would allow ACOs participating under certain two-sided models to establish beneficiary incentive programs to provide incentive payments to assigned beneficiaries who receive qualifying services. In developing our proposed policy, we have considered the statutory provisions set forth in section 1899(b)(2) and (m) of the Act, as amended, as well as the following: The application process for establishing a beneficiary incentive program; who can furnish an incentive payment; the amount, timing, and frequency of an incentive payment; how an incentive payment may be financed, and necessary program integrity requirements. We address each of these considerations in this proposed rule.

As previously explained, section 1899(m)(1)(A) of the Act authorizes ''an ACO participating under this section under a payment model described in clause (i) or (ii) of paragraph (2)(B)'' to establish an ACO beneficiary incentive program. In turn, section 1899(m)(2)(B)(i) of the Act describes ACOs participating in ''Track 2 and Track 3 payment models as described in section 425.600(a) . . . (or in any successor regulation).'' Section 1899(m)(2)(B)(ii) of the Act describes ACOs participating in ''any future payment models involving two-sided risk.'' As discussed in section II.A.2 of this proposed rule, we are proposing to (1) discontinue Track 2 as a participation option and limit its availability to agreement periods beginning before July 1, 2019; (2) rename Track 3 the ''ENHANCED track''; and (3) require ACOs with agreement periods beginning July 1, 2019 and in subsequent years to enter either the ENHANCED track (which entails two-sided risk) or the new BASIC track (in which Levels A and B have one-sided risk and Levels C, D, and E have two-sided risk). As noted in proposed § 425.600(a)(3), for purposes of the Shared Savings Program, all references to the ENHANCED track would be deemed to include Track 3; the terms are synonymous. Accordingly, Track 2 and ENHANCED track ACOs are described under section 1899(m)(2)(B)(i) of the Act, and ACOs in Levels C, D, or E of the BASIC track are described under section 1899(m)(2)(B)(ii) of the Act. As a result, Track 2 ACOs, ENHANCED track ACOs, and ACOs in Levels, C, D, or E of the BASIC track are authorized to establish beneficiary incentive programs under section 1899(m)(1)(A) of the Act.

Section 1899(m)(1)(B) of the Act states that the ''Secretary shall implement this subsection on a date determined appropriate by the Secretary. Such date shall be no earlier than January 1, 2019, and no later than January 1, 2020.'' We propose to allow ACOs to establish a beneficiary incentive program beginning no earlier than July 1, 2019. As discussed later in this section, ACOs that are approved to operate a beneficiary incentive program shall conduct the program for at least 1 year as required by section 1899(m)(2)(A) of the Act unless CMS terminates the ACO's beneficiary incentive program. This means, for example, that an ACO currently participating in the Shared Savings Program under Track 2 or Track 3 whose agreement period expires on December 31, 2019 would be ineligible to operate a beneficiary incentive program starting on July 1, 2019 because the ACO would have only 6 months of its agreement remaining as of July 1, 2019. The ACO could, however, start a beneficiary incentive program on January 1, 2020 (assuming it renews its agreement).

We considered the operational impact of having both a midyear beneficiary incentive program cycle (for ACOs that seek to establish a beneficiary incentive program beginning on July 1, 2019) and a calendar year beneficiary incentive program cycle (for ACOs that seek to establish a beneficiary incentive program beginning on January 1, 2020, or a later January 1 start date). We believe it could be confusing for ACOs, and difficult for CMS to monitor approved beneficiary incentive programs, if some ACOs begin their beneficiary incentive programs in July 2019 and other ACOs begin their beneficiary incentive programs in January 2020. For example, under this approach, annual certifications regarding intent to continue a beneficiary incentive program (as further discussed herein) would be provided by ACOs at different times of the year, depending on when each ACO established its beneficiary incentive program. To address this, we believe it is necessary to require ACOs that establish a beneficiary incentive program on July 1, 2019 to commit to an initial beneficiary incentive program term of 18 months (with certifications required near the conclusion of the 18-month period and for each consecutive 12-month period thereafter). However, any ACO that establishes a beneficiary incentive program beginning on January 1 of a performance year would be required to commit to an initial beneficiary incentive program term of 12 months. This would allow the term cycles of all ACO beneficiary incentive programs to later ''sync'' so that they all operate on a calendar year beginning on January 1, 2021. As an alternative, we considered permitting all ACOs to establish a beneficiary incentive program beginning January 1, 2020. However, we believe that some ACOs may prefer to establish a beneficiary incentive program on July 1, 2019, rather than delay until January 1, 2020.

The statute does not prescribe procedures that ACOs must adhere to in applying to establish a beneficiary incentive program. In addition, beyond the requirement that ACOs participate in Track 2, Track 3 (which, as we previously discussed, will be renamed the ''ENHANCED track'') or a ''future payment model involving two-sided risk'' (sections 1899(m)(2)(B)(i) and (ii) of the Act), the new provisions do not describe what factors we should consider in evaluating whether an ACO should be permitted to establish a beneficiary incentive program. Instead, section 1899(m)(1)(A) of the Act states that the ''Secretary shall permit such an ACO to establish such a program at the Secretary's discretion and subject to such requirements . . . as the Secretary determines necessary.'' We propose that the application for the beneficiary incentive program be in a form and manner specified by CMS, which may be separate from the application to participate in the Shared Savings Program. We would provide additional information regarding the application on our website.

We propose to permit eligible ACOs to apply to establish a beneficiary incentive program during the July 1, 2019 application cycle or during a future annual application cycle for the Shared Savings Program. In addition, we propose to permit an eligible ACO that is mid-agreement to apply to establish a beneficiary incentive program during the application cycle prior to the performance year in which the ACO chooses to begin implementing its beneficiary incentive program. This would apply to ACOs that enter a two-sided model at the start of an agreement period but that do not apply to establish

a beneficiary incentive program at the time of their initial or renewal application to the Shared Savings Program. This means, for example, that an ACO that enters the Shared Savings Program under a two-sided model but that does not seek to offer a beneficiary incentive program until its second performance year could apply to offer a beneficiary incentive program during the application cycle in advance of its second performance year. This would also apply to ACOs that enter the BASIC track's glide path under a one-sided model and that apply to establish a beneficiary incentive program beginning with a performance year under a two-sided model (see discussion in sections II.A.3.b and II.A.4.b of this proposed rule).

An ACO would be required to operate its beneficiary incentive program effective at the beginning of the performance year following CMS's approval of the ACO's application to establish the beneficiary incentive program. The ACO would then be required to operate the approved beneficiary incentive program for the entirety of such 12-month performance year (for ACOs that establish a beneficiary incentive program on January 1, 2020, or a later January 1 start date) or for an initial 18-month period (for ACOs that establish a beneficiary incentive program on July 1, 2019).

An ACO with an approved beneficiary incentive program application would be permitted to operate its beneficiary incentive program for any consecutive performance year if it complies with certain certification requirements. Specifically, an ACO that seeks to continue to offer its beneficiary incentive program beyond the initial 12-month or 18-month term (as previously discussed) would be required to certify, in the form and manner and by a deadline specified by CMS, its intent to continue to operate its beneficiary incentive program for the entirety of the next performance year, and that its beneficiary incentive program continues to meet all applicable requirements. CMS may terminate a beneficiary incentive program, in accordance with § 425.304(c)(7), as proposed, if an ACO fails to provide such certification. We believe this certification requirement is necessary for CMS to monitor beneficiary incentive programs. CMS would provide further information regarding the annual certification process through subregulatory guidance.

In addition to the application and certification requirements previously described, we are considering whether an ACO that offers a beneficiary incentive program should be required to notify CMS of any modification to its beneficiary incentive program prior to implementing such modification. We solicit comments on this issue.

With respect to who may receive an incentive payment, a FFS beneficiary would be eligible to receive an incentive payment if the beneficiary is assigned to an ACO through either preliminary prospective assignment with retrospective reconciliation, as described in § 425.400(a)(2), or prospective assignment, as described in § 425.400(a)(3). We note that Track 2 is under preliminary prospective assignment with retrospective reconciliation under § 425.400(a)(2). In addition, as discussed in section II.A.4 of this proposed rule, we propose to permit BASIC track and ENHANCED track ACOs to enter an agreement period under preliminary prospective assignment, as described in § 425.400(a)(2), or under prospective assignment, as described in § 425.400(a)(3). Further, a beneficiary may choose to voluntarily align with an ACO, and, if eligible for assignment, the beneficiary would be prospectively assigned to the ACO (regardless of track) for the performance year under § 425.402(e)(1). Therefore, consistent with our policy regarding which ACOs may establish a beneficiary incentive program, any beneficiary assigned to an ACO that is participating under Track 2; Levels C, D, or E of the BASIC track; or the ENHANCED track may receive an incentive payment under that ACO's CMS-approved beneficiary incentive program.

Section 1899(m)(2)(C) of the Act sets forth the definition of a qualifying service for purposes of the beneficiary incentive program. We mirror the language in the proposed regulation text noting that ''a qualifying service is a primary care service,'' as defined in § 425.20, ''with respect to which coinsurance applies under part B,'' furnished through an ACO by ''an ACO professional who has a primary care specialty designation included in the definition of primary care physician'' under § 425.20; an ACO professional who is a physician assistant, nurse practitioner, or clinical nurse specialist; or a FQHC or RHC. This means that any service furnished by an ACO professional who is a physician but does not have a specialty designation included in the definition of primary care physician would not be considered a qualifying service for which an incentive payment may be furnished.

With respect to the amount of any incentive payment, section 1899(m)(2)(D)(i) of the Act provides that an incentive payment made by an ACO in accordance with a beneficiary incentive program shall be ''in an amount up to $20.'' Accordingly, we propose to incorporate a $20 incentive payment limit into the regulation. We also propose to adopt the provision at section 1899(m)(2)(D)(i) of the Act, which provides that the $20 maximum amount must be ''updated annually by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period ending with June of the previous year.'' To avoid minor changes in the updated maximum amount, however, we believe it is necessary to round the updated maximum incentive payment amount to the nearest whole dollar. We have reflected this policy in our proposed regulations text. We would post the updated maximum payment amount on the Shared Savings Program website and/or in a guidance regarding beneficiary incentive programs.

We also propose to adopt the requirement that the incentive payment be ''in the same amount for each Medicare fee-for-service beneficiary'' without regard to enrollment of such a beneficiary in a Medicare supplemental policy, in a State Medicaid plan, or a waiver of such a plan, or in any other health insurance policy or health plan. (Section 1899(m)(2)(D)(ii) of the Act.) Accordingly, all incentive payments distributed by an ACO under its beneficiary incentive program must be of equal monetary value. In other words, an ACO would not be permitted to offer higher-valued incentive payments for particular qualifying services or to particular beneficiaries. However, an ACO may provide different types of incentive payments (for example, a gift card to some beneficiaries and a check to others) depending on a beneficiary's preference, so long as all incentive payments offered by the ACO under its beneficiary incentive program are of equal monetary value.

Furthermore, as required by section 1899(m)(2)(D)(iii) of the Act, we propose that an ACO furnish an incentive payment to an eligible beneficiary each time the beneficiary receives a qualifying service. In addition, in accordance with section 1899(m)(2)(D)(iv) of the Act, we propose to require that each incentive payment be ''made no later than 30 days after a qualifying service is furnished to such a beneficiary.''

We have considered the individuals and entities that should be permitted to offer incentive payments to beneficiaries under a beneficiary incentive program. We note that section 1899(m)(2)(D) of the Act, which addresses incentive

payments, contemplates that incentive payments be furnished directly by an ACO to a beneficiary. In addition, we believe this requirement is necessary because the ACO is in the best position to ensure that any incentive payments offered are distributed only to eligible beneficiaries and that other program requirements are met. We are therefore proposing to require that the ACO legal entity, and not ACO participants or ACO providers/suppliers, furnish the incentive payments directly to beneficiaries. We seek comment, however, on other potential methods for distributing an incentive payment to a beneficiary.

As previously explained, section 1899(m)(1)(A) of the Act allows the Secretary to establish ''program integrity requirements, as the Secretary deems necessary.'' Given the significant fraud and abuse concerns associated with offering cash incentives, we believe it is necessary to prohibit ACOs from distributing incentive payments to beneficiaries in the form of cash. Cash incentive payments would be inherently difficult to track for reporting and auditing purposes since they would not necessarily be tied to documents providing written evidence that a cash incentive payment was furnished to an eligible beneficiary for a qualifying service. The inability to trace a cash incentive would make it difficult for CMS to ensure that an ACO has uniformly furnished incentive payments to all eligible beneficiaries and has not made excessive payments or otherwise used incentive payments to improperly attract ''healthier'' beneficiaries while disadvantaging beneficiaries who are less healthy or have a disability. Therefore, we propose to require that incentive payments be in the form of a cash equivalent, which includes instruments convertible to cash or widely accepted on the same basis as cash, such as checks and debit cards.

In addition, we have considered record retention requirements related to beneficiary incentive programs. Section 1899(m)(2)(G) of the Act provides that an ACO ''conducting an ACO Beneficiary Incentive Program . . . shall, at such times and in such format as the Secretary may require . . . retain such documentation as the Secretary may require, including the amount and frequency of incentive payments made and the number of Medicare fee-for-service beneficiaries receiving such payments.'' We believe it is important for an ACO to be accountable for its beneficiary incentive program and to mitigate any gaming, fraud, or waste that may occur as a result of its beneficiary incentive program. Accordingly, we propose that any ACO that implements a beneficiary incentive program maintain records that include the following information: Identification of each beneficiary that received an incentive payment, including name and HICN or Medicare beneficiary identifier; the type (such as check or debit card) and amount (that is, the value) of each incentive payment made to each beneficiary; the date each beneficiary received a qualifying service and the HCPCS code for the corresponding service; the identification of the ACO provider/supplier that furnished the qualifying service; and the date the ACO provided each incentive payment to each beneficiary. An ACO that establishes a beneficiary incentive program would be required to maintain and make available such records in accordance with § 425.314(b). In addition to these record retention proposals, we expect any ACO that establishes a beneficiary incentive program to update its compliance plan (as required under § 425.300(b)(2)), to address any finalized regulations that address beneficiary incentive programs.

Furthermore, we propose that an ACO be required to fully fund the costs associated with operating a beneficiary incentive program, including the cost of any incentive payments. We further propose to prohibit ACOs from accepting or using funds furnished by an outside entity, including, but not limited to, an insurance company, pharmaceutical company, or any other entity outside of the ACO, to finance its beneficiary incentive program. We believe these requirements are necessary to reduce the likelihood of undue influence resulting in inappropriate steering of beneficiaries to specific products or providers/suppliers. We seek comments on this issue.

We also propose to incorporate language in section 1899(m)(2)(E) of the Act, which provides that ''[t]he Secretary shall not make any separate payment to an ACO for the costs, including incentive payments, of carrying out an ACO Beneficiary Incentive Program . . . Nothing in this subparagraph shall be construed as prohibiting an ACO from using shared savings received under this section to carry out an ACO Beneficiary Incentive Program.'' Specifically, we propose under § 425.304(a)(2) that the policy regarding use of shared savings apply with regard to both in-kind items and services furnished under § 425.304(b) and incentive payments furnished under § 425.304(c).

Further, we propose to prohibit ACOs from shifting the cost of establishing or operating a beneficiary incentive program to a Federal health care program, as defined at section 1128B(f) of the Act. Essentially, ACOs would not be permitted to bill the cost of an incentive payment to any plan or program that provides health benefits, whether directly, through insurance, or otherwise, which is funded directly, in whole or in part, by the United States Government. We believe this requirement is necessary because billing another Federal health care program for the cost of a beneficiary incentive program would potentially violate section 1899(m)(2)(E) of the Act which prohibits the Secretary from making any separate payment to an ACO for the costs of carrying out a beneficiary incentive program, including the costs of incentive payments. We seek comments on all of our proposed program integrity requirements.

In addition, we are proposing to implement the language in section 1899(m)(2)(F) of the Act that ''incentive payments made by an ACO . . . shall be disregarded for purposes of calculating benchmarks, estimated average per capita Medicare expenditures, and shared savings under this section.'' We are also proposing to disregard incentive payments made by an ACO for purposes of calculating shared losses under this section given that that shared savings would be disregarded.

Furthermore, we propose to implement the language set forth in section 1899(m)(3) of the Act, which provides that ''any payment made under an ACO Beneficiary Incentive Program . . . shall not be considered income or resources or otherwise taken into account for the purposes of determining eligibility for benefits or assistance (or the amount or extent of benefits or assistance) under any Federal program or any State or local program financed in whole or in part with Federal funds; or any Federal or state laws relating to taxation.'' We have included this proposal at § 425.304(c)(6).

With regard to termination of a beneficiary incentive program, section 1899(m)(2)(H) of the Act provides that the ''Secretary may terminate an ACO Beneficiary Incentive Program . . . at any time for reasons determined appropriate by the Secretary.'' We believe it would be appropriate for CMS to terminate an ACO's use of the beneficiary incentive program for failure to comply with the requirements of our finalized proposals at § 425.304, in whole or in part, and for the reasons set forth in § 425.218(b), and we are therefore proposing this policy at § 425.304(c)(7). We solicit comment on whether it would be appropriate for the Secretary to terminate a beneficiary

incentive program in other circumstances as well, or whether an ACO should have the ability to terminate its beneficiary incentive program early. In addition, we propose to require any ACO that wishes to reestablish a beneficiary incentive program after termination to reapply in accordance with the procedures established by CMS. We are also proposing to modify our regulations at § 425.800 to implement the language set forth in section 1899(g)(6) of the Act, which provides that there shall be no administrative or judicial review under section 1869 or 1878 of the Act or otherwise of the termination of an ACO beneficiary incentive program.

With regard to evaluation of beneficiary incentive programs, we note that section 50341(c) of the Bipartisan Budget Act requires that, no later than October 1, 2023, the Secretary evaluate and report to Congress an analysis of the impact of implementing beneficiary incentive programs on health expenditures and outcomes. We welcome comments on whether there might be information that we should require ACOs to maintain (in addition to the information that would be maintained as part of record retention requirements set forth at § 425.304(c)(4)(i)) to support such an evaluation of beneficiary incentive programs. We note, however, that we do not want to discourage participation by imposing overly burdensome data management requirements on ACOs. We therefore seek comment on reporting requirements for ACOs that are approved to establish a beneficiary incentive program.

In addition, we note that under the existing regulations for monitoring ACO compliance with program requirements, CMS may employ a range of methods to monitor and assess ACOs, ACO participants and ACO providers/suppliers to ensure that ACOs continue to satisfy Shared Savings Program eligibility and program requirements (§ 425.316). The scope of this provision would include monitoring ACO, ACO participant, and ACO provider/supplier compliance with the requirements for establishing and operating a beneficiary incentive program.

We are considering whether beneficiaries should be notified of the availability of a beneficiary incentive program. Because beneficiary incentives may be subject to abuse, we believe it is necessary, and we have proposed, to prohibit the advertisement of a beneficiary incentive program. We are considering, however, whether ACOs should be required to make beneficiaries aware of the incentive via approved outreach material from CMS. For example, under the program's existing regulations (§ 425.312(a)), including as revised by this proposed rule in section II.C.3.a., all ACO participants are required to notify beneficiaries that their ACO providers/suppliers are participating in the Shared Savings Program. We solicit comment on whether the notifications required under § 425.312(a) should include information regarding the availability of an ACO's beneficiary incentive program, and, if so, whether CMS should supply template language on the topic. We also seek comment on how and when an ACO might otherwise notify its beneficiaries that its beneficiary incentive program is available, without inappropriately steering beneficiaries to voluntarily align with the ACO or to seek care from specific ACO participants, and, whether it would be appropriate to impose restrictions regarding advertising a beneficiary incentive program. We note that we would expect any beneficiary notifications regarding incentive payments to be maintained and made available for inspection in accordance with § 425.314.

To ensure transparency and to meet the requirements of section 1899(m)(2)(G) of the Act requiring that an ACO ''conducting an ACO Beneficiary Incentive Program . . . shall, at such times and in such format as the Secretary may require, report to the Secretary such information . . . as the Secretary may require, including the amount and frequency of incentive payments made and the number of Medicare fee-for-service beneficiaries receiving such payments,'' we further propose to revise the program's public reporting requirements in § 425.308 to require any ACO that has been approved to implement a beneficiary incentive program to publicly report certain information about incentive payments on its public reporting web page. Specifically, we propose to require ACOs to publicly report, for each performance year, the total number of beneficiaries who receive an incentive payment, the total number of incentive payments furnished, HCPCS codes associated with any qualifying payment for which an incentive payment was furnished, the total value of all incentive payments furnished, and the total type of each incentive payment (for example, check or debit card) furnished. We note that this proposed policy would require reporting for the 6-month performance year that begins on July 1, 2019. We seek comment on whether information about a beneficiary incentive program should be publicly reported by the ACO or simply reported to CMS annually or upon request.

In summary, we are proposing to revise the regulation at § 425.304 to enable an ACO participating in Track 2, levels C, D, or E of the BASIC track, or the ENHANCED track, to establish a beneficiary incentive program to provide incentive payments to beneficiaries for qualifying primary care services in compliance with the requirements outlined in the revised regulations.

Our proposed policies concerning an ACO's ability to establish a beneficiary incentive program are summarized in Table 10.

TABLE 10—ABILITY OF ACOS TO ESTABLISH A PROPOSED BENEFICIARY INCENTIVE PROGRAM BY TRACK

Policy	Policy description	Track 1 (one-sided model; propose to discontinue)	Track 2 (two-sided model; propose to discontinue)	Track 1+ model (two-sided model)	BASIC track (proposed new track)	ENHANCED track (proposed; current track 3 financial model)
Beneficiary Incentive Program.	Requires ACOs that establish a beneficiary incentive program to provide an incentive payment to each assigned beneficiary (prospective or preliminary prospective) for each qualifying service received.	N/A	Proposed beginning July 1, 2019 and for subsequent performance years (preliminary prospective assignment).	N/A	Proposed beginning July 1, 2019 and for subsequent performance years for ACOs in Levels C, D or E (prospective or preliminary prospective assignment).	Proposed beginning July 1, 2019 and for subsequent performance years (prospective or preliminary prospective assignment).

d. Clarification of Existing Rules

We are also taking this opportunity to add regulation text at renumbered § 425.304(b)(3) to clarify that the in-kind items or services provided to a Medicare FFS beneficiary under § 425.304 must not include Medicare-covered items or services, meaning those items or services that would be covered under Title XVIII of the Act on the date the in-kind item or service is furnished to the beneficiary. It was always our intention that the in-kind items or services furnished under existing § 425.304(a) be non-Medicare-covered items and services so that CMS can accurately monitor the cost of medically necessary care in the Shared Savings Program and to minimize the potential for fraud and abuse. We also clarify that the provision of in-kind items and services is available to all Medicare FFS beneficiaries and is not limited solely to beneficiaries assigned to an ACO.

Finally, we propose a technical change to the title and structure of § 425.304. Specifically, we are proposing to replace the title of § 425.304 with ''Beneficiary incentives'' and to add a new section § 425.305, with a title ''Other program safeguards'', by redesignating paragraphs § 425.304(b) and (c) as § 425.305(a) and (b), and to make conforming changes to regulations that refer to section § 425.304. Specifically, we propose to make the following conforming changes: Amending § 425.118 in paragraph (b)(1)(iii) by removing ''§ 425.304(b)'' and adding in its place ''§ 425.305(a)''; amending § 425.224 in newly redesignated paragraph (b)(1)(v) by removing ''§ 425.304(b)'' and adding in its place ''§ 425.305(a)''; amending § 425.310 in paragraph (c)(3) by removing ''§ 425.304(a)'' and adding in its place ''§ 425.304''; and amending § 425.402 in paragraph (e)(3)(i) by removing ''§ 425.304(a)(2)'' and adding in its place ''§ 425.304(b)(1).''

3. Empowering Beneficiary Choice

a. Beneficiary Notifications

(1) Background on Beneficiary Notifications

To ensure full transparency between providers participating in Shared Savings Program ACOs and the beneficiaries they serve, the November 2011 final rule established requirements for how a Shared Savings Program ACO must notify Medicare FFS beneficiaries receiving primary care services at the point of care that the physician, hospital, or other provider is participating in a Shared Savings Program ACO (76 FR 67945 through 67946). Specifically, the November 2011 final rule established a requirement that ACO participants provide standardized written notices to beneficiaries of both their ACO provider/supplier's participation in the Shared Savings Program and the potential for CMS to share beneficiary identifiable data with the ACO.

We initially established the beneficiary notification requirements for ACOs to protect beneficiaries by ensuring patient engagement and transparency, including requirements related to beneficiary notification, since the statute does not mandate that ACOs provide information to beneficiaries about the Shared Savings Program (76 FR 67945 through 67946). The beneficiary information notices included information on whether a beneficiary was receiving services from an ACO participant or ACO provider/supplier, and whether the beneficiary's expenditure and quality data would be used to determine the ACO's eligibility to receive a shared savings payment.

In the June 2015 final rule, we amended the beneficiary notification requirement and sought comment on simplifying the process of disseminating the beneficiary information notice. We received numerous comments from ACOs that the beneficiary notification requirement was too burdensome and created some confusion amongst beneficiaries about the Shared Savings Program (80 FR 32739). As a result, we revised the rule so that ACO providers/suppliers would be required to provide the notification by simply posting signs in their facilities and by making the notice available to beneficiaries upon request.

We also amended our rule to streamline the beneficiary notification process by which beneficiaries may decline claims data sharing and finalized the requirement that ACO participants use CMS-approved template language to notify beneficiaries regarding participation in an ACO and the opportunity to decline data sharing. In order to streamline operations, reduce burden and cost on ACOs and their providers, and avoid creating beneficiary confusion, we also streamlined the process for beneficiaries to decline data sharing by consolidating the data opt out process through 1–800–MEDICARE in the June 2015 final rule (80 FR 32737 through 32743). Beneficiaries must contact 1–800–MEDICARE to decline sharing their Medicare claims data or to reverse that decision.

As previously discussed, under the program's current requirements, an ACO participant (for example physician practices and hospitals) must notify beneficiaries in writing of its participation in an ACO by posting signs in its facilities and, in settings in which beneficiaries receive primary care services, by making a standardized written notice (the ''Beneficiary Information Notice'') available to beneficiaries upon request (§ 425.312). We provide ACOs with templates, in English and Spanish, to share with their ACO participants for display or distribution. To summarize:

- The poster language template indicates the providers' participation in the Shared Savings Program; describes ACOs and what they mean for beneficiary care; highlights that a beneficiary's freedom to choose his or her doctors and hospitals is maintained; and indicates that beneficiaries have the option to decline to have their Medicare Part A, B, and D claims data shared with their ACO or other ACOs. The poster must be in a legible format for display and in a place where beneficiaries can view it.
- The Beneficiary Information Notice template covers the same topics and includes details on how beneficiaries can select their primary clinician via MyMedicare.gov and voluntarily align to the ACO.

In addition to these two templates, there are two other ways that beneficiaries can learn about ACOs and of their option to decline Medicare claims data sharing with ACOs:

- Medicare & You handbook. The language in the ACO section of the handbook (available at *https://www.medicare.gov/pubs/pdf/10050-Medicare-and-You.pdf*) describes ACOs and tells beneficiaries they will be notified at the point of care if their doctor participates in the Shared Savings Program. It explains what doctor participation in an ACO means for a beneficiary's care and that beneficiaries have the right to receive care from any doctor that accepts Medicare. The ACO section of the handbook also explains that beneficiaries must call 1–800–MEDICARE (1–800–633–4227) to decline sharing their health care information with ACOs or to reverse that decision.
- 1–800–MEDICARE. Customer service representatives are equipped with scripted language about the Shared Savings Program, including background about ACOs. The customer service representatives also can collect information from beneficiaries about declining or reinstating Medicare claims data sharing.

Further, beginning in July 2017, Medicare FFS beneficiaries can login to MyMedicare.gov and select the primary

clinician whom they believe is most responsible for their overall care coordination (a process we refer to as voluntary alignment). The instructions for selecting a primary clinician are also included in the Medicare & You handbook, issued by CMS annually to Medicare beneficiaries. The Shared Savings Program uses a beneficiary's selection of a primary clinician for assignment purposes, when applicable, for ACOs in all tracks beginning in performance year 2018 (§ 425.402(e)).

We have made information about the Shared Savings Program publicly available to educate ACOs, providers, beneficiaries and the general public, and to further program transparency. This includes fact sheets, program guidance and specifications, program announcements and data available through the Shared Savings Program website (see *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/index.html*). This material includes resources designed to educate beneficiaries about the Shared Savings Program and ACOs,[21] and specifically on the voluntary alignment process.[22]

(2) Proposed Revisions

We are revisiting the program's existing requirements at § 425.312 to ensure beneficiaries have a sufficient opportunity to be informed about the program and how it may affect their care and their data. We have also proposed changes in response to section 50331 of the Bipartisan Budget Act of 2018, which amends section 1899(c) of the Act to require that the Secretary establish a process by which Medicare FFS beneficiaries are (1) ''notified of their ability'' to identify an ACO professional as their primary care provider (for purposes of assigning the beneficiary to an ACO, as described in § 425.402(e)) and (2) ''informed of the process by which they may make and change such identification.''

In addition, in proposing revisions to § 425.312 we considered how to make the notification a comprehensive resource that compiles certain information about the program and what participation in the program means for beneficiary care. While there are many sources of information on the program that are available to beneficiaries, we are concerned that the existing information exists in separate resources, which may be time consuming for beneficiaries to compile, and, as a result, may be underutilized.

We also considered methods of notification that would better ensure that beneficiaries receive the comprehensive notification at the point of care. The current regulations emphasize use of posted signs in facilities and, in settings where beneficiaries receive primary care services, standardized written notices as a means to notify beneficiaries at the point of care that ACO providers/suppliers are participating in the program and of the beneficiary's opportunity to decline data sharing. Although standardized written notices must be made available upon request, we are concerned that few beneficiaries, or others who accompany beneficiaries to their medical appointments, may initiate request for this information. In turn, beneficiaries may not have the information they need to make informed decisions about their health care and their data.

Finally, we considered how to minimize burden on the ACO providers/suppliers that would provide the notification. We seek to balance the requirements of the notification to beneficiaries with the increased burden on health care providers that could draw their attention away from patient care.

With these considerations in mind, and to further facilitate beneficiary access to information on the Shared Savings Program, we are proposing to modify § 425.312(a) to require additional content for beneficiary notices. We propose that, beginning July 1, 2019, the ACO participant must notify beneficiaries at the point of care about voluntary alignment in addition to notifying beneficiaries that its ACO providers/suppliers are participating in the Shared Savings Program and that the beneficiary has the opportunity to decline claims data sharing. Specifically, the ACO participant must notify the beneficiary of his or her ability to, and the process by which, he or she may identify or change identification of a primary care provider for purposes of voluntary alignment.

We propose to modify § 425.312(b) to require that, beginning July 1, 2019, ACO participants must provide the information specified in § 425.312(a) to each Medicare FFS beneficiary at the first primary care visit of each performance year. Under this proposal, an ACO participant would be required to provide this notice during a beneficiary's first primary care visit in the 6-month performance year from July 1, 2019 through December 31, 2019, as well as the first primary care visit in the 12-month performance year that begins on January 1, 2020 (and in all subsequent performance years). We propose that this notice would be in addition to the existing requirement that an ACO participant must post signs in its facilities and make standardized written notices available upon request.

To mitigate the burden of this additional notification, we propose to require ACO participants to use a template notice that we would prepare and make available to ACOs. The template notice would contain all of the information required to be disclosed under § 425.312(a), including information on voluntary alignment. With respect to voluntary alignment, the template notice would provide details regarding how a beneficiary may select his or her primary care provider on *MyMedicare.gov*, and the step-by-step process by which a beneficiary could designate an ACO professional as his or her primary care provider, and how the beneficiary could change such designation. The CMS-developed template notice would also encourage beneficiaries to check their ACO professional designation regularly and to update such designation when they change care providers or move to a new area. The template notice could be provided to beneficiaries at their first primary care visit during a performance year, and the same template notice could be furnished upon request in accordance with § 425.312(b)(2).

We believe this proposed approach would appropriately balance the factors we described and achieve our desired outcome of more consistently educating beneficiaries about the program while mitigating burden of additional notification on ACO participants. In addition, we believe this approach would provide detailed information on the program to beneficiaries more consistently at a point in time when they may be inclined to review the notice and have an opportunity to ask questions and address their concerns. Furthermore, we believe this approach would pose relatively little additional burden on ACO participants, since they are already required to provide written notices to beneficiaries upon request.

We seek comment as to alternative means of dissemination of the beneficiary notice, including the frequency with which and by whom the notice should be furnished. For example, we seek comment on whether a beneficiary should receive the written notice at the beneficiary's first primary care visit of the performance year, or

[21] Accountable Care Organizations & You, available at *https://www.medicare.gov/Pubs/pdf/11588-Accountable-Care-Organizations-FAQs.pdf.*

[22] Empowering Patients to Make Decisions About Their Healthcare: Register for MyMedicare.gov and Select Your Primary Clinician, available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/vol-alignment-bene-fact-sheet.pdf.*

during the beneficiary's first visit of the performance year with any ACO participant. We also seek comment on whether there are alternative media for disseminating the beneficiary notice that may be less burdensome on ACOs, such as dissemination via email.

In addition, we solicit comment on whether the template notice should include other information outlining ACO activities that may be related to or affect a Medicare FFS beneficiary. Such activities may include: ACO quality reporting and improvement activities, ACO financial incentives to lower growth in expenditures, ACO care redesign processes (such as use of care coordinators), the ACO's use of payment rule waivers (such as the SNF 3-day rule waiver), and the availability of an ACO's beneficiary incentive program.

We also welcome feedback on the format, content, and frequency of this additional notice to beneficiaries about the Shared Savings Program, the benefits and drawbacks to requiring additional notification about the program at the point of care, and the degree of additional burden this notification activity may place on ACO participants. More specifically, we welcome feedback on the timing of providing the proposed annual notice to the beneficiary, particularly what would constitute the appropriate point of care for the beneficiary to receive the notice.

We are also taking this opportunity to add regulation text at renumbered § 425.312(a) to clarify our longstanding requirement that beneficiary notification obligations apply with regard to all Medicare FFS beneficiaries, not only to beneficiaries who have been assigned to an ACO (76 FR 67945 through 67946). We seek comment on whether an ACO that elects prospective assignment should be required to disseminate the beneficiary notice at the point of care only to beneficiaries who are prospectively assigned to the ACO, rather than to all Medicare FFS beneficiaries.

Finally, we are also proposing technical changes to the title and structure of § 425.312. For example, we are proposing to replace the title of § 425.312 with ''Beneficiary notifications.''

b. Beneficiary Opt-In Based Assignment Methodology

In the November 2011 final rule establishing the Shared Savings Program (76 FR 67865), we discussed comments that we had received in response to our proposed assignment methodology suggesting alternative beneficiary assignment methodologies in order to promote beneficiary free choice. For example, some commenters suggested that a beneficiary should be assigned to an ACO only if the beneficiary ''opted-in'' or enrolled in the ACO. We did not adopt an opt-in or enrollment requirement for several reasons, including our belief that such a prospective opt-in approach that allows beneficiaries to voluntarily elect to be assigned to an ACO would completely sever the connection between assignment and actual utilization of primary care services. A patient could choose to be assigned to an ACO from which he or she had received very few or no primary care services at all. However, more recently, some stakeholders have suggested that we reconsider whether it might be feasible to incorporate a beneficiary ''opt-in'' methodology under the Shared Savings Program. These stakeholders believe that under the current beneficiary assignment methodology, it can be difficult for an ACO to effectively manage a beneficiary's care when there is little or no incentive or requirement for the beneficiary to cooperate with the patient management practices of the ACO, such as making recommended lifestyle changes or taking medications as prescribed. The stakeholders noted that in some cases, an assigned beneficiary may receive relatively few primary care services from ACO professionals in the ACO and the beneficiary may be unaware that he or she has been assigned to the ACO. These stakeholders suggested we consider an alternative assignment methodology under which a beneficiary would be assigned to an ACO if the beneficiary ''opted-in'' to the ACO in order to reduce the reliance on the existing assignment methodology under subpart E and as a way to make the assignment methodology more patient-centered, and strengthen the engagement of beneficiaries in their health care. These stakeholders believe that using such an approach to assignment could empower beneficiaries to become better engaged and empowered in their health care decisions.

Although arguably beneficiaries ''opt-in'' to assignment to an ACO under the existing claims-based assignment methodology in the sense that claims-based assignment is based on each beneficiary's exercise of free choice in seeking primary care services from ACO providers/suppliers, we believe that incorporating an opt-in based assignment methodology, and de-emphasizing the claims-based assignment methodology, could have merit as a way to assign beneficiaries to ACOs. Therefore, we are exploring options for developing an opt-in based assignment methodology to further encourage and empower beneficiaries to become better engaged and empowered in their health care decisions. This approach to beneficiary assignment might also allow ACOs to better target their efforts to manage and coordinate care for those beneficiaries for whose care they will ultimately be held accountable. As discussed in section II.E.2, we have recently implemented a voluntary alignment process (which we are proposing to refine based on requirements in the Bipartisan Budget Act), which is an electronic process that allows beneficiaries to designate a primary clinician as responsible for coordinating their overall care. If a beneficiary designates an ACO professional as responsible for their overall care and the requirements for assignment under § 425.402(e) are met, the beneficiary will be prospectively assigned to that ACO. For 2018, the first year in which beneficiaries could be assigned to an ACO based on their designation of a primary clinician in the ACO as responsible for coordinating their care, 4,314 beneficiaries voluntarily aligned to 339 ACOs, and 338 beneficiaries were assigned to an ACO based solely on their voluntary alignment. Ninety-two percent of the beneficiaries who voluntarily aligned were already assigned to the same ACO under the claims-based assignment algorithm.

Voluntary alignment is based upon the relationship between the beneficiary and a single practitioner in the ACO. In contrast, an opt-in based assignment methodology would be based on an affirmative recognition of the relationship between the beneficiary and the ACO, itself. Under an opt-in based assignment methodology, a beneficiary would be assigned to an ACO if the beneficiary opted into assignment to the ACO. Therefore, under an opt-in approach, ACOs might have a stronger economic incentive to compete against other ACOs and healthcare providers not participating in an ACO because to the extent the ACO is able to increase quality and reduce expenditures for duplicative and other unnecessary care, it could attract a greater number of beneficiaries to opt-in to assignment the ACO. We believe there are a number of policy and operational issues, including the issues previously identified in the November 2011 final rule that would need to be addressed in order to implement an opt-in based methodology to assign beneficiaries to ACOs. These issues

include the process under which beneficiaries could opt-in to assignment to an ACO, ACO marketing guidelines, beneficiary communications, system infrastructure to communicate beneficiary opt-ins, and how to implement an opt-in based assignment methodology that responds to stakeholder requests while conforming with existing statutory and program requirements under the Shared Savings Program. These issues are addressed in the following discussion.

We believe under an opt-in based assignment methodology, it would be important for ACOs to manage notifying beneficiaries, collecting beneficiary opt-in data, and reporting the opt-in data to CMS. On an annual basis, ACOs would notify their beneficiary population about their participation in the Shared Savings Program and provide the beneficiaries a window during which time they could notify the ACO of their decision to opt-in and be assigned to the ACO, or to withdraw their opt-in to the ACO. Opting-in to a Shared Savings Program ACO could be similar to enrolling in a MA plan. MA election periods define when an individual may enroll or disenroll from a MA plan. An individual (or his/her legal representative) must complete an enrollment request (using an enrollment form approved by CMS, an online application mechanism, or through a telephone enrollment) to enroll in a MA plan and submit the request to the MA plan during a valid enrollment period. MA plans are required by 42 CFR 422.60 to submit a beneficiary's enrollment information to CMS within the timeframes specified by CMS, using a standard IT transaction system. Subsequently, CMS validates the beneficiary's eligibility, at which point the MA plan must meet the remainder of its enrollment-related processing requirements (for example, sending a notice to the beneficiary of the acceptance or rejection of the enrollment within the timeframes specified by CMS). Procedures have been established for disenrolling from a MA plan during MA election periods. (For additional details about the enrollment process under MA, see the CMS website at *https://www.cms.gov/Medicare/Eligibility-and-Enrollment/MedicareMangCareEligEnrol/index.html,* and the Medicare Managed Care Manual, chapter 2, section 40 at *https://www.cms.gov/Medicare/Eligibility-and-Enrollment/MedicareMangCareEligEnrol/Downloads/CY_2018_MA_Enrollment_and_Disenrollment_Guidance_6-15-17.pdf*).

Because opting-in or withdrawing an opt-in to assignment to a Shared Savings Program ACO could be similar to enrolling or disenrolling in a MA plan, we would need to establish the ACO opt-in process and timing in a way to avoid beneficiary confusion as to the differences between the Shared Savings Program and MA, and whether the beneficiary is opting-in to assignment to an ACO or enrolling in a MA plan. We would also need to determine how frequently beneficiaries would be able to opt-in or withdraw an opt-in to an ACO, and whether there should be limits on the ability to change an opt-in after the end of the opt-in window, in order to reduce possible beneficiary assignment ''churn''. We note that beneficiaries opting-in to assignment to an ACO would still retain the freedom to choose to receive care from any Medicare-enrolled provider or supplier, including providers and suppliers outside the ACO. The ACO would be responsible for providing the list of beneficiaries who have opted-in to assignment to the ACO, along with each beneficiary's Medicare number, address, and certain other demographic information, to CMS in a form and manner specified by CMS. After we receive this information from the ACO, we would verify that each of the listed beneficiaries meets the beneficiary eligibility criteria set forth in § 425.401(a) before finalizing the ACO's assigned beneficiary population for the applicable performance year. To perform these important opt-in related functions, ACOs might need to acquire new information technology systems, along with additional support staff, to track, monitor and transmit opt-in data to CMS, including effective dates for beneficiaries who opt-in or withdraw an opt-in to the ACO. Furthermore, changes in an ACO's composition of ACO participants and ACO providers/suppliers could affect a beneficiary's interest in maintaining his or her alignment with the ACO through an opt-in approach. As a result, we believe it would also be critical for an ACO participating under opt-in based assignment to inform beneficiaries of their option to withdraw their opt-in to the ACO, generally, and specifically, in the event that an ACO participant or ACO provider/supplier, from which the beneficiary has received primary care services is no longer participating in the ACO.

MA has marketing guidelines and requirements that apply to enrollment activities to prevent selective marketing or discrimination based on health status. (See 42 CFR 422.2260 through 422.2276 and section 30.4 of the Medicare Marketing Guidelines located at *https://www.cms.gov/Medicare/Health-Plans/ManagedCareMarketing/FinalPartCMarketingGuidelines.html*.) If we were to adopt an opt-in process for the Shared Savings Program, we would impose similar requirements to ensure ACOs are providing complete and accurate information to beneficiaries to inform their decision-making regarding opting-in to assignment to an ACO, and not selectively marketing or discriminating based on health status or otherwise improperly influencing beneficiary choice. Additionally, ACOs would be required to establish a method for tracking the beneficiaries they have notified regarding the opportunity to opt-in to assignment to the ACO, and the responses they received. Under § 425.314, ACOs agree and must require their ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities to agree that CMS has the right to audit, inspect, investigate, and evaluate records and other evidence that pertain to the ACO's compliance with the requirements of the Shared Savings Program. We believe this provision would authorize CMS to conduct oversight regarding ACOs' records documenting the beneficiaries who received such a notification and the beneficiary responses.

We are also considering how we would implement an opt-in based assignment methodology that addresses stakeholder requests, while conforming to existing program requirements. First, the requirement at section 1899(b)(2)(D) of the Act, that an ACO have at least 5,000 assigned beneficiaries, would continue to apply. Thus, under an opt-in based assignment methodology, an ACO still would be required to have at least 5,000 FFS beneficiaries, who meet our beneficiary eligibility criteria, assigned to the ACO at the time of application and for the entirety of the ACO's agreement period. We are concerned that using an opt-in based assignment methodology as the sole basis for assigning beneficiaries to an ACO could make it difficult for many ACOs to meet the 5,000 assigned beneficiary requirement under section 1899(b)(2)(D) of the Act. In particular, we are considering how an opt-in based assignment methodology would be implemented for new ACOs that have applied to the Shared Savings Program, but have not yet been approved by CMS to participate in the program. We believe it could be difficult for a new ACO to achieve 5,000 beneficiary opt-ins prior to the start of its first performance year under the program, as required by the statute in order to be

eligible for the program. It could also be difficult for certain established ACOs, such as ACOs located in rural areas, to achieve and maintain 5,000 beneficiary opt-ins. Smaller assigned beneficiary populations would also significantly increase the minimum savings rate and minimum loss rate (MSR and MLR) thresholds used to determine eligibility for shared savings and accountability for shared losses when these rates are based on the size of the ACO's assigned population as described in section II.6.b of this proposed rule. Smaller assigned beneficiary populations would also be a potential concern if ACOs and their ACO participants were to target care management to a small subset of patients at the expense of a more comprehensive transformation of care delivery with benefits that would have otherwise extended to a wider mix of patients regardless of whether they are assigned to the ACO.

Second, under an opt-in assignment approach, we could allow beneficiaries to opt-in before they have received a primary care service from a physician in the ACO, or any service from an ACO provider/supplier. This is similar to the situation that can sometimes occur under MA, where a beneficiary enrolls in a MA plan without having received services from any of the plan's providers. That means a beneficiary could be assigned to an ACO based on his or her opting-in to the ACO, and the ACO would be accountable for the total cost and quality of care provided to the opted-in beneficiary, including care from providers/suppliers that are not participating in the ACO. We note that section 1899(c) of the Act requires that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians in the ACO, or beginning January 1, 2019, services provided in FQHCs/RHCs. In order to meet this requirement under an opt-in based assignment methodology, we are considering whether we would need to continue to require that a beneficiary receive at least one primary care service from an ACO professional in the ACO who is a primary care physician or a physician with a specialty used in assignment (similar to our current requirement under § 425.402(b)(1)), in order for the beneficiary to be eligible to opt-in to assignment to the ACO.

Third, we are considering whether any changes would need to be made to our methodology for establishing an ACO's historical benchmark if we were to implement an opt-in based assignment methodology. Under the current assignment methodology used in the Shared Savings Program, we assign beneficiaries to ACOs for a performance year based upon either voluntary alignment or the claims-based assignment methodology. Because the vast majority of beneficiaries are assigned using the claims-based assignment methodology, we are able to use the same claims-based assignment methodology to assign beneficiaries for purposes of either a performance year or a benchmark year. The expenditures of the beneficiaries assigned to the ACO for a benchmark year are then used in the determination of the benchmark. However, the same approach would not be possible under an assignment methodology based solely on a beneficiary opt-in approach. If we were to adopt an entirely opt-in based assignment methodology, we would need to consider if any changes would need to be made to our methodology for establishing an ACO's historical benchmark to address selection bias and/or variation in expenditures because beneficiaries would not have opted-in to assignment to the ACO during the 3 prior years included in the historical benchmark under § 425.602, § 425.603, or proposed new § 425.601. Thus, under an entirely opt-in based assignment methodology there could be a large disconnect between the beneficiaries who have opted-in to assignment to the ACO for a performance year and the beneficiaries who are assigned to the ACO on the basis of claims for the historical benchmark years. An adjustment to the benchmark would be necessary to address these discrepancies. Alternatively, if we were to adopt a methodology under which we use expenditures from the 3 historical benchmark years only for beneficiaries who have opted-in to assignment to the ACO in the applicable performance year, it could create an imbalance because the expenditures for the years that comprise the historical benchmark would not include expenditures for decedents because beneficiaries necessarily would have survived through the baseline period in order to opt-in for the given performance year. A similar approach was initially applied in the Pioneer ACO Model, but it required complex adjustments to ACOs' benchmarks to account for significantly lower spending in historical base years for assigned beneficiaries, who necessarily survived for the one or more years between the given base year and the applicable performance year in which they were assigned to the ACO. It would likely be even more difficult and complex to consistently and accurately adjust the benchmark in the context of the proposed change to 5 year agreement periods (or a 6 year agreement period for agreement periods starting on July 1, 2019) because the historical benchmarks would eventually rely on an even smaller subset of base year claims available for beneficiaries who were enrolled in both Medicare Parts A and B during the base year and have survived long enough to cover the up to 7-year gap between the historical base year and the performance year for which they have opted-in to assignment to the ACO.

In light of these issues, we are considering implementing an opt-in based assignment methodology that would address stakeholder requests that we incorporate such an approach to make the assignment methodology more patient-centered, while also addressing statutory requirements and other Shared Savings Program requirements. Specifically, we believe it may be feasible to incorporate an opt-in based assignment methodology into the Shared Savings Program in the following manner. We would allow, but not require, ACOs to elect an opt-in based assignment methodology. Under this approach, at the time of application to enter or renew participation in the Shared Savings Program, an ACO could elect an opt-in based assignment methodology that would apply for the length of the agreement period. Under this approach, we would use the assignment methodology under subpart E, including the proposed revisions to provisions at §§ 425.400, 425.401, 425.402 and 425.404 as discussed in sections II.E.2 and II.E.3 of this proposed rule (herein referred to as the ''existing assignment methodology'' which would be comprised of a claims-based assignment methodology and voluntary alignment), to determine whether an ACO applicant meets the initial requirement under section 1899(b)(2)(D) of the Act to be eligible to participate in the program. We would use this approach because the ACO applicant would not be able to actively seek Medicare beneficiary opt-ins until the next opt-in window. That is, we would continue to determine an ACO's eligibility to participate in the program under the requirement that an ACO have at least 5,000 assigned beneficiaries using the program's existing assignment methodology. Therefore, an ACO that elects to participate under opt-in based assignment could be eligible to enter an agreement period under the program if we determine that it has at least 5,000 assigned beneficiaries in each of the 3 years prior to the start of the ACO's

agreement period, based on the claims-based assignment methodology and voluntarily aligned beneficiaries.

If an ACO chooses not to elect the opt-in based assignment methodology during the application or renewal process, then beneficiaries would continue to be assigned to the ACO based on the existing assignment methodology (claims-based assignment with voluntary alignment). As an alternative to allowing ACOs to voluntarily elect participation in an opt-in based assignment methodology we are also considering discontinuing the existing assignment methodology and applying an opt-in based assignment methodology program-wide (described herein as a hybrid assignment approach which includes beneficiary opt-in, modified claims-based assignment, and voluntary alignment). As described in this section, ACOs could face operational challenges in implementing opt-in based assignment, and this approach to assignment could affect the size and composition of the ACO's assigned population, specifically to narrow the populations served by ACO. In light of these factors, we believe it would be important to gain experience with opt-in based assignment as a voluntary participation option before modifying the program to allow only this participation option.

For ACOs electing to participate under an opt-in based assignment methodology, we would assign beneficiaries to the ACO using a hybrid approach that would be based on beneficiary opt-ins, supplemented by voluntary alignment and a modified claims-based methodology. Notwithstanding the assignment methodology under § 425.402(b), under this hybrid approach, a beneficiary would be prospectively assigned to an ACO that has elected the opt-in based assignment methodology if the beneficiary opted in to assignment to the ACO or voluntarily aligned with the ACO by designating an ACO professional as responsible for their overall care. If a beneficiary was not prospectively assigned to such an ACO based on either beneficiary opt-in or voluntary alignment, then the beneficiary would be assigned to such ACO only if the beneficiary received the plurality of his or her primary care services from the ACO and received at least seven primary care services from one or more ACO professionals in the ACO during the applicable assignment window. If a beneficiary did not receive at least seven primary care services from one or more ACO professionals in the ACO during the applicable assignment window, then the beneficiary would not be assigned to the ACO on the basis of claims even if the beneficiary received the plurality of their primary care services from the ACO. We note that this threshold of seven primary care services is consistent with the threshold established by an integrated healthcare system in a prior demonstration that targeted intervention on chronic care, high risk patients in need of better coordinated care due to their frequent utilization of health care services. A threshold for assignment of seven primary care services would mean that up to 25 percent of an ACO's beneficiaries who would have been assigned to the ACO under the existing assignment methodology under § 425.402(b) could continue to be assigned to the ACO based on claims. We believe it could be appropriate to establish such a minimum threshold of seven primary care services for assigning beneficiaries to ACOs electing an opt-in based assignment methodology because it would enable such ACOs to focus their care coordination activities on beneficiaries who have either opted-in to assignment to the ACO or voluntarily aligned with the ACO, or who are receiving a high number of primary care services from ACO professionals and may have complex conditions requiring care coordination. We seek comment on whether to use a higher or lower minimum threshold for determining beneficiaries assigned to the ACO under a modified claims-based assignment approach.

Under this hybrid approach to assignment, we would allow the ACO a choice of claims-based beneficiary assignment methodology as proposed in section II.A.4.c. of this proposed rule. Therefore, ACOs that elect to participate under opt-in based assignment for their agreement period would also have the opportunity to elect either prospective or preliminary prospective claims-based assignment prior to the start of their agreement period, and to elect to change this choice of assignment methodology annually.

More generally, we believe that the hybrid assignment methodology, which would incorporate claims-based and opt-in based assignment methods, as well as voluntary alignment, could be preferable to an opt-in only approach. A hybrid assignment methodology would increase the number of beneficiaries for whom the ACO would be accountable for quality and cost of care delivery and thereby provide stronger statistical confidence for shared savings or shared losses calculations and provide a stronger incentive for ACOs and their ACO participants and ACO providers/suppliers to improve care delivery for every FFS beneficiary rather than focusing only on beneficiaries who happen to have opted-in to assignment to the ACO.

For ACOs that enter an agreement period in the Shared Savings Program under an opt-in based assignment methodology, we would allow for a special election period during the first calendar year quarter of the ACO's first performance year for beneficiaries to opt-in to assignment to the ACO. For each subsequent performance year of an ACO's agreement period, the opt-in period would span the first three calendar year quarters (January through September) of the prior performance year. Beneficiaries that opt-in, and are determined eligible for assignment to the ACO, would be prospectively assigned to the ACO for the following performance year. Under this approach, there would be no floor or minimum number of opt-in beneficiaries required. Rather, we would consider whether, in total, the ACO's assigned beneficiary population (comprised of beneficiaries who opt-in, beneficiaries assigned under the modified claims-based assignment approach, and beneficiaries that have voluntarily aligned) meets the minimum population size of 5,000 assigned beneficiaries each performance year to comply with the requirements for continued participation in the program. To illustrate this hybrid assignment approach in determining performance year assignment: if an ACO has 2,500 beneficiaries assigned under the modified claims-based assignment approach who have not otherwise opted-in to assignment to the ACO, and 50 voluntarily aligned beneficiaries who have not otherwise opted-in to assignment to the ACO, then the ACO would be required to have at least 2,450 beneficiaries who have opted-in to assignment to remain in compliance with the program eligibility requirement to have at least 5,000 assigned beneficiaries.

Consistent with current program policy, ACOs electing the opt-in based assignment methodology with a performance year assigned population below the 5,000-minimum may be subject to the pre-termination actions in § 425.216 and termination of their participation agreement under § 425.218. Under the proposals for modifying the MSR/MLR to address small population sizes described in section II.A.6.3. of this proposed rule, if an ACO that elects an opt-in based assignment methodology has an assigned population below 5,000 beneficiaries, the ACO's MSR/MLR would be set at a level consistent with

the number of assigned beneficiaries to provide assurance that shared savings and shared losses represent meaningful changes in expenditures rather than normal variation.

As an alternative approach, we also considered requiring ACOs that have elected an opt-in based assignment methodology to maintain at least a minimum number of opt-in beneficiaries assigned in each performance year of its agreement period. We believe that any minimum population requirement should be proportional to the size of ACO's population, to recognize differences in the population sizes of ACOs across the program. We also considered whether we should require incremental increases in the size of the ACO's opt-in assigned population over the course of the ACO's agreement period, recognizing that it may take time for ACOs to implement the opt-in approach and for beneficiaries to opt-in. Another factor we considered is the possibility that the size of an ACO's population, and therefore the proportion of opt-in beneficiaries, could be affected by ACO participant list changes, and changes in the ACO providers/suppliers billing through ACO participant TINs, which could affect claims-based assignment, and the size of the ACO's voluntarily aligned population. Changes in the size of the ACO's claims-based assigned and voluntarily aligned populations could cause the ACO to fall out of compliance with a required proportion of opt-in assigned beneficiaries, even if there has been no reduction in the number of opt-in assigned beneficiaries.

Under opt-in based assignment, we anticipate that we would not establish restrictions on the geographic locations of the ACOs from which a beneficiary could select. This would be consistent with the program's voluntary alignment process, under which a beneficiary could chose to designate a primary clinician as being responsible for his or her care even if this clinician is geographically distant from the beneficiary's place of residence. Also, currently under the program's existing claims-based assignment methodology, beneficiaries who receive care in different parts of the country during the assignment window can be assigned to an ACO that is geographically distant from the beneficiary's place of residence. This approach also recognizes that a beneficiary could be assigned to a geographically distant ACO as a result of his or her individual circumstances, such as a beneficiary's change in place of residence, beneficiary spends time in and receives care in different parts of the country during the year (sometimes referred to as being a ''snowbird''), or the beneficiary receives care from a tertiary care facility that is geographically distant from his or her home. Further, this approach is in line with the expanded telehealth policies discussed in section II.B of this proposed rule under which certain geographic and other restrictions would be removed. We welcome comment on whether to establish geographic limitations on opt-in based assignment such that a beneficiary's choice of ACOs for opt-in would be limited to ACOs located near the beneficiary's place of residence, or where the beneficiary receives his or her care, or a combination of both.

When considering the options for incorporating an opt-in based assignment methodology, we considered if such a change in assignment methodology would also require changes to the proposed benchmarking methodology under § 425.601. A hybrid assignment approach could potentially require modifications to the benchmarking methodology to account for factors such as: Differences in beneficiary characteristics, including health status, between beneficiaries who may be amenable to opting-in to assignment to an ACO, beneficiaries who voluntarily align, and beneficiaries assigned under a modified claims-based assignment methodology who must have received at least seven primary care services from the ACO; differences between the existing claims-based assignment methodology and the alternative claims-based approach under which a minimum of seven primary care services would be required for assignment; and discrepancies caused by the use of the existing claims-based assignment methodology to perform assignment for historical benchmark years and the use of a hybrid assignment methodology for performance years. For simplicity, we prefer an approach that would use, to the greatest extent possible, the program's benchmarking methodology, as proposed to be modified as discussed in section II.D. of this proposed rule. This would allow us to more rapidly implement an opt-in based assignment approach, and may be easier to understand for ACOs and other program stakeholders experienced with the program's benchmarking methodology. We considered the following approach to establishing and adjusting the historical benchmark for ACOs that elect an opt-in based assignment methodology.

In establishing the historical benchmark for ACOs electing an opt-in based beneficiary assignment methodology, we would follow the benchmarking approach described in the provisions of the proposed new regulation at § 425.601. In particular, we would continue to determine benchmark year assignment based on the population of beneficiaries that would have been assigned to the ACO under the program's existing assignment methodology in each of the 3 most recent years prior to the start of the ACO's agreement period. However, we would take a different approach to annually risk adjusting the historical benchmark expenditures than what is proposed in section II.D and in the proposed provisions at §§ 425.605(a)(1) and 425.610(a)(2).

In risk adjusting the historical benchmark for each performance year, we would maintain the current approach of categorizing beneficiaries by Medicare enrollment type; however, we would further stratify the benchmark year 3 and performance year assigned populations into groups that we anticipate would have comparable expenditures and risk score trends. That is, we would further stratify the performance year population into two categories: (1) Beneficiaries who are assigned using the modified claims-based assignment methodology and must have received seven or more primary care services from ACO professionals and who have not also opted-in to assignment to the ACO; and (2) beneficiaries who opt-in and beneficiaries who voluntarily align. A beneficiary who has opted-in to assignment to the ACO would continue to be stratified in the opted in population throughout the agreement period regardless of whether the beneficiary would have been assigned using the modified claims-based assignment methodology because the beneficiary received seven or more primary care services from the ACO.

We would also further stratify the BY3 population, determined using the existing assignment methodology, into two categories: (1) Beneficiaries who received seven or more primary care services from the ACO; and (2) beneficiaries who received six or fewer primary care services from the ACO.

We anticipate that beneficiaries who opt-in would likely be a subset of beneficiaries who would have been assigned under the existing claims-based assignment methodology. As previously described, 92 percent of voluntarily aligned beneficiaries were already assigned to the same ACO using the existing claims-based assignment methodology. Further, based on our experience with the program about 75 percent of ACOs' assigned beneficiaries receive six or fewer primary care service

visits annually. Similar to the trend we observed with voluntarily aligned beneficiaries, we believe the opt-in beneficiaries would tend to resemble in health status and acuity a subset of the ACO's typical claims-based assigned population; that is, we anticipate opt-in beneficiaries, as with voluntarily aligned beneficiaries, would resemble the population of beneficiaries assigned in the benchmark year that received six or fewer primary care services.

We would determine ratios of risk scores for the comparable populations of performance year and BY3 assigned beneficiaries. We would calculate these risk ratios by comparing the risk scores for the BY3 population with seven or more primary care services with the risk scores for the performance year population with seven or more primary care services who have not otherwise opted-in or voluntarily aligned. We would also calculate risk ratios for the remaining beneficiary population by comparing risk scores for the BY3 population with six or fewer primary care services with the risk scores for the performance year population of opt-in and voluntarily aligned beneficiaries. We would use these ratios to risk adjust the historical benchmark expenditures not only by Medicare enrollment type, but also by these stratifications. That is, for each Medicare enrollment type, we would apply risk ratios comparing the risk scores of the BY3 population with seven or more primary care services and the risk scores of the performance year population with seven or more primary care services to adjust the historical benchmark expenditures for the population with seven or more primary care services in the benchmark period. Similarly, we would apply risk ratios comparing the risk scores of the BY3 population with six or fewer primary care services and the risk scores of the performance year opt-in or voluntarily aligned population to adjust the historical benchmark expenditures for the population with six or fewer primary care services in the benchmark period. We presume this is a reasonable approach based on our expectation that opt-in beneficiaries will resemble the population of beneficiaries, assigned under the existing claims-based assignment methodology, who have 6 or fewer primary care services with the ACO annually. This is supported by the assumptions that ACOs may selectively market opt-in to lower cost beneficiaries, and beneficiaries that require less intensive and frequent care may be more inclined to opt-in. However, since we lack experience with an opt-in based assignment approach, we would monitor the effects of this policy to determine if it is effective in addressing the differences in characteristics between the population assigned for establishing the ACO's benchmark under the existing assignment methodology and the population assigned for the performance year under the hybrid assignment approach, and if further adjustments may be warranted such as additional adjustments to the historical benchmark to account for such differences.

In rebasing the ACO's benchmark, which occurs at the start of each new agreement period, we would include in the benchmark year assigned population beneficiaries who were opted in to the ACO in a prior performance year that equates to a benchmark year for the ACO's new agreement period. For example if an ACO elected opt-in for a 5-year agreement period beginning January 1, 2020 and concluding December 31, 2024, and a beneficiary opted in and was assigned for 2023 and remained opted in and assigned for 2024, we would include this beneficiary in the benchmark year assigned population for BY2 (2023) and BY3 (2024) when we rebase the ACO for its next agreement period beginning January 1, 2025. We considered that the health status of an opt-in beneficiary may continue to change over time as the beneficiary ages, which would be accounted for in our use of full CMS–HCC risk scores in risk adjusting the rebased historical benchmark. We considered approaches to further adapt the rebasing methodology to account for the characteristics of the ACO's opt-in beneficiaries, and the ACO's experience with participating in an opt-in based assignment methodology.

We considered an approach under which we could determine the assigned population for the ACO's rebased benchmark using the program's existing assignment methodology and incorporate opt-in assigned beneficiaries in the benchmark population. In risk adjusting the ACO's rebased benchmark each performance year, we could use a stratification approach similar to the approach previously described in this discussion. That is we would stratify the BY3 population into two categories: (1) Beneficiaries who received seven or more primary care services from the ACO; and (2) beneficiaries who received six or fewer primary care services from the ACO. We would categorize opt-in beneficiaries, assigned in BY3, into either one of these categories based on the number of primary care services they received from ACO during BY3. We could continue to stratify the performance year population assigned under the hybrid assignment methodology into two categories: (1) Beneficiaries who are assigned using the modified claims-based assignment methodology and must have received seven or more primary care services from ACO professionals and who have not also opted-in to assignment to the ACO; and (2) beneficiaries who opt-in and beneficiaries who voluntarily align. We would apply risk ratios comparing the risk scores of the BY3 population with seven or more primary care services and the risk scores of the performance year population with seven or more primary care services to adjust the historical benchmark expenditures for the population with seven or more primary care services in the benchmark period. Similarly, we would apply risk ratios comparing the risk scores of the BY3 population with six or fewer primary care services and the risk scores of the performance year opt-in or voluntarily aligned population to adjust the historical benchmark expenditures for the population with six or fewer primary care services in the benchmark period.

An alternative approach to rebasing the benchmark for an ACO that elected opt-in assignment in their most recent prior agreement period and continues their participation in an opt-in based assignment methodology in their new agreement period, would be to use the hybrid assignment approach to determine benchmark year assignment. To risk adjust the benchmark each performance year we could then stratify the BY3 and the performance year assigned populations into two categories: (1) Beneficiaries assigned through the modified claims-based assignment methodology who received seven or more primary care services from the ACO; or (2) beneficiaries who opt-in and beneficiaries who voluntarily align. This approach would move ACOs to participation under a purely hybrid assignment approach since we would no longer use the existing assignment methodology in establishing the benchmark. However, this approach could result in smaller benchmark year assigned populations compared to populations determined based on the more inclusive, existing assignment methodology. In turn, this approach could result in ACOs that were successful at opting-in beneficiaries being ineligible to continue their participation in the program under an opt-in assignment methodology because they do not meet the program's eligibility requirement to have at least 5,000 beneficiaries assigned in each benchmark year.

In section II.D. of this proposed rule, we propose that annual adjustments in prospective CMS–HCC risk scores would be subject to a symmetrical cap of positive or negative 3 percent that would apply for the agreement period, such that the adjustment between BY3 and any performance year in the agreement period would never be more than 3 percent in either direction. We are considering whether a modified approach to applying these caps would be necessary for ACOs that elect opt-in based assignment methodology. For example, for the first performance year an opted-in beneficiary is assigned to an ACO, we could allow for full upward or downward CMS–HCC risk adjustment, thereby excluding these beneficiaries from the symmetrical risk score caps. This would allow us to account for newly opted-in beneficiaries' full CMS–HCC scores in risk adjusting the benchmark. In each subsequent performance year, the opted-in beneficiaries remain aligned to the ACO, we could use an asymmetrical approach to capping increases and decreases in risk scores. We would cap increases in the opt-in beneficiaries' CMS–HCC risk scores to guard against changes in coding intensity, but we would apply no cap to decreases in their CMS–HCC risk scores. That is, the risk scores for these opt-in beneficiaries would be subject to the positive 3 percent cap, but not the negative 3 percent cap. We believe this approach would safeguard against ACOs trying to enroll healthy beneficiaries, who would likely be less expensive than their benchmark population, in order to benefit from having a limit on downward risk adjustment. Beneficiaries who have not otherwise opted-in who are assigned to the ACO based on the modified claims-based assignment methodology and those that voluntarily align would be subject to the proposed symmetrical 3 percent cap. We note that we do not apply caps to risk scores when we rebase an ACO's historical benchmark, which allows the historical benchmark to reflect the current health status of the beneficiary populations assigned for the benchmark years.

As indicated in the alternatives considered section of the Regulatory Impact Analysis (see section IV.D of this proposed rule), there is limited information presently available to model the behavioral response to an opt-in based assignment methodology, for example in terms of ACOs' willingness to elect such an approach and beneficiaries' willingness to opt-in. Although for some policies we can draw upon our initial experience with implementing voluntary alignment. We believe the approach to adjusting benchmarks to address an opt-in based assignment methodology, as discussed in this proposed rule, could address our concerns about the comparability of benchmark and performance year populations. If such a policy were finalized we would monitor the impact of these adjustments on ACOs' benchmarks, and we would also monitor to determine ACOs' and beneficiaries' response to the opt-in based assignment participation option, characteristics of opt-in beneficiaries and the ACOs they are assigned to, and the cost and quality trends of opt-in beneficiaries to determine if further development to the program's financial methodology would be necessary to account for this approach.

If we were to establish an opt-in based assignment methodology, we anticipate that we would also need to establish program integrity requirements similar to the program integrity requirements with respect to voluntary alignment at § 425.402(e)(3). The ACO, ACO participants, ACO providers/suppliers, ACO professionals, and other individuals or entities performing functions and services related to ACO activities would be prohibited from providing or offering gifts or other remuneration to Medicare beneficiaries as inducements to influence their decision to opt-in to assignment to the ACO. The ACO, ACO participants, ACO providers/suppliers, ACO professionals, and other individuals or entities performing functions and services related to ACO activities would also be prohibited from directly or indirectly, committing any act or omission, or adopting any policy that coerces or otherwise influences a Medicare beneficiary's decision to opt-in to assignment to an ACO. Offering anything of value to a Medicare beneficiary as an inducement to influence the Medicare beneficiary's decision to opt-in (or not opt-in) to assignment to the ACO would not be considered to have a reasonable connection to the medical care of the beneficiary, as required under the proposed provision at § 425.304(b)(1).

Finally, we would emphasize that, as is the case for all FFS beneficiaries currently assigned to an ACO on the basis of claims or voluntary alignment, under an opt-in based assignment methodology, beneficiaries who opt-in to assignment to an ACO would retain their right to seek care from any Medicare-enrolled provider or supplier of their choosing, including providers and suppliers outside the ACO.

We are soliciting comment on whether we should offer ACOs an opportunity to voluntarily choose an alternative beneficiary assignment methodology under which an ACO could elect to have beneficiaries assigned to the ACO based on a beneficiary opt-in methodology supplemented by voluntary alignment and a modified claims-based assignment methodology. We welcome comments as to whether it would be appropriate to establish a minimum threshold number of primary care services, such as seven primary care services, for purposes of using claims to assign beneficiaries to ACOs electing an opt-in based assignment methodology to enable these ACOs to focus their care coordination efforts on those beneficiaries who have either opted-in to assignment to or voluntarily aligned with the ACO, or who are receiving a high number of primary care services from ACO professionals, and may have complex conditions requiring a significant amount of care coordination. We seek comment on whether this minimum threshold for use in determining modified claims-based assignment should be set at a higher or lower. We also welcome comments on an appropriate methodology for establishing and adjusting an ACO's historical benchmark under an opt-in based assignment methodology. Further, we seek comment on how to treat opt-in beneficiaries when rebasing the historical benchmark for renewing ACOs. Additionally, we welcome comments on any other considerations that might be relevant to adopting a methodology under which beneficiaries may opt-in to assignment to an ACO, including ways to minimize burden on beneficiaries, ACOs, ACO participants, and ACO providers/suppliers and avoid beneficiary confusion.

We have envisioned that if we were to incorporate such an opt-in based assignment methodology, the election by ACOs would be entirely voluntary. ACOs that did not elect this beneficiary assignment option would continue to have their beneficiaries assigned using the existing claims-based assignment methodology with voluntary alignment under § 425.402. However, we also seek comment on whether we should discontinue the existing assignment methodology under subpart E and instead assign beneficiaries to all ACOs using a hybrid assignment methodology, which would incorporate opt-in based assignment and the modified claims-based assignment methodology, as well as voluntary alignment. Under such an approach, the use of a modified

benchmarking methodology could help to ensure that an appropriate weight would be placed on the risk-adjusted expenditures of the ACO's opt-in population as this population increases in size.

D. Benchmarking Methodology Refinements

1. Background

An ACO's historical benchmark is calculated based on expenditures for beneficiaries that would have been assigned to the ACO in each of the 3 calendar years prior to the start of the agreement period (§§ 425.602(a), 425.603(b) and (c)). For ACOs that have continued their participation for a second or subsequent agreement period, the benchmark years for their current agreement period are the 3 calendar years of their previous agreement period.

There are currently differences between the methodology used to establish the ACO's first agreement period historical benchmark (§ 425.602) and the methodology for establishing the ACO's rebased historical benchmark in its second or subsequent agreement period (§ 425.603). We refer readers to discussions of the benchmark calculations in earlier rulemaking for details on the development of the current policies (see November 2011 final rule, 76 FR 67909 through 67927; June 2015 final rule, 80 FR 32785 through 32796; June 2016 final rule, 81 FR 37953 through 37991). For example, in resetting (or rebasing) an ACO's historical benchmark, we replace the national trend factor (used in in the first agreement period methodology) with regional trend factors, and we use a phased approach to adjust the rebased benchmark to reflect a percentage of the difference between the ACO's historical expenditures and FFS expenditures in the ACO's regional service area. This rebasing methodology incorporating factors based on regional FFS expenditures was finalized in the June 2016 final rule and is used to establish the benchmark for ACOs beginning a second or subsequent agreement period in 2017 and later years. An interim approach was established in the June 2015 final rule under which we adjusted the rebased benchmarks for ACOs that entered a second agreement period beginning in 2016 to account for savings generated in their first agreement period (§ 425.603(b)(2)).

In developing the June 2016 final rule, we considered the weight that should be applied in calculating the regional adjustment to an ACO's historical expenditures. We finalized a phased approach to transition to a higher weight in calculating the regional adjustment, where we determine the weight used in the calculation depending on whether the ACO is found to have lower or higher spending compared to its regional service area (§ 425.603(c)(9)). For ACOs that have higher spending compared to their regional service area, the weight placed on the regional adjustment is reduced to 25 percent (compared to 35 percent) in the first agreement period in which the regional adjustment is applied, and 50 percent (compared to 70 percent) in the second agreement period in which the adjustment is applied. Ultimately a weight of 70 percent will be applied in calculating the regional adjustment for all ACOs beginning no later than the third agreement period in which the ACO's benchmark is rebased using this methodology, unless the Secretary determines that a lower weight should be applied.

The annual update to the ACO's historical benchmark also differs for ACOs in their first versus second or subsequent agreement periods. In an ACO's first agreement period, the benchmark is updated each performance year based solely on the absolute amount of projected growth in national FFS spending for assignable beneficiaries (§ 425.602(b)). Although section 1899(d)(1)(B)(ii) of the Act requires us to update the benchmark using the projected absolute amount of growth in national per capita expenditures for Medicare Parts A and B services, we used our authority under section 1899(i)(3) of the Act to adopt an alternate policy under which we calculate the national update based on assignable beneficiaries, a subset of the Medicare FFS population as defined under § 425.20. For ACOs in a second or subsequent agreement period (beginning in 2017 and later years), we update the rebased benchmark annually to account for changes in FFS spending for assignable beneficiaries in the ACO's regional service area (§ 425.603(d)). We also used our authority under section 1899(i)(3) of the Act to adopt this alternate update factor based on regional FFS expenditures.

For all ACOs, at the time of reconciliation for each performance year, we further adjust the benchmark to account for changes in the health status and demographic factors of the ACO's performance year assigned beneficiary population (§§ 425.602(a)(9), 425.603(c)(10)). We use separate methodologies to risk-adjust the benchmark for populations of newly assigned and continuously assigned beneficiaries. For newly assigned beneficiaries, we use CMS–HCC prospective risk scores to adjust for changes in severity and case mix. We use demographic factors to adjust for changes in the health status of beneficiaries continuously assigned to the ACO. However, if the CMS–HCC prospective risk scores for the ACO's continuously assigned population decline, CMS will adjust the benchmark to reflect changes in severity and case mix for this population using the lower CMS–HCC prospective risk score. CMS–HCC prospective risk scores are based on diagnoses from the prior calendar year, as well as demographic factors.

2. Risk Adjustment Methodology for Adjusting Historical Benchmark Each Performance Year

a. Background

When establishing the historical benchmark, we use the CMS–HCC prospective risk adjustment model to calculate beneficiary risk scores to adjust for changes in the health status of the population assigned to the ACO. The effect of this policy is to apply full CMS–HCC risk adjustment to account for changes in case mix in the assigned beneficiary population between the first and third benchmark years and between the second and third benchmark years. For consistency, this approach is also used in adjusting the historical benchmark to account for changes to the ACO's certified ACO participant list for performance years within an agreement period and when resetting the ACO's historical benchmark for its second or subsequent agreement period. See §§ 425.602(a)(3) and (8), 425.603(c)(3) and (8); see also Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications (May 2018, version 6) available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-guidance-and-specifications.html.* Further, we use full CMS–HCC risk adjustment when risk adjusting county level FFS expenditures and to account for differences between the health status of the ACO's assigned population and the assignable beneficiary population in the ACO's regional service area as part of the methodology for adjusting the ACO's rebased historical benchmark to reflect regional FFS expenditures in the ACO's regional service area (see § 425.603(c)(9)(i)(C), (e)).

To account for changes in beneficiary health status between the historical benchmark period and the performance year, we perform risk adjustment using a methodology that differentiates

between newly assigned and continuously assigned beneficiaries, as defined in § 425.20. As specified under §§ 425.604(a), 425.606(a), and 425.610(a), we use CMS–HCC prospective risk scores to account for changes in severity and case mix for newly assigned beneficiaries between the third benchmark year (BY3) and the performance year. We use demographic factors to adjust for these changes in continuously assigned beneficiaries. However, if the CMS–HCC prospective risk scores for the continuously assigned population are lower in the performance year, we use the lower CMS–HCC prospective risk scores to adjust for changes in severity and case mix in this population. As we described in earlier rulemaking, this approach provides a balance between accounting for actual changes in the health status of an ACO's population while limiting the risk due to coding intensity shifts—that is, efforts by ACOs, ACO participants and/or ACO providers/suppliers to find and report additional beneficiary diagnoses so as to increase risk scores—that would artificially inflate ACO benchmarks (see for example, 81 FR 38008).

As described in the Shared Savings and Losses and Assignment Methodology specifications referenced previously in this section, all CMS–HCC and demographic beneficiary risk scores used in financial calculations for the Shared Savings Program are renormalized to ensure that the mean risk score among assignable beneficiaries in the national FFS population is equal to one. Renormalization helps to ensure consistency in risk scores from year to year, given changes made to the underlying risk score models. All risk adjustment calculations for the Shared Savings Program, including risk score renormalization, are performed separately for each Medicare enrollment type (ESRD, disabled, aged/dual eligible for Medicare and Medicaid, and aged/non-dual eligible for Medicare and Medicaid).

In practice, to risk adjust expenditures from one year to another, we multiply the expenditures that are to be adjusted by the quotient of two renormalized risk scores, known as the risk ratio. For example, to risk adjust the expenditures for an ACO's assigned beneficiary population from the first benchmark year to the third, we multiply benchmark year 1 (BY1) expenditures, by a risk ratio equal to the mean renormalized risk score among the ACO's assigned beneficiaries in benchmark year 3 (BY3) divided by the mean renormalized risk score among the ACO's assigned beneficiaries in BY1. One percent growth in renormalized risk scores between 2 years would be expressed by a risk ratio of 1.010. This ratio reflects growth in risk for the ACO's assigned beneficiary population relative to that of the national assignable population.

ACOs and other program stakeholders have expressed various concerns about the methodology for risk adjusting an ACO's benchmark each performance year, as described in comments on previous rulemaking (see 76 FR 67916 through 67919, 80 FR 32777 through 32778, 81 FR 37962 through 37968). We refer readers to these earlier rules for more detailed discussions of the issues raised by stakeholders. A common concern raised is that the current risk adjustment methodology does not adequately adjust for changes in health status among continuously assigned beneficiaries between the benchmark and performance years. Commenters have argued that the lack of upward CMS–HCC risk adjustment in response to increased patient acuity makes it harder for ACOs to realize savings and serves as a barrier to more ACOs taking on performance-based risk.

Stakeholders have also raised concerns that the current methodology, under which risk adjustment is performed separately for newly and continuously assigned beneficiaries, creates uncertainty around benchmarks. One commenter in prior rulemaking described the policy as rendering the role of risk scores ''opaque'', making it difficult for ACOs to anticipate how risk scores may affect their financial performance (81 FR 37968). We have attempted to increase transparency around the program's risk adjustment process by providing beneficiary-level risk score information in quarterly and annual reports, as well as by providing detailed explanations of the risk adjustment calculations to ACOs through webinars. However, despite these efforts, concerns about transparency remain, as evidenced by the many requests for technical assistance from ACOs related to risk adjustment.

b. Proposed Revisions

We appreciate the concerns regarding our current risk adjustment methodology raised by stakeholders, who have indicated that the current approach may not adequately recognize negative changes in health status that occur at the individual beneficiary level, particularly among continuously assigned beneficiaries who have experienced an acute event, such as a heart attack, stroke, or hip fracture, between the third benchmark year and the applicable performance year. We recognize that such acute events, which almost always require a hospitalization, are likely to have an upward impact on CMS–HCC risk scores that is not attributable to provider coding initiatives.

At the same time, we remain concerned that CMS–HCC risk scores, in general, are susceptible to increased diagnostic coding efforts. As noted previously, we employ full CMS–HCC risk adjustment when establishing an ACO's historical benchmark for its first agreement period, when adjusting the benchmark to account for participant list changes within an agreement period, and when resetting the benchmark for a second or subsequent agreement period, as we believe that doing so improves the accuracy of the benchmark. We have observed evidence of a modest increase in diagnostic coding completeness in the benchmark period for ACOs in their second agreement period (rebased ACOs). Simulation results suggest that rebased ACOs were more likely to benefit from full CMS–HCC risk adjustment in the benchmark period than were ACOs in a first agreement period. For rebased ACOs, the benchmark period coincides with their first agreement period in the Shared Savings Program, a time when these ACOs and their ACO participants and ACO providers/suppliers had an incentive to engage in increased coding so as to maximize their performance year risk scores, as well as their rebased benchmark in the next agreement period. ACOs in a first agreement period would have had less incentive to encourage their ACO participants and ACO providers/suppliers to engage in coding initiatives during the benchmark period as it took place before they entered the program. We recognize, however, that increased coding by ACO participants and ACO providers/suppliers may also reflect efforts to facilitate care coordination, quality improvement, and population management activities which require more complete clinical information at the point of care.

We also acknowledge that our current approach to risk adjustment for the performance year makes it difficult for ACOs to predict how their financial performance may be affected by risk adjustment. The current approach involves multiple steps including identifying newly and continuously assigned beneficiaries for each ACO for both the performance year and BY3, computing mean CMS–HCC risk scores for both populations and mean demographic risk scores for the continuously assigned beneficiary

population by Medicare enrollment type, conducting a test to determine whether an ACO will receive CMS–HCC or demographic risk adjustment for its continuously assigned population, and determining and applying the risk ratios used to adjust benchmark expenditures for the performance year. Although we have made efforts to explain these steps in detail through our program specifications, report documentation, and webinars, and have made beneficiary-level risk score data available, we frequently receive requests for technical assistance in this area suggesting that the methodology is still not entirely clear to ACOs.

To balance these competing concerns, we considered policies that would allow for some upward growth in CMS–HCC risk scores between the benchmark period and the performance year, while still limiting the impact of ACO coding initiatives, and also provide greater clarity for ACOs than the current methodology. In contemplating alternative policies, we also considered lessons learned from other CMS initiatives, including models tested by the Innovation Center. Finally, as we wish to encourage ACOs to take on higher levels of risk, we considered the importance of adopting a balanced risk adjustment methodology that provides ACOs with some protection against decreases in risk scores.

Our preferred approach would eliminate the distinction between newly and continuously assigned beneficiaries. We would use full CMS–HCC risk adjustment for all assigned beneficiaries between the benchmark period and the performance year, subject to a symmetrical cap of positive or negative 3 percent for the agreement period, which would apply such that the adjustment between BY3 and any performance year in the agreement period would never be more than 3 percent in either direction. In other words, the risk ratios applied to historical benchmark expenditures to capture changes in health status between BY3 and the performance year would never fall below 0.970 nor be higher than 1.030 for any performance year over the course of the agreement period. As is the case under the current policy, risk adjustment calculations would still be carried out separately for each of the four Medicare enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) and CMS–HCC prospective risk scores for each enrollment type would still be renormalized to the national assignable beneficiary population for that enrollment type before the cap is applied. Table 11 provides an illustrative example of how the cap would be applied to the risk ratio used to adjust historical benchmark expenditures to reflect changes in health status between BY3 and the performance year, for any performance year in the agreement period:

TABLE 11—HYPOTHETICAL DATA ON APPLICATION OF AGREEMENT PERIOD CAP ON PY TO BY3 RISK RATIO

Medicare enrollment type	BY3 renormalized CMS–HCC risk score	PY renormalized CMS–HCC risk score	Risk ratio before applying cap	Final risk ratio
ESRD	1.031	1.054	1.022	1.022
Disabled	1.123	1.074	0.956	0.970
Aged/dual eligible	0.987	1.046	1.060	1.030
Aged/non-dual eligible	1.025	1.001	0.977	0.977

In the example, the decrease in the disabled risk score and the increase in the aged/dual risk score would both be subject to the positive or negative 3 percent cap. Changes in the ESRD and aged/non-dual risk scores would not be affected by the cap; the ACO would receive full upward and downward adjustment, respectively, for these enrollment types.

This approach would provide full CMS–HCC risk adjustment for ACOs with changes in CMS–HCC risk below the cap, and a partial adjustment for ACOs with changes in CMS–HCC risk above the cap. Initial modeling suggests that among the 239 ACOs that received demographic risk adjustment for their continuously assigned population under the current policy in PY 2016 (55 percent of the 432 total ACOs reconciled), around 86 percent would have received a larger positive adjustment to their benchmark had this policy been in place. Therefore, we believe this approach would more consistently account for worsening health status of beneficiaries compared to the current policy. This could reduce the incentive for ACOs to avoid complex patients and potentially lead more ACOs to accept higher levels of performance-based risk. However, because of the cap on the increase in CMS–HCC risk, we believe that this policy would continue to provide protection to the Medicare Trust Funds against unwarranted increases in CMS–HCC prospective risk scores that are due to increased coding intensity, by limiting the impact of such increases on ACO benchmarks.

By instituting a symmetrical cap, this preferred approach would also limit large decreases in CMS–HCC prospective risk scores across all assigned beneficiaries. We believe that such a balanced approach would provide ACOs with a greater incentive to assume performance-based risk than under the current methodology, which provides ACOs with no protection from risk score decreases. Among the 193 ACOs that received CMS–HCC risk adjustment under the current policy for their continuously assigned population in PY 2016, 69 percent would have received a smaller negative adjustment with the symmetrical 3 percent cap. We also believe that this approach, which mirrors one of the risk adjustment methodologies tested in the Next Generation ACO Model, has a significant advantage over the current Shared Savings Program policy in that it is more straightforward, making it easier for ACOs to understand and determine the impact of risk adjustment on their benchmark. ACOs would be subject to risk adjustment within a clearly defined range, allowing them to more easily predict their performance.

Our choice of 3 percent as the preferred level for the symmetrical cap is influenced by program experience. A review of CMS–HCC risk score trends among Shared Savings Program ACOs found that a 3 percent cap on changes in aged/non-dual CMS–HCC risk scores (the enrollment category that represents the majority of assigned beneficiaries for most ACOs) would limit positive risk adjustment for less than 30 percent of ACOs, even when there is a 5-year lapse between BY3 and the performance year, which would be the case in the final year of a 5 year agreement period under

the proposal discussed in section II.A.2 of this proposed rule (or a 6-year lapse for the final performance year of the agreement period for ACOs that start a new agreement period on July 1, 2019, under the proposal discussed in section II.A.7). A 3 percent symmetrical cap was also advocated by some commenters on the 2016 proposed rule, who encouraged the Shared Savings Program to adopt a risk adjustment model similar to the one being used by the Next Generation ACO Model (see 81 FR 37968). Although we believe that a 3 percent cap on changes in CMS–HCC risk scores is reasonable and appropriate, we also considered alternate levels for a cap or allowing full CMS–HCC risk adjustment with no cap at all. However, we are concerned that a lower cap would not offer enough ACOs meaningfully greater protection against health status changes relative to the current approach. At the same time, we are concerned that adopting a higher cap, or allowing for full, uncapped risk adjustment would not provide sufficient protection against potential coding initiatives.

After consideration of these alternatives, we are proposing to change the program's risk adjustment methodology to use CMS–HCC prospective risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries, subject to a symmetrical cap of positive or negative 3 percent for the agreement period for agreement periods beginning on July 1, 2019, and in subsequent years. The cap would reflect the maximum change in risk scores allowed in an agreement period between BY3 and any performance year in the agreement period. For ACOs participating in a 5 year and 6-month agreement period beginning on July 1, 2019, as discussed in section II.A.7 of this proposed rule, the cap would represent the maximum change in risk scores for the agreement period between BY3 and calendar year 2019 in the context of determining financial performance for the 6-month performance year from July 1, 2019 through December 31, 2019, as well as the maximum change in risk scores between BY3 and any of the subsequent five performance years of the agreement period. We would apply this approach to ACOs participating under the proposed BASIC track, as reflected in the proposed new section of the regulations at § 425.605, and to ACOs participating under the proposed ENHANCED track, as reflected in the proposed modifications to § 425.610. We seek comment on this proposal, including the level of the cap.

3. Use of Regional Factors When Establishing and Resetting ACOs' Benchmarks

a. Background

As described in the background for this section, we apply a regional adjustment to the rebased historical benchmark for ACOs entering a second or subsequent agreement period in 2017 or later years. This adjustment reflects a percentage of the difference between the regional FFS expenditures in the ACO's regional service area and the ACO's historical expenditures. The percentage used in calculating the adjustment is phased in over time, ultimately reaching 70 percent, unless the Secretary determines a lower weight should be applied and such lower weight is specified through additional notice and comment rulemaking.

In the June 2016 final rule, we laid out the steps used to calculate and apply the regional adjustment (see 81 FR 37963). These steps are recapped here:

- First, we calculate the ACO's rebased historical benchmark and regional average expenditures for the most recent benchmark year for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible), resulting in average per capita expenditure values for each of the Medicare enrollment types. The regional average expenditure amounts are adjusted for differences between the health status of the ACO's assigned beneficiary population and that of the assignable population in the ACO's regional service area.
- For each Medicare enrollment type, we then determine the difference between the average per capita regional amount and the average per capita amount of the ACO's rebased historical benchmark. These values may be positive or negative. For example, the difference between these values for a particular Medicare enrollment type will be expressed as a negative number if the value of the ACO's rebased historical benchmark expenditure for that Medicare enrollment type is greater than the regional average amount.
- Next, we multiply the resulting difference for each Medicare enrollment type by the applicable percentage weight used to calculate the amount of the regional adjustment for that agreement period. The products (one for each Medicare enrollment type) resulting from this step are the amounts of the regional adjustments that will be applied to the ACO's historical benchmark.
- We then apply the adjustment to the ACO's rebased historical benchmark by adding the adjustment amount for the Medicare enrollment type to the ACO's rebased historical benchmark expenditure for the same Medicare enrollment type.
- We next multiply the regionally-adjusted value of the ACO's rebased historical benchmark for each Medicare enrollment type by the proportion of the ACO's assigned beneficiary population for that Medicare enrollment type, based on the ACO's assigned beneficiary population for benchmark year 3.
- Finally, we sum expenditures across the four Medicare enrollment types to determine the ACO's regionally-adjusted rebased historical benchmark.

In the June 2016 final rule, we also detailed how the percentage weight used to calculate the regional adjustment will be phased in over time (see 81 FR 37971 through 37974). For the first agreement period in which this methodology applies, ACOs for which the weighted average adjustment across the enrollment types is positive (net positive adjustment) will receive a weight of 35 percent for all enrollment types (including individual enrollment types for which the adjustment is negative) and ACOs for which the weighted average adjustment is negative (net negative adjustment) will receive a weight of 25 percent for all enrollment types (including individual enrollment types for which the adjustment is positive). For the second agreement period in which the methodology applies, ACOs with a net positive adjustment will receive a weight of 70 percent for all enrollment types and ACOs with a net negative adjustment will receive a weight of 50 percent for all enrollment types. By the third agreement period in which the methodology applies, ACOs with either a net positive or a net negative adjustment will receive a weight of 70 percent for all enrollment types, unless the Secretary determines that a lower weight should be applied.

This regional adjustment is one of three ways in which regional expenditures are currently incorporated into the program's methodology for resetting the historical benchmark for an ACO's second or subsequent agreement period. We also use regional, instead of national, trend factors for each enrollment type to restate BY1 and BY2 expenditures in BY3 terms when calculating the rebased benchmark, and we use regional update factors to update the regionally-adjusted rebased

historical benchmark to the performance year at the time of financial reconciliation. As described in the June 2016 final rule (81 FR 37977 through 37981), we used our statutory authority under section 1899(i)(3) of the Act to adopt a policy under which we update the benchmark using regional factors in lieu of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program as required under section 1899(d)(1)(B)(ii) of the Act.

The regional trend factors used to calculate an ACO's rebased benchmark and the regional update factors used to update the benchmark to the performance year represent growth rates in risk-adjusted FFS expenditures among assignable beneficiaries in the ACO's regional service area, including beneficiaries assigned to the ACO. An ACO's regional service area is defined at § 425.20 as all counties in which at least one of the ACO's assigned beneficiaries resides. To calculate expenditures used in determining the regional adjustment and the trend and update factors, we first calculate risk-adjusted FFS expenditures among assignable beneficiaries for each county in the ACO's regional service area and then weight these amounts by the proportion of the ACO's assigned beneficiaries residing in each county, with all calculations performed separately by Medicare enrollment type (ESRD, disabled, aged/dual, aged/non-dual).

In the June 2016 final rule, we discussed the benefits that we believe to be associated with incorporating regional expenditures into ACO benchmarks. We explained, for example, that the incorporation of regional expenditures provides an ACO with a benchmark that is more reflective of FFS spending in the ACO's region than a benchmark based solely on the ACO's own historical expenditures (see 81 FR 37955). We believe that this approach creates stronger financial incentives for ACOs that have been successful in reducing expenditures to remain in the program, thus improving program sustainability. Many commenters expressed support for the approach, citing it as an improvement over the existing rebasing methodology (see 81 FR 37956). In the June 2016 final rule, we also discussed how using regional trend and update factors would allow us to better capture the cost experience in the ACO's region, the health status and socio-economic dynamics of the regional population, and location-specific Medicare payments when compared to using national FFS expenditures (see 81 FR 37976 through 37977). In that rule, we stated our intention to explore the possibility of incorporating regional expenditures, including the regional adjustment and regional trend and update factors, in the benchmark established for an ACO's first agreement period (see 81 FR 37973). In section II.D.3.b of this proposed rule, we discuss our proposals for incorporating regional expenditures into the benchmarks for ACOs in their first agreement period under the program.

We also acknowledged in the June 2016 final rule that the incorporation of regional expenditures into ACO benchmarks can have differential effects depending on an ACO's individual circumstances (see 81 FR 37955). For example, ACOs with low historical expenditures relative to their regional service area will see their rebased historical benchmark increase due to the regional adjustment, whereas the benchmarks for higher spending ACOs will be reduced. One concern is that, as the higher weights for the regional adjustment are phased in over time, the benchmarks for low-spending ACOs may become overly inflated to the point where these organizations need to do little to maintain or change their practices to generate savings. For higher-spending ACOs, there is the concern that a negative regional adjustment will discourage program participation or discourage these ACOs from caring for complex, high-cost patients. There is also concern about the longer-term effects on participation resulting from lower trend and update factors among ACOs that have had past success in reducing expenditures and that serve a high proportion of the beneficiaries within certain counties in their regional service area. In sections II.D.3.c and II.D.3.d of this proposed rule, we discuss proposals designed to mitigate these concerns.

b. Proposals To Apply Regional Expenditures in Determining the Benchmark for an ACO's First Agreement Period

A number of stakeholders offering comments on the February 2016 proposed rule advocated for extending the policies incorporating regional expenditures proposed for determining the rebased benchmarks for ACOs entering a second or subsequent agreement period under the program to the methodology for establishing the benchmarks for ACOs in their first agreement period under the program (see 81 FR 37971). While we declined to modify the methodology used to establish benchmarks for ACOs in a first agreement period to incorporate regional expenditures as part of the June 2016 final rule, we did signal our intention to explore this matter further after gaining experience with the new rebasing methodology (see 81 FR 37973).

Since the publication of the June 2016 final rule we have employed the new methodology to determine rebased benchmarks for ACOs starting second agreement periods in 2017 and 2018. This experience has reinforced our belief that a benchmarking methodology that incorporates regional expenditures, in addition to an ACO's own historical expenditures, is important for the sustainability of the program. For agreement periods starting in 2017, for example, we found that around 80 percent of ACOs receiving a rebased benchmark benefitted from receiving a regional adjustment. Having observed variation across ACO regional service areas, we also maintain that the incorporation of regional expenditure trends can lead to more accurate benchmarks that better reflect experience in ACOs' individual regions than benchmarks computed solely using national factors. We believe that introducing regional expenditures into the benchmarking methodology for ACOs in a first agreement period, as has been recommended by stakeholders, would serve to further strengthen the incentives under the program, improve program sustainability, and increase the accuracy of benchmark calculations for new ACOs by making their benchmarks more reflective of the regional environment in which these organizations operate. We also believe that adopting a more consistent benchmarking methodology would provide greater simplicity and more predictability for ACOs. Under this approach, ACOs entering the program would only be required to familiarize themselves with a single benchmarking methodology that would apply for all agreement periods under the program.

For the above reasons, we are proposing to incorporate regional expenditures into the benchmarking methodology for ACOs in a first agreement period for all ACOs entering the program beginning on July 1, 2019 and in subsequent years. Under this proposal, we would use almost the same methodology for determining the historical benchmarks for ACOs in their first agreement period as will apply for ACOs in their second or subsequent agreement period, including all policies proposed in this proposed rule, should they be finalized, regarding establishing the historical benchmark at the start of the agreement period, adjusting the historical benchmark for each

performance year within an agreement period, and updating the benchmark for each performance year (or for calendar year 2019 in the context of determining the financial performance of ACOs during the 6-month performance year from July 1, 2019 through December 31, 2019, as proposed in section II.A.7 of this proposed rule). The only distinction between the methodology that would be used to determine the historical benchmark for ACOs in their first agreement period and those in a second or subsequent agreement period would be the weights that are applied to the 3 benchmark years. Under this proposal we would continue to use weights of 10 percent, 30 percent, and 60 percent to weight the 3 benchmark years, respectively, when calculating the historical benchmark for an ACO in its first agreement period, rather than the equal weights that are used in resetting the benchmark for ACOs entering a second or subsequent agreement period. As described in the June 2015 final rule (80 FR 32787 through 32788), the use of equal weights when calculating the rebased benchmark was motivated by the concern that placing higher weights on the later benchmark years would reduce the incentive for ACOs that generate savings or that are trending positive in their first agreement period to participate in the program over the longer run, or reduce incentives for ACOs to achieve savings in the final year of their first agreement period. This concern is not relevant for ACOs in a first agreement period. Therefore, for these ACOs, we favor maintaining the existing weights, which we believe are more accurate because they capture the ACO's most recent experience in the benchmark period.

We propose to add a new provision at § 425.601 to the regulations that will describe how we will establish, adjust, update and reset historical benchmarks using factors based on regional FFS expenditures for all ACOs for agreement periods beginning on July 1, 2019 and in subsequent years. We seek comment on this proposal.

c. Proposals for Modifying the Regional Adjustment

In finalizing the phase-in structure for the original regional adjustment in the June 2016 final rule, we acknowledged that it might be necessary to reevaluate the effects of the regional adjustment on the Shared Savings Program and, if warranted, to modify the adjustment through additional rulemaking. Therefore, we adopted a policy under which the maximum weight to be applied to the adjustment would be 70 percent, unless the Secretary determines that a lower weight should be applied, as specified through future rulemaking (see 81 FR 37969 through 32974). Relevant considerations in determining the appropriate weight to be applied to the adjustment include, but are not limited to, effects on net program costs; the extent of participation in the program; and the efficiency and quality of care received by beneficiaries.

We have revaluated the effects of the regional adjustment as part of the regulatory impact analysis required for this proposed rule (see section IV) and have also taken into consideration our experience in applying the regional adjustment under the policies established in the June 2016 final rule. While we continue to believe that it is necessary to employ a benchmarking methodology that incorporates expenditures in an ACO's regional service area in addition to the ACO's own historical expenditures in order to maintain or improve program sustainability, we are concerned that, if unaltered, the regional adjustment will have unintended consequences and adverse effects on ACO incentives as discussed in the Regulatory Impact Analysis (section IV).

By design, the regional adjustment results in more generous benchmarks for ACOs that spend below their regions. As noted in section II.D.3.b of this proposed rule, our initial experience with the regional adjustment found that 80 percent of ACOs that renewed for a second agreement period starting in 2017 received a positive adjustment. These ACOs saw their benchmarks increase by 1.8 percent, on average, when the adjustment was applied with the 35 percent weight, with several ACOs seeing increases of over 5 percent, and one over 7 percent. Preliminary results for ACOs that renewed for a second agreement period starting in 2018 show a similar share of ACOs receiving a positive adjustment and one ACO seeing an adjustment of over 10 percent. As the weight applied to the regional adjustment increases, we are concerned that the benchmarks for the ACOs with the lowest spending relative to their region will become overly inflated to the point where they will need to do little to change their care practices to generate savings, which could reduce incentives for these ACOs to improve the efficiency of care provided to beneficiaries.

On the other hand, the regional adjustment reduces benchmarks for ACOs with higher spending compared to their region. Among 14 ACOs that received a net negative regional adjustment to their benchmark in 2017, the average reduction was 1.6 percent, with one ACO seeing a reduction of over 7 percent. These adjustments were calculated using only a 25 percent weight. Although preliminary results for ACOs that started a second agreement period in 2018 show slightly smaller negative adjustments, on average, we are concerned that the ACOs with the highest relative costs, some of which have targeted specific beneficiary populations that are inherently more complex and costly than the regional average, will find little value in remaining in the Shared Savings Program when faced with a significantly reduced benchmark as the weight applied to the adjustment increases.

To reduce the likelihood that the regional adjustment will have these undesired effects, we are proposing policies that would limit the magnitude of the adjustment by reducing the weight that is applied to the adjustment and imposing an absolute dollar limit on the adjustment. We believe that moderating the regional adjustment would lower potential windfall gains to lower-cost ACOs and could help to improve the incentive for higher-cost ACOs to continue to participate in the program.

First, we are proposing to amend the schedule of weights used to phase in the regional adjustment. Consistent with our current policy, the first time that an ACO is subject to a regional adjustment, we would apply a weight of 35 percent if the ACO's historical spending was lower than its region and a weight of 25 percent if the ACO's historical spending was higher than its region. The second time that an ACO is subject to a regional adjustment, we would apply a weight of 50 percent if the ACO's historical spending was lower than its region and 35 percent if the ACO's historical spending was higher than its region. The third or subsequent time that an ACO is subject to a regional adjustment we would apply a weight of 50 percent in all cases.

We wish to make two points related to the proposed schedule of weights clear. First, consistent with our current policy under § 425.603(c)(8) for determining the adjusted benchmark for the second or subsequent performance year of an ACO's agreement period, in calculating an adjusted benchmark for an ACO that makes changes to its ACO participant list or assignment methodology, we would use the same set of weights as was used for the first performance year in the agreement period. For example, an ACO that is subject to a weight of 25 percent in its first performance year of an agreement period would continue to be subject to a weight of either 35 or 25 percent,

depending on whether the ACO's historical expenditures, as adjusted, are higher or lower than its region, for any subsequent years in the same agreement period.

Second, for renewing or re-entering ACOs (see section II.A.5.c of this proposed rule) that previously received a rebased historical benchmark under the current benchmarking methodology adopted in the June 2016 final rule, we would consider the agreement period the ACO is entering upon renewal or re-entry in combination with the weight previously applied to calculate the regional adjustment to the ACO's benchmark in the ACO's most recent prior agreement period to determine the weight that would apply in the new agreement period. For example, an ACO that was subject to a weight of 35 or 25 percent in its second agreement period in the Shared Savings Program under the current benchmarking methodology that enters its third agreement period upon renewal would be subject to a weight of 50 or 35 percent. By contrast, if the same ACO had terminated during its second agreement period and subsequently re-enters the program, the ACO would continue to face a weight of 35 or 25 percent until the start of its subsequent agreement period. For a new ACO identified as a re-entering ACO because greater than 50 percent of its ACO participants have recent prior participation in the same ACO, we would consider the weight most recently applied to calculate the regional adjustment to the benchmark for the ACO in which the majority of the new ACO's participants were participating previously.

The weights included in the proposed new schedule were chosen in part to maintain consistency with the current schedule which already includes the 25, 35, and 50 percent values. Furthermore, we believe that using 50 percent as the maximum weight is appropriate because it strikes an even balance between rewarding an ACO for attainment (efficiencies already demonstrated at the start of the agreement period) versus improvement during the agreement period over its past historical performance.

We also wish to note that while this proposal would reduce the maximum regional adjustment as compared to current regulations, our proposal to extend the regional adjustment to ACOs in their first agreement period in the program would increase the number of years that an ACO would be subject to the adjustment. Thus, the lower maximum weight in later years would be balanced to some extent by an earlier phase-in.

Based on the magnitude of regional adjustments observed in the first 2 years under the new rebasing methodology, which were calculated using the lowest weights under the current phase-in schedule, we are concerned that reducing the maximum weight on the adjustment may not be sufficient to guard against the undesired effects of large positive or negative regional adjustments on incentives faced by individual ACOs. Therefore, to complement the proposed changes to the schedule of weights used to phase-in the regional adjustment, we also considered options for imposing a cap on the dollar amount of the regional adjustment. We believe that limiting regional adjustments for ACOs that are particularly low- or high-cost relative to their regions, will better align incentives for these ACOs with program goals, while continuing to reward ACOs that have already attained efficiency relative to their regional service areas.

We are thus also proposing to cap the regional adjustment amount using a flat dollar amount equal to 5 percent of national per capita expenditures for Parts A and B services under the original Medicare FFS program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3 using data from the CMS OACT. The cap would be calculated and applied by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) and would apply for both positive and negative adjustments.

We believe that defining the cap based on national per capita expenditures offers simplicity and transparency in that, for each enrollment type, a single value would be applicable for all ACOs with the same agreement start date. When selecting the level of the proposed cap, we aimed to choose a level that would only constrain the adjustment for the most extreme ACOs. When looking at the distribution of observed final regional adjustments among the 73 ACOs that received a rebased benchmark in 2017, we found that the amount of the regional adjustment calculated for around 95 percent of these ACOs would fall under a symmetrical cap equal to 5 percent of national FFS expenditures. We believe that capping the amount of the regional adjustment at this level would continue to provide a meaningful reward for ACOs that are efficient relative to their region, while reducing windfall gains for the ACOs with the lowest relative costs. Similarly, we believe capping the amount of a negative regional adjustment at this level would continue to impose a penalty on ACOs that are less efficient relative to their region, but by guarding against extremely high negative adjustments, should increase the program's ability to retain ACOs that serve complex patients and that may need some additional time to lower costs.

To implement the cap, we would continue to calculate the difference between the average per capita regional amount and the per capita rebased benchmark amount for each Medicare enrollment type. We would continue to multiply the difference for each enrollment type by the appropriate weight (determined using the schedule described previously) in order to determine the uncapped adjustment for each Medicare enrollment type. For positive adjustments, the final adjustment amount for a particular enrollment type would be set equal to the lesser of the uncapped adjustment or a dollar amount equal to 5 percent of the national per capita FFS expenditures for assignable beneficiaries in that enrollment type for BY3. For negative adjustments, the final adjustment amount for a particular enrollment type would be set equal to the greater (that is, the smaller negative value) of either the uncapped adjustment or the negative of 5 percent of the national per capita FFS expenditures for assignable beneficiaries in that enrollment type for BY3. We would then apply the final adjustment for each enrollment type to the benchmark expenditure for that enrollment type in the same manner that we currently apply the uncapped regional adjustment. Table 12 provides an illustrative example of how the final adjustment would be determined.

TABLE 12—HYPOTHETICAL DATA ON APPLICATION OF CAP TO REGIONAL ADJUSTMENT AMOUNT

Medicare enrollment type	Uncapped adjustment	National assignable FFS expenditure	5 percent of national assignable FFS expenditure	Final adjustment
ESRD	$4,214	$81,384	$4,069	$4,069
Disabled	−600	11,128	556	−556
Aged/dual eligible	788	16,571	829	788
Aged/non-dual eligible	−367	9,942	497	−367

In this example, the ACO's positive adjustment for ESRD would be constrained by the cap because the uncapped adjustment amount exceeds 5 percent of the national assignable FFS expenditure for the ESRD population. Likewise, the ACO's negative adjustment for the disabled population would also be reduced by the cap. The adjustments for aged/dual and aged/non-dual eligible populations would not be affected.

We also considered an alternative approach under which the cap would be applied at the aggregate level rather than at the Medicare enrollment type level. Under this approach, we would calculate regional adjustments by Medicare enrollment type as we do currently and then determine the weighted average of these adjustments, using the enrollment distribution in the ACO's BY3 assigned beneficiary population, to arrive at a single aggregate regional adjustment. We would then determine a weighted average of national per capita FFS expenditures for assignable beneficiaries across the four enrollment types, again using the enrollment distribution in the ACO's BY3 assigned beneficiary population, to arrive at a single aggregate national expenditure value. We would calculate a symmetrical aggregate cap equal to positive or negative 5 percent of the aggregate national expenditure value and compare this cap to the uncapped aggregate regional adjustment amount to determine the final aggregate regional adjustment. Specifically, if the uncapped aggregate regional adjustment amount is above the aggregate cap, then the final aggregate regional adjustment would equal the cap. However, if the uncapped aggregate regional adjustment amount is below the aggregate cap, then the final aggregate regional adjustment would equal the uncapped regional adjustment amount. The regional adjustment calculated for each Medicare enrollment type would then be multiplied by the ratio of the final aggregate regional adjustment to the uncapped aggregate regional adjustment. If the uncapped aggregate regional adjustment exceeds the aggregate cap, this ratio will be less than one and the regional adjustment for each Medicare enrollment type would be reduced by the same percentage. If the uncapped aggregate regional adjustment is less than or equal to the aggregate cap, the ratio will equal one and the regional adjustment would not be reduced for any Medicare enrollment type.

For example, if the uncapped aggregate regional adjustment amount was $550 and the aggregate cap was $500, the final aggregate regional adjustment would be $500. The regional adjustment for each Medicare enrollment type would be multiplied by a ratio of $500 to $550 or 0.909. This is equivalent to reducing the adjustment for each enrollment type by 9.1 percent. As another example, if the uncapped aggregate regional adjustment was $450 and the aggregate cap remained at $500, the final aggregate regional adjustment would be $450 because it is less than the aggregate cap. The regional adjustment for each Medicare enrollment type would be multiplied by a ratio equal to 1, and thus would not be reduced.

Initial modeling found the two methods to be comparable for most ACOs but suggested that our proposed approach (capping the regional adjustment at the Medicare enrollment type level) is somewhat more effective at limiting larger upside or downside adjustments. This is likely because the aggregate approach smooths out variation in adjustments across individual enrollment types. For example, for some ACOs, large positive adjustments in one enrollment type may be offset by smaller positive adjustments, or negative adjustments in other enrollment types under the aggregate approach. The proposed approach also aligns with our current benchmark calculations, which are done by Medicare enrollment type, and provides greater accuracy and transparency. Under this approach, the cap will only reduce the magnitude of the adjustment for a particular enrollment type if the original uncapped value of the adjustment is relatively large. This is not necessarily the case under the aggregate approach, where adjustments for all enrollment types, large or small, will be reduced if the aggregate regional adjustment exceeds the aggregate cap.

We believe that imposing a cap on the magnitude of the adjustment, coupled with the proposed changes to the schedule of weights used in applying the regional adjustment, will help to reduce windfall gains to low-spending ACOs and will also help to reduce the incentive for higher spending ACOs to leave the program by limiting the negative adjustments these ACOs will experience. We anticipate that the proposed cap on the regional adjustment will provide stronger incentives for higher spending ACOs to remain in the program (by reducing the magnitude of the benchmark decrease associated with negative regional adjustments) than disincentives for lower spending ACOs. We expect this latter group would still be sufficiently rewarded by the regional adjustment under the proposed approach to encourage their continued participation in the program. However, we also believe that by reducing the windfall gains for these ACOs, the proposed constraints on the regional adjustment would lead to greater incentives for these ACOs to further reduce spending in order to increase their shared savings payments.

In summary, we are proposing both to modify the schedule of weights used to phase in the regional adjustment and to impose a cap on the dollar amount of the adjustment. For the first agreement period that an ACO is subject to the regional adjustment, we are proposing to apply a weight of 35 percent if the ACO's historical spending was lower than its region and a weight of 25 percent if the ACO's historical spending was higher than its region. For the second agreement period, we are proposing to apply weights of 50 percent and 35 percent for lower and

higher spending ACOs, respectively. For the third or subsequent agreement period, we are proposing to apply a weight of 50 percent for all ACOs. Additionally, we would impose a symmetrical cap on the regional adjustment equal to positive or negative 5 percent of the national per capita FFS expenditures for assignable beneficiaries for each enrollment type. We are proposing to apply the modified schedule of weights and the cap on the regional adjustment for agreement periods beginning on July 1, 2019, and in subsequent years. The policies proposed in this section are included in the proposed new provision at § 425.601, which will govern the determination of historical benchmarks for all ACOs for agreement periods starting on July 1, 2019, and in subsequent years. We are seeking comment on these proposals, as well as the alternative capping methodology considered. We are also seeking comment on the proposed timeline for application of these proposals.

d. Proposals for Modifying the Methodology for Calculating Growth Rates Used in Establishing, Resetting, and Updating the Benchmark

As discussed previously, we believe that using regional expenditures to trend forward BY1 and BY2 to BY3 in the calculation of the historical benchmark and to update the benchmark to the performance year has the advantage of producing more accurate benchmarks. Regional trend and update factors allow us to better capture the cost experience in the ACO's region, the health status and socio-economic dynamics of the regional population, and location-specific Medicare payments when compared to using national FFS expenditures. However, we acknowledge the concern raised by stakeholders that the use of regional trend or update factors may affect ACOs' incentives to reduce spending growth or to continue participation in the program, particularly in circumstances where an ACO serves a high proportion of beneficiaries in select counties making up its regional service area. For such an ACO, a purely regional trend will be more influenced by the ACO's own expenditure patterns, making it more difficult for the ACO to outperform its benchmark and conflicting with our goal to move ACOs away from benchmarks based solely on their own historical costs. We therefore considered options that would continue to incorporate regional expenditures into trend and update factors while still protecting incentives for ACOs that serve a high proportion of the Medicare FFS beneficiaries in their regional service area.

One approach, supported by a number of stakeholders commenting on the 2016 proposed rule, would be to exclude an ACO's own assigned beneficiaries from the population used to compute regional expenditures. However, as we explained in the June 2016 final rule (see 81 FR 37959 through 37960), we believe that such an approach would create potential bias due to the potential for small sample sizes and differences in the spending and utilization patterns between ACO-assigned and non-assigned beneficiaries. The latter could occur, for example, if an ACO tends to focus on a specialized beneficiary population. We are also concerned that excluding an ACO's own assigned beneficiaries from the population could provide ACOs with an incentive to influence the assignment process by seeking to provide more care to healthy beneficiaries and less care to more costly beneficiaries. Given these concerns, we chose to focus on alternative options that would address stakeholder concerns by using a combination of national and regional factors.

The first approach we considered would use a blend of national and regional growth rates to trend forward BY1 and BY2 to BY3 when establishing or resetting an ACO's historical benchmark (referred to as the national-regional blend). By incorporating a national trend factor that is more independent of an ACO's own performance, we believe that the national-regional blend would reduce the influence of the ACO's assigned beneficiaries on the ultimate trend factor applied. It would also lead to greater symmetry between the Shared Savings Program and MA which, among other adjustments, applies a national projected trend to update county-level expenditures

Under this approach, the national-regional blend would be calculated as a weighted average of national FFS and regional trend factors, where the weight assigned to the national component would represent the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO, calculated as described in this section of the proposed rule. The weight assigned to the regional component would be equal to 1 minus the national weight. As an ACO's penetration in its region increases, a higher weight would be placed on the national component of the national-regional blend and a lower weight on the regional component, reducing the extent to which the trend factors reflect the ACO's own expenditure history.

The national component of the national-regional blend would be trend factors computed for each Medicare enrollment type using per capita FFS expenditures for the national assignable beneficiary population. These trend factors would be calculated in the same manner as the national trend factors used to trend benchmark year expenditures for ACOs in a first agreement period under the current regulations. For example, the national trend factor for the aged/non-dual population for BY1 would be equal to BY3 per capita FFS expenditures among the national aged/non-dual assignable population divided by BY1 per capita FFS expenditures among the national aged/non-dual assignable population. Consistent with our current approach, the per capita FFS expenditures used in these calculations would not be explicitly risk-adjusted. By using risk ratios based on risk scores renormalized to the national assignable population, as described in section II.D.2 of this proposed rule, we are already controlling for changes in risk in the national assignable population elsewhere in the benchmark calculations, rendering further risk adjustment of the national trend factors unnecessary.

The regional component of the national-regional blend would be trend factors computed for each Medicare enrollment type based on the weighted average of risk-adjusted county FFS expenditures for assignable beneficiaries, including assigned beneficiaries, in the ACO's regional service area. These trend factors would be computed in the same manner as the regional trend factors used to trend benchmark year expenditures for ACOs that enter a second or subsequent agreement period in 2017 or later years under the current regulations. The regional trend factors reflect changes in expenditures within given counties over time, as well shifts in the geographic distribution of an ACO's assigned beneficiary population. This is because regional expenditures for each year are calculated as the weighted average of county-level expenditures for that year where the weight for a given county is the proportion of the ACO's assigned beneficiaries residing in that county in that year.

The weights used to blend the national and regional components would be calculated separately for each Medicare enrollment type using data for BY3. To calculate the national weights, we would first calculate for each enrollment type the share of assignable

beneficiaries that are assigned to the ACO in each county in the ACO's regional service area. We would then weight each county's share by the proportion of the ACO's total assigned beneficiary population in that enrollment type residing in that county to obtain the regional share. This weighting approach mirrors the methodology used to calculate regional expenditures, as it gives higher precedence to counties where more of the ACO's assigned beneficiaries reside when determining the ACO's overall penetration in its region.

As an example, assume an ACO has 11,000 assigned beneficiaries with aged/non-dual eligible enrollment status and the ACO's regional service area consists of two counties, County A and County B. There were 10,000 assignable aged/non-dual beneficiaries residing in County A in BY3, with 9,000 assigned to the ACO in that year. There were 12,000 assignable aged/non-dual beneficiaries residing in County B with 2,000 assigned to the ACO. The weight for the national component of the blended trend factor for the aged/non-dual enrollment type would be: [(Assigned Beneficiaries in County A/Assignable Beneficiaries in County A) × (Assigned Beneficiaries in County A/Total Assigned Beneficiaries)] + [(Assigned Beneficiaries in County B/Assignable Beneficiaries in County B) × (Assigned Beneficiaries in County B/Total Assigned Beneficiaries)] or [(9,000/10,000) × (9,000/11,000)] + [(2,000/12,000) × (2,000/11,000)], or 76.7 percent. The weight given to the regional component of the blended trend factor for aged/non-dual enrollment type in this example would be 23.3 percent. Because this hypothetical ACO has high penetration in its regional service area, the national component of the blended trend factor would receive a much higher weight than the regional component.

Initial modeling among 73 ACOs that renewed for a second agreement period in 2017 found that the weighted average share of assignable beneficiaries in an ACO's regional service area that are assigned to the ACO ranged from under 1 percent to around 60 percent, when looking at all four enrollment types combined, with a median of 12.3 percent and a mean of 15.1 percent. Among the 73 ACOs, 8 (11 percent) had regional shares above 30 percent. We found similar distributions when looking at the four enrollment types individually. Among ACOs with overall regional shares above 30 percent, the simulated use of blended trend factors caused changes in benchmarks (relative to current policy) of −0.8 percent to 0.3 percent, with half seeing a slight negative impact and the other half seeing a slight positive impact. Based on these statistics, it appears that most ACOs currently do not have significant penetration in their regional service areas. As a result, we would expect that for most ACOs the regional component of the blended trend factor would receive a higher weight than the national component and that the overall impact of the national-regional blend on benchmarks relative to current policy would be small. Should penetration patterns change over time, the blended formula would automatically shift more weight to the national component of the trend factor.

We would also use a national-regional blend when updating the historical benchmark for each performance year. That is, we would multiply historical benchmark expenditures for each Medicare enrollment type by an update factor that blends national and regional expenditure growth rates between BY3 and the performance year. The national component for each update factor would equal performance year per capita FFS expenditures for the national assignable beneficiary population for that enrollment type divided by BY3 per capita FFS expenditures for the national assignable beneficiary population for that enrollment type. As described above, the FFS expenditures for the national population would not be risk-adjusted. The regional component for each update factor would equal the weighted average of risk-adjusted county FFS expenditures among assignable beneficiaries, including the ACO's assigned beneficiaries, in the ACO's regional service area in the performance year divided by the weighted average of risk-adjusted county FFS expenditures among assignable beneficiaries, including the ACO's assigned beneficiaries, in the ACO's regional service area in BY3. This regional component would be computed in the same manner as the regional updates used to update the rebased benchmark for ACOs that enter a second or subsequent agreement period in 2017 or later years under the current regulations. The weights used to blend the national and regional components of the update factor would be calculated in the same manner as the weights that we are proposing to use in calculating the blended trend factors for the historical benchmark, except they would be based on performance year rather than BY3 data. That is, the weight assigned to the national component would represent the share of assignable beneficiaries in ACO's regional service area that are assigned to the ACO (based on a weighted average of county-level shares) in the performance year and the weight assigned to the regional component would be equal to 1 minus that share.

In addition to the national-regional blend, we considered an alternate approach that would incorporate national trends at the county level instead of at the regional service area level (national-county blend). Under this alternative, for each county that is in an ACO's regional service area in BY3, we would calculate trend factors to capture growth in county-level risk-adjusted expenditures for assignable beneficiaries from BY1 to BY3 and from BY2 to BY3. Each county-level trend factor would be blended with the national trend factor. The blended trend factor for each county would be a weighted average of the national and county-level trends where the weight applied to the national component would be the share of assignable beneficiaries in the county that are assigned to the ACO in BY3. The weight applied to the county component of the blend would be 1 minus the national weight.

After computing the blended trend factor for each county, we would determine the weighted average across all counties in the ACO's regional service area in BY3, using the proportion of assigned beneficiaries residing in each county in BY3 as weights to obtain an overall blended trend factor. We would then apply this overall blended trend factor to the expenditures for the ACO's assigned beneficiary population for the relevant benchmark year. All calculations would be done separately for each Medicare enrollment type. A similar approach would be used to compute update factors between BY3 and the performance year, but using weights based on share of assignable beneficiaries in each county that are assigned to the ACO in the performance year.

Returning to the hypothetical ACO from above, under the national-county blend we would calculate separate blended trend factors for County A and County B. For County A, the national component would receive a weight of 90.0 percent (9,000/10,000) and the county component would receive a weight of 1 minus 90.0 percent, or 10.0 percent. For County B, the national component would receive a weight of 16.7 percent (2,000/12,000) and the county component would receive a weight of 1 minus 16.7 percent, or 83.3 percent. After computing the blended trend factor for each county, we would take the weighted average across the two

counties, with County A's blended trend factor receiving a weight of 81.8 percent (9,000/11,000) and County B's blended trend factor receiving a weight of 18.2 percent (2,000/11,000).

Our modeling suggests that, for most ACOs, applying the blend at the county-level would yield similar results to the national-regional blend. However, for ACOs that have experienced shifts in the geographic distribution of their assigned beneficiaries over time, we found the two methods to diverge. This is because the national-regional blend reflects not only changes in expenditures within specific counties over time, but also changes in the geographic distribution of the ACO's own assigned beneficiaries. The national-county blend, by contrast, holds the geographic distribution of an ACO's assigned beneficiaries fixed at the BY3 distribution (for trend factors) or at the performance year distribution (for update factors), potentially reducing accuracy.

We are also concerned that calculating trends at the county rather than regional level, in addition to being less accurate, would be less transparent to ACOs. While national and regional trends are both used under our current benchmarking policies, and are thus familiar to ACOs, county-level trends would present a new concept. For these reasons, we favor the approach that incorporates national trends at the regional rather than county level.

Finally, we considered yet another approach that would simply replace regional trend and update factors with national factors for ACOs above a certain threshold of penetration in their regional service area. Specifically, if the share of assignable beneficiaries in an ACO's regional service area that are assigned to that ACO (computed as described above as a weighted average of county-level shares) is above the 90th percentile among all currently active ACOs for a given enrollment type in BY3, we would use national trend factors to trend forward BY1 and BY2 expenditures to BY3. For ACOs that are below the 90th percentile for a given enrollment type, we would continue to use regional factors as we do under the current policy. We would use a similar approach for the update factors, except the threshold would be based on the share of assignable beneficiaries that are assigned to the ACO in the performance year rather than BY3. Among the 73 ACOs that entered a second agreement period in 2017, the 90th percentile for the four enrollment types ranged between 25 and 30 percent of assignable beneficiaries in the ACO's regional service area. One drawback of this approach relative to the blended approaches previously described is that it treats ACOs that are just below the threshold and just above the threshold very differently, even though they may be similarly influencing expenditure trends in their regional service areas.

As we have previously indicated with respect to regional trends (see, for example, 81 FR 37976) and as suggested by our modeling, the national-regional blend, as well as the other options considered, would have mixed effects on ACOs depending on how the expenditure trends in an ACO's regional service area differ from the national trend. ACOs that have high penetration in their regional service area and that have helped to drive lower growth in their region relative to the national trend would benefit from this policy. ACOs that have contributed to higher growth in their regions would likely have lower benchmarks as a result of this policy than under current policy, helping to protect the Medicare Trust Fund and providing increased incentives for these ACOs to lower costs.

Based on the considerations previously discussed, we propose to use a blend of national and regional trend factors (that is, the national-regional blend) to trend forward BY1 and BY2 to BY3 when determining the historical benchmark. We also propose to use a blend of national and regional update factors, computed as described in this section, to update the historical benchmark to the performance year (or to calendar year 2019 in the context of determining the financial performance of ACOs for the 6-month performance year from July 1, 2019 through December 31, 2019, as proposed in section II.A.7 of this proposed rule). The blended trend and update factors would apply to determine the historical benchmark for all agreement periods starting on July 1, 2019 or in subsequent years, regardless of whether it is an ACO's first, second, or subsequent agreement period. We also wish to make clear that in the event an ACO makes changes to its certified ACO participant list for a given performance year or its assignment methodology selection, should our proposal in section II.A.4.c be finalized, the weight that is applied to the national and regional components of the blended trend and update factors would be recomputed to reflect changes in the composition of the ACO's assigned beneficiary population in BY3.

Because the proposed blended update factor would be used in place of an update factor based on the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original FFS program as called for in section 1899(d)(1)(B)(ii) of the Act, this proposal would require us to use our authority under section 1899(i)(3) of the Act. This provision grants the Secretary the authority to use other payment models, including payment models that use alternative benchmarking methodologies, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under this title and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model.

By combining a national component that is more independent of an ACO's own experience with a regional component that captures location-specific trends, we believe that the proposed blended update factor would mitigate concerns about ACO influence on regional trend factors, improving the accuracy of the benchmark update and potentially protecting incentives for ACOs that may have high penetration in their regional service areas. As such, we believe that this proposed change to the statutory benchmarking methodology would improve the quality and efficiency of the program. As discussed in the Regulatory Impact Analysis (section IV. of this proposed rule), we project that this proposed approach, in combination with other changes to the statutory payment model proposed elsewhere in this proposed rule, as well as current policies established using the authority of section 1899(i)(3) of the Act, would not increase program expenditures relative to those under the statutory payment model.

In summary, we propose to use a blend of national and regional trend factors to trend forward BY1 and BY2 to BY3 when determining the historical benchmark and a blend of national and regional update factors to update the historical benchmark to the performance year (or to calendar year 2019 in the context of determining the financial performance of ACOs for the 6-month performance year from July 1, 2019 through December 31, 2019, as proposed in section II.A.7 of this proposed rule). The national component of the blended trend and update factors would receive a weight equal to the share of assignable beneficiaries in the regional service area that are assigned to the ACO, computed as described in this section by taking a weighted average of county-level shares. The regional component of the blended trend and update factors would receive a weight equal to 1 minus the national weight. The proposed blended trend and update factors would apply to all

agreement periods starting on July 1, 2019 or in subsequent years, regardless of whether it is an ACO's first, second, or subsequent agreement period. These proposed policies are included in the proposed new provision at § 425.601, which would govern the determination of historical benchmarks for all ACOs. We seek comment on these proposals, as well as the alternatives considered, including incorporating national trends at the county rather than regional level or using national trend factors for ACOs with penetration in their regional service area exceeding a certain threshold.

4. Technical Changes To Incorporate References to Benchmark Rebasing Policies

We are also proposing to make certain technical, conforming changes to the following provisions to reflect our proposal to add a new section of the regulations at § 425.601 to govern the calculation of the historical benchmark for all agreement periods starting on July 1, 2019, and in subsequent years. We are also proposing to make conforming changes to these provisions to incorporate the policies on resetting, adjusting, and updating the benchmark that were adopted in the June 2016 final rule, and codified in the regulations at § 425.603.

- Under subpart C, which governs application procedures, add references to §§ 425.601 and 425.603 in § 425.204(g);
- Under subpart D, which governs the calculation of shared savings and losses, add references to § 425.603 in §§ 425.604 (Track 1) and 425.606 (Track 2); and add references to §§ 425.601 and 425.603 in § 425.610 (ENHANCED track);
- As part of the modifications to § 425.610, make a wording change to the paragraph currently numerated as (a)(2)(ii) that could not be completed with the June 2016 final rule due to a typographical error. In this paragraph, we would remove the phase ''adjusts for changes'', and in its place add the phrase ''CMS adjusts the benchmark for changes''; and
- Under subpart I, which governs the reconsideration review process, add references to §§ 425.601 and 425.603 to § 425.800(a)(4). In addition, as previously described, we have used our authority under section 1899(i)(3) of the Act to modify certain aspects of the statutory payment and benchmarking methodology under section 1899(d) of the Act. Accordingly, we also propose to amend § 425.800(a)(4) to clarify that the preclusion of administrative and judicial review applies only to the extent that a specific calculation is performed in accordance with section 1899(d) of the Act.

E. Updating Program Policies

1. Overview

This section addresses various proposed revisions to the Shared Savings Program designed to update program policies. We propose to revise our regulations governing the assignment process in order to align our voluntary alignment policies with the requirements of section 50331 of the Bipartisan Budget Act of 2018 and to update the definition of primary care services. We also propose to extend the policies that we recently adopted for ACOs impacted by extreme and uncontrollable circumstances during 2017 to 2018 and subsequent performance years. We also solicit comment on considerations related to supporting ACOs' activities to address the national opioid crisis and the agency's meaningful measures initiative. We propose to discontinue use of the quality performance measure that assesses an ACO's eligible clinicians' level of adoption of CEHRT and propose instead that ACOs annually certify that the percentage of eligible clinicians participating in the ACO using CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds certain thresholds. Lastly, we seek comment on how Medicare ACOs and Part D sponsors could be encouraged to collaborate so as to improve the coordination of pharmacy care for Medicare FFS beneficiaries.

2. Revisions to Policies on Voluntary Alignment

a. Background

Section 50331 of the Bipartisan Budget Act of 2018 amended section 1899(c) of the Act (42 U.S.C. 1395jjj(c)) to add a new paragraph (2)(B) that requires the Secretary, for performance year 2018 and each subsequent performance year, to permit a Medicare FFS beneficiary to voluntarily identify an ACO professional as the primary care provider of the beneficiary for purposes of assigning such beneficiary to an ACO, if a system is available for electronic designation. A voluntary identification by a Medicare FFS beneficiary under this provision supersedes any claims-based assignment otherwise determined by the Secretary. Section 50331 also requires the Secretary to establish a process under which a Medicare FFS beneficiary is notified of his or her ability to designate a primary care provider or subsequently to change this designation. An ACO professional is defined under section 1899(h) of the Act as a physician as defined in section 1861(r)(1) of the Act and a practitioner described in section 1842(b)(18)(C)(i) of the Act.

We believe that section 50331 requires certain revisions to our current beneficiary voluntary alignment policies in § 425.402(e). Prior to enactment of the Bipartisan Budget Act of 2018, section 1899(c) of the Act required that beneficiaries be assigned to an ACO based on their use of primary care services furnished by a physician as defined in section 1861(r)(1) of the Act, and beginning January 1, 2019, services provided in RHCs/FQHCs. In order to satisfy this statutory requirement, we currently require that a beneficiary receive at least one primary care service during the beneficiary assignment window from an ACO professional in the ACO who is a physician with a specialty used in assignment in order to be assigned to the ACO (see § 425.402(b)(1)). As currently provided in § 425.404(b), for performance year 2019 and subsequent performance years, for purposes of the assignment methodology in § 425.402, CMS treats a service reported on an FQHC/RHC claim as a primary care service performed by a primary care physician. After identifying the beneficiaries who have received a primary care service from a physician in the ACO, we use a two-step, claims-based methodology to assign beneficiaries to a particular ACO for a calendar year (see § 425.402(b)(2) through (4)). In the CY 2017 PFS final rule (81 FR 80501 through 80510), we augmented this claims-based beneficiary assignment methodology by finalizing a policy under which beneficiaries, beginning in 2017 for assignment for performance year 2018, may voluntarily align with an ACO by designating a ''primary clinician'' they believe is responsible for coordinating their overall care using MyMedicare.gov, a secure online patient portal. MyMedicare.gov contains a list of all of the Medicare-enrolled practitioners who appear on the Physician Compare website and beneficiaries may choose any practitioner present on Physician Compare as their primary clinician.

Notwithstanding the assignment methodology in § 425.402(b), beneficiaries who designate an ACO professional whose services are used in assignment as responsible for their overall care will be prospectively assigned to the ACO in which that ACO professional participates, provided the beneficiary meets the eligibility criteria established at § 425.401(a) and is not excluded from assignment by the

criteria in § 425.401(b), and has had at least one primary care service during the assignment window with an ACO professional in the ACO who is a primary care physician as defined under § 425.20 or a physician with one of the primary specialty designations included in § 425.402(c) (see § 425.402(e)). Such beneficiaries will be added prospectively to the ACO's list of assigned beneficiaries for the subsequent performance year, superseding any assignment that might have otherwise occurred under the claims-based methodology. Further, beneficiaries may change their designation at any time through *MyMedicare.gov;* the new choice will be incorporated when we perform assignment for the subsequent performance year. Beneficiaries who designate a provider or supplier outside an ACO, who is a primary care physician, a physician with a specialty designation that is considered in the assignment methodology, or a nurse practitioner, physician assistant, or clinical nurse specialist, as responsible for coordinating their overall care will not be added to an ACO's list of assigned beneficiaries, even if they would otherwise meet the criteria for claims-based assignment.

b. Proposals

Section 1899(c) of the Act, as amended by section 50331 of the Bipartisan Budget Act of 2018, requires the Secretary to permit a Medicare FFS beneficiary to voluntarily identify an ACO professional as their primary care provider for purposes of assignment to an ACO. Under our current methodology, a beneficiary may select any practitioner who has a record on the Physician Compare website as their primary clinician; however, we will only assign the beneficiary to an ACO if they have chosen a practitioner who is a primary care physician (as defined at § 425.20), a physician with one of the primary specialty designations included in § 425.402(c), or a nurse practitioner, physician assistant, or clinical nurse specialist. Therefore, we propose to modify our current voluntary alignment policies at § 425.402(e)(2)(iii) to provide that we will assign a beneficiary to an ACO based upon their selection of any ACO professional, regardless of specialty, as their primary clinician. Under this proposal, a beneficiary may select a practitioner with any specialty designation, for example, a specialty of allergy/immunology or surgery, as their primary care provider and be eligible for assignment to the ACO in which the practitioner is an ACO professional. Specifically, we propose to revise § 425.402(e)(2)(iii) to remove the requirement that the ACO professional designated by the beneficiary be a primary care physician as defined at § 425.20, a physician with a specialty designation included at § 425.402(c), or a nurse practitioner, physician assistant, or clinical nurse specialist. In addition, the provision at § 425.402(e)(2)(iv) addresses beneficiary designations of clinicians outside the ACO as their primary clinician. The current policy at § 425.402(e)(2)(iv) provides that a beneficiary will not be assigned to an ACO for a performance year if the beneficiary has designated a provider or supplier outside the ACO who is a primary care physician as defined at § 425.20, a physician with a specialty designation included at § 425.402(c), or a nurse practitioner, physician assistant, or clinical nurse specialist as their primary clinician responsible for coordinating their overall care. Consistent with the proposed revisions to § 425.402(e)(2)(iii) to incorporate the requirements of section 50331 of the Bipartisan Budget Act, we propose to revise § 425.402(e)(2)(iv) to indicate that if a beneficiary designates any provider or supplier outside the ACO as their primary clinician responsible for coordinating their overall care, the beneficiary will not be added to the ACO's list of assigned beneficiaries for a performance year.

Section 1899(c) of the Act, as amended by section 50331 of the Bipartisan Budget Act of 2018, requires the Secretary to allow a beneficiary to voluntarily align with an ACO, and does not impose any restriction with respect to whether the beneficiary has received any services from an ACO professional (see section 1899(c)(2)(B)(i) of the Act). We also believe the requirement in section 1899(c)(2)(B)(iii) of the Act that a beneficiary's voluntary identification shall supersede any claims-based alignment is consistent with eliminating the requirement that the beneficiary have received a service from an ACO professional in order to be eligible to be assigned an ACO. Therefore, we propose to remove the requirement at § 425.402(e)(2)(i) that a beneficiary must have received at least one primary care service from an ACO professional who is either a primary care physician or a physician with a specialty designation included in § 425.402(c) within the 12 month assignment window in order to be assigned to the ACO. Under this proposal, a beneficiary who selects a primary clinician who is an ACO professional, but who does not receive any services from an ACO participant during the assignment window, will remain eligible for assignment to the ACO. We believe this approach reduces burden on beneficiaries and their practitioners by not requiring practitioners to provide unnecessary care during a specified period of time in order for a beneficiary to remain eligible for assignment to the ACO. Consistent with this proposal, we propose to remove § 425.402(e)(2)(i) in its entirety.

We note that, under this proposal, if a beneficiary does not change their primary clinician designation, the beneficiary will remain assigned to the ACO in which that practitioner participates during the ACO's entire agreement period and any subsequent agreement periods under the Shared Savings Program, even if the beneficiary no longer seeks care from any ACO professionals. Because a beneficiary who has voluntarily identified a Shared Savings Program ACO professional as their primary care provider will remain assigned to the ACO regardless of where they seek care, this proposed change could also impact assignment under certain Innovation Center models in which overlapping beneficiary assignment is not permitted. Although we believe our proposed policy is consistent with the requirement under section 1899(c)(2)(B)(iii) of the Act that a voluntary identification by a beneficiary shall supersede any claims-based assignment, we also believe it could be appropriate, in limited circumstances, to align a beneficiary to an entity participating in certain specialty and disease-specific Innovation Center models, such as the CEC Model. CMS implemented the CEC Model to test a new system of payment and service delivery that CMS believes will lead to better health outcomes for Medicare beneficiaries living with ESRD, while lowering costs to Medicare Parts A and B. Under the model, CMS is working with groups of health care providers, dialysis facilities, and other suppliers involved in the care of ESRD beneficiaries to improve the coordination and quality of care that these individuals receive. We believe that an ESRD beneficiary, who is otherwise eligible for assignment to an entity participating in the CEC Model, could benefit from the focused attention on and increased care coordination for their ESRD available under the CEC Model. Such a beneficiary could be disadvantaged if they were unable to receive the type of specialized care for their ESRD that would be available from an entity participating in the CEC Model. Furthermore, we believe it could be difficult for the Innovation Center to conduct a viable test of a specialty or

disease-specific model, if we were to require that beneficiaries who have previously designated an ACO professional as their primary clinician remain assigned to the Shared Savings Program ACO under all circumstances. Currently, the CEC Model completes its annual PY prospective assignment lists prior to the Shared Savings Program in order to identify the beneficiaries who may benefit from receiving specialized care from an entity participating in the CEC Model. Additionally, on a quarterly basis, a beneficiary may be assigned to the CEC Model who was previously assigned to a Track 1 or Track 2 ACO.

As a result, we believe that in some instances it may be necessary for the Innovation Center to use its authority under section 1115A(d)(1) of the Act to waive the requirements of section 1899(c)(2)(B) of the Act solely as necessary for purposes of testing a particular model.

Therefore, we are proposing to create an exception to the general policy that a beneficiary who has voluntarily identified a Shared Savings Program ACO professional as their primary care provider will remain assigned to the ACO regardless of where they seek care. Specifically, we propose that we would not assign such a beneficiary to the ACO when the beneficiary is also eligible for assignment to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on claims for services other than primary care services and for which there has been a determination by Secretary that a waiver under section 1115A(d)(1) of the Act of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model. Under this proposal, if a beneficiary selects a primary clinician who is a Shared Savings Program ACO professional and the beneficiary is also eligible for alignment to a specialty care or disease specific model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on claims for services other than primary care services and for which there has been a determination that a waiver of the requirement in section 1899(c)(2)(B) is necessary solely for purposes of testing the Model, the Innovation Center or its designee would notify the beneficiary of their alignment to an entity participating in the model. Additionally, although such a beneficiary may still voluntarily identify his or her primary clinician and may seek care from any clinician, the beneficiary would not be assigned to a Shared Savings Program ACO even if the designated primary clinician is a Shared Savings Program ACO professional.

We would include a list of any models that meet these criteria on the Shared Savings Program website, to supplement the information already included in the beneficiary assignment reports we currently provide to ACOs (as described under § 425.702(c)), so that ACOs can know why certain beneficiaries, who may have designated an ACO professional as their primary clinician, are not assigned to them. Similar information would also be shared with 1–800–MEDICARE to ensure that Medicare customer service representatives are able to help beneficiaries who may be confused as to why they are not aligned to the ACO in which their primary clinician is participating.

Section 1899(c)(2)(B)(ii) of the Act, as amended by section 50331 of the Bipartisan Budget Act, requires the Secretary to establish a process under the Shared Savings Program through which each Medicare FFS beneficiary is notified of the ability to identify an ACO professional as his or her primary care provider and informed of the process that may be used to make and change such identification. We intend to implement section 1899(c)(2)(B)(ii) of the Act under the beneficiary notification process at § 425.312. In addition, we plan to use the beneficiary notification process under § 425.312 to address the concern that beneficiary designations may become outdated. Specifically, we propose to require ACO participants to use a CMS-developed template notice that encourages beneficiaries to check their designation regularly and to update their designation when they change care providers or move to a new area. We discuss our beneficiary notification processes further in section II.C.3.a of this proposed rule.

We propose to apply these modifications to our policies under the Shared Savings Program regarding voluntary alignment beginning for performance years starting on January 1, 2019, and subsequent performance years. We propose to incorporate these new requirements in the regulations by redesignating § 425.402(e)(2)(i) through (iv) as § 425.402(e)(2)(i)(A) through (D), adding a paragraph heading for newly redesignated § 425.402(e)(2)(i), and including a new § 425.402(e)(2)(ii).

We note that as specified in § 425.402(e)(2)(ii) a beneficiary who has designated an ACO professional as their primary clinician must still be eligible for assignment to an ACO by meeting the criteria specified in § 425.401(a). These criteria establish the minimum requirements for a beneficiary to be eligible to be assigned to an ACO under our existing assignment methodology, and we believe it is appropriate to impose the same basic limitations on the assignment of beneficiaries on the basis of voluntary alignment. We do not believe it would be appropriate, for example, to assign a beneficiary to an ACO if the beneficiary does not reside in the United States, or if the other eligibility requirements are not met.

We request comments on our proposals to implement the new requirements governing voluntary alignment under section 50331 of the Bipartisan Budget Act of 2018. We also seek comment on our proposal to create a limited exception to our proposed policies on voluntary alignment to allow a beneficiary to be assigned to an entity participating in a model tested or expanded under section 1115A of the Act when certain criteria are met. In addition, we welcome comments on how we might increase beneficiary awareness and further improve the electronic process through which a beneficiary may voluntarily identify an ACO professional as their primary care provider through My.Medicare.gov for purposes of assignment to an ACO.

3. Revisions to the Definition of Primary Care Services Used in Beneficiary Assignment

a. Background

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician and all services furnished by RHCs and FQHCs. However, the statute does not specify which kinds of services may be considered primary care services for purposes of beneficiary assignment. We established the initial list of services that we considered to be primary care services in the November 2011 final rule (76 FR 67853). In that final rule, we indicated that we intended to monitor this issue and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services, if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking to reflect additions or modifications to the codes that have been recognized for payment under the Medicare PFS, as summarized in the CY 2018 PFS proposed rule (82

FR 34109 and 34110). Subsequently, in the CY 2018 PFS final rule, we revised the definition of primary care services to include three additional chronic care management service codes, 99487, 99489, and G0506, and four behavioral health integration service codes, G0502, G0503, G0504 and G0507 (82 FR 53212 and 53213). These additions are effective for purposes of performing beneficiary assignment under § 425.402 for performance year 2019 and subsequent performance years.

Accounting for these recent changes, we define primary care services in § 425.400(c) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

CPT codes:

(1) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(2) 99304 through 99318 (codes for professional services furnished in a Nursing Facility, excluding services furnished in a SNF which are reported on claims with place of service code 31).

(3) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(4) 99341 through 99350 (codes for evaluation and management services furnished in a patients' home).

(5) 99487, 99489 and 99490 (codes for chronic care management).

(6) 99495 and 99496 (codes for transitional care management services).

HCPCS codes:

(1) G0402 (the code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the Annual Wellness Visits).

(3) G0463 (code for services furnished in electing teaching amendment hospitals).

(4) G0506 (code for chronic care management).

(5) G0502, G0503, G0504 and G0507 (codes for behavioral health integration).

As discussed in the CY 2018 PFS final rule, a commenter recommended that CMS consider including the advance care planning codes, CPT codes 99497 and 99498, in the definition of primary care services in future rulemaking (82 FR 53213). We indicated that we would consider whether CPT codes 99497 and 99498 or any additional existing HCPCS/CPT codes should be added to the definition of primary care services in future rulemaking for purposes of assignment of beneficiaries to ACOs under the Shared Savings Program. In addition, effective for CY 2018, the HCPCS codes for behavioral health integration G0502, G0503, G0504 and G0507 have been replaced by CPT codes 99492, 99493, 99494, 99484 (82 FR 53078).

CPT codes 99304 through 99318 are used for reporting evaluation and management services furnished by physicians and other practitioners in a skilled nursing facility (reported on claims with POS code 31) or a nursing facility (reported on claims with POS code 32). Based on stakeholder input, we finalized a policy in the CY 2016 PFS final rule (80 FR 71271 through 71272) effective for performance year 2017 and subsequent performance years, to exclude services identified by CPT codes 99304 through 99318 from the definition of primary care services for purposes of the beneficiary assignment methodology when the claim includes the POS code 31 modifier designating the services as having been furnished in a SNF. We established this policy to recognize that SNF patients are shorter stay patients who are generally receiving continued acute medical care and rehabilitative services. Although their care may be coordinated during their time in the SNF, they are then transitioned back into the community to the primary care professionals who are typically responsible for providing care to meet their true primary care needs. We continue to believe that it is appropriate for SNF patients to be assigned to ACOs based on care received from primary care professionals in the community (including nursing facilities), who are typically responsible for providing care to meet the true primary care needs of these beneficiaries. ACOs serving special needs populations, including beneficiaries receiving long term care services, and other stakeholders have recently suggested that we consider an alternative method for determining operationally whether services identified by CPT codes 99304 through 99318 were furnished in a SNF. Instead of indirectly determining whether a beneficiary was a SNF patient when the services were furnished based on physician claims data, these stakeholders suggest we more directly determine whether a beneficiary was a SNF patient based on SNF facility claims data. These stakeholders have recommended that CMS use contemporaneous SNF Medicare facility claims to determine whether a professional service identified by CPT codes 99304 through 99318 was furnished in a SNF and thus should not be used for purposes of the beneficiary assignment methodology under § 425.402. Specifically, these stakeholders suggest that we determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF by determining whether the beneficiary also received SNF facility services on the same date of service.

In this rule we propose to make changes to the definition of primary care services in § 425.400(c) to add new codes and to revise how we determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF.

b. Proposed Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes currently recognized for payment under the PFS, we believe it would be appropriate to amend the definition of primary care services to include certain additional codes. Specifically, we propose to revise the definition of primary care services in § 425.400(c) to include the following HCPCS and CPT codes: (1) Advance care planning service codes, CPT codes 99497 and 99498, (2) administration of health risk assessment service codes, CPT codes 96160 and 96161, (3) prolonged evaluation and management or psychotherapy service(s) beyond the typical service time of the primary procedure, CPT codes 99354 and 99355, (4) annual depression screening service code, HCPCS code G0444, (5) alcohol misuse screening service code, HCPCS code G0442, and (6) alcohol misuse counseling service code, HCPCS code G0443. In addition, in the recent CY 2019 PFS proposed rule (see 83 FR 35841 through 35844) CMS proposed to create three new HCPCS codes to reflect the additional resources involved in furnishing certain evaluation and management services: (1) GPC1X add-on code, for the visit complexity inherent to evaluation and management associated with certain primary care services, (2) GCG0X add-on code, for visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or interventional pain management-centered care, and (3) GPRO1, an additional add-on code for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure. We believe it would be appropriate to include these codes in the definition of primary care services under the Shared Savings Program because these codes are used to bill for services that are similar to services that are already included in the list of primary care codes at § 425.400(c). We

also expect that primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists frequently furnish these services as part of their overall management of a patient. As a result, we believe that including these codes would increase the accuracy of the assignment process by helping to ensure that beneficiaries are assigned to the ACO or other entity that is actually managing the beneficiary's care.

The following provides additional information about the HCPCS and CPT codes that we are proposing to add to the definition of primary care services:

Advance care planning (CPT codes 99497 and 99498): Effective January 1, 2016, CMS pays for voluntary advance care planning under the PFS (80 FR 70955 through 70959). See CMS, Medicare Learning Network, ''Advance Care Planning'' (ICN 909289, August 2016), available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/AdvanceCarePlanning.pdf.* Advance care planning enables Medicare beneficiaries to make important decisions that give them control over the type of care they receive and when they receive it. Medicare pays for advance care planning either as a separate Part B service when it is medically necessary or as an optional element of a beneficiary's Annual Wellness Visit. We believe it would be appropriate to include both Advance Care Planning codes 99497 and 99498 in the definition of primary care services under the Shared Savings Program because the services provided as part of advance care planning include counseling and other evaluation and management services similar to the services included in Annual Wellness Visits and other evaluation and management service codes that are already included in the list of primary care codes.

Administration of health risk assessment (CPT codes 96160 and 96161): In the CY 2017 PFS final rule (81 FR 80330 through 80331), CMS added two new CPT codes, 96160 and 96161, to the PFS, effective for CY 2017, to be used for payment for the administration of health risk assessment. These codes are ''add-on codes'' that describe additional resource components of a broader service furnished to the patient that are not accounted for in the valuation of the base code. For example, if a health risk assessment service were administered during a physician office visit, then the physician would bill for both the appropriate office visit code and the appropriate health risk assessment code. We believe it would be appropriate to include CPT codes 96160 and 96161 in the definition of primary care services because these add-on codes frequently represent additional practice expenses related to office visits for evaluation and management services that are already included in the definition of primary care services.

Prolonged evaluation and management or psychotherapy service(s) beyond the typical service time of the primary procedure (CPT codes 99354 and 99355): These two codes are also ''add-on codes'' that describe additional resource components of a broader service furnished in the office or other outpatient setting that are not accounted for in the valuation of the base codes. Code 99354 is listed on a claim to report the first hour of additional face-to-face time with a patient and code 99355 is listed separately for each additional 30 minutes of face-to-face time with a patient beyond the time reported under code 99354. Codes 99354 and 99355 would be billed separately in addition to the base office or other outpatient evaluation and management or psychotherapy service. (See Medicare Claims Processing Manual Chapter 12, Sections 30.6.15.1 Prolonged Services With Direct Face-to-Face Patient Contact Service (Codes 99354–99357) available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/clm104c12.pdf;* also see CMS, MLN Matters, Prolonged Services (Codes 99354–99359) (Article Number MM5972, Revised March 7, 2017), available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/mm5972.pdf.*) Although we do not currently include prolonged services codes CPT code 99354 and 99355 on our list of primary care services, based on further review we believe it would be appropriate to include them on our list of primary care services to more accurately assign beneficiaries to ACOs based on all the allowed charges for the primary care services furnished to beneficiaries. We note that the definitions of codes 99354 and 99355 also include prolonged services for certain psychotherapy services, which are not currently included on our list of primary care services. Therefore, we propose to include the allowed charges for CPT code 99354 and 99355, for purposes of assigning beneficiaries to ACOs, only when the base code is also on the list of primary care services.

Annual depression screening (HCPCS code G0444), alcohol misuse screening (HCPCS code G0442), and alcohol misuse counseling (HCPCS code G0443): Effective October 14, 2011, all Medicare beneficiaries are eligible for annual depression screening and alcohol misuse screening. (See CMS Manual System, Screening for Depression in Adults (Transmittal 2359, November 23, 2011) available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/downloads/R2359CP.pdf* and see CMS, MLN Matters, Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse (Article Number MM7633, Revised June 4, 2012), available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/mm7633.pdf*). Although these three codes have been in use since before the implementation of the Shared Savings Program in 2012, based on further review of these services, we believe that it would be appropriate to consider these services in beneficiary assignment. Annual depression screening may be covered if it is furnished in a primary care setting that has staff-assisted depression care supports in place to assure accurate diagnosis, effective treatment, and follow-up. Alcohol misuse screening and counseling are screening and behavioral counseling interventions in primary care to reduce alcohol misuse. All three of these codes include screening and counseling services similar to counseling and other evaluation and management services included in the codes already on the list of primary care codes.

In the recent CY 2019 PFS proposed rule (see 83 FR 35841 through 35844)), CMS proposed to create three new HCPCS G-codes as part of a broader proposal to simplify the documentation requirements and to more accurately pay for services represented by CPT codes 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient). All three of these codes are ''add-on codes'' that describe additional resource components of a broader service furnished to the patient that are not accounted for in the valuation of the base codes.

HCPCS code GPC1X is intended to capture the additional resource costs, beyond those involved in the base evaluation and management codes, of providing face-to-face primary care services for established patients. HCPCS code GPC1X would be billed in addition to the base evaluation and management code for an established patient when the visit includes primary care services. In contrast, new HCPCS code GCG0X is an add-on code intended to reflect the

complexity inherent to evaluation and management services associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, cardiology, and interventional pain management-centered care. We believe it would be appropriate to include both proposed new HCPCS codes GCG0X and GPC1X in our definition of primary care services because they represent services that are currently included in CPT codes 99201 through 99215, which are already included in the list of primary care codes in § 425.400(c).

Finally, proposed new HCPCS code GPRO1 (prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure, in the office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes) is modeled on CPT code 99354, a prolonged services code discussed earlier in this section which we are proposing to add to our list of primary care services. HCPCS code GPRO1 is intended to reflect prolonged evaluation and management or psychotherapy service(s) of 30 minutes duration beyond the typical service time of the primary or base service, whereas existing CPT code 99354 reflects prolonged services of 60 minutes duration. As is the case for code 99354, code GPRO1 would be billed separately in addition to the base office or other outpatient evaluation and management or psychotherapy service. We believe it would be appropriate to include proposed HCPCS code GPRO1 on our list of primary care services for the same reasons we are proposing to add CPT code 99354 to our list of primary care services. Because the proposed definition of HCPCS code GPRO1 also includes prolonged services for certain psychotherapy services, which are not currently included on our list of primary care services, we propose to include the allowed charges for HCPCS code GPRO1, for purposes of assigning beneficiaries to ACOs, only when the base code is also on the list of primary care services.

We propose to include these codes in the definition of primary care services when performing beneficiary assignment under § 425.402, for performance years starting on January 1, 2019, and subsequent years. We note, however, that our proposal to include the three proposed new ''add-on codes'', GPC1X, GCG0X, and GPRO1, is contingent on CMS finalizing its proposal to create these new codes for use starting in 2019.

As previously discussed in section II.E.3.a, ACOs and other stakeholders have expressed concerns regarding our current policy of identifying services billed under CPT codes 99304 through 99318 furnished in a SNF by using the POS modifier 31. We continue to believe it is appropriate to exclude from assignment services billed under CPT codes 99304 through 99318 when such services are furnished in a SNF. However, we agree with stakeholders that it might increase the accuracy of beneficiary assignment for these vulnerable and generally high cost beneficiaries if we were to revise our method for determining whether services identified by CPT codes 99304 through 99318 were furnished in a SNF to focus on whether the beneficiary also received SNF facility services on the same day. We believe it would be feasible for us to directly and more precisely determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF by analyzing our facility claims data files rather than by using the POS modifier 31 in our professional claims data files. Operationally, we would exclude professional services claims billed under CPT codes 99304 through 99318 from use in the assignment methodology when there is a SNF facility claim in our claims files with dates of service that overlap with the date of service for the professional service. Therefore, we propose to revise the regulation at § 425.400(c)(1)(iv)(A)(*2*), effective for performance years starting on January 1, 2019 and subsequent performance years, to remove the exclusion of claims including the POS code 31 and in its place indicate more generally that we would exclude services billed under CPT codes 99304 through 99318 when such services are furnished in a SNF.

Under our current process, if CMS's HCPCS committee or the American Medical Association's CPT Editorial Panel modifies or replaces any of the codes that we designate as primary care service codes in § 425.400(c), we must revise the primary care service codes listed in § 425.400(c) as appropriate through further rulemaking before the revised codes can be used for purposes of assignment. As noted previously, effective for CY 2018, the HCPCS codes for behavioral health integration G0502, G0503, G0504 and G0507 have been replaced by CPT codes 99492, 99493, 99494 and 99484. Therefore, consistent with our current process, we propose to revise the primary care service codes in § 425.400(c)(1)(iv) to replace HCPCS codes G0502, G0503, G0504 and G0507 with CPT codes 99492, 99493, 99494 and 99484 for performance years starting on January 1, 2019, and subsequent performance years.

We note that the regulations text at § 425.400(c)(1)(iv) includes brief descriptions for the HCPCS codes that we have designated as primary care service codes, but does not include such descriptions for the CPT codes that we have designated as primary care service codes. For consistency, we are proposing a technical change to the regulations at § 425.400(c)(1)(iv)(A) to also include descriptions for the CPT codes. We also note that one of the Chronic Care Management (CCM) codes, CPT code 99490, is inadvertently listed in the regulations text at § 425.400(c)(1)(iv)(A)(*6*) along with the codes for Transitional Care Management (TCM) services. We are proposing a technical change to the regulations to move CPT code 99490 up to § 425.400(c)(1)(iv)(A)(*5*) with the other CCM codes.

We welcome comments on the new codes we are proposing to add to the definition of primary care services used for purposes of assigning beneficiaries to Shared Savings Program ACOs. In addition, we seek comments on our proposal to revise our method for excluding services identified by CPT codes 99304 through 99318 when furnished in a SNF. We also seek comments on the other proposed technical changes to § 425.400(c)(1)(iv). We also welcome comments on any additional existing HCPCS/CPT codes that we should consider adding to the definition of primary care services in future rulemaking.

4. Extreme and Uncontrollable Circumstances Policies for the Shared Savings Program

a. Background

Following the 2017 California wildfires and Hurricanes Harvey, Irma, Maria and Nate, stakeholders expressed concerns that the effects of these types of disasters on ACO participants, ACO providers/suppliers, and the assigned beneficiary population could undermine an ACO's ability to successfully meet the quality performance standards, and adversely affect financial performance, including, in the case of ACOs under performance-based risk, increasing shared losses. To address these concerns, we published an interim final rule with comment period titled Medicare Program; Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017 (hereinafter referred to as the Shared Savings Program IFC) that appeared in the

Federal Register on December 26, 2017 (82 FR 60912). In the Shared Savings Program IFC, we established policies for addressing ACO quality performance scoring and the determination of the shared losses owed by ACOs participating under performance-based risk tracks for ACOs that were affected by extreme or uncontrollable circumstances during performance year 2017. The policies adopted in the Shared Savings Program IFC were effective for performance year 2017, including the applicable quality data reporting period for the performance year. We have considered the comments received to date on the Shared Savings Program IFC in developing the policies in this proposed rule for 2018 and subsequent years.

The extreme and uncontrollable circumstances policies established in the Shared Savings Program for performance year 2017 align with the policies established under the Quality Payment Program for the 2017 MIPS performance period and subsequent MIPS performance periods (see CY 2018 Quality Payment Program final rule with comment, 82 FR 53780 through 53783 and Quality Payment Program IFC, 82 FR 53895 through 53900). In particular, in the Shared Savings Program IFC (82 FR 60914), we indicated that we would determine whether an ACO has been affected by an extreme and uncontrollable circumstance by determining whether 20 percent or more of the ACO's assigned beneficiaries resided in counties designated as an emergency declared area in performance year 2017 as determined under the Quality Payment Program or the ACO's legal entity is located in such an area. In the Quality Payment Program IFC, we explained that we anticipated that the types of events that could trigger the extreme and uncontrollable circumstances policies would be events designated a Federal Emergency Management Agency (FEMA) major disaster or a public health emergency declared by the Secretary, although we indicated that we would review each situation on a case-by-case basis (82 FR 53897).

Because ACOs may face extreme and uncontrollable circumstances in 2018 and subsequent years, we believe it is appropriate to propose to extend the policies adopted in the Shared Savings Program IFC for addressing ACO quality performance scoring and the determination of the shared losses owed for ACOs affected by extreme or uncontrollable circumstances to performance year 2018 and subsequent performance years. In addition, in the Shared Savings Program IFC, we indicated that we planned to observe the impact of the 2017 hurricanes and wildfires on ACOs' expenditures for their assigned beneficiaries during performance year 2017, and might revisit the need to make adjustments to the methodology for calculating the benchmark in future rulemaking. We consider this issue further in the discussion that follows.

b. Proposed Revisions

The financial and quality performance of ACOs located in areas subject to extreme and uncontrollable circumstances could be significantly and adversely affected. Disasters may have several possible effects on ACO quality and financial performance. For instance, displacement of beneficiaries may make it difficult for ACOs to access medical record data required for quality reporting, as well as, reduce the beneficiary response rate on survey measures. Further, for practices damaged by a disaster, the medical records needed for quality reporting may be inaccessible. We also believe that disasters may affect the infrastructure of ACO participants, ACO providers/suppliers, and potentially the ACO legal entity itself, thereby disrupting routine operations related to their participation in the Shared Savings Program and achievement of program goals. The effects of a disaster could include challenges in communication between the ACO and its participating providers and suppliers and in implementation of and participation in programmatic activities. Catastrophic events outside the ACO's control can also increase the difficulty of coordinating care for patient populations, and due to the unpredictability of changes in utilization and cost of services furnished to beneficiaries, may have a significant impact on expenditures for the applicable performance year and the ACO's benchmark in the subsequent agreement period. These factors could jeopardize ACOs' ability to succeed in the Shared Savings Program, and ACOs, especially those in performance-based risk tracks, may reconsider whether they are able to continue their participation in the program.

Because widespread disruptions could occur during 2018 or subsequent performance years, we believe it is appropriate to have policies in place to change the way in which we assess the quality and financial performance of Shared Savings Program ACOs in any affected areas. Accordingly, we propose to extend the automatic extreme and uncontrollable circumstances policies under the Shared Savings Program that were established for performance year 2017 to performance year 2018 and subsequent performance years. Specifically, we propose that the Shared Savings Program extreme and uncontrollable circumstances policies for performance year 2018 and subsequent performance years would apply when we determine that an event qualifies as an automatic triggering event under the Quality Payment Program. As we discussed in the Shared Savings Program IFC (82 FR 60914), we believe it is also appropriate to extend these policies to encompass the quality reporting period, unless the reporting period is extended, because if an ACO is unable to submit its quality data as a result of a disaster occurring during the quality data submission window, we would not have the quality data necessary to measure the ACO's quality performance for the performance year. For example, if an extreme and uncontrollable event were to occur in February 2019, which we anticipate would be during the quality data reporting period for performance year 2018, then the extreme and uncontrollable circumstances policies would apply for quality data reporting and quality performance scoring for performance year 2018, if the reporting period is not extended. We do not believe it is appropriate to extend this policy to encompass the quality data reporting period if the reporting period is extended because affected ACOs would have an additional opportunity to submit their quality data, enabling us to measure their quality performance in the applicable performance year. Accordingly, we also propose that the policies regarding quality reporting would apply with respect to the determination of the ACO's quality performance in the event that an extreme and uncontrollable event occurs during the applicable quality data reporting period for a performance year and the reporting period is not extended. However, we note that, because a disaster that occurs after the end of the performance year would have no impact on the determination of an ACO's financial performance for that performance year, we do not believe it would be appropriate to make an adjustment to shared losses in the event an extreme or uncontrollable event occurs during the quality data reporting period.

(1) Modification of Quality Performance Scores for all ACOs in Affected Areas

As we explained in the Shared Savings Program IFC (82 FR 60914 through 60916), ACOs and their ACO

participants and ACO providers/suppliers are frequently located across several different geographic regions or localities, serving a mix of beneficiaries who may be differentially impacted by hurricanes, wildfires, or other triggering events. Therefore, for 2017, we established a policy for determining when an ACO, which may have ACO participants and ACO providers/suppliers located in multiple geographic areas, would qualify for the automatic extreme and uncontrollable circumstance policies for the determination of quality performance. Specifically, we adopted a policy for performance year 2017 of determining whether an ACO has been affected by extreme and uncontrollable circumstances by determining whether 20 percent or more of the ACO's assigned beneficiaries resided in counties designated as an emergency declared area in the performance year, as determined under the Quality Payment Program as discussed in the Quality Payment Program IFC (82 FR 53898) or the ACO's legal entity is located in such an area. For 2017, we adopted a policy under which the location of an ACO's legal entity is determined based on the address on file for the ACO in CMS's ACO application and management system. We used 20 percent of the ACO's assigned beneficiary population as the minimum threshold to establish an ACO's eligibility for the policies regarding quality reporting and quality performance scoring for 2017 because, as we stated in the Shared Savings Program IFC, we believe the 20 percent threshold provides a reasonable way to identify ACOs whose quality performance may have been adversely affected by an extreme or uncontrollable circumstance, while excluding ACOs whose performance would not likely be significantly affected.

The 20 percent threshold was selected to account for the effect of an extreme or uncontrollable circumstance on an ACO that has the minimum number of assigned beneficiaries to be eligible for the program (5,000 beneficiaries), and in consideration of the average total number of unique beneficiaries for whom quality information is required to be reported in the combined CAHPS survey sample (860 beneficiaries) and the CMS web interface sample (approximately 3,500 beneficiaries). (There may be some overlap between the CAHPS sample and the CMS web interface sample.) Therefore, we estimated that an ACO with an assigned population of 5,000 beneficiaries typically would be required to report quality information on a total of 4,000 beneficiaries. Thus, we indicated that we believe the 20 percent threshold ensures that an ACO with the minimum number of assigned beneficiaries would have an adequate number of beneficiaries across the CAHPS and CMS web interface samples in order to fully report on these measures. However, we also noted that it is possible that some ACOs that have fewer than 20 percent of their assigned beneficiaries residing in affected areas may have a legal entity that is located in an emergency declared area. Consequently, their ability to quality report may be equally impacted because the ACO legal entity may be unable to collect the necessary information from the ACO participants or experience infrastructure issues related to capturing, organizing, and reporting the data to CMS. We stated that if less than 20 percent of the ACO's assigned beneficiaries reside in an affected area and the ACO's legal entity is not located in a county designated as an affected area, then we believe that there is unlikely to be a significant impact upon the ACO's ability to report or on the representativeness of the quality performance score that is determined for the ACO. For performance year 2017, we will determine what percentage of the ACO's performance year assigned population was affected by a disaster based on the final list of beneficiaries assigned to the ACO for the performance year. Although beneficiaries are assigned to ACOs under Track 1 and Track 2 based on preliminary prospective assignment with retrospective reconciliation after the end of the performance year, these ACOs will be able to use their quarterly assignment lists, which include beneficiaries' counties of residence, for early insight into whether they are likely to meet the 20 percent threshold.

In the Shared Savings Program IFC, we modified the quality performance standard specified under § 425.502 by adding a new paragraph (f) to address potential adjustments to the quality performance score for performance year 2017 of ACOs determined to be affected by extreme and uncontrollable circumstances. We also modified § 425.502(e)(4) to specify that an ACO receiving the mean Shared Savings Program ACO quality score for performance year 2017 based on the extreme and uncontrollable circumstances policies is not eligible for bonus points awarded based on quality improvement in that year because quality data will not be available to determine if there was improvement from year to year.

In the Shared Savings Program IFC, we established policies with respect to quality reporting and quality performance scoring for the 2017 performance year. In anticipation of any future extreme and uncontrollable events, we believe it is appropriate to propose to extend these policies, with minor modifications, to subsequent performance years as well. In order to avoid confusion and reduce unnecessary burdens on affected ACOs, we propose to align our policies for 2018 and subsequent years with policies established for the Quality Payment Program in final rule with comment period, entitled CY 2018 Updates to the Quality Payment Program (82 FR 53568). Specifically, we propose to apply determinations made under the Quality Payment Program with respect to whether an extreme and uncontrollable circumstance has occurred and the identification of the affected geographic areas and the applicable time periods. Generally, in line with the approach taken for 2017 in the Quality Payment Program IFC (82 FR 53897), we anticipate that the types of events that would be considered an automatic triggering event would be events designated as a Federal Emergency Management Agency (FEMA) major disaster or a public health emergency declared by the Secretary, but CMS will review each situation on a case-by-case basis. We also propose that CMS would have sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity. Additionally, we propose to determine an ACO's legal entity location based on the address on file for the ACO in CMS's ACO application and management system.

In the Shared Savings Program IFC, we established a policy for performance year 2017 under which we will determine the percentage of the ACO's assigned population that was affected by a disaster based on the final list of beneficiaries assigned to the ACO for the performance year. We begin producing the final list of assigned beneficiaries after allowing for 3 months of claims run out following the end of a performance year. However, the quality reporting period ends before the 3-month claims run out period ends. Therefore, we are concerned that if, for future performance years, we continue to calculate the percentage of affected beneficiaries based on the ACO's final

list of assigned beneficiaries, it would not be operationally feasible for us to notify an ACO as to whether it meets the 20 percent threshold prior to the end of the quality reporting period because the final list of assigned beneficiaries is not available until after the close of the quality reporting period. We now believe it would be appropriate to base this calculation on the list of assigned beneficiaries used to generate the Web Interface quality reporting sample, which would be available with the quarter three program reports, generally in November of the applicable performance year (or calendar year for the 6-month performance year (or performance period) from January 1, 2019, through June 30, 2019). Under this timeline, we would be able to notify ACOs earlier as to whether they exceed the 20 percent threshold, and ACOs could then use this information to decide whether to report quality data for the performance year. Therefore, for performance year 2018 and subsequent performance years, we are proposing to determine the percentage of an ACO's assigned beneficiaries that reside in an area affected by an extreme and uncontrollable circumstance using the list of assigned beneficiaries used to generate the Web Interface quality reporting sample. We believe we can use this assignment list report regardless of the date(s) the natural disaster occurred. The assignment list report provides us with a list of beneficiaries who have received the plurality of their primary care services from ACO professionals in the ACO at a specific point in time. As this is the list that is used to determine the quality reporting sample, we believe it is appropriate to use the same list to determine how many of the ACO's beneficiaries reside in an area affected by a disaster, such that the ACO's ability to report quality data could be compromised. We propose to revise § 425.502(f) to reflect this proposal for performance year 2018 and subsequent years. We welcome comments on this proposal

In the Shared Savings Program IFC (82 FR 60916), we described the policies under the MIPS APM scoring standard that would apply for performance year 2017 for MIPS eligible clinicians in an ACO that did not completely report quality. The existing tracks of the Shared Savings Program (Track 1, Track 2 and Track 3), and the Track 1+ Model are MIPS APMs under the APM scoring standard.[23] If finalized, we expect the proposed BASIC track and ENHANCED track (based on Track 3) would similarly be considered MIPS APMs under the APM scoring standard. For purposes of the APM scoring standard, MIPS eligible clinicians in an ACO that has been affected by an extreme and uncontrollable circumstance and does not report quality for a performance year, and therefore, receives the mean ACO quality score under the Shared Savings Program, would have the MIPS quality performance category reweighted to zero percent resulting in MIPS performance category weighting of 75 percent for the Promoting Interoperability performance category and 25 percent for Improvement Activities performance category under the APM scoring standard per our policy at § 414.1370(h)(5)(i)(B). In the event an ACO that has been affected by an extreme and uncontrollable circumstance is able to completely and accurately report all quality measures for a performance year, and therefore receives the higher of the ACO's quality performance score or the mean quality performance score under the Shared Savings Program, we would not reweight the MIPS quality performance category to zero percent under the APM scoring standard. Additionally, unless otherwise excepted, the ACO participants will receive a Promoting Interoperability (PI) (formerly called Advancing Care Information (ACI)) performance category score under the APM scoring standard based on their reporting, which could further increase their final score under MIPS.

We propose to revise § 425.502(f) to extend the policies established for performance year 2017 to performance year 2018 and subsequent performance years. Specifically, we propose that for performance year 2018 and subsequent performance years, including the applicable quality data reporting period for the performance year if the reporting period is not extended, in the event that we determine that 20 percent or more of an ACO's assigned beneficiaries, as determined using the list of beneficiaries used to generate the Web Interface quality reporting sample, reside in an area that is affected by an extreme and uncontrollable circumstance, as determined under the Quality Payment Program, or that the ACO's legal entity is located in such an area, we would use the following approach to calculate the ACO's quality performance score instead of the methodology specified in § 425.502(a) through (e).

- The ACO's minimum quality score would be set to equal the mean quality performance score for all Shared Savings Program ACOs for the applicable performance year.
- If the ACO is able to completely and accurately report all quality measures, we would use the higher of the ACO's quality performance score or the mean quality performance score for all Shared Savings Program ACOs. If the ACO's quality performance score is used, the ACO would also be eligible for quality improvement points.
- If the ACO receives the mean Shared Savings Program quality performance score, the ACO would not be eligible for bonus points awarded based on quality improvement during the applicable performance year.
- If an ACO receives the mean Shared Savings Program ACO quality performance score for a performance year, in the next performance year for which the ACO reports quality data and receives a quality performance score based on its own performance, we would measure quality improvement based on a comparison between the ACO's performance in that year and in the most recently available prior performance year in which the ACO reported quality. Under this approach, the comparison will continue to be between consecutive years of quality reporting, but these years may not be consecutive calendar years.

Additionally, we propose to address the possibility that ACOs that have a 6-month performance year (or performance period) during 2019 may be affected by extreme and uncontrollable circumstances. As described in section II.A.7 of this proposed rule, we are proposing to use 12 months of data, based on the calendar year, to determine quality performance for the two 6-month performance years during 2019 (from January 2019 through June 2019, and from July 2019 through December 2019). We are also proposing to use this same approach to determine quality performance for ACOs that start a 12-month performance year on January 1, 2019, and then elect to voluntarily terminate their participation agreement with an effective termination date of June 30, 2019, and enter a new agreement period starting on July 1, 2019. Accordingly, we believe it is necessary to account for disasters occurring in any month(s) of calendar year 2019 for ACOs participating in a 6-month performance year (or performance period) during 2019 regardless of whether the ACO is actively participating in the Shared Savings Program at the time of the

[23] See, for example Alternative Payment Models in the Quality Payment Program as of February 2018, available at *https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Comprehensive-List-of-APMs.pdf*.

disaster. Therefore, for ACOs affected by a disaster in any month of 2019, we would use the alternative scoring methodology specified in § 425.502(f) to determine the quality performance score for the 2019 quality reporting period, if the reporting period is not extended. For example, assume that an ACO participates in the Shared Savings Program for a 6-month performance year from January 1, 2019, through June 30, 2019, and does not continue its participation in the program for a new agreement period beginning July 1, 2019. Further assume that we determine that 20 percent or more of the ACO's assigned beneficiaries, as determined using the list of beneficiaries used to generate the Web Interface quality reporting sample, reside in an area that is affected by an extreme and uncontrollable circumstance, as determined under the Quality Payment Program, in September 2019. The ACO's quality performance score for the 2019 reporting period would be adjusted according to the policies in § 425.502(f).

We propose to specify the applicability of the alternative scoring methodology in § 425.502(f) to the 6-month performance years (or the 6-month performance period) within calendar year 2019 in the proposed new section of the regulations at § 425.609 that describes the methodology for determining an ACO's financial and quality performance for the two 6-month performance years (or the 6-month performance period) during 2019.

(2) Mitigating Shared Losses for ACOs Participating in a Performance-Based Risk Track

In the Shared Savings Program IFC (82 FR 60916) we modified the payment methodology for performance-based risk tracks for performance year 2017, established under the authority of section 1899(i) of the Act, to mitigate shared losses owed by ACOs affected by extreme and uncontrollable circumstances. Under this approach, we will reduce the ACO's shared losses, if any, determined to be owed for performance year 2017 under the existing methodology for calculating shared losses in the Shared Savings Program regulations at 42 CFR part 425 subpart G by an amount determined by multiplying the shared losses by two factors: (1) The percentage of the total months in the performance year affected by an extreme and uncontrollable circumstance; and (2) the percentage of the ACO's assigned beneficiaries who reside in an area affected by an extreme and uncontrollable circumstance. For performance year 2017, we will determine the percentage of the ACO's performance year assigned beneficiary population that was affected by the disaster based on the final list of beneficiaries assigned to the ACO for the performance year. For example, assume that an ACO is determined to owe shared losses of $100,000 for performance year 2017, a disaster was declared for October through December during the performance year, and 25 percent of the ACO's assigned beneficiaries reside in the disaster area. In this scenario, we would adjust the ACO's losses in the following manner: $\$100{,}000 - (\$100{,}000 \times 0.25 \times 0.25) = \$100{,}000 - \$6{,}250 = \$93{,}750$. The policies for performance year 2017 are specified in paragraph (i) in § 425.606 for ACOs under Track 2 and § 425.610 for ACOs under Track 3.

We believe it is appropriate to continue to apply these policies in performance year 2018 and subsequent years to address stakeholders' concerns that ACOs participating under a performance-based risk track could be held responsible for sharing losses with the Medicare program resulting from catastrophic events outside the ACO's control given the increase in utilization, difficulty of coordinating care for patient populations leaving the impacted areas, and the use of natural disaster payment modifiers making it difficult to identify whether a claim would otherwise have been denied under normal Medicare FFS rules. Absent this relief, we believe ACOs that are participating in performance-based risk tracks may reconsider whether they are able to continue their participation in the Shared Savings Program under a performance-based risk track. The approach we adopted for performance year 2017 in the Shared Savings Program IFC, and which we are proposing to continue for performance year 2018 and subsequent years, balances the need to offer relief to affected ACOs with the need to continue to hold those ACOs accountable for losses incurred during the months in which there was no applicable disaster declaration and for the portion of their final assigned beneficiary population that was outside the area affected by the disaster. Consistent with the policy adopted for performance year 2017 in the Shared Savings Program IFC, we believe it is appropriate to continue to use the final assignment list report for the performance year for purposes of this calculation. This final assignment list report will be available at the time we conduct final reconciliation and provides the most complete information regarding the extent to which an ACO's assigned beneficiary population was affected by a disaster.

Additionally, we propose to also address the possibility that ACOs that have a 6-month performance year during 2019 may be affected by extreme and uncontrollable circumstances. As described in section II.A.7 of this proposed rule, we are proposing to use 12 months of expenditure data, based on the calendar year, to perform financial reconciliation for the two 6-month performance years during 2019 (from January 2019 through June 2019, and from July 2019 through December 2019). Accordingly, for ACOs participating in a 6-month performance year during 2019, we believe it is necessary to account for disasters occurring in any month(s) of calendar year 2019, regardless of whether the ACO is actively participating in the Shared Savings Program at the time of the disaster. This proposal applies to ACOs participating under a 6-month performance year during calendar year 2019, that would be reconciled based on their financial performance during the entire 12-month calendar year 2019 (as described in section II.A.7 of this proposed rule and in the proposed provision at § 425.609). This proposal also applies to ACOs that start a 12-month performance year on January 1, 2019, and then elect to voluntarily terminate their participation agreement with an effective termination date of June 30, 2019, and enter a new agreement period starting on July 1, 2019. Consistent with § 425.221(b)(3)(i), we would reconcile these ACOs for the performance period from January 1, 2019, through June 30, 2019, based on their financial performance during the entire 12-month calendar year 2019, according to the methodology in the proposed provision at § 425.609.

For ACOs with a 6-month performance year (or performance period) that are affected by an extreme or uncontrollable circumstance during calendar year 2019, we propose to first determine shared losses for the ACO over the full calendar year, adjust the ACO's losses for extreme and uncontrollable circumstances, and then determine the portion of shared losses for the 6-month performance year (or performance period) according to the methodology proposed under § 425.609. For example, assume that: A disaster was declared for October 2019 through December 2019; an ACO is being reconciled for its participation during the performance year (or performance period) from January 1, 2019, through June 30, 2019; the ACO is determined to have shared losses of $100,000 for calendar year 2019; and 25 percent of

the ACO's assigned beneficiaries reside in the disaster area. In this scenario, we would adjust the ACO's losses in the following manner: $100,000 − ($100,000 × 0.25 × 0.25) = $100,000 − $6,250 = $93,750, then we would multiply these losses by the portion of the year the ACO participated = $93,750 × 0.5 = $46,875.

This proposed approach to mitigate shared losses for ACOs that may be affected by extreme and uncontrollable circumstances would also apply to ACOs that are liable for a pro-rated share of losses, determined based on their financial performance during the entire performance year, as a consequence of voluntary termination of a 12-month performance year after June 30 or involuntary termination by CMS (as described in section II.A.6 of this proposed rule and in the proposed revisions to § 425.221(b)(2)). We note that according to the proposed policies in section II.A.6.d of this proposed rule, an ACO under a two-sided model that voluntarily terminates its participation agreement under § 425.220 during a 6-month performance year with an effective date of termination prior to the last calendar day of the performance year is not liable for shared losses incurred during the performance year. For ACOs that are involuntarily terminated from a 6-month performance year, pro-rated shared losses for the 6-month performance year would be determined based on assigned beneficiary expenditures for the full calendar year 2019 (as described in section II.A.7 of this proposed rule) and then pro-rated to account for the partial year of participation prior to involuntary termination.

We acknowledge that it is possible that ACOs that either voluntarily terminate after June 30th of a 12-month performance year or are involuntarily terminated and will be reconciled to determine a pro-rated share of any shared losses may also be affected by extreme and uncontrollable circumstances. In this case, we propose that the amount of shared losses calculated for the calendar year would be adjusted to reflect the number of months and the percentage of the assigned beneficiary population affected by extreme and uncontrollable circumstances, before we calculate the pro-rated amount of shared losses for the portion of the year the ACO participated in the Shared Savings Program. For example, assume that: A disaster was declared for October 2019 through December 2019; an ACO had been involuntarily terminated on March 31, 2019 and will be reconciled for its participation during the portion of the performance year from January 1, 2019 through March 31, 2019. The ACO is determined to have shared losses of $100,000 for calendar year 2019; and 25 percent of the ACO's assigned beneficiaries reside in the disaster area. In this scenario, we would adjust the ACO's losses in the following manner: $100,000 − ($100,000 × 0.25 × 0.25) = $100,000 − $6,250 = $93,750, then we would multiply these losses by the portion of the year the ACO participated = $93,750 × 0.25 = $23,437.50.

Therefore, we propose to amend §§ 425.606(i) and 425.610(i) to extend the policies regarding extreme and uncontrollable circumstances that were established for performance year 2017 to performance year 2018 and subsequent years. In section II.A.3.a of this proposed rule, we discuss our proposal that these policies for addressing the impact of extreme and uncontrollable circumstances on ACO financial performance would also apply to BASIC track ACOs under performance-based risk. These proposals are reflected in the proposed new provision at § 425.605(f). We also propose to specify in revisions to §§ 425.606(i) and 425.610(i), and in the proposed new provision for the BASIC track at § 425.605(f), that the policies regarding extreme and uncontrollable circumstances will also apply to ACOs that are reconciled for a partial year of performance under § 425.221(b)(2) as a result of voluntary or involuntary early termination. The proposed revisions to §§ 425.606(i) and 425.610(i) also address the applicability of these policies to a Track 2 or Track 3 ACO that starts a 12-month performance year on January 1, 2019, and then elects to voluntarily terminate its participation agreement with an effective termination date of June 30, 2019, and enters a new agreement period starting on July 1, 2019; these ACOs would be reconciled for the performance period from January 1, 2019 through June 30, 2019, consistent with the proposed new provision at § 425.221(b)(3)(i). In addition, we are proposing to include a provision at § 425.609(d) to provide that the policies on extreme and uncontrollable circumstances would apply to the determination of shared losses for ACOs participating in a 6-month performance year during 2019.

We note that to the extent that our proposal to extend the policies adopted in the Shared Savings Program IFC to 2018 and subsequent performance years constitutes a proposal to change the payment methodology for 2018 after the start of the performance year, we believe that consistent with section 1871(e)(1)(A)(ii) of the Act, and for the reasons discussed in this section of this proposed rule, it would be contrary to the public interest not to propose to establish a policy under which we would have the authority adjust the shared losses calculated for ACOs in Track 2 and Track 3 for performance year 2018 to reflect the impact of any extreme or uncontrollable circumstances that may occur during the year.

These proposed policies would not change the status of those payment models that meet the criteria to be Advanced APMs under the Quality Payment Program (see § 414.1415). Our proposed policies would reduce the amount of shared losses owed by ACOs affected by a disaster, but the overall financial risk under the payment model would not change and participating ACOs would still remain at risk for an amount of shared losses in excess of the Advanced APM generally applicable nominal amount standard. Additionally, these policies would not prevent an eligible clinician from satisfying the requirements to become a QP for purposes of the APM Incentive Payment (available for payment years through 2024) or higher physician fee schedule updates (for payment years beginning in 2026) under the Quality Payment Program.

We also want to emphasize that all ACOs would continue to be entitled to share in any savings they may achieve for a performance year. ACOs in all tracks of the program will continue to receive shared savings payments, if any, as determined under subpart G of the regulations. The calculation of savings and the determination of shared savings payment amounts for a performance year would not be affected by the proposed policies to address extreme and uncontrollable circumstances, except that the quality performance score for an affected ACO may be adjusted as described in this section of this proposed rule.

(3) Determination of Historical Benchmarks for ACOs in Affected Areas

In the Shared Savings Program IFC, we sought comment on how to address the impact of extreme and uncontrollable circumstances on the expenditures for an ACO's assigned beneficiary population for purposes of determining the benchmark (82 FR 60917). As we explained in the Shared Savings Program IFC (82 FR 60913), the impact of disasters on an ACO's financial performance could be unpredictable as a result of changes in utilization and cost of services furnished to the Medicare beneficiaries it serves. In some cases, ACO

participants might be unable to coordinate care because of migration of patient populations leaving the impacted areas. On the other hand, patient populations remaining in impacted areas might receive fewer services and have lower overall costs to the extent that healthcare providers are unable to reopen their offices because they lack power and water, or have limited access to fuel for operating alternate power generators. Significant changes in costs incurred, whether increased or decreased, as a result of an extreme or uncontrollable circumstance may impact the benchmark determined for the ACO's subsequent agreement period in the Shared Savings Program, as performance years of the current agreement period become the historical benchmark years for the subsequent agreement period. An increase in expenditures for a particular calendar year would result in a higher benchmark value when the same calendar year is used to determine the ACO's historical benchmark, and in calculating adjustments to the rebased benchmark based on regional FFS expenditures. Likewise, a decrease in expenditures for a particular calendar year would result in a lower benchmark value when the same calendar year is used to determine the ACO's historical benchmark.

While considering options for adjusting ACOs' historical benchmarks to account for disasters occurring during a benchmark year, we considered the effect that the proposed regional factors, that are discussed in section II.D.3 might have on the historical benchmarks for ACOs located in a disaster area. After review, we believe that when regional factors are applied to an ACO's historical benchmark, the regional factors would inherently adjust for variations in expenditures from year to year, and thus would also adjust for regional variations in expenditures related to extreme and uncontrollable circumstances. For example, assume that an ACO experienced a reduction in beneficiary expenditures in performance year 2017 because a portion of its assigned beneficiaries resided in counties that were impacted by a disaster. Then, also assume expenditures returned to their previously higher level in 2018 and this ACO subsequently renewed its ACO participation agreement in 2020. In 2020, when the ACO's historical benchmark would be reset (rebased), the expenditures for 2017 (now a historical benchmark year) would be subject to a higher regional trend factor because expenditures increased back to the expected level in 2018, which would increase the 2017 benchmark year expenditures. Additionally, this ACO could also have its historical benchmark increased even further as a result of its performance compared to others in its region, as reflected in the regional adjustment to the ACO's historical benchmark. In contrast, consider an ACO that experienced an increase in beneficiary expenditures in performance year 2017 because a portion of its assigned beneficiaries resided in counties that were impacted by a disaster. Then, assume expenditures returned to their previously lower level in 2018 and this ACO renewed its ACO participation agreement in 2020. In 2020, when the ACO's historical benchmark would be reset, the expenditures for 2017 would be subject to a lower regional trend factor because expenditures decreased back to the expected level in 2018, which would decrease the 2017 benchmark year expenditures. Additionally, this ACO could also have its historical benchmark decreased further as a result of its performance compared to others in its region, as reflected in the regional adjustment to the ACO's historical benchmark.

Our expectation that the proposed regional factors that would be used to establish an ACO's historical benchmark would also adjust for variations in expenditures related to extreme and uncontrollable circumstances is supported by a preliminary analysis of data for areas that were affected by the disasters that occurred in performance year 2017. Our analysis of the data showed that, as a result of the disasters in these areas, expenditure trends for the performance year appeared below projections. For these areas, the expenditures began to increase after the disaster incident period ended, but expenditures were still below expectations for the year. Based on the expenditure trends beginning to return to expected levels after the disaster period, it would be reasonable to expect that expenditures would continue to increase to expected levels in 2018. This difference between the lower than expected levels of expenditures in 2017 and a return to expected expenditures in 2018, would result in a higher regional trend factor being applied to 2017 expenditures when they are used to determine an ACO's historical benchmark.

In considering whether it might be necessary to make an additional adjustment to ACOs' historical benchmarks to account for expenditure variations related to extreme and uncontrollable circumstances, we considered an approach where we would adjust the historical benchmark by reducing the weight of expenditures for beneficiaries who resided in a disaster area during a disaster period and placing a correspondingly larger weight on expenditures for beneficiaries residing outside the disaster area during the disaster period. Such an approach would be expected to proportionally increase the historical benchmark for ACOs that experienced a decrease in expenditures, and conversely proportionally decrease the historical benchmark for ACOs that experienced an increase in expenditures for their assigned beneficiaries who were impacted by a disaster. Under this approach, for each of the historical benchmark years, we would identify each ACO's assigned beneficiaries who had resided in a disaster area during a disaster period. The portion of expenditures for these assigned beneficiaries that was impacted by the disaster would be removed from the applicable historical benchmark year(s). The removal of these expenditures from the historical benchmark year(s) would allow the historical benchmark calculations to include only expenditures that were not impacted by the disaster. We believe this methodology for calculating benchmark expenditures would adjust for expenditure increases or decreases that may occur as a result of impacts related to a disaster.

If we were to implement such an adjustment to the historical benchmark, we believe it would be appropriate to avoid making minor historical benchmark adjustments for an ACO that was not significantly affected by a disaster by establishing a minimum threshold for the percentage of an ACO's beneficiaries located in a disaster area. Based on data from 2017, quarter 3, over 80 percent of ACOs had less than 50 percent of their assigned beneficiaries residing in disaster counties, with over 75 percent having less than 10 percent of their assigned beneficiaries residing in disaster counties. Based on this data, we believe a minimum threshold of 50 percent of assigned beneficiaries residing in disaster counties could be an appropriate threshold for the adjustment to historical benchmarks because historical benchmarks are calculated based on the ACO's entire assigned beneficiary population in each benchmark year, rather than a sample as is used for quality reporting.

However, we are concerned that this methodology for calculating an adjustment might not be as accurate as the inherent adjustment that would result from applying regional factors when resetting the benchmark and may

impact other expected expenditure variations occurring in the impacted areas. For example, if an additional disaster adjustment were to be applied, it might have unintended impacts when expenditure truncation is applied, it might inappropriately weight and not account for expected variations in expenditures between areas that were and were not impacted by the disaster, and it might compound effects that have already been offset by the regional adjustment. In addition, the expenditures, as adjusted, may not be representative of the ACO's actual performance and aggregate assigned beneficiary population during the benchmark period.

In summary, we believe the regional factors that we are proposing to apply as part of the methodology for determining an ACO's historical benchmark would reduce the expenditures in a historical benchmark year when they are greater than expected (relative to other historical benchmark years) as a result of a disaster and conversely increase expenditures in a historical benchmark year when they are below the expected amount. For these reasons, we believe that the proposal in section II.D.3 of this proposed rule to apply regional factors when determining ACOs' historical benchmarks, starting with an ACO's first agreement period for agreement periods starting on July 1, 2019, and in subsequent years, would be sufficient to address any changes in expenditures during an ACO's historical benchmark years as a result of extreme and uncontrollable circumstances, and an additional adjustment, such as the method discussed previously in this section would not appear to be necessary. However, we will continue to evaluate the impact of the 2017 disasters on ACOs' assigned beneficiary expenditures, and we intend to continue to consider whether it might be appropriate to make an additional adjustment to the historical benchmark to account for expenditures that may have increased or decreased in a historical benchmark year as a result of an extreme or uncontrollable circumstance.

We welcome comments on these issues, including whether it is necessary to adjust ACOs' historical benchmarks to account for extreme and uncontrollable circumstances that might occur during a benchmark year, and appropriate methods for making such benchmark adjustments. We would also note that the proposal in section II.D.3 of this proposed rule to apply regional factors to determine ACOs' historical benchmarks would apply starting with an ACO's first agreement period for agreement periods starting on July 1, 2019, and in subsequent years and would therefore have no effect on benchmarks for ACOs in a first agreement period starting before July 1, 2019. Accordingly, we welcome comments on whether and how an adjustment should be made for ACOs whose benchmarks do not reflect these regional factors.

We invite comments on the policies being proposed for assessing the financial and quality performance of ACOs affected by an extreme or uncontrollable circumstance during performance year 2018 and subsequent years, including the applicable quality data reporting period for the performance year, unless the reporting period is extended. We believe these policies would reduce burden and financial uncertainty for ACOs, ACO participants, and ACO providers/suppliers affected by future catastrophes, and will also align with existing Medicare policies in the Quality Payment Program. We also invite comments on any additional areas where relief may be helpful or other ways to mitigate unexpected issues that may arise in the event of an extreme and uncontrollable circumstance.

5. Program Data and Quality Measures

In this section, we solicit comments on possible changes to the quality measure set and modifications to program data shared with ACOs to support CMS's Meaningful Measures initiative and respond to the nation's opioid misuse epidemic. As part of the Meaningful Measures initiative, we are focusing the agency's efforts on updating quality measures, reducing regulatory burden, and promoting innovation (see CMS Press Release, CMS Administrator Verma Announces New Meaningful Measures Initiative and Addresses Regulatory Reform; Promotes Innovation at LAN Summit, October 30, 2017, available at *https://www.cms.gov/Newsroom/MediaReleaseDatabase/Press-releases/2017-Press-releases-items/2017-10-30.html).* Under the Meaningful Measures initiative, we are working towards assessing performance on only those core issues that are most vital to providing high-quality care and improving patient outcomes, with an emphasis on outcome-based measures, reducing unnecessary burden on providers, and putting patients first. When we developed the quality reporting requirements under the Shared Savings Program, we considered the quality reporting requirements under other initiatives, such as the Physician Quality Reporting System (PQRS) and Million Hearts Initiative, and consulted with the measures community to ensure that the specifications for the measures used under the Shared Savings Program are up-to-date and reduce reporting burden.

Since the Shared Savings Program was first established in 2012, we have not only updated the quality measure set to reduce reporting burden, but also to focus on more meaningful outcome-based measures. The most recent updates to the Shared Savings Program quality measure set were made in the CY 2017 PFS Final Rule (81 FR 80484 through 80489) to adopt the ACO measure recommendations made by the Core Quality Measures Collaborative, a multi-stakeholder group with the goal of aligning quality measures for reporting across public and private stakeholders in order to reduce provider reporting burden. Currently, more than half of the 31 Shared Savings Program quality measures are outcome-based, including:

- Patient-reported outcome measures collected through the CAHPS for ACOs Survey that strengthen patient and caregiver experience;
- Outcome measures supporting care coordination and effective communication, such as unplanned admission and readmission measures; and
- Intermediate outcome measures that address the effective treatment of chronic disease, such as hemoglobin A1c control for patients with diabetes and control of high blood pressure.

It is important that the quality reporting requirements under the Shared Savings Program align with the reporting requirements under other Medicare initiatives and those used by other payers in order to minimize the need for Shared Savings Program participants to devote excessive resources to understanding differences in measure specifications or engaging in duplicative reporting. We seek comment, including recommendations and input on meaningful measures, on how we may be able to further advance the quality measure set for ACO reporting, consistent with the requirement under section 1899(b)(3)(C) of the Act that the Secretary seek to improve the quality of care furnished by ACOs by specifying higher standards, new measures, or both.

One particular area of focus by the Department of Health and Human Services is the opioid misuse epidemic. The Centers for Disease Control and Prevention (CDC) reports that the number of people experiencing chronic pain lasting more than 3 months is estimated to include 11 percent of the adult population. According to a 2016

CDC publication, 2 million Americans had opioid use disorder (OUD) associated with prescription opioids in 2014 (*https://www.cdc.gov/drugoverdose/prescribing/guideline.html*). Since the implementation of Medicare Part D in 2006 to cover prescription medications, the Medicare program has become the largest payer for prescription opioids in the United States (Zhou et al, 2016; *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4955937/*). Safe and effective opioid prescribing for older adults is of particular importance because misuse and abuse of opioids can lead to increased adverse events in this population (for example, increased falls, fractures, hospitalization, ER visits, mortality), especially given the high prevalence of polypharmacy in the elderly. Polypharmacy is the simultaneous use of multiple drugs by a single patient, for one or more conditions, which increases the risk of adverse events. For example, a study by MedPAC found that some beneficiaries who use opioids fill more than 50 prescriptions among 10 drug classes annually (*http://www.medpac.gov/docs/default-source/reports/chapter-5-polypharmacy-and-opioid-use-among-medicare-part-d-enrollees-june-2015-report-.pdf?sfvrsn=0,* MedPAC, 2015).

As part of a multifaceted response to address the growing problem of overuse and abuse of opioids in the Part D program, CMS adopted a policy in 2013 requiring Medicare Part D plan sponsors to implement enhanced drug utilization review. Between 2011 through 2014, there was a 26 percent decrease or 7,500 fewer Medicare Part D beneficiaries identified as potential opioid over-utilizers which may be due, at least in part, to these new policies. On January 5, 2017, CMS released its Opioid Misuse Strategy. This document outlines CMS's strategy and the array of actions underway to address the national opioid misuse epidemic and can be found at *https://www.cms.gov/Outreach-and-Education/Outreach/Partnerships/Downloads/CMS-Opioid-Misuse-Strategy-2016.pdf.*

We aim to align our policies under the Shared Savings Program with the priorities identified in the Opioid Misuse Strategy and to help ACOs and their participating providers and suppliers in responding to and managing opioid use, and are therefore considering several actions to improve alignment. Specifically, we are considering what information regarding opioid use, including information developed using aggregate Medicare Part D data, could be shared with ACOs. We are also considering the addition of one or more measures specific to opioid use to the ACO quality measures set. The potential benefits of such policies would be to focus ACOs on the appropriate use of opioids for their assigned beneficiaries and support their opioid misuse prevention efforts.

First, we are considering what information, including what aggregated Medicare Part D data, could be useful to ACOs to combat opioid misuse in their assigned beneficiary population. We recognize the importance of available and emerging resources regarding the opioid epidemic at the federal, state, and local level, and intend to work with our federal partners to make relevant resources available in a timely manner to support ACOs' goals and activities. We will also continue to share information with ACOs highlighting Federal opioid initiatives, such as the CDC Guideline for Prescribing Opioids for Chronic Pain (*https://www.cdc.gov/drugoverdose/prescribing/guideline.html*), which reviews the CDC's recommended approach to opioid prescribing, and the Surgeon General's report on Substance Use and Addiction, Facing Addiction in America: The Surgeon General's Report on Alcohol, Drugs, and Health, (*https://addiction.surgeongeneral.gov/*) which focuses on educating and mobilizing prescribers to take action to end the opioid epidemic by improving prescribing practices, informing patients about the risks of and resources for opioid addiction, and encouraging health care professionals to take a pledge to end the opioid crisis. We will also continue to highlight information about the opioid crisis and innovations for opioid treatment and prevention strategies in ACO learning system webinars. These webinars provide the forum for peer-to-peer sharing, such as the webinar held last year on Community Approaches to Preventing Opioid-Related Overdoses and Deaths, which included speakers from State and community organizations.

Although we recognize that not all beneficiaries assigned to Shared Savings Program ACOs have Part D coverage, we believe a sufficient number do have Part D coverage to make aggregate Part D data regarding opioid use helpful for the ACOs. As an example, we have found the following information for performance year 2016:

- Approximately 70 percent of beneficiaries assigned to ACOs participating in the Shared Savings Program had continuous Part D coverage.
- For assigned beneficiaries with continuous Part D enrollment, almost 37 percent had at least one opioid prescription. This percentage ranged from 10.6 percent to 58.3 percent across ACOs.
- The mean number of opioid medications filled per assigned beneficiary (with continuous Part D coverage) varied across ACOs, ranging from 0.3 to 4.5 prescriptions filled, with an average of 2.1 prescriptions filled.
- The number of opioid prescriptions filled for each assigned beneficiary with at least one opioid prescription filled varied across ACOs and ranged from 2.6 to 8.4 prescriptions, with an average of 5.5 opioid prescriptions filled.

ACOs currently receive as part of the monthly claims and claims line feed data Part D prescription drug event (PDE) data on prescribed opioids for their assigned beneficiaries who have not opted out of data sharing. We encourage ACOs to use this beneficiary-level data in their care delivery practices.

We also seek suggestions for other types of aggregate data related to opioid use that could be added for informational purposes to the aggregate quarterly and annual reports CMS provides to ACOs. The aim would be for ACOs to utilize this additional information to improve population health management for assigned beneficiaries, including prevention, identifying anomalies, and coordinating care. The type of aggregate data should be highly relevant for a population-based program at the national level and have demonstrated value in quality improvement initiatives. We are particularly interested in high impact aggregate data that would reflect gaps in quality of care, patient safety, multiple aspects of care, and drivers of cost. We aim to provide aggregate data that have validity for longitudinal analysis to enable both ACOs and the Shared Savings Program to trend performance across time and monitor for changes. Aggregate data on both processes and outcomes are appropriate, provided that the data are readily available. Types of aggregate data that we have begun to consider, based on the information available from prescription drug event records for assigned beneficiaries enrolled in Medicare Part D, include filled prescriptions for opioids (percentage of the ACO's assigned beneficiaries with any opioid prescription, number of opioid prescriptions per opioid user), number of beneficiaries with a concurrent prescription of opioids and benzodiazepines; and number of beneficiaries with opioid prescriptions above a certain daily Morphine Equivalent Dosage threshold. Second, we are seeking comments on measures

that can be added to the quality measure set for the purpose of addressing the opioid epidemic and addiction, more generally. We seek comment on measures related to various aspects of opioid use, such as prevention, pain management, or opioid use disorder treatment, and on measures related to addiction. In particular, we are considering the following relevant NQF-endorsed measures, with emphasis on Medicare individuals with Part D coverage who are 18 years or older without cancer or enrolled in hospice:

- NQF #2940 Use of Opioids at High Dosage in Persons Without Cancer: Analyzes the proportion (XX out of 1,000) of Medicare Part D beneficiaries 18 years or older without cancer or enrolled in hospice receiving prescriptions for opioids with a daily dosage of morphine milligram equivalent (MME) greater than 120 mg for 90 consecutive days or longer.
- NQF #2950 Use of Opioids from Multiple Providers in Persons Without Cancer: Analyzes the proportion (XX out of 1,000) of Medicare Part D beneficiaries 18 years or older without cancer or enrolled in hospice receiving prescriptions for opioids from four (4) or more prescribers AND four (4) or more pharmacies.
- NQF #2951 Use of Opioids from Multiple Providers and at High Dosage in Persons Without Cancer: Analyzes the proportion (XX out of 1,000) of Medicare Part D beneficiaries 18 years or older without cancer or enrolled in hospice with a daily dosage of morphine milligram equivalent (MME) greater than 120 mg for 90 consecutive days or longer, AND who received opioid prescriptions from four (4) or more prescribers AND four (4) or more pharmacies.

In addition, we seek input on potential measures for which data are readily available, such as measures that might be appropriately calculated using Part D data, and that capture performance on outcomes of appropriate opioid management. Comments on measures that are not already NQF endorsed should include descriptions of reliability, validity, benchmarking, the population in which the measure was tested, along with the data source that was used, and information on whether the measure is endorsed and by what organization. We recognize that measures of the various aspects of opioid use may involve concepts related to integrated, coordinated, and collaborative care, including as applicable for co-occurring and/or chronic conditions, as well as measures that reflect the impact of interventions on patient outcomes, including direct and indirect patient outcome measures. We also seek comment on opioid-related measures that would support effective measurement alignment of substance use disorders across programs, settings, and varying interventions.

6. Promoting Interoperability

Consistent with the call in the 21st Century Cures Act for interoperable access, exchange, and use of health information, the final rule entitled, 2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Certification Program Modifications (2015 Edition final rule) (80 FR 62601) under 45 CFR part 170 [24] focuses on the 2015 Edition of health IT certification criteria that support patient care, patient participation in care delivery, and electronic exchange of interoperable health information. The 2015 Edition final rule, which was issued on October 16, 2015, is expected to improve interoperability by adopting new and updated vocabulary and content standards for the structured recording and exchange of health information and to facilitate the accessibility and exchange of data by including enhanced data export, transitions of care, and application programming interface capabilities. These policies are relevant to assessing the use of CEHRT under the Quality Payment Program and other value based payment initiatives.

Under the Shared Savings Program, section 1899(b)(2)(G) of the Act requires participating ACOs to define processes to report on quality measures and coordinate care, such as through the use of telehealth, remote patient monitoring, and other such enabling technologies. Consistent with the statute, ACOs participating in the Shared Savings Program are required to coordinate care across and among primary care physicians, specialists, and acute and post-acute providers and suppliers and to have a written plan to encourage and promote the use of enabling technologies for improving care coordination, including the use of electronic health records and electronic exchange of health information (§ 425.112(b)(4)). Additionally, since the inception of the program in 2012, CMS has assessed the level of CEHRT use by certain clinicians in the ACO as a double-weighted quality measure (Use of Certified EHR Technology, ACO–11) as part of the quality reporting requirements for each performance year. For the 2018 performance year, we will use data derived from the Quality Payment Program's Promoting Interoperability performance category to calculate the percentage of eligible clinicians participating in an ACO who successfully meet the Advancing Care Information Performance Category Base Score for purposes of ACO–11. Because the measure is used in determining an ACO's quality score and for determining shared savings or losses under the Shared Savings Program, all eligible clinicians participating in Shared Savings Program ACOs must submit data for the Quality Payment Program's Advancing Care Information performance category, including those eligible clinicians who are participating in Shared Savings Program tracks that have been designated as Advanced APMs and who have met the QP threshold or are otherwise not subject to the MIPS reporting requirements.

In contrast, some alternative payment models tested by the Innovation Center, require all participants to use CEHRT even though certain tracks within those Models do not meet the financial risk standard for designation as Advanced APMs, such as the Oncology Care Model (one-sided risk arrangement track) and the Comprehensive End-Stage Renal Disease Care (CEC) Model (non-LDO one-sided risk arrangement track).[25] The primary rationale for this requirement is to promote CEHRT use by eligible clinicians and organizations participating in APMs by requiring them to demonstrate a strong commitment to the exchange of health information, regardless of whether they are participating in an APM that meets the criteria to be designated as an Advanced APM. Additionally, under the Quality Payment Program, an incentive payment will be made to certain Qualifying APM Participants (QPs) participating in Advanced APMs. Beginning in 2017, an eligible clinician can become a QP for the year by participating sufficiently in an Advanced APM during the QP performance period. Eligible clinicians who are QPs for a year receive a lump sum APM incentive payment for payment years from 2019 through 2024, and are excluded from the MIPS reporting requirements for the performance year and the MIPS payment adjustment for the payment year. In the CY 2017 Quality Payment Program final rule (81 FR 77408) we finalized the criteria that define an

[24] For more information, see: *https://www.healthit.gov/sites/default/files/understanding-certified-health-it-2.pdf.*

[25] See list of Alternative Payment Models in the Quality Payment Program as of February 2018, available at *https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Comprehensive-List-of-APMs.pdf.*

Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that, among other criteria, requires its participants to use CEHRT. In the CY 2017 Quality Payment Program final rule, we established that Advanced APMs meet this requirement if the APM either (1) requires at least 50 percent of eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or other health care providers; or (2) for the Shared Savings Program, applies a penalty or reward to an APM Entity based on the degree of the use of CEHRT of the eligible clinicians in the APM Entity (§ 414.1415(a)(1)(i) and (ii)). In the CY 2017 PFS final rule, we updated the title and specifications of EHR quality measure (ACO–11) to align with the Quality Payment Program criterion on CEHRT use in order to ensure that certain tracks under the Shared Savings Program could meet the criteria to be Advanced APMs. Specifically, we revised the ACO–11 measure to assess ACOs on the degree of CEHRT use by eligible clinicians participating in the ACO in order to align with the Quality Payment Program. Performance on the measure is determined by calculating the percentage of eligible clinicians participating in the ACO who successfully meet the Promoting Interoperability Performance Category Base Score.

In light of our additional experience with the Shared Savings Program, our desire to continue to promote and encourage CEHRT use by ACOs and their ACO participants and ACO providers/suppliers, and our desire to better align with the goals of the Quality Payment Program and the criteria for participation in certain alternative payment models tested by the Innovation Center, as previously noted, we believe it would be appropriate to amend our regulations related to CEHRT use and the eligibility requirements for ACOs to participate in the Shared Savings Program. Specifically, we propose to add a requirement that all ACOs demonstrate a specified level of CEHRT use in order to be eligible to participate in the Shared Savings Program. Additionally, we propose that, as a condition of participation in a track, or a payment model within a track, that meets the financial risk standard to be an Advanced APM, ACOs must certify that the percentage of eligible clinicians participating in the ACO who use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the threshold required for Advanced APMs as defined under the Quality Payment Program (§ 414.1415(a)(1)(i)). In conjunction with this proposed new eligibility requirement, we propose to retire the EHR quality measure (ACO–11) related to CEHRT use, thereby reducing reporting burden, effective for quality reporting for performance years starting on January 1, 2019, and subsequent performance years. In addition, consistent with our proposal to align with the Advanced APM criterion on use of CEHRT, we propose to apply the definition of CEHRT under the Quality Payment Program (§ 414.1305), including any subsequent updates to this definition, for purposes of the Shared Savings Program.

First, we are proposing that for performance years starting on January 1, 2019, and subsequent performance years ACOs in a track or a payment model within a track that does not meet the financial risk standard to be an Advanced APM must attest and certify upon application to participate in the Shared Savings Program, and subsequently, as part of the annual certification process, that at least 50 percent of the eligible clinicians participating in the ACO use CEHRT to document and communicate clinical care to their patients or other health care providers. ACOs would be required to submit this certification in the form and manner specified by CMS.

This proposed requirement aligns with the requirements regarding CEHRT use in many alternative payment models being tested by the Innovation Center (as previously noted). Additionally, we note that at the time of application, ACOs must have a written plan to use enabling technologies, such as electronic health records and other health IT tools, to coordinate care (§ 425.112(b)(4)(i)(C)). Over the years, successful ACOs have impressed upon us the importance of ''hitting the ground running'' on the first day of their participation in the Shared Savings Program, rather than spending the first year or two developing their care processes. We believe that requiring ACOs that are entering a track or a payment model within a track that does not meet the financial risk standard to be an Advanced APM to certify that at least 50 percent of the eligible clinicians participating in the ACO use CEHRT aligns with existing requirements under the Shared Saving Program and many Innovation Center alternative payment models and encourages participation by organizations that are more likely to meet the program goals. In addition, we believe such a requirement would also promote greater emphasis on the importance of CEHRT use for care coordination. Finally, we note that in the CY 2019 PFS proposed rule, we proposed to increase the threshold of CEHRT use required for APMs to meet criteria for designation as Advanced APMs under the Quality Payment Program to 75 percent (see 83 FR 35990). Given the proposals for updates and modifications to the Shared Savings Program tracks found elsewhere in this proposed rule, as well as the proposals under the Quality Payment Program, we believe it is important that only those ACOs that are likely to be able to meet or exceed the threshold designated for Advanced APMs should be eligible to enter and continue their participation in the Shared Savings Program. Because of this, and also our desire to align requirements as explained in more detail later in this section, we also considered whether to propose to require all Shared Savings Program ACOs, including ACOs in tracks or payment models within tracks that would not meet financial criteria to be designated as Advanced APMs, to meet the 75 percent threshold proposed under the Quality Payment Program.

We propose changes to the regulations at § 425.204(c) (to establish the new application requirement) and § 425.302(a)(3)(iii) (to establish the new annual certification requirement). We also propose to add a new provision at § 425.506(f)(1) to indicate that for performance years starting on January 1, 2019, and subsequent performance years, all ACOs in a track or a payment model within a track that does not meet the financial risk standard to be an Advanced APM must certify that at least 50 percent of their eligible clinicians use CEHRT to document and communicate clinical care to their patients or other health care providers. We note that this proposal, if finalized, would not affect the previously-finalized provisions for MIPS eligible clinicians reporting on the Promoting Interoperability (PI) performance category under MIPS. In other words, MIPS eligible clinicians who are participating in ACOs would continue to report as usual on the Promoting Interoperability performance category. We welcome comment on these proposed changes. We also seek comment on whether the percentage of CEHRT use should be set at a level higher than 50 percent for ACOs in a track or a payment model within a track that does not meet the financial risk standard to be an Advanced APM given

that average ACO performance on the Use of Certified EHR Technology measure (ACO–11) has substantially exceeded 50 percent, with ACOs reporting that on average roughly 80 percent of primary care physicians in their ACOs meet meaningful use requirements,[26] suggesting that a higher threshold may be warranted now or in the future. Additionally, a higher threshold percentage (such as 75 percent) would align with the proposed changes to the CEHRT use requirement under the Quality Payment Program in the CY 2019 PFS proposed rule.

Further, for ACOs in tracks or models that meet the financial risk standard to be Advanced APMs under the Quality Payment Program, we propose to align the proposed CEHRT use threshold with the criterion on use of CEHRT established for Advanced APMs under the Quality Payment Program. Although we believe it would be ideal for all ACOs to meet the same CEHRT thresholds to be eligible for participation in the Shared Savings Program, we recognize that there may be reasons why it may be desirable for ACOs in tracks or payment models within a track that do not meet the financial risk standard for Advanced APMs to have a different threshold requirement for CEHRT use than more sophisticated ACOs that are participating in tracks or payment models that qualify as Advanced APMs under the Quality Payment Program. For example, we note that in order for an APM to meet the criteria to be an Advanced APM under the Quality Payment Program, it must currently require at least 50 percent of eligible clinicians in each participating APM entity to use CEHRT to document and communicate clinical care to their patients or other health care providers (in addition to certain other criteria). However, we have proposed to increase this threshold level under the Quality Payment Program to 75 percent of eligible clinicians in each participating Advanced APM entity, as part of the CY 2019 PFS proposed rule, as previously noted. Therefore, for performance years starting on January 1, 2019, and subsequent performance years for Shared Savings Program tracks (or payment models within tracks) that meet the financial risk standard to be an Advanced APM, we propose to align the CEHRT requirement with the Quality Payment Program Advanced APM CEHRT use criterion at § 414.1415(a)(1)(i). Specifically, we propose that such ACOs would be required to certify that they meet the higher of the 50 percent threshold proposed for ACOs in a track (or a payment model within a track) that does not meet the financial risk standard to be an Advanced APM or the CEHRT use criterion for Advanced APMs under the Quality Payment Program at § 414.1415(a)(1)(i). We believe that requiring these ACOs to meet the higher of the 50 percent threshold proposed for ACOs in a track (or a payment model within a track) that does not meet the financial risk standard to be an Advanced APM or the CEHRT use criterion for Advanced APMs will ensure alignment of eligibility requirements across all Shared Savings Program ACOs, while also ensuring that if the CEHRT use criterion for Advanced APMs is higher than 50 percent, those Shared Savings Program tracks (or payment models within a track) that meet the financial risk standard to be an Advanced APM would also meet the CEHRT threshold established under the Quality Payment Program. We anticipate that for performance years starting on January 1, 2019, the tracks (or payment models within tracks) that would be required to meet the CEHRT threshold designated at § 414.1415(a)(1)(i) would include Track 2, Track 3, and the Track 1+ Model, and for performance years starting on July 1, 2019, they would include the BASIC track, Level E, and the ENHANCED track. ACOs in these tracks (or a payment model within such a track) would be required to attest and certify that the percentage of the eligible clinicians in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the level of CEHRT use specified under the Quality Payment Program regulation at § 414.1415(a)(1)(i). Although this proposal may cause Shared Savings Program ACOs in different tracks (or different payment models within the same track) to be held to different requirements regarding CEHRT use, we believe it is appropriate to ensure not only that ACOs that are still new to participation in the Shared Savings Program are not excluded from the program due to a requirement that a high percentage of eligible clinicians participating in the ACO use CEHRT, but also that eligible clinicians in ACOs further along the risk continuum have the opportunity to participate in an Advanced APM for purposes of the Quality Payment Program.

We propose to add a new provision to the regulations at § 425.506(f)(2) to establish the CEHRT requirement for performance years starting on January 1, 2019, and subsequent performance years for ACOs in a track or a payment model within a track that meets the financial risk standard to be an Advanced APM under the Quality Payment Program. These ACOs would be required to certify that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the higher of 50 percent or the threshold for CEHRT use by Advanced APMs at § 414.1415(a)(1)(i). We seek comment on this proposal. We also seek comment on whether we should apply the same standard regarding CEHRT use across all Shared Savings Program ACOs, including ACOs participating in tracks or payment models within tracks that do not meet the financial risk standard to be designated as Advanced APMs, specifically Track 1 and the proposed BASIC track, Levels A through D, or maintain the proposed 50 percent requirement for these ACOs as they gain experience on the glide path to performance-based risk.

As a part of these proposals to require ACOs to certify that a specified percentage of their eligible clinicians use CEHRT, CMS reserves the right to monitor, assess, and/or audit an ACO's compliance with respect to its certification of CEHRT use among its participating eligible clinicians, consistent with §§ 425.314 and 425.316, and to take compliance actions (including warning letters, corrective action plans, and termination) as set forth at §§ 425.216 and 425.218 when ACOs fail to meet or exceed the required CEHRT use thresholds. Additionally, we propose to adopt for purposes of the Shared Savings Program the same definition of ''CEHRT'' as is used under the Quality Payment Program. We propose to amend § 425.20 to incorporate a definition of CEHRT consistent with the definition at § 414.1305, including any subsequent updates or revisions to that definition. Consistent with this proposal and to ensure alignment with the requirements regarding CEHRT use under the Quality Payment Program, we also propose to amend § 425.20 to incorporate the definition of ''eligible clinician'' at § 414.1305 that applies under the Quality Payment Program.

Additionally, if the proposal to introduce a specified threshold of CEHRT use as an eligibility requirement for participation in the Shared Savings

[26] This estimate is based on calculations of primary care physician CEHRT use prior to the changes made to ACO–11 to align with the Quality Payment Program, which became effective for quality reporting for performance year 2017.

Program is finalized, we believe this new requirement should replace the current ACO quality measure that assesses the Use of Certified EHR Technology (ACO–11). The proposed new eligibility requirement, which would be assessed through the application process and annual certification, would help to meet the goals of the program and align with the approach used in other MIPS APMs. Moreover, the proposed new requirement would render reporting on the Use of Certified EHR Technology quality measure unnecessary in order for otherwise eligible tracks (and payments models within tracks) to meet the Advanced APM criterion regarding required use of CEHRT under § 414.1415(a)(1)(i). As a result, continuing to require ACOs to report on this measure would introduce undue reporting burden on eligible clinicians that meet the QP threshold and would otherwise not be required to report the Promoting Interoperability performance category for purposes of the Quality Payment Program. Therefore, we are proposing to remove the Use of Certified EHR Technology measure (ACO–11) from the Shared Savings Program quality measure set, effective with quality reporting for performance years starting on January 1, 2019, and subsequent performance years. We propose corresponding changes to the regulation at § 425.506. As previously noted, the removal of the Use of Certified EHR Technology measure (ACO–11) from the quality measure set used under the Shared Savings Program, if finalized, would not affect policies under MIPS for reporting on the Promoting Interoperability performance category and scoring under the APM Scoring Standard for MIPS eligible clinicians in MIPS APMs. In other words, eligible clinicians subject to MIPS (such as eligible clinicians in BASIC track, Levels A through D, Track 1, and other MIPS eligible clinicians who are required to report on the Promoting Interoperability performance category for purposes of the Quality Payment Program) would continue to report as usual on the Promoting Interoperability performance category. However, data reported for purposes of the Promoting Interoperability performance category under MIPS would not be used to assess the ACO's quality performance under the Shared Savings Program. We welcome public comment on the proposal to remove the quality measure on Use of Certified EHR Technology (ACO–11) from the Medicare Shared Savings Program measure set, effective for quality reporting for performance years starting on January 1, 2019, and subsequent years.

Finally, as discussed previously in this section, in the CY 2017 Quality Payment Program final rule, CMS finalized a separate Advanced APM CEHRT use criterion that applies for the Shared Savings Program at § 414.1415(a)(1)(ii). To meet the Advanced APM CEHRT use criterion under the Shared Savings Program, a penalty or reward must be applied to an APM Entity based upon the degree of CEHRT use among its eligible clinicians. We believed that this alternative criterion was appropriate to assess the Advanced APM CEHRT use requirement under the Shared Savings Program because at the time a specific level of CEHRT use was not required for participation in the program (81 FR 77412).

We now believe that that our proposal to impose specific CEHRT use requirements on ACOs participating in the Shared Savings Program would eliminate the need for the separate CEHRT use criterion applicable to the Shared Savings Program APMs found at § 414.1415(a)(1)(ii). If the previously described proposals are finalized, ACOs seeking to participate in a Shared Savings Program track (or payment model within a track) that meets the financial risk standard to be an Advanced APM would be required to demonstrate that the percentage of eligible clinicians in the ACO using CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the higher of 50 percent or the percentage specified in the CEHRT use criterion for Advanced APMs at § 414.1415(a)(1)(i). As a result, a separate CEHRT use criterion for APMs under the Shared Savings Program would no longer be necessary.

We therefore propose to revise the separate Shared Savings Program CEHRT use criterion at § 414.1415(a)(1)(ii) so that it applies only for QP Performance Periods under the Quality Payment Program prior to 2019. We seek comment on this proposal.

7. Coordination of Pharmacy Care for ACO Beneficiaries

Medicare ACOs and other stakeholders have indicated an interest in collaborating to enhance the coordination of pharmacy care for Medicare FFS beneficiaries to reduce the risk of adverse events and improve medication adherence. For example, areas where ACOs and the sponsors of stand-alone Part D PDPs might collaborate to enhance pharmacy care coordination include establishing innovative approaches to increase clinician formulary compliance (when clinically appropriate) and medication compliance; providing pharmacy counseling services from pharmacists; and implementing medication therapy management. Part D sponsors may be able to play a greater role in coordinating the care of their enrolled Medicare FFS beneficiaries and having greater accountability for their overall health outcomes, such as for beneficiaries with chronic diseases where treatment and outcome are highly dependent on appropriate medication use and adherence. Increased collaboration between ACOs and Part D sponsors may facilitate better and more affordable drug treatment options for beneficiaries by encouraging the use of generic prescription medications, where clinically appropriate, or reducing medical errors through better coordination between providers and Part D sponsors.

We believe that Medicare ACOs and Part D sponsors may be able to enter into appropriate business arrangements to support improved pharmacy care coordination, provided such arrangements comply with all applicable laws and regulations. However, challenges may exist in forming these arrangements. Under the Pioneer ACO Model, an average of 54 percent of the beneficiaries assigned to Pioneer ACOs in 2012 were also enrolled in a PDP in that year, with the median ACO having at most only 13 percent of its assigned beneficiaries enrolled in a plan offered by the same PDP parent organization. For performance year 2016, we found that approximately 70 percent of the beneficiaries assigned to Shared Savings Program ACOs had continuous Part D coverage.

We believe timely access to data could improve pharmacy care coordination. Although CMS already provides Medicare ACOs with certain Part D prescription drug event data, it may be useful for both Medicare ACOs and Part D sponsors to share certain clinical data and pharmacy data with each other to support coordination of pharmacy care. Any data sharing arrangements between ACOs and Part D sponsors should comply with all applicable legal requirements regarding the privacy and confidentiality of such data, including the Health Insurance Portability and Accountability Act (HIPAA).

We seek comment on how Medicare ACOs, and specifically Shared Savings Program ACOs, and Part D sponsors

could work together and be encouraged to improve the coordination of pharmacy care for Medicare FFS beneficiaries to achieve better health outcomes, better health care, and lower per-capita expenditures for Medicare beneficiaries. In addition, we seek comment on what kind of support would be useful for Medicare ACOs and Part D sponsors in establishing new, innovative business arrangements to promote pharmacy care coordination to improve overall health outcomes for Medicare beneficiaries. We also seek comment on issues related to how CMS, Medicare ACOs and Part D sponsors might structure the financial terms of these arrangements to reward Part D sponsors' contributions towards achieving program goals, including improving the beneficiary's coordination of care. Lastly, we seek comment on whether ACOs are currently partnering with Part D sponsors, if there are any barriers to developing these relationships (including, but not limited to, data and information sharing), and if there are any recommendations for how CMS can assist, as appropriate, with reducing barriers and enabling more robust data sharing.

F. Applicability of Proposed Policies to Track 1+ Model ACOs

1. Background

The Track 1+ Model was established under the Innovation Center's authority at section 1115A of the Act, to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care for Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. We have previously noted that 55 Shared Savings Program Track 1 ACOs entered into the Track 1+ Model beginning January 1, 2018. This includes 35 ACOs that entered the model within their current agreement period (to complete the remainder of their agreement period under the Model) and 20 ACOs that entered a 3-year agreement in the Model.

To enter the model, ACOs approved to participate are required to agree to the terms and conditions of the model by executing a Track 1+ Model Participation Agreement. See *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf.* Track 1+ Model ACOs are also required to have been approved to participate in the Shared Savings Program (Track 1) and to have executed a Shared Savings Program Participation Agreement. As indicated in the Track 1+ Model Participation Agreement, in accordance with its authority under section 1115A(d)(1) of the Act, CMS has waived certain provisions of law that otherwise would be applicable to ACOs participating in Track 1 of the Shared Savings Program, as necessary for purposes of testing the Track 1+ Model, and established alternative requirements for the ACOs participating in the Track 1+ Model.

Unless stated otherwise in the Track 1+ Model Participation Agreement, the requirements of the Shared Savings Program under 42 CFR part 425 continue to apply. Consistent with § 425.212, Track 1+ Model ACOs are subject to all applicable regulatory changes, including but not limited to, changes to the regulatory provisions referenced within the Track 1+ Model Participation Agreement that become effective during the term of the ACO's Shared Savings Program Participation Agreement and Track 1+ Model Participation Agreement, unless otherwise specified through rulemaking or amendment to the Track 1+ Model Participation Agreement. We note that the terms of the Track 1+ Model Participation Agreement permit the parties (CMS and the ACO) to amend the agreement at any time by mutual written agreement.

2. Unavailability of Application Cycles for Entry Into the Track 1+ Model in 2019 and 2020

An ACO's opportunity to join the Track 1+ Model aligns with the Shared Savings Program's application cycle. The original design of the Track 1+ Model included 3 application cycles for ACOs to apply to enter or renew their participation in the Track 1+ Model for an agreement period start date of 2018, 2019, or 2020. The 2018 application cycle is closed, and as discussed elsewhere in this proposed rule, 55 ACOs began participating in the Track 1+ Model on January 1, 2018. As discussed in section II.A.7 of this proposed rule, we are not offering an application cycle for a January 1, 2019 start date for new agreement periods under the Shared Savings Program. Therefore, we would similarly not offer a start date of January 1, 2019, for participation in the Track 1+ Model.

In addition, we have also re-evaluated the need for continuing the Track 1+ Model as a participation option for 2019 and 2020 in light of the proposal to offer the BASIC track (including a glide path for eligible ACOs) as a participation option beginning in 2019. Like the Track 1+ Model, the BASIC track would offer relatively lower levels of risk and potential reward than Track 2 and the ENHANCED track. The BASIC track's glide path would allow the flexibility for eligible ACOs to enter a one-sided model and to automatically progress through levels of risk and reward that end at a comparable level of risk and reward (Level E) as offered in the Track 1+ Model and to also qualify as participating in an Advanced APM. ACOs in the glide path could also elect to more quickly enter higher levels of risk and reward within the BASIC track. If the proposed approach to adding the BASIC track is finalized and made available for agreement periods beginning in 2019 and subsequent years, we would discontinue future application cycles for the Track 1+ Model. In that case, the Track 1+ Model would not accept new model participants for start dates of July 1, 2019, or January 1, 2020, or in subsequent years.

Existing Track 1+ Model ACOs would be able to complete the remainder of their current agreement period in the model, or terminate their current participation agreements (for the Track 1+ Model and the Shared Savings Program) and apply to enter a new Shared Savings Program agreement period under either the BASIC track (Level E) or the ENHANCED track, depending upon whether the ACO is low revenue or high revenue (as described in section II.A.5 of this proposed rule). Additionally, as discussed in section II.A.7.c.1 of this proposed rule, ACOs would not have the opportunity to apply to use a SNF 3-day rule waiver starting on January 1, 2019, under our decision to forgo an annual application cycle for a January 1, 2019 start date in the Shared Savings Program and the proposal that the next available application cycle would occur in advance of a July 1, 2019 start date in the Shared Savings Program. An exception to the January 1 start date for use of a SNF 3-day rule waiver would similarly be made to allow for a July 1, 2019 start date for eligible Track 1+ Model ACOs that apply for and are approved to use a SNF 3-day rule waiver.

In making this decision to discontinue future application cycles for the Track 1+ Model, we considered the high level of participation in the Track 1+ Model in its first performance year. This high level of interest in the model indicates a positive response to its design, and therefore we believe we have met an important goal of testing the Track 1+ Model. As we previously described in section II.A.1 of this proposed rule, the availability of the Track 1+ Model

significantly increased the number of ACOs participating under a two-sided risk model in connection with their participation in the Shared Savings Program, with over half of the 101 Shared Savings Program ACOs that have elected to take on performance-based risk opting to participate in the Track 1+ Model starting in 2018, the Model's first year. We will evaluate the quality and financial performance of Track 1+ Model ACOs and consider the results of this evaluation in the development of future policies for the Shared Saving Program.

Further, as discussed in section II.A of this proposed rule, we have incorporated lessons learned from our initial experience with the Track 1+ Model into the design of the proposed BASIC track. This includes offering a payment model within the BASIC track (Level E) that includes the same level of risk and potential reward as available under the Track 1+ Model. We have also proposed a repayment mechanism estimation methodology based on our experience with the Track 1+ Model, to allow for potentially lower, and therefore less burdensome, repayment mechanism amounts for ACOs with relatively lower estimated ACO participant Medicare FFS revenue compared to estimated benchmark expenditures for their assigned Medicare FFS beneficiary population. We believe offering both the BASIC track and the Track 1+ Model would create unnecessary redundancy in participation options within CMS's Medicare ACO initiatives.

3. Applicability of Proposed Policies to Track 1+ Model ACOs Through Revised Program Regulations or Revisions to Track 1+ Model Participation Agreements

We believe a comprehensive discussion of the applicability of the proposed policies to Track 1+ Model ACOs would allow these ACOs to better prepare for their future years of participation in the program and the Track 1+ Model. There are two ways in which the proposed policies would become applicable to Track 1+ Model ACOs: (1) Through revisions to existing regulations that currently apply to Track 1+ Model ACOs, and (2) through revisions to the ACO's Track 1+ Model Participation Agreement.

Unless specified otherwise, the proposed changes to the program's regulations that are applicable to Shared Savings Program ACOs within a current agreement period would apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 1, so long as the applicable regulation has not been waived under the Track 1+ Model. Similarly, to the extent that certain requirements of the regulations that apply to ACOs under Track 2 or Track 3 have been incorporated for ACOs in the Track 1+ Model under the terms of the Track 1+ Model Participation Agreement, any proposed changes to those regulations would also apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 2 or Track 3. For example, the following proposed policies would apply to Track 1+ Model ACOs, if finalized:

- Changes to the repayment mechanism requirements (other than the proposed provisions regarding calculation of the repayment mechanism amount at § 425.204(f)(4)), which would be applicable with the effective date of the final rule (section II.A.6.c). We believe these proposed requirements are similar to the requirements under which Track 1+ Model ACOs established their repayment mechanisms, such that no revision to these arrangements would be required, in the event the proposed policies are finalized. Further, consistent with the proposed changes to the repayment mechanism requirements, we note that Track 1+ Model ACOs that seek to renew their Shared Savings Program agreement would be permitted to use their existing repayment mechanism arrangement to support their continued participation in the Shared Savings Program under a two-sided model in their next agreement period, provided that the amount and duration of the repayment mechanism arrangement are updated as specified by CMS.
- The requirement to notify beneficiaries regarding voluntary alignment and to provide a standardized written notice at the first primary care visit of each performance year (section II.C.3.a.2). If finalized, the proposed policy would be applicable for the performance year beginning on July 1, 2019, and subsequent performance years.
- Revisions to voluntary alignment policies (section II.E.2). If finalized, the proposed policies would be applicable for the performance year beginning on January 1, 2019, and subsequent performance years.
- Revisions to the definition of primary care services used in beneficiary assignment (section II.E.3.b). If finalized, the proposed policy would be applicable for the performance year beginning on January 1, 2019, and subsequent performance years.
- Discontinuation of quality measure ACO–11; requirement to attest at the time of application and as part of the annual certification that a specified percentage of the ACO's eligible clinicians use CEHRT (section II.E.6). If finalized, the proposed policy would be applicable for the performance year beginning on January 1, 2019, and subsequent performance years.

We would also seek to apply the following proposed policies to Track 1+ Model ACOs, although to do so would require an amendment to the Track 1+ Model Participation Agreement executed by CMS and the ACO:

- Monitoring for and consequences of poor financial performance (section II.A.5.d).
- Revising the MSR/MLR to address small population sizes (section II.A.6.b.3).
- Payment consequences of early termination for ACOs under performance-based risk (section II.A.6.d).
- Annual certification that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the higher of 50 percent or the threshold established under § 414.1415(a)(1)(i) (section II.E.6). This certification would be required to ensure the Track 1+ Model continues to meet the CEHRT criterion for qualification as an Advanced APM for purposes of the Quality Payment Program.
- For ACOs that started a first or second Shared Savings Program participation agreement on January 1, 2016, and entered the Track 1+ Model on January 1, 2018, and that elect to extend their Shared Savings Program participation agreement for the 6-month performance year from January 1, 2019 through June 30, 2019 (as described in section II.A.7 of this proposed rule):

++ Consistent with the policy proposed in section II.A.7.c.3 and § 425.204(f)(6), the ACO would be required to extend its repayment mechanism so that it ends 24 months after the end of the agreement period (June 30, 2021).

++ We would determine performance for the 6-month performance year from January 1, 2019 through June 30, 2019, according to the approach specified in a proposed new section of the regulations at § 425.609(b), applying the financial methodology for calculating shared losses specified in the ACO's Track 1+ Model Participation Agreement.

++ We would continue to share aggregate report data with the ACO for the entire calendar year 2019, consistent with the proposed approach described in section II.A.7.c.9, and the terms of the

ACO's Track 1+ Model Participation Agreement.

- Extreme and uncontrollable circumstances policies for determining shared losses for performance years 2018 and subsequent years, consistent with the policies specified in §§ 425.610(i) (section II.E.4) and 425.609(d) (section II.A.7.c.5) for ACOs that elect to extend their Shared Savings Program participation agreement for the 6-month performance year from January 1, 2019 through June 30, 2019.
- Certain requirements related to the use of telehealth services beginning on January 1, 2020, as provided under section 1899(l) of the Act (section II.B.2.b.2). As previously described, the Bipartisan Budget Act of 2018 provides for coverage of certain telehealth services furnished by physicians and practitioners in ACOs participating in a model tested or expanded under section 1115A of the Act that operate under a two-sided model and for which beneficiaries are assigned to the ACO using a prospective assignment method. ACOs participating in the Track 1+ Model meet these criteria. We believe it would be appropriate to apply the same requirements under the Track 1+ Model with respect to the use of telehealth services that would apply to other Shared Savings Program ACOs that are applicable ACOs for purposes of section 1899(l) of the Act. This would ensure consistency across program operations, payments, and beneficiary protection requirements for Track 1+ Model ACOs and other Shared Savings Program ACOs with respect to the use of telehealth services.

We seek comment on these considerations, and any other issues that we may not have discussed related to the effect of the proposed policies on ACOs that entered the Track 1+ Model beginning in 2018. We note that these ACOs will complete their participation in the Track 1+ Model by no later than December 31, 2020 (for ACOs that entered the model at the start of a 3-year agreement period), or sooner in the case of ACOs that entered the model at the start of their second or third performance year within their current 3-year agreement period.

G. Summary of Proposed Timing of Applicability

Applicability or implementation dates may vary, depending on the policy, and the timing specified in the final rule. Unless otherwise noted, the proposed changes would be effective 60 days after publication of the final rule. Table 13 lists the anticipated applicability date of key changes in this proposed rule. By indicating that a provision is applicable to a performance year (PY) or agreement period, activities related to implementation of the policy may precede the start of the performance year or agreement period.

TABLE 13—APPLICABILITY DATES OF SELECT PROVISIONS OF THE PROPOSED RULE

Preamble section	Section title/description	Applicability date
II.A.2	Availability of an additional participation option under a new BASIC track (including glide path) under an agreement period of at least 5 years; Availability of Track 3 as the ENHANCED track under an agreement period of at least 5 years.	Agreement periods starting on or after July 1, 2019.
II.A.2	Discontinuing Track 1 and Track 2	No longer available for applicants for agreement periods starting in 2019 and subsequent years.
II.A.2	Discontinuing deferred renewal option	No longer available for renewal applicants for agreement periods starting in 2019 and subsequent years.
II.A.4.b	Permitting annual election of differing levels of risk and potential reward within the BASIC track's glide path.	Performance year beginning on July 1, 2019, and subsequent years for eligible ACOs.
II.A.4.c	Permitting annual election of beneficiary assignment methodology for ACOs in BASIC track or ENHANCED track.	Performance year beginning on July 1, 2019, and subsequent years.
II.A.5.c	Evaluation criteria for determining participation options based on ACO participants' Medicare FFS revenue, ACO legal entity and ACO participant experience with performance-based risk Medicare ACO initiatives, and prior performance (if applicable).	Agreement periods starting on or after July 1, 2019.
II.A.5.d.2	Monitoring for financial performance	Performance years beginning in 2019 and subsequent years.
II.A.6.b.2	Timing of election of MSR/MLR	Agreement periods starting on or after July 1, 2019.
II.A.6.b.3	Modifying the MSR/MLR to address small population sizes	Performance years beginning in 2019 and subsequent years.
II.A.6.c.3	Annual recalculation of repayment mechanism amounts	Agreement periods starting on or after July 1, 2019.
II.A.6.d	Payment consequences of early termination for ACOs under performance-based risk.	Performance years beginning in 2019 and subsequent years.
II.A.7	Participation options for agreement periods beginning in 2019	January 1, 2019 effective date for extension of existing agreement period for a 6-month fourth performance year, if elected by ACOs that started a first or second agreement period on January 1, 2016. One-time, July 1, 2019 agreement start date; 6-month first performance year.
II.B.2.a	Availability of the SNF 3-day rule waiver for eligible ACOs under performance-based risk under either prospective assignment or preliminary prospective assignment.	July 1, 2019 and subsequent performance years, for eligible ACOs applying for, or currently approved for, a SNF 3-day rule waiver. Not available to Track 2 ACOs.
II.B.2.a	Eligible CAHs and hospitals operating under a swing-bed agreements permitted to partner with eligible ACOs as SNF affiliates.	July 1, 2019, and subsequent performance years.

TABLE 13—APPLICABILITY DATES OF SELECT PROVISIONS OF THE PROPOSED RULE—Continued

Preamble section	Section title/description	Applicability date
II.B.2.b	Telehealth services furnished under section 1899(l)	Performance year 2020 and subsequent years for services furnished by physicians and practitioners billing through the TIN of an ACO participant in an applicable ACO.
II.C.2	Implementation of approved beneficiary incentive programs	July 1, 2019, and subsequent performance years.
II.C.3.a.2	New content and timing for beneficiary notifications	Performance year beginning on July 1, 2019, and subsequent years.
II.D.2.b	Benchmarking Methodology Refinements: Risk adjustment methodology for adjusting historical benchmark each performance year.	Agreement periods starting on or after July 1, 2019.
II.D.3.b	Benchmarking Methodology Refinements: Application of regional factors to determine the benchmark for an ACO's first agreement period.	Agreement periods starting on or after July 1, 2019.
II.D.3.c	Benchmarking Methodology Refinements: Modifying the regional adjustment..	Agreement periods starting on or after July 1, 2019.
II.D.3.d	Benchmarking Methodology Refinements: Modifying the methodology for calculating growth rates used in establishing, resetting, and updating the benchmark.	Agreement periods starting on or after July 1, 2019.
II.E.2	Modifications to voluntary alignment requirements	Performance years beginning in 2019 and subsequent years.
II.E.3	Revisions to the definition of primary care services used in beneficiary assignment.	Performance years beginning in 2019 and subsequent years.
II.E.4	Extreme and uncontrollable circumstances policies for the Shared Savings Program.	Performance year 2018 and subsequent years.
II.E.6	Addition of an interoperability criterion (use of CEHRT) to determine eligibility for program participation.	Performance years beginning in 2019 and subsequent years.
II.E.6	Discontinued use of quality measure ACO–11	Performance years beginning in 2019 and subsequent years.

III. Collection of Information Requirements

As stated in section 3022 of the Affordable Care Act, Chapter 35 of title 44, United States Code, shall not apply to the Shared Savings Program. Consequently, the information collection requirements contained in this proposed rule need not be reviewed by the Office of Management and Budget.

IV. Regulatory Impact Analysis

A. Statement of Need

This proposed rule is necessary in order to make certain payment and policy changes to the Medicare Shared Savings Program established under section 1899 of the Act. The Shared Savings Program promotes accountability for a patient population, fosters the coordination of items and services under Parts A and B, and encourages investment in infrastructure and redesigned care processes for high quality and efficient service delivery.

The need for the proposed policies is summarized in the statement of the rule's purpose in section I of this proposed rule and described in greater detail throughout the discussion of the proposed policies in section II of this proposed rule. As we have previously explained in this proposed rule, ACOs in two-sided models have shown significant savings to the Medicare program and are advancing quality. However, the majority of ACOs remain under a one-sided model. Some of these ACOs are generating losses (and therefore increasing Medicare spending) while receiving waivers of certain federal requirements in connection with their participation in the program. These ACOs may also be encouraging consolidation in the market place and reducing competition and choice for Medicare FFS beneficiaries. Under the proposed redesign of the Shared Savings Program, ACOs of different compositions, and levels of experience with the accountable care model could continue to participate in the program, but the proposals included in this proposed rule would put the program on a path towards achieving a more measureable move to value and achieve savings for the Medicare program, while promoting a competitive and accountable marketplace.

In summary, this proposed rule would redesign the participation options, including the payment models, available to Shared Savings Program ACOs to encourage their transition to performance-based risk. As part of this approach, CMS proposes to extend the length of ACOs' agreement periods from 3 to 5 years as well as to make changes to the program's benchmarking methodology to allow for benchmarks that better reflect the ACO's regional service area expenditures beginning with its first agreement period, while mitigating the effects of factors based on regional FFS expenditures on ACO benchmarks more generally. These proposed policies are necessary to improve the value proposition of the program for currently participating ACOs considering continuing their participation, as well as for organizations considering entering the program. Further, these changes are timely as large cohorts of the program's early entrants, the vast majority of which are currently participating in the program's one-sided model (Track 1), face a required transition to performance-based risk at the start of their next agreement period under the program's current regulations.

Other key changes to the program's regulations are also necessary, including to implement new requirements established by the Bipartisan Budget Act, which generally allow for additional flexibilities in payment and program policies for ACOs and their participating providers and suppliers. Specifically, we are proposing policies to implement provisions of the Bipartisan Budget Act that allow certain ACOs to establish CMS-approved beneficiary incentive programs to provide incentive payments to assigned beneficiaries who receive qualifying primary care services; permit payment for expanded use of telehealth services furnished by physicians or other practitioners participating in an applicable ACO that is subject to a prospective assignment methodology;

provide greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under a retrospective beneficiary assignment methodology a choice of prospective assignment for the agreement period; and offer the opportunity for Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider with such a voluntary identification superseding claims-based assignment. Additionally, this proposed rule would expand the availability of the program's existing SNF 3-day rule waiver to all ACOs participating under performance-based risk to support these ACOs in coordinating care across settings to meet the needs of their patient populations.

To provide ACOs time to consider the new participation options and prepare for program changes, make investments and other business decisions about participation, obtain buy-in from their governing bodies and executives, and complete and submit a Shared Savings Program application for a performance year beginning in 2019, we intend to forgo the application cycle in 2018 for an agreement start date of January 1, 2019, and instead propose to offer a July 1, 2019 start date. This midyear start in 2019 would also allow both new applicants and ACOs currently participating in the program an opportunity to make any changes to the structure and composition of their ACO as may be necessary to comply with the new program requirements for the ACO's preferred participation option, if changes to the participation options are finalized as proposed. Additionally, ACOs with a participation agreement ending on December 31, 2018, would have an opportunity to extend their current agreement period for an additional 6-month performance year and to apply for a new agreement period under the BASIC track or ENHANCED track beginning on July 1, 2019. ACOs entering a new agreement period on July 1, 2019, would have the opportunity to participate in the program under an agreement period spanning 5 years and 6 months, where the first performance year is the 6-month period between July 1, 2019, and December 31, 2019. This proposed rule includes the proposed methodology for determining ACO financial performance for these two, 6-month performance years during CY 2019.

Further, this proposed rule would make other timely updates to the program's regulations, for consistency with other changes in program policies or Medicare policies more generally, such as: (1) Modifying the definition of primary care services used in beneficiary assignment to add new codes and revising how we determine whether evaluation and management services were furnished in a SNF; (2) extending policies previously adopted for performance year 2017 to performance year 2018 and subsequent years to address quality performance scoring and the determination of shared losses (under two-sided models) in the event of extreme or uncontrollable circumstances; and (3) promoting interoperability in Medicare by establishing a new Shared Savings Program eligibility requirement related to adoption of CEHRT by an ACO's eligible clinicians, while discontinuing use of the existing quality measure on use of CEHRT.

B. Overall Impact

We examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) Having an annual effect on the economy of $100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as ''economically significant''); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. Executive Order 13771 directs agencies to categorize all impacts which generate or alleviate costs associated with regulatory burden and to determine the action's net incremental effect.

A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimate that this rulemaking is ''economically significant'' as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a RIA, which to the best of our ability presents the costs and benefits of the rulemaking.

In keeping with our standard practice, the main analysis presented in this RIA compares the expected outcomes if the full set of proposals in this rule were finalized to the expected outcomes under current regulations. We provide our analysis of the expected costs of the proposed payment model under section 1899(i)(3) of the Act to the costs that would be incurred under the statutory payment model under section 1899(d) of the Act in section IV.E. of this proposed rule.

C. Anticipated Effects

1. Effects on the Medicare Program

a. Background

The Shared Savings Program is a voluntary program operating since 2012 that provides financial incentives for demonstrating quality of care and efficiency gains within FFS Medicare. In developing the proposed policies, we evaluated the impact of the quality and financial results of the first 4 performance years of the program. We also considered our earlier projections of the program's impacts as described in the November 2011 final rule (see Table 8, 76 FR 67963), the June 2015 final rule (80 FR 32819), and June 2016 final rule (81 FR 38002).

(1) ACO Performance 2012 Through 2016

We have four performance years of financial performance results available for the Shared Savings Program.[27] Table 14 describes performance year 2016

[27] The first performance year for the program concluded December 31, 2013, which included a 21-period for April 2012 starters, an 18-month period for July 2012 starters, and a 12-month period for January 2013 starters. Thereafter, results have been determined for the calendar year performance year for 2014 through 2016 for all ACOs that participated in the program for the relevant year. Performance year 2017 results are not available at the time of publication of this proposed rule.

results for ACOs segmented by track. These results show that in performance year 2016, the 410 Track 1 ACOs spent more on average relative to their financial benchmarks, resulting in a net loss of $49 million, or $7 per beneficiary. Because these ACOs were in a one-sided shared savings only model, CMS did not recoup any portion of these losses. Further, in performance year 2016, the 6 Track 2 and 16 Track 3 ACOs spent less on average relative to their financial benchmarks. Track 2 ACOs produced net savings of $18 million or $308 per beneficiary, and Track 3 ACOs produced net savings of $14 million or $39 per beneficiary. These results (albeit from a relatively small sample of ACOs that in a number of cases moved to a performance-based risk track only after showing strong performance in a first agreement period under Track 1) indicate that ACOs under performance-based risk were more successful at lowering expenditures in performance year 2016 than ACOs under Track 1.

The same performance year 2016 data also show that ACOs produce a higher level of net savings and more optimal financial performance results the longer they have been in the Shared Savings Program and with additional participation experience. In performance year 2016, 42 percent of ACOs that started participating in the Shared Savings Program in 2012 and remained in the program shared in savings and 36 percent of both 2013 and 2014 starters shared in savings. In contrast, 26 percent of 2015 starters shared in savings and 18 percent of 2016 starters shared in savings in performance year 2016.

TABLE 14—PY 2016 RESULTS BY SHARED SAVINGS PROGRAM TRACK

Track	Two-sided risk?	Number of ACOs reconciled	Parts A and B spending above benchmark [A]	Parts A and B spending below benchmark [B]	Shared savings payments from CMS to ACOs [C]	Shared loss payments from ACOs to CMS [D]	Net effect in aggregate [A − B + C − D]	Net effect per beneficiary per year
Track 1	No	410	$1.021 billion	$1.562 billion	$590 million	$0	$49 million	$7
Track 2	Yes	6	0	42 million	24 million	0	−18 million	−308
Track 3	Yes	16	25 million	95 million	64 million	9 million	−14 million	−39

Table 15 indicates that when analyzing the performance of ACOs in Track 1, which is the track in which the majority of Shared Savings Program ACOs participated as of performance year 2016, it becomes clear that low revenue ACOs are saving CMS money while high revenue ACOs are resulting in additional spending by CMS before accounting for market-wide and potential spillover effects. Low revenue Track 1 ACOs produced net savings of $182 million relative to their benchmarks or $73 per enrollee, and high revenue Track 1 ACOs produced a net loss of $231 million or $46 per enrollee. For the purpose of this analysis, an ACO whose ACO participants' Medicare FFS revenue for assigned beneficiaries was less than 10 percent of the ACO's assigned beneficiary population's Parts A and B expenditures, was identified as a ''low revenue ACO,'' while an ACO whose ACO participants' Medicare FFS revenue for assigned beneficiaries was at least 10 percent of the ACO's assigned beneficiary population's Parts A and B expenditures, was identified as a ''high revenue ACO''. Nationally, evaluation and management spending accounts for about 10 percent of total Parts A and B per capita spending. Because ACO assignment focuses on evaluation and management spending, applying a 10 percent limit to identify low revenue ACOs would capture all ACOs that participated in the Shared Savings Program in performance year 2016 that were solely comprised of providers and suppliers billing physician fee schedule services and generally exclude ACOs with providers and suppliers that bill inpatient services for their assigned beneficiaries. The use of a threshold of 10 percent of the Parts A and B expenditures for the ACO's assigned beneficiary population to classify ACOs as either ''low revenue'' or ''high revenue'' also showed the most significant difference in performance between the two types of ACOs. We note that this approach differs from the proposed definitions for low revenue ACO and high revenue ACO discussed in section II.A.5.b. of this proposed rule. However, our analysis has confirmed that the simpler and more practical proposed policy for identifying low revenue ACOs using a 25-percent threshold in terms of the ratio of ACO participants' total Medicare Parts A and B FFS revenue relative to total Medicare Parts A and B expenditures for the ACO's assigned beneficiary population produces a comparable subgroup of ACOs with similarly-elevated average financial performance and physician-based ACO participant composition.

TABLE 15—PY 2016 RESULTS FOR LOW REVENUE AND HIGH REVENUE TRACK 1 ACOS

Track 1 ACO composition	Number of ACOs (total 410)	Parts A and B spending above benchmark	Parts A and B spending below benchmark [A]	Shared savings payments from CMS to ACOs [B]	Shared loss payments from ACOs to CMS [C]	Net effect in aggregate [A − B + C − D] [D]	Net effect per beneficiary per year
Low revenue	188	$339 million	−$863 million	$343 million	$0	−$182 million	−$73
High revenue	222	682 million	−698 million	247 million	0	231 million	46

With respect to ACO quality, the Shared Savings Program's quality measure set includes both process and outcome measures that evaluate preventive care, clinical care for at-risk populations, patient experience of care, and care coordination. ACOs have consistently achieved higher average performance rates compared to group practices reporting similar quality measures. In addition, ACOs that have participated in the program over a

longer time period have shown greater improvement in quality performance. For example, across all Shared Savings Program ACOs that reported quality in both performance year 2013 and performance year 2016, average quality performance improved by 15 percent across 25 measures used consistently across the performance years. Further, for performance year 2016, 93 percent of Shared Savings Program ACOs received bonus points for improving quality performance in at least one of the four quality measure domains with an average quality score increase for the applicable domain of 3 percentage points.

(2) ACO Market-Wide Effects and Potential Spillover

Analysis of wider program claims data indicates Medicare ACOs have considerable market-wide impact, including significant spillover effects not directly measurable by ACO benchmarks. Whereas spending relative to benchmark (Tables 14 and 15) indicates Shared Savings Program ACOs as a group are not producing net savings for the Medicare FFS program, a study of wider claims data indicates significant net savings are likely being produced. Table 16 includes data through performance year 2016 on the cumulative per capita Medicare FFS expenditure trend (on a price-standardized and risk-adjusted basis) in markets that include Medicare ACOs, including ACOs participating in the Shared Savings Program as well as in the Pioneer and Next Generation ACO Models. Table 16 illustrates that, compared to the results in relation to ACOs' historical benchmarks discussed previously (see Table 14), more savings are likely being generated when both the spillover effects on related populations and the feedback effect of growing ACO participation on the national average FFS program spending growth, which in turn has been used to update ACO benchmarks, are factored in. Table 16 expresses combined market average per capita spending growth since 2011 relative to a baseline FFS per capita trend observed for hospital referral regions continuing to have less than 10 percent of total assignable FFS beneficiaries assigned to Medicare ACOs through 2016. Markets that have been ''ACO active'' longer (defined by the year a market first reached at least 10 percent assignment of assignable FFS beneficiaries to Medicare ACOs) show the greatest relative reduction in average adjusted growth in per capita Medicare FFS spending. Markets that have included Medicare ACOs since 2012, particularly the relatively small subset of 10 hospital referral regions reaching significant ACO participation in risk (defined as at least 30 percent assignment by 2016 to ACOs participating in a Shared Savings Program track or Medicare ACO model with performance-based risk), show the most significant reductions in Medicare FFS spending through 2016.

TABLE 16—AVERAGE ADJUSTED CUMULATIVE PER CAPITA MEDICARE FFS TREND 2011 – 2016 (BY YEAR MARKETS BECOME ACO ACTIVE RELATIVE TO CUMULATIVE TREND FOR MARKETS WITHOUT SIGNIFICANT ACO ACTIVITY)

Markets Grouped	Adjusted Per Capita Change in Spending from Non-ACO Markets					
By ACO Activity	2011	2012	2013	2014	2015	2016
First Active 2016	0.0%	-0.5%	0.0%	-0.5%	-0.3%	-0.5%
First Active 2015	0.0%	-0.2%	0.2%	-0.1%	0.2%	0.1%
National Average	**0.0%**	**-0.3%**	**-0.3%**	**-0.7%**	**-0.7%**	**-1.2%**
First Active 2014	0.0%	-0.5%	-0.3%	-0.5%	-0.7%	-1.5%
First Active 2013	0.0%	0.0%	-0.1%	-1.0%	-1.1%	-1.8%
First Active 2012	0.0%	-0.3%	-0.8%	-1.3%	-1.5%	-2.0%
2012 Subset with Risk	0.0%	-0.9%	-1.9%	-2.5%	-2.9%	-3.4%

Based on an analysis of Medicare Shared Savings Program and Pioneer ACO Model performance data, we observe that the sharpest declines in spending are for post-acute facility services (particularly skilled nursing facility services), with smaller rates of savings (but more dollars saved overall) from prevented hospital admissions and reduced spending for outpatient hospital episodes. These findings become apparent when assessing hospital referral regions both with (>10 percent of assignable Medicare FFS beneficiaries assigned to ACOs in 2012) and without (<10 percent through 2016) a significant portion of assignable Medicare FFS beneficiaries assigned to ACOs. Comparing price-standardized per capita changes in spending from 2011 to 2016, regions with significant ACO penetration yielded larger declines in expenditures in the following areas relative to those without significant ACO penetration: Post-acute care facilities (relative decrease of 9.0 percent), inpatient (1.6 percent relative decrease), and outpatient (3.5 percent relative decrease). These relative decreases were accompanied by declines in evaluation and management services (2.5 percent relative decrease), emergency department (ED) utilization (1.6 percent relative decrease), hospital admissions (1.9 percent decrease), and hospital readmissions (3.5 percent decrease). There also appears to be substitution of higher cost services with lower cost services. For example, during the same period, home health expenditures increased by 5.0 percent and ambulatory surgery center expenditures increased by 1.4 percent, indicating that some beneficiaries could be forgoing care in institutional and inpatient settings in favor of lower cost sites of care.

These findings are supported by outside literature and research. For example, a study conducted by J. Michael McWilliams and colleagues (JAMA, 2017) found that Shared Savings Program ACOs that began participating in 2012 reduced post-acute care

spending by 9 percent by 2014.[28] Another study by Ulrika Winblad and colleagues (Health Affairs, 2017) determined that ACO-affiliated hospitals reduced readmissions from skilled nursing facilities at a faster rate than non-ACO-affiliated hospitals through 2013.[29] In addition, a study by John Hsu and colleagues (Health Affairs, 2017) concluded that using care management programs, large Pioneer ACOs generated 6 percent fewer ED visits, 8 percent fewer hospitalizations, and overall 6 percent less Medicare spending relative to a comparison group through 2014.[30]

Assuming Medicare ACOs were responsible for all relative deviations in trend from non-ACO markets produces an optimistic estimate that total combined Medicare ACO efforts potentially reduced total FFS Medicare Parts A and B spending in 2016 by about 1.2 percent, or $4.2 billion (after accounting for shared savings payments but before accounting for the potential impact on MA plan payment). However, it is likely that ACOs are not the only factor responsible for lower spending growth found in early-ACO-active markets. Health care providers in such markets are likely to be more receptive to other models and/or interventions, potentially including the following, for example: (1) Health Care Innovation Award payment and service delivery models funded by the Innovation Center; (2) advanced primary care functionality promoted by other payers, independent organizations like the National Committee for Quality Assurance, and/or through Innovation Center initiatives including the Multi-Payer Advanced Primary Care Practice Demonstration and Comprehensive Primary Care Initiative; and (3) care coordination funded through other Medicare initiatives, including, for example, the Community-based Care Transitions Program. Furthermore, the markets making up the non-ACO comparison group only cover about 10 percent of the national assignable FFS population in 2016 and may offer an imperfect counterfactual from which to estimate ACO effects on other markets.

An alternative (and likely more precise) estimate for the overall Medicare ACO effect on spending through 2016 involves assuming a spillover multiplier mainly for savings on non-assigned beneficiaries whose spending is not explicitly included in benchmark calculations and combining primary and spillover effects to estimate the degree that ACO benchmarks were reduced by the feedback such efficiency gains would have on national average spending growth. Analysis of claims data indicates an average ACO's providers and suppliers provide services to roughly 40 to 50 percent more beneficiaries than are technically assigned to the ACO in a given year. In addition, savings would potentially extend to spending greater than the large claims truncation amount, IME payments, DSH payments, and other pass-through payments that are excluded from ACO financial calculations. Assuming proportional savings accrue for non-assigned beneficiaries and the excluded spending categories, as previously described, supports a spillover savings assumption of 1.6 (that is, 60 cents of savings on non-benchmark spending for every dollar of savings on benchmark spending). Total implied savings, including the assumed spillover savings, would imply Medicare ACOs were responsible for about 50 percent of the lower spending growth in ACO markets (after becoming ACO active), or roughly 0.5 percent lower total FFS Parts A and B spending in 2016 after accounting for shared savings payments.

There are several other key takeaways from the available evidence and literature regarding the performance of Medicare ACOs, including the following:

Independent Research Finds ACOs Reduce Medicare Trust Fund Outlays. The implications from studying market-level trends described in the previous section are compatible with findings reported by independent researchers. J. Michael McWilliams (JAMA, 2016) found that in 2014, Shared Savings Program ACOs generated estimated program savings of $628 million, or about 2.5 times higher than the savings in relation to participating ACOs' historical benchmarks and nearly twice the total shared savings payments of $341 million.[31] Another study by McWilliams and colleagues (JAMA, 2013) on a commercial ACO initiative, the Alternative Quality Contract, estimated a net 3.4 percent reduction in spending on Medicare beneficiaries due to spillover from a commercial non-Medicare ACO initiative.[32] This research supports the hypothesis that changes in delivery implemented by Medicare ACO clinicians would in turn cause efficiency gains in the wider Medicare FFS population. In another study supporting this hypothesis, Madeleine Phipps-Taylor and Stephen Shortell (NEJM, 2016) conducted a set of case studies which concluded that ACOs were making system and process changes that would improve the value of services provided to all patients, regardless of payer.[33]

Low revenue ACOs (including small and physician-only ACOs) have produced stronger average benchmark savings to date than high revenue ACOs (likely including institutional providers). We also find lower spending growth in the handful of markets that happen to be virtually exclusively populated by low revenue ACOs; however, the sample size of such markets is too small for us to confidently estimate relative performance but does offer some corroboration of the stronger results observed for low revenue ACOs on average relative to their historical benchmarks. Further, evidence suggests that overall payment reform has been associated with little acceleration in consolidation of health care providers that surpasses trends already underway (Post et al., 2017),[34] although there is some evidence of potential defensive consolidation in response to new payment models (Neprash et al., 2017).[35] Anecdotally, ACOs provide physician practices with a way to stay independent and offer a viable alternative to merging with a hospital (Mostashari, 2016).[36]

Continued

Generating savings is difficult for ACOs. It may take time as well as trial and error for ACOs to build more efficient care delivery infrastructure. Small absolute savings compound over time in an incremental fashion. This gradual change is evidenced by ACOs' financial performance results to date, which indicate that ACOs produce more net savings the longer they participate in programs such as the Shared Savings Program.

Shared savings are not profits. Program experience since 2012 indicates that ACOs make upfront investments in care delivery infrastructure, including data analytics and staffing, with the intent of saving money through improvements in care management and coordination. ACOs that do not achieve savings must still fund these operational costs.

Sustainably rewarding attained efficiency and continued improvement is the central challenge. Therefore, optimizing program design elements for ACO initiatives such as the Shared Savings Program is key to ensuring that both of these goals are attained. Such elements include the methodology used to set and reset the ACO's historical benchmark, the approach used to calculate the ACO's shared savings and/or shared losses, the level of performance-based risk for ACOs, and the methodology for assigning beneficiaries to the ACOs. Striking this balance correctly would foster increased participation in ACO initiatives, which is required to produce higher levels of net savings.

b. Assumptions and Uncertainties

The changes to the Shared Savings Program proposed in this rule could result in a range of possible outcomes. We considered a number of uncertainties related to determining future participation and performance by ACOs in the Shared Savings Program.

Changes to the existing benchmark calculations described previously would benefit program cost savings by producing benchmarks with improved accuracy (most notably by limiting the effect of the regional benchmark adjustment to positive or negative 5 percent of the national per capita spending amount). However, such savings would be partly offset by increased shared savings payments to ACOs benefiting from our proposal to apply the methodology incorporating factors based on regional FFS expenditures beginning with the ACO's first agreement period, revising risk adjustment to include up to a 3 percent increase in average HCC risk score over the course of an agreement period, and blending national trend with regional trend when calculating ACO benchmarks. Such trade-offs reflect the intention of our proposal to strengthen the balance between rewarding ACOs for attainment of efficiency in an absolute sense in tandem with incentivizing continual improvement relative to an ACO's recent baseline.

More predictable relationships, that is, an ACO's knowledge of its costs relative to the FFS expenditures in its region used to adjust its benchmark, can allow risk-averse ACOs to successfully manage significant exposure to performance-based risk. However, the proposed policy would limit regional adjustments so that they still incentivize low cost ACOs to take on risk while mitigating excessive windfall payments to ACOs that, for a variety of reasons, may be very low cost at baseline. The proposed policy also increases the possibility that higher cost ACOs would find a reasonable business case to remain in the program and thereby continue to lower their cost over time.

We also considered the possibility that providers and suppliers would have differing responses to changing financial incentives offered by the program, including for example the varying levels of savings sharing rates and/or loss sharing limits proposed for the BASIC and ENHANCED tracks. Participation decisions are expected to continue to be based largely on an ACO's expectation of the effect of rebasing and the regional adjustment on its ability to show spending below an expected future benchmark. We also considered the incentive for ACOs to participate under the highest level of risk and reward in the BASIC track or in the ENHANCED track in order to be considered an Advanced APM Entity for purposes of the Quality Payment Program. Eligible clinicians in an ACO that is an Advanced APM Entity may become Qualifying APM Participants for a year if they receive a sufficient percentage of their payments for Part B covered professional services or a sufficient percentage of Medicare patients through the ACO.

We also gave consideration to the effect on program entry and renewal as a result of discontinuing Track 1 and Track 2, and offering instead the BASIC track (including the glide path for eligible ACOs) and ENHANCED track, including the option for ACOs currently under 3-year agreements for participation in Track 1, Track 2, and Track 3 to terminate their agreement to quickly enter a new agreement period under the BASIC track or the ENHANCED track. For example, if 2014 starters complete a second 3-year agreement period under Track 1 and are eligible to enter the BASIC track's glide path under a one-sided model in 2020, these ACOs could have 7 performance years under a one-sided model. Modeling indicates that while such allowance could slow the transition to risk for some ACOs that might otherwise have enough of a business case to make an immediate transition to performance-based risk, the longer glide path would likely result in greater overall program participation by the end of the projection period and marginally increase overall program savings. We also considered the effect on participation from the proposals to permit ACOs to change their beneficiary assignment method selection prior to the start of each performance year, to allow ACOs in the BASIC track's glide path the option annually to elect to transition to a higher level of risk and reward within the glide path, and to offer a July 1, 2019 start date (including the proposed extension of an existing agreement period through June 30, 2019).

We also considered the potential effects of policies proposed to promote participation by low revenue ACOs as follows. By allowing low revenue ACOs to enter the BASIC track (potentially immediately entering the maximum level of risk and potential reward under such track) and continue their participation in the BASIC track for a subsequent agreement period (under the highest level of risk and potential reward), the proposal would offer low revenue ACOs a longer period under a more acceptable degree of risk given their revenue constraints, before transitioning to more significant risk exposure under the ENHANCED track.

Low revenue ACOs can still choose to enter the ENHANCED track, and take on additional downside risk in exchange for the opportunity to share in a higher percentage of any savings. Such migration is likeliest for low revenue ACOs expecting a favorable regional adjustment to their rebased historical benchmark. The proposal to include the regional adjustment in the methodology for determining an ACO's benchmark for its first agreement period should help provide such ACOs the degree of certainty necessary for earlier election of performance-based risk, while capping the regional adjustment at positive or negative 5 percent of national per capita expenditures for Parts A and B services for assignable beneficiaries helps CMS avoid unnecessarily large windfall payments for ACOs that would have

in Value-Based Care. *Ann Fam Med.* 2016; 14(1):5–7. doi:10.1370/afm.1899.

already been properly incentivized to aggressively participate with a regional adjustment set at the level of the cap.

In addition, we considered related impacts of the proposed changes to the program's benchmarking methodology, as used to establish, adjust, update and reset the ACO's benchmark. For renewing ACOs—especially ACOs that are concerned about competition from operating in a highly-competitive ACO market or ACOs that make up a large portion of their market—several proposed changes are likely to help mitigate concerns about the long term business case of the model. Most notably, the use of a regional/national blend to determine the growth rates for the trend and update factors should reduce the degree to which ACO savings (and/or neighboring ACO savings) affect an ACO's own benchmark updates. Furthermore, the proposal to use full HCC risk ratios (capped at positive or negative 3 percent) regardless of the assignment status of a beneficiary should help to assuage concerns that risk adjustment could adversely affect an ACO that increasingly serves a higher morbidity population inside of its market.

To best reflect these uncertainties, we continue to utilize a stochastic model that incorporates assumed probability distributions for each of the key variables that would impact participation, changes in care delivery, and the overall financial impact of the Shared Savings Program. The model continues to employ historical baseline variation in trends for groups of beneficiaries assigned using the program's claim-based assignment methodology to simulate the effect of benchmark calculations as described in the June 2016 final rule (81 FR 38005 through 38007). We used several unique assumptions and assumption ranges in the updated model.

To estimate the number of ACOs that would participate in the program, we assumed that up to approximately 250 existing 2018 ACOs would be affected by the proposed policies starting with a potential third agreement period beginning on July 1, 2019, or in 2020 or 2021. We also assumed that up to approximately 300 existing 2018 ACOs would be affected by the proposed policies starting with a potential second agreement period beginning on July 1, 2019, in 2020, or 2021. In addition, between 20 and 50 new ACOs were assumed to form annually from 2019 through 2028.

We assumed ACO decision making regarding participation would reflect each ACO's updated circumstances including prior year performance as well as expected difference in spending in relation to future anticipated adjusted benchmark spending. Specific related assumptions are as follows:

For one, the potential that existing ACOs would renew under the policies in the proposed rule would be related to expectations regarding the effect of the proposed changes to the regional adjustment on the ACO's rebased benchmark. ACOs expecting adjusted historical benchmarks from 2 to 10 percent higher than actual per capita cost are assumed to select the highest-risk option (Track 3 in the baseline or the ENHANCED track under the proposed rule); such range is reduced for second or later rebasing under the policies in the proposed rule to 1 to 5 percent higher than actual per capita cost. Otherwise, ACOs expecting adjusted rebased benchmarks from 0 to 3 percent higher than actual per capita cost are assumed to select the Track 1+ Model (baseline) or BASIC track, Level E (proposed). ACOs expecting adjusted rebased historical benchmarks from zero to 5 percent lower than actual per capita cost are expected not to renew unless another agreement in Track 1 is allowed (baseline), or are assumed to have between zero and 50 percent chance of electing the BASIC track (proposed).

Second, all other renewal decisions would follow the same assumptions as the preceding description except for the following cases. For the baseline scenario, a Track 1 ACO eligible for a second Track 1 agreement period during the projection period that does not otherwise select renewal in Track 3 or the Track 1+ Model would only renew in Track 1 if the ACO had earned shared savings in either of the first 2 years of the existing agreement period or if the ACO anticipates an adjusted historical benchmark no lower than 3 percent below actual cost. For the proposed scenario, an ACO not otherwise choosing the ENHANCED track would only renew in the BASIC track if the following conditions were met: (1) The ACO expects an adjusted historical benchmark no lower than 0 to 3 percent below actual cost; (2) the ACO did not experience a loss in the existing agreement period; and (3) the ACO is low revenue (as high revenue ACOs would be precluded from renewing in the BASIC track).

Third, we used the following approach to make assumptions about participation decisions for ACOs encountering a shared loss. An adjusted shared loss (L) was calculated by netting out the total expected incentive payments that would be made under the Quality Payment Program to ACO providers/suppliers who are Qualifying APM Participants during the payment year that is 2 years after the performance year for which the ACO is accountable for shared losses. In each trial a random variable (X) was chosen from a skewed distribution ranging from zero to 3 percent of benchmark (mode 1 percent of benchmark) for determining participation decisions affecting years prior to 2023 (alternatively X was sampled from the range zero to 2 percent of benchmark with mode of 0.5 percent of benchmark for participation decisions for 2023 and subsequent years when the incentive to participate in an Advanced APM as a Qualifying APM Participant is reduced). If $L>X$ then the ACO is assumed to drop out. Otherwise, if $L>X/2$ then the ACO is assumed to have a 50 to 100 percent chance of leaving the program. Otherwise, the ACO has a relatively smaller loss ($L<X/2$) and the ACO is assumed to have roughly double the chance of persisting relative to the prior scenario.

Fourth, we used the following approach to make assumptions about the potential that ACOs in the BASIC track would elect early transition to the BASIC track, Level E. An adjusted shared savings (S) was calculated by adding the total potential incentive payments expected under the Quality Payment Program (2 years after the potential transition to Level E) to ACO providers/suppliers who would expect to become Qualifying APM Participants (due to the transition to Level E) to the ACO's most recent shared savings—with such sum expressed as a percentage of benchmark. In each trial a random variable (Y) was chosen from a skewed distribution ranging from 1 to 4 percent of benchmark (mode 2 percent of benchmark). If $S>Y$, then the ACO is assumed to elect immediate transition to the BASIC track, Level E for the following performance year.

Assumptions for ACO effects on claims costs reflect a combination of factors. First, ACO revenue is assumed to be inversely proportional to historical savings achieved prior to implementation of the new rule. This is because, as noted earlier, low revenue ACOs (that tend to have low ACO participant Medicare FFS revenue relative to the ACO's benchmark spending) have generally shown stronger financial performance over the first 5 years of the program than high revenue ACOs. For existing low revenue ACOs, baseline savings immediately prior to renewal under the proposed rule are estimated to range from 1 to 4 percent of spending accounted for by the program benchmark, with an additional spillover effect on extra-benchmark spending accounting for an

additional 25 to 75 percent savings relative to the directly assumed savings on benchmark spending. Conversely, existing high revenue ACOs are assumed to have baseline savings of only 25 percent of the assumed baseline savings for low revenue ACOs, as previously enumerated.

Residual baseline savings are then potentially assumed to gradually diminish if participation ends. Specifically, zero to 100 percent of baseline savings are assumed to erode by the fifth year after an existing ACO drops out of participation as a Medicare ACO.

Alternatively, future savings for each type of ACO are assumed to scale according to the incentive presented by each potential track of participation. Future savings in Track 3 or the ENHANCED track during the projection period for low revenue ACOs are assumed to range from zero to 4 percent of benchmark spending for existing ACOs and 1 to 5 percent of benchmark spending for new ACOs. High revenue ACOs are assumed to have zero to 100 percent of the savings assumed for low revenue ACOs. Ultimate savings are assumed to phase in over 5 to 10 years for all types of ACOs. Savings for the Track 1+ Model or the BASIC track, Level E, are assumed to be 50 to 100 percent of the savings assumed for Track 3/ENHANCED track (as previously described). Savings for the BASIC track, Levels C and D, or Track 1 are assumed to be 30 to 70 percent of the savings assumed for Track 3/ENHANCED track. Lastly, savings for the BASIC track, Levels A and B, are assumed to be 20 to 60 percent of the savings assumed for Track 3/ENHANCED track.

We also assumed that selection effects would implicitly include the renewal decisions of ACOs simulated in the model. Further assumptions included the following: (1) The proposed adoption of full HCC adjustment (capped at positive or negative 3 percent) allows each ACO to increase its benchmark according to a skewed distribution from zero to 3 percent (mode 0.5 percent); and (2) for both the baseline and proposed scenarios, each ACO is assumed to be able to influence its comparable spending to region by zero to 5 percent (skewed with mode 1 percent) for example via changes in ACO participant TIN composition or other methods to direct assignment in a favorable manner given the financial incentive from the regional adjustment to the benchmark.

c. Detailed Stochastic Modeling Results

A simulation model involving the assumptions and assumption ranges described in the previous section was constructed and a total of 1,000 randomized trials were produced. Table 17 summarizes the annual projected mean impact (projected differences under the proposed changes to the program relative to the current baseline program) on ACO participation, federal spending on Parts A and B claims, ACO earnings from shared savings net of shared losses, and the net federal impact (effect on claims net of the change in shared savings/shared losses payments). The overall average projection of the impact of the proposed program changes is approximately $2.24 billion in lower overall federal spending over 10 years from 2019 through 2028. The 10th and 90th percentile from the range of projected 10 year impacts range from −$4.43 billion in lower spending to $0.09 billion in higher spending, respectively. The mean impact is comprised of about $0.51 billion in lower claims spending, $2.17 billion in reduced shared savings payments, net of shared loss receipts, and approximately $0.44 billion in additional incentive payments made under the Quality Payment Program to additional ACO providers/suppliers expected to become Qualifying APM Participants (mainly for performance years prior to 2023 where the Quality Payment Program incentive made during the corresponding payment year is 5 percent of Physician Fee Schedule revenue).

TABLE 17—10-YEAR ESTIMATED IMPACT OF PROPOSED RULE ON ACO PARTICIPATION, SPENDING ON PARTS A AND B CLAIMS, ACO SHARED SAVINGS NET OF LOSSES AND NET FEDERAL IMPACT

(Impact on claims, ACO shared savings, Advanced APM incentive payments, and net federal spending are expressed in $ millions)

Performance Year	ACO Participation	Claims	ACO Net Earnings	Federal Impact Before APM Incentives	Advanced APM Incentives to QPs	Net Federal Impact
2019	-20	60	60	120	0	120
2020	-33	80	40	120	0	120
2021	-49	50	20	70	0	70
2022	-29	20	-150	-130	70	-60
2023	-17	-40	-200	-240	130	-110
2024	-21	-110	-160	-280	220	-60
2025	-90	-160	-290	-450	0	-450
2026	-109	-190	-400	-590	30	-560
2027	-107	-150	-500	-650	0	-650
2028	-109	-80	-570	-650	-10	-660
10-Year Total		**-510**	**-2,170**	**-2,680**	**440**	**-2,240**
Low (10th Percentile)		-2,140	-4,310	-4,840	110	-4,430
High (90th Percentile)		1,040	270	-440	740	90

The overall drop in expected participation is mainly due to the expectation that the program will be less likely to attract new ACO formation in future years as the number of risk-free years available to new ACOs would be reduced from 6 years (two, 3-year agreement periods in current Track 1) to 2 years in the BASIC track, which also has reduced attractiveness with a lower 25 percent maximum sharing rate during the 2 risk-free years. However, the changes are expected to increase continued participation from existing ACOs, especially those currently facing mandated transition to risk in a third agreement period starting in 2019, 2020, or 2021 under the existing regulations, as well as certain other higher cost ACOs for which the capped regional adjustment would not reduce their benchmark as significantly as prescribed by current regulation.

Relatively small increases in spending in years 2019 through 2021 are largely driven by expectations for more favorable risk adjustment to ACOs' updated benchmarks and a temporary delay in migration of certain existing ACOs to performance-based risk. Savings grow significantly in the out years as a greater share of existing ACOs eventually transition to higher levels of risk and the savings from capping the regional adjustment to the benchmark grow because ACOs would increasingly have become eligible for higher uncapped adjustments under the baseline in the later years of the projection period.

The mean projection of $2.24 billion reduced overall federal spending is a reasonable point estimate of the impact of the proposed changes to the Shared Savings Program during the period between 2019 through 2028. However, we emphasize the possibility of outcomes differing substantially from the median estimate, as illustrated by the estimate distribution. Accordingly, this RIA presents the costs and benefits of this proposed rule to the best of our ability. To help further develop and potentially improve this analysis, we request comment on the aspects of the rule that may incentivize behavior that could affect participation in the program and potential shared savings payments. As further data emerges and is analyzed, we may improve the precision of future financial impact estimates.

To the extent that proposed changes to the Shared Savings Program will result in net savings or costs to Part B of Medicare, revenues from Part B beneficiary premiums would also be correspondingly lower or higher. In addition, because MA payment rates depend on the level of spending within traditional FFS Medicare, savings or costs arising from the proposed changes to the Shared Savings Program would result in corresponding adjustments to MA payment rates. Neither of these secondary impacts has been included in the analysis shown.

2. Effects on Beneficiaries

Earlier in this analysis we describe evidence for the Shared Savings Program's positive effects on the efficiency of care delivered by ACO providers/suppliers over the first five years of the program. Reduced unnecessary utilization can lead to financial benefits for beneficiaries by way of lower Part B premiums or reduced out of pocket cost sharing or both. Certain beneficiaries may also benefit from the provision of in-kind items and services by ACOs that are reasonably connected to the beneficiary's medical care and are preventive care items or services or advance a clinical goal for the beneficiary. The value of care delivered to beneficiaries also depends on the quality of that care. Evidence indicates there have been incremental improvements in quality of care reported for ACO providers/suppliers. As previously noted in the Background

section of this RIA, for all ACOs that participated during performance year 2016 that had four or more years of experience in the program, average quality performance improved by 15 percent across the 25 measures used consistently across performance years 2013 to 2016.

As explained in more detail previously, we believe the proposed changes would provide additional incentives for ACOs to improve care management efforts and maintain program participation. In addition, ACOs with low baseline expenditures relative to their region are more likely to transition to and sustain participation in a risk track (either the BASIC track (Level E) or the ENHANCED track) in future agreement periods. Consequently, the changes in this rule would also benefit beneficiaries through greater beneficiary engagement and active participation in their care (via beneficiary incentives) and broader improvements in accountability and care coordination (such as through expanded use of telehealth services and extending eligibility for the waiver of the SNF 3-day rule to all ACOs accepting performance-based risk) than would occur under current regulations. Lastly, we estimate that the net impacts on federal spending, as previously detailed, would correspond to savings to beneficiaries in the form of reductions in Part B premium payments of approximately $310 million over the 10 year projection period through 2028.

We intend to continue to analyze emerging program data to monitor for any potential unintended effect that the use of a regional adjustment (as modified by the proposed rule) to determine the historical benchmarks for additional cohorts of ACOs could potentially have on the incentive for ACOs to serve vulnerable populations (and for ACOs to maintain existing partnerships with providers and suppliers serving such populations).

3. Effects on Providers and Suppliers

As noted previously, changes in this proposed rule aim to improve the ability for ACOs to transition to performance-based risk and provide higher value care. We believe the contemporaneous growth of ACO agreements with other payers is sufficiently mature (and invariably heterogeneous in structure) that it would not be materially affected by the proposed changes to specific features of the Shared Savings Program; however, we seek comment if stakeholders disagree with such assumption, as we would want to consider impacts on other payers and patient populations, if evidenced, as part of the development of the policies to be included in the final rule. Although the proposed elimination of Track 1 is expected to ultimately reduce the overall number of ACOs participating in the program, this proposed change might also create opportunities for more effective ACOs to step in and serve the beneficiaries who were previously assigned to other ACOs that leave the program. In addition, other proposed policies (including changes to HCC risk adjustment, longer five year agreement periods, gradual expansion of exposure to risk in the BASIC track, and allowing eligible low revenue ACOs to renew for a second agreement period in the BASIC track under Level E) are expected to increase the number of existing and new ACOs that ultimately make a sustained transition to performance-based risk. Such transition is expected to help ACOs more effectively engage with their ACO participants and ACO providers/suppliers in transforming care delivery.

Proposed changes to the methodology for making regional adjustments to the historical benchmark are expected to affect ACOs differently depending on their circumstances. Similar to observations described in the June 2016 final rule, certain ACOs that joined the program from a high expenditure baseline relative to their region and that showed savings under the first and/or second agreement period benchmark methodology would likely expect lower benchmarks and greater likelihood of shared losses under a methodology that includes a 35 percent weight on the regional expenditure adjustment. Additionally, certain ACOs that joined the program with relatively low expenditures relative to their region might expect significant shared savings payments even if they failed to generate shared savings in their first agreement period prior to the application of the regional adjustment to the benchmark. Limiting the weight of the regional adjustment to the benchmark to 50 percent and capping the adjustment at positive or negative 5 percent of national average per capita FFS spending for assignable beneficiaries would serve to preserve the incentive for low cost ACOs to maintain participation and accept performance-based risk while also improving the business case for high cost ACOs to continue to participate and drive their costs down toward parity with or even below their regional average. Therefore, the proposed changes to the regional adjustment are expected to increase participation by ACOs in risk tracks by broadening the mix of ACOs with plausible business cases for participation without creating excessive residual windfall payments to ACOs with very low baseline cost or unreasonably punitive decreases to benchmarks for ACOs serving very high cost populations at baseline. The increase in sustained participation in performance-based risk is evidenced by the projection of $440 million in increased incentive payments under the Quality Payment Program to ACO providers/suppliers achieving status as Qualifying APM Participants due to increased ACO participation in risk-based tracks of the Shared Savings Program. Conversely, the projected $2.17 billion in lower overall 10-year shared savings payments to ACOs reflects the prudent limitations that would be placed on the regional adjustment to the benchmark for ACOs that are very low cost relative to their region prior to rebasing.

Several other changes are expected to provide certain ACOs with stronger business cases for participating in the program. Transition to full HCC risk adjustment (capped at positive or negative 3 percent) regardless of beneficiary assignment status is expected to increase the resulting adjusted updated benchmark for the average ACO and better reflect actual shifts in assigned patient morbidity. Blending national with regional trend for ACO benchmark calculations is also expected to mitigate some ACOs' concerns regarding the problem of hyper competition against other ACOs in highly-saturated markets, as well as the potential that large ACOs would drive the regional trend they are ultimately measured against. These factors contribute to the expanded participation expected in performance-based risk and the resulting increase in savings on claims through more efficient care delivery.

We have made program data available that can help stakeholders evaluate the impact the proposed changes, as previously described, may have on individual ACOs in various markets. The Center for Medicare (CM) has created standard analytical files incorporating factors based on regional FFS expenditures (currently available for CYs 2014, 2015, and 2016) that specifically tabulate—(1) aggregate expenditure and risk score data for assignable beneficiaries by county; and (2) the number of beneficiaries assigned to ACOs, by county. These public use files can be obtained at the following website *https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/*

SSPACO/SSP_Benchmark_Rebasing.html.

CM has also created standard analytical files that contain ACO-specific metrics as well as summarized beneficiary and provider information for each performance year of the Shared Savings Program. These files include ACO-specific annual data on financial and quality performance, person years and demographic characteristics of assigned beneficiaries, aggregate expenditure and utilization, and participant composition of the ACO. The public use files for 2013 through 2016 can be obtained at the following website *https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/SSPACO/index.html.*

4. Effect on Small Entities

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most physician practices, hospitals, and other providers are small entities either by virtue of their nonprofit status or by qualifying as a small business under the Small Business Administration's size standards (revenues of less than $7.5 to $38.5 million in any 1 year; NAIC Sector-62 series). States and individuals are not included in the definition of a small entity. For details, see the Small Business Administration's website at *http://www.sba.gov/content/small-business-size-standards.* For purposes of the RFA, approximately 95 percent of physicians are considered to be small entities. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the Physician Fee Schedule.

Although the Shared Savings Program is a voluntary program and payments for individual items and services will continue to be made on a FFS basis, we acknowledge that the program can affect many small entities and have developed our rules and regulations accordingly in order to minimize costs and administrative burden on such entities as well as to maximize their opportunity to participate. (For example: Networks of individual practices of ACO professionals are eligible to form an ACO; the use of an MSR under Level A and Level B of the BASIC track, and, if elected by the ACO, under the ENHANCED track and BASIC track, Levels C through E, that varies by the size of the ACO's population and is calculated based on confidence intervals so that smaller ACOs have relatively lower MSRs; and low revenue ACOs may remain under reduced downside risk in a second agreement period under the BASIC track, Level E.)

Small entities are both allowed and encouraged to participate in the Shared Savings Program, provided the ACO has a minimum of 5,000 assigned beneficiaries, thereby potentially realizing the economic benefits of receiving shared savings resulting from the utilization of enhanced and efficient systems of care and care coordination. Therefore, a solo, small physician practice or other small entity may realize economic benefits as a function of participating in this program and the utilization of enhanced clinical systems integration, which otherwise may not have been possible. We believe the policies included in this proposed rule, such as the proposal to allow low revenue ACOs up to 2 agreement periods in in the BASIC track (with the second agreement period at the highest level of risk and potential reward) where downside risk exposure is limited to a percentage of ACO provider/supplier revenue (capped at a percentage of the ACO's benchmark), may further encourage participation by small entities in existing ACOs that may otherwise not find it possible to quickly assume the much higher exposure to downside risk required under the ENHANCED track.

As detailed in this RIA, total expected incentive payments made under the Quality Payment Program to Qualifying APM Participants are expected to increase by $440 million over the 2019 to 2028 period as a result of changes that will increase participation in the Shared Savings Program by certain ACOs and therefore increase the average small entity's earnings from such incentives. We also note that the proposal to extend each agreement period to at least 5 years offers greater certainty to ACOs, including small entities, regarding their benchmark as they approach the higher levels of risk required in the later years of the BASIC track and under the ENHANCED track.

5. Effect on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. Although the Shared Savings Program is a voluntary program, this proposed rule would have a significant impact on the operations of a substantial number of small rural hospitals. We have proposed changes to our regulations such that benchmark adjustments for regional spending are limited to at most a 50 percent weight and are capped at positive or negative 5 percent of national average per capita FFS spending for assignable beneficiaries. Additionally we have proposed to blend national and regional trend in benchmark calculations, and have proposed allowing full HCC risk adjustment with a positive or negative 3 percent cap regardless of beneficiary assignment status. Such changes could help provide a stronger business case for ACOs built around rural hospitals that may have otherwise been concerned about serving a higher-risk population in their region or driving the local trends against which they would be compared. We seek comment from small rural hospitals on the proposed changes with special focus on the impact of the proposed changes to the adjustment to the benchmark to reflect regional FFS expenditures. (See the Effects on Providers and Suppliers section for a description of data currently available on the CMS website that may be useful for commenters to estimate the effects of such proposed changes for their particular ACO and/or market.)

6. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2018, that is approximately $150 million. This proposed rule does not include any mandate that would result in spending by state, local or tribal governments, in the aggregate, or by the private sector in the amount of $150 million in any 1 year. Further, participation in this program is voluntary and is not mandated.

7. Regulatory Review Cost Estimation

We assume all 561 ACOs currently participating in the Medicare Shared Savings Program will review on average half of this proposed rule. For example, it is possible that certain ACOs may limit review to issues related only to the BASIC track and not the ENHANCED track or rely on a partnership with a management company, health plan, trade association or other entity that reviews the proposed rule and advises

multiple ACO partners. However, we acknowledge that this assumption may understate or overstate the costs of reviewing this rule. We welcome any comments on the approach in estimating the number of entities reviewing the proposed rule and the scope of the average review.

Using the wage information from the Bureau of Labor Statistics for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $107.39 per hour, where the assumed hourly wage of $53.69 has been increased by a factor of 2 to account for fringe benefits.[37] Assuming an average reading speed of 200 words per minute, we estimate it would take approximately 6 hours for the staff to review half of this proposed rule. For each ACO the estimated cost is $644.34 (6 hours × $107.39 per hour). Therefore, we estimate the total cost of reviewing this proposed regulation is approximately $361,500 ($644.34 × 561 ACOs).

8. Other Impacts on Regulatory Burden

We estimate that extending the agreement period to 5 years may reduce certain administrative costs incurred by ACOs. In its review of the Physician Group Practice demonstration, GAO estimated the average entity spent $107,595 on initial startup for administrative processes. We assume roughly one-tenth of such total startup amount would represent the administrative expenses of renewal for an ACO entering a renewed agreement period ($10,760 per ACO). Therefore, we estimate extending the agreement period to 5 years would reduce ACO administrative burden by approximately $6 million over 10 years ($10,760 × 561 ACOs).

We do not believe that the proposals included in this proposed rule would otherwise materially impact the burden on ACOs for compliance with the requirements of the Shared Savings Program. The annual certification and application process would remain comparable to the existing program (setting aside the change to five year agreement periods as noted in the previous paragraph). However, we seek comment if stakeholders have reason to believe the proposed changes would materially change the burden of participation in the program beyond what we have estimated, as described previously.

[37] Occupational Employment Statistics available online at *https://www.bls.gov/oes/current/oes_nat.htm.*

D. Alternatives Considered

A particularly significant element of the proposed changes to the benchmarking methodology included in this proposed rule is the proposal to limit the effect of regional adjustments on rebased ACO historical benchmarks via a cap of positive or negative 5 percent of national average per capita FFS expenditures for assignable beneficiaries. If the proposal were amended to remove this cap then shared savings payments to low cost ACOs and selective participation decisions would increase the cost of the proposed rule by roughly $5 billion such that the estimated $2.24 billion savings relative to current regulation baseline (as estimated for the proposed rule in the previous sections) would instead be projected as a $2.75 billion cost.

Another alternative considered would be to push back the first agreement periods under the proposed new participation options and all other applicable proposed changes to a January 1, 2020 start date. This would avoid the complexity of a July 1, 2019 midyear start date. ACOs otherwise eligible to renew their participation in the program in 2019 would be offered a one year extension under their current agreement periods. This alternative would have differing impacts on federal spending.

Forgoing the proposed July 1, 2019 start date and providing for the next available start date of January 1, 2020, would likely marginally increase spending on claims through a combination of factors. This approach would delay, by 6 months, the transition into performance-based risk for certain ACOs whose current agreement periods will end on December 31, 2018. We also would anticipate a temporary increase in overall shared savings payments to such ACOs during the one year extension in 2019 because of the additional year lag between the historical baseline expenditures and the 2019 performance year expenditures under the extended agreement period. However, this alternative would also have a slightly greater effect in reducing Federal spending in later years through a combination of factors. Under this approach, the third historical benchmark year of the subsequent agreement period for such ACOs would be CY 2019 rather than CY 2018, as would be the case under the proposed July 1, 2019 start date. The use of historical expenditures from 2017 through 2019, rather than 2016 through 2018, to determine the benchmark for these ACOs would marginally reduce the cumulative variation affecting benchmark accuracy in 2024, the final year of these ACOs' first agreement period under the policies in this proposed rule. We would also anticipate a reduction in incentive payments made under the Quality Payment Program in 2021 (which are based on participation by eligible clinicians in Advanced APMs during 2019) by delaying the transition to performance-based risk for certain ACOs to 2020 instead of July 1, 2019.

Overall, it is estimated that the shift to a January 1, 2020 start date for new agreement periods under the proposed changes, combined with a 1-year extension of the existing agreement period for most ACOs otherwise expected to enter a new agreement period in 2019, would reduce overall Federal spending by approximately an additional $100 million relative to the estimated $2.24 billion reduction in spending estimated for the proposal to offer a July 1, 2019 start date for new agreement periods under the proposed changes.

We also considered the potential impact of the alternative of allowing ACOs to elect a beneficiary opt-in based assignment methodology supplemented by a modified claims-based assignment methodology for beneficiaries who have received the plurality of their primary care and at least seven primary care services, from one or more ACO professionals in the ACO during the applicable assignment window and voluntary alignment. However, significant uncertainties potentially impacting the program in offsetting ways make projecting the impact of such proposal difficult. Although it is possible that ACOs electing such methodology could more effectively target care management to more engaged and/or needier subpopulations of patients, it is also possible that such targeting could deter ACOs from deploying more comprehensive care delivery reform across a wider mix of patients served by ACO providers/suppliers. It is also unclear if many ACOs would see value in a more restrictive assignment approach as they may be hesitant to voluntarily reduce their overall number of assigned beneficiaries and consequently lower their total benchmark spending and the magnitude of potential shared savings. Furthermore, it is not currently empirically possible to determine if the potential method for adjusting benchmark expenditures that is described in the proposed rule would provide sufficient accuracy in setting spending targets or if it could be vulnerable to higher claims variation and/or bias because of the selective

nature of beneficiaries who opt in, voluntarily align, or meet the modified claims-based assignment criteria in order to be assigned to the ACO. Such uncertainties and challenges may be likely to dissuade ACOs from electing such alternative assignment methodology over the existing options rooted in a broader claims-based assignment methodology supplemented by voluntary alignment, which current experience shows generally duplicates assignment for a subset of beneficiaries that would have been assigned regardless via the existing claims-based assignment methodology. If few ACOs were to elect this potential alternative assignment methodology then the impact on program spending would also be minimal.

E. Compliance With Requirements of Section 1899(i)(3)(B) of the Act

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished to Medicare FFS beneficiaries. Section 1899(i)(3)(B) of the Act requires that such other payment model must not result in additional program expenditures. Policies falling under the authority of section 1899(i)(3) of the Act include— (1) performance-based risk; (2) refining the calculation of national expenditures used to update the historical benchmark to reflect the assignable subpopulation of total FFS enrollment; (3) updating benchmarks with a blend of regional and national trends as opposed to the national average absolute growth in per capita spending; (4) reconciling the two 6-month performance years during 2019 based on expenditures for all of CY 2019, and pro-rating any resulting shared savings or shared losses; and (5) adjusting performance year expenditures to remove IME, DSH, and uncompensated care payments.

A comparison was constructed between the projected impact of the payment methodology that incorporates all changes and a hypothetical baseline payment methodology that excludes the elements described previously that require section 1899(i)(3) of the Act authority—most importantly performance-based risk in the ENHANCED track and Levels C, D, and E of the BASIC track and updating benchmarks using a blend of regional and national trends. The hypothetical baseline was assumed to include adjustments allowed under section 1899(d)(1)(B)(ii) of the Act including the up to 50 percent weight used in calculating the regional adjustment to the ACO's rebased historical benchmark, as proposed in this rule (depending on the number of rebasings and the direction of the adjustment), capped at positive or negative 5 percent of national average per capita FFS expenditures for assignable beneficiaries. The stochastic model and associated assumptions described previously in this section were adapted to reflect a higher range of potential participation given the perpetually sharing-only incentive structure of the hypothetical baseline model. Such analysis estimated approximately $3 billion greater average net program savings under the alternative payment model that includes all policies that require the authority of section 1899(i)(3) of Act than would be expected under the hypothetical baseline in total over the 2019 to 2028 projection period. The alternative payment model, as proposed in this rule, is projected to result in greater savings on benefit costs and reduced net payments to ACOs. In the final projection year, the alternative payment model is estimated to have 14 percent greater savings on benefit costs, 9 percent lower spending on net shared savings payments to ACOs, with 46 percent reduced overall ACO participation compared to the hypothetical baseline model.

Participation in performance-based risk in the ENHANCED track and the later years of the BASIC track is assumed to improve the incentive for ACOs to increase the efficiency of care for beneficiaries (similar to the assumptions used in the modeling of the impacts, described previously). Such added savings are partly offset by lower participation associated with the requirement to transition to performance-based risk. Despite the higher maximum sharing rate of 75 percent in the ENHANCED track under the alternative payment model under section 1899(i)(3) of the Act relative to the 50 percent maximum sharing rate assumed for the single one-sided risk track under the hypothetical baseline, shared savings payments are expected to be reduced relative to the hypothetical baseline because of lower expected participation resulting from the elimination of Track 1, more accurate benchmarks due to the incorporation of regional factors into the calculation of benchmark updates for all ACOs, and the cap on the regional benchmark adjustment of positive or negative 5 percent of the national average per capita FFS spending amount for assignable beneficiaries.

We will reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

F. Accounting Statement and Table

As required by OMB Circular A–4 under Executive Order 12866, in Table 18, we have prepared an accounting statement showing the change in—(1) net federal monetary transfers; (2) shared savings payments to ACOs net of shared loss payments from ACOs; and (3) incentive payments made under the Quality Payment Program to additional ACO providers/suppliers expected to become Qualifying APM Participants from 2019 to 2028 who would not have been expected to achieve such status absent the proposed changes.

TABLE 18—ACCOUNTING STATEMENT ESTIMATED IMPACTS

[CYs 2019–2028]

Category	Primary estimate	Minimum estimate	Maximum estimate	Source citation (RIA, preamble, etc.)
Transfers From the Federal Government to ACOs				
Annualized monetized: Discount rate: 7%.	−168.9 million	103.3 million	−427.6 million	Table 17.

TABLE 18—ACCOUNTING STATEMENT ESTIMATED IMPACTS—Continued

[CYs 2019–2028]

Category	Primary estimate	Minimum estimate	Maximum estimate	Source citation (RIA, preamble, etc.)
Annualized monetized: Discount rate: 3%.	−199.8 million	78.9 million	−466.0 million	

Notes: Negative values reflect reduction in federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

G. Regulatory Reform Analysis Under Executive Order 13771

Executive Order 13771, entitled Reducing Regulation and Controlling Regulatory Costs (82 FR 9339), was issued on January 30, 2017. The proposed modifications in this proposed rule are expected to primarily have effects on transfers via lower claims spending and shared savings outlays as described previously in this regulatory impact analysis. However these modifications are also anticipated to marginally reduce the administrative burden on participating ACOs by roughly $5.67 million over 10 years (as detailed previously in this RIA); therefore this proposed rule, if finalized, would be considered a deregulatory action under Executive Order 13771.

H. Conclusion

The analysis in this section, together with the remainder of this preamble, provides a regulatory impact analysis. As a result of this proposed rule, the median estimate of the financial impact of the Shared Savings Program for CYs 2019 through 2028 would be net federal savings of $2.24 billion greater than the expected savings if no changes were made. Although this is the best estimate of the financial impact of the Shared Savings Program during CYs 2019 through 2028, a relatively wide range of possible outcomes exists. While roughly 89 percent of the stochastic trials resulted in an overall increase in net program savings over 10 years, the 10th and 90th percentiles of the estimated distribution show a net increase in costs by $0.09 billion and a net decrease in costs by $4.43 billion, respectively.

Overall, our analysis projects that faster transition from one-sided model agreements—tempered by the option for eligible ACOs of a gentler exposure to downside risk calculated as a percentage of ACO participants' total Medicare Parts A and B FFS revenue and capped at a percentage of the ACO's benchmark—can affect broader participation in performance-based risk in the Shared Savings Program and reduce overall claims costs. A second key driver of estimated net savings is the reduction in shared savings payments from the proposed limitation on the amount of the regional adjustment to the ACO's historical benchmark. Such reduction in overall shared savings payments is projected to result despite the benefit of higher net adjustments expected for a larger number of ACOs from the use of a simpler HCC risk adjustment methodology, the blending of national and regional trends for benchmark calculations, and longer 5-year agreement periods that allow ACOs a longer horizon from which to benefit from efficiency gains before benchmark rebasing.

Therefore, the proposed changes are expected to improve the incentive for ACOs to invest in effective care management efforts, increase the number of ACOs participating under performance-based risk by discontinuing Track 1 and Track 2, and offering instead a BASIC track (which includes a glide path from a one-sided model to performance-based risk for eligible ACOs) or the ENHANCED track (based on the current design of Track 3), reduce the number of ACOs with poor financial and quality performance (by eliminating Track 1, requiring faster transition to performance-based risk, limiting high revenue ACOs to one agreement period in the BASIC track and low revenue ACOs to 2 agreement periods in the BASIC track (second agreement period at Level E), and increasing the monitoring of ACO financial performance), and result in greater overall gains in savings on FFS benefit claims costs while decreasing expected shared savings payments to ACOs.

We intend to monitor emerging results for ACO effects on claims costs, changing participation (including risk for cost due to selective changes in participation), and unforeseen bias in benchmark adjustments due to diagnosis coding intensity shifts.

In accordance with the provisions of Executive Order 12866, this rule was reviewed by the Office of Management and Budget.

V. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

List of Subjects

42 CFR Part 414

Administrative practice and procedure, Biologics, Drugs, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR parts 414 and 425 as set forth below:

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 1. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(l) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(l)).

■ 2. Section 414.1415(a)(1)(ii) is revised to read as follows:

§ 414.1415 Advanced APM criteria.

(a) * * *

(1) * * *

(ii) For QP Performance Periods prior to 2019, for the Shared Savings Program, apply a penalty or reward to an APM Entity based on the degree of the use of

CEHRT of the eligible clinicians in the APM Entity.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 1. The authority citation for part 425 continues to read as follows:

Authority: Secs. 1102, 1106, 1871, and 1899 of the Social Security Act (42 U.S.C. 1302, 1306, 1395hh, and 1395jjj).

■ 2. Section 425.20 is amended—

■ a. By revising the definition of ''Agreement period'';

■ b. By adding in alphabetical order definitions for ''Certified Electronic Health Record Technology (CEHRT)'', ''Eligible clinician'', ''Experienced with performance-based risk Medicare ACO initiatives'', ''High revenue ACO'', ''Inexperienced with performance-based risk Medicare ACO initiatives'', and ''Low revenue ACO'';

■ c. By revising the definition of ''Performance year''; and

■ d. By adding in alphabetical order definitions for ''Performance-based risk Medicare ACO initiative'', ''Re-entering ACO'', and ''Renewing ACO''.

The revisions and additions read as follows:

§ 425.20 Definitions.

* * * * *

Agreement period means the term of the participation agreement.

* * * * *

Certified Electronic Health Record Technology (CEHRT) has the same meaning given this term under § 414.1305 of this chapter.

* * * * *

Eligible clinician has the same meaning given this term under § 414.1305 of this chapter.

* * * * *

Experienced with performance-based risk Medicare ACO initiatives means an ACO that CMS determines meets the criteria in either paragraph (1) or (2) of this definition.

(1) The ACO is the same legal entity as a current or previous ACO that is participating in, or has participated in, a performance-based risk Medicare ACO initiative as defined under this section, or that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e).

(2) Forty percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, as defined under this section, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in any of the 5 most recent performance years prior to the agreement start date.

* * * * *

High revenue ACO means an ACO whose total Medicare Parts A and B fee-for-service revenue of its ACO participants based on revenue for the most recent calendar year for which 12 months of data are available, is at least 25 percent of the total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries based on expenditures for the most recent calendar year for which 12 months of data are available.

* * * * *

Inexperienced with performance-based risk Medicare ACO initiatives means an ACO that CMS determines meets all of the following:

(1) The ACO is a legal entity that has not participated in any performance-based risk Medicare ACO initiative as defined under this section, and has not deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e).

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, as defined under this section, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in each of the 5 most recent performance years prior to the agreement start date.

Low revenue ACO means an ACO whose total Medicare Parts A and B fee-for-service revenue of its ACO participants based on revenue for the most recent calendar year for which 12 months of data are available, is less than 25 percent of the total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries based on expenditures for the most recent calendar year for which 12 months of data are available.

* * * * *

Performance year means the 12-month period beginning on January 1 of each year during the agreement period, unless otherwise specified in § 425.200(c) or noted in the participation agreement.

Performance-based risk Medicare ACO initiative means, for purposes of this part, an initiative implemented by CMS that requires an ACO to participate under a two-sided model during its agreement period, including the following options and initiatives:

(1) Participation options within the Shared Savings Program as follows:

(i) BASIC track (Levels A through E).

(ii) ENHANCED track.

(iii) Track 2.

(2) The Innovation Center ACO models under which an ACO accepts risk for shared losses as follows:

(i) Pioneer ACO Model.

(ii) Next Generation ACO Model.

(iii) Comprehensive ESRD Care Model two-sided risk tracks.

(iv) Track 1+ Model.

(3) Other initiatives involving two-sided risk as may be specified by CMS.

* * * * *

Re-entering ACO means an ACO that does not meet the definition of a renewing ACO and meets either of the following conditions:

(1) Is the same legal entity as an ACO, as defined in this section, that previously participated in the program and is applying to participate in the program after a break in participation, because it is either—

(i) An ACO whose participation agreement expired without having been renewed; or

(ii) An ACO whose participation agreement was terminated under § 425.218 or § 425.220.

(2) Is a new legal entity that has never participated in the Shared Savings Program and is applying to participate in the program and more than 50 percent of its ACO participants were included on the ACO participant list under § 425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date.

Renewing ACO means an ACO that continues its participation in the program for a consecutive agreement period, without a break in participation, because it is either —

(1) An ACO whose participation agreement expired and that immediately enters a new agreement period to continue its participation in the program; or

(2) An ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program.

* * * * *

§ 425.100 [Amended]

■ 3. Section 425.100 is amended—

■ a. In paragraph (b) by removing the phrase ''under § 425.604, § 425.606 or § 425.610'' and adding in its place the phrase ''under § 425.604, § 425.605, § 425.606, § 425.609 or § 425.610''; and

■ b. In paragraph (c) by removing the phrase ''under § 425.606 or § 425.610'' and adding in its place the phrase ''under § 425.605, § 425.606, § 425.609 or § 425.610''.

■ 4. Section 425.110 is amended by revising paragraph (b) to read as follows:

§ 425.110 Number of ACO professionals and beneficiaries.

* * * * *

(b) If at any time during the performance year, an ACO's assigned population falls below 5,000, the ACO may be subject to the actions described in §§ 425.216 and 425.218.

(1) While under a CAP, the ACO remains eligible for shared savings and losses.

(2) If the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a CAP, CMS terminates the participation agreement and the ACO is not eligible to share in savings for that performance year.

(3) In determining financial performance for an ACO with fewer than 5,000 assigned beneficiaries, the MSR/MLR is calculated as follows:

(i) For ACOs with a variable MSR and MLR (if applicable), the MSR and MLR (if applicable) are set at a level consistent with the number of assigned beneficiaries.

(ii) For performance years starting before January 1, 2019, for ACOs with a fixed MSR/MLR, the MSR/MLR remains fixed at the level consistent with the choice of MSR and MLR that the ACO made at the start of the agreement period.

(iii) For performance years starting in 2019 and in subsequent years, for ACOs that selected a fixed MSR/MLR at the start of the agreement period or prior to entering a two-sided model during their agreement period, the MSR/MLR is calculated as follows:

(A) The MSR/MLR is set at a level based on the number of beneficiaries assigned to the ACO.

(*1*) The MSR is the same as the MSR that would apply in a one-sided model under § 425.604(b) (for Track 2 ACOs) or § 425.605(b)(1) (for BASIC track and ENHANCED track ACOs) and is based on the number of assigned beneficiaries.

(*2*) The MLR is equal to the negative MSR.

(B) The MSR and MLR revert to the fixed level previously selected by the ACO for any subsequent performance year in the agreement period in which the ACO's assigned beneficiary population is 5,000 or more.

§ 425.118 [Amended]

■ 5. Section 425.118 is amended in paragraph (b)(1)(iii) by removing the phrase ''screening performed under § 425.304(b)'' and adding in its place the phrase ''screening performed under § 425.305(a)''.

■ 6. Section 425.200 is amended—

■ a. By revising paragraph (a);

■ b. By revising the heading of paragraph (b);

■ c. By removing paragraph (b)(2) introductory text, adding a heading for paragraph (b)(2), and revising paragraph (b)(2)(ii);

■ d. By removing paragraph (b)(3) introductory text, adding a heading for paragraph (b)(3), and revising paragraph (b)(3)(ii);

■ e. By adding paragraphs (b)(4) and (5);

■ f. By revising paragraphs (c) and (d);

■ g. By redesignating paragraphs (e)(1)(i) through (v) as paragraphs (e)(1)(ii) through (vi); and

■ h. By adding a new paragraph (e)(1)(i).

The revisions and additions read as follows:

§ 425.200 Participation agreement with CMS.

(a) *General.* In order to participate in the Shared Savings Program, an ACO must enter into a participation agreement with CMS for a period of not less than the number of years specified in this section.

(b) *Agreement period.* * * *

(2) *For 2013 and through 2016.* * * *

(ii) The term of the participation agreement is 3 years unless all of the following conditions are met to extend the participation agreement by 6 months:

(A) The ACO entered an agreement period starting on January 1, 2016.

(B) The ACO elects to extend its agreement period until June 30, 2019.

(*1*) The ACO's election to extend its agreement period is made in the form and manner and according to the timeframe established by CMS; and

(*2*) An ACO executive who has the authority to legally bind the ACO must certify the election described in paragraph (b)(2)(ii)(B) of this section.

(3) *For 2017 and 2018.* * * *

(ii) The term of the participation agreement is 3 years, except for an ACO whose first agreement period in Track 1 began in 2014 or 2015, in which case the term of the ACO's initial agreement period under Track 1 (as described under § 425.604) may be extended, at the ACO's option, for an additional year for a total of 4 performance years if the conditions specified in paragraph (e) of this section are met.

(4) *For 2019.* (i) The start date is January 1, 2019, and the term of the participation agreement is 3 years for ACOs whose first agreement period began in 2015 and who deferred renewal of their participation agreement under paragraph (e) of this section; or

(ii) The start date is July 1, 2019, and the term of the participation agreement is 5 years and 6 months.

(5) *For 2020 and subsequent years.* (i) The start date is January 1 of that year; and

(ii) The term of the participation agreement is 5 years.

(c) *Performance year.* The ACO's performance year under the participation agreement is the 12 month period beginning on January 1 of each year during the term of the participation agreement unless otherwise noted in its participation agreement, and except as follows:

(1) For an ACO with a start date of April 1, 2012, or July 1, 2012, the ACO's first performance year is defined as 21 months or 18 months, respectively.

(2) For an ACO that entered a first or second agreement period with a start date of January 1, 2016, and that elects to extend its agreement period by a 6-month period under paragraph (b)(2)(ii)(B) of this section, the ACO's fourth performance year is the 6-month period between January 1, 2019, and June 30, 2019.

(3) For an ACO that entered an agreement period with a start date of July 1, 2019, the ACO's first performance year of the agreement period is defined as the 6-month period between July 1, 2019, and December 31, 2019.

(d) *Submission of measures.* For each performance year of the agreement period, ACOs must submit measures in the form and manner required by CMS according to § 425.500(c), and as applicable according to §§ 425.608 and 425.609.

(e) * * *

(1) * * *

(i) The ACO's first agreement period in the Shared Savings Program under Track 1 began in 2014 or 2015.

* * * * *

■ 7. Section 425.202 is amended by adding paragraph (b) introductory text to read as follows:

§ 425.202 Application procedures.

* * * * *

(b) * * * For determining eligibility for agreement periods beginning before July 1, 2019:

* * * * *

■ 8. Section 425.204 is amended—

■ a. By adding paragraph (c)(7);

■ b. By revising paragraph (f); and

■ c. In paragraph (g) introductory text by removing the phrase ''under § 425.602,'' and adding in its place the phrase ''under § 425.601, § 425.602, § 425.603 or § 425.609,''.

The addition and revision read as follows:

§ 425.204 Content of the application.

* * * * *

(c) * * *

(7) The ACO must certify, in a form and manner specified by CMS, that the

percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

* * * * *

(f) *Assurance of ability to repay.* (1) An ACO must have the ability to repay all shared losses for which it may be liable under a two-sided model.

(2) An ACO that will participate in a two-sided model must establish one or more of the following repayment mechanisms in an amount and by a deadline specified by CMS in accordance with this section:

(i) An escrow account with an insured institution.

(ii) A surety bond from a company included on the U.S. Department of Treasury's List of Certified Companies.

(iii) A line of credit at an insured institution (as evidenced by a letter of credit that the Medicare program can draw upon).

(3) An ACO that will participate under a two-sided model of the Shared Savings Program must submit for CMS approval documentation that it is capable of repaying shared losses that it may incur during its agreement period, including details supporting the adequacy of the repayment mechanism.

(i) An ACO participating in Track 2 or the ENHANCED track must demonstrate the adequacy of its repayment mechanism prior to the start of each agreement period in which it takes risk and at such other times as requested by CMS.

(ii) An ACO entering an agreement period in Levels C, D, or E of the BASIC track must demonstrate the adequacy of its repayment mechanism prior to the start of its agreement period and at such other times as requested by CMS.

(iii) An ACO entering an agreement period in Level A or Level B of the BASIC track must demonstrate the adequacy of its repayment mechanism prior to the start of any performance year in which it either elects to participate in, or is automatically transitioned to a two-sided model, Level C, Level D, or Level E, of the BASIC track, and at such other times as requested by CMS.

(iv) An ACO that has submitted a request to renew its participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period. The repayment mechanism applicable to the new agreement period may be the same repayment mechanism currently used by the ACO, provided that the ACO submits documentation establishing that the amount and duration of the existing repayment mechanism have been revised to comply with paragraphs (f)(4)(iv) and (f)(6)(ii) of this section.

(4) CMS calculates the amount of the repayment mechanism as follows:

(i) For a Track 2 or ENHANCED track ACO, the repayment mechanism amount must be equal to at least 1 percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available.

(ii) For a BASIC track ACO, the repayment mechanism amount must be equal to the lesser of the following:

(A) One percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available.

(B) Two percent of the total Medicare Parts A and B fee-for-service revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

(iii) For agreement periods beginning on or after July 1, 2019, CMS recalculates the ACO's repayment mechanism amount before the second and each subsequent performance year in the agreement period in accordance with this section based on the certified ACO participant list for the relevant performance year.

(A) If the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least 10 percent or $100,000, whichever is the lesser value, CMS notifies the ACO that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount.

(B) Within 90 days after receipt of such written notice from CMS, the ACO must submit for CMS approval documentation that the amount of its repayment mechanism has been increased to the amount specified by CMS.

(iv) In the case of an ACO that has submitted a request to renew its participation agreement and wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to the greater of the following:

(A) The amount calculated by CMS in accordance with either paragraph (f)(4)(i) or (ii) of this section, as applicable.

(B) The repayment mechanism amount that the ACO was required to maintain during the last performance year of the participation agreement it seeks to renew.

(5) After the repayment mechanism has been used to repay any portion of shared losses owed to CMS, the ACO must replenish the amount of funds available through the repayment mechanism within 90 days.

(6) The repayment mechanism must be in effect for the duration of the ACO's participation in a two-sided model plus 24 months following the conclusion of the agreement period, except as follows:

(i) CMS may require the ACO to extend the duration of the repayment mechanism if necessary to ensure that the ACO fully repays CMS any shared losses for each of the performance years of the agreement period.

(ii) In the case of a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the duration of the existing repayment mechanism must be extended by an amount of time specified by CMS and must be periodically extended thereafter upon notice from CMS.

(iii) The repayment mechanism may be terminated at the earliest of the following conditions:

(A) The ACO has fully repaid CMS any shared losses owed for each of the performance years of the agreement period under a two-sided model.

(B) CMS has exhausted the amount reserved by the ACO's repayment mechanism and the arrangement does not need to be maintained to support the ACO's participation under the Shared Savings Program.

(C) CMS determines that the ACO does not owe any shared losses under the Shared Savings Program for any of the performance years of the agreement period.

* * * * *

§ 425.220 [Amended]

■ 9. Section 425.220 is amended in paragraph (a) by removing the phrase ''60 days'' and adding in its place the phrase ''30 days''.

■ 10. Section 425.221 is amended by revising paragraph (b) to read as follows:

§ 425.221 Close-out procedures and payment consequences of early termination.

* * * * *

(b) *Payment consequences of early termination*—(1) *Receipt of shared savings.* (i) Except as set forth in paragraph (b)(3)(i) of this section, an ACO that terminates its participation agreement under § 425.220 is eligible to receive shared savings for the performance year during which the termination becomes effective only if all of the following conditions are met:

(A) CMS designates or approves an effective date of termination of one of the following:

(*1*) December 31st for a 12-month performance year.

(*2*) December 31st for a 6-month performance year starting on July 1, 2019.

(*3*) June 30th for a 6-month performance year starting on January 1, 2019.

(B) The ACO has completed all close-out procedures by the deadline specified by CMS.

(C) The ACO has satisfied the criteria for sharing in savings for the performance year.

(ii) If the participation agreement is terminated at any time by CMS under § 425.218, the ACO is not eligible to receive shared savings for the performance year during which the termination becomes effective.

(2) *Payment of shared losses.* Except as set forth in paragraphs (b)(3)(i) and (ii) of this section, for performance years beginning in 2019 and subsequent performance years, an ACO under a two-sided model is liable for a pro-rated share of any shared losses as follows if its participation agreement is terminated effective before the last day of a performance year:

(i) An ACO under a two-sided model that terminates its participation agreement under § 425.220 with an effective date of termination after June 30th of a 12-month performance year is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective.

(ii) An ACO under a two-sided model whose participation agreement is terminated by CMS under § 425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective.

(iii) The pro-rated share of losses described in paragraphs (b)(2)(i) and (ii) of this section is calculated as follows:

(A) In the case of a 12-month performance year: The shared losses incurred during the 12 months of the performance year are multiplied by the quotient equal to the number of months of participation in the program during the performance year, including the month in which the termination was effective, divided by 12.

(B) In the case of a 6-month performance year during 2019: The shared losses incurred during CY 2019 are multiplied by the quotient equal to the number of months of participation in the program during the performance year, including the month in which the termination was effective, divided by 12.

(3) *Exceptions.* (i) An ACO starting a 12-month performance year on January 1, 2019, that terminates its participation agreement with an effective date of termination of June 30, 2019, and that enters a new agreement period beginning on July 1, 2019, is eligible for pro-rated shared savings or shared losses for the 6-month period from January 1, 2019, through June 30, 2019, as determined in accordance with § 425.609.

(ii) An ACO under a two-sided model that terminates its participation agreement under § 425.220 during a 6-month performance year with an effective date of termination prior to the last calendar day of the performance year is not liable for shared losses incurred during the performance year.

■ 11. Section 425.222 is amended by revising the section heading and paragraphs (a), (b), and (c) introductory text to read as follows:

§ 425.222 Eligibility to re-enter the program for agreement periods beginning before July 1, 2019.

(a) For purposes of determining the eligibility of a re-entering ACO to enter an agreement period beginning before July 1, 2019, the ACO may participate in the Shared Savings Program again only after the date on which the term of its original participation agreement would have expired if the ACO had not been terminated.

(b) For purposes of determining the eligibility of a re-entering ACO to enter an agreement period beginning before July 1, 2019, an ACO whose participation agreement was previously terminated must demonstrate in its application that it has corrected the deficiencies that caused it to be terminated from the Shared Savings Program and has processes in place to ensure that it remains in compliance with the terms of the new participation agreement.

(c) For purposes of determining the eligibility of a re-entering ACO to enter an agreement period beginning before July 1, 2019, an ACO whose participation agreement was previously terminated or expired without having been renewed may re-enter the program for a subsequent agreement period.

* * * * *

■ 12. Section 425.224 is amended—

■ a. By revising the section heading and paragraph (a);

■ b. By revising paragraph (b) heading and paragraphs (b)(1) introductory text and (b)(1)(ii);

■ c. By removing paragraphs (b)(1)(iv) and (v);

■ d. By redesignating paragraphs (b)(1)(iii) and (vi) as paragraphs (b)(1)(iv) and (v);

■ e. By adding a new paragraph (b)(1)(iii);

■ f. By revising newly redesignated paragraphs (b)(1)(iv) and (v);

■ g. In paragraph (b)(2) introductory text by removing the phrase ''Renewal requests'' and adding in its place the phrase ''Applications'';

■ h. In paragraph (b)(2)(i) by removing the phrase ''renewal request'' and adding in its place the phrase ''application''; and

■ i. In paragraphs (c)(1) and (2) introductory text by removing the phrase ''renewal request'' and adding in its place the phrase ''application''.

The revisions and addition read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

(a) *General rules.* A renewing ACO or a re-entering ACO may apply to enter a new participation agreement with CMS for participation in the Shared Savings Program.

(1) In order to obtain a determination regarding whether it meets the requirements to participate in the Shared Savings Program, the ACO must submit a complete application in the form and manner and by the deadline specified by CMS.

(2) An ACO executive who has the authority to legally bind the ACO must certify to the best of his or her knowledge, information, and belief that the information contained in the application is accurate, complete, and truthful.

(3) An ACO that seeks to enter a new participation agreement under the Shared Savings Program and was newly formed after March 23, 2010, as defined in the Antitrust Policy Statement, must agree that CMS can share a copy of its application with the Antitrust Agencies.

(4) The ACO must select a participation option in accordance with the requirements specified in § 425.600. Regardless of the date of termination or expiration of the participation agreement, a renewing ACO or re-entering ACO that was previously under a two-sided model, or a one-sided

model of the BASIC track's glide path (Level A or Level B), may only reapply for participation in a two-sided model.

(b) *Review of application.* (1) CMS determines whether to approve a renewing ACO's or re-entering ACO's application based on an evaluation of all of the following factors:

* * * * *

(ii) The ACO's history of noncompliance with the requirements of the Shared Savings Program, including, but not limited to, the following factors:

(A)(*1*) For an ACO that entered into a participation agreement for a 3-year period, we consider whether the ACO failed to meet the quality performance standard during 1 of the first 2 performance years of the previous agreement period.

(*2*) For an ACO that entered into a participation agreement for a period longer than 3 years, we consider whether the ACO failed to meet the quality performance standard in either of the following:

(*i*) In 2 consecutive performance years and was terminated as specified in § 425.316(c)(2).

(*ii*) For 2 or more performance years of the previous agreement period, regardless of whether the years are in consecutive order.

(B) For 2 performance years of the ACO's previous agreement period, regardless of whether the years are in consecutive order, whether the average per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiary population exceeded its updated benchmark by an amount equal to or exceeding either of the following:

(*1*) The ACO's negative MSR, under a one-sided model.

(*2*) The ACO's MLR, under a two-sided model.

(C) Whether the ACO failed to repay shared losses in full within 90 days as required under subpart G of this part for any performance year of the ACO's previous agreement period in a two-sided model.

(D) For an ACO that has participated in a two-sided model authorized under section 1115A of the Act, whether the ACO failed to repay shared losses for any performance year as required under the terms of the ACO's participation agreement for such model.

(iii) Whether the ACO has demonstrated in its application that it has corrected the deficiencies that caused any noncompliance identified in paragraph (b)(1)(ii) of this section to occur, and any other factors that may have caused the ACO to be terminated from the Shared Savings Program, and has processes in place to ensure that it remains in compliance with the terms of the new participation agreement.

(iv) Whether the ACO has established that it is in compliance with the eligibility and other requirements of the Shared Savings Program to enter a new participation agreement, including the ability to repay losses by establishing an adequate repayment mechanism under § 425.204(f), if applicable.

(v) The results of a program integrity screening of the ACO, its ACO participants, and its ACO providers/suppliers (conducted in accordance with § 425.305(a)).

* * * * *

■ 13. Section 425.226 is added to subpart C to read as follows:

§ 425.226 Annual participation elections.

(a) *General.* This section applies to ACOs in agreement periods beginning on July 1, 2019, and in subsequent years. Before the start of a performance year, an ACO may make elections related to its participation in the Shared Savings Program, as specified in this section, effective at the start of the applicable performance year and for the remaining years of the agreement period, unless superseded by a later election in accordance with this section.

(1) *Selection of beneficiary assignment methodology.* An ACO may select the assignment methodology that CMS employs for assignment of beneficiaries under subpart E of this part. An ACO may select either of the following:

(i) Preliminary prospective assignment with retrospective reconciliation, as described in § 425.400(a)(2).

(ii) Prospective assignment, as described in § 425.400(a)(3).

(2) *Selection of BASIC track level.* An ACO participating under the BASIC track in the glide path may select a higher level of risk and potential reward, as provided in this section.

(i) An ACO participating under the BASIC track's glide path may elect to transition to a higher level of risk and potential reward within the glide path than the level of risk and potential reward that the ACO would be automatically transitioned to in the applicable year as specified in § 425.605(d)(1). The automatic transition to higher levels of risk and potential reward within the BASIC track's glide path continues to apply to all subsequent years of the agreement period in the BASIC track.

(ii) An ACO transitioning to a higher level of risk and potential reward under paragraph (a)(2)(i) of this section must meet all requirements to participate under the selected level of performance-based risk, including both of the following:

(A) Establishing an adequate repayment mechanism as specified under § 425.204(f).

(B) Selecting a MSR/MLR from the options specified under § 425.605(b).

(b) *Election procedures.* (1) All annual elections must be made in a form and manner and according to the timeframe established by CMS.

(2) ACO executive who has the authority to legally bind the ACO must certify the elections described in this section.

■ 14. Section 425.302 is amended—

■ a. In paragraph (a)(3)(i) by removing the phrase ''requirements; and'' and adding in its place the phrase ''requirements;'';

■ b. In paragraph (a)(3)(ii) by removing the phrase ''owed to CMS.'' and adding in its place the phrase ''owed to CMS; and''; and

■ c. Adding paragraph (a)(3)(iii).

The addition reads as follows:

§ 425.302 Program requirements for data submission and certifications.

(a) * * *

(3) * * *

(iii) That the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

* * * * *

■ 15. Section 425.304 is revised to read as follows:

§ 425.304 Beneficiary incentives.

(a) *General.* (1) Except as set forth in this section, or as otherwise permitted by law, ACOs, ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are prohibited from providing gifts or other remuneration to beneficiaries as inducements for receiving items or services from or remaining in, an ACO or with ACO providers/suppliers in a particular ACO or receiving items or services from ACO participants or ACO providers/suppliers.

(2) Nothing in this section shall be construed as prohibiting an ACO from using shared savings received under this part to cover the cost of an in-kind item or service or incentive payment provided to a beneficiary under paragraph (b) or (c) of this section.

(b) *In-kind incentives.* ACOs, ACO participants, ACO providers/suppliers,

and other individuals or entities performing functions or services related to ACO activities may provide in-kind items or services to Medicare fee-for-service beneficiaries if all of the following conditions are satisfied:

(1) There is a reasonable connection between the items and services and the medical care of the beneficiary.

(2) The items or services are preventive care items or services or advance a clinical goal for the beneficiary, including adherence to a treatment regime, adherence to a drug regime, adherence to a follow-up care plan, or management of a chronic disease or condition.

(3) The in-kind item or service is not a Medicare-covered item or service for the beneficiary on the date the in-kind item or service is furnished to the beneficiary.

(c) *Monetary incentives*—(1) *General.* For performance years beginning on July 1, 2019 and for subsequent performance years, an ACO that is participating under Track 2, Levels C, D, or E of the BASIC track, or the ENHANCED track may, in accordance with this section, establish a beneficiary incentive program to provide monetary incentive payments to Medicare fee-for-service beneficiaries who receive a qualifying service.

(2) *Application procedures.* (i) To establish or reestablish a beneficiary incentive program, an ACO must submit a complete application in the form and manner and by a deadline specified by CMS.

(ii) CMS evaluates an ACO's application to determine whether the ACO satisfies the requirements of this section, and approves or denies the application.

(3) *Beneficiary incentive program requirements.* An ACO must begin to operate its approved beneficiary incentive program beginning on July 1, 2019 or January 1 of the relevant performance year.

(i) *Duration.* (A) Subject to the termination provision at paragraph (c)(7) of this section, an ACO must operate a beneficiary incentive program for an initial period of 18 months in the case of an ACO approved to operate a beneficiary incentive program beginning on July 1, 2019, or 12 months in the case of an ACO approved to operate a beneficiary incentive program beginning on January 1 of a performance year.

(B) For each consecutive year that an ACO wishes to operate its beneficiary incentive program after the CMS-approved initial period, it must certify both of the following by a deadline specified by CMS:

(*1*) Its intent to continue to operate the beneficiary incentive program for the entirety of the relevant performance year.

(*2*) That the beneficiary incentive program meets all applicable requirements.

(ii) *Beneficiary eligibility.* A fee-for-service beneficiary is eligible to receive an incentive payment under a beneficiary incentive program if the beneficiary is assigned to the ACO through either of the following:

(A) Preliminary prospective assignment with retrospective reconciliation, as described in § 425.400(a)(2).

(B) Prospective assignment, as described in § 425.400(a)(3).

(iii) *Qualifying service.* For purposes of this section, a qualifying service is a primary care service (as defined in § 425.20) with respect to which coinsurance applies under Part B, if the service is furnished through an ACO by one of the following:

(A) An ACO professional who has a primary care specialty designation included in the definition of primary care physician under § 425.20.

(B) An ACO professional who is a physician assistant, nurse practitioner, or certified nurse specialist.

(C) A FQHC or RHC.

(iv) *Incentive payments.* (A) An ACO that establishes a beneficiary incentive program must furnish an incentive payment for each qualifying service furnished to a beneficiary described in paragraph (c)(3)(ii) of this section in accordance with this section.

(B) Each incentive payment made by an ACO under a beneficiary incentive program must satisfy all of the following conditions:

(*1*) The incentive payment is in the form of a check, debit card, or a traceable cash equivalent.

(*2*) The value of the incentive payment does not exceed $20, as adjusted annually by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period ending with June of the previous year, rounded to the nearest whole dollar amount.

(*3*) The incentive payment is provided by the ACO to the beneficiary no later than 30 days after a qualifying service is furnished.

(*4*) The incentive payment is not offered as part of an advertisement or solicitation to a beneficiary or any potential patient whose care is paid for in whole or in part by a Federal health care program (as defined at 42 U.S.C. 1320a–7b(f)).

(C) An ACO must furnish incentive payments in the same amount to each eligible Medicare fee-for-service beneficiary without regard to enrollment of such beneficiary in a Medicare supplemental policy (described in section 1882(g)(1) of the Act), in a State Medicaid plan under title XIX or a waiver of such a plan, or in any other health insurance policy or health benefit plan.

(4) *Program integrity requirements*—(i) *Record retention.* An ACO that establishes a beneficiary incentive program must maintain records related to the beneficiary incentive program that include the following:

(A) Identification of each beneficiary that received an incentive payment, including beneficiary name and HICN or Medicare beneficiary identifier.

(B) The type and amount of each incentive payment made to each beneficiary.

(C) The date each beneficiary received a qualifying service, the corresponding HCPCS code for the qualifying service, and identification of the ACO provider/supplier that furnished the qualifying service.

(D) The date the ACO provided each incentive payment to each beneficiary.

(ii) *Source of funding.* (A) An ACO must not use funds from any entity or organization outside of the ACO to establish or operate a beneficiary incentive program.

(B) An ACO must not directly, through insurance, or otherwise, bill or otherwise shift the cost of establishing or operating a beneficiary incentive program to a Federal health care program.

(5) *Effect on program calculations.* CMS disregards incentive payments made by an ACO under paragraph (c) of this section in calculating an ACO's benchmarks, estimated average per capita Medicare expenditures, and shared savings and losses.

(6) *Income exemptions.* Incentive payments made under a beneficiary incentive program are not considered income or resources or otherwise taken into account for purposes of either of the following:

(i) Determining eligibility for benefits or assistance (or the amount or extent of benefits or assistance) under any Federal program or under any State or local program financed in whole or in part with Federal funds.

(ii) Any Federal or State laws relating to taxation.

(7) *Termination.* CMS may require an ACO to terminate its beneficiary incentive program at any time for either of the following:

(i) Failure to comply with the requirements of this section.

(ii) Any of the grounds for ACO termination set forth in § 425.218(b).

■ 16. Section 425.305 is added to read as follows:

§ 425.305 Other program safeguards.

(a) *Screening of ACO applicants.* (1) ACOs, ACO participants, and ACO providers/suppliers are reviewed during the Shared Savings Program application process and periodically thereafter with regard to their program integrity history, including any history of Medicare program exclusions or other sanctions and affiliations with individuals or entities that have a history of program integrity issues.

(2) ACOs, ACO participants, or ACO providers/suppliers whose screening reveals a history of program integrity issues or affiliations with individuals or entities that have a history of program integrity issues may be subject to denial of their Shared Savings Program applications or the imposition of additional safeguards or assurances against program integrity risks.

(b) *Prohibition on certain required referrals and cost shifting.* ACOs, ACO participants, and ACO providers/suppliers are prohibited from doing the following:

(1) Conditioning the participation of ACO participants, ACO providers/suppliers, other individuals or entities performing functions or services related to ACO activities in the ACO on referrals of Federal health care program business that the ACO, its ACO participants, or ACO providers/suppliers or other individuals or entities performing functions or services related to ACO activities know or should know is being (or would be) provided to beneficiaries who are not assigned to the ACO.

(2) Requiring that beneficiaries be referred only to ACO participants or ACO providers/suppliers within the ACO or to any other provider or supplier, except that the prohibition does not apply to referrals made by employees or contractors who are operating within the scope of their employment or contractual arrangement to the employer or contracting entity, provided that the employees and contractors remain free to make referrals without restriction or limitation if the beneficiary expresses a preference for a different provider, practitioner, or supplier; the beneficiary's insurer determines the provider, practitioner, or supplier; or the referral is not in the beneficiary's best medical interests in the judgment of the referring party.

■ 17. Section 425.308 is amended by revising paragraph (b)(6) and adding paragraph (b)(7) to read as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(6) Use of payment rule waivers under § 425.612, if applicable or telehealth services under § 425.613, if applicable or both.

(7) Information about a beneficiary incentive program established under § 425.304(c), if applicable, including the following, for each performance year:

(i) Total number of beneficiaries who received an incentive payment.

(ii) Total number of incentive payments furnished.

(iii) HCPCS codes associated with any qualifying service for which an incentive payment was furnished.

(iv) Total value of all incentive payments furnished.

(v) Total of each type of incentive payment (for example, check or debit card) furnished.

* * * * *

■ 18. Section 425.310 is amended by revising paragraph (c)(3) to read as follows:

§ 425.310 Marketing requirements.

* * * * *

(c) * * *

(3) Comply with § 425.304 regarding beneficiary incentives.

* * * * *

■ 19. Section 425.312 is amended by revising the section heading and paragraph (a) and adding paragraph (b) to read as follows:

§ 425.312 Beneficiary notifications.

(a) An ACO participant must notify Medicare fee-for-service beneficiaries at the point of care about all of the following:

(1) Its ACO providers/suppliers are participating in the Shared Savings Program.

(2) The beneficiary's opportunity to decline claims data sharing under § 425.708.

(3) Beginning July 1, 2019, the beneficiary's ability to, and the process by which, he or she may identify or change identification of a primary care provider for purposes of voluntary alignment (as described in § 425.402(e)).

(b) Notification of the information specified in paragraph (a) of this section must be carried out by an ACO participant through all of the following methods:

(1) Posting signs in its facilities and, in settings in which beneficiaries receive primary care services, making standardized written notices available upon request.

(2) Beginning July 1, 2019, providing each beneficiary with a standardized written notice at the first primary care visit of each performance year in the form and manner specified by CMS.

* * * * *

■ 20. Section 425.314 is amended by adding paragraph (a)(4) and revising paragraph (b)(1) to read as follows:

§ 425.314 Audits and record retention.

(a) * * *

(4) The ACO's operation of a beneficiary incentive program.

(b) * * *

(1) To maintain and give CMS, DHHS, the Comptroller General, the Federal Government or their designees access to all books, contracts, records, documents, and other evidence (including data related to Medicare utilization and costs, quality performance measures, shared savings distributions, information related to operation of a beneficiary incentive program, and other financial arrangements related to ACO activities) sufficient to enable the audit, evaluation, investigation, and inspection of the ACO's compliance with program requirements, quality of services performed, right to any shared savings payment, or obligation to repay losses, ability to bear the risk of potential losses, and ability to repay any losses to CMS.

* * * * *

§ 425.315 [Amended]

■ 21. Section 425.315 is amended in paragraph (a)(1)(ii) by removing the phrase ''§ 425.604(f), § 425.606(h) or § 425.610(h)'' and adding in its place the phrase ''§ 425.604(f), § 425.605(e), § 425.606(h), § 425.609(e) or § 425.610(h)''.

■ 22. Section 425.316 is amended by adding paragraph (d) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(d) *Monitoring ACO financial performance.* (1) For performance years beginning in 2019 and subsequent performance years, CMS determines whether the Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for the performance year exceed the ACO's updated benchmark by an amount equal to or exceeding either the ACO's negative MSR under a one-sided model, or the ACO's MLR under a two-sided model.

(2) If the Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for the performance year exceed the ACO's updated benchmark as specified in paragraph (d)(1) of this section, CMS may take any of the pre-termination actions set forth in § 425.216.

(3) If the Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for the performance year exceed the ACO's updated benchmark as specified in paragraph (d)(1) of this section for another performance year of the agreement period, CMS may immediately or with advance notice terminate the ACO's participation agreement under § 425.218.

■ 23. Section 425.400 is amended—

■ a. In paragraph (a)(1)(ii) by adding before the period, ''and, with respect to ACOs participating in a 6-month performance year during CY 2019, during the entirety of CY 2019 as specified in § 425.609'';

■ b. By revising the headings for paragraphs (a)(2) and (3);

■ c. In paragraph (a)(3)(i) by removing the phrase ''under Track 3'';

■ d. By adding paragraph (a)(4);

■ e. By revising paragraphs (c)(1)(iv) introductory text, (c)(1)(iv)(A), (c)(1)(iv)(B) introductory text, and (c)(1)(iv)(B)(*5*); and

■ f. By adding paragraphs (c)(1)(iv)(B)(*6*) through (*10*).

The revisions and additions read as follows:

§ 425.400 General.

(a) * * *

(2) *Preliminary prospective assignment with retrospective reconciliation.** * *

(3) *Prospective assignment.* * * *

(4) *Assignment methodology applied to ACO.* (i) For agreement periods beginning before 2019, the applicable assignment methodology is determined based on track as specified in § 425.600(a).

(A) Preliminary prospective assignment with retrospective reconciliation as described in paragraph (a)(2) of this section applies to Track 1 and Track 2 ACOs.

(B) Prospective assignment as described in paragraph (a)(3) of this section applies to Track 3 ACOs.

(ii) For agreement periods beginning on July 1, 2019 and in subsequent years, an ACO may select the assignment methodology that CMS employs for assignment of beneficiaries under this subpart.

(A) An ACO may select either of the following:

(*1*) Preliminary prospective assignment with retrospective reconciliation, as described in paragraph (a)(2) of this section.

(*2*) Prospective assignment, as described in paragraph (a)(3) of this section.

(B) This selection is made prior to the start of each agreement period, and may be modified prior to the start of each performance year as specified in § 425.226.

* * * * *

(c) * * *

(1) * * *

(iv) For performance years starting on January 1, 2019, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*2*) 99304 through 99318 (codes for professional services furnished in a nursing facility; services identified by these codes furnished in a SNF are excluded).

(*3*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*4*) 99341 through 99350 (codes for evaluation and management services furnished in a patients' home for claims identified by place of service modifier 12).

(*5*) 99487, 99489 and 99490 (codes for chronic care management).

(*6*) 99495 and 99496 (codes for transitional care management services).

(*7*) 99497 and 99498 (codes for advance care planning).

(*8*) 96160 and 96161 (codes for administration of health risk assessment).

(*9*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)).

(*10*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(B) HCPCS codes:

* * * * *

(*5*) G0444 (codes for annual depression screening service).

(*6*) G0442 (code for alcohol misuse screening service).

(*7*) G0443 (code for alcohol misuse counseling service).

(*8*) GPC1X (add-on code, for visit complexity inherent to evaluation and management associated with primary medical care services).

(*9*) GCG0X (add-on code, for visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or interventional pain management-centered care).

(*10*) GPRO1 (add-on code, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)).

■ 24. Section 425.401 is amended by revising paragraph (b) introductory text to read as follows:

§ 425.401 Criteria for a beneficiary to be assigned to an ACO.

* * * * *

(b) A beneficiary is excluded from the prospective assignment list of an ACO that is participating under prospective assignment under § 425.400(a)(3) at the end of a performance or benchmark year and quarterly during each performance year consistent with § 425.400(a)(3)(ii), or at the end of CY 2019 as specified in § 425.609(b)(1)(ii) and (c)(1)(ii), if the beneficiary meets any of the following criteria during the performance or benchmark year:

* * * * *

■ 25. Section 425.402 is amended by revising paragraphs (e)(2) and (e)(3)(i) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(e) * * *

(2) Beneficiaries are added to the ACO's list of assigned beneficiaries if all of the following conditions are satisfied:

(i) For performance year 2018:

(A) The beneficiary must have had at least one primary care service during the assignment window as defined under § 425.20 with a physician who is an ACO professional in the ACO who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in paragraph (c) of this section.

(B) The beneficiary meets the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). The exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to ACOs under all tracks based on the beneficiary's designation of an ACO professional as responsible for coordinating their overall care under paragraph (e) of this section.

(C) The beneficiary must have designated an ACO professional who is a primary care physician as defined at § 425.20, a physician with a specialty designation included at paragraph (c) of this section, or a nurse practitioner, physician assistant, or clinical nurse specialist as responsible for coordinating their overall care.

(D) If a beneficiary has designated a provider or supplier outside the ACO who is a primary care physician as

defined at § 425.20, a physician with a specialty designation included at paragraph (c) of this section, or a nurse practitioner, physician assistant, or clinical nurse specialist, as responsible for coordinating their overall care, the beneficiary is not added to the ACO's list of assigned beneficiaries under the assignment methodology in paragraph (b) of this section.

(ii) For performance years starting on January 1, 2019, and subsequent performance years:

(A) The beneficiary meets the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). The exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to an ACO based on the beneficiary's designation of an ACO professional as responsible for coordinating their overall care under paragraph (e) of this section, regardless of the ACO's assignment methodology selection under § 425.400(a)(4)(ii).

(B) The beneficiary must have designated an ACO professional as responsible for coordinating their overall care.

(C) If a beneficiary has designated a provider or supplier outside the ACO as responsible for coordinating their overall care, the beneficiary is not added under the assignment methodology in paragraph (b) of this section to the ACO's list of assigned beneficiaries for a 12-month performance year or the ACO's list of assigned beneficiaries for a 6-month performance year, which is based on the entire CY 2019 as provided in § 425.609.

(D) The beneficiary is not assigned to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on claims for services other than primary care services and for which there has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model.

(3) * * *

(i) Offering anything of value to the Medicare beneficiary as an inducement to influence the Medicare beneficiary's decision to designate or not to designate an ACO professional as responsible for coordinating their overall care under paragraph (e) of this section. Any items or services provided in violation of paragraph (e)(3) of this section are not considered to have a reasonable connection to the medical care of the beneficiary, as required under § 425.304(b)(1).

* * * * *

§ 425.404 [Amended]

■ 26. Section 425.404 is amended in paragraph (b) by removing the phrase ''For performance year 2019 and subsequent performance years'' and adding in its place the phrase ''For performance years starting on January 1, 2019, and subsequent performance years''.

■ 27. Section 425.502 is amended—

■ a. In paragraph (e)(4)(v) by removing the phrase ''in the third year of the previous agreement period'' and adding in its place the phrase ''in the last year of the previous agreement period'';

■ b. In paragraph (e)(4)(vi) by removing the phrase ''For performance year 2017'' and adding in its place the phrase ''For performance year 2017 and subsequent performance years'';

■ c. By adding a new paragraph (e)(4)(vii);

■ d. By revising paragraph (f) introductory text;

■ e. By redesignating paragraphs (f)(1) and (2) as paragraphs (f)(2)(i) and (ii);

■ f. By adding a new paragraph (f)(1);

■ g. By adding a new paragraph (f)(2) introductory text;

■ h. In newly redesignated paragraph (f)(2)(i) by removing the phrase ''for performance year 2017'' and adding in its place the phrase ''for the relevant performance year'';

■ i. By removing paragraph (f)(4); and

■ j. By redesignating paragraph (f)(5) as paragraph (f)(4).

The revisions and additions read as follows:

§ 425.502 Calculating the ACO quality performance score.

* * * * *

(e) * * *

(4) * * *

(vii) For performance year 2017 and subsequent performance years, if an ACO receives the mean Shared Savings Program ACO quality score under paragraph (f) of this section, in the next performance year for which the ACO receives a quality performance score based on its own quality reporting, quality improvement is measured based on a comparison between the performance in that year and the most recently available prior performance year in which the ACO reported quality.

(f) *Extreme and uncontrollable circumstances.* For performance year 2017 and subsequent performance years, including the applicable quality data reporting period for the performance year if the quality reporting period is not extended, CMS uses an alternative approach to calculating the quality score for ACOs affected by extreme and uncontrollable circumstances instead of the methodology specified in paragraphs (a) through (e) of this section as follows:

(1) CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on either of the following:

(i) Twenty percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance.

(A) Assignment is determined under subpart E of this part.

(B) In making this determination for performance year 2017, CMS uses the final list of beneficiaries assigned to the ACO for the performance year. For performance year 2018 and subsequent performance years, CMS uses the list of assigned beneficiaries used to generate the Web Interface quality reporting sample.

(ii) The ACO's legal entity is located in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance. An ACO's legal entity location is based on the address on file for the ACO in CMS' ACO application and management system.

(2) If CMS determines the ACO meets the requirements of paragraph (f)(1) of this section, CMS calculates the ACO's quality score as follows:

* * * * *

■ 28. Section 425.506 is amended—

■ a. In paragraph (b) by removing the phrase ''As part of the quality performance score'' and adding in its place the phrase ''For performance years 2012 through 2018, as part of the quality performance score'';

■ b. In paragraph (c) by removing the phrase ''Performance on this measure'' and adding in its place the phrase ''For performance years 2012 through 2018, performance on this measure'';

■ c. In paragraph (e) introductory text by removing the phrase ''For 2017 and subsequent years'' and adding in its place the phrase ''For 2017 and 2018''; and

■ d. By adding paragraph (f).

The addition reads as follows:

§ 425.506 Incorporating reporting requirements related to adoption of certified electronic health record technology.

* * * * *

(f) For performance years starting on January 1, 2019, and subsequent performance years, ACOs in a track or a payment model within a track that—

(1) Does not meet the financial risk standard to be an Advanced APM must certify annually and at the time of application that the percentage of eligible clinicians participating in the

ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds 50 percent; or

(2) Meets the financial risk standard to be an Advanced APM must certify annually and at the time of application that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the higher of 50 percent or the threshold established under § 414.1415(a)(1)(i) of this chapter.

■ 29. Section 425.600 is amended—

■ a. In paragraph (a) introductory text by removing the phrase ''For its initial agreement period, an ACO'' and adding in its place ''An ACO'';

■ b. By revising paragraphs (a)(1), (2) and (3);

■ c. By adding paragraph (a)(4);

■ d. By revising paragraphs (b) introductory text and (c); and

■ e. By adding paragraphs (d), (e) and (f).

The revisions and additions read as follows:

§ 425.600 Selection of risk model.

(a) * * *

(1) *Track 1.* For agreement periods beginning before July 1, 2019, an ACO in Track 1 operates under the one-sided model (as described under § 425.604) for the agreement period.

(2) *Track 2.* For agreement periods beginning before July 1, 2019, an ACO in Track 2 operates under a two-sided model (as described under § 425.606), sharing both savings and losses with the Medicare program for the agreement period.

(3) *ENHANCED track.* An ACO in the ENHANCED track operates under a two-sided model (as described under § 425.610), sharing both savings and losses with the Medicare program for the agreement period. For purposes of this part, all references to the ENHANCED track are deemed to include Track 3.

(4) *BASIC track.* For agreement periods beginning on July 1, 2019, and in subsequent years, an ACO in the BASIC track operates under either a one-sided model or a two-sided model (as described under § 425.605), either sharing savings only or sharing both savings and losses with the Medicare program, as specified in this paragraph (a)(4).

(i)(A) Under the BASIC track's glide path, the level of risk and potential reward phases in over the course of the agreement period in the following order:

(*1*) *Level A.* The ACO operates under a one-sided model as described under § 425.605(d)(1)(i).

(*2*) *Level B.* The ACO operates under a one-sided model as described under § 425.605(d)(1)(ii).

(*3*) *Level C.* The ACO operates under a two-sided model as described under § 425.605(d)(1)(iii).

(*4*) *Level D.* The ACO operates under a two-sided model as described under § 425.605(d)(1)(iv).

(*5*) *Level E.* The ACO operates under a two-sided model as described under § 425.605(d)(1)(v).

(B)(*1*)(*i*) Except for an ACO that previously participated in Track 1 under paragraph (a)(1) of this section or a new ACO identified as a re-entering ACO because more than 50 percent of its ACO participants have recent prior experience in a Track 1 ACO, an ACO eligible to enter the BASIC track's glide path as determined under paragraphs (d)(1)(i) and (d)(2)(i) of this section may elect to enter its agreement period at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section.

(*ii*) An ACO that previously participated in Track 1 under paragraph (a)(1) of this section or a new ACO identified as a re-entering ACO because more than 50 percent of its ACO participants have recent prior experience in a Track 1 ACO may elect to enter its agreement period at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(*2*) through (*5*) of this section.

(*2*) Unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i), the ACO is automatically advanced to the next level of the BASIC track's glide path at the start of each subsequent performance year of the agreement period, if a higher level of risk and potential reward is available under the BASIC track, except as provided in paragraph (a)(4)(i)(B)(*2*)(*i*) of this section.

(*i*) The automatic advancement does not apply at the start of the second performance year for an ACO entering the BASIC track's glide path for an agreement period beginning on July 1, 2019.

(*ii*) For performance year 2020, the ACO remains in the same level of the BASIC track's glide path that it entered for the July 1, 2019 through December 31, 2019 performance year, unless the ACO chooses to advance more quickly in accordance with § 425.226(a)(2)(i).

(*iii*) The ACO is automatically advanced to the next level of the BASIC track's glide path at the start of performance year 2021 and all subsequent performance years of the agreement period.

(*iv*) Prior to entering performance-based risk, an ACO must meet all requirements to participate under performance-based risk, including establishing an adequate repayment mechanism as specified under § 425.204(f) and selecting a MSR/MLR from the options specified under § 425.605(b).

(*3*) If the ACO fails to meet the requirements to participate under performance-based risk under paragraph (a)(4)(i)(B)(*2*)(*ii*) of this section, the agreement is terminated.

(*4*) If, in accordance with § 425.226(a)(2)(i), the ACO elects to transition to a higher level of risk and reward available under paragraphs (a)(4)(i)(A)(*3*) through (*5*) of this section, then the automatic transition to levels of higher risk and reward specified in paragraph (a)(4)(i)(B)(*2*) of this section applies to all subsequent performance years of the agreement period.

(ii) If an ACO enters the BASIC track and is ineligible to participate under the glide path described in paragraph (a)(4)(i) of this section, as determined under paragraph (d) of this section, Level E as described in paragraph (a)(4)(i)(A)(*5*) of this section applies to all performance years of the agreement period.

(b) For agreement periods beginning before July 1, 2019, ACOs may operate under the one-sided model for a maximum of 2 agreement periods. An ACO may not operate under the one-sided model for a second agreement period unless the—

* * * * *

(c) For agreement periods beginning before July 1, 2019, an ACO experiencing a net loss during a previous agreement period may reapply to participate under the conditions in § 425.202(a), except the ACO must also identify in its application the cause(s) for the net loss and specify what safeguards are in place to enable the ACO to potentially achieve savings in its next agreement period.

(d) For agreement periods beginning on July 1, 2019, and in subsequent years, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

(1) If an ACO is identified as a high revenue ACO, the ACO is eligible for the participation options indicated in paragraph (a) of this section as follows:

(i) If the ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and

potential reward available under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section, except as provided in paragraph (a)(4)(i)(B) of this section, or the ENHANCED track under paragraph (a)(3) of this section.

(ii) If the ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter the ENHANCED track under paragraph (a)(3) of this section.

(2) If an ACO is identified as a low revenue ACO, the ACO is eligible for the participation options indicated in paragraph (a) of this section as follows:

(i) If the ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section, except as provided in paragraph (a)(4)(i)(B) of this section, or the ENHANCED track under paragraph (a)(3) of this section.

(ii) If the ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(*5*) of this section, except as provided in paragraph (d)(3) of this section, or the ENHANCED track under paragraph (a)(3) of this section.

(3) Low revenue ACOs may participate under the BASIC track for a maximum of two agreement periods. A low revenue ACO may only participate in the BASIC track for a second agreement period if it satisfies either of the following:

(i) The ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track only one time.

(ii) For a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track only one time.

(e) CMS monitors low revenue ACOs identified as experienced with performance-based risk Medicare ACO initiatives, during an agreement period in the BASIC track, for changes in the revenue of ACO participants that would cause the ACO to be considered a high revenue ACO and ineligible for participation in the BASIC track. If the ACO meets the definition of a high revenue ACO (as specified in § 425.20)—

(1) The ACO is permitted to complete the remainder of its current performance year under the BASIC track, but is ineligible to continue participation in the BASIC track after the end of that performance year if it continues to meet the definition of a high revenue ACO; and

(2) CMS takes compliance action as specified in §§ 425.216 and 425.218, up to and including termination of the participation agreement, to ensure the ACO does not continue in the BASIC track for subsequent performance years of the agreement period if it continues to meet the definition of a high revenue ACO.

(f) For agreement periods beginning on July 1, 2019, and in subsequent years, CMS determines the agreement period an ACO is entering for purposes of applying program requirements that phase-in over multiple agreement periods, as follows:

(1) An ACO entering an initial agreement period is considered to be entering a first agreement period in the Shared Savings Program.

(2) A re-entering ACO is considered to be entering a new agreement period in the Shared Savings Program as follows—

(i) An ACO whose participation agreement expired without having been renewed re-enters the program under the next consecutive agreement period in the Shared Savings Program;

(ii) An ACO whose participation agreement was terminated under § 425.218 or § 425.220 re-enters the program at the start of the same agreement period in which it was participating at the time of termination from the Shared Savings Program, beginning with the first performance year of that agreement period; or

(iii) A new ACO identified as a re-entering ACO enters the program in an agreement period that is determined based on the prior participation of the ACO in which the majority of the new ACO's participants were participating.

(A) If the participation agreement of the ACO used in this determination expired without having been renewed or was terminated, the agreement period of the re-entering ACO is determined in accordance with paragraph (f)(2)(i) or (ii) of this section, as applicable.

(B) If the ACO used in this determination is currently participating in the program, the new ACO is considered to be entering into the same agreement period as this currently participating ACO, beginning with the first performance year of that agreement period.

(3) A renewing ACO is considered to be entering the next consecutive agreement period in the Shared Savings Program.

(4) For purposes of this paragraph (f), program requirements that phase in over multiple agreement periods are as follows:

(i) The quality performance standard as described in § 425.502(a).

(ii) The weight used in calculating the regional adjustment to the ACO's historical benchmark as described in § 425.601(f).

(iii) The use of equal weights to weight each benchmark year as specified in § 425.601(e).

■ 30. Section 425.601 is added to read as follows:

§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on July 1, 2019, and in subsequent years

(a) *Computing per capita Medicare Part A and Part B benchmark expenditures for an ACO's first agreement period.* For agreement periods beginning on July 1, 2019 and in subsequent years, in computing an ACO's historical benchmark for its first agreement period under the Shared Savings Program, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.226(a)(1). CMS does all of the following:

(1) Calculates the payment amounts included in Parts A and B fee-for-service claims using a 3-month claims run out with a completion factor.

(i) This calculation excludes indirect medical education (IME) and disproportionate share hospital (DSH) payments.

(ii) This calculation includes individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program.

(2) Makes separate expenditure calculations for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) Adjusts expenditures for changes in severity and case mix using prospective HCC risk scores.

(4) Truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures

at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year in order to minimize variation from catastrophically large claims.

(5) Trends forward expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars using a blend of national and regional growth rates.

(i) To trend forward the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(ii) National growth rates are computed using CMS Office of the Actuary national Medicare expenditure data for each of the years making up the historical benchmark for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year.

(iii) Regional growth rates are computed using expenditures for the ACO's regional service area for each of the years making up the historical benchmark as follows:

(A) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the relevant benchmark year.

(B) Determine the ACO's regional expenditures as specified under paragraphs (c) and (d) of this section.

(iv) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(A) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area for BY3 that are assigned to the ACO in BY3, as calculated in paragraph (a)(5)(v) of this section; and

(B) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(v) CMS calculates the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO by doing all of the following:

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area.

(B) Weighting the county-level shares according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries.

(C) Aggregating the weighted county-level shares for all counties in the ACO's regional service area.

(6) Restates BY1 and BY2 trended and risk adjusted expenditures using BY3 proportions of ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(7) Weights each year of the benchmark for an ACO's initial agreement period using the following percentages:

(i) BY3 at 60 percent.

(ii) BY2 at 30 percent.

(iii) BY1 at 10 percent.

(8) Adjusts the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. CMS does all of the following:

(i) Calculates an average per capita amount of expenditures for the ACO's regional service area as follows:

(A) Determines the counties included in the ACO's regional service area based on the ACO's BY3 assigned beneficiary population.

(B) Determines the ACO's regional expenditures as specified under paragraphs (c) and (d) of this section for BY3.

(C) Adjusts for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area identified for the 12-month calendar year that corresponds to BY3.

(ii) Calculates the adjustment as follows:

(A) Determines the difference between the average per capita amount of expenditures for the ACO's regional service area as specified under paragraph (a)(8)(i) of this section and the average per capita amount of the ACO's historical benchmark determined under paragraphs (a)(1) through (7) of this section, for each of the following populations of beneficiaries:

(*1*) ESRD.

(*2*) Disabled.

(*3*) Aged/dual eligible for Medicare and Medicaid.

(*4*) Aged/non-dual eligible for Medicare and Medicaid.

(B) Applies a percentage, as determined in paragraph (f) of this section.

(C) Caps the per capita dollar amount for each Medicare enrollment type (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (a)(8)(ii)(B) of this section at a dollar amount equal to 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

(*1*) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(*2*) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted in accordance with § 425.118(b) for the addition and removal of ACO participants or ACO providers/suppliers, for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or both. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO under the ACO's most recent beneficiary assignment methodology selection in any of the 3 most recent years prior to the start of the agreement period using the most recent certified ACO participant list for the relevant performance year.

(ii) Redetermines the regional adjustment amount under paragraph (a)(8) of this section, according to the ACO's assigned beneficiaries for BY3 resulting from the ACO's most recent certified ACO participant list, the ACO's beneficiary assignment methodology selection under § 425.226(a)(1) for the relevant performance year, or both.

(10) The historical benchmark is further adjusted at the time of reconciliation for a performance year to account for changes in severity and case mix of the ACO's assigned beneficiary population as described under §§ 425.605(a), 425.609(c), and 425.610(a).

(b) *Updating the benchmark.* For all agreement periods beginning on July 1, 2019 and in subsequent years, CMS updates the historical benchmark annually for each year of the agreement

period using a blend of national and regional growth rates.

(1) To update the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) National growth rates are computed using CMS Office of the Actuary national Medicare expenditure data for BY3 and the performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to each year.

(3) Regional growth rates are computed using expenditures for the ACO's regional service area for BY3 and the performance year, computed as follows:

(i) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the year.

(ii) Determine the ACO's regional expenditures as specified under paragraphs (c) and (d) of this section.

(4) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(i) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the applicable performance year as specified in paragraph (a)(5)(v) of this section; and

(ii) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(c) *Calculating county expenditures.* For all agreement periods beginning on July 1, 2019 and in subsequent years, CMS does all of the following to determine risk adjusted county fee-for-service expenditures for use in calculating the ACO's regional fee-for-service expenditures:

(1)(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area, where assignable beneficiaries are identified for the 12-month calendar year corresponding to the relevant benchmark or performance year.

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates assignable beneficiary expenditures using the payment amounts included in Parts A and B fee-for-service claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. The calculation—

(i) Excludes IME and DSH payments; and

(ii) Considers individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program.

(3) Truncates a beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year that corresponds to the relevant benchmark or performance year, in order to minimize variation from catastrophically large claims.

(4) Adjusts fee-for-service expenditures for severity and case mix of assignable beneficiaries in the county using prospective CMS–HCC risk scores. The calculation is made according to the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(d) *Calculating regional expenditures.* For all agreement periods beginning on July 1, 2019 and in subsequent years, CMS calculates an ACO's risk adjusted regional expenditures by—

(1) Weighting the risk-adjusted county-level fee-for-service expenditures determined under paragraph (c) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries;

(2) Aggregating the values determined under paragraph (d)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area; and

(3) Weighting the aggregate expenditure values determined for each population of beneficiaries (according to Medicare enrollment type) under paragraph (d)(2) of this section by a weight reflecting the proportion of the ACO's overall beneficiary population in the applicable Medicare enrollment type for the relevant benchmark or performance year.

(e) *Resetting the benchmark.* (1) An ACO's benchmark is reset at the start of each subsequent agreement period.

(2) For second or subsequent agreements periods beginning on July 1, 2019 and in subsequent years, CMS establishes, adjusts, and updates the rebased historical benchmark in accordance with paragraphs (a) through (d) of this section with the following modifications:

(i) Rather than weighting each year of the benchmark using the percentages provided in paragraph (a)(7) of this section, each benchmark year is weighted equally.

(ii) For a renewing ACO or re-entering ACO whose prior agreement period benchmark was calculated according to § 425.603(c), to determine the weight used in the regional adjustment calculation described in paragraph (f) of this section, CMS considers the agreement period the ACO is entering into according to § 425.600(f) in combination with either of the following—

(A) The weight previously applied to calculate the regional adjustment to the ACO's benchmark under § 425.603(c)(9) in its most recent prior agreement period; or

(B) For a new ACO identified as a re-entering ACO, CMS considers the weight previously applied to calculate the regional adjustment to the benchmark under § 425.603(c)(9) in its most recent prior agreement period of the ACO in which the majority of the new ACO's participants were participating previously.

(f) *Phase-in of weights used in regional adjustment calculation.* (1) The first time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is

determined to have lower spending than the ACO's regional service area.

(ii) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third or subsequent time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment to the historical benchmark using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark.

(4) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark for each population of beneficiaries (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under either paragraph (a)(8)(ii)(A) or (e) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries) for BY 3 of the historical benchmark.

(ii) Sums the amounts determined in paragraph (f)(4)(i) of this section across the populations of beneficiaries (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If CMS adjusts the ACO's benchmark for the addition or removal of ACO participants or ACO providers/suppliers during the term of the agreement period or a change to the ACO's beneficiary assignment methodology selection as specified in paragraph (a)(9) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (f)(1) and (2) of this section used in calculating the adjustment under either paragraph (a)(8) or (e) of this section.

(g) *July 1, 2019 through December 31, 2019 performance year.* In determining performance for the July 1, 2019 through December 31, 2019 performance year described in § 425.609(c) CMS does all of the following:

(1) When adjusting the benchmark using the methodology set forth in paragraph (a)(10) of this section and § 425.609(c), CMS adjusts for severity and case mix between BY3 and CY 2019.

(2) When updating the benchmark using the methodology set forth in paragraph (b) of this section and § 425.609(c), CMS updates the benchmark based on growth between BY3 and CY 2019.

■ 31. Section 425.602 is amended—

■ a. By revising the section heading and paragraph (a) introductory text;

■ b. In paragraph (a)(1)(ii)(B) by removing the phrase ''For agreement periods beginning in 2018 and subsequent years'' and adding in its place the phrase ''For agreement periods beginning in 2018 and on January 1, 2019'';

■ c. In paragraphs (a)(4)(ii) and (a)(5)(ii) by removing the phrase ''For agreement periods beginning in 2017 and subsequent years'' and adding in its place the phrase ''For agreement periods beginning in 2017, 2018 and on January 1, 2019''; and

■ d. By adding paragraph (c).

The revisions and addition read as follows:

§ 425.602 Establishing, adjusting, and updating the benchmark for an ACO's first agreement period beginning on or before January 1, 2019.

(a) *Computing per capita Medicare Part A and Part B benchmark expenditures.* For agreement periods beginning on or before January 1, 2019, in computing an ACO's fixed historical benchmark that is adjusted for historical growth and beneficiary characteristics, including health status, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the agreement period using the ACO participants' TINs identified at the start of the agreement period. CMS does all of the following:

* * * * *

(c) *January 1, 2019 through June 30, 2019 performance year.* In determining performance for the January 1, 2019 through June 30, 2019 performance year described in § 425.609(b) CMS does all of the following:

(1) When adjusting the benchmark using the methodology set forth in paragraph (a)(9) of this section and § 425.609(b), CMS adjusts for severity and case mix between BY3 and CY 2019.

(2) When updating the benchmark using the methodology set forth in paragraph (b) of this section and § 425.609(b), CMS updates the benchmark based on growth between BY3 and CY 2019.

■ 32. Section 425.603 is amended—

■ a. By revising the section heading;

■ b. In paragraph (c) introductory text by removing the phrase ''For second or subsequent agreement periods beginning in 2017 and subsequent years'' and adding in its place the phrase ''For second or subsequent agreement periods beginning in 2017, 2018 and on January 1, 2019'';

■ c. In paragraph (c)(1)(ii)(B) by removing the phrase ''For agreement periods beginning in 2018 and subsequent years'' and adding in its place the phrase ''For agreement periods beginning in 2018 and on January 1, 2019'';

■ d. In paragraphs (d) introductory text and (e) introductory text by removing the phrase ''For second or subsequent agreement periods beginning in 2017 and subsequent years'' and adding in its place the phrase ''For second or subsequent agreement periods beginning in 2017, 2018 and on January 1, 2019'';

■ e. In paragraph (e)(2)(ii)(B) by removing the phrase ''For agreement periods beginning in 2018 and subsequent years'' and adding in its

place the phrase ''For agreement periods beginning in 2018 and on January 1, 2019'';

■ f. In paragraph (f) introductory text by removing the phrase ''For second or subsequent agreement periods beginning in 2017 and subsequent years'' and adding in its place the phrase ''For second or subsequent agreement periods beginning in 2017, 2018, and on January 1, 2019''; and

■ g. By adding paragraph (g).

The revision and addition reads as follows:

§ 425.603 Resetting, adjusting, and updating the benchmark for a subsequent agreement period beginning on or before January 1, 2019.

* * * * *

(g) In determining performance for the January 1, 2019 through June 30, 2019 performance year described in § 425.609(b) CMS does all of the following:

(1) When adjusting the benchmark using the methodology set forth in paragraph (c)(10) of this section and § 425.609(b), CMS adjusts for severity and case mix between BY3 and CY 2019.

(2) When updating the benchmark using the methodology set forth in paragraph (d) of this section and § 425.609(b), CMS updates the benchmark based on growth between BY3 and CY 2019.

■ 33. Section 425.604 is amended—

■ a. In paragraph (a) introductory text by removing the phrase ''under § 425.602'' and adding in its place the phrase ''under § 425.602 or § 425.603'';

■ b. In paragraph (a)(3) introductory text by removing the phrase ''described in § 425.602(a)'' and adding in its place the phrase ''described in § 425.602(a) or § 425.603(c)'';

■ c. In paragraph (b) by revising the table; and

■ d. By adding paragraph (g).

The revision and addition read as follows:

§ 425.604 Calculation of savings under the one-sided model.

* * * * *

(b) * * *

Number of beneficiaries	MSR (low end of assigned beneficiaries) (percent)	MSR (high end of assigned beneficiaries) (percent)
1–499	≥12.2	
500–999	12.2	8.7
1,000–2,999	8.7	5.0
3,000–4,999	5.0	3.9
5,000–5,999	3.9	3.6
6,000–6,999	3.6	3.4
7,000–7,999	3.4	3.2
8,000–8,999	3.2	3.1
9,000–9,999	3.1	3.0
10,000–14,999	3.0	2.7
15,000–19,999	2.7	2.5
20,000–49,999	2.5	2.2
50,000–59,999	2.2	2.0
60,000 +	2.0	2.0

* * * * *

(g) *January 1, 2019 through June 30, 2019 performance year.* Shared savings for the January 1, 2019 through June 30, 2019 performance year are calculated as described in § 425.609.

■ 34. Section 425.605 is added to read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

(a) *General rules.* For each performance year, CMS determines whether the estimated average per capita Medicare Parts A and B fee-for-service expenditures for Medicare fee-for-service beneficiaries assigned to the ACO are above or below the updated benchmark determined under § 425.601. In order to qualify for a shared savings payment under the BASIC track, or to be responsible for sharing losses with CMS, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below or above the updated benchmark, respectively, by at least the minimum savings or loss rate under paragraph (b) of this section.

(1) CMS uses an ACO's prospective HCC risk score to adjust the benchmark for changes in severity and case mix in the assigned beneficiary population between BY3 and the performance year.

(i) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(ii) Negative adjustments in prospective HCC risk scores are subject to a cap of negative 3 percent.

(iii) These caps are the maximum change in risk scores for each agreement period, such that the adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent in either direction.

(2) In risk adjusting the benchmark as described in § 425.601(a)(10), CMS makes separate adjustments for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) To minimize variation from catastrophically large claims, CMS truncates an assigned beneficiary's total annual Medicare Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare Parts A and B fee-for-service expenditures as determined for the applicable performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to the performance year.

(4) CMS uses a 3-month claims run out with a completion factor to calculate an ACO's per capita expenditures for each performance year.

(5) Calculations of the ACO's expenditures include the payment amounts included in Medicare Parts A and B fee-for-service claims.

(i) These calculations exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments.

(ii) These calculations take into consideration individually beneficiary

identifiable final payments made under a demonstration, pilot or time limited program.

(6) In order to qualify for a shared savings payment, the ACO's average per capita Medicare Parts A and B fee-for-service expenditures for the performance year must be below the applicable updated benchmark by at least the minimum savings rate established for the ACO under paragraph (b) of this section.

(b) *Minimum savings or loss rate.* (1) For ACOs under a one-sided model of the BASIC track's glide path, as specified under paragraphs (d)(1)(i) and (ii) of this section, CMS uses a sliding scale, based on the number of beneficiaries assigned to the ACO under subpart E of this part, to establish the MSR for the ACO as follows:

Number of beneficiaries	MSR (low end of assigned beneficiaries) (percent)	MSR (high end of assigned beneficiaries) (percent)
1–499	≥12.2	
500–999	12.2	8.7
1,000–2,999	8.7	5.0
3,000–4,999	5.0	3.9
5,000–5,999	3.9	3.6
6,000–6,999	3.6	3.4
7,000–7,999	3.4	3.2
8,000–8,999	3.2	3.1
9,000–9,999	3.1	3.0
10,000–14,999	3.0	2.7
15,000–19,999	2.7	2.5
20,000–49,999	2.5	2.2
50,000–59,999	2.2	2.0
60,000+	2.0	2.0

(2) Prior to entering a two-sided model of the BASIC track, the ACO must select the MSR/MLR. For an ACO making this selection as part of an application for, or renewal of, participation in a two-sided model of the BASIC track, the selection applies for the duration of the agreement period under the BASIC track. For an ACO making this selection during an agreement period, as part of the application cycle prior to entering a two-sided model of the BASIC track, the selection applies for the remaining duration of the applicable agreement period under the BASIC track.

(i) The ACO must choose from the following options for establishing the MSR/MLR:

(A) Zero percent MSR/MLR.

(B) Symmetrical MSR/MLR in a 0.5 percent increment between 0.5 and 2.0 percent.

(C) Symmetrical MSR/MLR that varies, based on the number of beneficiaries assigned to the ACO under subpart E of this part. The MSR is the same as the MSR that would apply under paragraph (b)(1) of this section for an ACO under a one-sided model of the BASIC track's glide path, and is based on the number of assigned beneficiaries. The MLR under the BASIC track is equal to the negative MSR.

(ii) The ACO selects its MSR/MLR as part of one the following:

(A) Application for, or renewal of, program participation in a two-sided model of the BASIC track.

(B) Election to participate in a two-sided model of the BASIC track during an agreement period under § 425.226.

(C) Automatic transition from Level B to Level C of the BASIC track's glide path under § 425.600(a)(4)(i).

(3) To qualify for shared savings under the BASIC track, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below its updated benchmark costs for the year by at least the MSR established for the ACO.

(4) To be responsible for sharing losses with the Medicare program, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be above its updated benchmark costs for the year by at least the MLR established for the ACO.

(c) *Qualification for shared savings payment.* To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Levels of risk and potential reward.* (1) An ACO eligible to enter the BASIC track's glide path as specified under § 425.600(d) may elect to enter its agreement period at any of the levels of risk and potential reward under paragraphs (d)(1)(i) through (v) of this section, with the exception that an ACO that previously participated in Track 1 under § 425.600(a)(1), or a new ACO identified as a re-entering ACO because more than 50 percent of its ACO participants have recent prior experience in a Track 1 ACO, may elect to enter its agreement period at any of the levels of risk and potential reward available under paragraphs (d)(1)(ii) through (v) of this section.

(i) *Level A (one-sided model)*—(A) *Final sharing rate.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment of up to 25 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section).

(B) *Performance payment.* (*1*) If an ACO qualifies for savings by meeting or exceeding the MSR, the final sharing rate specified in paragraph (d)(1)(i)(A) of this section applies to an ACO's savings on a first dollar basis.

(*2*) The amount of shared savings an eligible ACO receives under the BASIC track, Level A, may not exceed 10 percent of its updated benchmark.

(ii) *Level B (one-sided model)*—(A) *Final sharing rate.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment of up to 25 percent of all the savings under the updated benchmark,

as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section).

(B) *Performance payment.* (*1*) If an ACO qualifies for savings by meeting or exceeding the MSR, the final sharing rate specified in paragraph (d)(1)(ii)(A) of this section applies to an ACO's savings on a first dollar basis.

(*2*) The amount of shared savings an eligible ACO receives under the BASIC track, Level B, may not exceed 10 percent of its updated benchmark.

(iii) *Level C (two-sided model)*—(A) *Final sharing rate.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment of up to 30 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section).

(B) *Performance payment.* (*1*) If an ACO qualifies for savings by meeting or exceeding the MSR, the final sharing rate specified in paragraph (d)(1)(iii)(A) of this section applies to an ACO's savings on a first dollar basis.

(*2*) The amount of shared savings an eligible ACO receives under the BASIC track, Level C may not exceed 10 percent of its updated benchmark.

(C) *Shared loss rate.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on a fixed 30 percent loss sharing rate.

(D) *Loss recoupment limit.* (*1*) Except as provided in paragraph (d)(1)(iii)(D)(*2*) of this section, the amount of shared losses for which an eligible ACO is liable may not exceed 2 percent of total Medicare Parts A and B fee-for-service revenue of the ACO participants in the ACO.

(*2*) Instead of the revenue-based loss recoupment limit determined under paragraph (d)(1)(iii)(D)(*1*) of this section, the loss recoupment limit for the ACO is 1 percent of the ACO's updated benchmark as determined under § 425.601, if the amount determined under paragraph (d)(1)(iii)(D)(*1*) of this section exceeds the amount that is 1 percent of the ACO's updated benchmark as determined under § 425.601.

(iv) *Level D (two-sided model)*—(A) *Final sharing rate.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment of up to 40 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section).

(B) *Performance payment.* (*1*) If an ACO qualifies for savings by meeting or exceeding the MSR, the final sharing rate specified in paragraph (d)(1)(iv)(A) of this section applies to an ACO's savings on a first dollar basis.

(*2*) The amount of shared savings an eligible ACO receives under the BASIC track, Level D, may not exceed 10 percent of its updated benchmark.

(C) *Shared loss rate.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on a fixed 30 percent loss sharing rate.

(D) *Loss recoupment limit.* (*1*) Except as provided in paragraph (d)(1)(iv)(D)(*2*) of this section, the amount of shared losses for which an eligible ACO is liable may not exceed 4 percent of total Medicare Parts A and B fee-for-service revenue of the ACO participants in the ACO.

(*2*) Instead of the revenue-based loss recoupment limit determined under paragraph (d)(1)(iv)(D)(*1*) of this section, the loss recoupment limit for the ACO is 2 percent of the ACO's updated benchmark as determined under § 425.601, if the amount determined under paragraph (d)(1)(iv)(D)(*1*) of this section exceeds the amount that is 2 percent of the ACO's updated benchmark as determined under § 425.601.

(v) *Level E (two-sided model)*—(A) *Final sharing rate.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section).

(B) *Performance payment.* (*1*) If an ACO qualifies for savings by meeting or exceeding the MSR, the final sharing rate specified in paragraph (d)(1)(v)(A) of this section applies to an ACO's savings on a first dollar basis.

(*2*) The amount of shared savings an eligible ACO receives under the BASIC track, Level E, may not exceed 10 percent of its updated benchmark.

(C) *Shared loss rate.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on a fixed 30 percent loss sharing rate.

(D) *Loss recoupment limit.* (*1*) Except as provided in paragraph (d)(1)(v)(D)(*2*) of this section, the amount of shared losses for which an eligible ACO is liable may not exceed the percentage, as specified in § 414.1415(c)(3)(i)(A) of this chapter, of total Medicare Parts A and B fee-for-service revenue of the ACO participants in the ACO.

(*2*) Instead of the revenue-based loss recoupment limit determined under paragraph (d)(1)(v)(D)(*1*) of this section, the loss recoupment limit for the ACO is 1 percentage point higher than the percentage, as specified in § 414.1415(c)(3)(i)(B) of this chapter, based on the ACO's updated benchmark as determined under § 425.601, if the amount determined under paragraph (d)(1)(v)(D)(*1*) of this section exceeds this percentage of the ACO's updated benchmark as determined under § 425.601.

(2) Level E risk and reward as specified in paragraph (d)(1)(v) of this section applies to an ACO eligible to enter the BASIC track that is determined to be experienced with performance-based risk Medicare ACO initiatives as specified under § 425.600(d).

(e) *Notification of savings and losses.* (1) CMS notifies an ACO in writing regarding whether the ACO qualifies for a shared savings payment, and if so, the amount of the payment due.

(2) CMS provides written notification to an ACO of the amount of shared losses, if any, that it must repay to the program.

(3) If an ACO has shared losses, the ACO must make payment in full to CMS within 90 days of receipt of notification.

(f) *Extreme and uncontrollable circumstances.* The following adjustment is made in calculating the amount of shared losses, after the application of the shared loss rate and the loss recoupment limit.

(1) CMS determines the percentage of the ACO's performance year assigned beneficiary population affected by an extreme and uncontrollable circumstance.

(2) CMS reduces the amount of the ACO's shared losses by an amount determined by multiplying the shared losses by the percentage of the total months in the performance year affected by an extreme and uncontrollable circumstance, and the percentage of the ACO's assigned beneficiaries who reside in an area affected by an extreme and uncontrollable circumstance.

(i) For an ACO that is liable for a pro-rated share of losses under § 425.221(b)(2), the amount of shared losses determined for the performance year during which the termination becomes effective is adjusted according to this paragraph (f)(2).

(ii) [Reserved]

(3) CMS applies determinations made under the Quality Payment Program with respect to—

(i) Whether an extreme and uncontrollable circumstance has occurred; and

(ii) The affected areas.

(4) CMS has sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred and the percentage of the ACO's assigned beneficiaries residing in the affected areas.

(g) *July 1, 2019 through December 31, 2019 performance year.* Shared savings or shared losses for the July 1, 2019 through December 31, 2019 performance year are calculated as described in § 425.609.

■ 35. Section 425.606 is amended—

■ a. In paragraph (a) introductory text by removing the phrase ''under § 425.602'' and adding in its place the phrase ''under § 425.602 or § 425.603'';

■ b. In paragraph (a)(3) introductory text by removing the phrase ''described in § 425.602(a)'' and adding in its place the phrase ''described in § 425.602(a) or § 425.603(c)'';

■ c. In paragraph (g) introductory text by removing the phrase ''under § 425.602'' and adding in its place the phrase ''under § 425.602 or § 425.603'';

■ d. In paragraph (i) introductory text by removing the phrase ''For performance year 2017'' and adding in its place the phrase ''For performance year 2017 and subsequent performance years'';

■ e. In paragraph (i)(1) remove the phrase ''2017''; and

■ f. By adding paragraph (i)(2)(i), reserved paragraph (i)(2)(ii), and paragraph (j).

The additions read as follows:

§ 425.606 Calculation of shared savings and losses under Track 2.

* * * * *

(i) * * *

(2) * * *

(i) For an ACO that is liable for a pro-rated share of losses under § 425.221(b)(2) or (b)(3)(i), the amount of shared losses determined for the performance year during which the termination becomes effective is adjusted according to this paragraph (i)(2).

(ii) [Reserved]

* * * * *

(j) *January 1, 2019 through June 30, 2019.* Shared savings or shared losses for the January 1, 2019 through June 30, 2019 performance year are calculated as described in § 425.609.

■ 36. Section 425.609 is added to read as follows:

§ 425.609 Determining performance for 6-month performance years during CY 2019.

(a) *General.* An ACO's financial and quality performance for a 6-month performance year during 2019 are determined as described in this section.

(b) *January 2019 through June 2019.* For ACOs participating in a 6-month performance year from January 1, 2019, through June 30, 2019 under § 425.200(b)(2)(ii)(B) and for ACOs eligible for pro-rated shared savings or shared losses in accordance with § 425.221(b)(3)(i) for the performance period from January 1, 2019, through June 30, 2019, CMS reconciles the ACO after the conclusion of CY 2019 for the period from January 1, 2019, through June 30, 2019, based on the 12-month calendar year and pro-rates shared savings or shared losses to reflect the ACO's participation from January 1, 2019, through June 30, 2019. CMS does all of the following to determine financial and quality performance:

(1) Uses the ACO participant list in effect for the performance year beginning January 1, 2019, to determine beneficiary assignment, using claims for the entire calendar year, as specified in §§ 425.402 and 425.404, and according to the ACO's track as specified in § 425.400.

(i) For ACOs under preliminary prospective assignment with retrospective reconciliation the assignment window is CY 2019.

(ii) For ACOs under prospective assignment—

(A) Medicare fee-for-service beneficiaries are prospectively assigned to the ACO based on the beneficiary's use of primary care services in the most recent 12 months for which data are available; and

(B) Beneficiaries remain prospectively assigned to the ACO at the end of CY 2019 if they do not meet any of the exclusion criteria under § 425.401(b) during the calendar year.

(2) Uses the ACO's quality performance for the 2019 reporting period to determine the ACO's quality performance score as specified in § 425.502.

(i) The ACO participant list finalized for the first performance year of the ACO's agreement period beginning on July 1, 2019, is used to determine the quality reporting samples for the 2019 reporting year for the following ACOs:

(A) An ACO that extends its participation agreement for a 6-month performance year from January 1, 2019, through June 30, 2019, under § 425.200(b)(2)(ii)(B), and enters a new agreement period beginning on July 1, 2019.

(B) An ACO that participates in the program for the first 6 months of a 12-month performance year during 2019, and is eligible for pro-rated shared savings or shared losses in accordance with § 425.221(b)(3)(i).

(ii) The ACO's latest certified ACO participant list is used to determine the quality reporting samples for the 2019 reporting year for an ACO that extends its participation agreement for the 6-month performance year from January 1, 2019, through June 30, 2019, under § 425.200(b)(2)(ii)(B), and does not enter a new agreement period beginning on July 1, 2019.

(3) Uses the methodology for calculating shared savings or shared losses applicable to the ACO under the terms of the participation agreement that was in effect on January 1, 2019.

(i) The ACO's historical benchmark is determined according to either § 425.602 (first agreement period) or § 425.603 (second agreement period) except as follows:

(A) The benchmark is adjusted for changes in severity and case mix between BY 3 and CY 2019 using the methodology that accounts separately for newly and continuously assigned beneficiaries using prospective HCC risk scores and demographic factors as described under §§ 425.604(a)(1) through (3), 425.606(a)(1) through (3), and 425.610(a)(1) through (3).

(B) The benchmark is updated to CY 2019 according to the methodology described under § 425.602(b), § 425.603(b), or § 425.603(d), based on whether the ACO is in its first or second agreement period, and for an ACO in a second agreement period, the date on which that agreement period began.

(ii) The ACO's financial performance is determined based on the track the ACO is participating under during the performance year starting on January 1, 2019 (§ 425.604, § 425.606 or § 425.610), unless otherwise specified. In determining ACO financial performance, CMS does all of the following:

(A) Average per capita Medicare Parts A and B fee-for-service expenditures for CY 2019 are calculated for the ACO's performance year assigned beneficiary population identified in paragraph (b)(1) of this section.

(B) Expenditures calculated in paragraph (b)(3)(ii)(A) of this section are compared to the ACO's updated benchmark determined according to paragraph (b)(3)(i) of this section.

(C)(*1*) The ACO's performance year assigned beneficiary population identified in paragraph (b)(1) of this section is used to determine the MSR for Track 1 ACOs and the variable MSR/

MLR for ACOs in a two-sided model that selected this option at the start of their agreement period. In the event a two-sided model ACO selected a fixed MSR/MLR at the start of its agreement period, and the ACO's performance year assigned population identified in paragraph (b)(1) of this section is below 5,000 beneficiaries, the MSR/MLR is determined based on the number of assigned beneficiaries as specified in § 425.110(b)(3)(iii).

(*2*) To qualify for shared savings an ACO must do all of the following:

(*i*) Have average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for CY 2019 below its updated benchmark costs for the year by at least the MSR established for the ACO based on the track the ACO is participating under during the performance year starting on January 1, 2019 (§ 425.604, § 425.606 or § 425.610) and paragraph (b)(3)(ii)(C)(*1*) of this section.

(*ii*) Meet the minimum quality performance standards established under § 425.502 and according to paragraph (b)(2) of this section.

(*iii*) Otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(*3*) To be responsible for sharing losses with the Medicare program, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for CY 2019 must be above its updated benchmark costs for the year by at least the MLR established for the ACO based on the track the ACO is participating under during the performance year starting on January 1, 2019 (§ 425.606 or § 425.610) and paragraph (b)(3)(ii)(C)(*1*) of this section.

(D) For an ACO that meets all the requirements to receive shared savings payment under paragraph (b)(3)(ii)(C)(*2*) of this section—

(*1*) The final sharing rate, determined based on the track the ACO is participating under during the performance year starting on January 1, 2019 (§ 425.604, § 425.606 or § 425.610), is applied to all savings under the updated benchmark specified under paragraph (b)(3)(i) of this section, not to exceed the performance payment limit for the ACO based on its track; and

(*2*) After applying the applicable performance payment limit, CMS pro-rates any shared savings amount determined under paragraph (b)(3)(ii)(D)(*1*) of this section by multiplying the amount by one-half, which represents the fraction of the calendar year covered by the period from January 1, 2019, through June 30, 2019.

(E) For an ACO responsible for shared losses under paragraph (b)(3)(ii)(C)(*3*) of this section—

(*1*) The shared loss rate, determined based on the track the ACO is participating under during the performance year starting on January 1, 2019 (§ 425.606 or § 425.610), is applied to all losses under the updated benchmark specified under paragraph (b)(3)(i) of this section, not to exceed the loss recoupment limit for the ACO based on its track; and

(*2*) After applying the applicable loss recoupment limit, CMS pro-rates any shared losses amount determined under paragraph (b)(3)(ii)(E)(*1*) of this section by multiplying the amount by one-half, which represents the fraction of the calendar year covered by the period from January 1, 2019, through June 30, 2019.

(c) *July 2019 through December 2019.* For ACOs entering an agreement period beginning on July 1, 2019, the ACO's first performance year is from July 1, 2019, through December 31, 2019, as specified in § 425.200(c)(3). CMS reconciles the ACO after the conclusion of CY 2019 for the period from July 1, 2019, through December 31, 2019, based on the 12-month calendar year and pro-rates shared savings or shared losses to reflect the ACO's participation from July 1, 2019, through December 31, 2019. CMS does all of the following to determine financial and quality performance:

(1) Uses the ACO participant list in effect for the performance year beginning on July 1, 2019, to determine beneficiary assignment, using claims for the entire calendar year, consistent with the methodology the ACO selected at the start of its agreement period under § 425.400(a)(4)(ii).

(i) For ACOs under preliminary prospective assignment with retrospective reconciliation the assignment window is CY 2019.

(ii) For ACOs under prospective assignment—

(A) Medicare fee-for-service beneficiaries are prospectively assigned to the ACO based on the beneficiary's use of primary care services in the most recent 12 months for which data are available; and

(B) Beneficiaries remain prospectively assigned to the ACO at the end of CY 2019 if they do not meet any of the exclusion criteria under § 425.401(b) during the calendar year.

(2) Uses the ACO's quality performance for the 2019 reporting period to determine the ACO's quality performance score as specified in § 425.502. The ACO participant list finalized for the first performance year of the ACO's agreement period beginning on July 1, 2019, is used to determine the quality reporting samples for the 2019 reporting year for all ACOs.

(3) Uses the methodology for calculating shared savings or shared loses applicable to the ACO for its first performance year under its agreement period beginning on July 1, 2019.

(i) The ACO's historical benchmark is determined according to § 425.601 except as follows:

(A) The benchmark is adjusted for changes in severity and case mix between BY 3 and CY 2019 based on growth in prospective HCC risk scores, subject to a symmetrical cap of positive or negative 3 percent as described under § 425.605(a)(1) or § 425.610(a)(2).

(B) The benchmark is updated to CY 2019 according to the methodology described under § 425.601(b).

(ii) The ACO's financial performance is determined based on the track the ACO is participating under during the performance year starting on July 1, 2019 (§ 425.605 (BASIC track) or § 425.610 (ENHANCED track)), unless otherwise specified. In determining ACO financial performance, CMS does all of the following:

(A) Average per capita Medicare Parts A and B fee-for-service expenditures for CY 2019 are calculated for the ACO's performance year assigned beneficiary population identified in paragraph (c)(1) of this section.

(B) Expenditures calculated in paragraph (c)(3)(ii)(A) of this section are compared to the ACO's updated benchmark determined according to paragraph (c)(3)(i) of this section.

(C)(*1*) The ACO's performance year assigned beneficiary population identified in paragraph (c)(1) of this section is used to determine the MSR for ACOs in BASIC track Level A or Level B, and the variable MSR/MLR for ACOs in a two-sided model that selected this option at the start of their agreement period. In the event a two-sided model ACO selected a fixed MSR/MLR at the start of its agreement period, and the ACO's performance year assigned population identified in paragraph (c)(1) of this section is below 5,000 beneficiaries, the MSR/MLR is determined based on the number of assigned beneficiaries as specified in § 425.110(b)(3)(iii).

(*2*) To qualify for shared savings an ACO must do all of the following:

(*i*) Have average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for CY 2019 below its updated benchmark costs for the year by

at least the MSR established for the ACO based on the track the ACO is participating under during the performance year starting on July 1, 2019 (§ 425.605 or § 425.610) and paragraph (c)(3)(ii)(C)(*1*) of this section.

(*ii*) Meet the minimum quality performance standards established under § 425.502 and according to paragraph (c)(2) of this section.

(*iii*) Otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(*3*) To be responsible for sharing losses with the Medicare program, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for CY 2019 must be above its updated benchmark costs for the year by at least the MLR established for the ACO based on the track the ACO is participating under during the performance year starting on July 1, 2019 (§ 425.605 or § 425.610) and paragraph (c)(3)(ii)(C)(*1*) of this section.

(D) For an ACO that meets all the requirements to receive shared savings payment under paragraph (c)(3)(ii)(C)(*2*) of this section—

(*1*) The final sharing rate, determined based on the track the ACO is participating under during the performance year starting on July 1, 2019 (§ 425.605 or § 425.610), is applied to all savings under the updated benchmark specified under paragraph (c)(3)(i) of this section, not to exceed the performance payment limit for the ACO based on its track; and

(*2*) After applying the applicable performance payment limit, CMS pro-rates any shared savings amount determined under paragraph (c)(3)(ii)(D)(*1*) of this section by multiplying the amount by one-half, which represents the fraction of the calendar year covered by the July 1, 2019 through December 31, 2019 performance year.

(E) For an ACO responsible for shared losses under paragraph (c)(3)(ii)(C)(*3*) of this section—

(*1*) The shared loss rate, determined based on the track the ACO is participating under during the performance year starting on July 1, 2019 (§ 425.605 or § 425.610), is applied to all losses under the updated benchmark specified under paragraph (c)(3)(i) of this section, not to exceed the loss recoupment limit for the ACO based on its track; and

(*2*) After applying the applicable loss recoupment limit, CMS pro-rates any shared losses amount determined under paragraph (c)(3)(ii)(E)(*1*) of this section by multiplying the amount by one-half, which represents the fraction of the calendar year covered by the July 1, 2019 through December 31, 2019 performance year.

(d) *Extreme and uncontrollable circumstances.* For ACOs affected by extreme and uncontrollable circumstances during CY 2019—

(1) In calculating the amount of shared losses owed, CMS makes adjustments to the amount determined in paragraph (b)(3)(ii)(E)(*1*) or (c)(3)(ii)(E)(*1*) of this section, as specified in § 425.605(f), § 425.606(i), or § 425.610(i), as applicable; and

(2) In determining the ACO's quality performance score for the 2019 quality reporting period, CMS uses the alternative scoring methodology specified in § 425.502(f).

(e) *Notification of savings and losses.* CMS notifies the ACO of shared savings or shared losses separately for the January 1, 2019 through June 30, 2019 performance year (or performance period) and the July 1, 2019 through December 31, 2019 performance year, consistent with the notification requirements specified in §§ 425.604(f), 425.605(e), 425.606(h), and 425.610(h), as applicable:

(1) CMS notifies an ACO in writing regarding whether the ACO qualifies for a shared savings payment, and if so, the amount of the payment due.

(2) CMS provides written notification to an ACO of the amount of shared losses, if any, that it must repay to the program.

(3) If an ACO has shared losses, the ACO must make payment in full to CMS within 90 days of receipt of notification.

(4) If an ACO is reconciled for both the January 1, 2019 through June 30, 2019 performance year (or performance period) and the July 1, 2019 through December 31, 2019 performance year, CMS issues a separate notice of shared savings or shared losses for each performance year (or performance period), and if the ACO has shared savings for one performance year (or performance period) and shared losses for the other performance year (or performance period), CMS reduces the amount of shared savings by the amount of shared losses.

(i) If any amount of shared savings remains after completely repaying the amount of shared losses owed, the ACO is eligible to receive payment for the remainder of the shared savings.

(ii) If the amount of shared losses owed exceeds the amount of shared savings earned, the ACO is accountable for payment of the remaining balance of shared losses in full.

■ 37. Section 425.610 is amended—

■ a. By revising the section heading;

■ b. In paragraph (a) introductory text by removing the phrase ''under § 425.602'' and adding in its place the phrase ''under § 425.601, § 425.602 or § 425.603'' and by removing the phrase ''Track 3'' and adding in its place the phrase ''the ENHANCED track'';

■ c. By revising paragraph (a)(1) through (3);

■ d. In paragraph (b)(1)(iii) by removing all instances of the phrase ''Track 3'' and, in each instance, adding in its place the phrase ''the ENHANCED track'' and by removing the phrase ''§ 425.604(b)'' and adding in its place the phrase ''either § 425.604(b) (for ACOs entering an agreement period on or before January 1, 2019) or § 425.605(b)(1) (for ACOs entering an agreement period on July 1, 2019, and in subsequent years)'';

■ e. In paragraphs (b)(2), (d), (e)(2) by removing the phrase ''Track 3'' and adding in its place the phrase ''the ENHANCED track'';

■ f. In paragraph (g) by removing the phrase ''under § 425.602'' and adding in its place the phrase ''under § 425.601, § 425.602 or § 425.603'';

■ g. In paragraph (i) introductory text by removing the phrase ''For performance year 2017'' and adding in its place the phrase ''For performance year 2017 and subsequent performance years'';

■ h. In paragraph (i)(1) by removing the phrase ''2017''; and

■ i. By adding paragraph (i)(2)(i), reserved paragraph (i)(2)(ii), and paragraphs (j) and (k).

The revisions and additions read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

(a) * * *

(1) Risk adjustment for ACOs in agreement periods beginning on or before January 1, 2019. CMS does the following to adjust the benchmark each performance year:

(i) *Newly assigned beneficiaries.* CMS uses an ACO's prospective HCC risk score to adjust the benchmark for changes in severity and case mix in this population.

(ii) *Continuously assigned beneficiaries.* (A) CMS uses demographic factors to adjust the benchmark for changes in the continuously assigned beneficiary population.

(B) If the prospective HCC risk score is lower in the performance year for this population, CMS adjusts the benchmark for changes in severity and case mix for this population using this lower prospective HCC risk score.

(2) Risk adjustment for ACOs in agreement periods beginning on July 1,

2019, and in subsequent years. CMS uses an ACO's prospective HCC risk score to adjust the benchmark for changes in severity and case mix in the assigned beneficiary population between BY3 and the performance year.

(i) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(ii) Negative adjustments in prospective HCC risk scores are subject to a cap of negative 3 percent.

(iii) These caps are the maximum change in risk scores for each agreement period, such that the adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent in either direction.

(3) In risk adjusting the benchmark as described in §§ 425.601(a)(10), 425.602(a)(9) and 425.603(c)(10), CMS makes separate adjustments for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

* * * * *

(i) * * *

(2) * * *

(i) For an ACO that is liable for a pro-rated share of losses under § 425.221(b)(2) or (b)(3)(i), the amount of shared losses determined for the performance year during which the termination becomes effective is adjusted according to this paragraph (i)(2).

(ii) [Reserved]

* * * * *

(j) *January 1, 2019 through June 30, 2019 performance year.* Shared savings or shared losses for the January 1, 2019 through June 30, 2019 performance year are calculated as described in § 425.609.

(k) *July 1, 2019 through December 31, 2019 performance year.* Shared savings or shared losses for the July 1, 2019 through December 31, 2019 performance year are calculated as described in § 425.609.

■ 38. Section 425.612 is amended—

■ a. By revising paragraphs (a)(1) introductory text and (a)(1)(ii)(A);

■ b. By redesignating paragraphs (a)(1)(ii)(B) through (G) as paragraphs (a)(1)(ii)(C) through (H);

■ c. By adding new paragraph (a)(1)(ii)(B);

■ d. By revising paragraphs (a)(1)(iii)(A), (a)(1)(iv), and (a)(1)(v) introductory text;

■ e. Redesignating paragraphs (a)(1)(v)(A) through (C) as paragraphs (a)(1)(v)(C) through (E);

■ f. Adding new paragraphs (a)(1)(v)(A) and (B);

■ g. Revising newly redesignated paragraph (a)(1)(v)(D); and

■ h. By adding paragraphs (a)(1)(vi) and (f).

The revisions and additions read as follows:

§ 425.612 Waivers of payment rules or other Medicare requirements.

(a) * * *

(1) *SNF 3-day rule.* For performance year 2017 and subsequent performance years, CMS waives the requirement in section 1861(i) of the Act for a 3-day inpatient hospital stay prior to a Medicare-covered post-hospital extended care service for eligible beneficiaries assigned to ACOs participating in a two-sided model and as provided in paragraph (a)(1)(iv) of this section during a grace period for beneficiaries excluded from prospective assignment to an ACO in a two-sided model, who receive otherwise covered post-hospital extended care services furnished by an eligible SNF that has entered into a written agreement to partner with the ACO for purposes of this waiver. Eligible SNFs include providers furnishing SNF services under swing bed agreements. All other provisions of the statute and regulations regarding Medicare Part A post-hospital extended care services continue to apply. ACOs identified under paragraph (a)(1)(vi) of this section may request to use the SNF 3-day rule waiver for performance years beginning on July 1, 2019, and in subsequent years.

* * * * *

(ii) * * *

(A) In the case of a beneficiary who is assigned to an ACO that has selected preliminary prospective assignment with retrospective reconciliation under § 425.400(a)(2), the beneficiary must appear on the list of preliminarily prospectively assigned beneficiaries at the beginning of the performance year or on the first, second, or third quarterly preliminary prospective assignment list for the performance year in which they are admitted to the eligible SNF, and the SNF services must be provided after the beneficiary first appeared on the preliminary prospective assignment list for the performance year.

(B) In the case of a beneficiary who is assigned to an ACO that has selected prospective assignment under § 425.400(a)(3), the beneficiary must be prospectively assigned to the ACO for the performance year in which they are admitted to the eligible SNF.

* * * * *

(iii) * * *

(A) Providers eligible to be included in the CMS 5-star Quality Rating System must have and maintain an overall rating of 3 or higher.

* * * * *

(iv) For a beneficiary who was included on the ACO's prospective assignment list or preliminary prospective assignment list at the beginning of the performance year or on the first, second, or third quarterly preliminary prospective assignment list for the performance year, for an ACO for which a waiver of the SNF 3-day rule has been approved under paragraph (a)(1) of this section, but who was subsequently removed from the assignment list for the performance year, CMS makes payment for SNF services furnished to the beneficiary by a SNF affiliate if the following conditions are met:

(A)(*1*) The beneficiary was prospectively assigned to an ACO that selected prospective assignment under § 425.400(a)(3) at the beginning of the applicable performance year, but was excluded in the most recent quarterly update to the assignment list under § 425.401(b), and the beneficiary was admitted to a SNF affiliate within 90 days following the date that CMS delivered the quarterly exclusion list to the ACO; or

(*2*) The beneficiary was identified as preliminarily prospectively assigned to an ACO that has selected preliminary prospective assignment with retrospective reconciliation under § 425.400(a)(2) in the report provided under § 425.702(c)(1)(ii)(A) at the beginning of the performance year or for the first, second, or third quarter of the performance year, the SNF services were provided after the beneficiary first appeared on the preliminary prospective assignment list for the performance year, and the beneficiary meets the criteria to be assigned to an ACO under § 425.401(a)(1) and (2).

(B) But for the beneficiary's removal from the ACO's assignment list, CMS would have made payment to the SNF affiliate for such services under the waiver under paragraph (a)(1) of this section.

(v) The following beneficiary protections apply when a beneficiary receives SNF services without a prior 3-day inpatient hospital stay from a SNF affiliate that intended to provide services under a SNF 3-day rule waiver under paragraph (a)(1) of this section, the SNF affiliate services were non-covered only because the SNF affiliate stay was not preceded by a qualifying hospital stay under section 1861(i) of the Act, and in the case of a beneficiary where the ACO selected one of the following:

(A) Prospective assignment under § 425.400(a)(3), the beneficiary was not prospectively assigned to the ACO for the performance year in which they received the SNF services, or was prospectively assigned but was later excluded and the 90-day grace period, described in paragraph (a)(1)(iv)(A) of this section, has lapsed.

(B) Preliminary prospective assignment with retrospective reconciliation under § 425.400(a)(2), the beneficiary was not identified as preliminarily prospectively assigned to the ACO for the performance year in the report provided under § 425.702(c)(1)(ii)(A) at the beginning of the performance year or for the first, second, or third quarter of the performance year before the SNF services were provided to the beneficiary.

* * * * *

(D) CMS makes no payments for SNF services to a SNF affiliate of an ACO for which a waiver of the SNF 3-day rule has been approved when the SNF affiliate admits a FFS beneficiary who was not prospectively or preliminarily prospectively assigned to the ACO prior to the SNF admission or was prospectively assigned but was later excluded and the 90-day grace period under paragraph (a)(1)(iv)(A) of this section has lapsed.

* * * * *

(vi) The following ACOs may request to use the SNF 3-day rule waiver:

(A) An ACO participating in performance-based risk within the BASIC track under § 425.605.

(B) An ACO participating in the ENHANCED track under § 425.610.

* * * * *

(f) *Waiver for payment for telehealth services.* For performance year 2020 and subsequent performance years, CMS waives the originating site requirements in section 1834(m)(4)(C)(i) and (ii) of the Act and makes payment for telehealth services furnished to a beneficiary, if the following conditions are met:

(1) The beneficiary was prospectively assigned to an ACO that is an applicable ACO for purposes of § 425.613 at the beginning of the applicable performance year, but the beneficiary was excluded in the most recent quarterly update to the prospective assignment list under § 425.401(b).

(2) The telehealth services are provided by a physician or practitioner billing under the TIN of an ACO participant in the ACO within 90 days following the date CMS delivers the quarterly exclusion list to the ACO.

(3) But for the beneficiary's exclusion from the ACO's prospective assignment list, CMS would have made payment to the ACO participant for such services under § 425.613.

■ 39. Section 425.613 is added to subpart G to read as follows:

§ 425.613 Telehealth services.

(a) *General.* Payment is available for otherwise covered telehealth services furnished on or after January 1, 2020, by a physician or other practitioner billing through the TIN of an ACO participant in an applicable ACO, without regard to the geographic requirements under section 1834(m)(4)(C)(i) of the Act, in accordance with the requirements of this section.

(1) For purposes of this section:

(i) An applicable ACO is an ACO that is participating under a two-sided model under § 425.600 and has elected prospective assignment under § 425.400(a)(3) for the performance year.

(ii) The home of the beneficiary is treated as an originating site under section 1834(m)(4)(C)(ii) of the Act.

(2) For payment to be made under this section, the following requirements must be met:

(i) The beneficiary is prospectively assigned to the ACO for the performance year in which the beneficiary received the telehealth service.

(ii) The physician or practitioner who furnishes the telehealth service must bill under the TIN of an ACO participant that is included on the certified ACO participant list under § 425.118 for the performance year in which the service is rendered.

(iii) The originating site must comply with applicable State licensing requirements.

(iv) When the originating site is the beneficiary's home, the telehealth services must not be inappropriate to furnish in the home setting. Services that are typically furnished in an inpatient setting may not be furnished as a telehealth service when the originating site is the beneficiary's home.

(v) CMS does not pay a facility fee when the originating site is the beneficiary's home.

(b) *Beneficiary protections.* (1) When a beneficiary who is not prospectively assigned to an applicable ACO or in a 90-day grace period under § 425.612(f) receives a telehealth service from a physician or practitioner billing through the TIN of an ACO participant participating in an applicable ACO, CMS makes no payment for the telehealth service to the ACO participant.

(2) In the event that CMS makes no payment for a telehealth service furnished by a physician or practitioner billing through the TIN of an ACO participant, and the only reason the claim was non-covered is because the beneficiary is not prospectively assigned to the ACO or in the 90-day grace period under § 425.612(f), all of the following beneficiary protections apply:

(i) The ACO participant must not charge the beneficiary for the expenses incurred for such service.

(ii) The ACO participant must return to the beneficiary any monies collected for such service.

(iii) The ACO may be required to submit a corrective action plan under § 425.216(b) for CMS approval. If the ACO is required to submit a corrective action plan and, after being given an opportunity to act upon the corrective action plan, the ACO fails to implement the corrective action plan or demonstrate improved performance upon completion of the corrective action plan, CMS may terminate the participation agreement as specified under § 425.216(b)(2).

(c) *Termination date for purposes of payment for telehealth services.* (1) Payment for telehealth services under paragraph (a) of this section does not extend beyond the end of the applicable ACO's participation agreement.

(2) If CMS terminates the participation agreement under § 425.218, payment for telehealth services under paragraph (a) of this section is not made with respect to telehealth services furnished beginning on the date specified by CMS in the termination notice.

(3) If the ACO terminates the participation agreement, payment for telehealth services under paragraph (a) of this section is not made with respect to telehealth services furnished beginning on the effective date of termination as specified in the written notification required under § 425.220.

(d) *Monitoring of telehealth services.* (1) CMS monitors and audits the use of telehealth services by the ACO and its ACO participants and ACO providers/suppliers, in accordance with § 425.316.

(2) CMS reserves the right to take compliance action, up to and including termination of the participation agreement, as specified in §§ 425.216 and 425.218, with respect to an applicable ACO for non-compliance with program requirements, including inappropriate use of telehealth services.

■ 40. Section 425.702 is amended—

■ a. By revising paragraphs (c)(1)(ii)(A) introductory text, (c)(1)(ii)(B) introductory text and (c)(1)(ii)(C); and

■ b. By adding paragraph (d).

The revisions and addition read as follows:

§ 425.702 Aggregate reports.

* * * * *

(c) * * *

(1) * * *

(ii) * * *

(A) For an ACO participating under preliminary prospective assignment with retrospective reconciliation as specified under § 425.400(a)(2), the following information is made available regarding preliminarily prospectively assigned beneficiaries and beneficiaries that received a primary care service during the previous 12 months from one of the ACO participants that submits claims for primary care services used to determine the ACO's assigned population under subpart E of this part:

* * * * *

(B) For an ACO participating under preliminary prospective assignment with retrospective reconciliation as specified under § 425.400(a)(2), information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available regarding preliminarily prospectively assigned beneficiaries:

* * * * *

(C) The information under paragraphs (c)(1)(ii)(A) and (B) of this section is made available to ACOs participating under prospective assignment as specified under § 425.400(a)(3), but is limited to the ACO's prospectively assigned beneficiaries.

* * * * *

(d) For an ACO eligible to be reconciled under § 425.609(b), CMS shares with the ACO quarterly aggregate reports as provided in paragraphs (b) and (c)(1)(ii) of this section for CY 2019.

■ 41. Section 425.704 is amended by revising paragraph (d)(1) to read as follows:

§ 425.704 Beneficiary-identifiable claims data.

* * * * *

(d) * * *

(1) For an ACO participating under—

(i) Preliminary prospective assignment with retrospective reconciliation as specified under § 425.400(a)(2), the beneficiary's name appears on the preliminary prospective assignment list provided to the ACO at the beginning of the performance year, during each quarter (and in conjunction with the annual reconciliation) or the beneficiary has received a primary care service from an ACO participant upon whom assignment is based (under subpart E of this part) during the most recent 12-month period; or

(ii) Prospective assignment as specified under § 425.400(a)(3), the beneficiary's name appears on the prospective assignment list provided to the ACO at the beginning of the performance year.

* * * * *

■ 42. Section 425.800 is amended—

■ a. In paragraph (a)(4) by removing the phrase ''under §§ 425.602, 425.604, 425.606, and 425.610'' and adding in its place the phrase ''in accordance with section 1899(d) of the Act, as implemented under §§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, and 425.610'';

■ b. In paragraph (a)(5) by removing the phrase ''established under §§ 425.604, 425.606, and 425.610'' and adding in its place the phrase ''established under §§ 425.604, 425.605, 425.606, and 425.610''; and

■ c. By adding paragraph (a)(7).

The addition reads as follows:

§ 425.800 Preclusion of administrative and judicial review.

(a) * * *

(7) The termination of a beneficiary incentive program established under § 425.304(c).

Centralized Partnership Audit Regime

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking; notice of public hearing; withdrawal and partial withdrawal of notices of proposed rulemaking.

SUMMARY: This document contains proposed regulations implementing the centralized partnership audit regime. This document withdraws and reproposes certain portions of proposed regulations implementing the centralized partnership audit regime that have not been finalized to reflect the changes made by the Technical Corrections Act of 2018, contained in Title II of the Consolidated Appropriations Act of 2018 (TTCA). The proposed regulations affect partnerships with respect to partnership taxable years beginning after December 31, 2017, as well as partnerships that make the election under the Bipartisan Budget Act of 2015 (BBA), to apply the centralized partnership audit regime to partnership taxable years beginning on or after November 2, 2015 and before January 1, 2018.

DATES: Written or electronic comments must be received by October 1, 2018. Outlines of topics to be discussed at the public hearing scheduled for October 9, 2018, at 10 a.m. must be received by October 1, 2018.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–136118–15), Room 5207, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand delivered Monday through Friday between the hours of 8 a.m. and 4 p.m. to CC:PA:LPD:PR (REG–136118–15), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW, Washington, DC 20224, or sent electronically via the Federal eRulemaking Portal at *www.regulations.gov* (IRS REG–136118–15).

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations under sections 6221, 6226, 6235, and 6241, Jennifer M. Black of the Office of Associate Chief Counsel (Procedure and Administration), (202) 317–6834; concerning the proposed regulations under sections 6225, 6231, and 6234, Joy E. Gerdy-Zogby of the Office of Associate Chief Counsel (Procedure and Administration), (202) 317–6834; concerning the proposed regulations under sections 6222, 6227, 6232, and 6233, Steven L. Karon of the Office of Associate Chief Counsel (Procedure and Administration), (202) 217–6834; concerning the proposed regulations under section 6225 relating to creditable foreign tax expenditures, Larry R. Pounders, Jr. of the Office of Associate Chief Counsel (International), (202) 317–5465; concerning the proposed regulations relating to chapters 3 and 4 of subtitle A of the Internal Revenue Code (other than section 1446), Subin Seth of the Office of Associate Chief Counsel (International), (202) 317–5003; concerning the proposed regulations relating to section 1446, Ronald M. Gootzeit of the Office of Associate Chief Counsel (International), (202) 317–4953; concerning the proposed regulations under sections 704 through 706 and §§ 301.6225–4 and 301.6226–4, Allison R. Carmody or Meghan M. Howard of the Office of Associate Chief Counsel (Passthroughs and Special Industries), (202) 317–5279; concerning the submission of comments, the hearing, or to be placed on the building access list to attend the hearing, Regina Johnson, (202) 317–6901 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed regulations under sections 704 through 706 to amend the Income Tax Regulations (26 CFR part 1) under Subpart—Partners and Partnerships and proposed regulations under sections 6221 through 6241 to amend the Procedure and Administration Regulations (26 CFR part 301) under Subpart—Tax Treatment of Partnership Items to implement the centralized partnership audit regime enacted by section 1101 of the BBA, Public Law 114–74 (BBA), as amended by the Protecting Americans from Tax Hikes Act of 2015, Public Law 114–113 (PATH Act) and sections 201 through 207 of the TTCA, Public Law 115–141. This document also withdraws portions of proposed regulations under sections 704 through 706 and 6221 through 6241 that were published in the **Federal Register** on June 14, 2017 (REG–136118–15, 82 FR 27334), November 30, 2017(REG–119337–17, 82 FR 56765), December 19, 2017(REG–120232–17 and REG–120233–17, 82 FR 27071), and February 2, 2018 (REG–118067–17, 83 FR 4868).

Section 1101(a) of the BBA removed subchapter C of chapter 63 of the Internal Revenue Code (Code) effective for partnership taxable years beginning after December 31, 2017. Subchapter C of chapter 63 of the Code (subchapter C of chapter 63) contained the unified partnership audit and litigation rules that were commonly referred to as the TEFRA partnership procedures or simply TEFRA. Section 1101(b) of the BBA also removed subchapter D of chapter 63 of the Code and part IV of subchapter K of chapter 1 of the Code, rules applicable to electing large partnerships, effective for partnership taxable years beginning after December 31, 2017. Section 1101(c) of the BBA replaced the TEFRA partnership procedures and the rules applicable to electing large partnerships with a centralized partnership audit regime that, in general, determines, assesses, and collects tax at the partnership level.

On December 18, 2015, section 1101 of the BBA was amended by the PATH Act. The amendments under the PATH Act are effective as if included in section 1101 of the BBA, and therefore, subject to the effective dates in section 1101(g) of the BBA.

On June 14, 2017, the Treasury Department and the IRS published in the **Federal Register** (82 FR 27334) a notice of proposed rulemaking (REG–136118–15) (June 2017 NPRM) proposing rules under section 6221 regarding the scope and election out of the centralized partnership audit regime, section 6222 regarding consistent treatment by partners, section 6223 regarding the partnership representative, section 6225 regarding partnership adjustments made by the IRS and determination of the amount of the partnership's liability (referred to as the imputed underpayment), section 6226 regarding the election for partners to take partnership adjustments into account, section 6227 regarding administrative adjustment requests (AARs), and section 6241 regarding definitions and special rules. The Treasury Department and the IRS received written public comments in response to the regulations proposed in the June 2017 NPRM, and a public hearing regarding the proposed regulations was held on September 18, 2017.

On November 30, 2017, the Treasury Department and the IRS published in the **Federal Register** (82 FR 56765) a notice of proposed rulemaking (REG–119337–17) (November 2017 NPRM) proposing rules regarding international provisions under the centralized partnership audit regime, including rules relating to the withholding of tax

on foreign persons, the withholding of tax to enforce reporting on certain foreign accounts, and the treatment of creditable foreign tax expenditures of a partnership. No written comments were submitted in response to this NPRM, and no hearing was requested or held.

On December 19, 2017, the Treasury Department and the IRS published in the **Federal Register** (82 FR 27071) a notice of proposed rulemaking (REG–120232–17 and REG–120233–17) (December 2017 NPRM) proposing administrative and procedural rules under the centralized partnership audit regime, including rules addressing assessment and collection, penalties and interest, periods of limitations on making partnership adjustments, and judicial review of partnership adjustments. The regulations proposed in the December 2017 NPRM also provided rules addressing how pass-through partners take into account adjustments under the alternative to payment of the imputed underpayment described in section 6226 and under rules similar to section 6226 when a partnership files an AAR under section 6227. Written comments were received in response to the December 2017 NPRM. However, no hearing was requested or held.

On January 2, 2018, the Treasury Department and the IRS published in the **Federal Register** (82 FR 28398) final regulations under section 6221(b) providing rules for electing out of the centralized partnership audit regime.

On February 2, 2018, the Treasury Department and the IRS published in the **Federal Register** (83 FR 4868) a notice of proposed rulemaking (REG–118067–17) (February 2018 NPRM) proposing rules for adjusting tax attributes under the centralized partnership audit regime. Written comments were received in response to the February 2018 NPRM. However, no hearing was requested or held.

On March 23, 2018, Congress enacted the TTCA, which made a number of technical corrections to the rules under the centralized partnership audit regime. The amendments under the TTCA are effective as if included in section 1101 of the BBA, and therefore, subject to the effective dates in section 1101(g) of the BBA.

On August 9, 2018, the Treasury Department and the IRS published in the **Federal Register** (83 FR 39331) final regulations under section 6223 providing rules relating to partnership representatives and final regulations under § 301.9100–22 providing rules for electing into the centralized partnership audit regime for taxable years beginning on or after November 2, 2015 and before January 1, 2018. Corresponding temporary regulations under § 301.9100–22T were also withdrawn.

In light of the technical corrections made by the TTCA, to the extent regulations have not already been finalized, this document withdraws the regulations proposed in the June 2017 NPRM, the November 2017 NPRM, the December 2017 NPRM, and the February 2018 NPRM (collectively, the prior NPRMs) and proposes regulations reflecting the technical corrections made by the TTCA. The regulations proposed in this document also include clarifications, unrelated to the TTCA as discussed in the Explanation of Provisions section of this preamble. In addition, certain regulations have been reordered and renumbered, typographical errors have been corrected, nonsubstantive editorial changes have been made, and the applicability date provisions in the regulations have been revised to replace references to § 301.9100–22T with references to § 301.9100–22. Finally, the assumed highest rate of tax for corporations in the examples for all applicable periods is now 20 percent to more closely reflect the corporate tax rate in effect under section 11 (as amended by section 13001 of ''[a]n Act to provide for the reconciliation pursuant to titles II and V of the concurrent resolution on the budget for fiscal year 2018,'' Public Law 115–97 (the ''Act'')).

Although this document withdraws the prior NPRMs, the Explanation of Provisions sections contained in the preambles of the withdrawn NPRMs remain relevant. Therefore, to the extent not inconsistent with the Explanation of Provisions section of this preamble or the preamble to the portions of the proposed regulations that have already been finalized, those Explanation of Provision sections are incorporated by reference in this document. **Federal Register** citations are provided to assist with locating the relevant section of the preamble in the prior NPRMs. The prior NPRMs are also included in the rulemaking docket for this notice of proposed rulemaking on *www.regulations.gov.*

This document does not address written comments that were submitted in response to the regulations proposed in the prior NPRMs or respond to any statements made during the public hearing held on September 18, 2017. Except to the extent that the written comments relate to the final regulations under section 6221(b) and section 6223, such comments and any comments received in response to this notice of proposed rulemaking will be addressed when the regulations proposed in this document are finalized.

Explanation of Provisions

1. Scope of the Centralized Partnership Audit Regime and Partnership-Related Item

Section 6221(a) provides for the determination of certain adjustments at the partnership level under the centralized partnership audit regime. Prior to amendment by the TTCA, section 6221(a) provided that any adjustment to items of income, gain, loss, deduction, or credit of a partnership for a partnership taxable year (and any partner's distributive share thereof) shall be determined, any tax attributable thereto shall be assessed and collected, and the applicability of any penalty, addition to tax, or additional amount which relates to an adjustment to any such item or share shall be determined at the partnership level. Prior to amendment by the TTCA, section 6241(a)(2) provided that the term ''partnership adjustment'' meant any adjustment in the amount of any item of income, gain, loss, deduction, or credit of a partnership, or any partner's distributive share thereof.

Section 201(c)(2) of the TTCA amended section 6221(a) by replacing the phrase ''items of income, gain, loss, deduction, or credit of a partnership for a partnership taxable year (and any partner's distributive share thereof)'' with the phrase ''a partnership-related item.'' Section 6221(a) now provides that any adjustment to a partnership-related item and the applicability of any penalty, addition to tax, or additional amount which relates to an adjustment to any partnership-related item shall be determined at the partnership level. Additionally, section 6221(a) provides that any tax attributable to an adjustment to a partnership-related item shall be assessed and collected at the partnership level.

Section 201(a) of the TTCA amended section 6241(2) to provide that the term ''partnership adjustment'' means any adjustment to a partnership-related item, and the term ''partnership-related item'' means any item or amount with respect to the partnership (without regard to whether or not such item or amount appears on the partnership's return and including an imputed underpayment and any item or amount relating to any transaction with, basis in, or liability of, the partnership) which is relevant (determined without regard to subchapter C of chapter 63) in determining the tax liability of any person under chapter 1 of the Code

(chapter 1) and any partner's distributive share thereof.

By eliminating the reference to items of income, gain, loss, deduction, or credit of a partnership, and instead referring to partnership-related items, which is broadly defined, the amendments by the TTCA clarify that the scope of the centralized partnership audit regime is not narrower than the scope of the partnership audit procedures under TEFRA. Joint Comm. on Taxation, JCX–6–18, *Technical Explanation of the Revenue Provisions of the House Amendment to the Senate Amendment to H.R. 1625 (Rules Committee Print 115–66),* 37 (2018) (JCX–6–18). Rather, the centralized partnership audit regime is intended to have a scope sufficient to address those items that would have been considered partnership items, affected items, and computational adjustments under TEFRA, including the regulations. *Id.*

A. Proposed § 301.6221(a)–1

Proposed rules under § 301.6221(a)–1 were previously published in the **Federal Register** (82 FR 27372–73) in the June 2017 NPRM and the November NPRM (82 FR 56776) (former proposed § 301.6221(a)–1). Former proposed § 301.6221(a)–1(a) provided that the centralized partnership audit regime covers any adjustment to items of income, gain, loss, deduction, or credit of a partnership and any partner's distributive share of those adjusted items. Former proposed § 301.6221(a)–1(b)(1)(i) defined the phrase ''items of income, gain, loss, deduction or credit'' to mean all items and information required to be shown, or reflected, on a return of the partnership under section 6031, the regulations thereunder, and the forms and instructions prescribed by the IRS for the partnership's taxable year, and any information in the partnership's books and records for the taxable year. In addition, former proposed § 301.6221(a)–1(b)(1)(ii) provided that any factors that needed to be taken into account to determine or allocate the tax treatment of items adjusted under the centralized partnership audit regime were also to be determined at the partnership level. Former proposed § 301.6221(a)–1(b)(2) also addressed items included within the phrase ''partner's distributive share.'' Because the TTCA's amendment of the scope of the centralized partnership audit regime is accomplished by adding a new defined term—''partnership-related item''—the majority of the rules under former proposed § 301.6221(a)–1(b) that addressed the scope of what is adjusted at the partnership level are now incorporated into proposed § 301.6241–6 which defines the term ''partnership-related item.''

Proposed § 301.6221(a)–1(a) now provides the general rule that, except as otherwise provided under the centralized partnership audit regime, any adjustments to partnership-related items and the applicability of any penalty, addition to tax, or additional amount that relates to an adjustment to any such items are determined at the partnership level. In addition, proposed § 301.6221(a)–1(a) provides that any chapter 1 tax attributable to an adjustment to a partnership-related item is assessed and collected at the partnership level. See section 13 of the preamble for a discussion of special enforcement matters pertaining to partnership-related items that may be adjusted outside of the centralized partnership audit regime.

Proposed § 301.6221(a)–1(a) further provides that any consideration necessary to make a determination at the partnership level under the centralized partnership audit regime is made at the partnership level. This would include the period of limitations on making adjustments under section 6235 as well as any facts necessary to calculate any imputed underpayment under section 6225, except as otherwise provided under the centralized partnership audit regime. These determinations previously constituted factors described under former proposed § 301.6221(a)–1(b)(1)(ii)(F) and (I).

B. Proposed § 301.6241–6

Proposed § 301.6241–6 defines the term ''partnership-related item.'' Proposed § 301.6241–6(a) provides the general rule that a partnership-related item is any item or amount with respect to the partnership which is relevant in determining the tax liability of any person under chapter 1 and any partner's distributive share of any such item or amount.

Proposed § 301.6241–6(b) provides that an item or amount is with respect to a partnership without regard to whether or not such item or amount appears on the partnership return. An item or amount is with respect to a partnership if: The item or amount is shown or reflected, or required to be shown, or reflected, on a return of the partnership; the item or amount is in the partnership's books and records; the item or amount is an imputed underpayment; the item or amount relates to any transaction with, basis in, or liability of the partnership; or the item or amount relates to a transaction under section 707(a)(2), 707(b), or 707(c).

Under proposed § 301.6241–6(b)(4) and (7), an item or amount that relates to any transaction with, or liability of, the partnership, is with respect to a partnership only if the item or amount relates to a transaction or liability between the partnership and a partner acting in its capacity as a partner or an indirect partner (as defined in proposed § 301.6241–1(a)(4)) acting in its capacity as an indirect partner. Accordingly, an item or amount that relates to any transaction with or liability of the partnership is not with respect to the partnership if the item or amount is reported (or reportable) solely by a person other than the partnership, a partner not acting in its capacity as a partner, or an indirect partner not acting in its capacity as an indirect partner (except for transactions under section 707). Proposed § 301.6241–6(b)(8) provides that any determination necessary to make an adjustment to an item or amount described in proposed § 301.6241–6(b)(1) through (b)(7) is also an item or amount with respect to the partnership.

Proposed § 301.6241–6(c) provides that the determination of whether an item or amount is relevant in determining the tax liability of any person under chapter 1 is made without regard to the provisions of the centralized partnership audit regime. Proposed § 301.6241–6(c) also clarifies that an item or amount of a partnership is relevant in determining the liability of any person under chapter 1 without regard to whether such item or amount, or adjustment to such item or amount, has an effect on the tax liability of any particular person under chapter 1. Section 6241(2)(B)(i) does not limit whether an item is relevant in determining tax liability under chapter 1 to whether the item is relevant to determining the tax liability of a partner of the partnership under chapter 1. Rather, the statutory language refers to liability under chapter 1 of ''any person.'' An item or amount is a partnership-related item if the item or amount is relevant in determining any person's liability under chapter 1 if the item might have any effect on any person's liability under chapter 1 regardless of whether it actually does have such an effect. Consequently, the IRS is not required to determine if an adjustment would have an actual effect on any person's chapter 1 liability under the Code.

Proposed § 301.6241–6(d) provides a list of examples of partnership-related items. These examples are largely the same as the items described in former proposed § 301.6221(a)–1(b)(1) with a few minor revisions. First, the

references to ''foreign,'' ''tax,'' and ''§ 1.704–1(b)(4)(viii)(b)'' in the example regarding creditable expenditures were removed to clarify that partnership-related item includes any creditable expenditures, not just a creditable foreign tax expenditure. Also, the ''including . . .'' phrase from each example was removed to be consistent with the broad scope of the centralized partnership audit regime and does not reflect a substantive change. No inference should be drawn from the removal of that language.

Proposed § 301.6241–6(e) provides examples that illustrate the rules under proposed § 301.6241–6.

2. Partner's Return Must Be Consistent With Partnership Return

Prior to enactment of the TTCA, section 6222 provided that a partner shall treat on the partner's return ''each item of income, gain, loss, deduction, or credit attributable to a partnership'' subject to subchapter C of chapter 63 in a manner that is consistent with the treatment of such item on the partnership return. Section 201(c) of the TTCA amended section 6222 to provide that a partner shall treat on the partner's return ''any partnership-related item'' in a manner which is consistent with the treatment of such item on the partnership return.

A. Proposed § 301.6222–1

Proposed rules under § 301.6222–1 were previously published in the **Federal Register** (82 FR 27375–78) in the June 2017 NPRM (former proposed § 301.6222–1). For an explanation of the rules under former proposed 301.6222–1, see 82 FR 27345–46.

Former proposed § 301.6222–1(a) provided that a partner's treatment of each item of income, gain, loss, deduction, or credit attributable to a partnership must be consistent with the treatment of those items on the partnership return, including treatment with respect to the amount, timing, and characterization of those items. The reference in former proposed § 301.6222–1(a) to ''each item of income, gain, loss, deduction, or credit attributable to a partnership'' has been replaced with a reference to ''any partnership-related item'' to reflect the statutory change to section 6222(a). In addition, references throughout former proposed § 301.6222–1 to the term ''item'' have been replaced with references to the term ''partnership-related item,'' as appropriate.

3. Imputed Underpayment, Modification of Imputed Underpayment, and Adjustments That Do Not Result in an Imputed Underpayment

Section 6225 provides rules governing the determination of the imputed underpayment, modification of the imputed underpayment, and the treatment of adjustments that do not result in an imputed underpayment. Section 202(c) of the TTCA amended section 6225(a) to reflect the new term ''partnership-related item'' and to provide that in the case of adjustments to partnership-related items that result in an imputed underpayment the partnership shall pay an amount equal to the imputed underpayment in the adjustment year as provided in section 6232. In the case of adjustments that do not result in an imputed underpayment, such adjustments shall be taken into account by the partnership in the adjustment year.

Section 202(a) of the TTCA amended section 6225(b)(1) to provide that the Secretary shall determine any imputed underpayment with respect to any reviewed year by appropriately netting all partnership adjustments to such reviewed year and applying the highest rate of tax in effect for that year under section 1 or 11. Section 202(a) of the TTCA also amended section 6225(b)(2) to provide that in the case of any adjustment that reallocates the distributive share of any item from one partner to another, such adjustment shall be taken into account by disregarding so much of such adjustment as results in a decrease in the amount of the imputed underpayment.

Section 202(a) of the TTCA also added paragraphs (b)(3) and (b)(4) to section 6225. Section 6225(b)(3) provides that partnership adjustments for any reviewed year shall first be separately determined (and netted as appropriate) within each category of items that are required to be taken into account separately under section 702(a) or other provision of the Code. Section 6225(b)(4) provides if any adjustment would (but for section 6225(b)(4)) result in a decrease in the amount of the imputed underpayment, and could be subject to any additional limitation under the provisions of the Code (or not allowed, in whole or in part, against ordinary income) if such adjustment were taken into account by any person, such adjustment shall not be taken into account when appropriately netting partnership adjustments under section 6225(b)(1)(A) except to the extent otherwise provided by the Secretary.

Section 202(b) of the TTCA amended several provisions relating to modifications of imputed underpayments. Sections 6225(c)(3), (c)(4)(A), and (c)(5)(A)(i), which previously referred to the ''portion of the imputed underpayment,'' were amended to refer to the ''portion of the adjustment.'' This amendment clarifies that modifications under sections 6225(c)(3), (c)(4), and (c)(5) result in disregarding the portion of the partnership adjustment affected by the modification, rather than the portion of the imputed underpayment. Section 202(c) of the TTCA also added section 6225(c)(9), which provides that the Secretary shall establish procedures under which the adjustments described in section 6225(a)(2)—adjustments that do not result in an imputed underpayment—may be modified in such manner as the Secretary determines appropriate.

Section 203 of the TTCA amended section 6225(c)(2) relating to the procedures for partners to take adjustments into account during modification. Section 6225(c)(2)(A) governs the filing of amended returns by partners. Section 6225(c)(2)(B) provides for an alternative procedure to the filing of amended returns. Section 6225(c)(2)(C) provides rules for adjustments that reallocate the distributive share of any item from one partner to another. Section 6225(c)(2)(D) provides that sections 6501 and 6511 shall not apply in certain situations related to amended returns and the alternative procedure to filing amended returns. Section 6225(c)(2)(E) provides that any adjustments to tax attributes that occur as a result of a modification under section 6225(c)(2) are binding on the partners and the partnership. Section 6225(c)(2)(F) provides rules for tiered structures, including defining the term ''relevant partner'' to mean any partner in the chain of ownership of any partnerships that are partners in the partnership requesting modification.

A. Proposed §§ 301.6225–1, 301.6225–2, and 301.6225–3

Proposed rules under §§ 301.6225–1, 301.6225–2, and 301.6225–3 were previously published in the **Federal Register** in the June 2017 NPRM (82 FR 27382–91), the November 2017 NPRM (82 FR 56776), and in the December 2017 NPRM (82 FR 60154) (collectively, former proposed §§ 301.6225–1, 301.6225–2, and 301.6225–3). For an explanation of the rules under former proposed §§ 301.6225–1, 301.6225–2, and 301.6225–3, see 82 FR 27350–58, 82 FR 56766–75, and 82 FR 60152–53.

Proposed § 301.6225–1 has been reorganized to clarify the process for determining an imputed underpayment. This reorganization, when compared to former proposed § 301.6225–1 (1) more clearly describes the steps necessary to determine an imputed underpayment and adjustments that do not result in an imputed underpayment; (2) consolidates rules regarding adjustments that do not result in an imputed underpayment; and (3) relocates rules regarding creditable expenditures to more clearly explain how to account for creditable expenditures in the determination of the imputed underpayment.

Proposed § 301.6225–1(b) addresses the calculation of the imputed underpayment. Due to the number of adjustments that could be made based on the definition of partnership-related item, the IRS will need to address circumstances in which multiple partnership-related items are adjusted to address a single issue or transaction in the administrative proceeding. Adjusting multiple partnership-related items that relate to the same issue or transaction could result in an imputed underpayment that double-counts some of the adjustments even though, if the partnership and partners had properly reported the item, one or more adjustments would have been subsumed by another item. To prevent double-counting the individual adjustments as inputs into the imputed underpayment, proposed § 301.6225–1(b)(4) provides that the IRS may treat adjustments that would otherwise be double-counted as zero for purposes of determining the imputed underpayment.

Proposed § 301.6225–1(c) describes the different groupings in which adjustments are placed for purposes of determining an imputed underpayment. These groupings are the reallocation grouping, the credit grouping, the creditable expenditure grouping, and the residual grouping. Proposed § 301.6225–1(c)(1) provides authority for the IRS to alter the manner in which adjustments are grouped to appropriately reflect the facts and circumstances.

Proposed § 301.6225–1(c)(2) defines the term ''reallocation adjustment'' and provides that in general reallocation adjustments are placed in the reallocation grouping. Under proposed § 301.6225–1(c)(3), however, reallocation adjustments to credits are placed in the credit grouping, and under § 301.6225–1(c)(4), reallocation adjustments to creditable expenditures are placed in the creditable expenditure grouping, similar to the rule under former proposed § 301.6225–1(d)(2)(iv). Proposed § 301.6225–1(c)(2)(ii) provides that each reallocation adjustment results in two separate adjustments—one positive adjustment and one negative adjustment. Proposed § 301.6225–1(c)(6) provides similar rules for recharacterization adjustments.

Proposed § 301.6225–1(c)(5)(ii) provides rules for how to account for adjustments to partnership-related items that are not allocated by the partnership to its partners under section 704(b). Proposed § 301.6225–1(d)(2)(iii)(B) provides that adjustments to such items, solely for purposes of determining an imputed underpayment, are treated as a positive adjustment to income to the extent appropriate. The Treasury Department and the IRS request comments regarding how to treat recharacterization and reallocation adjustments related to items that are not allocated under section 704(b).

To incorporate the additions of sections 6225(b)(3) and (b)(4), proposed § 301.6225–1(d)(1) provides that when the IRS determines a negative adjustment (as defined in proposed § 301.6225–1(d)(2)(ii)), all partnership adjustments are placed into subgroupings based on whether the adjusted items are required to be taken into account separately under section 702 and other provisions of the Code. Proposed § 301.6225–1(d)(1) provides authority for the IRS to alter the manner in which adjustments are subgrouped to appropriately reflect the facts and circumstances.

Proposed § 301.6225–1(d)(2) provides for the treatment of certain partnership adjustments and defines the terms negative adjustment and positive adjustment. A negative adjustment is defined as an adjustment that is a decrease in an item of income, treated as a decrease in an item of income, or that is an increase in an item of credit. A positive adjustment is an adjustment that is not a negative adjustment. Proposed § 301.6225–1(d)(3) requires that positive and negative adjustments resulting from reallocation adjustments and recharacterization adjustments be placed into separate subgroupings.

Proposed § 301.6225–1(e) provides rules for appropriately netting adjustments within each grouping or subgrouping and provides that adjustments are not netted between groupings or subgroupings. The statutory changes referencing section 702(a) and other provisions of the Code and the general inability to net negative adjustments result in restrictions on netting in these proposed rules that are broader than the restrictions described in former proposed § 301.6225–1. The examples in the proposed rules have been revised to reflect these broader restrictions on netting.

Proposed § 301.6225–1(f) provides rules related to determining whether adjustments are adjustments that do not result in an imputed underpayment. If the adjustments do not result in an imputed underpayment, such adjustments are taken into account in accordance with § 301.6225–3.

Proposed § 301.6225–1(g) provides the IRS may create multiple imputed underpayments for a particular tax year. Proposed § 301.6225–1(g)(2)(iii)(B) allows a particular adjustment that does not result in an imputed underpayment to be associated with a particular imputed underpayment. This rule ensures that adjustments that are appropriately associated with the imputed underpayment will be taken into account along with the other adjustments underlying the imputed underpayment if an election under section 6226 is made with respect to that imputed underpayment. For example, a reallocation or recharacterization adjustment generally results in more than one adjustment. In the case of a reallocation adjustment, there are adjustments that affect at least two partners. In a recharacterization adjustment, there is an adjustment to correct the characterization and an adjustment disallowing the incorrect characterization. As a result, if an adjustment that does not result in an imputed underpayment is due to a reallocation or recharacterization adjustment and one side of the adjustment is used to calculate a specific imputed underpayment, the other side of the adjustment, which is an adjustment that does not result in an imputed underpayment, is associated with that specific imputed underpayment.

The IRS may also determine that other adjustments that do not result in an imputed underpayment should be associated with a specific imputed underpayment. An adjustment that does not result in an imputed underpayment and that is not associated with a particular specific imputed underpayment is associated with the general imputed underpayment.

Proposed § 301.6225–2 provides guidance on procedures to modify the imputed underpayment. Former § 301.6225–2(b) provided that the effect of modification was determined by considering how the modification changed the relevant portion of the adjustment. This approach to modification is consistent with the amendments to section 6225(c). Accordingly, proposed § 301.6225–2(b)

reflects the rule that modification affects the portion of an adjustment.

Proposed § 301.6225–2(b)(3)(iv) provides rules on rate modification in the case of special allocations. Those rules generally mirror the statutory rule under section 6225(c)(4)(B)(ii). The rule in the statute is complex compared with other rate modifications in that they require a valuation analysis. The Treasury Department and the IRS request comments on ways to implement these rules efficiently.

Proposed § 301.6225–2(d)(2) provides rules regarding amended returns and the alternative procedure to filing amended returns. Proposed § 301.6225–2(d)(2) provides that a partnership may satisfy the requirements of amended return modification by submitting all the information required for amended return modification and the partners paying any amount that would be due if the partners had filed amended returns. The Treasury Department and the IRS request comments on how best to implement the alternative procedure to filing amended returns.

Former proposed § 301.6225–2(d)(2)(viii) provided that partners could raise a reasonable cause defense under section 6664(c) (or other partner-level defense as described in former proposed § 301.6226–3(i)(3)) with an amended return in modification. Proposed § 301.6225–(d)(2)(viii) now provides that such partner-level defenses should be raised through a claim for refund that is submitted outside of the modification process. This rule is similar to the current rule regarding partner-level defenses related to adjustments that are taken into account by partners under section 6226. See proposed § 301.6226–3(d)(3).

Section 6225(c)(6) grants the Secretary authority to ''by regulations or guidance provide for additional procedures to modify imputed underpayment amounts on the basis of such other factors as the Secretary determines are necessary and appropriate to carry out the purposes of this section.'' The Treasury Department and the IRS have elected to use this authority in two circumstances that were not included in former proposed § 301.6225–2. First, the Treasury Department and the IRS have concluded that the references to the adjustment year in section 6225(c)(5) make the implementation of section 6225(c)(5) unworkable. No partner would qualify as a specified partner until the adjustment year, but at any time during the administrative proceeding that is relevant to modification, the adjustment year does not yet exist. As a result, the only time this type of modification could be used would be in the case of an AAR because in that case, the adjustment year is the year in which the AAR is filed. In order for modification under section 6225(c)(5) to be administrable, proposed § 301.6225–2(d)(5)(iv) provides that a ''qualified relevant partner'' is a person that meets the definition of a specified partner but in a year that can be determined at the time modification is requested. The definition of a specified passive activity loss has also been changed to clarify that the years at issue do not have to be the adjustment year.

Second, the Treasury Department and the IRS are also exercising the authority under section 6225(c)(6) to add a modification for partnerships with partners entitled to benefits under an income tax treaty. Proposed § 301.6225–2(d)(9) allows modification if a relevant partner would have qualified for a reduction or exemption from tax with respect to a particular item under an income tax treaty with the United States. The Treasury Department and the IRS request comments on this type of modification.

Proposed § 301.6225–2(e) provides rules for modification of certain types of adjustments that do not result in an imputed underpayment (as defined in proposed § 301.6225–1(f)). Proposed § 301.6225–2(e) limits the ability to modify such adjustments to certain types of modification. The Treasury Department and the IRS request comments on whether the list of allowed modifications under proposed § 301.6225–2(e) is sufficient.

Lastly, proposed § 301.6225–2 adopts the term ''relevant partner'' to describe any direct or indirect partner in the partnership seeking modification. See section 6225(c)(2)(F) and proposed § 301.6225–2(a).

Proposed § 301.6225–3 provides rules regarding adjustments that do not result in in an imputed underpayment. The changes in the TTCA comport with former proposed § 301.6225–3, which required that the partnership take the adjustments that do not result in an imputed underpayment into account as separately stated or non-separately stated adjustments as appropriate.

B. Proposed § 301.6225–4

Proposed rules under § 301.6225–4 were previously published in the **Federal Register** (83 FR 4868–82) in the February 2018 NPRM (former proposed § 301.6225–4). For an explanation of the rules under former proposed § 301.6225–4, see 82 FR 4877.

Proposed § 301.6225–4 sets forth rules under which a partnership and its partners must adjust specified tax attributes to take into account partnership adjustments and the partnership's payment of an imputed underpayment. Changes have been made throughout former proposed § 301.6225–4 to conform to the changes to the definition of ''tax attribute'' under proposed § 301.6241–1(a)(10). See section 11.A of this preamble regarding the change to the definition of ''tax attribute.'' In addition, the definition of ''specified tax attributes'' in proposed § 301.6225–4(a)(2) now includes earnings and profits under section 312 in response to comments received concerning the effect of partnership adjustments on a corporate partner's earnings and profits.

4. Election for the Alternative to Payment of the Imputed Underpayment

Section 6226 provides an alternative to the general rule under section 6225(a)(1) that the partnership must pay an imputed underpayment. Under section 6226, the partnership may elect to have its reviewed year partners take into account adjustments made by the IRS and pay any tax due as a result of those adjustments. If this election is made, the reviewed year partners must pay any chapter 1 tax resulting from taking into account the adjustments, and the partnership is not required to pay the imputed underpayment.

Section 206(d) of TTCA amended section 6226(a) to clarify that if a partnership makes a valid election under section 6226 with respect to an imputed underpayment, no assessment of such imputed underpayment, levy, or proceeding in any court for the collection of such imputed underpayment shall be made against such partnership.

Section 206(e) of the TTCA amended section 6226(b)(1) to provide that when a partner takes into account the adjustments, the partner's chapter 1 tax is adjusted by the aggregate of the ''correction amounts'' determined under section 6226(b)(2). After amendment by the TTCA, the correction amounts under section 6226(b)(2) are defined as the amounts by which the partner's chapter 1 tax would increase ''or decrease'' for the partner's first affected year if the partner's share of the adjustments were taken into account for that year. The correction amounts are also the amount by which the partner's chapter 1 tax would increase ''or decrease'' by reason of the adjustment to tax attributes for any intervening years. See section 6226(b)(2).

Section 204(a) of the TTCA added to the Code section 6226(b)(4), which provides that a partnership or S corporation that receives a statement under section 6226(a)(2) must file a

partnership adjustment tracking report with the IRS and furnish statements under rules similar to the rules of section 6226(a)(2). If the partnership or S corporation fails to furnish such statements, the partnership or S corporation must compute and pay an imputed underpayment under rules similar to the rules of section 6225. A partnership that is a partner must file the partnership adjustment tracking report, and furnish statements or pay an imputed underpayment, notwithstanding any election out of the centralized partnership audit regime under section 6221(b) by the partnership for the tax year that includes the end of the reviewed year of the audited partnership. The term ''audited partnership'' means the partnership in the chain of ownership that originally made the election under section 6226. See section 6226(b)(4)(D).

A. Proposed §§ 301.6226–1, 301.6226–2, and 301.6226–3

Proposed rules under §§ 301.6226–1, 301.6226–2, and 301.6226–3 were previously published in the **Federal Register** in the June 2017 NPRM (82 FR 27391–97), the November 2017 NPRM (82 FR 56778–79), and the December 2017 NPRM (82 FR 60155–61) (collectively, former proposed §§ 301.6226–1, 301.6226–2, and 301.6226–3). For an explanation of the rules under former proposed §§ 301.6226–1, 301.6226–2, and 301.6226–3, see 82 FR 27358–66, 82 FR 56769–71, and 82 FR 60148–51.

Former proposed § 301.6226–1(b)(2) provided that if a partnership makes a valid election in accordance with proposed § 301.6226–1, the partnership is not liable for the imputed underpayment to which the election relates. To reflect the statutory change to section 6226(a), language has been added to proposed § 301.6226–1(b)(2) to clarify that if a partnership makes a valid election under section 6226 with respect to an imputed underpayment, the IRS may not assess such imputed underpayment, levy, or bring a proceeding in any court for the collection of that imputed underpayment against such partnership. A similar change has also been made to proposed § 301.6226–1(c)(2) (regarding invalid elections) to clarify that if a final determination is made that a purported election under section 6226 is invalid, the IRS may assess the imputed underpayment with respect to which the election was made against the partnership without regard to the limitations under section 6232(b).

Former proposed § 301.6226–3 provided that a reviewed year partner that is furnished a statement under section 6226(a)(2) is required to pay any additional chapter 1 tax (additional reporting year tax) that results from taking into account the partnership adjustments on that statement. As mentioned above in this section of the preamble, section 206(e) of the TTCA amended section 6226(b) to provide that decreases, as well as increases, in chapter 1 tax that result from taking into account partnership adjustments are used in computing a partner's additional reporting year tax. Section 206(e) of the TTCA also replaced the term ''adjustment amount'' with ''correction amount.'' Accordingly, proposed § 301.6226–3 now refers to ''correction amount'' instead of ''adjustment amount,'' as appropriate, and now provides that a reviewed year partner's chapter 1 tax for the reporting year may be increased or decreased by the additional reporting year tax. The additional reporting year tax is the sum of the correction amounts for the first affected year and any correction amounts for the intervening years. Under proposed § 301.6226–3(b)(2) and (3), the correction amounts are the amounts by which the partner's chapter 1 tax for the taxable year would be increased or decreased if the partner's taxable income for that year were recomputed by taking into account, in the case of the first affected year, the partner's share of the partnership adjustments reflected on the statement furnished to the partner or, in the case of any intervening year, any change to tax attributes of the partner resulting from the changes in the first affected year. A correction amount for the first affected year or any intervening year may be less than zero and may be used to offset any correction amounts from any other year in computing the additional reporting year tax. The examples under proposed § 301.6226–3(h) illustrate situations in which a correction amount may be less than zero.

Furthermore, the additional reporting year tax may be less than zero and may offset other taxes owed by the partner on the partner's reporting year return. Accordingly, any references to the additional reporting year tax as a ''liability'' have been removed from former proposed § 301.6226–3 to account for situations in which the additional reporting year tax is less than zero.

Section 6226(c)(2) provides that interest in the case of a section 6226 election is determined at the partner level, from the due date of the return for the taxable year to which the increase in chapter 1 tax is attributable, and at the underpayment rate under section 6621(a)(2) (substituting 5 percent for 3 percent). As discussed above in this section of the preamble, the TTCA amended section 6226(b) to provide that both increases and decreases in chapter 1 tax are used in computing a partner's additional reporting year tax. However, the TTCA did not similarly amend the reference to ''increases'' in section 6226(c)(2) with the result that interest only applies to the increases in the chapter 1 tax that would have resulted from taking into account the partnership adjustments under section 6226. No provision under the centralized partnership audit regime provides for interest in the case of a *decrease* in chapter 1 tax that would have resulted in the first affected year or any intervening year if the adjustments were taken into account in those years. Accordingly, proposed § 301.6226–3(c)(1) provides that interest on the correction amounts determined under proposed § 301.6226–3(b) is only calculated for taxable years for which there is a correction amount greater than zero, that is, taxable years for which there would have been an increase in chapter 1 tax if the adjustments were taken into account.

Proposed § 301.6226–3(c)(1) further provides that for purposes of calculating interest on the correction amounts, any correction amount that is less than zero does not offset any correction amount that is greater than zero. Although those amounts may offset when determining the additional reporting year tax (as described in proposed § 301.6226–3(b)), allowing the same offset for purposes of calculating interest is inconsistent with section 6226(c)(2), which provides that interest is determined with respect to any increase determined under section 6226(b)(2).

Proposed § 301.6226–3(d)(3) has also been clarified to provide that if a partner wants to raise a partner-level defense to any penalty, addition to tax, or additional amount, a partner must first pay the penalty, addition to tax, or additional amount and file a claim for refund for the reporting year in order to raise the defense.

As discussed above in this section of the preamble, section 204(a) of the TTCA amended section 6226(b) to provide that partnerships and S corporations that are direct or indirect partners in an audited partnership and that receive statements under 6226(a)(2) must file partnership adjustment tracking reports with the IRS and furnish statements to their owners under rules similar to section 6226. If no statements are furnished, the partnership or S corporation must

compute and pay an imputed underpayment.

Former proposed § 301.6226–3(e)(1) provided that a pass-through partner (as defined in proposed § 301.6241–1(a)(5)) that was furnished a statement described in proposed § 301.6226–2 (including a statement as described in former proposed § 301.6226–3(e)(3)) must take into account the adjustments reflected on that statement by either furnishing statements to its partners or by paying an amount calculated like an imputed underpayment. Any statements furnished under those provisions were treated as statements described in proposed § 301.6226–2, and any pass-through partner receiving a statement under former proposed § 301.6226–3(e)(3) was required to also take the adjustments reflected on the statement into account by furnishing statements to its own partners or paying an amount calculated like an imputed underpayment. See former proposed § 301.6226–3(e)(3)(i) and (iv).

Although the rules under former proposed § 301.6226–3(e) were largely consistent with the rules under section 6226(b)(4), some changes were needed to conform the two sets of rules. First, proposed § 301.6226–3(a)(1) now provides that the rules under proposed § 301.6226–3(a)(1) apply to a reviewed year partner except to the extent otherwise provided in proposed § 301.6226–3. Second, proposed § 301.6226–3(e) now includes a requirement that the pass-through partner must file a partnership adjustment tracking report. Third, proposed § 301.6226–3(e) provides a default rule that a pass-through partner must furnish statements to its own partners in accordance with proposed § 301.6226–3(e)(3). If a pass-through partner fails to furnish statements in accordance with proposed § 301.6226–3(e)(3), the pass-through partner must compute and pay an imputed underpayment. Additionally, language referring to a pass-through partner ''taking into account'' the adjustments under former proposed § 301.6226–3(e) was removed to more closely align with the statutory language in section 6226(b)(4). Fourth, proposed § 301.6226–3(e) defines and refers to the term ''audited partnership,'' which proposed § 301.6226–3(e)(1) defines as the partnership that made the election under § 301.6226–1. See section 6226(b)(4)(D). Lastly, proposed § 301.6226–3(e)(4) provides that the amount a pass-through partner must compute and pay, if it does not furnish statements to its partners, is an ''imputed underpayment.'' See section 6226(b)(4)(A)(ii)(II).

Because under proposed § 301.6226–3(e), pass-through partners compute and pay an ''imputed underpayment,'' rather than calculating correction amounts under proposed § 301.6226–3(b), references in former proposed § 301.6226–3(b) to amended returns filed by indirect partners as part of modification have been deleted. Pass-through partners computing an imputed underpayment under proposed § 301.6226–3(e) may account for modifications submitted by their indirect partners, but non-pass-through partners calculating correction amounts under proposed § 301.6226–3(b) cannot. Accordingly, the references in former proposed § 301.6226–3(b) to amended returns filed by indirect partners were removed.

To reflect the change to the definition of ''tax attribute'' under proposed § 301.6241–1(a)(10) (see section 11.A. of this preamble), proposed §§ 301.6226–2 and 301.6226–3 now only refer to the tax attributes of the partner. For example, proposed §§ 301.6226–2(e) and 301.6226–3(e)(3)(iii) no longer require that the audited partnership report any changes to *partnership* tax attributes on the statements furnished to its partners under section 6226(a)(2). Therefore, when a partner computes the partner's correction amount for any intervening year, the partner calculates the amount by which the partner's chapter 1 tax for any intervening year would increase or decrease if any tax attribute of that partner (for example, a net operating loss carryover or capital loss carryover) has been adjusted after taking into account the partner's share of the adjustments in the first affected year.

Finally, references to ''items'' or ''items of income, gain, loss, deduction, or credit'' throughout former §§ 301.6226–1, 6226–2, and 6226–3 have been replaced with references to ''partnership-related items.''

B. Revisions to the Regulations Under Section 6226 Unrelated to the TTCA Amendments

In addition to the changes needed to conform to the amendments by the TTCA, some additional changes have been made to former proposed §§ 301.6226–1, 6226–2, and 6226–3. First, proposed § 301.6226–1(b)(2) now provides that only those adjustments that do not result in an imputed underpayment which are associated with an imputed underpayment for which an election under section 6226 is made are included in the reviewed year partner's share of the partnership adjustments reported to the partner. Any adjustments that do not result in an imputed underpayment which are not associated with an imputed underpayment for which an election under section 6226 is made are taken into account under section 6225. This change was necessary to clarify which partnership adjustments are pushed out in the case of multiple imputed underpayments where the push out election is not made with respect to all imputed underpayments. See proposed § 301.6225–1(g) for rules regarding the treatment of adjustments that do not result in an imputed underpayment in the context of specific imputed underpayments.

Second, under proposed § 301.6226–1(c)(1), an election under section 6226 is only valid if all the provisions under proposed § 301.6226–1 (regarding making the election) and § 301.6226–2 (regarding the furnishing of statements) are satisfied, and an election made under section 6226 is valid until the IRS determines that the election is invalid. The rule that an election is valid until the IRS determines it is invalid was moved from former proposed § 301.6226–1(c)(2) to proposed § 301.6226–1(c)(1) to clarify that an election that does not fully satisfy the requirements of proposed §§ 301.6226–1 and 301.6226–2 is valid unless the IRS determines that the purported election is invalid. For example, if a partnership makes an election in accordance with proposed § 301.6226–1 but fails to furnish statements to its partners, that election is valid until the IRS determines otherwise.

In addition, the word ''final'' was removed from before the word ''determination'' in proposed § 301.6226–1(c)(2) when referring to a determination made by the IRS that a purported election under section 6226 is invalid. The removal of the word ''final'' clarifies that the IRS may determine that an election is invalid and assess and collect the imputed underpayment to which the purported election related without first being required to make a proposed or initial determination of invalidity. Although nothing in the regulations precludes the IRS from first notifying the partnership of a potential problem with an election before determining the election is invalid, proposed § 301.6226–1(c)(2) provides that the IRS may determine that an election is invalid even if the partnership has corrected the statements required to be filed and furnished in accordance with proposed § 301.6226–2(d)(3) and also provides that the IRS is not obligated to require the correction of any errors prior to determining an election is invalid.

Third, several changes were made to clarify that the partnership must provide correct information in order to make a valid election under section 6226 and in order for statements to be properly furnished either under proposed § 301.6226–2 or proposed § 301.6226–3(e)(3). Proposed § 301.6226–1(c)(4)(ii) requires the partnership to provide correct information in its election, and proposed § 301.6226–2(e) and proposed § 301.6226–3(e)(3)(iii) require that the statements filed and furnished with the IRS include correct information. Additionally, proposed § 301.6226–2(d)(3) provides that if the IRS cannot determine whether the statements filed and furnished by the partnership are correct because of a failure by the partnership to comply with any requirements (such as filing a partnership adjustment tracking report), the IRS may, but is not obligated to, require the partnership to provide additional information to substantiate the statements. Proposed § 301.6226–2(d)(2) extends the rules governing corrections of errors in statements to statements furnished by pass-through partners under proposed § 301.6226–3(e)(3) and to provide that, if consent of the IRS is required for a correction, that corrected statements may not be furnished until the IRS provides consent.

Fourth, duplicative language regarding the definition of the extended due date for the adjustment year of the audited partnership was removed from former proposed § 301.6226–3(e)(3)(ii) and (e)(4)(ii).

Fifth, in proposed § 301.6226–3(g), the word ''grantor'' has been added between the words ''wholly-owned'' and ''trusts'' to clarify that ''wholly-owned trusts'' means ''wholly-owned grantor trusts.''

Sixth, the phrase ''an entity described in § 301.7701–2(c)(2)(i)'' in former proposed § 301.6226–3(j) was changed to ''a wholly-owned entity disregarded as separate from its owner for Federal tax purposes in the reviewed year'' to conform to the definition of disregarded entity under proposed § 301.6241–1(a)(4).

Seventh, proposed § 301.6226–3(c)(2) now provides that interest on any penalties, additions to tax, or additional amounts is calculated from each applicable taxable year until the penalty, addition to tax, or additional amount is paid. Former proposed § 301.6226–3(c)(2) provided that interest was calculated from the first affected year. Under proposed § 301.6226–3(d)(2), partners calculate any penalties, additions to tax, or additional amounts that relate to the partnership adjustments at the partner level. Because the adjustments could create tax effects in more than just the first affected year (for example, as a result of changes to tax attributes in an intervening year), a penalty, addition to tax, or additional amount might likewise result in more than just the first affected year. Accordingly, proposed § 301.6226–3(c)(2) provides that interest on penalties, additions to tax, and additional amounts runs from the applicable taxable year (that is, the particular tax year to which the penalty, addition to tax, or additional amount relates).

Finally, certain errors were corrected in the examples under proposed § 301.6226–3(h). Examples 2 through 4 and 6 through 9 under former proposed § 301.6226–3(h) incorrectly listed the last day to file a petition under section 6234 as the date the adjustments became final, and examples 6 through 9 incorrectly referred to former proposed § 301.6226–1(b) as support for this rule. Under proposed § 301.6226–2(b), partnership adjustments become finally determined on the later of the expiration of the time to file a petition under section 6234 or, if a petition is filed under section 6234, the date when the court's decision becomes final. The examples under proposed § 301.6226–3(h) now reflect that the adjustments become final on the day after the last day to file a petition under section 6234 to be consistent with the rule under § 301.6226–2(b), and incorrect references to § 301.6226–1(b) in Examples 6 through 9 under former proposed § 301.6226–3(h) have been replaced with correct references to § 301.6226–2(b).

Proposed § 301.6226–4

Proposed rules under §§ 301.6226–4 were previously published in the **Federal Register** in the February 2018 NPRM (83 FR 4868) (former proposed § 301.6226–4). For an explanation of the rules under former proposed § 301.6226–4, see 83 FR 4874.

Proposed § 301.6226–4 sets forth rules for adjusting reviewed year partners' tax attributes to take into account partnership adjustments when a partnership makes an election under section 6226. To reflect the addition of section 6226(b)(4), proposed § 301.6226–3(e)(4) now provides that a reviewed year partner that is a pass-through partner must pay an imputed underpayment if the pass-through partner does not furnish statements. In addition, changes have been made throughout former proposed § 301.6226–4 to conform to the change to the definition of ''tax attribute'' under proposed § 301.6241–1(a)(10). See section 11.A of this preamble. These changes reflect that the adjustments to tax attributes taken into account by a partner should be consistent, regardless of whether the partner files an amended return during modification, participates in the alternative procedure to filing an amended return, or receives a statement under section 6226. Accordingly, the proposed regulations under section 6226 have been revised to refer only to the tax attributes of the partner in the intervening years. Additionally, clarifying changes were made in proposed § 301.6226–4(b) to conform to the terminology used in proposed § 301.6226–3. Lastly, an incorrect cross-reference in former proposed § 301.6226–4(c)(4)(iii) has been replaced with the correct cross-reference.

5. Administrative Adjustment Requests

Section 6227 provides a mechanism for a partnership to file an AAR to correct errors on a partnership return for a prior year. Prior to amendment by the TTCA, section 6227(a) provided that a partnership may file a request for administrative adjustment in the amount of one or more items of income, gain, loss, deduction, or credit of the partnership or any partnership taxable year. Section 201(c) of the TTCA amended section 6227(a) by striking ''items of income, gain, loss, deduction, or credit of the partnership'' and inserting ''partnership-related items.''

Prior to amendment by the TTCA, section 6227(b) provided that any adjustment requested in an AAR is taken into account for the partnership taxable year in which the AAR is made. Section 206(p) of the TTCA amended section 6227(b) by striking ''is made'' both places it appears and inserting ''is filed.''

Prior to amendment by the TTCA, section 6227(b)(1) provided that if an adjustment results in an imputed underpayment, the adjustment may be determined and taken into account by the partnership under rules similar to the rules under section 6225 relating to payment of the imputed underpayment by the partnership, except that the provisions under section 6225 pertaining to modification of the imputed underpayment based on amended returns by partners, the time for submitting information to the Secretary for purposes of modification, and approval by the Secretary of any modification do not apply.

Section 206(p) of the TTCA amended section 6227(b)(1) by striking the reference to ''paragraphs (2), (6), and (7)'' of section 6225(c) (relating to

modification) and inserting ''paragraphs (2), (7), and (9)'' of section 6225(c). As a result, section 6227(b)(1) provides that adjustments requested in an AAR are taken into account by the partnership under rules similar to section 6225 (except for sections 6225(c)(2), (7), and (9)). As amended by TTCA, section 6225(c)(2) provides rules allowing for amended returns and an alternative procedure to filing amended returns for purposes of modification, section 6225(c)(7) provides that information required to be submitted for purposes of modification be submitted within 270 days from the date on which the notice of a proposed partnership adjustment is mailed under section 6231, and section 6225(c)(9) provides for modification with respect to adjustments that do not result in an imputed underpayment.

Lastly, section 206(f) of the TTCA added section 6227(d) to provide that the Secretary shall issue regulations or other guidance which provide for the proper coordination of section 6227 and section 905(c).

A. Proposed §§ 301.6227–1, 301.6227–2, and 301.6227–3

Proposed rules under §§ 301.6227–1, 301.6227–2, and 301.6227–3 were previously published in the **Federal Register** (82 FR 27397–99) in the June 2017 NPRM, November 2017 NPRM (82 FR 56779), and December 2017 NPRM (82 FR 60161) (collectively, former proposed §§ 301.6227–1, 301.6227–2, and 301.6227–3). For an explanation of the rules under former proposed §§ 301.6227–1, 301.6227–2, and 301.6227–3, see 82 FR 27366–69, 82 FR 56769, and 82 FR 60151.

Former proposed § 301.6227–1(a) provided that a partner may not file an AAR except if the partner is doing so on behalf of the partnership in the partner's capacity as the partnership representative or if the partner is a partnership-partner filing an AAR under former proposed § 301.6227–3(c). Proposed § 301.6227–3(c), however, does not provide for the filing of an AAR by a partnership-partner. Rather, under proposed § 301.6227–3(c), a partnership-partner takes into account adjustments requested in an AAR by the partnership in which it is a partner by following the rules under proposed § 301.6226–3(e) (except to the extent otherwise provided). Proposed § 301.6227–1(a) therefore is changed to remove the reference to partnership-partners, and now only refers to partners filing AARs in their capacity as a partnership representative.

Proposed § 301.6227–2(a)(1) provides the rules for determining whether an imputed underpayment results from adjustments requested in an AAR by referring to the rules under proposed § 301.6225–1. Under proposed § 301.6227–2(a)(2), in the case of an AAR, a partnership may reduce an imputed underpayment as a result of certain modifications permitted under proposed § 301.6225–2. Under former proposed § 301.6227–2(a)(2), these modifications included modifications that relate to tax-exempt partners (proposed § 301.6225–2(d)(3)), rate modification (proposed § 301.6225–2(d)(4)), modification related to certain passive losses of publicly traded partnerships (proposed § 301.6225–2(d)(5)), modification applicable to qualified investment entities described in section 860 (proposed § 301.6225–2(d)(7)), and other modifications to the extent permitted under future IRS guidance (proposed § 301.6225–2(d)(10)). Proposed § 301.6227–2(a)(2) adopts this same list of modifications and adds modifications related to the composition of the groupings that factor into the calculation of the imputed underpayment (proposed § 301.6225–2(d)(6)(ii)) and modifications related to tax treaties (proposed § 301.6225–2(d)(9)).

Proposed § 301.6227–2(a)(2) provides that other types of modification, such as modification under proposed § 301.6225–2(d)(2) with respect to amended returns, including the alternative procedure to filing amended returns, and modification under proposed § 301.6225–2(d)(8) with respect to closing agreements, are not available in the case of an AAR. Modifications with respect to adjustments that do not result in an imputed underpayment also are also not available in the case of an AAR.

Former proposed § 301.6227–2(a)(2)(i) provided that a partnership did not need to seek IRS approval prior to modifying an imputed underpayment that results from adjustments requested in an AAR. Section 6227(b)(1) does not explicitly carve out section 6225(c)(8),which states that any modification to the imputed underpayment made under section 6225(c) shall be made only upon approval of such modification by the Secretary. Section 6227(b)(1) does provide, however, that partnerships take into account adjustments requested in an AAR under rules similar to the rules under section 6225. In proposing rules similar to the rules under section 6225 for the purposes of requesting an AAR and taking into account adjustments, the Treasury Department and the IRS have determined it is more efficient and beneficial for both the IRS and for partnerships to be able to apply modifications when filing an AAR without first securing approval of permitted modifications. Accordingly, although any modifications in connection with an AAR are subject to IRS approval, the rules under proposed § 301.6227–2(a)(2)(i) provide that the partnership is not required to obtain the approval from the IRS before applying modifications when calculating the amount of the imputed underpayment the partnership needs to pay when filing the AAR. Proposed § 301.6227–2(a)(2)(ii) also provides, however, that modifications to an imputed underpayment resulting from adjustments requested in an AAR may not be applied by the partnership if the AAR that is filed does not include notification to the IRS of the modification, a description of the effect of the modification on the imputed underpayment, an explanation of the basis for such modification, and all necessary documentation to support the partnership's entitlement to such modification.

Under proposed § 301.6227–3, a reviewed year partner that receives a statement described in proposed § 301.6227–1(d) must treat that statement as if it were provided under section 6226(a)(2). Former proposed § 301.6227–3(b)(1) also provided that the restriction in former proposed § 301.6226–3(b)(1)—that the correction amount for the first affected year and any intervening year cannot be less than zero—does not apply in the case of taking into account adjustments requested by the partnership in an AAR. Proposed § 301.6227–3(b)(1) no longer needs to address that restriction because the restriction in former proposed § 301.6226–3(b)(1) no longer exists. Therefore, the exception in former proposed § 301.6227–3(b)(1) has been eliminated. Additionally, the provision in former proposed § 301.6227–3(b)(2), stating that when the additional reporting tax results in being less than zero the partner may reduce his chapter 1 tax for the reporting year, is moved to proposed § 301.6227–3(b)(1).

Former proposed § 301.6227–1 included a reserved paragraph regarding notice of change to amounts of creditable foreign tax expenditures. Proposed § 301.6227–1 also reserves this same paragraph and does not contain rules to coordinate sections 6227 and 905(c). The Treasury Department and the IRS seek comments regarding the coordination of sections 6227 and 905(c) for consideration in future guidance.

Lastly, the reference to ''items of income, gain, loss, deduction, or credit of the partnership'' in former proposed § 301.6227–1(a) has been replaced with

a reference to ''partnership-related items.''

B. Revisions to the Regulations Under Section 6227 Unrelated to the TTCA Amendments

Proposed § 301.6227–1(a) now coordinates the rules regarding the filing of an AAR and the revocation of a designation of the partnership representative under § 301.6223–1. Former proposed § 301.6227–1(a) provided that the partnership may not file an AAR solely for the purpose of allowing the partnership to change the designation of a partnership representative. Proposed § 301.6227–1(a) now adds that when the partnership changes the designation of the partnership representative or the appointment of a designated individual in conjunction with the filing of an AAR, the change in designation or appointment is treated as occurring prior to the filing of the AAR.

Former proposed § 301.6227–1(b) provided that an AAR may not be filed after a notice of administrative proceeding (NAP) has been mailed. To account for situations in which the IRS mails a NAP, but then withdraws it, proposed § 301.6227–1(b) now provides that an AAR may not be filed after a NAP has been mailed, except when the NAP has been withdrawn under proposed § 301.6231–1(f).

Additions were also made in proposed § 301.6227–3(c) to clarify the rules for pass-through partners, unrelated to the changes made by the TTCA. First, proposed § 301.6227–3(c)(1) provides that when a pass-through partner takes into account adjustments requested in an AAR in accordance with proposed § 301.6226–3(e), the pass-through partner must provide the information described in proposed § 301.6227–3(c)(3) as opposed to the information in described in proposed § 301.6226–3(e)(3)(iii) when furnishing statements to its partners. Second, under proposed § 301.6227–3(c)(1), a pass-through partner that computes and pays an imputed underpayment in accordance with proposed § 301.6226–3(e)(4) may not take into account any modifications. Third, proposed § 301.6227–3(c)(4) provides that when a pass-through partner furnishes a statement to an affected partner under proposed § 301.6227–3(c), the affected partner must treat that statement as if it were a statement described in proposed § 301.6227–3(a) that was furnished to such affected partner.

6. Notices of Proceedings and Adjustments

Section 6231(a) provides that the Secretary shall mail to the partnership and to the partnership representative a notice of any administrative proceeding initiated at the partnership level, notice of any proposed partnership adjustment resulting from that proceeding (NOPPA), and notice of any final partnership adjustment (FPA). Prior to amendment by the TTCA, section 6231(a) also provided that any FPA shall be mailed no earlier than 270 days after the date on which the NOPPA is mailed. Such notices shall be sufficient if mailed to the last known address of the partnership and the partnership representative, even if the partnership has terminated its existence. See section 6231(a) flush language (prior to amendment by the TTCA).

Prior to amendment by the TTCA, the statute did not limit the period for the IRS to propose adjustments under the centralized partnership audit regime. Section 206(h) of the TTCA amended section 6231 to address this issue. As amended, section 6231(b)(1) provides that any NOPPA shall not be mailed later than the date determined under section 6235(a)(1), which is generally the date that is 3 years after the later of: (1) The date on which the partnership return for the taxable year was filed, (2) the return due date for the taxable year, or (3) the date on which the partnership filed an AAR with respect to the taxable year.

Section 206(h) of the TTCA makes a conforming amendment to section 6231(a) to reflect the addition of the period of limitations to made partnership adjustments. Prior to amendment, section 6231(a) provided that ''Such notices shall be sufficient if mailed to the last known address of the partnership representative or the partnership (even if the partnership has terminated its existence).'' The amendment replaced the words ''Such notices'' with ''Any notice of final partnership adjustment.''

Section 201(c) of the TTCA also makes a conforming amendment to section 6231(a) by striking the phrase ''all items of income, gain, loss, deduction, or credit of the partnership'' and inserting ''all partnership-related items.''

A. Proposed § 301.6231–1

Proposed rules under § 301.6231–1 were previously published in the **Federal Register** (82 FR 60161–62) in the December 2017 NPRM (former proposed § 301.6231–1). For an explanation of the rules under former proposed § 301.6231–1, see 82 FR 60151–52.

Although not required by statute, former proposed § 301.6231–1(b)(1) provided a period of limitations for making partnership adjustment. That section provided that a NOPPA may not be mailed after the expiration of the period described in section 6235(a)(1), including any extensions of that period and after applying any of the special rules in section 6235(c) (providing additional time for situations where no return is filed, fraud, and other specified reasons).

Former proposed § 301.6231–1(c) provided that NAPs, NOPPAs, and FPAs are sufficient if mailed to the last known address of the partnership and the partnership representative. As discussed above in this section of the preamble, section 6231(a) now provides that any FPA is sufficient if mailed to the last known address of the partnership and the partnership representative. The Treasury Department and the IRS have determined that while the last known address requirement under section 6231(a) only applies to a notice of final partnership adjustment, the IRS will also mail the NAP and the NOPPA to the last known address of the partnership and the partnership representative.

Accordingly, because the rules under former proposed § 301.6231–1(b)(1) and (c) are consistent with the statutory changes to section 6231(a), those rules are unchanged. The only change to former proposed § 301.6231–1 was to replace references to ''item of income, gain, loss, deduction, or credit'' and to a ''partner's distributive share'' in former proposed § 301.6231–1(a)(1) with a reference to ''partnership-related item''.

7. Assessment, Collection, and Payment of Imputed Underpayments

Section 6232(a) provides rules for the assessment, collection, and payment of imputed underpayments. Section 206(g) of the TTCA amended section 6232(a) to clarify that the assessment of any imputed underpayment is not subject to the deficiency procedures under subchapter B of chapter 63 of the Code and to clarify that in the case of an AAR, the underpayment may be assessed when the AAR is filed. See JCX–6–18, at 48.

Section 6232(b) provides limitations on the assessment of an imputed underpayment. Section 206(g) of the TTCA amended section 6232(b) to correct a reference to ''assessment of a deficiency'' to now refer to ''assessment of an imputed underpayment.'' Section 206(p) of the TTCA also amends section

6232(b) to strike the reference to ''this chapter'' and replace it with ''this subtitle (other than subchapter B of this chapter).''

Section 205 of the TTCA added a new subsection (f) to section 6232 to provide a mechanism for collection of tax due in the case of a failure of a partnership or S corporation to pay an imputed underpayment or specified similar amount. Under section 6232(f)(1), if any amount of any imputed underpayment to which section 6225 applies or any specified similar amount as defined in section 6232(f)(2) has not been paid by the date which is 10 days after the date on which the Secretary provides notice and demand for such payment, the Secretary may assess upon each partner of the partnership a tax equal to such partner's proportionate share of such amount.

Under section 6232(f)(2), the term ''specified similar amount'' means the amount determined under section 6226(b)(4)(ii)(II) and any amount assessed upon a partner under section 6232(f)(1)(B) that is a partnership or an S corporation. Section 206(g)(2)(B) of the TTCA amended section 6232(b) to provide that the limitations on assessment with respect to an imputed underpayment do not apply in the case of a specified similar amount defined in section 6232(f)(2).

The Treasury Department and the IRS are not proposing rules under section 6232(f) at this time. The Treasury Department and the IRS request comments with respect to section 6232(f), including the determination of a partner's proportionate share of the unpaid amount, for consideration with respect to future guidance.

A. Proposed § 301.6232–1

Proposed rules under § 301.6232–1 were previously published in the **Federal Register** (82 FR 60162–63) in the December 2017 NPRM (former proposed § 301.6232–1). For an explanation of the rules under former proposed §§ 301.6232–1, see 82 FR 60152.

Former proposed § 301.6232–1(a) provided that because the centralized partnership audit regime under subchapter C of chapter 63 applies to an assessment of an imputed underpayment, the deficiency procedures under subchapter B of chapter 63 do not apply. Former proposed § 301.6232–1(b) provided that the IRS may assess an underpayment reflected on an AAR on the date the AAR is filed. Former proposed § 301.6232–1(c) provided limitations on assessment of the imputed underpayment, except as otherwise provided in § 301.6232–1. Because the rules under former proposed § 301.6232–1(a) and (b) are consistent with the statutory changes to section 6232(a), those rules are unchanged.

Proposed § 301.6232–1(c) is generally the same as former proposed § 301.6232–1(c). However, changes were made to take into account section 206(g)(2)(B) of TTCA, providing that the limitations on assessment do not apply to specified similar amounts, and section 206(p) of TTCA, providing that the limitations on assessments under proposed § 301.6232–1(c) apply except as otherwise provided in subtitle F of the Code (other than deficiency procedures under subchapter B of chapter 63).

With respect to former proposed § 301.6232–1(d), the reference to ''items of income, gain, loss, deduction, or credit'' in former proposed § 301.6232–1(d)(1)(i) was replaced with a reference to ''partnership-related items.''

8. Interest and Penalties Related to Imputed Underpayments

Section 6233 provides rules related to interest and penalties with respect to imputed underpayments. Section 206(i) of the TTCA amended section 6233 by adding a new subsection (c), which provides a cross-reference to section 6603 for rules allowing deposits to suspend the running of interest on potential underpayments.

A. Proposed §§ 301.6233(a)–1 and 301.6233(b)–1

Proposed rules under §§ 301.6233(a)–1 and 301.6233(b)–1 were previously published in the **Federal Register** (82 FR 60163–65) in the December 2017 NPRM (former proposed §§ 301.6233(a)–1 and 301.6233(b)–1). For an explanation of the rules under former proposed §§ 301.6233(a)–1 and 301.6233(b)–1, see 82 FR 60152–53.

Proposed § 301.6233(a)–1 provides rules for determining interest and penalties from the reviewed year, and proposed § 301.6233(b)–1 provides rules for determining interest and penalties from the adjustment year. Neither former proposed § 301.6233(a)–1 nor former proposed § 301.6233(b)–1 provided rules regarding deposits to suspend the running of interest on underpayments. The Treasury Department and the IRS are not proposing rules regarding the interaction of the deposit rules under section 6603 and the interest rules under section 6233. However, the Treasury Department and the IRS request comments for consideration in future guidance regarding the interaction between section 6603 and the interest rules under section 6233.

Former proposed § 301.6233(a)–1(c)(2)(ii)(C) provided a definition of ''negative adjustment'' and defined that term through reference to ''items of income, gain, loss, deduction, or credit.'' Proposed § 301.6225–1 now uses the term ''negative adjustment'' and the phrase ''items of income, gain, loss, deduction, or credit'' has been removed from subchapter C of chapter 63. To reflect these changes, proposed § 301.6233(a)–1(c)(2)(ii)(C) now provides that a ''decreasing adjustment'' is ''an adjustment to a partnership-related item that resulted in a decrease to the imputed underpayment.'' Example 3 under proposed § 301.6233(a)–1(c)(3) also reflects changes to former proposed §§ 301.6225–1 and 301.6225–2.

Former proposed § 301.6233(a)–1(c)(2)(ii), regarding how to calculate the portion of the imputed underpayment to which a penalty applies, referred to ''non-credit partnership adjustments'' and ''credit adjustments.'' Under proposed § 301.6225–1(e)(3)(iii) certain adjustments to creditable expenditures are treated as an adjustment to a credit and may impact the calculation of the imputed underpayment. To properly account for such adjustments when determining the portion of an imputed underpayment subject to a penalty, the term ''non-credit partnership adjustment'' was changed to ''a partnership adjustment that is not an adjustment to a credit or treated as an adjustment to a credit,'' and the term ''credit adjustment'' changed to ''an adjustment to a credit or treated as an adjustment to a credit.''

Former proposed § 301.6233(a)–1(c)(2)(iii)(B), regarding the application of the substantial understatement penalty under section 6662(d)(1)(A)(i) to imputed underpayments, provided that taxable income meant the net ordinary business income or loss of the partnership. The reference to ''ordinary business'' failed to account for other sources of income of the partnership that are appropriate to consider for purposes of the substantial understatement penalty. Therefore, proposed § 301.6233(a)–1(c)(2)(iii)(B) now provides that for purposes of determining the amount of tax required to be shown on the return it is the net income or loss of the partnership that is treated as taxable income. See Page 5 of Form 1065, Return of Partnership Income.

Former proposed § 301.6233(a)–1(c)(2)(v), pertaining to reasonable cause and good faith defenses, provided that

partner-level defenses may not be raised in a proceeding of the partnership except as provided under the modification procedures pertaining to amended returns and partner closing agreements. For clarity, this provision has been moved to proposed § 301.6233(a)–1(c)(1). Furthermore, the provision allowing partner-level defenses to penalties to be raised under the modification procedures has been removed. A partner may raise a partner-level defense by filing a claim for refund under procedures existing outside of the centralized partnership audit regime or through an agreement with the IRS regarding an adjustment to a partnership-related item.

9. Judicial Review of Partnership Adjustments

Section 6234(a) provides that within 90 days after the date on which an FPA is mailed under section 6231 with respect to any partnership taxable year, the partnership may file a petition for readjustment for such taxable year with the Tax Court, the district court in which the partnership's principal place of business is located, or the Court of Federal Claims. Prior to amendment by the TTCA, section 6234(b)(1) provided that a petition for readjustment under section 6234 may be filed in a district court of the United States or the Court of Federal Claims only if the partnership filing the petition deposits with the Secretary, on or before the date the petition is filed, the amount of the imputed underpayment. Section 206(j) of the TTCA amended section 6234(b)(1) to clarify that the amount of the jurisdictional deposit that the partnership must make in order to file a readjustment petition in a district court or the Court of Federal Claims is the amount of (as of the date of the filing of the petition) the imputed underpayment, penalties, additions to tax, and additional amounts with respect to the imputed underpayment. See JCX–6–18, at 49.

A. Proposed § 301.6234–1

Proposed rules under § 301.6234–1 were previously published in the **Federal Register** (82 FR 60165–66) in the December 2017 NPRM (former proposed § 301.6234–1). For a further explanation of the rules under former proposed § 301.6234–1, see 82 FR 60153.

Former proposed § 301.6234–1(b) provided that a partnership may file a petition for a readjustment of any partnership adjustment in a district court or the Court of Federal Claims ''only if the partnership filing the petition deposits with the [IRS], on or before the date the petition is filed, the amount of any imputed underpayment resulting from the partnership adjustment.''

To reflect the amendment to section 6234(b)(1) made by section 206(j) of the TTCA regarding the amount of the deposit, proposed § 301.6234–1(b) now provides that amount required to be deposited is the amount (as of the date of the filing of the petition) of any imputed underpayment and any penalties, additions to tax, and additional amounts with respect to such imputed underpayment.

To account for the possibility that multiple imputed underpayments may be reflected in an FPA, proposed § 301.6234–1(b) also now provides that the partnership must only deposit the amount of any imputed underpayment to which the petition for readjustment relates and the amount of any penalties, additions to tax, and additional amounts with respect to such imputed underpayment.

10. Period of Limitations on Making Adjustments

Section 6235 provides the period of limitations on making adjustments under the centralized partnership audit regime. Under section 6235(a), the general rule is that no adjustment for any partnership taxable year may be made after the later of three specified dates. Section 206(k) of the TTCA amended section 6235(a) by inserting ''or section 905(c)'' after ''Except as otherwise provided in this section.'' The amendment makes clear that the period of limitations on making adjustments under the centralized partnership audit regime does not limit the period for notification of the Secretary and redetermination of tax under section 905(c) with respect to foreign tax redeterminations.

In addition, section 206(k) of the TTCA amended section 6235 by striking paragraph (d), which provided for a suspension of the period on making adjustments when the Secretary mails an FPA. That provision was similar to a provision that existed under TEFRA, but the provision has no effect on making adjustments under the centralized partnership audit regime. See JCX–6–18, at 49–50.

A. Proposed § 301.6235–1

Proposed rules under § 301.6235–1 were previously published in the **Federal Register** (82 FR 60166–67) in the December 2017 NPRM (former proposed § 301.6235–1). For an explanation of the rules under former proposed § 301.6235–1, see 82 FR 60153–54.

Proposed § 301.6235–1(a) now reflects the amendments to section 6235 to provide an exception for section 905(c) and to remove the reference to section 6235(d).

11. Definitions and Special Rules

A. Proposed § 301.6241–1

Proposed rules under § 301.6241–1 were previously published in the **Federal Register** (82 FR 27399–400) in the June 2017 NPRM (former proposed § 301.6241–1). For an explanation of the rules under former proposed § 301.6241–1, see 82 FR 27369.

Former proposed § 301.6241–1(a)(1) defined the term ''adjustment year'' to mean the partnership taxable year in which a decision of a court becomes final (if a petition is filed under section 6234), an AAR is made, or, in any other case, when an FPA is mailed (or if the partnership waives its right to an FPA, the year the waiver is executed by the IRS). Section 206(p) of the TTCA amended section 6227 to provide that an AAR is ''filed,'' as opposed to ''made.'' To reflect this amendment, proposed § 301.6241–1(a)(1) now provides that an AAR is ''filed'' and not ''made.''

Former proposed § 301.6241–1(a)(3) defined the term ''imputed underpayment'' as the amount determined under § 301.6225–1. Because an imputed underpayment may also be computed and paid pursuant to proposed § 301.6226–3(e)(4) (relating to pass-through partners) as well as under proposed § 301.6227–2 and § 301.6227–3(c) (relating to AARs), proposed § 301.6241–1(a)(3) now refers to imputed underpayments determined under those provisions. Proposed § 301.6241–1(a)(3) was also clarified to provide that an imputed underpayment calculated under section 6225 is calculated under section 6225 and the regulations thereunder.

Proposed § 301.6241–1(a)(4) now provides that the term ''indirect partner'' includes a person that holds an interest in the partnership through a wholly owned entity that is disregarded as separate from its owner for Federal income tax purposes, such as a disregarded entity or grantor trust. This change from the language in the former proposed regulations clarifies that a partnership may seek modification under proposed § 301.6225–2 based on indirect partners holding an interest through a disregarded entity or grantor trust.

Proposed § 301.6241–1(a)(6) now provides that the term ''partnership adjustment'' means any adjustment to a partnership-related item (as defined in

proposed § 301.6241–6), and such term includes a portion of a partnership adjustment.

Former proposed § 301.6241–1(a)(10) defined a tax attribute as anything that can affect, with respect to a partnership or partner, the amount or timing of an item of income, gain, loss, deduction, or credit or that can affect the amount of tax due in any taxable year. As discussed in section 4.A. of this preamble, section 203(a) of the TTCA amended section 6225 to provide an alternative procedure to filing amended returns during modification under which a partner agrees to take into account adjustments to the tax attributes ''of such partner''. Section 6225(c)(2)(B)(ii). To reflect the amendment to section 6225(c)(2)(B) regarding tax attributes of a partner, the phrase ''with respect to a partnership or a partner'' was removed from the definition of tax attribute under former proposed § 301.6241–1(a)(10). The reference to ''items of income, gain, loss, deduction, or credit'' in former proposed § 301.6241–1(a)(10) was also replaced with a reference to ''partnership-related item.''

B. Proposed § 301.6241–2

Proposed rules under § 301.6241–2 were previously published in the **Federal Register** (82 FR 27400) in the June 2017 NPRM (former proposed § 301.6241–2). Former proposed § 301.6241–2 provided for coordination between Title 11 of the United States Code, which deals with bankruptcy, and the centralized partnership audit regime. Because the amendments by the TTCA did not affect section 6241(6), the rules under former proposed § 301.6241–2 are unchanged. For an explanation of the rules under former proposed § 301.6241–2, see 82 FR 27369–70.

C. Proposed § 301.6241–3

Proposed rules under § 301.6241–3 were previously published in the **Federal Register** (82 FR 27400–02) in the June 2017 NPRM (former proposed § 301.6241–3). For an explanation of the rules under former proposed § 301.6241–3, see 82 FR 27370–71.

Former proposed § 301.6241–3(a)(3) provided that the rules requiring former partners to take into account adjustments of a partnership which the IRS determined had ceased to exist did not apply to the former partners of a partnership that had elected out of the centralized partnership audit regime under section 6221(b). Because under section 6226(b)(4) a partnership-partner that has elected out of the centralized partnership audit regime may be liable for an imputed underpayment in the case of a push out election, proposed § 301.6241–3(a)(3) now provides that the rules under proposed § 301.6241–3 apply to a partnership-partner and its former partners, regardless of whether the partnership-partner has elected out of the centralized partnership audit regime. Accordingly, under proposed § 301.6241–3(a)(3), the former partners of any partnership that may be liable for an imputed underpayment, including a partnership-partner that has elected out of the centralized partnership audit regime, will be required to take into account a partnership adjustment if the IRS determines that such partnership ceased to exist before the partnership adjustment had taken effect. Example 2 under proposed § 301.6241–3(f) illustrates this rule.

Former proposed § 301.6241–3(b)(2)(i) provided that the IRS will not determine that a partnership has ceased to exist solely because: (i) A partnership has technically terminated under section 708(b)(1)(B); (ii) the partnership has made a valid election under section 6226 and the regulations thereunder with respect to any imputed underpayment; or (iii) the partnership has not paid any amount the partnership is liable for under subchapter C of chapter 63. To reflect the amendment to section 708 by the Act to eliminate technical terminations, the reference to section 708(b)(1)(B) was removed from former proposed § 301.6241–3(b)(2)(i). In addition, a rule was added to former proposed § 301.6241–3(b)(2)(i) to provide that a partnership also does not cease to exist solely because it furnished statements in accordance with proposed § 301.6226–3(e)(3). This change clarifies that partnership-partners that properly furnish statements in accordance with proposed § 301.6226–3(e)(3) (and therefore are not liable for an imputed underpayment) are treated the same as an audited partnership who made a valid election under section 6226.

Additional clarifications were made to proposed § 301.6241–3. First, the phrase ''any amounts'' in former proposed § 301.6241–3(a)(2) was replaced with the phrase ''any unpaid amounts.'' This clarification was made to eliminate the implication that the partnership was not liable for the original amount due and to clarify that if the IRS determines that a partnership has ceased to exist, the partnership is no longer liable for any remaining unpaid amounts due under subchapter C of chapter 63, meaning that if the partnership had made a prior payment, the IRS can retain that payment. Second, former proposed § 301.6241–3(b)(2)(iii) provided that the IRS may not determine that a partnership has ceased to exist after the expiration of the period of limitations on collection. Proposed § 301.6241–3(b)(2)(iii) now provides that the period relevant to this determination is the period of limitations on collection with respect to the imputed underpayment that was assessed against the partnership that ceased to exist. Finally, prior references to section 708(b)(1)(A) in former proposed § 301.6241–3(b)(2), (d)(2), and (f) were changed to refer to section 708(b)(1) to reflect the amendment to section 708 made by the Act.

D. Proposed § 301.6241–4

Proposed rules under § 301.6241–4 were previously published in the **Federal Register** (82 FR 27402) in the June 2017 NPRM (former proposed § 301.6241–4). For an explanation of the rules under former proposed § 301.6241–4, see 82 FR 27371.

Former proposed § 301.6241–4 provided that payments made by a partnership under the centralized partnership audit regime, including payment of any imputed underpayment and any amount under proposed § 301.6226–3, were not deductible to the partnership. Because the payment amount for a partnership-partner in the case of a push out election is referred to as an imputed underpayment, reference to any amount under § 301.6226–3 in former proposed § 301.6241–4 became superfluous and thus was removed.

E. Proposed § 301.6241–5

Proposed rules under § 301.6241–5 were previously published in the **Federal Register** (82 FR 27402) in the June 2017 NPRM (former proposed § 301.6241–5). For an explanation of the rules under former proposed § 301.6241–5, see 82 FR 27371.

Former proposed § 301.6241–5 provided rules for extending the centralized partnership audit regime to entities filing partnership returns. References in former proposed § 301.6241–5(a) to ''items of income, gain, loss, deduction, or credit'' and ''partner's distributive share'' were replaced with a reference to ''partnership-related item.'' Proposed § 301.6241–5(c) now also reflects the fact that certain business arrangements, which may not be classified as entities, can file partnership returns to make an election under section 761(a). Under proposed § 301.6241–5(c), the centralized partnership audit regime does not apply in that case notwithstanding the filing of a partnership return.

12. Coordination With Other Chapters of the Code

Section 201(b) of the TTCA added section 6241(9) to the Code regarding the coordination of the centralized partnership audit regime with chapters of the Code other than chapter 1. Section 6241(9)(A) provides that the centralized partnership audit regime shall not apply with respect to any tax imposed (including any amount required to be deducted or withheld) under chapter 2, 2A, 3, or 4 of subtitle A of the Code, except that any partnership adjustment determined under the centralized partnership audit regime for purposes of chapter 1 shall be taken into account for purposes of determining any such tax to the extent that such adjustment is relevant to such determination. Section 6241(9)(B) provides that in the case of any tax imposed (including any amount required to be deducted or withheld) under chapters 3 and 4 of the Code, which is determined with respect to a partnership adjustment, such tax shall be so determined with respect to the reviewed year and shall be so imposed (or so required to be deducted or withheld) with respect to the adjustment year.

Section 201(b) also added section 6501(c)(12) to the Code regarding the statute of limitation on assessment of taxes under chapter 2 or 2A which are attributable to any partnership adjustment. Section 6501(c)(12) provides in the case of any partnership adjustment determined under the centralized partnership audit regime, the period for assessment of any tax imposed under chapter 2 or 2A of the Code which is attributable to such adjustment shall not expire before the date that is one year after one of two events. In the case of an adjustment pursuant to the decision of a court in a proceeding brought under section 6234, the period for assessment shall not expire before the date that is one year after the decision becomes final. In any other case, the period for assessment shall not expire before the date that is one year after 90 days after the date on which the FPA is mailed under section 6231.

A. Proposed § 301.6241–7

Former proposed § 301.6221(a)–1(d) provided that nothing in subchapter C of chapter 63 precluded the IRS from making any adjustment to an item of a partnership (as described in the prior version of § 301.6221(a)–1(b)) outside of the centralized partnership audit regime for purposes of determining tax imposed by provisions of the Code other than chapter 1. Accordingly, under former proposed § 301.6221(a)–1(d), the IRS was not precluded from examining a partnership's compliance with its obligations under chapters 3 and 4 (or any other chapter of the Code other than chapter 1) in a proceeding outside of the centralized partnership audit regime. Former proposed § 301.6221(a)–1(f) provided examples to illustrate this concept.

The rules contained in former proposed § 301.6221(a)–1(d), and the examples in former proposed § 301.6221(a)–1(f), are consistent with section 6241(9)(A). However, given that these concepts are now codified in section 6241, the rules and examples under former proposed § 301.6221(a)–1(d) and (f) are now under proposed § 301.6241–7(a)(1) and (2). References to ''items of income, gain, loss, deduction, or credit'' were replaced with references to ''partnership-related item'' as defined under proposed § 301.6241–6. Other editorial changes were made to reflect revisions to former proposed § 301.6221(a)–1.

Proposed § 301.6241–7(a)(1) provides that the centralized partnership audit regime does not apply with respect to any tax imposed (including any amount required to be deducted or withheld) under any chapter of the Code other than chapter 1, including chapter 2, 2A, 3, or 4 of the Code. Accordingly, for purposes of determining taxes under chapters of the Code other than chapter 1, the IRS may make adjustments to partnership-related items in proceedings not subject to the centralized partnership audit regime. However, to the extent an adjustment to a partnership-related item or a determination made under the centralized partnership audit regime is relevant in determining tax outside of chapter 1, such adjustment or determination must be taken into account in determining that non-chapter 1 tax. Proposed § 301.6241–7(a)(2) provides examples to illustrate these concepts.

Proposed § 301.6241–7(b) provides rules for coordinating the centralized partnership audit regime with chapters 3 and 4 of the Code. Proposed § 301.6241–7(b)(1) restates the rule in section 6241(9)(B) regarding the timing of withholding for tax imposed under chapters 3 and 4 that is determined with respect to a partnership adjustment. Proposed § 301.6241–7(b)(2) defines the terms chapter 3, chapter 4, and amount subject to withholding.

Former proposed §§ 301.6225–1(a)(4) and 301.6226–2(h) provided rules to coordinate the collection of tax in the case of partnership adjustments to amounts subject to withholding under chapters 3 and 4, including rules for when the partnership pays an imputed underpayment resulting from such an adjustment and rules for when the partnership makes the election under section 6226 with respect to such an imputed underpayment. These rules now fall within proposed § 301.6241–7(b)(3) and (b)(4). Proposed § 301.6241–7(b)(4) now provides that a partnership required to pay tax under chapter 3 or chapter 4 when it makes an election under section 6226 is required to pay the tax before the due date of the partnership return for the adjustment year (without regard to extension).

13. Other Amendments by the TTCA to the Centralized Partnership Audit Regime

Section 206(l) of the TTCA amended section 6241 by adding a new provision, section 6241(11), providing for the treatment of special enforcement matters. Under section 6241(11), in the case of partnership-related items which involve special enforcement matters, the Secretary may prescribe regulations pursuant to which the centralized partnership audit regime (or any portion thereof) does not apply to such items, and that such items are subject to special rules (including rules related to assessment and collection) as the Secretary determines to be necessary for the effective and efficient enforcement of the Code. For purposes of section 6241(11), the term ''special enforcement matters'' means: (1) Failure to comply with the requirements of section 6226(b)(4)(A)(ii) (regarding the requirement for a pass-through partner to furnish statements or compute and pay an imputed underpayment); (2) assessments under section 6851 (relating to termination assessments of income tax) or section 6861 (relating to jeopardy assessments of income, estate, gift, and certain excise taxes); (3) criminal investigations; (4) indirect methods of proof of income; (5) foreign partners or partnerships; and (6) other matters that the Secretary determines by regulation present special enforcement considerations. Rules under this provision may be provided in future guidance. The Treasury Department and the IRS are considering proposing rules under section 6241(11)(B)(vi) (dealing with other matters that present special enforcement considerations) which allow certain partnership-related items reported solely by persons other than the partnership to be adjusted outside the centralized partnership audit regime. The Treasury Department and the IRS request comments on this provision, including whether there are

any additional special enforcement considerations that should be addressed through regulations.

Section 206(m) of the TTCA amended section 6241 by adding a new provision, section 6241(12), to clarify that a U.S. shareholder of a controlled foreign corporation (CFC) which is a partner of a partnership shall be treated as a partner of such partnership for purposes of the centralized partnership audit regime. The U.S. shareholder's distributive share of the partnership is the U.S. shareholder's pro rata share of the CFC's Subpart F income determined under rules similar to section 951(a)(2). Similarly, a taxpayer that makes a Qualified Electing Fund (QEF) election with respect to a passive foreign investment company (PFIC) that is a partner in a partnership shall be treated as a partner of such partnership. In this case, a taxpayer's distributive share of the partnership is the taxpayer's pro rata share of the PFIC's ordinary earnings and net capital gain determined under rules similar to section 1293(b). Consequently, in both circumstances, the U.S. shareholder of a CFC and the taxpayer of a PFIC will be treated as the adjustment year partner or reviewed year partner under the centralized partnership audit regime, where applicable. Regulatory authority was also given to issue regulations or other guidance as necessary or appropriate to carry out the purpose of the provision, including regulations which apply the rule in similar circumstances or with respect to similarly situated persons. Consequently, in both circumstances, the U.S. shareholder of a CFC and the taxpayer of a PFIC will be treated as the adjustment year partner or reviewed year partner under proposed §§ 301.6241–1(a)(2) and 301.6241–1(a)(9) where applicable.

Special Analyses

This regulation is not subject to review under section 6(b) of Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Department of the Treasury and the Office of Management and Budget regarding review of tax regulations.

Because the proposed regulations would not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply.

Pursuant to section 7805(f) of the Code, this notice of proposed rulemaking has been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings, Notices, and other guidance cited in this preamble are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *www.irs.gov.*

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any electronic and written comments that are submitted timely to the IRS as prescribed in this preamble under the **ADDRESSES** heading. The Treasury Department and the IRS request comments on all aspects of the proposed rules. All comments will be available at *www.regulations.gov* or upon request.

A public hearing has been scheduled for October 9, 2018, beginning at 10 a.m. in the Auditorium of the Internal Revenue Building, 1111 Constitution Avenue NW, Washington, DC. Due to building security procedures, visitors must enter at the Constitution Avenue entrance. In addition, all visitors must present photo identification to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 30 minutes before the hearing starts. For more information about having your name placed on the building access list to attend the hearing, see the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to present oral comments at the hearing must submit an outline of the topics to be discussed and the time to be devoted to each topic by October 1, 2018. Submit a signed paper or electronic copy of the outline as prescribed in this preamble under the **ADDRESSES** heading. A period of 10 minutes will be allotted to each person for making comments. An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal authors of these proposed regulations are Jennifer M. Black, Joy E. Gerdy-Zogby, Steven L. Karon, and Brittany Harrison of the Associate Chief Counsel (Procedure and Administration). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 301

Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

Withdrawal of Notices of Proposed Rulemaking and Partial Withdrawal of Notice of Proposed Rulemaking

Accordingly, under the authority of 26 U.S.C. 7805, the notices of proposed rulemaking (REG–119337–17, REG–120232–17, REG–120233–17, and REG–118067–17) that were published in the **Federal Register** on November 30, 2017 (82 FR 56765), December 19, 2017 (82 FR 27071), and February 2, 2018 (83 FR 4868) are withdrawn. Also under the authority of 26 U.S.C. 7805, 301.6221(a)–1, 301.6222–1, 301.6225–1, 301.6225–2, 301.6225–3, 301.6225–4, 301.6226–1, 301.6226–2, 301.6226–3, 301.6226–4, 301.6227–1, 301.6227–2, 301.6227–3 of the notice of proposed rulemaking (REG–136118–15) published in the **Federal Register** on June 14, 2017 (82 FR 27334) is withdrawn.

Proposed Amendments to the Regulations

Accordingly, 26 CFR parts 1 and 301 are proposed to be amended as follows:

PART 1—INCOME TAX

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.704–1 is amended by:

■ 1. Adding paragraph (b)(1)(viii).

■ 2. Adding a sentence to the end of paragraph (b)(2)(iii)(*a*).

■ 3. Adding paragraphs (b)(2)(iii)(*f*), (b)(2)(iv)(*i*)(*4*), and (b)(4)(xi) through (xv).

The additions read as follows:

§ 1.704–1 Partner's distributive share.

* * * * *

(b) * * *

(1) * * *

(viii) *Items relating to a final determination under the centralized partnership audit regime*—(*a*) *In general.* Certain items of income, gain, loss, deduction or credit may result from a final determination under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) (relating to the centralized partnership audit regime). Special rules

under section 704(b) and § 1.704–1(b) apply to these items that take into account that the item relates to the reviewed year (as defined in § 301.6241–1(a)(8) of this chapter) but occurs in the adjustment year (as defined in § 301.6241–1(a)(1) of this chapter). See paragraphs (b)(2)(iii)(*a*) and (*f*), (b)(2)(iv)(*i*)(*4*), and (b)(4)(xi) through (xv) of this section.

(*b*) *Successors*—(*1*) *In general.* In the case of a transfer or liquidation of a partnership interest subsequent to a reviewed year, a successor has the meaning provided in paragraph (b)(1)(viii)(*b*) of this section. In the case of a subsequent transfer by a successor of a partnership interest, the principles of paragraph (b)(1)(viii)(*b*) of this section will also apply to the new successor.

(*2*) *Identifiable transferee partner.* Except as otherwise provided in paragraph (b)(1)(viii)(*b*)(*3*) of this section, in the case of a transfer of all or part of a partnership interest during or subsequent to the reviewed year, a successor is the partner to which the reviewed year transferor partner's capital account carried over (or would carry over if the partnership maintained capital accounts) under paragraph (b)(2)(iv)(*l*) of this section (an identifiable transferee partner).

(*3*) *Unidentifiable transferee partner.* If, after exercising reasonable diligence, the partnership cannot determine an identifiable transferee partner under paragraph (b)(1)(viii)(*b*)(*2*) of this section, each partner in the adjustment year that is not an identifiable transferee partner and was not a partner in the reviewed year, (an unidentifiable transferee partner) is a successor to the extent of the proportion of its interest in the partnership to the total interests of unidentifiable transferee partners in the partnership (considering all facts and circumstances).

(*4*) *Liquidation of partnership interest.* In the case of a liquidation of a partner's entire interest in the partnership during or subsequent to the reviewed year, the successors to the liquidated partner are certain adjustment year partners (as defined in § 301.6241–1(a)(2) of this chapter) as provided in this paragraph (b)(1)(viii)(*b*)(*4*). The determination of the extent to which the adjustment year partners are treated as successors under this section must be made in a manner that reflects the extent to which the adjustment year partners' interests in the partnership increased as a result of the liquidating distribution (considering all facts and circumstances).

(2) * * *

(iii) * * *

(*a*) * * * Notwithstanding any other sentence of this paragraph (b)(2)(iii)(*a*), an allocation of any of the following will be substantial only if the allocation is described in paragraph (b)(2)(iii)(*f*) of this section: an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63 (relating to the centralized partnership audit regime), adjustments reflected on a statement furnished to a pass-through partner (as defined in § 301.6241–1(a)(5) of this chapter) under § 301.6226–3(e)(4) of this chapter, or interest, penalties, additions to tax, or additional amounts described in section 6233.

* * * * *

(*f*) *Certain expenditures under the centralized partnership audit regime*—(*1*) *In general.* The economic effect of an allocation of an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63 (as described in § 301.6241–4(a) of this chapter) is substantial only if the expenditure is allocated in the manner described in this paragraph (b)(2)(iii)(*f*). For partnerships with allocations that do not satisfy paragraph (b)(2)(ii) of this section, see paragraph (b)(4)(xi) of this section.

(*2*) *Expenditures for imputed underpayments or similar amounts.* Except as otherwise provided, an expenditure for an imputed underpayment, as defined in § 301.6241–1(a)(3) of this chapter, is allocated to the reviewed year partner (or its successor, as defined in paragraph (b)(1)(viii)(*b*) of this section) in proportion to the allocation of the notional item (as described in § 301.6225–4(b) of this chapter) to which the expenditure relates, taking into account modifications under § 301.6225–2 of this chapter attributable to that partner.

(*3*) *Interest, penalties, additions to tax, or additional amounts described in section 6233.* An expenditure for interest, penalties, additions to tax, or additional amounts as determined under section 6233 (or penalties and interest described in § 301.6226–3(e)(4)(iv) of this chapter) is allocated to the reviewed year partner (or its successor, as defined in paragraph (b)(1)(viii)(*b*) of this section) in proportion to the allocation of the portion of the imputed underpayment with respect to which the penalty applies or related notional item to which it relates (whichever is appropriate), taking into account modifications under § 301.6225–2 of this chapter attributable to that partner.

(*4*) *Imputed underpayments unrelated to notional items.* In the case of an imputed underpayment that results from a partnership adjustment for which no notional items are created under § 301.6225–4(b)(2) of this chapter, the expenditure must be allocated to the reviewed year partner (or its successor, as defined in paragraph (b)(1)(viii)(*b*) of this section) that would have borne the economic benefit or burden of the partnership adjustment if the partnership and its partners had originally reported in a manner consistent with the partnership adjustment that resulted in the imputed underpayment with respect to the reviewed year.

(iv) * * *

(*i*) * * *

(*4*) *Certain expenditures under the centralized partnership audit regime.* Notwithstanding paragraph (b)(2)(iv)(*i*)(*1*) of this section, the economic effect of an allocation of an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63 (as described in § 301.6241–4(a) of this chapter) is substantial only if the expenditure is allocated in the manner described in paragraph (b)(2)(iii)(*f*) of this section. For partnerships with allocations that do not satisfy paragraph (b)(2)(ii) of this section, see paragraph (b)(4)(xii) of this section.

* * * * *

(4) * * *

(xi) *Notional items under the centralized partnership audit regime.* An allocation of a notional item (as described in § 301.6225–4(b)(3) of this chapter) does not have substantial economic effect within the meaning of paragraph (b)(2) of this section. However, the allocation of a notional item of income or gain described in § 301.6225–4(b)(3)(ii) and (iv) of this chapter, or expense or loss described in § 301.6225–4(b)(3)(iii) and (v) of this chapter, will be deemed to be in accordance with the partners' interests in the partnership if the notional item is allocated in the manner in which the corresponding actual item would have been allocated in the reviewed year under the rules of this section, treating successors (as defined in paragraph (b)(1)(viii)(*b*) of this section) as reviewed year partners. Additionally, the allocation of a notional item of expense or loss described in § 301.6225–4(b)(3)(iv) of this chapter, or a notional item of income or gain described in § 301.6225–4(b)(3)(v) of this chapter, will be deemed to be in accordance with the partners' interests in the partnership if the notional item is allocated to the reviewed year partners (or their successors as defined in paragraph (b)(1)(viii)(*b*) of this section) in the

manner in which the excess item was allocated in the reviewed year.

(xii) *Certain section 705(a)(2)(B) expenditures under the centralized partnership audit regime.* An allocation of an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63 (relating to the centralized partnership audit regime and as described in § 301.6241–4(a) of this chapter) will be deemed to be in accordance with the partners' interests in the partnership, as provided in paragraph (b)(3) of this section, only if the expenditure is allocated in the manner described in paragraph (b)(2)(iii)(*f*) of this section and if the partners' distribution rights are reduced by the partners' shares of the imputed underpayment.

(xiii) *Partnership adjustments that do not result in an imputed underpayment under the centralized partnership audit regime.* An allocation of an item arising from a partnership adjustment that does not result in an imputed underpayment (as defined in § 301.6225–1(f) of this chapter) does not have substantial economic effect within the meaning of paragraph (b)(2) of this section. However, the allocation of such an item will be deemed to be in accordance with the partners' interests in the partnership if allocated in the manner in which the item would have been allocated in the reviewed year under the rules of this section, treating successors as defined in paragraph (b)(1)(viii)(*b*) of this section as reviewed year partners.

(xiv) *Partnership adjustments subject to an election under section 6226.* An allocation of an item arising from a partnership adjustment that results in an imputed underpayment for which an election is made under § 301.6226–1 of this chapter does not have substantial economic effect within the meaning of paragraph (b)(2) of this section. However, the allocation of such an item will be deemed to be in accordance with the partners' interests in the partnership if allocated in the adjustment year (as defined in § 301.6241–1(a)(1) of this chapter) in the manner in which the item would have been allocated under the rules of this section (or otherwise taken into account under subtitle A of the Code) in the reviewed year (as defined in § 301.6241–1(a)(8) of this chapter), followed by any intervening years (as defined in § 301.6226–3(b)(3) of this chapter), concluding with the reporting year (as defined in § 301.6226–3(a) of this chapter).

(xv) *Substantial economic effect under sections 168(h) and 514(c)(9)(E)(i)(ll).* An allocation described in paragraphs (b)(4)(xi) through (xiv) of this section will be deemed to have substantial economic effect for purposes of sections 168(h) and 514(c)(9)(E)(i)(ll) if the allocation is deemed to be in accordance with the partners' interests in the partnership under the applicable rules set forth in paragraphs (b)(4)(xi) through (xiv) of this section.

* * * * *

■ **Par. 3.** Section 1.705–1 is amended by adding paragraph (a)(10) to read as follows:

§ 1.705–1 Determination of basis of partner's interest.

(a) * * *

(10) For rules relating to determining the adjusted basis of a partner's interest in a partnership following a final determination under subchapter C of chapter 63 of the Internal Revenue Code (relating to the centralized partnership audit regime), see §§ 301.6225–4 and 301.6226–4 of this chapter.

* * * * *

■ **Par. 4.** Section 1.706–4 is amended by redesignating paragraphs (e)(2)(viii) through (xi) as paragraphs (e)(2)(ix) through (xii), respectively, and adding a new paragraph (e)(2)(viii) to read as follows:

§ 1.706–4 Determination of distributive share when a partner's interest varies.

* * * * *

(e) * * *

(2) * * *

(viii) Any item arising from a final determination under subchapter C of chapter 63 of the Internal Revenue Code (relating to the centralized partnership audit regime) with respect to a partnership adjustment resulting in an imputed underpayment for which no election is made under § 301.6226–1 of this chapter or for which a pass-through partner (as defined in § 301.6241–1(a)(5)) pays an imputed underpayment under § 301.6226–3(e)(4).

* * * * *

PART 301—PROCEDURE AND ADMINISTRATION

■ **Par. 5.** The authority citation for part 301 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 6.** Section 301.6221(a)–1 is added to read as follows:

§ 301.6221(a)–1 Determination at partnership level.

(a) *In general.* Except as otherwise provided under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) and the regulations thereunder, any adjustment to a partnership-related item (as defined in § 301.6241–6) is determined, any tax imposed by chapter 1 of subtitle A of the Internal Revenue Code (Code) attributable thereto is assessed and collected, and the applicability of any penalty, addition to tax, or additional amount that relates to an adjustment to any partnership-related item is determined at the partnership level under subchapter C of chapter 63. Any consideration necessary to make a determination at the partnership level under subchapter C of chapter 63, including the period of limitations on making partnership adjustments under section 6235 or facts necessary to calculate an imputed underpayment under section 6225, is also made at the partnership level except as otherwise provided under subchapter C of chapter 63 and the regulations thereunder. For rules relating to assessment and collection in a proceeding involving inconsistent treatment of a partnership-related item, see § 301.6222–1; in the case of modification under section 6225(c), see § 301.6225–2; in the case of an election under section 6226, see § 301.6226–3. For rules relating to tax imposed (including any amount required to be deducted or withheld) by chapter 2, 2A, 3 or 4 of subtitle A of the Code, see section 6241(9) and § 301.6241–7. For rules relating to special enforcement matters, see § 301.6241–8.

(b) *Applicability date*—(1) *In general.* Except as provided in paragraph (b)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 7.** Section 301.6222–1 is added to read as follows:

§ 301.6222–1 Partner's return must be consistent with partnership return.

(a) *Consistent treatment of partnership-related items*—(1) *In general.* The treatment of partnership-related items (as defined in § 301.6241–6) on a partner's return must be consistent with the treatment of such items on the partnership return in all respects, including the amount, timing, and characterization of such items. A partner has not satisfied the requirement of this paragraph (a) if the treatment of the partnership-related item on the partner's return is consistent with how such item was treated on a schedule or other information furnished to the partner by the partnership but inconsistent with the treatment of the item on the partnership return actually

filed. For rules relating to the election to be treated as having reported the inconsistency where the partner treats a partnership-related item consistently with an incorrect schedule or other information furnished by the partnership, see paragraph (d) of this section.

(2) *Partner that is a partnership.* The rules of this section apply to a partnership-partner (as defined in § 301.6241–1(a)(7)) regardless of whether the partnership-partner has made an election under section 6221(b) to elect out of the provisions of subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63). Accordingly, unless the requirements of paragraph (c) of this section are satisfied, a partnership-partner must treat partnership-related items of a partnership in which it is a partner consistent with the treatment of such items on the partnership return filed by the partnership in which it is a partner.

(3) *Partnership does not file a return.* A partner's treatment of a partnership-related item attributable to a partnership that does not file a return is per se inconsistent, unless the partner files a notice of inconsistent treatment under paragraph (c) of this section.

(4) *Treatment of items on a partnership return.* For purposes of this section, the treatment of a partnership-related item on a partnership return includes—

(i) The treatment of such item on the partnership's return of partnership income filed with the IRS under section 6031, and any amendment or supplement thereto, including an administrative adjustment request (AAR) filed pursuant to section 6227 and the regulations thereunder; and

(ii) The treatment of such item on any statement, schedule or list, and any amendment or supplement thereto, filed by the partnership with the Internal Revenue Service (IRS), including any statements filed pursuant to section 6226 and the regulations thereunder.

(5) *Examples.* The following examples illustrate the rules of this paragraph (a). For purposes of these examples, each partnership is subject to the provisions of subchapter C of chapter 63, and each partnership and its partners are calendar year taxpayers, unless otherwise stated.

Example 1. B is a partner in Partnership during 2018 and 2019. Both B and Partnership are calendar year taxpayers. In December 2018, Partnership receives an advance payment for services to be performed in 2019 and reports this amount as income on its partnership return for 2018. B includes its distributive share of income from the advance payment on B's income tax return for 2019 and not on B's income tax return for 2018. B did not file a notice of inconsistent treatment with respect to the advanced payment. B's treatment of the income attributable to Partnership is inconsistent with the treatment of that item by Partnership on its partnership return.

Example 2. C is a partner in Partnership during 2018. Partnership incurred start-up costs before it was actively engaged in its business. Partnership capitalized these costs on its 2018 partnership return. C deducted his distributive share of the start-up costs on C's 2018 income tax return. C's treatment of the start-up costs is inconsistent with the treatment of that item by Partnership on its partnership return.

Example 3. D is a partner in Partnership during 2018. Partnership reports a loss of $100,000 on its partnership return for 2018. On the 2018 Schedule K–1 attached to the partnership return, Partnership reports $5,000 as D's distributive share of that loss. On the 2018 Schedule K–1 furnished to D, however, Partnership reports $15,000 as D's distributive share of the loss. D reports the $15,000 loss on D's 2018 income tax return. D has not satisfied the requirements of paragraph (a) of this section because D reported D's distributive share of the loss in a manner that is inconsistent with how D's distributive share of the loss was reported on the 2018 partnership return actually filed. See, however, paragraph (d) of this section for the election to be treated as having reported the inconsistency where the partner treats an item consistently with an incorrect schedule.

Example 4. D was a partner in Partnership during 2018. Partnership reports a loss of $100,000 on its partnership return for 2018. In 2020, Partnership files an AAR under section 6227 reporting that the amount of the loss on its 2018 partnership return is $90,000, rather than $100,000 as originally reported. Pursuant to section 6227 and the regulations thereunder, Partnership elects to have its partners take the adjustment into account, and furnishes D a statement showing D's share of the reduced loss for 2018. D fails to take his share of the reduced loss for 2018 into account in accordance with section 6227 and the regulations thereunder. D has not satisfied the requirements of paragraph (a) of this section because D has not taken into account his share of the loss in a manner consistent with how Partnership treated such items on the partnership return actually filed.

Example 5. E was a partner in Partnership during 2018. In 2021, Partnership receives a notice of final partnership adjustment in an administrative proceeding under subchapter C of chapter 63 with respect to Partnership's 2018 taxable year. Partnership properly elects the application of section 6226 and furnishes to E a statement of E's share of adjustments with respect to Partnership's 2018 taxable year. E fails to take his share of the adjustments into account in accordance with section 6226 and the regulations thereunder. E has not satisfied the requirements of paragraph (a) of this section because E has not taken into account his share of adjustments with respect to Partnership's 2018 taxable year in a manner consistent with how Partnership treated such items on the partnership return actually filed.

Example 6. In 2018, E is a partner in Partnership. E is a partnership-partner with a 2018 taxable year that ends on the same day as Partnership's 2018 taxable year. E has filed a valid election under section 6221(b) in effect with respect to E's 2018 partnership taxable year. Notwithstanding E's election under section 6221(b) for its 2018 taxable year, E is subject to section 6222 for taxable year 2018. E must treat, on its 2018 partnership return, any items attributable to E's interest in Partnership in a manner that is consistent with the treatment of those items on the 2018 partnership return actually filed by Partnership.

(b) *Effect of inconsistent treatment*—(1) *Determination of underpayment of tax resulting from inconsistent treatment.* If a partner fails to satisfy the requirements of paragraph (a) of this section, unless the partner provides notice in accordance with paragraph (c) of this section, the IRS may adjust the inconsistently reported partnership-related item on the partner's return to make it consistent with the treatment of such item on the partnership return and determine the underpayment of tax that results from that adjustment. For purposes of this section, the underpayment of tax is the amount by which the correct tax, as determined by making the partner's return consistent with the partnership return, exceeds the tax shown on the partner's return.

(2) *Assessment and collection of tax.* The IRS may assess and collect any underpayment of tax resulting from an adjustment described in paragraph (b)(1) of this section in the same manner as if the underpayment of tax was on account of a mathematical or clerical error appearing on the partner's return, except that the procedures under section 6213(b)(2) for requesting abatement of an assessment do not apply.

(3) *Effect when partner is a partnership.* If the partner is itself a partnership (a partnership-partner), any adjustment on account of such partnership-partner's failure to satisfy the requirements of paragraph (a) of this section will be treated as an adjustment on account of a mathematical or clerical error under section 6213(b), except that the procedures under section 6213(b)(2) for requesting abatement of an assessment do not apply. See section 6232(d)(1)(B) and § 301.6232–1(d).

(4) *Examples.* The following examples illustrate the rules of this paragraph (b).

Example 1. D, an individual, is a partner in Partnership. D and Partnership are both calendar year taxpayers and Partnership does not have an election under section 6221(b) in effect for its 2018 taxable year. On its partnership return for taxable year 2018,

Partnership reports $100,000 in ordinary income. On the Schedule K–1 attached to the partnership return, as well as on the Schedule K–1 furnished to D, Partnership reports $15,000 as D's distributive share of the $100,000 in ordinary income. D reports only $5,000 of the $15,000 of ordinary income on his 2018 income tax return. The IRS may determine the amount of tax that results from adjusting the ordinary income attributable to D's interest in Partnership reported on D's 2018 income tax return from $5,000 to $15,000 and assess that resulting underpayment in tax as if it was on account of a mathematical or clerical error appearing on D's return. D may not request an abatement of that assessment under section 6213(b).

Example 2. F was a partner in Partnership during 2018. In 2021, Partnership receives a notice of final partnership adjustment in an administrative proceeding under subchapter C of chapter 63 with respect to Partnership's 2018 taxable year. Partnership properly elects the application of section 6226 and files with the IRS a statement of F's share of adjustments with respect to Partnership's 2018 taxable year. F fails to report one adjustment, F's share of a decrease in the amount of losses for 2018, on F's return as required by section 6226 and the regulations thereunder. The IRS may determine the amount of tax that results from adjusting the decrease in the amount of losses on F's return to be consistent with the amount included on the section 6226 statement filed with the IRS and may assess the resulting underpayment in tax as if it was on account of a mathematical or clerical error appearing on F's return. F may not request an abatement of that assessment under section 6213(b).

(c) *Notification to the IRS when items attributable to a partnership are treated inconsistently*—(1) *In general.* Paragraphs (a) and (b) of this section (regarding the consistent treatment of partnership-related items and the effect of inconsistent treatment) do not apply to partnership-related items identified as inconsistent (or that may be inconsistent) in a statement that the partner provides to the IRS according to the forms, instructions, and other guidance prescribed by the IRS. Instead, the procedures in paragraph (c)(3) of this section apply. A statement does not identify an inconsistency for purposes of this paragraph (c) unless it is attached to the partner's return on which the partnership-related item is treated inconsistently.

(2) *Coordination with section 6223.* Paragraph (c)(1) of this section is not applicable to a partnership-related item the treatment of which is binding on the partner because of actions taken by the partnership under subchapter C of chapter 63 or because of a final decision in a proceeding with respect to the partnership under subchapter C of chapter 63. Accordingly, the provisions of paragraph (c)(1) of this section do not apply with respect to the partner's treatment of a partnership-related item reflected on an AAR under section 6227 or a statement under section 6226 filed by the partnership with the IRS to which the partner is bound under section 6223. Therefore, if the partner's treatment of a partnership-related item reflected on an AAR or statement described in section 6226 is not consistent with the treatment of the partnership to which the partner is bound under section 6223, the provisions of section 6222(c) and paragraph (c)(1) of this section do not apply with respect to such item, and any resulting underpayment may be assessed and collected in accordance with paragraph (b)(2) of this section.

(3) *Partner protected only to extent of notification.* A partner who reports the inconsistent treatment of a partnership-related item is not subject to paragraphs (a) and (b) of this section only with respect to those items identified in the statement described in paragraph (c)(1) of this section. Thus, if a partner notifying the IRS with respect to one partnership-related item does not report the inconsistent treatment of another partnership-related item, the IRS may determine the amount of tax that results from adjusting the unidentified, inconsistently reported item on the partner's return to make it consistent with the treatment of such item on the partnership return, and assess the resulting underpayment of tax in accordance with paragraph (b)(2) of this section.

(4) *Adjustment after notification*—(i) *In general.* If a partner notifies the IRS of the inconsistent treatment of a partnership-related item in accordance with paragraph (c)(1) of this section, and the IRS disagrees with the inconsistent treatment, the IRS may adjust the identified, inconsistently reported item in a proceeding with respect to the partner. Nothing in this paragraph (c)(4)(i) precludes the IRS from also conducting a proceeding with respect to the partnership.

(ii) *Adjustments in partner proceeding.* In a proceeding with respect to a partner described in paragraph (c)(4)(i) of this section, the IRS may adjust any identified, inconsistently reported partnership-related item to make the item consistent with the treatment of that item on the partnership return or determine that the correct treatment of such item differs from the treatment on the partnership return and instead adjust the item to reflect the correct treatment, notwithstanding the treatment of that item on the partnership return. The IRS may also adjust any item on the partner's return, including items that are not partnership-related items. Any final decision with respect to an inconsistent position in a proceeding to which the partnership is not a party is not binding on the partnership.

(5) *Examples.* The following examples illustrate the rules of this paragraph (c). For purposes of these examples, each partnership is subject to the provisions of subchapter C of chapter 63, and each partnership and partner is a calendar year taxpayer, unless otherwise stated.

Example 1. B is a partner in Partnership during 2018. B treats a deduction and a capital gain attributable to Partnership on B's 2018 income tax return in a manner that is inconsistent with the treatment of those items by Partnership on its 2018 partnership return. B reports the inconsistent treatment of the deduction in accordance with paragraph (c)(1) of this section, but not the inconsistent treatment of the gain. Because B did not notify the IRS of the inconsistent treatment of the gain in accordance with paragraph (c)(1) of this section, the IRS may determine the amount of tax that results from adjusting the gain reported on B's 2018 income tax return in order to make the treatment of that gain consistent with how the gain was treated on Partnership's partnership return. Pursuant to paragraph (c)(3) of this section, the IRS may assess and collect the underpayment of tax resulting from the adjustment to the gain as if it was on account of a mathematical or clerical error appearing on B's return.

Example 2. On its 2018 partnership return, Partnership treats partner E's distributive share of ordinary loss attributable to Partnership as $8,000. E, however, claims an ordinary loss of $9,000 as attributable to Partnership on its 2018 income tax return and notifies the IRS of the inconsistent treatment in accordance with paragraph (c)(1) of this section. As a result of the notice of inconsistent treatment, the IRS conducts a separate proceeding under subchapter B of chapter 63 of the Internal Revenue Code with respect to E's 2018 income tax return, a proceeding to which Partnership is not a party. During the proceeding, the IRS determines that the proper amount of E's distributive share of the ordinary loss from Partnership is $3,000. During the same proceeding, the IRS also determines that E overstated a charitable contribution deduction in the amount of $2,500 on its 2018 income tax return. The determination of the adjustment of E's share of ordinary loss is not binding on Partnership. The charitable contribution deduction is not attributable to Partnership or to another partnership subject to the provisions of subchapter C of chapter 63. The IRS may determine the amount of tax that results from adjusting the $9,000 ordinary loss deduction to $3,000 and from adjusting the charitable contribution deduction. Pursuant to paragraph (c)(4)(ii) of this section, the IRS is not limited to only adjusting the ordinary loss of $9,000, as originally reported on E's partner return, to $8,000, as originally reported by Partnership on its partnership return, nor is the IRS prohibited from adjusting the charitable

contribution deduction in the proceeding with respect to E.

(d) *Partner receiving incorrect information*—(1) *In general.* A partner is treated as having complied with section 6222(c)(1)(B) and paragraph (c)(1) of this section with respect to a partnership-related item if the partner—

(i) Demonstrates that the treatment of such item on the partner's return is consistent with the treatment of that item on the statement, schedule, or other form prescribed by the IRS and furnished to the partner by the partnership, and

(ii) The partner makes an election in accordance with paragraph (d)(2) of this section.

(2) *Time and manner of making election*—(i) *In general.* An election under paragraph (d) of this section must be filed in writing with the IRS office set forth in the notice that notified the partner of the inconsistency no later than 60 days after the date of such notice.

(ii) *Contents of election.* The election described in paragraph (d)(2)(i) of this section must be—

(A) Clearly identified as an election under section 6222(c)(2)(B);

(B) Signed by the partner making the election;

(C) Accompanied by a copy of the statement, schedule, or other form furnished to the partner by the partnership and a copy of the IRS notice that notified the partner of the inconsistency; and

(D) Include any other information required in forms, instructions, or other guidance prescribed by the IRS.

(iii) *Treatment of partnership-related item is unclear.* Generally, the requirement described in paragraph (d)(2)(ii)(C) of this section will be satisfied by attaching a copy of the statement, schedule, or other form furnished to the partner by the partnership to the election (in addition to a copy of the IRS notice that notified the partner of the inconsistency). However, if it is not clear from the statement, schedule, or other form furnished by the partnership that the partner's treatment of the partnership-related item on the partner's return is consistent, the election must also include an explanation of how the treatment of such item on the statement, schedule, or other form furnished by the partnership is consistent with the treatment of the item on the partner's return, including with respect to the characterization, timing, and amount of such item.

(3) *Example.* The following example illustrates the rules of this paragraph (d). For purposes of this example, the partnership is subject to subchapter C of chapter 63 and the partnership and its partners are calendar year taxpayers.

Example. E is a partner in Partnership for 2018. On its 2018 partnership return, Partnership reports that E's distributive share of ordinary income attributable to Partnership is $1,000. Partnership furnishes to E a Schedule K–1 for 2018 showing $500 as E's distributive share of ordinary income. E reports $500 of ordinary income attributable to Partnership on its 2018 income tax return consistent with the Schedule K–1 furnished to E. The IRS notifies E that E's treatment of the ordinary income attributable to Partnership on its 2018 income tax return is inconsistent with how Partnership treated the ordinary income allocated to E on its 2018 partnership return. Within 60 days of receiving the notice from the IRS of the inconsistency, E files an election with the IRS in accordance with paragraph (d)(2) of this section. Because E made a valid election under section 6222(c)(2)(B) and paragraph (d)(1) of this section, E is treated as having notified the IRS of the inconsistency with respect to the ordinary income attributable to Partnership under paragraph (c)(1) of this section.

(e) *Applicability date*—(1) *In general.* Except as provided in paragraph (e)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par 8.** Section 301.6225–1 is added to read as follows:

§ 301.6225–1 Partnership Adjustment by the Internal Revenue Service.

(a) *Imputed underpayment based on partnership adjustments*—(1) *In general.* In the case of any partnership adjustments (as defined in § 301.6241–1(a)(6)) by the Internal Revenue Service (IRS), if the adjustments result in an imputed underpayment (as determined in accordance with paragraph (b) of this section), the partnership must pay an amount equal to such imputed underpayment in accordance with paragraph (a)(2) of this section. If the adjustments do not result in an imputed underpayment (as described in paragraph (f) of this section), such adjustments must be taken into account by the partnership in the adjustment year (as defined in § 301.6241–1(a)(1)) in accordance with § 301.6225–3. Partnership adjustments may result in more than one imputed underpayment pursuant to paragraph (g) of this section. Each imputed underpayment determined under this section is based solely on partnership adjustments with respect to a single taxable year.

(2) *Partnership pays the imputed underpayment.* An imputed underpayment (determined in accordance with paragraph (b) of this section and included in a notice of final partnership adjustment (FPA) under section 6231(a)(3)) must be paid by the partnership in the same manner as if the imputed underpayment were a tax imposed for the adjustment year in accordance with § 301.6232–1. The FPA will include the amount of any imputed underpayment, as modified under § 301.6225–2 if applicable, unless the partnership waives its right to such FPA under section 6232(d)(2). See § 301.6232–1(d)(2). For the alternative to payment of the imputed underpayment by the partnership, see § 301.6226–1. If a partnership pays an imputed underpayment, the partnership's expenditure for the imputed underpayment is taken into account by the partnership in accordance with § 301.6241–4. For interest and penalties with respect to an imputed underpayment, see section 6233.

(3) *Imputed underpayment set forth in notice of proposed partnership adjustment.* An imputed underpayment set forth in a notice of proposed partnership adjustment (NOPPA) under section 6231(a)(2) is determined in accordance with paragraph (b) of this section without regard to any modification under § 301.6225–2. Modifications under § 301.6225–2, if allowed by the IRS, may change the amount of an imputed underpayment set forth in the NOPPA and determined in accordance with paragraph (b) of this section. Only the partnership adjustments set forth in a NOPPA are taken into account for purposes of determining an imputed underpayment under this section and any modification under § 301.6225–2.

(b) *Determination of an imputed underpayment*—(1) *In general.* In the case of any partnership adjustment by the IRS, an imputed underpayment is determined by—

(i) Grouping the partnership adjustments in accordance with paragraph (c) of this section and, if appropriate, subgrouping such adjustments in accordance with paragraph (d) of this section;

(ii) Netting the adjustments in accordance with paragraph (e) of this section;

(iii) Calculating the total netted partnership adjustment in accordance with paragraph (b)(2) of this section;

(iv) Multiplying the total netted partnership adjustment by the highest rate of Federal income tax in effect for

the reviewed year under section 1 or 11; and

(v) Increasing or decreasing the product that results under paragraph (b)(1)(iv) of this section by—

(A) Any amounts treated under paragraph (e)(3)(ii) of this section as net positive adjustments (as defined in paragraph (e)(4)(i) of this section); and

(B) Any net negative adjustments (as defined in paragraph (e)(4)(ii) of this section), except net negative adjustments resulting from reallocation adjustments to credits as described in paragraph (d)(3)(ii) of this section and creditable tax expenditures described in paragraph (e)(3)(iii) of this section.

(2) *Calculation of the total netted partnership adjustment.* For purposes of determining an imputed underpayment under paragraph (b)(1) of this section, the *total netted partnership adjustment* is the sum of all net positive adjustments in the reallocation grouping described in paragraph (c)(2) of this section and the residual grouping described in paragraph (c)(5) of this section.

(3) *Adjustments to items for which tax has been collected under chapters 3 and 4.* A partnership adjustment is disregarded for purposes of calculating the total netted partnership adjustment under paragraph (b)(2) of this section to the extent that the IRS has collected the tax required to be withheld under chapter 3 or chapter 4 (as defined in § 301.6241–7(b)(2)(ii) and (iii)) that is attributable to the partnership adjustment. See § 301.6241–7(b)(3) for rules that apply when a partnership pays an imputed underpayment that includes a partnership adjustment to an amount subject to withholding (as defined in § 301.6241–7(b)(2)(i)) under chapter 3 or chapter 4 for which such tax has not yet been collected.

(4) *Treatment of adjustment as zero for purposes of calculating the imputed underpayment.* If the effect of a partnership adjustment under chapter 1 of subtitle A of the Internal Revenue Code (Code) to any person is reflected in another adjustment taken into account under this section, the IRS may treat an adjustment as zero solely for purposes of calculating the imputed underpayment.

(c) *Grouping of partnership adjustments*—(1) *In general.* To determine an imputed underpayment under paragraph (b) of this section, partnership adjustments are placed into one of four groupings. These groupings are the reallocation grouping described in paragraph (c)(2) of this section, the credit grouping described in paragraph (c)(3) of this section, the creditable expenditure grouping described in paragraph (c)(4) of this section, and the residual grouping described in paragraph (c)(5) of this section. Adjustments in groupings may be placed in subgroupings, as appropriate, in accordance with paragraph (d) of this section. The IRS may, in its discretion, group adjustments in a manner other than the manner described in this paragraph (c) when such grouping would appropriately reflect the facts and circumstances. For requests to modify the groupings, see § 301.6225–2(d)(6).

(2) *Reallocation grouping*—(i) *In general.* Any adjustment that allocates or reallocates a partnership-related item to and from a particular partner or partners is a *reallocation adjustment.* Except in the case of an adjustment to a credit (as described in paragraph (c)(3) of this section) or to a creditable expenditure (as described in paragraph (c)(4) of this section), reallocation adjustments are placed in the reallocation grouping. Adjustments that reallocate a credit to and from a particular partner or partners are placed in the credit grouping (see paragraph (c)(3) of this section), and adjustments that reallocate a creditable expenditure to and from a particular partner or partners are placed in the creditable expenditure grouping (see paragraph (c)(4) of this section).

(ii) *Each reallocation adjustment results in at least two separate adjustments.* Each reallocation adjustment generally results in at least two separate adjustments. One adjustment reverses the effect of the improper allocation of a partnership-related item, and the other adjustment effectuates the proper allocation of the partnership-related item. Generally, a reallocation adjustment results in one positive adjustment (as defined in paragraph (d)(2)(iii) of this section) and one negative adjustment (as defined in paragraph (d)(2)(ii) of this section).

(3) *Credit grouping.* Each adjustment to a partnership-related item that is reported or could be reported by a partnership as a credit on the partnership's return, including a reallocation adjustment, is placed in the credit grouping.

(4) *Creditable expenditure grouping*—(i) *In general.* Each adjustment to a creditable expenditure, including a reallocation adjustment to a creditable expenditure, is placed in the creditable expenditure grouping.

(ii) *Adjustment to a creditable expenditure*—(A) *In general.* For purposes of this section, an adjustment to a partnership-related item is treated as an adjustment to a creditable expenditure if any person could take the item that is adjusted (or item as adjusted if the item was not originally reported by the partnership) as a credit. See § 1.704–1(b)(4)(ii) of this chapter. For instance, if the adjustment is a reduction of qualified research expenses, the adjustment is to a creditable expenditure for purposes of this section because any person allocated the qualified research expenses by the partnership could claim a credit with respect to their allocable portion of such expenses under section 41, rather than a deduction under section 174.

(B) *Creditable foreign tax expenditures.* The creditable expenditure grouping includes each adjustment to a creditable foreign tax expenditure (CFTE) as defined in § 1.704–1(b)(4)(viii)(*b*) of this chapter, including any reallocation adjustment to a CFTE.

(5) *Residual grouping*—(i) *In general.* Any adjustment to a partnership-related item not described in paragraph (c)(2), (3), or (4) of this section is placed in the residual grouping.

(ii) *Adjustments to partnership-related items that are not allocated under section 704(b).* The residual grouping includes any adjustment to a partnership-related item that derives from an item that would not have been required to be allocated by the partnership to a reviewed year partner under section 704(b).

(6) *Recharacterization adjustments*—(i) *Recharacterization adjustment defined.* An adjustment that changes the character of a partnership-related item is a recharacterization adjustment. For instance, an adjustment that changes a loss from ordinary to capital or from active to passive is a recharacterization adjustment.

(ii) *Grouping recharacterization adjustments.* A recharacterization adjustment is placed in the appropriate grouping as described in paragraphs (c)(2) through (5) of this section.

(iii) *Recharacterization adjustments result in two partnership adjustments.* In general, a recharacterization adjustment results in at least two separate adjustments in the appropriate grouping under paragraph (c)(6)(ii) of this section. One adjustment reverses the improper characterization of the partnership-related item, and the other adjustment effectuates the proper characterization of the partnership-related item. A recharacterization adjustment results in two adjustments regardless of whether the amount of the partnership-related item is being adjusted. Generally, recharacterization adjustments result in one positive

adjustment and one negative adjustment.

(d) *Subgroupings*—(1) *In general.* If any partnership adjustment within any grouping described in paragraph (c) of this section is a negative adjustment, the adjustments within that grouping are subgrouped in accordance with this paragraph (d). If all partnership adjustments within the groupings are positive adjustments, this paragraph (d) does not apply, and no adjustment within the groupings is subgrouped in accordance with this paragraph (d). The IRS may, in its discretion, subgroup adjustments in a manner other than the manner described in this paragraph (d) when such subgrouping would appropriately reflect the facts and circumstances. For requests to modify the subgroupings, see § 301.6225–2(d)(6).

(2) *Definition of negative adjustments and positive adjustments*—(i) *In general.* For purposes of this section, partnership adjustments made by the IRS are treated as follows:

(A) An increase in an item of gain is treated as an increase in an item of income;

(B) A decrease in an item of gain is treated as a decrease in an item of income;

(C) An increase in an item of loss or deduction is treated as a decrease in an item of income; and

(D) A decrease in an item of loss or deduction is treated as an increase in an item of income.

(ii) *Negative adjustment.* A *negative adjustment* is any adjustment that is a decrease in an item of income, a partnership adjustment treated under paragraph (d)(2)(i) of this section as a decrease in an item of income, or an increase in an item of credit.

(iii) *Positive adjustment*—(A) *In general.* A *positive adjustment* is any adjustment that is not a negative adjustment as defined in paragraph (d)(2)(ii) of this section.

(B) *Treatment of adjustments that cannot be allocated under section 704(b).* For purposes of determining an imputed underpayment under this section, an adjustment described in paragraph (c)(5)(ii) of this section that could result in an increase in income or decrease in a loss, deduction, or credit for any person without regard to any particular person's specific circumstances is treated as a positive adjustment to income to the extent appropriate.

(3) *Subgrouping rules*—(i) *In general.* Except as otherwise provided in this paragraph (d)(3), an adjustment is subgrouped according to how the adjustment would be required to be taken into account separately under section 702(a) or any other provision of the Code or regulations applicable to the adjusted partnership-related item. For purposes of creating subgroupings under this section, if any adjustment could be subject to any preference, limitation, or restriction under the Code (or not allowed, in whole or in part, against ordinary income) if taken into account by any person, the adjustment is placed in a separate subgrouping from all other adjustments within the grouping. A negative adjustment that is not otherwise required to be placed in its own subgrouping under this paragraph (d)(3) must be placed in the same subgrouping as another adjustment if the negative adjustment and the other adjustment would have been properly netted at the partnership level and such netted amount would have been required to be allocated to the partners of the partnership as a single partnership-related item for purposes of section 702(a) or other provision of the Code and regulations.

(ii) *Subgrouping reallocation adjustments*—(A) *Reallocation adjustments in the reallocation grouping.* Each positive adjustment and each negative adjustment resulting from a reallocation adjustment as described in paragraph (c)(2)(ii) of this section is placed in its own separate subgrouping within the reallocation grouping. For instance, if the reallocation adjustment reallocates a deduction from one partner to another partner, the decrease in the deduction (positive adjustment) allocated to the first partner is placed in a subgrouping within the reallocation grouping separate from the increase in the deduction (negative adjustment) allocated to the second partner. If a particular partner or group of partners has two or more reallocation adjustments allocable to such partner or group, such adjustments may be subgrouped in accordance with paragraph (d)(3)(i) of this section and netted in accordance with paragraph (e) of this section.

(B) *Reallocation adjustments in the credit grouping.* In the case of a reallocation adjustment to a credit, which is placed in the credit grouping pursuant to paragraph (c)(3) of this section, the decrease in credits allocable to one partner or group of partners is treated as a positive adjustment, and the increase in credits allocable to another partner or group of partners is treated as a negative adjustments. Each positive adjustment and each negative adjustment resulting from a reallocation adjustment to credits is placed in its own separate subgrouping within the credit grouping.

(iii) *Subgroupings within the creditable expenditure grouping*—(A) *In general.* Each adjustment in the creditable expenditure grouping described in paragraph (c)(4) of this section is subgrouped in accordance with this paragraph (d)(3)(iii).

(B) *Subgroupings for adjustments to CFTEs.* Each adjustment to a CFTE is subgrouped based on the separate category of income to which the CFTE relates in accordance with section 904(d) and the regulations thereunder, and to account for any different allocation of the CFTE between partners. Two or more adjustments to CFTEs are included within the same subgrouping only if each adjustment relates to CFTEs in the same separate category, and each adjusted partnership-related item would be allocated to the partners in the same ratio had those items been properly reflected on the partnership return for the reviewed year.

(C) *Other creditable expenditures.* [Reserved]

(iv) *Subgrouping recharacterization adjustments.* Each positive adjustment and each negative adjustment resulting from a recharacterization adjustment as described in paragraph (c)(6) of this section is placed in its own separate subgrouping within the residual grouping. If a particular partner or group of partners has two or more recharacterization adjustments allocable to such partner or group, such adjustments may be subgrouped in accordance with paragraph (d)(3)(i) of this section and netted in accordance with paragraph (e) of this section.

(e) *Netting adjustments within each grouping or subgrouping*—(1) *In general.* All adjustments within a subgrouping determined in accordance with paragraph (d) of this section are netted in accordance with this paragraph (e) to determine whether there is a net positive adjustment (as defined in paragraph (e)(4)(i) of this section) or net negative adjustment (as defined in paragraph (e)(4)(ii) of this section) for that subgrouping. If paragraph (d) of this section does not apply because a grouping only includes positive adjustments, all adjustments in that grouping are netted in accordance with this paragraph (e). For purposes of this paragraph (e), netting means summing all adjustments together within each grouping or subgrouping, as appropriate.

(2) *Limitations on netting adjustments.* Positive adjustments and negative adjustments may only be netted against each other if they are in the same grouping or subgrouping in accordance with the rules in paragraphs

(c) and (d) of this section. An adjustment in one grouping or subgrouping may not be netted against an adjustment in any other grouping or subgrouping. Adjustments from one taxable year may not be netted against adjustments from another taxable year.

(3) *Results of netting adjustments within groupings or subgroupings*—(i) *Groupings other than the credit and creditable expenditure groupings.* Except as described in paragraphs (e)(3)(ii) and (iii) of this section, each net positive adjustment (as defined in paragraph (e)(4)(i) of this section) with respect to a particular grouping or subgrouping that results after netting the adjustments in accordance with this paragraph (e) is included in the calculation of the total netted partnership adjustment under paragraph (b)(2) of this section. Each net negative adjustment (as defined in paragraph (e)(4)(ii) of this section) with respect to a grouping or subgrouping that results after netting the adjustments in accordance with this paragraph (e) is excluded from the calculation of the total netted partnership adjustment under paragraph (b)(2) of this section. Adjustments underlying a net negative adjustment described in the preceding sentence are adjustments that do not result in an imputed underpayment (as described in paragraph (f) of this section).

(ii) *Credit grouping.* Any net positive adjustment or net negative adjustment in the credit grouping (including any such adjustment with respect to a subgrouping within the credit grouping) is excluded from the calculation of the total netted partnership adjustment. A net positive adjustment or net negative adjustment described in this paragraph (e)(3)(ii) is taken into account under paragraph (b)(1)(v) of this section, except for negative adjustments to credits resulting from a reallocation adjustment that were placed in a separate subgrouping pursuant to paragraph (d)(3)(ii)(B) of this section. A negative adjustment to a credit placed in its separate subgrouping under paragraph (d)(3)(ii)(B) of this section is treated as an adjustment that does not result in an imputed underpayment in accordance with paragraph (f)(1)(i) of this section.

(iii) *Treatment of creditable expenditures*—(A) *Creditable foreign tax expenditures.* A net decrease to a CFTE in any CFTE subgrouping (as described in paragraph (d)(3)(iii)(B) of this section) is treated as a net positive adjustment described in paragraph (e)(3)(ii) of this section. A net increase to a CFTE in any CFTE subgrouping is treated as a net negative adjustment described in paragraph (e)(3)(i) of this section.

(B) *Other creditable expenditures.* [Reserved]

(4) *Net positive adjustment and net negative adjustment defined*—(i) *Net positive adjustment.* A *net positive adjustment* means an amount that is greater than zero which results from netting adjustments within a grouping or subgrouping in accordance with this paragraph (e). A net positive adjustment includes a positive adjustment that was not netted with any other adjustment. A net positive adjustment includes a net decrease in an item of credit.

(ii) *Net negative adjustment.* A *net negative adjustment* means any amount which results from netting adjustments within a grouping or subgrouping in accordance with this paragraph (e) that is not a net positive adjustment (as defined in paragraph (e)(4)(i) of this section). A net negative adjustment includes a negative adjustment that was not netted with any other adjustment.

(f) *Partnership adjustments that do not result in an imputed underpayment*—(1) *In general.* Except as otherwise provided in paragraph (e) of this section, a partnership adjustment does not result in an imputed underpayment if—

(i) After grouping, subgrouping, and netting the adjustments as described in paragraphs (c), (d), and (e) of this section, the result of netting with respect to any grouping or subgrouping that includes a particular partnership adjustment is a net negative adjustment (as described in paragraph (e)(4)(ii) of this section); or

(ii) The calculation under paragraph (b)(1) of this section results in an amount that is zero or less than zero.

(2) *Treatment of an adjustment that does not result in an imputed underpayment.* Any adjustment that does not result in an imputed underpayment (as described in paragraph (b)(2) of this section) is taken into account by the partnership in the adjustment year in accordance with § 301.6225–3. If the partnership makes an election pursuant to section 6226 with respect to an imputed underpayment, the adjustments that do not result in that imputed underpayment that are associated with that imputed underpayment (as described in paragraph (g)(2)(iii)(B) of this section) are taken into account by the reviewed year partners in accordance with § 301.6226–3.

(g) *Multiple imputed underpayments in a single administrative proceeding*—(1) *In general.* The IRS, in its discretion, may determine that partnership adjustments for the same partnership taxable year result in more than one imputed underpayment. The determination of whether there is more than one imputed underpayment for any partnership taxable year, and if so, which partnership adjustments are taken into account to calculate any particular imputed underpayment is based on the facts and circumstances and nature of the partnership adjustments. See § 301.6225–2(d)(6) for modification of the number and composition of imputed underpayments.

(2) *Types of imputed underpayments*—(i) *In general.* There are two types of imputed underpayments: A general imputed underpayment (described in paragraph (d)(2)(ii) of this section) and a specific imputed underpayment (described in paragraph (d)(2)(iii) of this section). Each type of imputed underpayment is separately calculated in accordance with this section.

(ii) *General imputed underpayment.* The general imputed underpayment is calculated based on all adjustments (other than adjustments that do not result in an imputed underpayment under paragraph (f) of this section) that are not taken into account to determine a specific imputed underpayment under paragraph (g)(2)(iii) of this section. There is only one general imputed underpayment in any administrative proceeding. If there is one imputed underpayment in an administrative proceeding, it is a general imputed underpayment and may take into account adjustments described in paragraph (g)(2)(iii) of this section, if any, and all adjustments that do not result in that general imputed underpayment (as described in paragraph (e) of this section) are associated with that general imputed underpayment.

(iii) *Specific imputed underpayment*—(A) *In general.* The IRS may, in its discretion, designate a specific imputed underpayment with respect to adjustments to a partnership-related item or items that were allocated to one partner or a group of partners that had the same or similar characteristics or that participated in the same or similar transaction or on such other basis as the IRS determines properly reflects the facts and circumstances. The IRS may designate more than one specific imputed underpayment with respect to any partnership taxable year. For instance, in a single partnership taxable year there may be a specific imputed underpayment with respect to adjustments related to a transaction affecting some, but not all, partners of the partnership (such as adjustments

that are specially allocated to certain partners) and a second specific imputed underpayment with respect to adjustments resulting from a reallocation of a distributive share of income from one partner to another partner. The IRS may, in its discretion, determine that partnership adjustments that could be taken into account to calculate one or more specific imputed underpayments under this paragraph (g)(2)(iii)(A) for a partnership taxable year are more appropriately taken into account in determining the general imputed underpayment for such taxable year. For instance, the IRS may determine that it is more appropriate to calculate only the general imputed underpayment if, when calculating the specific imputed underpayment requested by the partnership, there is an increase in the number of the partnership adjustments that after grouping and netting result in net negative adjustments and are disregarded in calculating the specific imputed underpayment.

(B) *Adjustments that do not result in an imputed underpayment associated with a specific imputed underpayment.* If the IRS designates a specific imputed underpayment, the IRS will designate which adjustments that do not result in an imputed underpayment, if any, are appropriate to associate with that specific imputed underpayment. If the adjustments underlying that specific imputed underpayment are reallocation adjustments or recharacterization adjustments, the net negative adjustment that resulted from the reallocation or recharacterization is associated with the specific imputed underpayment. Any adjustments that do not result in an imputed underpayment that are not associated with a specific imputed underpayment under this paragraph (d)(2)(iii)(B) are associated with the general imputed underpayment.

(h) *Examples.* The following examples illustrate the rules of this section. For purposes of these examples, each partnership is subject to the provisions of subchapter C of chapter 63 of the Code, each partnership and its partners are calendar year taxpayers, all partners are U.S. persons (unless otherwise stated), the highest rate of income tax in effect for all taxpayers is 40 percent for all relevant periods, and no partnership requests modification under § 301.6225–2.

Example 1. Partnership reports on its 2019 partnership return $100 of ordinary income and an ordinary deduction of <$70>. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year and determines that ordinary income was $105 instead of $100 ($5 adjustment) and that the ordinary deduction was <$80> instead of <$70> (<$10> adjustment). Pursuant to paragraph (c) of this section, the adjustments are both in the residual grouping. The <$10> adjustment to the ordinary deduction would result in a decrease in the imputed underpayment if netted with the $5 adjustment to ordinary income. Because the <$10> adjustment to the ordinary deduction might be limited if taken into account by any person, it is grouped in a separate subgrouping from the $5 adjustment to ordinary income. The total netted partnership adjustment is $5, which results in an imputed underpayment of $2. The <$10> adjustment to the ordinary deduction is a net negative amount and is an adjustment that does not result in an imputed underpayment which is taken into account by Partnership in the adjustment year in accordance with § 301.6225–3.

Example 2. The facts are the same as *Example 1* of this paragraph (h), except that the <$10> adjustment would not be limited if taken into account by any of its partners (direct or indirect). The IRS may, in its discretion, group the $5 adjustment and the <$10> adjustment together in the residual grouping. As a result, the $5 and the <$10> adjustments are netted under paragraph (e) of this section. Such netting results in a net negative adjustment (as defined under paragraph (e)(4)(ii)) in the residual grouping of <$5> under paragraph (e) of this section. Pursuant to paragraph (f) of this section, the <$5> net negative adjustment is an adjustment that does not result in an imputed underpayment. Therefore, since the only net adjustment is an adjustment that does not result in an imputed underpayment, there is no imputed underpayment.

Example 3. Partnership reports on its 2019 partnership return ordinary income of $300, long-term capital gain of $125, long-term capital loss of <$75>, a depreciation deduction of <$100>, and a tax credit that can be claimed by the partnership of $5. In an administrative proceeding with respect to Partnership's 2019 taxable year, the IRS determines that ordinary income is $500 ($200 adjustment), long-term capital gain is $200 ($75 adjustment), long-term capital loss is <$25> ($50 adjustment), the depreciation deduction is <$70> ($30 adjustment), and the tax credit is $3 ($2 adjustment). Pursuant to paragraph (c) of this section, the tax credit is in the credit grouping under paragraph (c)(3) of this section. The remaining adjustments are part of the residual grouping under paragraph (c)(5) of this section. Pursuant to paragraph (d)(2) of this section, all of the adjustments in the residual grouping are positive adjustments. Because there are no negative adjustments, there is no need for further subgrouping within the residual grouping. Under paragraph (b)(2), the adjustments in the residual grouping are summed for a total netted partnership adjustment of $355. Under paragraph (b)(1)(iv) of this section, the total netted partnership adjustment is multiplied by 40 percent (highest tax rate in effect), which results in $142. Under paragraph (b)(1)(iv) of this section, the $142 is increased by the $2 credit adjustment, resulting in an imputed underpayment of $144.

Example 4. Partnership reported on its 2019 partnership return long-term capital gain of $125 and long-term capital loss of <$75>. In an administrative proceeding with respect to Partnership's 2019 taxable year, the IRS determines the long-term capital gain should have been reported as ordinary income of $125. There are no other adjustments for the 2019 taxable year. This recharacterization adjustment results in two adjustments in the residual grouping pursuant to paragraph (c)(6) of this section: an increase in ordinary income of $125 ($125 adjustment) as well as a decrease of long-term capital gain of $125 (<$125> adjustment). The decrease in long-term capital gain is a negative adjustment under paragraph (d)(2)(ii) of this section and the increase in ordinary income is a positive adjustment under paragraph (d)(2)(iii) of this section. Under paragraph (d)(3)(i) of this section, the adjustment to long-term capital gain is placed in a subgrouping separate from the adjustment to ordinary income because the reduction of long-term capital gain is required to be taken into account separately pursuant to section 702(a). The $125 decrease in long-term capital gain is a net negative adjustment in the long-term capital subgrouping and as a result is an adjustment that does not result in an imputed underpayment under paragraph (f) of this section. The $125 increase in ordinary income results in a net positive adjustment under paragraph (e)(4)(i) of this section. Because the ordinary subgrouping is the only subgrouping resulting in a net positive adjustment, $125 is the total netted partnership adjustment under paragraph (b)(2) of this section. Under paragraph (b)(1)(iv) of this section, $125 is multiplied by 40 percent resulting in an imputed underpayment of $50.

Example 5. Partnership reported a $100 deduction for certain expenses on its 2019 partnership return and an additional $100 deduction with respect to the same type of expenses on its 2020 partnership return. The IRS initiates an administrative proceeding with respect to Partnership's 2019 and 2020 taxable years and determines that Partnership improperly accelerated accrual of a portion of the expenses with respect to the deduction in 2019 that should have been taken into account in 2020. Therefore, for taxable year 2019, the IRS determines that Partnership should have reported a deduction of $75 with respect to the expenses ($25 adjustment in the 2019 residual grouping). For 2020, the IRS determines that Partnership should have reported a deduction of $125 with respect to these expenses (<$25> adjustment in the 2020 residual grouping). There are no other adjustments for the 2019 and 2020 partnership taxable years. Pursuant to paragraph (e)(2) of this section, the adjustments for 2019 and 2020 are not netted with each other. The 2019 adjustment of $25 is the only adjustment for that year and a net positive adjustment under paragraph (e)(4)(i) of this section, and therefore the total netted partnership adjustment for 2019 is $25 pursuant to paragraph (b)(2) of this section. The $25 total netted partnership adjustment is multiplied by 40 percent resulting in an imputed underpayment of $10 for

Partnership's 2019 taxable year. The $25 increase in the deduction for 2020 a net negative adjustment under paragraph (e)(4)(ii) of this section is an adjustment that does not result in an imputed underpayment for that year. Therefore, there is no imputed underpayment for 2020.

Example 6. On its partnership return for the 2020 taxable year, Partnership reported ordinary income of $100 and a capital gain of $50. Partnership had four equal partners during the 2020 tax year, all of whom were individuals. On its partnership return for the 2020 tax year, the capital gain was allocated to partner E and the ordinary income was allocated to all partners based on their interests in Partnership. In an administrative proceeding with respect to Partnership's 2020 taxable year, the IRS determines that for 2020 the capital gain allocated to E should have been $75 instead of $50 and that Partnership should have recognized an additional $10 in ordinary income. In the NOPPA mailed by the IRS, the IRS may determine pursuant to paragraph (g) of this section that there is a general imputed underpayment with respect to the increase in ordinary income and a specific imputed underpayment with respect to the increase in capital gain specially allocated to E.

Example 7. On its partnership return for the 2020 taxable year, Partnership reported a recourse liability of $100. During an administrative proceeding with respect to Partnership's 2020 taxable year, the IRS determines that the $100 recourse liability should have been reported as a $100 nonrecourse liability. Under paragraph (d)(2)(iii)(B), the adjustment to the character of the liability results in a $100 increase in income because such recharacterization of a liability could result in up to $100 in taxable income if taken into account by any person. The $100 increase in income is a positive adjustment in the residual grouping under paragraph (c)(5)(ii) of this section. There are no other adjustments for the 2020 partnership taxable year. The $100 positive adjustment is treated as a net positive adjustment under paragraph (e)(4)(i) of this section, and the total netted partnership adjustment under paragraph (b)(2) of this section is $100. Pursuant to paragraph (b)(1) of this section, the total netted partnership adjustment is multiplied by 40 percent for an imputed underpayment of $40.

Example 8. Partnership reports on its 2019 partnership return $400 of CFTEs in the general category under section 904(d). The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year and determines that the amount of CFTEs was $300 instead of $400 (<$100> adjustment to CFTEs). No other adjustments are made for the 2019 taxable year. The <$100> adjustment to CFTEs is placed in the creditable expenditure grouping described in paragraph (c)(4) of this section. Pursuant to paragraph (e)(3)(iii) of this section, the decrease to CFTEs in the creditable expenditure grouping is treated as a positive adjustment to (decrease in) credits in the credit grouping under paragraph (c)(3) of this section. Because no other adjustments have been made, the $100 decrease in credits produces an imputed underpayment of $100 under paragraph (b)(1) of this section.

Example 9. Partnership reports on its 2019 partnership return $400 of CFTEs in the passive category under section 904(d). The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year and determines that the CFTEs reported by Partnership were general category instead of passive category CFTEs. No other adjustments are made. Under the rules in paragraph (c)(6) of this section, an adjustment to the category of a CFTE is treated as two separate adjustments: An increase to general category CFTEs of $400 and a decrease to passive category CFTEs of $400. Both adjustments are included in the creditable expenditure grouping under paragraph (c)(4) of this section, but they are included in separate subgroupings. Therefore, the two amounts do not net. Instead, the $400 increase to CFTEs in the general category subgrouping is treated as a net negative adjustment under paragraph (e)(3)(iii)(A) of this section and is an adjustment that does not result in an imputed underpayment under paragraph (f) of this section. The decrease to CFTEs in the passive category subgrouping of the creditable expenditure grouping results in a decrease in CFTEs. Therefore, pursuant to paragraph (e)(3)(iii)(A) of this section, it is treated as a decrease in credits in the credit grouping under paragraph (c)(3) of this section, which results in an imputed underpayment of $400 under paragraph (b)(1) of this section.

Example 10. Partnership has two partners, A and B. Under the partnership agreement, $100 of the CFTE is specially allocated to A for the 2019 taxable year. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year and determines that $100 of CFTE should be reallocated from A to B. Because the adjustment reallocates a creditable expenditure, paragraph (c)(4) of this section provides that it is included in the creditable expenditure grouping rather than the reallocation grouping. The partnership adjustment is a <$100> adjustment to general category CFTE allocable to A and an increase of $100 to general category CFTE allocable to B. Pursuant to paragraph (d)(3)(iii) of this section, the <$100> adjustment to general category CFTE and the increase of $100 to general category CFTE are included in separate subgroupings in the creditable expenditure grouping. The $100 increase in general category CFTEs, B-allocation subgrouping, is a net negative adjustment, which does not result in an imputed underpayment and is therefore taken into account by the partnership in the adjustment year in accordance with § 301.6225–3. The net decrease to CFTEs in the general-category, A-allocation subgrouping, is treated as a decrease to credits in the credit grouping under paragraph (c)(3) of this section, resulting in an imputed underpayment of $100 under paragraph (b)(1) of this section.

Example 11. Partnership has two partners, A and B. Partnership owns two entities, DE1 and DE2, that are disregarded as separate from their owner for Federal tax purposes and are operating in and paying taxes to foreign jurisdictions. The partnership agreement provides that all items from DE1 and DE2 are allocable to A and B in the following manner. Items related to DE1: To A 75% and to B 25%. Items related to DE2: To A 25% and to B 75%. On Partnership's 2018 return, Partnership reports CFTEs in the general category of $300, $100 with respect to DE1 and $200 with respect to DE2. Partnership allocates the $300 of CFTEs $125 and $175 to A and B respectively. During an administrative proceeding with respect to Partnership's 2018 taxable year, the IRS determines that Partnership understated the amount of creditable foreign tax paid by DE2 by $40 and overstated the amount of creditable foreign tax paid by DE1 by $80. No other adjustments are made. Because the two adjustments each relate to CFTEs that are subject to different allocations, the two adjustments are in different subgroupings under paragraph (d)(3)(iii)(B) of this section. The adjustment reducing the CFTEs related to DE1 results in a decrease in CFTEs within that subgrouping and under paragraph (e)(3)(iii)(A) of this section is treated as a decrease in credits in the credit grouping under paragraph (c)(3) of this section and results in an imputed underpayment of $80 under paragraph (b)(1) of this section. The increase of $40 of general category CFTE related to the DE2 subgrouping results in an increase in CFTEs within that subgrouping and is treated as a net negative adjustment, which does not result in an imputed underpayment and is taken into account in the adjustment year in accordance with § 301.6225–3.

(i) *Applicability date*—(1) *In general.* Except as provided in paragraph (i)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22T is in effect.

■ **Par. 9.** Section 301.6225–2 is added to read as follows:

§ 301.6225–2 Modification of Imputed Underpayment.

(a) *Partnership may request modification of an imputed underpayment.* A partnership that has received a notice of proposed partnership adjustment (NOPPA) under section 6231(a)(2) from the Internal Revenue Service (IRS) may request modification of a proposed imputed underpayment set forth in the NOPPA in accordance with this section and any forms, instructions, and other guidance prescribed by the IRS. The effect of modification on a proposed imputed underpayment is described in paragraph (b) of this section. Unless otherwise described in paragraph (d) of this section, a partnership may request any type of modification of an imputed underpayment described in paragraph (d) of this section in the time and manner described in paragraph (c) of

this section. A partnership may request modification with respect to a partnership adjustment (as defined in § 301.6241–1(a)(6)) that does not result in an imputed underpayment (as described in § 301.6225–1(f)(1)(ii)) as described in paragraph (e) of this section. Only the partnership representative may request modification under this section. See section 6223 and § 301.6223–2 for rules regarding the binding authority of the partnership representative. For purposes of this section, the term relevant partner means any person for whom modification is requested by the partnership that is—

(1) A reviewed year partner (as defined in § 301.6241–1(a)(9)), including any pass-through partner (as defined in § 301.6241–1(a)(5)), except for any reviewed year partner that is a wholly-owned entity disregarded as separate from its owner for Federal tax purposes, or

(2) An indirect partner (as defined in § 301.6241–1(a)(4)) except for any indirect partner that is a wholly-owned entity disregarded as separate from its owner for Federal tax purposes.

(b) *Effect of modification*—(1) *In general.* A modification of an imputed underpayment under this section that is approved by the IRS may result in an increase or decrease in the amount of an imputed underpayment set forth in the NOPPA. A modification under this section has no effect on the amount of any partnership adjustment determined under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63). See paragraph (e) of this section for the effect of modification on adjustments that do not result in an imputed underpayment. A modification may increase or decrease an imputed underpayment by affecting the extent to which adjustments factor into the determination of the imputed underpayment (as described in paragraph (b)(2) of this section), the tax rate that is applied in calculating the imputed underpayment (as described in paragraph (b)(3) of this section), and the number and composition of imputed underpayments, including the placement of adjustments in groupings and subgroupings (if applicable) (as described in paragraph (b)(4) of this section), as well as to the extent of other modifications allowed under rules provided in forms, instructions, or other guidance prescribed by the IRS (as described in paragraph (b)(5) of this section). If a partnership requests more than one modification under this section, modifications are taken into account in the following order:

(i) Modifications that affect the extent to which an adjustment factors into the determination of the imputed underpayment under paragraph (b)(2) of this section;

(ii) Modification of the number and composition of imputed underpayments under paragraph (b)(4) of this section;

(iii) Modifications that affect the tax rate under paragraph (b)(3) of this section.

(2) *Modifications that affect partnership adjustments for purposes of determining the imputed underpayment.* If the IRS approves modification with respect to a partnership adjustment, such partnership adjustment is excluded from the determination of the imputed underpayment as determined under § 301.6225–1(b). This paragraph (b)(2) applies to modifications under—

(i) Paragraph (d)(2) of this section (amended returns and the alternative procedure to filing amended returns);

(ii) Paragraph (d)(3) of this section (tax exempt status);

(iii) Paragraph (d)(5) of this section (specified passive activity losses);

(iv) Paragraph (d)(7) of this section (qualified investment entities);

(v) Paragraph (d)(8) of this section (closing agreements), if applicable;

(vi) Paragraph (d)(9) of this section (tax treaty modifications), if applicable; and

(vii) Paragraph (d)(10) of this section (other modifications), if applicable.

(3) *Modifications that affect the tax rate*—(i) *In general.* If the IRS approves a modification with respect to the tax rate applied to a partnership adjustment, such modification results in a reduction in tax rate applied to the total netted partnership adjustment with respect to the partnership adjustments in accordance with this paragraph (b)(3). A modification of the tax rate does not affect how the partnership adjustment factors into the calculation of the total netted partnership adjustment. This paragraph (b)(3) applies to modifications under—

(A) Paragraph (d)(4) of this section (rate modification);

(B) Paragraph (d)(8) of this section (closing agreements), if applicable;

(C) Paragraph (d)(9) of this section (tax treaty modifications), if applicable; and

(D) Paragraph (d)(10) of this section (other modifications), if applicable.

(ii) *Determination of the imputed underpayment in the case of rate modification.* Except as described in paragraph (b)(3)(iv) of this section, in the case of an approved modification described under paragraph (b)(3)(i) of this section, the imputed underpayment is the sum of the total netted partnership adjustment consisting of the net positive adjustments not subject to rate reduction under paragraph (b)(3)(i) of this section (taking into account any approved modifications under paragraph (b)(2) of the section), plus the *rate-modified netted partnership adjustment* determined under paragraph (b)(3)(iii) of this section, reduced or increased by any adjustments to credits (taking into account any modifications under paragraph (b)(4) of this section). The total netted partnership adjustment not subject to rate reduction under paragraph (b)(3)(i) of this section (taking into account any approved modifications under paragraph (b)(2) of the section) is determined by multiplying the partnership adjustments included in the total netted partnership adjustment that are not subject to rate modification under paragraph (b)(3)(i) of this section (including any partnership adjustment that remains after applying paragraph (b)(3)(iii) of this section) by the highest tax rate (as described in § 301.6225–1(b)(1)(iv)).

(iii) *Calculation of rate-modified netted partnership adjustment in the case of a rate modification.* The *rate-modified netted partnership adjustment* is determined as follows—

(A) Determine each relevant partner's distributive share of the partnership adjustments subject to an approved modification under paragraph (b)(3)(i) of this section based on how each adjustment subject to rate modification would be properly allocated under section 702 to such relevant partner in the reviewed year (as defined in § 301.6241–1(a)(8)).

(B) Multiply each partnership adjustment determined under paragraph (b)(3)(iii)(A) of this section by the tax rate applicable to such adjustment based on the approved modification described under paragraph (b)(3)(i) of this section.

(C) Add all of the amounts calculated under paragraph (b)(3)(iii)(B) of this section with respect to each partnership adjustment subject to an approved modification described under paragraph (b)(3)(i) of this section.

(iv) *Rate modification in the case of special allocations.* If an imputed underpayment results from adjustments to more than one partnership-related item and any relevant partner for whom modification described under paragraph (b)(3)(i) of this section is approved has a distributive share of such items that is not the same with respect to all such items, the imputed underpayment as modified based on the modification types described under paragraph (b)(3)(i) of this section is determined as described in paragraphs (b)(3)(ii) and (iii) of this section except that each relevant partner's distributive share is

determined based on the amount of net gain or loss to the partner that would have resulted if the partnership had sold all of its assets at their fair market value as of the close of the reviewed year appropriately adjusted to reflect any approved modification under paragraphs (d)(2) and (3) and (d)(5) through (10) of this section with respect to any relevant partner. Upon request by the IRS, the partnership may be required to provide the relevant partners' capital account calculation through the end of the reviewed year, a calculation of asset liquidation gain or loss, and any other information necessary to determine whether rate modification is appropriate, consistent with the rules of paragraph (c)(2) of this section.

(4) *Modification of the number and composition of imputed underpayments.* Once approved by the IRS, a modification under paragraph (d)(6) of this section affects the manner in which adjustments are placed into groupings and subgroupings (as described in § 301.6225–1(c) and (d)) or whether the IRS designates one or more specific imputed underpayments (as described in § 301.6225–1(g)). If the IRS approves a request for modification under this paragraph (b)(4), the imputed underpayment and any specific imputed underpayment affected by or resulting from the modification is determined according to the rules of § 301.6225–1 subject to any other modifications approved by the IRS under this section.

(5) *Other modifications.* The effect of other modifications described in paragraph (d)(10) of this section, including the order that such modification will be taken into account for purposes of paragraph (b)(1) of this section, may be set forth in forms, instructions, or other guidance prescribed by the IRS.

(c) *Time, form, and manner for requesting modification*—(1) *In general.* In addition to the requirements described in paragraph (d) of this section, a request for modification under this section must be submitted in accordance with, and include the information required by, the forms, instructions, and other guidance prescribed by the IRS. The partnership representative must submit any request for modification and all relevant information (including information required under paragraphs (c)(2) and paragraph (d) of this section) to the IRS within the time described in paragraph (c)(3) of this section. The IRS will notify the partnership representative in writing of the approval or denial, in whole or in part, of any request for modification. A request for modification, including a request by the IRS for information related to a request for modification, and the determination by the IRS to approve or not approve all or a portion of a request for modification, is part of the administrative proceeding with respect to the partnership under subchapter C of chapter 63 and does not constitute an examination, inspection, or other administrative proceeding with respect to any other person for purposes of section 7605(b).

(2) *Partnership must substantiate facts supporting a request for modification*—(i) *In general.* A partnership requesting modification under this section must substantiate the facts supporting such a request to the satisfaction of the IRS. The documents and other information necessary to substantiate a particular request for modification are based on the facts and circumstances of each request, as well as the type of modification requested under paragraph (d) of this section, and may include tax returns, partnership operating documents, certifications in the form and manner required with respect to the particular modification, and any other information necessary to support the requested modification. The IRS may, in forms, instructions, or other guidance, set forth procedures with respect to information and documents supporting the modification, including procedures to require particular documents or other information to substantiate a particular type of modification, the manner for submitting documents and other information to the IRS, and recordkeeping requirements. The IRS will deny a request for modification if a partnership fails to provide information the IRS determines is necessary to substantiate a request for modification within the time restrictions described in paragraph (c) of this section.

(ii) *Information to be furnished for any modification request.* In the case of any modification request, the partnership representative must furnish to the IRS a detailed description of the partnership's structure, allocations, ownership, and ownership changes, its relevant partners for each taxable year relevant to the request for modification, as well as the partnership agreement as defined in § 1.704–1(b)(2)(ii)(h) of this chapter for each taxable year relevant to the modification request. In the case of any modification request with respect to a relevant partner that is an indirect partner, the partnership representative must provide to the IRS any information that the IRS may require relevant to any pass-through partner through which the relevant partner holds its interest in the partnership. For instance, if the partnership requests modification with respect to an amended return filed by a relevant partner pursuant to paragraph (d)(2) of this section, the partnership representative may be required to provide to the IRS information that would have been required to have been filed by pass-through partners through which the relevant partner holds its interest in the partnership as if those pass-through partners had also filed their own amended returns.

(3) *Time for submitting modification request and information*—(i) *Modification request.* Unless the IRS grants an extension of time, all information required under this section with respect to a request for modification must be submitted to the IRS in the form and manner prescribed by the IRS on or before 270 days after the date the NOPPA is mailed.

(ii) *Extension of the 270-day period.* The IRS may, in its discretion, grant a request for extension of the 270-day period described in paragraph (c)(3)(i) of this section provided the partnership submits such request to the IRS, in the form and manner prescribed by forms, instructions, or other guidance, before expiration of such period, as extended by any prior extension granted under this paragraph (c)(3)(ii).

(iii) *Expiration of the 270-day period by agreement.* The 270-day period described in paragraph (c)(3)(i) of this section (including any extensions under paragraph (c)(3)(ii) of this section) expires as of the date the partnership and the IRS agree, in writing, to waive the 270-day period after the mailing of the NOPPA and before the IRS may issue a notice of final partnership adjustment. See section 6231(b)(2)(A); § 301.6231–1(b)(2).

(4) *Approval of modification by the IRS.* Notification of approval will be provided to the partnership only after receipt of all relevant information (including any supplemental information required by the IRS) and all necessary payments with respect to the particular modification requested before expiration of the 270-day period in paragraph (c)(3)(i) of this section plus any extension granted by the IRS under paragraph (c)(3)(ii) of this section.

(d) *Types of modification*—(1) *In general.* Except as otherwise described in this section, a partnership may request one type of modification or more than one type of modification described in paragraph (d) of this section.

(2) *Amended returns by partners*—(i) *In general.* A partnership may request a modification of an imputed underpayment based on an amended return filed by a relevant partner provided all of the partnership

adjustments properly allocable to such relevant partner are taken into account and any amount due is paid in accordance with this paragraph (d)(2) of this section. Only adjustments to partnership-related items or adjustments to a relevant partner's tax attributes affected by adjustments to partnership-related items may be taken into account on an amended return under paragraph (d)(2) of this section. A partnership may request a modification for purposes of this paragraph (d)(2) by submitting a modification request based on the alternative procedure to filing amended returns as described in paragraph (d)(2)(x) of this section. The partnership may not request an additional modification of any imputed underpayment for a partnership taxable year under this section with respect to any relevant partner that files an amended return (or utilizes the alternative procedure to filing amended returns) under paragraph (d)(2) of this section or with respect to any partnership adjustment allocated to such relevant partner.

(ii) *Requirements for approval of a modification request based on amended return.* Except as otherwise provided under alternative procedures described in paragraph (d)(2)(x) of this section, an amended return modification request under this paragraph (d)(2) will not be approved unless the provisions of this paragraph (d)(2)(ii) are satisfied.

(A) *Full payment required.* An amended return modification request under paragraph (d)(2) of this section will not be approved unless the relevant partner filing the amended return has paid all tax, penalties, additions to tax, additional amounts, and interest due as a result of taking into account the adjustments in the first affected year (as defined in § 301.6226–3(b)(2)) and all modification years (as described in paragraph (d)(2)(ii)(B) of this section) at the time such return is filed with the IRS.

(B) *Amended returns for all relevant taxable years must be filed.* Modification under paragraph (d)(2) of this section will not be approved by the IRS unless a relevant partner files an amended return for the first affected year and any modification year. A *modification year* is any taxable year with respect to which any tax attribute (as defined in § 301.6241–1(a)(10)) of the relevant partner is affected by reason of taking into account the relevant partner's distributive share of all partnership adjustments in the first affected year. A modification year may be a taxable year before or after the first affected year, depending on the effect on the relevant partner's tax attributes of taking into account the relevant partner's distributive share of the partnership adjustments in the first affected year.

(C) *Amended returns for partnership adjustments that reallocate distributive shares.* Except as described in this paragraph (d)(2)(ii)(C), in the case of a partnership adjustment that reallocates the distributive share of any partnership-related item from one partner to another, a modification under paragraph (d)(2) of this section will be approved only if all partners affected by such adjustment file amended returns in accordance with paragraph (d)(2) of this section and all such returns are approved by the IRS for modification purposes. The IRS may determine that the requirements of this paragraph (d)(2)(ii)(C) are satisfied even if not all relevant partners affected by such adjustment file amended returns provided the remaining relevant partners affected by the reallocation take into account their distributive share of the adjustment through other modifications approved by the IRS (including the alternative procedures to filing amended returns under paragraph (d)(2)(x) of this section) or if a pass-through partner takes into account the relevant adjustments in accordance with paragraph (d)(2)(vi) of this section. For instance, in the case of an adjustment that reallocates a loss from one partner to another, the IRS may determine that the requirements of this paragraph (d)(2)(ii)(C) have been satisfied if one affected relevant partner files an amended return taking into account the adjustment and the other affected relevant partner signs a closing agreement with the IRS taking into account the adjustments.

(iii) *Form and manner for filing amended returns.* A relevant partner must file all amended returns required for modification under paragraph (d)(2) of this section with the IRS in accordance with forms, instructions, and other guidance prescribed by the IRS. Except as otherwise provided under alternative procedures described in paragraph (d)(2)(x) of this section, the IRS will not approve modification under paragraph (d)(2) of this section unless prior to the expiration of the 270-day period described in paragraph (c)(3) of this section, the partnership representative provides to the IRS, in the form and manner prescribed by the IRS, an affidavit from each relevant partner signed under penalties of perjury by such partner stating that all of the amended returns required to be filed under paragraph (d)(2) of this section has been filed (including the date on which such amended returns were filed) and that the full amount of tax, penalties, additions to tax, additional amounts, and interest was paid (including the date on which such amounts were paid).

(iv) *Period of limitations.* Generally, the period of limitations under sections 6501 and 6511 do not apply to an amended return filed under this paragraph (d)(2) provided the amended return otherwise meets the requirements of paragraph (d)(2) of this section.

(v) *Amended returns in the case of adjustments allocated through certain pass-through partners.* A request for modification related to an amended return of a relevant partner that is an indirect partner holding its interest in the partnership through a pass-through partner that could be subject to tax under chapter 1 on the partnership adjustments that are properly allocated to such pass-through partner will not be approved unless the partnership—

(A) Establishes that the pass-through partner is not subject to chapter 1 tax on the adjustments that are properly allocated to such pass-through partner; or

(B) Requests modification with respect to the adjustments resulting in chapter 1 tax for the pass-through partner, including full payment of such chapter 1 tax for the first affected year and all modification years under paragraph (d)(2) of this section or in accordance with forms, instructions, or other guidance prescribed by the IRS.

(vi) *Amended returns in the case of pass-through partners*—(A) *Pass-through partners may file amended returns.* A relevant partner that is a pass-through partner, including a partnership-partner (as defined in § 301.6241–1(a)(7)) that has a valid election under section 6221(b) in effect for a partnership taxable year, may, in accordance with forms, instructions, and other guidance provided by the IRS and solely for purposes of modification under paragraph (d)(2) of this section, take into account its share of the partnership adjustments and determine and pay an amount calculated in the same manner as the amount computed under § 301.6226–3(e)(4)(iii) subject to paragraph (d)(2)(vi)(B) of this section.

(B) *Modifications with respect to upper-tier partners of the pass-through partner.* In accordance with forms, instructions, and other guidance provided by the IRS, for purposes of determining and calculating the amount a pass-through partner must pay under paragraph (d)(2)(vi)(A) of this section, the pass-through partner may take into account modifications with respect to its direct and indirect partners to the extent that such modifications are

requested by the partnership requesting modification and approved by the IRS under this section.

(vii) *Limitations on amended returns*—(A) *In general.* A relevant partner may not file an amended return with respect to partnership adjustments or with respect to an imputed underpayment except as described in paragraph (d)(2) of this section.

(B) *Further amended returns restricted.* If a relevant partner files an amended return under paragraph (d)(2) of this section, such partner may not file a subsequent amended return without the permission of the IRS.

(viii) *Penalties.* The applicability of any penalties, additions to tax, or additional amounts that relate to an adjustment to a partnership-related item is determined at the partnership level in accordance with section 6221(a). However, the amount of penalties, additions to tax, and additional amounts a relevant partner must pay under paragraph (d)(2)(ii)(A) of this section for the first affected year and for any modification year is based on the underpayment or understatement of tax, if any, reflected on the amended return filed by the relevant partner under this paragraph (d)(2). For instance, if after taking into account the adjustments, the return of the relevant partner for the first affected year or any modification year reflects an underpayment or an understatement that falls below the applicable threshold for the imposition of a penalty under section 6662(d), no penalty would be due from that relevant partner for such year. A relevant partner may raise a partner-level defense (as described in § 301.6226–3(d)(3)) by first paying the penalty, addition to tax, or additional amount with the amended return filed under this paragraph (d)(2) and then filing a claim for refund in accordance with forms, instructions, and other guidance.

(ix) *Effect on tax attributes binding.* Any adjustments to the tax attributes of any relevant partner which are affected by modification under paragraph (d)(2) of this section are binding on the relevant partner with respect to the first affected year and all modification years (as defined in paragraph (d)(2)(ii)(B) of this section). A failure to adjust any tax attribute in accordance with this paragraph (d)(2)(ix) is a failure to treat a partnership-related item in a manner which is consistent with the treatment of such item on the partnership return within the meaning of section 6222. The provisions of section 6222(c) and § 301.6222–1(c) (regarding notification of inconsistent treatment) do not apply with respect to tax attributes under this paragraph (d)(2)(ix).

(x) *Alternative procedure to filing amended returns*—(A) *In general.* A partnership may satisfy the requirements of paragraph (d)(2) of this section by submitting on behalf of a relevant partner, in accordance with forms, instructions, and other guidance provided by the IRS, all information and payment of any tax, penalties, additions to tax, additional amounts, and interest that would be required to be provided if the relevant partner were filing an amended return under paragraph (d)(2) of this section, except as otherwise provided in relevant forms, instructions, and other guidance provided by the IRS. A relevant partner for which the partnership seeks modification under this paragraph (d)(2)(x) must agree to take into account, in accordance with forms, instructions, and other guidance provided by the IRS, adjustments to any tax attributes of such relevant partner. A modification request submitted in accordance with the alternative procedure under this paragraph (d)(2)(x) is not a claim for refund with respect to any person.

(B) *Modifications with respect to reallocation adjustments.* A submission made in accordance with this paragraph (d)(2)(x) with respect to any relevant partner is treated as if such relevant partner filed an amended return for purposes of paragraph (d)(2)(ii)(C) of this section (regarding the requirement that all relevant partners affected by a reallocation must file an amended return to be eligible to for the modification under paragraph (d)(2) of this section) provided the submission is with respect to the first affected year and all modification years of such relevant partner as required under paragraph (d)(2) of this section.

(3) *Tax-exempt partners*—(i) *In general.* A partnership may request modification of an imputed underpayment with respect to partnership adjustments that the partnership demonstrates to the satisfaction of the IRS are allocable to a relevant partner that would not owe tax by reason of its status as a tax-exempt entity (as defined in paragraph (d)(3)(ii) of this section) in the reviewed year (tax-exempt partner).

(ii) *Definition of tax-exempt entity.* For purposes of paragraph (d)(3) of this section, the term *tax-exempt entity* means a person or entity defined in section 168(h)(2)(A), (C), or (D).

(iii) *Modification limited to portion of partnership adjustments for which tax-exempt partner not subject to tax.* Only the portion of the partnership adjustments properly allocated to a tax-exempt partner with respect to which the partner would not be subject to tax for the reviewed year (tax-exempt portion) may form the basis of a modification of the imputed underpayment under paragraph (d)(3) of this section. A modification under paragraph (d)(3) of this section will not be approved by the IRS unless the partnership provides documentation in accordance with paragraph (c)(2) of this section to support the tax-exempt partner's status and the tax-exempt portion of the partnership adjustment allocable to the tax-exempt partner.

(4) *Modification based on a rate of tax lower than the highest applicable tax rate.* A partnership may request modification based on a lower rate of tax for the reviewed year with respect to adjustments that are attributable to a relevant partner that is a C corporation and adjustments with respect to capital gains or qualified dividends that are attributable to a relevant partner who is an individual. In no event may the lower rate determined under the preceding sentence be less than the highest rate in effect for the reviewed year with respect to the type of income and taxpayer. For instance, with respect to adjustments that are attributable to a C corporation, the highest rate in effect for the reviewed year with respect to all C corporations would apply to that adjustment, regardless of the rate that would apply to the C corporation based on the amount of that C corporation's taxable income. For purposes of this paragraph (d)(4), an S corporation is treated as an individual.

(5) *Certain passive losses of publicly traded partnerships*—(i) *In general.* In the case of a publicly traded partnership (as defined in section 469(k)(2)) that is a relevant partner, the imputed underpayment is determined without regard to the adjustment that the partnership demonstrates would be reduced by a specified passive activity loss (as defined in paragraph (d)(5)(ii) of this section) which is allocable to a specified partner (as defined in paragraph (d)(5)(iii) of this section) or qualified relevant partner (as defined in paragraph (d)(5)(iv) of this section).

(ii) *Specified passive activity loss.* A specified passive activity loss carryover amount for any specified partner or qualified relevant partner of a publicly traded partnership is the lesser of the section 469(k) passive activity loss of that partner which is separately determined with respect to such partnership—

(A) At the end of the first affected year (affected year loss); or

(B) At the end of either—

(*1*) The specified partner's taxable year in which or with which the adjustment year (as defined in

§ 301.6241–1(a)(1)) of the partnership ends, reduced to the extent any such partner has utilized any portion of its affected year loss to offset income or gain relating to the ownership or disposition of its interest in such publicly traded partnership during either the adjustment year or any other year; or

(*2*) The most recent year for which the publicly traded partnership has filed a return under section 6031.

(iii) *Specified partner.* A specified partner is a person that for each taxable year beginning with the first affected year through the person's taxable year in which or with which the partnership adjustment year ends satisfies the following three requirements—

(A) The person is a partner of a publicly traded partnership;

(B) The person is an individual, estate, trust, closely held C corporation, or personal service corporation; and

(C) The person has a specified passive activity loss with respect to the publicly traded partnership.

(iv) *Qualified relevant partner.* A qualified relevant partner is a relevant partner that meets the three requirements to be a specified partner (as described in paragraphs (d)(5)(iii)(A), (B), and (C) of this section) for each year beginning with the first affected year through described in paragraph (d)(5)(ii)(*B*)(*2*) of this section.

(v) *Partner notification requirement to reduce passive losses.* If the IRS approves a modification request under paragraph (d)(5) of this section, the partnership must report, in accordance with forms, instructions, or other guidance prescribed by the IRS, to each specified partner the amount of that specified partner's reduction of its suspended passive loss carryovers at the end of the adjustment year to take into account the amount of any passive losses applied in connection with such modification request. In the case of a qualified relevant partner, the partnership must report, in accordance with forms, instructions, or other guidance prescribed by the IRS, to each qualified relevant partner the amount of that qualified relevant partner's reduction of its suspended passive loss carryovers at the end of the taxable year for which the partnership's next return is due to be filed under section 6031 to be taken into account by the qualified relevant partner on the partner's return for the year that includes the end of the partnership's taxable year for which the partnership's next return is due to be filed under section 6031. The reduction in suspended passive loss carryovers as reported to a specified partner under this paragraph (d)(5)(v) is a determination of the partnership under subchapter C of chapter 63 and is binding on the specified partners under section 6223 and the regulations thereunder.

(6) *Modification of the number and composition of imputed underpayments*—(i) *In general.* A partnership may request modification of the number or composition of any imputed underpayment included in the NOPPA by requesting that the IRS include one or more partnership adjustments in a particular grouping or subgrouping (as described in § 301.6225–1(c) and (d)) or specific imputed underpayments (as described in § 301.6225–1(g)) different from the grouping, subgrouping, or imputed underpayment set forth in the NOPPA. For example, a partnership may request under this paragraph (d)(6) that one or more partnership adjustments taken into account to determine a general imputed underpayment set forth in the NOPPA be taken into account to determine a specific imputed underpayment.

(ii) *Request for particular treatment regarding limitations or restrictions.* A modification request under paragraph (d)(6) of this section includes a request that one or more partnership adjustments be treated as if no limitations or restrictions under § 301.6225–1(d) apply and as a result such adjustments may be subgrouped with other adjustments.

(7) *Partnerships with partners that are ''qualified investment entities'' described in section 860*–(i) *In general.* A partnership may request a modification of an imputed underpayment based on the partnership adjustments allocated to a relevant partner where the modification is based on deficiency dividends distributed as described in section 860(f) by a relevant partner that is a qualified investment entity (QIE) under section 860(b) (which includes both a regulated investment company (RIC) and a real estate investment trust (REIT)). Modification under this paragraph (d)(7) is available only to the extent that the deficiency dividends take into account adjustments described in § 301.6225–1 that are also adjustments within the meaning of section 860(d)(1) or (d)(2) (whichever applies).

(ii) *Documentation of deficiency dividend.* The partnership must provide documentation in accordance with paragraph (c) of this section of the ''determination'' described in section 860(e). Under section 860(e)(2), § 1.860–2(b)(1)(i) of this chapter, and paragraph (d)(8) of this section, a closing agreement entered into by the QIE partner pursuant to section 7121 and paragraph (d)(8) of this section is a determination described in section 860(e), and the date of the determination is the date in which the closing agreement is approved by the IRS. In addition, under section 860(e)(4), a determination also includes a Form 8927, *Determination Under Section 860(e)(4) by a Qualified Investment Entity,* properly completed and filed by the RIC or REIT pursuant to section 860(e)(4). To establish the date of the determination under section 860(e)(4) and the amount of deficiency dividends actually paid, the partnership must provide a copy of Form 976, *Claim for Deficiency Dividends Deductions by a Personal Holding Company, Regulated Investment Company, or Real Estate Investment Trust* (Form 976), properly completed by or on behalf of the QIE pursuant to section 860(g), together with a copy of each of the required attachments for Form 976.

(8) *Closing agreements.* A partnership may request modification based on a closing agreement entered into by the IRS and the partnership or any relevant partner, or both if appropriate, pursuant to section 7121. If modification under this paragraph (d)(8) is approved by the IRS, any partnership adjustment that is taken into account under such closing agreement and for which any required payment under the closing agreement is made will not be taken into account in determining the imputed underpayment under § 301.6225–1. Generally, the IRS will not approve any additional modification under this section with respect to a relevant partner to which a modification under this paragraph (d)(8) has been approved.

(9) *Tax treaty modifications.* A partnership may request a modification under this paragraph (d)(9) with respect to a relevant partner's distributive share of an adjustment to a partnership-related item if the relevant partner—

(i) Was a foreign person who would have qualified, under an income tax treaty with the United States, for a reduction or exemption from tax with respect to such partnership-related item in the reviewed year;

(ii) Would have derived the item (within the meaning of § 1.894–1(d) of this chapter) had it been taken into account properly in the partnership's reviewed year return; and

(iii) Is not otherwise prevented under the income tax treaty with the United States from claiming such reduction or exemption with respect to the reviewed year at the time the modification under this paragraph (d)(9) is requested.

(10) *Other modifications.* A partnership may request a modification not otherwise described in paragraph (d)

of this section, and the IRS will determine whether such modification is accurate and appropriate in accordance with paragraph (c)(4) of this section. Additional types of modifications and the documentation necessary to substantiate such modifications may be set forth in forms, instructions, or other guidance prescribed by the IRS.

(e) *Modification of adjustments that do not result in an imputed underpayment.* A partnership may request modification of adjustments that do not result in an imputed underpayment (as described in § 301.6225–1(f)(1)(ii)) using modifications described in paragraph (d)(2) of this section (amended returns and the alternative procedure to filing amended returns), paragraph (d)(6) of this section (number and composition of the imputed underpayment), paragraph (d)(8) of this section (closing agreements), or, if applicable, paragraph (d)(10) of this section (other modifications).

(f) *Examples.* The following examples illustrate the rules of this section. For purposes of these examples, each partnership is subject to the provisions of subchapter C of chapter 63, each partnership and its relevant partners are calendar year taxpayers, all relevant partners are U.S. persons (unless otherwise stated), the highest rate of income tax in effect for all taxpayers is 40 percent for all relevant periods, and no partnership requests modification under this section except as provided in the example.

Example 1. Partnership has two partners during its 2019 partnership taxable year: P and S. P is a partnership, and S is an S Corporation. P has four partners during its 2019 partnership taxable year: A, C, T and DE. A is an individual, C is a C Corporation, T is a trust, and DE is a wholly-owned entity disregarded as separate from its owner for Federal tax purposes. The owner of DE is B, an individual. T has two beneficiaries during its 2019 taxable year: F and G, both individuals. S has 3 shareholders during its 2019 taxable year: H, I, and J, all individuals. For purposes of this section, if Partnership requests modification with respect to A, B, C, F, G, H, I, and J, those persons are all relevant partners (as defined in paragraph (a) of this section). P, S, and DE are not relevant partners (as defined in paragraph (a) of this section) because DE is a wholly-owned entity disregarded as separate from its owner for Federal tax purposes and modification was not requested with respect to P and S.

Example 2. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year. The IRS mails a NOPPA to Partnership for the 2019 partnership taxable year proposing a single partnership adjustment increasing ordinary income by $100, resulting in a $40 imputed underpayment ($100 multiplied by the 40 percent tax rate). Partner A, an individual, held a 20 percent interest in Partnership during 2019. Partnership timely requests modification under paragraph (d)(2) of this section based on A's filing an amended return for the 2019 taxable year taking into account $20 of the partnership adjustment and paying the tax and interest due attributable to A's share of the increased income and the tax rate applicable to A for the 2019 tax year. No tax attribute in any other taxable year of A is affected by A's taking into account A's share of the partnership adjustment for 2019. In accordance with paragraph (d)(2)(iii) of this section, Partnership's partnership representative provides the IRS with documentation demonstrating that A filed the 2019 return and paid all tax and interest due. The IRS approves the modification and, in accordance with paragraph (b)(2) of this section, the $20 increase in ordinary income allocable to A is not included in the calculation of the total netted partnership adjustment (determined in accordance with § 301.6225–1). Partnership's total netted partnership adjustment is reduced to $80 ($100 adjustment less $20 taken into account by A), and the imputed underpayment is reduced to $32 (total netted partnership adjustment of $80 after modification multiplied by 40 percent).

Example 3. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year. Partnership has two equal partners during its entire 2019 taxable year: An individual, A, and a partnership-partner, B. During all of 2019, B has two equal partners: A tax-exempt entity, C, and an individual, D. The IRS mails a NOPPA to Partnership for its 2019 taxable year proposing a single partnership adjustment increasing Partnership's ordinary income by $100, resulting in a $40 imputed underpayment ($100 total netted partnership adjustment multiplied by 40 percent). Partnership timely requests modification under paragraph (d)(3) of this section with respect to B's partner, C, a tax-exempt entity. In accordance with paragraph (d)(3)(iii) of this section, Partnership's partnership representative provides the IRS with documentation substantiating to the IRS's satisfaction that C held a 25 percent indirect interest in Partnership through its interest in B during the 2019 taxable year, that C was a tax-exempt entity defined in paragraph (d)(3)(ii) of this section during the 2019 taxable year, and that C was not subject to tax with respect to its entire distributive share of the partnership adjustment allocated to B (which is $25 (50 percent × 50 percent × $100)). The IRS approves the modification and, in accordance with paragraph (b)(2) of this section, the $25 increase in ordinary income allocated to C, through B, is not included in the calculation of the total netted partnership adjustment (determined in accordance with § 301.6225–1). Partnership's total netted partnership adjustment is reduced to $75 ($100 adjustment less C's share of the adjustment, $25), and the imputed underpayment is reduced to $30 (total netted partnership adjustment of $75, after modification, multiplied by 40 percent).

Example 4. The facts are the same as in *Example 3* of this paragraph (f), except $10 of the $25 of the adjustment allocated to C is unrelated business taxable income (UBTI) as defined in section 512 because it is debt-financed income within the meaning of section 514 (no section 512 UBTI modifications apply) with respect to which C would be subject to tax if taken into account by C. As a result, the modification under paragraph (d)(3) of this section with respect to C relates only to $15 of the $25 of ordinary income allocated to C that is not UBTI. Therefore, only a modification of $15 ($25 less $10) of the total $100 partnership adjustment may be approved by the IRS under paragraph (d)(3) of this section and, in accordance with paragraph (b)(2) of this section, excluded when determining the imputed underpayment for Partnership's 2019 taxable year. The total netted partnership adjustment (determined in accordance with § 301.6225–1) is reduced to $85 ($100 less $15), and the imputed underpayment is reduced to $34 (total netted partnership adjustment of $85, after modification, multiplied by 40 percent).

Example 5. The facts are the same as in *Example 3* of this paragraph (f), except that Partnership also timely requests modification under paragraph (d)(2) with respect to an amended return filed by B, and, in accordance with (d)(2)(iii) of this section, Partnership's partnership representative provides the IRS with documentation demonstrating that B filed the 2019 return and paid all tax and interest due. B reports 50 percent of the partnership adjustments ($50) on its amended return, and B calculates an amount under paragraph (d)(2)(vi)(A) of this section and § 301.6226–3(e)(4)(iii) that, pursuant to paragraph (d)(2)(vi)(B) of this section, takes into account the modification under paragraph (d)(3) approved by the IRS with respect to B's partner C, a tax-exempt entity. B makes a payment pursuant to paragraph (d)(2)(ii)(A) of this section, and the IRS approves the requested modification. Partnership's total netted partnership adjustment is reduced by $50 (the amount taken into account by B). Partnership's total netted partnership adjustment (determined in accordance with § 301.6225–1) is $50, and the imputed underpayment, after modification, is $20.

Example 6. The facts are the same as in *Example 3* of this paragraph (f), except that in addition to the modification with respect to tax-exempt entity C, which reduced the imputed underpayment by excluding from the determination of the imputed underpayment $25 of the $100 partnership adjustment reflected in the NOPPA, Partnership timely requests modification under paragraph (d)(2) of this section with respect to an amended return filed by individual D, and, in accordance with (d)(2)(iii) of this section, Partnership's partnership representative provides the IRS with documentation demonstrating that D filed the 2019 return and paid all tax and interest due. D's amended return for D's 2019 taxable year takes into account D's share of the partnership adjustment (50 percent of B's 50 percent interest in Partnership, or $25) and D paid the tax and interest due as a result of taking into account D's share of the partnership adjustment in accordance with

paragraph (d)(2) of this section. No tax attribute in any other taxable year of D is affected by D taking into account D's share of the partnership adjustment for 2019. The IRS approves the modification and the $25 increase in ordinary income allocable to D is not included in the calculation of the total netted partnership adjustment (determined in accordance with § 301.6225–1). As a result, Partnership's total netted partnership adjustment is $50 ($100, less $25 allocable to C, less $25 taken into account by D), and the imputed underpayment, after modification, is $20.

Example 7. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year. All of Partnership's partners during its 2019 taxable year are individuals. The IRS mails a NOPPA to Partnership for the 2019 taxable year proposing three partnership adjustments. The first partnership adjustment is an increase to ordinary income of $75 for 2019. The second partnership adjustment is an increase in the depreciation deduction allowed for 2019 of $25, which under § 301.6225–1(d)(2)(i) is treated as a $25 decrease in income. The third adjustment is an increase in long-term capital gain of $10 for 2019. In accordance with § 301.6225–1, the total netted partnership adjustment is $85 ($75 increase in ordinary income + $10 increase in long-term capital gain), resulting in an imputed underpayment of $34 ($85 multiplied by 40 percent). The $25 decrease in income as a result of the increase in depreciation is an adjustment that does not result in an imputed underpayment under § 301.6225–1(f). Under the partnership agreement in effect for Partnership's 2019 taxable year, the long-term capital gain and the increase in depreciation is specially allocated to B and the increase in ordinary income is specially allocated to A. Partnership requests a modification under paragraph (d)(6) of this section to determine a specific imputed underpayment with respect to the $75 adjustment to ordinary income allocated to A. The specific imputed underpayment is with respect to $75 of the increase in income specially allocated to A and the general imputed underpayment is with respect to $10 of the increase in capital gain and the $25 increase in depreciation deduction specially allocated to B. If the modification is approved by the IRS, the specific imputed underpayment is $30 ($75 multiplied by 40 percent), the general imputed underpayment is $4 ($10 multiplied by 40 percent), and the increase in depreciation of $25 remains an adjustment that does not result in an imputed underpayment under § 301.6225–1(f) and is associated with the general imputed underpayment.

Example 8. Partnership has two reviewed year partners, C1 and C2, both of which are C corporations. The IRS mails to Partnership a NOPPA with two adjustments, both based on rental real estate activity. The first adjustment is an increase of rental real estate income of $100 attributable to Property A. The second adjustment is an increase of rental real estate loss of $30 attributable to Property B. The Partnership did not treat the leasing arrangement with respect to Property A and Property B as an appropriate economic unit for purposes of section 469. If the $100 increase in income attributable to Property A and the $30 increase in loss attributable to Property B were included in the same subgrouping and netted, then taking the $30 increase in loss into account would result in a decrease in the amount of the imputed underpayment. Also, the $30 increased loss might be limited or restricted if taken into account by any person under the passive activity rules under section 469. For instance, under section 469, rental activities of the two properties could be treated as two activities, which could limit a partner's ability to claim the loss. In addition to the potential limitations under section 469, there are other potential limitations that might apply if the $30 loss were taken into account by any person. Therefore, in accordance with § 301.6225–1(d), the two adjustments are placed in separate subgroupings within the residual grouping, the total netted partnership adjustment is $100, the imputed underpayment is $40 ($100 × 40 percent), and the $30 increase in loss is an adjustment that does not result in an imputed underpayment under § 301.6225–1(f). Partnership requests modification under paragraph (d)(6) of this section, substantiating to the satisfaction of the IRS that C1 and C2 are publicly traded C corporations, and therefore, the passive activity loss limitations under section 469 of the Code do not apply. Partnership also substantiates to the satisfaction of the IRS that no other limitation or restriction applies that would prevent the grouping of the $100 with the $30 loss. The IRS approves Partnership's modification request and places the $100 of income and the $30 loss into the subgrouping in the residual grouping under the rules described in § 301.6225–1(c)(5). Under § 301.6225–1(e), because the two adjustments are in one subgrouping, they are netted together, resulting in a total netted partnership adjustment of $70 ($100 plus <$30>) and an imputed underpayment of $28 ($70 × 40 percent). After modification, there are not adjustments treated as an adjustment that does not result in an imputed underpayment under § 301.6225–1(f) because the $30 loss is now netted with the $100 of income.

(g) *Applicability date*—(1) *In general.* Except as provided in paragraph (g)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015, and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 10.** Section 301.6225–3 is added to read as follows:

§ 301.6225–3 Treatment of partnership adjustments that do not result in an imputed underpayment.

(a) *In general.* Partnership adjustments (as defined in § 301.6241–1(a)(6)) that do not result in an imputed underpayment (as described in § 301.6225–1(f)) are taken into account by a partnership in the adjustment year (as defined in § 301.6241–1(a)(1)) in accordance with paragraph (b) of this section.

(b) *Treatment of adjustments by the partnership*—(1) *In general.* Except as described in paragraphs (b)(2) through (5) of this section, a partnership adjustment that does not result in an imputed underpayment is taken into account as a reduction in non-separately stated income or as an increase in non-separately stated loss for the adjustment year depending on whether the adjustment is to a partnership-related item that is an item of income or loss.

(2) *Separately stated items.* In the case of a partnership adjustment to partnership-related item that is required to be separately stated under section 702, the adjustment is taken into account by the partnership in the adjustment year as a reduction in such separately stated item or as an increase in such separately stated item depending on whether the adjustment is a reduction or an increase to the separately stated item.

(3) *Credits.* In the case of an adjustment to a partnership-related item that is reported or could be reported by a partnership as a credit on the partnership's return for the reviewed year (as defined in § 301.6241–1(a)(8)), the adjustment is taken into account by the partnership in the adjustment year as a separately stated item.

(4) *Reallocation adjustments.* A partnership adjustment that reallocates a partnership-related item to or from a particular partner or partners that also does not result in an imputed underpayment pursuant to § 301.6225–1(f) is taken into account by the partnership in the adjustment year as a separately stated item or a non-separately stated item, as required by section 702. The portion of an adjustment allocated under this paragraph (b)(4) is allocated to adjustment year partners (as defined in § 301.6241–1(a)(2)) who are also reviewed year partners (as defined in § 301.6241–1(a)(9)) with respect to whom the amount was reallocated.

(5) *Adjustments taken into account by partners as part of the modification process.* If, as part of modification under § 301.6225–2, a relevant partner (as defined in § 301.6225–2(a)) takes into account a partnership adjustment that would not result in an imputed underpayment, and the IRS approves the modification, such partnership adjustment is not taken into account by the partnership in the adjustment year in accordance with § 301.6225–1(a).

(6) *Effect of election under section 6226.* If a partnership makes a valid election under § 301.6226–1 with respect to an imputed underpayment, a partnership adjustment that does not result in an imputed underpayment and that is associated with such imputed underpayment as described in § 301.6225–1(g) is taken into account by the reviewed year partners in accordance with § 301.6226–3 and is not taken into account under this section.

(c) *Treatment of adjustment year partners.* The rules under subchapter K with respect to the treatment of partners apply in the case of adjustments taken into account by the partnership under this section.

(d) *Applicability date*—(1) *In general.* Except as provided in paragraph (d)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 11.** Section 301.6225–4 is added to read as follows:

§ 301.6225–4 Effect of a partnership adjustment on specified tax attributes of partnerships and their partners.

(a) *Adjustments to specified tax attributes*—(1) *In general.* When there is a partnership adjustment (as defined in § 301.6241–1(a)(6)), the partnership and its adjustment year partners (as defined in § 301.6241–1(a)(2)) generally must adjust their specified tax attributes (as defined in paragraph (a)(2) of this section) in accordance with the rules in this section. For a partnership adjustment that results in an imputed underpayment (as defined in § 301.6241–1(a)(3)), specified tax attributes are generally adjusted by making appropriate adjustments to the book value and basis of partnership property under paragraph (b)(2) of this section, creating notional items based on the partnership adjustment under paragraph (b)(3) of this section, allocating those notional items as described in paragraph (b)(5) of this section, and determining the effect of those notional items for the partnership and its reviewed year partners (as defined in § 301.6241–1(a)(9)) or their successors (as defined in § 1.704–1(b)(1)(viii)(*b*) of this chapter) under paragraph (b)(6) of this section. Paragraph (c) of this section describes how to treat an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) including any imputed underpayment. Paragraph (d) of this section describes adjustments to tax attributes of a partnership and its partners in the case of a partnership adjustment that does not result in an imputed underpayment (as described in § 301.6225–1(f)).

(2) *Specified tax attributes.* Specified tax attributes are the tax basis and book value of a partnership's property, amounts determined under section 704(c), adjustment year partners' bases in their partnership interests, adjustment year partners' capital accounts determined and maintained in accordance with § 1.704–1(b)(2) of this chapter, and earnings and profits under section 312.

(3) *Timing.* Adjustments to specified tax attributes under this section are made in the adjustment year (as defined in § 301.6241–1(a)(1)). Thus, to the extent that an adjustment to a specified tax attribute under this section is reflected on a federal tax return, the partnership adjustment is generally first reflected on any return filed with respect to the adjustment year.

(4) *Effect of other sections.* The determination of specified tax attributes under this section is not conclusive as to tax attributes of a partnership or its partners determined under other sections of the Internal Revenue Code (Code), including the subchapter C of chapter 63. For example, a partnership that files an administrative adjustment request (AAR) under section 6227 adjusts partnership tax attributes as appropriate. Further, to the extent a partner or partnership appropriately adjusted its tax attributes prior to a final determination under subchapter C of chapter 63 with respect to a partnership adjustment (for example, in the context of an amended return modification described in § 301.6225–2(d)(2), the alternative procedure to filing amended returns as described in § 301.6225–2(d)(2)(x), or a closing agreement described in § 301.6225–2(d)(8)), those tax attributes are not adjusted under this section. Similarly, to the extent a partner filed a return inconsistent with the treatment of items on a partnership return, a reviewed year partner (or its successor) does not adjust its tax attributes to the extent the partner's prior return was consistent with the partnership adjustment. For the rules regarding consistent treatment by partners, see § 301.6222–1.

(5) *Election under section 6226*—(i) *In general.* Except as otherwise provided in paragraph (a)(5)(ii) of this section, tax attributes of a partnership and its partners are adjusted for a partnership adjustment that results in an imputed underpayment with respect to which an election is made under § 301.6226–1 in accordance with § 301.6226–4, and not the rules of this section.

(ii) *Pass-through partners and indirect partners.* A pass-through partner (as defined in § 301.6241–1(a)(5)) that is a partnership and pays an imputed underpayment under § 301.6226–3(e)(4) treats its share of each partnership adjustment reflected on the relevant statement as a partnership adjustment described in paragraph (a)(1) of this section, treats the imputed underpayment under § 301.6226–3(e)(4)(iii) as an imputed underpayment determined under § 301.6225–1 for purposes of § 1.704–1(b)(2)(iii)(*a*) and (*f*) of this chapter, treats items arising from an adjustment that does not result in an imputed underpayment as an item under paragraph (d) of this section, and finally treats amounts with respect to any penalties, additions to tax, and additional amounts and interest computed as an amount described in § 1.704–1(b)(2)(iii)(*f*)(*3*) of this chapter.

(6) *Reflection of economic arrangement.* This section and the rules in § 1.704–1(b)(1)(viii), (b)(2)(iii)(*a*) and (*f*), (b)(2)(iv)(*i*)(*4*), and (b)(4)(xi), (xii), (xiii), (xiv), and (xv) of this chapter must be interpreted in a manner that reflects the economic arrangement of the parties and the principles of subchapter K of the Code, taking into account the rules of the centralized partnership audit regime.

(b) *Adjusting specified tax attributes in the case of a partnership adjustment that results in an imputed underpayment*—(1) *In general.* This paragraph (b) applies with respect to each partnership adjustment that was taken into account in the determination of the imputed underpayment under § 301.6225–1, except to the extent partner or partnership tax attributes were already adjusted as part of the partnership adjustment.

(2) *Book value and basis of partnership property.* Partnership-level specified tax attributes must be adjusted under this paragraph (b)(2). Specifically, the partnership must make appropriate adjustments to the book value and basis of property to take into account any partnership adjustment. No adjustments are made with respect to property that was held by the partnership in the reviewed year but is no longer held by the partnership in the adjustment year. Amounts determined under section 704(c) must also be adjusted to take into account the partnership adjustment.

(3) *Creation of notional items based on partnership adjustment*—(i) *In general.* In order to give appropriate effect to each partnership adjustment for

partner-level specified tax attributes, notional items are created with respect to each partnership adjustment, except as provided in paragraph (b)(4) of this section.

(ii) *Increase in income or gain.* In the case of a partnership adjustment that is an increase to income or gain, a notional item of income or gain is created in an amount equal to the partnership adjustment.

(iii) *Increase in expense or loss.* In the case of a partnership adjustment that is an increase to an expense or a loss, a notional item of an expense or loss is created in an amount equal to the partnership adjustment.

(iv) *Decrease in income or gain.* In the case of a partnership adjustment that is a decrease to income or gain, a notional item of expense or loss is created in an amount equal to the partnership adjustment.

(v) *Decrease in expense or loss.* In the case of a partnership adjustment that is a decrease to an expense or to a loss, a notional item of income or gain is created in an amount equal to the partnership adjustment.

(vi) *Credits.* If a partnership adjustment reflects a net increase or net decrease in credits as determined in accordance with § 301.6225–1, the partnership may have one or more notional items of income, gain, loss, or deduction that reflects the change in the item that gives rise to the credit, and those items are treated as items in paragraph (b)(3)(ii), (iii), (iv), or (v) of this section. For example, if a partnership adjustment is to a credit, a notional item of deduction may be created when appropriate. See section 280C.

(4) *Situations in which notional items are not created*—(i) *In general.* In the case of a partnership adjustment described in this paragraph (b)(4), or when the creation of a notional item would duplicate a specified tax attribute or an actual item already taken into account, notional items are not created. Nevertheless, in these situations specified tax attributes are adjusted for the partnership and its reviewed year partners or their successors (as defined in § 1.704–1(b)(i)(viii)(*b*) of this chapter) in a manner that is consistent with how the partnership adjustment would have been taken into account under the partnership agreement in effect for the reviewed year taking into account all facts and circumstances. See § 1.704–1(b)(2)(iii)(*f*)(*4*) of this chapter for rules for allocating the expenditure for an imputed underpayment in these circumstances.

(ii) *Adjustments for non-section 704(b) items.* Notional items are not created for a partnership adjustment that does not derive from items that would have been allocated in the reviewed year under section 704(b). See paragraph (e) of this section, *Example 5.*

(iii) *Section 705(a)(2)(B) expenditures.* Notional items are not created for a partnership adjustment that is a change of an item of deduction to a section 705(a)(2)(B) expenditure.

(iv) *Tax-exempt income.* Notional items are not created for a partnership adjustment to an item of income of a partnership exempt from tax under subtitle A of the Code.

(5) *Allocation of the notional items.* Notional items are allocated to the reviewed year partners or their successors under § 1.704–1(b)(4)(xi) of this chapter.

(6) *Effect of notional items*—(i) *In general.* The partnership creates notional items of income, gain, loss, deduction, or credit in order to make appropriate adjustments to specified tax attributes. See paragraph (e), *Example 1* of this section.

(ii) *Partner capital accounts.* For purposes of capital accounts determined and maintained in accordance with § 1.704–1(b)(2) of this chapter, a notional item of income, gain, loss, deduction or credit is treated as an item of income, gain, loss, deduction or credit (including for purposes of determining book value). Similar adjustments may be appropriate for partnerships that do not determine and maintain capital accounts in accordance with § 1.704–1(b)(2) of this chapter.

(iii) *Partner's basis in its interest*—(A) *In general.* Except as otherwise provided, the basis of a partner's interest in a partnership is adjusted (but not below zero) to reflect any notional item allocated to the partner by treating the notional item as an item described in section 705(a).

(B) *Special basis rules.* The basis of a partner's interest in a partnership is not adjusted for any notional items allocated to the partner—

(*1*) When a partner that is not a tax-exempt entity (as defined in § 301.6225–2(d)(3)(ii)) is a successor under § 1.704–1(b)(1)(viii)(*b*) of this chapter to a reviewed year tax-exempt partner, to the extent that the IRS approved a modification under § 301.6225–2 because the tax-exempt partner was not subject to tax; or

(*2*) When the notional item would be allocated to a successor that is related (within the meaning of sections 267(b) or 707(b)) to the reviewed year partner, the successor acquired its interest from the reviewed year partner in a transaction (or series of transactions) in which not all gain or loss is recognized during an administrative adjustment proceeding with respect to the partnership's reviewed year under subchapter C of chapter 63, and a principal purpose of the interest transfer (or transfers) was to shift the economic burden of the imputed underpayment among the related parties.

(c) *Determining a partner's share of an expenditure for any payment required to be made by a partnership under subchapter C of chapter 63.* Payment by a partnership of any amount required to be paid under subchapter C of chapter 63 as described in § 301.6241–4(a) is treated as an expenditure described in section 705(a)(2)(B). Rules for determining whether the economic effect of an allocation of these expenses is substantial are provided in § 1.704–1(b)(2)(iii)(*f*) of this chapter and rules for determining whether an allocation of these expenses is deemed to be in accordance with the partners' interests in the partnership are provided in § 1.704–1(b)(4)(xii) of this chapter.

(d) *Adjusting tax attributes for a partnership adjustment that does not result in an imputed underpayment.* The rules under subchapter K of the Code apply in the case of a partnership adjustment that does not result in an imputed underpayment. See § 301.6225–3(c). Accordingly, tax attributes (as defined in § 301.6241–1(a)(10)) of a partnership and its partners are adjusted under those rules. An item arising from a partnership adjustment that does not result in an imputed underpayment (as defined in § 301.6225–1(f)) is allocated under § 1.704–1(b)(4)(xiii) of this chapter.

(e) *Examples.* The following examples illustrate the rules of this section. For purposes of these examples, unless otherwise stated, Partnership is subject to the provisions of subchapter C of chapter 63, Partnership and its partners are calendar year taxpayers, all partners are U.S. persons, and the highest rate of income tax in effect for all taxpayers is 20 percent for all relevant periods.

Example 1. (i) In 2019, A, B, and C are individuals that form Partnership. A contributes Whiteacre, which is unimproved land with an adjusted basis of $400 and a fair market value of $1,000, and B and C each contribute $1,000 in cash. The partnership agreement provides that all income, gain, loss, and deduction will be allocated in equal ⅓ shares among the partners. The partnership agreement also provides that the partners' capital accounts will be determined and maintained in accordance with § 1.704–1(b)(2)(iv) of this chapter, distributions in liquidation of the partnership (or any partner's interest) will be made in accordance with the partners' positive capital account balances, and any partner with a deficit

balance in his capital account following the liquidation of his interest must restore that deficit to the partnership (as provided in § 1.704–1(b)(2)(ii)(*b*)(*2*) and (*3*) of this chapter).

(ii) Upon formation, Partnership has the following assets and capital accounts:

	Partnership basis	Book	Value		Outside basis	Book	Value
Cash	$2,000	$2,000	$2,000	A	$400	$1,000	$1,000
Whiteacre	400	1,000	1,000	B	1,000	1,000	1,000
				C	1,000	1,000	1,000
Totals	2,400	3,000	3,000		2,400	3,000	3,000

(iii) In 2019, Partnership makes a $120 payment for Asset that it treats as a deductible expense on its partnership return.

	Partnership basis	Book	Value		Outside basis	Book	Value
Cash	$1,880	$1,880	$1,880	A	$360	$960	$1,000
Whiteacre	400	1,000	1,000	B	960	960	1,000
Asset	0	0	120	C	960	960	1,000
Totals	2,280	2,880	3,000		2,280	2,880	3,000

(iv) Partnership does not file an AAR for 2020. In 2021 (the adjustment year) it is finally determined that Partnership's $120 expenditure was not allowed as a deduction in 2019 (the reviewed year), but rather was the acquisition of an asset for which cost recovery deductions are unavailable. Accordingly, the IRS makes a partnership adjustment that disallows the entire $120 deduction, which results in an imputed underpayment of $48 ($120 × 40 percent). Partnership did not request modification under § 301.6225–2. Partnership pays the $48 imputed underpayment.

(v) Partnership first determines its tax attribute adjustments resulting from the partnership adjustment by applying paragraph (b) of this section. Pursuant to paragraph (b)(2) of this section, Partnership must re-state the basis and book value of Asset to $120. Further, pursuant to paragraph (b)(3)(v) of this section, a $120 notional item of income is created. The $120 item of notional income is allocated in equal shares ($40) to A, B, and C in 2021 under § 1.704–1(b)(4)(xi) of this chapter. Accordingly, in 2021 Partnership increases the capital accounts of A, B, and C by $40 each, and increases A, B, and C's outside bases by $40 each under paragraph (b)(6)(ii) and (iii) of this section, respectively.

(vi) As described in paragraph (c) of this section, Partnership's payment of the $48 imputed underpayment is treated as an expenditure described in section 705(a)(2)(B) under § 301.6241–4. Under § 1.704–1(b)(4)(xii) of this chapter, Partnership determines each partner's properly allocable share of this expenditure in 2021 by allocating the expenditure in proportion to the allocations of the notional item to which the expenditure relates. Accordingly, each of A, B, and C have a properly allocable share of $16 each, which is the same proportion (⅓ each) in which A, B, and C share the $120 item of notional income. Thus, A, B and C's capital accounts are each decreased by $16 in 2021 and A, B and C's outside bases are each decreased by $16 in 2021. The allocation of the expenditure under the partnership agreement has economic effect under § 1.704–1(b)(2)(ii) of this chapter and, because the allocation of the expenditure is determined in accordance with § 1.704–1(b)(2)(iii)(*f*) of this chapter, the economic effect of these allocations is deemed to be substantial.

(vii) The payment is also reflected by a $48 decrease in partnership cash for book purposes under § 1.704–1(b)(4)(ii) of this chapter. Therefore, in 2021, A's basis in Partnership is $384 and his capital account is $984. B and C each have a basis and capital account of $984.

	Partnership basis	Book	Value		Outside basis	Book	Value
Cash	$1,832	$1,832	$1,832	A	$384	$984	$984
Whiteacre	400	1,000	1,000	B	984	984	984
Asset	120	120	120	C	984	984	984
Totals	2,352	2,952	2,952		2,352	2,952	2,952

Example 2. (i) The facts are the same as in *Example 1* of this paragraph (e), except the IRS approves modification under § 301.6225–2(d)(3) with respect to A, which is a tax-exempt entity, and under § 301.6225–2(d)(4) with respect to C, which is a corporation subject to a tax rate of 20 percent. These modifications reduce Partnership's overall imputed underpayment from $48 to $30.

(ii) As in *Example 1* of this paragraph (e), Partnership determines its tax attribute adjustments resulting from the partnership adjustment by applying paragraph (b) of this section. Pursuant to paragraph (b)(3)(v) of this section, a $120 notional item of income is created. The $120 item of notional income is allocated in equal shares ($40) to A, B, and C in 2021 under § 1.704–1(b)(4)(xi) of this chapter. Accordingly, in 2021 Partnership increases the capital accounts of A, B, and C by $40 each, and increases A, B, and C's outside bases by $40 each under paragraph (b)(6)(ii) and (iii) of this section, respectively.

(iii) However, the modifications affect how Partnership must allocate the imputed underpayment expenditure among A, B, and C in 2021 (the adjustment year) pursuant to § 1.704–1(b)(2)(iii)(*f*) of this chapter. Specifically, Partnership allocates the $24 expenditure in 2021 in proportion to the allocation of the notional item to which it relates (which is ⅓ each as in *Example 1* of this paragraph (e)), but it must also take into account modifications attributable to each partner. Accordingly, B's allocation is $16 (its share of the imputed underpayment, for which no modification occurred), and A and C have properly allocable shares of $0 and $8, respectively (their shares, taking into account modification). Thus, A's capital account is decreased by $0, B's capital account is decreased by $16, and C's capital

account is decreased by $8 in 2021 and their respective outside bases are decreased by the same amounts in 2021.

(iv) The payment is also reflected by a $24 decrease in partnership cash for book purposes. Therefore, in 2021, A's basis in Partnership is $400 and his capital account is $1000, B's basis and capital account are both $984, and C's basis and capital account are both $992.

	Partnership basis	Book	Value		Outside basis	Book	Value
Cash	$1,856	$1,856	$1,856	A	$400	$1,000	$1,000
Whiteacre	400	1,000	1,000	B	984	984	984
Asset	120	120	120	C	992	992	992
Totals	2,376	2,976	2,976		2,376	2,976	2,976

Example 3. The facts are the same as in *Example 1* of this paragraph (e). However, in 2020, C transfers its entire interest in Partnership to D (an individual) for cash. Under § 1.704–1(b)(2)(iv)(l) of this chapter, C's capital account carries over to D. In 2021, the year the IRS determines that Partnership's $120 expense is not allowed as a deduction, D is C's successor under § 1.704–1(b)(1)(viii)(*b*)(*2*) of this chapter with respect to specified tax attributes and the payment of the imputed underpayment treated as an expenditure under section 705(a)(2)(B).

Example 4. The facts are the same as in *Example 1* of this paragraph (e), except that the partnership agreement provides that the section 705(a)(2)(B) expenditure for imputed underpayments made by the partnership are specially allocated to A (all other items continue to be allocated in equal shares). Accordingly, in 2021, the section 705(a)(2)(B) expenditure is allocated entirely to A, which reduces its capital account by $48, which has economic effect under § 1.704–1(b)(2)(ii) of this chapter. However, the economic effect of this allocation is not substantial under § 1.704–1(b)(2)(iii)(*a*) of this chapter because it is not allocated in the manner described in § 1.704–1(b)(2)(iii)(*f*) of this chapter. The allocation will also not be deemed to be in accordance with the partners' interests in the partnership under § 1.704–1(b)(3)(ix) of this chapter because it is not allocated pursuant to the rules under § 1.704–1(b)(4)(xii) of this chapter.

Example 5. (i) In 2019, Partnership has two partners, A and B. Both A and B have a $0 basis in their interests in Partnership. Further, Partnership has a $200 liability as defined in § 1.752–1(a)(4) of this chapter. The liability is treated as a nonrecourse liability as defined in § 1.752–1(a)(2) of this chapter so that A and B both are treated as having a $100 share of the liability under § 1.752–3 of this chapter. In 2021 (the adjustment year), the IRS determines that the liability was inappropriately classified as a nonrecourse liability, should have been classified as a recourse liability as defined in § 1.752–1(a)(1) of this chapter, and that A should have no share of the recourse liability under § 1.752–2 of this chapter. The recharacterization of the liability from nonrecourse to recourse and the decrease in A's share of partnership liabilities are adjustments that are not allocated under section 704(b) under § 301.6225–1(c)(5)(ii). As a result of the adjustments, the IRS includes in the residual grouping $100 of increased income to account for the cumulative effects of these adjustments to reflect the $100 decrease in A's share of partnership liabilities under §§ 1.752–1(c) and 1.731–1(a)(1)(i) of this chapter and determines an imputed underpayment of $40 ($100 × 40 percent). Partnership does not request modification under § 301.6225–2. Partnership pays the $40 imputed underpayment.

(ii) Pursuant to paragraph (b)(4)(ii) of this of this section, notional items are not created with respect to this partnership adjustment. Instead, under paragraph (b)(4)(i) of this section, specified tax attributes are adjusted in a manner that is consistent with how the partnership adjustment would have been taken into account under the partnership agreement in effect for the reviewed year taking into account all facts and circumstances. In this case, no specified tax attributes are adjusted.

(iii) However, because A would have borne the economic burden of the partnership adjustment if the partnership and its partners had originally reported in a manner consistent with the partnership adjustment, the $40 imputed underpayment section 705(a)(2)(B) expenditure is allocated to A under § 1.704–1(b)(2)(iii)(*f*)(*4*) of this chapter.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 12.** Section 301.6226–1 is added to read as follows:

§ 301.6226–1 Election for an alternative to the payment of the imputed underpayment.

(a) *In general.* A partnership may elect under this section an alternative to the payment by the partnership of an imputed underpayment determined under section 6225 and the regulations thereunder. In addition, a partnership making a valid election under paragraph (b) of this section is no longer liable for the imputed underpayment (as defined in § 301.6241–1(a)(3)) to which the election applies. If a notice of final partnership adjustment (FPA) mailed under section 6231 includes more than one imputed underpayment (as described in § 301.6225–1(g)), a partnership may make an election under this section with respect to one or more imputed underpayments identified in the FPA. See § 301.6226–2(f) regarding the determination of each reviewed year partner's (as defined in § 301.6241–1(a)(9)) share of the partnership adjustments (as defined in § 301.6241–1(a)(6)) and related penalties, additions to tax, and additional amounts that must be taken into account.

(b) *Effect of election*—(1) *Reviewed year partners.* If a partnership makes a valid election under this section with respect to any imputed underpayment, the reviewed year partners must take into account their share of the partnership adjustments that relate to that imputed underpayment and are liable for any tax, penalties, additions to tax, additional amounts, and interest as described in § 301.6226–3. If an election is made under this section, any modification approved by the IRS under § 301.6225–2 is taken into account by the reviewed year partners in accordance with § 301.6226–2(f)(2).

(2) *Partnership.* A partnership making a valid election under this section is not liable for the imputed underpayment to which the election applies (and no assessment of tax, levy, or proceeding in any court for the collection of such imputed underpayment may be made against such partnership). Any adjustments that do not result in an imputed underpayment described in § 301.6225–1(f) that are associated with an imputed underpayment (as described in § 301.6225–1(g)) for which an election under this section is made are not taken into account by the partnership in the adjustment year (as defined in § 301.6241–1(a)(1)) and instead each reviewed year partners' share of the adjustment determined in accordance with § 301.6226–2(f) must be included on the statement described in § 301.6226–2.

(c) *Time, form, and manner for making the election*—(1) *In general.* An election under this section is valid only if all of the provisions of this section

and § 301.6226–2 (regarding statements filed with the Internal Revenue Service (IRS) and furnished to reviewed year partners) are satisfied. However, an election under this section is valid until the IRS determines that the election is invalid. An election under this section may only be revoked with the consent of the IRS.

(2) *Invalid election.* If an election under this section is determined by the IRS to be invalid, the IRS will notify the partnership and the partnership representative within 30 days of the determination that the election is invalid and the reason for the determination that the election is invalid. If the IRS makes a determination that an election under this section is invalid, section 6225 applies with respect to the imputed underpayment as if the election was never made, the IRS may assess the imputed underpayment against the partnership (without regard to the limitations under section 6232(b)), and the partnership must pay the imputed underpayment under section 6225 and any penalties and interest under section 6233. An election under this section may be determined to be invalid even if a correction is made in accordance with § 301.6226–2(d)(2) or if a correction is not made as required in accordance with § 301.6226–2(d)(3). However, the IRS has no obligation to require correction of errors discovered by the IRS and may determine an election to be invalid without providing an opportunity to correct under § 301.6226–2(d)(3).

(3) *Time for making the election.* An election under this section must be filed within 45 days of the date the FPA is mailed by the IRS. The time for filing such an election may not be extended.

(4) *Form and manner of the election*—(i) *In general.* An election under this section must be signed by the partnership representative and filed in accordance with forms, instructions, and other guidance and include the information specified in paragraph (c)(4)(ii) of this section.

(ii) *Contents of the election.* An election under this section must include the following correct information—

(A) The name, address, and taxpayer identification number (TIN) of the partnership,

(B) The taxable year to which the election relates,

(C) A copy of the FPA to which the election relates,

(D) In the case of an FPA that includes more than one imputed underpayment, identification of the imputed underpayment(s) to which the election applies,

(E) Each reviewed year partner's name, address, and TIN, and

(F) Any other information prescribed by the IRS in forms, instructions, and other guidance.

(d) *Binding nature of statements.* The election under this section, which includes filing and furnishing statements described in § 301.6226–2, are actions of the partnership under section 6223 and the regulations thereunder and, unless determined otherwise by the IRS, the partner's share of the adjustments and the applicability of any penalties, additions to tax, and additional amounts as set forth in the statement are binding on the partner pursuant to section 6223. Accordingly, a partner may not treat any partnership-related items (as defined in § 301.6241–6) reflected on a statement described in § 301.6226–2 on the partner's return inconsistently with how those items are treated on the statement that is filed with the IRS. See § 301.6222–1(c)(2) (regarding partnership-related items the treatment of which a partner is bound to under section 6223).

(e) *Coordination with section 6234 regarding judicial review.* Nothing in this section affects the rules regarding judicial review of a partnership adjustment. Accordingly, a partnership that makes an election under this section is not precluded from filing a petition under section 6234(a). See § 301.6226–2(b)(3), *Example 3.*

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 13.** Section 301.6226–2 is added to read as follows:

§ 301.6226–2 Statements furnished to partners and filed with the IRS.

(a) *In general.* A partnership that makes an election under § 301.6226–1 must furnish to each reviewed year partner (as defined in § 301.6241–1(a)(9)) and file with the Internal Revenue Service (IRS) a statement that includes the items required by paragraphs (e) and (f) of this section with respect to each reviewed year partner's share of partnership adjustments (as defined in § 301.6241–1(a)(6)) associated with the imputed underpayment for which an election under § 301.6226–1 is made. The statements furnished to the reviewed year partners under this section are in addition to, and must be filed and furnished separate from, any other statements required to be filed with the IRS and furnished to partners, including any statements under section 6031(b). A separate statement under this section must be furnished to each reviewed year partner with respect to each reviewed year (as defined in § 301.6241–1(a)(8)) subject to an election under § 301.6226–1.

(b) *Time and manner for furnishing the statements to partners*—(1) *In general.* The statements described in paragraph (a) of this section must be furnished to the reviewed year partners no later than 60 days after the date all of the partnership adjustments to which the statement relates are finally determined. The partnership adjustments are finally determined upon the later of:

(i) The expiration of the time to file a petition under section 6234, or

(ii) If a petition under section 6234 is filed, the date when the court's decision becomes final.

(2) *Address used for reviewed year partners.* The partnership must furnish the statement described in paragraph (a) of this section to each reviewed year partner in accordance with the forms, instructions, and other guidance prescribed by the IRS. If the partnership mails the statement, it must mail the statement to the current or last address of the reviewed year partner that is known to the partnership. If a statement is returned to the partnership as undeliverable, the partnership must undertake reasonable diligence to identify a correct address for the reviewed year partner to which the statement relates.

(3) *Examples.* The following examples illustrate the rules of this paragraph (b).

Example 1. During Partnership's 2020 taxable year, A, an individual, was a partner in Partnership and had an address at 123 Main St. On February 1, 2021, A sells his interest in Partnership and informs Partnership that A moved to 456 Broad St. On March 15, 2021, Partnership mails A's statement under section 6031(b) for the 2020 taxable year to 456 Broad St. On June 1, 2023, A moves again but does not inform Partnership of A's new address. In 2023, the IRS initiates an administrative proceeding with respect to Partnership's 2020 taxable year and mails a notice of final partnership adjustment (FPA) to Partnership for that year setting forth a single imputed underpayment. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment and on May 31, 2024, timely mails a statement described in paragraph (a) of this section to A at 456 Broad St. Although the statement was mailed to the last address for A that was known to Partnership, it is returned to Partnership as undeliverable

because unknown to Partnership, A had moved. After undertaking reasonable diligence to obtain the correct address of A, Partnership is unable to ascertain the correct address. Therefore, pursuant to paragraph (b)(2) of this section, Partnership properly furnished the statement to A when it mailed the statement to 456 Broad St.

Example 2. The facts are the same as in *Example 1* of this paragraph (b)(3), except that A lives at 789 Forest Ave. during all of 2024 and reasonable diligence would have revealed that 789 Forest Ave. is the correct address for A, but Partnership did not undertake such diligence. Because the statement was returned as undeliverable and Partnership did not undertake reasonable diligence to obtain the correct address for A, Partnership failed to properly furnish the statement with respect to A pursuant to paragraph (b)(2) of this section.

Example 3. Partnership is a calendar year taxpayer. The IRS initiates an administrative proceeding with respect to Partnership's 2020 taxable year. On January 1, 2024, the IRS mails an FPA with respect to the 2020 taxable year to Partnership setting forth a single imputed underpayment. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment. Partnership timely files a petition for readjustment under section 6234 with the Tax Court. The IRS prevails, and the Tax Court sustains all of the adjustments in the FPA with respect to the 2020 taxable year. The time to appeal the Tax Court decision expires, and the Tax Court decision becomes final on April 10, 2025. Under paragraph (b)(1)(ii) of this section, the adjustments in the FPA are finally determined on April 10, 2025, and Partnership must furnish the statements described in paragraph (a) of this section to its reviewed year partners and electronically file the statements with the IRS no later than June 9, 2025. See paragraph (c) of this section for the rules regarding filing the statements with the IRS.

(c) *Time and manner for filing the statements with the IRS.* No later than 60 days after the date the partnership adjustments are finally determined (as described in paragraph (b)(1) of this section), the partnership must electronically file with the IRS the statements that the partnership furnishes to each reviewed year partner under this section, along with a transmittal that includes a summary of the statements filed and such other information required in forms, instructions, and other guidance prescribed by the IRS.

(d) *Correction of statements*—(1) *In general.* A partnership corrects an error in a statement furnished under paragraph (b) of this section or filed under paragraph (c) of this section by filing the corrected statement with the IRS in the manner prescribed in paragraph (c) of this section and furnishing a copy of the corrected statement to the reviewed year partner to whom the statement relates in accordance with the forms, instructions, and other guidance prescribed by the IRS.

(2) *Error discovered by partnership*—(i) *Discovery within 60 days of statement due date.* If a partnership discovers an error in a statement within 60 days of the due date for furnishing the statements to partners and filing the statements with the IRS (as described in paragraphs (b) and (c) of this section and § 301.6226–3(e)(3)(ii)), the partnership must correct the error in accordance with paragraph (d)(1) of this section and does not have to seek consent of the IRS prior to doing so.

(ii) *Error discovered more than 60 days after statement due date.* If a partnership discovers an error more than 60 days after the due date for furnishing the statements to partners and filing the statements with the IRS (as described in paragraphs (b) and (c) of this section and § 301.6226–3(e)(3)(ii)), the partnership may only correct the error after receiving consent of the IRS in accordance with the forms, instructions, and other guidance prescribed by the IRS. The partnership may not furnish corrected statements unless it receives consent of the IRS to make the correction.

(3) *Error discovered by the IRS.* If the IRS discovers an error in the statements furnished or filed under paragraphs (b) and (c) of this section and § 301.6226–3(e)(3) or the IRS cannot determine whether the statements furnished or filed by the partnership are correct because of a failure by the partnership to comply with any requirement under this section or § 301.6226–3(e), the IRS may require the partnership to correct such errors in accordance with paragraph (d)(1) of this section or to provide additional information as necessary. Failure by the partnership to correct an error or to provide information when required by the IRS may be treated by the IRS as a failure to properly furnish correct statements to partners and file the correct statements with the IRS as described in paragraphs (b) and (c) of this section or in § 301.6226–3(e)(3). Whether the IRS requires the partnership to correct any errors discovered by the IRS or provide additional information is discretionary on the part of the IRS and the IRS is under no obligation to require the partnership to provide additional information or to correct any errors discovered or brought to the IRS's attention at any time.

(4) *Adjustments in the corrected statements taken into account by the reviewed year partners.* The adjustments included on a corrected statement are taken into account by a reviewed year partner in accordance with § 301.6226–3 for the reporting year (as defined in § 301.6226–3(a)).

(e) *Content of the statements.* Each statement described in paragraph (a) of this section must include the following correct information:

(1) The name and TIN of the reviewed year partner to whom the statement is being furnished;

(2) The current or last address of the reviewed year partner that is known to the partnership;

(3) The reviewed year partner's share of items as originally reported for the reviewed year to the partner on statements furnished to the partner under section 6031(b) and, if applicable, section 6227;

(4) The reviewed year partner's share of partnership adjustments determined under paragraph (f)(1) of this section;

(5) Modifications approved by the IRS with respect to the reviewed year partner (or with respect to any indirect partner (as defined in § 301.6241–1(a)(4)) that holds its interest in the partnership through its interest in the reviewed year partner);

(6) The applicability of any penalty, addition to tax, or additional amount determined at the partnership level that relates to any adjustments allocable to the reviewed year partner and the adjustments to which the penalty, addition to tax, or additional amount relates, the section of the Internal Revenue Code (Code) under which each penalty, addition to tax, or additional amount is imposed, and the applicable rate of each penalty, addition to tax, or additional amount determined at the partnership level;

(7) The date the statement is furnished to the reviewed year partner;

(8) The partnership taxable year to which the adjustments relate; and

(9) Any other information required by forms, instructions, and other guidance prescribed by the IRS.

(f) *Determination of each partner's share of adjustments*—(1) *Adjustments and other amounts*—(i) *In general.* Except as described in paragraphs (f)(1)(ii), (f)(1)(iii), or (f)(2) of this section, the adjustments set forth in the statement described in paragraph (a) of this section are reported to the reviewed year partner in the same manner as each adjusted partnership-related item was originally allocated to the reviewed year partner on the partnership return for the reviewed year.

(ii) *Adjusted partnership-related item not reported on the partnership's return for the reviewed year.* Except as described in paragraph (f)(1)(iii) of this section, if the adjusted partnership-

related item was not reported on the partnership return for the reviewed year, each reviewed year partner's share of the adjustments must be determined in accordance with how such partnership-related items would have been allocated under rules that apply with respect to partnership allocations, including under the partnership agreement.

(iii) *Adjustments that specifically allocate items.* If an adjustment involves an allocation of a partnership-related item to a specific partner or in a specific manner, including a reallocation of such an item, the reviewed year partner's share of the adjustment set forth in the statement is determined in accordance with the adjustment as finally determined (as described in paragraph (b)(1) of this section).

(2) *Treatment of modifications disregarded.* Any modifications approved by the IRS with respect to the reviewed year partner (or with respect to any indirect partner (as defined in § 301.6241–1(a)(4)) that holds its interest in the partnership through its interest in the reviewed year partner) under § 301.6225–2 are disregarded for purposes of determining each partner's share of the adjustments under paragraph (f)(1) of this section.

(g) *Coordination with other provisions under subtitle A of the Code*—(1) *Statements furnished to qualified investment entities described in section 860.* If a reviewed year partner is a qualified investment entity within the meaning of section 860(b) and the partner receives a statement described in paragraph (a) of this section, the partner may be able to avail itself of the deficiency dividend procedure described in § 301.6226–3(b)(4).

(2) *Liability for tax under section 7704(g)(3).* An election under this section has no effect on a partnership's liability for any tax under section 7704(g)(3) (regarding the exception for electing 1987 partnerships from the general rule that certain publicly traded partnerships are treated as corporations).

(3) *Adjustments subject to chapters 3 and 4.* A partnership that makes an election under § 301.6226–1 with respect to an imputed underpayment must pay the amount of tax required to be withheld under chapter 3 or chapter 4, if any, in accordance with § 301.6241–7(b)(4).

(h) *Applicability date*—(1) *In general.* Except as provided in paragraph (h)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 14.** Section 301.6226–3 is added to read as follows:

§ 301.6226–3 Adjustments taken into account by partners.

(a) *Effect of taking adjustments into account on tax imposed by chapter 1.* Except as otherwise provided in this section, the tax imposed by chapter 1 of subtitle A of the Internal Revenue Code (chapter 1 tax) for each reviewed year partner (as defined in § 301.6241–1(a)(9)) for the taxable year that includes the date a statement was furnished in accordance with § 301.6226–2 (the reporting year) is increased by the additional reporting year tax, or if the additional reporting year tax is less than zero, decreased by such amount. The additional reporting year tax is the aggregate of the correction amounts (determined in accordance with paragraph (b) of this section). In addition to being liable for the additional reporting year tax, a reviewed year partner must also calculate and pay for the reporting year any penalties, additions to tax, and additional amounts (as determined under paragraph (d) of this section). Finally, a reviewed year partner must also calculate and pay for the reporting year any interest (as determined under paragraph (c) of this section).

(b) *Determining the aggregate of the correction amounts*—(1) *In general.* For purposes of paragraph (a) of this section, the aggregate of the correction amounts is the sum of the correction amounts described in paragraphs (b)(2) and (3) of this section. A correction amount under paragraph (b)(2) or (3) of this section may be less than zero, and any correction amount that is less than zero may reduce any other correction amount with the result that the aggregate of the correction amounts under this paragraph (b)(1) may also be less than zero. However, see paragraphs (c) and (d) of this section requiring a separate determination of interest and penalties, additions to tax, and additional amounts on the correction amount for each applicable taxable year (as defined in paragraph (c)(1) of this section) without regard to the correction amount for any other applicable taxable year.

(2) *Correction amount for the first affected year*—(i) *In general.* The correction amount for the taxable year of the partner that includes the end of the reviewed year (the first affected year) is the amount by which the reviewed year partner's chapter 1 tax would increase or decrease for the first affected year if the partner's taxable income for such year was recomputed by taking into account the reviewed year partner's share of the partnership adjustments (as defined in § 301.6241–1(a)(6)) reflected on the statement described in § 301.6226–2 with respect to the partner.

(ii) *Calculation of the correction amount for the first affected year.* The correction amount is the amount of chapter 1 tax that would have been imposed for the first affected year if the items as adjusted in the statement described in § 301.6226–2 had been reported as such on the return for the first affected year less the sum of:

(A) The amount of chapter 1 tax shown by the partner on the return for the first affected year (which includes amounts shown on an amended return for such year, including an amended return filed, or alternative to an amended return submitted, under section 6225(c)(2) by the reviewed year partner), plus

(B) Amounts not so shown previously assessed (or collected without assessment) (as defined in § 1.6664–2(d) of this chapter), less

(C) The amount of rebates made (as defined in § 1.6664–2(e) of this chapter).

(iii) *Definition of the correction amount for the first affected year.* The correction amount also may be expressed as—

$$\text{Correction amount} = A - (B + C - D),$$

Where A = the amount of chapter 1 tax that would have been imposed had the items as adjusted been properly reported on the return for the first affected year; B = the amount shown as chapter 1 tax on the return for the first affected year (taking into account amended returns (or alternatives)); C = amounts not so shown previously assessed (or collected without assessment); and D = the amount of rebates made.

(3) *Correction amount for the intervening years*—(i) *In general.* The correction amount for all taxable years after the first affected year and before the reporting year (the intervening years) is the aggregate of the correction amounts determined for each intervening year. Determining the correction amount for each intervening year is a year-by-year determination. The correction amount for each intervening year is the amount by which the reviewed year partner's chapter 1 tax for such year would increase or decrease if the partner's taxable income for such year was recomputed by taking into account any adjustments to tax attributes (as defined in § 301.6241–1(a)(10)) of the partner under this paragraph (b)(3).

(ii) *Calculation of the correction amount for the intervening years.* The correction amount for each intervening year is the amount of chapter 1 tax that would have been imposed for the intervening year if any tax attribute of the partner for the intervening year had been adjusted after taking into account the reviewed year partner's share of the adjustments for the first affected year as described in paragraph (b)(2) of this section (and if any tax attribute of the partner for the intervening year had been adjusted, after taking into account any adjustments to tax attributes of the partner in any prior intervening year(s)) exceeds less the sum of—

(A) The amount of chapter 1 tax shown by the partner on the return for the intervening year (which includes amounts shown on an amended return for such year, including an amended return filed, or alternative to an amended return submitted, under section 6225(c)(2) by a reviewed year partner), plus

(B) Amounts not so shown previously assessed (or collected without assessment) (as defined in § 1.6664–2(d) of this chapter), less

(C) The amount of rebates made (as defined in § 1.6664–2(e) of this chapter).

(iii) *Definition of the correction amount for the intervening years.* The correction amount also may be expressed as—

$$\text{Correction amount} = A - (B + C - D),$$

Where A = the amount of chapter 1 tax that would have been imposed for the intervening year; B = the amount shown as chapter 1 tax on the return for the intervening year (taking into account amended returns (or alternatives)); C = amounts not so shown previously assessed (or collected without assessment); and D = the amount of rebates made.

(4) *Coordination of sections 860 and 6226.* If a qualified investment entity (QIE) within the meaning of section 860(b) receives a statement described in § 301.6226–2(a) and correctly makes a determination within the meaning of section 860(e)(4) that one or more of the adjustments reflected in the statement is an adjustment within the meaning of section 860(d) with respect to that QIE for a taxable year, the QIE may distribute deficiency dividends within the meaning of section 860(f) for that taxable year and avail itself of the deficiency dividend procedures set forth in section 860. If the QIE utilizes the deficiency dividend procedures with respect to adjustments in a statement described in § 301.6226–2(a), the QIE may claim a deduction for deficiency dividends against the adjustments furnished to the QIE in the statement in calculating any correction amounts under paragraphs (b)(2) and (3) of this section, and interest on such correction amounts under paragraph (c) of this section, to the extent that the QIE makes deficiency dividend distributions under section 860(f) and complies with all requirements of section 860 and the regulations thereunder.

(c) *Interest*—(1) *Interest on the correction amounts.* Interest on the correction amounts determined under paragraph (b) of this section is the aggregate of all interest calculated for each applicable taxable year in which there was a correction amount greater than zero at the rate set forth in paragraph (c)(3) of this section. For each applicable taxable year, interest on the correction amount is calculated from the due date (without extension) of the reviewed year partner's return for such applicable taxable year until the amount is paid. For purposes of this paragraph (c)(1), the term *applicable taxable year* means the reviewed year partner's taxable year affected by taking into account adjustments as described in paragraph (b) of this section (for instance, the first affected year and any intervening year in which there is a correction amount greater than zero). For purposes of calculating interest under this paragraph (c), a correction amount under paragraph (b)(2) or (3) of this section for an applicable taxable year that is less than zero does not reduce the correction amount for any other applicable taxable year.

(2) *Interest on penalties.* Interest on any penalties, additions to tax, or additional amounts determined under paragraph (d) of this section is calculated at the rate set forth in paragraph (c)(3) of this section from the due date (without extension) of the reviewed year partner's return for the applicable taxable year until the amount is paid.

(3) *Rate of interest.* For purposes of paragraph (c) of this section, interest is calculated using the underpayment rate under section 6621(a)(2) by substituting ''5 percentage points'' for ''3 percentage points'' in section 6621(a)(2)(B).

(d) *Penalties*—(1) *Applicability determined at the partnership level.* In the case of a partnership that makes an election under section 6226, the applicability of any penalty, addition to tax, and additional amount that relates to an adjustment to any partnership-related item is determined at the partnership level in accordance with section 6221(a). The partnership's reviewed year partners are liable for such penalties, additions to tax, and additional amounts as determined under paragraph (d)(2) of this section.

(2) *Amount calculated at partner level.* A reviewed year partner calculates the amount of any penalty, addition to tax, or additional amount relating to the partnership adjustments taken into account under paragraph (b)(1) of this section as if the correction amount were an underpayment or understatement of the reviewed year partner for the first affected year or intervening year, as applicable. The calculation of any penalty, addition to tax, or additional amount is based on the characteristics of, and facts and circumstances applicable to, the reviewed year partner for the first affected year or intervening year, as applicable after taking into account the partnership adjustments reflected on the statement. If after taking into account the partnership adjustments in accordance with this section, the reviewed year partner does not have an underpayment, or has an understatement that falls below the applicable threshold for the imposition of a penalty, no penalty is due from that reviewed year partner under this paragraph (d)(2). For penalties in the case of a pass-through partner that makes a payment under paragraph (e)(4) of this section, see paragraph (e)(4)(iv) of this section.

(3) *Partner-level defenses to penalties.* A reviewed year partner claiming that a penalty, addition to tax, or additional amount that relates to a partnership adjustment reflected on a statement described in § 301.6226–2 (or paragraph (e)(3) of this section) is not due because of a partner-level defense must first pay the penalty and file a claim for refund for the reporting year. Partner-level defenses are limited to those that are personal to the reviewed year partner (for example, a reasonable cause and good faith defense under section 6664(c) that is based on the facts and circumstances applicable to the partner).

(e) *Pass-through partners*—(1) *In general.* Except as provided in paragraph (e)(6) of this section, if a pass-through partner (as defined in § 301.6241–1(a)(5)) is furnished a statement described in § 301.6226–2 (including a statement described in paragraph (e)(3) of this section) with respect to adjustments of a partnership that made an election under § 301.6226–1 (audited partnership), the pass-through partner must file with the IRS a partnership adjustment tracking report in accordance with forms, instructions, or other guidance prescribed by the IRS on or before the due date described in paragraph (e)(3)(ii) of this section, and file and furnish statements in accordance with paragraph (e)(3) of this section. The pass-through partner must

comply with paragraph (e) of this section with respect to each statement furnished to the pass-through partner.

(2) *Failure to file and furnish required documents*—(i) *Failure to timely file and furnish statements.* If any pass-through partner fails to timely file and furnish correct statements in accordance with paragraph (e)(3) of this section, the pass-through partner must compute and pay an imputed underpayment, as well as any penalties, additions to tax, additional amounts, and interest with respect to the adjustments reflected on the statement furnished to the pass-through partner in accordance with paragraph (e)(4) of this section. The IRS may assess such imputed underpayment against such pass-through partner without regard to the limitations under section 6232(b). See § 301.6232–1(c)(2). A failure to furnish statements in accordance with paragraph (e)(3) of this section is treated as a failure to timely pay an imputed underpayment required under paragraph (e)(4)(i) of this section, unless the pass-through partner computes and pays an imputed underpayment in accordance with paragraph (e)(4) of this section. See section 6651(i).

(ii) *Failures relating to partnership adjustment tracking report.* Failure to timely file the partnership adjustment tracking report as required in paragraph (e)(1) of this section, or filing such report without showing the information required under paragraph (e)(1) of this section, is subject to the penalty imposed by section 6698.

(3) *Furnishing statements to partners*—(i) *In general.* A pass-through partner described in paragraph (e)(1) of this section must furnish a statement that includes the items required by paragraph (e)(3)(iii) of this section to each partner that held an interest in the pass-through partner at any time during the taxable year of the pass-through partner to which the adjustments in the statement furnished to the pass-through partner relate (affected partner). The statements described in this paragraph (e)(3) must be filed with the IRS by the due date prescribed in paragraph (e)(3)(ii) of this section. Except as otherwise provided in paragraphs (e)(3)(ii), (iii), and (v) of this section, the rules applicable to statements described in § 301.6226–2 are applicable to statements described in this paragraph (e)(3).

(ii) *Time for filing and furnishing the statements.* The pass-through partner must file with the IRS and furnish to its affected partners the statements described in paragraph (e)(3) of this section no later than the extended due date for the return for the adjustment year (as defined in § 301.6241–1(a)(1)) of the audited partnership. For purposes of this section, the extended due date is the extended due date under section 6081 regardless of whether the audited partnership is required to file a return for the adjustment year or timely files a request for an extension under section 6081 and the regulations thereunder.

(iii) *Contents of statements.* Each statement described in paragraph (e)(3) of this section must include the following correct information—

(A) The name and taxpayer identification number (TIN) of the audited partnership;

(B) The adjustment year of the audited partnership;

(C) The extended due date for the return for the adjustment year of the audited partnership (as described in paragraph (e)(3)(ii) of this section);

(D) The date on which the audited partnership furnished its statements required under § 301.6226–2(b);

(E) The name and TIN of the partnership that furnished the statement to the pass-through partner if different from the audited partnership;

(F) The name and TIN of the pass-through partner;

(G) The pass-through partner's taxable year to which the adjustments reflected on the statements described in paragraph (e)(3) of this section relates;

(H) The name and TIN of the affected partner to whom the statement is being furnished;

(I) The current or last address of the affected partner that is known to the pass-through partner;

(J) The affected partner's share of items as originally reported to such partner under section 6031(b) and, if applicable, section 6227, for the taxable year to which the adjustments reflected on the statement furnished to the pass-through partner relate;

(K) The affected partner's share of partnership adjustments determined under § 301.6226–2(f)(1) as if the affected partner were the reviewed year partner and the pass-through partner were the partnership;

(L) Modifications approved by the IRS with respect to the affected partner that holds its interest in the audited partnership through the pass-through partner;

(M) The applicability of any penalties, additions to tax, or additional amounts that relate to any adjustments allocable to the affected partner and the adjustments allocated to the affected partner to which such penalties, additions to tax, or additional amounts relate, the section of the Internal Revenue Code under which each penalty, addition to tax, or additional amount is imposed, and the applicable rate of each penalty, addition to tax, or additional amount; and

(N) Any other information required by forms, instructions, and other guidance prescribed by the IRS.

(iv) *Affected partner must take into account the adjustments.* A statement furnished to an affected partner in accordance with paragraph (e)(3) of this section is treated as if it were a statement described in § 301.6226–2. An affected partner that is a pass-through partner must take into account the adjustments reflected on such a statement in accordance with this paragraph (e). An affected partner that is not a pass-through partner must take into account the adjustments reflected on such a statement in accordance with this section by treating references to ''reviewed year partner'' as ''affected partner''. For purposes of this paragraph (e)(3)(iv), an affected partner that is not a pass-through partner takes into account the adjustments in accordance with this section by determining its reporting year based on the date upon which the audited partnership furnished its statements to its reviewed year partners (as described in paragraph (a) of this section). No addition to tax under section 6651 related to any additional reporting year tax will be imposed if an affected partner that is not a pass-through partner reports and pays the additional reporting year tax within 30 days of the extended due date for the return for the adjustment year of the audited partnership (as described in paragraph (e)(3)(ii) of this section).

(v) *Adjustments subject to chapters 3 and 4.* If a pass-through partner furnishes statements to its affected partners in accordance with paragraph (e)(3) of this section, the pass-through partner must comply with the requirements of § 301.6241–7(b)(4), and an affected partner must comply with the requirements of paragraph (f) of this section. For purposes of applying both § 301.6241–7(b)(4) and paragraph (f) of this section, as appropriate, references to the ''partnership'' should be replaced with references to the ''pass-through partner''; references to the ''reviewed year partner'' should be replaced with references to the ''affected partner''; references to the statement required under paragraph (a) of this section and its due date should be replaced with references to the statement required under paragraph (e)(3) of this section and its due date described in paragraph (e)(3)(ii) of this section; references to the ''reporting year'' should be read in accordance with paragraph (e)(3)(iv) of this section; and references to the partnership return should be read as

references to the return for the adjustment year of the audited partnership as described in paragraph (e)(3)(ii) of this section.

(4) *Pass-through partner pays an imputed underpayment*—(i) *In general.* If a pass-through partner described in paragraph (e)(1) of this section does not furnish statements in accordance with paragraph (e)(3) of this section, the pass-through partner must compute and pay an imputed underpayment determined under paragraph (e)(4)(iii) of this section. The pass-through partner must also pay any penalties, additions to tax, additional amounts, and interest as determined under paragraph (e)(4)(iv) of this section. A failure to timely pay an imputed underpayment required under this paragraph (e)(4) is subject to penalty under section 6651(i).

(ii) *Time of payment.* A pass-through partner must file a partnership adjustment tracking report and compute and pay the imputed underpayment and any penalties, additions to tax, additional amounts, and interest, as described in paragraph (e)(4)(i) of this section, in accordance with forms, instructions, and other guidance no later than the extended due date for the return for the adjustment year of the audited partnership.

(iii) *Computation of the imputed underpayment.* The imputed underpayment under paragraph (e)(4)(i) of this section is computed in the same manner as an imputed underpayment under section 6225 and § 301.6225–1, except that adjustments reflected on the statement furnished to the pass-through partner under § 301.6226–2 are treated as partnership adjustments (as defined in § 301.6241–1(a)(6)) for the first affected year. Any modification approved by the IRS under § 301.6225–2 with respect to the pass-through partner (including any modifications with respect to a relevant partner (as defined in § 301.6225–2(a)) that holds its interest in the audited partnership through its interest in the pass-through partner) reflected on the statement furnished to the pass-through partner under § 301.6226–2 (or paragraph (e)(3) of this section) is taken into account in calculating the imputed underpayment under this paragraph (e)(4)(iii). Any modification that was not approved by the IRS under § 301.6225–2 may not be taken into account in calculating the imputed underpayment under this paragraph (e)(4)(iii).

(iv) *Penalties and interest*—(A) *Penalties.* A pass-through partner must compute and pay any applicable penalties, additions to tax, and additional amounts on the imputed underpayment calculated under paragraph (e)(4)(iii) of this section as if such amount were an imputed underpayment for the pass-through partner's first affected year. See § 301.6233(a)–1(c).

(B) *Interest.* A pass-through partner must pay interest on the imputed underpayment calculated under paragraph (e)(4)(iii) of this section in accordance with paragraph (c) of this section as if such imputed underpayment were an imputed underpayment due for the first affected year.

(v) *Adjustments that do not result in an imputed underpayment.* Adjustments taken into account under paragraph (e)(4) of this section that do not result in an imputed underpayment (as defined in § 301.6225–1(f)) are taken into account by the pass-through partner in accordance with § 301.6225–3 in the taxable year of the pass-through partner that includes the date the imputed underpayment required under paragraph (e)(4)(i) of this section is paid. If, after making the computation described in paragraph (e)(4)(iii) of this section, no imputed underpayment exists and therefore no payment is required under paragraph (e)(4)(i) of this section, the adjustments that did not result in an imputed underpayment are taken into account by the pass-through partner in accordance with § 301.6225–3 in the taxable year of the pass-through partner that includes the date the statement described in § 301.6226–2 (or paragraph (e)(3) of this section) is furnished to the pass-through partner.

(vi) *Coordination with chapters 3 and 4.* If a pass-through partner pays an imputed underpayment described in paragraph (e)(4)(i) of this section, § 301.6241–7(b)(3) applies to the pass-through partner by substituting ''pass-through partner'' for ''partnership'' where § 301.6241–7(b)(3) refers to the partnership that pays the imputed underpayment.

(5) *Treatment of pass-through partners that are not partnerships*—(i) *S corporations.* For purposes of this paragraph (e), an S corporation is treated as a partnership and its shareholders are treated as partners.

(ii) *Trusts and estates.* Except as provided in paragraph (g) of this section, for purposes of paragraph (e) of this section, a trust and its beneficiaries, and an estate and its beneficiaries are treated in the same manner as a partnership and its partners.

(6) *Pass-through partners subject to chapter 1 tax.* A pass-through partner that is subject to tax under chapter 1 of the Code on the adjustments (or a portion of the adjustments) reflected on the statement furnished to such partner under § 301.6226–2 (or paragraph (e)(3) of this section) takes the adjustments into account under this paragraph (e)(6) when the pass-through partner calculates and pays the additional reporting year tax as determined under paragraph (b) of this section and furnishes statements to its partners in accordance with paragraph (e)(3) of this section. Notwithstanding the prior sentence, a pass-through partner is only required to include on a statement under paragraph (e)(3) of this section the adjustments that would be required to be included on statements furnished to owners or beneficiaries under sections 6037 and 6034A, as applicable, if the pass-through partner had correctly reported the items for the year to which the adjustments relate. If the pass-through partner fails to comply with the requirements of this paragraph (e)(6), the pass-through partner must compute and pay an imputed underpayment, as well as any penalties, additions to tax, additional amounts, and interest with respect to the adjustments reflected on the statement furnished to such partner in accordance with paragraph (e)(4) of this section.

(f) *Partners subject to withholding under chapters 3 and 4.* A reviewed year partner that is subject to withholding under § 301.6241–7(b)(4) must file an income tax return for the reporting year to report its additional reporting year tax and its share of any penalties, additions to tax, additional amounts, and interest (notwithstanding any filing exception in § 1.6012–1(b)(2)(i) or § 1.6012–2(g)(2)(i) of this chapter). The amount of tax paid by a partnership under § 301.6241–7(b)(4) is allowed as a credit under section 33 to the reviewed year partner to the extent that the tax is allocable to the reviewed year partner (within the meaning of § 1.1446–3(d)(2) of this chapter) or is actually withheld from the reviewed year partner (within the meaning of § 1.1464–1(a) or § 1.1474–3 of this chapter). The credit is allowed against the reviewed year partner's income tax liability for its reporting year. The reviewed year partner must substantiate the credit by attaching the applicable Form 1042–S, ''Foreign Person's U.S. Source Income Subject to Withholding,'' or Form 8805, ''Foreign Partner's Information Statement of Section 1446 Withholding Tax,'' to its income tax return for the reporting year, as well as satisfying any other requirements prescribed by the IRS in forms and instructions.

(g) *Treatment of disregarded entities and wholly-owned grantor trusts.* In the case of a reviewed year partner that is a wholly-owned entity disregarded as

separate from its owner for Federal tax purposes in the reviewed year or a trust that is wholly owned by only one person in the reviewed year, whether the grantor or another person, and where the trust reports the owner's information to payors under § 1.671–4(b)(2)(i)(A) of this chapter and that is furnished a statement described in § 301.6226–2 (or paragraph (e)(3) of this section), the owner of the disregarded entity or wholly-owned grantor trust must take into account the adjustments reflected on that statement in accordance with this section as if the owner were the reviewed year partner.

(h) *Examples.* The following examples illustrate the rules of this section. For purposes of these examples, each partnership is subject to subchapter C of chapter 63 of the Code, each partnership and partner has a calendar year taxable year, no modifications are requested by any partnership under § 301.6225–2 (unless otherwise stated), no penalties, additions to tax, or additional amounts are determined at the partnership level (unless otherwise stated), all persons are U.S. persons (unless otherwise stated), the highest rate of income tax in effect for is 40 percent for all relevant periods, the highest rate of income tax in effect for corporations is 20 percent for all relevant periods, and the highest rate of tax for individuals for capital gains is 15 percent for all relevant periods.

Example 1. On its partnership return for the 2020 tax year, Partnership reported ordinary income of $1,000 and charitable contributions of $400. On June 1, 2023, the IRS mails a notice of final partnership adjustment (FPA) to Partnership for Partnership's 2020 year disallowing the charitable contribution in its entirety and determining that a 20 percent accuracy-related penalty under section 6662(b) applies to the disallowance of the charitable contribution, and setting forth a single imputed underpayment with respect to such adjustments. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and files a timely petition in the Tax Court challenging the partnership adjustments. The Tax Court determines that Partnership is not entitled to any of the claimed $400 in charitable contributions and upholds the applicability of the penalty. The decision regarding Partnership's 2020 tax year becomes final on December 15, 2025. Pursuant to § 301.6226–2(b), the partnership adjustments are finally determined on December 15, 2025. On February 2, 2026, Partnership files the statements described under § 301.6226–2 with the IRS and furnishes to partner A, an individual who was a partner in Partnership during 2020, a statement described in § 301.6226–2. A had a 25 percent interest in Partnership during all of 2020 and was allocated 25 percent of all items from Partnership for that year. The statement shows A's share of ordinary income reported on Partnership's return for the reviewed year of $250 and A's share of the charitable contribution reported on Partnership's return for the reviewed year of $100. The statement also shows no adjustment to A's share of ordinary income, but does show an adjustment to A's share of the charitable contribution, a reduction of $100 resulting in $0 charitable contribution allocated to A from Partnership for 2020. In addition, the statement reports that a 20 percent accuracy-related penalty under section 6662(b) applies. A must pay the additional reporting year tax as determined in accordance with paragraph (b) of this section, in addition to A's penalties and interest. A computes his additional reporting year tax as follows. First, A determines the correction amount for the first affected year (the 2020 taxable year) by taking into account A's share of the partnership adjustment (<100> reduction in charitable contribution) for the 2020 taxable year. A determines the amount by which his chapter 1 tax for 2020 would have increased or decreased if the $100 adjustment to the charitable contribution from Partnership were taken into account for that year. There is no adjustment to tax attributes in A's intervening years as a result of the adjustment to the charitable contribution for 2020. Therefore, A's aggregate of the correction amounts is the correction amount for 2020, A's first affected year. In addition to the aggregate of the correction amounts being added to the chapter 1 tax that A owes for 2026, the reporting year, A must calculate a 20 percent accuracy-related penalty on A's underpayment attributable to the $100 adjustment to the charitable contribution, as well as interest on the correction amount for the first affected year and the penalty determined in accordance with paragraph (c) of this section. Interest on the correction amount for the first affected tax year runs from April 15, 2021, the due date of A's 2020 return (the first affected tax year) until A pays this amount. In addition, interest runs on the penalty from April 15, 2021, the due date of A's 2020 return for the first affected year until A pays this amount. On his 2026 income tax return, A must report the additional reporting year tax determined in accordance with paragraph (b) of this section, which is the correction amount for 2020, plus the accuracy-related penalty determined in accordance with paragraph (d) of this section, and interest determined in accordance with paragraph (c) of this section on the correction amount for 2020 and the penalty.

Example 2. On its partnership return for the 2020 tax year, Partnership reported an ordinary loss of $500. On June 1, 2023, the IRS mails an FPA to Partnership for the 2020 taxable year determining that $300 of the $500 in ordinary loss should be recharacterized as a long-term capital loss. Partnership has no long-term capital gain for its 2020 tax year. The FPA for Partnership's 2020 tax year reflects an adjustment of an increase in ordinary income of $300 (as a result of the disallowance of the recharacterization of $300 from ordinary loss to long-term capital loss) and an imputed underpayment related to that adjustment, as well as an adjustment of an additional $300 in long-term capital loss for 2020 which does not result in an imputed underpayment under § 301.6225–1(f). Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA and does not file a petition for readjustment under section 6234. Accordingly, under § 301.6226–1(b)(2) and § 301.6225–3(b)(6), the adjustment year partners (as defined in § 301.6241–1(a)(2)) do not take into account the $300 long-term capital loss that does not result in an imputed underpayment. Rather, the $300 long-term capital loss is taken into account by the reviewed year partners. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. On September 30, 2023, Partnership files with the IRS statements described in § 301.6226–2 and furnishes statements to all of its reviewed year partners in accordance with § 301.6226–2. One partner of Partnership in 2020, B (an individual), had a 25 percent interest in Partnership during all of 2020 and was allocated 25 percent of all items from Partnership for that year. The statement filed with the IRS and furnished to B shows B's allocable share of the ordinary loss reported on Partnership's return for the 2020 taxable year as $125. The statement also shows an adjustment to B's allocable share of the ordinary loss in the amount of <$75>, resulting in a corrected ordinary loss allocated to B of $50 for taxable year 2020 ($125 originally allocated to B less $75 which is B's share of the adjustment to the ordinary loss). In addition, the statement shows an increase to B's share of long-term capital loss in the amount of $75 (B's share of the adjustment that did not result in the imputed underpayment with respect to Partnership). B must pay the additional reporting year tax as determined in accordance with paragraph (b) of this section. B computes his additional reporting year tax as follows. First, B determines the correction amount for the first affected year (the 2020 taxable year) by taking into account B's share of the partnership adjustments (a $75 reduction in ordinary loss and an increase of $75 in long-term capital loss) for the 2020 taxable year. B determines the amount by which his chapter 1 tax for 2020 would have increased or decreased if the $75 adjustment to ordinary loss and the $75 adjustment to long-term capital loss from Partnership were taken into account for that year. Second, B determines if there is any increase or decrease in chapter 1 tax for any intervening year as a result of the adjustment to the ordinary and capital losses for 2020. B's aggregate of the correction amounts is the correction amount for 2020, B's first affected year plus any correction amounts for any intervening years. B is also liable for any interest on the correction amount for the first affected year and for any intervening year as determined in accordance with paragraph (c) of this section.

Example 3. On its partnership return for the 2020 tax year, Partnership, a domestic partnership, reported U.S. source dividend income of $2,000. On June 1, 2023, the IRS mails an FPA to Partnership for Partnership's

2020 year increasing the amount of U.S. source dividend income to $4,000 and determining that a 20 percent accuracy-related penalty under section 6662(b) applies to the increase in U.S. source dividend income. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and does not file a petition for readjustment under section 6234. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. On September 30, 2023, Partnership files the statements described under § 301.6226–2 with the IRS and furnishes to partner C, a nonresident alien individual who was a partner in Partnership during 2020 (and remains a partner in Partnership in 2023), a statement described in § 301.6226–2. C had a 50 percent interest in Partnership during all of 2020 and was allocated 50 percent of all items from Partnership for that year. The statement shows C's share of U.S. source dividend income reported on Partnership's return for the reviewed year of $1,000 and an adjustment to U.S. source dividend income of $1,000. In addition, the statement reports that a 20 percent accuracy-related penalty under section 6662(b) applies. Under § 301.6241–7(b)(4)(i), because the additional $1,000 in U.S. source dividend income allocated to C is an amount subject to withholding (as defined in § 301.6241–7(b)(2)), Partnership must pay the amount of tax required to be withheld on the adjustment. See §§ 1.1441–1(b)(1) and 1.1441–5(b)(2)(i)(A) of this chapter. Under § 301.6241–7(b)(4)(ii), Partnership may reduce the amount of withholding tax it must pay because it has valid documentation from 2020 that establishes that C was entitled to a reduced rate of withholding in 2020 on U.S. source dividend income of 10 percent pursuant to a treaty. Partnership withholds $100 of tax from C's distributive share, remits the tax to the IRS, and files the necessary return and information returns required by § 1.1461–1 of this chapter. On his 2023 return, C must report the additional reporting year tax determined in accordance with paragraph (b) of this section, the accuracy-related penalty determined in accordance with paragraph (d) of this section, and interest determined in accordance with paragraph (c) of this section on the correction amount for the first affected year, the correction amount for any intervening year, and the penalty. Under paragraph (f) of this section, C may claim the $100 withholding tax paid by Partnership pursuant to § 301.6241–7(b)(4)(i) as a credit under section 33 against C's income tax liability on his 2023 return.

Example 4. On its partnership return for the 2020 tax year, Partnership reported ordinary income of $100 and a long-term capital gain of $40. Partnership had four equal partners during the 2020 tax year: E, F, G, and H, all of whom were individuals. On its partnership return for the 2020 tax year, the entire long-term capital gain was allocated to partner E and the ordinary income was allocated to all partners based on their equal (25 percent) interest in Partnership. The IRS initiates an administrative proceeding with respect to Partnership's 2020 taxable year and determines that the long-term capital gain should have been allocated equally to all four partners and that Partnership should have recognized an additional $10 in ordinary income. On June 1, 2023, the IRS mails an FPA to Partnership reflecting the reallocation of the $40 long-term capital gain so that F, G, and H each have $10 increase in long-term capital gain and E has a $30 reduction in long-term capital gain for 2020. In addition, the FPA reflects the partnership adjustment increasing ordinary income by $10. The FPA reflects a general imputed underpayment with respect to the increase in ordinary income and a specific imputed underpayment with respect to the increase in long-term capital gain allocated to F, G, and H. In addition, the FPA reflects a $30 partnership adjustment that does not result in an imputed underpayment, that is, the reduction of $30 in long-term capital gain with respect to E that is associated with the specific imputed underpayment in accordance with § 301.6225–1(g)(2)(iii)(B). Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the specific imputed underpayment relating to the reallocation of long-term capital gain. Partnership does not file a petition for readjustment under section 6234. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. Partnership timely pays and reports the general imputed underpayment relating to the partnership adjustment to ordinary income. On September 30, 2023, Partnership files with the IRS statements described in § 301.6226–2 and furnishes statements to its partners reflecting their share of the partnership adjustments as finally determined in the FPA that relate to the specific imputed underpayment, that is, the reallocation of long-term capital gain. The statements for F, G, and H each reflect a partnership adjustment of an additional $10 of long-term capital gain for 2020. The statement for E reflects a partnership adjustment of a reduction of $30 of long-term capital gain for 2020. All partners must report the additional reporting year tax as determined in accordance with paragraph (b) of this section in the partners' reporting year, which is 2023. They compute their additional reporting year tax as follows. First, they determine the correction amount for the first affected year (the 2020 taxable year) by taking into account their share of the partnership adjustments for the 2020 taxable year. They each determine the amount by which their chapter 1 tax for 2020 would have increased or decreased if the adjustment to long-term capital gain from Partnership were taken into account for that year. Second, they determine if there is any increase or decrease in chapter 1 tax for any intervening year as a result of the adjustment to the long-term capital gain for 2020. Their aggregate of the correction amounts is the sum of the correction amount for 2020, their first affected year and any correction amounts for any intervening years. They are also liable for any interest on the correction amount for the first affected year and for any intervening year as determined in accordance with paragraph (c) of this section.

Example 5. On its partnership return for the 2020 taxable year, Partnership reported a long-term capital loss of $500. During an administrative proceeding with respect to Partnership's 2020 taxable year, the IRS mails a notice of proposed partnership adjustment (NOPPA) in which it proposes to disallow $200 of the reported $500 long-term capital loss, the only adjustment. Accordingly, the imputed underpayment reflected in the NOPPA is $80 ($200 × 40 percent). F, a C corporation partner with a 50 percent interest in Partnership, received 50 percent of all long-term capital losses for 2020. As part of the modification process described in § 301.6225–2(d)(2), F files an amended return for 2020 taking into account F's share of the partnership adjustment ($100 reduction in long-term capital loss) and pays the tax owed for 2020, including interest. Also as part of the modification process, F also files amended returns for 2021 and 2022 and pays additional tax (and interest) for these years because the reduction in long-term capital loss for 2020 affected the tax due from F for 2021 and 2022. See § 301.6225–2(d)(2). The reduction of the long-term capital loss in 2020 did not affect any other taxable year of F. This is the only modification requested. The IRS approves the modification with respect to F and on June 1, 2023, mails an FPA to Partnership for Partnership's 2020 year reflecting the partnership adjustment reducing the long-term capital loss in the amount of $200. The FPA also reflects the modification to the imputed underpayment based on the amended returns filed by F taking into account F's share of the reduction in the long-term capital loss. Therefore, the imputed underpayment in the FPA is $40 ($100 × 40 percent). Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and files a timely petition in the Tax Court challenging the partnership adjustments. The Tax Court upholds the determinations in the FPA and the decision regarding Partnership's 2020 tax year becomes final on December 15, 2025. Pursuant to § 301.6226–2(b), the partnership adjustments are finally determined on December 15, 2025. On February 1, 2026, Partnership files the statements described under § 301.6226–2 with the IRS and furnishes to its partners statements reflecting their shares of the partnership adjustment. The statement issued to F reflects F's share of the partnership adjustment for Partnership's 2020 taxable year as finally determined by the Tax Court. The statement shows F's share of the long-term capital loss adjustment for the reviewed year of $100, as well as the $100 long-term capital loss taken into account by F as part of the amended return modification. Accordingly, in accordance with paragraph (b) of this section, when F computes its correction amounts for the first affected year (the 2020 taxable year) and the intervening years (the 2021 through 2026 taxable years), F computes any increase

or decrease in chapter 1 tax for those years using the returns for the 2020, 2021, and 2022 taxable years as amended during the modification process.

Example 6. Partnership has two equal partners for the 2020 tax year: I (an individual) and J (a partnership). For the 2020 tax year, J has two equal partners—K and L—both individuals. On June 1, 2023, the IRS mails an FPA to Partnership for Partnership's 2020 year increasing Partnership's ordinary income by $500,000 and asserting an imputed underpayment of $200,000. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and does not file a petition for readjustment under section 6234. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. Therefore, Partnership's adjustment year is 2023, the due date of the adjustment year return is March 15, 2024 and the extended due date for the adjustment year return is September 16, 2024. On October 12, 2023, Partnership timely files with the IRS statements described in § 301.6226–2 and timely furnishes statements to its partners reflecting their share of the partnership adjustments as finally determined in the FPA. The statements to I and J each reflect a partnership adjustment of $250,000 of ordinary income. I takes its share of the adjustments reflected on the statements furnished by Partnership into account on I's return for the 2023 tax year in accordance with paragraph (b) of this section. On April 1, 2024, J files the adjustment tracking report and files and furnishes statements to K and L reflecting each partner's share of the adjustments reflected on the statements Partnership furnished to J. K and L must take their share of adjustments reflected on the statements furnished by J into account on their returns for the 2023 tax year in accordance with paragraph (b) of this section by treating themselves as reviewed year partners for purposes of that paragraph.

Example 7. On its partnership return for the 2020 tax year, Partnership reported that it placed Asset, which had a depreciable basis of $210,000, into service in 2020 and depreciated Asset over 5 years, using the straight-line method. Accordingly, Partnership claimed depreciation of $42,000 in each year related to Asset. Partnership has two equal partners for the 2020 tax year: M (a partnership) and N (an S corporation). For the 2020 tax year, N has one shareholder, O, who is an individual. On June 1, 2023, the IRS mails an FPA to Partnership for Partnership's 2020 year. In the FPA, the IRS determines that Asset should have been depreciated over 7 years instead of 5 years and adjusts the depreciation for the 2020 tax year to $30,000 instead of $42,000 resulting in a $12,000 adjustment. This adjustment results in an imputed underpayment of $4,800 ($12,000 × 40 percent). Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and does not file a petition for readjustment under section 6234. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. On October 12, 2023, Partnership timely files with the IRS statements described in § 301.6226–2 and furnishes statements to its partners reflecting their share of the partnership adjustments as finally determined in the FPA. The statements to M and N reflect a partnership adjustment of $6,000 of ordinary income for the 2020 tax year. On February 1, 2024, N takes the adjustments into account under paragraph (e)(3) of this section by filing an adjustment tracking reporting and issuing a statement to O reflecting her share of the adjustments reported to N on the statement it received from Partnership. M does not furnish statements and instead chooses to calculate and pay an imputed underpayment under paragraph (e)(4) of this section equal to $1,200 ($6,000 × 40 percent) on the adjustments reflected on the statement it received from Partnership plus interest on the amount calculated in accordance with paragraph (e)(4)(iv)(B) of this section. On her 2023 return, O properly takes the adjustments into account under this section. Therefore, O reports and pays the additional reporting year tax determined in accordance with paragraph (b) of this section, which is the correction amount for 2020 plus any correction amounts for 2021 and 2022 (if the adjustments in 2020 resulted in any changes to the tax attributes of O in those years), and pays interest determined in accordance with paragraph (c) of this section on the correction amounts for each of those years.

Example 8. On its partnership return for the 2020 tax year, Partnership reported $1,000 of ordinary loss. Partnership has two equal partners for the 2020 tax year: P and Q, both S corporations. For the 2020 tax year, P had one shareholder, R, an individual. For the 2020 tax year, Q had two shareholders, S and T, both individuals. On June 1, 2023, the IRS mails an FPA to Partnership for Partnership's 2020 year determining $500 of the $1,000 of ordinary loss should be recharacterized as $500 of long-term capital loss and $500 of the ordinary loss should be disallowed. The FPA asserts an imputed underpayment of $400 ($1,000 × 40 percent) with respect to the $1,000 reduction to ordinary loss and reflecting an adjustment that does not result in an imputed underpayment of a $500 capital loss. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and does not file a petition for readjustment under section 6234. The time to file a petition expires on August 30, 2023. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on August 31, 2023. On October 12, 2023, Partnership timely files with the IRS statements described in § 301.6226–2 and furnishes statements to its partners reflecting their share of the partnership adjustments as finally determined in the FPA. The statements to P and Q each reflect a partnership adjustment of a $500 increase in ordinary income and a $250 increase in capital loss in accordance with § 301.6225–3(b)(6). P takes the adjustments into account under paragraph (e)(3) of this section by timely filing an adjustment tracking reporting and furnishing a statement to R. Q timely filed an adjustment tracking report but chooses not to furnish statements and instead must calculate and pay an imputed underpayment under paragraph (e)(4) of this section as well as interest on the imputed underpayment determined under paragraph (e)(4)(iv)(B) of this section on the imputed underpayment. After applying the rules set forth in § 301.6225–1, Q calculates the imputed underpayment that it is required to pay of $200 ($500 adjustment to ordinary income × 40 percent). Q also has one adjustment that does not result in an imputed underpayment—the $250 increase to capital loss. On its 2023 return, Q reports and allocates the $250 capital loss to its shareholders for its 2023 taxable year as a capital loss as provided in § 301.6225–3. Q must file the adjustment tracking report and pay the amounts due under paragraph (e)(4) of this section no later than September 15, 2024, the extended due date of Partnership's return for the 2023 year, which is the adjustment year.

Example 9. On its partnership return for the 2020 tax year, Partnership reported a $1,000 long-term capital gain on the sale of Stock. Partnership has two equal partners for the 2020 tax year: U (an individual) and V (a partnership). For the 2020 tax year, V has two equal partners: W (an individual) and X (a partnership). For the 2020 tax year, X has two equal partners: Y and Z, both of which are C corporations. On June 1, 2023, the IRS mails a NOPPA to Partnership for Partnership's 2020 year proposing a $500 increase in the long-term capital gain from the sale of Stock and an imputed underpayment of $200 ($500 × 40 percent). On July 17, 2023, Partnership timely submits a request to modify the rate used in calculating the imputed underpayment under § 301.6225–2(d)(4). Partnership submits sufficient information demonstrating that $375 of the $500 adjustment is allocable to individuals (50 percent of the $500 adjustment allocable to U and 25 percent of the $500 adjustment allocable to W) and the remaining $125 is allocable to C corporations (the indirect partners Y and Z). The IRS approves the modification and the imputed underpayment is reduced to $81.25 (($375 × 15 percent) + ($125 × 20 percent)). See § 301.6225–2(b)(3). No other modifications are requested. On February 28, 2024, the IRS mails an FPA to Partnership for Partnership's 2020 year determining a $500 increase in the long-term capital gain on the sale of Stock and asserting an imputed underpayment of $81.25 after taking into account the approved modifications. Partnership makes a timely election under section 6226 in accordance with § 301.6226–1 with respect to the imputed underpayment in the FPA for Partnership's 2020 year and does not file a petition for readjustment under section 6234. The time to file a petition expires on May 28, 2024. Pursuant to § 301.6226–2(b), the partnership adjustments become finally determined on May 29, 2024. On July 26, 2024, Partnership timely files with the IRS

statements described in § 301.6226–2 and furnishes statements to its partners reflecting their share of the partnership adjustments as finally determined in the FPA. The statements to U and V each reflect a partnership adjustment of a $250 increase in long-term capital gain. V timely files the adjustment tracking report but fails to furnish statements and therefore must calculate and pay an imputed underpayment under paragraph (e)(4) of this section as well as interest on the imputed underpayment determined under paragraph (e)(4)(iv)(B) of this section. On February 3, 2025, V pays an imputed underpayment of $43.75 (($125 × 20 percent for the adjustments allocable to X) + ($125 × 15 percent for the adjustments allocable to W)) which takes into account the rate modifications approved by the IRS with respect to Y and Z. V must also pay any interest on the amount as determined in accordance with paragraph (e)(4)(iv)(B) of this section. V must file the adjustment tracking report and pay the amounts due under paragraph (e)(4) of this section no later than September 15, 2025, the extended due date of Partnership's return for the 2024 year, which is the adjustment year.

(i) *Applicability date*—(1) *In general.* Except as provided in paragraph (i)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015, and before January 1, 2018, for which a valid election under § 301.9100–22 is in effect.

■ **Par. 15.** Section 301.6226–4 is added to read as follows:

§ 301.6226–4 Effect of a partnership adjustment on tax attributes of partnerships and their partners.

(a) *Adjustments to tax attributes*—(1) *In general.* When a partnership adjustment (as defined in § 301.6241–1(a)(6)) is taken into account by the reviewed year partners (as defined in § 301.6241–1(a)(9)) or affected partners (as described in § 301.6226–3(e)(3)(i)) pursuant to an election made by a partnership under § 301.6226–1, the partnership and its reviewed year partners or affected partners must adjust their tax attributes (as defined in § 301.6241–1(a)(10)) in accordance with the rules in this section.

(2) *Application to pass-through partners and indirect partners.* To the extent a pass-through partner (as defined in § 301.6241–1(a)(5)) pays an imputed underpayment under § 301.6226–3(e)(4)(iii), such pass-through partner and its affected partners or their successors must make adjustments to their tax attributes in accordance with the rules in § 301.6225–4.

(3) *Allocation of partnership adjustments.* Partnership adjustments are allocated to the reviewed year partners or affected partners under § 1.704–1(b)(4)(xiv) of this chapter.

(b) *Adjusting tax attributes of a partnership and its partners when an election under section 6226 is made.* For partnership adjustments that are taken into account by the reviewed year partners or affected partners because an election is made under § 301.6226–1, the partnership adjustments to be taken into account by each partner are determined under § 301.6226–2(f). Accordingly, the reviewed year partners or affected partners must take into account the partnership adjustments as reflected on the statements described in § 301.6226–2 or § 301.6226–3(e)(3) in accordance with § 301.6226–3. The reviewed year partners or affected partners and the partnership adjust partnership tax attributes affected by reason of an adjustment reflected on the statements described in § 301.6226–2 or § 301.6226–3(e)(3) with respect to the reviewed year (as defined in § 301.6241–1(a)(8)), except to the extent partner or partnership tax attributes were already adjusted as part of the partnership adjustment. Additionally, reviewed year partners or affected partners adjust their partner tax attributes that are affected by the adjustments reflected on the statements described in § 301.6226–2 or § 301.6226–3(e)(3), but these adjustments to partner tax attributes are calculated with respect to each year beginning with the first affected year (as defined in § 301.6226–3(b)(2)(i)), followed by any intervening years (as defined in § 301.6226–3(b)(3)(i)), concluding with the reporting year (as defined in § 301.6226–3(a)).

(c) *Example.* The following example illustrates the rules of this section. For purposes of this example, Partnership is subject to the provisions of subchapter C of chapter 63 of the Internal Revenue Code, Partnership and its partners are calendar year taxpayers, all partners are U.S. persons, and the highest rate of income tax in effect for all taxpayers is 40 percent for all relevant periods.

Example. (i) In 2021, J, K and L form Partnership by each contributing $500 in exchange for partnership interests that share all items of income, gain, loss and deduction in identical shares. Partnership immediately purchases Asset on January 1, 2021 for $1,500, which it depreciates using the straight-line method with a 10-year recovery period beginning in 2021 ($150) so that each partner has a $50 distributive share of the depreciation, resulting in an outside basis of $450 for each partner. Accordingly, at the end of 2022, J, K and L have an outside basis and capital account of $400 each ($500 less $50 of their respective allocable shares of depreciation in 2021 and $50 in 2022).

	Partnership basis	Book	Value		Outside basis	Book	Value
Asset	$1200	$1200	$1500	J	$400	$400	$500
	.....	.....	.....	K	400	400	500
	.....	.....	.....	L	400	400	500
Totals	1200	1200	1500	.....	1200	1200	1500

(ii) The IRS initiates an administrative proceeding with respect to Partnership's 2021 taxable year (reviewed year) and in 2023 (adjustment year) finally determines that Asset should have been depreciated with a 20-year recovery period beginning in 2021, resulting in a $75 partnership adjustment that results in an imputed underpayment. The IRS does not initiate an administrative proceeding with respect to Partnership's 2022 taxable year, and Partnership does not file an administrative adjustment request for that taxable year. Partnership makes an election under § 301.6226–1 with respect to the imputed underpayment. Therefore, J, K and L each are furnished a statement described in § 301.6226–2 by Partnership reflecting the $25 income adjustment for 2021.

(iii) Tax attributes of the partners must be adjusted to reflect the $75 partnership adjustment reflected on the statements described in § 301.6226–2 that is taken into account in equal shares ($25) by J, K, and L with respect to 2021. Specifically, J, K and L's outside bases and capital accounts must be increased $25 each with respect to the 2021 tax year. As a result, J, K and L each have an outside basis and capital account of $425 ($400 plus $25 of income realized with respect to 2021). Asset's basis and book value must also be changed in 2023. Thus, after adjusting tax attributes of the partners to take into account the election under § 301.6226–1 and taking into account other activities of Partnership in 2023, accounts are stated as follows:

	Partnership basis	Book	Value		Outside basis	Book	Value
Asset	$1275	$1275	$1500	J	$425	$425	$500
	.....	.....	.....	K	425	425	500
	.....	.....	.....	L	425	425	500
Totals	1275	1275	1500	.....	1275	1275	1500

(d) *Applicability date*—(1) *In general.* Except as provided in paragraph (d)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 16.** Section 301.6227–1 is added to read as follows:

§ 301.6227–1 Administrative adjustment request by partnership.

(a) *In general.* A partnership may file a request for an administrative adjustment with respect to any partnership-related item (as defined in § 301.6241–6) for any partnership taxable year. When filing an administrative adjustment request (AAR), the partnership must determine whether the adjustments requested in the AAR result in an imputed underpayment in accordance with § 301.6227–2(a) for the reviewed year (as defined in § 301.6241–1(a)(8)). If the adjustments requested in the AAR result in an imputed underpayment, the partnership must take the adjustments into account under the rules described in § 301.6227–2(b) unless the partnership makes an election under § 301.6227–2(c), in which case each reviewed year partner (as defined in § 301.6241–1(a)(9)) must take the adjustments into account in accordance with § 301.6227–3. If the adjustments requested in the AAR do not result in an imputed underpayment (as determined under § 301.6227–2(a)), such adjustments must be taken into account by the reviewed year partners in accordance with § 301.6227–3. A partner may not file an AAR except if the partner is doing so on behalf of the partnership in the partner's capacity as the partnership representative designated under section 6223. In addition, a partnership may not file an AAR solely for the purpose of changing the designation of a partnership representative or changing the appointment of a designated individual. See § 301.6223–1 (regarding designation of the partnership representative). When the partnership changes the designation of the partnership representative (or appointment of the designated individual) in conjunction with the filing of an AAR in accordance with § 301.6223–1(e), the change in designation (or appointment) is treated as occurring prior to the filing of the AAR.

(b) *Time for filing an AAR.* An AAR may only be filed by a partnership with respect to a partnership taxable year after a partnership return for that taxable year has been filed with the Internal Revenue Service (IRS). A partnership may not file an AAR with respect to a partnership taxable year more than three years after the later of the date the partnership return for such partnership taxable year was filed or the last day for filing such partnership return (determined without regard to extensions). Except as provided in § 301.6231–1(f), an AAR may not be filed for a partnership taxable year after a notice of administrative proceeding with respect to such taxable year has been mailed by the IRS under section 6231.

(c) *Form and manner for filing an AAR*—(1) *In general.* An AAR, including any required statements, forms, and schedules as described in this section, must be filed with the IRS in accordance with the forms, instructions, and other guidance prescribed by the IRS, and must be signed under penalties of perjury by the partnership representative (as defined in section 6223(a) and the regulations thereunder).

(2) *Contents of AAR filed with the IRS.* A valid AAR filed with the IRS must include—

(i) The adjustments requested,

(ii) If a reviewed year partner is required to take into account the adjustments requested under § 301.6227–3, statements described in paragraph (e) of this section, including any transmittal with respect to such statements required by forms, instructions, and other guidance prescribed by the IRS, and

(iii) Other information prescribed by the IRS in forms, instructions, or other guidance.

(d) *Copy of statement furnished to reviewed year partners in certain cases.* If a reviewed year partner is required to take into account adjustments requested in an AAR under § 301.6227–3, the partnership must furnish a copy of the statement described in paragraph (e) of this section to the reviewed year partner to whom the statement relates in accordance with the forms, instructions and other guidance prescribed by the IRS. If the partnership mails the statement, it must mail the statement to the current or last address of the reviewed year partner that is known to the partnership. The statement must be furnished to the reviewed year partner on the date the AAR is filed with the IRS.

(e) *Statements*—(1) *Contents.* Each statement described in this paragraph (e) must include the following correct information:

(i) The name and TIN of the reviewed year partner to whom the statement is being furnished;

(ii) The current or last address of the partner that is known to the partnership;

(iii) The reviewed year partner's share of items as originally reported on statements furnished to the partner under section 6031(b) and, if applicable, section 6227;

(iv) The reviewed year partner's share of the adjustments as described under paragraph (c)(2) of this section;

(v) The date the statement is furnished to the partner;

(vi) The partnership taxable year to which the adjustments relate; and

(vii) Any other information required by forms, instructions, and other guidance prescribed by the IRS.

(2) *Determination of each partner's share of adjustments*—(i) *In general.* Except as provided in paragraphs (e)(2)(ii) and (iii) of this section, each reviewed year partner's share of the adjustments requested in the AAR is determined in the same manner as each adjusted partnership-related item was originally allocated to the reviewed year partner on the partnership return for the reviewed year.

(ii) *Adjusted partnership-related item not reported on the partnership's return for the reviewed year.* Except as provided in paragraph (e)(2)(iii) of this section, if the adjusted partnership-related item was not reported on the partnership return for the reviewed year, each reviewed year partner's share

of the adjustments must be determined in accordance with how such items would have been allocated under rules that apply with respect to partnership allocations, including under the partnership agreement.

(iii) *Allocation adjustments.* If an adjustment involves allocation of a partnership-related item to a specific partner or in a specific manner, including a reallocation of an item, the reviewed year partner's share of the adjustment requested in the AAR is determined in accordance with the AAR.

(f) *Binding nature of AAR.* Filing an AAR as described in paragraph (c) of this section and furnishing statements as described in paragraph (d) of this section are actions of the partnership under section 6223 and the regulations thereunder. Accordingly, unless determined otherwise by the IRS, each partner's share of the adjustments set forth in a statement described in paragraph (e) of this section are binding on the partner pursuant to section 6223. A partner may not treat partnership-related items on the partner's return inconsistently with how those items are treated on the statement that is filed with the IRS under paragraph (c) of this section. See § 301.6222–1(c)(2) (regarding partnership-related items the treatment of which a partner is bound to under section 6223).

(g) *Administrative proceeding for a taxable year for which an AAR is filed.* Within the period described in section 6235 and the regulations thereunder, the IRS may initiate an administrative proceeding with respect to the partnership for any partnership taxable year regardless of whether the partnership filed an AAR with respect to such taxable year and may adjust any partnership-related item, including any partnership-related item adjusted in an AAR filed by the partnership. The amount of an imputed underpayment determined by the partnership under § 301.6227–2(a)(1), including any modifications determined by the partnership under § 301.6227–2(a)(2), may be re-determined by the IRS.

(h) *Notice of change to the amount of creditable foreign tax expenditures.* [Reserved]

(i) *Applicability date*—(1) *In general.* Except as provided in paragraph (i)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 17.** Section 301.6227–2 is added to read as follows:

§ 301.6227–2 Determining and accounting for adjustments requested in an administrative adjustment request by the partnership.

(a) *Determining whether adjustments result in an imputed underpayment*—(1) *Determination of the imputed underpayment.* The determination of whether adjustments requested in an administrative adjustment request (AAR) result in an imputed underpayment in the reviewed year (as defined in § 301.6241–1(a)(8)) and the determination of the amount of the imputed underpayment, if any, is made in accordance with the rules under § 301.6225–1.

(2) *Modification of imputed underpayment for purposes of this section.* A partnership may apply modifications to the amount of the imputed underpayment determined under paragraph (a)(1) of this section using only the provisions under § 301.6225–2(d)(3) (regarding tax-exempt partners), § 301.6225–2(d)(4) (regarding modification of applicable tax rate), § 301.6225–2(d)(5) (regarding specified passive activity losses), § 301.6225–2(d)(6)(ii) (regarding limitations or restrictions in the grouping of adjustments), § 301.6225–2(d)(7) (regarding certain qualified investment entities), § 301.6225–2(d)(9) (regarding tax treaty modifications), or as provided in forms, instructions, or other guidance prescribed by the IRS with respect to AARs. The partnership may not modify an imputed underpayment resulting from adjustments requested in an AAR except as described in this paragraph (a)(2). When applying modifications to the amount of an imputed underpayment under this paragraph (a)(2):

(i) The partnership is not required to seek the approval from the Internal Revenue Service (IRS) prior to applying modifications to the amount of any imputed underpayment under paragraph (a)(1) of this section reported on the AAR; and

(ii) As part of the AAR filed with the IRS in accordance with forms, instructions, and other guidance prescribed by the IRS, the partnership must—

(A) Notify the IRS of any modification,

(B) Describe the effect of the modification on the imputed underpayment,

(C) Provide an explanation of the basis for such modification, and

(D) Provide documentation to support the partnership's eligibility for the modification.

(b) *Adjustments resulting in an imputed underpayment taken into account by the partnership*—(1) *In general.* Except in the case of an election under paragraph (c) of this section, a partnership must pay any imputed underpayment (as determined under paragraph (a) of this section) resulting from the adjustments requested in an AAR on the date the partnership files the AAR. For the rules applicable to the partnership's expenditure for the imputed underpayment, as well as any penalties and interest paid by the partnership with respect to the imputed underpayment, see § 301.6241–4.

(2) *Penalties and interest.* The IRS may impose a penalty, addition to tax, and additional amount with respect to an imputed underpayment determined under this section in accordance with section 6233(a)(3) (penalties determined from the reviewed year). In addition, the IRS may impose a penalty, addition to tax, and additional amount with respect to a failure to pay an imputed underpayment on the date an AAR is filed in accordance with section 6233(b)(3) (penalties with respect to the adjustment year return). Interest on the imputed underpayment is determined under chapter 67 for the period beginning on the date after the due date of the partnership return for the reviewed year (as defined in § 301.6241–1(a)(8)) (determined without regard to extension) and ending on the earlier of the date payment of the imputed underpayment is made, or the due date of the partnership return for the adjustment year (as defined in § 301.6241–1(a)(1)). See section 6233(a)(2). In the case of any failure to pay an imputed underpayment by the due date of the partnership return for the adjustment year, interest is determined in accordance with section 6233(b)(2).

(3) *Coordination with chapters 3 and 4*—(i) *Coordination when partnership pays an imputed underpayment.* If a partnership pays an imputed underpayment resulting from adjustments requested in an AAR under paragraph (b)(1) of this section, the rules in § 301.6241–7(b)(3) apply to treat the partnership as having paid the amount required to be withheld under chapter 3 or chapter 4 (as defined in § 301.6241–7(b)(2)).

(ii) *Coordination when partnership elects to have adjustments taken into account by reviewed year partners.* If a partnership elects under paragraph (c) of this section to have its reviewed year partners take into account adjustments

requested in an AAR, the rules in § 301.6226–2(g)(3) apply to the partnership, and the rules in § 301.6226–3(f) apply to the reviewed year partners that take into account the adjustments pursuant to § 301.6227–3.

(c) *Election to have adjustments resulting in an imputed underpayment taken into account by reviewed year partners.* In lieu of paying the imputed underpayment under paragraph (b) of this section, the partnership may elect to have each reviewed year partner (as defined in § 301.6241–1(a)(9)) take into account the adjustments requested in the AAR in accordance with § 301.6227–3. A partnership makes an election under this paragraph (c) at the time the AAR is filed in accordance with the forms, instructions, and other guidance prescribed by the IRS. If the partnership makes a valid election in accordance with this paragraph (c), the partnership is not liable for, nor required to pay, the imputed underpayment resulting from the adjustments requested in the AAR. Rather, each reviewed year partner must take into account their share of the adjustments requested in the AAR in accordance with § 301.6227–3. If an election is made under this paragraph (c), modifications applied under paragraph (a)(2) of this section are disregarded and all adjustments requested in the AAR must be taken into account by each reviewed year partner in accordance with § 301.6227–3.

(d) *Adjustments not resulting in an imputed underpayment.* If the adjustments requested in an AAR do not result in an imputed underpayment (as determined under paragraph (a) of this section), the partnership must furnish statements to each reviewed year partner and file such statements with the IRS in accordance with § 301.6227–1. Each reviewed year partner must take into account its share of the adjustments requested in the AAR in accordance with § 301.6227–3.

(e) *Applicability date*—(1) *In general.* Except as provided in paragraph (e)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 18.** Section 301.6227–3 is added to read as follows:

§ 301.6227–3 Adjustments requested in an administrative adjustment request taken into account by reviewed year partners.

(a) *In general.* Each reviewed year partner (as defined in § 301.6241–1(a)(9)) is required to take into account its share of adjustments requested in an administrative adjustment request (AAR) if the partnership makes an election under § 301.6227–2(c) with respect to such AAR. In addition, each reviewed year partner must take into account its share of adjustments requested in an AAR that do not result in an imputed underpayment (as defined in § 301.6241–1(a)(3)) as determined under § 301.6227–2(a). Each reviewed year partner receiving a statement furnished in accordance with § 301.6227–1(d) must take into account adjustments reflected in the statement in the reviewed year partner's taxable year that includes the date the statement is furnished (reporting year) in accordance with paragraph (b) of this section.

(b) *Adjustments taken into account by the reviewed year partner in the reporting year*—(1) *In general.* Except as provided in paragraph (c) of this section, a reviewed year partner that is furnished a statement described in paragraph (a) of this section must treat the statement as if it were issued under section 6226(a)(2) and, on or before the due date for the reporting year must report and pay the additional reporting year tax (as defined in § 301.6226–3(a)), if any, determined after taking into account that partner's share of the adjustments requested in the AAR in accordance with § 301.6226–3. A reviewed year partner may, in accordance with § 301.6226–3(a), reduce chapter 1 tax for the reporting year where the additional reporting year tax is less than zero. For purposes of paragraph (b) of this section, the rule under § 301.6226–3(c)(3) (regarding the increased rate of interest) does not apply. Nothing in this section entitles any partner to a refund of tax imposed by chapter 1 of subtitle A of the Internal Revenue Code (chapter 1 tax) to which such partner is not entitled. For instance, a partnership-partner (as defined in § 301.6241–1(a)(7)) may not claim a refund with respect to its share of any adjustment.

(2) *Examples.* The following examples illustrate the rules of this paragraph (b).

Example 1. In 2022, partner A, an individual, received a statement described in paragraph (a) of this section from Partnership with respect to Partnership's 2020 taxable year. Both A and Partnership are calendar year taxpayers and A is not claiming any refundable tax credit in 2020. The only adjustment shown on the statement is an increase in ordinary loss. Taking into account the adjustment, A determines that his additional reporting year tax for 2022 (the reporting year) is <$100> (that is, a reduction of $100.) A's chapter 1 tax for 2022 (without regard to any additional reporting year tax) is $150. Applying the rules in paragraph (b)(2) of this section, A's chapter 1 tax for 2022 is reduced to $50 ($150 chapter 1 tax without regard to the additional reporting year tax plus <$100> additional reporting year tax).

Example 2. The facts are the same as in *Example 1* of this paragraph (b)(2), except A's chapter 1 tax for 2022 (without regard to any additional reporting year tax) is $75. Applying the rules in paragraph (b)(1) of this section, A's chapter 1 tax for 2022 is reduced by the <$100> of additional reporting year tax. Accordingly, A's chapter 1 tax for 2022 is $0 ($75 chapter 1 tax without regard to any additional reporting year tax plus <$100> of additional reporting year tax), A owes no chapter 1 tax for 2022, and A may make a claim for refund with respect to the overpayment of $25.

(c) *Reviewed year partners that are pass-through partners*—(1) *In general.* Except as provided in this paragraph (c), if a statement described in paragraph (a) of this section (including a statement described in this paragraph (c)(1)) is furnished to a reviewed year partner that is a pass-through partner (as defined in § 301.6241–1(a)(5)), the pass-through partner must take into account the adjustments reflected on that statement in accordance with § 301.6226–3(e) by treating the partnership that filed the AAR as the partnership that made an election under § 301.6226–1. A pass-through partner that furnishes statements in accordance with § 301.6226–3(e)(3) must provide the information described in paragraph (c)(3) of this section in lieu of the information described in § 301.6226–3(e)(3)(iii) on the statements the pass-through partner furnishes to its partners. A pass-through partner that computes and pays an imputed underpayment in accordance with § 301.6226–3(e)(4)(iii) may not apply any modifications to the amount of imputed underpayment. For purposes of this paragraph (c)(1), the statement furnished to the pass-through partner by the partnership filing the AAR is treated as if it were a statement issued under section 6226(a)(2) and described in § 301.6226–2.

(2) *Adjustments that do not result in an imputed underpayment.* If the adjustments requested in an AAR do not result in an imputed underpayment (as described in § 301.6227–2(d)), § 301.6226–3(e)(2) does not apply. The pass-through partner must take into account the adjustments reflected on the statement described in paragraphs (a) or (c)(1) of this section in accordance with § 301.6226–3(e)(3), except that the pass-

through partner must provide the information described in paragraph (c)(3) of this section in lieu of the information described in § 301.6226–3(e)(3)(iii) on the statements the pass-through partner furnishes to its partners.

(3) *Contents of statements.* Each statement described in paragraph (c)(1) or (2) of this section must include the following correct information—

(i) The name and taxpayer identification number (TIN) of the partnership that filed the AAR with respect to the adjustments reflected on the statements described in paragraph (c)(1) of this section;

(ii) The adjustment year (as defined in § 301.6241–1(a)(1)) of the partnership described in paragraph (c)(3)(i) of this section;

(iii) The extended due date for the return for the adjustment year of the partnership described in paragraph (c)(3)(i) of this section (as described in § 301.6226–3(e)(3)(ii));

(iv) The date on which the partnership described in paragraph (c)(3)(i) of this section furnished its statements required under § 301.6227–2(d);

(v) The name and TIN of the partnership that furnished the statement to the pass-through partner if different from the partnership described in paragraph (c)(3)(i) of this section;

(vi) The name and TIN of the pass-through partner;

(vii) The pass-through partner's taxable year to which the adjustments set forth in the statement described in paragraph (c)(1) of this section relate;

(viii) The name and TIN of the affected partner (as defined in § 301.6226–3(e)(3)(i)) to whom the statement is being furnished;

(ix) The current or last address of the affected partner that is known to the pass-through partner;

(x) The affected partner's share of items as originally reported to such partner under section 6031(b) and, if applicable, section 6227, for the taxable year to which the adjustments reflected on the statement furnished to the pass-through partner relate;

(xi) The affected partner's share of partnership adjustments determined under § 301.6227–1(e)(2) as if the affected partner were the reviewed year partner and the partnership were the pass-through partner;

(xii) Any other information required by forms, instructions, and other guidance prescribed by the IRS.

(4) *Affected partners must take into account the adjustments.* A statement furnished to an affected partner in accordance with paragraph (c)(1) or (2) of this section is to be treated by the affected partner as if it were a statement described in paragraph (a) of this section. The affected partner must take into account its share of the adjustments reflected on such a statement in accordance with this section by treating references to ''reviewed year partner'' as ''affected partner.'' When taking into account the adjustments as described in § 301.6226–3(e)(3)(iv), the rules under § 301.6226–3(c)(3) (regarding the increased rate of interest) do not apply.

(d) *Applicability date*—(1) *In general.* Except as provided in paragraph (d)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 19.** Section 301.6231–1 is added to read as follows:

§ 301.6231–1 Notice of proceedings and adjustments.

(a) *Notices to which this section applies.* In the case of any administrative proceeding under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63), including an administrative proceeding with respect to an administrative adjustment request (AAR) filed by a partnership under section 6227, the following notices must be mailed to the partnership and the partnership representative (as described in section 6223 and § 301.6223–1)—

(1) Notice of any administrative proceeding initiated at the partnership level with respect to an adjustment of any partnership-related item (as defined in § 301.6241–6) for any partnership taxable year under subchapter C of chapter 63 (notice of administrative proceeding (NAP));

(2) Notice of any proposed partnership adjustment resulting from an administrative proceeding under subchapter C of chapter 63 (notice of proposed partnership adjustment (NOPPA)); and

(3) Notice of any final partnership adjustment resulting from an administrative proceeding under subchapter C of chapter 63 (notice of final partnership adjustment (FPA)).

(b) *Time for mailing notices*—(1) *Notice of proposed partnership adjustment.* A NOPPA is timely if it is mailed before the expiration of the period for making adjustments under section 6235(a)(1) (including any extensions under section 6235(b) and any special rules under section 6235(c)).

(2) *Notice of final partnership adjustment.* An FPA may not be mailed earlier than 270 days after the date on which the NOPPA is mailed unless the partnership agrees, in writing, with the Internal Revenue Service (IRS) to waive the 270-day period. See § 301.6225–2(c)(3)(iii) for the effect of a waiver under this paragraph (b)(2) on the 270-period for requesting a modification under section 6225(c). See § 301.6232–1(d)(2) for the rules regarding a waiver of the limitations on assessment under § 301.6232–1(c).

(c) *Last known address.* A notice described in paragraph (a) of this section is sufficient if mailed to the last known address of the partnership representative and the partnership (even if the partnership or partnership representative has terminated its existence).

(d) *Notice mailed to partnership representative*—(1) *In general.* A notice described in paragraph (a) of this section will be treated as mailed to the partnership representative if the notice is mailed to the partnership representative that is reflected in the IRS records as of the date the letter is mailed.

(2) *No partnership representative in effect.* In any case in which no partnership representative designation is in effect in accordance with § 301.6223–1(f), a notice described in paragraph (a) of this section mailed to ''PARTNERSHIP REPRESENTATIVE'' at the last known address of the partnership satisfies the requirements of this section.

(e) *Restrictions on additional FPAs after petition filed.* The IRS may mail more than one FPA to any partnership for any partnership taxable year. However, except in the case of fraud, malfeasance, or misrepresentation of a material fact, the IRS may not mail an FPA to a partnership with respect to a partnership taxable year after the partnership has filed a timely petition for readjustment under section 6234 with respect to an FPA issued with respect to such partnership taxable year.

(f) *Withdrawal of NAP or NOPPA.* The IRS may, without consent of the partnership, withdraw any NAP or NOPPA. A NAP or NOPPA that has been withdrawn by the IRS has no effect for purposes of subchapter C of chapter 63. For instance, if the IRS withdraws a NAP with respect to a partnership taxable year, the prohibition under section 6227(c) on filing an AAR after the mailing of a NAP no longer applies with respect to such taxable year.

(g) *Rescission of FPA.* The IRS may, with the consent of the partnership, rescind any FPA. An FPA that is

rescinded is not an FPA for purposes of subchapter C of chapter 63, and the partnership cannot bring a proceeding under section 6234 with respect to such FPA.

(h) *Applicability date*—(1) *In general.* Except as provided in paragraph (h)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 20.** Section 301.6232–1 is added to read as follows:

§ 301.6232–1 Assessment, collection, and payment of imputed underpayment.

(a) *In general.* An imputed underpayment determined under subchapter C of chapter 63 of the Internal Revenue Code (Code) is assessed and collected in the same manner as if the imputed underpayment were a tax imposed by subtitle A of the Code for the adjustment year (as defined in § 301.6241–1(a)(1)) except that the deficiency procedures under subchapter B of chapter 63 of the Code do not apply to an assessment of an imputed underpayment. Accordingly, no notice under section 6212 is required for, and the restrictions under section 6213 do not apply to, the assessment of any imputed underpayment. See paragraph (c) of this section for limitations on assessment and paragraph (d) of this section for exceptions to restrictions on adjustments.

(b) *Payment of the imputed underpayment.* Upon receipt of notice and demand from the Internal Revenue Service (IRS), an imputed underpayment must be paid by the partnership at the place and time stated in the notice. In the case of an adjustment requested in an administrative adjustment request (AAR) under section 6227(b)(1) that is taken into account by the partnership under § 301.6227–2(b), payment of the imputed underpayment is due on the date the AAR is filed. The IRS may assess the amount of the imputed underpayment reflected on the AAR on the date the AAR is filed. For interest with respect to an imputed underpayment, see § 301.6233(a)–1(b).

(c) *Limitation on assessment*—(1) *In general.* Except as otherwise provided by this section or subtitle F of the Code (except for subchapter B of chapter 63), no assessment of an imputed underpayment may be made (and no levy or proceeding in any court for the collection of an imputed underpayment may be made, begun, or prosecuted) before—

(i) The close of the 90th day after the day on which a notice of a final partnership adjustment (FPA) under section 6231(a)(3) was mailed; and

(ii) If a petition for readjustment is filed under section 6234 with respect to such FPA, the decision of the court has become final.

(2) *Specified similar amount.* The limitations under paragraph (c)(1) of this section do not apply in the case of a specified similar amount as defined in section 6232(f)(2).

(d) *Exceptions to restrictions on adjustments and assessments*—(1) *Adjustments treated as mathematical or clerical errors*—(i) *In general.* A notice to a partnership that, on account of a mathematical or clerical error appearing on the partnership return or as a result of a failure by a partnership-partner (as defined in § 301.6241–1(a)(7)) to comply with section 6222(a), the IRS has adjusted or will adjust partnership-related items (as defined in § 301.6241–6) to correct the error or to make the items consistent under section 6222(a) and has assessed or will assess any imputed underpayment (determined in accordance with § 301.6225–1) resulting from the adjustment is not considered an FPA under section 6231(a)(3). A petition for readjustment under section 6234 may not be filed with respect to such notice. The limitations under section 6232(b) and paragraph (c) of this section do not apply to an assessment under this paragraph (d)(1)(i). For the definition of mathematical or clerical error generally, see section 6213(g)(2). For application of mathematical or clerical error in the case of inconsistent treatment by a partner that fails to give notice, see § 301.6222–1(b).

(ii) *Request for abatement*—(A) *In general.* Except as provided in paragraph (d)(1)(ii)(B) of this section, a partnership that is mailed a notice described in paragraph (d)(1)(i) of this section may file with the IRS, within 60 days after the date of such notice, a request for abatement of any assessment of an imputed underpayment specified in such notice. Upon receipt of the request, the IRS must abate the assessment. Any subsequent assessment of an imputed underpayment with respect to which abatement was made is subject to the provisions of subchapter C of chapter 63 of the Code, including the limitations under paragraph (c) of this section.

(B) *Adjustments with respect to inconsistent treatment by a partnership-partner.* If an adjustment that is the subject of a notice described in paragraph (d)(1)(i) of this section is due to the failure of a partnership-partner to comply with section 6222(a), paragraph (d)(1)(ii)(A) of this section does not apply, and abatement of any assessment specified in such notice is not available. However, prior to assessment, a partnership-partner that has failed to comply with section 6222(a) may correct the inconsistency by filing an administrative adjustment request under section 6227 or filing an amended partnership return and furnishing amended statements, as appropriate.

(iii) *Partnerships that have an election under section 6221(b) in effect.* In the case of a partnership-partner that has an election under section 6221(b) in effect for the reviewed year (as defined in § 301.6241–1(a)(8)), any tax resulting from an adjustment due to the partnership-partner's failure to comply with section 6222(a) may be assessed with respect to the reviewed year partners (as defined in § 301.6241–1(a)(9)) of the partnership-partner (or indirect partners of the partnership-partner, as defined in § 301.6241–1(a)(4)). Such tax may be assessed in the same manner as if the tax were on account of a mathematical or clerical error appearing on the reviewed year partner's or indirect partner's return, except that the procedures under section 6213(b)(2) for requesting an abatement of such assessment do not apply.

(2) *Partnership may waive limitations.* A partnership may at any time by a signed notice in writing filed with the IRS waive the limitations under paragraph (c) of this section (whether or not an FPA under section 6231(a)(3) has been mailed by the IRS at the time of the waiver).

(e) *Limit on amount of imputed underpayment where no proceeding is begun.* If no proceeding under section 6234 is begun with respect to an FPA under section 6231(a)(3) before the close of the 90th day after the day on which such FPA was mailed, the amount for which the partnership is liable under section 6225 with respect to such FPA cannot exceed the amount determined in such FPA.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 21.** Section 301.6233(a)–1 is added to read as follows:

§ 301.6233(a)–1 Interest and penalties determined from reviewed year.

(a) *Interest and penalties with respect to the reviewed year.* Except to the extent provided in section 6226(c) and the regulations thereunder, in the case of a partnership adjustment (as defined in § 301.6241–1(a)(6)) for a reviewed year (as defined in § 301.6241–1(a)(8)), a partnership is liable for—

(1) Interest computed in accordance with paragraph (b) of this section; and

(2) Any penalty, addition to tax, or additional amount as provided under paragraph (c) of this section.

(b) *Computation of interest with respect to partnership adjustments for the reviewed year.* The interest imposed on an imputed underpayment resulting from partnership adjustments for the reviewed year is the interest that would be imposed under chapter 67 of the Internal Revenue Code (Code) if the imputed underpayment were treated as an underpayment of tax for the reviewed year. The interest imposed on an imputed underpayment under this paragraph (b) begins on the day after the due date of the partnership return (without regard to extension) for the reviewed year and ends on the earlier of—

(1) The date prescribed for payment (as described in § 301.6232–1(b));

(2) The due date of the partnership return (without regard to extension) for the adjustment year (as defined in § 301.6241–1(a)(1)); or

(3) The date the imputed underpayment is fully paid.

(c) *Penalties with respect to partnership adjustments for the reviewed year*—(1) *In general.* In accordance with section 6221(a), the applicability of any penalties, additions to tax, and additional amounts that relate to an adjustment to any partnership-related item for the reviewed year is determined at the partnership level as if the partnership had been an individual subject to tax imposed by chapter 1 of subtitle A of the Code for the reviewed year, and the imputed underpayment were an actual underpayment of tax or understatement for such year. Nothing in this paragraph (c)(1) affects the application of any penalty, addition to tax, or additional amount that may apply to the partnership or to any reviewed year partner (as defined in § 301.6241–1(a)(9)) or to any indirect partner (as defined in § 301.6241–1(a)(4)) that is unrelated to an adjustment to a partnership-related item under subchapter C of chapter 63 of the Code. A partner-level defense (as described in § 301.6226–3(d)(3)) may not be raised in a proceeding of the partnership.

(2) *Coordination with accuracy-related and fraud penalty provisions*—(i) *In general.* In the case of penalties imposed under section 6662, section 6662A, and section 6663 with respect to partnership adjustments in accordance with paragraph (c)(1) of this section, the rules described in paragraphs (c)(2)(ii), (iii), (iv), and (v) of this section apply.

(ii) *Determining the portion of the imputed underpayment to which a penalty applies*—(A) *In general.* In the case of penalties imposed under section 6662, section 6662A, and section 6663, paragraph (c)(2)(ii) of this section applies if—

(*1*) There is at least one adjustment with respect to which no penalty has been imposed and at least one adjustment with respect to which a penalty has been imposed; or

(*2*) There are at least two adjustments with respect to which penalties have been imposed and the penalties have different rates.

(B) *Calculating the portion of the imputed underpayment to which the penalty applies.* In computing the portion of an imputed underpayment to which a penalty applies, adjustments that do not result in the imputed underpayment (as described in § 301.6225–1(f)) are not taken into account. The portion of an imputed underpayment to which a penalty applies is calculated as follows—

(*1*) All the partnership adjustments that resulted in the imputed underpayment are grouped together according to whether they are adjustments with respect to which a penalty has been imposed and, if so, according to rate of penalty. Decreasing adjustments as defined in paragraph (c)(2)(ii)(C) of this section are grouped in accordance with paragraphs (c)(2)(ii)(D) and (E) of this section.

(*2*) Within each grouping described in paragraph (c)(2)(ii)(B)(*1*) of this section, multiply the portion of each partnership adjustment that is not an adjustment to a credit or treated as an adjustment to a credit under § 301.6225–1(e)(3)(iii) by the rate that applied to such portion when calculating the imputed underpayment. See §§ 301.6225–1(b)(1)(iv), 301.6225–2(b)(3).

(*3*) Within each grouping, add the amounts that were calculated under paragraph (c)(2)(ii)(B)(*2*) of this section.

(*4*) Within each grouping, increase or decrease the amounts that were calculated under paragraph (c)(2)(ii)(B)(*3*) of this section by any adjustments to credits (or adjustments treated as adjustments to credits under § 301.6225–1(e)(3)(iii)).

(C) *Decreasing adjustments.* An adjustment to a partnership-related item that resulted in a decrease to the imputed underpayment is a *decreasing adjustment.*

(D) *Grouping of decreasing adjustments.* Decreasing adjustments are grouped under paragraph (c)(2)(ii)(B)(*1*) of this section in the following order—

(*1*) First, decreasing adjustments are grouped with partnership adjustments with respect to which no penalties have been imposed until the amount of the adjustments remaining in this group is zero in accordance with paragraph (c)(2)(ii)(E) of this section;

(*2*) Second, decreasing adjustments remaining after application of paragraph (c)(2)(ii)(D)(*1*) of this section (taking into account application of paragraph (c)(2)(ii)(E) of this section) are grouped with partnership adjustments with respect to which a penalty has been imposed at a 20 percent rate;

(*3*) Third, decreasing adjustments remaining after application of paragraph (c)(2)(ii)(D)(*2*) of this section (taking into account application of paragraph (c)(2)(ii)(E) of this section) are grouped with partnership adjustments with respect to which a penalty has been imposed at a 30 percent rate;

(*4*) Fourth, decreasing adjustments remaining after application of paragraph (c)(2)(ii)(D)(*3*) of this section (taking into account application of paragraph (c)(2)(ii)(E) of this section) are grouped with partnership adjustments with respect to which a penalty has been imposed at a 40 percent rate;

(*5*) Fifth, decreasing adjustments remaining after application of paragraph (c)(2)(ii)(D)(*4*) of this section (taking into account application of paragraph (c)(2)(ii)(E) of this section) are grouped with partnership adjustments with respect to which a penalty has been imposed at a 75 percent rate.

(E) *Decreasing adjustments that reduce a grouping to zero.* If, when allocating the decreasing adjustments under paragraph (c)(2)(ii)(D) of this section, the amount calculated in paragraph (c)(2)(ii)(B) of this section for a particular grouping equals zero, any remaining decreasing adjustments (or portion thereof) that would otherwise reduce the amount to less than zero are allocated to the next grouping in sequential order under paragraph (c)(2)(ii)(D) of this section.

(F) *Fraud penalties under section 6663.* If any portion of an imputed underpayment is determined by the IRS to be attributable to fraud, the entire imputed underpayment is treated as attributable to fraud. This paragraph (c)(2)(ii)(F) does not apply to any portion of the imputed underpayment the partnership establishes by a

preponderance of the evidence is not attributable to fraud.

(iii) *Substantial understatement penalty under section 6662(d)*—(A) *In general.* For purposes of application of the penalty under section 6662(d) (substantial understatement of income tax), the imputed underpayment is treated as an understatement under section 6662(d)(2). To determine whether an imputed underpayment treated as an understatement under this paragraph (c)(3)(iii)(A) is a substantial understatement under section 6662(d)(1), the rules of section 6662(d)(1)(A) apply by treating the amount described in paragraph (c)(2)(iii)(B) of this section as the tax required to be shown on the return for the taxable year under section 6662(d)(1)(A)(i).

(B) *Amount of tax required to be shown on the return.* The amount described in this paragraph (c)(2)(iii)(B) is the tax that would result by treating the net income or loss of the partnership for the reviewed year, reflecting any partnership adjustments as finally determined, as taxable income described in section 1(c) (determined without regard to section 1(h)).

(iv) *Reportable transaction understatement under section 6662A.* For purposes of application of the penalty under section 6662A (reportable transaction understatement penalty), the portion of an imputed underpayment attributable to an item described under section 6662A(b)(2) is treated as a reportable transaction understatement under section 6662A(b).

(v) *Reasonable cause and good faith.* For purposes of determining whether a partnership satisfies the reasonable cause and good faith exception under section 6664(c) or (d) with respect to a penalty under section 6662, section 6662A, or section 6663, the partnership is treated as the taxpayer. See § 1.6664–4 of this chapter. Accordingly, the facts and circumstances taken into account to determine whether the partnership has established reasonable cause and good faith are the facts and circumstances applicable to the partnership.

(3) *Examples.* The following examples illustrate the rules of paragraph (c) of this section. For purposes of these examples, each partnership has a calendar taxable year, and the highest tax rate in effect for all taxpayers is 40 percent for all relevant periods.

Example 1. One adjustment with respect to which a penalty is imposed. In an administrative proceeding with respect to Partnership's 2018 partnership return, the IRS determines that Partnership understated ordinary income by $100. The $100 understatement is due to negligence or disregard of rules or regulations under section 6662(c), and a 20-percent accuracy-related penalty applies under section 6662(a). The IRS also determines that Partnership understated long-term capital gain by $300, but no penalty applies with respect to that adjustment. Partnership does not request modification of the imputed underpayment under section 6225 and does not raise any penalty defenses prior to issuance of the notice of final partnership adjustment (FPA). In the FPA, the IRS determines that the imputed underpayment is $160 (($100 + $300) × 40 percent). In determining the penalty, the $100 adjustment (to which the 20-percent penalty relates) is grouped separately from the $300 adjustment (to which no penalty applies). The portion of the imputed underpayment to which the 20-percent penalty applies is $40 ($100 × 40 percent), and the penalty is $8 ($40 × 20 percent).

Example 2. More than one adjustment with respect to which the same rate of penalty is imposed. The facts are the same as in *Example 1* of this paragraph (c)(3), except that the IRS determines that Partnership also overstated its credits by $10. The overstatement of credits is due to negligence or disregard of rules or regulations under section 6662(c), and a 20-percent accuracy-related penalty applies under section 6662(a). Because the Partnership did not request modification, the imputed underpayment is $170 (($100 + $300) × 40 percent) + $10). In determining the penalty, the $10 credit adjustment and the $100 understatement of income, both of which are adjustments with respect to which the 20-percent accuracy-related penalty is imposed, are grouped together. Accordingly, the portion of the imputed underpayment to which the 20-percent accuracy-related penalty applies is $50 (($100 × 40 percent) + $10), and the penalty is $10 ($50 × 20 percent).

Example 3. Decreasing adjustment. The facts are the same as in *Example 2* of this paragraph (c)(3), except that there is also an adjustment that reduces ordinary income by $50. In calculating the imputed underpayment under § 301.6225–1 and § 301.6225–2, the partnership demonstrates to the satisfaction of the IRS that the $50 decrease to ordinary income is appropriately netted with the $100 increase in ordinary income. Therefore, the $50 reduction in ordinary income is an adjustment that resulted in the imputed underpayment and therefore a decreasing adjustment described in paragraph (c)(2)(ii)(C) of this section. Because Partnership did not request any further modifications, the imputed underpayment is $150 (($100 − $50) + $300) × 40 percent) + $10). To determine the portion of the imputed underpayment to which the 20-percent accuracy-related penalty applies, the $50 reduction to ordinary income is grouped with the $300 adjustment to long-term capital gain (in accordance with paragraph (c)(2)(ii)(D) of this section). Accordingly, the portion of the imputed underpayment to which the 20-percent accuracy-related penalty applies is $50 (($100 × 40 percent) + $10), and the penalty is $10 ($50 × 20 percent).

Example 4. Two adjustments with respect to which penalties of different rates have been imposed. The facts are the same as in *Example 3* of this paragraph (c)(3), except that the $300 adjustment to long-term capital gain is due to a gross valuation misstatement. A 40-percent accuracy-related penalty under section 6662(a) and (h) applies to the portion of the imputed underpayment attributable to the gross valuation misstatement. The imputed underpayment is $150 (($100 − $50) + $300) × 40 percent) + $10). Under paragraph (c)(2)(ii)(B) of this section, the adjustment to long-term capital gain (the adjustment to which the 40-percent penalty relates) and the adjustments to ordinary income and credits (the adjustments to which the 20-percent penalty relates) are grouped separately. In accordance with paragraph (c)(2)(ii)(D) of this section, because all partnership adjustments other than the decreasing adjustment are subject to penalties, the $50 reduction in ordinary income (the decreasing adjustment) is allocated to the grouping of adjustments with respect to which the 20-percent penalty is imposed. The amount described under paragraph (c)(2)(ii)(B) of this section with respect to the 20-percent penalty grouping is $30 (($100 × 40 percent) − ($50 × 40 percent) + $10). Therefore, the portion of the imputed underpayment to which the 20 percent accuracy-related penalty applies is $30 and the penalty is $6 ($30 × 20 percent). The portion of the imputed underpayment to which the 40-percent gross valuation misstatement penalty applies is $120 ($300 × 40 percent), and the penalty is $48 ($120 × 40 percent). The accuracy-related penalty under section 6662(a) is $54.

Example 5. Modification with respect to tax-exempt partner. The IRS initiates an administrative proceeding with respect to Partnership's 2019 taxable year. Partnership has four equal partners during its 2019 taxable year: two partners are partnerships, A and B; one partner is a tax-exempt entity, C; and the fourth partner is an individual, D. The IRS timely mails a notice of proposed partnership adjustment (NOPPA) to Partnership for its 2019 taxable year proposing a single partnership adjustment increasing Partnership's ordinary income by $400,000. The $400,000 increase in income is due to negligence or disregard of rules or regulations under section 6662(c). A 20-percent accuracy-related penalty under section 6662(a) and (c) applies to the portion of the imputed underpayment attributable to the negligence or disregard of the rules or regulations. In the NOPPA, the IRS determines an imputed underpayment of $160,000 ($400,000 × 40 percent) and that the 20-percent penalty applies to the entire imputed underpayment. The penalty is $32,000 ($160,000 × 20 percent). Partnership requests modification under § 301.6225–2(d)(3) (regarding tax-exempt partners) with respect to the amount of additional income allocated to C, and the IRS approves the request. After modification of the imputed underpayment, the imputed underpayment is $120,000 (($400,000 − $100,000) × 40 percent), and the penalty is $24,000 ($120,000 × 20 percent).

Example 6. Amended return modification. The facts are the same as in *Example 5* of this paragraph (c)(3), except in addition to the

modification with respect to C's tax-exempt status, Partnership requests a modification under § 301.6225–2(d)(2) (regarding amended returns) with respect to the $100,000 of additional income allocated to D. In accordance with the rules under § 301.6225–2(d)(2), D files an amended return for D's 2019 taxable year taking into account $100,000 of additional ordinary income. In addition, in accordance with § 301.6225–2(d)(2)(viii), D takes into account on D's return the 20-percent accuracy-related penalty for negligence or disregard of rules or regulations that relates to the ordinary income adjustment. D's tax attributes for other taxable years are not affected. The IRS approves the modification. As a result, Partnership's total netted partnership adjustment under § 301.6225–1(b)(2) is $200,000 ($400,000 less $100,000 allocable to C and $100,000 taken into account by D). The imputed underpayment, after modification, is $80,000 ($200,000 × 40 percent), and the penalty is $16,000 ($80,000 × 20 percent).

(d) *Applicability date*—(1) *In general.* Except as provided in paragraph (d)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 22.** Section 301.6233(b)–1 is added to read as follows:

§ 301.6233(b)–1 Interest and penalties with respect to the adjustment year return.

(a) *Interest and penalties with respect to failure to pay imputed underpayment on the date prescribed.* In the case of any failure to pay an imputed underpayment on the date prescribed for such payment (as described in § 301.6232–1(b)), a partnership is liable for—

(1) Interest as determined under paragraph (c) of this section; and

(2) Any penalty, addition to tax, or additional amount as determined under paragraph (d) of this section.

(b) *Imputed underpayments to which this section applies.* This section applies to the portion of an imputed underpayment determined by the IRS under section 6225(a)(1), or an imputed underpayment resulting from adjustments requested by a partnership in an administrative adjustment request under section 6227, that is not paid by the date prescribed for payment under § 301.6232–1(b).

(c) *Interest.* Interest determined under this paragraph (c) is the interest that would be imposed under chapter 67 of the Internal Revenue Code (Code) by treating any unpaid amount of the imputed underpayment as an underpayment of tax imposed for the adjustment year (as defined in § 301.6241–1(a)(1)). The interest under this paragraph (c) begins on the date prescribed for payment (as described in § 301.6232–1(b)) and ends on the date payment of the imputed underpayment is made.

(d) *Penalties.* If a partnership fails to pay an imputed underpayment by the date prescribed for payment (as described in § 301.6232–1(b)), section 6651(a)(2) applies to such failure, and any unpaid amount of the imputed underpayment is treated as if it were an underpayment of tax for purposes of part II of subchapter A of chapter 68 of the Code. For purposes of this section, the penalty under 6651(a)(2) is applied by treating the unpaid amount of the imputed underpayment as the unpaid amount shown as tax on a return required under subchapter A of chapter 61 of the Code.

(e) *Applicability date*—(1) *In general.* Except as provided in paragraph (e)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 23.** Section 301.6234–1 is added to read as follows:

§ 301.6234–1 Judicial review of partnership adjustment.

(a) *In general.* Within 90 days after the date on which a notice of a final partnership adjustment (FPA) under section 6231(a)(3) with respect to any partnership taxable year is mailed, a partnership may file a petition for a readjustment of any partnership adjustment (as defined in § 301.6241–1(a)(6)) reflected in the FPA for such taxable year (without regard to whether an election under section 6226 has been made with respect to any imputed underpayment (as defined in § 301.6241–1(a)(3)) reflected in such FPA) with—

(1) The Tax Court;

(2) The district court of the United States for the district in which the partnership's principal place of business is located; or

(3) The Court of Federal Claims.

(b) *Jurisdictional requirement for bringing action in district court or Court of Federal Claims.* A petition for readjustment under this section with respect to any partnership adjustment may be filed in a district court of the United States or the Court of Federal Claims only if the partnership filing the petition deposits with the Internal Revenue Service (IRS), on or before the date the petition is filed, the amount of (as of the date of the filing of the petition) any imputed underpayment (as shown on the FPA) and any penalties, additions to tax, and additional amounts with respect to such imputed underpayment. If there is more than one imputed underpayment reflected in the FPA, the partnership must deposit the amount of each imputed underpayment to which the petition for readjustment relates and the amount of any penalties, additions to tax, and additional amounts with respect to each such imputed underpayment.

(c) *Treatment of deposit as payment of tax.* Any amount deposited in accordance with paragraph (b) of this section, while deposited, will not be treated as a payment of tax for purposes of the Internal Revenue Code (Code). Notwithstanding the preceding sentence, an amount deposited in accordance with paragraph (b) of this section will be treated as a payment of tax for purposes of chapter 67 of the Code (relating to interest). Interest will be allowed and paid in accordance with section 6611.

(d) *Effect of decision dismissing action.* If an action brought under this section is dismissed other than by reason of a rescission of the FPA under section 6231(d) and § 301.6231–1(g), the decision of the court dismissing the action is considered as its decision that the FPA is correct.

(e) *Amount deposited may be applied against assessment.* If the limitations on assessment under section 6232(b) and § 301.6232–1(c) no longer apply with respect to an imputed underpayment for which a deposit under paragraph (b) of this section was made, the IRS may apply the amount deposited against any such imputed underpayment that is assessed.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 24.** Section 301.6235–1 is added to read as follows:

§ 301.6235–1 Period of limitations on making adjustments.

(a) *In general.* Except as provided in section 6235(c), section 905(c) or paragraph (b) of this section (regarding extensions), no partnership adjustment (as defined in § 301.6241–1(a)(6)) for

any partnership taxable year may be made after the later of the date that is—

(1) Three years after the latest of—

(i) The date on which the partnership return for such taxable year was filed;

(ii) The return due date (as defined in section 6241(3)) for the taxable year; or

(iii) The date on which the partnership filed an administrative adjustment request with respect to such taxable year under section 6227; or

(2) The date described in paragraph (b) of this section with respect to a request for modification; or

(3) The date described in paragraph (c) of this section with respect to a notice of proposed partnership adjustment.

(b) *Modification requested under section 6225(c)*—(1) *In general.* For purposes of paragraph (a)(2) of this section, in the case of any request for modification of any imputed underpayment under section 6225(c), the date by which the Internal Revenue Service (IRS) may make a partnership adjustment is the date that is 270 days (plus the number of days of an extension of the period for requesting modification (as described in § 301.6225–2(c)(3)(i)) agreed to by the IRS under section 6225(c)(7) and § 301.6225–2(c)(3)(ii)) after the date on which everything required to be submitted to the IRS pursuant to section 6225(c) is so submitted.

(2) *Date on which everything is required to be submitted*—(i) *In general.* For purposes of paragraph (b)(1) of this section, the date on which everything required to be submitted to the IRS pursuant to section 6225(c) is so submitted is the earlier of—

(A) The date the period for requesting modification ends (including extensions) as described in § 301.6225–2(c)(3)(i) and (ii); or

(B) The date the period for requesting modification expires as a result of a waiver of the prohibition on mailing a notice of final partnership adjustment (FPA) under § 301.6231–1(b)(2). See § 301.6225–2(c)(3)(iii).

(ii) *Incomplete submission has no effect.* A determination by the IRS that the information submitted as part of a request for modification is incomplete has no effect on the applicability of paragraph (b)(2) of this section.

(c) *Notice of proposed partnership adjustment.* For purposes of paragraph (a)(3) of this section, the date by which the IRS may make a partnership adjustment is the date that is 330 days (plus the number of days of an extension of the modification period (as described in § 301.6225–2(c)(3)(i)) agreed to by the IRS under section 6225(c)(7) and § 301.6225–2(c)(3)(ii)) after the date the last notice of proposed partnership adjustment (NOPPA) under section 6231(a)(2) is mailed, regardless of whether modification is requested by the partnership under section 6225(c).

(d) *Extension by agreement.* The periods described in paragraphs (a), (b), and (c) of this section (including any extension of those periods pursuant to this paragraph (d)) may be extended by an agreement, in writing, entered into by the partnership and the IRS before the expiration of such period.

(e) *Examples.* The following examples illustrate the rules of this section. For purposes of these examples, each partnership has a calendar taxable year.

Example 1. Partnership timely files its partnership return for the 2020 taxable year on March 1, 2021. On September 1, 2023, Partnership files an administrative adjustment request (AAR) under section 6227 with respect to its 2020 taxable year. As of September 1, 2023, the IRS has not initiated an administrative proceeding under subchapter C of chapter 63 of the Internal Revenue Code with respect to Partnership's 2020 taxable year. Therefore, as of September 1, 2023, under paragraph (a)(1) of this section, the period for making partnership adjustments with respect to Partnership's 2020 taxable year expires on September 1, 2026.

Example 2. Partnership timely files its partnership return for the 2020 taxable year on the due date, March 15, 2021. On February 1, 2023, the IRS mails to Partnership and the partnership representative of Partnership (PR) a notice of administrative proceeding under section 6231(a)(1) with respect to Partnership's 2020 taxable year. Assuming no AAR has been filed with respect to Partnership's 2020 taxable year and the IRS has not yet mailed a NOPPA under section 6231(a)(2) with respect to Partnership's 2020 taxable year, the period for making partnership adjustments for Partnership's 2020 taxable year expires on the date determined under paragraph (a)(1) of this section, March 15, 2024.

Example 3. The facts are the same as in *Example 2* of this paragraph (e), except that on June 1, 2023, pursuant to § 301.6235–1(d), PR signs an agreement extending the period for making partnership adjustments under section 6235(a)(1) for Partnership's 2020 taxable year to December 31, 2025. In addition, on June 2, 2025, the IRS mails to Partnership and PR a timely NOPPA under section 6231(a)(2). Pursuant to § 301.6225–2(c)(3)(i), the period for requesting modification expires on February 27, 2026 (270 days after June 2, 2025, the date the NOPPA is mailed), but PR does not submit a request for modification on or before this date. Under paragraph (c) of this section, the date for purposes of paragraph (a)(3) of this section is April 28, 2026, the date that is 330 days from the mailing of the NOPPA. Because April 28, 2026 is later than the date under paragraph (a)(1) of this section (December 31, 2025, as extended under paragraph (d) of this section), and because no modification was requested, paragraph (a)(2) of this section is not applicable, April 28, 2026 is the date on which the period for making partnership adjustments expires under section 6235.

Example 4. The facts are the same as in *Example 3* of this paragraph (e), except that PR notifies the IRS that Partnership will be requesting modification. On January 5, 2026, PR and the IRS agree to extend the period for requesting modification pursuant to section 6225(c)(7) and § 301.6225–2(c)(3)(ii) for 45 days—from February 27, 2026 to April 13, 2026. PR submits the request for modification to the IRS on April 13, 2026. Therefore, the date determined under paragraph (b) of this section is February 22, 2027, which is 270 days after the date everything required to be submitted was so submitted pursuant to paragraph (b)(2) of this section plus the additional 45-day extension of the period for requesting modification agreed to by PR and the IRS. Because February 22, 2027 is later than the date under paragraph (a)(1) of this section (December 31, 2025, as extended under paragraph (d) of this section) and the date under paragraph (a)(3) of this section (June 12, 2026, which is 330 days from the date the NOPPA was mailed plus the 45-day extension under section 6225(c)(7)), February 22, 2027 is the date on which the period for making partnership adjustments expires under section 6235.

Example 5. The facts are the same as in *Example 4* of this paragraph (e), except that PR does not request an extension of the period for requesting modification. On February 1, 2026, PR submits a request for modification and PR, and the IRS agree in writing to waive the prohibition on mailing an FPA pursuant to § 301.6231–1(b)(2). Pursuant to § 301.6225–2(c)(3)(iii), the period for requesting modification expires as of February 1, 2026, rather than February 27, 2026. Accordingly, under paragraph (b)(2) of this section, the date on which everything required to be submitted pursuant to section 6225(c) is so submitted is February 1, 2026, and the 270-day period described in paragraph (b)(1) of this section begins to run on that date. Therefore, the date for purposes of paragraph (a)(2) of this section is October 29, 2026, which is 270 days after February 1, 2026, the date on which everything required to be submitted under section 6225(c) is so submitted. Because October 29, 2026 is later than the date under paragraph (a)(1) of this section (December 31, 2025, as extended under paragraph (d) of this section) and the date under paragraph (a)(3) of this section (April 28, 2026), October 29, 2026 is the date on which the period for making partnership adjustments expires under section 6235.

Example 6. The facts are the same as in *Example 5* of this paragraph (e), except PR completes its submission of information to support a request for modification on July 1, 2025, but does not execute a waiver pursuant to § 301.6231–1(b)(2). Therefore, pursuant to paragraph (b)(2) of this section, February 26, 2026, the date the period requesting modification expires, is the date on which everything required to be submitted pursuant to section 6225(c) is so submitted. As a result, the 270-day period described in

paragraph (b)(1) of this section expires on November 23, 2026. Because November 23, 2026 is later than the date under paragraph (a)(1) of this section (December 31, 2025, as extended under paragraph (d) of this section) and the date under paragraph (a)(3) of this section (April 28, 2026), November 23, 2026 is the date on which the period for making partnership adjustments expires under section 6235.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 25.** Section 301.6241–1 is added to read as follows:

§ 301.6241–1 Definitions.

(a) *Definitions.* For purposes of subchapter C of chapter 63 of the Internal Revenue Code—

(1) *Adjustment year.* The term *adjustment year* means the partnership taxable year in which—

(i) In the case of an adjustment pursuant to the decision of a court in a proceeding brought under section 6234, such decision becomes final;

(ii) In the case of an administrative adjustment request (AAR) under section 6227, such AAR is filed; or

(iii) In any other case, a notice of final partnership adjustment is mailed under section 6231 or, if the partnership waives the restrictions under section 6232(b) (regarding limitations on assessment), the waiver is executed by the IRS.

(2) *Adjustment year partner.* The term *adjustment year partner* means any person who held an interest in a partnership at any time during the adjustment year.

(3) *Imputed underpayment.* Except as otherwise provided in this paragraph (a)(3), the term *imputed underpayment* means the amount determined in accordance with section 6225 and the regulations thereunder. In the case of an election under section 6226, the term *imputed underpayment* means the amount determined in accordance with § 301.6226–3(e)(4). In the case of an administrative adjustment request, the term *imputed underpayment* means the amount determined in accordance with § 301.6227–2 or § 301.6227–3(c).

(4) *Indirect partner.* The term *indirect partner* means any person who has an interest in a partnership through their interest in one or more pass-through partners (as defined in paragraph (a)(5) of this section) or through a wholly-owned entity disregarded as separate from its owner for Federal tax purposes.

(5) *Pass-through partner.* The term *pass-through partner* means a pass-through entity that holds an interest in a partnership. A pass-through entity is a partnership as described in § 301.7701–2(c)(1) (including a foreign entity that is classified as a partnership under § 301.7701–3(b)(2)(i)(A) or (c)), an S corporation, a trust (other than a wholly-owned trust disregarded as separate from its owner for Federal tax purposes), and a decedent's estate. For purposes of this paragraph (a)(5), a pass-through entity is not a wholly-owned entity disregarded as separate from its owner for Federal tax purposes.

(6) *Partnership adjustment.* The term *partnership adjustment* means any adjustment to a partnership-related item (as defined in § 301.6241–6) and includes any portion of a partnership adjustment.

(7) *Partnership-partner.* The term *partnership-partner* means a partnership that holds an interest in another partnership.

(8) *Reviewed year.* The term *reviewed year* means the partnership taxable year to which a partnership adjustment relates.

(9) *Reviewed year partner.* The term *reviewed year partner* means any person who held an interest in a partnership at any time during the reviewed year.

(10) *Tax attribute.* A tax attribute is anything that can affect the amount or timing of a partnership-related item (as defined in § 301.6241–6) or that can affect the amount of tax due in any taxable year. Examples of tax attributes include, but are not limited to, basis and holding period, as well as the character of items of income, gain, loss, deduction, or credit and carryovers and carrybacks of such items.

(b) *Applicability date*—(1) *In general.* Except as provided in paragraph (b)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 26.** Section 301.6241–2 is added to read as follows:

§ 301.6241–2 Bankruptcy of the partnership.

(a) *Coordination between Title 11 and proceedings under subchapter C of chapter 63*—(1) *In general.* If a partnership is a debtor in a case under Title 11 of the United States Code (Title 11 case), the running of any period of limitations under section 6235 with respect to the time for making a partnership adjustment (as defined in § 301.6241–1(a)(6)) and under sections 6501 and 6502 with respect to the assessment or collection of any imputed underpayment (as defined in § 301.6241–1(a)(3)) determined under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) is suspended during the period the Internal Revenue Service (IRS) is prohibited by reason of the Title 11 case from making the adjustment, assessment, or collection until—

(i) 60 days after the suspension ends, for adjustments or assessments, and

(ii) 6 months after the suspension ends, for collection.

(2) *Interaction with section 6232(b).* The filing of a proof of claim or request for payment (or the taking of any other action) in a Title 11 case is not be treated as an action prohibited by section 6232(b) (regarding limitations on assessment).

(3) *Suspension of the time for judicial review.* In a Title 11 case, the running of the period specified in section 6234 (regarding judicial review of partnership adjustments) is suspended during the period during which the partnership is prohibited by reason of the Title 11 case from filing a petition under section 6234, and for 60 days thereafter.

(4) *Actions not prohibited.* The filing of a petition under Title 11 does not prohibit the following actions:

(i) An administrative proceeding with respect to a partnership under subchapter C of chapter 63;

(ii) The mailing of any notice with respect to a proceeding with respect to a partnership under subchapter C of chapter 63, including:

(A) A notice of administrative proceeding,

(B) A notice of proposed partnership adjustment, and

(C) A notice of final partnership adjustment;

(iii) A demand for tax returns;

(iv) The assessment of any tax, including the assessment of any imputed underpayment with respect to a partnership; and

(v) The issuance of notice and demand for payment of an assessment under subchapter C of chapter 63 (but see section 362(b)(9)(D) of Title 11 of the United States Code regarding the timing of when a tax lien takes effect by reason of such assessment).

(b) *Applicability date*—(1) *In general.* Except as provided in paragraph (b)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 27.** Section 301.6241–3 is added to read as follows:

§ 301.6241–3 Treatment where a partnership ceases to exist.

(a) *Former partners take adjustments into account*—(1) *In general.* Except as described in paragraphs (a)(2) and (3) of this section, if the Internal Revenue Service (IRS) determines that any partnership (including a partnership-partner as defined in § 301.6241–1(a)(7)) ceases to exist (as defined in paragraph (b)(2) of this section) before any partnership adjustment (as defined in § 301.6241–1(a)(6)) under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) takes effect (as described in paragraph (c) of this section), the partnership adjustment is taken into account by the former partners (as described in paragraph (d) of this section) of the partnership in accordance with paragraph (e) of this section.

(2) *Partnership no longer liable for any unpaid amounts resulting from a partnership adjustment.* A partnership that ceases to exist is no longer liable for any unpaid amounts resulting from a partnership adjustment required to be taken into account by a former partner under this section.

(3) *Application of this section to partnership-partners.* This section applies to a partnership-partner and its former partners, regardless of whether the partnership-partner has an election under section 6221(b) in effect for any relevant partnership taxable year.

(b) *Determination that partnership ceases to exist*—(1) *In general.* For purposes of this section, the IRS may, in its sole discretion, make a determination that a partnership ceases to exist for purposes of this section, but the IRS is not required to do so even if the definition in paragraph (b)(2) of this section applies with respect to such partnership. If the IRS determines that a partnership ceases to exist, the IRS will notify the partnership and the former partners (as defined in paragraph (d) of this section), in writing, within 30 days of such determination using the last known address of the partnership and the former partners.

(2) *Cease to exist defined*—(i) *In general.* The IRS may determine that a partnership ceases to exist if the partnership terminates within the meaning of section 708(b)(1), or does not have the ability to pay, in full, any amount due under the provisions of subchapter C of chapter 63 for which the partnership is or becomes liable. For purposes of this section, a partnership does not have the ability to pay if the IRS determines that the amount due with respect to the partnership is not collectible based on the information the IRS has at the time of such determination. For purposes of this section, a partnership does not cease to exist solely because the partnership has—

(A) A valid election under section 6226 and the regulations thereunder in effect with respect to any imputed underpayment (as defined in § 301.6241–1(a)(3));

(B) Received a statement under section 6226(a)(2) (or § 301.6226–3(e)) and has furnished statements to its partners in accordance with § 301.6226–3(e)(3); or

(C) Not paid any amount required to be paid under subchapter C of chapter 63.

(ii) *Year in which a partnership ceases to exist.* If a partnership terminates under section 708(b)(1), the partnership ceases to exist on the last day of the partnership's final taxable year. If a partnership does not have the ability to pay, the partnership ceases to exist on the date that the IRS makes a determination under paragraph (b)(2)(i) of this section that the partnership ceases to exist.

(iii) *Limitation on IRS determination that partnership ceases to exist.* In no event may the IRS determine that a partnership ceases to exist with respect to a partnership adjustment after the expiration of the period of limitations on collection applicable to the assessment made against the partnership for the amount due resulting from such adjustment.

(c) *Partnership adjustment takes effect*—(1) *Full payment of amounts resulting from a partnership adjustment.* For purposes of this section, a partnership adjustment under subchapter C of chapter 63 takes effect when there is full payment of amounts resulting from a partnership adjustment. For purposes of this section, *full payment of amounts resulting from a partnership adjustment* means all amounts due under subchapter C of chapter 63 resulting from the partnership adjustment are fully paid by the partnership.

(2) *Partial payment of amount due by the partnership.* If a partnership pays part, but not all, of any amount due resulting from a partnership adjustment before the partnership ceases to exist, the former partners (as defined in paragraph (d) of this section) of the partnership that has ceased to exist are not required to take into account any partnership adjustment to the extent amounts have been paid by the partnership with respect to such adjustment. The notification that the IRS has determined that the partnership has ceased to exist will include information regarding the portion of the partnership adjustments with respect to which appropriate amounts have not already been paid by the partnership and therefore must be taken into account by the former partners (described in paragraph (d) of this section) in accordance with paragraph (e) of this section.

(d) *Former partners*—(1) *Adjustment year partners*—(i) *In general.* Except as described in paragraphs (d)(1)(ii) and (d)(2) of this section, the term *former partners* means the adjustment year partners (as defined in § 301.6241–1(a)(2)) of a partnership that ceases to exist for the partnership taxable year to which the partnership adjustment relates.

(ii) *Partnership-partner ceases to exist.* If the adjustment year partner is a partnership-partner that the IRS has determined ceased to exist, the partners of such partnership-partner during the partnership-partner's taxable year that includes the end of the adjustment year (as defined in § 301.6241–1(a)(1)) of the partnership that is subject to a proceeding under subchapter C of chapter 63 are the former partners for purposes of this section. If the partnership-partner ceased to exist before the partnership-partner's taxable year that includes the end of the adjustment year of the partnership that is subject to a proceeding under subchapter C of chapter 63, the former partners for purposes of this section are the partners of such partnership-partner during the partnership taxable year for which the final partnership return of the partnership-partner under section 6031 is filed.

(2) *No adjustment year partners.* If there are no adjustment year partners of a partnership that ceases to exist, the term *former partners* means the partners of the partnership during the last taxable year for which a partnership return under section 6031 was filed with respect to such partnership. For instance, if a partnership terminates under section 708(b)(1) (and therefore ceases to exist under paragraph (b)(2)(i) of this section) before the adjustment year and files a final partnership return for the partnership taxable year of such partnership, the former partners for purposes of this section are the partners of the partnership during the

partnership taxable year for which a final partnership return is filed.

(e) *Taking adjustments into account*—(1) *In general.* For purposes of paragraph (a) of this section, a former partner of a partnership that ceases to exist takes a partnership adjustment into account as if the partnership had made an election under section 6226 and the regulations thereunder (regarding the alternative to payment of the imputed underpayment). A former partner must take into account the former partner's share of a partnership adjustment as set forth in the statement described in paragraph (e)(2) of this section in accordance with § 301.6226–3.

(2) *Statements furnished to former partners.* If a partnership is notified by the IRS that the partnership has ceased to exist as described in paragraph (b)(1) of this section, the partnership must furnish to each former partner a statement reflecting such former partner's share of the partnership adjustment required to be taken into account under this section and file a copy of such statement with the IRS in accordance with the rules under § 301.6226–2, except that—

(i) The adjustments are taken into account by the applicable former partner (as described in paragraph (d) of this section), rather than the reviewed year partners (as defined in § 301.6241–1(a)(9)), and

(ii) The partnership must furnish statements to the former partners and file the statements with the IRS no later than 30 days after the date of the notification to the partnership that the IRS has determined that the partnership has ceased to exist.

(3) *Authority to issue statements.* If any statements required by paragraph (e) of this section are not timely furnished to a former partner and filed with the IRS in accordance with paragraph (e)(2)(ii) of this section, the IRS may notify the former partner in writing of such partner's share of the partnership adjustments based on the information reasonably available to the IRS at the time such notification is provided. For purposes of paragraph (e) of this section, a notification to a former partner under this paragraph (e)(3) is treated the same as a statement required to be furnished and filed under paragraph (e)(2) of this section.

(f) *Examples.* The following examples illustrate the provisions of this section. For purposes of the examples, all partnerships and partners are calendar year taxpayers and each partnership is subject to the provisions of subchapter C of chapter 63 of the Code (unless otherwise stated).

Example 1. The IRS initiates a proceeding under subchapter C of chapter 63 with respect to the 2020 partnership taxable year of Partnership. During 2023, in accordance with section 6235(b), Partnership extends the period of limitations on adjustments under section 6235(a) until December 31, 2025. On February 1, 2025, the IRS mails Partnership a notice of final partnership adjustment (FPA) that determines partnership adjustments that result in a single imputed underpayment. Partnership does not timely file a petition under section 6234 and does not make a valid election under section 6226. On June 2, 2025, the IRS mails Partnership notice and demand for payment of the amount due resulting from the adjustments determined in the FPA. Partnership fails to make a payment. On September 1, 2029, the IRS determines Partnership ceases to exist for purposes of this section because the IRS has determined that Partnership does not have the ability to pay under paragraph (b)(2)(i) of this section. Under § 301.6241–1(a)(1), the adjustment year is 2025 and A and B, both individuals, are the only adjustment year partners of Partnership during 2025. Accordingly, under paragraph (d)(1) of this section, A and B are former partners. Therefore, A and B are required to take their share of the partnership adjustments determined in the FPA into account under paragraph (e) of this section.

Example 2. The IRS initiates a proceeding under subchapter C of chapter 63 with respect to the 2020 partnership taxable year of P, a partnership. G, a partnership that has an election under section 6221(b) in effect for the 2020 taxable year, is a partner of P during 2020 and for every year thereafter. On February 3, 2025, the IRS mails P an FPA that determines partnership adjustments that result in a single imputed underpayment. P does not timely file a petition under section 6234 and does not make a timely election under section 6226. On May 6, 2025, the IRS mails P notice and demand for payment of the amount due resulting from the adjustments determined in the FPA. P does not make a payment. On September 1, 2025, the IRS determines P ceases to exist for purposes of this section because the IRS has determined that P does not have the ability to pay under paragraph (b)(2)(i) of this section. G terminated under section 708(b)(1) on December 31, 2024. On September 1, 2025, the IRS determines that G ceased to exist in 2024 for purposes of this section in accordance with paragraph (b)(2)(i) of this section. J and K, individuals, were the only partners of G during 2024. Therefore, under paragraph (d)(1)(ii) of this section, J and K, the partners of G during G's 2024 partnership taxable year, are the former partners of G for purposes of this section. Therefore, J and K are required to take into account their share of the adjustments contained in the statement furnished by P to G in accordance with paragraph (e) of this section.

(g) *Applicability date*—(1) *In general.* Except as provided in paragraph (g)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 28.** Section 301.6241–4 is added to read as follows:

§ 301.6241–4 Payments nondeductible.

(a) *Payments nondeductible.* No deduction is allowed under subtitle A of the Internal Revenue Code for any payment required to be made by a partnership under subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63). Payment by a partnership of any amount required to be paid under subchapter C of chapter 63, including any imputed underpayment (as defined in § 301.6241–1(a)(3)), or interest, penalties, additions to tax, or additional amounts with respect to an imputed underpayment, is treated as an expenditure described in section 705(a)(2)(B).

(b) *Applicability date*—(1) *In general.* Except as provided in paragraph (b)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 29.** Section 301.6241–5 is added to read as follows:

§ 301.6241–5 Extension to entities filing partnership returns.

(a) *Entities filing a partnership return.* Except as described in paragraph (c) of this section, an entity that files a partnership return for any taxable year is subject to the provisions of subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) and the regulations thereunder with respect to such taxable year even if it is determined that the entity filing the partnership return was not a partnership for such taxable year. Accordingly, any partnership-related item (as defined in § 301.6241–6) and any person holding an interest in the entity, either directly or indirectly, at any time during that taxable year are subject to the provisions of subchapter C of chapter 63 and the regulations thereunder for such taxable year.

(b) *Partnership return filed but no entity found to exist.* Paragraph (a) of this section also applies where a partnership return is filed for a taxable year, but the IRS determines that no entity existed at all for such taxable year. For purposes of applying paragraph (a) of this section, the

partnership return is treated as if it were filed by an entity.

(c) *Exceptions.* Paragraph (a) of this section does not apply to—

(1) Any taxable year for which an election under section 6221(b) is in effect, treating the return as if it were filed by a partnership for the taxable year to which the election relates, and

(2) Any taxable year for which a partnership return was filed for the sole purpose of making the election described in section 761(a) (regarding election out of subchapter K for certain unincorporated organizations).

(d) *Applicability date*—(1) *In general.* Except as provided in paragraph (d)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 30.** Section 301.6241–6 is added to read as follows:

§ 301.6241–6 Partnership-related Item.

(a) *In general.* The term *partnership-related item* means—

(1) Any item or amount with respect to the partnership (as described in paragraph (b) of this section) which is relevant in determining the tax liability of any person under chapter 1 of subtitle A of the Internal Revenue Code (chapter 1) (as described in paragraph (c) of this section), and

(2) Any partner's distributive share of any such item or amount.

(b) *Item or amount with respect to the partnership.* For purposes of this section, an item or amount is with respect to the partnership without regard to whether or not such item or amount appears on the partnership return. An item or amount is with respect to the partnership if—

(1) The item or amount is shown or reflected, or required to be shown or reflected, on a return of the partnership under section 6031, the regulations thereunder, or the forms and instructions prescribed by the Internal Revenue Service (IRS) for the partnership's taxable year;

(2) The item or amount is in the partnership's books or records;

(3) The item or amount is an imputed underpayment;

(4) The item or amount relates to a transaction with the partnership by a partner acting in its capacity as a partner or by an indirect partner (as defined in § 301.6241–1(a)(4)) acting its capacity as an indirect partner;

(5) The item or amount relates to a transaction that is described in section 707(a)(2), 707(b), or 707(c);

(6) The item or amount relates to basis in the partnership;

(7) The item or amount relates to a liability of the partnership that is reported or reportable by a partner acting in its capacity as a partner or an indirect partner acting in its capacity as an indirect partner, including such partner or indirect partner's share of the liability; or

(8) Any legal or factual determinations necessary to make an adjustment to an item or amount described in paragraphs (b)(1) through (7) of this section, such as a determination regarding—

(i) The validity of any election made by the partnership,

(ii) The partnership's accounting practices and methods;

(iii) Whether a partnership exists for tax purposes and whether multiple partnerships should be treated as a single partnership;

(iv) Whether any items or transactions of the partnership lack economic substance or should otherwise be disregarded, collapsed, recharacterized, or attributed to other persons;

(v) Whether a partnership terminates under section 708(b)(1) or as a result of a transaction under Rev. Rul. 99–6 (1999–1 C.B. 432) (see § 601.601(d)(2) of this chapter); or

(vi) The type of partnership interest held by any partner.

(c) *Relevant in determining the tax liability of any person under chapter 1.* For purposes of this section, an item or amount is relevant in determining the tax liability of any person under chapter 1 without regard to application of subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) and without regard to whether such item or amount, or adjustment to such item or amount, has an effect on the tax liability of any particular person under chapter 1.

(d) *Examples of partnership-related items.* The term partnership-related item includes—

(1) The character, timing, source, and amount of the partnership's income, gain, loss, deductions, and credits;

(2) The character, timing, and source of the partnership's activities;

(3) The character, timing, source, value, and amount of any contributions to, and distributions from, the partnership;

(4) The partnership's basis in its assets, the character and type of the assets, and the value (or revaluation such as under § 1.704–1(b)(2)(iv)(*f*) or (*s*) of this chapter) of the assets;

(5) The amount and character of partnership liabilities and any changes to those liabilities from the preceding tax year;

(6) The category, timing, and amount of the partnership's creditable expenditures;

(7) Any item or amount resulting from a partnership termination;

(8) Any item or amount relating to an election under section 754;

(9) Partnership allocations and any special allocations; and

(10) Whether any person is a partner in the partnership.

(e) *Examples.* The following examples illustrate the provisions of this section. For purposes of these examples, Partnership is subject to the provisions of subchapter C of chapter 63 and all taxpayers are calendar year taxpayers.

Example 1. Partnership enters into a transaction with A to purchase widgets for $100 in taxable year 2020. A is not a partner of Partnership or an indirect partner of Partnership. The transaction is not a transaction described in 707(a)(2), 707(b), or 707(c). Partnership pays A $100 for the widgets. Any deduction or expense of the Partnership for the purchase of the widgets is an item or amount that relates to a transaction with Partnership and is relevant to determining the liability of any person under chapter 1 pursuant to paragraph (c) of this section. Therefore, the deduction or expense is a partnership-related item. However, the income to A resulting from the transaction with Partnership is not an item or amount with respect to Partnership under paragraph (b) of this section because although the amount of income relates to a transaction with Partnership, the amount of income is reported or reportable by A, and A is not a partner (direct or indirect) of Partnership. Accordingly, the amount of income reportable by A is not a partnership-related item.

Example 2. B loans Partnership $100 in Partnership's 2020 taxable year. Partnership makes an interest payment to B in 2020 of $5. B is a partner in Partnership in the 2020 taxable year, but B loaned the $100 to Partnership in a capacity other than B's capacity as a partner. Partnership's liability relating to the loan by B to Partnership and the $5 of interest expense paid by the Partnership are items or amounts that relates to a transaction with or liability of Partnership and are relevant to determining the liability of any person under chapter 1 pursuant to paragraph (c) of this section. However, the treatment of the loan by B and the amount of interest income received by B are not items or amounts with respect to Partnership under paragraph (b) of this section because although they relate to a transaction with or liability of Partnership, the loan and interest income are reportable by B, and B was not acting in his capacity as a partner when he loaned the $100 to Partnership. Accordingly, the loan as treated by B and the amount of interest income to B is not a partnership-related item.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 31.** Section 301.6241–7 is added to read as follows:

§ 301.6241–7 Coordination with Other Chapters of the Internal Revenue Code.

(a) *Coordination with other chapters*—(1) *In general.* Subchapter C of chapter 63 of the Internal Revenue Code (subchapter C of chapter 63) only applies to tax imposed by chapter 1 of the Internal Revenue Code (Code) and not to any tax imposed (including any amount required to be deducted or withheld) under any chapter of the Code other than chapter 1 of the Code (chapter 1), including chapter 2, 2A, 3, or 4 of the Code. Accordingly, for purposes of determining taxes imposed under chapters of the Code other than chapter 1, the Internal Revenue Service (IRS) may make an adjustment to any partnership-related item (as defined in § 301.6241–6) in a proceeding that is not under subchapter C of chapter 63. To the extent an adjustment or determination is made under subchapter C of chapter 63 for purposes of chapter 1 and is relevant in determining tax imposed under a chapter of the Code other than chapter 1, such adjustment or determination must be taken into account for purposes of determining such tax.

(2) *Examples.* The following examples illustrate the rules of this paragraph (a) as applied to cases in which a partnership has a withholding obligation under chapter 3 or chapter 4 with respect to income that the partnership earns. For purposes of these examples, each partnership is subject to the provisions of subchapter C of chapter 63 of the Code, and the partnership and its partners are calendar year taxpayers.

Example 1. Partnership, a partnership created or organized in the United States, has two equal partners, A and B. A is a nonresident alien who is a resident of Country A, and B is a U.S. citizen. In 2018, Partnership earned $200 of U.S. source royalty income. Partnership was required to withhold 30 percent of the gross amount of the royalty income allocable to A unless Partnership had documentation that it could rely on to establish that A was entitled to a reduced rate of withholding. See §§ 1.1441–1(b)(1) and 1.1441–5(b)(2)(i)(A) of this chapter. Partnership withheld $15 from the $100 of royalty income allocable to A based on its incorrect belief that A is entitled to a reduced rate of withholding under the U.S.-Country A Income Tax Treaty. In 2020, the IRS determines in an examination of Partnership's Form 1042, Annual Withholding Tax Return for U.S. Source Income of Foreign Persons, that Partnership should have withheld $30 instead of $15 on the $100 of royalty income allocable to A because Partnership failed to obtain documentation from A establishing a valid treaty claim for a reduced rate of withholding. The tax imposed on Partnership for its failure to withhold on that income, however, is not a tax imposed by chapter 1. Rather, it is a tax imposed by chapter 3, which is not a partnership-related item under § 301.6241–6. Therefore, in accordance with section 6221(a), the adjustment to increase Partnership's withholding tax liability by $15 is not determined under subchapter C of chapter 63, and instead must be determined as part of the Form 1042 examination.

Example 2. Partnership, a partnership created or organized in the United States, has two equal partners, A and B. A is a nonresident alien who is a resident of Country A, and B is a U.S. citizen. In 2018, Partnership earned $100 of U.S. source dividend income. Partnership was required to report the dividend income on its 2018 Form 1065, U.S. Return of Partnership Income, and withhold 30 percent of the gross amount of the dividend income allocable to A unless Partnership had documentation that it could rely on to establish that A was entitled to a reduced rate of withholding. See §§ 1.1441–1(b)(1) and 1.1441–5(b)(2)(i)(A) of this chapter. In 2020, in an examination of Partnership's Form 1042, the IRS determines that Partnership earned but failed to report the $100 of U.S. source dividend income in 2018. The adjustment to increase Partnership's dividend income by $100 is an adjustment to a partnership-related item. The tax imposed on Partnership for its failure to withhold on that income, however, is not a tax imposed by chapter 1; rather, it is a tax imposed by chapter 3. Pursuant to § 301.6221(a)-1(a), only chapter 1 tax attributable to adjustments to partnership-related items is assessed under subchapter C of chapter 63. Therefore, because the tax imposed with respect to the adjustment is a chapter 3 tax, under paragraph (a)(1) of this section, the IRS may determine, assess, and collect chapter 3 tax attributable to an adjustment to a partnership-related item without conducting a proceeding under subchapter C of chapter 63. Accordingly, the IRS may determine the chapter 3 tax in the examination of Partnership's Form 1042 by adjusting Partnership's withholding tax liability by an additional $15 for failing to withhold on the $50 of dividend income allocable to A. However, the IRS must initiate an administrative proceeding under subchapter C of chapter 63 to make any adjustments for purposes of chapter 1 attributable to the income. If the IRS subsequently initiates an administrative proceeding under subchapter C of chapter 63 and makes an adjustment to the same item of income, the portion of the dividend income allocable to A will be disregarded in the calculation of the total netted partnership adjustment to the extent that the chapter 3 tax has been collected with respect to such income. See § 301.6225–1(b)(3).

(b) *Coordination with chapters 3 and 4*—(1) *In general.* In the case of any tax imposed under chapter 3 or chapter 4 that is determined with respect to a partnership adjustment determined under subchapter C of chapter 63 for purposes of chapter 1, such tax is determined with respect to the reviewed year (as defined in § 301.6241–1(a)(8)) and is imposed (or required to be deducted and withheld) with respect to the adjustment year (as defined in § 301.6241–1(a)(1)).

(2) *Definitions.* The following definitions apply for purposes of this paragraph (b) and the regulations under subchapter C of chapter 63.

(i) *Amount subject to withholding.* The term *amount subject to withholding* means an amount subject to withholding (as defined in § 1.1441–2(a) of this chapter), a withholdable payment (as defined in § 1.1473–1(a) of this chapter), or the allocable share of effectively connected taxable income (as computed under § 1.1446–2(b) of this chapter).

(ii) *Chapter 3.* The term *chapter 3* means sections 1441 through 1464 of subtitle A of the Code, but does not include section 1443(b).

(iii) *Chapter 4.* The term *chapter 4* means sections 1471 through 1474 of subtitle A of the Code.

(3) *Partnership pays an imputed underpayment.* If a partnership pays an imputed underpayment (as determined under § 301.6225–1(b)) and the total netted partnership adjustment (as calculated under § 301.6225–1(b)(2)) includes a partnership adjustment to an amount subject to withholding, the partnership is treated as having paid (at the time that the imputed underpayment is paid) the amount required to be withheld with respect to that partnership adjustment under chapter 3 or chapter 4 for purposes of applying §§ 1.1463–1 and 1.1474–4 of this chapter. See § 301.6225–1(b)(3) for the coordination rule that applies for calculating an imputed underpayment when an adjustment is made to an amount subject to withholding for which tax has been collected under chapter 3 or chapter 4.

(4) *Partnership makes an election under section 6226 with respect to an imputed underpayment*—(i) *In general.* A partnership that makes an election under § 301.6226–1 with respect to an imputed underpayment must pay the amount of tax required to be withheld under chapter 3 or chapter 4 on the amount of any adjustment set forth in

the statement described in § 301.6226–2(a) to the extent that it is an adjustment to an amount subject to withholding, and the IRS has not already collected tax attributable to the adjustment under chapter 3 or chapter 4. The partnership must pay the amount due under this paragraph (b)(4)(i) on or before the due date of the partnership return for the adjustment year (without regard to extension), and must make the payment in the manner prescribed by the IRS in forms, instructions, and other guidance. For the rules governing partners subject to the taxes imposed by chapters 3 and 4 when the partner receives a statement under § 301.6226–2, see § 301.6226–3(f). See § 301.6226–3(e)(3)(v) for the application of the rules of this paragraph (b)(4) to pass-through partners (as defined in § 301.6241–1(a)(5)).

(ii) *Reduced rate of tax.* A partnership may reduce the amount of tax it is required to pay under paragraph (b)(4)(i) of this section to the extent that it can associate valid documentation from a reviewed year partner pursuant to the regulations under chapter 3 or chapter 4 (other than pursuant to § 1.1446–6 of this chapter) with the portion of the adjustment that would have been subject to a reduced rate of tax in the reviewed year. For this purpose, the partnership may rely on documentation that the partnership possesses that is valid with respect to the reviewed year (determined without regard to the expiration after the reviewed year of any validity period prescribed in § 1.1441–1(e)(4)(ii), § 1.1446–1(c)(2)(iv)(A), or § 1.1471–3(c)(6)(ii) of this chapter), or new documentation that the partnership obtains from the reviewed year partner that includes a signed affidavit stating that the information and representations associated with the documentation are accurate with respect to the reviewed year.

(iii) *Reporting requirements.* A partnership required to pay tax under paragraph (b)(4)(i) of this section must file the appropriate return and issue information returns as required by regulations under chapter 3 or chapter 4. For return and information return requirements, see § 1.1446–3(d)(1)(iii); § 1.1461–1(b), (c); § 1.1474–1(c), (d) of this chapter. The partnership must file the return and issue information returns for the year that includes the date on which the partnership pays the tax required to be withheld under paragraph (b)(4)(i) of this section. The partnership must report the information on the return and information returns in the manner prescribed by the IRS in forms, instructions, and other guidance.

(iv) *Partners subject to withholding.* A reviewed year partner that is subject to withholding under paragraph (b)(4)(i) of this section must follow the rules under § 301.6226–3(f).

(c) *Applicability date*—(1) *In general.* Except as provided in paragraph (c)(2) of this section, this section applies to partnership taxable years beginning after December 31, 2017.

(2) *Election under § 301.9100–22 in effect.* This section applies to any partnership taxable year beginning after November 2, 2015 and before January 1, 2018 for which a valid election under § 301.9100–22 is in effect.

■ **Par. 32.** Section 301.6241–8 is added to read as follows:.

§ 301.6241–8 Treatment of special enforcement matters—[Reserved]

Douglas W. O'Donnell,

Acting Deputy Commissioner for Service and Enforcement.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at *http://www.archives.gov/federal-register/laws*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO's Federal Digital System (FDsys) at *http://www.gpo.gov/fdsys*. Some laws may not yet be available.

H.R. 2345/P.L. 115–233

National Suicide Hotline Improvement Act of 2018 (Aug. 14, 2018; 132 Stat. 2424)

H.R. 5554/P.L. 115–234

Animal Drug and Animal Generic Drug User Fee Amendments of 2018 (Aug. 14, 2018; 132 Stat. 2427)

H.R. 6414/P.L. 115–235

To amend title 23, United States Code, to extend the deadline for promulgation of regulations under the tribal transportation self-governance program. (Aug. 14, 2018; 132 Stat. 2443)

S. 770/P.L. 115–236

NIST Small Business Cybersecurity Act (Aug. 14, 2018; 132 Stat. 2444)

Last List August 15, 2018

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
