Abstract: Length of request: 3 years. Respondents include hospitals that perform blood transfusions (approximately 2,900); hospitals that additionally perform blood donor collections (approximately 100), and large scale community-based blood collection centers (approximately 150).

The NBCUS is performed once every two years. The NBCUS is a biennial survey of the blood collection and utilization community to produce reliable and accurate estimates of national and regional collections, utilization and safety of all blood products. The 2019 NBCUS is funded by Department of Health and Human Services (DHHS/OASH) and performed by the Centers for Disease Control and Prevention (CDC). The survey includes a core of standard questions on blood collection, processing, and utilization practices to allow for comparison with data from previous surveys. Additionally, questions to specifically address emerging and developing issues and technologies in blood collection and utilization are included. Questions on transfusion transmitted infections, transfusion associated circulatory overload, acute hemolysis, delayed hemolysis, and severe allergic reactions are included in the survey.
