Underground Injection Control Program; Hazardous Waste Injection Restrictions; Petition for Exemption Reissuance—Class I Hazardous Waste Injection; Phillips 66 Company, Borger, Texas

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of a final decision on a UIC no migration petition reissuance.

SUMMARY: Notice is hereby given that a reissuance of an exemption to the Land Disposal Restrictions, under the 1984 Hazardous and Solid Waste Amendments to the Resource Conservation and Recovery Act, has been granted to Phillips 66 Company for a Class I hazardous waste injection well located at their Borger, Texas refinery. The company has adequately demonstrated to the satisfaction of the EPA by the petition reissuance application and supporting documentation that, to a reasonable degree of certainty, there will be no migration of hazardous constituents from the injection zone for as long as the waste remains hazardous. This final decision allows the underground injection by Phillips 66 Company of the specific restricted hazardous wastes identified in this exemption reissuance request, into Class I hazardous waste injection well WDW–325 until April 1, 2026, unless the EPA moves to terminate this exemption. Additional conditions included in this final decision may be reviewed by contacting the EPA Region 6 Ground Water/UIC Section. A public notice was issued July 13, 2018, and the public comment period closed on August 30, 2018, and no comments were received. This decision constitutes final Agency action and there is no Administrative appeal. This decision may be reviewed/appealed in compliance with the Administrative Procedure Act.

DATES: This action is applicable as of September 17, 2018.

relating thereto are on file at the following location: Environmental Protection Agency, Region 6, Water Division, Safe Drinking Water Branch (6WQ–S), 1445 Ross Avenue, Dallas, Texas 75202–2733.

Abstract: EPA’s Sustainable Food Management (SFM) Program promotes the sustainable management of food which is a systematic approach that seeks to reduce wasted food and its associated impacts over its’ entire lifecycle. The lifecycle of food includes use of natural resources, manufacturing, sales, and consumption and ends with decisions on recovery or final disposal.

Diversion of food waste from landfills is a critical component of this effort. In order to effectively divert food waste from landfills, sufficient capacity to process the diverted materials is required. Knowledge of organics recycling capacity is needed to facilitate food waste diversion and anaerobic digestion facilities provide a significant amount of the needed capacity.

EPA's food recovery hierarchy prioritizes potential actions to prevent and divert wasted food. According to the hierarchy, processing wasted food via anaerobic digestion is a more desirable option than landfilling or incineration because it creates more benefits for the environment, society and the economy. Anaerobic digestion of food waste and other organic materials generates renewable energy, reduces methane emissions to the atmosphere, and provides opportunities to improve soil health through the production of soil amendments. The SFM program supports these efforts by educating state and local governments and communities about the benefits of wasted food diversion. The SFM program also builds partnerships with state agencies and other strategic partners interested in developing organics recycling capacity and provides tools to assist organizations in developing anaerobic digestion (AD) projects.

The nationwide collection of data about AD facilities processing food waste began in 2017 with a survey of all known AD facilities under the initial Information Collection Request (ICR No. 2533.01). EPA published the first annual report of findings based on this data in July 2018. This information collection consists of a request to renew ICR No. 2533.02 in order to continue to monitor growth and evaluate trends in the capacity for processing of food waste and the amount of food waste being processed via AD in the United States.

Data will be collected using electronic surveys that will be distributed to respondents by email and will be available on EPA's AD website.
