

any related legal proceedings. If the individual agrees to participate, then he or she will be asked to take an oral fluid drug test. This is essentially a cotton swab that must be held in an individual's mouth for approximately two to three minutes (no more than ten minutes). The oral fluid specimen will be shipped to an independent laboratory for analysis. The participant will be asked to respond to approximately ten minutes of questions through a self-report survey on alcohol and drug use, perceptions of impaired driving, and driving behaviors. The survey will be completed via an electronic tablet or, where deemed necessary, a paper copy of the survey. All electronic data will be recorded on a secure data collection and management site without any identifying information.

A goal of the collection will be to minimize the possibility of collecting any potentially-identifying information on a participant. The drug test result will be associated with participant responses using a subject code, but no identifying information on the participant will be collected.

Respondents: The research will collect both an oral fluid drug test and a questionnaire from approximately 1,000 participants. Data collection will take place over a six-month period at two to three sites across the United States.

Estimated Time per Response: It will take just under 15 minutes to participate. We anticipate that it will take 1.5 minutes (*i.e.*, 90 seconds) for the individual to hear about the study and process the information. Our total burden estimate includes this 90-second estimate for 1,200 individuals, with the goal of 1,000 participants (total burden 30 hours). It will take an average of an additional 1.2 minutes for participants to ask any questions and verbally agree to participate in the study (total burden 20 hours). This results in an estimated 50 total burden hours for the verbal consent process. The drug test and questionnaire will be completed at a single point in time. It can take up to 10 minutes to collect a sufficient quantity of saliva for the oral fluid drug test. However, it is anticipated that the average oral fluid collection time is four minutes and the survey will take an additional eight minutes to complete (*i.e.*, 12 total minutes). The total burden for the participant questionnaire and oral fluid collection is 200 hours.

Estimated Total Annual Burden: 250 hours total over the six-month data collection period.

Frequency of Collection: Each participant will only respond to the survey and/or biological sample

requests a single time during the six-month study period.

II. Comment Response

On September 9th, 2017, NHTSA published a notice in the **Federal Register** (NHTSA-2017-0057) with a 60-day public comment period to announce this proposed information collection. As of the closing date of November 6th, 2017 two comments were received in response to this notice.

One comment described frustration with the EPA and massive costs of regulation. This project does not involve the EPA and the comment is thus not relevant to the current project. A second commenter emailed NHTSA directly to request access to the project's full methodology.

The comment will be provided to OMB to be placed in the docket. The methodology will be available from OMB upon NHTSA's submission of the Information Collection Request to OMB.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.95.

Issued in Washington, DC, on October 1, 2018.

Associate Administrator, Research and Program Development.
