Definition of Terms

Components of Census Coverage—The components of census coverage include correct enumerations, erroneous enumerations, whole-person imputations, and omissions. Correct enumerations are people or housing units that were correctly enumerated in the census. Erroneous enumerations are people or housing units that were enumerated in the census but should not have been. Examples of erroneous enumerations are duplicates, nonexistent housing units or people, and people or housing units that were enumerated in the wrong place. Omissions are people and housing units that were not correctly enumerated in the census but should have been. Lastly, whole-person imputations are census records for which all of the demographic characteristics were imputed. Many of these imputations represent people in housing units where we knew the household count but did not obtain sufficient information about the people residing at the housing unit.

Net Coverage Error—Reflects the difference between the true population and the census count. If the census count was less than the actual number of people or housing units in the population, then we say there was an undercount. If the census count was more than the actual number of people or housing units in the population, then we say there was an overcount.
