At the end of the molt, up to 25 adult females will undergo a health and pregnancy status assessment and will be outfitted with a satellite-relay dive recorder. Unmanned aircraft system surveys will be used for photogrammetry of handled animals, as well as unhandled seals in larger area surveys. Up to 500 crabeater seals (*Lobodon carcinophagus*) may also be taken by incidental harassment. Research activities will be conducted as part of a larger assessment of Weddell seals in the Ross Sea Marine Protected Area, led by the New Zealand Antarctic Program.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
