SUPPLEMENTARY INFORMATION:

Project Description

BIA approval is required for a lease and sublease to build and operate a commercial wind power generation facility capable of generating up to 252 megawatts (MW) of electricity.

The project would include the generation of up to 252 MW consisting of up to 60 turbines. The project study area covers approximately 2,200 acres on the Campo Indian Reservation. The total area that would be disturbed by the project would be substantially less. The turbines proposed for the project would range from 2.5 MW to 4.2 MW in maximum output rating per turbine, tubular steel towers, with a rotor diameter of approximately 450 feet, a hub height of approximately 361 feet, and a total height of turbine (highest point) of approximately 586 feet. Each turbine would be set on a concrete foundation. Turbines would be connected by an underground electrical collection system to a project collector substation. The collector substation would be sited on approximately 2 acres and would consist of a graveled, fenced area containing transformer and switching equipment and an area for vehicle parking. A new 230 kV overhead generation transmission line would be constructed, on the Campo Indian Reservation and partially outside on private lands, from the project collector substation on the Reservation to a San Diego Gas & Electric (SDG&E) substation/switchyard that would be constructed on private lands adjacent to the Sunrise Powerlink northeast of the Reservation. The SDG&E substation/switchyard and related transmission line improvements will be subject to approval by the County of San Diego,

California, Public Utilities Commission (CPUC) and the BIA. Other required facilities, all located within the Reservation, would include: Up to three permanent meteorological towers; temporary material laydown areas during construction; temporary staging and construction trailer areas; an operations and maintenance building; underground cabling; telecommunications; new access roads and improvements to portions of existing roads; and a temporary concrete batch plant. The wind power generation facility would operate year-round for a minimum of 25 years.

The EIS will analyze the potential environmental impacts of the construction and operation of a proposed wind generation facility, including access roads, a collector substation, as well as a substation/switchyard and transmission facilities. The EIS will be prepared in accordance with NEPA (42 U.S.C. 4321 *et seq.*); the Council on Environmental Quality (CEQ) regulations (40 CFR parts 1500–1508); Department of the Interior regulations (43 CFR part 46); and the BIA NEPA Handbook (59 IAM 3–H) and will also be compliant with the California Environmental Quality Act in accordance with Public Resources Code section 21083.7. A reasonable range of alternatives to the proposed action including a no-action alternative, will be analyzed in the EIS. The range of issues and alternatives included will be based on comments and information received during the scoping process. This notice initiates the public scoping process to identify alternatives and relevant issues associated with the proposed project.

Directions for Submitting Public Comments

During the public scoping meetings, the public may submit written and verbal comments. Verbal comments given at the scoping meetings will have the same merit as written comments and will be addressed equally.
