Notice of Availability of Draft Environmental Assessment: Black Bear Hydro Partners, LLC

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380, the Office of Energy Projects has reviewed the application for the relicensing of the Ellsworth Hydroelectric Project, located on the Union River, in Hancock County, Maine, and has prepared a Draft Environmental Assessment (DEA) for the project.

The DEA contains staff's analysis of the potential environmental impacts of the project and concludes that licensing the project, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment.

[Project No. 14892-000]

Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications: Badger Mountain Hydro, LLC

On October 2, 2018, Badger Mountain Hydro, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Badger Mountain Pumped Storage Project (project) to be located near East Wenatchee in Douglas County, Washington. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project will be a closed-loop pumped storage project with initial fill and make up water coming from local water rights holders, tentatively

identified as the Greater Wenatchee Irrigation District. Water would be delivered from the District's Veedol Tank via an approximately 0.7-mile-long, 12-inch-diameter buried steel pipe to a new lower reservoir. The proposed project would consist of: An upper 5- to 40-foot-high, 7,500-foot-long zoned earth/rockfill ring dam enclosing the 70-acre upper reservoir with storage capacity of 2,000 acre-feet; a lower 35-foot-high, 540-foot-long zoned earth/rockfill primary dam and 10-foot-high, 830-foot-long earthen supplemental dam enclosing the 80-acre lower reservoir with storage capacity of 2,600 acre-feet; a 600-foot-long, 14-foot-diameter unlined or concrete-lined low pressure tunnel; a 30-foot-diameter, 50-foot-high concrete surge tank; two 5,200-foot-long, 10-foot-diameter steel penstocks; a powerhouse with a 220-foot-high, 65-foot-diameter steel and concrete shaft, and two 150-megawatt (MW) reversible pump-turbines/motor-generators for a total installed capacity of 300 MW; a 1,200-foot-long, 17-foot-diameter concrete-lined tailrace tunnel; a 230-kilovolt (kV), 3.7-mile-long transmission line interconnecting with the existing Puget Sound Energy Rocky Reach-Cascade transmission line, and a possible second transmission line interconnecting with the existing 230-kV Bonneville Power Administration Rocky Reach-Columbia transmission line 500 feet from the powerhouse.

The estimated average annual generation of the project would be 473,040 megawatt-hours.
