Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Federalism

Executive Order 13132 requires us to ensure meaningful and timely input by State and local elected officials in the development of regulatory policies that have federalism implications. “Federalism implications” means substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. The proposed regulations in §200.89(b) may have federalism implications. We encourage State and local elected officials to review and provide comments on these proposed regulations.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotape, or compact disc) on request to the person listed under FOR FURTHER INFORMATION CONTACT.

Electronic Access to This Document: The official version of this document is the document published in the Federal Register. You may access the official edition of the Federal Register and the Code of Federal Regulations via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the Federal Register, in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the Federal Register by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department. List of Subjects in 34 CFR Part 200

Education of disadvantaged, Elementary and secondary education, Grant programs-education, Indians-education, Infants and children, Juvenile delinquency, Migrant labor, Private schools, Reporting and recordkeeping requirements.

Betsy DeVos,
Secretary of Education.

For the reasons discussed in the preamble, the Secretary proposes to amend part 200 of title 34 of the Code of Federal Regulations as follows:

PART 200—TITLE I—IMPROVING THE ACADEMIC ACHIEVEMENT OF THE DISADVANTAGED

§ 200.89 Re-interviewing; Eligibility documentation; and Quality control.

(b) * * * * *

(2) Prospective re-interviewing. As part of the system of quality controls identified in §200.89(d), an SEA must annually validate child eligibility determinations from the current performance reporting period (September 1 to August 31) through re-interviews for a randomly selected sample of children identified as migratory during the same performance reporting period using re-interviewers, who may be SEA or local operating agency staff members working to administer or operate the State MEP, or any other person trained to conduct personal interviews and who understands program eligibility requirements, but who did not work on the initial eligibility determinations being tested. In conducting these re-interviews, an SEA must—

(i) Use one or more independent re-interviewers (i.e., interviewers who are either SEA or local operating agency staff members working to administer or operate the State MEP or any other persons who worked on the initial eligibility determinations being tested and who are trained to conduct personal interviews and to understand and apply program eligibility requirements) at least once every three years until September 1, 2020; * * * * *

(ii) Prospective re-interviewing following a major statutory or regulatory change to child eligibility. Beginning September 1, 2020, an SEA must use one or more independent re-interviewers (i.e., interviewers who are neither SEA nor local operating agency staff members working to administer or operate the State MEP, nor any other persons who worked on the initial eligibility determinations being tested and who are trained to conduct personal interviews and to understand and apply program eligibility requirements) to validate child eligibility determinations at least once within the first three full performance reporting periods (September 1 through August 31) following the effective date of a major statutory or regulatory change that directly impacts child eligibility (as determined by the Secretary), consistent with the prospective re-interview process described in paragraph (b)(2)(ii)–(vii) of this section. The entire sample of eligibility determinations to be tested by independent re-interviewers must be drawn from children determined to be eligible after the major statutory or regulatory change took effect.

BILLING CODE 4000–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Clean Air Plans; 2008 8-Hour Ozone Nonattainment Area Requirements; San Joaquin Valley, California

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve portions of two state implementation plan (SIP) revisions submitted by the State of California to meet Clean Air Act (CAA or “the Act”) requirements for the 2008 8-hour ozone national ambient air quality standards (NAAQS or “standards”) in the San Joaquin Valley, California, ozone nonattainment area. First, the EPA is proposing to approve the portion of the “2016 Ozone Plan for the 2008 8-Hour Ozone Standard” (“2016 Ozone Plan”) that addresses the requirement for a base year emissions inventory. Second, the EPA is proposing to approve the portions of the “2018
Updates to the California State Implementation Plan ("2018 SIP Update") that address the requirements for a reasonable further progress (RFP) demonstration and motor vehicle emissions budgets (MVEBs) for the San Joaquin Valley for the 2008 ozone standards. Lastly, the EPA is proposing to conditionally approve portions of the 2018 SIP Update that address the requirement for contingency measures for failure to meet RFP milestones or to attain the NAAQS by the applicable attainment date. The proposed approval is conditional because it relies on commitments by the State air agency and regional air district to supplement the contingency measure portion of the 2018 SIP Update with submission of an additional contingency measure within one year of the EPA’s final conditional approval.

DATES: Written comments must arrive on or before December 31, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2018–0535 at https://www.regulations.gov. For comments submitted at Regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the FOR FURTHER INFORMATION CONTACT section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit http://www.epa.gov/dockets/commenting-epa-dockets.

FOR FURTHER INFORMATION CONTACT: Laura Lawrence, EPA Region IX, (415) 972–3407, lawrence.laura@epa.gov.

SUPPLEMENTAL INFORMATION: Throughout this document, “we,” “us” and “our” refer to the EPA.

VI. Statutory and Executive Order Reviews

I. Regulatory Context

A. Ozone Standards, Area Designations and SIPs

Ground-level ozone pollution is formed from the reaction of volatile organic compounds (VOC) and oxides of nitrogen (NOx) in the presence of sunlight. These two pollutants, referred to as ozone precursors, are emitted by many types of sources, including on- and off-road motor vehicles and engines, power plants and industrial facilities, and smaller area sources such as lawn and garden equipment and paints. Scientific evidence indicates that adverse public health effects occur following exposure to elevated levels of ozone, particularly in children and adults with lung disease. Breathing air containing ozone can reduce lung function and inflame airways, which can increase respiratory symptoms and aggravate asthma or other lung diseases.

Under section 109 of the CAA, the EPA promulgates NAAQS for pervasive air pollutants, such as ozone. The EPA has previously promulgated NAAQS for ozone in 1979 and 1997. In 2008, the EPA revised and further strengthened the ozone NAAQS by setting the acceptable level of ozone in the ambient air at 0.075 parts per million (ppm) averaged over an 8-hour period. Although the EPA further tightened the 8-hour ozone NAAQS to 0.070 ppm in 2015, this action relates to the requirements for the 2008 ozone NAAQS. The State of California and the EPA will address the 2015 ozone NAAQS in later actions.

Following promulgation of a new or revised NAAQS, the EPA is required under CAA section 107(d) to designate areas throughout the country as attaining or not attaining the NAAQS. The EPA classifies ozone nonattainment areas under CAA section 181 according to the severity of the ozone pollution problem, with classifications ranging from Marginal to Extreme. State planning and emissions control requirements for ozone are determined, in part, by the nonattainment area’s classification. The EPA designated the San Joaquin Valley as nonattainment for the 2008 ozone standards on May 21, 2012, and classified the area as Extreme.

Under the CAA, after the EPA designates areas as nonattainment for a NAAQS, states with nonattainment areas are required to submit SIP revisions. For areas classified Moderate and above, these revisions must provide for, among other things, attainment of the NAAQS within certain prescribed periods that vary depending on the severity of nonattainment. Areas classified as Extreme must attain the NAAQS within 20 years of the effective date of the nonattainment designation.

In California, the California Air Resources Board (CARB or “State”) is the state agency responsible for the adoption and submission to the EPA of California SIPs and SIP revisions, and it has broad authority to establish emissions standards and other requirements for state-wide sources of emissions. Under California law, local and regional air pollution control districts in California are responsible for the regulation of regional/local sources such as stationary sources, and are generally responsible for the development of regional air quality plans. In the San Joaquin Valley, the San Joaquin Valley Air Pollution Control District (SVAPCD or “District”) develops and adopts air quality...
management plans to address CAA planning requirements applicable to that region. The District then submits such plans to CARB for adoption and submission to the EPA as revisions to the California SIP. Such revisions do not become part of the applicable SIP for federal purposes until approved by the EPA.

B. The San Joaquin Valley Ozone Nonattainment Area

The San Joaquin Valley nonattainment area for the 2008 ozone standards consists of San Joaquin, Stanislaus, Merced, Madera, Fresno, Tulare, and Kings counties, and the western portion of Kern County. The San Joaquin Valley nonattainment area stretches over 250 miles from north to south, averages a width of 80 miles, and encompasses over 23,000 square miles. It is partially enclosed by the Coast Mountain range to the west, the Tehachapi Mountains to the south, and the Sierra Nevada range to the east.

The population of the San Joaquin Valley in 2015 was estimated to be nearly 4.2 million people and is projected to increase by 25.3 percent in 2030 to over 5.2 million people. Ambient 8-hour ozone concentrations in the San Joaquin Valley are above the level of the 2008 ozone standards. The maximum design value for the area based on certified data is 0.092 ppm for the 2015–2017 period, which was measured at the Parlier monitor (Air Quality System ID: 06–019–4001).

C. CAA and Regulatory Requirements for 2008 8-Hour Ozone Nonattainment Area SIPs

States must implement the 2008 ozone standards under Title 1, part D of the CAA, which includes sections 171–179B of subpart 2 (“Nonattainment Areas in General”) and sections 181–185 of subpart 2 (“Additional Provisions for Ozone Nonattainment Areas”). To assist states in developing effective plans to address ozone nonattainment problems, in 2015 the EPA issued a SIP Requirements Rule (SRR) for the 2008 ozone standards (“2008 Ozone SRR”) that addressed implementation of the 2008 standards, including attainment dates, requirements for emissions inventories, attainment and RFP demonstrations, as well as the transition from the 1997 ozone standards to the 2008 ozone standards and associated anti-backsliding requirements. The 2008 Ozone SRR is codified at 40 CFR part 51, subpart AA. We discuss the CAA and regulatory requirements for the elements of 2008 ozone plans relevant to this proposal in more detail below.

The EPA’s 2008 Ozone SRR was challenged, and on February 16, 2018, the U.S. Court of Appeals for the D.C. Circuit (“D.C. Circuit”) published its decision in South Coast Air Quality Management District v. EPA (D.C. Circuit) (“South Coast II”) vacating portions of the 2008 Ozone SRR. The only aspect of the South Coast II decision that affects this proposed action is the vacatur of the alternative baseline year for RFP plans. More specifically, the 2008 Ozone SRR required states to develop the baseline emissions inventory for RFP plans using the emissions for the most recent calendar year for which states submit a triennial inventory to the EPA under subpart A (“Air Emissions Reporting Requirements”) of 40 CFR part 51, which was 2011. However, the 2008 Ozone SRR allowed states to use an alternative year, between 2008 and 2012, for the baseline emissions inventory provided that the state demonstrated why the alternative baseline year was appropriate. The baseline emissions inventory for the RFP demonstration for the 2016 Ozone Plan was based on an alternative year of 2012 rather than 2011. In the South Coast II decision, the D.C. Circuit vacated the provisions of the 2008 Ozone SRR that allowed states to use an alternative baseline year for demonstrating RFP.

II. Submissions From the State of California To Address 2008 Ozone Requirements in the San Joaquin Valley

A. Summary of Submissions

On August 24, 2016, in response to the EPA’s designation of the area as nonattainment and classification of the area as Extreme for the 2008 ozone NAAQS, CARB submitted the 2016 Ozone Plan to the EPA as a revision to the California SIP. Prior to submission to the EPA, CARB approved the 2016 Ozone Plan, which had previously been adopted by the District and forwarded to CARB for approval and submission to the EPA.

The 2016 Ozone Plan submission consists of documents originating from the District (e.g., the 2016 Ozone Plan with Appendices and the District Governing Board Resolution) and CARB (e.g., the CARB Staff Report and Appendices, and the CARB Resolution adopting the 2016 Ozone Plan and CARB Staff Report as a SIP revision). The 2016 Ozone Plan addresses the requirements for base year and projected future year emissions inventories, air quality modeling demonstrating attainment of the 2008 ozone NAAQS by the applicable attainment year, provisions demonstrating implementation of reasonably available control measures (RACM), provisions for advanced technology/clean fuels for boilers, provisions for transportation control strategies and measures, a demonstration of RFP, motor vehicle emissions budgets, and contingency measures for failure to make RFP or attain, among other requirements. On August 31, 2018, the EPA proposed approval of the attainment demonstration portion of the 2016 Ozone Plan and associated attainment year motor vehicle emission budgets, the RACM demonstration, provisions for advanced technology/clean fuels for boilers, and provisions for transportation control strategies and measures.

See See letter from Richard Corey, Executive Officer, CARB, to Alexis Strauss, Acting Regional Administrator, EPA Region IX, dated August 24, 2016.

See four enclosures to the August 24, 2016 letter from CARB to EPA Region 9: (I) District Submission, including letter from Sheraz Gill, Director of Strategies and Incentives for the District, to Richard Corey, Executive Officer, CARB, and five appendices titled: (I) ARB SIP Completeness Checklist, (2) 2016 Ozone Plan with Appendices, (3) Governing Board Resolution Adopting the 2016 Ozone Plan, (4) Governing Board Memo, and (5) Evidence of Public Hearing; (II) CARB Evidence of Public Notice and Transcript; (III) CARB Staff Report; (IV) CARB Resolution 16–8 adopting the 2016 Ozone Plan and CARB Staff Report.

See FR 44528 (August 31, 2018).
In response to the court’s decision in *South Coast II* vacating the 2008 Ozone SRR with respect to the use of an alternate baseline year for demonstrating RFP, California developed the 2018 SIP Update, which includes an RFP demonstration for the San Joaquin Valley for the 2008 ozone NAAQS using the required 2011 baseline year. The 2018 SIP Update also includes updated motor vehicle emission budgets and a contingency measure for failure to meet an RFP milestone or attain the NAAQS by the applicable attainment date. CARB released a draft of the 2018 SIP Update for public review on September 21, 2018. On October 3, 2018, CARB requested that the EPA accept the draft 2018 SIP Update for parallel processing with respect to the portions of the 2018 SIP Update that apply to the San Joaquin Valley area. Under the EPA’s parallel processing procedure, the EPA may propose action on a public draft version of a SIP revision but will take final action only after the state adopts and submits the final version of the EPA for approval. If there are no significant changes from the draft version of the SIP revision to the final version, the EPA may elect to take final action on the proposal. In this case, on October 25, 2018, CARB has adopted the 2018 SIP Update previously released for public review, without significant modifications, as a revision to the California SIP. The only change of note between the draft and final versions is a menu of specific contingency measure actions that the CARB Board included in the resolution (Resolution 18–50) adopting the 2018 SIP Update. CARB has not yet submitted the final version of the SIP revision to the EPA, and thus we are proposing action based on the draft version of the 2018 SIP Update submitted to us on October 3, 2018, and the contents of CARB Resolution 18–50.

In addition to these submissions, CARB sent additional technical information in two technical supplements on October 17, 2018, and October 19, 2018. Further, on October 30, 2018, CARB forwarded a letter of commitment to the EPA from the District dated October 18, 2018, in which the District commits to revise its architectural coatings rule to create an additional contingency measure that will be triggered if the area fails to meet RFP or to trigger by the applicable attainment date. In the October 30, 2018 letter, CARB commits to submit the revised District rule to the EPA as a SIP revision within 12 months of the final action on the 2016 Ozone Plan and relevant portions of the 2018 SIP Update.

### III. Evaluation of the 2016 Ozone Plan and 2018 SIP Update

#### A. Emissions Inventories

1. Statutory and Regulatory Requirements

CA section 172(c)(3) requires that each nonattainment plan SIP submission include a “comprehensive, accurate, current inventory of actual emissions from all sources of the relevant pollutant or pollutants in the area.” The accounting required by this section provides a “base year” inventory that serves as the starting point for attainment demonstration air quality modeling, for assessing RFP, and for determining the need for additional SIP control measures. EPA regulations require that the inventory year be consistent with the baseline year for the RFP demonstration, which is the most recent calendar year for which a complete triennial inventory is required to be submitted to the EPA under the Air Emissions Reporting Requirements.

Future baseline emissions inventories must reflect the most recent population, employment, travel and congestion estimates for the area. Emissions inventories for ozone must include emissions of VOC and NO\textsubscript{X} and represent emissions for a typical ozone

season weekday.\footnote{40 CFR 51.1115(a) and (c), and 40 CFR 51.1100(bb) and (cc).} States should include documentation explaining how it calculated emissions data. In estimating mobile source emissions, states should use the latest emissions models and planning assumptions available at the time it develops the SIP submission.\footnote{See 80 FR 12264, at 12290 (March 6, 2015).}

2. Summary of the State's Submissions

The 2016 Ozone Plan includes a 2012 base year emissions inventory based on actual emissions, to meet the requirements of CAA sections 172(c)(3) and 182(a)(1). The 2018 SIP Update does not include a new base year emissions inventory with actual emissions; rather, for purposes of updating the RFP demonstration, the transportation conformity motor vehicle emission budgets, and the contingency measure calculations, CARB used the 2012 base year inventory from the 2016 Ozone Plan to create new emissions inventory projections for the 2011 RFP baseline year and for RFP milestone years. These new projections are included in the 2018 SIP Update. CARB also submitted a “San Joaquin Valley Emission Projection Technical Clarification” to clarify how it calculated the projected inventories in this submission.\footnote{Email from Stephanie Huber, Manager, CARB Emission Inventory Development Section to Larry Biland, EPA Region IX Air Quality Analysis Office, dated October 17, 2018, transmitting “San Joaquin Valley Emission Projections Technical Clarification.”} The EPA has evaluated the 2012 base year inventory from the 2016 Ozone Plan to determine whether it meets the requirements for a base year inventory in CAA sections 172(c)(3) and 182(a)(1), and the projected inventories included in the 2018 SIP Update to determine whether they are appropriate for use in the updated RFP demonstration and other purposes (e.g., establishing revised motor vehicle emissions budgets). A summary of these submissions, and the results of our evaluation, are discussed below.

a. 2016 Ozone Plan

The 2016 Ozone Plan includes a 2012 base year emissions inventory for the San Joaquin Valley nonattainment area, based on actual emissions, to fulfill the requirements in CAA sections 172(c)(3) and 182(a)(1). The inventory includes VOC and \( \text{NO}_x \) emissions, because these pollutants are precursors to ozone formation, across all source categories during an ozone season day as defined in 40 CFR 51.1100(cc). The 2016 Ozone Plan has identified the summer, defined as May through October, as the time when the highest concentration of ozone is formed.

A description of base year emissions inventory development can be found in the 2016 Ozone Plan, chapter 3.11 through 3.11.2. The complete emissions inventory and documentation are found in Appendix B (“Emissions Inventory”). VOC and \( \text{NO}_x \) emissions are grouped into two general categories: stationary sources and mobile sources. Stationary sources are further divided into “point” and “area” sources. Point sources typically refer to permitted facilities that have one or more identified and fixed pieces of equipment and emissions points. Permitted facilities were required to report their actual emissions to the District by the facility operators through the calendar year 2012. Stationary area sources are many smaller point sources, and include sources that have internal combustion engines, and gasoline dispensing facilities (gas stations). These sources are not inventoried individually; their emissions are estimated as a group and reported as a single source category.

Area sources consist of widespread and numerous smaller emission sources, such as small permitted facilities and households.

The mobile sources category can be divided into two major subcategories: “on-road” and “off-road” mobile sources. On-road mobile sources include light-duty automobiles, light-, medium-, and heavy-duty trucks, and motorcycles. Off-road mobile sources include aircraft, locomotives, construction equipment, mobile equipment, and recreational vehicles.

The emissions inventories for the San Joaquin Valley 2008 ozone nonattainment area in the 2016 Ozone Plan were developed jointly by CARB and the District. Data were provided by CARB, the California Department of Transportation, the Department of Motor Vehicles, the Department of Pesticide regulation, the California Energy Commission and regional transportation agencies to develop mobile and area-wide source emission estimates. The emission estimates reflect reported emissions for point sources, whereas estimates for mobile and area sources are based on projections obtained through use of emissions models and methodologies along with actual activity data for 2012 (e.g., vehicle miles traveled). The District utilizes different methodologies to estimate over sixty different types of individual stationary area sources. CARB and the District also reviewed the growth profiles for point and areawide source categories and updated them as necessary to ensure that the emission projections were based on data that reflect historical trends, current conditions, and recent economic and demographic forecasts.

CARB provided emission estimates for stationary nonagricultural diesel engines, agricultural irrigation pumps, laundering (dry cleaning), degreasing (solvents), oil and gas production, and gasoline dispensing facilities.

Area sources are categories such as consumer products, pesticides/ fertilizers, fireplaces, farming operations, and other emissions which occur over a wide geographic area. Emissions for these categories were estimated by both CARB and the District using various models and methodologies.

CARB developed the emissions inventory for mobile sources, both on-road and off-road. CARB estimated on-road mobile sources emissions, which include passenger vehicles, buses, and trucks, using CARB’s EMFAC2014 model.\footnote{30 The EPA approved EMFAC2014 for use in SIP development and transportation conformity in California at 80 FR 77337 (December 14, 2015). EMFAC2014 is the most recently-approved model for California for these uses.} CARB calculated the on-road emissions by applying EMFAC2014 emission factors to the transportation activity data provided by the local San Joaquin Valley transportation agencies from their 2014 adopted Regional Transportation Plan. CARB estimated off-road mobile sources emissions using either newer category-specific models or, where a new model was not available, the OFFROAD2007 model.

Table 1 provides a summary, by major source categories, for the 2012 base year VOC and \( \text{NO}_x \) emissions inventories in tons per day (tpd) for the San Joaquin Valley 2008 ozone nonattainment area, as presented in the 2016 Ozone Plan. In the 2012 inventory presented in the 2016 Ozone Plan, mobile sources account for approximately 85 percent of \( \text{NO}_x \) emissions and 32 percent of VOC emissions in the San Joaquin Valley, and total area sources account for approximately 1.3 percent of \( \text{NO}_x \) emissions and 50 percent of VOC emissions.
b. 2018 SIP Update

In response to the South Coast II decision, CARB developed the 2018 SIP Update, which updates the RFP demonstration and related SIP elements to rely on a 2011 baseline year. The 2018 SIP Update does not include a new base year emissions inventory with actual emissions for the San Joaquin Valley 2008 ozone nonattainment area to meet the requirements of 172(c)(3) and 182(a)(1). Rather, for purposes of the RFP demonstration, CARB used the 2012 base year inventory from the 2016 Ozone Plan to develop new emissions inventory projections for the 2011 RFP baseline year and for all RFP milestone years. These inventories form the basis of the RFP demonstration calculations, the motor vehicle emissions budgets, and the contingency measure calculations for the San Joaquin Valley 2008 ozone nonattainment area, which will be discussed in sections II.B, II.C, and III.D below. In this section, we describe and evaluate these updated inventory projections to determine whether they are appropriate for use in these SIP elements.

As in the 2016 Ozone Plan, the projected inventories in the 2018 SIP Update include NO\textsubscript{X} and VOC emissions and are for the summer season defined as May through October. Details on the emissions inventory, documentation, and a complete listing of emissions can be found on pages 51 through 54 and Appendix A, pages A–27 through A–30 of the 2018 SIP Update. Additional emissions inventory information can be found in the “San Joaquin Valley Emission Projections Technical Clarification” document which explains the changes made in the methodologies used in emissions inventory development. This document is contained in the docket for this rulemaking.

The State and District developed point and stationary source VOC and NO\textsubscript{X} emissions for the 2011 inventory from actual emissions, generally using the same methodologies used in the 2016 Ozone Plan. Stationary aggregate emissions and area source emissions for 2011 were backcast, and for future years were forecast, from the 2012 base year inventory. Mobile sources used the same model, EMFAC2014, as in the 2016 Ozone Plan. While the 2016 Ozone Plan used California Emissions Projections and Analysis Model (CEPAM) version 1.03 to project future year emissions, the 2018 SIP Update used CEPAM version 1.05. CEPAM 1.05 includes updates to methodologies for stationary and area sources in the following source categories: pesticides, cleaning and surface coatings, waste disposal, composting facilities, glass manufacturing, services and commercial/residential fuel combustion-space heating, and petroleum marketing. CARB used current information to update emissions from locomotives. For the rest of the source categories in the emissions inventory, CARB used the same methodologies as in the 2016 Ozone Plan.

Tables 2 and 3 provide summaries, by major source categories, for VOC and NO\textsubscript{X} emissions inventories for RFP baseline and milestone years. These emissions are for the San Joaquin Valley 2008 ozone nonattainment area as presented in the Appendix A, pages A–27 through A–30 of the 2018 SIP Update.

With respect to future year projections, the EPA will approve a state plan that takes emissions reduction credit for a control measure only where the EPA has approved the measure as part of the SIP. Thus, to take credit for the emissions reductions from newly-adopted or amended District rules for stationary sources, the related rules must be approved by the EPA into the SIP. Table 1 in the technical support document (TSD) accompanying this rulemaking shows District rules that were incorporated in the future year inventories, along with information on EPA approval of these rules. In recent years, the EPA has taken action to approve CARB mobile source regulations into the California SIP. Therefore, the EPA is proposing to approve the 2012 emissions inventory as meeting the requirements for a base year inventory set forth in CAA section 182(a)(1) and 40 CFR 51.1115.

Regarding the requirement in the 2008 Ozone SRR that the base year inventory be consistent with the baseline year for the RFP demonstration, we note that 2012 is the year of the base year inventory, while the RFP demonstration is based on a 2011 baseline year. However, as noted above, the 2011 emissions inventory is backcast from the 2012 base year inventory, and therefore is based on the same data. Therefore, we find that selection of 2012 as the base year for the emissions inventory is consistent with the 2011 baseline year for the RFP demonstration for this nonattainment area as required by 40 CFR 51.1115(a).

The 2018 SIP Update starts with 2011 as the baseline year and shows future baseline emissions inventories out to 2032. The EPA is proposing to find these inventories appropriate for use in developing the RFP demonstration (section III.B below), motor vehicle emissions budgets (section III.C below), and the contingency measure element for the San Joaquin Valley for the 2008 ozone standards (section III.D below).

35 Id.
Except as specifically provided in CAA section 182(b)(1)(C), emissions reductions from all SIP-approved, federally promulgated, or otherwise SIP-creditable measures that occur after the baseline year are creditable for purposes of demonstrating that the RFP targets are met. Because the EPA has determined that the passage of time has caused the effect of certain exclusions to be de minimis, the RFP demonstration is no longer required to calculate and specifically exclude reductions from measures related to motor vehicle exhaust or evaporative emissions promulgated by January 1, 1990; regulations concerning Reid vapor pressure promulgated by November 15, 1990; measures to correct previous RACT requirements; and, measures required to correct previous inspection and maintenance (I/M) programs.\textsuperscript{36}

The 2008 Ozone SRR requires the RFP baseline year to be the most recent calendar year for which a complete triennial inventory was required to be submitted to the EPA. For the purposes of developing RFP demonstrations for the 2008 ozone standards, the applicable triennial inventory year is 2011. As discussed previously, the 2008 Ozone SRR provided states with the opportunity to use an alternative baseline year for RFP but that particular aspect of the 2008 Ozone SRR was vacated by the D.C. Circuit in the South Coast II decision.\textsuperscript{37}

2. Summary of the State’s Submission

The 2018 SIP Update replaces the RFP portion of the 2016 Ozone Plan and includes updated emissions estimates for the baseline, milestone and attainment years, and an updated RFP demonstration relying on a 2011 baseline year.\textsuperscript{38} The updated RFP demonstration is shown in table 4 below:

Source: Table VIII–2 of the 2018 SIP Update.

The updated RFP demonstration calculates future year VOC targets from the 2011 baseline, consistent with CAA 182(c)(2)(B)(i), which requires reductions of “at least 3 percent of baseline emissions each year.” The updated RFP demonstration in the 2018 SIP Update substitutes NOx reductions for VOC reductions\textsuperscript{39} beginning in milestone year 2020 to meet VOC emission targets. For the San Joaquin Valley nonattainment area, CARB concludes that the RFP demonstration meets the applicable requirements for each milestone year as well as the attainment year.

3. The EPA’s Review of the State’s Submission

As discussed in section III.A above, we are proposing to find that the baseline and RFP milestone year emissions inventories are acceptable for use in the RFP demonstration. We have reviewed the calculations in table VIII–2 of the 2018 SIP Update and presented in table 4 above, and find that the State has used an appropriate calculation method to demonstrate RFP. For these reasons, we have determined that the State has demonstrated RFP in each milestone year and the attainment year, consistent with applicable CAA requirements and EPA guidance. We therefore propose to approve the RFP demonstrations under sections

\textsuperscript{36} See 40 CFR 51.1110(a)(7).

\textsuperscript{37} See 40 CFR 51.1110(b).

\textsuperscript{38} NOx substitution is permitted under EPA regulations. See 40 CFR 51.1110(a)(2)(ii)(C) and 40 CFR 51.1110(a)(2)(ii)(B); and 70 FR 12264 at 12271 (March 6, 2015).
C. Motor Vehicle Emissions Budgets for Transportation Conformity

1. Statutory and Regulatory Requirements

Section 176(c) of the CAA requires federal actions in nonattainment and maintenance areas to conform to the SIP’s goals of eliminating or reducing the severity and number of violations of the NAAQS and achieving timely attainment of the standards. Conformity to the SIP’s goals means that such actions will not: (1) Cause or contribute to violations of a NAAQS, (2) worsen the severity of an existing violation, or (3) delay timely attainment of any NAAQS or any interim milestone.

Actions involving Federal Highway Administration (FHWA) or Federal Transit Administration (FTA) funding or approval are subject to the EPA’s transportation conformity rule, codified at 40 CFR part 93, subpart A. Under this rule, MPOs in nonattainment and maintenance areas coordinate with state and local air quality and transportation agencies, the EPA, the FHWA, and the FTA to demonstrate that an area’s transportation plans and transportation improvement programs conform to the applicable SIP. This demonstration is typically done by showing that estimated emissions from existing and planned highway and transit systems are less than or equal to the motor vehicle emissions budgets (MVEBs or “budgets”) contained in all control strategy SIPs. Budgets are generally established for specific years and specific pollutants or precursors. Ozone plans should identify budgets for on-road emissions of ozone precursors (NOX and VOC) in the area for each RFP milestone year and the attainment year, if the plan demonstrates attainment.40

For budgets to be approvable, they must meet, at a minimum, the EPA’s adequacy criteria (40 CFR 93.118(e)(4)). To meet these requirements, the budgets must be consistent with the attainment and RFP requirements and reflect all of the motor vehicle control measures contained in the attainment and RFP demonstrations.41

The EPA’s process for determining adequacy of a budget consists of three basic steps: (1) Providing public notification of a SIP submission; (2) providing the public the opportunity to comment on the budget during a public comment period; and, (3) making a finding of adequacy or inadequacy.42

2. Summary of the State’s Submission

The 2016 Ozone Plan included sub-regional (i.e., county-based) budgets for the 2018, 2021, 2024, 2027, and 2030 RFP milestone years, and the 2031 attainment year. In June 2017, the EPA found the budgets adequate for transportation conformity purposes,43 and more recently, proposed approval of the 2031 budgets in our August 31, 2018 action on portions of the 2016 Ozone Plan. The budgets for 2018, 2021, 2024, 2027 and 2030 were derived from the 2012 RFP baseline year and the associated RFP milestone years. As such, the budgets are affected by the South Coast II decision vacating the alternative baseline year provision, and therefore, the EPA did not propose action on RFP budgets in our August 31, 2018 proposed rule. On October 3, 2018, CARB requested parallel processing of the 2018 SIP Update before its board’s anticipated adoption of the plan on October 25, 2018. The 2018 SIP Update revises the RFP determination and identifies new sub-regional budgets for each county in the nonattainment area for VOC and NOX for each updated RFP milestone year through 2030 and for the attainment year, 2031. The budgets in this 2018 SIP Update replace all of the budgets contained in the 2016 Ozone Plan.

The budgets in the 2018 SIP Update were calculated using updated vehicle miles traveled (VMT) estimates from the 2018 Regional Transportation Plans from the San Joaquin Valley Metropolitan Transportation Planning agencies and EMFAC2014. CARB’s latest approved version of the EMFAC model for estimating emissions from on-road vehicles operating in California, and reflect average summer weekday emissions consistent with the RFP milestone years and the 2031 attainment year for the 2008 ozone NAAQS. The budgets also include a safety margin for some years and some counties. The conformity budgets for NOX and VOC for each county in the nonattainment area are provided in table 5 below.

3. The EPA’s Review of the State’s Submission

We have evaluated the submitted budgets in the 2018 SIP Update against our adequacy criteria in 40 CFR 93.118(e)(4) as part of our review of the budgets’ approvability (see section III in the EPA’s TSD for this proposal) and will complete the adequacy review concurrent with our final action on the ozone plan. The EPA is not required under its transportation conformity rule to find budgets adequate prior to proposing approval of them.44

---

40 See 40 CFR 93.102(b)(2)(i).
41 See 40 CFR 93.118(e)(4)(iii), (iv) and (v). For more information on the transportation conformity requirements and applicable policies on MVEBs, please visit our transportation conformity website: [http://www.epa.gov/otaq/stateregions/transcon/index.htm](http://www.epa.gov/otaq/stateregions/transcon/index.htm).
42 See 40 CFR 93.118(f)(2).
43 82 FR 29547 (June 29, 2017).
The EPA has previously determined that the budgets in the 2016 Ozone Plan are adequate for use for transportation conformity purposes. On February 23, 2017, the EPA announced the availability of the 2016 Ozone Plan and budgets, which were available for a 30-day public comment period that ended on March 27, 2017. The EPA received no comments from the public. On June 13, 2017, as noted above, the EPA determined the 2018, 2021, 2024, 2027, 2030 and 2031 MVEBs were adequate. On June 29, 2017, the notice of adequacy was published in the Federal Register. These budgets became effective on July 14, 2017, and have been used in transportation conformity determinations in the San Joaquin Valley area.

In today’s notice, the EPA is proposing to approve the 2020, 2023, 2026, 2029 and 2031 budgets in the 2018 SIP Update for transportation conformity purposes. The EPA has determined through its review of the submitted 2018 SIP Update that these budgets, along with emission control measures in the SIP, reasonable further progress and attainment for the 2008 ozone NAAQS. For the reasons discussed in section III.B of this proposed rule, we are proposing to approve the RFP demonstration in the 2018 SIP Update. To supplement the information in the 2018 SIP Update, CARB provided an additional technical supplement demonstrating that the budgets, including safety margins, which are clearly identified in the tables VIII–4 through VIII–10 of the 2018 SIP Update, are consistent with RFP.

The EPA has previously proposed to approve the attainment demonstration in 2016 Ozone Plan and associated 2031 budgets. The 2018 SIP Update does not update the attainment demonstration, therefore CARB provided an additional technical supplement to assess the effect of the emissions updates in the 2018 SIP Update using modeling from the 2016 Ozone Plan. The supplement showed that the updated on-road emission and safety margins, when considered together with all other emission sources, are consistent with applicable requirements for attainment. A detailed discussion of the EPA’s analysis of CARB’s technical supplement is provided in section III of the TSD accompanying this rulemaking.

The 2018 SIP Update budgets as shown in table 5, are consistent with the RFP demonstration and attainment demonstration, are clearly identified and precisely quantified, and meet all other applicable statutory and regulatory requirements, including the adequacy criteria in 40 CFR 93.118(e)(4) and (5). For these reasons, the EPA proposes to approve the budgets in table 5. We provide a more detailed discussion in section III of the EPA’s TSD, which can be found in the docket for today’s action. If we finalize approval of the budgets in the 2018 SIP Update, as proposed, then they will replace the budgets from the 2016 Ozone Plan that we previously found adequate for use in conformity determinations by transportation agencies in the San Joaquin Valley.

D. Contingency Measures for Failure To Meet RFP Milestones or To Attain the NAAQS by the Applicable Attainment Date

1. Statutory and Regulatory Requirements

Under the CAA, ozone nonattainment areas classified under subpart 2 as Serious or above must include in their SIPs contingency measures consistent with sections 172(c)(9) and 182(c)(9). Contingency measures are additional controls or measures to be implemented in the event the area fails to make RFP or to attain the NAAQS by the attainment date. The SIP should contain mechanisms for the contingency measures, specify a schedule for implementation, and indicate that the measure will be implemented without significant further action by the state or the EPA.

Neither the CAA nor the EPA’s implementing regulations establish a specific amount of emissions reductions that implementation of contingency measures must achieve, but the 2008 Ozone SRR reiterates the EPA’s guidance recommendation that contingency measures should provide for emissions reductions approximately equivalent to one year’s worth of RFP, thus amounting to reductions of 3 percent of the baseline emissions inventory for the nonattainment area. It has been the EPA’s longstanding interpretation of section 172(c)(9) that states may rely on existing federal measures (e.g., federal mobile source measures based on the incremental turnover of the motor vehicle fleet each year) and state or local measures in the SIP already scheduled for implementation that provide emissions reductions in excess of those needed to meet any other nonattainment plan requirements, such as meeting RACM/RACT, RFP or expeditious attainment requirements.

The key is that the statute requires that contingency measures provide for additional emissions reductions that are not relied on for RFP or attainment and that are not included in the RFP or attainment demonstrations as meeting part or all of the contingency measure requirements. The purpose of contingency measures is to provide continued emissions reductions while the state revises the SIP to meet the missed milestone or attainment date.

The EPA has approved numerous nonattainment area plan SIP submissions under this interpretation, i.e., SIPs that use as contingency measures one or more federal or state control measures that are already in place and provide reductions that are in excess of the reductions required to meet other requirements or relied upon in the modeled attainment demonstration, and there is case law supporting the EPA’s interpretation in this regard.

However, in Bahr v. EPA, the Ninth Circuit rejected the EPA’s interpretation of CAA section 172(c)(9) as allowing for approval of already implemented control measures as contingency measures. The Ninth Circuit concluded that contingency measures must be measures that would take effect at the time the area fails to make RFP or to attain by the applicable attainment date, not before. Thus, within the geographic jurisdiction of the Ninth Circuit, states cannot rely on already implemented control measures to comply with the contingency measures.

53 See, e.g., LEAN v. EPA, 382 F.3d 575 (5th Cir. 2004) (upholding contingency measures that were previously required and implemented where they were in excess of the attainment demonstration and RFP SIP).

54 Bahr v. EPA, 836 F.3d 1218, at 1235–1237 (9th Cir. 2016).

55 Id. at 1235–1237.
2. Summary of the State’s Submission

The District and CARB adopted the 2016 Ozone Plan prior to the Bahr v. EPA decision, and it relies upon surplus emissions reductions from already implemented control measures in the RFP milestone years to demonstrate compliance with the RFP milestone contingency measure requirements of CAA sections 172(c)(9) and 182(c)(9). With respect to the attainment contingency measure requirements, the 2016 Ozone Plan relies upon the incremental reduction in emissions in the year following the attainment year relative to the emissions in the attainment year due to continuing benefits from already implemented control measures, and on the aggregate emission reduction commitment made by CARB in the 2016 State Strategy for San Joaquin Valley.57

In the 2018 SIP Update, CARB revises the RFP demonstration for the 2008 ozone standards for the San Joaquin Valley nonattainment area and recalculates the extent of surplus emission reductions (i.e., surplus to meeting the RFP milestone requirement for a given milestone year) in the milestone years, and updates the estimate of the incremental reduction in emissions in the year following the attainment year (relative to the attainment year). In light of the Bahr v. EPA decision, however, the 2018 SIP Update does not identify such surplus or incremental emissions reductions as contingency measures. Instead, the 2018 SIP Update includes a contingency measure that would take effect upon a failure to meet an RFP milestone or upon a failure to attain the 2008 ozone standards by the applicable attainment date.

The new contingency measure, referred to as the “Enhanced Enforcement Activities Program,” is described in chapter X (“Contingency Measures”), section C of the 2018 SIP Update. In short, under the Enhanced Enforcement Activities Program, within 60 days of a determination by the EPA that the San Joaquin Valley nonattainment area failed to meet an RFP milestone or to attain the 2008 ozone NAAQS by the applicable attainment date, the CARB Executive Officer would direct enhanced enforcement activities in San Joaquin Valley consistent with the findings and recommendations in a report (referred to as the Enhanced Enforcement Report) that is to be prepared and published within 60 days of the triggering event. In the 2018 SIP Update, CARB indicates that the Enhanced Enforcement Report will, among other things, describe the compliance status of stationary and mobile sources in the area, determine the probable cause of the failure of RFP or attainment, and specify the type and quantity of additional enforcement resources that will be directed to the area. Lastly, through its resolution of adoption of the 2018 SIP Update, CARB added a menu of specific enforcement activity measures, one or more of which must be identified in the Enhanced Enforcement Report and implemented within 60 days of a triggering event.60

In chapter X (“Contingency Measures”) of the 2018 SIP Update, CARB indicates that compliance with the contingency measure requirements of the CAA necessitates that individual air districts adopt a local contingency measure or measures to complement CARB’s Enhanced Enforcement Activities Program measure. To address the contingency measure requirement for the 2008 ozone standards in the San Joaquin Valley nonattainment area, the District has committed to adopt and submit a contingency measure to CARB within 11 months of the EPA’s final conditional approval of the contingency measure element of the 2016 Ozone Plan, as supplemented by the relevant portions of the 2018 SIP Update.61 The District’s specific commitment is to revise the architectural coatings rule to remove the exemption for architectural coatings sold in containers with a volume of one liter or less if the EPA determines that the San Joaquin Valley nonattainment area has missed an RFP milestone or failed to attain the 2008 ozone NAAQS by the applicable attainment date. The District further commits to submit the revised architectural coatings rule to CARB within 11 months of final EPA action. CARB has attached the District’s commitment to revise the architectural coatings rule to a letter committing to adopt and submit the revised rule to the EPA within one year of the EPA’s final action on the contingency measure element of the 2016 Ozone Plan (and related portions of the 2018 SIP Update).62

3. The EPA’s Review of the State’s Submission

We have evaluated the contingency measure provisions in the 2016 Ozone Plan, the 2018 SIP Update, and the commitments by the District and CARB to adopt and submit a district contingency measure within one year of the EPA’s final action and have concluded that, collectively, these materials provide the basis for us to propose conditional approval of the 2016 Ozone Plan and the relevant portions of 2018 Update.

First, we find that CARB’s Enhanced Enforcement Activities Program contains, and the revised architectural coatings rule (once adopted) represent additional controls or measures to be implemented in the event San Joaquin Valley fails to make RFP or to attain the NAAQS by the applicable attainment date. We also find that CARB’s Enhanced Enforcement Activities Program contains, and the revised architectural coatings rule will contain, triggering mechanisms and schedules for implementation for the additional measures. Furthermore, the contingency measures are designed to be implemented without significant further action by the State or the EPA.63 As such, CARB’s Enhanced Enforcement Activities Program measure is structured, and the District’s intended measure, as described in the commitment, will be structured, to meet the requirements of CAA sections

57 The Bahr v. EPA decision involved a challenge to an EPA approval of contingency measures under the general nonattainment area plan provisions for contingency measures in CAA section 172(c)(9), but does not depend upon rulemaking or any
58 See the 2016 Ozone Plan, chapter 6, section 6.3.
59 See the 2016 Ozone Plan, chapter 6, section 6.4 and CARB’s Staff Report, ARB Review of the San Joaquin Valley 2016 Plan for the 2008 8-Hour Ozone Standard, release date June 17, 2016, pages 21 and 22. CARB’s aggregate commitment is to achieve emission reductions in the San Joaquin Valley 8-ppb of NOx by 2031. In our August 31, 2018 proposed action on portions of the 2016 Ozone Plan (83 FR 44452, at 44457), we proposed to approve the aggregate 8-tpd NOx commitment by CARB from the 2016 State Strategy as a SIP strengthening measure.
60 CARB Resolution 18–50, dated October 25, 2018, attachment B
61 Letter from Dr. Michael Benjamin, Chief, CARB Air Quality Planning and Science Division, to Michael Stoker, Regional EPA Region IX Administrator, dated October 20, 2018.
62 We recognize that CARB’s Enhanced Enforcement Activities Program calls for the preparation of a report before specific actions are taken; however, we view the preparation of the report as a ministerial act that does not require significant action on the part of CARB or the EPA, e.g., does not depend upon rulemaking or any action by the CARB Board. Furthermore, in adopting the 2018 SIP Update, the CARB Board strengthened the Enhanced Enforcement Activities Program contingency measure by adopting a menu of specific actions, one or more of which must be included in the report for implementation beginning 60 days after the triggering event. See CARB Resolution 18–50, October 25, 2018, attachment B (“Menu of Enhanced Enforcement Actions”).
63 We recognize that CARB’s Enhanced Enforcement Activities Program comprises, and the revised architectural coatings rule (once adopted) represent additional controls or measures to be implemented in the event San Joaquin Valley fails to make RFP or to attain the NAAQS by the applicable attainment date. We also find that CARB’s Enhanced Enforcement Activities Program contains, and the revised architectural coatings rule will contain, triggering mechanisms and schedules for implementation for the additional measures. Furthermore, the contingency measures are designed to be implemented without significant further action by the State or the EPA. As such, CARB’s Enhanced Enforcement Activities Program measure is structured, and the District’s intended measure, as described in the commitment, will be structured, to meet the requirements of CAA sections...
requirements when considered in conjunction with the surplus emissions reductions estimated to be achieved in the RFP milestone years and the incremental emissions reductions projected to occur in the year following the attainment year. Although these surplus emission reductions and incremental emissions reductions result from existing (i.e., already implemented) measures that are not appropriate as contingency measures under the Bahr v. EPA court's interpretation of CAA section 172(c)(9), they nonetheless provide additional emission reductions that will improve the ambient ozone levels in the San Joaquin Valley 2008 ozone nonattainment area in the event that RFP or attainment are not met.

In this case, “surplus” refers to emissions reductions over and above the reductions necessary to demonstrate RFP in San Joaquin Valley for the 2008 ozone standards. More specifically, table VIII–2 in the 2018 SIP Update identifies surplus NO\textsubscript{X} reductions in the various RFP milestone years. For San Joaquin Valley, the estimates of surplus NO\textsubscript{X} reductions vary for each RFP milestone year but range from 92.4 tpd (24.6 percent of 2011 baseline NO\textsubscript{X}) in milestone year 2031 to 157.4 tpd (41.9 percent of 2011 baseline NO\textsubscript{X}) in milestone year 2023. These represent values that far eclipse one year’s worth of RFP (11.4 tpd). The surplus reflects already implemented regulations and is primarily the result of vehicle turnover, which refers to the ongoing replacement by individuals, companies, and government agencies of older, more polluting vehicles and engines designed to meet more stringent CARB mobile source emission standards. In light of the extent of surplus NO\textsubscript{X} emissions reductions in the RFP milestone years, we agree with CARB that the emissions reductions from the two contingency measures would be sufficient to meet the contingency measure requirements of the CAA with respect to NO\textsubscript{X} emissions.

For attainment contingency measure purposes, we view the emissions reductions from the two contingency measures in the context of the expected reduction in emissions within the San Joaquin Valley nonattainment area for the 2008 ozone NAAQS in the year following the attainment year (relative to those occurring in the attainment year). Based on the emission inventories in the Appendix A to the 2018 SIP Update, we note that overall regional emissions are expected to be approximately 1 tpd of NO\textsubscript{X} lower in 2032 than in 2031.\textsuperscript{66} Considered together with the quantified 1 tpd reduction from the contingency measures, the adopted regulations would not provide sufficient emissions reductions to constitute one year’s worth of RFP. However, as part of the 2016 State Strategy, CARB has made an aggregate emission reduction commitment of 8 tpd of NO\textsubscript{X} for San Joaquin Valley by 2031 over and above the reductions that are needed for any other CAA purpose with respect to the 2008 ozone standards. Fulfillment of the 8-tpd commitment would reduce the potential for the area to fail to attain the 2008 ozone NAAQS by the 2031 applicable attainment date. Under these circumstances, given the reduced potential for failure to attain and the expected year-over-year net reduction in regional emissions, we find that the emissions reductions from the two contingency measures are sufficient to meet the contingency measure requirements of the CAA with respect to attainment.

For the above reasons, we propose to conditionally approve the contingency measure element of the 2016 Ozone Plan, as modified by the 2018 SIP Update, and supplemented by the commitments by the District and CARB to adopt and submit an additional contingency measure, as meeting the contingency measure requirements of CAA sections 172(c)(9) and 182(c)(9). Our proposed approval is conditional because it relies upon a commitment to adopt a specific enforceable contingency measure. Conditional approvals are authorized under CAA section 110(k)(4) of the CAA.

V. Proposed Action

For the reasons discussed above, under CAA section 110(k)(3), the EPA is proposing to approve as a revision to the California SIP the following portions of the San Joaquin Valley 2016 Ozone Plan submitted by CARB on August 24, 2016:

- Base year emissions inventory as meeting the requirements of CAA

\textsuperscript{66} A comparison of regional emissions totals in 2032 with those in 2031 shows that VOC emissions are expected to be 1.05 tpd higher, and NO\textsubscript{X} emissions are expected to be 2.14 lower, for a net reduction of approximately 1 tpd of NO\textsubscript{X}.

\textsuperscript{67} As noted previously, the EPA has already approved the portions of the 2016 Ozone Plan (section 3.4 (“Reasonably Available Control Technology (RACT) Demonstration") and Appendix C ("Stationary and Area Source Control Strategy Evaluations");) that relate to the RACT requirements under CAA section 182(b)[2] and 40 CFR 51.1112.
sections 172(c)(3) and 182(a)(1) and 40 CFR 51.1115.

The EPA is also proposing to approve as a revision to the California SIP the following portions of the 2018 SIP Update to the California State Implementation Plan, adopted by CARB on October 25, 2018:

- RFP demonstration as meeting the requirements of CAA sections 172(c)(2), 182(b)(1), and 182(c)(2)(B), and 40 CFR 51.1110(a)(2)(ii); and
- Motor vehicle emissions budgets for the RFP milestone years of 2020, 2023, 2026, and 2029, and the attainment year of 2031 (see table 5, above) because they are consistent with the RFP demonstration previously proposed for approval and meet the other criteria in 40 CFR 93.118(e).

Lastly, we are proposing to conditionally approve the contingency measure element of the 2016 Ozone Plan, as modified by the 2018 SIP Update, as meeting the requirements of CAA sections 172(c)(9) and 182(c)(9) based on commitments by CARB and the District to supplement the element through submission of a SIP revision within 1 year of final conditional approval action that will include a revised District architectural coatings rule.

The EPA is soliciting public comments on the proposed actions listed above, our rationales for the proposed actions, and any other pertinent matters related to the issues discussed in this document. We will accept comments from the public on this proposal for the next 30 days and will consider comments before taking final action.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA’s role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely proposes to approve state plans and an air district rule as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866; and
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4;
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the proposed rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).
