**Abstract:** The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Benzene Waste Operations (40 CFR part 61, subpart FF) apply to existing facilities and new facilities that generate waste containing benzene, such as chemical manufacturing plants, coke by-product recovery plants, petroleum refineries, and those owners and operators of hazardous waste treatment, storage, and disposal facilities (TSDF) that receive wastes from the above facilities. In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance with 40 CFR part 61, subpart FF.

**Form Numbers:** None.

**Respondents/affected entities:** Owners and operators of benzene waste facilities.

**Respondent's obligation to respond:** Mandatory (40 CFR part 61, subpart FF).

**Estimated number of respondents:** 270 (total).

**Frequency of response:** Quarterly and annually.

**Total estimated burden:** 19,500 hours (per year). Burden is defined at 5 CFR 1320.3(b).

**Total estimated cost:** \$2,130,000 (per year), which includes \$0 in annualized capital/startup and/or operation & maintenance costs.

**Changes in the Estimates:** There is an adjustment increase in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes, but reflects the addition of burden hours to account for the time spent by existing facilities to re-familiarize themselves annually with the rule requirements.
