ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR),

EPA Strategic Plan Information on Source Water Protection (EPA ICR Number 1816.07, OMB Control Number 2040-0197) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. Abstract: The EPA is collecting data from the states on their progress toward substantial implementation of protection strategies for all community water systems (CWSs). The EPA and states use this voluntary collection of data to understand the progress toward the Agency's goal of increasing the percentage of CWS (and the populations they serve) where risk is minimized through source water protection. The EPA specifically tracks the percentage of all CWSs that are implementing source water protection and the percentage of the population which is served by those systems.

Form Numbers: None.

Respondents/affected entities: State environmental and health agencies.

Respondent's obligation to respond: Voluntary.

Estimated number of respondents: 51 (total).

Frequency of response: Quarterly.

Total estimated burden: 684 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$29,874 (per year).

Changes in the Estimates: The EPA anticipates the annual totals for estimated burden to be 684 hours, an increase of 342 hours compared with the ICR currently approved by OMB. This is a two-fold-increase due to voluntary reporting that would increase in frequency from annually to quarterly compared to the ICR currently approved by OMB. States may use their existing methodology for routine tracking, which the EPA believes will result in efficiencies that would allow states to minimize hourly burden and cost.

Courtney Kerwin,

Director, Regulatory Support Division.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Aluminum, Copper and Other Non-ferrous Metals Foundries apply to both existing and new facilities conducting melting operations located at an aluminum, copper, or other non-ferrous foundry that is an area source of hazardous air pollutants (HAP) emissions, melts 600 tons per year (tpy) of aluminum, copper, or other non-ferrous metal or greater, and uses material that contains or has the potential to emit HAP for which the source category was listed. New facilities include those that commenced construction, modification or reconstruction after the date of proposal. In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP. This information is being collected to assure compliance with 40 CFR part 63, subpart ZZZZZZ.

Form Numbers: None.

Respondents/affected entities: Aluminum, copper, and other non-ferrous foundries.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart ZZZZZZ).

Estimated number of respondents: 318 (total).

Frequency of response: Initially, occasionally and semiannually.

Total estimated burden: 11,900 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$1,360,000 (per year), which includes \$0 for annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is no change in the labor hours in this ICR compared to the previous ICR. This is due to two considerations: (1) The regulations have not changed over the past three years and are not anticipated to change over the next three years; and (2) the growth rate for the industry is very low, negative or non-existent, so
