

The Census Bureau proposes to evaluate treatment comparisons by comparing self-response rates. For each comparison a two-tailed test will be used so that the Census Bureau can measure the impact on the evaluation measure in either direction with 80 percent power, at the  $\alpha = 0.1$  level. The sample size will be able to detect differences of approximately 1.74 percentage points between the self-response return rates between two experimental treatments. Additionally, a cost analysis will also be conducted.

**Affected Public:** Individuals or households.

**Frequency:** One-time test as part of the monthly American Community Survey.

**Respondent's Obligation:** Mandatory.  
**Legal Authority:** Title 13, United States Code, Sections 141, 193, and 221.
