DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

45 CFR Part 88
RIN 0945-AA10

Protecting Statutory Conscience Rights in Health Care; Delegations of Authority

AGENCY: Office for Civil Rights (OCR), Office of the Secretary, HHS.

ACTION: Final rule.

SUMMARY: The United States has a long history of protecting provisions in health care for individuals and entities on the basis of religious beliefs or moral convictions. Congress has passed many such laws applicable to the Department of Health and Human Services (“HHS”) or the “Department”) and the programs or activities it funds or administers, some of which are the subject of existing HHS regulations. This final rule revises existing regulations to ensure vigorous enforcement of Federal conscience and anti-discrimination laws applicable to the Department, its programs, and recipients of HHS funds, and to delegate overall enforcement and compliance responsibility to the Department’s Office for Civil Rights (“OCR”). In addition, this final rule clarifies OCR’s authority to initiate compliance reviews, conduct investigations, supervise and coordinate compliance by the Department and its components, and use enforcement tools otherwise available in existing regulations to address violations and resolve complaints. In order to ensure that recipients of Federal financial assistance and other Department funds comply with their legal obligations, this final rule requires certain recipients to maintain records; cooperate with OCR’s investigations, reviews, or other proceedings; and submit written assurances and certifications of compliance to the Department. The final rule also encourages the recipients of HHS funds to provide notice to individuals and entities about their right to be free from coercion or discrimination on account of religious beliefs or moral convictions.

DATES: This rule is effective July 22, 2019.

FOR FURTHER INFORMATION CONTACT: Sarah Bayko Albrecht at (800) 368-1019 or (800) 537-7697 (TDD).

SUPPLEMENTARY INFORMATION: Electronic Access

I. Background

This document adopts as final, with changes in response to public comments, a revised part 88, Protecting Statutory Conscience Rights in Health Care; Delegations of Authority. This preamble to the final rule provides a brief background of the rule, summarizes the final rule provisions, and discusses in detail the comments received on the proposed rule.1

A. Statutory History

The freedoms of conscience and of religious exercise are foundational protections rights protected by the Constitution and numerous Federal statutes. Congress has acted to protect these freedoms with particular force in the health care context, and it is these laws that are the subject of this final rule. Specifically, this final rule concerns Federal laws that provide:

• Conscience protections related to abortion, sterilization, and certain other health services applicable to the Department of Health and Human Services and recipients of certain Federal funds encompassed by 42 U.S.C. 300a–7 (the “Church Amendments”);
• Conscience protections for health care entities related to abortion provision or training, referral for such abortion or training, or accreditation standards related to abortion (the “Coats-Snowe Amendment,” 42 U.S.C. 238n);
• Protections from discrimination for health care entities that do not provide, pay for, provide coverage of, or refer for abortions under programs funded by the Department’s appropriations acts (e.g., Departments of Labor, Health and Human Services, and Education, and Related Agencies Appropriations Act, 2019, Div. B., sec. 507(d), Public Law 115–245, 132 Stat. 2901 (Sept. 28, 2018) (the “Weldon Amendment”); id., sec. 209);
• Protections from discrimination under the Patient Protection and Affordable Care Act (“ACA”) for health care entities that do not provide any health care item or service furnished for the purpose of causing, or for the purpose of assisting in causing, the death of any individual, such as by assisted suicide, euthanasia, or mercy killing, applicable to the Federal Government and any State or local government that receives Federal financial assistance (42 U.S.C. 18113);
• Conscience protections for providers, organizations, or their employees regarding counseling regarding the same (42 U.S.C. 14406(1));
• Conscience protections regarding exemptions applicable to the ACA’s individual mandate (26 U.S.C. 5000A; 42 U.S.C. 18081);
• Conscience protections under the ACA for qualified health plans related to coverage of abortion, and for individual health care providers and health care facilities that do not provide, pay for, provide coverage of, or refer for abortions (42 U.S.C. 18023(b)(1)(A) and (b)(4));
• Conscience protections for Medicare Advantage organizations and Medicaid managed care organizations with moral or religious objections to counseling or referral for certain services (42 U.S.C. 1395w–22(j)(3)(B) and 1396u–2(b)(3)(B));
• Conscience protections related to the performance of advanced directives (42 U.S.C. 1395ccc(f), 1396a(w)(3), and 14406(2));
• Conscience and nondiscrimination protections for organizations related to Global Health Programs, to the extent such funds are administered by the Secretary of HHS (the “Secretary”) (22 U.S.C. 7631(d));
• Conscience protections attached to Federal funding, to the extent such funding is administered by the Secretary, regarding abortion and involuntarily sterilization (22 U.S.C. 2151b(f), see, e.g., the Consolidated Appropriations Act, 2019, Pub. L. 116–6, Div. F, sec. 7018 (the “Helms, Biden, 1978, and 1985 Amendments”));
• Conscience protections from compulsory health care or services generally (42 U.S.C. 1396f and 5106(a)), and under specific programs for hearing screening (42 U.S.C. 280g–1(d)), occupational illness testing (29 U.S.C. 669(a)(5)); vaccination (42 U.S.C. 1396s(c)(2)(B)(ii)), and mental health treatment (42 U.S.C. 290bb–36(f)); and
• Protections for religious nonmedical health care providers and their patients from certain requirements under Medicare and Medicaid that may burden their exercise of their religious beliefs regarding medical treatment (e.g., 42 U.S.C. 1320a–1(h), 1320c–11, 1395i–5, 1395x(e), 1395x(y)(1), 1396a(a), and 1397–1(b)).

For purposes of this final rule, these laws will be collectively referred to as “Federal conscience and anti-discrimination laws.” Congress has recognized that modern health care practices may give rise to conflicts with the religious beliefs and moral convictions of payers, providers, and patients alike. The existence of

1 83 FR 3880 (Jan. 26, 2018).
moral and ethical objections on the part of health care clinicians about participating in, assisting with, referring for, or otherwise being complicit in certain procedures is well documented by ethicists. Religious institutions and entities, too, have expressed objections to the provision of or participation in insurance coverage for certain procedures or services, such as abortion, sterilization, and assisted suicide. To address these problems, Congress has repeatedly legislated conscience protections for individuals and institutions providing health care to the American public, as outlined below.

The Church Amendments. The Church Amendments were enacted at various times during the 1970s in response to debates over whether judicially recognized rights to abortions, sterilizations, or related practices might lead to the requirement that individuals or entities participate in activities to which they have religious or moral objections. The Church Amendments consist of five provisions, codified at 42 U.S.C. 300a–7, that protect those who hold religious beliefs or moral convictions regarding certain health care procedures from discrimination by entities that receive certain Federal funds, and in health service programs and research activities funded by HHS. Notably, the Church Amendments contain provisions explicitly protecting the rights of both individuals and entities.

First, paragraph (b) of the Church Amendments provides, with regard to individuals, that no court, public official, or other public authority can use an individual’s receipt of certain Federal funding as grounds to require the individual to perform, or assist in, sterilizations or abortions, if doing so would be contrary to his or her religious beliefs or moral convictions. 42 U.S.C. 300a–7(b)(1). Paragraph (b) further prohibits those public authorities from requiring an entity, based on the entity’s receipt of Federal funds under certain HHS programs, (1) to permit sterilizations or abortions in the entity’s facilities if the performance of such procedures there violates the entity’s religious beliefs or moral convictions, or (2) to make its personnel available for such procedures if contrary to the personnel’s religious beliefs or moral convictions. 42 U.S.C. 300a–7(b)(2). The individuals and entities protected by this provision are recipients of grants, contracts, loans, or loan guarantees under the Public Health Service Act (42 U.S.C. 201 et seq.), and those entities’ personnel.

Second, paragraph (c)(1) of the Church Amendments applies to decisions on employment, promotion, or termination of employment, as well as extension of staff or other privileges with respect to physicians and other health care personnel. 42 U.S.C. 300a–7(c)(1). This paragraph prohibits certain entities from discriminating in these decisions based on an individual declining to perform or assist in an abortion or sterilization because of that individual’s religious beliefs or moral convictions. 42 U.S.C. 300a–7(c)(1). It also prohibits those entities from discriminating in such decisions based on an individual’s performance of a lawful abortion or sterilization procedure, or on an individual’s religious beliefs or moral convictions about such procedures more generally. Id. Like paragraph (b), any recipients of a grant, contract, loan, or loan guarantee under the Public Health Service Act must comply with paragraph (c)(1).

Third, paragraph (c)(2) of the Church Amendments applies to the recipients of the Department’s grants or contracts for biomedical or behavioral research under any program administered by the Secretary. 42 U.S.C. 300a–7(c)(2). This paragraph prohibits discrimination by such entity against physicians or other health care personnel in employment, promotion, or termination of employment, as well as discrimination in the extension of staff or other privileges, because of an individual’s performance or assistance in any lawful health service or research activity. Declining to perform or assist in any such service or activity based on religious beliefs or moral convictions, or the individual’s religious beliefs or moral convictions respecting such

Fourth, paragraph (d) of the Church Amendments applies to any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary. For these health service programs or research activities, no individual shall be required to perform or assist in the performance of any part of the program or research activity if doing so would be contrary to his or her religious beliefs or moral convictions. 42 U.S.C. 300a–7(d).

Fifth, paragraph (e) of the Church Amendments applies to health care training or study programs, including internships and residencies. Paragraph (e) prohibits any entity receiving certain funds from denying admission to, or otherwise discriminating against, applicants for training or study based on the applicant’s reluctance or willingness to counsel, suggest, recommend, assist, or in any way participate in the performance of abortions or sterilizations contrary to, or consistent with, the applicant’s religious beliefs or moral convictions. 42 U.S.C. 300a–7(e). Any recipient of a grant, contract, loan, loan guarantee, or interest subsidy under the Public Health Service Act or the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (42 U.S.C. 15001 et seq.) must comply with paragraph (e).

The Coats-Snowe Amendment. Enacted in 1996, section 245 of the Public Health Service Act (also known as the “Coats-Snowe Amendment” or “Coats-Snowe”) applies nondiscrimination requirements to the Federal government, and to State or local governments receiving Federal financial assistance. 42 U.S.C. 238n. Such governments may not discriminate against any health care entity that refuses to undergo training in, require or provide training in, or perform abortions; refer for abortions or abortion training; or make arrangements for any of those activities. 42 U.S.C. 238n(a)(1)–(2). Furthermore, those governments may not discriminate against a health care entity because the entity attends or attended a health care training program that does not (or did not) perform abortions; require, provide, or refer for training in the performance of abortions; or make arrangements for any such training. 42 U.S.C. 238n(a)(3). The law defines the term “health care entity” as including (and, therefore, not limited to) an individual physician, a postgraduate physician training program, and a participant in a program of training in the health professions. 42 U.S.C. 238n(c)(2).
In addition, Coats-Snowe applies to accreditation of postgraduate physician training programs. Therefore, the Federal government, and State or local governments receiving Federal financial assistance, may not deny a legal status (including a license or certificate) or financial assistance, services, or other benefits to a health care entity based on an applicable physician training program’s lack of accreditation due to the accrediting agency’s requirements that a health care entity perform induced abortions; require, provide, or refer for training in the performance of induced abortions; or make arrangements for such training, regardless of whether such standard provides exceptions or exemptions. 42 U.S.C. 238b(b)(1). Additionally, the statute requires the government involved to formulate regulations or other mechanisms, or enter into agreements with accrediting agencies, as are necessary to comply with this accreditation provision of Coats-Snowe.

Id. The Weldon Amendment. The Weldon Amendment (or “Weldon”) was originally adopted in 2004 and has been readopted (or incorporated by reference) in each subsequent appropriations act for the Departments of Labor, Health and Human Services, and Education. See, e.g., Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019, and Continuing Appropriations Act, 2019, Public Law 115–245, Div. B, sec. 507(d). Weldon provides that none of the funds made available in the applicable Labor, HHS, and Education appropriations act be made available to a Federal agency or program, or to a State or local government, if such agency, program, or government subjects any institutional or individual health care entity to discrimination on the basis that the health care entity does not provide, pay for, provide coverage of, or refer for abortions. E.g., Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019, and Appropriations Act, 2019, Public Law 115–245, Div. B, sec. 507(d). Weldon states that the term “health care entity” includes an individual physician or other health care professional, a hospital, a provider-sponsored organization, a health maintenance organization, a health insurance plan, or any other kind of health care facility, organization, or plan.

Id. Conditions on Federally Appropriated Funds Requiring Compliance with Federal Conscience and Anti-Discrimination Laws. In addition to Weldon, current appropriations acts include other health care conscience protections. For example, one provision, using language similar to the Weldon Amendment, prohibits the Department from denying participation in Medicare Advantage to an otherwise eligible entity, such as a provider-sponsored organization, because the entity informs the Secretary it will not provide, pay for, provide coverage of, or provide referrals for abortions. Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019 and Continuing Appropriations Act, 2019, Public Law 115–245, Div. B, sec. 209, 132 Stat. 2981.

The Patient Protection and Affordable Care Act’s Conscience and Associated Anti-Discrimination Protections. Passed in 2010, the Patient Protection and Affordable Care Act (ACA) also includes several conscience and associated anti-discrimination protections.

Section 1553 of the ACA prohibits the Federal, any State or local government or health care provider that receives Federal financial assistance under the ACA, or any ACA health plans, from discriminating against an individual or institutional health care entity because of the individual or entity’s objection to providing any health care items or service for the purpose of causing or assisting in causing death, such as by assisted suicide, euthanasia, or mercy killing. 42 U.S.C. 18113. Section 1553 designates OCR to receive complaints of discrimination on that basis.

Section 1303 declares that the ACA does not require health plans to provide coverage of abortion services as part of “essential health benefits for any plan year.” 42 U.S.C. 18023(b)(1)(A). Furthermore, no qualified health plan offered through an ACA exchange may discriminate against any individual health care provider or health care facility because of the facility or provider’s unwillingness to provide, pay for, provide coverage of, or refer for abortions. 42 U.S.C. 18023(b)(4). And section 1303 of the ACA makes clear that nothing in that Act should be construed to undermine Federal laws regarding—(i) conscience protection; (ii) willingness or refusal to provide abortion; and (iii) discrimination on the basis of the willingness or refusal to provide, pay for, cover, or refer for abortion or to provide or participate in training to provide abortion. 42 U.S.C. 18023(c)(2)(A)(i)–(iii). Qualified health plans, as defined under 42 U.S.C. 18021, offered one created under the ACA, are required to comply with § 88.3(f)(2)(i) and (ii), which faithfully applies the plain text of section 1303 of the ACA, 42 U.S.C. 18023.

Finally, under section 1411 of the ACA, 42 U.S.C. 18081, HHS is responsible for issuing certifications to individuals who are entitled to an exemption from the individual responsibility requirement imposed under Internal Revenue Code sec. 5000A, including when such individuals are exempt based on a hardship (such as the inability to secure affordable coverage without abortion), 4 are members of an exempt religious organization or division, 5 or participate in a “health care sharing ministry.” 6 See also 26 U.S.C. 5000A(d)(2). Under section 1311(d)(4)(H) of the ACA, 42 U.S.C. 18031(d)(4)(H), health benefit exchanges are responsible for issuing certifications of exemption consistent with the Secretary’s determinations under section 1411 of the ACA.

Other Protections Related to the Performance of Advance Directives or Assisted Suicide. Before passage of section 1553 of the ACA, Congress had passed other conscience protections related to assisted suicide. Section 7 of the Assisted Suicide Funding Restriction Act of 1997 (Pub. L. 105–12, 111 Stat. 23) clarified that the Patient Self-Determination Act’s provisions stating that Medicare and Medicaid beneficiaries have certain self-determination rights do not (1) require any provider, organization, or any employee of such provider or organization participating in the Medicare or Medicaid program to insert or counsel about a right to any item or service furnished for the purpose of causing or assisting in causing the death of such individual, such as assisted suicide, euthanasia, or mercy killing; or (2) apply to or affect

---

5 Organizations that are religiously exempt include those with established tenets or teachings in opposition to acceptance of the benefits of any private or public insurance, such as the 1402(g)(1).

6 A “health care sharing ministry” is an organization, described in section 501(c)(3) and taxed under section 501(a) of the Internal Revenue Code, comprising members who share a common set of ethical or religious beliefs and who share medical expenses among members in accordance with those beliefs without regard to the State in which a member resides or is employed. 26 U.S.C. 5000A(d)(2)(B).
any requirement with respect to a portion of an advance directive that directs the purposeful causing of, or assistance in causing, the death of an individual, such as by assisted suicide, euthanasia, or mercy killing. 42 U.S.C. 14406 (by cross-reference to 42 U.S.C. 1395cc(f) (Medicare) and 1396a(w) [Medicaid]); see also 42 U.S.C. 1395cc(f)(4) (by cross-reference to 42 U.S.C. 14406); 1396a(w)(3), 1396a(a)(57); 1396b(m)(1)(A); and 1396r(c)(2)(E).\(^7\) Those protections extend to Medicaid and Medicare programs under the President's Emergency Plan for AIDS Relief (PEPFAR), to Medicare–Choice (now Medicare Advantage) organizations, and prepaid organizations.\(^8\)

**Protections Related to Counseling and Referrals Under Medicare Advantage Plans, Medicaid Plans, and Managed Care Organizations.** Certain Federal protections prohibit organizations offering Medicare–Choice (now Medicare Advantage) plans and Medicaid managed care organizations from being compelled under certain circumstances to provide, reimburse for, or cover, any counseling or referral service in plans over an objection on moral or religious grounds. 42 U.S.C. 1395w–22(j)(3)(B) [Medicare–Choice]; 42 U.S.C. 1396a–2(b)(3)(B) [Medicaid managed care organization]. Department regulations provide that this conscience provision for managed care organizations also applies to prepaid inpatient health plans and prepaid ambulatory health plans under the Medicaid program. 42 CFR 438.102(a)(2).

**Federal Conscience and Anti-Discrimination Protections Applying to Global Health Programs.** The Department administers certain programs under the President’s Emergency Plan for AIDS Relief (PEPFAR), to which additional conscience protections apply. Specifically, recipients of foreign assistance funds for HIV/AIDS prevention, treatment, or care authorized by section 104A of the Foreign Assistance Act of 1961 (22 U.S.C. 2151b–2), 22 U.S.C. 7601–7682, or under any amendment made by the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008 (Pub. L. 110–293), cannot be required, as a condition of receiving such funds, (1) to “endorse or utilize a multisectoral or comprehensive approach to combating HIV/AIDS,” or (2) to “endorse, utilize, make a referral to, become integrated with, or otherwise participate in any program or activity to which the organization has a religious or moral objection.” 22 U.S.C. 7631(d)(1)(B). The government also cannot discriminate against such recipients in the solicitation or issuance of grants, contracts, or cooperative agreements for the recipients’ refusal to do any such actions. 22 U.S.C. 7631(d)(2).

**Exemptions from Compulsory Medical Screening, Examination, Diagnosis, or Treatment.** This rule incorporates four statutory provisions that protect parents who, on the basis of conscience, object to their children being forced to receive certain treatments. First, under the Public Health Service Act, certain suicide prevention programs are not to be construed to require “suicide assessment, early intervention, or treatment services for youth” if their parents or legal guardians have religious or moral objections to such services. 42 U.S.C. 290bb–36(f); section 3(c) of the Garrett Lee Smith Memorial Act (Pub. L. 108–355, 118 Stat. 1404, reauthorized by Pub. L. 114–255 at sec. 9008).

Second, authority to issue certain grants through the Health Resources and Services Administration (HRSA), Centers for Disease Control and Prevention (CDC), and the National Institutes of Health (NIH) may not be construed to preempt or prohibit State laws which do not require hearing loss screening for newborn, infants or young children whose parents object to such screening based on religious beliefs. 42 U.S.C. 23173 Federal Register

---

7 Similar protections exist under the Department’s regulations applicable to hospitals, nursing facilities, and other medical facilities. See, e.g., 42 CFR 489.102(c)(2); Medicare Advantage, 42 CFR 422.128(b)(2)(ii); and Medicare Health Maintenance Organizations and Comprehensive Medical Plans, 42 CFR 417.436 (such organizations, plans, and their agents are not required to implement advance directives if the provider cannot do so “as a matter of conscience” and State law allows such conscientious objection).

* Federal Register Vol. 84, No. 98/Tuesday, May 21, 2018/Rules and Regulations 23173
Congress has also provided particular accommodations for persons and institutions that object to medical services and items. Section 6703(a) of the Elder Justice Act of 2009 (Pub. L. 111–148, 124 Stat. 119) provides that Elder Justice and Social Services Block Grant programs may not interfere with or abridge an elder person’s “right to practice his or her religion through reliance on prayer alone for healing,” when the preference for such reliance is contemporaneously expressed, previously set forth in a living will or similar document, or unambiguously deduced from such person’s life history. 42 U.S.C. 1397j–1(b). Additionally, the Child Abuse Prevention and Treatment Act (CAPTA) specifies that it does not require (though it also does not prevent) a State finding of child abuse or neglect in cases in which a parent or legal guardian relies solely or partially upon spiritual means rather than medical treatment, in accordance with religious beliefs. 42 U.S.C. 5106(a)(2).

B. Regulatory History

The Department engaged in rulemaking to enforce some of these conscience and anti-discrimination laws on previous occasions: In the 2008 final rule at 45 CFR part 88 (the “2008 Rule”), 73 FR 78072, 78074 (Dec. 19, 2008), in the revocation and replacement of that Rule in 2011 (the “2011 Rule”), and in existing CMS regulations at 42 CFR parts 422 and 438, which implement 1395w–2(j)(3)(b) and 1396u–2(b)(3)(B), respectively. This section of the preamble briefly summarizes the first two actions.

2008 Rule. The Department issued a notice of proposed rulemaking in 2008 to enforce, and clarify the applicability of, the Church, Coats-Snowe, and Weldon Amendments. 73 FR 50274 (Aug. 26, 2008) (August 2008 Proposed Rule). That proposed rule recognized (1) inconsistent awareness of Federal conscience and anti-discrimination protections among federally funded recipients and protected persons and entities; and (2) the need for greater enforcement mechanisms to ensure that Department funds do not support morally coercive or discriminatory policies or practices in violation of Federal law.

The Department received a “large volume” of comments on the August 2008 Proposed Rule. See 73 FR at 78074. Comments came from a wide variety of individuals and organizations, including private citizens, individual and institutional health care providers, religious organizations, patient advocacy groups, professional organizations, universities and research institutions, consumer organizations, and State and Federal agencies and representatives. Comments dealt with a range of issues surrounding the proposed rule, including whether the rule was needed, what individuals would be protected by the proposed rule, what services would be covered by the proposed rule, whether health care workers would use the regulation to discriminate against patients, what significant implementation issues could be associated with the rule, what legal arguments could be made for and against the rule, and what cost impacts of the proposed rule could be anticipated. Many comments confirmed the need to promulgate a regulation to raise awareness of Federal conscience and anti-discrimination protections and provide for their enforcement. The Department responded to those substantive comments and issued a final rule on December 19, 2008, codifying the rule at 45 CFR part 88 (“2008 Rule”), which consisted of six sections: Section 88.1 stated that the purpose of the 2008 Rule was “to provide for the implementation and enforcement” of the Church, Coats-Snowe, and Weldon Amendments. It specified that those Amendments and the implementing regulations “[w]ere to be interpreted and implemented broadly to effectuate their protective purposes.”

Section 88.2 of the 2008 Rule defined several terms used in part 88 and applicable to various provider nondiscrimination protections, namely, the terms “Assist in the Performance,” “Entity,” “Health Care Entity,” “Health Service Program,” “Individual,” “Instrument,” “Recipient,” “Sub-recipient,” and “Workforce.” Section 88.3 of the 2008 Rule set forth the scope of applicability of the sections and paragraphs of part 88 as they related to each conscience law implemented in the 2008 Rule. Section 88.4 of the 2008 Rule set forth the substantive requirements and applications of the Church, Coats-Snowe, and the Weldon Amendments. Section 88.5 of the 2008 Rule required covered federally funded entities to provide written certification of compliance with the laws encompassed by the 2008 Rule.

Section 88.6 of the 2008 Rule designated HHS OCR to receive complaints based on the three specified Federal conscience and anti-discrimination laws, and directed OCR to coordinate handling those complaints with the Departmental components from which the covered entity receives funding.

Proposed Changes in 2009 Resulting in New Final Rule in 2011. On March 10, 2009, with the advent of a new Administration, the Department proposed to rescind, in its entirety, the 2008 Rule. 74 FR 10207 (Mar. 10, 2009) (2009 Proposed Rule). The Department declared that certain comments on the August 2008 Proposed Rule raised a number of questions warranting further review of the 2008 Rule to ensure its consistency with that Administration’s policy. The Department invited further comments to reevaluate the necessity for regulations implementing the Federal conscience and anti-discrimination laws. In response to the proposal to rescind the 2008 Rule, for which the Department received supporting comments, the Department also received comments stating that health care workers should not be required to violate their religious beliefs or moral convictions; expressing concern that health care providers would be coerced into violating their consciences; and identifying the 2008 Rule as protecting First Amendment religious freedom rights, the capacity to uphold the tenets of the Hippocratic Oath, and the ethical integrity of the medical profession. Numerous commenter identified concerns that there would be no regulatory scheme to protect the legal rights afforded to health care providers, including medical students. 76 FR 9968, 9974 (Feb. 23, 2011) [2011 Final Rule].

On February 23, 2011, the Department rescinded most of the 2008 Rule and finalized a new rule. 76 FR 9968. The 2011 Rule left in place section “88.1 Purpose,” but removed the word “implementation,” describing the 2011 Rule’s purpose as “provid[ing] for the enforcement” of the Church, Coats-Snowe, and Weldon Amendments. It then removed the 2008 Rule’s sections 88.2 through 88.5, redesignated the 2008 Rule’s §§ 88.6 as § 88.2, and modified that section to consist of two sentences, stating that OCR is designated to receive complaints based on the Federal health care provider conscience protection statutes, and will coordinate the handling of complaints with the Departmental funding component(s) from which the entity with respect to which a complaint has been filed, receives funding.

The preamble to the 2011 Rule stated, “The Department supports clear and strong conscience protections for health care providers who oppose performing abortions.” 76 FR at 9969. The Department recognized, “The
Allegations and Evidence of Discrimination and Coercion Have Existed Since the 2008 Rule and Increased Over Time. The 2008 Rule sought to address an environment of discrimination toward, and attempted coercion of, those who object to certain health care procedures based on religious beliefs or moral convictions. Yet in February 2009, the Department announced its intent to rescind the 2008 Rule just one month after its effective date. It completed that rescission in 2011, despite significant evidence of an environment of discrimination and coercion, including thousands of public comments during the rulemakings that led to the 2008 and 2011 Rules describing that environment. For example, a 2009 article in the New England Journal of Medicine argued, “Qualms about abortion, sterilization, and birth control? Do not practice women’s health.” In 2009, a survey of 2,865 members of faith-based medical associations, 39% reported having faced pressure or discrimination from administrators or faculty based on their moral, ethical, or religious beliefs. Additionally, 32% of the survey respondents reported having been pressured to refer a patient for a procedure to which they had moral, ethical, or religious objections. Some 20% of medical students in that poll said that they would not pursue a career in obstetrics or gynecology because of perceived discrimination and coercion in that specialty against their beliefs. In total, 91% of respondents reported that they “would rather stop practicing medicine altogether than be forced to violate [their] conscience.”

Comments received during the rulemaking that led to the 2011 Rule were consistent with this survey.

Multiple commenters reported that some hospitals had forced health care providers to sign affidavits agreeing to participate in abortions if asked. One obstetrician/gynecologist commented that he had been pressured to participate in abortions and abortion counseling during his entire time in health care—from medical school, through his residency, and during private practice. Medical and nursing students, in twenty-five comments, expressed their reluctance to enter the health care field as a whole, and particularly specialties such as obstetrics, family medicine, and elder care, where their objection to abortion or euthanasia might not be respected. At least ninety commenters said that, if forced to choose between their careers or violating their conscience, they would quit their jobs. Tens of thousands of comments filed with OCR alleging violations of the laws that were the subject of the 2011 Rule, compared to the time period between the 2009 proposal to repeal the 2008 Rule and November 2016. The increase underscores the need for the Department to have the proper enforcement tools available to appropriately enforce all Federal conscience and anti-discrimination laws.

11 Since 2011, conscience and coercion in health care have been the subjects of significant litigation at the State and local level. Recently, the Supreme Court held that the State of California likely violated the Free Speech rights of pro-life pregnancy resource centers that do not provide information about where to obtain abortions by adopting a statute that required them, among other things, to provide information about about where to obtain abortions by adopting a statute that required them, among other things, to
thousands of comments to the 2009 proposed rule expressed concern that, without robust enforcement of Federal conscience and anti-discrimination laws, individuals with conscientious objections simply would not enter the health care field, or would leave the profession, and hospitals would shut down, contributing to the shortage of health care providers or affecting the quality of care provided.20 Thousands also feared personnel with objections would be terminated or otherwise unable to find employment, training, or opportunities to advance in their fields.21 Commenters also identified a culture of hostility to conscience concerns in health care.22 Some expressed concern that the rescission of the 2008 Rule would contribute to these problems by inappropriately politicizing, and interfering in, the practice of medicine and individual providers’ judgment.23

Thousands of comments from medical personnel stated their disagreement with the rescission, often stating that they had requested exemptions in the past and were concerned rescission would make it harder to request

doctors to give birth.

Some of the holdings in these lawsuits also filed complaints with OCR alleging that the State laws violate the Weldon, Coats-Snowe, and/or Church Amendments. Complaints filed with OCR against the State of California, alleging California’s Reproductive Freedom, Accountability, Comprehensive Care, and Transparency Act (FACT Act) (Cal. Health & Safety Code Ann. sections 123470, et seq.)

Weldon and Coats-Snowe Amendments, as discussed infra.

for example, sent a letter to seven insurance companies seeking to enforce a California legal requirement that the insurers include abortion coverage in plans used by persons who objected to such coverage. See Letter from California Department of Managed Health Care, Re: Limitations or Exclusions of Abortion Services (Aug. 22, 2014) (interpreting State statutes, regulations, and court decisions). The State of California estimates that at least 28,000 individuals subsequently lost their abortion-free health plans, and houses of worship have challenged California’s policy in court. See Foothill Church v. Rouillard, 2:15–cv–02165–KJM–EFB, 2016 WL 3688422 (E.D. Cal. July 11, 2016); Skyline Wesleyan Church v. California Department of Managed Health Care, No. 3:16–cv–00501–HDH (S.D. Cal. 2016). The New York State Department of Financial Services has similarly sought to require individual and small group employers, regardless of the number of employees or any religious affiliation, to provide insurance coverage for abortions, prompting additional lawsuits. See, e.g., Roman Catholic Diocese of Albany v. Vullo, No. 02070–16 (N.Y. Albany County Sup. Ct. May 4, 2016).

More recently still, the family of a California cancer patient sued UCSF Medical Center for alleged elder abuse because the cancer patient died after the oncologists on staff declined to participate in assisted suicide, but before she could obtain a new physician.36

---

31 Id. at 9.

Finally, some States have passed laws requiring health care professionals to provide referrals for implementation of advance directives without accommodation for religious belief or moral conviction. See Iowa Code Ann. section 144D.3(5) (2012) (requiring that providers take “all reasonable steps to transfer the patient to another health care provider, hospital, or health care facility” even when there is an objection based on “religious beliefs, or moral convictions”); Idaho Code Ann. 39–4513(2) (2012) (requiring that a provider “make a good faith effort to assist the person in obtaining the services of another physician or other health care provider who is willing to provide care for the person in accordance with the person’s expressed or documented wishes”).

Since the Department issued the proposed Conscience Rule in 2018, OCR issued a Notice of Violation to the State of California for OCR Complaint Nos. 16–224756 and 16–2292848, finding that California’s FACT Act violated the Weldon and Coats–Snowe Amendments, as discussed supra. Beyond this finding, in this final rule, the Department does not opine on or judge the legal merits or sufficiency of any of the above-cited lawsuits or challenged laws. They are discussed here to illustrate a notable number of disputes about alleged violations of health care conscience, broadly understood, by State and local governments. They also illustrate the need for greater clarity concerning the scope and operation of the Federal conscience and anti-discrimination laws that are the subject of this final rule. The Department anticipates that this final rule will result in greater public familiarity with Federal conscience and anti-discrimination laws, and may inform both State and local governments and health care institutions of their obligations, and individual and institutional health care entities of their rights, under those laws.

Congress has exercised the broad authority afforded to it under the Spending Clause to attach conditions on Federal funds to protect conscience rights. Such conditions override conflicting provisions of State law for States that accept the conditioned funds according to the terms of the statutes applicable to such funding streams. States have long been able to harmonize and comply with other “cross-cutting” anti-discrimination laws imposed through such conditions on Federal financial assistance. See, e.g., Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d et seq. and Title IX of the Education Amendments of 1972, 20 U.S.C. 1681 et seq. The Department seeks to clarify the scope and application of Federal conscience and anti-discrimination laws in this final rule as it has with other anti-discrimination laws. See 45 CFR part 80 (Title VI) and part 86 (Title IX). Courts Have Found No Alternative Private Right of Action to Remedy Violations. The government, rather than private parties, has the central role in enforcement of Federal conscience and anti-discrimination laws. In lawsuits filed by health care providers for alleged violations of certain of these laws, courts have generally held that such laws do not contain, or imply, a private right of action to seek relief from such violations by non-governmental covered entities. Thus, adequate governmental enforcement mechanisms are critical to the enforcement of these laws.

The case of a New York nurse who alleged that a private hospital forced her to assist in an abortion over her religious objections illustrates the point. The nurse filed a lawsuit in Federal court in 2009, but her case was dismissed on the ground that she did not have a private right to file a civil action against such a hospital under the Church Amendments. Cenzo–DeCarlo v. Mount Sinai Hospital, 626 F.3d 695 (2d Cir. 2010). The Second Circuit affirmed the dismissal, holding that the Church Amendments “may be a statute in which Congress conferred an individual right,” but that Congress had not implied a remedy to file suit against private entities in Federal court. Id. at 698–99. After the dismissal of the Federal lawsuit, the nurse then filed a case in State court, but that case too was dismissed for lack of a private right of action. Cenzo–DeCarlo v. Mount Sinai Hosp., 962 N.Y.S.2d 845 (Sup. Ct. Kings County 2010), aff’d by 957 N.Y.S.2d 256 (App. Div. 2012). The nurse then filed a complaint with OCR on January 1, 2011, and OCR resolved the complaint after the hospital changed its written policy for health care professionals.

Similar results occurred in a Federal lawsuit brought by a nurse in 2014, alleging that a health center had violated the Church Amendments when it denied her the ability to apply for a position as a nurse because she objected to prescribing abortifacients. Hellwege v. Tampa Family Health Centers, 103 F. Supp. 3d 1303 (M.D. Fla. 2015). Like the court in New York, the court held that the Church Amendments “recognize important individual rights” but do not confer a remedy to bring suit against a private entity in Federal court. Id. at 1310. More recently, a Federal district court in Illinois held that there is no private right of action for a doctor who alleges that the State required her to refer for abortions in violation of the Coats–Snowe Amendment. Order at 4, Nat ‘I Instit. of Family and Life Advocates, v. Rauner, No. 3:16–cv–50310 (N.D. Ill. July 19, 2017), ECF No. 65.

In light of these decisions and the increase in conscience-based challenges to State and local laws in the health care context, OCR has a singular and critical responsibility to provide clear and appropriate interpretation of Federal conscience and anti-discrimination laws, to engage in outreach to protected parties and covered entities, to conduct compliance reviews, to investigate alleged violations, and to vigorously enforce those laws.

Addressing Confusion Caused by OCR Sub-Regulatory Guidance. This final rule also resolves confusion caused by sub-regulatory guidance issued through OCR’s high-profile closure of three Weldon Amendment complaints against
the State of California filed in 2014.37 On June 21, 2016, OCR declared it found no violation stemming from California’s policy requiring that health insurance plans include coverage for abortion based on the facts alleged in the three complaints it had received.38 OCR’s closure letter concluded that the Weldon Amendment’s protection of health insurance plans included issuers of health insurance plans but not institutions or individuals who purchase or are insured by those plans. Even though California’s policy resulted in complainants losing abortion-free insurance that was consistent with their beliefs and that insurers were willing to provide, the letter concluded that none qualified as an entity or person protected under the Weldon Amendment because none was an insurance issuer. Relying on an interpretation of legislative history, instead of the Weldon Amendment’s text, OCR also declared that health care entities are not protected under Weldon unless they possess a “religious or moral objection to abortion,” and concluded that the insurance issuers at issue did not merit protection because they had not raised any religious or moral objections. Finally, OCR called into question its ability to enforce the Weldon Amendment against a State at all because, according to the letter, to do so could “potentially” require the revocation of Federal funds to California in such a magnitude as to violate State sovereignty and constitute a violation of the Constitution.39 The Department does not opine upon, and has not yet made a judgment on, the compatibility of California’s policy with the Weldon Amendment. But clarification is in order with respect to the general interpretations of the Weldon Amendment offered in OCR’s closure of complaints against California’s abortion coverage requirement. The Department has engaged in further consideration of this general matter and has also further reviewed Federal conscience and anti-discrimination laws, their legislative history, and the record of rulemaking and public comments. Based on this review, the Department indicated, in the preamble to the proposed rule, that the above-mentioned sub-regulatory guidance issued by OCR with respect to interpretation of the Weldon Amendment no longer reflects the Department’s position on, and interpretation of, the Weldon Amendment. The Department continues to hold the views it expressed on that issue in the preamble to the proposed rule, see 83 FR at 3890–91, and has reflected those views in its analysis contained in the Notice of Violation to the State of California for OCR Complaint Nos. 16–224756 and 18–292848, discussed supra, in which OCR discussed the rationale behind its determination that “California’s enactment of the FACT Act violate[d] the Weldon... Amendment[] by discriminating against health care entities that object to referring for, or making arrangements for, abortion.” 40

The Department is concerned that segments of the public have been dissuaded from complaining about religious discrimination in the health care setting to OCR as the result, at least in part, of these unduly narrow interpretations of the Weldon Amendment. For example, Foothill Church, located in Glen Morrow, California, expressed concern that filing a complaint with OCR about California’s abortion-coverage requirement was pointless because the Department had already closed three similar complaints, finding no violation of Federal conscience and anti-discrimination laws. See Foothill Church v. Rouillard, No. 2:15–cv–02165–KJM–EFB, 2016 WL 3688422 (E.D. Cal. July 11, 2016).

With this final rule, the Department seeks to educate protected entities and covered entities as to their legal rights and obligations; to encourage individuals and organizations with religious beliefs or moral convictions to enter, or remain in, the health care industry; and to prevent others from being dissuaded from filing complaints due to prior OCR complaint resolutions or sub-regulatory guidance that no longer reflect the views of the Department.

Additional Federal Conscience and Anti-Discrimination Laws. Finally, in addition to all of the concerns discussed above, the Department is using this rulemaking to address various other conscience protection and anti-discrimination laws not discussed in the 2008 and 2011 Rules. Some of these provisions were enacted after 2008. All provide additional protections, such as for health care providers and patients, from coercion and discrimination including that stemming from moral convictions or religious beliefs.

B. Structure of the Final Rule

This final rule generally reinstates the structure of the 2008 Rule, includes further definitions of terms, and provides robust certification and enforcement provisions comparable to provisions found in OCR’s other civil rights regulations. This final rule also encourages certain recipients of Federal financial assistance from the Department or of Federal funds from the Department to notify individuals and entities protected under Federal conscience and anti-discrimination laws (such as employees, applicants, or students) of their Federal conscience rights. In addition, this final rule requires certain such entities to assure and certify to the Department their compliance with the requirements of these laws. It also sets forth in more detail the investigative and enforcement responsibility of OCR, along with the tools at OCR’s disposal for carrying out its responsibility with respect to these laws.

Congress has imposed obligations on the Department and funding recipients through these statutes, and the Department is, therefore, required to ensure its own compliance and the compliance of its funding recipients. In 2008 and 2011, the Secretary delegated to OCR the authority to receive complaints of discrimination under the Church, Coats-Snowe, and Weldon Amendments, in coordination with Department components that provide Federal financial assistance. Congress later designated OCR as responsible for receiving complaints under section 1553 of the ACA. Many of the remaining statutes that are the subject of the proposed rule do not have any implementing regulations. To the extent not already delegated to OCR, the Secretary is, therefore, delegating to OCR enforcement authority—that is, the authority to receive complaints, and, in consultation and coordination with the funding components of the Department, investigate alleged violations and take appropriate enforcement action—over those additional Federal statutes as well as the statutes covered by the 2008 and 2011 Rules.

The compliance and enforcement sections specify in much greater detail than either the 2008 Rule or 2011 Rule how OCR will, in consultation and coordination with HHS funding components, enforce the Federal conscience and anti-discrimination laws. Implementation of the requirements set forth in this final rule.
will be conducted in the same way that OCR implements other civil rights requirements (such as the prohibition of discrimination on the basis of race, color, or national origin), which includes outreach, investigation, compliance, technical assistance, and enforcement practices. Enforcement will be based on complaints, referrals, and other information OCR may receive about potential violations, such as news reports and OCR-initiated compliance reviews and communications activities if facts suffice to support an investigation. If OCR becomes aware of a potential violation of Federal conscience and anti-discrimination laws, OCR will investigate, in coordination with the Department component providing Federal financial assistance or Federal funds to the investigated entity. If OCR concludes an entity is not in compliance, OCR, in consultation and coordination with the Department funding component(s), will assist covered entities with corrective action or compliance, or require violators to come into compliance. If, despite the Department’s assistance, corrective action is not satisfactory or compliance is not achieved, OCR, in coordination with the funding component, may consider all legal options available to the Department, to overcome the effects of such discrimination or violations. Enforcement mechanisms where voluntary resolution cannot be reached include termination of relevant funding, either in whole or in part, funding claw backs to the extent permitted by law, voluntary resolution agreements, referral to the Department of Justice (in consultation and coordination with the Department’s Office of the General Counsel), or other measures, as set forth in applicable regulations, procedures, and funding instruments. This final rule clarifies that recipients are responsible for their own compliance with Federal conscience and anti-discrimination laws and implementing regulations, as well as for ensuring their sub-recipients comply with these laws. This final rule also clarifies that parties subject to OCR investigation have a duty to cooperate and preserve documents and to report to their Department funding component(s) if they are subject to a determination by OCR of noncompliance. Finally, this final rule specifies that OCR may remedy claims of intimidation and retaliation against those who file a complaint or assist in an OCR investigation.

### III. Analysis and Response to Public Comments on the Proposed Rule

HHS received over 242,000 comments in response to the notice of proposed rulemaking (NPRM). HHS considered all comments filed in accordance with the Administrative Procedure Act and the instructions provided in the NPRM published in the Federal Register on January 26, 2018.

The Department’s evaluation of the comments led to a number of changes between the NPRM and this final rule. The public comments and the changes made in issuing this final rule are discussed below.

#### A. General Comments

The Department received many comments on the proposed rule that expressed general support or opposition and did not include substantive or technical commentary upon the rule.

**Comment:** The Department received comments expressing concern about the impact of the rule on access to care in rural communities, underprivileged communities, or other communities that are primarily served by religious healthcare providers or facilities.

**Response:** Access to care is a critical concern of the Department. The Department does not believe this rule will harm access to care. When the Department promulgated the 2008 Rule protecting conscience rights in health care, it addressed comments about the rule’s impact on access to care. In that response, the Department stated that the regulation did not expand the scope of existing Federal conscience and anti-discrimination laws, and noted that implementation and enforcement of such laws would help alleviate the country’s shortage of health care providers. The Department also observed that it was contradictory to argue, as many commenters did, that the rule would decrease access to care and that the then-current conscience protections for providers were sufficient: If the Department’s new rule would decrease access to care because of an increase in providers’ exercise of conscientious objections, it would seem that the statutory protections that existed before the regulation did not result in providers fully exercising their consciences as protected by law.

The Department agrees with its previous response. The Federal conscience and anti-discrimination laws pre-exist these regulations. They provide rights and protections to health care providers, including in rural communities, underprivileged communities, or other communities that are primarily served by religious healthcare providers or facilities (together, “underserved communities”). There appears to be no empirical data, however, on how previous legislative or regulatory actions to protect conscience rights have affected access to care or health outcomes. Studies have specifically found that there is insufficient evidence to conclude that conscience protections have negative effects on access to care. The Department is not aware of data in its possession, in the public comments, or in the public domain that provides a way to estimate how many health care providers either in general or in underserved communities are—and are not—exercising their conscience rights and protections, even though they are encompassed by Federal conscience and anti-discrimination laws, nor is the Department aware of data to determine how many providers, among those, would exercise their conscience rights and protections once this rule is finalized, and because it is finalized. Because enforcement of the rule will remove barriers to entry into the health care professions, it is reasonable to assume that the rule may, in fact, induce more people and entities to enter or remain in the health care field. On a broad level, this effect is reasonably likely to increase, not decrease, access to care, including—and perhaps especially—in underserved communities. The Department is not aware of data, including from public commenters, that would provide a useful basis for a quantitative estimate of how many more providers would enter the health care field, or serve

---

41 See Chavkin et al., “Conscientious objection and refusal to provide reproductive healthcare: A White Paper examining prevalence, health consequences, and policy responses,” 123 Int’l J. Gynecol. & Obstet. 3 (2013), 541–556 (“[I]t is difficult to disentangle the impact of conscientious objection when it is one of many barriers to reproductive healthcare. . . . [C]onscientious objection to reproductive health care has yet to be rigorously studied.”); K. Morrell & W. Chavkin, “Conscientious objection to abortion and reproductive healthcare: A review of recent literature and implications for adolescents.” 27 Curr. Opin. Obstet. Gynecol. 5 (2015), 333–38 (“[T]he degree to which conscientious objection has compromised sexual and reproductive healthcare for adolescents is unknown.”).
underserved communities, as a result of this rule, nor what the corresponding increase of access to care might be. However, no public commenter provided any data that undermines the reasoning that leads the Department to believe that the rule will have such an effect. And several factors support the Department’s position.

First, predictions that the rule will reduce services in underserved communities may be based on incorrect assumptions. As the Department has made clear, the rule does not expand the substance protections of Federal conscience and anti-discrimination laws. Thus, to the extent commenters believe the rule would reduce services in underserved communities, that would seem to be based on an assumption that there are health care providers in underserved communities who are protected by these laws but are offering services to which they object anyway (for example, abortions or abortion referrals) because the laws are inadequately enforced. That is not necessarily a correct assumption. Such health care providers might be responding to a threat to their conscientious practice, not by offering the services despite their objections, but by leaving the health care field or a particular practice area involving that service. One poll suggests that over 80% of religious health care providers in underserved communities would likely limit their scope of practice if they were required to participate in practices and procedures to which they have moral, ethical, or religious objections, rather than provide the services.46 If that is correct, improving enforcement of Federal conscience and anti-discrimination laws might reduce infringement of conscience protections, not by reducing the availability of services such as abortion, but by increasing the availability of other services by encouraging providers not to self-limit their practices in underserved communities.

Second, and relatedly, the rule might result in an increase in the number of providers in certain specialties within the health care field. Individuals and entities may have chosen not to enter the health care field because they anticipated they would be pressured to violate their consciences. In some cases, that decision may be the result of discrimination occurring during medical training, such as medical students’ experiences of discrimination on the basis of their religious beliefs or moral convictions,

47 The CMA comment cited a poll finding that twenty percent of responding faith-based medical students chose not to pursue a career in obstetrics/gynecology because of perceived coercion and discrimination in that field.

or by pressures faced by institutions because of their religious identity or moral convictions. Reducing that discrimination and pressure may lead to more individual and institutional health care providers overall, which could help increase, rather than decrease, services for underserved communities. Another way this effect may manifest itself is if the average facility has access to more highly qualified candidates because there is a larger pool of medical professionals from which to choose. Having more providers overall, so that the field as a whole provides a wide and diverse range of services, is preferable to having fewer providers, particularly with respect to underserved areas.

Third, the rule may prevent some health care providers from leaving the field. A certain proportion of decisions by currently practicing health providers to leave the profession may be motivated by such pressure.48 With the rule’s added emphasis on enforcing protections for rights of conscience, fewer individuals may leave the profession, and in turn they may help meet unmet needs for care. In addition, in some instances where a provider objects, based on conscience, to providing a service, there may be some underserved communities where other providers who have no such objections are available to provide the service. By contrast, without enforcement of Federal conscience and anti-discrimination laws, some providers with religious beliefs or moral convictions could close their doors (rather than violate their consciences), leaving a community even more underserved than if the provider were in practice.

The rule might allow an increase in the provision of health care by religious institutions as well, not just individuals. Religious hospitals or clinics, for example, if they are assured greater enforcement of their rights to practice medicine consistent with their religious beliefs, may find it worthwhile to expand to serve more people, including in underserved communities. Some commenters contend this could lead religious hospitals to move into underserved communities and crowd out other providers who might not have objections to certain services. The Department is not, however, aware of data demonstrating that the expansion of health care services by religious providers, particularly in underserved communities, would crowd out other providers who perform services that they do not, and market forces ordinarily would not dictate that result. Again, the Department is not aware of data demonstrating the dire results predicted by some commenters.

In addition, the relationship between religious or other conscientiously objecting providers and underserved communities may be far more complex than assumed by the prediction that this rule will decrease services. There are reasons to believe that many persons who might make use of protections under Federal conscience and anti-discrimination laws are already more likely to be located in certain underserved areas, and that their patients are similarly likely to share their views on issues such as abortion. According to the Pew Research Center, for example, “urban dwellers are far more likely than their rural counterparts to say abortion should be legal in all or most cases.”49 This suggests that the enforcement of Federal conscience and anti-discrimination laws is not likely to be the cause of religious and other objecting providers being located in rural communities, but that such providers are already in those communities, and Congress passed these laws to protect them, among other individuals and entities, from being driven out of practice, which could exacerbate the lack of access to health care overall in those areas.

There is also reason to believe that religious institutions and individuals are disposed to serve in underserved communities because of elements of their religious mission besides objections protected by Federal conscience and anti-discrimination laws. For example, various commenters...
content the reason why Catholic hospitals are overrepresented in serving certain underserved populations is because the hospitals are motivated by their Catholic beliefs to serve underserved, underserved, underprivileged, or minority communities, and these commenters argue that Catholic hospitals (and, by extension, other religious providers) provide an overall benefit to underserved communities. This overall benefit is consistent with Congress’s apparent intent, in the Federal conscience and anti-discrimination laws, to ensure that the health care system remains open to the vibrant participation of religious and other providers, without barriers that can be created by discrimination against them, or infringements of their conscientious beliefs. Any loss of such providers because of the lack of enforcement of Federal conscience and anti-discrimination laws could decrease access to care for underserved communities. Therefore, when other commenters contend that women of color would be disproportionately harmed by this rule due to the significant services provided by Catholic hospitals, they do not seem to account for the fact that, without those hospitals’ overall ability to exercise their religious mission, they would not be providing health care services to those communities in the first place.

The Department also disagrees with the assumption that the rule’s enforcement of Federal conscience and anti-discrimination laws will result in harm, or in more harm than the benefits that derive from implementing Federal laws. As explained in the Regulatory Impact Analysis, infra at part IV.C.3.vii, the Department expects the rule to enhance, not impede, access to care in areas with fewer providers, such as rural communities. The Department is not aware of data establishing the views of commenters who say the rule will reduce services in underserved communities, or of data establishing quantitatively how much the rule will increase and enhance access to health care services in underserved communities. The Department concludes, instead, that it is reasonable to agree with commenters who believe the rule will not decrease access to care, and may increase it.

The Department finds that finalizing the rule is appropriate without regard to whether data exists on the competing contentions about its effect on access to services. Most significantly, finalizing the rule is appropriate because it enforces Federal conscience and anti-discrimination laws, which represent Congress’s considered judgment that these rights are worth protecting even if they impact overall or individual access to a particular service, such as abortion. But finalizing the rule is also appropriate because the Department’s belief that the rule will enhance access to care is based on reasonable, informed assumptions unrebuted by public comments submitted in opposition to the rule. Ultimately, the Department believes that this rule will result in more health care provider options and, thus, better health care for all Americans. The Department thus believes that it is appropriate to finalize this rule to enforce Federal conscience and anti-discrimination laws, even though the Department and commenters do not have data capable of quantifying all of its effects on the availability of care.

Comment: The Department received comments stating that protecting health care professionals’ moral and religious convictions places health care providers above patients.

Response: The Department disagrees. First, this final rule provides for the enforcement of protections established by the people’s representatives in Congress; the Department has no authority to override Congress’s balancing of the protections. Second, protecting health care providers’ rights of conscience ensures that health care providers with deeply held religious beliefs or moral convictions are not driven out of the health care industry—and, therefore, made unavailable to serve any patients and provide any health care services—because of their refusal to participate in certain objected-to activities, such as abortion, sterilization, or assisted suicide. Third, the Department believes the provider-patient relationship is best served by open communication of conscience issues surrounding the provision of health care services, including any conscientious objections providers or patients may have to providing, assisting, participating in, or receiving certain services or procedures. By protecting a diversity of beliefs among health care providers, these protections ensure that options are available to patients who desire, and would feel most comfortable with, a provider whose religious beliefs or moral convictions match their own. Even where a patient and provider do not share the same religious beliefs or moral convictions, it is not necessarily the case that patients would want providers to be forced to violate their religious beliefs or moral convictions.

Response: The Department drafted the proposed rule to track the scope of each statute’s covered activities as Congress drafted them, without being unduly broad or unduly narrow. For example, where the scope of laws that are the subject of this regulation is limited to certain enumerated procedures, the final rule makes clear that OCR will only pursue enforcement under those laws with respect to those enumerated procedures.

The Department is unaware of any cases claiming denial of service regarding these procedures brought under any of the statutes implemented by this rule. Public comments received by the Department did not cite such cases. In the event that the Department receives a complaint with respect to HIV treatment, pre-exposure prophylaxis, or infertility treatment, the Department would examine the facts and circumstances of the complaint to determine whether it falls within the scope of the statute in question and these regulations.

Discussion of this rule’s potential application with regard to gender dysphoria is located in the section-by-section analysis regarding comments on the Church Amendments, infra at part III.B.

Comment: The Department received many comments expressing confusion or concern as to how the proposed rule would interact with or be in conflict with other Federal laws, such as the
Emergency Medical Treatment and Active Labor Act (EMTALA) and Federal anti-discrimination statutes (such as section 1557 of the ACA).

Response: This final rule provides the Department with the means to enforce Federal conscience and anti-discrimination laws in accordance with their terms and to the extent permitted under the laws of the United States and the Constitution. This final rule, like the 2008 Rule and the 2011 Rule, does not go into detail as to how its provisions may or may not interact with other statutes or in all scenarios, but OCR intends to read every law passed by Congress in harmony to the fullest extent possible so that there is maximum compliance with the terms of each law. With respect to EMTALA, the Department generally agrees with its explanation in the preamble to the 2008 Rule 51 that the requirement under EMTALA that certain hospitals treat and stabilize patients who present in an emergency does not conflict with Federal conscience and anti-discrimination laws. The Department intends to give all laws their fullest possible effect.

Comment: The Department received comments stating that the Department should withhold Federal financial assistance from any State that does not provide for religious exemptions to vaccination.

Response: This rule is only intended to provide enforcement mechanisms for the Federal conscience and anti-discrimination laws that Congress has enacted. The creation of a new substantive conscience protection is outside of the scope of this rulemaking. With respect to vaccination in particular, this rule provides for enforcement of 42 U.S.C. 1396s(c)(2)(B)(ii), which requires providers of pediatric vaccines funded by Federal medical assistance programs to comply with any State laws relating to any religious or other exemptions. Under the statute’s plain text, this protection applies only to the extent a State already provides (or, in the future, chooses to provide) such an accommodation, and does not require a State to adopt such an accommodation.

Comment: The Department received comments stating that the proposed rule’s enforcement mechanisms will not meaningfully further conscience protection because existing laws protecting religious beliefs or moral convictions are sufficient.

Response: The Department disagrees, and believes that the rule would make a meaningful difference in terms of compliance, as compared to the status quo. This rule provides appropriate enforcement mechanisms in response to a significant increase in complaints alleging violations of Federal conscience and anti-discrimination laws. Each law that is the subject of this rule meaningfully differs from the next. Moreover, the Department believes some laws have never been enforced, not necessarily because of widespread compliance with other overlapping laws, but because the Department has devoted no meaningful attention to those laws, has not conducted outreach to the public on them, and has not adopted regulations with enforcement procedures for them.

Comment: The Department received a comment requesting that the Department clarify that health care providers may establish systems to help meet patients’ health care needs when a provider holds a religious belief or moral conviction that may affect the service or procedure that a patient is seeking.

Response: Nothing in the rule prohibits an entity from providing a lawful service it wants to provide, even as it respects the rights of personnel who may be protected by Federal laws from being required to provide, or assist in, the service. As discussed later in this preamble, the rule provides incentives for (but does not mandate) notices that parallel notice provisions under other anti-discrimination regulations. The Department believes that the provider-patient relationship is best served by open communication of conscience issues surrounding the provision of health care services, so that the consciences of patients, providers, and employees are respected whenever possible or required. Nothing in the rule precludes such communication or systems that encourage such communication. For example, providers may include notices in patient intake materials notifying patients that a provider’s service provision is governed by certain ethical or religious principles. Provisions may also encourage communication of moral or religious views by patients with respect to treatment in order to respect patients’ wishes to the extent it is mutually acceptable or required. The Department declines to mandate any particular timeline or form in which a provider or patient must raise these sensitive issues. The Department encourages providers, if they are working with, or employing, health care professionals who may have religious or moral objections, especially with regard to procedures or treatments, to openly discuss these issues and have processes in place to identify and respect a diversity of views, further the provision of health care, and comply with the law. The final rule’s modifications to the definition of “discrimination” permit employers of such personnel to accommodate the professionals’ religious or moral objections, without interfering in the employer’s delivery of health services.

Comment: The Department received comments questioning whether the Department has authority to issue regulations implementing some or all of the Federal conscience and anti-discrimination laws encompassed by this rule.

Response: The Federal conscience and anti-discrimination laws encompassed by this part, including the Church Amendments, section 245 of the Public Health Service Act, and the Weldon Amendment, require, among other things, that the Department and recipients of Department funds refrain from discriminating against institutional and individual health care entities that do not participate in certain medical procedures or services, including certain health services or research activities funded in whole or in part by the Federal government.

Compliance by the Department. Inherent in Congress’s adoption of the statutes that require compliance by the Department, by departmental programs, and by recipients of Federal funds from the Department is the authority of the Department to take measures to ensure its own compliance. As explained more fully below, compliance reviews, complaint investigation, and record-keeping are standard measures for ensuring compliance with conditions Congress has imposed upon the Department and on recipients of Federal funds, including statutory nondiscrimination requirements. Moreover, 5 U.S.C. 301 empowers the head of an Executive department to prescribe regulations “for the government of his department, the conduct of his employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property.”

Compliance through funding instruments and agreements. In large part, the rule’s enforcement mechanisms concerning entities that receive funds from the Department involve placing terms and conditions that implement Federal law in contracts, grants, and other Federal funding instruments and agreements. HHIS has the authority to impose terms and conditions in its grants, contracts, and funding instruments, to ensure recipients comply with applicable law, including...
the aforementioned Federal conscience and anti-discrimination laws. The Department, furthermore, will enforce such terms and conditions requiring compliance with such conscience and anti-discrimination law in accordance with existing statutes, regulations, and policies that govern such instruments, such as the Federal Acquisition Regulation; the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for HHS Awards (HHS UAR), 45 CFR part 75; regulations applicable to CMS programs; the associated regulations relating to the suspension and debarment; as well as any other regulations or procedures that govern the Department’s ability to impose and enforce terms and conditions on funding recipients to comply with Federal requirements.

Grants and cooperative agreements. With respect to grants and cooperative agreements, the HHS UAR, 45 CFR part 75, requires adherence by award recipients to all applicable Federal statutes and regulations. For example, section 75.300(a) requires that the Department administer Federal awards to ensure that Federal funding and associated programs “are implemented in full accordance with U.S. statutory and public policy requirements: Including, but not limited to, those protecting public welfare, the environment, and prohibiting discrimination.” The regulation also requires the Department to communicate to non-Federal entities all policy requirements and include them in the conditions of the award. 45 CFR 75.300(a).

Furthermore, section 75.371 sets forth remedies for non-compliance where the award recipient “fails to comply with Federal statutes, regulations, or the terms and conditions of the Federal award.” These remedies include disallowance, withholding, suspension, and termination of funding. 45 CFR 75.371. The HHS UAR also contains provisions relating to recordkeeping (45 CFR 75.501) and program specific audits (45 CFR 75.503), which the Department may invoke when enforcing grant terms and conditions that operate to implement the Federal conscience and anti-discrimination laws. In addition, Federal grant recipients must also sign OMB-approved assurances which certify compliance with all Federal statutes relating to non-discrimination and all applicable requirements of all other Federal laws governing the program.

In sum, the Department’s enforcement of the Federal conscience and anti-discrimination laws for grantees will be conducted through the normal grant compliance mechanisms applicable to grants or other funding instruments, with OCR coordinating its investigation and compliance activities with the funding component. If the Department becomes aware that a State or local government or a health care entity may have undertaken activities that may violate any statutory conscience protection, the Department will work to assist such government or entity to comply with, or come into compliance with, such requirements or prohibitions. If, despite the Department’s assistance, compliance is not achieved, the Department will consider all legal options as may be provided under 45 CFR parts 75 (HHS UAR) and 96 (regulations addressing HHS block grant programs), as applicable.

Contracts. With respect to Federal contracts and contractors, the Federal Property and Administrative Services Act of 1949 (“FPASA”) authorizes the promulgation of the Federal Acquisition Regulation (“FAR”). 40 U.S.C. 121(c). The FAR, in turn, authorizes agency heads to “issue or authorize the issuance of agency acquisition regulations that implement or supplement the FAR and incorporate, together with the FAR, agency policies, procedures, contract clauses, solicitation provisions, and forms that govern the contracting process or otherwise control the relationship between the agency, including any of its suborganizations, and contractors or prospective contractors.” 48 CFR 1.301–[a](1). In addition, Federal agencies are required to prepare their solicitations and resulting contracts utilizing a uniform contract format, which permits agencies to include a clear statement of any “special contract requirements” that are not included in its standard government contract clauses or in other sections of the uniform contract format. 48 CFR 15.204–2(h). Finally, pursuant to the FAR and other legal authorities, the Department has established the Department of Health and Human Services Acquisition Regulation (“HHSAR”) [48 CFR parts 300 through 370], which establishes uniform departmental acquisition policies and procedures that implement and supplement the FAR. The HHSAR contains departmental policies that govern the acquisition process or otherwise control acquisition relationships between the Department’s contracting activities and contractors. The HHSAR contains (1) requirements of law; (2) HHS-wide policies; (3) deviations from FAR requirements; and (4) policies that have a significant impact beyond the internal procedures of the Department or a significant cost or administrative impact on contractors or offerors. See 48 CFR 301.101(b); see also 48 CFR 301.103(b) (“The Assistant Secretary for Financial Resources (ASFR) prescribes the HHSAR under the authority of 5 U.S.C. 301 and section 205(c) of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 121(c)(2)), as delegated by the Secretary[.]”). As a result, the Department has ample authority to include terms and conditions in its contracts consistent with the Federal conscience and anti-discrimination laws. Furthermore, the Federal Acquisition Regulation provides a variety of mechanisms that may be used to enforce such contract provisions (e.g., 48 CFR part 49 “Termination of Contracts”). Thus, the Department intends to implement and enforce contract terms on the Federal conscience and anti-discrimination laws through the FAR and HHSAR and other Federal laws and regulations that govern the administration and performance of Federal contracts.

Other rulemaking authorities. Under the ACA section 1321(a), 42 U.S.C. 18041, the Department has the authority to promulgate regulations implementing the ACA conscience provisions. Section 1321(a) provides authority to the Secretary to issue regulations setting standards for meeting the requirements under Title I of the ACA, and the amendments made by Title I, with respect to the establishment and operation of Exchanges (including SHOP Exchanges), the offering of qualified health plans through such Exchanges, the establishment of the reinsurance and risk adjustment programs under part V, and such other requirements as the Secretary determines appropriate. This provision authorizes the Secretary to promulgate regulations setting standards for regulated entities to meet the conscience protection requirements in ACA sections 1303(b)(1)(A) & (b)(4), 1411, and 1553, 42 U.S.C. 18023(b)(1)(A) & (b)(4), 18081, 18113, all of which are located in Title I of the ACA.

With respect to the Medicare, Medicaid, and Children’s Health Insurance Program (CHIP), section 1102 of the Social Security Act, 42 U.S.C. 1302, authorizes the Secretary to “make and publish such rules and regulations, not inconsistent with this Act, as may be necessary to the efficient administration of the functions with which [he] is charged under this Act.” This provides the Secretary with authority to promulgate regulations that authorize the conscience compliance by participants in the Medicare, Medicaid, and CHIP programs, including Medicare
providers, State Medicaid and CHIP programs, etc., with applicable Federal conscience and anti-discrimination laws.

Furthermore, with respect to funding instruments administered by the Centers for Medicare & Medicaid Services (CMS), including instruments or agreements authorized by the Social Security Act and ACA, the Secretary has the authority under section 1115(a)(2) of the Social Security Act to authorize Federal matching funds in expenditures by State Medicaid agencies that would not otherwise be eligible for Federal matching in order to carry out a demonstration project that promotes the objectives of the Medicaid or CHIP programs. Under section 1115A of the Social Security Act, Federal funds are available to test innovative payment and service delivery models expected to reduce costs to Medicare, Medicaid, or CHIP, while preserving or enhancing the quality of care furnished to the beneficiaries of these programs. The Secretary has the authority to include terms and conditions addressing Federal conscience and anti-discrimination laws in certain funding instruments or agreements under these authorities. The Secretary also has the authority to impose terms and conditions in certain grant instruments under some of its grant authorities, such as the grants available to States for ACA implementation under section 2794(c)(2)(B) of the Public Health Service Act. In addition, the Secretary has the authority to include such requirements, through rulemaking, with respect to State Medicaid programs generally, Medicaid managed care organizations (section 1902(a)(4) of the Social Security Act), Medicare Advantage organizations (section 1856(b)(1) of the Social Security Act) and Medicare Part D sponsors (section 1857(e)(1) of the Social Security Act), other types of Medicare providers and suppliers of items and services,52 and

Qualified Health Plans offering individual market coverage on State exchanges.

To the extent that terms and conditions relating to Federal conscience and anti-discrimination laws are incorporated into CMS’s instruments or agreements, CMS would have the authority to enforce such terms pursuant to the relevant enforcement mechanism for each instrument or agreement. For example, with respect to a special term and condition under a section 1115 demonstration, the demonstration could be terminated for a failure to comply with a term and condition. With respect to section 1115A, it would depend on the legal instrument used. For cooperative agreements, the enforcement mechanism would be Federal procurement law. For addenda to existing contracts, the enforcement mechanism would be Federal procurement law. For participation agreements and regulations—through which CMMI operates most of its section 1115A models—CMS could enforce these requirements under the terms of the agreement or regulation itself (which allow CMS to take certain corrective actions, up to and including termination of a non-compliant participant from the model)—and, under certain circumstances, under general CMS regulations (e.g., regarding recoupments). In the case of a CMS grant program, it would depend on the terms included in the grant award, but grant funds could be subject to forfeiture in some instances. Medicaid requirements imposed through rulemaking would be enforced through a compliance action under section 1902(a)(4) of the Social Security Act. For Medicare Advantage or Part C contracts, there are intermediate sanctions, civil money penalties, and potential contract termination for violations of contract requirements. In the case of Medicare providers and suppliers, enforcement could involve loss of a provider agreement or certification.

Debarment and suspension. Finally, the Department notes that it has the authority, where appropriate, to initiate debarment or suspension proceedings against entities that are otherwise eligible to receive Federal funding pursuant to grants and cooperative agreements, contracts and other funding instruments. See, e.g., 48 CFR part 9.4; 2 CFR part 376. Entities that are debarred, suspended, or proposed for debarment are also excluded from conducting business with the Government and, thus, are generally not eligible to receive Federal funds during the duration of the suspension or debarment. The Department notes that, under the FAR, an entity may be debarred for the “[c]ommission of any other offense indicating a lack of business integrity or business honesty that seriously and directly affects the present responsibility of a Government contractor or subcontractor.” 48 CFR 9.406–2(a)(5). In addition, a contractor may be debarred for a “[w]illful failure to perform in accordance with the terms of one or more contracts.” 48 CFR 9.406–2(b). Thus, the Department will consider whether suspension or debarment may be appropriate when enforcing terms and conditions implementing the Federal conscience and anti-discrimination laws.

Receipt and processing of complaints. With regard to the receipt and processing of complaints of violations of the Federal conscience and anti-discrimination laws, it is well settled in case law that every agency has the inherent authority to issue interpretive rules and rules of agency practice and procedure. 1 Richard J. Pierce, Jr., Administrative Law Treatise § 6.4 (4th ed. 2002). This rule does not substantively alter or amend the obligations of the respective statutes, JEM Broad. v. FCC, 22 F.3d 320 (D.C. Cir. 1994), and the definitions offered in this rule are reasonably drawn from the existing statutes, Hooter v. Dept. of Agriculture, 82 F.3d 165 (7th Cir. 1996). As a result, the Department and OCR have authority to issue interpretations regarding the Federal conscience and anti-discrimination laws, many of

52 Through delegation from the Secretary, CMS has statutory authority to place conditions on participation in its programs under the following authorities:

3. Hospitals—section 1861(e)(9) of the Act [42 U.S.C. 1395x(e)(9)].
6. Home health agencies (HHAs)—section 1861(o)(6) of the Act [42 U.S.C. 1395x(o)(6)].
7. Rehabilitation agencies and Clinics as providers of physical, occupational therapy and speech language pathology services—section 1861(p)(4)(A)(v) of the Act and 1861(p)(4) [flush language] [42 U.S.C. 1395x(p)(4)].
13. Independent clinical laboratories—section 353(f)(1)(E) of the Public Health Act [42 U.S.C. 263a(f)(1)(E)] (authorizing the Secretary to make additional regulations to assure consistent performance by such laboratories of accurate and reliable laboratory examinations and procedures ".
15. Intermediate care facilities for individuals with intellectual disabilities (ICF/IIDs)—section 1861(e)(9) of the Act [42 U.S.C. 1395x(e)(9)].
which have been placed in the Department’s program statutes.

Comment: The Department received a comment requesting that long-term care and post-acute providers be exempted from the rule because such entities are already heavily regulated.

Response: The Department declines to provide this exemption. The rule provides for appropriate enforcement of statutes protecting foundational civil rights, and Congress did not exempt long-term care or post-acute providers from these civil rights laws.

B. Section-by-Section Analysis

Purpose (§ 88.1)

In the NPRM, the Department’s “Purpose” section set forth the objective that the proposed regulation would, when finalized, provide for the implementation and enforcement of Federal conscience and anti-discrimination laws. It also stated that the statutory provisions and regulations contained in this part are to be interpreted and implemented broadly to effectuate their protective purposes. The Department did not receive comments on this section beyond the general comments addressed above. § 88.1 of the final rule reflects technical edits to replace the word “persons” with “individuals,” for clarity, and to refer to the set of statutes encompassed by this rule collectively as the “Federal conscience and anti-discrimination laws, which are listed in § 88.3 of this part.” Throughout the final rule, the Department has made changes to refer to those statutes as “Federal conscience and anti-discrimination laws,” rather than “Federal conscience protection and associated anti-discrimination laws.”

Summary of Regulatory Changes: The Department believes, as discussed above, that there are various reasons why this rule is needed and appropriate to provide for the implementation and enforcement of Federal conscience and anti-discrimination laws. In addition, the Department believes it is appropriate to interpret the rules broadly, within the scope of the text set forth in each statute, to effectuate their protective purposes. Generally, it is appropriate to broadly interpret laws enacted to protect civil rights and prevent discrimination. For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes this section as proposed, but with technical edits to replace the word “persons” with “individuals,” add the term “certain” in regard to health care services, remove the term “for example” and “comprehensively” in relation to the degree of the protections, for clarity, and to refer to the statutes part 88 addresses as “Federal conscience and anti-discrimination laws, which are listed in § 88.3 of this part.”

Definitions (§ 88.2)

In the NPRM, the Department proposed definitions of various terms. The comments and the responses applicable to each definition are set forth below.

Administered by the Secretary. The Department proposed that a federally funded program or activity is “administered by the Secretary” when it is “subject to the responsibility of the Secretary of the U.S. Department of Health and Human Services, established via statute or regulation.” The Department did not receive comments specifically on this definition.

In proposing the definition for “administered by the Secretary,” the Department noted that the 2008 Rule had not defined the phrase, and that the proposed definition was intended to add clarity. Upon further review and in consideration of general comments received concerning whether the proposed rules are sufficiently clear, the Department has concluded that the proposed definition does not add substantial clarity to the plain meaning of the phrase “administered by the Secretary.” No commenters submitted comments on this question, which suggests that there is no confusion about the meaning of this phrase. The Department is finalizing this rule without adopting the proposed definition, or any definition, of “administered by the Secretary.” In the event that the Department is asked to consider the meaning of this phrase in its application of the rule, the Department will apply the standard canons of statutory construction.

Assist in the Performance. The Department proposed that “assist in the performance” means “to participate in any program or activity with an articulable connection to a procedure, health service, health program, or research activity, so long as the individual involved is a part of the workforce of a Department-funded entity.” The definition specified that “[t]his includes but is not limited to counseling, referral, training, and other arrangements for the procedure, health service, health program, or research activity.” The Department received comments on this definition, including comments generally supportive of the proposed definition and generally opposed to it. Because comments evidenced significant confusion over the proposed definition, the Department amends the definition, as described further below.

Comment: The Department received comments suggesting that the definition of “assist in the performance” is unnecessary because employees maintain the option to seek employment elsewhere.

Response: The Department disagrees.

Congress established requirements, including the protections interpreted by this final rule, for recipients of certain Federal financial assistance or participants in certain Federal programs. Those obligations are not obviated merely because an employee who desires to make use of the protections that Congress provided could, instead, find employment elsewhere. Indeed, forcing a person to find employment elsewhere (which includes as a result of being fired), because they make certain protected objections to procedures, or because of their religious beliefs or moral convictions, is a quintessential example of the discrimination and coercion that these laws prohibit. The existence of numerous comments employing this line of reasoning provides additional evidence of the need for this final rule, so that the Department may better educate both recipients and the public on the law, and may ensure vigorous enforcement where education proves insufficient to achieve compliance.

Comment: The Department received comments stating that the proposed “articulable connection” standard is too broad and would permit objections by persons whom certain commenters contend have only a tangential connection to the objected-to procedure or health service program or research activity. Some commenters included examples such as a person preparing a room for an abortion or scheduling an abortion.

Response: The Department believes that the proffered examples are properly considered as within the scope of the protections enacted by Congress for those who choose to assist and those who choose not to assist in the performance of an abortion. Scheduling an abortion or preparing a room and the instruments for an abortion are necessary parts of the process of providing an abortion, and it is
reasonable to consider performing these actions as constituting “assistance.”

The definition will ensure a sufficient connection between the conduct for which (or from which) the conscientious objector is seeking relief and the protections Congress established in law. This approach would ensure that health care workers are not driven from the health care industry because of conflicts with their religious beliefs or moral convictions in connection with practices as set forth by Congress, such as abortion. It would also dissuade employers from attempting to skirt protections through improperly narrow interpretations of the term.

Nevertheless, in response to concerns about the potential overbreadth and need for increased clarity of the definition, the Department finalizes the definition with a change to the first sentence, so that it reads: To assist in the performance means “to take an action that has a specific, reasonable, and articulable connection to furthering a procedure or a part of a health service program or research activity undertaken by or with another person or entity.” The Department believes that replacing the phrase “to participate in any activity” with the phrase “to take an action” more clearly and precisely explains the conduct covered by “assist in the performance.” The phrase “undertaken by or with another person or entity” distinguishes “assisting” from “performing,” as assisting implies working with another. This change would also ensure that any articulable connection must also be “reasonable” and “specific.” It would, therefore, preclude vague or attenuated allegations that do not support a claim of assisting in a procedure or health service program or research activity. For example, a health care worker who objects to being scheduled to conduct physicals on some patients, when abortions are scheduled on the same day for unrelated patients elsewhere in the building, would not have a claim of being coerced into “assisting” with an abortion, barring additional facts. Conversely, where a provider requires the designation and availability of a backup doctor whenever an abortion is to be performed, that designation may constitute assistance in the performance of an abortion even if no complications arise requiring the backup doctor to intervene during or after an abortion in a particular instance. In addition, the Department clarifies that the activities need only to regard “part of a health service program or research activity,” in contrast to, for example, furthering the health service program as a whole.

The Department believes these changes adequately respond to commenters who contend the proposed definition of “assist in the performance” is insufficiently clear, without narrowing the definition to exclude actions that do constitute assistance in the performance. The Department believes the definition in the final rule, while still requiring OCR to weigh the facts and circumstances of each case, provides additional clarity. Congress did not define “assist in the performance.” The Department considered not finalizing a definition of “assist in the performance,” but without any definition, there may be confusion about what the term includes, with different employers interpreting it more broadly or more narrowly. For example, in the Danquah lawsuit, where nurses contended they were required to assist abortion cases in violation of the Church Amendments, a public hospital receiving Public Health Service Act funds filed a brief in Federal court stating that “to administer routine pre and post-operative care” to abortion patients does not constitute assisting in the performance of an abortion under the Church Amendments.55 Without taking a position on the facts of that case, the Department disagrees with a narrow interpretation of assisting in the performance that excludes pre- and post-operative support to a scheduled abortion procedure. The Department believes that the confusion among covered entities and members of the public about what constitutes assistance in the performance of a health service makes it appropriate for the Department to define “assist in the performance” with the changes as set forth in this final rule.

Comment: The Department received a comment requesting that “articulable connection” be replaced with “reasonable connection” because “articulable connection” may be abused by persons articulating connections that are irrational.

Response: The Department agrees in part, to the extent that the reasonableness standard should be included in the definition. As stated above, in response to similar concerns about potential overbreadth, the Department has modified the sentence containing the phrase, “to participate in any program or activity with an articulable connection to a procedure,” to add the word “reasonable,” and other language to limit its scope and add greater specificity. Specifically, the final rule describes “to take an action that has a specific, reasonable, and articulable connection to furthering a procedure or health service program or research activity undertaken by or with another person or entity.” This standard would preclude irrational assertions that an action constitutes assisting in the performance of a procedure, because it requires the action to have a specific, reasonable, and articulable connection to furthering the procedure. If the connection between an action and a procedure is irrational, there is no actual connection by which the action specifically furthers the procedure. The Department does not interpret the language to permit irrational applications.

Comment: The Department received a comment suggesting that the “articulable connection” standard be replaced with a standard that connects that assistance to the clinical setting and includes a complete, not illustrative, list of activities subject to the protections. The Department believes this concern is adequately addressed by the changes described above to clarify the definition of “assist in the performance.” The Department disagrees with the recommended approach because the statutory protections for objecting to assisting in the performance of procedures encompasses situations beyond the narrow scope proposed by the commenter. For example, an unlawfully coerced assistance in an abortion is no less unlawful if the coercion takes place outside a particular clinical setting, as opposed to within such clinical setting. Furthermore, creating an exhaustive list of potentially protected conduct does not allow for variations from State to State, or even clinic to clinic, in how procedures are handled. Such an approach also does not consider the diverse ways in which protected moral or religious objections may manifest, and would not account for changes in practices over time.

Comment: The Department received comments stating that the scope of persons protected by the definition of “assist in the performance” is too broad because it extends beyond health care professionals and includes other members of the workforce.

Response: The Department acknowledges that inclusion of a reference to workforce members in the definition of “assist in the performance” has caused confusion among commenters. The Department has concluded this reference is not necessary because the scope of persons and entities protected from being forced to “assist in the performance” of an

objected to procedure is already governed by provisions in the relevant law and this rule. Accordingly, the Department is finalizing the definition of “assist in the performance” to delete the reference to workforce members. Similarly, the Department is removing the reference to “any program or activity” as part of the definition of “assist in the performance” because the new language in the definition—“to take an action that has a specific articulable connection”—makes the reference to “any program or activity” unnecessary. The Department is also removing the reference to “health program or activity” because that term is no longer defined in the final rule, as discussed further below.

Comment: The Department received comments expressing concern that the definition of “assist in the performance” would cover ambulance drivers.

Response: EMTs and paramedics are treated like other health care professionals under this definition. Federal conscience and anti-discrimination laws would apply to them, or not, based on whether the elements of the law (and this final rule) are satisfied in a particular circumstance. To the extent the commenters contend that the kinds of actions that ambulance crews perform never count as assisting in the performance of a procedure encompassed by a Federal conscience or anti-discrimination law, the Department declines to take such a categorical approach. As discussed earlier, where EMTALA might apply in a particular case, the Department would apply both EMTALA and the relevant law under this rule harmoniously to the extent possible. EMTs and paramedics are trained medical professionals, not mere “drivers.” If commenters contend that driving a patient to a procedure should never be construed to be assisting in the performance of a procedure, the Department disagrees and believes it would depend on the facts and circumstances of each case. For example, the Department believes driving a person to a hospital or clinic for a scheduled abortion could constitute “assisting in the performance” of an abortion, as would physically delivering drugs for inducing abortion.

To the extent commenters are referring to emergency transportation of persons experiencing unforeseen complications after, for example, an abortion procedure, the Department does not believe such a scenario would implicate the definition of “assist in the performance” of an abortion, because the complications in need of treatment would be an unforeseen and unintended byproduct of a completed procedure. Further, the Department is not aware of any entities or medical professionals that would object to treating someone, or transporting someone to treatment, under these circumstances.

To the extent commenters are referring to emergency transportation of persons with conditions such as an ectopic pregnancy, where the potential procedures performed at the hospital may include abortion, the question of whether such transportation falls under the definition of “assist in the performance” would depend on the facts and circumstances. However, as a general matter, the Department does not believe that mere speculation that an object-to service or procedure may occur suffices to establish a specific and reasonable connection between the object-to service or procedure and the act of transporting the patient.

The Department’s existing regulation implementing EMTALA at 42 CFR 489.24 defines EMTALA’s statutory language “comes to the emergency department”26 to include an individual who is en route to a hospital in an ambulance owned and operated by the hospital, with limited exceptions, as well as, in certain circumstances, an individual who is en route to a hospital in an ambulance that is not owned and operated by the hospital.27 Federal Appeals Courts in the Ninth and First Circuits have examined the Department’s regulatory definition of “comes to the emergency department,” and have upheld the Department’s regulatory definition for EMTALA as reasonable, and have distinguished other Federal Circuits’ cases interpreting EMTALA by differentiating the cases by their facts or by the nature of the courts’ analyses.28

Comment: The Department received comments stating that the inclusion of counseling and referral in the definition of “assist in the performance” was not the intent of Congress in enacting the Church Amendments. Some commenters pointed to differing language in the Church, Weldon, and Coats-Snowe Amendments to support this assertion.

Response: Congress did not define the phrases “assist in the performance,” “counsel,” or “recommend” in the Church Amendments; “refer” or  

referral in Weldon or Coats-Snowe; or “make arrangements for” in Coats-Snowe. Some commenters contend that the meaning of these terms are completely distinct and should never be interpreted as overlapping. The Department disagrees. When Congress enacted paragraphs (b) and (c)(1) of the Church Amendments in 1973, and paragraphs (c)(2) and (d) in 1974, it used the phrase “assist in the performance” regarding certain medical procedures. Congress then enacted paragraph (e) in 1979 to protect applicants for medical training or study from discrimination based on their reluctance or willingness “to counsel, suggest, recommend, assist, or in any way participate in the performance of abortions or sterilizations.”

Counseling and referral are common and well understood forms of assistance that materially help people reach desired medical ends. Indeed, because referrals are so tightly bound to the ultimate performance of medical procedures, Congress banned many forms of referral fees or “kickbacks” among providers receiving Medicare and Medicaid reimbursements. See the Medicare and Medicaid Patient Protection Act of 1987, as amended, 42 U.S.C. 1320a–7b (the “Anti-Kickback Statute”) and the Ethics in Patient Referrals Act of 1989, as amended, 42 U.S.C. 1395nn (the “Stark Law”). Similarly, counseling of some form regarding abortion is often required before the procedure can be performed, as is the case in 33 States,59 and many hospitals and health care facilities likely require some kind of counseling as a prerequisite to abortion of their own accord.

Based on the text, structure, and purpose of the statutes at issue, the Department interprets “assist in the performance” broadly and does not believe the presence of more specific terms of assistance elsewhere in the Church Amendments, or in other laws that are the subject of this rule, narrows the meaning of the phrase. It would be contrary to the structure and history of the Church Amendments to interpret provisions protecting conscience in the study of abortion procedures significantly more broadly than provisions protecting conscience in the actual performance of an abortion procedure.

The Department, however, does not believe that every form of counseling, training, or referral (as defined under
this rule) necessarily constitutes assistance in the performance of a procedure under this rule. The Department, therefore, finalizes the definition of “assist in the performance” by changing the second sentence to read “This may include counseling, referral, training, or otherwise making arrangements for the procedure or health service program or research activity, depending on whether aid is provided by such actions.”

Comment: The Department received comments expressing concern that the definition of “assist in the performance” combined with the language of 42 U.S.C. 300a–7(d) could impact counseling or referrals for LGBT persons.

Response: Several provisions of statutes that are the subject of this rule are specific to abortion, sterilization, assisted suicide, or other procedures, and provide specific protections. In 42 U.S.C. 300a–7(d) and 300a–7(c)(2), Congress directed the protection of conscientious objections in contexts not tied to specific treatments. When the previous administration finalized 45 CFR part 88 in 2011, it affirmed its commitment to enforce Federal conscience and anti-discrimination laws, including 42 U.S.C. 300a–7(d). (76 FR at 9972). The Department continues and expands on that commitment in this rule. The Department does not pre-judge matters without the benefit of specific facts and circumstances, and particular claims under 42 U.S.C. 300a–7(d) will be evaluated on a case-by-case basis. Nonetheless, the Department believes that some commenters may misunderstand the scope of paragraph (d). Generally, the protections of paragraph (d) follow the funds provided by any program administered by the Secretary. But paragraph (d) does not encompass every medical treatment or service performed by any entity receiving Federal funds from HHS for whatever purpose. Instead, Congress narrowly focused paragraph (d) to prohibit the coercion of persons “in performance of health service programs funded under a program administered by the Secretary. As explained more fully in response to other comments below with respect to paragraph (d), many medical treatments and services performed by health care providers are not “part of” a health service program receiving funding from HHS. In such circumstances, paragraph (d) would not apply.

Comment: The Department received comments expressing concern that the definition of “assist in the performance” will result in conscientious objectors refusing to provide information to patients about objected-to treatment options, potentially in violation of principles of informed consent.

Response: The Department disagrees that the rule would violate principles of informed consent. Medical ethics have long protected rights of conscience alongside the principles of informed consent. The Department does not believe that enforcement of conscience protections, many of which have been in place for nearly fifty years, violates or undermines the principles of informed consent. This rule will not change the obligation that, absent exigent circumstances, doctors secure informed consent from patients before engaging in a medical procedure.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department adopts the definition of “assist in the performance” with changes to read that it means “to take an action that has a specific, reasonable, and articulable connection to furthering a procedure or health service program or research activity undertaken by or with another person or entity.” The definition specifies that “[t]his may include counseling, referral, training, or otherwise making arrangements for the procedure or health service program or research activity, depending on whether aid is provided by such actions.” This new definition removes “so long as the individual involved is a part of the workforce of a Department-funded entity” for accuracy and clarity and makes other minor language changes, for example, changing “includes but is not limited to” to “may include.”

Department. The Department proposed that “Department means the Department of Health and Human Services and any component thereof.” The Department did not receive comments on this definition.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, the Department adopts the definition of “Department” as proposed.

Discriminate or Discrimination. The Department proposed “discriminate or discrimination” to mean one of four categories of adverse actions or treatment, for which each paragraph or type of action within each paragraph would apply as permitted by the applicable statute. Paragraph (1) of the definition addressed prohibited adverse actions or treatment, as permitted by the applicable statute, as those actions relate to any grant, contract, subcontract, cooperative agreement, loan, license, certification, accreditation, employment, title, or other similar instrument, position, or status. Paragraph (2) addressed prohibited adverse actions or treatment, as permitted by the applicable statute, as those actions relate to any benefit or privilege. For both paragraphs, prohibited adverse actions or treatment included those to withhold, reduce, exclude, terminate, restrict, or otherwise make unavailable or deny the categories listed in paragraphs (1) and (2). Paragraph (3) addressed the use of any criterion, method of administration, or site selection, including the enactment, application, or enforcement of laws, regulations, policies, or procedures directly or through contractual or other arrangements, that tends to subject individuals or entities protected under the rule to any adverse effect described in this definition, or has the effect of defeating or substantially impairing accomplishment of a health program or activity with respect to individuals, entities, or conduct protected under the rule. Finally, paragraph (4) of the definition set forth a catch-all for which discriminate or discrimination means to otherwise engage in any activity reasonably regarded as discrimination, including intimidation or retaliatory action.

The Department received comments on this definition, including comments generally supporting or opposing the proposed definition.

Comment: The Department received comments stating that the definition of “discriminate or discrimination” would encompass situations in which States apply neutral laws of general applicability that require the performance of abortion, and such commenters disagreed that a neutral law of general applicability can be deemed an act of discrimination.

Response: The term “neutral law of general applicability” is a legal term of art that derives from case law interpreting the Free Exercise Clause of the First Amendment. What renders a law “neutral” in the Free Exercise context is that the law is not by its text, history, motive, or operation targeted at the protected activity of religious exercise. If commenters are contending that States that might otherwise be prohibited by a Federal conscience or anti-discrimination law from discriminating against doctors who refuse to perform abortions may nonetheless do so pursuant to a neutral State law of general applicability, the Department disagrees. States that accept
applicable Federal funds and thereby subject themselves to Federal conscience and anti-discrimination laws cannot evade the requirements of those laws through neutral laws of general applicability. For example, the Weldon Amendment flatly prevents State laws from discriminating against doctors because they do not perform abortions against their will regardless of whether the law is “neutrally” worded or applied. Subjecting persons to penalties or adverse treatment because they decline to perform abortions is a form of discrimination encompassed by the Weldon Amendment. Even if a State law were to impose penalties on OB/GYNs because they decline to perform any lawful procedure they are competent to perform (the Department is not aware of such a law), and that law were used to impose penalties on OB/GYNs because they do not perform abortions, that would also constitute discrimination encompassed by the Weldon Amendment. The Coats-Snowe Amendment similarly prohibits discrimination against a health care entity, such as an individual physician, who (among other things) declines to perform abortions. Additionally, under both the Coats-Snowe and Weldon Amendments, protected entities and individuals need not specify a motive, or provide a justification, for declining.

Paragraph (c)(1) of the Church Amendments provides that a covered entity cannot discriminate against any physician or other health care personnel (1) because he or she performed or assisted in the performance of a sterilization or abortion procedure, (2) because he or she refused to perform or assist “on the grounds that” doing so “would be contrary to his [or her] religious beliefs or moral convictions,” or (3) “because of his religious beliefs or moral convictions respecting sterilization procedures or abortions.” The last provision covers circumstances where a covered entity’s motive is arguably driven by anti-religious animus. But the second prohibition of discrimination does not rely on animus on the part of the entity committing the discrimination; it rests solely on whether the person refused to perform or assisted in the performance of a sterilization or abortion procedure on the grounds of religious beliefs or moral convictions with respect to such procedures. Therefore, under paragraph (c)(1), a covered entity cannot discriminate against a doctor, for example, because of his or her refusal to perform abortions on the grounds of religious beliefs or moral convictions regardless of whether the covered entity’s discrimination is accompanied by anti-religious animus, or whether the entity would also penalize doctors who refuse to perform abortions for non-protected reasons. Nothing in the legislative history of the Church Amendments suggests that Congress intended to permit entities receiving applicable funds to coerce religiously or morally motivated doctors to perform abortions, so long as those entities also require doctors who do not have qualms about abortions to perform them. Consequently, the Department concludes that the concept of discrimination, as used in Federal conscience and anti-discrimination laws, can encompass a situation where a State takes adverse action against a doctor because of the doctor’s refusal to perform an abortion, even under a general or “neutral” law mandating the performance of abortions.

Comment: The Department received comments stating that the phrase “any activity reasonably regarded as discrimination” is overbroad or impermissibly vague.

Response: Discrimination standards usually do not limit themselves to an exclusive list of discriminatory actions, because adverse action based on prohibited grounds can take various forms depending on the facts and circumstances of the case. This rule encompasses several statutes barring discrimination. As such, the Department believes it is appropriate for this definition to encompass an array of actions that might be taken against a person on the basis of such person’s exercise of the rights protected by Federal conscience and anti-discrimination laws. On the other hand, the Department agrees in part with commenters that the language “any activity reasonably regarded as discrimination” does not provide precise guidance on the scope of the definition. Therefore the Department will finalize the definition of “discriminate or discrimination” by deleting proposed paragraph (4). The Department will also change the word “means” to “includes” in the opening phrase of the discrimination definition, and change the phrase “as permitted by the applicable statute” to “to the extent permitted by the applicable statute.”

This will maintain the definition’s description of types of discrimination, and ensure that the definition only applies to the extent it is authorized by the applicable statute, while also rendering the descriptions in the definition non-exclusive, so OCR can consider grounds that might constitute discrimination in violation of an applicable Federal conscience and anti-discrimination law to which this part applies.

Any allegation of discrimination under the laws to which this part applies will be considered in light of a reasonable interpretation of applicable law and an application of that law to the facts. By making the definition inclusive, instead of exclusive, by use of the word “includes,” the definition will not exclude the types of actions that constitute discrimination but might not fall squarely into one of the descriptions set forth in paragraphs (1) to (3) of the definition. Additionally, in light of the language added to address concerns with respect to how this definition interacts with reasonable accommodations, the Department believes that making the definition inclusive, while eliminating proposed paragraph (4), ensures that the definition is not overly broad.

Comment: The Department received comments stating that the proposed definition of “discriminate or discrimination” conflicts with or is inconsistent with other Federal laws such as Title VII of the Civil Rights Act and Title X of the Public Health Service Act.

Response: The Department disagrees that these regulations conflict with statutes applicable to the Title X family planning program under the Public Health Service Act. The Department agrees that regulations finalized in 2000 governing the Title X program, which in some cases required referrals, information, and counseling about abortion, conflicted with certain Federal conscience and anti-discrimination laws and, consequently, with this rule. The Department acknowledged this conflict in the preamble to the 2008 Rule (73 FR at 78087), in the preamble to the notice of proposed rulemaking for the Title X regulations in 2018 (83 FR 25502, 25506 (June 1, 2018)), and in the preamble to the Title X final rule published in 2019 (84 FR 7714, 7716 (March 4, 2019)). In all three instances the Department stated it would operate the Title X program in compliance with Federal conscience and anti-discrimination laws, notwithstanding the language of the 2000 Title X regulations.²² The

—²²In addition, in the preamble to the 2000 Title X regulations, the Department acknowledged the implications of the Church Amendment when it addressed a comment that the requirement to provide options counseling “should not apply to employees of a grantee who object to providing such counseling on moral or religious grounds,” and rejected it, contending that it is not necessary because, under the Church Amendments, “grantees may not require individual employees who have such objections to provide such counseling,” but “in such cases the grantees must make other arrangements to ensure that the service is available.
recently published Title X final rule revised the 2000 Title X regulations to eliminate that conflict and achieve consistency with Federal conscience statutes. Nothing in the Title X statute itself or in appropriations restrictions applicable to Title X funding requires abortion referrals, counseling, or information. This includes Congress’s directive that, in Title X programs, “all pregnancy counseling shall be nondirective.” That provision does not address referrals or information, only counseling, and does not require pregnancy counseling, but merely specifies that, if pregnancy counseling occurs, it shall be nondirective—and now the regulation permits, but does not require abortion counseling and information (and bars abortion referrals). Accordingly, this rule is consistent with both Title X and the Federal conscience and anti-discrimination laws.

With respect to Title VII, the Department agrees with some commenters that the definition of “discriminate or discrimination” as proposed does not function in the same way as the approach set forth in Title VII, specifically regarding parts of the

Title X clients who desire it.” 65 FR 41270, 41274 (July 3, 2000). At the time, the Department apparently did not consider the implications of the Coats-Snowe Amendment adopted in 1996, with respect to Title X grantees and applicants; the Weldon Amendment was adopted subsequently.

64 The Department acknowledges that, as of the date of publication of this final rule, several district courts have issued preliminary injunctions, on a nationwide basis, against the enforcement or implementation of the 2019 Title X final rule, and required the Department to maintain the status quo under the 2000 Title X regulations. Those injunctions do not purport to otherwise enjoin the Department’s enforcement of the Federal conscience and anti-discrimination laws. Since at least 2008, under the 2000 Title X regulations, the Department has recognized that it cannot, by regulation, require abortion counseling or referral by a Title X applicant, grantee, project, clinic, or provider where such requirement would constitute a violation of one or more of the Federal conscience and anti-discrimination laws, and the Department has stated that it reserves the Title X program accordingly. The 2019 Title X final rule memorialized HHS’s longstanding recognition that Federal conscience and anti-discrimination laws bar enforcement of certain requirements of the 2000 Title X regulations, but the 2019 Title X final rule did not alter HHS’s preexisting policy dating back at least to 2008 of not enforcing requirements of the 2000 regulations where they may conflict with the Federal conscience statutes as explained in this rule. This rule, similarly, does not alter that status quo, but sets forth general processes for enforcing Federal conscience and anti-discrimination laws. The Department will implement all of its programs consistent with the Federal conscience and anti-discrimination laws and with any applicable court orders.

reasonable accommodation of religion standard set forth under Title VII. The Department believes components of that approach are appropriate in this context and is therefore adding a new paragraph (4) to the definition of “discriminate or discrimination” to properly recognize that the voluntary acceptance of an effective accommodation of protected conduct, religious beliefs, or moral convictions, will not, by itself, constitute discrimination. Further, the Department will take into account an entity’s adoption and implementation of policies to accommodate objecting persons in making determinations of discrimination. The Department finds this approach appropriate because it is generally consistent with the text and intent of Federal conscience and anti-discrimination laws to respect objections based on religious beliefs by accommodating them. The Department’s approach will differ from Title VII, however, by not incorporating the additional concept of an “undue hardship” exception for reasonable accommodations under Title VII.

Despite having previously enacted Title VII, Congress did not adopt an undue hardship exception for the protections found in Federal conscience and anti-discrimination laws that are the subject of this rule. The Department believes Congress’s decision to take a different approach in Title VII as compared to Federal conscience and anti-discrimination laws is consistent with the fact that Title VII’s comprehensive regulation of American employers applies in far more contexts, and is more vast, variable, and potentially burdensome (and, therefore, warranting of greater exceptions) than the more targeted conscience statutes that are the subject of this rule, which are health care specific, and often procedure specific, and which are specific to the exercise of Congress’s Spending Clause authority. Therefore, the Department deems it appropriate to recognize that, when appropriate accommodations are made for objections protected by Federal conscience and anti-discrimination laws, those accommodations do not themselves constitute discrimination. The Department also finds it appropriate not to adopt the undue hardship exception for enforcing Federal conscience and anti-discrimination laws because Congress chose not to place that limitation on the protections set forth in the Federal conscience and anti-discrimination laws.

Comment: The Department received comments expressing concern that the proposed definition of “discriminate or discrimination” would prohibit employers from accommodating religious objections by placing the conscientious objector in a different position, potentially requiring the double-staffing of certain positions.

Response: The Department agrees with this concern in part. As discussed above, the Department is adding language in response to public comments to acknowledge the reasonable accommodations that entities make for persons protected by Federal conscience and anti-discrimination laws. In this way, the Department recognizes that staffing arrangements can be acceptable accommodations in certain circumstances. The Department has addressed this through the addition of a new paragraph (4) in the definition of “discriminate or discrimination” that recognizes the effective and timely accommodation of an employee (which may include non-retaliatory staff rotations) as not constituting discrimination. Additionally, to address concerns raised by these commenters, the Department is adding new paragraphs (5) and (6) to clarify that, within limits, employers may require a protected employee to inform them of objections to referring for, participating, or assisting in the performance of specific procedures, programs, research, counseling, or treatments to the extent there is a reasonable likelihood that the protected entity or invididual may be asked in good faith to refer for, participate in, or assist in the performance of such conduct, and that the employer may use alternate staff or methods to provide or further any object-to conduct, subject to certain limitations designed to protect the objecting person.

On the other hand, as a general matter, it is not an acceptable practice under Federal conscience and anti-discrimination laws for covered entities to deem persons with religious or moral objections to covered practices, such as abortion, to be disqualified for certain job positions on that basis. For example, a hospital receiving Public Health Service Act funds could not deem a doctor or a nurse with a religious objection to performing abortions to be ineligible to practice obstetrics and gynecology on that basis. An important purpose of laws such as the Church Amendments is to prevent fields such as

65 For example, nurses assigned exclusively to nursing homes for elderly patients would not be expected to refer or assist in the performance of any sterilization procedures or abortions, and thus, it would be inappropriate for an entity subject to the prohibitions in this rule to require such nurses to disclose whether or not they have any objections to referring or assisting in such procedures.
obstetrics and gynecology from being purged of pro-life personnel just because abortion is legal and some health care entities perform them. In this sense, the Department disagrees with commenters who essentially contend that pro-life medical personnel can be placed outside of women’s health positions for that reason. The Department need not address in this rule whether a covered entity could disqualify a person with religious or moral objections to covered practices if such covered practices made up the primary or substantial majority of the duties of the position, as the Department is not aware of any instances in which individuals with religious or moral objections to such practices have sought such jobs.

Overall, under new paragraph (6) of the definition, taking steps to use alternate staff or methods to provide for or further the objected-to conduct would not run afoul of the definition of discrimination, or constitute a prohibited referral, if the employer or program does not require any additional action by the objecting individual or health care entity and if such methods do not exclude individuals from areas or fields of practice on the basis of their protected objections. The employer may also inform the public of the availability of alternate staff or methods to provide for or further the objected-to conduct, if doing so does not constitute retaliation or other adverse action against the objecting individual or health care entity. For example, an employer may post a notice and a phone number in a reception area or at a point of sale, but may not list staff with conscientious objections by name if such singling out constitutes retaliation.

The Department disagrees with commenters who take the view that the definition of “discrimination” should not include liability for otherwise disparate impact arising from disparities in observed outcomes. The Department believes these disparities may enable discrimination, or the potential for discrimination, to be uncovered in the context of the program or activity, and each protected right is typically associated with a particular Federal funding stream or streams. For example, in §88.3(c)(2), “discrimination” is unlawful when done “on the basis that the health care entity in the provision—“does not provide, pay for, provide coverage of, or refer for, abortion.” Thus, an adverse action taken for reasons wholly unrelated to abortion or the health care entity’s actions or beliefs objecting to abortion would not constitute a violation under this provision. In addition, as noted above, whether an action is regarded as adverse is subject to a standard of reasonableness.

The Department notes that the definition of “discriminate or discrimination” finalizes the definition of “discriminate or discrimination” that are encompassed by the protections set forth in those statutes and this rule.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes the definition of “discriminate or discrimination” (with additional minor changes for accuracy and clarity); changing “means” to “includes,” limiting the definition “to the extent” permitted by the statute; changing “exclude” to “exclude from;” deleting “otherwise” from paragraphs (1) and (2); adding “or impose any penalty” to the end of paragraph (2); in paragraph (3), deleting “defeating or substantially impairing accomplishment of a health program or activity,” changing “tends to subject” to “subject,” and adding “on grounds prohibited under an applicable statute encompassed by this part;” deleting the proposed paragraph (4) and

"discrimination” as adopted in this final rule is non-exclusive, as discussed above, OCR is not predjudging any complaints of violations of part 88 that are based on a claim of disparate impact, and will consider the circumstances of each complaint and apply each statute according to its text and any applicable court precedents.

Comment: The Department received comments stating that the proposed definition of “discriminate or discrimination” would turn any adverse action taken against a protected party for any reason into per se unlawful discrimination.

Response: The Department disagrees. The definition of “discriminate or discrimination” does not trigger violations based on any adverse action whatsoever, but must be read in the context of each underlying statute at issue, any other related provisions of the rule, and the facts and circumstances. In this rule, the prohibition on discrimination is always conditioned on, and applied in the context of, violating a specific right or protection, and each protected right is typically associated with a particular Federal funding stream or streams. For example, in § 88.3(c)(2), “discrimination” is unlawful when done “on the basis that the health care entity in the provision—“does not provide, pay for, provide coverage of, or refer for, abortion.” Thus, an adverse action taken for reasons wholly unrelated to abortion or the health care entity’s actions or beliefs objecting to abortion would not constitute a violation under this provision. In addition, as noted above, whether an action is regarded as adverse is subject to a standard of reasonableness.

Comment: The Department received comments suggesting that the definition of “discriminate or discrimination” should not include elements of disparate impact. Because circuit courts of appeals handle disparate impact analysis differently, its inclusion here will lead to confusion and differing outcomes depending on the circuit in which the conduct occurred, and including elements of disparate impact would create incentives to manipulate data in order to bring illegitimate complaints.

Response: The Department agrees in part and disagrees in part. Because there is uncertainty about which laws, or parts of laws, implemented by this rule may or may not support a disparate impact claim, the Department is choosing to finalize the rule without explicitly including terms traditionally associated with disparate impact theories. It is specifically replacing the phrase “adverse effects” with “adverse treatment” and is deleting “otherwise,” “tends to,” and “defeats or substantially impairs accomplishment of a health program or activity,” changing “tends to subject” to “subject,” and adding “on grounds prohibited under an applicable statute encompassed by this part;” deleting the proposed paragraph (4)
adding new paragraph (4) as described above regarding entities that “shall not be regarded as having engaged in discrimination;” adding paragraph (5) as described above allowing an entity subject to any prohibition in this part to “require a protected entity to inform them of objections;” and adding paragraph (6) as described above addressing what actions by the entity subject to this part “would not, by itself, constitute discrimination.”

**Entity.** The Department proposed that “Entity means a ‘person’ as defined in 1 U.S.C. 1; or a State, political subdivision of any State, instrumentality of any State or political subdivision thereof, or any public agency, public institution, public organization, or other public entity in any State or political subdivision of any State.” The Department received comments on this definition.

**Comment:** The Department received comments requesting that the definition of “entity” include non-profit religious corporations as well.

**Comment:** The Department received a comment noting that the definition of “entity” does not mention foreign governments, the United Nations, and related bodies. The comment proposed explicitly excluding foreign governments and the United Nations from the definition of “entity” because of sovereignty concerns.

**Response:** The Department disagrees that the term “entity” should address foreign governments, foreign nongovernmental organizations, intergovernmental organizations (such as the United Nations), and related bodies, but the Department disagrees that they should be explicitly excluded. Some of the Federal conscience statutes to be enforced by the Department may implicate foreign entities,\(^67\) but Congress did not exempt certain kinds of foreign entities that would otherwise be covered. Accordingly, the definition of “entity” is modified to clarify that “entity” may include a foreign government, foreign nongovernmental organization, or intergovernmental organization (including the United Nations and its affiliated agencies). The Federal statutes at issue apply their protections to the funds at issue, regardless of whether those funds are awarded to domestic or foreign entities. If foreign entities wish not to be bound by these conscience protections, they may choose not to accept the relevant funds.

**Comment:** The Department received a comment stating that the definition of “entity” would permit any employer to deny its employees coverage for abortion or other objected-to services, even if otherwise required by law. Other comments expressed concern that defining “entity” to include State or local governments expands covered entities beyond the health care industry.

**Response:** The Department disagrees. The definition section must be read in conjunction with other sections of the rule when determining whether any particular entity must comply with any particular provision of the rule. For example, the fact that private employers are a type of organization that falls under the definition of “entity” does not make every private employer in America automatically subject to the Federal protection statutes for which this rule provides enforcement mechanisms. Similarly, the fact that natural persons fall under the definition of entity does not mean that every person in America is automatically granted protection under the rule. Rather, obligations and protections apply only to those entities that are subject to a relevant provision of a statute under the rule. Each provision in this final rule that addresses a Federal conscience statute has a paragraph titled “Applicability” (see § 88.3), which specifies whether an entity is subject to any given provision of a Federal statute at issue. For some statutes or some portions of statutes, the Applicability paragraph by its own terms may only implicate certain types of entities or only entities receiving certain types of funding.

**Summary of Regulatory Changes:** For the reasons described in the proposed rule\(^68\) and above, and considering the comments received, the Department finalizes the definition of “entity” by including “or, as applicable, a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).” The Department also adds the term “the Department” to the definition of “entity,” for clarity.

As described further below, to ensure uniformity, the Department also modifies the definitions of “recipient” and “sub-recipient” to include, as applicable, a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).

**Federal financial assistance.** The Department proposed that Federal financial assistance align with the definition of this term in the Department’s regulations implementing Title VI of the Civil Rights Act of 1964 at 45 CFR 80.13, which includes the provision of assistance of Federal funds and non-cash assistance, such as the detail of Federal personnel. The Department received comments on this term.

**Comment:** The Department received a comment stating that the uses of the word “arrangement” and the “provision of assistance” were difficult to interpret, and that the definition of “Federal financial assistance” should clarify whether it “includes any claim for payment, payments in exchange for health care services, or applications to participate in a Federal program through which payment would be made.”

**Response:** The Department disagrees. The proposed definition of “Federal financial assistance” mirrors the definition used in the Department’s regulations implementing Title VI and is intended to carry the same meaning as it has traditionally been understood to carry in the application of those regulations. See 45 CFR 80.13(f). The Department believes that entities subject to this regulation will be sufficiently familiar with that meaning to understand its application in this final rule. Further, numerous Federal courts have recognized that Federal financial assistance encompasses subsidies, but not fair market value compensation paid in return for services. See, e.g., Jarno v. Lewis, 256 F. Supp. 2d 499, 504 (E.D. Va. 2003); DeVargas v. Mason & Hanger-Silas Mason Co., 911 F.2d 1377, 1382 (10th Cir. 1990); Cook v. Budget Rent-a-Car, 502 F. Supp. 494 (S.D.N.Y. 1980); Shotz v. American Airlines, 420 F.3d 1332 (11th Cir. 2005); Venkatraman v. REI Systems, 417 F.3d 418 (4th Cir. 2005). In light of the comments, the Department finalizes this definition with a minor clarifying change to avoid a circular definition, by replacing “funds, support, or aid” with “subsidy” in paragraph (5) of the definition.

**Summary of Regulatory Changes:** For the reasons described in the proposed
are not natural persons can hold moral or religious beliefs.

Response: Federal law routinely recognizes corporations, organizations, or other non-natural persons as holders of legal rights and subject to legal obligations. The Federal Government has long recognized the Free Speech and Free Exercise rights of non-profit organizations with charitable missions related to the religious beliefs or moral convictions of its members, and has recognized the Free Speech rights of public corporations. *Citizens United v. FEC*, 558 U.S. 310, 365 (2010). The definition of “person” that is protected under the Religious Freedom Restoration Act includes both natural and non-natural persons (corporations, partnerships, etc.).

In *Hobby Lobby*, having found that the text of the Religious Freedom Restoration Act, 42 U.S.C. 2000bb-2000bb-4 (“RFRA”), does not preclude its application to corporations, the Supreme Court held that a closely held for-profit corporation can assert the religious beliefs of its owners. More specifically, from the enactment of the first paragraph of the Church Amendments in 1973, Federal conscience and anti-discrimination laws have recognized that entities such as hospitals can possess “religious beliefs or moral convictions” when prohibiting their facilities from being used for abortions or sterilizations. In addition, the Coats-Snowe and Weldon Amendments, and ACA section 1553, protect organizations or institutions as “health care entities” when they object to certain activities concerning abortion or assisted suicide without regard to the motivation for the objection. Both the Coats-Snowe and Weldon Amendments contain definitions of “health care entity” that include, as examples, both natural persons and corporate persons. The same is true of the definition of “health care entity” in ACA section 1553.

Finally, religious faith and moral convictions are often the organizing principle for entities covered in this rule, and natural persons form these organizations for the purpose of asserting their faith or convictions more forcefully and effectively in the public realm. As the Supreme Court has recognized, there is nothing about organizing in a group that diminishes the rights they would enjoy as individuals. Therefore, the Department considers it appropriate to finalize the definition of health care entities to include non-natural persons.

Comment: The Department received comments stating that the proposed definition of “health care entity” exceeds the Department’s statutory authority under the Weldon Amendment and the Coats-Snowe Amendment.

Response: The Weldon and Coats-Snowe Amendments and ACA section 1553 each provide a definition of “health care entity” that contains a non-exhaustive list of entities that are “health care entities.” The Coats-Snowe Amendment says that “health care entity” “includes an individual physician, a postgraduate physician training program, and a participant in a program of training in the health professions.” The Weldon Amendment and ACA section 1553 state that the term “includes an individual physician or other health care professional, a hospital, a provider-sponsored organization, a health maintenance organization, a health insurance plan, or any other kind of health care facility, organization, or plan.” All three laws use the word “includes,” which means the lists of such entities in the definitions are non-exhaustive, and other entities could also be “health care entities” under the plain meaning of the term as used in those statutes. The Coats-Snowe Amendment also uses a catch-all phrase for entities in “any other program of training in the health professions.” The Weldon Amendment and ACA section 1553 likewise include catch-all provisions such as “other health care professional” and “any other kind of health care facility, organization, or plan.” Thus, in defining the term for purposes of this rule, it is consistent with the statutory text to list certain entities that are not explicitly
mentioned in the statutes, because the statutory lists are non-exhaustive; including those entities is consistent with the plain meaning of the terms set forth in those statutes. As explained in the following discussion, however, the Department is finalizing the definition of health care entity to better conform the definition to the varying texts of the specific Federal conscience and anti-discrimination laws that use the term.

Comment: The Department received comments stating that the inclusion of “a plan sponsor” in the definition of “health care entity” would subject all employers who sponsor group health plans to the conscience statutes using that term. Other commenters contended the laws using those terms did not intend to protect plan sponsors that are not otherwise health care entities. Other commenters suggest that the term “health care entity” should not be the same for the Coats-Snowe Amendment, the Weldon Amendment, and ACA section 1553.

The Department received other comments supporting the inclusion of “plan sponsor” and “third party administrator” in the definition of “health care entity.” One comment expressed that faith-based organizations that fund health plans should not be required to fund services or procedures that violate their religious beliefs.

Response: Commenters contending that including particular types of entities in the definition of “health care entity” would require such entities to comply with the Coats-Snowe Amendment, the Weldon Amendment, or ACA section 1553 are incorrect. The term “health care entity” is used in those statutes—and in this final rule—to specify not which entity must comply with the statute, but which kinds of entities are protected from discrimination. Thus, including an entity in the term “health care entity” under those statutes does not expand or affect which governmental or non-governmental fund recipients must comply with those statutes.

The Department concludes it is appropriate to include “a plan sponsor” in the definition “health care entity” for purposes of the Weldon Amendment and ACA section 1553. The Weldon Amendment explicitly protects entities that do not pay for or provide coverage of abortions, and includes “health insurance plans, or any other kind of health care facility, organization, or plan” within its own illustrative list of protected health care entities. ACA section 1553 applies to government entities receiving federal financial assistance under the ACA, and any health plan created under the ACA. It uses the same definition of “health care entity” as the Weldon Amendment, in specifying that health care entities cannot be subject to discrimination for choosing not to provide certain items or services related to assisted suicide. Because the focus of both laws includes protection of health plans, it is consistent with their language and scope to include “a plan sponsor” as a protected “health care entity.” In the action of sponsoring a health plan or health coverage, the plan sponsor engages in an important function with respect to health care. Although the sponsor, the plan, and the issuer are all distinct entities, sponsoring a plan and paying for coverage (by an issuer, in the case of a fully insured plan) or for health care services (in the case of a self-insured plan) are part and parcel of the provision of health coverage under a group health plan. The Weldon Amendment is written to prohibit discrimination against, among others, entities that do not provide abortion in health coverage; ACA section 1553 is similarly written to protect entities from being required to provide certain health care items or services in connection with health plans and the ACA. Both laws define health care entity to include the catch-all phrase “any other kind of health care facility, organization, or plan,” in order to protect a broad range of entities that might be engaged in providing coverage or services and subject to discrimination for not providing or covering abortion or assisted suicide, respectively. Therefore, treating a plan sponsor as a protected health care entity is consistent with the text of the Weldon Amendment and ACA section 1553.

In further consideration of public comments, however, the Department has concluded that the definition of “health care entity” should be different for the Coats-Snowe Amendment than for the Weldon Amendment and ACA section 1553, including with respect to whether to include a plan sponsor. The Coats-Snowe Amendment, while providing a non-exclusive list of entities and individuals included in the term “health care entity,” contains a different list of entities and individuals than that set forth in the Weldon Amendment and ACA section 1553. Moreover, the nature and scope of protections set forth in the Coats-Snowe Amendment—which can assist in understanding the intended range of protected health care entities—also differ. The Coats-Snowe Amendment focuses generally on the performance of, training for, and referral for abortions, whereas the Weldon Amendment focuses more broadly on not just providing and referring for, but also providing coverage of, and payment for, abortions. Similar to the Weldon Amendment, and unlike the Coats-Snowe Amendment, ACA section 1553 focuses on the context of health plans and coverage in addition to the provision of items and services. Consequently, the Department concludes that it is appropriate to finalize a definition of health care entity for the Coats-Snowe Amendment that is somewhat different from the definition applicable to the Weldon Amendment and ACA section 1553, and to not include in the definition for purposes of the Coats-Snowe Amendment entities pertaining specifically to the health insurance and coverage context, namely, a provider-sponsored organization, a health maintenance organization, a health insurance plan (including group or individual plans), a plan sponsor, an issuer, or a third-party administrator. Likewise, the Department deems it appropriate not to list in the definition applicable to the Coats-Snowe Amendment the catch-all phrase that is in the statutory text of the Weldon Amendment and ACA section 1553: “or third-party administrator; or any other kind of health care organization, facility, or plan.”

Otherwise, the Department deems it appropriate to include in both definitions of health care entity the proposed rule’s non-exhaustive enumeration of various individual and organizational entities that engage in health care practices or services: “an individual physician or other health care professional; health care personnel; a participant in a program of training in the health professions; an applicant for training or study in the health professions; a post-graduate physician training program; a hospital; a medical laboratory; or an entity engaging in biomedical or behavioral research.”

Because the Department intended these entities to be health care entities, and the term “laboratory” could be interpreted to include laboratories that are not related to health care, the Department finalizes the term “laboratory” in these definitions to add the word “medical” to clarify its health care scope.

These entities are health care entities under the ordinary meaning of that term because they are engaged in health care practices, training, or research. They are also similar to the types of individuals and entities listed in the non-exclusive lists of health care entities in the Coats-

72 That is not to say that certain types of health plans could not also be health care providers, e.g., staff model health maintenance organizations.
Snowe Amendment, the Weldon Amendment, and ACA section 1553. All three statutes list individuals and personnel in the health professions, not just corporate entities. This demonstrates that Congress explicitly intended the term health care entity in all three to protect individuals, not just organizational entities. All three definitions also list organizational entities, and of course they all contain the basic term “health care entity,” which must be interpreted to encompass terms included in its ordinary meaning.

Finally, the proposed definition of “health care entity” concludes by specifying that it “may also include components of State or local governments.” To clarify the meaning of this sentence, the Department finalizes it with a change in each definition of “health care entity,” to read: “As applicable, components of State or local governments may be health care entities under” the Coats-Snowe Amendment, the Weldon Amendment, and ACA section 1553.

Comment: The Department received a comment stating that pharmacies and pharmacists are sometimes not understood to be health care providers and asking that pharmacists and pharmacies be included in the provisions of this rule.

Response: The Department accepts this recommendation and is including pharmacies and pharmacists in the definitions of “health care entity.” A pharmacy is a health care entity, considering the ordinary meaning of that term, because it provides pharmaceuticals and information, which are health care items and services. Regarding pharmacists, because Congress specified that the term “health care entity” in the Coats-Snowe Amendment, the Weldon Amendment, and ACA section 1553, includes certain individuals in the health professions, and does not provide an exclusive definition, the Department deems it appropriate to include pharmacists, who are also health care professionals. Whether a particular protection in those three laws applies to a pharmacist or pharmacy in a particular case, or whether it applies to any of the examples in these definitions, is a separate question that will be determined in the context of the factual and legal issues applicable to the situation. For the purpose of specifying whether a pharmacist or pharmacy could possibly be covered by the term health care entity in these three laws, depending on the circumstances, the Department deems it appropriate to include them in the list of individuals and entities set forth in these definitions.

Comment: The Department received comments suggesting that “health care entity” should include public school districts that provide on-campus medical care or manage vaccination records.

Response: The definition specifies that “health care entity” also includes components of State or local governments. The Department does not believe the definitions need to specify further that public school districts providing on-campus medical care are included. The Department will evaluate the applicability of the rule to public school entities with health care functions according to the facts and circumstances of each case as they arise and the applicable laws.

Comment: The Department received a comment proposing that “health care entity” exclude occupational therapists.

Response: To the extent that occupational therapists are health care personnel qualifying as “other health care professionals,” the Department disagrees that they would be necessarily excluded from protection. While some questions concerning who qualifies for protection in a particular circumstance are relatively straightforward, such as physicians under certain conscience protection laws, some questions are closer and depend on the facts and the applicable law. The Department, therefore, declines to make explicit exclusions, such as for occupational therapists, to the definitions of health care professionals, and will instead consider individual cases based on the facts and circumstances presented in each case as they arise and the applicable law.

Comment: The Department received comments stating that the inclusion of “health care personnel” exceeds the definition of “health care entity” under the Weldon Amendment or other laws using that term.

Response: The Department disagrees. The list of individuals, persons and entities included as a “health care entity” in the Weldon Amendment and ACA section 1553 includes “an individual physician,” and also the catch-all phrases “or other health care professional.” The Coats-Snowe Amendment says the term includes “individual physician” and “a participant in a program of training in the health professions.” Because the term “health care entity” includes individuals, and the definitions are non-exclusive, the Department deems it appropriate to include other individuals who are health care personnel. Including “health care personnel” and/or “health care professional” in the definition of “health care entity” is, therefore, consistent with Congress’s explicit inclusion of individual persons in the health care field. Doing so effectuates the remedial purposes of the Coats-Snowe Amendment, the Weldon Amendment, and ACA section 1553, and is consistent with their texts.

Comment: The Department received comments requesting that “health care professional” and “health care personnel” be defined terms.

Response: The Department declines to define these terms. The Department believes it is appropriate to determine remaining potential questions about the scope and application of the term “health care entity” based on an analysis of facts and circumstances presented in each case as they arise. Regarding health care professionals, State and local law might also be relevant concerning which persons are considered health care professionals. Because those laws differ, the Department considers it appropriate not to specify a single definition of health care professional or health care personnel in this rule. Parts of the Church Amendments use the terms “personnel” and “health care personnel,” but do not define those terms. Although this rule also does not define those terms, the Department believes this rule provides some additional clarity to the application of Federal conscience and anti-discrimination laws.

Summary of Regulatory Changes: For the reasons described in the proposed rule73 and above, and considering the comments received, the Department finalizes the definition of “health care entity” with changes to bifurcate the definition into two: One applicable for purposes of the Coats-Snowe Amendment, and the other applicable for purposes of the Weldon Amendment and ACA section 1553. Both definitions add pharmacies and pharmacists. Both add the word “medical” before the term “laboratory” to more clearly describe its health care scope, and both note that “as applicable, components of State or local governments may be health care entities.” The definition applicable to the Coats-Snowe Amendment omits the terms “a provider-sponsored organization; a health maintenance organization; a health insurance plan (including group or individual plans); a plan sponsor, issuer, or third-party administrator; or any other kind of..."
health care organization, facility, or plan.”

Health program or activity. The Department proposed that “Health program or activity” includes the provision or administration of any health-related services, health service programs and research activities, health-related insurance coverage, health studies, or any other service related to health or wellness, whether directly through payments, grants, contracts, or other instruments, through insurance, or otherwise.

Under the proposed rule the terms “health program or activity” and “health service program” differed mainly in that the former included “the provision or administration of any health-related services,” while the latter included any “plan or program that provides health benefits.” Because “health service program” could be seen as narrower, the phrase health program or activity incorporated “health service program” explicitly as part of its definition. The Department asked for comment “on whether the terms mean the same thing and should or could be defined interchangeably for purposes of this regulation.”

The Department did not receive specific comments on this question, but the comments received regarding the two definitions generally treated the two phrases as identical. Upon further consideration the Department has concluded that there are insufficient grounds for defining such similar terms differently under the rule.

The Department is finalizing the rule without defining “health program or activity” because other revisions have eliminated the use of the phrase in the regulation text as finalized. However, for reasons explained below, the Department adopts (with minor edits) the definition proposed for “health program or activity” as the definition for “health service program.” All questions and responses to comments concerning “health program or activity” apply fully and “transfer” to “health service program.”

Comment: The Department received comments stating that the definition of “health program or activity” (now “health service program”), is overly broad; and, when combined with section 104A of the Foreign Assistance Act of 1961, could result in otherwise unauthorized discrimination against minority groups or persons in sex trafficking in programs funded under section 104A.

Response: The Department disagrees. The relevant language of section 104A, “any program or activity” (22 U.S.C. 7631(d)(1)(B)), is broader than, and clearly includes, any “health service program.” As the Department only administers section 104A funds (as relevant to this rule) with respect to health, the definition of “health program or activity” is not intended to limit, and in no way limits, any protection from discrimination provided in section 104A of the Foreign Assistance Act of 1961. Additionally, nothing in 22 U.S.C. 7631(d)(1)(B) exempts certain programs or activities from its conscience protections.

Summary of Regulatory Changes: For the reasons described in the proposed rule, above and below, and considering the comments received, the Department adopts the definition of “health program or activity” as proposed as the definition of “health service program,” except for the modifications adopted herein.

74 83 FR 3880, 3893–94 (stating the reasons for the proposed definition of “health program or activity,” except for the modifications adopted herein).
circumstances, paragraph (d) would not apply. This distinction can be illustrated by considering the parallel term used in paragraph (d), “research activity.” For example, if an entity receives a grant from a program administered by HHS to conduct research on a new cancer treatment, paragraph (d) of the Church Amendments would protect individuals involved in the performance of any part of that research activity. But if the entity engages in other research activities that are not funded by HHS (i.e., not related to the cancer treatment for which the research grant was issued in this example), paragraph (d) would not apply to those other activities. This would hold true even if other statutory provisions that are the subject of this rule would apply to those other research activities.

Similarly, Medicaid is funded in whole or in part under a program administered by the Department. Nevertheless, if a health care provider receives Medicaid reimbursements for some medical treatments, but is providing other medical treatments that are not being reimbursed by Medicaid or otherwise funded by the Department, the provider—with respect to the non-Medicaid treatment—is not performing “part of a health service program” funded by a program administered by HHS. Because Medicaid generally provides reimbursements for particular treatments, not for a medical practice overall, providing a treatment not reimbursed by Medicaid would generally not be “part of a health service program . . . funded in whole or in part under” Medicaid for the purposes of paragraph (d) of the Church Amendments, even if the overall medical practice also receives Medicaid reimbursements for other treatments.

The Department intends to enforce paragraph (d) of the Church Amendments consistent with the text of the statute. It would be inappropriate for the Department to define “health service program” to exclude programs that involve health services and that are funded (in whole or in part) under a program administered by HHS, when Congress specified that paragraph (d) of the Church Amendments covers such programs. The Department believes that the specific limitations in paragraph (d) concerning the circumstances in which it applies has already (under the statute) prevented the realization of many overbreadth concerns raised by commenters, and will continue to do so under this rule, notwithstanding the plainly broad meaning of the term “health service program” itself.

Comment: The Department received a comment stating that the definition of “health service program” should only apply in the context of biomedical research.

Response: The Department disagrees. Congress used the disjunctive phrase “health service program or research activity” in paragraph (d) of the Church Amendments. Nothing in the phrase or its context (the surrounding text) indicates that the protection provided by Congress is limited only to biomedical research. If “health service program” meant only research activities, then Congress’s addition of “or research activity” would be superfluous. Further, in a separate provision of the Church Amendments enacted at the same time as paragraph (d), paragraph (c)(2), Congress provided specific prohibitions for entities that receive grants or contracts “for biomedical or behavioral research” alone, without including health service programs. This demonstrates that Congress’s inclusion or omission of “health service program,” was a considered decision intended to have substantive effect.

Summary of Regulatory Changes: The Department asked for comment on whether “health program or activity” and “health service program” should or could be defined interchangeably for purposes of this regulation, but received no specific comments on the question. Upon further consideration, the Department has concluded that there are insufficient grounds for defining such similar terms differently under the rule.

The Department’s definition for “health service program” in the proposed rule mirrored the definition of the term in the 2008 Rule. The 2008 Rule, in turn, incorporated the phrase “health benefits” into the definition of “health service program” by borrowing from Section 1128B(f)(1) of the Social Security Act’s (42 U.S.C. 1320a–7b(f)(1)) definition of “Federal health care program”—the rationale being that “Federal health care program” was similar enough to “health service program,” to warrant the borrowing. With respect to the inclusion of “health benefits,” in the definition of “health service program,” this was appropriate because the Federal health service programs implemented under the Social Security Act are programs administered by the Secretary—and, thus, consistent with the language of the Church Amendment. However, the Social Security Act is not (and was not) the exclusive basis for defining the scope of “health service program.” The Department believes that it is also appropriate to consider the Public Health Service Act (PHSA) as a source for defining the term “health service program” because, (1) the Church Amendments themselves cite the PHSA to help establish what programs are covered and (2) the PHSA uses the phrase “health service program” and “health services” numerous times. For example, the PHSA provides grant authority to assist States and other public entities “in meeting the costs of establishing and maintaining preventive health service programs” (42 U.S.C. 247b), and grants the Secretary permission to enter into contracts to “furnish health services to eligible Indians” (42 U.S.C. 238m).

The terms “health services” and “health service program,” as used by the PHSA, clearly include the provision of health care or health benefits, but they also include health-related services. For example, the PHSA uses the phrase “environmental health services” to describe programs that deal with the detection and alleviation of “unhealthful conditions” associated with water supply, chemical and pesticide exposures, air quality or exposure to lead, 42 U.S.C. 254b(2)(C). These are health-related programs. Moreover, the PHSA uses the phrase “health service programs” explicitly and includes “preventive” programs within its ambit including—for example, programs for “the control of rodents” and “for community and school-based fluoridation programs.” 42 U.S.C. 300w–3(a)(1)(B). These are health-related programs.

In light of the above, and for the sake of consistency and to avoid confusion, the Department finalizes the term “health service program” as equivalent to “health program or activity” (with minor changes). The Department is no longer including a definition of “health program or activity” but in light of public comments, is finalizing a definition of “health service program” with changes that incorporate some of the elements of both terms, based on concerns raised about both definitions in the public comments. The finalized definition states that “health service program includes the provision or administration of any health or health-related services or research activities, health benefits, health or health-related insurance coverage, health studies, or any other service related to health or wellness, whether directly; through payments, grants, contracts, or other instruments; through insurance; or otherwise.”
Individual. The Department proposed that “Individual means a member of the workforce of an entity or health care entity.” The Department received comments on this definition.

Comment: The Department received a comment stating that the definition of “individual” should include “persons exercising their right of informed consent to decline a healthcare service on the basis of religion or conscience.”

Response: Upon considering this comment and reviewing the use of the word “individual” throughout the proposed rule, the Department agrees that the term has multiple meanings depending on the context of its use in the rule and in applicable statutes. Sometimes it refers to members of the workforce of an entity or health care entity, and other times it refers to persons who are not health care providers and yet are protected by the Federal conscience and anti-discrimination laws at issue in this rule, such as an individual who makes use of a religious health care institution or an individual who “is conscientiously opposed to acceptance of the benefits of any private or public insurance.” Because “individual” has multiple meanings throughout the rule, and the meaning of “individual” is clear in each instance from its context, the inclusion of a definition for “individual” introduces unnecessary confusion. Consequently, the Department is deciding not to finalize the proposed definition, or any definition, of the word “individual” in the final rule. As “individual” is no longer a defined term, additional comments on the definition of the word “individual” are either addressed by that change, or not necessary to address further.

Summary of Regulatory Changes: For the reasons described above, and considering the comments received, the Department does not finalize the proposed definition of “individual” and removes the word “individual” and its definition from the list of defined terms.

Instrument. The Department proposed that “Instrument is the means by which Federal funds are conveyed to a recipient, and includes grants, cooperative agreements, contracts, grants under a contract, memoranda of understanding, loans, loan guarantees, stipends, and any other funding or employment instrument or contract.” The Department did not receive comments on this definition.

Summary of Regulatory Changes: For the reasons described in the proposed rule79 and above, the Department adopts the definition of “instrument” as proposed.

OCR. The Department proposed that OCR means the Office for Civil Rights of the Department of Health and Human Services. The Department did not receive comments on this definition.

Summary of Regulatory Changes: For the reasons described in the proposed rule79 and above, the Department adopts the definition of “OCR” as proposed.

Recipient. The Department proposed that “Recipient means any State, political subdivision of any State, instrumentality of any State or political subdivision thereof, and any person or any public or private agency, institution, organization, or other entity in any State including any successor, assign, or transferee thereof, to whom Federal financial assistance is extended directly from the Department or a component of the Department, or who otherwise receives Federal funds directly from the Department or a component of the Department, but such term does not include any ultimate beneficiary. The term may include foreign or international organizations (such as agencies of the United Nations).” The Department received comments on this definition.

Comment: The Department received a comment stating that while the proposed definition of “recipient” recognizes that an individual or organization must comply with the provider conscience regulations if the individual or organization receives funds “directly from the Department or a component of the Department” to carry out a project or program, the proposed rule does not explain how “compliance with the regulations would not be required for products or services offered by the individual or organization that are unrelated to the Federal funding.”

Response: Fitting within the definition of a “recipient” alone does not necessarily subject an entity to all of the requirements of the statutes implemented through this rule. In each paragraph of § 88.3 of this rule, there is an “Applicability” paragraph and a “Requirements and prohibitions” paragraph that describe, in more particularity for each Federal conscience and anti-discrimination law being implemented by the paragraph, the scope of the statute and, thus, this regulation.

As discussed concerning the definition of the term “entity,” the Department is finalizing the terms “entity,” “recipient,” and “sub-recipient” with parallel language to clarify that they all may encompass “a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).”

Summary of Regulatory Changes: For the reasons described in the proposed rule80 and above, and considering the comments received, the Department finalizes the definition of “recipient” with a change to the last sentence, so that rather than referring only to “foreign or international organizations,” it reads “The term may include a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).”

Referral or refer for. The Department proposed that “Referral or refer for” be defined as including the provision of any information (including but not limited to name, address, phone number, email, website, instructions, or description) by any method (including but not limited to notices, books, disclaimers or pamphlets online or in print), pertaining to a health care service, activity, or procedure, including related to availability, location, training, information resources, private or public funding or financing, or directions that could provide any assistance in a person obtaining, assisting, training in, funding, financing, or performing a particular health care service, activity, or procedure, when the entity or health care entity making the referral sincerely understands that particular health care service, activity, or procedure to be a purpose or possible outcome of the referral. The Department received comments on this definition, including general comments in support of and opposition to the proposed definition.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” should be maintained as it appropriately allows healthcare professionals to abide by their own professional and ethical judgments.

Response: The Department agrees that the definition of “referral or refer for” is appropriate, except for the addition of relatively minor narrowing and clarifying changes as discussed below.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” exceeds the scope of the Weldon Amendment or the Coats-Snowe Amendment.

80 83 FR 3880, 3894 (stating the reasons for the proposed definition of “recipient,” except for the modifications adopted herein).
Response: The Department disagrees. Neither the Weldon nor Coats–Snowe Amendment defines “referral” or “refer for.” The definition is a reasonable interpretation of these terms and faithfully effectuates the text and structure of Congress’s protection of health care professionals and entities from being coerced or compelled to facilitate conduct (with respect to Weldon and Coats–Snowe, concerning abortion) that may violate their legally protected rights through the forced provision of referrals. For example, in the Weldon Amendment and section 1303 of the ACA, Congress did not merely protect the action of declining to refer to an abortion provider, but of declining to refer “for” abortions generally. This more broadly protects a decision not to provide contact information or guidance likely to assist a patient in obtaining an abortion elsewhere.

The rule’s definition of “referral” or “refer for” also comports with dictionary definitions of the word “refer.” Merriam-Webster’s definition of “to send or direct for treatment, aid, information, or decision.” Refer, Merriam-Webster.com, available at https://www.merriam-webster.com/dictionary/refer (last accessed April 9, 2019) (emphasis added); see also Refer, Dictionary.com, available at https://www.dictionary.com/browse/refer (last accessed April 9, 2019) (defining refer as “to direct for information or anything required” and “to hand over or submit for information, consideration, decision, etc.”). This interpretation properly serves the remedial purposes of these protections. Recent attempts at coerced referrals for abortion, such as California’s Reproductive FACT Act, have taken the form of compelled display of information discussing the availability of State-subsidized abortions. The purpose, design, and effect of such displays of information is precisely to assist patients in obtaining abortion if they so choose. As discussed elsewhere in this rule, OCR found that the FACT Act’s compelled display of such information to members of the public is a type of referring or referral “for” abortion that Congress prohibited in the Weldon and Coats–Snowe Amendments.81

Nevertheless, the Department has made significant modifications to the definition of “discrimination” that address the concerns raised by commenters concerning the definition of referral. Specifically, the Department recognizes greater latitude for accommodation procedures by employers and entities and has added additional exclusions and exemptions under the rule. In doing so, the rule narrows the scope of possible bases of a violation under the rule.

For example, the rule allows an employer, when there is a reasonable likelihood it may ask its employees in good faith to refer for, participate in, or assist in the performance of potentially objected to conduct, to require its employee to inform it of any objections. Thus, a hospital that regularly performs elective abortions may ask a nurse hired to work in the OB/GYN department if he or she anticipates having any objections to assisting in the performance of elective abortions to allow the hospital to make appropriate, non-discriminatory staffing arrangements. Barring other facts, if the nurse refuses to answer, the Department would not treat any resultant adverse action by the employer against the nurse as “discrimination” under the rule.

These significant changes to the rule’s definition of discrimination respect the laws provided by Congress and the interests of all parties—employers, health care entities, and individual physicians—who wish to provide services allowed by law according to their consciences.

Additionally, the Department agrees that some proposed terms in the definition of refer or referral were unnecessarily broad, and therefore the Department finalizes the definition with narrowing edits as set forth in response to comments regarding specific phrases discussed below.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” would interfere with legal and ethical duties of doctors to provide information to their patients.

Response: The Department disagrees. The rules do not prohibit any doctor or health care entity from providing information to their patients—or referring for a medical service or treatment—if they feel they have a medical, legal, ethical, or other duty to do so. The rules simply enforce existing laws that prevent doctors or other protected entities from being forced to refer for abortions against their will or judgment. The rule’s definition of “referral or refer for” ensures that doctors can use their own professional, medical, and ethical judgment without being coerced by entities receiving Federal funds to violate their moral or religious convictions. To the extent a State subject to this rule (under, for example, the Coats–Snowe Amendment or the Weldon Amendment) legally mandates that protected individuals and entities refer for abortion, Congress has indicated such mandates are inconsistent with Federal law.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” would violate the requirement that patients receive informed consent before performing treatments.

Response: A similar objection is discussed above concerning the definition of “assist in the performance” and its inclusion of referrals. The Department disagrees with the objection. Federal conscience and anti-discrimination laws specifically shield certain persons and entities from being required to provide referrals for abortion. Indeed, medical ethics have long protected rights of conscience alongside the principles of informed consent. The Department does not believe that enforcement of conscience protections, many of which date to the era of Roe v. Wade and Doe v. Bolton, violates or undermines the principles of informed consent. This final rule will not change existing laws requiring doctors to secure informed consent from patients before performing medical procedures.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” conflicts with Title X of the Public Health Service Act.

Response: As discussed above, the Department concluded in 2008 and again in the preamble to the proposed rule in this rulemaking that the 2000 Regulations governing the Title X program, which required Title X projects and providers to provide abortion counseling, information and referrals in certain circumstances, conflict with certain Federal conscience and anti-discrimination laws. Notably, that requirement was imposed by the Department, not by Congress in Title X itself, which has long prohibited the use of Title X funds “in programs where abortion is a method of family planning.” 42 U.S.C. 300a–6. The Department has amended the Title X regulations to remove the requirements for abortion counseling, information, and referrals, while permitting the provision of nondirective counseling on, and information about, abortion. Under the 2019 final rule governing the Title X program, the Title X regulations no longer conflict with Federal conscience and anti-discrimination laws or this final rule. Regardless, as the Department
recognized in the 2008 Rule, a Federal regulatory requirement that a Title X applicant, grantee, program, or clinic—a recipient of Federal funds in carrying out a HHS program—provide abortion counseling, information, and referrals cannot be enforced against such entities whose refusal to do so is protected by applicable Federal conscience and related nondiscrimination statutes.

Comment: The Department received comments stating that including “the provision of any information . . . by any method” in the definition “referral” or “refer for” goes beyond the meaning of those words in the statutes.

Response: The definition’s breadth reflects the fact that conscientious objections to, or the nonperformance of, acts that facilitate the conduct of a third party may take many forms and occur in many contexts. Nevertheless, the Department agrees that the phrases “any information” and “any method” as well as “any assistance” are unnecessarily broad, and therefore deletes the three apparent superfluous words “any” from the definition. The rule instead relies on the non-exhaustive list of illustrations to guide the scope of the definition. Additionally, the rule permits the description of specific methods of transmitting information, namely, “any method (including but not limited to notices, books, pamphlets, online or in print),” and replaces the list with the clearer and more concise statement of “in oral, written, or electronic form.”

Comment: The Department received comments stating that the proposed definition of “referral or refer for” could permit a provider to turn away a patient experiencing complications from an objected-to medical drug, device, or service without providing any information.

Response: To the extent the comments concern providers that decline to volunteer certain information or make referrals to other providers, the applicability of the rule would turn on the individual facts and circumstances of each case. In making a determination, the Department will consider the relationship between the treatment subject to a referral request and the underlying service or procedure giving rise to the request. The Department, however, is not aware of any providers that would refuse to treat or refer a person with unforeseen and unintended complications arising from, for example, an abortion procedure that the provider would not perform.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” could result in a health care professional refusing to refer a woman for treatment of ovarian cancer because sterilization would be a “possible outcome of the referral.”

Response: The Department agrees that “possible outcome of the referral” is unnecessarily broad. The Department is therefore changing the word “possible” to “reasonably foreseeable,” which still recognizes robust protection to conscientious objectors as provided by Congress, but requires a stronger connection between the referral and the objected-to activity or result. The Department also finalizes the definition with a change to eliminate subjective language concerning what an entity “sincerely understands” out of similar concerns about overbreadth.

Comment: The Department received a comment suggesting that “referral or refer for” should be defined as “active facilitation of access.”

Response: The Department disagrees and believes such a definition would risk improperly narrow the protections provided by Congress. For example, California’s Reproductive FACT Act (which the Supreme Court ruled in NIFLA likely violates the Constitution, 138 S. Ct. at 2371–76), involved a requirement that health care facilities opposed to abortion tell women that the State may provide free or low cost abortion, and provide the women a phone number for further information on how to access those abortions. After investigating complaints related to the FACT Act, the Department found that mandating the communication of such information to members of the public is a type of referring or referral “for” abortion that Congress prohibited in conscience protection statutes. Narrowing the definition to the “active facilitation of access” may subject many health care providers to coercive requirements that the Department has already found violate the law. The definition finalized here better includes the full range of referral activities protected by Congress.

Comment: The Department received comments stating that the definition of “referral or refer for,” when applied to employees of health plans, could hinder people who are attempting to determine what services are covered by their insurance plans and what doctors are in their plans or could be used to not process claims for objected-to services under a health plan. The comments suggested limiting conscience protections to health plans themselves rather than including the plans’ employees, exempting administrative tasks performed by a health plan’s employees, or limiting the definition of “referral or refer for” to not include health plans or their employees.

Response: The Department replaced paragraph (4) to the definition of “discriminate or discrimination” to make clear that employers can use, and are encouraged to pursue, accommodation procedures with protected employees. Additionally, the Department added paragraphs (5) and (6) to the definition of discrimination to clarify that, within limits, employers may require protected employees to inform them of objections to referring for, participating in, or assisting in the performance of specific procedures, programs, research, counseling, or treatments to the extent there is a reasonable likelihood that the protected entity or member may be asked in good faith to refer for, participate in, or assist in the performance of such conduct.

Consistent with the terms of paragraphs (5) and (6) of the definition of discrimination regarding advance notice by an employee of the potential for a conscientious objection, an employer may similarly require an employee to notify it in a timely manner of an actual conscientious objection that the employee has to a specific act, in the day-to-day course of work, that the employee would otherwise be expected to perform. For example, nurses assigned exclusively to nursing homes for elderly patients would not be expected to refer or assist in the performance of any sterilization procedures or abortions, and thus, it would be inappropriate for an entity subject to the prohibitions in this rule to require such nurses to disclose whether or not they have objections to referring or assisting in such procedures.

Comment: The Department notes material legal and factual distinctions between, on the one hand, an employer requiring an employee to notify it of a conscientious objection covered by this rule and, on the other, the accommodation process for religious employers in the Department’s previous regulations mandating employer coverage of contraception and sterilization. 80 FR 41318 (July 14, 2015). Numerous religious organizations brought challenges under RFRA concerning the “accommodation” process promulgated under those rules. RFRA prevents the Federal Government from substantially burdening a person’s religious exercise unless in furtherance of a compelling governmental interest and in the manner least restrictive of that exercise. Under the accommodation, objecting religious organizations that self-insured would have been required to notify either the third-party administrator of their health plan, via a certain prescribed form, or HHS, via a letter containing certain prescribed information, of their objection to including contraception and sterilization in their health plans. Plaintiffs in those cases argued that providing such notice would itself have violated their religious beliefs. But a crucial element of the plaintiffs’ argument in the context
Employers and programs that subsequently take steps to use alternate staff or methods to provide for or further the objecting-to conduct would not be considered to engage in discrimination—or would the requirement for the objecting entity to provide notice to the employer or program be considered a referral—if the employer or program does not take any adverse action against the objecting person or entity, if such methods do not exclude persons from fields of practice on the basis of their protected objections, and if the employer or program does not require any additional action by the objecting person or entity beyond the provision of notice discussed above. The employer may also inform the public of the availability of alternate staff or methods to provide or further the objected-to conduct if it does not constitute taking any adverse action against the objecting person or entity.

The Department believes that incorporating these significant limitations in the scope of discrimination and, thus, addressing issues that may arise for an employer when a health care entity objects to making a referral, solves concerns such as those raised by this comment.

Comment: The Department received comments stating that the proposed definition of “referral or refer for,” because it applies to public notices, would prohibit California’s Reproductive FACT Act, “which requires facilities specializing in pregnancy-related care to disseminate notices to all clients about the availability of public programs that provide free or subsidized family planning services, including prenatal care and abortion.”

Response: As discussed above, the Department has already found that the FACT Act violated the Weldon and Coats-Snowe Amendments, and the Supreme Court, in NIFLA, 138 S. Ct. at 2371–76, ruled that it likely violates the First Amendment’s free speech protections for targeting pro-life health care entities and compelling them to provide information about how to obtain abortions.

Comment: The Department received comments stating that the proposed definition of “referral or refer for” conflicts with the DeConcini Amendment, which states, “[i]n order to reduce reliance on abortion in developing nations, funds [to carry out the provisions of chapters 1 and 10 of part I of the Foreign Assistance Act of 1961] shall be available only to voluntary family planning projects which offer, either directly or through referral to, or information about access to, a broad range of family planning methods and services” (Consolidated Appropriations Act, 2019, Public Law 116–6, Div. B, Sec. 7002).

Response: The Department disagrees. The DeConcini Amendment’s reference to “a broad range of family planning methods and services” does not include abortion. Rather, the amendment itself contrasts abortion with that broad range of family planning methods and services and excludes abortion as a method of family planning. Another proviso bars the use of “funds made available under this Act . . . to pay for the performance of abortion as a method of family planning or to motivate or coerce any person to practice abortions” and “[t]hat nothing in this paragraph shall be construed to alter any existing statutory prohibitions against abortion under section 104 of the Foreign Assistance Act of 1961.” The Department believes the best reading of that amendment is that the broad range of family planning methods and services is viewed as an alternative to abortion, not that the amendment mandates referrals for abortion as if they are part of family planning. In the context of foreign assistance, since the 1980s, four different presidential administrations have implemented policies to prohibit foreign assistance for family planning to go to entities that perform or actively promote abortion as a method of family planning, and Congress has been aware of those policies. Furthermore, the DeConcini Amendment’s discussion of a broad range of family planning methods and services is nearly identical to the scope of the Title X statute, 42 U.S.C. 300. In that context, Congress made clear that it does not consider abortion to be a method of family planning and, in fact, prohibits the use of Federal funds in programs where abortion is a method of family planning. See 42 U.S.C. 300–6.

Comment: The Department received comments stating that the definition of “referral or refer for” could permit a health care provider to refuse to ever refer a patient to an OB/GYN for any reason because a future possible outcome of such a referral could be that the patient seeks an abortion or sterilization from the OB/GYN, even though the direct referral is not for such service.

Response: The comments’ concerns seem far-fetched, but are, nevertheless, addressed by the change from the word “possible outcome” to “reasonably foreseeable outcome,” which requires a stronger connection between the referral and the objecting-to conduct. The Department does not find there to be reason to foresee that objectors would use the Weldon or Coats-Snowe Amendments or these rules to refuse to refer women to every OB/GYN.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes the definition of “referral or refer for” with changes as described above. The comments lead the Department to believe the text as originally proposed was unduly long, confusing, and repetitive and therefore finalizes the definition with numerous stylistic changes and deletions and nonsubstantive reordering of text to substantially improve readability. The Department also finalizes the rule to clarify that assistance related to a program is also encompassed by the definition in order to track the use of that phrase in statutes, including the Weldon and Coats-Snowe Amendments.

86 83 FR 3880, 3894–95 (stating the reasons for the proposed definition of “referral or refer for,” except for the modifications adopted herein).
that protect against forced referrals in certain programs. The revised definition includes the provision of information in oral, written, or electronic form (including names, addresses, phone numbers, email or web addresses, directions, instructions, descriptions, or other information resources), where the purpose or reasonably foreseeable outcome of provision of the information is to assist a person in receiving funding or financing for, training in, obtaining, or performing a particular health care service, program, activity, or procedure.

State: The Department proposed that “State” includes, in addition to the several States, the District of Columbia. For those provisions related to or relying upon the Public Health Service Act, the term ‘State’ includes the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Northern Mariana Islands, the U.S. Virgin Islands, American Samoa, and the Trust Territory of the Pacific Islands. For those provisions related to or relying upon the Social Security Act, such as Medicaid or the Children’s Health Insurance Program, the term ‘State’ follows the definition of State, found at 42 U.S.C. 1301.” The Department did not receive comments on this definition.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, the Department adopts the definition of “State” with one change, omitting “follows” and replacing it with “shall be defined in accordance with.”

Sub-recipient: The Department proposed that sub-recipient means any State, political subdivision of any State, instrumentality of any State or political subdivision thereof, and any person or any public or private agency, institution, organization, or other entity in any State including any successor, assign, or transferee thereof, to whom Federal financial assistance is extended through a recipient or another sub-recipient, or who otherwise receives Federal funds from the Department or a component of the Department indirectly through a recipient or another sub-recipient, but such term does not include any ultimate beneficiary. The term may include foreign or international organizations (such as agencies of the United Nations). The Department received comments on this definition.

Comment: The Department received a comment stating that the proposed definition of “sub-recipient” is overly broad and could be read to include every contracting party with a recipient of Federal financial assistance. The commenter proposes that “sub-recipient” should be limited “to those for whom there is a direct pass-through of Federal financial assistance and who are identified as sub-recipients of such dollars in contracts with the direct recipient.”

Response: The Department agrees that the definition should be clarified so that it does not include every entity that contracts with a recipient of Federal financial assistance. The Department, therefore, finalizes this definition with a change to the definition of “sub-recipient” replacing the phrase “to whom Federal financial assistance is extended through a recipient or another sub-recipient,” with “to whom there is a pass-through of Federal financial assistance through a recipient or another sub-recipient.” The Department disagrees, however, that a sub-recipient must be explicitly declared as a sub-recipient in a contract (or a grant). Requiring explicit designation as a sub-recipient could permit sub-recipients in fact to avoid such designation by contracting around such designation.

As discussed concerning the term “entity,” the Department is finalizing the terms “entity,” “recipient,” and “sub-recipient” with parallel language to clarify that they all may encompass “a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).”

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes the definition of “sub-recipient” changing “and” to “or,” replacing the phrase “to whom Federal financial assistance is extended through a recipient or another sub-recipient, or who otherwise receives Federal funds from the Department or a component of the Department indirectly through a recipient or another sub-recipient, or who otherwise receives Federal funds from the Department or a component of the Department indirectly through a recipient or another sub-recipient,” with “to whom there is a pass-through of Federal financial assistance or Federal funds from the Department through a recipient or another sub-recipient,” and to change the last sentence previously referring to “foreign or international organizations” to read, “The term may include a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).”

Workforce: The Department proposed that workforce means employees, volunteers, trainees, contractors, and other persons whose conduct, in the performance of work for an entity or health care entity, is under the direct control of such entity or health care entity, whether or not they are paid by the entity or health care entity, as well as health care providers holding privileges with the entity or health care entity. The Department received comments on this definition.

Comment: The Department received comments stating that the inclusion of volunteers, trainees, and contractors within the definition of “workforce” is too broad.

Response: The Department does not agree. Under the revised rule text adopted in this final rule, the defined term “workforce” is used in a limited number of places and for limited purposes related to voluntary notice provisions in this rule. Limiting “workforce” to employees fails to acknowledge the complexity of the health care system. The Department adapted the proposed definition from the definition of “workforce” in the regulations implementing the HIPAA administrative simplification provisions, including the HIPAA Privacy Rule. See 45 CFR 160.103 (definition of “workforce”). That definition has worked well to ensure, among other things, the protection of the privacy and security of protected health information. Just as is the case with the HIPAA Rules, compliance with Federal conscience and anti-discrimination laws would not be appropriately comprehensive if only the employees of covered entities were protected, or if institutional entities chose to avoid providing notice to contractors, volunteers, and trainees.

Comment: The Department received a comment suggesting that volunteers and contractors be included in the definition of “workforce” only if they are performing or assisting in the performance of health care activities.

Response: The Department disagrees. As stated above, the defined term “workforce” is used in only a limited number of places and for limited purposes under the rule. Generally, the statutes enforced under these rules apply to health care activities and entities, but where they do not, the terms of the statute govern.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department

---

88 83 FR 3880, 3895 (stating the reasons for the proposed definition of “sub-recipient,” except for the modifications adopted herein).
adopts the definition of “workforce” as proposed.

Applicable Requirements and Prohibitions (§ 88.3)

The Department proposed a statute-by-statute recapitulation of the substantive provisions of each statute that is the subject of this rule, and of the applicability and scope of requirements and prohibitions of each such statute. The proposed “Applicability” provisions outlined the specific requirements of the Federal conscience and anti-discrimination laws that apply to various persons and entities. These provisions were taken from the relevant statutory language and would direct covered entities to the appropriate sections that contain the relevant requirements that form the basis of this regulation.

The “Requirements and Prohibitions” provisions explained the obligations that the Federal conscience and anti-discrimination laws impose on the Department and on entities that receive applicable Federal financial assistance and other Federal funding from the Department. These provisions were taken from the relevant statutory language. The Department received comments on this section. The responses to comments are provided below following the proposed applicability and requirements and prohibitions provisions for each Federal conscience and anti-discrimination law.

One conforming revision to the proposed rule that the Department has made throughout the “Requirements and Prohibitions” provisions is to remove § 88.5 of 45 CFR part 88 (provision of notice) from the list of sections with which applicable persons and entities must comply. As described in the section-by-section analysis for § 88.5 of this rule, the provision of a notice of rights of Federal conscience and anti-discrimination law is no longer a requirement for the Department and recipients.

Another conforming revision to the proposed rule that the Department has made throughout the “Requirements and Prohibitions” provisions is to modify the phrase “entities to whom” various paragraphs apply to “entities to which.” The Department believes the word “which” avoids confusion regarding the nature and scope of entities to whom the rule applies.

88.3(a). The Church Amendments.

The Department received comments generally supportive of the Church Amendments and supportive of the inclusion of the Church Amendments in the rule, as well as comments opposed to the Church Amendments themselves or to the Department’s enforcement of them.

Comment: The Department received comments stating that the proposed rule only protects health care providers who hold moral or religious convictions against the provision of abortion or sterilization, but provides no protection for health care providers whose moral or religious convictions motivate them to provide abortions or sterilizations.

Response: To the extent the commenter’s concerns reflect an accurate reading of the Church Amendments, these concerns raised by the commenters are a result of choices Congress itself made. This final rule reasonably interprets the protections that Congress established, but it can neither eliminate nor transform the policy judgments embedded in the text of the Church Amendments or of any other applicable law. To the extent the Church Amendments apply because someone performed or assisted in the performance of a lawful sterilization procedure or abortion, this rule would enforce those provisions to the extent consistent with other statutory and constitutional requirements. See, e.g., § 88.3(a)(2)(iv), (vi), and (vii).

Comment: The Department received comments stating that proposed § 88.3(a)(2)(v) and (vi), which apply 42 U.S.C. 300a–7(c)(2) and (d), are too broad, and that 42 U.S.C. 300a–7(d) should be or has been interpreted to provide protections only for participation in abortion or sterilization procedures.

Response: The Department disagrees that these paragraphs should be limited to situations involving abortion or sterilization. Paragraphs (b), (c)(1), and (e) of the Church Amendments clearly specify they apply concerning abortions or sterilizations. But paragraphs (c)(2) and (d) do not use that language; instead, as Congress specified, they encompass “any lawful health service or research activity” or “any part of a health service program or research activity,” respectively. The Department is required to implement the statutes as written by Congress. Reading paragraphs (c)(2) and (d) to address only abortion and sterilization procedures would narrow the scope of those statutory provisions in contradiction of the clear text of the statute.

Furthermore, court opinions interpreting 42 U.S.C. 300a–7(d) have varied in their interpretations, but recognize that it applies to more than abortion or sterilization procedures. 90

Regarding the breadth and accuracy of § 88.3 overall, however, the Department finalizes the paragraph with changes to more accurately reflect the statutory text. With respect to § 88.3(a)(2)(v), however, the Department agrees that the proposed rule was imprecise in omitting one limiting phrase that Congress had included in paragraph (c)(2) of the Church Amendments. The proposed rule ended § 88.3(a)(2)(v) with, “because of his or her religious beliefs or moral convictions,” while the statute reads, “because of his religious beliefs or moral convictions respecting any such service or activity.” The Department finalizes this paragraph to add the phrase “respecting any such service or activity” that Congress included in this part of the statute.

Comment: The Department received a comment stating that the rule should clarify that the protections provided by Congress under 42 U.S.C. 300a–7(b) and (c) apply only to abortions and sterilizations in the circumstances provided for in the statute.

Response: Paragraphs (b) and (c)(1) of the Church Amendments specify that they apply in the context of abortion and sterilization procedures specifically. Paragraph (c)(2) has a broader reach, encompassing “any lawful health service or research activity.” As discussed in response to the similar comment asking that (c)(2) and (d) be interpreted to encompass only abortion and sterilizations, Congress limited paragraphs (b), (c)(1), and (e) to abortions and sterilizations, but used different language in paragraphs (c)(2) and (d). The rule tracks the text of paragraphs (b) and (c)(1) accordingly, as established by Congress. Paragraphs (a)(2)(i) through (iv) and (vii) in § 88.3 of the rule explicitly relate to abortions or sterilizations, 91 while § 88.3(a)(2)(v) through (vi) relate to any lawful health service or research activity. 92

Church Amendments. It excuses individuals engaged in health care or research from any obligation to perform abortions or other procedures which may violate religious beliefs or moral convictions.” (emphasis added); Franciscan Alliance, Inc. v. Burwell, 227 F. Supp. 3d 660, 683 (Dec. 31, 2016) (“The Church Amendment forbids requiring any individual ‘to perform or assist in the performance of any part of a health service program . . . if his performance or assistance in the performance of such part of such program . . . would be contrary to his religious beliefs or moral convictions.’ “) (alterations). 93

90 Paragraph 88.3(a)(2)(i) implements subparagraph (b)(1) of the Church Amendments; paragraphs 88.3(a)(2)(ii) and (iii) implement paragraph (b)(2) of the Church Amendments; and paragraph 88.3(a)(2)(iv) implements paragraph (c)(1) of the Church Amendments.

91 Paragraph 88.3(a)(2)(v) implements subparagraph (c)(2) of the Church Amendment.
Comment: The Department received comments asking for clarification whether the provisions in § 88.3(a) that relate to sterilization include only intentional sterilizations, or whether they also include procedures or services that have sterilization as a side effect, such as hysterectomies performed for reasons other than sterilization, or chemotherapy.

Response: Congress did not provide a definition of sterilization in the Church Amendments, or further specify the scope of objections under those statutes, but provided broad protections for religious and moral objections to sterilization procedures. Generally speaking, the Department understands the term “sterilization” as used in the Church Amendments to encompass the ordinary meaning of that term, and does not understand the term to include treatment of a physical disease where sterilization is an unintended side effect of the treatment, such as chemotherapy to treat uterine cancer or testicular cancer. To the extent that a Church Amendment complaint with respect to sterilization is filed, the Department will examine the facts and circumstances of each such claim to determine whether an act falls within the scope of the statute and these regulations.

Comment: The Department received comments asking for clarification about whether provisions in § 88.3(a) apply to sterilizations performed in the context of gender dysphoria.

Response: The Department is aware of three cases brought at least in part under the Church Amendments, in which the claimants argued that the Church Amendments’ sterilization provisions protect the claimants’ conscientious objections to performing gender dysphoria related surgery. In one case, Franciscan Alliance, Inc. v. Burwell, 227 F. Supp. 3d 660 (Dec. 31, 2016), enforcement of the challenged regulation, which plaintiffs contended would have required the performance of procedures such as hysterectomies to treat gender dysphoria, was preliminarily enjoined on other grounds. In the other two, consolidated as Religious Sisters of Mercy, et al. v. Burwell, No. 3:16-cv–386 (D.N.D. 2017), which challenged the same regulation, the court issued an order staying enforcement of the regulation in light of the nationwide preliminary injunction issued in Franciscan Alliance. In the event the Department receives any such complaints, the Department will consider them on a case-by-case basis.

Comment: The Department received comments contending that the paragraphs of the rule concerning the Church Amendments were too broad or did not faithfully apply the statutory text.

Response: The Department intended § 88.3 to faithfully apply the text of applicable statutes, including the Church Amendments. As a result of comments, the Department became aware of instances in which the proposed rule text did not accurately reflect the content of the statute. Accordingly, the Department finalizes the rule with changes to more accurately reflect the statute. Specifically, in § 88.3(a)(2)(i) and (ii), concerning paragraphs (b)(2)(A) and (B) of the Church Amendments, the Department finalizes the rule by changing the phrase “entities to whom this paragraph . . . applies shall not require any entity funded under the Public Health Service Act” to “the receipt of a grant, contract, loan, or loan guarantee under the Public Health Service Act by any entity does not authorize entities to which this paragraph . . . applies to require such entity to . . .”.

The Department also finalizes § 88.3(a)(1)(vi) by changing “Any entity that carries out” to “Any entity that receives funds for any health service program or research activity under any program administered by the Secretary of Health and Human Services.” The Department makes this change to provide clarity regarding which entities are required to comply with paragraph (d) of the Church Amendments.

Comment: The Department received a comment stating that the rule should clarify that the protections provided by Congress under 42 U.S.C. 300a–7(d) apply only to individuals.

Response: The rule tracks the statutory language. Namely, § 88.3(a)(2)(vi) states that covered entities “shall not require any individual . . .” (emphasis added) to act contrary to their religious beliefs or moral convictions in the performance of certain health service programs or research activities. The Department maintains such language in this final rule.

Summary of Regulatory Changes: For the reasons described in the proposed rule 93 and above, and considering the comments received, the Department makes certain changes in this paragraph in this final rule. The Department finalizes § 88.3(a)(1)(vi) by changing “Any entity that carries out” to “Any entity that receives funds for any health service program or research activity under any program administered by the Secretary of Health and Human Services.” The Department finalizes § 88.3(a)(2)(ii) and (iii) by changing the word “entity” to “recipient” where applicable, in order to avoid confusion potentially created by the use of the word “entity” to refer both to protected entities and entities obligated to comply with 88.3(a). Additionally, in § 88.3(a)(2)(i) through (vii), concerning paragraphs and paragraphs of the Church Amendments, the Department finalizes paragraphs (a)(2)(i) through (vii) by changing the language of each paragraph to adopt the statutory text as closely as possible in relevant part, including by adding the words “respecting any such service or activity” to the end of § 88.3(a)(2)(v); amending § 88.3(a)(2)(i) to clarify that the statute enforces a rule of construction regarding the receipt of certain Federal financial assistance; by rephrasing the requirements to state that the receipt of relevant funds “does not authorize entities to which this paragraph . . . applies to require” practices specified by 42 U.S.C. 300a–7(b); adding in the U.S.C. parenthetical from the statute, “(including applicants for internships and residencies)”, to § 88.3(a)(2)(viii); and replacing short form descriptions of the statutory text with the full statutory text, such as by changing the words “doing so” in § 88.3(a)(2)(v) to “his performance or assistance in the performance of such service or activity.” The Department also eliminates some articles and terms, like “the” and “or her,” and replaces the term “whom” with the term “which” for readability and accuracy.

88.3(b). Coats-Snowe Amendment.

The Department received comments generally supportive of the Coats-Snowe Amendment and supportive of the inclusion of the Coats-Snowe Amendment in the rule, as well as comments opposed to the Coats-Snowe Amendment or the rule’s implementation of that statute.

Comment: The Department received comments on the definition of terms used by the Coats-Snowe Amendment, such as what constitutes a “health care entity.” All such comments are addressed in the responses to comments on definitions under § 88.2.

Comment: The Department received a comment stating that the Coats-Snowe Amendment was only a “narrow response to a specific problem”—correcting a loophole that could have conditioned Federal financial assistance on the provision of abortions indirectly through the Accrediting Council on Graduate Medical Education’s accreditation standards for obstetrics and gynecology graduate programs—not

---

93 81 FR 3880, 3895 (stating the reasons for the proposed § 88.3(a), except for the modifications adopted herein).
a pronouncement of new national policy and “cannot justify the rulemaking authority the Department claims in the NPRM.”

Response: The Department disagrees. While the Coats-Snowe Amendment may have been motivated by the situation involving the Accrediting Council on Graduate Medical Education’s accreditation standards for obstetrics and gynecology graduate medical education programs and standards for the receipt of Federal financial assistance based on accreditation, the plain language of the text of the Coats-Snowe Amendment is broader than that situation. While paragraph (b) of the Coats-Snowe Amendment addresses the accreditation and treatment of postgraduate physician training programs (and physicians trained in such programs) that are or are not accredited by accrediting agencies that require the performance and training in the performance of induced abortions, paragraph (a) of the Coats-Snowe Amendment establishes far broader protections for health care entities that refuse, among other things, to provide or undergo training in the performance of induced abortions, to perform such abortions, or to provide referrals for such training or such abortions. The Amendment was, thus, drafted with separate language to provide both general protections, relating to the training, performance of, and referral for abortions, and specific protections, relating to governmental treatment of physicians and physician training programs where the accreditation agency had accreditation standards that requires performance or training in the performance of induced abortion.

This rule must be governed by the text of the law, not legislative intent or legislative history that may or may not have been reflected in the text passed by Congress and signed by the President. The Department finds it appropriate for this rule to follow the text of the Coats-Snowe Amendment, and not to narrow its scope based on what may have been the impetus for the introduction, passage or enactment of the statute. The Department intends to provide enforcement mechanisms for the protections that Congress actually enacted.

Comment: The Department received comments stating that the Coats-Snowe Amendment only provides protections for entities that object to abortions for religious or moral reasons.

Response: The Department disagrees. As the text of the Church Amendments makes clear, when Congress wants to limit a protection to situations in which the protected party acts or refuses to act on the basis of religious beliefs or moral convictions specifically (as distinct from other reasons), it explicitly includes such a limitation. The text of the Coats-Snowe Amendment, unlike the text of the Church Amendments, does not include any such limitation. It encompasses objections concerning such activities as training, performing, providing referrals for, or making arrangements for referrals for abortions or abortion training, without specifying that the objections are only protected if they are based on religious beliefs or moral convictions. Limiting the application of the Coats-Snowe Amendment to only situations in which the protected entity is acting on the basis of religious beliefs or moral convictions would be to add narrowing language to the Coats-Snowe Amendment that Congress did not include.

Comment: The Department received a comment stating that parts of proposed § 88.3 could affect the ability of independent institutions to set standards for accreditation or licensure.

Response: The Department agrees in part. As other commenters have noted, one purpose leading to enactment of the Coats-Snowe Amendment was to prevent States from basing their accreditation or licensure decisions on grounds that eliminate medical schools or their graduates from the medical profession on the basis that they refuse to be involved in abortion. The Coats-Snowe Amendment prevents States that receive Federal financial assistance from engaging in discrimination that would, for example, refuse accreditation to medical schools, or licensure to physicians or nurses, because they did not provide training for, train on, or perform, abortions. The Amendment does not directly regulate any non-governmental entity. The amendment, however, would preclude a State from relying on a private entity’s refusal to accredit on the bases just described. In order to, among other things, deny recognition to the medical school as a medical school, or to deny recognition of the medical degree of a graduate of that school.

The Department finalizes § 88.3 with other changes from the proposed rule to include language from the statute as follows. Specifically, the proposed rule did not reflect, as set forth in paragraph (b)(1) of the statute, that “the government involved,” meaning Federal, State, or local, “shall formulate such regulations or other mechanisms, or enter into such agreements with accrediting agencies, as are necessary to comply with this subsection.” In response to comments, the Department has included language at the end of § 88.3(b)(2)(ii) reflecting this relevant statutory text.

Summary of Regulatory Changes: For the reasons described in the proposed rule ⁹⁴ and above, and considering the comments received, the Department finalizes § 88.3(b) with the following changes.

Further consideration led the Department to determine that the proposed text of § 88.3(b)(1)(i) presented concerns regarding the scope of entities to which the proposed § 88.3(b) would apply. Accordingly, the Department is finalizing § 88.3(b)(1)(i) to read “The Department is required to comply with” in lieu of the proposed rule’s statement that “The Federal government, including the Department, is required to comply with.”

The Department removes references to “individual or institutional” in § 88.3(b)(2)(i), in order to avoid confusion regarding the definition of the term “health care entity.” While the Department makes this change, it is not intended to change the scope of protection provided by the Coats-Snowe Amendment (and this final rule)—namely, both individuals and organizations (or institutions) that constitute health care entities. The Department also removes a reference to “require attendees to” in (b)(2)(i)(C) in order to more accurately track the language of the statute. The Department finalizes § 88.3(b)(2)(ii) by changing “an accreditation standard or standards” to “accreditation standards” and changing “such standard provides” to “such standards provide;” and adding “that require an entity to” in order to more clearly articulate the requirements of the statute. Finally, in order to fully incorporate the text of the Coats-Snowe Amendment, the Department also adds the sentence “Entities to which this paragraph (b)(2)(ii) applies and which are involved in such matters shall formulate such regulations or other mechanisms, or enter into such agreements with accrediting agencies, as are necessary to comply with this paragraph.”

Additionally, the Department removes the Federal government from the applicability section in § 88.3(b)(1)(i) but leaves “the Department.” Although the relevant statutory provision applies to the Federal government, this rule concerns the activities and programs funded or administered by the

⁹⁴ 83 FR 3880, 3895 (stating the reasons for the proposed § 88.3(b), except for the modifications adopted herein).
Department rather than the entire Federal Government.

88.3(c). Weldon Amendment. The Department received comments on this paragraph, including comments generally supportive of the Weldon Amendment and supportive of the inclusion of the Weldon Amendment in the proposed rule, as well as comments opposed to the Weldon Amendment itself or the proposed rule’s implementation of the Amendment. Comment: The Department received comments on the definition of terms used by the Weldon Amendment, such as what constitutes a “health care entity.” All such comments are addressed above in the responses to comments on definitions under § 88.2.

Comment: The Department received comments stating that the Weldon Amendment does not provide authority for the Department to impose any burdens or obligations on health care entities, such as the requirement of an assurance of compliance and the notice of compliance. Such comments are addressed above in the responses to comments on definitions under § 88.2.

Response: Assurance requirements to remedy past discrimination or prevent future discrimination are common regulatory features of anti-discrimination laws like those that are the subject of this rule and such authority has been affirmed by the Supreme Court. See Grove City College v. Bell, 465 U.S. 555 (1984) (affirming partial termination of institution’s Federal funds for refusing to sign a Title IX assurance of compliance form). In response to comments, the Department has revised the proposed notice provisions from being a requirement to being one factor that OCR considers in its determinations as to whether a covered entity is in violation of this part. Comments concerning assurance and notice provisions are discussed in more detail below in §§ 88.4 and 88.5, proposing to impose those provisions.

Comment: The Department received comments stating that the proposed rule impermissibly extends the Weldon Amendment to apply to non-governmental entities, and that the proposed rule disagrees with the position taken by the government in National Family Planning and Reproductive Health Association v. Gonzales, 391 F. Supp. 2d 200 (D.D.C. 2005), regarding whether the Weldon Amendment extends to non-governmental entities through those entities’ receipt of Federal financial assistance.

Response: The Department agrees that, as proposed, § 88.3 was worded to extend the Weldon Amendment to non-governmental entities in ways not encompassed by the text of the Amendment as written. This was due to the inclusion of paragraph (c)(1)(iii) in that section, which required compliance with the Weldon Amendment by “any entity” that receives funds to which the Weldon Amendment applies. This paragraph would render superfluous paragraphs (c)(1)(i) and (ii), which require compliance with the Weldon Amendment by the Department and its programs and by any State or local government that receives funds to which the Weldon Amendment applies. The Department is therefore finalizing § 88.3(c)(1) by removing paragraph (c)(1)(iii).

The Department notes, however, that the conduct and activities of contractors engaged by the Department, a Departmental program, or a State or local government is attributable to such Department, program, or government for purposes of enforcement or liability under the Weldon amendment.

Comment: The Department received comments stating that the Department cannot engage in permanent rulemaking based on an annual appropriations amendment that may or may not be reenacted with each appropriations act.

Response: The Department disagrees. The Department has outlined, above, the authority that it relies upon to promulgate regulations containing the substantive requirements established in the Weldon Amendment. The Department further notes that it has promulgated rules based on the Weldon Amendment in 2008 and 2011 and has operated under such rules based in part on the annual appropriations amendment cited. The Department has similarly issued regulations to implement annual appropriations amendments, such as the Hyde Amendment.95 Paragraphs (c)(1)(i) and (ii) in § 88.3 of this rule specify that compliance is only effective “under an appropriations act . . . that contains the Weldon Amendment.” Therefore, the provisions of this rule enforcing the Weldon Amendment will only be applicable to a State or local government that receives funds subject to such appropriation. If Congress were to substantially change or not renew the Weldon Amendment, the final rule would not apply to that extent.

Comment: The Department received comments stating that the Weldon Amendment cannot be interpreted to prevent States from requiring abortion coverage, because the Affordable Care Act, at 42 U.S.C. 18023(c)(1), states，“Nothing in this Act shall be construed to preempt or otherwise have any effect on State laws requiring abortion coverage, does not apply to the Weldon Amendment. More importantly, ACA section 1303 also provides that “[n]othing in this Act shall be construed to have any effect on State laws requiring abortion coverage, does not apply to the Weldon Amendment. Therefore, 42 U.S.C. 18023(c)(1), which states, “[n]othing in this Act shall be construed to have any effect on State laws requiring abortion coverage, does not apply to the Weldon Amendment. Generally owed deference if the two laws did conflict, which they do not.

Comment: The Department received comments stating that the Weldon Amendment, as evidenced by its legislative history, does not apply to refusals unrelated to conscience-based (that is, religious or moral) objections, such as purely financial or operational motives.

Response: The Department disagrees, for similar reasons described above in response to comments arguing for a narrow interpretation of the Coats-Snowe Amendment. As the text of the Church Amendments makes clear, when Congress wants to limit a protection to situations in which the protected party acts or refuses to act on the basis of religious beliefs or moral convictions, it explicitly includes such limitation in the text of the statute. The text of the Weldon Amendment, unlike the text of the Church Amendments, does not include any such limitation. On its face, the Weldon Amendment encompasses a decision by a health care entity not to provide, pay for, provide coverage of, or refer for abortions, without specifying that such decisions must be based on religious, moral, conscientious, or any other particular motive. Limiting the application of the Weldon Amendment only to situations in which the health care entity is acting on the basis of conscientious, moral or religious convictions would be to refuse to apply the Weldon Amendment according to the text enacted by Congress.

Comment: The Department received comments asking for clarification that
the Weldon Amendment only applies with respect to abortions.

Response: The Department agrees with the commenter. The text of the proposed rule already makes clear that, as stated in the text of the Weldon Amendment and as described in this rule, the Weldon Amendment only protects against discrimination on the basis that a health care entity does not provide, pay for, provide coverage of, or refer for abortions.

Comment: The Department received a comment stating that the proposed rule would impermissibly extend the Weldon Amendment’s protection beyond the abortion context to protect refusals to provide, pay for, provide coverage of, or refer for “any lawful health service.”

Response: The Department disagrees. Nothing in the proposed rule or in this final rule extends protections under the Weldon Amendment outside of the abortion context. As § 88.3(c)(2) states, “The entity to which this paragraph (c)(2) applies shall not subject any institutional or individual health care entity to discrimination on the basis that the health care entity does not provide, pay for, provide coverage of, or refer for, abortion” (emphasis added). The regulatory provision in the proposed rule and in this final rule that makes reference to “any lawful health service” addresses and would implement paragraph (c)(2) of the Church Amendments, which prohibits certain discrimination against a physician or other health care personnel because, among other things, “he performed or assisted in the performance of any lawful health service or research activity.”

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.3(c) as proposed, except for changes to the citation to the most current Public Law where the Weldon Amendment may be found, and the removal of proposed paragraph (c)(1)(iii). Additionally, the Department is adding the phrase “and its programs” after “the Department” to track the statutory language more closely.

Response: The Department received comments stating that section 1553 cannot allow a health care professional to omit information about “all choices” available at end-of-life because a patient has a right to be informed.

Comment: The Department disagrees with this comment. Congress specified in section 1553 that a health care entity is protected in its decision not to provide “any health care item or service furnished for the purposes of causing, or for the purpose of assisting in causing” assisted suicide, euthanasia, or mercy killing. The Department is unaware of any Federal requirement that an individual or health care entity provide information about a service that it does not provide. Medical ethics have long protected rights of conscience alongside the protected rights of conscience. The Department does not believe that enforcement of conscience protections, many of which date to the era of Roe v. Wade and Doe v. Bolton, violates or undermines the principles of informed consent. In fact, in Roe the Supreme Court favorably cited an American Medical Association resolution on abortion affirming “[t]hat no physician or other professional personnel shall be compelled to perform any act which violates his good medical judgment. Neither physician, hospital, nor hospital personnel shall be required to perform any act violative of personally-held moral principles.” Similarly, in Doe the Court spoke favorably about Georgia’s statutory language giving a hospital the freedom not to admit a patient for an abortion, and protecting a physician or other hospital employee “for moral or religious reasons” from participating in an abortion procedure. The Department interprets section 1553 as specifically encompassing the decision by a health care entity not to provide information about, or referrals for, assisted suicide.

Comment: The Department received a comment stating that, while Congress explicitly granted the Department the authority to promulgate regulations to implement section 1557 of the ACA, Congress did not provide such a grant for section 1553, but only gave the Department the authority to “receive complaints of discrimination” under section 1553.

Response: As discussed supra at part III, multiple statutes and regulations authorize the Department to issue these rules—including with respect to ACA section 1553—to ensure that the Department and covered entities comply with Federal conscience and anti-discrimination laws that apply to certain Federal funding. With respect to section 1553 specifically, that section imposes specific provisions, including construction provisions, and mandates that the Department’s Office for Civil Rights implement section 1553 by receiving complaints. This rule follows that language and provides Departmental mechanisms for acting upon complaints under section 1553. Such authority is implicit in the authority to receive complaints set forth in 1553. If that were not the case, OCR would not be able to comply with Congress’s direction under section 1553 to handle and respond to complaints it receives, making the authority designated to OCR in section 1553 mere surplusage, hollow, or inoperative.

The fact that section 1557 of the Affordable Care Act specifically authorized, but did not require, the Department to issue regulations to

96 See 42 U.S.C. 200a–7(c)(2); compare 45 CFR 88.3(a)(2)(iv) (implementing Church (c)(2) with 45 CFR 88.3(c) (implementing Weldon Amendment).
97 83 FR 3880, 3895 (stating the reasons for the proposed § 88.3(c), except for the modifications adopted herein).
98 83 FR 3880, 3895.
99 410 U.S. at 143–44.
100 410 U.S. at 197–98.
101 A referral is a health care service, and the phrase “assisting in causing” is reasonably interpreted to carry the same meaning as “assisting in performing,” which the Department interprets to include the act of referring.
102 See Hibbs v. Winn, 542 U.S. 88, 101 (2004) (statutes should be construed so as to avoid rendering superfluous any statutory language; “statute should be construed so that effect is given to all its provisions, so that no part will be inoperative or superfluous, void or insignificant. . . .”).
implement that section, does not negate the authority Congress provided the Secretary under 5 U.S.C. 301 and the other statutory and regulatory authorities cited supra at part III.A to carry out the duties Congress designated to OCR under section 1553 of the ACA. In particular, as discussed above, section 1321(a) of the ACA authorizes the Department to “issue regulations setting standards for meeting the requirements under [title I of the ACA] with respect to . . . the offering of qualified health plans through such Exchanges. . . . and . . . such other requirements as the Secretary determines appropriate.” Section 1321(a), thus, provides the Department with the authority to issue regulations setting setting standard for meeting the requirements established in section 1553, which is part of title 1 of the ACA.

**Summary of Regulatory Changes: For the reasons described in the proposed rule** and above, and considering the comments received, the Department finalizes § 88.3(e) as proposed with minor technical changes for clarity and adherence to the text of section 1553 of the ACA, for example changing “any amendment” to “an amendment” and clarifying that “the Act” refers to the “Patient Protection and Affordable Care Act.” Paragraph (e)(1)(iv) clarifies that the amendment would have been “made by the Patient Protection and Affordable Care Act.”’ Paragraph (e)(2) deletes “provided, that.”

**88.3(f). Section 1303 of the Affordable Care Act, 42 U.S.C. 18023.** The Department received comments on this paragraph, including comments generally supportive of section 1303 of the Affordable Care Act and supportive of the inclusion of section 1303 in the rule, as well as comments critical of this proposed paragraph.

**Comment:** The Department received a comment stating that the inclusion of section 1303 of the ACA in this rule is redundant, as the conscience protection provided for in section 1303 are also provided by other conscience protection statutes, and by the Religious Freedom Restoration Act, 42 U.S.C. 2000bb et seq.

**Response:** The Department disagrees. Section 1303 contains several distinct provisions relating to conscience and conscience protections, in section 1303. While section 1303(c)(2) references and preserves the applicability of Federal laws regarding conscience protection, section 1303(b)(1) and (b)(4) provide standalone conscience protections that are independent of other Federal conscience protection provisions. While the language used in section 1303(b)(1) and (b)(4) is similar to other conscience protection statutes, these provisions provide independent conscience protections both with respect to governmental requirements of qualified health plans, and with respect to qualified health plans’ discrimination against individual health care providers and health care facilities. Additionally, were other Federal conscience and anti-discrimination laws to be revoked, the conscience protections in section 1303(b)(1) and (b)(4) of the ACA could remain in effect. The Department does not presume that separate Federal conscience and anti-discrimination laws enacted by Congress are redundant. It is a principle of statutory construction that effect should be given to overlapping statutes as long as there is no “positive repugnance” between them. See, e.g., Connecticut Nat’l Bank v. Germain, 503 U.S. 249, 253 (1992). And there is no such positive repugnance here.

**Summary of Regulatory Changes: For the reasons described in the proposed rule** and above, and considering the comments received, the Department finalizes § 88.3(f) as proposed, with a technical correction to reflect that 42 U.S.C. 18023(b)(1)(A) is a rule of construction regarding Title I of the Patient Protection and Affordable Care Act, rather than a substantive prohibition. In paragraph (f)(2)(i), the Department clarifies that the entities shall not “construe anything in Title I of the Patient Protection and Affordable Care Act (or any amendment made by Title I of the Patient Protection and Affordable Care Act) to.”

**88.3(g). Section 1411 of the Affordable Care Act, 42 U.S.C. 18081.** The Department did not receive comments on this paragraph.

The Department intended § 88.3 to faithfully apply the text of applicable statutes, including section 1411 of the Affordable Care Act, while at the same time, providing clarity to regulated persons and entities. To this end, the final rule clarifies in § 88.3(g)(2) that the Department is required not only to provide a certification documenting a religious exemption from the individual responsibility requirement and penalty under the Affordable Care Act, which appeared in the proposed rule, but also discrimination on the basis of the willingness or refusal to provide abortion, pay for, cover, or refer for abortion or to provide or participate in training to provide abortion.”

103 83 FR 3880, 3895.
104 42 U.S.C. 18023(c)(2) (“In nothing in this Act shall be construed to have any effect on Federal laws regarding—(i) conscience protection; (ii) willingness or refusal to provide abortion; and (iii) willingness or refusal to provide abortion; and (iii) 105 83 FR 3880, 3895.

108 83 FR 3880, 3895.
health services, and the Department adds clarification for the Department to comply with the applicable prohibitions in coordination with State Exchanges. §88.3(h). Counseling and referral provisions of 42 U.S.C. 1395w–22(j)(3)(B) and 1396u–2(b)(3)(B). The Department received comments on this paragraph.

Comment: The Department received a comment stating that, while the statutory text of 42 U.S.C. 1395w–22(j)(3)(B) and 1396u–2(b)(3)(B) established rules of construction, the proposed rule converted these statutes into freestanding exemptions.

Response: The Department agrees that the proposed rule is worded imprecisely to treat 42 U.S.C. 1395w–22(j)(3)(B) and 1396u–2(b)(3)(B) as freestanding exemptions, rather than as rules of construction as set forth in the statutory text. The Department, therefore, modifies the final rule accordingly to conform to the statutory text.

Summary of Regulatory Changes: For the reasons described in the proposed rule 109 and above, and considering the comments received, the Department finalizes §88.3(b)(2)(ii) by referring to regulations that also implement the statutes containing the requirements and prohibitions, for example by adding “construe 42 U.S.C. 1395w–22(j)(3)(A) or 42 CFR 422.206(a) to;”; by deleting “offer a plan that provides, reimburses for, or provides” and replace it with “provide, reimburse for, or provide, “; inserting “offering the plan” to the end of paragraph (h)(2)(i); and adding paragraph (h)(2)(i)(B) regarding making information available to prospective enrollees and enrollees. The Department also makes changes to paragraph (h)(2)(ii) by changing the phrase “shall not require a Medicaid managed care organization to provide” to “shall not construe 42 U.S.C. 1396u–2(b)(3)(A) or 42 CFR 438.102(a)(1) to require;”; deleting “objects to the provision of such service on moral or religious grounds.”; and adding paragraphs (h)(2)(ii)(A) and (B), (A) stating the organization objects on moral or religious grounds and (B) regarding the policies to prospective enrollees and enrollees.

88.3(j). Advance Directives. 42 U.S.C. 1395cc(f), 1396a(w)(3), and 14406. The Department received comments on this paragraph.

Comment: The Department received a comment stating that 42 U.S.C. 1395cc(f) requires that certain entities maintain written policies and procedures to inform patients of their “individual rights under State law to make decisions concerning such medical care, including the right to accept or refuse medical or surgical treatment and the right to formulate advanced directives,” but the proposed rule “attempt[s] to rewrite this provision by prohibiting this statute from being construed to require covered entities to provide full information to patients about services to which they may object.”

Response: The Department disagrees. This final rule provides for the enforcement of 42 U.S.C. 14406, which states, “. . . section 1395cc(f) . . . shall not be construed (1) to require any provider or organization, or any employee of such a provider or organization, to inform or counsel any individual regarding any right to obtain an item or service furnished for the purpose of causing, or the purpose of assisting in causing, the death of the individual, such as by assisted suicide, euthanasia, or mercy killing . . . .” This statutory language is adopted almost verbatim into §88.3(j)(2)(ii). Far from “attempt[ing] to rewrite this provision,” this rule merely adopts Congress’s rule of construction provision as Congress enacted it.

Comment: The Department received comments stating that advance directives should be followed regardless of a physician’s personal objections.

Response: Paragraph (i) in §88.3 provides for the implementation and enforcement of provisions at 42 U.S.C. 1395cc(f), 1396a(w)(3), and 14406, which assure that applicable Federal laws (relating to Medicare and Medicaid) are not used contrary to statute to prohibit health care providers from exercising their rights of conscience with respect to advance directives, including with respect to assisted suicide. This provision does not affect State laws governing the enforceability of advance directives.

But, in general, the Department believes that protecting health care providers’ rights of conscience with respect to advance directives ensures that doctors, nurses, and other persons in the health care industry are not forced to choose between continuing to serve as health care providers and remaining faithful to their deepest convictions. Such conscience protection ensures diversity in the health care industry and maximizes the number of health care professionals in the United States, which helps all patients.

Summary of Regulatory Changes: For the reasons described in the proposed rule 110 and above, and considering the comments received, the Department finalizes §88.3(i) with a change to correct a typographical error in §88.3(i)(2)(i), where “1395a(w)” should instead read “1396a(w)(3).”

88.3(j). Global Health Programs. 22 U.S.C. 7631(d). The Department received comments on this paragraph.

Comment: The Department received comments in opposition to the Department’s enforcement of Federal conscience and anti-discrimination laws outside of the United States, because populations served by U.S. foreign aid often have less financial resources and access to fewer medical providers than persons in the United States.

Response: The Department disagrees with the underlying premise of this comment. As described above, the Department believes that enforcing statutory conscience rights will increase, not decrease, the availability of quality medical care because it will prevent the exclusion of health care professionals motivated by deep religious beliefs or moral convictions to serve others, often the most underprivileged. Moreover, this rule merely provides for the enforcement of laws enacted by Congress that, by their own terms, may apply abroad.

Comment: The Department received a comment stating that the provisions with respect to foreign policy may lead to confusion as to which laws properly govern foreign aid.

Response: Upon reviewing the text of this paragraph, the Department has revised the language to make it clearer to which entities the requirements apply, and the circumstances in which they apply, and to more closely track the language enacted by Congress. The proposed rule would have applied the requirements of this paragraph to the Department and recipients of relevant Federal financial assistance. However, 22 U.S.C. 7631(d) does not impose requirements on what recipients of assistance can and cannot do; rather, it imposes requirements on the conditions that may be placed on receipt of assistance. The statute does not provide a description of the entities that the statute governs—i.e., entities that are in a position to place conditions on the receipt of assistance. The Department believes that class of entities is best described as those that are authorized to obligate the assistance. Accordingly, the Department is modifying §88.3(j)(1) to apply to the Department and entities that are authorized by statute, regulation, or agreement to obligate Federal financial aid.
assistance under section 104A of the Foreign Assistance Act of 1961 (22 U.S.C. 2151b–2), under Chapter 83 of Title 22 of the U.S. Code or under the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008, to the extent such Federal financial assistance is administered by the Secretary, and is deleting the reference regarding the Federal financial assistance being “for HIV/AIDS prevention, treatment, or care to the extent administered by the Secretary.”

Summary of Regulatory Changes: For the reasons described in the proposed rule 111 and above, and considering the comments received, the Department finalizes §88.3(j) with technical changes clarifying the language regarding to which entities the requirements apply, and the circumstances in which they apply, to more closely follow the language of such statutes and amendments as enacted by Congress, eliminating in paragraph (j)(2)(i) “To the extent administered by the Secretary” and inserting “Require an organization, including a faith-based organization, that is otherwise eligible to receive assistance,” deleting “require applicants for” and replacing it with “to the extent such assistance is administered by the Secretary, . . . as a condition of such assistance.” The Department also changed “applicant” to “organization” and removed “as a condition of assistance” in (j)(2)(i)(B), and made significant edits to paragraph (j)(2)(ii) for accuracy regarding the statutory text and references to other paragraphs of this part.

88.3(k). The Helms, Biden, 1978, and 1985 Amendments. 22 U.S.C. 2151b(f); e.g., Consolidated Appropriations Act, 2019, Public Law 116–6, Div. F, sec. 7018. The Department received comments on this paragraph.

Comment: The Department received a comment stating that the provisions regarding the 1985 Amendment112 have been included in annual appropriations acts rather than codified as a statute, the Department is modifying the description of covered entities’ obligations under §88.3(k)(2) to clarify that the rule’s provisions regarding the 1985 Amendment apply only to funds under an appropriations act containing the 1985 Amendment.

Summary of Regulatory Changes: For the reasons described in the proposed rule 114 and above, and considering the comments received, the Department finalizes §88.3(l) with technical changes clarifying the citations and enforcement mechanisms, alleging they are against other State or Federal laws.

88.3(m). Medical Screening, Examination, Diagnosis, Treatment, or Other Health Care or Services. 42 U.S.C. 280g–1(d). The Department received comments on this paragraph.

Comment: The Department received numerous comments supporting the rule’s provision of enforcement mechanisms for 42 U.S.C. 1396f. Other commenters opposed the enforcement mechanisms, alleging they create an affirmative mandate that a State agency that administers a State Medicaid Plan may not compel any

111 See, e.g., the Consolidated Appropriations Act, 2019, Public Law 116–6, Div. F, sec. 7018 (“None of the funds made available to carry out part I of the Foreign Assistance Act of 1961, as amended, may be obligated or expended for any country or organization if the President certifies that the use of these funds by any such country or organization would violate any of the above provisions related to abortions or involuntary sterilizations.”)

112 See 83 FR 3880, 3895 (stating the reasons for the proposed §88.3(j), except for the modifications adopted herein).

114 See 83 FR 3880, 3895.
person to undergo any medical screening, examination, diagnosis, or treatment if such person objects on religious grounds.

Response: The Department disagrees with commenters opposing the paragraph. 42 U.S.C. 1396f is a rule of construction, and this rule does not convert it into an affirmative Federal exemption. This rule’s enforcement provisions do not create a freestanding right for persons or their families to be free to decline certain medical screenings or treatments. Rather, they only prevent an interpretation of 42 U.S.C. 1396f as requiring States to compel the acceptance of such screening or treatment when the Medicaid statute has no such requirement.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.3(m) as proposed.

Comment: The Department received comments generally supporting the concept of conscience protections for occupational medical examinations, immunizations, and treatments, and other comments generally opposing that concept. The Department did not receive specific comments on § 88.3(n) or its implementation of the rule of construction described in 29 U.S.C. 669(a)(5).

Response: Although Congress granted HHS authority to conduct research, experiments, and demonstrations related to occupational illnesses in the Occupational Safety and Health Act of 1970, such authority did not include the power to require “medical examination, immunization, or treatment for those who object thereto on religious grounds, except where such is necessary for the protection of the health or safety of others.” 29 U.S.C. 669(a)(5). The Department is required to abide by this limitation, and considers it appropriate to issue a final rule ensuring compliance.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.3(n) with minor changes, for example, deleting “With respect to occupational illness examinations and tests, the entities” and replacing it with “Entities.”

88.3(o). Vaccination, 42 U.S.C. 1396s(c)(2)(B)(ii). The Department received comments on this paragraph.

Comment: The Department received comments suggesting that the scope of this paragraph be expanded beyond pediatric vaccines to encompass all vaccines, or that it should be expanded to create a personal right to decline vaccinations based on moral or religious objections.

Response: The Department is aware of complaints asserting religious or moral objections to administering or receiving vaccines, including, for example, objections to administering or receiving vaccines derived from aborted fetal tissue. Because § 88.3(o) of the rule provides enforcement mechanisms for 42 U.S.C. 1396s, it is therefore limited to the scope of 42 U.S.C. 1396s. As 42 U.S.C. 1396s applies only to the pediatric vaccine program under Medicaid (the Vaccines for Children Program), the Department is unable to expand the scope of this paragraph beyond such programs. Likewise, as 42 U.S.C. 1396s requires compliance with religious or other exemptions under State law with respect to pediatric vaccines, the Department is unable to expand this rule provision to preempt State laws that do not provide such conscience protections.

Comment: The Department received comments asking for clarification as to how the proposed § 88.3(o) interacts with State laws such as school immunization requirements.

Response: Upon reviewing the proposed § 88.3(o), the Department agrees that the language can be clarified regarding how the paragraph might interact with State law. The Department therefore finalizes § 88.3(o) to more accurately reflect the text of 42 U.S.C. 1396s(c)(2)(B)(ii) by changing the applicability of the requirement of § 88.3(o) to reflect the statute’s requirement that, under any State-administered pediatric vaccine distribution program, the provider agreement executed by any provider registered to participate in the program includes the requirement that the program-registered provider comply with applicable State law, including any such law relating to any religious or other exemption. In order to further clarify the scope of § 88.3(o), the Department finalizes this paragraph to specify that applicable State “law” may include State statutory, regulatory, or constitutional protections for conscience and religious freedom, where applicable.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.3(o) with changes to ensure it follows the language of 42 U.S.C. 1396s(c)(2)(B)(ii), which applies to program-registered providers of pediatric vaccines, not to States generally, and to specify that applicable State law may include State statutory, regulatory, or constitutional protections for conscience and religious freedom, where applicable.

88.3(p). Specific Assessment, Prevention and Treatment Services, 42 U.S.C. 290bb–36(f), 5106(a).

Comment: The Department received comments on this paragraph expressing concern that the provision of conscience protections for parents who object to youth suicide assessments for their children should be balanced with the risk to the child’s life.

Response: Paragraph (p) in § 88.3 is a rule of construction that prevents persons or entities administering programs under 42 U.S.C. 290bb–36 or 42 U.S.C. 5106(a) from relying on the particular statutes at issue to require assessments or treatments that conflict with religious belief. The provisions in this rule related to these statutes do not, however, prevent or interfere with any other State or Federal law that reaches a different (or the same) conclusion on these questions.

In reviewing this paragraph in light of the comments received on it, however, the Department has determined that paragraph (p)(2)(iii) needs to be modified to more closely track the statutory language, in order to ensure it operates as a rule of construction consistent with 42 U.S.C. 290bb–36(f).

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.3(p) with changes to paragraph (p)(2)(iii) to more closely track the language of 42 U.S.C. 290bb–36(f), which establishes it as a rule of construction.

88.3(q). Religious nonmedical health care, 42 U.S.C. 1320a–1, 1320c–11, 1395–5, 1395x(e), 1395x(y)(1), 1396a(a), and 1397f–1(b).

The Department received comments on this paragraph.

Comment: The Department received comments opposed to the provision of Federal funds to religious nonmedical health care facilities because such funding could be interpreted as legitimating such facilities, resulting in

116 83 FR 3880, 3895.
117 83 FR 3880, 3895 (stating the reasons for the proposed § 88.3(o), except for the modifications adopted herein).
118 83 FR 3880, 3895 (stating the reasons for the proposed § 88.3(p), except for the modifications adopted herein).
patients of such facilities not seeking other treatment options.

Response: Whether to permit Federal funds to be used to pay religious nonmedical health care facilities for particular services provided to Medicare or Medicaid beneficiaries has been determined by Congress through 42 U.S.C. 1320a–1, 1320c–11, 1395i–5, 1395x(e), 1395x(y)(1), 1396a(a), and 1397–1(b), and the Department is unable to alter that decision. The purpose of including these provisions in the proposed rule and this final rule is only to provide enforcement mechanisms for the determination of Congress with respect to funding of religious nonmedical health care facilities. Nevertheless, the Department believes that most if not all persons who make use of religious nonmedical health care facilities do so because they hold religious objections to the receipt of medical care and would be unwilling to seek other treatment options regardless of the religious nonmedical health care facilities’ funding status.

Response: This rule only provides for enforcement mechanisms for conscience protection statutes that Congress has enacted, and determinations of policy matters raised by these comments are outside the scope of this rulemaking to the extent they conflict with decisions made by Congress. That said, this provision regarding religious nonmedical health care facilities could prevent people, particularly children, from accessing necessary medical health care.

Comment: The Department received comments expressing concern that providing conscience protections for attendees of religious nonmedical health care facilities could prevent people, particularly children, from accessing necessary medical health care.

Response: As noted by the commenter, because Medicare Advantage organizations are required to cover services covered by Medicare Parts A and B pursuant to 42 U.S.C. 1395w–22(a)(1)(A), the exemptions for religious nonmedical health care facilities related to Medicare Part A funding apply to Medicare Advantage as well. Because the applicability paragraphs of § 88.3(q) follow the statutory language concerning religious nonmedical health care exemptions, the Department declines to adopt the commenter’s suggested modification.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department made significant changes to the structure of § 88.3(q) to clarify applicable statutes and paragraphs, correct typographical errors, and more closely track the statutory language. The Department more clearly articulates which paragraphs are applicable to different entities by, for example, changing “(q)(2)(i) through (iii)” to “(q)(2)(i), (ii), (iii), and (iv).” The Department added “(h)” to the reference to 42 U.S.C. 1320a–1 to clarify the particular paragraph containing relevant information. The Department clarified in paragraph (q)(1)(ii) that some State agencies are required to comply, in paragraph (q)(1)(iii) that entities receiving Federal financial assistance from Medicare have compliance obligations, and in paragraph (q)(1)(iv) that entities including States that receive Federal financial assistance from Medicaid have compliance obligations, and in paragraph (q)(1)(v) clarified the authority related to an elder’s right to practice his or her religion through reliance on prayer alone is subtitle B of Title XX of the Social Security Act (42 U.S.C. 1397–1397m–5) and eliminated what was the last paragraph regarding the Elder Justice Block Grants. The paragraph incorporates multiple references to 42 U.S.C. 1395xs(1), which defines a religious nonmedical health care institution, to add clarity to the regulation. The paragraph clarifies the application of various provisions to entities that make an agreement with the Secretary of the Department pursuant to 42 U.S.C. 1320a–1(b), or receive Federal financial assistance from Medicare, Medicaid, or Subtitle B of Title XX of the Social Security Act (42 U.S.C. 1397–1397m–5). Last, the Department removed the references requiring compliance with § 88.5, as compliance with that section is now voluntary.

Assurance and Certification of Compliance Requirements (§ 88.4)

In the “Assurance and Certification of Compliance” section of the proposed rule, the Department proposed to require certain recipients of Federal financial assistance or other Federal funds from the Department or that the Department administers to submit written assurances and certifications of compliance with the Federal conscience and anti-discrimination laws, as applicable, as part of the terms and conditions of acceptance of Federal financial assistance or other Federal funding from the Department. The Department stated its belief that both an assurance and a certification provide important protections to persons and entities under these laws and would be consistent with requirements under other civil rights laws. The Department noted its concern that there is a lack of knowledge on the part of States, local governments, the health care industry, and the public of the rights of protected persons and entities, and the corresponding obligations on covered entities provided by Federal conscience and anti-discrimination laws.
Section 88.4 proposed to require certain applicants for Federal financial assistance or other Federal funds from the Department to which this part applies to submit assurances and certifications of compliance with Federal conscience and anti-discrimination laws and this part. The Department proposed that covered applicants operationalize the assurance and certification requirement by filing revised versions of applicable civil rights forms, such as the HHS–690 Assurance of Compliance Form once per year and incorporate such filing by reference in all other applications submitted that year, rather than for every application that year. To this end, and as consistent with other civil rights regulations requiring assurances or certifications, the Department proposed in §88.4(b)(6) to permit an applicant to incorporate the assurance by reference in subsequent applications to the Department. The proposed rule explained that both the assurance and certification would constitute a condition of continued receipt of Federal financial assistance or other Federal funds from the Department. With respect to the certification required in proposed §88.4(a)(2), proposed §88.4(b)(7) clarified that, as with other anti-discrimination laws, a violation of the requirements of the certification may result in enforcement by the Department, as provided in §88.7 of this part.

Noting the need to increase public awareness of Federal conscience and anti-discrimination laws, the Department solicited public comment on the various options available for public education and outreach.

Proposed paragraph (b) identified specific requirements for the proposed assurance and compliance requirements: (b)(1) Addressed the timing to submit the assurance for current applicants or recipients as of the effective date of this part; (b)(2) addressed the form and manner of such submittals; and (b)(3) addressed the duration of obligations for both the assurance and certification.

Proposed §88.4(b)(2) explained that applicants would submit assurance and certification forms in an efficient manner specified by OCR, in coordination with the relevant Department component, or alternatively in a separate writing.

The Department proposed that its components be given discretion to phase in the written assurance and certification requirement by no later than the beginning of the next fiscal year following the effective date of the regulation. The Department stated its intent to work with recipients of Federal financial assistance or other Federal funds from the Department to ensure compliance with the requirements or prohibitions promulgated in this regulation. If the applicant or recipient would fail or refuse to furnish a required assurance or certification, the Department proposed that OCR, in coordination with the relevant Department component, would be authorized to effect compliance by any of the remedies provided in §88.7. See Grove City College, 465 U.S. 555 (affirming partial termination of institution’s Federal funds for refusing to sign a Title IX assurance of compliance form).

The Department also proposed that, while both recipients and sub-recipients, as defined herein, must comply with the substantive requirements of Federal conscience and anti-discrimination laws, as applicable, sub-recipients would not be subject to the requirements of §88.4 regarding assurance and certifications of compliance. The Department invited comment on whether this approach strikes the appropriate balance between achievement of this rulemaking’s policy objectives and avoidance of undue burden on the health care industry.

Proposed §88.4(c) also contained several important exceptions from the proposed requirements for written assurance and certification of compliance, including (1) physicians, physician offices, and other health care practitioners participating only in Part B of the Medicare program; (2) recipients of Federal financial assistance or other Federal funds from the Department awarded under certain grant programs currently administered by the Administration for Children and Families, whose purpose is unrelated to health care provision as specified; (3) recipients of Federal financial assistance or other Federal funds from the Department awarded under certain grant programs currently administered by the Administration on Community Living, whose purpose is unrelated to health care provision as specified; and (4) Indian Tribes and Tribal Organizations when contracting with the Indian Health Service under the Indian Self-Determination and Education Assistance Act. The Department sought public comment on whether further exceptions should be made to the requirements of §88.4 in contexts where the requirements would be unduly burdensome or in contexts unrelated to health care or medical research. The Department received comments on this section, including general comments in support of this section.

Comment: The Department received comments requesting that exemptions for religious beliefs or moral convictions, such as for vaccinations, be included in form HHS–690.

Response: The Department’s implementation of the assurance and certification of compliance will address the Federal conscience and anti-discrimination laws implicated by this rule. Because none of the statutes that this rule implements create across-the-board exemptions on the basis of religious beliefs or moral convictions to vaccination requirements, the assurance and certification of compliance requirement does not either.

Comment: The Department received comments requesting that any assurance of compliance be acquired through form HHS–690 to avoid the increased administrative burden of adding new forms or procedures.

Response: The Department agrees with this proposal and is working to obtain Paperwork Reduction Act clearance for updates to the HHS–690 form entitled Assurance of Compliance, which previously had OMB PRA clearance as OMB No. 0945–0006. (The Department’s operationalization of the certification of compliance required in §88.4(a)(1) is described in the RIA and PRA portions of this rule.)

The HHS–690 form enables an applicant to provide an assurance that it will comply with certain Federal civil rights laws and regulations “in consideration of and for the purpose of obtaining Federal grants, loans, contracts, property, discounts, or other Federal financial assistance” from the Department.120 By signing the assurance of compliance, the applicant “agrees that compliance with this assurance constitutes a condition of continued receipt of Federal financial assistance, and that it is binding upon the Applicant, its successors, transferees and assignees for the period during which such assistance is provided.”121

As finalized, §88.4(b)(1) requires entities that are already recipients as of the effective date of the rule and applicants to submit the assurance and the certification as a condition of any application or reapplication for funds to which the rule applies. Pursuant to the final §88.4(b)(6), it would be permissible to incorporate assurances and certifications by reference in subsequent applications, which is consistent with the Department’s Grants Policy Statement, which states that

121 Id.
because recipients file an assurance of compliance form "for the organization and . . . not . . . for each application," a recipient with a signed assurance on file assures through its signature on the award application that it has a signed Form 690 on file.122

The Department proposed to add a provision to § 88.4(b)(1) that would require submission of the assurance more frequently than at the time of application if the applicant or recipient fails to meet a requirement of the rule, or if OCR or the relevant Department component has reason to suspect or cause to investigate the possibility of such failure. For instance, OCR may have reason to suspect through its investigations or the number of complaints received that a particular recipient is not complying with the Federal conscience and anti-discrimination laws or the rule and consequently asks the recipient to sign an assurance of compliance form offcycle from the normal grants process. To forgo as-needed assurances outside of the application process jeopardizes OCR’s and the Department’s flexibility to ensure that the Federal financial assistance or other Federal funds that the Department awards are used in a manner compliant with Federal conscience and anti-discrimination laws and this rule.

Comment: The Department received a comment requesting that the certification of compliance contain additional language, such as explicit protections for LGBT patients.

Response: The Department does not agree. This collection of assurances and certifications would facilitate the Department’s obligation to ensure that the Federal financial assistance or other Federal funds that the Department awards are used in a manner that complies with Federal conscience and anti-discrimination laws and this rule. The Department is accountable to the American public for protecting the integrity of Federal financial assistance and other Federal funds that the Department awards. The Department’s administration of a requirement for a person or entity at the time of application or reapplication to assure and certify compliance with Federal conscience and anti-discrimination laws and the final rule demonstrates that the person or entity was aware of its obligations under those laws and the rule.

In addition, this collection of assurances and certifications would operationalize the obligations of persons and entities to comply with applicable Federal conscience and anti-discrimination laws. As discussed above, the Department has the authority to place terms and conditions with respect to the Federal conscience and anti-discrimination laws in any instrument HHS issues or to which it is a party (e.g., grants, contracts, or other HHS agreements). A Department component extending an award must communicate and incorporate statutory and public policy requirements and obligate the recipient to comply with Federal statues and “public policy requirements, including . . . those . . . prohibiting discrimination.”123 More specifically, the Department component “must communicate . . . all relevant public policy requirements, including those in general appropriations provisions, and incorporate them either directly or by reference in the terms and conditions of the Federal award.”124 To execute this obligation, the Departmental component may require a recipient “to submit certifications and representations required by Federal statutes, or regulations . . . .”125

Furthermore, the proposed requirements of § 88.4 are consistent with the requirements of other Federal civil rights laws and would bring Federal conscience and anti-discrimination laws into parity with those other civil rights laws. Although instituting an enforcement action against an entity is effective in ensuring that the enforced-against entity is aware of its requirements under the statutes implemented through this rule, the requirement of an assurance and certification of compliance would ensure that such awareness is shared by entities subject to proposed § 88.4 before violations occur and may help prevent them.

Comment: The Department received a comment stating that the requirement that covered entities provide assurances and certifications of compliance could lead to third-party qui tam lawsuits parallel to the Department’s enforcement actions.

Response: Whether a third-party may bring or prevail in a qui tam lawsuit with respect to an assurance or certification required by this rule is a legal question dependent on statutes and precedent governing qui tam lawsuits and is beyond the scope of this rulemaking. The Department does not consider the possibility that such laws may apply as a sufficient reason not to require assurance or certification of compliance with Federal conscience and anti-discrimination laws in order to achieve the goals described in this Final Rule for requiring such assurance or certification.

Comment: The Department received a comment stating that the proposed rule is unclear as to whether a person that falls within one of the exempt categories described in § 88.4(c)(1) and (2) remains exempt if such person receives Federal funds under a separate agency or program.

Response: The Department does not agree that the proposed rule is unclear as to whether such a person would remain exempt. Proposed § 88.4(c) states that certain persons or entities shall not be required to comply with paragraphs (a)(1) and (2) of § 88.4 “provided that such persons or entities are not recipients of Federal financial assistance or other Federal funds from the Department through another instrument, program, or mechanism, other than those set forth in paragraphs (c)(1) through (4) of this paragraph.” Therefore, a person who would be exempt under one of these provisions, but receives Federal financial assistance or other Federal funds from a non-exempt HHS program, is no longer exempt.

“Federal financial assistance” as used in the phrase “Federal financial assistance or other Federal funds from the Department” should be read to mean such assistance from the Department. Therefore, a person that falls within one of the exempt categories described in § 88.4(c)(1) and (2) remains exempt if such person receives Federal financial assistance from an agency or department other than HHS.

Comment: The Department received a comment stating that the proposed rule is unclear because, while the rule states that it is appropriate to exempt clinicians who are part of State Medicaid programs, such clinicians are not included in the exemptions of § 88.4(c).

123 45 CFR 75.300(a).

124 Id.

125 Id. sec. 75.208.
Response: The exclusion in § 88.4(c) does not need to explicitly exempt State Medicaid program clinicians because such participants are already excluded from § 88.4’s application by virtue of being sub-recipients of the Department, not recipients. States are the direct recipients of Medicaid funding from the Department, and States may offer Medicaid benefits on a fee-for-service (FFS) basis, through managed care plans, or both. Regardless of the model that the States use, clinicians are sub-recipients as this term is used in this rule. Under the fee-for-service model, the State pays the clinicians directly and under the managed care model, a State pays a fee to a managed care plan, which in turn pays the clinician for the services a beneficiary may require that are within the managed care plan’s contract with the State to serve Medicaid beneficiaries.126 The 2008 Rule expressly exempted State Medicaid program clinicians because the certification requirement applied to recipients and sub-recipients.127 In contrast, the certification requirement in this rule applies to recipients only.128 Comment: The Department received a comment stating that, while some pharmacies and pharmacists participate in Medicare Part B, the exemption for health care practitioners in § 88.4(c) does not explicitly include pharmacists and pharmacies, and “health care practitioners” may not be understood to include pharmacists or pharmacies.

Response: The Department agrees with the commenter’s observation and, accordingly, will finalize § 88.4(c)(1) to explicitly include pharmacists and pharmacies within the exemption if they participate in Medicare Part B and are not otherwise subject to this part.

Comment: The Department received a comment asking that the exemption in § 88.4(c) be expanded to include participants in Medicare Part C as well as Part B.

Response: In contrast to doctors and other health care practitioners who participate in Medicare Part B and are considered recipients under this rule because these providers receive direct payments from the Centers for Medicare & Medicaid Services, Medicare Part C (Medicare Advantage) providers are not recipients, as defined by this rule, but instead are sub-recipients. Under the Medicare Part C program, HHS makes payments to the private plan, which is the recipient for the purpose of Medicare Part C, and the plan pays the provider, which under this rule would be considered a sub-recipient.129 Therefore, § 88.4(c) does not need to exempt Medicare Part C providers because, as a threshold manner, the assurances and certifications requirement of § 88.4 do not apply to providers participating in Medicare Part C. The same is true of participants in Medicare Part D.130

Comment: The Department received a comment asking that the assurance and certification of compliance provisions become effective one year after the final rule is published or provide a one-year safe harbor to entities that make a good faith effort to inform their employees about the Federal conscience and anti-discrimination laws and come into compliance.

Response: Although ultimate responsibility for compliance resides with covered entities, OCR plans to do significant outreach and public education to inform covered entities of their obligations and timelines. Recipients are also free to inform their employees about Federal conscience and anti-discrimination laws through policies and procedures or internal communications efforts, such as by posting notices of rights under Federal conscience and anti-discrimination laws, using the model in appendix A to 45 CFR part 88. Section 88.5 of this rule no longer requires recipients to post notices, but OCR will consider the posting of notices as non-dispositive evidence of compliance if OCR were to investigate the recipients’ compliance with Federal conscience and anti-discrimination laws. Because the notice provision is being finalized as a voluntary best practice that serves as non-dispositive evidence of compliance, there is no deadline for posting of notices.

Summary of Regulatory Changes: For the reasons described in the proposed rule133 and above, and considering the comments received, the Department finalizes § 88.4 with the following changes: A change to paragraph (b)(1), deleting “applicants or recipients” and replacing with “entities” for accuracy; a change to paragraph (b)(1) to insert “or any applicants” and to insert “application or” to clarify that new applicants are included; a change to paragraph (b)(1), regarding timing, to clarify that submission of assurance and certifications may be required on a more frequent basis if “OCR or the relevant Department component has reason to suspect or cause to investigate the possibility of [a] failure” to meet a requirement of this part; changes to paragraph (b)(6) to clarify that both prior assurances and certifications may be incorporated by reference; a change to the end of paragraph (b)(7) by adding the phrase “including by referral to the Department of Justice, in coordination with the Department’s Office of General Counsel, where appropriate” as discussed above; a change to paragraph (b)(8) to replace “remedies” with “mechanisms” for accuracy; and a change to paragraph (c)(1) to include pharmacies and pharmacists in the list of Medicare Part B exclusions.

Notice of Rights Under Federal Conscience and Anti-Discrimination Laws (§§ 88.5)

The NPRM proposed requiring the Department and recipients to notify the public, patients, and workforce, which may include students or applicants for employment or training, of their protections under the Federal conscience and anti-discrimination laws and this rule. For consistency with other notice requirements in civil rights regulations, paragraph (a) of § 88.5 proposed to require the Department and recipients to post the notice provided in Appendix A of the proposed rule within 90 days of the effective date of this part. This proposed notice would advise persons and entities about their rights and the Department’s and/or recipients’ obligations under Federal conscience and anti-discrimination laws. The notice would provide information about how to file a complaint with OCR. The Department sought comment on whether there are categories of recipients that should be exempted from this requirement to post such notices. The proposed rule did not propose to require sub-recipients to post the notice.

The proposed rule would require all Department components and recipients to use the notice text in appendix A of the proposed rule. The Department invited comment on whether the proposed rule should permit recipients to draft their own notices for which the content meets certain criteria and does not compromise the intent of § 88.5.

Proposed paragraph (b) set forth two categories of locations where the notice...
would be required to appear: On the Department’s and recipient’s website(s), and in a physical location of each Department and recipient establishment where notices to the public and notices to their workforce are customarily posted. With regard to the physical posting, paragraph (b)(2) would impose readability requirements without identifying prescriptive font-size or other display requirements.

Proposed paragraph (c) would incentivize recipients to display the notice in locations other than their websites and physical establishments. The Department explained that, in the event that the OCR Director, pursuant to the enforcement authority provided in §88.7, investigates or initiates a compliance review of a recipient, the OCR Director would consider, as one of many factors with respect to compliance, whether the recipient posted the notice in the documents described in paragraphs (c)(1) through (3), as applicable. Because this part regulates a diverse range of recipients, the Department identified three categories of documents most common across all recipients for proposed listing in paragraph (c). The Department sought comment on the proposed approach of paragraph (c) and on the categories of documents identified in paragraphs (c)(1) through (3).

Finally, paragraph (d) of §88.5 proposed to permit recipients to combine the text of the notice required in paragraph (a) with other notices under the condition that the recipients retain all of the language provided in Appendix A of the proposed rule in an unaltered state. The Department requested comment on whether the proposed paragraph (d) struck the best balance based on recipients’ experiences. The Department received comments on this section, including comments that were general expressions of support or opposition to proposed §88.5.

Comment: The Department received comments objecting to the burdens of required notices, and stating that none of the Federal conscience and anti-discrimination laws give the Department authority to issue the notice requirements of §88.5.

Response: The Department has considered these and other comments objecting to the notice requirements of the proposed rule. Each Federal conscience and anti-discrimination law requires the Department and covered entities to comply with its substantive provisions. Notice of rights under those provisions are important means of ensuring proper compliance. Notices are also commonly used in ensuring compliance with other Federal civil rights protections.

At the same time, the Department appreciates the potential burden of such notices and the fact that they are not explicitly required by statute. In response to comments concerning notice requirements, the Department is finalizing §88.5 to change the notice provision from a requirement to a voluntary action and to accept self-drafting of notices to provide greater tailoring to individual circumstances. In investigating complaints and initiating compliance reviews, OCR will consider the extent to which entities post notices, as well as the inclusion of such notices in the type of documents identified in the proposed rule at §88.5(c), according to the rule’s notice provisions as non-dispositive evidence of compliance with the substantive provisions of this rule applicable to such entities. The existence or not of posted or published notices may also be considered in the determination of potential corrective action in cases of violation.

The Department believes that the change of the notice provisions of this rule from a requirement to a voluntary action to be considered in complaint investigations addresses any concerns about the Department’s authority to implement mandatory notice provisions. Providing guidance on notices and considering notices with respect to enforcement, including corrective action, are matters concerning the government of the Department and the performance of Department business as authorized by the authorities discussed supra at part III.A.

Comment: The Department received a comment stating that, although the commenter approves of the notice proposed in Appendix A of the NPRM, the commenter believes that recipients should be free to draft their own notice if they desire, so long as they clearly state what protections are available under the law. The commenter proposes that permitting recipients to draft their own notice will permit them to tailor the notice to their unique settings and avoid possible unintentional misrepresentations that may arise based on their status. The commenter proposes that any such recipient-drafted notice should be free to draft their own notice if they desire, so long as they clearly state what protections are available under the law. The commenter proposes that permitting recipients to draft their own notice will permit them to tailor the notice to their unique settings and avoid possible unintentional misrepresentations that may arise based on their status. The commenter proposes that any such recipient-drafted notice could be required to state where the text of Appendix A may be found or to provide such text upon request.

Response: The Department agrees that recipients should be permitted to draft their own notices so as to avoid misrepresentations and tailor their notice to their particular circumstances and is modifying §88.5 to acknowledge and accept self-drafted notices to provide greater flexibility.

Comment: The Department received a comment stating that recipients should be free to draft their own notice if they desire, so long as they clearly state what protections are available under the law. The commenter proposes that permitting recipients to draft their own notice will permit them to tailor the notice to their unique settings and avoid possible unintentional misrepresentations that may arise based on their status. The commenter proposes that any such recipient-drafted notice could be required to state where the text of Appendix A may be found or to provide such text upon request.

Response: Because the notice provision is being finalized as a voluntary practice that serves as non-dispositive evidence of compliance in investigations and compliance reviews, the notice provision no longer has a timeframe in which such notices must be posted.

Comment: The Department received comments stating that the broad, general language proposed in appendix A could lead a health care provider to believe
that they may violate Federal non-discrimination laws or the Emergency Medical Treatment and Active Labor Act.

Response: The Department disagrees. The broad nature of the proposed language in appendix A specifically avoids implying that providers have a categorical, unconditional right under Federal law to exercise conscientious objections. The notice text is clear that only “certain health-care related treatments, research, or services” are covered by the Federal conscience and anti-discrimination laws, and only states that providers “may,” in a given circumstance, be protected by the rule. Nothing in the language of the proposed notice states that other Federal laws are waived. The appendix continues to serve as a valid model notice.

Comment: The Department received comments stating that the proposed notice should require mention of an exemption for vaccinations.

Response: As stated above, the Department has changed its approach to the notice provisions, and they are now voluntary and flexible. In addition, with respect to vaccination, this rule provides for enforcement of 42 U.S.C. 1396(c)(2)(B)(ii), which requires providers of pediatric vaccines funded by Federal medical assistance programs to comply with any State laws relating to any religious or other exemptions, but this rule does not create a new substantive conscience protection concerning vaccination, nor does it require a State to adopt such an accommodation. In investigating a complaint or conducting a compliance review, OCR will consider an entity’s voluntary posting of a notice of nondiscrimination as non-dispositive evidence of compliance with the applicable substantive provisions of this part, to the extent such notices are provided according to the provisions of this section and are relevant to the particular investigation or compliance review.

Comment: The Department received a comment stating that the statutes referenced by the proposed notice in appendix A do not apply to health plan employees and, thus, the proposed notice is overly broad.

Response: While the Department disagrees by the proposed notice cannot apply to health plan employees, the Department agrees that the proposed appendix A could be misleading for a particular entity, and has modified both § 88.5 to provide greater flexibility as to content and scope. The Department also agrees that the proposed notice, as written, could be misleading for a particular investigation or compliance review. The notice text is clear that only “certain health-care related treatments, research, or services” are covered by the Federal conscience and anti-discrimination laws, and only states that providers “may,” in a given circumstance, be protected by the rule. Nothing in the language of the proposed notice states that other Federal laws are waived. The appendix continues to serve as a valid model notice.

Comment: The Department received comments stating that the proposed notice was unclear as to who is responsible for posting the notice required by § 88.5.

Response: Paragraph (a) in § 88.5 states that “the Department and each recipient” should post the notice text. Because the notice provisions in the rule will now be voluntary, this provision is deleted from § 88.5(a) as finalized. Nevertheless, because the voluntary posting of notices may be considered by the Department in its handling of complaints and compliance reviews, entities specifically subject to this rule (such as certain recipients of Federal funds) would be the appropriate parties for ensuring that such notices are posted if they chose to post them.

Comment: The Department received comments stating that health insurance issuers should not be required to provide the notice to the public.

Response: To the extent the commenters took this position because they did not know that the protections of the Federal conscience and anti-discrimination laws would apply to health insurance issuers, the Department disagrees with such assumption. The notice provision is being finalized not as a requirement, but as guidance on best practices that the Department will consider in complaint investigation and compliance reviews. Certain Federal conscience and anti-discrimination laws clearly implicate health insurance issuers; accordingly, in investigation of complaints or compliance reviews involving health insurance issuers, the Department may consider whether the issuer has posted such a notice as non-dispositive evidence of compliance with the rule. If a health insurance issuer is subject to provisions of the rule, as at least some will be, notice provided by an insurer to both its employees and the public are appropriate factors to consider as evidence of compliance with this rule.

Comment: The Department received a comment stating that requiring the proposed notice to be displayed in emergency rooms may violate the Emergency Medical Treatment and Active Labor Act because patients who see the notice may leave before they are treated.

Response: The Department disagrees. The regulations enacted under the Emergency Medical Treatment and Active Labor Act at 42 CFR 498.20(q)(1) require that public notices be posted in emergency rooms to inform patients of the requirements of EMTALA. Furthermore, while the Department disagrees that a notice of Federal conscience and anti-discrimination laws would in any way discourage a patient seeking emergency treatment, a patient’s voluntary refusal to seek treatment would not be a violation of EMTALA.

Comment: The Department received a comment proposing that, instead of specifying particular locations for the notice to be placed, the rule instead require covered entities to provide the notice using the same means that such entities regularly use to provide important notices.

Response: The Department believes that the proposed rule’s specificity with respect to how to place the notice provides appropriate guidance on how to effectively communicate its content to the intended audiences. Because the notice provisions are now voluntary, but the posting of such notices would be considered as positive evidence of compliance, covered entities will have flexibility regarding where, how, and when they post notices. At the same time, if entities post notices only in contexts or ways where persons to whom the notices are directed are not likely to receive the benefit of the notices, the Department will take that
into consideration in investigations and compliance reviews. The notice provisions under this final rule provide appropriate suggestions for effective placement while still acknowledging that not all circumstances are identical.

Comment: The Department received comments stating that there should be no exceptions to the notice requirement in § 88.5.

Response: The Department appreciates the comments, but has decided not to finalize the notice provision as a requirement. The notice provision is being finalized as a voluntary best practice that the Department will consider in complaint investigation and compliance reviews.

Summary of Regulatory Changes: For the reasons described in the proposed rule, and above, and considering the comments received, the Department finalizes § 88.5 with changes so that notices are not required, but will be a voluntary best practice that may demonstrate compliance in any OCR investigation. The rule specifies that OCR may, in investigating complaints and conducting compliance reviews, consider the extent to which covered entities post notices according to the rule’s notice provisions as non-dispositive evidence of compliance with substantive provisions of the rule applicable to covered entities. The section also now permits recipients to draft their own version of the notice, or to combine the notice with other non-discrimination notices, to allow greater accuracy, flexibility, and tailoring to their particular circumstances. The Department also changes the section to reflect that, while guidance regarding particular placement of notices remains a factor for compliance consideration purposes, all notice placement provisions may not be applicable or appropriate to all covered entities. The Department also changes the section to remove the requirement that the notice be posted within 90 days of the publishing of the rule, or, with respect to new recipients, within 90 days of becoming a recipient, to reflect that posting of the notice is voluntary and that there is no mandated time frame within which a notice must be posted. The Department also changes the section to include, in paragraphs (b)(3) and (4), “the Department” in addition to recipients, for additional clarity. Finally, the Department makes a technical change to relocate the proposed rule’s provision regarding the readability of the notice text from paragraph (b)(2) in the proposed rule to paragraph (b)(6) in the final rule.

Compliance Requirements (§ 88.6)

This section of the proposed rule identified specific requirements for compliance with the Federal conscience and anti-discrimination laws. The Department proposed to subject recipients to the imposition of funding restrictions and other appropriate remedies if they or a sub-recipient is found to have violated a Federal conscience and anti-discrimination law. The Department proposed to require recipients, sub-recipients, and agency components to maintain records evidencing compliance with these laws and the proposed rule and to require such entities to cooperate with any OCR compliance review or investigation (including by producing documents or participating in interviews). The proposed rule further would require recipients and sub-recipients to inform any Departmental funding component, and to disclose, on applications for Departmental funding, the existence of any OCR compliance review, investigation, or complaint under the rule. This section also addressed claims in the event a covered entity intimidates or retaliates against those who complain to OCR or participate in or assist in an OCR enforcement action. The Department received comments suggesting improvements to this section, as well as comments generally supporting proposed § 88.6.

Comment: The Department received comments stating that it is unduly burdensome and unnecessary to require recipients to report to the Department funding component all compliance reviews, investigations, and complaints when they occur and to disclose any compliance review, investigation, or complaint for five years prior in any application for new or renewed Federal financial assistance or Departmental funding. Commenters noted that such requirements are burdensome on the covered entities, are unnecessary if an investigation found no violation, and require the covered entity to provide the Department with information that the Department should already have.

Response: The Department agrees that such reporting requirements are unnecessary in situations in which an investigation has found no violation. The Department also agrees that the provision of such reports to funding components of the Department for already awarded Federal financial assistance or Departmental funding is unnecessary because the Office for Civil Rights can notify such funding components at the time such a determination of violation is made. The Department disagrees that such records of violations are unnecessary as to future awards of Federal financial assistance or Departmental funding, because the Department does not maintain records of all such findings in a manner that is generally accessible to funding components across the Department. Therefore, the Department is revising the reporting requirements under § 88.6 to reduce the burden on covered entities and to eliminate the reporting requirements in situations in which such reports are unnecessary or redundant with actions that will be taken by the Department. The final rule retains the requirement that recipients or sub-recipients subject to a determination by OCR of noncompliance with this part must, in any application for new or renewed Federal financial assistance or Departmental funding following such determination, disclose the determination of noncompliance. The rule also clarifies that applicants must also disclose OCR determinations made against their sub-recipients under previous or existing contracts, grants, or other instruments providing Federal financial assistance. Sub-recipients would only have to disclose findings made against them if they are seeking new or renewed funding as recipients of HHS funds or Federal financial assistance. The final rule shortens the period for reporting from five years to three years.

Comment: The Department received comments stating that none of the Department conscience and anti-discrimination laws authorize the Department to require record-keeping, conduct compliance reviews, or investigate complaints.

Response: As discussed supra at part III.A, various statutes and regulations authorize the Department to issue these regulations. The Department, and entities to which this rule applies, are required by statute to comply with various Federal conscience and anti-discrimination laws. Inherent in Congress’s adoption of the statutes that require the recipients of Federal funds from the Department to comply with certain Federal health conscience statutes is the authority of the Department to take measures to ensure compliance. Further, complaint investigation, compliance reviews, and record-keeping are standard measures that the Department employs with respect to the grants and contracts that they provide—to ensure compliance with requirements imposed by Congress with respect to particular programs and on
recipients of Federal funds, including statutory non-discrimination requirements. Below, the Department discusses in more detail objections to the Department’s authority to conduct compliance reviews.

Issuing this rule as finalized provides for the application and imposition of standard Departmental terms, conditions, and procedures to ensure compliance by recipients with statutory non-discrimination requirements, pursuant to the Department’s authorities discussed supra at part III.A. Those authorities allow, among other things, the imposition of terms and conditions on grant awards, contracts, and other funding instruments, and authorize the Department to require certain information from entities applying for such funds.

Comment: The Department received comments requesting more specificity as to how long records should be maintained, in what form or manner they should be maintained, and what content such records should include.

Response: The Department agrees that greater specificity as to the records that should be maintained, how long such records should be maintained, and in what format such records should be kept is appropriate. Therefore the Department will finalize the rule with modifications specifying that records (1) shall be maintained for a period of three years from the date the record was created, was last in force, or was obtained, by the recipient or sub-recipient; (2) shall contain any information maintained by the recipient or sub-recipient that pertains to discrimination on the basis of religious belief or moral conviction, including any complaints; statements, policies, or notices concerning discrimination on the basis of religious belief or moral conviction; procedures for accommodating employees’ or other protected individuals’ religious beliefs or moral convictions; and records of requests for such religious or moral accommodation and the recipient or sub-recipient’s response to such requests; and (3) may be maintained in any form and manner that affords OCR with reasonable access to them in a timely manner. These modifications are consistent with recordkeeping requirements employed in other civil rights regulations. For example, the Department of Justice imposed three-year record maintenance for self-evaluations required under regulations implementing section 504 of the Rehabilitation Act, and the Department or the Department of Justice imposed similar requirements in regulations under Title II of the Americans with Disabilities Act, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972. And HHS regulations under Title VI, Age Discrimination Act of 1975, and Titles VI and XVI of the Public Health Service Act generally require that a recipient maintain records necessary to determine whether the recipient has complied with the law.

Comment: The Department received a comment requesting that the requirements of § 88.6 not go into effect until at least one year after the publication of the final rule.

Response: The Department believes that covered entities will have sufficient time to begin abiding by the requirements of § 88.6 60 days after the publication of this final rule. To the extent that entities have specific reasons why they cannot comply within that timeframe, the Department will consider exercising enforcement discretion and take those reasons into consideration during any investigation of complaints that may arise.

Comment: The Department received comments requesting that the imposition of funding restrictions or other remedies on recipients based on their sub-recipients’ violations of Federal conscience and anti-discrimination laws be made discretionary instead of mandatory because some recipients may have limited control over their sub-recipients.

Response: As with other anti-discrimination regulations OCR enforces, such as the Age Discrimination Act (45 CFR 90), Title IX (45 CFR 86), and Title VI (45 CFR 80), this rule assures that Federal funds channeled from recipients to sub-recipients do not become immune to the protections provided by conscience and associated anti-discrimination laws. The Department, however, agrees that the rule should reflect greater enforcement discretion, and will finalize § 88.6(a) by changing “shall” to “may” with respect to the imposition of funding restrictions “and” other remedies to read “may” and “or,” respectively.

Summary of Regulatory Changes: For the reasons described in the proposed rule and above, and considering the comments received, the Department finalizes § 88.6 with substantial changes as described above, by making a technical correction to provide OCR with greater enforcement discretion concerning the responsibility of recipients for violations of the rule by sub-recipients, by changing “shall” to “may” in paragraph (a); by providing greater specificity as to the records covered by the rule, and for how long in paragraphs (b)(1) through (3); by making a technical correction to provide greater clarity on how a covered entity’s failure to cooperate may result in an OCR referral to the Department of Justice by inserting “in coordination with the Department’s Office of General Counsel” in paragraph (c); by making a technical correction, in keeping with the Department’s intent for § 88.6 to mirror Title VI enforcement regulations where applicable, to add a provision regarding the time and manner of OCR’s access to records, and the applicability of confidentiality and privacy concerns to OCR’s access in paragraph (c); by shortening from five years to three years in paragraph (d) the period for disclosing in any application for new or renewed Federal financial assistance or Departmental funding any determination by OCR of noncompliance to reduce the burden on covered entities; by revising reporting requirements in paragraph (d) to reduce the burden on covered entities by eliminating reporting requirements in situations in which such reports are unnecessary or redundant with actions taken by the Department, such as disclosing the existence of complaints, compliance reviews, or investigations in any application for new or renewed Federal financial assistance or Departmental funding; and by making a technical correction at the end of paragraph (d) to clarify that recipients disclose any OCR determinations made against their sub-recipients.

Enforcement Authority (§ 88.7) This section of the proposed rule reaffirmed the delegation to OCR of the Department’s authority to enforce the Federal conscience and anti-discrimination laws, in collaboration with the relevant Department components. The Department also noted that OCR has been expressly delegated the authority to enforce the Church, Coats-Snowe, and Weldon Amendments.

133 See, e.g., “A public entity shall, within one year of the effective date of this part, evaluate its current services, policies, and practices, and the effects thereof, that do not or may not meet the
since the 2008 Rule, which was reaffirmed in the 2011 Rule. Enforcement of section 1553 is also expressly delegated to OCR in the ACA. The NPRM provided notice that the Secretary delegated to OCR the authority to enforce all Federal conscience and anti-discrimination laws that were the subject of the proposed rule.

This section also proposed to specify that OCR’s enforcement authority would include the authority to handle complaints, perform compliance reviews, investigate, and seek, as appropriate action (in coordination with the leadership of any relevant HHS component) that the Director deems necessary to remedy the violation of Federal conscience and anti-discrimination laws and the proposed regulation, as allowed by law. The proposed text of § 88.7 of this part would provide OCR discretion in choosing the means of enforcement, from informal resolution to more rigorous enforcement leading to, for example, funding termination, as appropriate to the particular facts, law, and availability of resources.

The Department also proposed to explicitly establish its authority to investigate and handle (a) alleged violations and conduct compliance reviews whether or not a formal complaint has been filed, and (b) “whistleblower” complaints, or complaints made on behalf of others, whether or not the particular complainant is a person or entity protected by Federal conscience and anti-discrimination laws.

In this section of the proposed rule, the Department proposed to adopt the enforcement procedures for other civil rights laws, such as Title VI and section 504 of the Rehabilitation Act, for the Federal conscience and anti-discrimination laws. The Department solicited comments on what administrative procedures or opportunities for due process the Department should, as a matter of policy, or must, as a matter of law, provide (1) with respect to the remedial and enforcement measures that the Department may consider imposing or utilizing in response to a failure or threatened failure to comply with Federal conscience and anti-discrimination laws or this part, (2) before the Department may terminate Federal financial assistance or other Federal funds from the Department, or (3) before the Department may implement any or all of the remedial measures in § 88.7(i)(3) of the proposed rule. For example, comment was requested on whether the proposed rule should establish notice, hearing, and appeal procedures similar to those established in the Department’s regulations implementing Title VI of the Civil Rights Act of 1964, at 45 CFR 80.8–80.10. The Department also requested comment on whether and in what circumstances it would be appropriate to require remedies against a recipient for the violations of a sub-recipient, or against entities’ subsidiaries that are found to be in violation of any Federal conscience and anti-discrimination law or the proposed regulation.

The Department received comments on this section, including those generally supporting the proposed § 88.7.

Comment: The Department received comments stating that the Federal conscience and anti-discrimination laws do not provide the Department with the authority to conduct compliance reviews under these statutes or to engage in the investigatory actions provided for in the Department also received a comment stating that conducting a compliance review without having received a complaint is unreasonable.

Response: Inherent in Congress’s adoption of the statutes that require the recipients of Federal funds from the Department to comply with certain Federal health conscience statutes is the authority of the Department to take measures to ensure compliance. This is especially true in light of the fact that courts have refused to recognize private rights of action under certain statutes that are the subject of this rule, thus leaving victims of unlawful discrimination with no possible remedy without the Department’s intervention. Further, under the various statutes and regulations governing HHS grants, contracts and other programs discussed in part III.A above concerning the authority to issue this rule, the Department has authority to ensure that both it, and covered entities, are spending Federal funds and operating programs consistent with Federal laws applicable to those funds and programs. The Secretary similarly has authority under 5 U.S.C. 301 to prescribe regulations for the government of the Department and the distribution and performance of its business. Providing for Departmental procedures to ensure compliance, including to undertake compliance reviews, falls under such authorities.

As for their reasonableness, compliance reviews are a standard tool for enforcing compliance with Federal nondiscrimination statutes, despite the fact that most Federal nondiscrimination statutes, such as Title VI of the Civil Rights Act of 1964, do not explicitly mention them. Executive Order 12250 directed the Attorney General to implement regulations that addressed investigations and compliance reviews for the Federal nondiscrimination statutes. The order also directed agencies administering Federal nondiscrimination statutes to implement directives, via either policy guidance or regulations, consistent with the Attorney General’s regulations. Regulations subsequently promulgated by the Department of Justice regarding coordination of Title VI compliance, pursuant to Executive Order 12250, interpret Title VI as authorizing Federal agencies to conduct compliance reviews for Title VI enforcement. See, e.g., 28 CFR 42.407(c)(1) (“Federal agencies shall establish and maintain an effective program of post-notification compliance reviews regarding approved new applications (see 28 CFR 50.3(c) II A), applications for continuation or renewal of assistance (28 CFR 50.3(c) II B) and all other federally assisted programs.”).

Nevertheless, in order to address these concerns, the Department is finalizing § 88.7(c) with certain changes to clarify that OCR may conduct compliance reviews based on information from a complaint or other source that causes OCR to suspect non-compliance by an entity subject to the rule.

Comment: The Department received comments stating that, to provide clarity for covered entities and to ensure fairness of enforcement, potential penalties set forth in the rule should be clear and uniform.

Response: The Department agrees with this comment in part. Potential penalties vary among the Federal conscience and anti-discrimination laws as set by Congress. In addition, to the extent penalties may be imposed involuntarily, regulations such as those that apply to HHS grants, contracts, and CMS programs discussed above provide a well-established process for enforcing compliance with the terms and conditions of grants and contracts and programmatic regulations that require compliance with certain non-discrimination provisions. Consequently, in order to increase the clarity and uniformity of involuntary remedial processes applied through this rule, the Department has concluded that penalties imposed involuntarily under this rule will be imposed through those applicable regulations, such as 45 CFR part 75, or the FAR and DFAR. This is preferable both to an independent framework mirroring those of Title VI
and section 504 of the Rehabilitation Act, as the Department had proposed, and to a new set of uniform penalties as the commenter may have been proposing. Under this rule, in the event the Department deems that involuntary remedies may be appropriate, OCR will coordinate with the relevant funding component(s) of HHS in pursuing such remedies.

Comment: The Department received a comment stating that conducting a compliance review without having received a complaint is unreasonable.

Response: The Department disagrees. The Department’s Office for Civil Rights routinely conducts compliance reviews to ensure covered entities follow the requirements of other Federal civil rights laws, as well as the Health Insurance Portability and Accountability Act of 1996 and its associated regulations. Providing for compliance reviews to ensure that Federal conscience and anti-discrimination laws are not violated brings the Department’s ability to enforce such laws into parity with other civil rights laws that the Department enforces.

Comment: The Department received comments stating that proposed § 88.7 does not provide for adequate due process.

Response: The Department agrees in part, and is finalizing the rule to make use of remedial processes under other existing HHS regulations. As clarified herein, where OCR is not able to reach a voluntary resolution of a complaint with a covered entity, involuntary enforcement will occur by the mechanisms established in the Department’s existing regulations, such as those that apply to grants, contracts, or CMS programs, with OCR coordinating with the relevant funding component(s) of HHS. In those instances, the due process available under the applicable regulations will be available to covered entities. For example, 45 CFR 75.374 provides for opportunities for grantees to object, obtain hearings, and seek appeals when the Department or a component take a remedy for grantees non-compliance.

Comment: The Department received comments stating that § 88.7 threatens all penalties violate the Spending Clause of the Constitution because, for Congress to place a condition on receipt of Federal funds by a State, the condition placed on the State must be unambiguous, and the amount in question cannot be so great that it can be considered coercive to the State’s acceptance of the condition.

Response: The Department disagrees. The substantive requirements of laws enforced by this rule were set forth by Congress, and the Department is not aware of any successful Spending Clause challenge to such laws, even though some of those laws have existed for decades. The Department believes the conditions and requirements imposed on the States by the Federal conscience and anti-discrimination laws are unambiguous, and that these rules, in mirroring those requirements, are similarly clear. The Department has provided a clear description of entities to which each such statute applies, and of what is required of each entity in § 88.3 of this rule and elsewhere. Only after a violation is found should the Department take into consideration facts such as the appropriateness of remedies available under the law be answered.

It is the consistent policy of the Federal government to presume that statutes passed by Congress and signed by the President are constitutional. Funding remedies in cases of violations under this rule will be applied consistently with the Constitution and relevant case law. The Department’s decision to finalize this section to make use of existing remedial mechanisms under longstanding HHS regulations applicable to certain funding instruments, with OCR coordinating with HHS funding components, will also ensure that remedies imposed will be consistent with any constitutional concerns.

Comment: The Department received a comment stating that referral to the Department of Justice for additional enforcement is not provided for in any of the Federal conscience and anti-discrimination laws.

Response: The Department as the Department’s representative acts as the Department’s representative in court, and the Department routinely refers matters that require litigation on its behalf, or on behalf of the United States, to the Department of Justice including laws enforced by OCR. Furthermore, entities that make assurances or certifications of compliance under § 88.4, or that make other statements or productions to the Department under this part, do so under penalty of 18 U.S.C. 1001 (prohibiting materially false statements regarding an agency matter), violations of which may warrant referral to the Department of Justice. Additionally, the Department of Justice would be the appropriate party to receive referrals of potential violations of 42 U.S.C. 300a–8 which imposes criminal penalties on any officer or employee of the United States, or of any entity that administers federally funded programs (including States), and on any person receiving Federal financial assistance, who coerces or endeavors to coerce any person to undergo an abortion or sterilization procedure by threatening such person with the loss of, or disqualification for the receipt of, any benefit or service under a program receiving Federal financial assistance.

As a result, the Department finalizes the rule by amending § 88.7(i) (renumbered as § 88.7(h)) to clarify that possible appropriate referrals to the Department of Justice include potential violations of 42 U.S.C. 300a–8 and 18 U.S.C. 1001.

Comment: The Department received comments stating that health care entities should not be subject to the mechanisms in § 88.7 unless a complaint is unreasonable.

Response: While the Department encourages employers and employees to openly discuss religious and moral convictions that may impact which services or tasks the employer may ask of employees, where Federal conscience and anti-discrimination laws do not require prior notice of religious beliefs or moral convictions, neither does this rule. In other situations involving religious accommodations, the Supreme Court has held that notice is not required. Nevertheless, during complaint investigations and compliance reviews, the Department takes into consideration facts such as whether the covered entity knew or should have known about the objection.

Comment: The Department received a comment stating that § 88.7(i)(3) (renumbered as § 88.7(i)(3)) on the basis of a “threatened failure” to comport with the Federal conscience and anti-discrimination laws is excessive.

Response: The Department agrees and is removing the phrase “threatened failure” from § 88.7(i)(3) (renumbered as § 88.7(i)(3)).

Comment: The Department received a comment stating that § 88.7 threatens all

137 45 CFR 160.308.

138 See, e.g., EEOC v. Abercrombie & Fitch Stores, Inc., 135 S. Ct. 2028, 2033 (2015) (stating that importation of a notice requirement would “add words to the law” and that a prior request for accommodation “may make it easier to infer motive, but is not a necessary condition of liability.”).
funding streams for any violation of the Federal conscience and anti-discrimination laws.

Response: The Department disagrees. The only funding streams threatened by a violation of the Federal conscience and anti-discrimination laws are the funding streams that such statutes directly implicate. The Department cannot terminate funding for violation of a Federal conscience or anti-discrimination law unless Congress has applied that law to that funding. Section 88.7 is intended to provide a general description of the range of possible enforcement mechanisms available to the Department, not an exhaustive list of actions to be taken for each violation or prescribed amounts. Termination of funding as a possible remedy is a necessary corollary of Congressional requirements that certain funding not be provided to entities that engage in impermissible discrimination. Nevertheless, OCR commonly investigates complaints under civil rights laws that permit termination of funding on a finding of a violation, and yet OCR only rarely imposes termination of funding as a penalty for such violations. For example, under HIPAA, civil monetary penalties are not uncommon, although they still represent the minority of resolutions to cases where a violation was found to the satisfaction of the Department. In civil rights cases, complaint investigations in which OCR finds a violation are usually resolved by corrective action. What specific remedy is appropriate in the case of a particular violation depends on the facts and circumstances, and OCR does not prejudge those facts in this rule to suggest termination of funding will be either a common or an uncommon outcome. The Department simply observes that, just because the rule provides for termination of funding as a possible corrective action, does not mean that funding, either in whole or in part, will be terminated in all or even most cases. It would be premature and contrary to the history of OCR enforcement to deem this rule as a requirement that OCR terminate all, or even some, funding of all entities found to have committed a violation.

Summary of Regulatory Changes: For the reasons described in the proposed rule\(^1\)\(^2\) and above, and considering the comments received, the Department finalizes § 88.7 by making the changes discussed above, which include clarifying that OCR will serve a coordinating role with other Department components when remedial actions are pursued, and such remedies will be pursued under regulations applicable to relevant funding instruments, rather than under an independent enforcement framework set forth in this rule as had been proposed. Consistent with changes made to the definition of “discrimination” regarding the applicability of disparate impact analysis, the Department deletes the phrase “to overcome the effects of violations of Federal conscience and anti-discrimination laws and this part” from § 88.7(a)(6). The Department deletes the phrase “from time to time” from § 88.7(c) and, in place of the sentence “OCR may conduct these reviews in the absence of a complaint,” adds the sentence “OCR may initiate a compliance review of an entity subject to this part based on information from a complaint or other source that causes OCR to suspect non-compliance by such entity with this part or the laws implemented by this part.” The Department also adds certain criminal statutes as possible bases of referrals to the Department of Justice under § 88.7(h); and removes the phrase “threatened failure” from § 88.7(j)(3) of the proposed rule (renumbered as § 88.7(i)(3) in this final rule). The Department also makes a technical correction, in order to maintain consistency of terminology, to replace the phrase “cash payments” with “Federal financial assistance” in § 88.7(i)(3)(i) of the proposed rule (renumbered § 88.7(i)(3)(i) in this final rule); makes technical changes to § 88.7(a); adds coordination with the Department’s Office of General Counsel to § 88.7(a)(6) and (h); makes a stylistic change to § 88.7(d), including the deletion of “health care;” “associated,” “the,” and “but not limited to;” removes proposed § 88.7(e), which discussed destruction of evidence; makes an edit for clarity and readability to relocate the phrase “in whole or in part” within paragraph (i)(3)(v); for greater accuracy replaces “created by Federal law” with “under Federal law or paragraph (i)(3)(v); and inserts a new § 88.7(j) to specifically address handling of noncompliance with assurances and certifications, as discussed above.

Relationship to Other Laws § 88.8

This section would clarify the relationship between this part and other Federal, State, and local laws that protect religious freedom and moral convictions. In the proposed rule, the preamble for this section acknowledged that many State laws provide additional conscience protections for providers who have objections to abortion, fertility treatments, sterilization, assisted suicide, and euthanasia, among others. The Department proposed to uphold the maximum protection for the rights of conscience and the broadest prohibition on discrimination provided by Federal, State, or local law, as consistent with the Constitution. Where a State or local law provides as much or greater protection than Federal law for religious freedom and moral convictions, the Department proposed not to construe Federal law to preempt or impair the application of that law, unless expressly provided.

The Department noted that the proposed rule would not relieve OCR of its obligation to enforce other civil rights authorities, such as Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, the Age Discrimination Act of 1975, section 504 of the Rehabilitation Act of 1973, and the Americans with Disabilities Act of 1990. The Department affirmed that OCR would enforce all civil rights laws consistent with the Constitution and the statutory language. The Department received comments on this section.

Comment: The Department received comments stating that the proposed rule conflicted with other Federal laws, such as Title X of the Public Health Service Act, that were raised in comments related to other provisions of the proposed rule.

Response: Issues of potential statutory conflict have already been raised by other comments and answered in responses set forth above, so they are not repeated here.

Comment: The Department received comments stating that the proposed rule violates 42 U.S.C. 18114, a section of the ACA that states that, notwithstanding any other provision of ACA, the Secretary shall not promulgate any regulation that creates any unreasonable barriers to the ability of individuals to obtain appropriate medical care, impedes timely access to health care services, interferes with communications regarding a full range of treatment options between the patient and the provider, restricts the ability of health care providers to provide full disclosure of all relevant information to patients making health care decisions, violates the principles of informed consent and the ethical standards of health care professionals, or limits the availability of health care treatment for the full duration of a patient’s medical needs. Such comments argued that the proposed rule would violate this section by permitting providers to exercise their consciences when responding to a patient’s request for a particular medical...
service or treatment, or when determining whether or not to refer for a particular medical service or treatment, instead of requiring providers to comply with such requests by patients.

Response: The Department disagrees. ACA section 1554, 42 U.S.C. 18114, in no way negates the Federal conscience and anti-discrimination laws enforced by this rule. First, section 1554 is limited to regulations promulgated under the ACA. Only a minority of the laws implemented by this rule are set forth in the ACA—most, including for example the Church Amendments, the Coats-Snowe Amendments, and the Weldon Amendment, are not part of the ACA, and therefore regulations implementing those statutes are not affected by section 1554.

Second, it is a basic principle that Congress “does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions—it does not, one might say, hide elephants in mouseholes.” Whitman v. Am. Trucking Ass’ns, 531 U.S. 457, 468 (2001). It is implausible that Congress intended section 1554 to imply repeal Federal conscience protections when section 1554 contains no reference to conscience whatsoever—and when, at the same time and in the same legislation, Congress added several new conscience provisions (e.g., ACA sections 1303(b)(1)(A) and (b)(4), 1553), as well as a provision that nothing in the ACA shall be construed to have any effect on Federal laws regarding conscience; willingness or refusal to provide abortion; and discrimination on the basis of the willingness or refusal to provide, pay for, cover, or refer for abortion or to provide or participate in training to provide abortion (e.g., ACA section 1303(c)(2)).

Third, “it is a commonplace of statutory construction that the specific governs the general.” Morales v. Trans World Airlines, Inc., 504 U.S. 374, 384 (1992). Each Federal conscience and anti-discrimination law enforced by this rule is more specific to each set of circumstances than is section 1554, so that, to the extent there could be a potential conflict between the statutes, the more specific Federal conscience and anti-discrimination laws require that section 1554 not be interpreted to supersede them. For example, to the extent this rule enforces specific provisions of the ACA, such as ACA sections 1303(b)(1)(A) and (b)(4) and 1553, the rule enforces those laws according to text. The Department disagrees with the commenter’s implication that, in ACA section 1554, 42 U.S.C. 18114, Congress intended to prohibit the enforcement of ACA sections 1303(b)(1)(A) and (b)(4) and 1553 as written. Generally, one part of a statute should not be interpreted to negate many other parts of the same statute, because that would render those parts of the statute meaningless.

Fourth, even assuming that section 1554 applies, it must be construed in harmony with the ACA conscience provisions, as well as the other Federal conscience protections, especially in light of section 1303(c)(2) that nothing in the ACA shall be construed to have any effect on Federal laws regarding conscience protection: There is a presumption that Congress does not silently repeal its own statutes, but it intends multiple statutes to be read without conflict. And this is the manner in which the Department interprets section 1554.

Fifth, again even assuming that section 1554 applies, this Final Rule does not “create[] any unreasonable barriers to individuals to obtain appropriate medical care.” The protections enforced by this rule are duly enacted laws, passed by Congress and signed by the President. Such protections are, by definition, reasonable under 42 U.S.C. 18114. Further, by removing or reducing barriers that discourage health care providers from remaining in the health care industry, this rule promotes diversity and full participation of providers in health care generally and in HHS-funded programs in particular, and enhances the ability of individuals to obtain appropriate medical care. As for the compliance with 42 U.S.C. 18114’s provisions concerning timely access to health care services or for full duration of a period of medical need, this rule does not limit a health care provider’s ability to provide timely care and appropriate care, and for the reasons just discussed, should result in a greater number of providers and thus more timely and complete care overall.

Additionally, as discussed in response to a previous comment, the Emergency Medical Treatment and Labor Act (EMTALA) would not be displaced by the rule, and requires provision of treatment in certain emergency situations and facilities. As for 42 U.S.C. 18114’s provisions concerning informed consent and interference with communications and the ability for doctors and patients to communicate freely, the Department addressed similar concerns in response to several comments above and incorporates such responses here by reference. Moreover, nothing in this rule restricts the doctor-patient relationship or interferes with doctor-patient communications. The underlying statutes enforced by this rule apply, or do not apply, to communications between a patient and provider of their own force, and this final rule does not “interfere” in those communications merely by protecting conscience rights established by Congress.

Comment: The Department received comments alleging that the proposed rule conflicts with the Americans with Disabilities Act, 42 U.S.C. 12101 et seq., or the Rehabilitation Act, 29 U.S.C. 701 et seq., because health care providers may exercise their religious beliefs or moral convictions to refuse to treat patients with HIV, or may decline to provide an abortion to a woman with a life-threatening condition.

Response: The Department is unaware of any religious or ethical belief systems that prohibit treatment of persons on the basis of their HIV status. Additionally, the Department disagrees that there is a conflict between the requirements of this rule and the Americans with Disabilities Act or the Rehabilitation Act under the hypotheticals presented. No regulation can, of its own force, supersede statutes enacted by Congress unless such statute is superseded or limited by another act of Congress. This rule merely provides the Department with the means to adequately enforce the Federal conscience and anti-discrimination laws to the extent permissible under the laws of the United States and the Constitution. See Maher v. Roe, 432 U.S. 464 (1977) (holding that government may favor childbirth over abortion through public funding); Harris v. McRae, 448 U.S. 917 (1980) (upholding laws limiting Federal funding of abortions).

Comment: The Department received a comment alleging that the proposed rule conflicts with international treaties, such as the International Covenant on Civil and Political Rights (“ICCPR”), which includes a “right to health,” and the International Covenant on Economic, Social and Cultural Rights (“ICESCR”), which describes four components of the right to health as availability, accessibility, acceptability and quality.

Response: The Department disagrees that the proposed rule conflicts with the ICCPR. The ICCPR does not include a “right to health” as described by the commenter. Instead, the ICCPR includes “public safety, order, health, or morals” as a permitted limitation on certain fundamental rights, such as free speech.
and religious liberty. When the Senate ratified the ICCPR, however, it did so subject to a declaration “that it is the view of the United States that States Party to the Covenant should wherever possible refrain from imposing any restrictions or limitations on the exercise of the rights recognized and protected by the Covenant, even when such restrictions and limitations are permissible under the terms of the Covenant.” Additionally, the Senate ratified the ICCPR with the understanding that the ICCPR is not self-executing.

The Department also disagrees that the proposed rule conflicts with the ICESCR. First, the description of the ICESCR provided by the commenter is incorrect. The ICESCR simply requires that “States Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standard of physical and mental health.” Additionally, the United States has not ratified the ICESCR; thus, it is not binding. Nevertheless, because the Department believes, as described elsewhere in this preamble, that this rule will increase access to and quality of health care in America, this rule furthers the goals of the ICESCR.

**Comment:** The Department received a comment stating that the proposed rule violated the Eighth Amendment to the U.S. Constitution because the proposed rule would reduce access to care in prisons.

**Response:** The Department disagrees. First, as noted above, the Department believes that this rule will result in greater access to health care or greater options from a wider and more diverse pool of medical professionals. Additionally, the finalized definition of “discriminate or discrimination” ensures that a facility that must respect conscience can use alternative staff to accommodate an objector without violating this rule.

**Comment:** The Department received comments stating that the proposed rule could harm efforts to assist persons with substance use disorder because a health care provider may hold a religious or moral conviction that drug use should be treated as a moral or criminal matter instead of a medical matter.

**Response:** This rule does not conflict with any Federal statutes that would require the treatment of persons suffering from substance use disorder, because no regulation can, of its own force, supersede statutes enacted by Congress. This rule merely provides the Department with the means to adequately enforce the Federal conscience and anti-discrimination laws to the extent permissible under the laws of the United States and the Constitution. The Department is unaware of any faith community that holds the views identified by the commenter. To the contrary, the Department’s experience reveals that many members of the faith community are actively involved and voluntarily play an important role in efforts to help address the opioid crisis and other substance use disorders.

**Comment:** The Department received comments stating that the proposed rule would violate the Equal Protection Clause of the Constitution by permitting discrimination against women seeking abortion.

**Response:** The Department disagrees. Nothing in this rule permits the Federal government to discriminate against a person on the basis of such person’s membership in a suspect class. Neither the equal protection doctrine nor any other constitutional doctrine negates any of the Federal conscience and anti-discrimination laws pertaining to abortion that this rule enforces. On the contrary, the Supreme Court has upheld laws limiting Federal funding of abortions, even of those deemed to be medically necessary, against equal protection challenges. See Harris v. McRae, 448 U.S. 917 (1980) (upholding the Hyde Amendment against a challenge under the Equal Protection Clause because the Hyde Amendment is rationally related to the legitimate governmental interest in preserving the life of the unborn); Maher v. Roe, 432 U.S. 464 (1977) (holding that government may legitimately favor childbirth over abortion through public funding); Rust v. Sullivan, 500 U.S. 173 (1991) (same). Roe v. Wade and Doe v. Bolton both explicitly affirmed the appropriateness of conscience protections, and, therefore, the scope of rights defined by either case cannot be read to conflict with conscience protections relating to abortion. This rule, additionally, furthers the legitimate governmental interest in ensuring a large and diverse pool of health care providers by removing obstacles to persons who are interested in serving as health care providers but might be unwilling to do so for fear of being coerced to violate their religious beliefs or moral convictions.

**Comment:** The Department received comments stating the proposed rule would violate the Establishment Clause by providing for an affirmative accommodation for religious beliefs that burden a third party.

**Response:** The Department disagrees that religious accommodations such as those provided by Congress and enforced by this rule violate the Establishment Clause. Congress began enacting laws such as the Church Amendments in 1973, and none of them have been invalidated under the Establishment Clause. As the Supreme Court recognized in Corporation of Presiding Bishop of the Church of Jesus Christ of Latter-day Saints v. Amos, “the government may (and sometimes must) accommodate religious practices and . . . it may do so without violating the Establishment Clause.” 483 U.S. 327, 334 (1987) (quoting Hobbie v. Unemployment Appeals Comm'n of Fla., 480 U.S. 136, 144–45 (1987)). As one commenter noted, in Burwell v. Hobby Lobby Stores, Inc., 134 S. Ct. 2751, 2781 (2014), the Court held that the Department’s regulation mandating group health plans to cover contraceptives violated the Religious Freedom Restoration Act by failing to provide an exemption for Hobby Lobby to exercise its sincerely held religious beliefs. The Supreme Court also observed that any burden on third parties could be addressed in other ways, including through the establishment of a new governmental program if necessary. The Court held that Hobby Lobby itself did not have to bear a religious burden merely because its religious accommodation may burden a third party.

Furthermore, this rule merely provides for the enforcement of the Federal conscience and anti-discrimination laws as Congress enacted them. These protections are limited to particular programs, particular governmental involvement, and particular funding streams, as Congress determined necessary to ensure that conscience rights are respected and that
health care entities with moral or religious objections to certain medical services or certain aspects of health service programs or research activities are not driven from the health care industry.

Comment: The Department received comments stating that the proposed rule will conflict with various State laws and medical standards.

Response: This rule does not establish new Federal law, but provides for the enforcement of laws enacted by Congress. To the extent State or local laws or standards conflict with the Federal laws that are the subject of this rule, the Federal conscience and antidiscrimination laws preempt such laws and standards with respect to funded entities and activities, in accordance with the terms of such Federal laws. With respect to States, States can decline to accept Federal funds that are conditioned on respecting Federal conscience rights and protections.

Summary of Regulatory Changes: For the reasons described in the proposed rule \( ^{145} \) and above, and considering the comments received, the Department finalizes § 88.8 without change, beyond global edits to the rule as a whole.

Rule of Construction § 88.9

This section proposed that the protections for religious freedom and moral conviction for which enforcement mechanisms are provided by this part would be construed broadly and to the maximum extent permitted by law and the Constitution. The Department received comments on this section, including comments in general support of the proposed section.

Comment: The Department received a comment stating that § 88.9 could be more clearly stated as follows: “This part shall be construed in favor of a broad protection of the free exercise of religious beliefs and of moral convictions, to the maximum extent permitted by the Constitution and the terms of the Federal conscience protection and associated anti-discrimination statutes.”

Response: The Department agrees that the proposed language is clearer and is modifying § 88.9 to so read, with some stylistic changes to the proposed text, characterizing the Federal laws in question as “Federal conscience and anti-discrimination laws.”

Summary of Regulatory Changes: For the reasons described in the proposed rule \( ^{146} \) and above, and considering the comments received, the Department finalizes § 88.9 by rephrasing it to add clarity so that it now says, “This part shall be construed in favor of a broad protection of the free exercise of religious beliefs and of moral convictions, to the maximum extent permitted by the Constitution and the terms of the Federal conscience protection and associated anti-discrimination statutes.”

Severability § 88.10

In § 88.10, the Department proposed a severability provision that would govern the Department’s interpretation and implementation of 45 CFR part 88 if any section of part 88 should be held invalid or unenforceable, either facially or as applied. In the event this occurs, the Department proposed that the provision in question be construed in a manner that gives maximum extent to the force of the provision as permitted by law. For instance, a provision held to be unenforceable as applied to a particular circumstance should be construed so as to continue the application of the provision to dissimilar circumstances. Proposed § 88.10 would provide that if the provision is held to be utterly invalid or unenforceable, the provision in question shall be severable from part 88, and the remainder of part 88 should remain in full force and effect to the maximum extent permitted by law. The Department received a comment on this section.

Comment: The Department received a comment stating that a severability clause is unnecessary because, following consideration of public comments to the proposed rule, the Department should be aware of any portions of the rule that are invalid or unenforceable.

Response: The Department does not agree that the severability clause is inappropriate. The Department considers all the provisions of this final rule as being legally supported, has fully considered all comments received, and has made appropriate modifications, additions, and deletions. Nevertheless, as a general matter, severability represents the Department’s intention regarding whether the rule should go into effect if parts of it are held invalid or enjoined by a court. The Department deems it appropriate to maintain the severability clause as proposed, so that this rule will remain in place to the maximum extent allowable in the event of adverse court action. In addition, future additions to statutes enforced by this rule could render parts of the rule inapplicable, and it is the Department’s intention that such changes will not invalidate parts of the rule that remain statutorily supported.

Summary of Regulatory Changes: For the reasons described in the proposed rule \( ^{147} \) and above, and considering the comments received, the Department finalizes § 88.10 without change.

Appendix A to Part 88—Notice of Rights Under Federal Conscience and Anti-Discrimination Laws

The Department received comments on appendix A to part 88, which were responded to above, with the comments to § 88.5.

Summary of Regulatory Changes: For the reasons described above, and considering the comments received, the Department finalizes appendix A to part 88 to provide a more accurate notice as to the protections provided by the Federal conscience and anti-discrimination laws. For instance, the Department replaces proposed text stating that the entity “does not” engage in certain acts with language stating that entity “complies with” laws prohibiting certain acts. The Department also modifies the notice text to say that “You may have the right” instead of “You have the right,” and replaces “participate in” with “perform, assist in the performance of.” The Department also makes stylistic changes to the heading and certain portions of the body text of the model notice in appendix A.

IV. Regulatory Impact Analysis

A. Introduction and Summary

This rule revises the regulation that allows OCR to accept and coordinate the handling of complaints alleging violations of the Weldon, Coats-Snowe and Church Amendments, three Federal
laws that collectively protect conscience, prohibit coercion, and require nondiscrimination in certain programs and activities operated by recipients or sub-recipients or that are administered by the Secretary. Specifically, this rule:

(1) Expands the regulation’s scope to encompass the full panoply of Federal health-related conscience protection and associated anti-discrimination laws that exist across the Department and that the Secretary has delegated to OCR to handle,

(2) Articulates the scope of enforcement mechanisms available to HHS to address noncompliance with Federal conscience and anti-discrimination laws, and

(3) Requires certain persons and entities covered by this rule to adhere to procedural and administrative requirements that aim to improve compliance with Federal conscience and anti-discrimination laws and to achieve parity with procedural and administrative requirements of other Federal civil rights authorities enforced by OCR.

**Analysis of Economic Impacts:**

**Executive Orders 12866 and 13563**

HHS has examined the economic implications of this final rule as required by Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). The Department estimates that the benefits of this rule, although not always quantifiable or monetized, justify the burdens of the regulatory action.

**B. Executive Order 12866**

Section 6((3)(C) of Executive Order 12866 requires agencies to prepare a regulatory impact analysis (RIA) for major rules that are significant. Section 3((f) of Executive Order 12866 defines a regulatory action as significant if it is likely to result in a rule that meets one of four conditions: (1) Is economically significant, (2) creates a serious inconsistency or otherwise interferes with an action taken or planned by another agency, (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of the recipients of these grants and programs, or (4) raises novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in Executive Order 12866. A rule is likely to be economically significant where the agency estimates that it will (a) have an annual effect on the economy of $100 million or more in any one year, or (b) adversely and materially affect the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities. The Department has determined that this rule will have an annual effect on the economy of $100 million or more in one year and, thus, is economically significant. The rule also furthers a presidential priority of protecting conscience and religious freedom. Executive Order 13798, 82 FR 21675 (May 4, 2017).

**C. Executive Order 13563**

Executive Order 13563 supplements and reaffirms the principles of Executive Order 12866. Section 1((b) of Executive Order 13563 requires agencies to:

- "propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs,"  
- "tailor its regulations to impose the least burden on society,"  
- "select . . . regulatory approaches that maximize net benefits,"  
- "as feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt," and

- "identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior . . . or providing information upon which the public can make choices."

Executive Order 13563 encourages agencies to promote innovation; avoid creating redundant, inconsistent, or overlapping requirements applicable to already highly regulated industries and sectors; and consider approaches that maintain flexibility and freedom of choice for the public. Finally, Executive Order 13563 requires that agencies use the best reasonably obtainable scientific, technical, and economic information available in evaluating the burdens and benefits of a regulatory action.

The Department considered these objectives and used the best reasonably obtainable technical and economic information to determine that this final rule creates net benefits, is tailored to impose the least burden on society, incentivizes the desired behavior, and maximizes flexibility. This impact analysis also strives to promote transparency in how the Department derived the estimates. To this end, this RIA notes the extent to which key uncertainties in the data and assumptions affect the Department’s analytic conclusions.
1. Need for the Rule

(i) Problems That This Rule Seeks To Address

In developing regulatory actions, “[e]ach agency shall identify the problem that it intends to address (including . . . the failures of private markets or public institutions . . . ) as well as assess the significance of the problem.” E.O. 12866, sec. 1(b)(1). In identifying warranting agency regulatory action, “[e]ach agency shall examine whether existing regulations (or other law) have created, or contributed to, the problem . . . .” E.O. 12866, sec. 1(b)(2).

This rule seeks to address two categories of problems: (1) Inadequate enforcement tools to address unlawful discrimination and coercion faced by protected persons, entities, or health care entities, and (2) lack of awareness, and, to the extent there is awareness, confusion concerning Federal conscience protection obligations and associated anti-discrimination rights, of covered entities and individuals and organizations, respectively, leading to possible violations of law. The array of issues described in supra at part I.B (describing the final rule’s regulatory history) fall into one or both of these categories.

The first category—inadequate enforcement tools to address unlawful discrimination and coercion—stems from inadequate to non-existent regulatory frameworks to enforce existing Federal conscience and anti-discrimination laws. The absence of adequate Federal governing frameworks to remedy discrimination may have undermined incentives for covered persons and entities to institute proactive measures to protect conscience, prohibit coercion, and promote nondiscrimination. Although some public comments argued that existing law is sufficient to protect conscience and religious freedom, the Department disagrees, given the mutually reinforcing deficiencies at the Federal level, which include:

• An inadequate, minimalistic regulatory scheme set forth in the Department’s 2011 Rule that rescinded the comprehensive 2008 Rule, which addressed three of the 25 statutory provisions that are the subject of this rule. See supra at part I (describing existing and prior versions of the rule and identifying confusion about the scope and applicability of Federal conscience and anti-discrimination laws).

• An unduly narrow Departmental interpretation of the Weldon Amendment adopted by OCR in connection with the 2011 Rule that limited the scope of prohibited discrimination, contrary to the language that Congress passed, see supra at part I.B (addressing confusion caused by OCR sub-regulatory guidance); and

• A lack of strategic coordination across the Department to promote awareness of Federal protections for conscience and religious freedom in health care, and to address the enforcement of Federal conscience and anti-discrimination laws set forth in authorizing statutes of programs conducted or administered by Departmental components. See supra at part I.A (identifying additional Federal conscience and anti-discrimination laws).

The second category of problems—lack of awareness and, where there is awareness, confusion concerning Federal conscience protection obligations and associated anti-discrimination rights, of covered entities and individuals and entities, respectively—stems from inadequate information and understanding about such Federal law, leading to possible violations of law. Relevant situations where persons, entities, and health care entities with religious beliefs or moral convictions may be coerced or suffer discrimination include:

• Being required to perform, participate in, pay for, provide coverage for, counsel or refer for abortion, sterilization, euthanasia, or other health services;148

• participating in health professional training that pressures students, residents, fellows, etc., to perform, assist in the performance of, refer for, or counsel for, abortion or sterilization; being steered away from a career in obstetrics, family medicine, or geriatric medicine, when one has a religious or moral objection, as applicable, to abortion, sterilization, physician-assisted suicide or euthanasia;

• being asked to perform or assist in certain services within the scope of one’s employment but contrary to one’s religious beliefs or moral convictions.

Comments received in support of the proposed rule demonstrated that persons who are unlawfully coerced to violate their consciences, or otherwise discriminated against because they have acted in accord with their moral convictions or religious beliefs, may experience real harms that are significant and sometimes devastating psychologically, emotionally, and/or financially.149 This can include loss of jobs, loss of promotion possibilities, “blackballing” in the medical community, denial of acceptance into or graduation from a medical school, denial of board certification, stigmatization, shunning by peers, and trauma and stress from forced violations of the Hippocratic Oath. Commenters shared anecdotes of the occurrence and nature of coercion, discriminatory conduct, or other actions potentially in violation of Federal conscience and anti-discrimination laws. Commenters also shared their assessment of the knowledge, or lack thereof, among the general public, health care field, health care insurance industry, and employment law field of the rights and obligations that this rule implements and enforces. Examples follow:

• Numerous commenters shared anecdotes of bias and animus in the health care sector against individuals with religious beliefs or moral convictions with respect to abortion.

• Employees shared that they experienced discrimination based on their objections to prescribing abortifacients or participating in abortion or assisted suicide.

• Commenters stated that many health care professionals’ careers are jeopardized because entities are completely unaware or willfully dismissive of applicable Federal law that protects conscience, prohibits coercion, or requires nondiscrimination.

• Students, fellows, and residents shared their being forced out of residency programs or fields of medicine because of their beliefs about abortion or contraception.

• Commenters stated that they considered avoiding obstetrics and gynecology programs for fear of discrimination and shared polling data, which the RIA’s benefits section describes infra at part IV.C.4, documenting discrimination experienced by medical students on the basis of their religious beliefs or moral convictions.

• Commenters expressed concern that States are coercing persons and entities

148 California, for example, sent a letter to seven insurance companies requiring insurers to include abortion coverage in plans used by persons who objected to such coverage. See Letter from California Department of Managed Health Care, Re: Limitations or Exclusions of Abortion Services (Aug. 22, 2014). The State of California estimates that at least 28,000 individuals subsequently lost their abortion-free health plans, and multiple churches have challenged California’s policy in court. See Football Church v. Rouillard, 2:15–cv–02165–KJM–EFB, 2016 WL 3688442 (E.D. Calif. July 11, 2016); Skyline Wesleyan Church v. California Department of Managed Health Care, No. 3:16–cv–00501–H–DHB (S.D. Calif. 2016).

149 See, e.g., Compl. Cenzon–DeCarlo v. Mount Sinai Hosp., No. 09–3120 (E.D.N.Y. Jul. 21, 2009) at 15 (“Being forced to assist in this abortion has caused Mrs. DeCarlo extreme emotional, psychological, and spiritual suffering.”) (dismissed on other grounds).
During FY 2018, the most recently demonstrate the importance of this rule. Commenters shared that misconstrue the reasons for this rule; the increase in complaints received by OCR is one of the many metrics used to demonstrate the importance of this rule. During FY 2018, the most recently completed fiscal year for which data are available, OCR received 343 complaints alleging conscience violations. Some complaints raise issues that affect more than one aggrieved person, entity or health care entity; therefore, although one person may have filed the complaint, the complaint may represent the concerns and objections of all nurses at a hospital, multiple pregnancy care facilities or providers in a State, or entire populations (or subpopulations) of States or communities.

(ii) How the Rule Seeks To Address the Problems

This rule corrects those problems. First, the Department revises 45 CFR part 88 from a minimal regulatory scheme to one comparable to the regulatory schemes implementing other civil rights laws. Such schemes typically include a dozen provisions, addressing a range of conduct. These provisions typically restate the substantive requirements and obligations of the laws and often set forth procedural requirements (e.g., assurances of compliance, recordkeeping of compliance, etc.) to advance compliance with substantive rights and obligations. In addition, the regulatory schemes outline the enforcement procedures to provide regulated entities notice of the enforcement tools available to HHS and the type of remedies HHS may seek. Part 88 in effect as a result of the 2011 Rule, by contrast, was only three sentences long and provided considerably less notice and clarity about the conduct prohibited under Federal law and the enforcement mechanisms available to HHS.

This rule confirms HHS will have the authority to initiate compliance reviews where it believes conscience issues have arisen, conduct investigations, resolve complaints, and supervise and coordinate appropriate action(s) with the relevant Department component(s) to assure compliance. Under this rule, certain persons and entities must maintain records regarding compliance with part 88; cooperate with OCR investigations, compliance reviews, interviews, or other parts of OCR’s investigative process; and submit written assurances and certifications of compliance to the Department. These procedural and administrative requirements are similar to those in other civil rights regulations that promote compliance with, and enforcement of, the Federal civil rights laws that the regulations implement. Finally, by expanding the scope of part 88 to cover the 25 statutory conscience and anti-discrimination laws applicable to HHS that are the subject of this rule, the rule supports the Department’s strategic coordination with respect to compliance with, and enforcement of, these laws across the Department, as well as providing one location that identifies all of the health care related conscience protections and associated anti-discrimination laws enforced by the Department so that regulated entities have clear knowledge of the applicable conscience requirements.

The investigative and enforcement processes set forth by the rule are vital because other avenues of relief are inadequate or unavailable. The Department solicited comment on whether alternate remedies, such as pursuing litigation, have been sufficient to address discrimination, coercion, or other treatment that are not subject of this rule prohibited. Many commenters stated that litigation is an inadequate option because several courts have declined to recognize a private right of action, such as under the

---

150 RNHCIs can participate in Medicare and Medicaid as long as they meet the requisite conditions of coverage and participation. See supra at part LA [summarizing the history of statutory provisions regarding RNHCIs, among other provisions, which this rule implements and enforces]. See also https://www.cms.gov/Medicare/ Provider-Enrollment-and-Certification/ CertificationAndCompliance/RNHCIs.html.

151 See 83 FR 3880, 3886 (proposed Jan. 26, 2018) [to be codified at 45 CFR part 88] (summarizing the history of OCR enforcement of conscience laws).

153 See supra at part II.A (describing the lack of private remedies).
rights enshrined in the First Amendment and Federal law. The Department shares the anticipation of many commenters who reasoned that the rule will promote a culture of respect for rights of conscience and religious freedom in health care that is currently lacking. The boundaries of protection for conscience may be tested when protections for religious beliefs and moral convictions appear to impose a cost or compete with other public purposes. However, as with other civil rights laws, it is in those cases where fidelity to the law becomes of paramount importance.

2. Affected Persons and Entities

The final rule affects (1) persons and entities already obligated to comply with the Weldon Amendment, Coats-Snowe Amendment, or Church Amendments (or a combination thereof) under the 2008 and 2011 Rules; and (2) persons and entities obligated to comply with at least one of the other Federal statutory provisions that this rule implements.

(i) Scope of Persons and Entities

Covered by 45 CFR Part 88 in 2011 Rule

Depending on the operation and applicability of the underlying statutes, the 2011 Rule, i.e., 45 CFR part 88 as currently in effect, extended, and continues to extend, broadly. As explained below, the diversity of entities estimated as covered is due to the applicability of the Church Amendments, which applies to non-governmental (as well as governmental) entities that operate “any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary” or receive a grant, contract, loan, or loan guarantee under the Public Health Service (PHS) Act, which contains thirty titles and authorizes dozens of programs, or under the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (DD Act), or receive an interest subsidy under the DD Act.

(A) The Department

As a result of the 2011 Rule, 45 CFR part 88 applied, and still applies, to the Department because the Weldon and Coats-Snowe Amendments, as well as specific parts of the Church Amendments, apply to the Department. The Weldon Amendment states that “[n]one of the funds made available in [the Departments of Labor, Health and Human Services, and Education, and Related Agencies Appropriations Act, 2019] may be made available to a Federal agency or program . . . if such agency or program . . . subjects any institutional or individual health care entity to discrimination. . . .” The Department is a Federal agency that receives substantial funds made available in the Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019 and Continuing Appropriations Act, 2019, which are the funds addressed in Weldon. The Department must comply with the Weldon Amendment.

The Coats-Snowe Amendment states that “[t]he Federal Government . . . may not subject any health care entity to discrimination on the [bases]” listed in paragraphs (a)(1)-(3) of 42 U.S.C. 238n. The Department, as part of the Federal Government, must comply with the Coats-Snowe Amendment in its operations.

Paragraphs (d) and (c)(2) of the Church Amendments apply to certain programs administered by the Secretary. Paragraph (d) applies to all health service programs or research activities funded in whole or part under programs administered by the Secretary, regardless of the source of funding. Paragraph (c)(2) applies to entities that receive grants or contracts “for biomedical or behavioral research under any program administered by the Secretary.” The requirements would, thus, apply to such programs or research activities conducted by, or funded by or through, the Department.

(B) State and Local Governments

As a result of the 2008 and 2011 Rules, 45 CFR part 88 applied, and will continue to apply, to all State and local governments that receive HHS Federal financial assistance by virtue of several statutory provisions. First, the Weldon Amendment applies to State and local governments that receive funds made available in the annual Labor, Health and Human Services, and Education Appropriations Act. Second, the Coats-Snowe Amendment applies to State and local governments that receive Federal financial assistance, including Federal financial assistance from the Department (without restriction to any particular funding stream), “includ[ing] governmental payments provided as reimbursement for carrying out health-related activities.” Third, several paragraphs of the Church Amendments apply to State and local governments. Paragraph (b) of the Church Amendments prohibits coercion by a “public authority,” and thereby includes States and local governments. Paragraphs (c) and (e) of the Church Amendments apply to State and local governments to the extent that such governments receive funds to implement programs authorized in the public laws cited in such paragraphs. Finally, paragraph (d) of the Church Amendments applies to a State or local government (or a component thereof) to the extent that such State or local government receives funding under any program administered by the Secretary.

State and local governments (such as counties or cities) and instrumentalities of governments (such as State health and human services agencies) receive Federal financial assistance or Federal funds from the Department from a variety of financing streams as recipients or sub-recipients. Examples of programs and activities in which State and local governments (in some cases, not exclusively) receive Federal financial assistance or Federal funds from the Department may include Medicaid and the Children’s Health Insurance Program; Title X programs, public health and prevention programs, HIV/AIDS and STD prevention and education, and substance abuse screening; biomedical and behavioral research at State institutions of higher education; services for older Americans; medical assistance to refugees; and adult protection services to combat elder abuse.

161 Id. section 300a–7(c)(2) and (d).

162 See, e.g., Public Law 115–245, Div. B, section 507(d), 132 Stat. 2981, 3118 (“None of the funds made available in [the Departments of Labor, Health and Human Services, and Education, and Related Agencies Appropriations Act, 2019] may be made available to a . . . State or local government[,] if such . . . government . . .”).

163 42 U.S.C. 238n(a), (c)(1).

164 Id. section 300a–7(d) (“No individual shall be required to perform or assist in the performance of any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary of Health and Human Services . . . .”).
[C] Persons and Entities

As a result of the 2008 and 2011 Rules, 45 CFR part 88 applied, and still applies, to recipients and sub-recipients that operate "any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary," 165 or receive a grant, contract, loan, or loan guarantee under the Public Health Service (PHS) Act 166 or the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (DD Act), or receive an interest subsidy under the DD Act.

Examples of recipients and sub-recipients may include:

- Health facilities, including hospitals, federally qualified health centers, community health centers, and mental health clinics;
- Health-related schools and other education entities that provide health professions training for medicine, oral health, behavioral health, geriatric care, nursing, etc.;
- Community-based organizations that provide substance abuse screening, HIV/AIDS prevention and treatment, and domestic violence screening;
- Title X-funded family planning clinics;
- Private non-profit and for-profit agencies that provide medical care to unaccompanied minors;
- Interdisciplinary university centers or public or nonprofit entities associated with universities that receive financial assistance to implement the DD Act 167, and
- State Councils on Developmental Disabilities 168 and States’ Protection and Advocacy Systems that receive funds to implement the DD Act. 169

Several statutory provisions support this application. First, paragraphs (c)(1) and (2) of the Church Amendments apply to entities that receive a "grant, contract, loan, or loan guarantee under the [PHS Act]," or a "grant or contract for biomedical or behavioral research." Second, paragraph (e) of the Church Amendments applies to entities that receive a "grant, contract, loan, or loan guarantee, or interest subsidy" under the Public Health Service Act 170 and the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (DD Act), or receive an interest subsidy under the DD Act.

Paragraph (d) of the Church Amendments applies to "any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary of Health and Human Services." 171 Paragraph (d) of the Church Amendment does not tie the funding source to a particular appropriation, instrument, or authorizing statute, nor does the receipt of funds under Church (d) automatically trigger coverage of all of an entity's operations.

(ii) Persons and Entities Obligated To Comply With Additional Federal Laws That This Rule Implements and Enforces

This rule only affects persons and entities obligated to comply with at least one of the Federal statutory provisions that this rule implements and enforces. There is substantial overlap between persons and entities currently obligated to comply with 45 CFR part 88, as based on the 2011 Rule and persons and entities subject to at least one of the additional Federal laws that this final rule enforces. This overlap occurs because such persons and entities largely were, and continue to be, subject to 45 CFR part 88 by virtue of the Church Amendments, but also the Weldon Amendment and the Coats-Snowe Amendment, as explained above. Because of this substantial overlap, the Department estimated in the proposed rule that OCR’s authority to enforce the following statutory provisions would not add any new persons and entities to the coverage of this rule:

- Provisions protecting health care entities and individuals from discrimination who object to furthering or participating in abortion under Medicare Advantage, e.g. Public Law 115–245, Div. B, Tit. II, sec. 209, 132 Stat. 2981, 3090 (2018);
- Provisions of the Affordable Care Act related to assisted suicide (42 U.S.C. 18113), the ACA individual mandate (26 U.S.C. 5000A(d)(2)), and other matters of conscience (42 U.S.C. 18023(c)(2)(A)(i)–(iii), (b)(1)(A) & (b)(4));
- Provisions regarding conscience protections for objections to counseling and referral for certain services in Medicaid or Medicare Advantage (42 U.S.C. 1395w–22)(j)(3)(B) and 1396u–2(b)(3)(B));
- Provisions regarding conscience protections related to the performance of advanced directives (42 U.S.C. 1395cc(f), 1396a(w)(3), and 14406);
- Provisions exempting individuals from compulsory health care or services generally (42 U.S.C. 1396f & 5106(a)(1)), and under specific programs for hearing screening (42 U.S.C. 280g–1(d)), occupational illness testing (29 U.S.C. 669a(3)), vaccination (42 U.S.C. 1396c(c)(2)(B)(ii)), and mental health treatment (42 U.S.C. 290bb–30(f)); and
- Protections for religious nonmedical health care relating to health facility review (42 U.S.C. 1320a–1), peer review (42 U.S.C. 1320c–11), certain health standards (42 U.S.C. 1396a(a)(9)(A)), medical evaluation (42 U.S.C. 1396a(a)(31)), medical licensing review (42 U.S.C. 1396a(a)(33)), and utilization review plan requirements (42 U.S.C. 1396b(i)(4)), and by protecting the exercise of religious nonmedical health care in the Elder Justice Block Grant Program (42 U.S.C. 1397–1(b)) and in the Child Abuse Prevention and Treatment Act (42 U.S.C. 5106(a)(2)).

In the proposed rule, the Department estimated that the OCR enforcement of the following Federal statutory provisions could add new persons and entities to the coverage of 45 CFR part 88:

- Global Health Programs for HIV/AIDS Prevention, Treatment, or Care (22 U.S.C. 7631(d)), and

However, the proposed rule explained that because paragraph (d) of the Church Amendments does not require that the funding for the health service program or research activity be appropriated to HHS, but only that it be "funded in whole or part under a program administered by the [HHS] Secretary," funding appropriated to other Federal Departments, but awarded by HHS in its administration of certain global health programs would be covered by paragraph (d) of the Church Amendments. Consequently, HHS's

165 42 U.S.C. 300a–7(d).
166 The PHS Act contains thirty titles and authorizes dozens of programs.
169 Id. 300a–7(c)(1)(B) (“No entity which receives a grant, contract, loan, or loan guarantee under the Public Health Service Act . . . .”); 300a–7(e) (“No entity which receives . . . . any grant, contract, loan, or loan guarantee, or interest subsidy” under the Public Health Service Act . . . .”).
170 Third, section 300a–7(c)(1)(B) (“No entity which receives a grant, contract, loan, or loan guarantee under the Public Health Service Act . . . .”).
171 42 U.S.C. 2689 et seq. Paragraph (c) of the Church Amendments applies to entities that receive funding under the Community Mental Health Centers Act, 42 U.S.C. 2689, et seq. Paragraph (c) of the Church Amendments additionally applies to entities that receive funding under the Developmental Disabilities Services and Facilities Construction Act, 42 U.S.C. 6000, et seq. Congress repealed both of these laws. See Omnibus Reconciliation Act of 1981, Public Law 97–35, Title IX, sec. 902 (2)(j)(B), 95 Stat. 560 (1981); Developmental Disabilities Assistance and Bill of Rights Act of 2000, Public Law 106–402, Title IV, sec. 401(a), 114 Stat. 1737 (2000). Thus, there are no entities receiving funds under programs authorized by these statutes to consider in this RIA.
172 Id. section 300a–7(d) (“No individual shall be required to perform or assist in the performance of any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary of Health and Human Services . . . .”).
implementation of 22 U.S.C. 2151b(f) and 7631(d) may not expand the scope of persons and entities covered by this part.

(iii) Methodology

The Department quantitatively estimated those persons and entities covered by the final rule by relying primarily on the latest data available from the U.S. Census Bureau’s Statistics of U.S. Businesses supplemented with other sources. The Department invited public comment on the proposed rule’s methodology and solicited ideas on whether there are other methodologies that the Department could consider to refine the scope of persons and entities affected by this rule. The Department received one comment suggesting that the Department’s methodology was flawed for failing to include an estimate of the number of consumers of health care affected, i.e., patients, and thus did not consider consumers of health care in the list of persons shown in Table 2. The purpose of Table 2 is to identify regulated entities, not consumers of health care. An analysis of this rule’s impact on persons, entities, and health care entities is included in the rule’s analysis of benefits, infra at part IV.C.4. The final rule’s methods for quantifying the persons and entities impacted are the same methods from the proposed rule, which the Department determined was the most reasonable and reliable approach.173

The U.S. Census Bureau’s Statistics of U.S. Businesses is based on the North American Industry Classification System (NAICS).174 The NAICS classifies all economic activity into 20 sectors and breaks that information down into sub-sectors and industries.175 Essentially, the NAICS groups physical business establishments together based on how similar the locations’ processes are for producing goods or services.176 The NAICS provides information on how many singular physical locations exist for a particular business or industry (called an “establishment”).177 How many of those establishments are under common ownership or control of a business organization or entity (called a “firm”).178 And the number of people who work in a particular business or industry, among other types of information. For instance, a hospital system that has common ownership and control over multiple hospital facilities is a firm, and each hospital facility is an establishment.

For the vast majority of the recipient and sub-recipient types, the Department assumed that only a portion of the industry captured in the Statistics of U.S. Businesses receives Federal funds to trigger coverage by this rule (e.g., “Federal financial assistance . . . from the Department or a component of the Department, or who otherwise receives Federal funds directly from the Department or a component of the Department”). For instance, not all physician offices receive FFA or otherwise receive Federal funds as a recipient or sub-recipient. In fact, about 68.9 percent of physician offices accepted new Medicaid patients based on 2013 data from the National Electronic Health Records Survey.179 Approximately 83.7 percent of physicians accepted new Medicare patients based on the same data.180 Because OCR interprets the 2011 Rule to apply to physicians receiving reimbursement for Medicare Part B, which is a “health service program . . . funded in whole or in part under a program administered by the Secretary of Health and Human Services”, the Department assumed that the lower of these two percentages (69 percent) represents the lower-bound of physicians nationwide subject to the 2011 Rule. In the absence of evidence with which to generate a refined upper-bound estimate, the Department assumed that the 2011 Rule covers all physicians nationwide as the upper-bound.

The Department used this same percentage range (69 to 100 percent) in estimating the coverage for other health care industry sector types, such as hospitals and various outpatient care facilities. For the social services and education industries, which generally have principal purposes other than health and patient care, the Department adopted ranges more appropriate for those industries. For the social services industries, the Department adopted a range with 25 percent as the lower-bound and 100 percent as the upper-bound to cover 62.5 percent of the industry on average. In its notice of proposed rulemaking, the Department sought comment on this methodology, but received no comments providing a superior method of generating these estimates.

The Department assumes some portion of the social service industry will be covered by the rule, given the scope of the 2011 Rule and thereby this rule. For instance, entities that carry out social services programs and activities may do so in the context of health service programs or research activities funded in whole or in part under programs administered by the Secretary, or may receive funding through programs administered by the Secretary, as well as by grants or other mechanisms under the PHS Act or the Developmental Disabilities Assistance and Bill of Rights Act of 2000 within the scope of the Church Amendment’s application.

To estimate the number of local governments and educational institutions, the Department relied on data from other U.S. Census Bureau statistical programs or available award data available through the HHS Tracking Accountability in Government Grants System (TAGGS).182 For instance, in estimating the number of counties nationwide, the Department relied on the U.S. Census Bureau’s 2010 Census Geographic Entity Tallies by State and Type to identify the total counties and equivalent areas for the U.S., Puerto Rico, the U.S. Territories, and the Island Areas.183 As another example, the Department relied on data from TAGGS to derive a lower-bound percentage of colleges and universities that are recipients. (The upper-bound assumes all educational institutions industry-wide are recipients.) Although most colleges and universities receive Federal financial assistance from the U.S. Department of Education, not all universities are recipients of HHS funds; thus, the Department adopted a lower-bound estimate to reflect that assumption. Using the “Advanced Search” function in TAGGS, HHS identified all awards to Junior Colleges, Colleges, and

---

172 https://www.census.gov/data/datasets/2015/econ/sush/2015/sush.html. The Department relied on the data file titled “U.S. & State, NAICS, detailed employment sizes (U.S., 6-digit and States, NAICS sectors)” in the data file titled “U.S. Businesses is based on the North American Industry Classification System (NAICS). The NAICS classifies all economic activity into 20 sectors and breaks that information down into sub-sectors and industries. Essentially, the NAICS groups physical business establishments together based on how similar the locations’ processes are for producing goods or services. The NAICS provides information on how many singular physical locations exist for a particular business or industry (called an “establishment”). How many of those establishments are under common ownership or control of a business organization or entity (called a “firm”). And the number of people who work in a particular business or industry, among other types of information. For instance, a hospital system that has common ownership and control over multiple hospital facilities is a firm, and each hospital facility is an establishment.

173 170, 171

180 Id.

181 The PHS Act contains thirty titles and authorizes dozens of programs.

183 https://www.census.gov/geo/maps-data/data/tallies/all_tallies.html
Universities for FY 2016 and de-duplicated the results to obtain a singular list of unique awardees from the Department, which totaled 615. Because these awardees included satellite campuses of college or university systems, the total awardee number was akin to the number of “establishments” rather than “firms” as those terms are used in the U.S. Census Bureau’s Statistics of U.S. Businesses. Similar to how an “establishment” is a location of a “firm” that has common ownership and control over at least one establishment, a satellite campus is one location of a university system with common ownership and control over multiple campus locations.

To derive an estimate of educational institutions at the “firm” level, the Department computed the ratio between firms and establishments from the U.S. Census Bureau’s Statistics of U.S. Businesses. This ratio is 51.32 percent (2,457 firms/4,788 establishments). The Department applied that ratio to the total number of Junior Colleges, Colleges, and Universities that received HHS funding as “establishments” (0.5132 × 615 awardee establishments) to get an estimate of 316 firms. Despite this method’s potential complexity, the Department found it the most reasonable method for estimating the lower-bound number of colleges and universities that are Department recipients.

(iv) Quantitative Estimate of Persons and Entities Covered by This Rule

Table 2 lists each estimated type of recipient and the estimated number of recipients that this final rule covers. Because there is uncertainty as to the universe of actual persons and entities covered, Table 2 captures this uncertainty by reflecting estimated recipients as a range with a lower and an upper-bound. The footnotes detail the assumptions and calculations for each line of the table and assume coverage for 69–100 percent of the industry unless otherwise noted. The Department has made a technical correction to Table 2 to include the number of offices of miscellaneous health practitioners (e.g., clinical pharmacists, dieticians, registered practical or licensed nurses’ offices, Christian Science practitioners’ offices) who operate private or group practices in their own centers or clinics or in the facilities of others, such as hospitals.

\(^{185}\) See the industry description for offices of miscellaneous health practitioners, NAICS code 921399, https://www.census.gov/cgi-bin/sssd/naics/naicsrch?code=621399&search=2012 NAICS Search.

</tbody>
</table>

Approximately 392,236 to 613,367 persons and entities were subject to part 88 in effect based on the 2011 Rule by virtue of the Weldon, Coats-Snowe and Church Amendments. The Department estimated that the number of entities that this final rule covers that are subject to 22 U.S.C. 7631(d) and 2151(b), but not paragraph (d) of the Church Amendments is small and, possibly, non-existent because paragraph (d) of the Church Amendments does not tie funding to a particular appropriation or financial stream.223 Consequently, this final rule

222 The text of paragraph (d) states that its protection applies for health service program and research activities “funded in whole or part under a program administered by the [HHS] Secretary.”

calculation. The Department received no comments regarding information, data sources, studies, or reports that could assist the Department in improving its approach.

To refine the estimates, the Department reconsidered the proposed rule’s blanket assumption that all counties are sub-recipients for purposes of calculation. Using the “Advanced Search” function in TAGGSS, the Department identified the total number of county awardees and de-duplicated the results to obtain one list of unique county awardees from the Department for FY 2017. This approach identified 625 counties (19 percent) receiving funding directly from HHS as recipients. Assuming that all counties are HHS recipients or sub-recipients, the remaining of 2,609 counties (81 percent) would be sub-recipients that are not subject to § 88.4’s application. This method is a more accurate proxy for estimating the number of sub-recipient counties. If some entities (other than counties) in Table 2 are sub-recipients rather than recipients, then the Department overestimated the scope of entities subject to § 88.4’s application that are not exempted.

Calculating Exempted Recipients in § 88.4(c)(1) Through (4)

The Department received no comments regarding the methods used to estimate the scope of exempted recipients under § 88.4(c)(1) through (4). Therefore, the Department maintains the proposed rule’s methods.

The Department assumed that all physicians’ offices would meet the criteria in § 88.4(c)(1) and subtracted out 255,684 to 370,557 entities, which represents the lower and upper-bounds of all physicians’ offices.226 If some physicians’ offices are recipients through an instrument other than Medicare Part B reimbursement, then the Department overestimated the number of physicians’ offices exempted due to § 88.4(c)(1). The Department does not have the necessary data to estimate the impact of the final rule’s new exemption for pharmacies and pharmacists that receive Medicare Part B because the Department does not know whether such pharmacies or pharmacists exempted under § 88.4(c)(1) are Department recipients (as opposed to sub-recipients) of HHS Federal financial assistance or other Federal funds from a non-exempt HHS program (i.e., a program not captured in § 88.4(c)(2) through (4)).

The Department subtracted out 11,220 to 44,879 persons and entities that meet the criteria in § 88.4(c)(2) and (3) regarding the exemption for recipients of grant programs administered by the Administration for Children and Families or the Administration for Community Living.227 The exemption applies if the program meets certain regulatory criteria indicating that its purpose is unrelated to health care and certain types of research, does not involve health care providers, and does not involve referral for the provision of health care. The Department reasonably assumed that all persons and entities that provide child and youth services (such as adoption and foster care) would fall into this exemption. The Department also reasonably assumed that all entities providing services for the elderly and persons with disabilities (by providing nonresidential social assistance services to improve quality of life) would fall within this exemption. The Department did not subtract out the entities providing “Other Individual Family Services” (e.g., marriage counseling, crisis intervention centers, suicide crisis centers) because there is a significant likelihood of referral for the provision of health care at crisis intervention centers and suicide crisis centers.

The Department subtracted out 230 Tribes and Tribal Organizations for the exemption in § 88.4(c)(4). This number represents the total Tribes and Tribal Organizations that operate contracts under Title I of the ISDEA Act.230 This final rule revises the requirements for federally recognized Indian tribes, tribal organizations, or urban Indian organizations who are recipients by virtue of grants or cooperative agreements under 42 U.S.C. 290bb–36, removing the requirement that such entities comply with § 88.4. The Department does not have the data necessary to estimate the number of such entities who are recipients of funds via such grants or cooperative agreements that are not already captured within the scope of the exemption in § 88.4(c)(4).

(B) Estimated Number of Recipients Incentivized To Provide Voluntarily a Notice of Rights (§ 88.5)

The proposed rule contained a freestanding notice provision with mandatory and discretionary elements. As finalized in this rule, the notice provisions are no longer mandatory. Section 88.5 incentivizes recipients and the Department to provide notice to persons, entities, and health care entities concerning Federal conscience and anti-discrimination laws. The rule intends to accomplish this goal by providing that OCR will consider a recipient’s posting of a notice as non-dispositive evidence of compliance with this rule in any investigation or compliance review pursuant to this rule, to the extent such notices are provided according to the provisions of this section and are relevant to the particular investigation or compliance review.

The Department expects that some regulated recipients and Department components will voluntarily post the notice through one of the methods specified. Because recipients are the primary entities responsible for compliance under this rule, the Department assumes that sub-recipients will not be induced by the rule to post a notice on their own accord.

The proposed rule did not permit recipients to modify the pre-written

226 Sum of rows 11, 12, 14–16, and 18 of Table 2.
227 Sum of rows 31 and 33 of Table 2.
notice in appendix A. As discussed in the preamble for §88.5, supra at part II.B, public comments asked for flexibility to modify the notice’s content as applied to recipients. Paragraph (c) in §88.5 of the final rule provides greater flexibility by stating that the recipient and the Department should consider using the model text provided in appendix A for the notice, but may tailor the content to address the laws that apply to the recipient or Department under the rule and the recipient’s or Department’s particular circumstances. Accordingly, the Department assumes that some recipients that voluntarily post notices will modify the pre-written notice in appendix A. Recipients that modify the pre-written notice likely will do so at the firm level (i.e., corporate level) rather than the establishment level (i.e., at each facility). For instance, a company with common ownership and control over multiple facilities would modify the notice at its corporate (“firm”) level but would post substantially the same physical notices at each facility (“establishment”) where notices are customarily posted to permit ready observation for members of the workforce or for the public.

The Department estimates that eighteen recipient types, such as medical specialists, elder care providers, and entities providing primarily social services, are likely to modify the pre-written notice as applied to them (in relation to, for example, abortion). The sum of the low-end and high-end estimates of firms associated with these eighteen recipient types is 225,751 (low-end) and 332,707 (high-end), providing an average of 279,229 firms. Given the discretionary nature of the notice provision, the Department adjusts the range of firms downward by 50 percent for the purpose of this calculation to derive the values shown in infra at Table 4: 112,876 firms (low-end) and 166,354 firms (high-end) for a mid-point of 139,615 firms likely to modify the pre-written notice in appendix A. To the extent that recipient types other than those listed in Table 4 modify the notice, the Department has underestimated the scope of impact.

</tbody>
</table>

The Department assumes that, for all posting methods, recipients will execute the posting at the establishment level. Using the range of firms subject to this rule as a foundation, the range of establishments associated with those recipients is shown infra at in Table 5. Table 5 employs the methodology used for calculating the number of persons and entities shown in Table 2, but uses the U.S. Census Bureau’s Statistics of U.S. Businesses data for establishments rather than firms. The footnotes detail the assumptions and calculations for each line and assume 69–100 percent of the industry as covered unless otherwise noted, which parallels the assumptions for Table 2. Because there is a high degree of uncertainty as to the proportion of recipients that will voluntarily post notices through one or more of the methods specified in §88.5 in the first year of the rule’s implementation, the Department adjusts the range of establishments associated with covered recipients downward by 50 percent for the purpose of this calculation. The values derived from this calculation appear infra at in Table 5: 261,735 establishments (low-end) and 408,918 establishments (high-end) for a mid-point of 335,327 establishments. The Department adjusts downward the range of establishments that would voluntarily provide notices of rights in years two through five by 25 percent, relative to year one, to reflect attrition: 196,301 establishments (low-end) and 306,689 establishments (high-end) for a mid-point of 251,495 establishments.

3. Estimated Burdens

There are five categories of estimated monetized burdens for this final rule as summarized in Table 6, as well as burdens that cannot be fully monetized. No commenters provided alternate reliable methodologies for monetizing the rule’s burden. Potential burdens associated with access to care and health outcomes are discussed infra at part IV.C.4.vii.

Several comments argued that the rule would impose costs on entities associated with the increased risk of litigation over incidents of providers’ exercise of conscience, both between patients and providers and between individual providers and their employers.

Regarding an increase in risk for litigation between individual providers and their employers, the Department agrees with the potential effect these commenters predict: That some entities will change their behavior to come into compliance, or improve compliance, with Federal conscience and antidiscrimination laws. Indeed, the proposed rule’s RIA and this RIA estimate the burden associated with such voluntary behavior changes. However, whether entities take such action because of the risk of litigation is too speculative and uncertain for calculation in the RIA. Further, some courts have held that there is no private right of action under the Coats-Snowe and Church Amendments, excluding litigation as a viable alternative for individuals.271 Regarding an increase in risk for litigation between patients and providers, the Department agrees that this rule will result in more providers exercising conscientious objections to participating in services requested by patients, and that such objections may give rise to lawsuits by patients. However, the Department is unaware of any reliable basis for estimating the frequency or cost of such lawsuits.

Public comments regarding general burdens are integrated throughout the RIA. Public comments regarding the burden, if any, that may result from secondary effects of this rule, such as the monetary impact of certain health outcomes that may arise from increased conscience protection, are discussed in the rule’s analysis of benefits, infra at IV.C.4.

272The totals in Table 6: Cost Summary of the Final Rule may not appear to add correctly, but that is due to rounding.

</table>

In this impact analysis, the Department calculates labor costs using the mean hourly wage (including benefits and overhead) for a:
- Lawyer at $134.50 per hour ($67.25 per hour \times 2),\textsuperscript{273}
- Executive at $186.88 ($93.44 per hour \times 2),\textsuperscript{274}
- Administrative assistant at $38.78 per hour ($19.39 per hour \times 2),\textsuperscript{275}
- Web developer at $69.38 per hour ($34.69 per hour \times 2),\textsuperscript{276} and
- Paralegal at $51.84 per hour ($25.92 per hour \times 2).\textsuperscript{277}

These calculations reflect the Department’s standard practice of calculating a fully loaded mean hourly wage (i.e., wage including benefits and overhead) by multiplying the hourly pre-tax wage by two.\textsuperscript{278}

(i) Familiarization Burden

The Department estimates a one-time burden for regulated persons and entities to familiarize themselves with the rule. The proposed rule estimated that on average, each person and entity would spend one hour for familiarization. The Department received comments arguing that this estimate fell short of the time needed to accomplish the goal of familiarization. In light of these comments, the Department increased the estimate from one hour to two hours. This increase reflects persons’ and entities’ familiarization of the rule’s requirements and procedures, including the changes from the proposed rule.

The burden is a one-time opportunity cost of staff time (a lawyer) to review the rule. The labor cost is approximately $135.3 million in the first year ($134.50 per hour \times 2 \times 502,899 entities (the average of the low and high-end range in Table 2)) and zero dollars in years two through five. This estimated burden represents the average burden; some persons and entities may spend substantially more time than two hours on familiarization, and others may spend less time.

(ii) Burden Associated With Assurance & Certification (§ 88.4)

As a condition of the approval, renewal, or extension of any Federal financial assistance or Federal funds from the Department, § 88.4 requires every application for Federal financial assistance or Federal funds from the Department to which the rule applies to provide, contain, or be accompanied by an assurance and a certification that the applicant or recipient will comply with applicable Federal conscience and anti-discrimination laws and this rule.

The burden to recipients not exempted from § 88.4 is the opportunity cost of recipient staff time (1) to review the assurance and certification language and the requirements of the Federal conscience and anti-discrimination laws referenced or incorporated, (2) to review recipient-wide policies and procedures or take other actions to self-assess compliance with applicable Federal conscience and anti-discrimination laws, and (3) to implement any actions necessary to come into compliance.

In Table 7 summarizes these costs. The Department estimates that each recipient not exempted from § 88.4 will spend an average of 4 hours annually reviewing the assurance and certification language and the Federal conscience protection and associated anti-discrimination laws and the rule. In the 2008 Rule, the Department estimated that it would take 30 minutes to certify compliance with three laws: The Church, Weldon, and Coats-Snowe Amendments.\textsuperscript{279} In this rule, there are 22 additional statutory provisions covered. Citations for each law are clearly listed in the rule, the texts of the statutes are easily found online. For many entities, it will be immediately clear when a law that this rule implements and enforces does not apply to those entities.\textsuperscript{280}

However, the commenter’s argument is based on Federal overhead rates for contracts, and not evidence of the resource costs associated with reallocating employee time. As a result, we do not adopt the commenter’s recommendation, and we continue to use the Department’s standard of 100% for overhead and fringe benefits.”).
\textsuperscript{279} 73 FR 78072, 78095 (2008 Rule).
\textsuperscript{280} For example, provisions applicable to Medicaid recipients would not apply to entities that do not receive Medicaid and, presumably, most entities readily know if they receive Medicaid reimbursements as a result of providing care to Medicaid beneficiaries.
estimates each recipient will take 10 minutes per law on average, yielding an additional 3.5 hours on average to review the applicability of the additional laws that this rule proposes to enforce, for a total burden of 4 hours per recipient, per year, for the first five years. Some recipients may spend considerably less time; others may spend considerably more time.

The labor cost is a function of a lawyer spending 3 hours reviewing the assurance and certification and an executive spending one hour to review and sign, as § 88.4(b)(2) requires a signature by an individual authorized to bind the recipient. The weighted mean hourly wage (including benefits and overhead) is $147.60 per hour. The labor cost is $93.8 million each year for the first five years ($147.60 per hour × 4 hours × 158,890 recipients).

The Department estimates that 79,445 recipients, which is half of recipients required to assure and certify compliance (158,890 recipients total), will spend 4 hours reviewing policies and procedures or taking other actions to self-assess compliance with applicable Federal conscience and anti-discrimination laws each year for the first five years after publication of the rule. Some entities will spend more time and others will spend less time. The Department reasonably estimates such action because § 88.4(b)(4) states that the submission of an assurance and certification will not relieve a recipient of the obligation to come into compliance prior to or after submission of such assurance or certification. A first step to such actions may be to review organization-wide safeguards (or best practices), such as policies and procedures, that may be, or should be, in place. The labor cost is a function of a lawyer spending 3 hours and an executive spending one hour, which produces a weighted mean hourly wage of $147.60 per hour. The labor cost for self-assessing compliance is a total of $46.9 million annually for the first five years ($147.60 per hour × 4 hours × 79,445 entities).

The Department estimates that approximately 5 percent of entities (or 16 percent of those subject to § 88.4) will take a similar action annually in years two through five. This percentage equates to 2,514 recipients annually in years two through five. The Department estimates that these recipients would spend 4 hours annually, on average, to take remedial efforts. The Department estimates that recipients will spend an average of 4 hours to update policies and procedures, implement staffing or scheduling practices that respect an exercise of conscience rights under Federal law, or disseminate the recipient’s policies and procedures. The labor cost is a function of a lawyer spending in the first five years of publication for remedial efforts associated with a recipient’s commitment to assure and certify compliance in § 88.4. However, the fact that there would be such costs is wholly consistent with the Department’s stated justifications for the rule (i.e., lack of knowledge of, and compliance with, the laws).

Several commenters expressed concern with the possible burden on health care providers resulting from the requirements to assure and certify compliance with Federal conscience and anti-discrimination laws. In drafting the rule, the Department considered the possible burden on health providers and exempted certain classes of recipients from § 88.4. The impact of the exemption means that, unless such exempted persons or entities are recipients of Federal financial assistance or other Federal funds from the Department through another instrument, program, or mechanism, approximately 70 percent of recipients do not have to comply with the assurance and certification requirement.

283 The average between the lower-bound (267,134) and upper-bound (415,666) of recipients exempted is 341,400 recipients, which represents 68 percent of the estimated total 502,298 recipients of the rule (which is the result of 502,899 entities minus the estimated 2690 counties that are estimated for the purposes of this rule as sub-recipients). If fewer recipients are impacted by the exemptions in § 88.4(c)(1) through (4) than estimated, and if such recipients do not receive HHS Federal financial assistance or other Federal funds from a non-exempted HHS program, then the Department has overestimated the percent of recipients that do not have to comply with the assurance and certification requirement.

286 Id. at I–31.

Finally, the Department has made efforts to reduce the frequency of information collected. Paragraph (b)(6) in § 88.4 allows an applicant or recipient to incorporate the assurances and certification by reference in subsequent applications to the Department or Department component if prior assurances or certifications are initially provided in the same year. This approach is consistent with the HHS Grants Policy Statement. Because recipients file an assurance of compliance form “for the organization and . . . not . . . for each application,” a recipient with a signed assurance on file assures through its signature on the award application that it has a signed Form 690 on file.

Paragraph (b)(1) in § 88.4 requires submission more frequently than the time of application if the applicant or recipient fails to meet a requirement of the rule, or OCR or the relevant Department component has reason to suspect or cause to investigate the possibility of such failure. The ability to require assurances outside of the application process permits OCR and the Department to ensure that the Federal financial assistance or other Federal funds that the Department awards are used in a manner compliant with Federal conscience and anti-discrimination laws and the final rule. As this is a new requirement, OCR has
not yet gained the experience to know how many recipients, if any, would be required by OCR or a Department component to sign assurances on an as-needed basis outside of the application process.

(iii) Burden Associated With Voluntary Actions To Provide Notices of Rights (§ 88.5)

As explained supra at in part IV.C.2.iv.B, the Department assumes that some recipients and Department components will voluntarily post and distribute a notice of rights through one of the methods specified in § 88.5. The expected cost to recipients and the Department is $93.4 million in the first year of the rule’s implementation and $14.1 million annually in years two through five. The cost to the Department makes up a miniscule portion of the cost—about 0.04 percent in the first year and 0.10 percent annually in years two through five.

As explained supra at part IV.C.2.iv.B, the Department assumes that an estimated 139,615 recipients (the average of the low-end and high-end estimates shown in Table 4) will likely modify the pre-written notice in Appendix A as applied to them. Because the scope of such modifications would likely be limited, the Department estimates that modifying the notice constitutes a minimal opportunity cost of 20 minutes of a lawyer’s time for drafting and 10 minutes of an executive’s time to provide final approval. For some recipients, modifying the notice will take more of the lawyer’s or executive’s time; for other recipients, it will take less time. The weighted mean hourly wage (including benefits and overhead) of these two occupations is $151.79 per hour.287 The one-time labor cost is $10.6 million in the first year ($151.79 per hour × 0.5 hours × 139,615 recipients).

There is uncertainty regarding how many recipients will voluntarily post notices and which method or methods in § 88.5 they will employ. For the purposes of this calculation, the Department erred on the side of overestimating the burden and assumes that recipients likely to provide notice will do so:

- At physical locations,
- On their websites, and
- In two publications, such as a personnel manual or other substantially similar document for members of the recipient’s workforce; in an application for membership in the recipient’s workforce or for participation in a service, benefit or other program, including for training or study; or in a student handbook or other substantially similar document for students participating in a program for training or study, including for post-graduate interns, residents, and fellows.

One commenter suggested that the final rule should permit the notice requirement to be posted electronically only, and not in paper form. Because the rule does not require recipients to provide notices of rights, recipients are free to provide notice in electronic form only and have such action considered by OCR as non-dispositive evidence of compliance with the substantive provisions of the rule, to the extent such notices are otherwise provided according to § 88.5 and relevant to the particular OCR investigation or compliance review.

For recipients that voluntarily post notices through any of the methods in § 88.5, the Department assumes that the recipients will act by the end of the first year after the rule’s implementation. An entity that posts on its website and in a physical location will incur a one-time burden. A recipient that includes an insert in a publication may incur an annual burden represented by the costs of labor, materials (paper and ink for hard-copy publication), and in some cases, postage.

#### Burden for Voluntary Posting in Physical Locations

The Department estimates that it will take 3⁄4 of an hour for an administrative assistant to print notice(s) and post them in physical locations of the establishments where notices are customarily posted to permit ready observation. For some establishments, it may take an administrative assistant longer to perform his or her respective functions; for other establishments, it may take less time. As shown in Table 5, 335,327 establishments is the average in the range of estimated establishments associated with covered recipients that would voluntarily post notices in the first year after the rule’s publication. The estimated labor cost is $4.3 million (3⁄4 hour × $38.76 per hour × 335,327 establishments).

A key uncertainty is the total number of locations per establishment where recipients commonly post notices; the per-establishment total will vary based on multiple factors. These factors include the type of recipient, floor plans of the building, the square footage of the common areas, the square footage of the building, the number of floors, the size of the workforce, and the number of ultimate beneficiaries, among other variables. The Department assumes that the average establishment will print and post five notices in physical locations where notices are customarily posted; larger recipients might post more and smaller recipients might post fewer. The Department assumes that the cost of materials (paper and ink) is $0.05 per page. Based on this assumption, the first-year cost to post 5 notices across all establishments would be $83,832 (335,327 establishments × $0.05 per page × 5 pages). Because the Department assumes that this cost is a one-time cost during the first year of this rule’s implementation, the cost will not recur in years two through five. The total labor and materials costs for 335,327 establishments to post notices in physical locations is $4.4 million ($4.3 million in labor costs and $83,832 for materials) in year one with zero recurring costs.

#### Burden for Web Posting

To post the notice on the web, the Department estimates that it will take 2 hours for a web developer to execute the design and technical elements for posting. A key uncertainty is whether

287 Sum of ($134.50 × .67) and ($186.88 × .33).
each recipient maintains separate websites for each facility, and if so, whether those websites are maintained at the corporate (i.e., firm) level or facility (i.e., establishment) level. In the proposed rule, the Department erred on the side of overestimating the burden and assumed that recipients maintained separate websites for each of their facilities at the establishment level. Thus, a web developer at each recipient’s physical location would post the notice on the web. For some establishments, it may take web developers longer to perform their respective functions; for other establishments, it may take less time. This labor cost is approximately $46.5 million (2 hours × $69.38 per hour × 335,327 establishments).

If, however, recipients maintain one website at the corporate level for all of their facilities, a web developer at the firm-level, rather than at each establishment, would bear the burden. In contrast to recipients bearing the cost across 335,327 facilities, about 250,145 recipients at the firm-level would each bear this cost, which equals $34.7 million (2 hours × $69.38 per hour × 250,145 firms). Thus, if recipients voluntarily post notices on their websites, and if they do so at their corporate level for all sites including facility-specific websites, recipients would save on average about 25 percent of their labor costs to execute web posting in this manner.

Burden for Posting in Two Publications

The Department did not receive specific comments estimating the annual costs of labor or materials that may be incurred by entities that include notices in relevant publications as set forth in the proposed rule (which remained unaltered in the final rule). Given the key uncertainties in how recipients will disseminate the notices of rights, as explained in subsequent paragraphs, the Department assumes that: (1) Establishments that include notices of rights in publications will most often do so in online publications or in hard-copy publications hand-distributed, where the notice’s inclusion results in an additional 100 hard copy notices per establishment per year, and (2) half of the establishments associated with covered recipients voluntarily providing hard-copy notices (i.e., 167,663 establishments in year one and 125,747 establishments annually in years two through five) will distribute the publications via U.S. mail where the weight of the notice incrementally increases the postage costs.

The Department assumes that, within the first year after the rule’s publication, each recipient voluntarily posting notices in publications would identify the two publications in which to include the notice, revising the documents or their layouts to include the notice, or otherwise printing an insert to include with hard copies of the publication. A recipient that adds the notice to a publication disseminated only online that is not disseminated in hard copy will incur a one-time labor cost with zero costs for materials. In contrast, recipients that add the notice to a publication disseminated via hard copy may incur the annual cost of materials or incremental postage, or both, as well as the associated labor cost. For instance, a recipient that is unable to add the notice to the back page of an existing publication might add the notice as a separate page to the underlying publication or may print notices annually to include as inserts with the hard-copy publications. A recipient that does so and disseminates the publication via U.S. mail might incur incremental postage costs if the incremental weight of the notice places the total weight of the mailing in the next bracket of postage costs.

These assumptions may differ from recipients’ implementation experiences. Some recipients may distribute fewer than 100 hard-copy notices with relevant publications while others will distribute more than 100. Some recipients that mail relevant publications with notices of rights may not experience any incremental postage costs if the total weight of the mailings with notices does not place the mailing in the next postage bracket. Notwithstanding these uncertainties, the Department sets forth the following monetization as its best estimate of the burden based on its assumptions.

The Department assumes an administrative assistant would spend an average of two hours in year one and one hour annually in years two through five to execute the activities except for mailing. The average labor cost, excluding mailing-related labor costs, is $26.0 million in year one ($38.78 per hour × 2 hours × 335,327 establishments) and $9.8 million annually in years two through five ($38.78 per hour × 1 hour × 251,495 establishments). Based on the marginal cost of postage per ounce of $0.15, an annual number of mailings of 100 pages per establishment, average annual labor cost for mailing of $38.78 per hour, and an average number of labor hours per mailing of 0.25 hours, the total costs due to the voluntary mailing of notices are $4.1 million in year one and $3.1 million annually in years two through five. Finally, the annual cost of printed materials for notices (both mailed and hand distributed) is $1.7 million (335,327 establishments × 100 pages × $0.05 per page) in year one and $1.3 million annually in years two through five (251,495 establishments × 100 pages × $0.05 per page).

In sum, the burden to recipients related to the voluntary posting and distributions of notices that § 88.5 incentivizes is $93.4 million in the first year and $14.1 million annually in years two through five.

Burden to the Federal Government

Federal agencies are encouraged to identify costs and savings to government agencies where significant. The burden of § 88.5 to the Federal government is the cost associated with the Department’s components posting the notice voluntarily. Although this burden is not significant, the RIA monetizes the burden for completeness.

The Department uses a framework for estimating its burden that is similar to the framework used to estimate the burden to recipients. For instance, the Department assumes that half of its components will post notices of rights voluntarily in the first year of the rule’s publication (i.e., 10 of the 20 HHS Operating and Staff Divisions will post online). Because of attrition in compliance, 75 percent of that number will continue posting annually in certain publications in years two through five. As a proxy for that assumption to enable monetization of the physical postage, the Department assumes that staff at half of 335 physical in year one will continue to do so in out years and there will be lower attrition compared to the estimate provided in the proposed rule.

291 Sum of incremental postage of $2.5 million ($0.15 per mailing × 100 mailings × 167,663 establishments) and incremental labor of $1.6 million ($38.78 per hour × 0.25 hours × 167,663 establishments).

292 Sum of incremental postage of $1.9 million ($0.15 per mailing × 100 mailings × 125,747 establishments) and incremental labor of $1.2 million ($38.78 per hour × 0.25 hours × 125,747 establishments).

locations owned or leased by the Department 294 (277 physical locations) would post an average of five hard-copy notices per physical location and would post in certain publications. In years two through five, 75 percent of the 277 locations (207 locations) would post in certain publications. The Department assumes that the duration of the anticipated activities (e.g., downloading, printing, and posting the notice) would take Department staff the same time as it would take recipient staff. Similarly, the Department assumes that half of the physical locations associated with HHS components voluntarily providing hard copy notices (i.e., 138 locations in year one and 104 locations annually in years two through five) 295 will distribute the publications via U.S. mail where the weight of the notice incrementally increases the postage costs.

The methods diverge in how the web posting is implemented (by each HHS Operating and Staff Division but not by each facility owned or leased) and in the average hourly wage rate used: A GS–7 step 5, 296 which, adjusted upward for benefits and overhead, equals $47.44 per hour ($23.72 per hour × 2). 297

Based on these assumptions, the total labor cost is $5,277 in the first year: ($47.44 per hour × 1/2 hour × 277 locations) + ($47.44 per hour × 2 hours × 10 Departmental components). Cost for materials for the notice is $1,452 dollars 298 in the first year after publication of the final rule and $1,037 annually 299 in years two through five. Finally, the cost associated with the portion of Department locations that mail notices of rights with certain publications is $3,713 in the first year 300 and $2,785 301 annually in years two through five. In sum, the burden to the Federal government associated with § 88.5 is $36,677 in the first year and $13.660 annually in years two through five.

(iv) Record-Keeping (§ 88.6(b))

Paragraph (b) in § 88.6 of the final rule requires recipients and sub-recipients to maintain records evidencing their compliance with this part. In the proposed rule, the Department did not identify record-keeping as a separate burden because it assumed that recipients and sub-recipients already maintain records in the course of evidencing compliance with the terms and conditions of a Federal award, which would include not only financial management requirements but all applicable Federal laws, including Federal conscience and anti-discrimination laws. The Department requested comment on that assumption. The Department received numerous comments stating that the record-keeping requirements in § 88.6(b) were too vague and requesting clarity on what kinds of records must be maintained. However, the Department received no comments contradicting its assumption that recipients and sub-recipients already follow record-keeping practices that suffice to document compliance with Federal civil rights laws. Therefore, because the Department understands that recipients and sub-recipients must document such compliance in the course of receiving a Federal award, 302 any potential marginal increase in the cost of maintaining records according to the clarity set forth in § 88.6(b) would be de minimis.

(v) Reporting a Finding of Noncompliance (§ 88.6(d))

Paragraph (d) in § 88.6 of the proposed rule would have required recipients and sub-recipients to report to the relevant Departmental funding component the existence of an OCR compliance review, investigation, or complaint under 45 CFR part 88 over a five-year period as such incidents arise and in any application for new or renewed Federal financial assistance or Departmental funding. The Department received numerous comments that stated this requirement was too burdensome.

Accordingly, the Department has significantly revised § 88.6(d). Recipients and sub-recipients would no longer have to report a compliance review, investigation, or complaint against them as it arises. Moreover, recipients and sub-recipients would only be required to disclose the existence of a determination by OCR of noncompliance with this rule in any application for new or renewed Federal financial assistance or Departmental funding (rather than reporting compliance reviews, investigations, or complaints). Recipients would be responsible for disclosing any OCR determinations of non-compliance made against their sub-recipients. Finally, the final rule shortens the reporting period from five to three years following an OCR determination of noncompliance.

Given the revisions to § 88.6(d), the Department has revisited its methodology for estimating the costs imposed by § 88.6(d). The Department estimates that the burden is the opportunity cost for recipients and sub-recipients who have had OCR determine that they are noncompliant with this rule to retrieve information from their records systems and enter in the application basic identifying information regarding the determination. The components to monetize this burden include: (1) The time spent for a staff member to execute the reporting functions and that person’s fully loaded mean hourly wage, (2) the number of times a recipient or sub-recipient applies for new or renewed funding administered by the Department annually, and (3) the number of recipients and sub-recipients that OCR finds noncompliant with this part annually.

The Department estimates it would take a records custodian at the experience level of a paralegal about 15 minutes to retrieve the relevant information (such as date of the OCR determination of noncompliance and the OCR “transaction number” (i.e., case number)) from the recipient’s or sub-recipient’s records and an administrative assistant 15 minutes to enter the information in the application for Federal financial assistance or other Federal funds from the Department. The mean weighted hourly wage for the paralegal and administrative assistant is

---

294 Obtained from U.S. General Services Administration on October 30, 2018 (on file with HHS OCR).
295 Product of 277 locations times 50 percent for year one. Product of 207 locations times 50 percent for years two through five.
296 The hourly wage rates of staff are likely to vary from a GS–3 to a GS–11. The Department uses the mid-point GS-level and step and relies on hourly wage rates for the locality salary adjustment for the District of Columbia and surrounding geographic area.
298 Sum of costs for materials to post in physical locations (5 pages × $0.05 per page × 277 locations) plus costs for materials to post in certain publications (100 pages × $0.05 per page × 277 locations).
299 Costs for materials to post in certain publications (100 pages × $0.05 per page × 207 locations).
300 Sum of incremental postal of $2,074 ($0.15 per mailing × 100 mailings × 138 facilities) and incremental labor of $1,640 ($47.44 per hour × 0.25 hours × 138 facilities).
301 Sum of incremental postal of $1,555 ($0.15 per mailing × 100 mailings × 104 facilities) and incremental labor of $1,230 ($47.44 per hour × 0.25 hours × 104 facilities).
302 See 45 CFR 75.302 (regarding the sufficiency of an HHS awardee’s financial management system, including “records documenting compliance with Federal statutes, regulations, and the terms and conditions of the Federal award.”). See also id. section 75.361 (requiring an HHS awardee to maintain records for three years from the date of the final expenditure report or from the date the awardee submits its quarterly or annual financial report).
$45.31.$303 The Department estimates that a recipient would bear this labor cost at the firm level for every award action the recipient applied, including new funding opportunities, supplemental funding, and non-competing continuations, among others.

Because OCR had no publicly available or reliable data source to estimate how many total applications for new or renewed funding in a fiscal year a recipient might make to the Department or its component, actual award data from HHS TAGGS was used as a proxy. The Department considered the number of award actions the Department and its components made to State agencies and State universities in FY 2017 to inform the estimate. Award data in HHS TAGGS for FY 2017 indicated that some State universities receive less than 100 awards per fiscal year and others receive nearly 2,000 awards. Some State agencies receive one or two awards per fiscal year and others receive 80 awards per fiscal year. Consequently, a recipient or sub-recipient found in violation of this part, on the extreme end, would expend $45,310 per year in labor costs at the firm level (2,000 applications per year × $45.31 per hour × 0.5 hours).

The most significant uncertainty for monetizing the burden of §88.6(d) is the number of recipients and sub-recipients that OCR will determine as noncompliant with this rule. OCR employs a range of fact-finding methods and evaluates each complaint based on the relevant facts, circumstances, and law at issue, which is an approach that this rule codifies in §88.7(d). OCR is gaining experience in handling the complexity and volume of complaints received alleging violations of the Weldon Amendment, Church Amendment, Coats-Snowe Amendment, and section 1553 of the Affordable Care Act. Most of the statutes that are the subject of the rule have no case law interpreting them. In addition, compared to OCR’s experience handling complex cases for other civil rights and health information privacy matters, there is little institutional history of OCR enforcement of the Weldon Amendment, Church Amendments, Coats-Snowe Amendment, and section 1553 of the Affordable Care Act. Indeed, OCR was receiving only approximately 1.25 complaints per year alleging such violations during the eight years preceding the change in Administration. However, during FY 2018, the most recently completed fiscal year for which data are available, OCR received 343 complaints alleging conscience violations.$304 Given this variable posture at this stage of the Department’s renewed efforts on conscience and religious freedom, the Department cannot reliably predict the number of OCR determinations of noncompliance to monetize this burden, but estimates that, for those to whom it applies, the related reporting cost is about $45,310 per year per entity with the highest number of applications for HHS funding.

(vi) Voluntary Remedial Efforts

The proposed rule noted that the Department anticipates that some recipients will institute a grievance or similar process to handle internal complaints raised to the recipient’s or sub-recipient’s attention. The rule does not require such a process, but in HHS OCR’s enforcement experience, informal resolution of matters at the recipient or sub-recipient level may effectively resolve a beneficiary’s or employee’s concern. The Department received no comments regarding the proposed rule’s methodology for estimating these costs. The Department anticipates 0.5 percent of entities, or 2,514 entities,$305 would conduct such internal investigations should complaints come to the recipient’s or sub-recipient’s attention or would undertake remedial efforts to resolve complaints.

The burden is the opportunity cost of staff time to handle internal investigations and take remedial action. Uncertainty exists as to how many hours annually a recipient or sub-recipient would devote to this effort. On average, the Department anticipates entities spending 20 hours annually: 16 hours of a lawyer’s time and 4 hours of an executive’s time. The weighted mean hourly wage (including benefits and overhead) is $144.98 per hour.$306 The labor cost is $7.3 million ($144.98 per hour × 20 hours × 2,514 entities). Some recipients may spend more than 20 hours on voluntary remedial efforts, and if this is the case, the labor cost will be lower. Other recipients may spend less than 20 hours, and if this is the case, the labor cost will be lower.

(vii) OCR Enforcement and Associated Costs

The Department anticipates a temporary increase in investigation and enforcement costs to OCR over the five years immediately following publication of the final rule. The Department expects this increase from the synergistic impact of persons’ increased awareness of rights; increased confidence in the Department’s ability and willingness to address those rights through the administrative complaint process; and an increase in the number of Federal conscience and anti-discrimination laws that the rule proposes to enforce. Indeed, since during FY 2018, the most recently completed fiscal year for which data are available, OCR received 343 complaints alleging conscience violations.$307 The impact of the rule on OCR is the opportunity cost of about 12 FTEs to perform investigative responsibilities and coordinate enforcement with HHS components, as set forth in §88.7, which is an increase of 7.5 FTEs from the proposed rule’s estimate. These responsibilities include receiving and handling complaints, initiating compliance reviews, conducting investigations, coordinating compliance within the Department, and performing other associated activities as part of its program to promote widespread voluntary compliance of Federal conscience and anti-discrimination laws. The Department anticipates that the 12 FTEs consist of a member of the Senior Executive Service, four GS–15 employees, three GS–14 employees, two GS–13 employees, and two GS–12 employees, each paid a mid-level salary for the DC area.$308 The fully loaded labor cost (including benefits and overhead) for those twelve employees is estimated to be $3 million annually. The difference between the proposed rule’s estimate for OCR’s enforcement costs and this estimate is primarily the result of the increase in the number of FTEs. This increase is informed by OCR’s experience since publication of the proposed rule, which has demonstrated that OCR will need to devote greater resources to the area of conscience protections than OCR had anticipated at the time of publication of the proposed rule.

$304 Complaint data based on OCR’s system of records as of December 20, 2018.

$305 Sum of (0.5 × $38.78 per hour) and (0.5 × $53.84 per hour).

$306 Sum of ($67.25 × .80) + ($93.44 × .20) and multiplied by two to adjust upward for overhead and benefits.

307 Complaint data based on OCR’s system of records as of December 20, 2018. Using the locality salary adjustment for the District of Columbia and surrounding geographic area, the annual salaries adjusted upward for benefits and overhead are as follows: $290,324 for GS–15 step 5 ($145,162 + $246,812 for GS–14 step 5 ($104,433 + $502,899 recipients. $305 Sum of (0.5 × $38.78 per hour) and (0.5 × $53.84 per hour).
rule. This estimate also has been adjusted upwards based on the method of calculating the wages of the FTEs. The proposed rule assumed a fully loaded wage for each of the 4.5 FTEs at $201,000, but the final rule estimates the cost of the 12 FTEs based on various GS levels and therefore relies upon the fully loaded wage using the estimated hourly salaries of employees under the GS schedule.

One commenter stated that the costs associated with OCR’s enforcement efforts would double to the extent that both a provider and a patient file a complaint over the same matter. The commenter did not provide an example of a scenario where such “double filing” would occur. The Department believes that such scenarios, if they occur at all, would constitute a de minimis proportion of complaints received by OCR and would not involve increased or doubled costs, as resources for resolution of the two complaints would be shared through investigation of similar matters.

4. Estimated Benefits

The Department expects this final rule to produce a net increase in access to health care, improve the quality of care that patients receive, and secure societal goods that extend beyond health care. These effects will occur primarily via four mechanisms.

First, this rule is expected to remove barriers to the entry of certain health professionals, and to delay the exit of certain health professionals from the field, by reducing discrimination or coercion that health professionals anticipate or experience. Comments received by the Department demonstrate that a lack of conscience protections diminishes the availability of qualified health care providers. For example, in a survey of providers belonging to faith-based provider organizations, over nine in ten (91 percent) agreed with the statement, “I would rather stop practicing medicine altogether than be forced to violate my conscience.”

Second, in supporting a more diverse medical field, the rule will benefit patients by improving doctor-patient relationships and quality of care. Academic literature supports the proposition that prohibiting the exercise of conscience rights in medicine decreases the quality of care that patients receive. As one article noted, “[If] physicians do not have loyalty and fidelity to their own core moral beliefs, it is unrealistic to expect them to have loyalty and fidelity to their professional responsibilities.”

Third, the rule is expected to decrease the harm that providers suffer when they are forced to violate their consciences, with attending improvements to patient health. Scholars have observed that “[a]bandoning the right to conscience of the medical practitioner not only harms the individual practitioner but also threatens harm to his patients as well—the harms, however paradoxical it might seem, are actually inseparable from one another.”

Fourth, by providing for OCR investigation and HHS enforcement of Federal conscience and anti-discrimination laws, this final rule is expected to decrease unlawful discrimination, thereby permitting greater personal freedom. The rule will promote protection of religious beliefs and moral convictions, which is a societal good based on fundamental rights. As James Madison, often hailed as the “father of the Constitution,” wrote,

“The Religion then of every man must be left to the conviction and conscience of every man; and it is the right of every man to exercise it as these may dictate . . . . It is the duty of every man to render to the Creator such homage, and such only, as he believes to be acceptable to him.”

The Department received comments arguing that the proposed rule did not provide a sufficient articulation of the benefits that this rule would create or secure. In addition to analyses provided elsewhere in this preamble where germane, the Department’s analysis of the rule’s benefits responds to those comments and reflects a review of academic literature on the benefits of conscience protections in health care.

The analysis demonstrates that the rule creates and secures significant benefits.

(i) Historical Support for Conscience Protections

The people of the United States of America have valued conscience protections since the country’s founding era. Madison said that “[c]onscience is the most sacred of all property; . . . the exercise of that, being a natural and unalienable right, to guard a man’s house as his castle, to pay public and enforce private debts with the most exact faith, can give no title to invade a man’s conscience which is more sacred than his castle.”

George Washington wrote, “Government being, among other purposes, instituted to protect the Persons and Consciences of men from oppression, it certainly is the duty of Rulers, not only to abstain from it themselves, but according to their Stations, to prevent it in others, . . . [and] the Conscientious [sic] scruples of all men should be treated with great delicacy & tenderness.”

Some scholars have argued that the right to conscience was a hallmark of our founding and in fact, “[p]rotection for individual exercise of rights of conscience was one of the essential purposes for the founding of the United States of America and one of the great motivations for the drafting of the Bill of Rights.”

(ii) Expected Positive Impact on the Recruitment and Maintenance of Health Care Professionals

Numerous studies and comments show that the failure to protect conscience is a barrier to careers in the health care field.

A 2009 survey found that 82% of responding faith-based health care providers said it was either “very” or “somewhat” likely that they personally would limit the scope of their practice of medicine if conscience rules were not in place. This was true of 81% of medical professionals who practice in rural areas and 86% who work full-time serving poor and medically-underserved populations. 91% agreed, “I would rather stop practicing medicine if conscience rules were not in place.”

309 Christian Medical Association & Freedom2Care summary of polls conducted April, 2009 and May, 2011, available at https://docs.wixstatic.com/u/edg/6099e70_7d5a6f110dde48c686e10/3e67a7e41c.pd f.
310 D. White and B. Brody, Would Accommodating Some Conscientious Objections by Physicians Promote Quality in Medical Care?, 305 J. Am. Med. Assoc., May 4, 2011, at 1804–1805 (arguing that prohibiting conscience-based refusals “may negatively influence the type of persons who enter medicine[,] . . . may negatively influence how practicing physicians attend to professional obligation[,] . . . [may cause] higher levels of callousness [by physicians] toward patients[,] . . . [and] may reciprocally diminish physicians’ willingness to be sympathetic to and accommodating of patients’ diverse moral beliefs”).
altogether than be forced to violate my conscience.” 316

The Department expects this rule to remove barriers to entry into the health care professions and into certain specialties within the health care profession 317 that arise from anticipated or experienced discrimination against such persons’ religious beliefs or moral convictions. The Department also expects this rule to delay the exit of certain types of health professionals who are considering leaving the field in order to avoid such coercion or discrimination. 318 Although the rule does not create substantive protections beyond those in existing law, the Department believes that greater awareness and enforcement of those laws will help promote compliance and provide these follow-on effects. The Department has a significant interest in removing unlawful barriers to careers in the health care field.

The American Association of Pro-Life Obstetricians and Gynecologists (AAPLOG) represents 2,500 members and associates, 319 wrote in 2009, “Like pro-life physicians generally, AAPLOG members overwhelmingly would leave the medical profession—or relocate to a more conscience-friendly jurisdiction—before they would accept coercion to participate or assist in procedures that violate their consciences.” 320 AAPLOG’s members and associates represent 13 percent of OB/GYNs in the United States. 321 Yet, as explained above, the Department has received significant anecdotal evidence of violations of the very conscience laws that Congress has enacted to protect such providers.

Because the rule is expected to remove a barrier to entry into the health care profession, the rule is expected to engender more people to be willing to enter the health care profession. Since

there is an unmet need for health care providers in the United States, the Department assumes that an increase in the number of people willing to enter the health care profession (or a certain specialization within the health care profession) will result in an increase in the number of providers. Similarly, a certain proportion of decisions by currently practicing health providers to leave the profession are motivated by coercion or discrimination based on providers’ religious beliefs or moral convictions, 322 so the Department anticipates that this rule’s protections will decrease such departures from the field. Several commenters agreed anecdotally, stating that without the rule, access to medical care will suffer, because pro-life and faith-based medical providers will leave the profession.

The Department anticipates that this effect will also occur at the macro-scale in the health industry. For example, religiously-operated hospitals or health care systems, being granted greater security to practice medicine consistent with their religious beliefs, may find it worthwhile to hire more providers to serve more people, or to serve new populations (geographic, etc.), and will have a larger pool of medical professionals to choose from. The Department is not aware, however, of data enabling it to quantify any effect the rule may have on increasing the number of health care providers or the possible result of increasing access to care. The Department instead believes it is reasonable to conclude that the rule will increase, or at least not decrease, access to health care providers and services.

Several commenters stated that permitting or honoring conscientious objections, especially objections to referring for a health service, will exacerbate current lack of access to health care caused by the existing shortage of health care providers. This argument appears to not adequately take into account how greater awareness and enforcement of conscience rights will (1) remove a barrier to entry for certain individuals and institutions into the health care field, and (2) encourage individuals and institutions with religious beliefs and moral convictions currently in the health care field that may be thinking about leaving the field to remain, thereby creating net benefits. As described in the analysis below on the effects of this final rule on access to care, commenters who raised the claim that the rule would exacerbate current barriers to accessing health care failed to provide data that the Department believes enables a reliable quantification of the effect of the rule on access to providers and to care. For the reasons explained in this analysis, the Department disagrees with those commenters and believes it is more likely that removing the barriers to entry that may exist due to insufficient enforcement of conscience laws will result in an overall increase in access to care. Again, however, the Department is not aware of data that allows for an estimate of the effect of this rule on access to services.

(iii) Expected Positive Impact on Patient Care by Religious Health Care Professionals and Organizations

Many comments discussed the subject of the management of miscarriages in Catholic hospitals, alleging that Catholic hospitals’ adherence to the Ethical and Religious Directives (ERDs), a document that expresses the teaching of the Catholic Church on matters of health care, risks harm to women undergoing a miscarriage. Approximately forty-three public comment submissions (each of which may represent more than one comment per submission) cited the article “When There’s a Heartbeat: Miscarriage Management in Catholic-Owned Hospitals,” which describes experiences of a handful of physicians across the nation’s Catholic health care facilities that adhered to ERDs. 323 The article relays anecdotes and quotes from six physicians out of the thirteen interviewed by the authors. The authors do not state why the article omits quotes from the other seven providers, nor does it highlight anecdotes from positive or neutral experiences with facilities’ adherence to ERDs. The authors use the anecdotes and quotes as support for the idea that adherence to ERDs creates actual, potential, or perceived deficiencies in the facilities’ management of miscarriage by Catholic health care facilities. Anecdotal accounts of such a limited nature do not provide the Department with a robust basis for estimating the rule’s impact on the management of miscarriages.

Twenty-four public comment submissions (each of which may represent more than one comment per submission) discussed the case of Tamesha Means, who was treated for a miscarriage by a Catholic hospital in

320 Letter from Lawrence J. Joseph, on behalf of the American Association of Pro-Life Obstetricians & Gynecologists, to the Office of Public Health & Science, Dep’t of Health & Human Servs. 2 (Apr. 9, 2009), http://downloads.fs.fed.us/ef/09530.pdf.
Michigan, as an example of the harm to patient health caused by the faith-based practices of Catholic hospitals. Ms. Means subsequently brought a lawsuit claiming that the hospital’s adherence to the ERDs constituted negligence. Yet the U.S. Court of Appeals for the Sixth Circuit ruled that Ms. Means had not alleged any harm or injury that could sustain her claim. Means v. U.S. Conf. of Catholic Bishops, No. 15–1779 (6th Cir. 2016).

The rule does not incorporate ERDs, and it does not enforce them. Nothing in the rule requires any individual or institutional provider to abide by any religious belief or moral conviction in his or her practice of medicine, and this rule does not take a position on whether any facility should or should not adhere to ERDs. Instead, the rule provides mechanisms for the enforcement for Federal conscience laws and anti-discrimination statutes, which are very different from ERDs in their text, structure, and legal significance.

Numerous commenters also cited statistics demonstrating that women of color are disproportionately served by Catholic hospitals. These commenters argued that, because ERDs prohibit Catholic hospitals from performing elective abortions, sterilizations, and other procedures that are counter to Catholic beliefs, women of color would be disproportionately harmed by exercises of religious belief protected by the rule.

The question of the ultimate effect of Catholic hospitals’ adherence to ERDs on general access to reproductive health care, or access by any particular population, is outside the scope of this rule, but appears to be less settled than many commenters portray it to be. A meta-study in 2019 found a surprising paucity of data on the issue, stating that “Although many may assume that institutional restrictions cause harm, our current understanding demonstrates that the landscape of provision [of reproductive health care services] is wide-ranging and complex in nature.”324 On the subject of miscarriages in particular, another study observed that “Anecdotal reports have suggested that Catholic hospitals are putting women in danger due to the restrictions on miscarriage management. Contrary to these reports, we find some evidence that Catholic ownership is in fact associated with a reduction in miscarriages that involve a complication, suggesting that anecdotal accounts may not be indicative of a widespread pattern.”325

Additionally, Catholic and other religiously affiliated health care providers play a major role in the delivery of health care to residents of the United States, including to underserved or underprivileged communities in particular, and are motivated by their beliefs to serve such communities.326 As some commenters noted, that role may explain the disproportionately large share of charitable care and service given by religious providers to underserved communities. For example, Ascension, the nation’s largest religiously affiliated non-profit health care system, had an annual operating revenue in 2016 that was about one-third the size of the annual operating revenue for Kaiser Permanente, the nation’s largest non-profit health care system that is not religiously affiliated.327 However, both organizations provided approximately $2 billion in care and other benefit programming to underserved communities in 2017.328 As the Department discusses above in response to comments, supra at part

---

326 Ascension, RE: Docket HHS–OCR–2018–0002, Protecting Statutory Conscience Rights in Health Care; Delegations of Authority (Mar. 27, 2018) (“As the largest non-profit health system in the U.S. and the world’s largest Catholic health system, Ascension is committed to delivering compassionate, personalized care to all, with special attention to persons living in poverty and those most vulnerable. In FY2017, Ascension provided more than $1 billion in care of persons living in poverty and other community benefit programs.”); Catholic Health Association, REF: RIN 0945–ZA 03 Protecting Statutory Conscience Rights in Health Care; Delegations of Authority: Proposed Rule, 83 FR 3880, January 26, 2018 (Mar. 27, 2018) (“As a Catholic health ministry, our mission and our ethical standards in health care are rooted in and inseparable from the Catholic Church’s teachings about the dignity of each and every human person, created in the image of God. Access to health care is essential to promote and protect the inherent and inalienable worth and dignity of every individual. These values form the basis for our steadfast commitment to the compelling moral implications of our health care ministry, and give meaning to our duty to maintain and work for the right of everyone to affordable, accessible health care.”).

Substantial academic literature documents the existence among health care providers of “moral distress,” which is “a sense of complicity in doing wrong” and “a deep anguish that comes from the nature of those circumstances [of the provider’s work environment] as systemic, persistently recurrent, and pervasively productive of crises of conscience.”

Moral distress functions as a pressure on providers to leave the health care profession: “Prolonging these conditions can lead to exhaustion of their resistance resources and cause dissatisfaction with the workplace. Those who continue to work despite these conditions experience stress and burnout along with dissatisfaction.”

It is difficult to quantify the impact of the psychological trauma that results from moral distress. The strength of the provider’s moral objection may vary based on the facts and circumstances of each case, including the service in question.

(v) Expected Patient Benefits From This Rule

To the extent the rule supports a more diverse medical field, the rule would create positive effects for patients. The rule could assist patients in seeking counselors and other health care providers who share their deeply held convictions. Some patients appreciate the ability to speak frankly about their own convictions concerning questions that touch upon life and death and treatment options and preferences with a doctor best suited to provide such treatment. A pro-life woman may seek a pro-life OB/GYN to advise her on decisions relating to her fertility and reproductive choices. Open communication in the doctor-patient relationship will foster better overall care for patients.

The benefit of open and honest communication between a patient and her doctor is difficult to quantify. One study showed that even “the quality of communication [between the physician and patient] affects outcomes . . . [and] influences how often, and if at all, a patient will return to that physician.”

But poor communication negatively affects continuity of care and undermines the patient’s health goals. When conscience protections are robust, both patients and their physicians can communicate openly and honestly with one another at the outset of their relationship.

Facilitating open communication between providers and their patients also helps to eliminate barriers to care, particularly for people of faith, and especially in migrant communities where culturally competent care matters greatly. Because positions of conscience often ground in religious influence, “[d]enying the aspect of spirituality and religion for some . . . patients can act as a barrier. These influences can greatly affect the well-being of people. They were reported to be an essential element in the lives of certain migrant women which enabled them to face life with a sense of equality.”

It is important for patients seeking care to feel assured that their religious beliefs and their moral convictions will be honored. This will ensure that they feel they are being treated fairly. And for some, being able to find health care providers that share the same moral convictions can be a source of personal healing.

As mentioned above, academic literature supports the proposition that prohibiting the exercise of conscience rights in medicine may decrease the quality of care that patients receive.

Commentary on the concept of moral distress among providers also expresses concern over how a degraded moral culture in health care can jeopardize patients’ health. As one review of literature on moral distress in nursing found, “There is also a general consensus among the reviews that [moral distress] arises from a number of different sources, and that it (mostly) impacts negatively on nurses’ personal and professional lives and, ultimately, harms patients.”

Similarly, allowance for the exercise of conscience rights by health care providers more broadly preserves a preferable model of health care practice, and improve the doctor-patient relationship.
As noted above, the Department assumes that this rule will increase the overall number of providers because (1) it will reduce barriers to entry into the health care field (and reduce pressure to leave the field) for individuals and organizations with religious beliefs or moral convictions, and (2) there exists an unmet demand for more providers. If the Department is incorrect in assuming that the rule will increase the overall number of providers—i.e., if health care employers and medical training programs do not increase their hiring rates and the size of their programs, respectively, despite an increase in applicants—then the rule will increase the quality of the average provider because the increase in the pool of available professionals will result in the selection of better providers overall. An increase in the quality of providers will increase the quality of care that patients receive. The Department is not, however, aware of data that provides a basis for quantifying these effects.

(vi) Expected Societal Benefits From This Rule

The rule will also yield lasting societal benefits. The rule mitigates current misunderstanding about what conduct the Federal government is legally able to support and fund, and educates individuals about their Federal conscience rights. By requiring certifications and assurances (with some exceptions), this rule provides a mechanism by which regulated entities will learn about—and, thus, be more likely to comply with—Federal conscience and anti-discrimination laws. The rule also provides a centralized office within the Department for individuals and institutions to file complaints with the Department when such individuals and institutions believe that their rights have been infringed. The Department expects that, as a result of this rule, more individuals, having been apprised of those rights, will assert them. The combination of these mechanisms will contribute to the general public’s knowledge and appreciation of the foundational nature of these rights, as well as the protections afforded by Federal law.

Fostering respect for the existing Federal conscience and anti-discrimination laws also fosters lawfulness more generally. As one author stated, [Law and] conscience are deeply intertwined. . . . But the phenomenon of conscience isn’t important only to legal experts. Just as conscience helps explain why people follow legal rules, it helps explain why people follow other types of rules as well, such as employers’ rules for employees, parents’ rules for children, and schools’ and universities’ rules for students. It may also help explain why people adhere to difficult-to-enforce ethical rules and to the sorts of cultural rules (“social norms”) that make communal life bearable. . . . Twenty-first century Americans still enjoy a remarkably cooperative, law-abiding culture.

Because fostering conscience in individuals—and compliance with Federal conscience laws—contribute to a more lawful and virtuous society, governments and their subdivisions have a significant interest in encouraging expressions of, and fidelity to, conscience.

Forcing religious believers to violate their consciences involves harms that go beyond legal rules, it helps explain why people follow other types of rules as well, such as employers’ rules for employees, parents’ rules for children, and schools’ and universities’ rules for students. It may also help explain why people adhere to difficult-to-enforce ethical rules and to the sorts of cultural rules (“social norms”) that make communal life bearable. . . . Twenty-first century Americans still enjoy a remarkably cooperative, law-abiding culture.

Governments also have an interest in ensuring the implementation and enforcement of existing laws, as part of the greater virtue of the rule of law. It is difficult to monetize the benefits of respect for conscience to the individual and society as a whole, but they are clearly significant. As the Supreme Court has said:

Both morals and sound policy require that the state should not violate the conscience of the individual. All our history gives confirmation to the view that liberty of conscience has a moral and social value which makes it worthy of preservation at the hands of the state. So deep in its significance and vital, indeed, is it to the integrity of man’s moral and spiritual nature that nothing short of the self-preservation of the state should warrant its violation; and it may well be questioned whether the state which preserves its life by a settled policy of violation of the conscience of the individual will not in fact ultimately lose it by the process.

To protect the rights of conscience is to protect personal and interpersonal goods that permit peaceful and fulfilling lives.

(vii) Analysis of Expected Effects of This Final Rule on Access to Care

The Department solicited information on costs that may arise as secondary effects of this rule, such as those associated with changes in health outcomes arising from increased protection of conscience for health care providers, as well as information about whether the existence or expansion of rights to exercise religious beliefs or moral convictions in health care improves or worsens patient outcomes and access to health care. The Department also requested comment on the related question of whether this final rule would result in unjustified limitations on access to health care.

The questions of access to care and of health outcomes are largely interdependent; access to care matters because of its effects on health outcomes, and the discussion in the public comments on health outcomes in the context of this rule were typically framed as a consequence of changes in access to care. Many comments the Department received argued that the rule would decrease access to care and harm patient health outcomes, and most such comments focused on the potential that providers would decline to perform a particular service for a patient.

Generally, however, instead of attempting to answer the difficult question of how this rule would affect access to health care and health outcomes, and how to quantify those effects, such comments argued that significant discrimination against some segments of the population in health care exists and is per se proof that the rule would result in harm. The comments made this argument without establishing a causal relationship between this rule and how it would affect health care access, and without providing any data the Department believes enables a reliable quantification of the effect of the rule on access to providers and to care.

344 Christopher C. Lund, Religion Is Special Enough, 103 Va. L. Rev. 481, 504 (2017) (“Freedom of conscience, it turns out, is one of the same values served by freedom of religion—among other things, it can serve to ameliorate psychological distress, reduce civil strife, and preserve individual identity.”).
Other comments focused on whether health disparities exist among demographics that tend to utilize health services that may be the subject of conscientious objections protected by this final rule, but again without establishing a causal link between the provisions of this rule and the predicted or speculated effects. Many comments observed that various demographic groups—women, LGBT people, immigrants and refugees, people of color, people living with HIV/AIDS, people with language barriers, people living in poverty, people with disabilities, and people living in rural areas—already face barriers to access to care and therefore would be disproportionately harmed by any additional barriers to access to care. The Department does not dispute that people in such demographic categories face health care disparities of various forms. The Department does disagree, however, with these comments’ conclusions that the rule will create any negative effect on access to care that cannot be otherwise addressed, or that is not outweighed by gains in overall public health, overall access to care due to the removal of barriers for providers, or the benefits of compliance with the law and respect for conscience and religious freedom. In fact, as the Department discusses supra at part IV.C.4.iii and infra, the Department expects the rule to specifically benefit underserved populations.

A common sentiment expressed in comments was that conscience protections for providers are only appropriate to the extent they do not interfere with, impose upon, or in any way result in others feeling harmed. This type of objection is not accepted for any other anti-discrimination law. For example, the Fair Housing Act and the Americans with Disabilities Act, under certain circumstances, require building and apartment owners to incur costs to ensure that facilities are accessible to persons with disabilities. These statutes impose costs, but Congress and several Presidents have deemed it important to remove barriers to full participation in economic and social life for persons with disabilities. Similarly, America has since the founding recognized that Free Speech results in harm and hurt feelings (sometimes extraordinarily so) for many Americans, yet it is deemed a price worth paying. Conscience protection should be not be a special exception to the principle that fundamental rights do not depend on there being zero conflicts or disagreements in their exercise.

In objections based on potential (often temporary) lack of access to particular procedures as a result of enforcement of the law are really objections to policy decisions made by the people’s representatives in Congress in enacting the Federal conscience and anti-discrimination laws in the first place, rather than to this rule’s mechanisms for implementing and enforcing those laws. An analysis of any change in access to care caused by this final rule is not the same as an analysis of the total impact of the exercise of religious belief and moral conviction on access to care. Nor is it the same as estimating the total impact of discrimination against women, LGBT individuals, or individuals in any other population demographic on access to care. Rather, the question involves isolating the impact of the exercises of religious belief or moral conviction attributable to this final rule specifically, over and above whatever impact is attributable to the pre-existing base rate of exercise of religious belief or moral conviction. Different types of harm can result from denial of a particular procedure based on an exercise of such belief or conviction. First, the patient’s health might be harmed if an alternative is not readily found, depending on the condition. Second, there may be search costs for finding an alternative. Third, the patient may experience distress associated with not receiving a procedure he or she seeks. These three potential harms, however, would also be applicable for denials of care based on, for example, inability to pay the requested amount. Fourth, there may be a harm resulting from a conscientious objection to referring for a health service, distinct from the harm of the initial objection to performing the service. Fifth, some commentators allege others in the community to which the patient belongs may be less willing to seek medical care.

On the other hand, it is important not to assume that every patient who wants a particular service is offended by a provider’s unwillingness to provide that service, or wishes that the provider would do so, against his or her religious beliefs or moral convictions. Some persons, out of respect for the beliefs of providers, may want a service but not take any offense, nor deem it any burden on themselves, for the provider to not provide that service to them. Some patients may even value the health care provider’s willingness to obey his or her conscience, because the patient feels that provider can be trusted to act with integrity in other matters as well. The Department does not believe it is appropriate to assume that all patients who want a particular service also want to force unwilling providers to provide it in violation of their consciences.

Lastly, numerous comments focused on the potential for a patient to feel insulted or emotionally distressed because of a perception that a provider, in declining for reasons of religious belief or moral conviction to perform an objected-to service or procedure, is expressing disapproval of the patient, especially regarding his or her personal identity or personal conceptions of morality. Although the Department does not understand such conscientious objections to be necessarily intended to convey such disapproval, the Department recognizes that, in some circumstances, some patients do experience emotional distress as a consequence of providers’ exercise of religious beliefs or moral convictions. However, Congress, in considering the statutes enforced by this rule, did not establish balancing tests that weigh such emotional distress against the right to abide by one’s conscience.

On the other side of the equation, those who suffer discrimination on the basis of their religious beliefs or moral convictions, or those coerced to violate those convictions, may themselves experience emotional distress, as well as economic harms such as job loss or rejection from admission into a training program. There appears to be no empirical data on how previous legislative or regulatory actions to protect conscience rights have affected access to care or health outcomes. In fact, studies have specifically found that there is insufficient evidence to conclude that conscience protections have negative effects on access to care.345 Many commenters reasoned that, despite this lack of empirical evidence, the rule would cause an increase in denials of care. For example, one comment cited various statistics on the rates of discrimination against LGBT individuals, but those statistics were general in nature and did not assist the

345 See Chavkin et al., "Conscientious objection and refusal to provide reproductive healthcare: A White Paper examining prevalence, health consequences, and policy responses, 123 Int’l J. Gynecol. & Obstet. 3 (2013), 541–556 ("[I]t is difficult to disentangle the impact of conscientious objection when it is one of many barriers to reproductive healthcare. . . . [(C]onscientious objection to reproductive health care has yet to be rigorously studied."); K. Morrell & W. Chavkin, Conscientious objection to abortion and reproductive healthcare: a review of recent literature and implications for adolescents, 27 Curr. Opin. Obstet. Gynecol. 5 (2015), 333–338 ("The degree to which conscientious objection has compromised sexual and reproductive healthcare for adolescents is unknown.").
Department in estimating what degree may be attributable to the lawful exercise of religious beliefs or moral convictions. The comment also identified numerous health disparities between LGBT individuals and non-LGBT individuals, but did not explain the extent to which such disparities are the product of the lawful exercise of religious beliefs or moral convictions. The comment then concluded that “discrimination and related health disparities facing the LGBT population stand to worsen if health care providers are authorized to refuse to serve LGBT people.”

The same comment attached an amicus brief that cited two studies on how State laws affect health disparities among LGBT populations—one study on States that either did not include sexual orientation as a protected category in its hate crimes statute or did not prohibit employment discrimination on the basis of sexual orientation, and another on States that had constitutional amendments banning gay marriage on the ballot in 2004 and 2005. Neither study provides a reliable basis for inferring an answer to the questions at issue here.

Another comment cited a 2018 report on anecdotal experiences of discrimination among LGBT individuals in eight States where laws had been passed to protect religious freedom. The report itself includes a citation to one study finding that awareness of legislation prohibiting discrimination on the basis of sexual orientation is associated with a decrease in the rate of such discrimination in interpersonal employment contexts. While analogous, such a finding is not the same as a finding that the awareness of legislation protecting conscience rights increases the rates of discriminatory conduct by people with religious beliefs or moral convictions. The report provides anecdotal accounts of discrimination from LGBT residents of those States. However, the report does not attempt to determine if the laws passed by those States played any causal role in the discrimination experienced by the respondents, e.g., via comparison to LGBT individuals’ experiences in States where no such laws had been passed. Multiple comments provided lists of various incidents in which providers declined to participate in a service or procedure to which they had a religious or moral objection. Such lists offer no suitable data for estimating the impact of this rule.

No comment attempted a detailed description of the actual impact expected from the rule on access to care, health outcomes, and associated concerns.

The Department attempted to quantify the impact of this rule on access to care but determined that there is not enough reliable data, and that the analysis was subject to too many confounding variables, for the Department to arrive at a useful estimate. For instance, the Department is not aware of a source for data on the percentages of providers who have religious beliefs or moral convictions against each particular service or procedure that is the subject of this rule. Likewise, the Department is not aware of data on the actual rate of providers’ exercise of conscientious objections to performing such services or procedures. Some providers who have a religious or moral objection to performing a service or procedure may nonetheless perform it for one reason or another, such as fear of legal reprisal. Others may respond to pressure to violate their consciences by limiting their practices, rather than providing the treatment with which they object. Commenters who contend the rule will reduce access to care seem to assume all providers with conscientious objections that are not being honored are providing those services anyway, so that the rule will reduce their provision of those services. The Department does not believe that assumption is correct. The Department considered methods for estimating the increase in the rate of such exercise of conscientious objections that may occur as a result of this rule, but determined that no reliable method was available. The Department likewise considered whether providers who, for reasons of religious beliefs or moral convictions, have left the practice of medicine or limited their scope of practice may reenter the field or resume their previous scope of practice, given the rule’s expanded enforcement of protections for religious beliefs or moral convictions. If providers who limited their practices because of threats to their consciences expand them because of this rule, those would not be instances of a reduction in the provision of services to which they object, but of an increase in other services. However, the Department was unable to find reliable data on this question, and concluded that no useful quantitative estimate of this impact was feasible.

The impact on health outcomes from the exercise of conscientious objections to particular services and procedures also resisted a useful quantitative estimate. Without data—to inform an estimate of the quantity of such objections that would be attributable this rule, the number of those objections that led to providers offering services to which they object rather than limiting their practices, the number of persons who left or did not enter certain fields or practices altogether because conscience laws were insufficiently enforced, the market effect of providers expanding or moving into different areas because conscience laws are enforced, and the overall resulting availability of access, both to objected-to services and to other health care overall—the Department lacks the predicate for estimating the impact on health outcomes of any change in the availability of services. The analysis on this point is also generally subject to the same confounding factors discussed below regarding the impact of conscientious objections to providing referrals.

The Department expects any decreases in access to care to be outweighed by significant overall increases in access generated by this rule. If the laws that are the subject of this rule are not enforced, many of the exact same people who would face a burden from a denial of access to a particular procedure from a particular doctor or provider would face the potential of receiving no health care at all from that doctor or provider because such providers may limit, or leave, their practices if unable to comply with their religious beliefs or moral convictions. The absence or departure of those providers from the health field does not clearly lead to any increase in other providers who are willing to offer services that are the subject of Federal conscience and anti-discrimination laws, but is more likely to simply diminish the overall availability of health care services. The burden of not being able to receive any health care clearly outweighs the burden of not being able to receive a particular treatment. For example, after the Department proposed in 2009 to rescind the 2008...
rule providing conscience protections for providers, a survey found that 81 percent of faith-based health care professionals working in rural areas and 86 percent of faith-based health care professionals working full-time in service to underserved communities said that they were either "very" or "somewhat" likely to limit the scope of their practice if the 2008 rule was rescinded.347 For such providers who did not in fact limit their scope of practice, this rule will help to prevent future situations in which they feel forced to do so. For those who did, this rule provides protections that may induce them to resume their previous scope of practice. In this sense the Department believes the rule will both preserve and expand access to health care generally.

Furthermore, as one academic article observed, "'[P]atients choose not merely particular services, but particular kinds of professionals.'"348 As noted earlier in this section, a survey of patients found that 86 percent would prefer that their providers share their moral beliefs.349 Another survey conducted by a former Chair of Bioethics of the National Institutes of Health Clinical Center "reinforces the existence of patient preference for physicians with shared values . . . [finding] that nearly one-fifth of [cancer] patients surveyed 'thought they would change physicians if their physician told them he or she 'had provided euthanasia [sic] or assisted suicide' for other patients.'"350 The Department, accordingly, expects this rule, through its recognition of the "fundamental necessity of conscience protections to ensuring patient access" for "patients who want access to physicians of conscience," to result in an increase in access to care.351

The Effect of the Rule’s Protection of Refusals To Refer for Services

As with the analysis in the above factors, there exists some baseline rate of exercise of conscientious objection to referring for a service to which the provider morally objects. A significant percentage of providers believe that they are not obligated to refer for a service to which they morally object.352 It is reasonable to assume that the rates of exercise of the right not to refer will increase under the rule, but it is difficult to determine by how much. It is likewise difficult to estimate what part of the baseline instances of conscientious objection manifest themselves in providers providing the referrals in violation of their objections, instead of limiting their practices so as to avoid the conflict.

First, it is important to note how many providers understand their existing right to decline to refer, whether grounded in ethics or the law, to be coextensive with the freedom that the rule reflects. For example, a provider who objects to performing sterilizations may feel ethically obligated to inform a patient where vasectomies are locally available—an act that the rule may allow the provider to abstain from—but may not feel obligated to provide the patient any further information about how to obtain that procedure. Research suggests that providers may often draw such a distinction.353

It is also difficult to estimate what actual impact the increase in refusals to refer would have. One confounding factor is that the practical effect of a provider’s exercise of conscientious objection to referring may vary greatly depending on the particular facts and circumstances of the case. Public knowledge of the availability of certain medical services may be extensive or minimal depending on the procedure. For instance, any pregnant woman is almost certainly aware of the existence and purpose of abortion, and the extensive efforts of pro-choice groups to facilitate women’s access to abortion make information about how to obtain an abortion relatively easy to find.354 So the effect of a provider’s refusal to refer for an abortion is mitigated by the patient’s own knowledge and the widespread availability of information about abortion access on the internet and elsewhere.

The Change in the Number of Patients Who Delay or Forgo Health Care for Fear of Being Denied a Health Service

As numerous public comments demonstrate, certain minority groups already experience significant health care disparities. Commenters state that negative health outcomes from some demographics are due to fear of discrimination leading to avoidance of seeking health care. However, the Department is not aware of any data establishing what, if any, part of this avoidance phenomenon is attributable to the exercise of conscientious objections protected by this rule or by implementation of the enforcement mechanisms of this rule.

Other Comments on Access to Care

Many of the comments that claimed that the rule would result in more frequent denials of service to patients also argued that the rule is unnecessary because there is no current problem with health care providers being coerced into violating their consciences. These arguments are contradictory. If, under the final rule, a provider exercises a right protected by the rule to decline to perform a service that he had been performing prior to this rule, his previous performances of the service would likely have been contrary to his conscience.

Many commenters observed that, in rural areas, if a provider were to decline on religious or moral grounds to provide a particular service or procedure, there may not be alternative providers within a feasible distance of the patient. The Department does not dispute that patients in rural areas are more likely than patients in urban areas to suffer adverse health outcomes as a result of being denied care. That is why enforcement of Federal conscience and anti-discrimination laws to prevent health care providers from being unlawfully driven out of business.

348 M. Bowman & C. Schandevel, The Harmony between Professional Conscience Rights and Patients’ Right of Access, 8 Phoenix L. Rev. 33 (2012) at 56 (“First, a patient who chooses a professional physician is not merely choosing a physician who does not object to the requested procedure; she is choosing a physician who affirmatively practices medicine where vasectomies are locally available—an act that the rule may allow the provider to abstain from—but may not feel obligated to provide the patient any further information about how to obtain that procedure.”). See also Christian Medical Association & Freedom2Care summary of polls conducted April, 2009 and May, 2011, available at https://docs.wixstatic.com/ugd/809e70_7ddd4f4110ddde46cb961ef3a678d7e41c.pdf ("86% of American adults surveyed said it is either ‘very’ or ‘somewhat’ important to them that they share a similar set of morals as their doctors, nurses, and other healthcare providers.")

MED. 593–600, 593 [2007] available at http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2867473/ (finding that some providers will inform patients of options but not refer for such options) ["Most [providers] also believe that physicians are obligated to present all options (86%) and to refer the patient to another clinician who does not object to the requested procedure (71%)"]

353 See, e.g., https://prochoice.org/think-youre-pregnant/find-a-provider/ (first result for Google search of phrase “find abortion clinic near me” performed 10/17/18)
especially in rural areas, is of paramount importance. Instead of a decrease in access to a particular procedure from a particular doctor or provider, the residents of a rural area would face the potential of receiving no health care at all from that doctor or provider because such providers may leave the practice if unable to practice medicine according to their religious beliefs or moral convictions. In addition, as discussed in response to comments supra at part III.A., some polls show populations in rural communities may be more likely to agree with providers in objecting to certain procedures encompassed by Federal conscience and anti-discrimination laws. This implies that the demand for such services may not exist (or be as great) in such communities, partially offsetting the impact of a higher number of conscientious objections that may be effectuated because of the rule. Persons in urban areas, in contrast, may feel less effect from an increase in conscientious objections because of the relatively greater availability of alternative providers as compared to rural areas.

One commenter noted that individuals whose health insurance does not provide financially adequate coverage for a large enough number of providers may similarly face a lack of alternative providers in the event one provider exercises a conscientious objection to a desired service. The Department regards its analysis herein regarding rural areas to be applicable to such situations as well.

Just as the consequences of denials of care may in some cases be magnified in rural areas, so too may be the consequences of forcing a rural health care provider to violate her conscience. First, the provider may limit her practice or exit the field, harming health care access in a significant way. Second, if the provider continues to practice, the stress of having to violate her conscience may detract from the quality of care the provider delivers to her patients in general, who have no alternative provider.

Additionally, if a provider is in an area where the majority of the population shares the provider’s belief system, and if the provider leaves the area due to inability to exercise protected beliefs, many in the community may lose the ability to have a provider with values they share, thus negatively impacting the delivery of health care and the doctor-patient relationship.

5. Analysis of Regulatory Alternatives

The Department carefully considered alternatives to this final rule. The Department determined that no alternative could achieve appropriately robust enforcement of, and respect for, Federal conscience and anti-discrimination laws without unduly burdening covered persons and entities subject to those laws and this rule. The following alternatives represent the major approaches the Department considered, including how burden reduction was a consideration in constructing this rule.

The Department considered preserving the status quo by maintaining 45 CFR part 88 without change from the 2011 Rule. Under this approach, the Department would largely defer to the States to enforce their respective conscience laws or to enact new laws to fill gaps in the landscape of Federal and State conscience protection and associated anti-discrimination rights and their enforcement. Continue with the current inadequate enforcement scheme, and provide no meaningful enforcement of the conscience and associated anti-discrimination laws that were not part of the 2011 Rule. The Department received comments advocating this approach since, in commenters’ views, State law, in conjunction with Federal law, already provides adequate accommodation of religious beliefs. Furthermore, some commenters stated that the stringent protections for conscience established by the statutes implemented by this rule are in tension with State nondiscrimination laws, State pharmaceutical dispensing laws, and State immunization laws that offer employers greater leeway in handling situations in which an employee asserts a conscientious objection.355 As stated elsewhere in response to similar comments, the Department disagrees with these arguments. As described above and further in the rule’s Federalism analysis, to eliminate or reduce any tension between this rule’s application of Federal statutes and State law, the final rule narrows the scope of the definitions of “discrimination” and “referral” in § 88.2. The Department also disagrees that maintaining the status quo is preferable to this rule. Reference to States would perpetuate the current circumstances necessitating Federal regulation, which include (1) inadequate to non-existent Federal government frameworks to enforce Federal conscience and anti-discrimination laws and (2) inadequate information and understanding about the obligations of regulated persons and entities and the rights of persons, entities, and health care entities under the Federal conscience and anti-discrimination laws. State action cannot correct these deficiencies at the Federal level. Furthermore, the Department could not, in good faith, choose to rely on States to promote conscience protection policies, knowing that some States have adopted policies that are inconsistent with, or have otherwise expressed indifference towards, the rights protected by the laws that part 88 (as written in the 2011 Rule) implements—the Weldon, Church, and Coats-Snowe Amendments.356

Additionally, as noted more extensively in the preamble’s summary of regulatory history, supra at part I, many commenters have pointed out the mutually reinforcing inadequate circumstances of the status quo contribute to the critical need for this final rule, including a conspicuously minimalistic regulatory scheme (compared to regulations implementing other civil rights laws OCR enforces); a lack of recognition by courts of a private right of action under certain Federal conscience and anti-discrimination laws;357 and hostility to conscience protections in some portion of the population and in certain State and local governments. Maintaining the status quo leaves a gap where HHS has a responsibility to coordinate compliance with, and enforcement of, Federal conscience protection and anti-discrimination laws but does not have the regulatory scheme to accomplish that goal. The Department consequently promulgates this final rule to eliminate that gap.

The Department considered maintaining the status quo, but dramatically increasing its outreach. Numerous commenters asserted the strong need for outreach to combat bias and animus in the health care sector against individuals with religious beliefs or moral convictions, to raise awareness of the conscience rights of individuals, entities, and health care entities, and to clarify the legal obligations of regulated persons and entities. Commenters suggested a range

355 See supra at part II.A (discussing laws and policies that some States have adopted).
of ideas, including that the Department publish educational materials for academic medical institutions to educate students about their protected conscience rights and the obligation of regulated entities to comply with Federal conscience and anti-discrimination laws; that HHS partner with State institutions regulating health professions; and that HHS create an advisory team with diverse members to develop a plan for extensive outreach to combat ignorance about Federal conscience and anti-discrimination laws.

The Department remains committed to robust outreach. Outreach has tremendous benefits to clarify legal obligations, raise awareness of OCR, and elevate awareness of the importance of conscience protections generally. The Department, however, agrees with one commenter who noted that, although outreach is important, it is insufficient without an enforceable rule to uphold the substantive protections under Federal law. As with every other civil rights law, outreach without adequate enforcement mechanisms is not enough to ensure appropriate compliance.

The Department considered a regulatory scheme that was more prescriptive than this rule by requiring all recipients and sub-recipients to establish policies and procedures for accommodating workforce members who objected to certain services based on moral convictions or religious beliefs; to address certain substantive elements in their policies and procedures; and to require the dissemination of information to workforce members about Federal conscience and anti-discrimination laws, this rule, or the recipient’s and sub-recipient’s policies and procedures. The burden under this option across 502,899 entities (the mid-point of the range shown in supra at Table 2) is the labor of a lawyer’s time (3 hours) and an executive’s time (1 hour). Using the mean hourly wages for these occupations adjusted upward for benefits and overhead, the annual average burden would be $297 million.\(^{358}\)

The Department rejected this alternative, but estimates supra at part IV.C.3.ii that five percent of entities in year one and 0.5 percent of entities annually in years two through five would voluntarily update policies and procedures or disseminate them to staff as a by-product of assuring and certifying compliance with Federal conscience and anti-discrimination laws and this rule.

As discussed above, the Department considered requiring recipients to post notices of nondiscrimination in various physical locations and online, but has chosen to make the notice provisions voluntary, in part to reduce burden. The final rule allows recipients and sub-recipients flexibility to decide what measures will best ensure compliance with Federal conscience and anti-discrimination laws and this rule, while providing for vigorous enforcement in cases of violation. Recipients and sub-recipients are better positioned to decide whether organization-wide action is necessary, and if so, what extent, content, and manner of that action is appropriate to ensure compliance. This approach allows recipients and sub-recipients to tailor appropriate organization-wide action based on their type, the populations they serve, their size, the scope of their workforce members likely to exercise protected rights under the Federal conscience and anti-discrimination laws and this rule, and other relevant considerations. This rule, therefore, permits recipient employers to establish their own policies and procedures for how they will handle individuals’ objections to certain procedures, such as abortion, sterilization, or assisted suicide, and recognizes the availability of appropriate accommodation procedures. In addition, this rule permits recipient employers who do have institution-wide objections to performing certain procedures, such as sterilization, but that do not object to referring for such procedures, to establish referral systems with nearby institutions that do not have objections to such procedures to facilitate the delivery of the services or programs.

D. Executive Order 13771

Executive Order 13771 (January 30, 2017) requires that the costs associated with significant new regulations “to the extent permitted by law, be offset by the elimination of existing costs associated with at least two prior regulations.” The Department believes that this final rule is a significant regulatory action as defined by section 3(f) of Executive Order 12866. This rule is also considered a regulatory action under Executive Order 13771. Excluding any negative externalities attributed to this rule in the form of health outcomes or other effects not compensated by positive health or other externalities from protecting conscience rights, the Department estimates that this rule will generate $148.2 million in annualized costs at a 7 percent discount rate, discounted relative to year 2016, over a perpetual time horizon.

One commenter argued that the final rule violates Executive Order 13771 because it imposes costs but does not identify what other burdens imposed by other regulations are being eliminated. Although each agency must identify offsetting deregulatory actions for each new regulatory burden, OMB does not interpret Executive Order 13771 to require each regulation that imposes costs to cite the particular deregulatory actions that offset that particular burden.\(^{359}\)

E. Regulatory Flexibility Act

HHS has examined the economic implications of this final rule as required by the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612). The RFA requires an agency to describe the impact of a rulemaking on small entities by providing an initial regulatory flexibility analysis unless the agency expects that the rule will not have a significant impact on a substantial number of small entities, provides a factual basis for this determination, and to certify the statement. 5 U.S.C. 603(a), 605(b). If an agency must provide an initial regulatory flexibility analysis, this analysis must address the consideration of regulatory options that would lessen the economic effect of the rule on small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. HHS considers a rule to have a significant impact on a substantial number of small entities if it has at least a three percent impact of revenue on at least five percent of small entities.

Based on its examination, the Department has concluded that this rule does not have a significant economic impact on a substantial number of small entities. The entities that would be affected by this final rule, in industries described in detail in the RIA, are considered small by virtue of either nonprofit status or having revenues of less than between $7.5 million and $38.5 million in average annual revenue, with the threshold varying by

\(^{358}\)Product of weighted mean hourly wage of $147.60 per hour × 4 hours × 502,899 entities.

\(^{359}\)Office of Management & Budget, Guidance Implementing Executive Order 13771, Titled Reducing Regulation and Controlling Regulatory Costs, at 16 (Apr. 5, 2017), https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/2017/M-17-21-OMB.pdf (stating in the answer to question 37 that “[w]hile each Federal Register notice should identify whether the regulation is an E.O. 13771 regulatory action, there is no need to discuss specific offsetting E.O. 13771 deregulatory actions within the same Federal Register entry.”).
industry. Persons and States are not included in the definition of a small entity. The Department assumes that most of the entities affected meet the threshold of a small entity.

Although this final rule will apply to and, thus, affect small entities, this rule’s per-entity effects are relatively small. The Department estimates that this rule would impose an average cost of $778 per entity in the first year of compliance and about $325.30 per year in years two through five. Furthermore, these costs would generally be proportional to the size of an entity, so that the smallest affected entities will face lower average costs. Given the thresholds discussed in the preceding paragraphs, the average costs are below those required to have a significant impact on a substantial number of small entities, within the meaning of the RFA.

Furthermore, the rule attempts to minimize costs imposed on small entities. For example, the assurance and certification requirements in § 88.4 contain exceptions to relieve many small entities of the requirement to submit an assurance and certification. Approximately 70 percent of recipients are exempted from the assurance and certification requirement, assuming that those exempted do not receive HHS funding through a non-exempt program. Given the magnitude and type of entities granted the exception, § 88.4 should not be understood as unduly burdening small entities subject to the rule.

The Department has further committed to leveraging existing grant, contract, and other Departmental forms where possible to implement § 88.4, rather than create additional, separate forms for recipients to sign. Similarly, § 88.5 no longer requires recipients to provide notices of conscience rights, but incentivizes recipients to voluntarily provide such notices. In light of this determination, the Secretary certifies that this rule will not result in a significant impact on a substantial number of small entities.

F. Unfunded Mandates Reform Act

The Department similarly concludes that the requirements of the Unfunded Mandates Reform Act of 1995 are not triggered by this final rule. Section 202(a) of that Act requires the Department to prepare a written statement, including an assessment of anticipated costs and benefits, before issuing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is $150 million, using the most current (2016) Implicit Price Deflator for the Gross Domestic Product. As discussed in this RIA, this rule will not result in an expenditure in any year that meets or exceeds that amount with regard to State, local, or tribal governments, but will exceed that amount with regard to the private sector. An in-depth analysis of the rule with respect to State and local governments specifically appears in the following section of this RIA regarding Executive Order 13132 (Federalism).

G. Executive Order 13132—Federalism; Executive Order 13175—Impact on Tribal Entities

Federalism

The Secretary has determined that this final rule comports with Executive Order 13132. Executive Order 13132 aims to “guarantee the division of governmental responsibilities between the national government and the States that was intended by the Framers of the Constitution . . . [and] ensure that the principles of federalism . . . guide the executive departments and agencies in the formulation and implementation of policies.” Some of the Federal laws that this rule implements and enforces, such as the Weldon and Coats-Snowe Amendments, directly regulate States and local governments that receive Federal funding by conditioning the receipt of such funding on the governments’ commitments to refrain from discrimination on certain bases or by imposing certain requirements on States and local governments that receive Federal funding. This impact, however, is a result of the statutory prohibitions and requirements themselves, and are not due to the mechanisms provided by this rule.

Under the Supremacy and Spending Clauses of the Constitution, States and their political subdivisions are subject to Acts of Congress and Federal conscience and anti-discrimination laws are no exception. This rule holds States and local governments accountable for compliance with these laws by setting forth mechanisms for OCR investigation and HHS enforcement related to those requirements. The rule does not change the substantive conscience protections or anti-discrimination requirements of these statutes.

The Department received comments arguing that the enforcement of this rule through § 88.7 could infringe on State sovereignty, in violation of the limits of the Spending Clause power afforded by the U.S. Constitution to Congress. The Federal government presumably the constitutionality of statutes that Congress enacts. Congress has exercised the broad authority afforded to it under the Spending Clause to attach clear conditions on Federal funds to secure conscience protection and associated anti-discrimination rights. In cases of violation of the Federal conscience and anti-discrimination laws, the Department intends to interpret and apply the remedies that § 88.7 sets forth in a manner consistent with the particular Federal law(s) at issue and the U.S. Constitution, and, as discussed in response to earlier comments, will comply with relevant Supreme Court precedents concerning federalism.

Some commenters argued that the rule implicates the requirements of Executive Order 13132 and unconstitutionally impedes the ability of States to exercise power in areas traditionally reserved to them, such as health, safety, and welfare. Commenters also raised concerns that the rule may inhibit States from implementing their own conscience protections. The Department disagrees with these concerns. The Department promulgates this rule under longstanding Federal laws that leave ample room for State activity. States are free to enact their own conscience protection and anti-discrimination laws that consider their own respective needs, populations, and prerogatives. Indeed, all fifty States have some protections in place for conscientious objectors to certain health or medical services and several provisions of this rule explicitly apply to reinforce and respect State conscience protections. States are

361 Result of $391.5 million in first year costs to non-HHS entities divided by 502,899 entities.
362 Result of $163.6 million annually to non-HHS entities in years two through five divided by 502,899 entities.
363 The average between the lower-bound (267,134) and upper-bound (415,666) of recipients is 341,408 recipients, which represents 68 percent of the estimated total 500,290 recipients of the rule (excluding the estimated 2,609 counties that for the purpose of this rule are estimated to be sub-recipients).
364 See supra at part III.B (section-by-section analysis for § 88.7) and part LB (this regulation’s history) for further discussion of this matter.
365 See Kevin Theriot & Ken Connelly, Free to Do No Harm: Conscience Protections for Healthcare
free to experiment with various approaches to promote respect of, and tolerance for, the exercise of conscience rights, and this final rule respects that prerogative. States are also free to reject Federal funding if they object to conditions required by any of the laws that are the subject of this rule.

Section 88.8 of the rule makes clear that the rule is not intended to interfere with the operation of State law. For State laws equally or more protective of religious freedom and moral convictions than this rule, § 88.8 of this rule states that nothing in the rule “shall be construed to preemp[t]” such State or local law. Section 88.8 also declares that nothing in the rule “shall be construed to narrow the meaning or application of any State . . . law protecting free exercise of religious beliefs or moral convictions.”

Some statutes that the rule implements, such as 42 U.S.C. 13966(c)(2)[B][ii], require providers to comply “with applicable State law, including any law relating to any religious or other exemption” as a condition of participation in the program that the statute authorizes (in this example, the Federal pediatric vaccine program). Other laws that this rule implements, such as 42 U.S.C. 280g–1(d), clarify that Federal assistance for newborn and infant hearing screening programs do not preemp[t] or prohibit any State law protections for parents to assert religious objections to such screenings. Similarly, 42 U.S.C. 1396f clarifies that nothing requires a State to compel a person to undergo medical screenings, examination, diagnosis, treatment, health care or services if a person objects on religious grounds, with limited exceptions.

This rule’s requirements and prohibitions do not impose substantial direct effects on States and their political subdivisions, modify the relationship between the Federal government and the States, or alter the distribution of power and responsibilities among the various levels of government.

Some commenters argued that this rule, or the statutes that the rule implements, conflict with State and local laws regarding student and health provider immunizations, mandated provision of abortion coverage, employer protections, counseling related to assisted suicide, or employers being able to accommodate objectors with alternative arrangements. These comments paralleled the concerns already addressed above. In short, the Department finalizes the rule to recognize forms of accommodation and to eliminate or reduce such tension between applicable statutes or between this final rule and State laws. Accordingly, the final rule narrows the scope of the definitions of “discrimination” and “referral” in § 88.2.

The impact of § 88.4 is minimal in terms of the added labor costs for State and local government staff to assure and certify compliance. Additionally, the rule relies on enforcement mechanisms already available to HHS for grants and other forms of financial assistance.

In light of the above, the rule cannot be properly understood to impose substantial direct effects on States or their political subdivisions, their relationship with the Federal Government, or the distribution of power among the various levels of government.

One comment noted that it “does not threaten principles of federalism [to] require[e] respect for constitutionally-protected conscience rights as a condition of receiving Federal funds.” The Department agrees. The Department has not identified any Federal laws or jurisprudence that indicates that merely implementing and enforcing Federal laws as written violates constitutional principles of federalism.

Impact on Tribal Entities

One comment stated that the Department would be required to engage in tribal consultation regarding the rule as required under Executive Order 13175. However, because the final rule removes the requirement in the proposed § 88.3(p)(1)(iii) that certain federally recognized Indian tribes or tribal organizations and urban Indian organizations comply with sections 88.4 and 88.6 of the rule, the Department believes that the rule does not have tribal implications as defined in Executive Order 13175, and that tribal consultation regarding the rule was, therefore, not necessary.

H. Congressional Review Act

The Congressional Review Act defines a “major rule” as “any rule that the Administrator of the Office of Information and Regulatory Affairs (OIRA) of the Office of Management and Budget finds has resulted in or is likely to result in—(A) an annual effect on the economy of $100,000,000 or more; (B) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (C) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.” 5 U.S.C. 804(2). Based on the analysis of this final rule under Executive Order 12866, the Office of Management and Budget has determined that this rule is a major rule for purposes of the Congressional Review Act.

I. Assessment of Federal Regulation and Policies on Families

In the proposed rule, the Department included a discussion of section 654 of the Treasury and General Government Appropriations Act of 1999, Public Law 105–277, sec. 654, 112 Stat. 2681 (1998) as amended by Public Law 108–271, sec. 654, 112 Stat. 814 (2004), which required Federal departments and agencies to determine whether a policy or regulation could affect family well-being. These provisions are codified as a “note” to 5 U.S.C. 601. Because Congress did not renew these requirements in the most recent appropriations act applicable to the Department, the Department believes it is not obligated to conduct an analysis of potential impact on family well-being before finalizing regulations. Additionally, OMB Circular A–4 does not require such an analysis.

Nevertheless, out of an abundance of caution, the Department conducts such an analysis below.

Section 601 (note) of 5 U.S.C. required agencies to assess whether a regulatory action (1) impacts the stability or safety of the family, particularly in terms of marital commitment; (2) impacts the authority of parents in the education, nurture, and supervision of their children; (3) helps the family perform its functions; (4) affects disposable income or poverty of families and children; (5) if the regulatory action which financially impacts families, is justified; (6) may be carried out by State or local government or by the family; and (7) establishes a policy concerning the relationship between the behavior

and personal responsibility of youth and the norms of society.

The Department received comments stating that it did not adequately assess the impact on families in the proposed rule and reached an incorrect conclusion in determining that it is unlikely that this rule will negatively impact factors (1)–(4), with respect to the stability of the family, parental authority, or the disposable income or poverty of families and children. Other comments referenced concerns about how delays or refusals in treatment or in the transmission of information could affect factor (5): The emotional and financial well-being of families. The Department did not receive comments addressing factors (6) or (7). In response to these comments, the Department notes that these concerns do not constitute an impact on the well-being of the family within the meaning of 5 U.S.C. 601 (note) and that, in any event, the objections are to the underlying statutes that are the subject of the rule, not the mechanisms provided by the rule itself. With regard to factor (5), the prospect of a person losing their job, thus affecting the emotional and financial well-being of their family, is greater if conscience laws are not enforced as people of faith and moral conviction risk being driven out of the health care field as discussed above. Further discussion on the impact of this rule on patients and individuals can be found in part IV.C.4 (Estimated Benefits).

As the Department noted in the proposed rule, the action taken in this rule cannot be carried out by State or local governments or by the family on their own (factor (6)) because the rule pertains to enforcement of certain Federal laws. Additionally, by protecting parents’ ability to assert conscience rights on behalf of their children, the rule clearly enhances parental authority under factor (2). None of the rule’s provisions impact factors (1), (3)–(5), or (7) to the degree contemplated by 5 U.S.C. 601 (note). Accordingly, this rule will not negatively affect the financial well-being within the meaning of 5 U.S.C. 601 (note) in the event such provisions apply.

**J. Paperwork Reduction Act**

This final rule requires new collections of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). Congress enacted the Paperwork Reduction Act of 1995 to “maximize the practical utility and public benefit of the information created, collected, disclosed, maintained, used, shared and disseminated by or for the Federal government” and to minimize the burden of this collection. 44 U.S.C. 3501(2). As defined in 5 CFR 1320.3(c), “collection of information” comprises reporting, record-keeping, monitoring, posting, labeling, and other similar actions. The Department sought comments regarding the burden estimates and the information collections generally. Some comments are discussed supra at part IV.C.3.i–vi and others discussed in the following sections. The collections of information required by this final rule relate to §§88.4 (Assurance and Certification), 88.5 (Voluntary Posting of Notice of Rights), and 88.6(d) (Compliance Requirements).

1. Information Collection for §88.4 (Assurance and Certification)

(i) Summary of the Collection of Information

This final rule requires each recipient (or applicant to become a recipient), with limited exceptions, to assure and certify compliance with Federal conscience and anti-discrimination laws. Specifically, §88.4(a)(1) and (2) requires each recipient or applicant to include in its application for Federal funds, or accompany its application with, an assurance and a certification that it will operate applicable projects or programs in compliance with applicable Federal conscience and anti-discrimination laws and this rule.

**Operationalizing the Assurance of Compliance Requirement**

To operationalize the requirement in §88.4(a)(1) for a recipient or applicant to sign an assurance of compliance, the Department is seeking clearance under the PRA to use the HHS–690 form, which is entitled “Assurance of Compliance” and is described in the section-by-section analysis of the preamble for §88.4. The new language that the Department is adding to the HHS–690 form identifies the major Federal conscience and anti-discrimination laws by their popular titles and their U.S. Code provisions (if codified) and directs the reader to OCR’s Conscience and Religious Freedom web page for a full listing of the laws.

**Operationalizing the Certification of Compliance Requirement**

In response to public comments that encouraged the Department to use existing forms, the Department explored operationalizing the certification of compliance requirement in §88.4(a)(2) by updating the HHS form 5161–1, but this form is only used by two HHS components rather than by all or most HHS operating or staff divisions. The Department also explored updating the Assurances for Non-Construction Programs (SF–424B), which, despite its name, enables the authorized representative of the applicant to certify up to nineteen paragraphs of agency and program-specific laws and regulations, such as housing, environmental, and labor laws and regulations. Pursuant to an OMB directive, “[e]ffective January 1, 2019, the SF–424B will become optional and agencies shall make plans to phase out use in Funding Opportunity Announcements.” Given this directive, the Department did not further explore updating the SF–424B.

The Department is seeking PRA clearance to operationalize the certification of compliance requirement during calendar year 2019 through the existing signature block of the government-wide Application for Federal Assistance (SF–424) or, for research or related grants, through the Application for Federal Assistance for Research and Related (R&R) Series (SF–424 R&R). The signature block for both applications contains the following statement:

By signing this application, I certify (1) to the statements contained in the list of certifications ** and (2) that the statements herein are true, complete and accurate to the best of my knowledge. I also provide the required assurances ** and agree to comply with any resulting terms if I accept an award. I am aware that any false, fictitious, or fraudulent statements or claims may subject me to criminal, civil, or administrative penalties. (U.S. Code, Title 18, Section 1001).

**The list of certifications and assurances, or an internet site where you may obtain this list, is contained in the announcement or agency specific instructions.**

In calendar year 2020 and the outyears, the Department is seeking PRA clearance to operationalize the certification of compliance requirement during calendar year 2020 through the existing signature block of the government-wide Application for Federal Assistance (SF–424) or, for research or related grants, through the Application for Federal Assistance for Research and Related (R&R) Series (SF–424 R&R).
clearance to operationalize the certification of compliance requirement through the government-wide System for Award Management (SAM). The certifications and representations required of Federal grants recipients will become the central repository for common government-wide certifications and representations. The certifications and representations through SAM replace the government-wide assurances contained in the Assurances for Non-Construction Programs (SF–424B).

In submitting the general certifications and representations through SAM, the authorized representative certifies to several statements, two of which the Department interprets as operationalizing § 88.4(b). First, the authorized representative certifies that it “will comply with all applicable requirements of all other Federal laws, executive orders, regulations, and policies governing financial assistance awards and any financial assistance project covered by this certification document.” The Department construes this catch-all statement as incorporating the Federal conscience and anti-discrimination laws, as applicable, and the final rule.

(ii) Need for Information

Requiring certain recipients and applicants to assure and certify compliance serves two purposes. First, through the act of reading and reviewing the statutory requirements to which recipients or applicants assure and certify compliance, recipients would be apprised of their obligations under the applicable Federal conscience and anti-discrimination laws and this rule. Second, a recipient’s or applicant’s awareness of its obligations would increase the likelihood that it would comply with such laws and, consequently, afford entities and individuals protection of their conscience rights and protection from coercion or discrimination.

In the proposed rule, the Department requested comment on whether the collection of information is necessary for the proper performance of the Department’s functions to enforce Federal laws on which Federal funding is conditioned. At least one commenter encouraged the Department to add the assurance and certification requirements in § 88.4 because of the “surge in harassment and coercion of medical providers of faith.” Other commenters stated that assurance and certification was unnecessary because recipients already must certify compliance with Federal law upon the receipt of Federal funds.

This collection of information facilitates the Department’s obligation to ensure that the Federal financial assistance or other Federal funds that the Department awards are used in a manner compliant with Federal conscience and anti-discrimination laws and the final rule. The Department’s administration of a requirement for an entity at the time of application or reapplication to assure and certify compliance with Federal conscience and anti-discrimination laws and the final rule demonstrates that the person or entity was aware of its obligations under those laws and the rule.

In addition, HHS has the authority to place terms and conditions consistent with those statutes in any instrument HHIS issues or to which it is a party (e.g., grants, contracts or other HHS instruments). A Department component extending an award must communicate and incorporate statutory and public policy requirements and obligate the recipient to comply with Federal statutes and “public policy requirements, including. . . those . . . prohibiting discrimination.” More specifically, the Department component “must communicate . . . all relevant public policy requirements, including those in general appropriations provisions, and incorporate them either directly or by reference in the terms and conditions of the Federal award.” The Departmental component may require a recipient “to submit certifications and representations required by Federal statutes, or regulations . . . .”

(iii) Use of Information

The Department and its components awarding Federal funds and OCR will use the signed assurance and certification as documentation of (1) a recipient’s or applicant’s awareness of its obligations under the Federal conscience and anti-discrimination laws and this rule, and (2) a recipient’s or applicant’s binding agreement to abide by such obligations. This use would most likely occur during an OCR investigation of the recipient’s compliance with Federal conscience and anti-discrimination laws and this rule, and as part of an entity’s record keeping obligations under this rule.

(iv) Description of the Respondents

The respondents are applicants or recipients for Federal financial assistance or Federal funds from the Department as set forth in § 88.3, which identifies the applicability of this rule for each of the underlying statutes that would be implemented and enforced. Respondents include hospitals, research institutions, health professions training programs, qualified health plan issuers, Health Insurance Marketplaces, home health agencies, community mental health centers, and skilled nursing facilities.

(v) Number of Respondents

The Department estimates the number of respondents at 158,890 persons or...
entities, which is the average between the low (122,558) and high (195,222) estimates of entities required to sign an assurance or a certification. These figures appear supra at Table 3, part IV.C.2.iv.A. Respondents are a subset of the recipients because § 88.4(c)(1) through (4) excludes certain categories of recipients. The rule excludes physicians, as defined in 42 U.S.C. 1395x(r), physician offices, other health care practitioners or pharmacists who are recipients in the form of reimbursements for services provided to beneficiaries under Medicare Part B. See § 88.4(c)(1). The rule also exempts recipients of certain grant programs administered by the Administration for Children and Families or the Administration for Community Living when the program’s purpose is unrelated to health care and certain types of research, does not involve health care providers, and does not involve any significant likelihood of referral for the provision of health care. See § 88.4(c)(2) and (3). Finally, this final rule excludes Indian Tribes and Tribal Organizations when contracting with the Indian Health Service under the Indian Self-Determination and Education Assistance Act. See § 88.4(c)(4).

(vi) Burden of Response

The Paperwork Reduction Act burden is the opportunity cost of recipient staff time to review the assurance and certification language as well as the requirements of the underlying Federal conscience and anti-discrimination laws referenced or incorporated. The methods that the Department uses are outlined supra at part IV.C.3.ii, and the mean hourly wage is adjusted downward to exclude benefits and overhead.

The labor cost is a function of a lawyer spending 3 hours reviewing the assurance and certification and an executive spending one hour to review and sign, as § 88.4(b)(2) requires a signature by an individual authorized to bind the recipient. The weighted mean hourly wage (not including benefits and overhead) of these two occupations is $73.80 per hour.387 The labor cost is $46.9 million each year ($73.80 per hour × 4 hours × 158,890 entities).388

The Department asked for public comment on the information collection under § 88.4. Several specific questions that the Department posed received no comments:

- Whether the exception for Indian Tribes and tribal Organizations in proposed 45 CFR 88.4(c)(vi) avoids “tribal implications” and does not “impose substantial direct compliance costs on Indian Tribal governments” as stated in Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, sec. 5(b) (Nov. 9, 2000);
- Whether assuring compliance with the Federal conscience protection and associated anti-discrimination statutes would constitute a burden exempt from the Paperwork Reduction Act as a usual and customary business practice incurred by recipients during the ordinary course of business;
- How the quality, utility, and clarity of the information to be collected may be enhanced; and
- How the manner of compliance with the assurance and certification requirements could be improved, including through use of automated collection techniques or other forms of information technology.

The Department received public comments expressing concern with the possible burden on health care providers resulting from § 88.4, which is discussed supra at part IV.C.3.ii. In addition, as explained in the summary of this Paperwork Reduction Act analysis, the Department is leveraging existing grant, contract, and other Departmental forms and government-wide systems, consistent with OMB’s government-wide effort to reduce recipient burden.389

2. Information Collection for § 88.5 (Notice)

(i) Summary of the Collection of Information

Under this rule as finalized, § 88.5 does not mandate the provision of notice, but rather incentivizes recipients and Department components to provide notice concerning Federal conscience and anti-discrimination laws. The rule intends to accomplish this goal by considering a recipient’s or a Department component’s posting of the notice as non-dispositive evidence of compliance with the rule when OCR investigates or initiates a compliance review of a recipient or Department component. If recipients voluntarily provide notice to implement § 88.5, recipients are encouraged to use the pre-written notice in appendix A. The recipient is otherwise free to draft its own notices tailored to its specific circumstances and applicable laws under the rule.

(ii) Need for Information

The Department incentivizes recipients and Department components to provide notice of rights because notice serves three primary purposes. First, individuals become apprised of their rights under applicable Federal conscience and anti-discrimination laws, including the right to file a complaint with HHS OCR. Second, an individual’s awareness of his or her rights increases the likelihood that the individual will exercise those rights. Third, recipients and their managers and employees will be more likely to be reminded, and be made aware, of their own obligations under these laws.

(iii) Use of Information

Individuals, entities, and health care entities will use the information to increase their awareness of their rights and file complaints with OCR if they believe their rights have been violated. Entities required to comply will have an increased likelihood of understanding their obligations to thus act accordingly to fulfill them. During OCR investigation or compliance review of a recipient, OCR will consider as non-dispositive evidence of compliance whether and how the recipient posted a notice according to § 88.5.

(iv) Description of the Respondents

The respondents are recipients as defined in this rule at § 88.2. Respondents include, but are not limited to, States, hospitals, research institutions, and skilled nursing facilities.

(v) Number of Respondents

The number of respondents is estimated at 335,327 recipients at the establishment-level in year one and 75 percent of that amount in years two through five (i.e., 251,495 establishments). This estimate represents the average between the lower and upper-bound estimates of how many recipient establishments will voluntarily post notices through one or more of the methods in § 88.5 in years one and annually in years two through five. A subset of respondents, about 139,615 recipients at the firm level, will likely modify the pre-written notice in appendix A.

(vi) Burden of Response

Even though the notice provision of the final rule is entirely voluntary, the Department expects that some segment
of the recipients and Department components that this rule regulates will choose to post the notice through one of the methods specified. The burden is mix of labor, materials, and in some cases, postage costs. The methods and assumptions that the Department uses are outlined supra at part IV.C.3.iii, and the mean hourly wage is adjusted downward to exclude benefits and overhead. Unlike the burden estimated in the RIA of the rule, the PRA burden associated with § 88.5 excludes the costs of posting the notice for those entities that post it verbatim because the Department is supplying the language for the notice for the purpose of disclosure to the public, under 5 CFR 1320.3(c)(2).

Assuming that 139,615 recipients at the firm level alter the text of the notice in appendix A, these recipients will, on average, bear a minimal opportunity cost of $0.15 per page (paper and ink) × 5 pages). The total labor and materials costs associated with voluntary posting in physical locations by 180,331 establishments is $1.2 million ($1.2 million in labor costs and $45,083 for materials) in the first year of implementation with zero recurring costs.

Acknowledging the uncertainties outlined supra at part IV.C.3.iii, the Department estimates the annual costs of labor, material, and postage according to the following assumptions. The Department assumes that (1) establishments that include notices of rights in publications will most often do so in online publications or in hard-copy publications hand-distributed, where the notice’s inclusion results in an additional 100 hard copy notices per establishment per year, and (2) half of the establishments associated with covered recipients are voluntarily providing hard copy notices (i.e., 90,166 establishments in year one and 67,624 establishments annually in years two through five) will mail the publications for which the weight of the notice incrementally increases the postage costs. These assumptions may differ from the actual experience of recipients’ implementation, as described supra at part IV.C.3.iii.

Using the model, hourly estimates, and other assumptions described supra at part IV.C.3.iii, the average labor cost, excluding mailing-related labor costs, resulting from including notices in relevant publications is $7.0 million in year one ($19.39 per hour × 2 hours × 180,331 establishments) and $2.6 million annually in years two through five ($19.39 per hour × 1 hour × 135,249 establishments).

Based on the marginal cost of postage per ounce of $0.15, an annual number of mailings of 100 pages per establishment, average annual labor cost for mailing of $19.39 per hour, and an average number of labor hours per mailing of 0.25 hours, the total costs due to the voluntary mailing of notices is $1.8 million in year one and $1.3 million annually in years two through five. Finally, the in year one will continue to do so in out years and there will be lower attrition compared to the estimate provided in the proposed rule.

Product of 180,331 establishments times 50 percent for year one. Product of 135,249 establishments times 50 percent for years two through five. These totals differ from the estimate of the burden in the RIA because the RIA uses a fully loaded wage rate (i.e., including benefits and overhead) not employed here.

398 This total differs from the estimate of the burden in the RIA because the RIA uses a fully loaded wage rate (i.e., including benefits and overhead) not employed here.
399 Under the final rule, because all the notice provisions are voluntary, the Department assumes that 75% of entities that voluntarily provide notices

390 This total differs from the burden in the RIA because a fully loaded wage that is adjusted upwards for benefits and overhead must be used.
annual cost of printed materials for notices (both mailed and hand distributed) is $0.9 million (180,331 establishments × 100 pages × $0.05 per page) in year one and $676,243 annually in years two through five (135,249 establishments × 100 pages × $0.05 per page).

In sum, the total expected cost of activities related to the voluntary posting and distributions of notices that § 88.5 incentivizes is $28.7 million in the first year and $4.6 million annually in years two through five.

(x) Burden to the Federal Government

Unlike the burden estimated in the RIA of the rule, the PRA burden to the Department associated with § 88.5 excludes the costs of posting the notice for those HHS components that post it verbatim because the Department is supplying the language of the notice for the purpose of disclosure to the public, under 5 CFR 1320.3(c)(2). Because the Department may, at its discretion, not use Appendix A verbatim, all costs to the Department under the PRA for § 88.5 are excluded.

The remaining issue raised by commenters is whether the rule requires translation of the notice into non-English languages. Under the conscience protection and associated anti-discrimination laws and this rule, translation or posting of translated notices is not independently required. However, recipients subject to this rule may also have independent obligations to provide language assistance services and meaningful access to individuals with limited English proficiency when abiding by the prohibition of national origin discrimination in Federal civil rights laws that OCR enforces.

The Department asked for public comment on the following issues and received no comments:

• Whether the proposed collection of information is necessary for the proper performance of the Department’s functions to enforce Federal laws on which Federal funding is conditioned, including whether the information will have practical utility;
• Whether the public had feedback on the assumptions that formed the basis of the cost estimates for the notice provision; and
• How the manner of compliance with the notice provision could be improved, including through the use of automated collection techniques or other forms of information technology.

3. Compliance Procedures (§ 88.6(d))

(i) Summary of the Collection of Information

Paragraph 88.6(d) requires any recipient or sub-recipient that is subject to a determination by OCR of noncompliance with this part concerning Federal conscience and anti-discrimination laws to report this fact in any application for new or renewed Federal financial assistance or Departmental funding in the three years following the determination of noncompliance. This includes a requirement that recipients disclose any OCR determinations made against their sub-recipients.

(ii) Need for Information

The information alerts applicable Departmental components of OCR’s determination of noncompliance on the part of the recipient or sub-recipient, to ensure appropriate coordination within the Department during OCR’s enforcement of Federal conscience and anti-discrimination laws, and to inform funding decision-making.

(iii) Use of Information

This requirement puts the Departmental component on notice of OCR’s determination of noncompliance to inform a component’s decision whether to approve, renew, or modify Federal funding to the recipient. This requirement also facilitates coordination between the component and OCR on the status of the recipient or sub-recipient’s compliance status.

(iv) Description of the Respondents

The respondents are recipients and sub-recipients that HHS OCR has found noncompliant with this final rule.

(v) Number of Respondents

As explained, supra at part IV.C.3.v, the Department cannot predict the number of entities that OCR will find noncompliant with the rule.

(vi) Burden of Response

The Department estimates it would prepare a response of 50 pages totaling 500 hours for a recipient that is noncompliant with the rule. Based on the experience of a paralegal at the highest end, $22,655 per year in labor costs at the firm level ($22.66 per hour × 2,000 applications × 0.5 hours).

Commenters stated that the version of this requirement in the proposed rule was redundant and duplicative. The Department agrees. The final rule and this information collection has been modified substantially to require recipients and sub-recipients to notify the Departmental components from which the recipient or sub-recipient receives Federal funds in the three years following a determination of noncompliance with Federal conscience and anti-discrimination laws and this final rule by OCR.

List of Subjects in 45 CFR Part 88

Abortion, Adult education, Advanced directives, Assisted suicide, Authority delegations, Childbirth, Civil rights, Coercion, Colleges and universities, Community facilities, Contracts, Educational facilities, Employment, Euthanasia, Family planning, Federal-State relations, Government contracts, Government employees, Grants programs-health, Grants administration, Health care, Health facilities, Health insurance, Health professions, Hospitals, Immunization, Indian Tribes, Insurance, Insurance companies, Laboratories, Manpower training programs, Maternal and child health, Medicaid, Medical and dental schools, Medical research, Medicare, Mental health programs, Mercy killing, Moral convictions, Nondiscrimination, Nursing homes, Nursing schools, Occupational safety and health, Occupational training, Physicians, Prescription drugs, Public assistance programs, Public awareness, Public health, Religious discrimination, Religious beliefs, Religious liberties, Religious nonmedical health care institutions, Reporting and recordkeeping requirements, Rights of conscience, Scholarships and fellowships, Schools, Scientists, State and local governments, Sterilization,
Students, Technical assistance, Tribal Organizations.

For the reasons set forth in the preamble, the Department of Health and Human Services revises 45 CFR part 88 to read as follows:

PART 88—PROTECTING STATUTORY CONSCIENCE RIGHTS IN HEALTH CARE; DELEGATIONS OF AUTHORITY

§ 88.1 Purpose.

The purpose of this part is to provide for the implementation and enforcement of the Federal conscience and anti-discrimination laws listed in § 88.3. Such laws, for example, protect the rights of individuals, entities, and health care entities to refuse to perform, assist in the performance of, or undergo certain health care services or research activities to which they may object for religious, moral, ethical, or other reasons. Such laws also protect patients from being subjected to certain health care or services over their conscientious objection. Consistent with their objective to protect the conscience and associated anti-discrimination rights of individuals, entities, and health care entities, the statutory provisions and the regulatory provisions contained in this part are to be interpreted and implemented broadly to effectuate their protective purposes.

§ 88.2 Definitions.

For the purposes of this part: Assist in the performance means to take an action that has a specific, reasonable, and articulate connection to furthering a procedure or a part of a health service program or research activity undertaken by or with another person or entity. This may include counseling, referral, training, or otherwise making arrangements for the procedure or a part of a health service program or research activity, depending on whether aid is provided by such actions. Department means the Department of Health and Human Services and any component thereof. Discriminate or discrimination includes, as applicable to, and to the extent permitted by, the applicable statute:

(1) To withhold, reduce, exclude from, terminate, restrict, or make unavailable or deny any grant, contract, subcontract, cooperative agreement, loan, license, certification, accreditation, employment, title, or other similar instrument, position, or status;

(2) To withhold, reduce, exclude from, terminate, restrict, or make unavailable or deny any benefit or privilege or impose any penalty; or

(3) To utilize any criterion, method of administration, or site selection, including the enactment, application, or enforcement of laws, regulations, policies, or procedures directly or through contractual or other arrangements, that subjects individuals or entities protected under this part to any adverse treatment with respect to individuals, entities, or conduct protected under this part on grounds prohibited under an applicable statute encompassed by this part.

§ 88.3 Relationship to other laws.

For the purposes of this part,OCR will take into account the degree to which an entity had implemented policies to provide effective accommodations for the exercise of protected conduct, religious beliefs, or moral convictions under this part and whether or not the entity took any adverse action against a protected entity on the basis of protected conduct, beliefs, or convictions before the provision of any accommodation.

(5) Notwithstanding paragraphs (1) through (3) of this definition, an entity subject to any prohibition in this part may require a protected entity to inform it of objections to performing, referring for, participating in, or assisting in the performance of specific procedures, programs, research, counseling, or treatments, but only to the extent that there is a reasonable likelihood that the protected entity may be asked in good faith to perform, refer for, participate in, or assist in the performance of, any act or conduct just described. Such inquiry may only occur after the hiring of, contracting with, or awarding of a grant or benefit to a protected entity, and once per calendar year thereafter, unless supported by a persuasive justification.

§ 88.4 Notice of rights under Federal conscience and anti-discrimination laws.

Federal financial assistance includes:
(1) Grants and loans of Federal funds;
(2) The grant or loan of Federal property and interests in property;
(3) The detail of Federal personnel;
(4) The sale or lease of, and the permission to use (on other than a casual or transient basis), Federal property or any interest in such property without consideration or at a nominal consideration, or at a consideration which is reduced for the purpose of assisting the recipient or in recognition of the public interest to be served by such sale or lease to the recipient; and
(5) Any agreement or other contract between the Federal government and a recipient that has as one of its purposes the provision of a subsidy to the recipient.

Health care entity includes:
(1) For purposes of the Coats-Snowe Amendment (42 U.S.C. 238n) and the subsections of this part implementing that law (§88.3(b)), an individual physician or other health care professional, including a pharmacist; health care personnel; a participant in a program of training in the health professions; an applicant for training or study in the health professions; a postgraduate physician training program; a hospital; a medical laboratory; an entity engaging in biomedical or behavioral research; a pharmacy; or any other health care provider or health care facility. As applicable, components of State or local governments may be health care entities under the Coats-Snowe Amendment; and
(2) For purposes of the Weldon Amendment (e.g., Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019, and Continuing Appropriations Act, 2019, Pub. L. 115–245, Div. B, sec. 507(d), 132 Stat. 2981, 3118 (Sept. 28, 2018)), Patient Protection and Affordable Care Act section 1553 (42 U.S.C. 18113), and to sections of this part implementing those laws (§88.3(c) and (e)), an individual physician or other health care professional, including a pharmacist; health care personnel; a participant in a program of training in the health professions; an applicant for training or study in the health professions; a postgraduate physician training program; a hospital; a medical laboratory; an entity engaging in biomedical or behavioral research; a pharmacy; a provider-sponsored organization; a health maintenance organization; a health insurance issuer; a health insurance plan (including group or individual plans); a plan sponsor or third-party administrator; or any other kind of health care organization, facility, or plan. As applicable, components of State or local governments may be health care entities under the Weldon Amendment and Patient Protection and Affordable Care Act section 1553.

Health service program includes the provision or administration of any health or health-related services or research activities, health benefits, health or health-related insurance coverage, health studies, or any other service related to health or wellness, whether directly; through payments, grants, contracts, or other instruments; through insurance; or otherwise.

Instrument is the means by which Federal funds are conveyed to a recipient and includes grants, cooperative agreements, contracts, grants under a contract, memorandum of understanding, loans, loan guarantees, stipends, and any other funding or employment instrument or contract.

OCR is the Office for Civil Rights of the Department of Health and Human Services.

Recipient means any State, political subdivision of any State, instrumentality of any State or political subdivision thereof, or any person or any public or private agency, institution, organization, or other entity in any State, including any successor, assign, or transferee thereof, to whom there is a pass-through of Federal financial assistance or Federal funds from the Department through a recipient or another sub-recipient, but such term does not include any ultimate beneficiary. The term may include a foreign government, foreign nongovernmental organization, or intergovernmental organization (such as the United Nations or its affiliated agencies).

Workforce means employees, volunteers, trainees, contractors, and other persons whose conduct, in the performance of work for an entity or health care entity, is under the direct control of such entity or health care entity, whether or not they are paid by the entity or health care entity, as well as health care providers holding privileges with the entity or health care entity.

§88.3 Applicable requirements and prohibitions.

(a) The Church Amendments, 42 U.S.C. 300a–7—(1) Applicability. (i) The Department is required to comply with paragraphs (a)(2)(i) through (vii) of this section and §88.6 of this part.

(ii) Any State or local government or subdivision thereof and any other public entity is required to comply with paragraphs (a)(2)(i) through (iii) of this section.

(iii) Any entity that receives a grant, contract, loan, or loan guarantee under the Public Health Service Act (42 U.S.C. 201 et seq.) after June 18, 1973, is required to comply with paragraph (a)(2)(iv) of this section and §§88.4 and 88.6 of this part.

(iv) Any entity that receives a grant or contract for biomedical or behavioral research under any program administered by the Secretary of Health and Human Services after July 12, 1974, is required to comply with paragraph (a)(2)(v) of this section and §§88.4 and 88.6 of this part.

(v) The Department and any entity that receives funds for any health
service program or research activity under any program administered by the Secretary of Health and Human Services is required to comply with paragraph (a)(2)(vi) of this section and §§ 88.4 and 88.6 of this part.

(vi) Any entity that receives, after September 29, 1979, any grant, contract, loan, loan guarantee, or interest subsidy under the Public Health Service Act or the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (42 U.S.C. 15001 et seq.) is required to comply with paragraph (a)(2)(vi) of this section and §§ 88.4 and 88.6 of this part.

(2) Requirements and prohibitions. (i) Pursuant to 42 U.S.C. 300a–7(b)(1), the receipt of a grant, contract, loan, or loan guarantee under the Public Health Service Act by any individual does not authorize entities to which this paragraph (a)(2)(i) applies to require such individual to perform or assist in the performance of any sterilization procedure or abortion if his performance or assistance in the performance of such procedure or abortion would be contrary to his religious beliefs or moral convictions.

(ii) Pursuant to 42 U.S.C. 300a–7(b)(2)(A), the receipt of a grant, contract, loan, or loan guarantee under the Public Health Service Act by any recipient does not authorize entities to which this paragraph (a)(2)(ii) applies to require such recipient to make its facilities available for the performance of any sterilization procedure or abortion if the performance of such procedure or abortion in such facilities is prohibited by the recipient on the basis of religious beliefs or moral convictions.

(iii) Pursuant to 42 U.S.C. 300a–7(b)(2)(B), the receipt of a grant, contract, loan, or loan guarantee under the Public Health Service Act by any recipient does not authorize entities to which this paragraph (a)(2)(iii) applies to require such recipient to provide personnel for the performance of any sterilization procedure or abortion if the performance or assistance in the performance of such procedure or abortion by such personnel would be contrary to the religious beliefs or moral convictions of such personnel.

(iv) Pursuant to 42 U.S.C. 300a–7(c)(1), entities to which this paragraph (a)(2)(iv) applies shall not discriminate against any physician or other health care personnel in employment, promotion, termination of employment, or extension of staff or other privileges because such physician or other health care personnel performed or assisted in the performance of a lawful sterilization procedure or abortion, because he refused to perform or assist in the performance of a lawful sterilization procedure or abortion on the grounds that his performance or assistance in the performance of such procedure or abortion would be contrary to his religious beliefs or moral convictions, or because of his religious beliefs or moral convictions respecting sterilization procedures or abortions.

(v) Pursuant to 42 U.S.C. 300a–7(c)(2), entities to which this paragraph (a)(2)(v) applies shall not discriminate against any physician or other health care personnel in employment, promotion, termination of employment, or extension of staff or other privileges because such physician or other health care personnel performed or assisted in the performance of any lawful health service or research activity, because he refused to perform or assist in the performance of any such service or activity on the grounds that his performance or assistance in the performance of such service or activity would be contrary to his religious beliefs or moral convictions, or because of his religious beliefs or moral convictions respecting any such service or activity.

(vi) Pursuant to 42 U.S.C. 300a–7(d), entities to which this paragraph (a)(2)(vi) applies shall not require any individual to perform or assist in the performance of any part of a health service program or research activity funded in whole or in part under a program administered by the Secretary of Health and Human Services if the individual’s performance or assistance in the performance of such part of such program or activity would be contrary to his religious beliefs or moral convictions.

(vii) Pursuant to 42 U.S.C. 300a–7(e), entities to which this paragraph (a)(2)(vii) applies shall not deny admission to or otherwise discriminate against any applicant (including applicants for internships and residencies) for training or study because of the applicant’s reluctance or willingness to counsel, suggest, recommend, assist, or in any way participate in the performance of abortions or sterilizations contrary to, or consistent with, the applicant’s religious beliefs or moral convictions.

(b) The Coats-Snowe Amendment (Section 245 of the Public Health Service Act), 42 U.S.C. 238n—(1) Applicability. (i) The Department is required to comply with paragraphs (b)(2)(i) through (ii) of this section and § 88.6 of this part.

(ii) Any State or local government that receives funds under an appropriations act for the Department that contains the Weldon Amendment is required to provide exceptions or exemptions.
comply with paragraph (c)(2) of this section and §§ 88.4 and 88.6 of this part. (2) Prohibition. The entities to which this paragraph (c)(2) applies shall not subject any institutional or individual health care entity to discrimination on the basis that the health care entity does not provide, pay for, provide coverage of, or refer for, abortion.

(d) Medicare Advantage (See, e.g., Pub. L. 115–245, Div. B, sec. 209)—(1) Applicability. The Department, while operating under an appropriations act that contains a provision with respect to the Medicare Advantage program as set forth by Public Law 115–245, Div. B, sec. 209, is required to comply with paragraph (d)(2) of this section and § 88.6 of this part.

(2) Prohibition. The entities to which this paragraph (d)(2) applies shall not deny participation in the Medicare Advantage program to an otherwise eligible entity (including a Provider Sponsored Organization) because that entity informs the Secretary that it will not provide, pay for, provide coverage of, or provide referrals for abortions.

(e) Section 1553 of the Affordable Care Act, 42 U.S.C. 18113—(1) Applicability. (i) The Department is required to comply with paragraph (e)(2) of this section and § 88.6 of this part.

(ii) Any State or local government that receives Federal financial assistance under the Patient Protection and Affordable Care Act (or under an amendment made by the Patient Protection and Affordable Care Act) is required to comply with paragraph (e)(2) of this section and §§ 88.4 and 88.6 of this part.

(iii) Any health care provider that receives Federal financial assistance under the Patient Protection and Affordable Care Act (or under an amendment made by the Patient Protection and Affordable Care Act) is required to comply with paragraph (e)(2) of this section and §§ 88.4 and 88.6 of this part.

(iv) Any health plan created under the Patient Protection and Affordable Care Act (or under an amendment made by the Patient Protection and Affordable Care Act) is required to comply with paragraph (e)(2) of this section and §§ 88.4 and 88.6 of this part.

(2) Requirements and prohibitions. (i) Pursuant to 42 U.S.C. 18023(b)(4), entities to which this paragraph (f)(2)(ii) applies shall not construe anything in Title I of the Patient Protection and Affordable Care Act (or any amendment made by Title I of the Patient Protection and Affordable Care Act) to require a qualified health plan to provide coverage of abortion or abortion-related services as described in 42 U.S.C. 18023(b)(1)(B)(i) or (ii) as part of its essential health benefits for any plan year.

(ii) Pursuant to 42 U.S.C. 18023(b)(4), entities to which this paragraph (f)(2)(ii) applies shall not discriminate against any individual health care provider or health care facility because of its unwillingness to provide, pay for, provide coverage of, or refer for abortions.

(f) Section 1411 of the Affordable Care Act, 42 U.S.C. 18081—(1) Applicability. The Department shall comply with paragraph (g)(2) of this section and § 88.6 of this part.

(2) Requirement. The Department shall provide a certification documenting a religious exemption from the individual responsibility requirement and penalty under the Patient Protection and Affordable Care Act and shall coordinate with State Health Benefit Exchanges in the implementing of the certification requirements of 42 U.S.C. 1396w–22(j)(4)(H)(ii) where applicable to:

(i) Any applicant for such a certificate for any month who provides information demonstrating that the applicant:

(A) Is an adherent of religious tenets or teachings by reason of which he is conscientiously opposed to acceptance of the benefits of any private or public insurance which makes payments in the event of death, disability, old-age, or retirement or makes payments toward the cost of, or provides services for, medical care (including the benefits of any insurance system established by the Social Security Act), or

(B) Is an adherent of religious tenets or teachings that are not described in paragraph (g)(2)(i)(A) of this section, who relies solely on a religious method of healing, and for whom the acceptance of medical health services would be inconsistent with the religious beliefs of the individual, and the application for the certificate includes an attestation that the individual has not received medical health services during the preceding taxable year.

(1) For purposes of this paragraph (g)(2)(i)(B), “medical health services” does not include routine dental, vision and hearing services, midwifery services, vaccinations, necessary medical services provided to children, services required by law or by a third party, and such other services as the Secretary may provide in implementing section 1311(d)(4)(H) of the Patient Protection and Affordable Care Act; and

(ii) Any applicant for such a certificate for any month who provides information demonstrating that the applicant is a member of a “health care sharing ministry,” as defined in 26 U.S.C. 5000A(f)(4)(B)(ii), for the month.

(h) Counseling and referral provisions of 42 U.S.C. 1395w–22(j)(3)(B) and 1396u–2(b)(3)(B)—(1) Applicability. (i) The Department is required to comply with paragraphs (h)(2)(i) and (ii) of this section and § 88.6 of this part.

(ii) Any State agency that administers a Medicaid program is required to comply with paragraph (h)(2)(ii) of this section and §§ 88.4 and 88.6 of this part.

(2) Requirements and prohibitions. (i) Pursuant to 42 U.S.C. 1395w–22(j)(3)(B), entities to which this paragraph (h)(2)(i) applies shall not construe 42 U.S.C. 1395w–22(j)(3)(A) or 42 CFR 422.206(a) to require a Medicare Advantage organization to provide, reimburse for, or provide coverage of, a counseling or referral service if the organization offering the plan:

(A) Objects to the provision of such service on moral or religious grounds, and

(B) In the manner and through the written instrumentality such organization deems appropriate, makes
available information on its policies regarding such service to prospective enrollees before or during enrollment and to enrollees within 90 days after the date that the organization adopts a change in policy regarding such a counseling or referral service.

(ii) Pursuant to 42 U.S.C. 1396u–2(b)(3)(B), entities to which this paragraph (h)(2)(i) applies shall not construe 42 U.S.C. 1396u–2(b)(3)(A) or 42 CFR 438.102(a)(1) to require a Medicaid managed care organization to provide, reimburse for, or provide coverage of, a counseling or referral service if the organization:

(A) Objects to the provision of such service on moral or religious grounds, and

(B) In the manner and through the written instrumentalities such organization deems appropriate, makes available information on its policies regarding such service to prospective enrollees before or during enrollment and to enrollees within 90 days after the date that the organization adopts a change in policy regarding such a counseling or referral service.

Applicability.

(i) Advance Directives, 42 U.S.C. 1395cc(f), 1396a(w)(3), and 14406—(1) Applicability. (i) The Department is required to comply with paragraph (j)(2) of this section and §88.6 of this part.

(ii) Pursuant to 42 U.S.C. 1396u–2(b)(3)(A) or 1395cc(f), 1396a(w)(3), and 14406—(1) Applicability. (i) The Department is required to comply with paragraph (j)(2) of this section and §88.6 of this part.

(ii) Prohibitions. The entities to which this paragraph (j)(2) applies shall not:

(i) Require an organization, including a faith-based organization, that is otherwise eligible to receive assistance under section 104A of the Foreign Assistance Act of 1961 (22 U.S.C. 2151b–2), under Chapter 83 of Title 22 of the U.S. Code, or under the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008, to comply with paragraph (j)(2) of this section and §§88.4 and 88.6 of this part.

(ii) Prohibitions. (i) The entities to which this paragraph (k)(2)(i) applies shall not:

(A) Permit Federal financial assistance identified in paragraph (k)(1)(ii) of this section to be used in a manner that would violate provisions in paragraphs (k)(2)(ii)(A)(1) through (5) of this section related to abortions and involuntary sterilizations.

(B) Obligate or expend Federal financial assistance under an appropriations act that contains the 1985 Amendment and identified in paragraph (k)(1)(ii) of this section for any country or organization if the President certifies that the use of these funds by any such country or organization would violate provisions in paragraphs (k)(2)(ii)(A)(1) through (3) of this section related to abortions and involuntary sterilizations.

(ii) Discriminate against an organization, including a faith-based organization, that is otherwise eligible to receive assistance under section 104A of the Foreign Assistance Act of 1961 (22 U.S.C. 2151b–2), under Chapter 83 of Title 22 of the U.S. Code, or under the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008, to the extent such assistance is administered by the Secretary, for HIV/AIDS prevention, treatment, or care, to a condition of such assistance:

(A) Endorse or utilize a multisectoral or comprehensive approach to combating HIV/AIDS; or

(B) Endorse, utilize, make a referral to, become integrated with, or otherwise participate in any program or activity to which the organization has a religious or moral objection.

(ii) The entities to which this paragraph (k)(2)(ii) applies shall not:

(A) Use such Federal financial assistance identified in paragraph (k)(1)(ii) of this section to:

(1) Pay for the performance of abortions as a method of family planning;

(2) Motivate or coerce any person to practice abortions;

(3) Pay for the performance of involuntary sterilizations as a method of family planning;

(4) Coerce or provide any financial incentive to any person to undergo sterilizations; or

(5) Pay for any biomedical research that relates in whole or in part, to methods of, or the performance of, abortions or involuntary sterilization as a means of family planning.

(B) Obligate or expend Federal financial assistance under an appropriations act that contains the 1985 Amendment and identified in paragraph (k)(1)(iii) of this section for
any country or organization if the President certifies that the use of these funds by any such country or organization would violate provisions in paragraphs (k)(2)(iii)(A)(i) through (5) of this section related to abortions and involuntary sterilizations.

(i) Newborn and Infant Hearing Loss Screening, 42 U.S.C. 280g–1(d)—(1) Applicability. The Department is required to comply with paragraph (l)(2) of this section and § 88.6 of this part.

(ii) Any State agency that administers a pediatric vaccine distribution program under 42 U.S.C. 1396s is required to comply with paragraph (o)(2) of this section and §§ 88.4 and 88.6 of this part.

(ii) Requirement. The entities to which this paragraph (o)(2) applies shall ensure that, under any State-administered pediatric vaccine distribution program under 42 U.S.C. 1396s, the provider agreement executed by any program-registered provider, as defined under 42 U.S.C. 1396s(c)(1), includes the requirement that the program-registered provider will provide pediatric vaccines in compliance with all applicable State law relating to any religious or other exemption. Such State law may include State statutory, regulatory, or constitutional protections for conscience and religious freedom, where applicable.

(p) Specific Assessment, Prevention and Treatment Services, 42 U.S.C. 290bb–36(f), 5106(a)—(1) Applicability. (i) The Department is required to comply with paragraphs (p)(2)(i) through (iii) of this section and § 88.6 of this part.

(ii) Any State, political subdivision, public organization, private nonprofit organization, institution of higher education, or tribal organization actively involved with the State-sponsored statewide or tribal youth suicide early intervention and prevention strategy, designated by a State to develop or direct the State-sponsored Statewide youth suicide early intervention and prevention strategy under 42 U.S.C. 290bb–36 and that receives a grant or cooperative agreement thereunder, is required to comply with paragraph (p)(2)(iii) of this section and §§ 88.4 and 88.6 of this part.

(iii) Any federally recognized Indian tribe or tribal organization (as defined in the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 et seq.) or an urban Indian organization (as defined in the Indian Health Care Improvement Act (25 U.S.C. 1601 et seq.) that is actively involved in the development and continuation of a tribal youth suicide early intervention and prevention strategy under 42 U.S.C. 290bb–36 and that receives a grant or cooperative agreement thereunder is required to comply with paragraph (p)(2)(iii) of this section.

(iv) Any entity that receives funds under 42 U.S.C. chapter 67, subchapters I or III as requiring a State to find, or prohibiting a State from finding, child abuse or neglect in cases in which a parent or legal guardian relies solely or partially upon spiritual means rather than medical treatment, in accordance with the religious beliefs of the parent or legal guardian.

(v) Any entity receiving Federal financial assistance from participating in Medicare is required to comply with paragraphs (p)(2)(ii) of this section and §§ 88.4 and 88.6 of this part.

(vi) Any entity, including a State, receiving Federal financial assistance from participating in Medicaid, including any entity receiving Federal financial assistance through CHP that is used to expand Medicaid, is required to comply with paragraphs (p)(2)(ii) of this section and §§ 88.4 and 88.6 of this part.

(vii) Any entity, including a State or local government or subdivision thereof, receiving Federal financial assistance under subtitle B of Title XX of the Social Security Act (42 U.S.C. 1397–1397m–5) is required to comply with paragraph (p)(2)(iv) of this section and §§ 88.4 and 88.6 of this part.

(2) Requirements and prohibitions. (i) Entities to which this paragraph (p)(2)(i) applies shall not construe the receipt of funds under or anything in 42 U.S.C. chapter 67, subchapters I or III as establishing any Federal requirement that a parent or legal guardian provide a child any medical service or treatment against the religious beliefs of the parent or legal guardian.

(ii) Entities to which this paragraph (p)(2)(ii) applies shall not construe the receipt of funds under or anything in 42 U.S.C. chapter 67, subchapters I or III as requiring a State to find, or prohibiting a State from finding, child abuse or neglect in cases in which a parent or legal guardian relies solely or partially upon spiritual means rather than medical treatment, in accordance with the religious beliefs of the parent or legal guardian.

(iii) Entities to which this paragraph (p)(2)(iii) applies shall not construe anything in 42 U.S.C. 290bb–36 to require suicide assessment, early intervention, or treatment services for youth whose parents or legal guardians object based on the parents’ or legal guardians’ religious beliefs or moral objections.

(q) Religious nonmedical health care, 42 U.S.C. 1320a–1(i), 1320c–11, 1395i–5, 1395x(e), 1395x(f)(1), 1396a(a), and 1397–1(b)—(1) Applicability. (i) The Department is required to comply with paragraphs (q)(2)(i) through (iv) of this section and § 88.6 of this part.

(ii) Any State agency that makes an agreement with the Secretary pursuant to 42 U.S.C. 1320c–11 is required to comply with paragraph (q)(2)(i) of this section and §§ 88.4 and 88.6 of this part.

(iii) Any entity receiving Federal financial assistance from participating in Medicare is required to comply with paragraphs (q)(2)(ii) of this section and §§ 88.4 and 88.6 of this part.

(iv) Any entity, including a State, receiving Federal financial assistance from participating in Medicaid, including any entity receiving Federal financial assistance through CHP that is used to expand Medicaid, is required to comply with paragraphs (q)(2)(ii) of this section and §§ 88.4 and 88.6 of this part.

(v) Any entity, including a State or local government or subdivision thereof, receiving Federal financial assistance under subtitle B of Title XX of the Social Security Act (42 U.S.C. 1397–1397m–5) is required to comply with paragraph (q)(2)(iv) of this section and §§ 88.4 and 88.6 of this part.
(B) Be evaluated under 42 U.S.C. § 1396a(a)(33), on the appropriateness and quality of care and services; and

(C) Undergo a regular program, under 42 U.S.C. § 1396a(a)(31), of independent professional review, including medical evaluation, of services in an intermediate care facility for persons with mental disabilities; and

(D) Meet the requirements of 42 U.S.C. § 1396b(i)(4) to establish a utilization review plan consistent with, or superior to, the utilization review plan criteria under 42 U.S.C. § 1395x(k) for Medicare.

(iv) Pursuant to 42 U.S.C. § 1397–1(b), the entities to which this paragraph (q)(2)(iv) applies shall not construe or apply the term "elder" to any religious nonmedical health care institution as defined in 42 U.S.C. § 1395x(ss)(1), a skilled nursing facility as defined in 42 U.S.C. § 1395x(y), or a home health agency as defined in 42 U.S.C. § 1395xaaa, respectively, if the condition under 42 U.S.C. § 1395i–5(a)(2) is satisfied and an individual makes an election pursuant to § 1395i–5(b) that:

(1) Such individual is conscientiously opposed to acceptance of medical care or treatment other than medical care or treatment (including medical and other health services) that is:

(i) Received involuntarily, or

(ii) Required under Federal or State law or law of a political subdivision of a State; and

(2) Acceptance of such medical treatment would be inconsistent with such individual’s sincere religious beliefs, or

(B) In administering 42 U.S.C. § 1395i–5 or § 1395x(ss)(1):

(1) Require any patient of a religious nonmedical health care institution to undergo medical screening, examination, diagnosis, prognosis, or treatment or to accept any other medical health care service, if such patient (or legal representative of the patient) objects to such service on religious grounds, or

(2) Subject a religious nonmedical health care institution or its personnel to any medical supervision, regulation, or control, insofar as such supervision, regulation, or control would be contrary to the religious beliefs observed by the institution or such personnel, or

(C) Subject religious nonmedical health care institution to the provisions of part B of subchapter XI of Chapter 7 of Title 42 of the U.S. Code.

(iii) Pursuant to 42 U.S.C. § 1396a(a), the entities to which this paragraph (q)(2)(iii) applies shall not fail or refuse to exempt a religious nonmedical health care institution from the Medicaid requirements to:

(A) Meet State standards described in 42 U.S.C. § 1396a(a)(9)(A);
certifications by reference in subsequent applications to the Department or Department component if prior assurances or certifications are initially provided in the same fiscal or calendar year, as applicable.

(7) Enforcement of assurances and certifications. The Department, Department components, and OCR shall have the right to seek enforcement of the assurances and certifications required in this section.

(b) Remedies for failure to make assurances and certifications. If an applicant or recipient fails or refuses to furnish an assurance or certification required under this section, OCR, in coordination with the relevant Department component, may effect compliance by any of the mechanisms provided in § 88.7.

(c) Exceptions. The following persons or entities shall not be required to comply with paragraphs (a)(1) and (2) of this section, provided that such persons or entities are not recipients of Federal financial assistance or other Federal funds from the Department through another instrument, program, or mechanism, other than those set forth in paragraphs (a)(1) through (4) of this section:

(1) A physician, as defined in 42 U.S.C. 1395x(r), physician office, pharmacist, pharmacy, or other health care practitioner participating in Part B of the Medicare program;

(2) A recipient of Federal financial assistance or other Federal funds from the Department awarded under certain grant programs currently administered by the Administration for Children and Families, the purpose of which is either solely financial assistance unrelated to health care or which is otherwise unrelated to health care provision, and which, in addition, does not involve—

(i) Medical or behavioral research;

(ii) Health care providers; or

(iii) Any significant likelihood of referral for the provision of health care;

(3) A recipient of Federal financial assistance or other Federal funds from the Department awarded under certain grant programs currently administered by the Administration on Community Living, the purpose of which is either solely financial assistance unrelated to health care or which is otherwise unrelated to health care provision, and which, in addition, does not involve—

(i) Medical or behavioral research;

(ii) Health care providers; or

(iii) Any significant likelihood of referral for the provision of health care;

(4) Indian Tribes and Tribal Organizations when contracting with the Indian Health Service under the Indian Self-Determination and Education Assistance Act.

§ 88.5 Notice of rights under Federal conscience and anti-discrimination laws.

(a) In general. In investigating a complaint or conducting a compliance review, OCR will consider an entity’s voluntary posting of a notice of nondiscrimination as non-dispositive evidence of compliance with the applicable substantive provisions of this part, to the extent such notices are provided according to the provisions of this section and are relevant to the particular investigation or compliance review.

(b) Placement of the notice text. In evaluating the Department’s or a recipient’s compliance with this part, OCR will take into account whether, as applicable and appropriate, the Department or recipient has provided the notice under this section:

(1) On the Department or recipient’s website(s);

(2) In a prominent and conspicuous physical location in Department or recipient establishments where notices to the public and notices to its workforce are customarily posted to permit ready observation;

(3) In a personnel manual or other substantially similar document for members of the Department or recipient’s workforce;

(4) In applications to the Department or recipient for inclusion in the workforce or for participation in a service, benefit, or other program, including for training or study; and

(5) In any student handbook or other substantially similar document for students participating in a program of training or study, including for post-graduate interns, residents, and fellows.

(c) Content of the notice text. The recipient and the Department should consider using the model text provided in Appendix A for the notice, but may tailor its notice to address its particular circumstances and to more specifically address the laws that apply to it under this rule.

(d) Combined nondiscrimination notices. The Department and each recipient may post the notice text provided in Appendix A of this part, or a notice it crafts itself, along with the content of other notices (such as other non-discrimination notices).

§ 88.6 Compliance requirements.

(a) In general. The Department and each recipient has primary responsibility to ensure that it is in compliance with Federal conscience and anti-discrimination laws and this part, and shall take steps to eliminate any violations of the Federal conscience and anti-discrimination laws and this part. If a sub-recipient is found to have violated the Federal conscience and anti-discrimination laws, the recipient from whom the sub-recipient received funds may be subject to the imposition of funding restrictions or any appropriate remedies available under this part, depending on the facts and circumstances.

(b) Records and information. The Department, each recipient, and each sub-recipient shall maintain complete and accurate records evidencing compliance with Federal conscience and anti-discrimination laws and this part, and afford OCR, upon request, reasonable access to such records and information in a timely manner and to the extent OCR finds necessary to determine compliance with the Federal conscience and anti-discrimination laws and this part. Such records:

(1) Shall be maintained for a period of three years from the date the record was created or obtained by the recipient or sub-recipient;

(2) Shall contain any information maintained by the recipient or sub-recipient that pertains to discrimination on the basis of religious belief or moral conviction, including, without limitation, any complaints; statements, policies, or notices concerning discrimination on the basis of religious belief or moral conviction; procedures for accommodating employees’ or other protected individuals’ religious beliefs or moral convictions; and records of requests for such religious or moral accommodation and the recipient or sub-recipient’s response to such requests; and

(3) May be maintained in any form and manner that affords OCR with reasonable access to them in a timely manner.

(c) Cooperation. The Department, each recipient, and each sub-recipient shall cooperate with any compliance review, investigation, interview, or other part of OCR’s enforcement process, which may include production of documents, participation in interviews, response to data requests, and making available of premises for inspection where relevant. Failure to cooperate may result in an OCR referral to the Department of Justice, coordination with the Department’s Office of the General Counsel, for
involuntary enforcement, such as those that apply to grants, contracts, or CMS programs; and
(8) In coordination with the relevant component or components of the Department, coordinate other appropriate remedial action as the Department deems necessary and as allowed by law and applicable regulation.

(b) Complaints. Any entity, whether individually, as a member of a class, on behalf of others, or on behalf of an entity, may file a complaint with OCR alleging any potential violation of Federal conscience and anti-discrimination laws or this part. OCR shall coordinate handling of complaints with the relevant Department component(s). The complaint filer is not required to be the entity whose rights under the Federal conscience and anti-discrimination laws or this part have been potentially violated.

(c) Compliance reviews. OCR may conduct compliance reviews or use other similar procedures as necessary to permit OCR to investigate and review the practices of the Department, Department components, recipients, and sub-recipients to determine whether they are complying with Federal conscience and anti-discrimination laws and this part. OCR may initiate a compliance review of an entity subject to this part based on information from a complaint or other source that causes OCR to suspect non-compliance by such entity with this part or the laws implemented by this part.

(d) Investigations. OCR shall make a prompt investigation, whenever a compliance review, report, complaint, or any other information found by OCR indicates a threatened, potential, or actual failure to comply with Federal conscience and anti-discrimination laws or this part. The investigation should include, where appropriate, a review of the pertinent practices, policies, communications, documents, compliance history, circumstances under which the possible noncompliance occurred, and other factors relevant to determining whether the Department, Department component, recipient, or sub-recipient has failed to comply. OCR shall use fact-finding methods including site visits; interviews with the complainants, Department component, recipients, sub-recipients, or third-parties; and written data or discovery requests. OCR may seek the assistance of any State agency.

(e) Failure to respond. Absent good cause, the failure of an entity that is subject to a compliance review to respond to a request for information or to a data or document request within 45 days of OCR’s request shall constitute a violation of this part.

(f) Related administrative or judicial proceeding. Consistent with other applicable Federal laws, testimony and other evidence obtained in an investigation or compliance review conducted under this part may be used by the Department for, and offered into evidence in, any administrative or judicial proceeding related to this part.

(g) Supervision and coordination. If as a result of an investigation, compliance review, or other enforcement activity, OCR determines that a Department component appears to be in noncompliance with its responsibilities under Federal conscience and anti-discrimination laws or this part, OCR will undertake appropriate action with the component to assure compliance. In the event that OCR and the Department component are unable to agree on a resolution of any particular matter, the matter shall be submitted to the Secretary for resolution. OCR may from time to time request the assistance of officials of the Department in carrying out responsibilities in connection with the enforcement of Federal conscience and anti-discrimination laws and this part, including the achievement of effective coordination and maximum uniformity within the Department.

(h) Referral to the Department of Justice. If as a result of an investigation, compliance review, or other enforcement activity, OCR determines that a recipient or sub-recipient is not in compliance with the Federal conscience and anti-discrimination laws or this part, OCR may, in coordination with the relevant Department component and the Office of the General Counsel, make referrals to the Department of Justice, for further enforcement in Federal court or otherwise. OCR may also make referrals to the Department of Justice, in coordination with the Office of the General Counsel, concerning potential violations of 18 U.S.C. 1001 or 42 U.S.C. 300a–8 for enforcement or other appropriate action.

(i) Resolution of matters. (1) If an investigation or compliance review reveals that no action is warranted, OCR will so inform any party who has been notified of the existence of the investigation or compliance review, if any, in writing.

(2) If an investigation or compliance review indicates a failure to comply with Federal conscience and anti-discrimination laws or this part, OCR will so inform the relevant parties and the matter will be resolved by informal means whenever possible. Attempts to resolve matters informally shall not preclude OCR from simultaneously...
pursuing any action described in paragraphs (a)(5) through (7) of this section.

(3) If OCR determines that there is a failure to comply with Federal conscience and anti-discrimination laws or this part, compliance with these laws and this part may be effected by the following actions, taken in coordination with the relevant Department component, and pursuant to statutes and regulations which govern the administration of contracts (e.g., Federal Acquisition Regulation), grants (e.g., 45 CFR part 75) and CMS funding arrangements (e.g., the Social Security Act):

(i) Temporarily withholding Federal financial assistance or other Federal funds, in whole or in part, pending correction of the deficiency;

(ii) Denying use of Federal financial assistance or other Federal funds from the Department, including any applicable matching credit, in whole or in part;

(iii) Wholly or partly suspending award activities;

(iv) Terminating Federal financial assistance or other Federal funds from the Department, in whole or in part;

(v) Denying or withholding, in whole or in part, new Federal financial assistance or other Federal funds from the Department administered by or through the Secretary for which an application or approval is required, including renewal or continuation of existing programs or activities or authorization of new activities;

(vi) In coordination with the Office of the General Counsel, referring the matter to the Attorney General for proceedings to enforce any rights of the United States, or obligations of the recipient or sub-recipient, under Federal law or this part; and

(vii) Taking any other remedies that may be legally available.

(j) Noncompliance with § 88.4. If a recipient of Federal financial assistance or applicant therefor fails or refuses to furnish an assurance or certification required under § 88.4 or otherwise fails or refuses to comply with a requirement imposed by or pursuant to that section, OCR, in coordination with the relevant Department component, may effect compliance by any of the remedies provided in paragraph (i) of this section. The Department shall not be required to provide assistance in such a case during the pendency of the administrative proceedings brought under such paragraph.

§ 88.8 Relationship to other laws.

Nothing in this part shall be construed to preempt any Federal, State, or local law that is equally or more protective of religious freedom and moral convictions. Nothing in this part shall be construed to narrow the meaning or application of any State or Federal law protecting free exercise of religious beliefs or moral convictions.

§ 88.9 Rule of construction.

This part shall be construed in favor of a broad protection of the free exercise of religious beliefs and moral convictions, to the maximum extent permitted by the Constitution and the terms of the Federal conscience and anti-discrimination laws.

§ 88.10 Severability.

Any provision of this part held to be invalid or unenforceable either by its terms or as applied to any entity or circumstance shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event such provision shall be severable from this part, which shall remain in full force and effect to the maximum extent permitted by law. A severed provision shall not affect the remainder of this part or the application of the provision to other persons or entities not similarly situated or to other, dissimilar circumstances.

Appendix A to Part 88—Model Text: Notice of Rights Under Federal Conscience and Anti-Discrimination Laws

[Name of recipient, the Department, or Department component] complies with applicable Federal conscience and anti-discrimination laws prohibiting exclusion, adverse treatment, coercion, or other discrimination against individuals or entities on the basis of their religious beliefs or moral convictions. You may have the right under Federal law to decline to perform, assist in the performance of, refer for, undergo, or pay for certain health care-related treatments, research, or services (such as abortion or assisted suicide, among others) that violate your conscience, religious beliefs, or moral convictions.

If you believe that [Name of recipient, the Department, or Department component] has failed to accommodate your conscientious, religious, or moral objection, or has discriminated against you on those grounds, you can file a conscience and religious freedom complaint with the U.S. Department of Health and Human Rights, Office for Civil Rights, electronically through the Office for Civil Rights Complaint Portal, available at https://ocrportal.hhs.gov/ocr/portal/lobby.jsf or by mail or phone at: U.S. Department of Health and Human Services, 200 Independence Avenue SW, Room 509F, HHH Building Washington, DC 20201, 1–800–368–1019, 800–537–7697 (TDD). Complaint forms and more information about Federal conscience and anti-discrimination laws are available at http://www.hhs.gov/conscience.

Dated: May 2, 2019.

Alex M. Azar II,
Secretary, Department of Health and Human Services.
