requirements for the 2008 8-hour Ozone NAAQS as set forth by sections 182(b) and 184(b)(2) of the CAA. In addition, EPA is proposing to approve “Reasonably Available Control Technology (RACT) State Implementation Plan (SIP) Revision Under the 2008 8-hour Ozone National Ambient Air Quality Standard (NAAQS),” as having satisfied the 2008 8-hour NAAQS RACT requirements, and as an addition to the Maine SIP at 40 CFR 52.1020(e) “Nonregulatory”.

EPA is proposing to withdraw the following previously-approved source-specific RACT requirements for “Prime Tanning Company, York County, Berwick, Maine” (two approvals); “JJ Nissen Baking Company, Cumberland County, Portland Maine”; “Georgia Pacific Corporation, Washington County, Woodland, Maine”; “Moosehead Manufacturing Company, Piscataquis County, Dover-Foxcroft, Maine”; “Moosehead Manufacturing Company, Piscataquis County, Monson, Maine”; “Dexter Shoe Company, Piscataquis County, Dexter, Maine” (two approvals); and “McCain Foods USA, Inc., Tatermeal Facility”, and to remove all entries for these facilities which are currently listed in 40 CFR 52.1020(d) “EPA-approved State Source specific requirements.”

EPA is not proposing action with respect to the 2015 Ozone NAAQS or with respect to the 2016 CTG for Oil and Natural Gas Industry. EPA is soliciting public comments on the issues discussed in this notice or on other relevant matters. These comments will be considered before taking final action. Interested parties may participate in the Federal rulemaking procedure by submitting written comments to this proposed rule by following the instructions listed in the ADDRESSES section of this Federal Register.

V. Incorporation by Reference
In this rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference “Reasonably Available Control Technology (RACT) State Implementation Plan (SIP) Revision Under the 2008 8-Hour Ozone National Ambient Air Quality Standard (NAAQS),” and 06–096 CMR Chapter 166, “Industrial Cleaning Solvents.” The EPA has made, and will continue to make, these documents generally available through https://www.regulations.gov and at the EPA Region 1 Office (please contact the person identified in the FOR FURTHER INFORMATION CONTACT section of this preamble for more information).

VI. Statutory and Executive Order Reviews
Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

• Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
• This action is not expected to be an Executive Order 13771 regulatory action because this action is not significant under Executive Order 12866;
• Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
• Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
• Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
• Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
• Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
• Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
• Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
• Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52
Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: June 5, 2019.
Deborah A. Szaro,
Acting Regional Administrator, EPA Region 1.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Air Plan Approval; AK: Adoption Updates and Permitting Rule Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) proposes to approve revisions to the Alaska State Implementation Plan (SIP) submitted on October 25, 2018. The revisions adopt changes to federal emissions factors and modeling guidelines, update pre-construction permitting of stationary sources, and fix typographical and grammatical errors. Upon final approval, the Alaska SIP will include provisions for electronic permit applications, online notice of draft permits, revised modeling guidelines, and updated fine particulate matter requirements in nonattainment areas. The EPA also proposes to approve the submitted revisions as meeting major source pre-construction permitting requirements for the Fairbanks North Star Borough fine particulate matter nonattainment area.

DATES: Comments must be received on or before July 11, 2019.

The EPA published a notice in the Federal Register on June 11, 2019, announcing updates to the State Implementation Plan (SIP) for Alaska. The updates are in response to a request from the Alaska Department of Environmental Conservation (ADEC) to submit revisions to the SIP to ensure compliance with the National Ambient Air Quality Standards (NAAQS) set by the EPA. The revisions update the state's plan to meet air quality standards and incorporate new pollution control strategies.

### II. Evaluation of Submission

#### A. Adoption Updates

1. **Air Pollutant Emissions Factors**
   - Alaska updated the adoption by reference of federal Air Pollutant Emissions Factors (AP–42), as of February 1, 2018. This update captures recent changes in emissions factors for industrial flares in Section 13.5 of AP–42, 5th Edition. Emissions estimates, informed by AP–42, are used to determine the applicability of permitting programs and to develop control strategies. This submitted revision keeps reference materials in the Alaska SIP current.

2. **Air Quality Models**
   - Alaska updated the adoption by reference of the federal Guidelines on Air Quality Models, codified at 40 CFR part 51, appendix W (Appendix W), as of July 1, 2017. Appendix W models are used in preconstruction permitting, attainment planning, and other air pollution control efforts. Alaska’s submission incorporates the most recent version of Appendix W, promulgated on January 17, 2017 (82 FR 5182). Among other things, the 2017 update to Appendix W addressed the use of screening models, including AERSCREEN. Therefore, Alaska repealed separate, redundant references to AERSCREEN and the AERSCREEN User’s Guide in state regulations.

   Alaska also updated a cross-reference to alternative model recommendations and clarified that the ADEC Commissioner may delegate their part in the alternative model approval process to a designee. Alaska’s regulations allow for the use of alternative models to those described in Appendix W when properly approved by the EPA and ADEC. These changes are consistent with the EPA’s implementing regulations in 40 CFR part 51, subpart I for air quality modeling.

3. **New Source Review Provisions**
   - Alaska’s major new source review (NSR) program implements pre-construction permitting for new and modified major stationary sources. The major NSR program is established in Article 3 of 18 AAC 50, and references supporting rules throughout the Alaska SIP. To make it easier to keep the program up-to-date, Alaska’s major NSR program incorporates references to certain federal NSR regulations as of a specific date, and the state routinely updates this citation date. In the October 25, 2018 submission, Alaska updated the adoption by reference of portions of federal regulations that apply in areas designated attainment and unclassifiable (Prevention of Significant Deterioration (PSD)) and in areas designated nonattainment (NNSR). More specifically, Alaska adopted by reference portions of PSD regulations in 40 CFR 51.166 and 40 CFR 52.21 and portions of NNSR regulations in 40 CFR 51.165 as of July 1, 2017. Alaska also updated the definition of “fugitive emissions” to equate to the federal definition in 40 CFR 51.166(b)(20), adopted by reference as of July 1, 2017.

### B. Permitting Revisions

1. **Electronic Notice and Submission**
   - Alaska’s major NSR program, established in Article 3 of 18 AAC 50, includes PSD and NNSR. Alaska’s PSD program is governed by 18 AAC 50.306 and refers to 18 AAC 50.040(h), which adopts certain provisions of 40 CFR 51.166 and 40 CFR 52.21 by reference. The NNSR program is governed by 18 AAC 50.311 and refers to 18 AAC 50.040(i), which adopts certain provisions of 40 CFR 51.165 by reference. In the October 25, 2018 submission, Alaska updated its adoption by reference as of July 1,
2017. The update captures the EPA’s removal of the requirement to publish notice of draft major NSR permits in the local newspaper and provides the option to publish notice on a publicly-accessible website, along with the draft permit (October 18, 2016, 81 FR 71613). As a result, Alaska’s major NSR program no longer requires newspaper notice.

Alaska also requested approval of a provision allowing ADEC to require owners and operators of certain minor stationary sources to apply for their permits online, through Alaska’s Online System/Permittee Portal. This electronic system was approved by the EPA on August 13, 2015 as meeting the Cross-Media Electronic Reporting Rule (CROMERR) (80 FR 48531). The approval changes the SIP-approved minor source permitting programs, among other programs. Therefore, we propose to approve the minor source electronic permit application provision into the Alaska SIP.

2. Fine Particulate Matter

Alaska has a SIP-approved major NSR program applicable in designated PM2.5 nonattainment areas. On January 7, 2015, the EPA approved revisions to that program as meeting Moderate area attainment planning requirements for the only designated PM2.5 nonattainment area in the state, the Fairbanks North Star Borough (FNSB) area (January 7, 2015, 80 FR 832). Subsequently, on August 24, 2016, the EPA promulgated changes to NSR requirements for PM2.5 nonattainment areas (81 FR 58010). The EPA’s changes were made in response to a D.C. Circuit court decision remanding specific EPA NSR rulemakings promulgated in 2007 and 2008. After the FNSB PM2.5 nonattainment area was reclassified from Moderate to Serious by the EPA, Alaska was required to update the SIP-approved PM2.5 NSNR program applicable in the FNSB area, in accordance with the August 24, 2016 regulatory changes (May 9, 2017, 82 FR 21711). Alaska made updates in response and submitted the changes for approval as part of the October 25, 2018 submission.

Alaska adopted key requirements that the EPA revised in accordance with the D.C. Circuit court’s decision, including the definitions for “major source,” “regulated NSR pollutant,” and “significant,” as these definitions apply in PM2.5 nonattainment areas. In areas classified as Serious, “major source” is now defined in Alaska regulations as a stationary source that emits or has the potential to emit 70 tons per year of direct PM2.5 emissions, or 70 tons per year of any one of four regulated precursors: Nitrogen oxides (NOx), sulfur dioxide (SO2), VOC, and ammonia. For areas classified as Moderate, the major source threshold for direct PM2.5 emissions and regulated precursors remains at 100 tons per year. Alaska also defined the term “regulated NSR pollutant” in designated PM2.5 nonattainment areas as direct PM2.5 emissions and NOx, SO2, VOC, and ammonia as precursors to PM2.5. The effect of this change is that the Alaska NSNR program, which previously regulated NOx and SO2 as precursors to PM2.5, now regulates all four precursors to PM2.5 established by the EPA on August 24, 2016 (81 FR 58010).

Alaska also revised the definition of “significant.” This term is used to evaluate the extent to which construction at an existing major stationary source becomes subject to NSR as a major modification with respect to the nonattainment pollutant. A major modification, defined in 40 CFR 51.165(a)(1)(v)(A), is any physical change in or change in the method of operation of a major stationary source that would result in: (1) A significant emissions increase of a regulated NSR pollutant, and (2) a significant net emissions increase of that pollutant. “Significant” is separately defined in 40 CFR 51.165(a)(1)(x)(A) to mean a rate of emissions specified for each pollutant or precursor to that pollutant. Alaska defined “significant” in PM2.5 nonattainment areas in the state to be 10 tons per year of direct PM2.5 emissions and 40 tons per year of any one of the four regulated precursors to PM2.5: NOx, SO2, VOC, and ammonia. The rates established by Alaska for NOx, SO2, and VOC are those set by the EPA and adopted by reference. We note however, the EPA’s August 24, 2016 rulemaking did not establish a significant emissions rate for ammonia as a precursor to PM2.5 (61 FR 58010). Rather, if a state’s plan for a specific nonattainment area requires regulation of ammonia as a precursors to PM2.5, the EPA directed the state to define “significant” for ammonia for that nonattainment area. The EPA declined to set a minimum significant emissions rate for ammonia on a nationwide basis in part because, as stated in the preamble to the August 24, 2016, rulemaking, “[w]e anticipate that very few states will actually need to control source modifications of ammonia under their NSR programs for PM2.5 since (1) stationary sources of ammonia generally are not one of the primary causes of ambient PM2.5 concentrations in most PM2.5 nonattainment areas, and (2) according to information in the EPA’s National Emissions Inventory database, most existing PM2.5 nonattainment areas do not have an existing major stationary source of ammonia to which the ammonia significant emission rate would be applied to determine whether a proposed modification of such major source would be ‘major’ for ammonia.”

Alaska’s only designated PM2.5 nonattainment area is the FNSB area. Alaska has undertaken planning efforts to reduce PM2.5 levels in the area, resulting in the FNSB PM2.5 Moderate plan, approved by the EPA on September 8, 2017 (82 FR 42457). In that plan, Alaska evaluated total PM2.5 and speciated PM2.5 monitoring data to help identify the appropriate emissions control strategy for the area. We summarized Alaska’s evaluation in the preamble to our proposed action on the FNSB PM2.5 Moderate plan stating, “Alaska concludes that throughout the winter months, residential wood heating is the major source of PM2.5 and accounts for 60 to 80 percent of the observed PM2.5.” Emissions inventories developed by Alaska and approved by the EPA as part of the FNSB PM2.5 Moderate plan demonstrate there are no existing major stationary sources of ammonia in the area and that the estimated total annual ammonia emissions for existing major stationary sources of direct PM2.5 emissions or other precursors for PM2.5 is less than 0.001 tons per day on days in which exceedances of the PM2.5 NAAQS typically occur. Based on the analysis in the FNSB PM2.5 Moderate Plan, it is unlikely that there will be any major modifications to major stationary sources of ammonia in the area.

However, the EPA has reclassified the FNSB PM2.5 nonattainment area to Serious, triggering the requirement for...
additional planning, including revisions to NNSR requirements applicable in the area. In those revisions, Alaska included regulation of ammonia under NNSR in PM2.5 nonattainment areas.25

In the October 25, 2018 revisions, Alaska set significant emissions rates for all four regulated precursors to PM2.5, including ammonia, and submitted the changes to the EPA for approval. Specifically, Alaska adopted by reference the 40 tons per year significant emissions rates for NOX, SO2, and VOC set by the EPA, and also established a significant emissions rate of 40 tons per year for ammonia as a precursor for PM2.5, consistent with the thresholds of the other PM2.5 precursors.26 The EPA addressed the evaluation of potential sources for ammonia in PM2.5, serious nonattainment area established by the EPA and is consistent with the levels the EPA set for other PM2.5 precursors.28

Based on the SIP-approved emissions inventories demonstrating no existing major sources of ammonia and extremely low total estimated ammonia emissions from existing stationary sources in the FNSB PM2.5 nonattainment area, speciated monitoring data identifying residential wood combustion as the primary source category driving PM2.5 exceedances in the area, and the EPA’s stated maximum acceptable ammonia significant emissions rate of 70 tons per year for Serious PM2.5 nonattainment areas, the EPA proposes to find that 40 tons per year is a reasonable threshold for requiring review of major modifications to major stationary sources of ammonia in the FNSB PM2.5 nonattainment area, should any be constructed.29

We propose to approve the submitted revisions to the Alaska PM2.5 NNSR program into the SIP. Upon final action, the added NNSR requirements established in the EPA’s 2016 PM2.5 implementation rule that were triggered upon reclassification of the FNSB PM2.5 nonattainment area to Serious will be met.30

3. Pre-Approved Emissions Limits

The submission clarified requirements for pre-approved stationary source emissions limits. Specifically, the state revised rule language to make clear that if a source terminates a pre-approved limit that had allowed the source to avoid reconstruction review, the limit remains in effect until a minor permit, as well as a construction permit, is issued for the source.31

C. Corrections

Alaska submitted several corrections to typographical, grammatical, and cross-reference errors. First, Alaska corrected the geographical name of Mt. McKinley to Denali.32 Second, Alaska updated a provision to fix an obsolete cross reference and to use the term “coal-fired” vs. “coal burning.”33 Third, Alaska made changes throughout 18 AAC 50 to consistently use and spell the term “emissions unit.”34

III. Proposed Action

The EPA proposes to approve, and incorporate by reference, the revisions to the Alaska SIP submitted on October 25, 2018 and described above. Upon final approval, the Alaska SIP will contain the following rule sections, state effective September 15, 2018:

• 18 AAC 50.025 Visibility and Other Special Protection Areas;
• 18 AAC 50.035 Documents, Procedures, and Methods Adopted by Reference, except (a)(6), (a)(9), and (b)(4);
• 18 AAC 50.040 Federal Standards Adopted by Reference, except (a), (b), (c), (d), (e), (g), (j), (k);
• 18 AAC 50.050 Industrial Processes and Fuel-Burning Equipment, except (d)(2)(B);
• 18 AAC 50.215 Ambient Air Quality Analysis Methods, except (a)(4);
• 18 AAC 50.220 Enforceable Test Methods, except (c)(1)(A), (B), (C), and (c)(2);
• 18 AAC 50.225 Owner-Requested Limits;
• 18 AAC 50.230 Preapproved Emission Limits, except (d);
• 18 AAC 50.260 Guidelines for Best Available Retrofit Technology under the Regional Haze Rule;
• 18 AAC 50.311 Nonattainment Area Major Stationary Source Permits;
• 18 AAC 50.345 Construction, Minor and Operating Permits: Standard Permit Conditions, except (b), (c)(3), and (l);
• 18 AAC 50.502 Minor Permits for Air Quality Protection;
• 18 AAC 50.540 Minor Permit: Application;
• 18 AAC 50.542 Minor Permit: Review and Issuance;
• 18 AAC 50.560 General Minor Permits; and
• 18 AAC 50.990 Definitions.

The listed exceptions were not submitted in the October 25, 2018 submission and are not part of the current federally-approved Alaska SIP.35 For more information, please see our prior actions on September 19, 2014 (79 FR 56268) and August 14, 2007 (72 FR 45378).

The EPA also proposes to approve the submission as fulfilling NNSR requirements for the FNSB PM2.5 nonattainment area set forth in the EPA’s 2016 PM2.5 implementation rule and triggered upon reclassification of the area to Serious.

IV. Incorporation by Reference

In this rule, the EPA proposes to include in a final rule, regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA proposes to incorporate by reference the provisions described in Section III. The EPA has made, and will continue to make, these documents generally available electronically through www.Regulations.gov and in hard copy at the appropriate EPA Region 10 Office (please contact the person identified in the FOR FURTHER INFORMATION CONTACT section of this preamble for more information).

28 May 10, 2017, 82 FR 21711. See also 40 CFR part 81.
26 18 AAC 50.311[e].
27 August 24, 2016, 81 FR 58010 at page 58114.
24 40 CFR 51.165(a)(1)[iv]. See also CAA section 189(b)(3).
25 Again, the likelihood of there being a major modification of a major stationary source of ammonia is extremely low. The most likely potential construction scenario would be the addition of controls to an existing combustion source, that is a by-product of controlling NOx.
29 May 10, 2017, 82 FR 21711. See also 40 CFR part 81.
22 18 AAC 50.055 Industrial Processes and Fuel-Burning Equipment, except (d)(2)(B);
19 18 AAC 50.215 Ambient Air Quality Analysis Methods, except (a)(4);
18 18 AAC 50.220 Enforceable Test Methods, except (c)(1)(A), (B), (C), and (c)(2);
18 18 AAC 50.225 Owner-Requested Limits;
18 18 AAC 50.230 Preapproved Emission Limits, except (d);
18 18 AAC 50.260 Guidelines for Best Available Retrofit Technology under the Regional Haze Rule;
18 18 AAC 50.311 Nonattainment Area Major Stationary Source Permits;
18 18 AAC 50.345 Construction, Minor and Operating Permits: Standard Permit Conditions, except (b), (c)(3), and (l);
18 18 AAC 50.502 Minor Permits for Air Quality Protection;
18 18 AAC 50.540 Minor Permit: Application;
18 18 AAC 50.542 Minor Permit: Review and Issuance;
18 18 AAC 50.560 General Minor Permits; and
18 18 AAC 50.990 Definitions.
35 The excepted provisions implement New Source Performance Standards (NSPS), National Emissions Standards for Hazardous Air Pollutants (NESHAPs), and title V of the CAA and are not relied on by the state to attain or maintain the NAAQS under CAA section 110 and the SIP; or are inconsistent with CAA requirements.
V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA’s role is to approve state choices, provided they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

• Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
• Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
• Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
• Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
• Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
• Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
• Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
• Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because it does not involve technical standards; and
• Does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and record keeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 et seq.

Chris Hladick,
Regional Administrator, Region 10.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Air Plan Approval; Missouri; Revision to Reference Methods Rule

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing approval of a State Implementation Plan (SIP) revision submitted by the State of Missouri on January 14, 2019. The revision submitted by the state is an amendment to a rule relating to reference methods for determining ambient air/atmosphere data and information necessary for the enforcement of air pollution control regulations throughout Missouri. The revision is administrative in nature and either incorporates by reference or updates state rules to match Federal regulations. This revision does not have an adverse effect on air quality. The EPA’s proposed approval of this rule revision is being done in accordance with the requirements of the Clean Air Act (CAA).

DATES: Comments must be received on or before July 11, 2019.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received will be posted without change to https://www.regulations.gov, including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the “Written Comments” heading of the SUPPLEMENTARY INFORMATION section of this document.

FOR FURTHER INFORMATION CONTACT: Jonathan Meyer, Environmental Protection Agency, Region 7 Office, Air Quality Planning Branch, 11201 Ronner Boulevard, Lenexa, Kansas 66219; telephone number (913) 551–7140; email address meyer.jonathan@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document “we,” “us,” and “our” refer to the EPA.

I. Written Comments

Submit your comments, identified by Docket ID No. EPA–R07–OAR–2019–0293, at https://www.regulations.gov. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e. on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit https://www.epa.gov/dockets/commenting-epa-dockets.

II. What is being addressed in this document?

The EPA is proposing to approve a revision to Missouri’s SIP by approving the state’s request to revise 10 CSR 10–6.040, Reference Methods, received January 14, 2019. The revision submitted by the state is an amendment to a rule relating to reference methods for determining ambient air/atmosphere data and information necessary for the
