From those screenings, approximately 4,000 respondents, as representatives of the civilian, noninstitutional population aged 12 years old or older, are expected to complete a FT interview using the revised questionnaire and materials.

For the NSDUH FT screening, revisions may include: (1) A revised roster structure; (2) various wording edits to improve respondent comprehension and flow; (3) the use of revised materials, such as the lead letter, study description and question &

answer brochure; (4) a conditional test of a \$5 screening incentive to assess impact on response rates; and (5) the inclusion of two outcome questions on past month alcohol and past month cigarette use at the end of the screening to assess nonresponse bias from the screening incentive.

For the NSDUH FT interview, revisions may include: (1) A conditional test of a \$50 interview incentive to assess impact on response rates; (2) revisions to the DSM-5-based SUD module as a result of prior testing in the CVS; (3) the inclusion of new modules on substance use treatment and mental health service utilization; (4) the addition of new and/or revised

questions on a variety of items such as Electronic Nicotine Delivery Systems (ENDS), synthetic drugs, pain and sleep, vaping and needle use, and criminal justice; (5) the addition of measures of adolescent psychological distress and/or impairment; (6) the expansion of suicide items; and (7) other general questionnaire revisions such as clarifying wording and terminology, reordering for improved question flow, formatting changes, removal of questions with low prevalence rates, and other minor updates and revisions.

The total annual burden estimate for the FT is shown below in Table 3.
