**Abstract:** The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Clay Ceramics Manufacturing, Glass Manufacturing, and Secondary Nonferrous Metals Processing Area Sources (40 CFR part 63, subparts RRRRRR, SSSSSS, and TTTTTTT) were proposed on September 20, 2007, and promulgated on December 26, 2007. These regulations apply to the following existing and new facilities: (1) Clay ceramics manufacturing facilities that process more than 50 tons per year of wet clay and are area sources of hazardous air pollutants (HAP); (2) glass manufacturing facilities that use continuous furnaces to produce glass that contains HAP as raw materials and are area sources of HAP; and (3) secondary nonferrous metals processing facilities that are area sources of HAP.

Clay ceramics manufacturing facilities include facilities that manufacture pressed tile, sanitaryware, dinnerware, or pottery with an atomized glaze spray booth or kiln that fires glazed ceramic ware. Glass manufacturing facilities include facilities that manufacture flat glass, glass containers, or pressed and blown glass by melting a mixture of raw materials, to produce molten glass and form the molten glass into sheets, containers, or other shapes. Secondary nonferrous metals processing facilities means brass and bronze ingot making, secondary magnesium processing, or secondary zinc processing plants that use furnace melting operations to melt post-consumer nonferrous metal scrap to make products including bars, ingots, blocks, or metal powders. New facilities include those that commenced construction, modification or reconstruction after the date of proposal.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

**Form Numbers:** None.

**Respondents/affected entities:** Clay ceramics manufacturing facilities that process more than 50 tons per year of wet clay, glass manufacturing facilities that use continuous furnaces to produce glass that contains HAP as raw materials, and secondary nonferrous metals processing facilities that are area sources of HAP.

**Respondent’s obligation to respond:** Mandatory (40 CFR part 63, subparts RRRRRR, SSSSSS, and TTTTTTT).

**Estimated number of respondents:** 82 (total), consisting of 51 clay ceramics manufacturing facilities, 21 glass manufacturing facilities, and 10 secondary nonferrous metals processing facilities.

**Frequency of response:** Initially and occasionally.

**Total estimated burden:** 1,950 hours (per year). Burden is defined at 5 CFR 1320.3(b).

**Total estimated cost:** $235,000 (per year), which includes $13,200 in annualized capital/startup and/or operation & maintenance costs.

**Changes in the Estimates:** There is an increase in the respondent labor hours in this ICR compared to the previous ICR. The increase is not due to a change in program requirements. The number of respondents expected to reamiliarize with the regulatory requirements each year has been increased to include all 82 respondents. The annual O&M costs for glass furnace inspections have been adjusted upward to reflect current industry labor rates for technical workers. The regulations have not changed over the past three years and are not anticipated to change over the next three years. The growth rate for the industry is very low, negative or non-existent.
