Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Plastic Parts and Products Surface Coating (40 CFR part 63, subpart PPPP) were proposed on: December 4, 2002; promulgated on April 19, 2004; and amended on April 24, 2007. These regulations apply to both existing and new facilities that perform surface coating of plastic parts and products, and that use at least 100 gallons of HAP-containing coatings annually, and where the potential to emit any single hazardous air pollutant (HAP) is greater than or equal to 10 tons per year, or where the potential to emit any combination of HAPS is greater than or equal to 25 tons per year. New facilities include those that commenced construction, modification or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart PPPP.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities:

Existing and new facilities that: Perform surface coating of plastic parts and products and that use at least 100 gallons of HAP-containing coatings annually, and where the potential to emit any single hazardous air pollutant (HAP) is greater than or equal to 10 tons per year, or where the potential to emit any combination of HAPS is greater than or equal to 25 tons per year.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart PPPP).

Estimated number of respondents: 223 (total).

Frequency of response: Initially and semiannually.

Total estimated burden: 86,400 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$9,910,000 (per year), which includes \$66,900 in annualized capital/startup and/or operation & maintenance costs.

Changes in the estimates: There is an adjustment decrease in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This decrease is not due to any

program changes. The adjustment decrease in burden from the most recently-approved ICR is due to a decrease in the number of existing major sources subject to this rule. The EPA's records indicate that there are currently 223 major sources subject to this NESHAP; the previous estimate of 836 major sources was based on the Final Rule for this NESHAP in 2004. The revised estimate is also supported by preliminary data collected for the NESHAP Risk and Technology Review. This decrease in the estimated number of sources results in decreases in the respondent labor hours, total O&M costs, and number of responses.

Courtney Kerwin,

Director, Regulatory Support Division.

Abstract: The New Source Performance Standards (NSPS) for Pressure Sensitive Tape and Label Surface Coating Operations (40 CFR part 60 subpart RR) were proposed on December 30, 1980, and promulgated on October 18, 1983, and amended on October 17, 2000. These regulations apply to existing facilities and new facilities with coating lines used in the manufacture of pressure sensitive tape and label materials. Existing facilities and new facilities are both subject to these regulations, except those facilities that input 45 mega grams (Mgs) of volatile organic compounds (VOC) or less per 12-month period. New facilities include those that commenced construction, modification or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 60, subpart RR.

In general, all NSPS standards require initial notifications, performance tests, and periodic reports by the owners/
