(c) If provided in the actuarial documents, you may elect to limit a reduction to the approved APH yield to a maximum decline of 10 percent of the previous crop year’s approved APH yield when such reduction is due to a decline in production resulting from a natural disaster or other insurable loss, as provided in FCIC procedures.

#### SUPPLEMENTARY INFORMATION:

##### Discussion

On November 19, 2018 at 83 FR 58191, the **Federal Register** published our notice of proposed rulemaking (NPRM), which proposed to amend 14 CFR part 39 by adding an AD that would apply to Airbus Helicopters Model MBB-BK 117 C-2 helicopters with certain parts installed. The NPRM proposed to require establishing and reducing the life limit of the following parts: Main rotor head—nut, upper and lower quadruple nut, bolts, and inner sleeve; swash plate control ring assembly; rotor flight control collective bellcrank-K; cyclic control rod tube; and upper control forked lever. The proposed requirements were intended to prevent a part remaining in service beyond its fatigue life, which could result in failure of a part and loss of control of the helicopter.

The NPRM was prompted by EASA AD No. 2017-0174, dated September 12, 2017 (EASA AD 2017-0174), issued by EASA, which is the Technical Agent for the Member States of the European Union, to correct an unsafe condition for Airbus Helicopters Model MBB-BK 117 C-2 helicopters. EASA advises that recalculation by Airbus Helicopters has resulted in new or reduced life limits for certain parts. EASA AD 2017-0174 states the life limits are mandatory for continued airworthiness and failing to replace life-limited parts as specified could result in an unsafe condition. To address this condition, EASA AD 2017-0174 requires replacing the affected parts before exceeding their new or reduced life limit.

#### Comments

We gave the public the opportunity to participate in developing this AD, but we did not receive any comments on the NPRM.

#### FAA's Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to our bilateral agreement with the European Union, EASA has notified us of the unsafe condition described in its AD. We are issuing this AD because we evaluated all information provided by EASA and determined the unsafe

condition exists and is likely to exist or develop on other products of the same type designs and that air safety and the public interest require adopting the AD requirements as proposed except for minor editorial changes. "Bellcrank-K (collective) (4)" was listed in Table 1 to paragraph (e) of this AD, but should have been "Bellcrank-K (collective)" instead. The cost of the parts listed in the Costs of Compliance section have also been updated to reflect current market prices. The updated costs are considered non-substantial. These minor editorial changes are consistent with the intent of the proposals in the NPRM and will not increase the economic burden on any operator nor increase the scope of this AD.

#### Related Service Information

We reviewed Airbus Helicopters Alert Service Bulletin ASB MBB-BK117 C-2-04A-008, Revision 0, dated April 27, 2017, for Model MBB-BK 117 C-2 and C-2e helicopters. This service information specifies entering into the helicopter records the reduced and new airworthiness life limits for certain part-numbered main rotor head, swash plate, rotor flight controls, cyclic controls, and upper controls parts.

#### Costs of Compliance

We estimate that this AD affects 128 helicopters of U.S. Registry. We estimate that operators may incur the following costs in order to comply with this AD. Labor costs average \$85 per work-hour.

Replacing a nut takes about 5 work-hours and parts cost about \$3,736 for an estimated replacement cost of \$4,161.

Replacing a quadruple nut upper takes about 5 work-hours and parts cost about \$3,682 for an estimated replacement cost of \$4,107.

Replacing a quadruple nut lower takes about 5 work-hours and parts cost about \$3,819 for an estimated replacement cost of \$4,244.

Replacing a bolt takes about 2 work-hours and parts cost about \$418 for an estimated replacement cost of \$588.

Replacing an inner sleeve takes about 2 work-hours and parts cost about \$20,826 for an estimated replacement cost of \$20,996.

Replacing a control ring assembly takes about 5 work-hours and parts cost about \$11,500 for an estimated replacement cost of \$11,925.

Replacing a bellcrank-K (collective) takes about 4 work-hours and parts cost about \$3,400 for an estimated replacement cost of \$3,740.

Replacing a control rod tube takes about 4 work-hours and parts cost about \$1,197 for an estimated replacement cost of \$1,537.
