Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Halogenated Solvent Cleaners/Halogenated Hazardous Air Pollutants were proposed on November 29, 1993, and promulgated on December 2, 1994. The NESHAP was amended on the following dates: June 5, 1995; December 11, 1998; July 13, 1999; August 19, 1999; and May 3, 2007. These regulations apply to each individual batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing methylene chloride, perchloroethylene, 1,1,1-trichloroethane, trichloroethylene, carbon tetrachloride, chloroform, or any combination of these halogenated HAP solvents, in a total concentration greater than 5 percent by weight, as a cleaning and/or drying agent. New facilities include those that commenced construction or reconstruction on or after December 2, 1994. This information is being collected to assure compliance with 40 CFR part 63, subpart T.

In general, all NESHAP standards require initial notification reports, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and

duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities:

Halogenated Solvent Cleaners.

Respondent's obligation to respond: Mandatory (40 CFR part 63).

Estimated number of respondents: 931 (total).

Frequency of response: Semiannual.

Total estimated burden: 31,300 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$4,230,000 (per year), which includes \$660,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: The decrease in burden from the most recently-approved ICR is due to an adjustment. The adjustment decrease in burden is due to more accurate estimates of existing and anticipated new sources. The estimates in this ICR reflect a decrease in the universe of respondents that is the result of changes within the industry to use alternative solvents and solvent machines that do not contain the HAP subject to the NESHAP. These estimates also more accurately reflect the number of respondents identified in EPA's ECHO database. The decrease in the number of respondents also results in a decrease in the operation and maintenance costs. There are no changes to the capital and startup costs.

Director, Regulatory Support Division.
