**Abstract:** The New Source Performance Standards (NSPS) for Industrial/Commercial/Institutional

Steam Generating Units (40 CFR part 60, subpart Db) were proposed on June 19, 1986, promulgated on December 16, 1987, and most-recently amended on February 27, 2014. The amendment of 2014 promulgated technical and editorial corrections for source-testing of emission operations. The revisions did not result in any changes to either the reporting or recordkeeping requirements. These regulations apply to industrial/commercial/institutional steam generating units (boilers) that commenced either construction, or modification, or reconstruction after June 19, 1984, and have a heat input capacity from fuels combusted in the unit of greater than 29 megawatts (MW) (100 million British thermal units per hour (MMBtu/hr)). This information is being collected to assure compliance with 40 CFR part 60, subpart Db.

In general, all NSPS standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NSPS.

*Form Numbers:* None.

*Respondents/affected entities:*

Owners and operators of industrial/commercial/institutional steam generating units (boilers) that commenced construction, modification, or reconstruction after June 19, 1984, and have a heat input capacity from fuels combusted in the unit of greater than 29 megawatts (MW) (100 million British thermal units per hour (MMBtu/hr)).

*Respondent's obligation to respond:* Mandatory (40 CFR part 60, subpart Db).

*Estimated number of respondents:* 1,957 (total).

*Frequency of response:* Quarterly and semiannually.

*Total estimated burden:* 1,790,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

*Total estimated cost:* \$243,000,000 (per year), which includes \$36,200,000 in annualized capital/startup and/or operation & maintenance costs.

*Changes in the estimates:* There is an adjustment increase in the burden in this ICR compared to the previous ICR. The increase is based on an increase in the number of sources subject to the
