FEDERAL REGISTER

Vol. 84 Friday,

No. 159 August 16, 2019

Book 1 of 2 Books

Pages 41883–42042

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 84 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 84, No. 159
Friday, August 16, 2019

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 985

[Doc. No. AMS–SC–19–0026; SC19–985–2 FR]

Marketing Order Regulating the Handling of Spearmint Oil Produced in the Far West; Increased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule implements a recommendation from the Far West Spearmint Oil Administrative Committee (Committee) to increase the assessment rate established for the 2019–2020 and subsequent marketing years. The assessment rate will remain in effect indefinitely unless modified, suspended, or terminated.

DATES: Effective September 16, 2019.

FOR FURTHER INFORMATION CONTACT: Barry Broadbent, Senior Marketing Specialist, or Gary Olson, Regional Director, Northwest Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (503) 326–2724, Fax: (503) 326–7440, or Email: *Barry.Broadbent@usda.gov* or *GaryD.Olson@usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202)720–8938, or Email: *Richard.Lower@usda.gov.*

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, amends regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This rule is issued under Marketing Order No. 985, as amended (7 CFR part 985), regulating the handling of spearmint oil produced in the Far West. Part 985 (referred to as the ''Order'') is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.'' The Committee locally administers the Order and is comprised of spearmint oil producers operating within the area of production, and a public member.

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 13563 and 13175. This final rule falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review. Additionally, because this rule does not meet the definition of a significant regulatory action, it does not trigger the requirements contained in Executive Order 13771. See OMB's Memorandum titled ''Interim Guidance Implementing Section 2 of the Executive Order of January 30, 2017, titled 'Reducing Regulation and Controlling Regulatory Costs' '' (February 2, 2017).

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the Order now in effect, Far West spearmint oil handlers are subject to assessments. Funds to administer the Order are derived from such assessments. The assessment rate will be applicable to all assessable spearmint oil for the 2019–2020 marketing year, and continue until amended, suspended, or terminated.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to a marketing order may file with USDA a petition stating that the order, any provision of the marketing order, or any obligation imposed in connection with the marketing order is not in accordance with law and request a modification of the marketing order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

The Order provides authority for the Committee, with the approval of USDA, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The members are familiar with the Committee's needs and with the costs of goods and services in their local area and can formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in a public meeting where all directly affected persons have an opportunity to participate and provide input.

This final rule increases the assessment rate from $0.09 to $0.10 per pound of Far West spearmint oil handled for the 2019–2020 and subsequent marketing years. The higher rate is necessary to cover most of the Committee's 2019–2020 marketing year budgeted expenditures. The Committee has had to draw from its monetary reserve to partially fund program activities during the last five marketing years and is expected to do so again for the 2019–2020 marketing year because of a one-time $45,000 expense to update the Committee's electronic recordkeeping system. However, the Committee believes that drawing from reserves to fund operations on an on-going basis is not a sustainable strategy moving forward. Increasing the continuing assessment rate will allow the Committee to better fund its 2019–2020 budgeted expenses and fully fund its budgeted expenses for the 2020–2021 and subsequent marketing years.

The Committee met on March 1, 2019, and unanimously recommended 2019–2020 marketing year expenditures of $272,850 and an assessment rate of $0.10 per pound of spearmint oil handled. In comparison, last year's budgeted expenditures were $233,800. The assessment rate of $0.10 is $0.01 higher than the $0.09 rate currently in effect. The Committee recommended the assessment rate increase because expenditures have exceeded assessment revenue in the previous five marketing years and financial reserves have been reduced to approximately $180,000. Even with an assessment rate increase, monetary reserves are expected to be further reduced during the 2019–2020 marketing year to approximately

$130,000 but should stabilize at that level for the 2020–2021 and subsequent marketing years.

The major expenditures recommended by the Committee for the 2019–2020 marketing year include $169,000 for contracted administration by Ag Association Management, $45,000 for software/website maintenance, $30,850 for administrative expenses, $15,000 for Committee expenses, and $13,000 for market research and development projects. In comparison, major expenses for the 2018–2019 marketing year included $169,000 for contracted administration, $5,000 for software/website maintenance, $35,300 for administrative expenses, $17,500 for Committee expenses, and $12,000 for market research and development projects.

The assessment rate recommended by the Committee was derived by considering anticipated expenses, expected spearmint oil sales, and the amount of funds available in the authorized reserve. Income derived from handler assessments of $220,500 (2,205,000 million pounds of spearmint oil at $0.10 per pound), along with $1,650 in interest income and $50,700 from reserve funds, will be adequate to cover budgeted expenses of $272,850. Funds in the reserve (estimated to be $180,561 at the beginning of the 2019–2020 marketing year) will be kept within the maximum permitted by § 927.42(a) and will not exceed the expenses of approximately one marketing year.

The assessment rate established in this rule will continue in effect indefinitely unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Committee or other available information.

Although this assessment rate will be in effect for an indefinite period, the Committee will continue to meet prior to or during each marketing year to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee or USDA. Committee meetings are open to the public and interested persons may express their views at these meetings. USDA would evaluate Committee recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking would be undertaken as necessary. The Committee's budget for subsequent marketing years will be reviewed and, as appropriate, approved by USDA.

Final Regulatory Flexibility Act

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this final rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 33 producers and 90 producers of Scotch and Native spearmint oil, respectively, in the regulated production area and approximately 8 spearmint oil handlers subject to regulation under the Order. Small agricultural service firms are defined by the Small Business Administration (SBA) as those having annual receipts of less than $7,500,000, and small agricultural producers are defined as those having annual receipts of less than $750,000 (13 CFR 121.201).

The Committee reported that recent producer prices for spearmint oil range from $15.50 to $18.00 per pound. The National Agricultural Statistics Service (NASS) reported that the 2017 U.S. season average spearmint oil producer price per pound was $16.20 (NASS has not released data for 2018). Multiplying $16.20 per pound by 2016–2017 spearmint oil utilization of 2,186,751 million pounds yields a crop value estimate of about $35.4 million. Total 2016–2017 spearmint oil utilization, reported by the Committee, is 621,236 pounds and 1,565,515 pounds for Scotch and Native spearmint oil, respectively.

Given the accounting requirements for the volume regulation provisions of the Order, the Committee maintains accurate records of each producer's production and sales. Using the $16.20 average spearmint oil price, and Committee production data for each producer, the Committee estimates that 11 of the 33 Scotch spearmint oil producers and 34 of the 90 Native spearmint oil producers could be classified as small entities under the SBA definition.

There is no third party or governmental entity that collects and reports spearmint oil prices received by spearmint oil handlers. However, the Committee estimates an average spearmint oil handling markup at approximately 20 percent of the price received by producers. Multiplying 1.20 by the 2016 producer price of $16.20 yields a handler f.o.b. price per pound estimate of $19.44.

Multiplying this handler f.o.b. price by spearmint oil utilization of 2,186,751 pounds results in an estimated handler-level spearmint oil value of $42.5 million. Dividing this figure by the number of handlers (8) yields estimated average annual handler receipts of about $5.3 million, which is below the SBA threshold for small agricultural service firms.

Furthermore, using confidential data on pounds handled by each handler, and the abovementioned estimated handler price per pound, the Committee reported that it is likely that at least two of the eight handlers had 2017–2018 marketing year spearmint oil sales value that exceeded the SBA threshold.

Therefore, in view of the foregoing, the majority of producers of spearmint oil may be classified as large entities and the majority of handlers of spearmint oil may be classified as small entities.

This final rule increases the assessment rate collected from handlers for the 2019–2020 and subsequent marketing years from $0.09 to $0.10 per pound of spearmint oil handled. The Committee unanimously recommended 2019–2020 marketing year expenditures of $272,850 and a $0.10 per pound assessment rate. The $0.10 per pound assessment rate is $0.01 higher than the rate for the 2018–2019 marketing year.

The Committee estimates that the industry will handle 2,205,000 pounds of spearmint oil during the 2019–2020 marketing year. Thus, the $0.10 per pound rate should provide $220,500 in assessment income. Income derived from handler assessments, and $1,650 of interest income, will be adequate to cover most of the budgeted expenses. Given the budgeted one-time $45,000 expense to upgrade the Committee's electronic recordkeeping system, the Committee anticipates needing to draw $50,700 from its monetary reserve in the 2019–2020 marketing year to fully fund all its budgeted expenses. However, the Committee expects that assessment revenue will completely cover budgeted expenses for the 2020–2021 and subsequent marketing years.

The major expenditures recommended by the Committee for the 2019–2020 marketing year include $169,000 for contracted administration by Ag Association Management, $45,000 for software/website maintenance, $30,850 for administrative expenses, $15,000 for Committee expenses, and $13,000 for market research and

development projects. Budgeted expenses for these items in the 2018–2019 marketing year were $169,000, $5,000, $35,300, $17,500, and $12,000, respectively.

The higher assessment rate is necessary to cover most of the Committee's 2019–2020 marketing year budgeted expenditures. The Committee has had to draw from its monetary reserve to partially fund program activities during the previous five marketing years and expects to draw $50,700 from the reserve in the 2019–2020 marketing year to fund a one-time $45,000 upgrade to its electronic recordkeeping system. However, the Committee believes that drawing from its financial reserve to fund operations on an on-going basis is not a sustainable strategy. Increasing the continuing assessment rate will allow the Committee to fully fund budgeted expenses, and replenish its financial reserve, beginning in the 2020–2021 marketing year.

Prior to arriving at this budget and assessment rate, the Committee considered maintaining the current assessment rate of $0.09 per pound. However, leaving the assessment rate unchanged would not have generated enough revenue to meet the Committee's 2019–2020 marketing year budgeted expenses and would have required the Committee to deplete its financial reserve to a fiscally dangerous level. Based on estimated shipments, the recommended assessment rate of $0.10 per pound of spearmint oil should provide $220,500 in assessment income. The Committee determined assessment revenue will be adequate to cover most of the budgeted expenditures for the 2019–2020 marketing year and all of the Committee's budgeted expenditures for the 2020–2021 and subsequent marketing years. Moving forward, any excess funds will be used to replenish the Committee's monetary reserve. Reserve funds will be kept within the amount authorized in the Order.

A review of historical data and preliminary information pertaining to the upcoming marketing year indicates that the average producer price for the 2019–2020 season should be approximately $15.50–18.00 per pound of spearmint oil. Therefore, the estimated assessment revenue for the 2019–2020 marketing year as a percentage of total producer revenue will be between 0.55 and 0.65 percent.

This action increases the assessment obligation imposed on handlers. While assessments impose some additional costs on handlers, the costs are minimal and distributed uniformly across all spearmint oil handlers. Some of the additional costs may be passed on to producers. However, these costs would be offset by the benefits derived by the operation of the Order.

The Committee's meetings were widely publicized throughout the Far West Spearmint Oil industry. All interested persons were invited to attend the meetings and participate in Committee deliberations on all issues. Like all Committee meetings, the March 1, 2019, meeting was a public meeting and all entities, both large and small, were able to express views on this issue. Interested persons were invited to submit comments on this rule, including the regulatory and information collection impacts of this action on small businesses.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the Order's information collection requirements have been previously approved by the OMB and assigned OMB No. 0581–0178, Specialty Crops. No changes in those requirements will be necessary because of this action. Should any changes become necessary, they will be submitted to OMB for approval.

This final rule will not impose any additional reporting or recordkeeping requirements on either small or large Far West spearmint oil handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. As noted in the initial regulatory flexibility analysis, USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this final rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

A proposed rule concerning this action was published in the **Federal Register** on May 30, 2019 (84 FR 25010). Copies of the proposed rule were provided to all Far West spearmint oil handlers. The proposal was also made available through the internet by USDA and the Office of the Federal Register. A 30-day comment period ending July 1, 2019, was provided for interested persons to respond to the proposal. One comment in support of the action was received. Accordingly, no changes will be made to the rule as proposed.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *http://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Committee and other available information, it is hereby found that this rule will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 985

Marketing agreements, Oils and fats, Reporting and recordkeeping requirements, Spearmint oil.

For the reasons set forth in the preamble, 7 CFR part 985 is amended as follows:

PART 985—MARKETING ORDER REGULATING THE HANDLING OF SPEARMINT OIL PRODUCED IN THE FAR WEST

Authority: 7 U.S.C. 601–674.

■ 2. Revise 985.141 to read as follows:

§ 985.141 Assessment rate.

On and after June 1, 2019, an assessment rate of $0.10 per pound is established for Far West spearmint oil. Unexpended funds may be carried over as a reserve.

Dated: August 13, 2019.

Bruce Summers,

Administrator, Agricultural Marketing Service.

NUCLEAR REGULATORY COMMISSION

10 CFR Part 52

[NRC–2015–0224]

RIN 3150–AJ67

Advanced Power Reactor 1400 (APR1400) Design Certification

AGENCY: Nuclear Regulatory Commission.

ACTION: Direct final rule; confirmation of effective date.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is confirming the effective date of September 19, 2019, for the direct final rule that was published in the **Federal Register** on May 22, 2019. This direct final rule amended NRC's regulations to certify the Advanced Power Reactor 1400 standard

design so that applicants or licensees intending to construct and operate an Advanced Power Reactor 1400 standard design may do so by referencing the design certification rule.

DATES: *Effective date:* The effective date of September 19, 2019, for the direct final rule published May 22, 2019 (84 FR 23439), is confirmed.

ADDRESSES: Please refer to Docket ID NRC–2015–0224 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2015–0224. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''*Begin Web-based ADAMS Search*.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *pdr.resource@nrc.gov.*
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Yanely Malave-Velez, Office of Nuclear Material Safety and Safeguards, telephone: 301–415–1519, email: *Yanely.Malave@nrc.gov* or William Ward, Office of New Reactors, telephone: 301–415–7038, email: *William.Ward@nrc.gov.* Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION: On May 22, 2019 (84 FR 23439), the NRC published a direct final rule amending its regulations in part 52 of title 10 of the *Code of Federal Regulations,* ''Domestic Licensing of Production and Utilization Facilities,'' to certify the APR1400 standard design so that applicants or licensees intending to construct and operate an APR1400 design may do so by referencing the design certification rule. In the direct final rule, the NRC stated that if no significant adverse comments were received, the direct final rule would become effective on September 19, 2019. The NRC received one comment on the direct final rule from Jeffrey A. Ciocco, available in ADAMS under Accession No. ML19176A175.

The comment was in favor of the design certification and determined to not be significant and adverse. Because no significant adverse comments were received, the direct final rule will become effective as scheduled.

Paperwork Reduction Act Statement

The direct final rule contains a new or amended collection of information subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). On July 2, 2019, NRC submitted the collection of information (3150–0236) to the Office of Management and Budget for review and approval. NRC will publish a separate notice in the **Federal Register** with the effective date of the information collection.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to a collection of information unless the document requesting or requiring the collection displays a currently valid OMB control number.

Dated at Rockville, Maryland, this 12th day of August 2019.

For the Nuclear Regulatory Commission.

Cindy Bladey,

Chief, Regulatory Analysis and Rulemaking Support Branch, Division of Rulemaking, Office of Nuclear Material Safety and Safeguards.

FEDERAL HOUSING FINANCE AGENCY

12 CFR Part 1254

RIN 2590–AA98

Validation and Approval of Credit Score Models

AGENCY: Federal Housing Finance Agency.

ACTION: Final rule.

SUMMARY: The Federal Housing Finance Agency (FHFA) is issuing a final rule on the process for validation and approval of credit score models by the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) (together, the Enterprises). The final rule defines a four-phase process for an Enterprise to validate and approve credit score models. The process begins with the Credit Score Solicitation (a solicitation by the Enterprises of applications from credit score model developers), followed by the Submission and Initial Review of Applications (an initial review by the Enterprise of submitted applications). The third phase is a Credit Score Assessment by the Enterprise, and the fourth phase is an Enterprise Business Assessment. The final rule establishes criteria for each of the four phases and includes required timing and notices for Enterprise decisions under the process.

DATES: This rule is effective: October 15, 2019.

FOR FURTHER INFORMATION CONTACT: Beth Spring, Senior Policy Analyst, Housing & Regulatory Policy, Division of Housing Mission and Goals, at (202) 649–3327, *Elizabeth.Spring@fhfa.gov,* or Kevin Sheehan, Associate General Counsel, (202) 649–3086, *Kevin.Sheehan@fhfa.gov.* These are not toll-free numbers. The telephone number for the Telecommunications Device for the Deaf is (800) 877–8339.

SUPPLEMENTARY INFORMATION:

I. Background

Section 310 of the Economic Growth, Regulatory Relief, and Consumer Protection Act of 2018 (Pub. L. 115–174, section 310) amended the Fannie Mae and Freddie Mac charter acts and the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (Safety and Soundness Act) to establish requirements for the validation and approval of third-party credit score models by Fannie Mae and Freddie Mac.

Section 310 provides that if an Enterprise elects to condition the purchase of a mortgage loan on the delivery of a borrower's credit score, that credit score must be produced by a model that has been validated and approved by the Enterprise. Section 310 imposes separate requirements on FHFA and the Enterprises. FHFA must first issue a regulation establishing standards and criteria for the validation and approval of credit score models by the Enterprises. Then, each Enterprise must publish a description of its validation and approval process that an Enterprise will use to evaluate applications from credit score model developers, consistent with the FHFA issued regulation.

Section 310 sets forth several factors that must be considered in the validation and approval process, including the credit score model's integrity, reliability, and accuracy, its historical record of measuring and

predicting borrower credit behaviors (such as default rates), and consistency of the credit score model with the safe and sound operation of the Enterprises. The validation and approval process established by the final rule addresses each of the statutory factors, as well as additional standards and criteria consistent with section 310.

On December 21, 2018, FHFA published in the **Federal Register** a notice of proposed rulemaking on the ''Validation and Approval of Credit Score Models.'' *See* 83 FR 65575. FHFA requested public comment on the proposed rule, including the standards and criteria for the validation and approval of credit score models by the Enterprises. FHFA received 60 comment letters on the proposed rule. FHFA reviewed and considered all comments received in response to the proposed rule. The final rule reflects adoption, clarifications, or changes based on the comments received. A full discussion of the adoption of certain provisions, clarifications, and changes to provisions are in the subsequent sections.

II. Major Provisions of the Final Rule

A. Validation and Approval Process

The final rule generally adopts the validation and approval process set forth in the proposed rule. The validation and approval process outlines how an Enterprise will solicit applications from credit score model developers and assess credit score models for use. An Enterprise must publish a ''Credit Score Solicitation'' describing the requirements for credit score model developers to submit applications and the criteria under which the Enterprises will evaluate the applications.

Following the ''Submission and Initial Review of Applications,'' in order for a credit score model to be approved for use, an Enterprise must complete two separate assessments. The first assessment is a ''Credit Score Assessment,'' under which an Enterprise will evaluate the credit score model for accuracy, reliability and integrity. During the Credit Score Assessment, an Enterprise will evaluate the credit score model on a standalone basis, outside the Enterprise business systems and processes.

The second assessment is an ''Enterprise Business Assessment,'' under which an Enterprise will evaluate the potential impact of using the credit score model within the Enterprise's proprietary business systems and processes. The Enterprise Business Assessment is a comprehensive evaluation of the potential impacts that using each credit score model could have on an Enterprise and the mortgage finance industry. The assessment will consider several factors leading to a decision for use by an Enterprise. Because the Enterprises' automated underwriting systems (AUS) treat credit scores differently, and because they have different risk tolerances, the Enterprise Business Assessment is designed to consider the credit score model's impact on an Enterprise's proprietary business use and risk management needs.

The final rule clarifies that an Enterprise will submit a proposed approve or disapprove determination for each application to FHFA for review, and FHFA will make its determination taking into account the information provided by the Enterprise along with any other factors that FHFA determines appropriate.

B. Certification of Conflicts-of-Interest

The final rule does not adopt the proposed conflict-of-interest certification requirement. The proposed rule would have required credit score model developers to demonstrate, upon applying for consideration, that there was no common ownership with a consumer data provider that has control over the data used to construct and test the credit score model.

Under the final rule, any credit score model developer is able to submit an application in response to a Credit Score Solicitation, provided it meets the other requirements for applicants set forth in the Credit Score Solicitation.

While the final rule permits credit score model developers that meet solicitation requirements to submit applications, the Enterprises will consider market and competition impacts as part of the Enterprise Business Assessment. This may include market or competition impacts related to the ownership structure of the credit score model developer and its relationship to other market participants. The Enterprise's consideration of market and competition impacts is consistent with the normal risk assessment and evaluation that an Enterprise would conduct with respect to other potential third-party providers or counterparties.

C. No Required Use of Credit Scores

The final rule provides that an Enterprise is not required to use third-party credit scores for any business purpose. Section 310 does not require an Enterprise to use a third-party credit score model for any part of its business operations or purchase decisions. However, if an Enterprise conditions its purchase of mortgages on the provision of a credit score, section 310 requires that the score must be derived from a model that has been validated and approved in accordance with section 310 and this final rule. The validated and approved credit score must be used in all of the Enterprise's purchase-related systems and procedures that use a credit score.

The final rule contemplates that if in the future an Enterprise no longer uses third-party credit scores in any purchase-related systems or procedures, the Enterprise would not be subject to the requirements in the final rule. Conversely, if an Enterprise uses credit scores as a consideration in setting the price for loans it purchases, for example by using Loan Level Price Adjustments (LLPAs) or Delivery Fees based on credit score and loan-to-value (LTV) ratios, the Enterprise is subject to the requirements of the final rule, even if the Enterprise no longer uses credit scores in any other manner.

If a new credit score model is approved, the final rule permits an Enterprise to replace the existing credit score model or to continue to use the existing credit score model in addition to a newly approved credit score model. Section 310 expressly permits replacement of one validated and approved credit score model with another validated and approved credit score model, and does not establish any standard for replacement, other than the models must be validated and approved. Neither section 310 nor the final rule creates any right to or expectation of continued, future, or permanent use of any credit score model by an Enterprise, even if the model has been validated and approved.

D. Current Credit Score Model in Use

Fannie Mae and Freddie Mac currently require lenders to provide credit scores derived from the Classic FICO credit score model for each loan delivered to the Enterprises.[1] The final rule clarifies how Classic FICO will be evaluated under the validation and approval process. The final rule establishes criteria for the initial Credit Score Assessment that permit an Enterprise to evaluate Classic FICO on an expedited basis, if necessary, to meet statutory timeframes. This approach allows an Enterprise to complete the validation and approval process for the credit score model currently in use by the Enterprises and the mortgage

[1] The Enterprises require delivery of FICO 5 from Equifax, FICO 4 from TransUnion, and FICO Score 2 from Experian, which are collectively referred to as ''Classic FICO.''

finance industry (Classic FICO). This evaluation may occur prior to a determination on any other application(s) received in response to the initial Credit Score Solicitation.

While the final rule makes no predetermination of which applications will be approved, FHFA expects that Classic FICO is likely to meet the applicable testing criteria based on its history of use. However, FHFA acknowledges that approving a credit score model in use for the past decade would not satisfy the intent of section 310 that the Enterprises consider credit score models developed after Classic FICO. FHFA expects that the Enterprises will also evaluate applications received in response to the initial Credit Score Solicitation and that the Enterprises may submit to FHFA a proposed determination to approve one or more of those credit score models for use, either to replace Classic FICO or in addition to Classic FICO.

III. Summary of Comments Received and FHFA Responses

In response to the proposed rule, FHFA received 60 comment letters during the 90-day comment period.[2] Comments were received from all segments of the mortgage industry, including: Mortgage insurers, mortgage originators, Mortgage Backed Securities (MBS) and Credit Risk Transfer (CRT) investors, technology vendors, housing advocates, industry trade groups, Congressional members, and other interested stakeholders. FHFA considered all comments received in response to the proposed rule. While the final rule adopts most of the provisions from the proposed rule, FHFA has incorporated a number of changes. A discussion of FHFA's rationale for all components of the final rule, including responses to significant issues raised by comment letters, is set forth below.

A. Validation and Approval Process and Timelines

FHFA proposed that the validation and approval process have four phases, with the first phase being a solicitation for applications from credit score model developers, the second phase being the submission and initial review of applications, the third phase being a Credit Score Assessment, and the last phase being an Enterprise Business Assessment. The final rule adopts these four phases as proposed and establishes minimum standards and criteria for each phase. Consistent with section 310 and the proposed rule, the final rule permits an Enterprise to add to the standards and criteria for all four phases of the process. In general, comments received on the four phases in the proposed rule were supportive of this approach.

The proposed rule also set out timelines for the completion of each phase of the validation and approval process. Section 310 requires that an Enterprise provide notice of a ''determination'' to an applicant within 180 days from receipt of a complete application, with two possible 30-day extensions. While recognizing that statutory provision, the proposed rule set forth timelines that reflect the length of time FHFA believes, based on similar analysis conducted in 2015, is necessary for an Enterprise to complete the acquisition of consumer credit data for testing of each credit score model and the empirical and business analysis of each credit score. FHFA received a few comment letters that supported the need to separate the Credit Score Assessment from the Enterprise Business Assessment. Commenters were split on the length of time proposed for each phase. Some commenters stated that the maximum total time allowed for completion of the process was too long.

The final rule adopts the four phases and the associated timeframes as proposed. Specifics of the four phases are explained in more detail below.

1. Proposed and Final Rule

Under both the proposed rule and the final rule, each Enterprise must publish a Credit Score Solicitation as part of the solicitation phase of the process. The Credit Score Solicitation will specify the opening and closing dates of the solicitation time period during which the Enterprise will accept applications from credit score model developers. FHFA expects that the Credit Score Solicitation will include a description of the information that must be submitted with the application; instructions for submitting the application; a description of the Enterprise process for obtaining data for testing; a description of the Enterprise's process/criteria for conducting the Credit Score Assessment and the Enterprise Business Assessment; and other requirements established by the Enterprise consistent with section 310.

In the Submission and Initial Review of Applications phase, the Enterprise will determine whether each application submitted by a credit score model developer is complete. An application would be complete only after the Enterprise has received all required fees and information from the applicant as well as any data that must be obtained from a third party. If an application is not complete, the Enterprise must notify the applicant and provide an opportunity for the applicant to submit any information that the Enterprise determines necessary for the evaluation of the application.

During the Credit Score Assessment phase of the process, each credit score model will be assessed for accuracy, reliability, and integrity, independent of the use of the credit score in the Enterprise's systems. The Credit Score Assessment will also include any other requirements established by the Enterprise.

During the Enterprise Business Assessment phase, which is the fourth and final phase of the process, an Enterprise will assess the credit score model in conjunction with the Enterprise's business systems and processes. The Enterprise must assess the accuracy and reliability of credit scores when used within the Enterprise's systems. The Enterprise must assess possible impacts on fair lending and on the Enterprise's operations and risk management. An Enterprise also must consider impacts on the mortgage finance industry, assess competitive effects, conduct a third-party provider review, and perform any other evaluations established by the Enterprise as part of the Enterprise Business Assessment.

2. Comments Received and Final Rule Rationale

Commenters were generally supportive of the proposed four phases, and the final rule adopts this approach. Based on the comments received and prior work related to analyzing credit score models, the four-phase approach is operationally practical. The four-phase approach is also consistent with the statutory requirements of section 310.

Some commenters stated that the proposed timeline for the solicitation, review and assessment of applications was too long. One commenter stated that the ''long, drawn out process does not encourage the competition contemplated by Sec. 310.'' On the other hand, the Enterprises commented that they support the four-phased approach, and the timelines outlined in the proposed rule. The timelines in the proposed rule were informed by the work related to assessing credit score models conducted by FHFA and the Enterprises from 2015 to 2018 pursuant to FHFA's Conservatorship Scorecards. The final rule adopts the proposed timelines associated with completion of each phase of the process because they

[2] *https://www.fhfa.gov/SupervisionRegulation/Rules/Pages/Validation-and-Approval-of-Credit-Score-Models.aspx.*

appropriately allow for completion of the provisions required by section 310. The timelines allow the Enterprises an appropriate amount of time to process applications, and they reasonably reflect prior FHFA and Enterprise experience regarding the amount of time needed to test and evaluate credit score models. The timelines adopted in the final rule reflect the maximum number of days allowable to complete the entire process, and in FHFA's judgment, are necessary to reasonably achieve the objectives of the statute.

The timeframes set out in the final rule do not address the time it will take the industry to prepare for a change in credit score requirements. One commenter stated consideration of any credit score model should include ''the time, effort, complexity, uncertainty, and costs (direct and indirect) to the mortgage industry of alternative decisions.'' As discussed in the proposed rule, implementation timing is not addressed in section 310. Implementation of any change to existing credit score requirements will have significant operational and cost implications for the Enterprises and the mortgage finance industry. FHFA expects that full implementation of any change to the Enterprise credit score requirements will take the industry as long as 24 months after a new credit score model is approved. The final rule does not address how an Enterprise's credit score requirements might change following the approval of a new credit score model. How an approved credit score model(s) is implemented, including the timeframe for the Enterprises to transition from one credit score to another score or scores, is best addressed outside of the final rule. FHFA will provide direction to the Enterprises on implementation issues consistent with applicable law.

Some comment letters stated that the validation and approval phases should be done simultaneously. Under the final rule, the Credit Score Assessment and Enterprise Business Assessment phases may be conducted sequentially, or in unusual or unique circumstances such as the initial solicitation, simultaneously. In some cases, an Enterprise may want to have the results of the Credit Score Assessment before initiating the Enterprise Business Assessment. In other cases, an Enterprise may conduct some or all of the Enterprise Business Assessment at the same time it is conducting the Credit Score Assessment. In all cases, in order for a credit score model to be approved for use, the credit score model would have to pass both a Credit Score Assessment and an Enterprise Business Assessment. As discussed in more detail below, the final rule clarifies that FHFA's review of a proposed determination by an Enterprise must include a decision by FHFA to either approve or disapprove the proposed determination. Under the final rule, if an Enterprise finds that an application should be approved, the Enterprise must submit a proposed determination recommending approval of a credit score model to FHFA at the conclusion of the Enterprise Business Assessment phase. However, the credit score model will only be considered validated and approved for purposes of the regulation and section 310 if an Enterprise makes a final determination to approve the credit score model after FHFA has completed its review.

With regard to communication with applicants during the Enterprise review process, one commenter noted the possible need for additional interaction with applicants concerning issues in their applications. As noted above, the final rule provides for an Enterprise to request supplemental information from the applicant if necessary, which will allow the Enterprises to have those additional interactions.

Several comments were in favor of the Enterprises conducting a joint Credit Score Assessment. The comments that supported a joint assessment indicated that it is likely to lead to a more efficient process. The final rule does not prohibit the Enterprises from conducting a joint Credit Score Solicitation and/or Credit Score Assessment. The Enterprises may choose to issue a joint Credit Score Solicitation and to collaborate on the Credit Score Assessment of credit score models outside of their automated underwriting systems. A joint approach may minimize costs and operational burdens with these phases. However, the Enterprises will have to consider each credit score model that passes the Credit Score Assessment in an independent Enterprise Business Assessment because of differences in their respective business systems and processes.

B. Alignment of Enterprises

The preamble to the proposed rule stated that FHFA may direct the Enterprises to align their assessment processes or their decisions on which credit score models to approve. The final rule includes three separate provisions that FHFA may use to direct the Enterprises at different stages of the validation and approval process. The final rule does not itself require the Enterprises to align their processes or outcome decisions. This approach is consistent with the proposed rule in providing flexibility for FHFA and the Enterprises to ensure that the Enterprises are able to respond appropriately to the primary market and to their own business requirements and objectives, as well as to manage their operations in a manner that is safe and sound.

1. Proposed Rule

The proposed rule provided for FHFA review at two points in the validation and approval process. First, the proposed rule required each Enterprise to submit its Credit Score Solicitation for FHFA review before making it publicly available. The proposed rule stated that FHFA could approve or disapprove the Credit Score Solicitation, and may impose any appropriate terms, conditions, or limitations on its approval. Second, the proposed rule would have required each Enterprise to notify FHFA of any decision to approve or disapprove a credit score model application prior to an Enterprise's notification to the applicant or the public. The preamble to the proposed rule indicated that this notice requirement would provide FHFA with an opportunity to make any determinations or take any steps appropriate in FHFA's capacity as conservator or as safety and soundness regulator with respect to changes, updates to, or replacement of any credit score model, including alignment of outcomes.

2. Comments Received

FHFA received several comments that either supported alignment of the Enterprises or expressed concern that the rule would permit the Enterprises to approve for use different credit score models. For example, one commenter stated that it is necessary and appropriate for FHFA to align Enterprise usage of credit scores to ensure that Fannie Mae and Freddie Mac securities are as homogeneous as possible. Other commenters emphasized the potential cost and operational impacts if the Enterprises do not align on which credit scores they require.

FHFA also received comments on the impact that alignment of the Enterprise credit score requirements could have on FHFA regulations such as the Enterprise capital requirements (Conservatorship Capital Framework) and other Enterprise policies, such as the Private Mortgage Insurer Eligibility Requirements (PMIERs). For example, one commenter noted that credit scores are used by the mortgage insurance industry ''in a variety of ways, including to determine borrower eligibility, pricing, and to calculate the amount of

capital required to comply with the Enterprises' capital and operational standards for [private mortgage insurers].'' Two commenters raised a concern about the Enterprises using different credit score models to assess the creditworthiness of borrowers, which they stated could raise the risk of a divergence in the performance of loans collateralizing their mortgage backed securities, potentially causing prepayment speeds to differ in the Uniform Mortgage Backed Security (UMBS). Commenters also noted that any change in the credit score model would require other policies and requirements such as PMIERs and the Enterprise capital requirements to be recalibrated based on the new credit score model.

3. Rationale for Final Rule

While the final rule does not require the Enterprises to align on processes or outcomes related to validation and approval of credit score models, the final rule permits FHFA to require alignment of the Enterprises on any aspects of the validation and approval process, including which credit score model or models would be approved for use. Based on the comments received and FHFA's own assessment of potential impacts, it is likely that FHFA would have to consider whether the Enterprises should align their credit score requirements, whether the Enterprises remain in conservatorship or not. The final rule expands on the proposed rule provisions for FHFA review at different stages of the validation and approval process to provide clarity for applicants and the Enterprises on how FHFA, as conservator or regulator, may require alignment of the Enterprises.

As stated above, the final rule expands on three provisions FHFA may use to direct the Enterprises at different stages of the validation and approval process to address alignment. First, the final rule maintains the proposed provision for FHFA review of the Enterprise Credit Score Solicitation. As in the proposed rule, the final rule states explicitly that FHFA may approve or disapprove the Credit Score Solicitation and may impose any terms, conditions, or limitations on its approval. This will allow FHFA to require an Enterprise to make any changes that FHFA determines appropriate, including any changes that may be necessary to align the respective Enterprise processes.

Second, the final rule adds a new provision for FHFA to undertake an evaluation concurrent with the 240-day Enterprise Business Assessment phase. FHFA's evaluation during the Enterprise Business Assessment phase will focus on potential impacts on other regulations and aligned Enterprise policies. This evaluation could include how the Enterprise use of credit scores may impact the PMIERs, the UMBS regulation, CRT transactions, and the Enterprise capital requirements. For example, under the PMIERs, the risk-based required asset amounts for mortgage insurers are based on factors including the original LTV ratio of the insured loan, the original credit score for the loan, the loan vintage, and other factors. A change to the credit score requirements of the Enterprises would require an update to the PMIERs requirements to reflect a new credit score model.

FHFA's evaluation during the Enterprise Business Assessment will provide an opportunity for FHFA to determine the feasibility of implementing multiple credit score models. FHFA may make this decision in its capacity as conservator under existing FHFA authorities or as safety and soundness regulator under the approval authority provided by this final rule. For example, FHFA may consider the impact on Enterprise loan pricing if the Enterprises permit the use of more than one credit score model by lenders. FHFA may require the Enterprises to maintain a single credit score model if the secondary market liquidity were expected to decline if multiple credit score models were permitted, or if FHFA determines there are other policies or regulations that require alignment on credit score model requirements.

Finally, the final rule revises the proposed provision regarding prior notice to FHFA of an Enterprise determination based on the Enterprise Business Assessment. The proposed rule provided for 45-day prior notice to FHFA of any determination by an Enterprise on an application. This would have required an Enterprise to make an approval determination and submit that approval determination to FHFA for review. The preamble to the proposed rule indicated that FHFA could take appropriate steps in FHFA's capacity as conservator or as safety and soundness regulator in response to the prior notice, but the proposed rule did not explicitly state that FHFA could approve or disapprove the Enterprise determination at this stage.

The final rule provides that an Enterprise must submit a proposed determination to FHFA. FHFA will review the Enterprise proposal and either approve it or disapprove the proposed determination. The final rule provides that FHFA must approve or disapprove the Enterprise's proposed determination during the 45-day prior notice period. The requirement for FHFA approval or disapproval will provide a mechanism for FHFA to ensure that the Enterprises reach aligned decisions on which credit score model or models to approve, if FHFA determines that alignment of the Enterprises is appropriate.

FHFA acknowledges the concerns raised by commenters about the potential costs and complexity that may arise if the Enterprises follow different processes, apply different criteria, or reach different decisions on which credit score model(s) to use and how they would be used. However, the final rule is flexible enough to allow FHFA to require alignment in areas where FHFA determines alignment is appropriate, and to allow the Enterprises to be different in other areas. For example, Fannie Mae and Freddie Mac currently treat credit scores in different ways in their respective AUSs. Fannie Mae uses credit scores as an eligibility threshold for its AUS, while Freddie Mac uses credit scores as one factor in the risk assessment for its AUS. As a result, in implementing the final rule, the Enterprises may consider different factors in their respective Enterprise Business Assessments based on how they each use credit scores in their own business systems.

The final rule does not require the Enterprises to use identical processes for evaluating credit score models, and the final rule does not require the Enterprises to reach identical decisions on which credit score models to approve through the validation and approval process.

However, the final rule provides for several points at which FHFA may consider whether a greater or lesser degree of alignment is needed to address the needs of the mortgage market or the statutory mission of the Enterprises, including to promote access to mortgage credit throughout the Nation. For example, FHFA may exercise this discretion to enhance processing efficiency in the mortgage market, to enhance the safety and soundness of the Enterprises, or to reduce costs for lenders, borrowers, and others.

C. No Requirement for Conflicts-of-Interest Certification

The proposed rule would have required each applicant to provide a certification regarding conflicts of interest as part of its application. The final rule does not adopt this requirement and instead permits credit score model developers to submit applications to the Enterprises in

response to a Credit Score Solicitation, regardless of the ownership structure of the credit score model developer. However, the final rule permits consideration of conflicts of interests as part of a comprehensive Enterprise Business Assessment.

1. Proposed Rule

The proposed rule required that a credit score model developer certify in its application that the credit score model developer has no common ownership or affiliation with the owner of data used to construct the credit score model. This conflicts-of-interest certification was proposed to address concerns about vertical integration of the nationwide consumer reporting agencies (CRAs), and to address current and potential future affiliations between data providers and analytic companies that own algorithms used to generate credit scores. For example, VantageScore Solutions, LLC is jointly owned by the three nationwide CRAs. The CRAs also own, price, and distribute consumer credit data and credit scores. This type of common ownership could in theory negatively impact competition in the marketplace.

The proposed rule discussed concerns that the CRAs could potentially use their position in the marketplace in a manner that favors VantageScore Solutions, LLC over its current and future competitors. The proposed rule would have addressed these concerns by prohibiting common ownership or control of a credit score model developer and the owner of the consumer credit data that is needed to construct the model and to generate the credit scores.

The proposed rule also required each applicant to provide information about its market experience and financial capacity. Such information included a detailed description of the credit score model developer's corporate structure and business relationships, governance structure, and past financial performance, including audited financial statements for the preceding three years.

2. Comments Received

FHFA received numerous comments on the proposed conflicts-of-interest certification, both supporting the proposed restriction and opposing the proposed restriction. Commenters against the proposed conflicts-of-interest certification raised three main arguments. First, several commenters stated that the proposed conflicts-of-interest certification requirement was not consistent with the spirit or letter of section 310. One commenter stated that ''the Proposed Rule directly conflicts with the spirit and intent of the Credit Score Competition provisions within the Economic Recovery, Regulatory Relief and Consumer Protection Act (S.2155); where Congress recognized that competition is vital in commercial markets and therefore required that the FHFA allow existing credit scoring models to compete with the incumbent scoring company.''

Second, some commenters stated that open competition among credit score model developers would lead to improved credit score models and would benefit borrowers. One commenter stated that ''[f]or over a decade, VantageScore LLC has competed and provided demonstrable value in other lending markets without any tangible harm to its rivals, and most importantly, consumers have benefitted from greater access to financial opportunity.''

Third, commenters argued that the proposed conflicts-of-interest certification is unnecessary because antitrust laws already prohibit the types of anti-competitive behavior that the conflicts-of-interest certification was intended to prevent. One commenter stated that ''[t]he antitrust statutes are very clearly designed to prevent exactly the type of anticompetitive behavior the FHFA is concerned about and if necessary, those statutes may be readily invoked to provide relief.''

FHFA also received comments supporting the proposed conflicts-of-interest certification. These comments expressed concerns about the potential negative effects on competition that may result if the owner of consumer credit data needed to develop competing credit score models and distribute credit scores into the marketplace also owns or controls a credit score model developer. One comment stated that ''[t]he Enterprises must be required and allowed to judge competing scoring approaches and their effects on reliability and performance based solely on the merits, without the inevitable distortions brought about by data owners' simultaneous control of the data, the credit score model, and the means of credit score distribution.''

Another commenter indicated that the proposed independence requirement is needed to promote open and fair competition among credit score developers, stating that the proposed certification requirement ''shows serious consideration for ensuring open and fair competition in the submission and evaluation of new credit scoring models that is welcome and needed.'' Another commenter suggested that the competitive concerns about common ownership could be mitigated if the CRAs transferred their contractual control of the credit score distribution channel and pricing. Commenters supporting independence of credit score model developers also argued that there is the potential for competitive harm resulting from vertical integration of credit score model developers and the CRAs that own the data used to construct and test such models.

Although not addressed in the proposed rule, some commenters expressed support for other changes that could foster competition. For example, some commenters supported an approach that would allow lenders to choose among multiple validated and approved credit scores. Opposing this view were commenters expressing concerns about adverse selection and impact on investors if lenders were permitted to select the credit score used to underwrite a borrowers mortgage.

A number of commenters also noted that increased competition and improvements to credit score models may result from adopting newer data types and sources. For example, some commenters supported the use of data outside of the CRAs, such as rental and telecommunications data. While FHFA believes there are other consumer data sources that could potentially be useful, the proposed and final rule do not address, or create any provision related to, required use of alternative data consistent with section 310.

3. Rationale for Final Rule

The final rule does not include the proposed conflicts-of-interest certification requirement. Instead, the final rule permits credit score model developers to submit applications for consideration by the Enterprises, without having to demonstrate that there is no affiliation or common ownership of the credit score model developer with data provider(s). The independence requirement was intended to encourage additional credit score developers to enter the mortgage marketplace. The proposed rule reflected concerns that the CRAs lacked an incentive to support new entrants because of their ownership of VantageScore Solutions, LLC. However, FHFA recognizes that there are many other factors that may affect the potential entrance of new credit scoring companies into the industry.

Despite the concerns raised by some commenters about potential impacts on competition, FHFA has concluded that allowing all credit score model developers to submit applications is more consistent with section 310, which does not prevent any credit score model

from being considered for potential use in the mortgage market. Therefore, the final rule does not require a credit score model developer to provide a conflicts-of-interest certification with its application.

While all credit score model developers are permitted to apply for consideration regardless of ownership structure, the final rule adopts the proposed requirement that a credit score model developer provide all information necessary for an Enterprise to evaluate the credit score model developer. Such information may include relevant experience of the applicant and financial capacity of the applicant. The final rule requires, as part of the Enterprise Business Assessment, evaluating whether use of a credit score model could have an impact on competition in the industry. The Enterprise must consider whether such impact is due to any ownership or other business relationship between the credit score model developer and any other institution. The assessment of competitive effects is discussed in more detail below.

D. Frequency of Solicitation of Applications

The proposed rule provided that FHFA would require the Enterprises to solicit applications from credit score model developers at a minimum once every seven years, unless FHFA determined that a solicitation should occur more or less frequently. The proposed minimum frequency for solicitations was based on prior feedback from the industry on the significant cost and operational complexity of updating the credit score required by the Enterprises. For example, responding to FHFA's December 2017 Request for Information (RFI), representatives from the mortgage insurance industry requested 24 months to transition from the current credit score to a new credit score.[3] However, several comments on the proposed rule stated that seven years is too long, and that the seven years would not align with the rate of innovation or advances in technology and data.

The final rule provides that FHFA will require the Enterprises to open a solicitation period as FHFA determines necessary. FHFA may require a new solicitation on its own initiative or in response to a request from any party, including an Enterprise. The final rule requires FHFA to make a determination on whether it is necessary for the Enterprises to open a solicitation for credit score model developers to apply for consideration.

1. Proposed Rule

The proposed rule stated that FHFA would require the Enterprises to solicit applications from credit score model developers at least once every seven years, unless FHFA determined that a solicitation should occur more or less frequently. FHFA would establish the solicitation requirement by notice to the Enterprises, which would include: (1) A requirement for the Enterprises to submit a Credit Score Solicitation to FHFA for review; (2) a deadline for submission of the Credit Score Solicitation to FHFA; and (3) a timeframe for the solicitation period in which the Enterprises would accept applications.

In connection with each required solicitation, the proposed rule would have required an Enterprise to submit to FHFA a Credit Score Solicitation including: (1) The opening and closing dates of the solicitation time period during which the Enterprise will accept applications from credit score model developers; (2) a description of the information that must be submitted with an application; (3) a description of the process by which the Enterprise would obtain data for the assessment of the credit score model; (4) a description of the process for the Credit Score Assessment and the Enterprise Business Assessment; and (5) any other requirements as determined by the Enterprise.

2. Comments Received

FHFA received comments expressing a range of views on the appropriate frequency for solicitation of new credit score models. One commenter stated that ''[w]ith respect to the frequency of the validation and approval process, the proposed rule contemplates FHFA requiring Enterprise solicitation of new credit score models every seven years. This cycle allows sufficient time for the completion of each validation and approval process, though it may not allow the Enterprises to be as responsive as possible when new technologies or data sources emerge.'' The commenter therefore recommended that ''FHFA more frequently evaluate whether a new solicitation would provide significant benefits to the market, such that it is prepared to begin the process earlier than the seven year threshold if warranted.'' However, another commenter cautioned that ''frequent and radical changes to credit score models may raise the cost and complicate implementation even more . . .''

3. Rationale for Final Rule

The final rule provides that FHFA will determine the frequency of credit score solicitations in its discretion. FHFA may initiate a solicitation at its own initiative or in response to a request submitted to FHFA by any person, including an Enterprise. While the final rule does not include the proposed baseline frequency of once every seven years, the final rule approach is consistent with the proposed rule, which would have allowed FHFA to require a solicitation either more or less frequently.

Recognizing that comments on the proposed rule encouraged FHFA to consider opening solicitations more frequently, the final rule does not include a seven-year solicitation cycle. Instead, the final rule allows FHFA to establish the frequency of the solicitation in response to the need and justification from either the industry or an Enterprise. FHFA can open the solicitation window as frequently or as infrequently as necessary, assuming there is reasonable justification to do so.

The final rule strikes a balance between the comments concerned about the potential cost and impact of frequent solicitations and the comments concerned that infrequent solicitations would not be responsive to advances in technology and data. The validation and approval process is potentially time-consuming and costly, and the implementation of any changes to the credit score model in use by the Enterprise and the industry would entail substantial time, cost, and effort by many parties. For that reason, it would be impractical and too costly to require the Enterprise to solicit applications on a rolling or annual basis. At the same time, FHFA recognizes that a seven-year cycle may be too long to take into account innovations and advances in technology and data. FHFA may initiate solicitations more or less frequently depending on technology, improved data, or other compelling reasons to do so.

E. Fair Lending Compliance and Certification

The proposed rule included fair lending compliance provisions in two phases of the credit score model validation and approval process. First, the proposed rule would have required a certification by the credit score model developer in the application phase. Second, the proposed rule would have required the Enterprises to assess fair lending impacts during the Enterprise Business Assessment. The final rule

[3] *https://www.fhfa.gov/PolicyProgramsResearch/Policy/Pages/Credit-Scores.aspx.*

retains both of these fair lending provisions. The final rule also adds a requirement that the Enterprises evaluate the potential impact of using a particular credit score model on access to credit.

1. Proposed Rule

The proposed rule included two provisions related to fair lending. First, in the application phase, the credit score model developer would have been required to certify that no characteristic that is based directly on or is highly correlated solely with a classification prohibited under the Equal Credit Opportunity Act (15 U.S.C. 1691(a)(1)), the Fair Housing Act (42 U.S.C. 3605(a)), and the Safety and Soundness Act (12 U.S.C. 4545(1)) was used in the development of the credit score model or was used as a factor in the credit score model to produce credit scores. The proposed rule would have required the credit score model developer to provide information in its application on any fair lending testing and evaluation of the model conducted. Second, in the Enterprise Business Assessment phase, the Enterprises would have been required to evaluate the fair lending risk and fair lending impact of the credit score model and credit scores produced by it in accordance with standards and requirements related to federal fair lending laws.

2. Comments Received and Final Rule Rationale

Comments on the proposed fair lending provisions were generally supportive of both the proposed certification requirement in the application phase and the proposed fair lending assessment in the Enterprise Business Assessment. Some commenters recommended that FHFA expand the fair lending requirements to include additional requirements for fair lending testing. Commenters also supported adding as part of the Enterprise Business Assessment a requirement to assess potential impacts on access to credit from any change to the credit score model requirements of the Enterprises.

The final rule retains fair lending compliance provisions in both the application and Enterprise Business Assessment phases and adds a requirement that the Enterprises consider potential impacts on access to credit in response to feedback received in the comments.

The compliance and certification requirements in the application phase of the final rule are the same as the proposed rule. Some commenters suggested requiring fair lending testing by the credit score model developer in the application's fair lending certification.

The final rule requires each application to include a certification that no characteristic used in the development of the credit score model or as a factor in the credit score model to produce credit scores is based directly on or is highly correlated solely with a prohibited classification. In the final rule, each application must address compliance of the credit score model and credit scores produced by it with federal fair lending requirements and provide information on any fair lending testing and evaluation of the model conducted. FHFA expects credit score model developers to have a sufficient basis for making the certification and addressing the application requirement, but the final rule does not prescribe or require any particular method of evaluation or testing.

Some commenters proposed inserting ''current'' before ''federal fair lending requirements'' out of a concern that federal fair lending requirements may change due to rulemakings, acts of Congress, and court decisions. FHFA recognizes that applicable legal standards, including the Fair Housing Act, Equal Credit Opportunity Act, and Safety and Soundness Act, may change over time. The proposed rule was not limited to federal fair lending requirements as of a particular date, and the final rule does not include any change on this point.

The final rule includes the proposed fair lending assessment requirements in the Enterprise Business Assessment phase. Commenters supported the fair lending compliance component in the Enterprise Business Assessment. One commenter recommended including disparate impact testing in the fair lending assessment. The final rule refers to the standards and requirements of applicable fair lending authorities. The final rule itself does not describe the compliance standards for those authorities. However, the rule does require an evaluation of the fair lending risk and fair lending impact associated with those fair lending authorities, including identification of potential impact, comparison of the new credit score model with any credit score model currently in use, and consideration of potential methods of using the new credit score model.

The proposed rule also requested comments on whether the Enterprise Business Assessment should consider whether the credit score model may have any impact on access to mortgage credit. Commenters were supportive of requiring this analysis. Some commenters stated that access to mortgage credit is a critical component of building wealth that has historically been limited on the basis of protected factors. The final rule requires an Enterprise to consider possible impacts on access to credit as part of the Enterprise Business Assessment.

F. Qualifications of Credit Score Model Developer

The proposed rule would have required that the Enterprises review, in accordance with their third-party provider management policies and procedures, the corporate structure, governance structure, and past financial performance of the credit score model developer, including three years of audited financial statements to demonstrate financial strength of the credit score model developer. As discussed previously, the final rule includes the proposed requirements on the evaluation of the financial strength of the credit score model developer, but the final rule does not include the proposed application requirement for three years of audited financial statements. FHFA expects that the Enterprises will consider any guidance that FHFA has issued in its supervisory capacity to the regulated entities on the oversight of third-party provider relationships.

1. Proposed Rule

The proposed rule would have required that each application include any information that an Enterprise may require to evaluate the credit score model developer (*i.e.,* relevant experience and financial capacity). Such information would include a detailed description of the credit score model developer's: (i) Corporate structure, including any business relationship to any other person through any degree of common ownership or control; (ii) governance structure; and (iii) past financial performance, including audited financial statements for the preceding three years.

2. Comments Received

Several commenters opposed the proposed requirement that applicants provide audited financial statements for the preceding three years, stating that such a requirement was arbitrary or unreasonable and the Enterprises should manage their vendor risk through their existing third-party management process. Several commenters raised concerns about the burden associated with providing three years of audited financial statements.

One commenter stated that ''since credit score model developers are not counterparties, there is no need to require an assessment of developers at the rigorous level proposed.''

3. Rationale for Final Rule

The final rule does not adopt the proposed three year audited financial statements requirement. The final rule is less prescriptive than the proposed rule in establishing criteria for assessing the financial strength of credit score model developers. The final rule requires an applicant to submit information related to its organization and financial strength in its application, and the final rule requires an Enterprise to assess the financial strength of the credit score model developer as part of the Enterprise Business Assessment. However, the final rule does not include the proposed requirement that a credit score model developer provide three years of audited financial statements. This change will provide more flexibility for an Enterprise to determine what information is necessary for its review and potentially more flexibility to applicants submitting such information.

FHFA has provided supervisory guidance to the Enterprises on managing risks associated with third-party providers. The guidance describes FHFA's supervisory expectations, including that an Enterprise review audited financial statements, equivalent financial information, or other evidence of creditworthiness and financial viability. This review should consider whether the third-party provider will be able to continue to perform its role for the foreseeable future. The level of review, and documentation required, will vary depending on the financial risk to an Enterprise and/or the viable alternatives to the third-party provider.

Effective risk management of third-party provider relationships is essential to the safe and sound operations of the Enterprises. It is not necessary for the final rule to reference guidance that is already applicable to the Enterprises or to impose specific requirements related to third-party provider financial information. FHFA expects the Enterprises to consider applicants in accordance with any applicable FHFA guidance on the financial strength of third-party providers that is in effect at the time of the relevant Credit Score Solicitation.

The final rule also permits the Enterprises to establish additional requirements for qualifications of credit score model developers. The Enterprises are required to include any such additional requirements in the Credit Score Solicitation, and those requirements are subject to FHFA review and approval as discussed above.

G. Demonstrated Use

The proposed rule would have required an applicant to demonstrate use of the credit score by creditors to make lending decisions. The proposed rule would not have established a standard for meeting the demonstrated use component, but permits an Enterprise to address criteria for demonstrating use in its Credit Score Solicitation. The final rule adopts the same approach.

1. Proposed Rule

The proposed rule would have required the applicant to demonstrate use of its credit score model by creditors to make credit decisions. The requirement was designed to ensure that all credit score models considered by an Enterprise are used or employed by lenders. The proposed rule discussed various options for how an applicant might demonstrate use (*e.g.,* testimonials by non-mortgage and/or mortgage lenders).

2. Comments Received

Most commenters supported the proposed requirement that applicants demonstrate use of the credit score by creditors to make credit decisions. One commenter suggested that this requirement could be expanded to require ''substantial use in originating and securitizing consumer credit products of the same credit quality as the conventional, conforming mortgage loans that the Enterprises purchase and securitize.'' In addition, commenters encouraged FHFA to include in the final rule an ''objective and quantifiable standard of substantial use.'' One commenter stated that while the demonstrated use requirement ''may impede innovation,'' the Enterprise pilot programs could engage ''untested'' credit scores.

3. Rationale for Final Rule

The final rule requires an applicant to demonstrate use of the credit score by creditors to make credit decisions. The final rule does not establish a standard for meeting the demonstrated use component, but permits an Enterprise to address criteria for demonstrating use in its Credit Score Solicitation. FHFA acknowledges that requiring credit score models to demonstrate use in making credit decisions may limit the number of applications submitted to the Enterprises. This concern is partially addressed by the final rule provision permitting pilot programs. The availability of pilot programs will be an essential vehicle for new credit scores to demonstrate their performance history. The provisions related to pilot programs are discussed in more detail below.

H. Options for Evaluating Accuracy Test Results

A credit score model is accurate if it produces a credit score that appropriately reflects a borrower's propensity to repay a mortgage loan in accordance with its terms, permitting a credit score user to rank order the risk that the borrower will not repay the obligation in accordance with its terms relative to other borrowers. The accuracy standard is measured by statistical testing. The final rule adopts a transitional approach to evaluating the results of the statistical testing.

Under the transitional approach, one standard for accuracy would be applied to the initial Credit Score Assessment undertaken by an Enterprise, and another standard would be applied to subsequent Credit Score Assessments in response to a future solicitation. The transitional approach will require the Enterprises to apply the same standard to all applications received in response to the initial solicitation. This transitional approach will permit an Enterprise to assess the score currently in use, Classic FICO, pending a determination on any other applications received by the Enterprise in response to the initial Credit Score Solicitation.

1. Proposed Rule

FHFA proposed four options for evaluating credit score accuracy test results in the Credit Score Assessment: A comparison approach, a champion-challenger approach, a benchmark-based approach, and a transitional approach. The four options reflect different approaches for comparing the statistical results from the credit score models being evaluated. The comparison approach would require an Enterprise to consider the credit score accuracy results of the new model(s) but would not establish a bright-line standard. The champion-challenger approach would require that the accuracy of the new credit score exceed the accuracy of the credit score(s) that are in use by the Enterprises. The benchmark approach would require all applicants to meet or exceed a benchmark established by regulation or by FHFA notice. The transitional approach would apply one of the above approaches to the initial solicitation and apply a different approach to subsequent evaluations.

2. Comments Received

A majority of the commenters who addressed the four options in the proposed rule supported some variation of the transitional approach. The primary rationale provided by commenters to support the transitional approach was that the transitional approach would allow for the validation and approval of Classic FICO in the initial Credit Score Assessment. Some commenters recommended that the Enterprises immediately validate and approve Classic FICO, while one commenter stated that Classic FICO should be reviewed under the same process used for any other credit score model.

Some commenters noted that Classic FICO has been tested by virtue of its use across the industry and within Enterprise systems for many years. These commenters stated that the Enterprises should be able to validate and approve Classic FICO consistent with this final rule on an expedited basis. One commenter stated that ''regardless of the option that is adopted in the final rule, FHFA and the Enterprises should validate and approve Classic FICO immediately rather than require the model to undergo the lengthy process envisioned in the proposed rule. Such a step would significantly reduce transition uncertainty for market participants and ensure that there are no market disruptions prior to the approval of any new models (including new models developed by FICO).''

Most of the commenters that addressed the other options in the proposed rule recommended that they be used in combination with the transitional approach. A few commenters supported a standalone champion-challenger approach, stating that it would provide a clear standard for approval. Some commenters supported the comparison approach as a means of ensuring that the credit score models currently in use could meet the standard. Several other commenters opposed the comparison approach, stating that it would provide too much discretion and therefore would lack transparency. Similarly, most of the commenters that addressed the benchmark approach opposed it due to uncertainty about how the benchmark would be set.

3. Rationale for Final Rule

FHFA agrees that there are benefits to the industry to validate and approve the score currently in use, Classic FICO, while also applying a fair and rigorous validation and approval process for all credit score model applications. The final rule provides that all credit score models must meet the same criteria for validation and approval. However, FHFA recognizes that the long use and widespread industry acceptance of Classic FICO may allow an Enterprise to accelerate the validation and approval process for this model.

The final rule adopts the transitional approach because it offers the smoothest transition from the current use of Classic FICO to any new credit score model. Section 310 permits an Enterprise to continue to use the current credit score model until November 20, 2020. The transitional approach will abate the risk of the Enterprises failing to validate and approve a credit score model under the final rule before this date.

Under the transitional approach, the standard for accuracy in the initial Credit Score Assessment will be different from the standard for accuracy in subsequent Credit Score Assessments. For the initial Credit Score Assessment, a champion-challenger approach would be problematic due to the lack of a validated and approved credit score to serve as the champion. Multiple commenters suggested instead setting a benchmark threshold based on the performance of Classic FICO for the initial Credit Score Assessment.

The final rule requires the Enterprises to establish a credit score accuracy benchmark for the initial Credit Score Assessment. FHFA expects that the accuracy benchmark for the initial Credit Score Assessment will be informed by the accuracy of the credit score model currently used by the Enterprises, Classic FICO. Establishing a benchmark informed by Classic FICO is appropriate because the model has been used by the Enterprises and the mortgage finance industry for more than 12 years. In addition, FHFA has found the Classic FICO score to be a reasonable measure of default risk for the Enterprises' internal purposes. The Enterprises will publish the accuracy benchmark for the initial Credit Score Assessment in the initial Credit Score Solicitation.

This approach to setting an accuracy benchmark for the initial Credit Score Assessment will permit an Enterprise to validate and approve Classic FICO while continuing to evaluate other credit score models for which it receives applications in response to the initial Credit Score Solicitation. If an Enterprise validates and approves Classic FICO and then validates and approves another credit score model, the Enterprise may replace Classic FICO with the newly validated and approved credit score model.

The final rule adopts a credit score accuracy standard for Credit Score Assessments in response to future solicitations that will be based on the validated and approved credit score model(s) in use at that time. This is equivalent to the champion-challenger approach where the applicant's ''challenger'' credit score model must be more accurate than the ''champion'' credit score model that is in use. One commenter suggested adding an accuracy improvement margin such that the applicant's credit score would have to be more accurate than the existing credit score by a threshold.

Considering the implementation costs associated with introducing a new credit score into the mortgage marketplace, requiring an improvement in accuracy is reasonable. However, establishing such a threshold in the final rule could provide less flexibility to the Enterprises. An Enterprise may consider the relative accuracy of different credit score models as part of the Enterprise Business Assessment, including whether any improvement is sufficient to justify the costs and benefits associated with adoption of a new credit score requirement.

Several commenters mentioned the known testing bias where new credit scores will seem more accurate than legacy credit scores, when in fact they are not more accurate. In the absence of a simple solution to abate the statistical bias, some commenters recommended requiring new credit score models exceed the accuracy of the existing credit score model. An alternative viewpoint expressed by two commenters was that requiring an applicant's credit score to be equally as accurate as the current credit score model in use would enable more credit score models to pass the Credit Score Assessment and be evaluated in the Enterprise Business Assessment phase.

One commenter stated that credit score models that pass the Credit Score Assessment may have greater credibility in the market. However, it is important to note that the Credit Score Assessment is only one step of the overall validation and approval process. When an application passes the Credit Score Assessment, an Enterprise has determined that a credit score meets the minimum testing criteria for the limited purpose of the Credit Score Assessment. The statistical results of the Credit Score Assessment should not be extrapolated beyond these minimum testing criteria. The Credit Score Assessment does not evaluate the appropriateness of a credit score model for any other purposes, and

an Enterprise determination as part of the Credit Score Assessment should not be viewed as an endorsement of the credit score model.

I. Assessment of Impact on Enterprise Operations and Risk Management, and Impact on Industry

The proposed rule would have required that the Enterprise Business Assessment include a cost-benefit analysis of the potential operational impact on industry and borrowers of using a particular credit score model. FHFA received a number of comments raising concerns with the potential cost and time required for an extensive cost-benefit analysis, with some commenters concerned that the cost of this analysis would be shifted to applicants through excessive upfront or assessed fees. The final rule does not make any change to the proposed provisions on application fees or cost-benefit analysis. Under the final rule, the Enterprise is responsible for conducting the Enterprise Business Assessment, which includes a cost-benefit analysis. The final rule does not permit an Enterprise to assess an applicant for the costs of this analysis beyond the upfront application fee and any assessment for third-party data acquisition costs. The final rule also provides that the cost-benefit analysis must be completed within the 240 days allotted for completing the Enterprise Business Assessment.

1. Proposed Rule

Under the proposed rule, the Enterprise Business Assessment included an evaluation of the impact that using the applicant's credit score model would have on Enterprise operations (including any impact on purchase eligibility criteria and loan pricing) and risk management (including counterparty risk management), in accordance with standards and requirements related to prudential management and operations and governance set forth in other FHFA regulations.[4]

The Enterprise Business Assessment would evaluate the impact of using the applicant's credit score model on mortgage industry operations and mortgage market liquidity, including costs associated with implementation of a newly approved credit score model. This evaluation also would consider whether the benefits of using credit scores produced by that model can reasonably be expected to exceed the costs. Consideration of the costs and benefits would include implementation and ongoing costs, projected benefits and costs to the Enterprises and borrowers, as well as potential impacts on market liquidity and the cost and availability of credit.

2. Comments Received

Many commenters addressed the cost-benefit analysis in the Enterprise Business Assessment. Commenters generally were in favor of the proposed cost-benefit analysis in the Enterprise Business Assessment. Several commenters cited the importance of this provision as part of prudent decision-making practices. Other commenters supported the provision but suggested changes, stating that the provision was too vague and should explicitly require engagement with industry stakeholders to seek input on industry costs.

Some commenters were concerned that the Enterprises would have an unlimited amount of time to conduct the cost-benefit analysis and that the costs of such an analysis would be borne by the applicant. One commenter suggested that the cost-benefit analysis should be made public, either through making the raw data from the Enterprises' analysis available or in the form of an Enterprise white paper.

Several commenters, including associations representing smaller lenders, expressed concern that replacement of a credit score model, or the use of multiple credit score models at the same time, would present significant lender implementation costs which might especially impact smaller lenders. The commenters noted that those costs may not be worth the benefits of a new credit score model, especially given the higher expected costs associated with the use of multiple credit score models.

3. Rationale for Final Rule

The proposed rule included the requirement for a cost-benefit analysis in the Enterprise Business Assessment, which was limited in time and scope. The final rule adopts the cost-benefit analysis provision as proposed. The final rule requires the cost-benefit analysis to evaluate the impact of using the credit score model on industry operations and mortgage market liquidity, including costs associated with implementation of a newly approved credit score. Because the cost-benefit analysis is one element of the overall Enterprise Business Assessment, the cost-benefit analysis must be conducted within the 240-day timeframe for completing the Enterprise Business Assessment.

The final rule provides that each applicant must pay an up-front application fee established by the Enterprise. This application fee is intended to cover the direct costs to the Enterprise of conducting the Credit Score Assessment. An Enterprise also may assess an applicant for the cost of obtaining third-party data and credit scores necessary for testing purposes. The Enterprises are responsible for any costs associated with the Enterprise Business Assessment.

Finally, the final rule does not make changes in response to comments recommending that the rule be more explicit about engaging with industry stakeholders. FHFA expects that the Enterprises will engage with industry stakeholders if necessary to complete the cost-benefit analysis. For example, an Enterprise may consider the need for mortgage insurers to update and submit their premium rate sheets to state insurance regulators for approval, as well as the need for MBS and CRT investors to re-estimate mortgage performance and valuation models.

J. Competitive Effects

As discussed above, the final rule does not include the proposed conflicts-of-interest certification, which would have required independence of a credit score model developer from any data provider. However, the final rule still includes an evaluation of competitive effects as one component of the Enterprise Business Assessment. This will allow an Enterprise to consider whether using a particular model would promote or discourage competition in the industry.

1. Proposed Rule

The proposed rule would have required the Enterprise Business Assessment to include an evaluation of whether using the applicant's credit score model could have an impact on competition in the industry. This evaluation would consider whether use of a particular credit score model could have an impact on competition due to any ownership or other business relationship between the credit score model developer and any other institution.

2. Comments Received

FHFA received numerous comments on the proposed competition provisions. As previously discussed, many commenters opposed the conflicts-of-interest certification requirement in the application, and FHFA is eliminating the requirement for an applicant to certify its independence as a component of the application. However, many commenters also suggested that it is appropriate for an Enterprise to consider whether using a particular credit score

[4] *See* 12 CFR part 1236 and 1239.

model may have competitive effects on the industry—positive or negative—during an Enterprise Business Assessment.

These commenters supported addressing competition as part of the rulemaking and the Enterprise evaluations, with some commenters believing that ''that increased market competition in the credit-score industry could be beneficial to both consumers and lenders because it can improve efficiency, decrease pricing, and potentially expand the market of consumers for mortgage products.'' Other commenters expressed concerns about vertical integration and about the lack of other participants in the credit score market.

3. Rationale for Final Rule

The final rule adopts the provision requiring the Enterprise Business Assessment to include consideration of the potential impact selection of a credit score could have on competition. An Enterprise may consider whether using a particular credit score model would contribute to consolidation or vertical integration. This type of evaluation is not unusual for the Enterprises. In the normal course of business, an Enterprise may consider the potential impact on consolidation as part of its review of third-party providers. For example, the Enterprises consider consolidation risk when doing business with servicers, sub-servicers, counterparties, vendors, and third-party providers. A similar evaluation is appropriate for the review of competitive effects in the market for credit score model developers.

An assessment of competitive effects is just one component of the broader Enterprise Business Assessment. Overall, the Enterprise Business Assessment requires the Enterprises to consider multiple factors including, but not limited to, review of fair lending impacts, impact on risk management, and assessment of the credit score model developer as a third-party provider. FHFA expects that an Enterprise's review of competitive effects will be considered in conjunction with all other criteria established for the Enterprise Business Assessment.

K. Pilot Programs

Section 310 requires that a credit score model have a historical record of measuring and predicting default rates and other credit behaviors. This could pose a challenge for newer credit scores. The proposed rule would have allowed for the Enterprises to use pilot programs for credit scores as a way for the Enterprises to evaluate and track performance of potential new credit scores with minimal disruption. Comments were supportive of the proposed provision on pilot programs, which the final rule adopts, with some clarifications.

1. Proposed Rule

The proposed rule would have permitted the Enterprises to engage in pilot programs to learn about credit score models. Such pilot programs would balance the section 310 requirement that a credit score model have ''a historical record of measuring and predicting default rates and other credit behaviors'' with desirable innovation in credit score models. A pilot program could assist an Enterprise in determining the appropriate standards and criteria for a Credit Score Solicitation, including requirements for applications from credit score model developers.

The proposed rule would have required FHFA to review and approve any credit score pilot of an Enterprise, and the proposed rule would have permitted FHFA to impose terms, conditions, and limitations as it deemed appropriate. Pilot programs generally would be of limited duration and scope. This would reinforce the ''test and learn'' nature of a pilot program and would ensure consistency with section 310's requirement that any score used by an Enterprise be validated and approved.

2. Comments Received

All of the commenters that addressed pilot programs supported allowing the Enterprises to engage in pilot programs and other testing initiatives. One commenter stated that ''[t]his is perhaps the most important provision in the proposed rule. And it will be the provision with the most long-lasting impact in terms of encouraging innovation and progress,'' if new scoring models are able to help ''thin'' or ''no-file'' consumers and expand access to mortgage credit without increasing risk. Another commenter stated that ''[t]he pilot program process that [FHFA proposed] for new scoring models in the rule is exactly the right approach to encourage and promote innovation, competition and the use of true alternative data and alternative methods,'' and that pilots should be encouraged rather than just permitted. Other commenters agreed that pilots would be consistent with the intent of section 310, which they described as encouraging competition among and innovation by credit score model developers. Several commenters noted that pilots could be helpful in advancing the use of alternative data such as rental, utility, and telecommunications data, as well as consumer-permissioned data such as depository data.

Several commenters suggested types of pilots that might be beneficial. One commenter suggested that the Enterprises could conduct a pilot on ''a subset of borrowers that did not have a credit score and were manually underwritten by the Enterprises to assess how well a new credit score predicts the propensity of these borrower to repay their mortgages.'' Another commenter suggested pilot programs ''for new models that go beyond conventional minimum scoring criteria'' to score consumers new to credit (those whose credit files show no accounts that have been opened for six or more months), consumers who may be ''involuntarily inactive'' and have derogatory information such as a past delinquency on file, and consumers who are voluntarily inactive. Pilot programs for credit score models that use alternative data could demonstrate whether future models using such data would be able to accurately and inclusively score a larger portion of the population.

Several commenters suggested that the final rule provide for transparency and public awareness of pilot programs. One commenter suggested FHFA publicly report on new pilots and the results of pilots while another suggested FHFA ''maximize'' transparency by regularly informing the public of approved pilots, publicly sharing the results from pilots, and providing the public information about Enterprise and FHFA actions that follow pilots. Similarly, another commenter suggested that the terms of pilots should be transparent, limitations on duration and scope should be made publicly available, and that the public should be provided information on the types of institutions participating in the pilot and the qualitative and quantitative metrics for evaluating pilots.

One commenter suggested that requirements for implementing a pilot be less restrictive and time intensive than the proposed credit score model validation and approval process. Another commenter suggested that all pilot program applicants be assessed and compared against each other, considering that there would be no incumbent or benchmark credit score model to use for comparison. That commenter also noted that pilots should include model testing across the populations and market conditions they are intended to address.

Some commenters also addressed transitioning from a pilot program to wider use of a validated and approved credit score, with one commenter suggesting that a model that successfully completes a pilot program then be eligible to undergo a Credit Score Assessment and another suggesting that FHFA provide clear guidance about how a credit score model would transition from a pilot program to the full validation and approval process to full implementation by the Enterprises.

3. Rationale for Final Rule

To promote public awareness and transparency, FHFA intends to apply as much of the credit score validation and approval process established by this final rule as is appropriate, considering the nature of any pilot programs that may be considered by an Enterprise. For example, FHFA anticipates that the Enterprises may solicit applications for pilot programs. A solicitation for pilot programs would include much of the same information as a Credit Score Solicitation. Because of the potentially wide variation among pilot programs, the final rule does not restrict the ability of FHFA or the Enterprises to vary the requirements for a pilot program solicitation based on the specific pilot program in question.

The final rule requires that an Enterprise must submit any pilot program to FHFA for review and approval. An Enterprise may submit a proposed pilot program at any time, regardless of whether FHFA has initiated a solicitation period for all applicants. FHFA may impose terms, conditions, or limitations on the pilot program to ensure that it clearly addresses any regulatory requirements that a pilot applicant is required to meet and any other Enterprise standards and criteria.

To address concerns that pilots might be perceived as ''exceptions'' to the full regulatory validation and approval process, the final rule provides that each pilot program will be subject to limits on the duration and scope of the pilot. The final rule allows FHFA to extend the duration of a pilot for good cause shown.

FHFA acknowledges the interest commenters expressed in making information about pilots publicly available. FHFA expects to assess publication of information about pilot programs in the context of the review and approval process for pilots.

IV. Other Comments Received

This section addresses comments on other significant topics, including themes outside the scope of this rulemaking.

A. Lender Choice

Some commenters suggested that the final rule permit lenders to select the credit score used to underwrite a mortgage for delivery to an Enterprise. While the concept of lender choice was one of four approaches on which FHFA requested input from the public in the 2017 Credit Score RFI, this issue is outside the scope of this rulemaking. As stated previously, the final rule does not address how multiple approved credit score models would be implemented.

B. Tri-Merged Credit Report

The Enterprises have long required a tri-merged credit report, pursuant to which lenders are required to purchase credit scores and credit reports from all three CRAs. Several commenters noted that competition could be encouraged among the CRAs if the Enterprise requirement for a tri-merged report was eliminated. While FHFA stated in the 2017 Credit Score RFI that changes to the tri-merged report are under consideration, the tri-merged report requirement is outside the scope of this rulemaking.

While FHFA may at some point review and evaluate changing the requirement of lenders to purchase credit reports and scores from all three CRAs, FHFA and the Enterprises would need to fully understand the costs and benefits before making any change to the tri-merge requirement. FHFA aims to simplify and reduce costs associated with mortgage origination and the acquisition process, while ensuring the Enterprises manage their credit risk exposure appropriately.

C. Encourage New Credit Data Repositories

One commenter stated that FHFA should encourage the creation of additional credit data repositories. The commenter suggested that one mechanism for encouraging such new entrants would be to require the Enterprises to sell mortgage payment data to any new credit data repositories. While FHFA supports competition in the credit data and credit score industry generally, the specific steps recommended by the commenter are outside the scope of this rulemaking.

D. Use of Nontraditional Consumer Credit Data

Several commenters supported the use of consumer credit data that is not traditionally found in the CRAs. FHFA agrees with commenters on the potential benefits of using nontraditional data, such as data on payment of rent, utility data, or telecommunications data. The Enterprises currently consider alternative housing-related data such as rental payments or utility payments where available. However, the use of nontraditional consumer credit data is outside the scope of this rulemaking.

E. Transparency/Release of Information

Several commenters suggested that FHFA or the Enterprises make additional disclosures of information if and when a new credit score model is to be implemented. These commenters requested that FHFA or the Enterprises disclose the criteria for, and the results of, any cost-benefit analysis of a new credit score model, and also that comprehensive data be disclosed so the market can understand the impact of a new credit score model. The commenters stated that this type of transparency will increase confidence in the new credit score model.

Although a discussion of implementation is outside the scope of this rulemaking, FHFA acknowledges the importance of public understanding of the impact of, and confidence in, any new credit score model. FHFA and the Enterprises will consider how to facilitate public understanding of any new credit score model, including the potential sharing of non-proprietary information, at the time a new credit score model is approved.

F. Request for Enterprises To Provide Raw Credit Score Data

Some commenters requested that the Enterprises provide access to the historical loan-level data and credit scores used for the empirical testing of credit scores conducted by FHFA and the Enterprises from 2015 to 2018 pursuant to FHFA's Conservatorship Scorecards. FHFA received similar requests in response to the 2017 Credit Score RFI. While the data used for that empirical testing has not been made public, Enterprises make available to the public several other loan-level data sets that include credit scores.

The final rule does not require the Enterprises to make data available to industry or the public for parallel testing. The data used for empirical testing of credit scores is generally proprietary data that may be costly to obtain and may be subject to restrictions on further sharing. Industry participants are encouraged to work with the credit score model developers and CRAs to acquire any data needed to update their internal models or to conduct parallel testing of credit score models.

G. Consider Enterprise Mission

While several commenters noted the Enterprises' public mission, one commenter requested that FHFA revise its proposal on the Enterprise Business Assessment to require consideration of the positive effect a model could have on expanding the universe of creditworthy borrowers and potential homebuyers, as an offsetting factor to the cost of adopting and implementing that model. FHFA believes this sentiment is already reflected in the final rule, which requires the Enterprises to consider potential benefits to borrowers, including benefits related to cost and availability of credit. FHFA also interprets its regulations, and expects the Enterprise to implement them, with full awareness of other statutory duties that may be implicated, including duties related to Enterprise safety and soundness, acting consistently with the public interest, support of mortgages for low- and moderate-income families, and compliance with fair lending laws. Consequently, FHFA does not believe the requested change is necessary.

H. Consider Eliminating LLPAs and Delivery Fees

Some commenters noted that consumers with lower credit scores are more likely to be subject to higher LLPAs and Delivery Fees and thus may pay more for credit. One commenter noted that consumers with lower credit scores are disproportionately likely to have low or moderate incomes or to be minorities. The commenter stated that LLPAs and Delivery Fees could reduce access to credit for such consumers and suggested eliminating LLPAs and Delivery Fees on that basis.

LLPAs and Delivery Fees are used by the Enterprises to compensate for the credit risk of a mortgage loan. To the extent that credit scores are used in setting the LLPAs and Delivery Fees, the final rule requires that the credit scores be produced from validated and approved models. As other commenters have expressed, innovation in credit score models could result in improved understanding of borrower creditworthiness that may result in reduced cost of credit for some borrowers. However, the question of establishing specific requirements for Enterprise loan pricing (including LLPAs and Delivery Fees) is outside the scope of this rulemaking.

I. Discontinue the Rulemaking

One commenter stated that the proposed rule is a waste of taxpayer dollars. The commenter urged FHFA to discontinue the rulemaking process and to go back to Congress to gain additional guidance. However, section 310 requires FHFA to establish standards and criteria for the validation and approval of credit score models. This final rule meets that statutory obligation.

V. Section-by-Section Analysis of Final Rule

A. Purpose and Scope, Definitions, and Computation of Time—§§ 1254.1, 1254.2 and 1254.3

Section 1254.1 of the final rule sets out the purpose of the final rule, to establish the standards and criteria that an Enterprise must satisfy in creating a process for the validation and approval of credit score models. Section 1254.1 of the final rule also describes the four major components of the validation and approval process.

Section 1254.2 of the final rule defines key terms used in the regulation. The definitions distinguish between a ''credit score'' and a ''credit score model.'' As defined in the final rule, a ''credit score'' is a numerical value that is derived from a statistical tool or model, while a ''credit score model'' is the statistical tool or model itself. Consistent with section 310, the definition of ''credit score model'' is limited to models created by third parties. In other words, ''credit score model'' does not include any statistical tool or model created by an Enterprise, such as an AUS. The final rule defines a ''credit score model developer'' as any person with ownership rights in the intellectual property of a credit score model.

The proposed rule would have defined ''nationwide consumer reporting agency'' consistent with the definition in the Fair Credit Reporting Act (15 U.S.C. 1681a). The final rule omits this definition because the term is not used in the regulation.

Section 1254.3 of the final rule clarifies how time periods will be measured for the various requirements and deadlines set forth in the final rule.

B. Enterprise Use of Credit Scores—§ 1254.4

Section 1254.4 of the final rule provides that an Enterprise is not required to use a credit score for any business purpose. However, if an Enterprise requires a credit score as a condition of purchasing a mortgage, the credit score must be produced by a credit score model that has been validated and approved in accordance with the final rule. As discussed in more detail above, the final rule permits an Enterprise to use credit scores that are subject to a limited pilot program being conducted by the Enterprise in accordance with the final rule.

Section 1254.4 of the final rule also provides that an Enterprise may replace any validated and approved credit score with any other validated and approved credit score. The proposed rule would have provided that such replacement was at the discretion of the Enterprise. However, as discussed in more detail above, the final rule provides that an Enterprise must submit any proposed determination to FHFA for review and approval. This prior approval requirement applies to any proposed determination to replace one credit score model with another, and so the final rule omits the phrase indicating that replacement is at an Enterprise's discretion. However, the final rule still provides that use of a credit score model by an Enterprise does not create any expectation of or right to continued use of that credit score model.

C. Enterprise Solicitation of Applications From Credit Score Model Developers—§ 1254.5

The final rule addresses the solicitation process, the minimum required contents of an Enterprise solicitation, and details and timing of the review of Enterprise proposed solicitations by FHFA prior to Enterprise publication. The final rule establishes that the solicitation process involves: (1) A notice from FHFA to the Enterprises that FHFA has determined that the Enterprises must undertake a solicitation; (2) development of a Credit Score Solicitation by each Enterprise; (3) review and approval of the Credit Score Solicitation by FHFA; (4) publication of the Credit Score Solicitation by the Enterprise; and (5) the time period during which the Enterprises will accept applications for validation and approval of credit score models. Each step is addressed below.

1. Solicitation Process Initiated by FHFA

Section 1254.5(a) of the final rule permits FHFA to require the Enterprises to solicit applications from credit score model developers for the review and approval of the credit score model by an Enterprise. FHFA will determine in its discretion whether to open a solicitation for credit score model developers to apply for consideration.

FHFA may open a solicitation at its own initiative or based on a request from an Enterprise or any other party. Such requests may be based on a reasonable belief on the part of an Enterprise or interested party that a new score has the potential to be materially

beneficial to the mortgage market and merits earlier consideration. In determining the need for future solicitations, FHFA will consider potential benefits of updating the credit score model requirements and the costs to industry of changing from one credit score model to another, and whether an update to the credit score model could be achieved by an enhancement to an Enterprise AUS. For example, FHFA may determine there is no need to open a solicitation in the future because an Enterprise no longer conditions mortgage purchases on the provision of a credit score.

Section 1254.5(a) of the final rule also provides that FHFA will notify an Enterprise of the requirement to solicit applications. The notice will state when the Enterprise must begin soliciting applications, the deadline for an Enterprise to submit its proposed Credit Score Solicitation to FHFA, and the length of time the solicitation period is open. Each Enterprise is required to submit a ''Credit Score Solicitation'' to FHFA for review and approval in response to an FHFA initiated solicitation.

The final rule does not require an Enterprise to consider any application that is received outside of a solicitation established by FHFA. An Enterprise could review and conduct preliminary empirical analysis if an application is received outside of a particular solicitation, and this analysis could prompt an Enterprise to request that FHFA open a solicitation. However, an Enterprise would not be permitted to approve an application that was not submitted in response to a solicitation.

2. Required Content of a Credit Score Solicitation

Section 1254.5(b) of the final rule requires that a ''Credit Score Solicitation'' must cover the Enterprise's validation and approval process, including the requirements that an application must meet in order for a credit score model to be considered by an Enterprise. The final rule permits the Enterprises to establish requirements in addition to those set forth in the rule.

Specifically, the final rule requires each Credit Score Solicitation to provide the opening and closing dates of the period during which applications will be accepted, describe information that must be included in each application, and describe the process by which the Enterprise will obtain data for assessing applicants' credit score models. The Credit Score Solicitation must describe the Enterprise validation and approval process, including the processes for the Credit Score Assessment and the Enterprise Business Assessment. The process must be in accordance with the minimum standards and criteria of section 310 and the final rule. For example, the Credit Score Solicitation must address the standards or criteria for accuracy, reliability, and integrity, and any method of demonstrating that the credit score has a historical record of measuring and predicting credit behaviors, including default rates, as required by section 310.

The final rule establishes minimum standards and criteria for validation and approval of credit score models. An Enterprise may have valid business reasons for imposing additional standards and criteria. Section 310 and the final rule both permit additional standards and criteria to be imposed by an Enterprise. Any additional standards, criteria, or requirements must be included in the Credit Score Solicitation, and are subject to FHFA review and approval.

3. FHFA Review of Enterprise Solicitation

Section 1254.5(c) of the final rule requires FHFA to review and approve or disapprove each Credit Score Solicitation submitted by an Enterprise, including any Credit Score Solicitations submitted jointly by the Enterprises. The final rule requires an Enterprise to submit a Credit Score Solicitation for FHFA review prior to the start of the solicitation period. FHFA may object to any additional Enterprise standards, criteria, or requirements, or impose any terms, conditions, or limitations that FHFA determines appropriate. The final rule establishes a 45-day period for FHFA to complete its review, which may be extended by FHFA if necessary.

Because the Credit Score Solicitation must describe the Enterprise validation and approval process, FHFA's review of each Credit Score Solicitation meets the statutory requirement that FHFA ''periodically'' review the Enterprise validation and approval process.[5] This review does not prevent FHFA from reviewing an Enterprise's validation and approval process as part of its usual supervisory processes, including examinations.

4. Publication of Credit Score Solicitation

Section 1254.5(d) of the final rule provides that after receiving approval of the Credit Score Solicitation from FHFA, the Enterprise must make publicly available the Credit Score Solicitation for at least 90 days prior to the start of the solicitation time period. This will provide prospective applicants time to consider whether to submit an application for review. In particular, the 90-day publication period will provide applicants a reasonable period to review the fees and the information required to complete an application prior to expending resources to submit an application. The publication of the Enterprise Credit Score Solicitation satisfies section 310's requirement that an Enterprise ''make publicly available'' a description of its validation and approval process.

5. Timeframes for Solicitation

Section 1254.5(a) provides that the solicitation period will be determined by FHFA. Based on comments received, FHFA wants to ensure that the Enterprises are accepting applications concurrently. Therefore, FHFA expects to require each Enterprise to publish its Credit Score Solicitation on the same date. Section 1254.5(e) of the final rule requires that each Enterprise submit its Credit Score Solicitation for the initial solicitation within 60 days of the effective date of the final rule. The initial solicitation time period will begin on a date determined by FHFA and will extend for 120 days. For future solicitation time periods, FHFA will review the Credit Score Solicitations submitted by the Enterprises and consider the appropriate length of time the solicitation window should be open.

D. Submission and Initial Review of Applications—§ 1254.6

1. Overview

Section 1254.6 of the final rule establishes the minimum criteria an application must meet to be considered complete, including: (1) An application fee; (2) a fair lending certification; (3) information to demonstrate use of the credit score model by the lending industry; (4) information on the qualifications of the credit score model developer; and (5) any other information required by an Enterprise in the Credit Score Solicitation. The final rule also addresses submission of applications, Enterprise determination of each application's completeness, notice to applicants of the status of the application as complete, and acquisition of historical consumer credit data by an Enterprise. Finally, the final rule establishes that an Enterprise is not required to evaluate any application that is not complete.

2. Application Fees and Enterprise Assessment for Costs

Section 1254.6(a)(1) of the final rule requires each applicant to pay an

[5] 12 U.S.C. 1454(d)(8) and 1717(b)(7)(H).

application fee that is intended to cover the direct cost to the Enterprise of the Credit Score Assessment. The final rule also permits an Enterprise to address conditions under which it would refund a portion of the application fee. Section 1254.6(b) of the final rule also permits an Enterprise to assess applicants for the costs associated with acquiring third-party data and credit scores, either in addition to or instead of an up-front application fee.

3. Fair Lending Certification and Compliance

Section 1254.6(a)(2) of the final rule requires each applicant to address compliance of the credit score model and the credit scores it produces with federal fair lending requirements, and to certify that no characteristic used in the development of the credit score model or as a factor in the credit score model to produce credit scores is based directly on or is highly correlated solely with prohibited classifications, as defined by the Equal Credit Opportunity Act (15 U.S.C. 1691(a)(1)), the Fair Housing Act (42 U.S.C. 3605(a)), and the Safety and Soundness Act (12 U.S.C. 4545(1)).

4. Demonstrated Use

Section 1254.6(a)(3) of the final rule requires an applicant to demonstrate use of the credit score by creditors to make lending decisions. The final rule does not establish a standard for meeting the demonstrated use component, but permits an Enterprise to address criteria for demonstrating use in its Credit Score Solicitation. Enterprise criteria may include, for example, submissions of testimonials by lenders who use the applicant's credit score for underwriting credit.

5. Qualifications of Credit Score Model Developer

Section 1254.6(a)(4) of the final rule requires each applicant to provide information on the qualifications of the credit score model developer, including a description of the developer's relevant experience, financial capacity, corporate structure (including relationships through common control or ownership), governance structure, and past financial performance. Each Credit Score Solicitation may also set forth other required information related to qualifications, in the Enterprise's discretion.

6. Additional Enterprise Standards and Criteria

Section 1254.6(a)(5) of the final rule permits the Enterprises to establish additional requirements for applicants. Each Enterprise must include all application requirements in its Credit Score Solicitation, including requirements established by the Enterprise in addition to those established by the final rule.

7. Data Acquisition

Section 1254.6(b) of the final rule permits an Enterprise to acquire any historical consumer credit data necessary to test the credit score model's record of measuring default rates and other credit behaviors. Such data typically include historical credit scores on a test set of existing Enterprise loans at origination. Applicants whose credit scores incorporate multiple sources of consumer credit information (*e.g.,* credit scores based on information from the nationwide CRAs augmented with data outside of the three nationwide CRAs) will be required to work with the Enterprises on a process to obtain the applicant's credit scores on existing Enterprise loans. FHFA recognizes that information required from a third party, such as consumer credit data, may be beyond the control of the applicant. The final rule permits third parties to deliver information to an Enterprise within a reasonable time period that may extend beyond the 120-day solicitation period. However, an application is not complete unless and until an Enterprise has received all the necessary data needed to undertake a Credit Score Assessment.

As stated above, the final rule also permits an Enterprise to assess applicants for reasonable costs associated with the acquisition of third-party data and credit scores.

8. Completeness of Applications

Section 1254.6(c) of the final rule requires the Enterprises to review each application that is submitted within the solicitation period. Within 60 days after the date of submission, the Enterprise must provide the applicant a status notice of the application. Each applicant will be responsible for submitting the documentation required within the timeframe imposed by the final rule. If the applicant needs to provide additional information in order for the application to be complete, the deadline for submitting that information is the close of the solicitation period. Required information from a third party, such as consumer credit data, may be submitted to an Enterprise after the close of the solicitation period.

The final rule provides that an application is complete when an Enterprise determines that the required information has been received from the applicant and any third-party (*i.e.,* any data requested from a third-party on behalf of the applicant for use by the Enterprise).

The final rule establishes that an Enterprise has no obligation to assess any incomplete application. As required by section 310, each applicant will receive an application status notice informing the applicant of any additional information needed in conjunction with an application. If an Enterprise determines that an application is incomplete, the applicant would have the opportunity to respond within the designated 120-day solicitation period.

The final rule does not require an Enterprise to consider any application that is received outside of a solicitation established by FHFA. An Enterprise could review and conduct preliminary empirical analysis if an application is received outside of a particular solicitation, and this analysis could prompt an Enterprise to request that FHFA open a solicitation. However, an Enterprise would not be permitted to approve an application that was not submitted in response to a solicitation.

E. Credit Score Assessment—§ 1254.7

1. Overview

Section 1254.7 of the final rule requires each Enterprise to undertake a Credit Score Assessment of each credit score model for which it has received a complete application. The Credit Score Assessment includes an evaluation of the accuracy, reliability, and integrity of credit scores on a stand-alone basis (outside of an Enterprise's internal systems and procedures). The final rule addresses the standards or criteria for accuracy, reliability, and integrity for this purpose, and sets forth an accuracy standard for the initial Credit Score Solicitation to facilitate the transition to validated and approved credit score models. The final rule also addresses who may conduct such evaluations, and the timeframe in which the Credit Score Assessment must be completed.

2. Testing for Accuracy and Reliability

Section 1254.7(b) of the final rule requires that the Enterprises conduct statistical testing that uses one or more industry standard statistical tests for demonstrating divergence among borrowers' propensity to repay, applied to mortgages purchased by an Enterprise. The final rule does not define specific parameters for the testing that would be conducted by an Enterprise for accuracy testing. Although the final rule allows flexibility for the Enterprises to define the specific parameters of testing, FHFA requires

that the Enterprise testing requirements include a common definition of default.

The definition of default is critical to accuracy and reliability testing of a credit score. A definition of default includes two parts, the occurrence of an event (*e.g.,* delinquency) and a time horizon (*e.g.,* 24 months since origination). Currently, the generally accepted definition of default is a 90-day delinquency during a two year period. FHFA expects that the Enterprises will use the generally-accepted definition of default during the Credit Score Assessment. However, FHFA encourages the Enterprises to consider testing using other definitions in addition to the testing using the generally-accepted definition.

FHFA requested comment on any additional default definitions. Commenters generally supported the proposed language and mentioned the benefits of the Enterprises using an aligned definition of default. One commenter indicated that the definition of default should be longer given that mortgages have long maturities. The predictive power of credit scores at origination declines as the mortgage ages beyond two years, while other factors like payment history and home equity (or LTV) increase in predictive power. While the aligned definition of default is reasonable, consistent with industry standard and consistent with how the Enterprises use credit scores, the Enterprises are encouraged to test longer performance windows.

The final rule includes a requirement that the Enterprise test accuracy and reliability on subgroups of loans. The loan sets obtained for testing would have to contain sufficient observations to perform the tests on subgroups. It is unlikely that the accuracy of a credit score is constant across the entire credit score distribution. Subgroup testing could be applied to loan-to-value groups, credit score groups, and thin credit file loans at origination, as well as new credit files and files with a past delinquency. It is expected that credit score accuracy will decline when applied to thin, stale, and new credit files, yet the accuracy of credit score models is critically important to borrowers and investors for thin files because such credit scores will likely be close to current underwriting thresholds.

3. Accuracy Standard

Section 1254.7(c)(1) of the final rule provides that a credit score model is accurate if it produces credit scores that appropriately reflect a borrower's propensity to repay a mortgage loan in accordance with its terms. An accurate credit score permits a credit score user to correctly rank order the risk that the borrower will not repay the obligation in accordance with its terms relative to other borrowers.

The final rule requires an Enterprise to establish a credit score accuracy cutoff as a benchmark for the initial Credit Score Assessment. Applicants' credit scores must be as accurate as the benchmark in order to pass the Credit Score Assessment. FHFA expects that the benchmark for the initial Credit Score Assessment will be informed by the accuracy of the credit score in use today, Classic FICO.

The final rule establishes that future Credit Score Assessments must use the validated and approved credit score models in use at the time the testing is conducted as the accuracy standard. Basing the benchmark on the most accurate validated and approved score in use at that time is equivalent to the champion-challenger approach where the applicant's credit score model (the ''challenger'') must be more accurate than the existing credit score model in use (the ''champion'').

4. Reliability Standard

Section 1254.7(c)(2) of the final rule establishes the reliability standard that must be met as part of the Credit Score Assessment. Under the reliability standard, a credit score model is reliable if it produces credit scores that maintain accuracy through the economic cycle. The final rule requires that an Enterprise evaluate whether a new credit score model produces credit scores that are at least as reliable as the credit scores produced by a credit score model that the Enterprise is then using, as demonstrated by appropriate testing.

The final rule requires an Enterprise to test at least two sets of Enterprise loans to evaluate credit score reliability. The first group of loans would represent recently underwritten loans with sufficient performance history consistent with the definition of default. The second set of loans would be selected from a period earlier than the estimation data used to develop the new credit scores and at a point in the economic cycle different from the first loan group. The Enterprises would define the loan sets conditional on origination period (or acquisition period) and include all single-family loans within the specified periods.

5. Integrity Standard

Section 1254.7(c)(3) of the final rule establishes a standard for integrity that must be met as part of the Credit Score Assessment. Under the integrity standard, a credit score model has integrity if, when producing a credit score, it uses relevant data that reasonably encompasses the borrower's credit history and financial performance. To be validated, a credit score model applicant would be required to demonstrate to the Enterprise that the model has integrity, based on appropriate evaluations or requirements identified by the Enterprise (which may address, for example, the level of aggregation of data or observable data that may not be omitted or discounted when constructing a credit score).

One commenter recommended that the integrity standard in proposed § 1254.7(b)(3) also provide that ''No credit score model may be eliminated from consideration based solely on the test for integrity, unless it clearly fails to meet the criteria set out by the Enterprise, but performance on this test may be considered as one factor in the overall Credit Score Assessment.'' FHFA recognizes that the integrity standard in the final rule is more subjective than the accuracy and reliability standards, which are based on statistical testing. However, determining whether particular data elements are relevant to the borrower's credit history and financial performance is necessarily a subjective determination. The additional language recommended by this commenter would not change the subjective nature of the determination and therefore the final rule does not include the suggested language. FHFA expects the Enterprises to apply the integrity standard based on their reasonable judgment of which data elements are necessary for a credit score model to consider.

The integrity standard should be evaluated subjectively but consistently in the Credit Score Assessment. The goal of the standard is to ensure that the credit score model developer utilized available data elements that are relevant and legally permissible. Improvements in the range of consumer information available to credit score model developers may improve credit score accuracy. The integrity standard is designed to permit credit score model developers to innovate.

6. Additional Enterprise Standards and Criteria

Section 1254.7(c)(4) of the final rule permits an Enterprise to establish additional requirements for the Credit Score Assessment. The Enterprise would be required to include any additional requirements in its Credit Score Solicitation, and those requirements would be subject to FHFA review and approval as discussed above.

7. Required Testing

Section 1254.7(c) of the final rule permits an Enterprise to conduct its own testing for the Credit Score Assessment or to contract with a third party to test each credit score model. In addition, the Enterprises are permitted to jointly conduct the Credit Score Assessment for all complete applications received in response to a solicitation.

8. Timing and Notices

Section 1254.7(d) of the final rule requires an Enterprise to provide a notice to each applicant that has submitted a complete application when an Enterprise will begin the Credit Score Assessment. The final rule provides that the Credit Score Assessment will begin no earlier than the close of the solicitation period unless FHFA determines that the assessment should begin on an earlier date. For example, FHFA may permit an Enterprise to begin a Credit Score Assessment prior to the close of the solicitation period if an Enterprise has concluded the application is complete, and the Enterprise has all the necessary data to begin a Credit Score Assessment.

The final rule requires an Enterprise to complete the Credit Score Assessment period within 180 days. The final rule permits FHFA to authorize not more than two extensions of the Credit Score Assessment period that shall not exceed 30 days each, upon a written request and showing of good cause by an Enterprise.

Section 1254.7(d) of the final rule also requires that an Enterprise notify an applicant if the application has passed the Credit Score Assessment. The final rule requires that this notification be provided no later than 30 days after the Enterprise has determined that the application has passed the Credit Score Assessment. If an application does not pass the Credit Score Assessment, the Enterprise would submit a proposed determination to FHFA as described in section 1254.9.

F. Enterprise Business Assessment—§ 1254.8

1. Overview

Section 1254.8 of the final rule requires Fannie Mae and Freddie Mac to independently undertake an Enterprise Business Assessment for each credit score model that the Enterprise determines has passed the Credit Score Assessment. The Enterprise Business Assessment must include: (1) An assessment of the accuracy and reliability of credit scores within the Enterprise underwriting and other systems; (2) an assessment of possible fair lending impacts of using the credit score within the Enterprise systems and processes that use credit scores; (3) an assessment of potential impacts on Enterprise operations and risk management, and impact on industry; (4) an assessment of possible competitive effects from using a particular credit score model; (5) an assessment of the credit score model provider as a potential third-party provider; and (6) any other Enterprise standards and criteria. Because the Enterprises operate different systems, different business models, and different credit tolerances, the Enterprise Business Assessment requires each Enterprise to assess credit scores based on its specific business needs.

2. Accuracy and Reliability of Credit Scores Within Enterprise Systems

Section 1254.8(b)(1) of the final rule requires an Enterprise to evaluate the accuracy and reliability of the credit score model when used within the Enterprise systems and processes. This evaluation must consider whether the credit score produced by an applicant's model is more accurate than, and at least as reliable as, the credit score that is then in use by the Enterprise. The Enterprise Business Assessment does not require an Enterprise to consider a credit score model's integrity, because the integrity of a credit score model would be established in the Credit Score Assessment phase and would not change when used in an Enterprise system or process.

3. Fair Lending Assessment

Section 1254.8(b)(2) of the final rule requires an Enterprise to evaluate the fair lending risk and fair lending impact of using the applicant's credit score model, in accordance with standards and requirements of federal fair lending laws. The fair lending assessment must also consider any impact on access to credit related to use of that credit score model.

4. Assessment of Impact on Enterprise Operations and Risk Management, and Impact on Industry

Section 1254.8(b)(3) of the final rule requires an Enterprise to consider operational impacts to the Enterprises of using the credit score produced by the applicant's credit score model, such as implementation timing and potential impacts on Enterprise risk management. That evaluation must consider whether the benefits of using the applicant's credit score can reasonably be expected to exceed the adoption and ongoing costs of using that credit score, considering costs and benefits to the Enterprises. The Enterprise also must consider potential costs and benefits across the entire mortgage industry—origination, servicing, and securitization—of adopting a newly validated and approved credit score model. The final rule also requires an Enterprise to consider potential impacts on mortgage eligibility criteria and Enterprise pricing for loan purchases as part of any assessment.

5. Competitive Effects

Section 1254.8(b)(4) of the final rule requires an Enterprise to evaluate whether using the applicant's credit score model could have an impact on competition in the credit reporting and credit scoring industry. This evaluation must consider whether use of a particular credit score model could have an impact on competition due to any ownership or other business relationship between the credit score model developer and any other institution.

6. Third-Party Provider Review

Section 1254.8(b)(5) of the final rule requires an Enterprise to conduct a comprehensive third-party provider review for all applicants, consistent with the Enterprise's standards for approval of third-party providers. This review should address any financial, governance, operational, compliance, legal, and reputational risks associated with the third party.

7. Enterprise Standards and Criteria

Section 1254.8(b)(6) of the final rule permits an Enterprise to establish additional requirements for the Enterprise Business Assessment. An Enterprise is required to include any additional requirements in its Credit Score Solicitation, and those requirements are subject to FHFA review and approval as previously discussed.

8. Timing

Section 1254.8(c) of the final rule requires that an Enterprise complete its Enterprise Business Assessment within 240 days.

9. FHFA Evaluation

Section 1254.8(d) of the final rule provides that FHFA will conduct an independent analysis of the potential impacts of any change to an Enterprise's credit score model. This analysis will be conducted at the same time as the Enterprise Business Assessment. The analysis will provide a mechanism for FHFA to make determinations in its capacity as safety and soundness

regulator of the Enterprises with respect to the Enterprise use of credit scores. Under the final rule, the FHFA evaluation could result in a requirement that an Enterprise conduct additional analysis or reporting related to credit scores. The FHFA evaluation would also permit FHFA to determine whether the Enterprises will continue to use a single credit score or will permit the use of multiple credit scores, or to require other changes. Such determination by FHFA may impact an Enterprise Business Assessment.

G. Determinations on Applications—§ 1254.9

Section 1254.9(a) of the final rule requires an Enterprise to submit to FHFA a proposed determination of approval or disapproval for each application. The final rule requires an Enterprise to submit to FHFA a proposed determination of approval if an application passes both the Credit Score Assessment and the Enterprise Business Assessment. The final rule requires an Enterprise to submit to FHFA a proposed determination of disapproval of an application if the Enterprise finds at any point in the validation and approval process that the application should be disapproved. The final rule permits an Enterprise to propose disapproval of an application based on any of the criteria identified in the Credit Score Solicitation, including any of the application requirements or any of the criteria under the Credit Score Assessment or the Enterprise Business Assessment.

FHFA will make its decision on approval or disapproval after considering the Enterprise proposal and any other information that FHFA determines appropriate. The final rule provides a 45-day review period, which FHFA may extend as needed. FHFA's review and approval of a proposed Enterprise determination must be completed before the Enterprise notifies that applicant. The final rule clarifies that the 30-day period for any approval or disapproval notification by an Enterprise to the applicant begins when FHFA has notified the Enterprise of its decision on the proposed Enterprise determination. FHFA may impose any appropriate terms, conditions, or limitations on its approval or disapproval of the Enterprise proposed determination.

1. Approval of a Credit Score Model

Section 1254.9(b) of the final rule provides if an Enterprise approves an application for a credit score model following FHFA review of its proposed determination, the Enterprise must implement the credit score model in its mortgage purchase systems that use a credit score for mortgage purchases. If an application is approved, the Enterprise will notify the applicant and the public of the approval of such application within 30 days after FHFA completes its review.

2. Disapproval of a Credit Score Model

Section 1254.9(c) of the final rule provides that, if an application is disapproved, an Enterprise must provide an applicant with a notice of disapproval no later than 30 days after FHFA completes its review. The Enterprise must provide a description of the reason(s) for disapproval in its notice to the applicant.

H. Withdrawal of Application—§ 1254.10

Section 1254.10 of the final rule permits an applicant to withdraw its application at any time during the validation and approval process by notifying the Enterprise. This allows an applicant to terminate the evaluation process for any reason after providing notice to the Enterprise. However, because an Enterprise may have already devoted considerable resources to the evaluation of the application, the final rule does not require the Enterprise to return any application fee paid by the applicant. In appropriate circumstances, an Enterprise may determine that some portion of the application fee should be refunded to the applicant or used to offset the application fee if the applicant submits a new application. However, any decision to return a portion of an application fee or apply it toward a new application would be in the sole discretion of the Enterprise.

I. Pilot Programs—§ 1254.11

Section 1254.11(a) of the final rule permits an Enterprise to conduct credit score pilot programs. A pilot program will allow an Enterprise to use a credit score model that has not been validated and approved under this rule for the limited purpose of evaluating the performance of the credit score model.

Section 1254.11(b) of the final rule requires that an Enterprise must submit any proposed pilot program to FHFA for review and approval. The Enterprise must provide a complete description of the pilot program, including the purpose, duration, and scope of the pilot program. This will allow FHFA to ensure that the pilot program addresses any requirements that FHFA determines appropriate. For example, FHFA may require that an Enterprise publish a solicitation for applicants to participate in a pilot program, or FHFA may add other terms or limitations as appropriate.

FHFA expects regulatory notice and timing requirements to apply to pilot program applications, even though the credit score model considered for a pilot program will not be subject to the full regulatory validation and approval process. FHFA believes it would be valuable to obtain from the model developer any available information that is responsive to the regulatory requirements, such as information about the ownership structure and business qualifications of the applicant.

VI. Regulatory Determinations

A. Paperwork Reduction Act

The final rule does not contain any information collection requirement that would require the approval of the Office of Management and Budget (OMB) under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). Therefore, FHFA has not submitted any information to OMB for review.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires that a regulation that has a significant economic impact on a substantial number of small entities must include an analysis describing the regulation's impact on small entities. Such an analysis need not be undertaken if the agency has certified that the regulation will not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 605(b). FHFA has considered the impact of the final rule under the Regulatory Flexibility Act. The General Counsel of FHFA certifies that this final rule will not have a significant economic impact on a substantial number of small entities because the regulation applies only to the Enterprises, which are not small entities for purposes of the Regulatory Flexibility Act.

C. Congressional Review Act

In accordance with the Congressional Review Act (5 U.S.C. 801 *et seq.*), FHFA has determined that this final rule is a major rule and has verified this determination with the Office of Information and Regulatory Affairs of the OMB.

List of Subjects in 12 CFR Part 1254

Mortgages.

Authority and Issuance

■ Accordingly, for the reasons stated in the preamble, and under the authority of 12 U.S.C. 4511, 4513, 4526, and Public Law 115–174, section 310, 132 Stat.

1296, FHFA amends subchapter C of chapter XII of Title 12 of the Code of Federal Regulations by adding part 1254 to read as follows:

PART 1254—VALIDATION AND APPROVAL OF CREDIT SCORE MODELS

Sec.
1254.1 Purpose and scope.
1254.2 Definitions.
1254.3 Computation of time.
1254.4 Requirements for use of a credit score.
1254.5 Solicitation of applications.
1254.6 Submission and initial review of applications.
1254.7 Credit Score Assessment.
1254.8 Enterprise Business Assessment.
1254.9 Determinations on applications.
1254.10 Withdrawal of application.
1254.11 Pilot programs.

Authority: 12 U.S.C. 4511, 4513, 4526 and Sec. 310, Pub. L. 115–174, 132 Stat. 1296.

§ 1254.1 Purpose and scope.

(a) The purpose of this part is to set forth standards and criteria for the process an Enterprise must establish to validate and approve any credit score model that produces any credit score that the Enterprise requires in its mortgage purchase procedures and systems.

(b) The validation and approval process for a credit score model includes the following phases: Solicitation of Applications, Submission of Applications and Initial Review, Credit Score Assessment, and Enterprise Business Assessment.

§ 1254.2 Definitions.

For purposes of this part, the following definitions apply. Definitions of other terms may be found in 12 CFR part 1201, General Definitions Applying to All Federal Housing Finance Agency Regulations.

Credit score means a numerical value or a categorization created by a third party derived from a statistical tool or modeling system used by a person who makes or arranges a loan to predict the likelihood of certain credit behaviors, including default.

Credit score model means a statistical tool or algorithm created by a third party used to produce a numerical value or categorization to predict the likelihood of certain credit behaviors.

Credit score model developer means any person with ownership rights in the intellectual property of a credit score model.

Days means calendar days.

Mortgage means a residential mortgage as that term is defined at 12 U.S.C. 1451(h).

Person means an individual, sole proprietor, partnership, corporation, unincorporated association, trust, joint venture, pool, syndicate, organization, or other legal entity.

§ 1254.3 Computation of time.

For purposes of this part, each time period begins on the day after the relevant event occurs *(e.g.,* the day after a submission is made) and continues through the last day of the relevant period. When the last day is a Saturday, Sunday, or Federal holiday, the period runs until the end of the next business day.

§ 1254.4 Requirements for use of a credit score.

(a) *Enterprise use of a credit score.* An Enterprise is not required to use a credit score for any business purpose. However, if an Enterprise conditions its purchase of a mortgage on the provision of a credit score for the borrower:

(1) The credit score must be derived from a credit score model that has been approved by the Enterprise in accordance with this part; and

(2) The Enterprise must provide for the use of the credit score by any automated underwriting system that uses a credit score and any other procedures and systems used by the Enterprise that use a credit score for mortgage purchases.

(b) *Replacement of credit score model.* An Enterprise may replace any credit score model then in use after a new credit score model has been approved in accordance with this part.

(c) *No right to continuing use.* Enterprise use of a particular credit score model does not create any right to or expectation of continuing, future, or permanent use of that credit score model by an Enterprise.

§ 1254.5 Solicitation of applications.

(a) *Required solicitations.* FHFA periodically will require the Enterprises to solicit applications from credit score model developers. FHFA will determine whether a solicitation should be initiated. FHFA will establish the solicitation requirement by notice to the Enterprises, which will include:

(1) The requirement to submit a Credit Score Solicitation to FHFA for review;

(2) A deadline for submission of the Credit Score Solicitation; and

(3) A timeframe for the solicitation period.

(b) *Credit Score Solicitation.* In connection with each required solicitation, an Enterprise must submit to FHFA a Credit Score Solicitation including:

(1) The opening and closing dates of the solicitation time period during which the Enterprise will accept applications from credit score model developers;

(2) A description of the information that must be submitted with an application;

(3) A description of the process by which the Enterprise will obtain data for the assessment of the credit score model;

(4) A description of the process for the Credit Score Assessment and the Enterprise Business Assessment; and

(5) Any other requirements as determined by the Enterprise.

(c) *Review by FHFA.* Within 45 days of an Enterprise submission of its Credit Score Solicitation to FHFA, FHFA will either approve or disapprove the Enterprise's Credit Score Solicitation. FHFA may extend the time period for its review as needed. FHFA may impose such terms, conditions, or limitations on the approval of a Credit Score Solicitation as FHFA determines to be appropriate.

(d) *Publication.* Upon approval by FHFA, the Enterprise must publish the Credit Score Solicitation on its website for at least 90 days prior to the start of the solicitation time period.

(e) *Initial solicitation.* Each Enterprise must submit its initial Credit Score Solicitation to FHFA within 60 days of the effective date of this regulation. The initial solicitation time period will begin on a date determined by FHFA and will extend for 120 days.

§ 1254.6 Submission and initial review of applications.

(a) *Application requirements.* Each application submitted in response to a Credit Score Solicitation must meet the requirements set forth in the Credit Score Solicitation to which it responds. Each application must include the following elements, and any additional requirements that may be set forth in the Credit Score Solicitation:

(1) *Application fee.* Each application must include an application fee established by the Enterprise. An Enterprise may address conditions for refunding a portion of a fee in the Credit Score Solicitation. The application fee is intended to cover the direct costs to the Enterprise of conducting the Credit Score Assessment.

(2) *Fair lending certification and compliance.* Each application must address compliance of the credit score model and credit scores produced by it with federal fair lending requirements, including information on any fair lending testing and evaluation of the model conducted. Each application must include a certification that no characteristic that is based directly on or

is highly correlated solely with a classification prohibited under the Equal Credit Opportunity Act (15 U.S.C. 1691(a)(1)), the Fair Housing Act (42 U.S.C. 3605(a)), or the Safety and Soundness Act (12 U.S.C. 4545(1)) was used in the development of the credit score model or is used as a factor in the credit score model to produce credit scores.

(3) *Use of model by industry.* Each application must demonstrate use of the credit score by creditors to make a decision whether to extend credit to a prospective borrower. An Enterprise may address criteria for such demonstration in the Credit Score Solicitation. An Enterprise may permit such demonstration of use to include submission of testimonials by creditors (mortgage or non-mortgage) who use the applicant's credit score when making a determination to approve the extension of credit.

(4) *Qualification of credit score model developer.* Each application must include any information that an Enterprise may require to evaluate the credit score model developer (*i.e.,* relevant experience and financial capacity). Such information must include a detailed description of the credit score model developer's:

(i) Corporate structure, including any business relationship to any other person through any degree of common ownership or control;

(ii) Governance structure; and

(iii) Past financial performance.

(5) *Other requirements.* Each application must include any other information an Enterprise may require.

(b) *Historical consumer credit data.* An Enterprise may obtain any historical consumer credit data necessary for the Enterprise to test a credit score model's historical record of measuring and predicting default rates and other credit behaviors. An Enterprise may assess the applicant for any costs associated with obtaining or receiving such data unless such costs were included in the up-front application fee.

(c) *Acceptance of applications.* Each application submitted in response to a Credit Score Solicitation within the solicitation time period must be reviewed for acceptance by the Enterprise.

(1) *Notice of status.* Within 60 days of an applicant's submission, the Enterprise must provide the applicant with an Application Status Notice, which will indicate whether the application requires additional information to be provided by the applicant. An applicant may submit additional information through the end of the solicitation period.

(2) *Complete application.* Completeness of an application will be determined by the Enterprise. An application is complete when an Enterprise determines that required information has been received by the Enterprise from the applicant and from any third party. Information from a third party for a specific application may be received by the Enterprise after the solicitation period closes. The Enterprise must notify the applicant upon determining that the application is complete with a Complete Application Notice.

§ 1254.7 Credit Score Assessment.

(a) *Requirement for Credit Score Assessment.* An Enterprise will undertake a Credit Score Assessment of each application that the Enterprise determines to be complete. An Enterprise must determine whether an application passes the Credit Score Assessment.

(b) *Testing for Credit Score Assessment.* An Enterprise must conduct statistical tests for accuracy and reliability that use one or more industry standard statistical tests for demonstrating divergence among borrowers' propensity to repay using the industry standard definition of default, applied to mortgages purchased by an Enterprise (including subgroups), as identified by the Enterprise.

(c) *Criteria for Credit Score Assessment.* The Credit Score Assessment is based on the following criteria:

(1) *Testing for accuracy.* A credit score model is accurate if it produces a credit score that appropriately reflects a borrower's propensity to repay a mortgage loan in accordance with its terms, permitting a credit score user to rank order the risk that the borrower will not repay the obligation in accordance with its terms relative to other borrowers.

(i) *Initial Credit Score Assessment.* For the Credit Score Assessment of applications submitted in response to the initial solicitation under § 1254.5(e), a credit score model meets the test for accuracy if it produces credit scores that meet a benchmark established by the Enterprise in the initial Credit Score Solicitation, as demonstrated by appropriate testing.

(ii) *Subsequent Credit Score Assessments.* For the Credit Score Assessment of applications submitted in response to any later solicitation under this part, a credit score model meets the test for accuracy if it produces credit scores that are more accurate than the credit scores produced by any credit score model that is required by the Enterprise at the time the test is conducted, as demonstrated by appropriate testing.

(2) *Testing for reliability.* A credit score model is reliable if it produces credit scores that maintain accuracy through the economic cycle. The Credit Score Assessment must evaluate whether a new credit score model produces credit scores that are at least as reliable as the credit scores produced by any credit score model that is required by the Enterprise at the time the test is conducted, as demonstrated by appropriate testing. Testing for reliability must demonstrate accuracy at a minimum of two points in the economic cycle when applied to mortgages purchased by an Enterprise (including subgroups), as identified by the Enterprise.

(3) *Testing for integrity.* A credit score model has integrity if, when producing a credit score, it uses relevant data that reasonably encompasses the borrower's credit history and financial performance. The Credit Score Assessment must evaluate whether a credit score model applicant has demonstrated that the model has integrity, based on appropriate testing or requirements identified by the Enterprise (which may address, for example, the level of aggregation of data or whether observable data has been omitted or discounted when producing a credit score).

(4) *Other requirements.* An Enterprise may establish requirements for the Credit Score Assessment in addition to the criteria established by FHFA.

(c) *Third-party testing.* Testing required for the Credit Score Assessment may be conducted by:

(1) An Enterprise; or

(2) An independent third party selected or approved by an Enterprise.

(d) *Timing of Credit Score Assessment.* (1) An Enterprise must notify the applicant when the Enterprise begins the Credit Score Assessment. The Credit Score Assessment will begin no earlier than the close of the solicitation time period, unless FHFA has determined that an Enterprise should begin a Credit Score Assessment sooner. The Credit Score Assessment will extend for 180 days. FHFA may authorize not more than two extensions of time for the Credit Score Assessment, which shall not exceed 30 days each, upon a written request and showing of good cause by the Enterprise.

(2) An Enterprise must provide notice to the applicant within 30 days of a determination that the application has passed the Credit Score Assessment.

§ 1254.8 Enterprise Business Assessment.

(a) *Requirement for Enterprise Business Assessment.* An Enterprise will undertake an Enterprise Business Assessment of each application that the Enterprise determines to have passed the Credit Score Assessment. An Enterprise must determine whether an application passes the Enterprise Business Assessment.

(b) *Criteria for Enterprise Business Assessment.* The Enterprise Business Assessment is based on the following criteria:

(1) *Accuracy; reliability.* The Enterprise Business Assessment must evaluate whether a new credit score model produces credit scores that are more accurate than and at least as reliable as credit scores produced by any credit score model currently in use by the Enterprise. This evaluation must consider credit scores as used by the Enterprise within its systems or processes that use a credit score for mortgage purchases.

(2) *Fair lending assessment.* The Enterprise Business Assessment must evaluate the fair lending risk and fair lending impact of the credit score model in accordance with standards and requirements related to the Equal Credit Opportunity Act (15 U.S.C. 1691(a)(1)), the Fair Housing Act (42 U.S.C. 3605(a)), and the Safety and Soundness Act (12 U.S.C. 4545(1)) (including identification of potential impact, comparison of the new credit score model with any credit score model currently in use, and consideration of potential methods of using the new credit score model). This evaluation must consider credit scores as used by the Enterprise within its systems or processes that use a credit score for mortgage purchases. The fair lending assessment must also consider any impact on access to credit related to the use of a particular credit score model.

(3) *Impact on Enterprise operations and risk management, and impact on industry.* The Enterprise Business Assessment must evaluate the impact using the credit score model would have on Enterprise operations (including any impact on purchase eligibility criteria and loan pricing) and risk management (including counterparty risk management) in accordance with standards and requirements related to prudential management and operations and governance set forth at parts 1236 and 1239 of this chapter. This evaluation must consider whether the benefits of using credit scores produced by that model can reasonably be expected to exceed the adoption and ongoing costs of using such credit scores, considering projected benefits and costs to the Enterprises. The Enterprise Business Assessment must evaluate the impact of using the credit score model on industry operations and mortgage market liquidity, including costs associated with implementation of a newly approved credit score. This evaluation must consider whether the benefits of using credit scores produced by that model can reasonably be expected to exceed the adoption and ongoing costs of using such credit scores, considering projected benefits and costs to the Enterprises and borrowers, including market liquidity and cost and availability of credit.

(4) *Competitive effects.* The Enterprise Business Assessment must evaluate whether using the credit score model could have an impact on competition in the industry. This evaluation must consider whether use of a credit score model could have an impact on competition due to any ownership or other business relationship between the credit score model developer and any other institution.

(5) *Third-Party Provider Review.* The Enterprise Business Assessment must evaluate the credit score model developer under the Enterprise standards for approval of third-party providers.

(6) *Other requirements.* An Enterprise may establish requirements for the Enterprise Business Assessment in addition to the criteria established by FHFA.

(c) *Timing of Enterprise Business Assessment.* The Enterprise Business Assessment must be completed within 240 days.

(d) *FHFA Evaluation.* FHFA will conduct an independent analysis of the potential impacts of any change to an Enterprise's credit score model. FHFA will initiate its analysis no later than the beginning of the Enterprise Business Assessment. Based on its analysis, FHFA may:

(1) Require an Enterprise to undertake additional analysis, monitoring, or reporting to further the purposes of this part;

(2) Require an Enterprise to permit the use of a single credit score model or multiple credit score models; or

(3) Require any other change to an Enterprise program, policy, or practice related to the Enterprise's use of credit scores.

§ 1254.9 Determinations on applications.

(a) *Enterprise determinations subject to prior review and approval by FHFA.* An Enterprise must submit to FHFA a proposed determination of approval or disapproval for each application. Within 45 days of an Enterprise submission, FHFA must approve or disapprove the Enterprise's proposed determination. FHFA may extend the time period for its review as needed. FHFA may impose such terms, conditions, or limitations on the approval or disapproval of the Enterprise's proposed determination as FHFA determines to be appropriate.

(b) *Approval of a credit score model.* If an Enterprise approves an application for a credit score model following FHFA review of its proposed determination, the Enterprise must implement the credit score model in its mortgage purchase systems that use a credit score for mortgage purchases. The Enterprise must provide written notice to the applicant and the public within 30 days after the FHFA decision on the proposed determination.

(c) *Disapproval of a credit score model.* If an Enterprise disapproves an application for a credit score model following FHFA review of its proposed determination, the Enterprise must provide written notice to the applicant within 30 days after the FHFA decision on the proposed determination. An application may be disapproved under this section at any time during the validation and approval process based on any of the criteria identified in the Credit Score Solicitation. The notice to the applicant must provide a description of the reasons for disapproval.

§ 1254.10 Withdrawal of application.

At any time during the validation and approval process, an applicant may withdraw its application by notifying an Enterprise. The Enterprise may, in its sole discretion, determine whether to return any portion of the application fee paid by the applicant.

§ 1254.11 Pilot programs.

(a) *Pilots permitted; duration of pilots.* An Enterprise may undertake pilot programs to evaluate credit score models. If a pilot program involves a credit score model not in current use by an Enterprise, the credit score model is not required to be approved under this part.

(b) *Prior notice to FHFA.* Before commencing a pilot program, an Enterprise must submit the proposed pilot program to FHFA for review and approval. The Enterprise's submission to FHFA must include a complete and specific description of the pilot program, including its purpose, duration, and scope. FHFA may impose such terms, conditions, or limitations on the pilot program as FHFA determines to be appropriate.

Dated: August 13, 2019.

Mark A. Calabria,

Director, Federal Housing Finance Agency.

BILLING CODE 8070–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2019–0336; Airspace Docket No. 19–AGL–11]

RIN 2120–AA66

Amendment of Class E Airspace; Minocqua-Woodruff, WI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class E airspace areas extending upward from 700 feet or more above the surface of the earth at Lakeland/Nobel F. Lee Memorial Field Airport in Minocqua-Woodruff, WI. The FAA is taking this action as the result of an airspace review caused by the decommissioning of the Arbor Vitae non-directional radio beacon (NDB). The geographic coordinates for the airport in the associated airspace are updated to coincide with the FAA's aeronautical database. Airspace redesign is necessary for the safety and management of instrument flight rules (IFR) operations at these airports.

DATES: Effective 0901 UTC, December 5, 2019. The Director of the Federal Register approves this incorporation by reference action under Title 1 Code of Federal Regulations part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11C, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11C at NARA, email *fedreg.legal@nara.gov,* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: John Witucki, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5900.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace at Lakeland/Nobel F. Lee Memorial Field Airport, in support of standard instrument approach procedures for IFR operations at the airport.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (84 FR 22747; May 20, 2019) for Docket No. FAA–2019–0336 to amend Class E airspace extending upward from 700 feet above the surface at Lakeland/Nobel F. Lee Memorial Field Airport. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11C, dated August 13, 2018, and effective September 15, 2018, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018. FAA Order 7400.11C is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11C lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14 Code of Federal Regulations (14 CFR) amends part 71 by:

Modifying the Class E airspace extending upward from 700 feet above the surface within a 6.6-mile radius (reduced from 7 miles) of the Lakeland/Nobel F. Lee Memorial Field Airport and removing the extension to the southeast associated with the Arbor Vitae non-directional radio beacon. This action enhances safety and the management of IFR operations at the airport. Also, the geographic coordinates were adjusted to coincide with the FAA's aeronautical database.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018, is amended as follows:

* * * * *

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL WI E5 Minocqua-Woodruff, WI [Amended]

Minocqua-Woodruff, Lakeland/Nobel F. Lee Memorial Field Airport, WI
(Lat. 45°55′41″ N, long. 89°43′51″ W)

That airspace extending upward from 700 feet above the surface within a 6.6-mile radius of the Lakeland/Noble F. Lee Memorial Field Airport.

Issued in Fort Worth, Texas, on August 8, 2019.

John Witucki,

Acting Manager, Operations Support Group, ATO Central Service Center.

RIN 1515–AE48

Import Restrictions Imposed on Archaeological Material From Algeria

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This final rule amends the U.S. Customs and Border Protection (CBP) regulations to reflect the imposition of import restrictions on certain archaeological material from the People's Democratic Republic of Algeria (Algeria). These restrictions are being imposed pursuant to an agreement between the United States and Algeria that has been entered into under the authority of the Convention on Cultural Property Implementation Act. The final rule amends CBP regulations by adding Algeria to the list of countries which have a bilateral agreement with the United States to impose cultural property import restrictions. The final rule also contains the Designated List that describes the types of archaeological material to which the restrictions apply.

DATES: *Effective Date:* August 14, 2019.

FOR FURTHER INFORMATION CONTACT: For legal aspects, Lisa L. Burley, Chief, Cargo Security, Carriers and Restricted Merchandise Branch, Regulations and Rulings, Office of Trade, (202) 325–0300, *otrrculturalproperty@cbp.dhs.gov*. For operational aspects, Christopher N. Robertson, Branch Chief, Commercial Targeting and Analysis Center, Trade Policy and Programs, Office of Trade, (202) 325–6586, *CTAC@cbp.dhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Convention on Cultural Property Implementation Act, Public Law 97–446, 19 U.S.C. 2601 *et seq.* (''the Cultural Property Implementation Act''), implements the 1970 United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property (823 U.N.T.S. 231 (1972)) (''the Convention''). Pursuant to the Cultural Property Implementation Act, the United States entered into a bilateral agreement with Algeria to impose import restrictions on certain Algerian archaeological material. This rule announces that the United States is now imposing import restrictions on certain archaeological material from Algeria.

Determinations

Under 19 U.S.C. 2602(a)(1), the United States must make certain determinations before entering into an agreement to impose import restrictions under 19 U.S.C. 2602(a)(2). On January 10, 2019, the Assistant Secretary for Educational and Cultural Affairs, United States Department of State, after consultation with and recommendation by the Cultural Property Advisory Committee, made the determinations required under the statute with respect to certain archaeological material originating in Algeria that are described in the Designated List set forth below in this document. These determinations include the following: (1) That the cultural patrimony of Algeria is in jeopardy from the pillage of archaeological material representing Algeria's cultural heritage dating from approximately 2.4 million years up to 250 years ago, including material starting in the Paleolithic period and going into the Ottoman period (19 U.S.C. 2602(a)(1)(A)); (2) that the Algerian government has taken measures consistent with the Convention to protect its cultural patrimony (19 U.S.C. 2602(a)(1)(B)); (3) that import restrictions imposed by the United States would be of substantial benefit in deterring a serious situation of pillage and remedies less drastic are not available (19 U.S.C. 2602(a)(1)(C)); and (4) that the application of import restrictions as set forth in this final rule is consistent with the general interests of the international community in the interchange of cultural property among nations for scientific, cultural, and educational purposes (19 U.S.C. 2602(a)(1)(D)). The Assistant Secretary also found that the material described in the determinations meets the statutory definition of ''archaeological or ethnological material of the State Party'' (19 U.S.C. 2601(2)).

The Agreement

On August 15, 2019, the United States and Algeria entered into a bilateral agreement, ''Memorandum of Understanding between the Government of the United States of America and the Government of the People's Democratic Republic of Algeria Concerning the Imposition of Import Restrictions on Categories of Cultural Property of Algeria'' (''the Agreement''), pursuant to the provisions of 19 U.S.C. 2602(a)(2). The Agreement enables the promulgation of import restrictions on categories of archaeological material representing Algeria's cultural heritage that is at least 250 years old, dating from the Paleolithic (approximately 2.4 million years ago), Neolithic, Classical, Byzantine, and Islamic periods and into the Ottoman period to A.D. 1750. A list of the categories of archaeological material subject to the import restrictions is set forth later in this document.

Restrictions and Amendment to the Regulations

In accordance with the Agreement, importation of material designated below is subject to the restrictions of 19 U.S.C. 2606 and § 12.104g(a) of title 19 of the Code of Federal Regulations (19 CFR 12.104g(a)) and will be restricted from entry into the United States unless the conditions set forth in 19 U.S.C. 2606 and § 12.104c of the CBP

regulations (19 CFR 12.104c) are met. CBP is amending § 12.104g(a) of the CBP Regulations (19 CFR 12.104g(a)) to indicate that these import restrictions have been imposed.

Import restrictions listed at 19 CFR 12.104g(a) are effective for no more than five years beginning on the date on which the Agreement enters into force with respect to the United States. This period may be extended for additional periods of not more than five years if it is determined that the factors which justified the Agreement still pertain and no cause for suspension of the Agreement exists. The import restrictions will expire five years from August 15, 2019, unless extended.

Designated List of Archaeological Material of Algeria

The Agreement between the United States and Algeria includes, but is not limited to, the categories of objects described in the Designated List set forth below. Importation of material on this list is restricted unless the material is accompanied by documentation certifying that the material left Algeria legally and not in violation of the export laws of Algeria.

The Designated List includes archaeological material in stone, ceramic, metal, bone, glass, and other categories ranging in date from the Paleolithic period (beginning around 2.4 million years ago) to the middle of the Ottoman period in Algeria (A.D. 1750).

Archaeological Material

Approximate Chronology of Well-Known Archaeological Periods and Sites

(a) *Paleolithic period* (Oldowan, Aterian, Oranian, Capsian; c. 2.4 million years ago–6000 B.C.): Afalou bou Rhummel, Ain Hanech, Bir el Ater, Columnata, Taforalt, Tamar Hat, Tighenif.

(b) *Neolithic period* (c. 6000–2000 B.C.): Amekni, Capeletti Cave, Oued Guettara, Tassili n'Ajjer.

(c) *Classical period* (Phoenician, Roman, Punic; c. 1100 B.C.–A.D. 533): Ain Fakroun, Beni Ghename, Cherchell (Caesarea), Cirta, Cuicul, Djémila, Gouraya, Les Andalouses, Mersa Medakh, Siga, Rachgoun, Tébessa, Timgad, Tipasa.

(d) *Byzantine period* (c. A.D. 533–644): Al-Asnam, Guelma, Merouana, Timgad.

(e) *Islamic period* (Umayyad, Abbasid, Fatimid, Hammadid, Almoravid, Almohad, Zayyanid, Marinid; c. A.D. 698–1465): Al Qal'a of Beni Hammad, Algiers, El Kantara, M'Zab Valley, Nedroma, Rhoufi, Tlemcen.

(f) *Ottoman period* (c. A.D. 1555–1830 [1]): Algiers, Oran.

Categories of Material

A. Stone

1. Architectural elements—Doors, door frames, window fittings, columns, capitals, bases, lintels, jambs, friezes, pilasters, engaged columns, altars, *mihrabs* (prayer niches), screens, fountains, inlays, and blocks from walls, floors, and ceilings of buildings. May be plain, molded, or carved. Often decorated with motifs and inscriptions. Marble, limestone, sandstone, and gypsum are most commonly used, in addition to porphyry and granite.

2. Mosaics—Floor mosaics made from stone cut into small bits (tesserae) and laid into a plaster matrix. Wall and ceiling mosaics are made with a similar technique but may include tesserae of both stone and glass. Subjects can include landscapes, scenes of deities, humans, or animals, and activities such as hunting and fishing or religious imagery. There may also be vegetative, floral, or geometric motifs and imitations of stone. Most date approximately from the 5th century B.C. to 4th century A.D.

3. Architectural and non-architectural relief sculptures—Types include carved slabs with figural, vegetative, floral, geometric, or other decorative motifs, carved relief vases, steles, and plaques, sometimes inscribed in Greek, Punic, Latin, or Arabic. Sculptures are also used also for architectural decoration of funerary, votive, or commemorative monuments. Marble, limestone, and sandstone are most commonly used.

4. Monuments—Types include votive statues, funerary and votive stelae, and bases and base revetments in marble, limestone, and other kinds of stone. These may be painted, carved with relief sculpture, decorated with moldings, and/or carry dedicatory or funerary inscriptions in Greek, Punic, Latin, or Arabic.

5. Statuary—Large- and small-scale, including deities, human, animal, and hybrid figures, as well as groups of figures in the round, primarily in marble, but also in limestone and sandstone. Common types are large-scale and free-standing statuary from approximately 1 m to 2.5 m (approximately 3 ft to 8 ft) in height, life-sized portrait or funerary busts (head and shoulders of an individual), and waist-length female busts that are either faceless (aniconic) and/or veiled (head or face). Prehistoric examples are small, 5 cm to 10 cm (approximately 2 in to 4 in), ornaments with carved designs.

6. Sepulchers—Types of burial containers include sarcophagi, caskets, and chest urns in marble, limestone, and other kinds of stone. May be plain or have figural, geometric, or floral motifs painted on them, be carved in relief, and/or have decorative moldings.

7. Vessels and containers—Bowls, cups, jars, jugs, lamps, and flasks, and also include smaller funerary urns, in marble and other stone. Funerary urns can be egg-shaped vases with button-topped covers and may have sculpted portraits, painted geometric motifs, inscriptions, scroll-like handles, and/or be ribbed.

8. Furniture—Types include thrones, tables, and beds, from funerary or domestic contexts.

9. Inscriptions—In Greek, Punic, Latin, or Arabic. Includes funerary stelae, votive plaques, tombstones, mosaic floors, and building plaques made of marble or limestone.

10. Tools and weapons—In flint, chert, obsidian, and other hard stones. Prehistoric and Protohistoric microliths (small stone tools). Chipped stone types include blades, borers, scrapers, sickles, cores, and arrow heads. Ground stone types include grinders (*e.g.,* mortars, pestles, millstones, whetstones), choppers, spherical-shaped hand axes, hammers, mace heads, and weights.

11. Jewelry—Includes seals, beads, finger rings, and other personal adornment in marble, limestone, and various semi-precious stones, including rock crystal, amethyst, jasper, agate, steatite, and carnelian.

12. Seals and stamps—Small devices with at least one side engraved with a design for stamping or sealing. They can be discoid, cuboid, conoid, or in the shape and animals or fantastic creatures (*e.g.,* a scarab).

B. Ceramic

1. Architectural elements—Baked clay (terracotta) elements used to decorate buildings. Examples include acroteria, antefixes, painted and relief plaques, revetments, carved and molded brick, and tile wall ornaments and panels.

2. Statuary—Includes deities, human and animal figures, human body parts, and groups of figures in the round. May be brightly colored. Small- and large-scale, ranging from approximately 10 cm to 1 m (4 in to 3 ft) in height.

3. Figurines—Terracotta statues and statuettes, including deities, human, and animal figures, as well as groups of figures in the round.

4. Vessels—Types, forms, and decoration vary among archaeological

[1] *Note:* Import restrictions concerning Ottoman period archaeological material apply only to those objects dating to 1750 A.D. and earlier.

styles and over time. Includes painted and unpainted forms, which can be either handmade or wheel-made, and decorated with burnish, glazes, or carvings; imagery of humans, deities, animals, floral decorations, or inscriptions. Some of the most well-known types are highlighted below:

a. Neolithic—In a variety of shapes from simple bowls and vases to large storage jars. Handmade, often decorated with a lustrous burnish, decorated with applique and/or incision, sometimes with added paint. So-called ''wavy line pottery'' from the Saharan region is characteristic of the period.

b. Greek—Includes both local and imported fine and coarse wares and amphorae. Also imported Attic Black Figure, Red Figure, and White Ground pottery—these are made in a specific set of shapes (*e.g.,* amphorae, kraters, hydriae, oinochoi, kylikes) decorated with black painted figures on a clear clay ground (Black Figure), decorative elements in reserve with background fired black (Red Figure), and multi-colored figures painted on a white ground (White Ground). Includes imported painted pottery made in Corinth in a specific range of shapes for perfume and unguents and for drinking or pouring liquids. The very characteristic painted and incised designs depict human and animal figural scenes, rows of animals, and floral decoration. Approximate date: 8th century B.C. to 6th century B.C.

c. Punic and Roman—Includes fine and coarse wares, including terra sigillata and other red gloss wares, cooking wares and mortaria, and storage and shipping amphorae.

d. Byzantine—Includes undecorated plain wares, lamps, utilitarian tableware, serving and storage jars, amphorae, and special shapes such as pilgrim flasks. Can be matte painted or glazed, including incised ''sgraffitto'' and stamped with elaborate polychrome decorations using floral, geometric, human, and animal motifs.

e. Islamic and Ottoman—Includes plain or utilitarian wares as well as painted wares in a variety of types.

5. Lamps—Rounded bodies with a hole on the top and in the nozzle, handles or lugs, and figural motifs such as beading, rosettes, or silphium plant. Inscriptions may also be found on the body. Later periods include glazed ceramic lamps, which may have a straight or round bulbous body with flared top, and several branches.

6. Objects of daily use—Includes game pieces, loom weights, and toys.

C. Metal

1. Statuary—Large- and small-scale, including deities, human, and animal figures, as well as groups of figures in the round in bronze, iron, silver, or gold. Common types are large-scale, free-standing statuary from approximately 1 m to 2.5 m (approximately 3 ft to 8 ft) in height and life-size busts (head and shoulders of an individual).

2. Reliefs—Including plaques, appliques, steles, and masks, often in bronze. May include Greek, Punic, Latin, and Arabic inscriptions.

3. Inscribed or decorated sheet—Engraved inscriptions, ''curse tablets,'' and thin metal sheets with engraved or impressed designs often used as attachments to furniture. Primarily in bronze or lead.

4. Vessels and containers—Forms include bowls, cups, jars, jugs, strainers, cauldrons, and oil lamps, as well as vessels in the shape of an animal or part of an animal. Also includes scroll and manuscript containers, as well as reliquaries. In bronze, silver, and gold. May portray deities, humans, or animals, as well as floral motifs in relief. Objects from the Islamic period may be inscribed in Arabic.

5. Jewelry—Necklaces, chokers, pectorals, rings, beads, pendants, belts, belt buckles, earrings, diadems, straight pins and fibulae, bracelets, anklets, girdles, belts, mirrors, wreaths and crowns, make-up accessories and tools, metal strigils (scrapers), crosses, and lamp-holders. In iron, bronze, silver, and gold. Metal can be inlaid (with items such as red coral, colored stones, and glass).

6. Seals—Types include finger rings, amulets, and seals with shank in lead, tin, copper, bronze, silver, and gold.

7. Tools—Types include hooks, weights, axes, scrapers, trowels, keys and the tools of crafts persons such as carpenters, masons and metal smiths, in copper, bronze, and iron.

8. Weapons and armor—Body armor, including helmets, cuirasses, shin guards, and shields, and horse armor often decorated with elaborate engraved, embossed, or perforated designs. Both launching weapons (spears and javelins) and weapons for hand-to-hand combat (swords, daggers, *etc.*).

9. Coins—Pre-Roman mints in Algeria include Cirta, Hippo Regius, Caesarea (Iol), Lix, Siga, and Timici. Roman provincial mints in Algeria include Caesarea, Cartenna, and Hippo Regius. Helpful reference books include: *Corpus nummorum Numidiae Mauretaniaeque,* 1955, J. Mazard, et al., Arts et metiers graphiques, Paris; *Le Trésor de Guelma,* 1963, R. Turcan, Arts et Métiers Graphiques, Paris; *Etude sur la numismatique et l'histoire monétaire du Maroc: Corpus des dirhams idrissites et contemporains,* 1971, D. Eustache, Banque du Maroc, Rabat; *Corpus des Monnaies Alaouites,* 1984, D. Eustache, Banque du Maroc, Rabat; *The Roman Provincial Coinage,* multiple volumes, 1992-, A. Burnett, et al., The British Museum Press, London. Some of the best-known types are described below:

a. Greek—In silver, bronze, and gold, struck in Algeria and in nearby mints (Cyrene, Carthage).

b. Roman Provincial—In bronze, struck at Roman and Roman provincial mints and found throughout Algeria.

c. Numidian and Mauretanian—Associated with Numidian kings such as Micipsa, Jugurtha, Hiempsal II, and Juba I, and Mauretanian kings such as Syphax, Juba II, Ptolemy II of Mauretania, Bocchus I, and Bocchus II.

d. Byzantine—In bronze, silver, and gold, struck in nearby mints like Carthage or mobile mints in Arab-Byzantine period Ifriqiya.

e. Islamic—In silver and gold struck at various mints including Algiers, Bijaya, Biskra, Qusantina, and Tlemcen. Examples include any coins of the following dynasties: Almohad, Hafsid, Marinid, and Ziyanid.

f. Ottoman—Ottoman coins of Algeria in silver, gold, billon, and copper, struck at various mints including Algiers, Qusantina, Tagdemt, and Tlemcen. Also Spanish coins of Oran in billon or copper, produced in Toledo or Madrid for use in Spanish Oran between 1618 and 1691.

D. Bone, Ivory, Shell, and Other Organic Materials

1. Small statuary and figurines—Includes human, animal, and hybrid figures, and parts thereof as well as groups of figures in the round. These range from approximately 10 cm to 1 m (4 in to 40 in) in height.

2. Reliefs, plaques, steles, and inlays—Carved and sculpted. May have figurative, floral, and/or geometric motifs.

3. Jewelry—Types include amulets, combs, pins, spoons, bracelets, buckles, and beads (for example, prehistoric perforated shells) in bone, ivory, and spondylus shell.

4. Seals and stamps—Small devices with at least one side engraved with a design for stamping or sealing. They can be discoid, cuboid, conoid, or in the shape and animals or fantastic creatures (*e.g.,* a scarab).

5. Vessels and luxury objects—Include small containers and decorated vessels made of ostrich eggshell. Ivory,

bone, and shell were used either alone or as inlays in luxury objects, including furniture, chests and boxes, writing and painting equipment, musical instruments, games, cosmetic containers, combs, jewelry, amulets, and seals.

6. Tools—Including bone points and awls, mounted fish jaws for arrow points, and fish hooks.

7. Manuscripts—Written or painted on specially prepared animal skins (cattle, sheep/goat, camel) known as parchment. They occur in single leaves or bound as a book or codex. They date primarily from the late Classical or Byzantine periods and later.

8. Human remains—Skeletal remains from the human body, preserved in burials or other contexts.

E. Glass, Faience, and Semi-Precious Stone

1. Architectural elements—Includes glass tesserae pieces from floor and wall mosaics and glass windows.

2. Vessels and containers—Shapes include small jars, bowls, animal shaped, goblet, spherical, candle holders, perfume jars (*unguentaria*), and lamps. Ancient examples may be engraved and/or colorless or blue, green, or orange, while those from the Islamic period may include animal, floral, and/or geometric motifs.

3. Jewelry—Colored beads, including multi-colored eye beads. Glass bracelets, usually in very dark glass, sometimes twisted.

4. Lamps—Primarily from the Islamic period. May have a straight or round bulbous body with flared top, and several branches.

F. Painting and Plaster

1. Rock art—Painted and/or incised drawings on natural rock surfaces. Common motifs include humans, animals, geometric, and/or floral elements.

2. Wall painting—With figurative (deities, humans, animals), floral, and/or geometric motifs, as well as funerary scenes. These are painted on stone, mud plaster, lime plaster (wet—*buon fresco*—and dry—*secco fresco*), sometimes to imitate marble.

3. Stucco—A fine plaster used for coating wall surfaces or molding into architectural decorations such as reliefs, plaques, steles, and inlays.

G. Textiles, Basketry, and Rope

1. Textiles—Linen cloth was used in Greco-Roman times for mummy wrapping, shrouds, garments, and sails. Islamic period textiles in linen and wool, including garments and hangings.

2. Basketry—Plant fibers were used to make baskets and containers in a variety of shapes and sizes, as well as sandals and mats.

3. Rope—Rope and string were used for a great variety of purposes, including binding, lifting water for irrigation, fishing nets, measuring, and stringing beads for jewelry and garments.

Inapplicability of Notice and Delayed Effective Date

This amendment involves a foreign affairs function of the United States and is, therefore, being made without notice or public procedure (5 U.S.C. 553(a)(1)). For the same reason, a delayed effective date is not required under 5 U.S.C. 553(d)(3).

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

Executive Orders 12866 and 13771

CBP has determined that this document is not a regulation or rule subject to the provisions of Executive Order 12866 or Executive Order 13771 because it pertains to a foreign affairs function of the United States, as described above, and therefore is specifically exempted by section 3(d)(2) of Executive Order 12866 and section 4(a) of Executive Order 13771.

Signing Authority

This regulation is being issued in accordance with 19 CFR 0.1(a)(1) pertaining to the Secretary of the Treasury's authority (or that of his/her delegate) to approve regulations related to customs revenue functions.

List of Subjects in 19 CFR Part 12

Cultural property, Customs duties and inspection, Imports, Prohibited merchandise, Reporting and recordkeeping requirements.

Amendment to CBP Regulations

For the reasons set forth above, part 12 of Title 19 of the Code of Federal Regulations (19 CFR part 12), is amended as set forth below:

PART 12—SPECIAL CLASSES OF MERCHANDISE

■ 1. The general authority citation for part 12 and the specific authority for § 12.104g continue to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Sections 12.104 through 12.104i also issued under 19 U.S.C. 2612;

* * * * *

■ 2. In § 12.104g, paragraph (a), the table is amended by adding Algeria to the list in alphabetical order to read as follows:

§ 12.104g Specific items or categories designated by agreements or emergency actions.

(a) * * *

State party	Cultural property	Decision No.
Algeria	Archaeological material representing Algeria's cultural heritage that is at least 250 years old, dating from the Paleolithic (approximately 2.4 million years ago), Neolithic, Classical, Byzantine, and Islamic periods and into the Ottoman period to A.D. 1750.	CBP Dec. 19–09.
*	* * * * * *	*

Dated: August 13, 2019.

Robert E. Perez,

Deputy Commissioner, U.S. Customs and Border Protection.

Approved:

Timothy E. Skud,

Deputy Assistant Secretary of the Treasury.

[FR Doc. 2019–17743 Filed 8–14–19; 4:15 pm]

BILLING CODE 9111–14–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Part 1308

[Docket No. DEA–332]

Listing of Noroxymorphone in the Code of Federal Regulations and Assignment of a Controlled Substances Code Number

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final rule.

SUMMARY: Noroxymorphone is a derivative of opium and opiates and, as such, is a schedule II controlled substance. The Drug Enforcement Administration (DEA) has established the use of the Drug Enforcement Administration Code Number 9668 for tracking noroxymorphone and for establishing aggregate production quotas. This rule amends the Code of Federal Regulations (CFR) to reflect the current practice of using the Code Number 9668 for noroxymorphone. This rulemaking will list the schedule II controlled substance noroxymorphone as a basic class with the Code Number 9668. This rule does not affect the control of noroxymorphone as a schedule II controlled substance.

DATES: Effective: August 16, 2019.

FOR FURTHER INFORMATION CONTACT: Lynnette Wingert, Diversion Control Division, Drug Enforcement Administration; Mailing Address: 8701 Morrissette Drive, Springfield, Virginia 22152; Telephone (202) 598–8837.

SUPPLEMENTARY INFORMATION:

Noroxymorphone is a schedule II controlled substance defined in the Controlled Substances Act (CSA) by 21 U.S.C. 812(c), Schedule II (a)(1) and 21 CFR 1308.12(b)(1), which control ''opium and opiate, and any salt, compound, derivative, or preparation of opium or opiate.'' It meets the statutory definition of a ''narcotic drug'' as stated in 21 U.S.C. 802(17) as it can be obtained from the chemical modification of substances extracted from vegetable origin, specifically from the plant species Papaver somniferum L. that is lawfully defined as ''opium poppy'' by 21 U.S.C. 802(19). It is not an isoquinoline alkaloid, which is categorically excluded from the statutory definition of a ''narcotic drug.'' 21 U.S.C. 802(17)(A). Rather, noroxymorphone is a phenanthrene alkaloid with a similar chemical structure to other opium and opiate phenanthrene alkaloids listed in 21 CFR 1308.12(b)(1), such as hydrocodone, hydromorphone, dihydroetorphine, ethylmorphine, etorphine hydrochloride, metopon, thebaine, morphine, codeine, oxycodone, and oxymorphone. Noroxymorphone meets the statutory definition of ''opiate'' as it can be readily converted to other morphine-like substances including oxymorphone, which has an addiction-forming or addiction-sustaining abuse liability similar to morphine. Based on the similarity of the chemical structure of noroxymorphone to opium alkaloids listed in 21 CFR 1308.12(b)(1), and the fact that it is obtained by the chemical modification of these listed opium alkaloids, noroxymorphone is a derivative of opium and opiates and a schedule II controlled substance as defined by 21 U.S.C. 812(a)(1) Schedule II and 21 CFR 1308.12(b)(1).

As provided in 21 CFR 1308.03, each controlled substance or basic class thereof is assigned a four digit Drug Enforcement Administration Controlled Substances Code Number that is used to track quantities of the controlled substance imported and exported to and from the United States. Additionally, DEA uses these Code Numbers in establishing aggregate production quotas for basic classes of controlled substances listed in schedules I and II as required by 21 U.S.C. 826.

Since 1996, DEA has established an aggregate production quota for noroxymorphone using the DEA Controlled Substances Code Number 9668. In this final rule, DEA is amending the CFR to reflect the current practice of using the DEA Controlled Substances Code Number 9668 for noroxymorphone. Listing noroxymorphone and its DEA Controlled Substances Code Number in 21 CFR 1308.12(b)(1) does not alter the status of noroxymorphone as a Schedule II controlled substance. Noroxymorphone already is included as a Schedule II controlled substance because 21 CFR 1308.12(b)(1) controls any salt, compound, derivative, or preparation of the listed substances. Accordingly, noroxymorphone has been controlled as a derivative of the listed substances and this rule will not result in adding any new substances into the schedules. Listing noroxymorphone also will not affect the aggregate production quota currently established. DEA-registered manufacturers of noroxymorphone previously granted individual quotas for such purposes may continue to apply for quota after this rule is finalized.

Regulatory Analyses

Administrative Procedure Act (APA)

Under 5 U.S.C. 553(b)(3)(B), an agency may dispense with notice and comment rulemaking when, for good cause, it ''finds . . . that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest.'' DEA finds that notice and comment rulemaking is unnecessary and that good cause exists to dispense with these procedures because the inclusion of noroxymorphone and its DEA Controlled Substances Code Number in the list of schedule II substances in 21 CFR 1308.12(b)(1) is '' 'a minor or merely technical amendment in which the public is not particularly interested.' '' *National Nutritional Foods Ass'n* v. *Kennedy,* 572 F.2d 377, 385 (2d Cir. 1978) (quoting S. Rep. No. 79–752, at 200 (1945)). *See also Utility Solid Waste Activities Group* v. *E.P.A.,* 236 F.3d 749, 755 (D.C. Cir. 2001) (the ''unnecessary'' prong ''is confined to those situations in which the administrative rule is a routine determination, insignificant in nature and impact, and inconsequential to the industry and public'') (int. quotations and citation omitted). This rule is a ''technical amendment'' to 21 CFR 1308.12(b)(1) as it is ''insignificant in nature and impact, and inconsequential to the industry and public.''

Similarly, the APA states that a rule cannot be made effective less than 30 days after publication, unless the rule falls under one of three enumerated exceptions. One of these exceptions is when an agency provides good cause that compliance would be impracticable, unnecessary, or contrary to the public interest. 5 U.S.C. 553(d)(3). A delayed effective date for this rule is unnecessary because this rule simply lists the schedule II controlled substance noroxymorphone in 21 CFR 1308.12(b)(1) as a basic class and assigns to it the DEA Controlled Substances Code Number 9668. This rule merely amends the CFR to reflect the current DEA business practice and better assist companies in complying with registration and quota requirements. In addition, this rule does not require those firms that handle

noroxymorphone to alter their current practices with respect to their quota applications and reporting obligations.

For the reasons stated above, notice and comment procedures are unnecessary and this rule may be made effective upon publication.

Executive Order 12866, 13563, and 13771, Regulatory Planning and Review, Improving Regulation and Regulatory Review, and Reducing Regulation and Controlling Regulatory Costs

This regulation has been drafted and reviewed in accordance with the principles of Executive Orders 12866 and 13563. This rule is not a significant regulatory action under Executive Order 12866. Noroxymorphone is a derivative of opium and opiates and, as such, is a schedule II controlled substance. In this final rule, DEA is merely amending its regulations to reflect the current practice of using the DEA Controlled Substances Code Number 9668 for noroxymorphone. Listing noroxymorphone and its DEA Controlled Substances Code Number will not alter the status of noroxymorphone as a Schedule II controlled substance. Accordingly, this rule has not been reviewed by the Office of Management and Budget.

Because this final rule is not significant under Executive Order 12866, it is not subject to the requirements of Executive Order 13771.[1]

Executive Order 12988, Civil Justice Reform

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate drafting errors and ambiguity, minimize litigation, provide a clear legal standard for affected conduct, and promote simplification and burden reduction.

Executive Order 13132, Federalism

This rulemaking does not have federalism implications warranting the application of Executive Order 13132. The rule does not have substantial direct effects on the States, on the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government.

[1] Office of Mgmt. & Budget, Exec. Office of The President, Interim Guidance Implementing Section 2 of the Executive Order of January 30, 2017 Titled ''Reducing Regulation and Controlling Regulatory Costs'' (Feb. 2, 2017).

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

This rule does not have tribal implications warranting the application of Executive Order 13175. It does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612) applies to rules that are subject to notice and comment under section 553(b) of the APA or other laws. As explained above, the DEA determined that there was good cause to exempt this final rule from notice and comment. Consequently, the RFA does not apply to this final rule.

Unfunded Mandates Reform Act of 1995

This final rule will not result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted for inflation) in any one year, and will not significantly or uniquely affect small governments. Therefore, no actions were deemed under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1532.

Paperwork Reduction Act of 1995

This rule does not impose a collection of information requirement under the Paperwork Reduction Act of 1995. 44 U.S.C. 3501–3521.

Congressional Review Act

This rule is not a major rule as defined by section 804 of the Congressional Review Act (CRA), 5 U.S.C. 804. Pursuant to the CRA, the DEA is submitting a copy of this final rule to both Houses of Congress and to the Comptroller General.

List of Subjects in 21 CFR Part 1308

Drug traffic control, Controlled Substances.

For the reasons set out above, 21 CFR part 1308 is amended as follows:

PART 1308—SCHEDULES OF CONTROLLED SUBSTANCES

■ 1. The authority citation for part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b), unless otherwise noted.

■ 2. Section 1308.12 is amended by redesignating paragraphs (b)(1)(x) through (xviii) as paragraphs (b)(1)(xi) through (xix), respectively, and by adding a new paragraph (b)(1)(x) to read as follows:

§ 1308.12 Schedule II.

* * * * *

(b) * * *

(1) * * *

BILLING CODE 4410–09–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[EPA–HQ–SFUND–1995–0005; FRL–9998–43–Region 4]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Deletion of the Tennessee Products Superfund Site

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) Region 4 announces the deletion of the Tennessee Products Superfund Site (Site) located in Chattanooga, Tennessee, from the National Priorities List (NPL). The NPL, promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). The EPA and the State of Tennessee, through the Tennessee Department of Environment and Conservation, have determined that all appropriate response actions under CERCLA, other than Five Year Reviews, have been completed. However, this deletion does not preclude future actions under Superfund.

DATES: This action is effective August 16, 2019.

ADDRESSES: *Docket:* EPA has established a docket for this action under Docket Identification No. EPA–HQ–SFUND–1995–0005. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information or other information whose disclosure is

restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *http://www.regulations.gov* or in hard copy at the Site information repositories. Locations, contacts, phone numbers and viewing hours are:

U.S. EPA Region 4, Superfund and Emergency Management Division, 61 Forsyth Street SW, Atlanta, Georgia 30303. Hours: Monday through Friday, 9:00 a.m. to 5:00 p.m.

Tennessee Department of Environment and Conservation, Division of Remediation, 1301 Riverfront Parkway, Suite 206, Chattanooga, Tennessee 37402. Hours: Monday through Friday, 9:00 a.m. to 5:00 p.m. Phone: 423–634–5745.

FOR FURTHER INFORMATION CONTACT: Craig Zeller, Remedial Project Manager, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303, 404–562–8827, email: *zeller.craig@epa.gov*.

SUPPLEMENTARY INFORMATION: The site to be deleted from the NPL is: Tennessee Products, Chattanooga, Tennessee. A Notice of Intent to Delete for this Site was published in the **Federal Register** (84 FR 20073) on May 8, 2019.

The closing date for comments on the Notice of Intent to Delete was June 7, 2019. No public comments were received.

EPA maintains the NPL as the list of sites that appear to present a significant risk to public health, welfare, or the environment. Deletion from the NPL does not preclude further remedial action. Whenever there is a significant release from a site deleted from the NPL, the deleted site may be restored to the NPL without application of the hazard ranking system. Deletion of a site from the NPL does not affect responsible party liability in the unlikely event that future conditions warrant further actions.

List of Subjects in 40 CFR Part 300

Environmental protection, Air pollution control, Chemicals, Hazardous waste, Hazardous substances, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Superfund, Water pollution control, Water supply.

Dated: August 5, 2019.

Mary S. Walker,

Regional Administrator, Region 4.

For reasons set out in the preamble, 40 CFR part 300 is amended as follows:

PART 300—NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN

■ 1. The authority citation for part 300 continues to read as follows:

Authority: 33 U.S.C. 1321(d); 42 U.S.C. 9601–9657; E.O. 13626, 77 FR 56749, 3 CFR, 2013 Comp., p. 306; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; E.O. 12580, 52 FR 2923, 3 CFR, 1987 Comp., p. 193.

Appendix B to Part 300—[Amended]

■ 2. Table 1 of appendix B to part 300 is amended by removing the entry for ''TN, Tennessee Products, Chattanooga.''

[FR Doc. 2019–17671 Filed 8–15–19; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

44 CFR Part 64

[Docket ID FEMA–2019–0003; Internal Agency Docket No. FEMA–8593]

Suspension of Community Eligibility

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: This rule identifies communities where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP) that are scheduled for suspension on the effective dates listed within this rule because of noncompliance with the floodplain management requirements of the program. If the Federal Emergency Management Agency (FEMA) receives documentation that the community has adopted the required floodplain management measures prior to the effective suspension date given in this rule, the suspension will not occur and a notice of this will be provided by publication in the **Federal Register** on a subsequent date. Also, information identifying the current participation status of a community can be obtained from FEMA's Community Status Book (CSB). The CSB is available at *https://www.fema.gov/national-flood-insurance-program-community-status-book.*

DATES: The effective date of each community's scheduled suspension is the third date (''Susp.'') listed in the third column of the following tables.

FOR FURTHER INFORMATION CONTACT: If you want to determine whether a particular community was suspended on the suspension date or for further information, contact Adrienne L. Sheldon, PE, CFM, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 400 C Street SW, Washington, DC 20472, (202) 212–3966.

SUPPLEMENTARY INFORMATION: The NFIP enables property owners to purchase Federal flood insurance that is not otherwise generally available from private insurers. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended, 42 U.S.C. 4022, prohibits the sale of NFIP flood insurance unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed in this document no longer meet that statutory requirement for compliance with program regulations, 44 CFR part 59. Accordingly, the communities will be suspended on the effective date in the third column. As of that date, flood insurance will no longer be available in the community. We recognize that some of these communities may adopt and submit the required documentation of legally enforceable floodplain management measures after this rule is published but prior to the actual suspension date. These communities will not be suspended and will continue to be eligible for the sale of NFIP flood insurance. A notice withdrawing the suspension of such communities will be published in the **Federal Register**.

In addition, FEMA publishes a Flood Insurance Rate Map (FIRM) that identifies the Special Flood Hazard Areas (SFHAs) in these communities. The date of the FIRM, if one has been published, is indicated in the fourth column of the table. No direct Federal financial assistance (except assistance pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act not in connection with a flood) may be provided for construction or acquisition of buildings in identified SFHAs for communities not participating in the NFIP and identified for more than a year on FEMA's initial FIRM for the community as having flood-prone areas (section 202(a) of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4106(a), as amended). This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column. The

Administrator finds that notice and public comment procedures under 5 U.S.C. 553(b), are impracticable and unnecessary because communities listed in this final rule have been adequately notified.

Each community receives 6-month, 90-day, and 30-day notification letters addressed to the Chief Executive Officer stating that the community will be suspended unless the required floodplain management measures are met prior to the effective suspension date. Since these notifications were made, this final rule may take effect within less than 30 days.

National Environmental Policy Act. FEMA has determined that the community suspension(s) included in this rule is a non-discretionary action and therefore the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) does not apply.

Regulatory Flexibility Act. The Administrator has determined that this rule is exempt from the requirements of the Regulatory Flexibility Act because the National Flood Insurance Act of 1968, as amended, Section 1315, 42 U.S.C. 4022, prohibits flood insurance coverage unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed no longer comply with the statutory requirements, and after the effective date, flood insurance will no longer be available in the communities unless remedial action takes place.

Regulatory Classification. This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 13132, Federalism. This rule involves no policies that have federalism implications under Executive Order 13132.

Executive Order 12988, Civil Justice Reform. This rule meets the applicable standards of Executive Order 12988.

Paperwork Reduction Act. This rule does not involve any collection of information for purposes of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

List of Subjects in 44 CFR Part 64

Flood insurance, Floodplains.

Accordingly, 44 CFR part 64 is amended as follows:

PART 64—[AMENDED]

■ 1. The authority citation for part 64 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.;* Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp.; p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp.; p. 376.

§ 64.6 [Amended]

■ 2. The tables published under the authority of § 64.6 are amended as follows:

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket Nos. 18–202, 17–105; FCC 19–67]

Children's Television Programming Rules; Modernization of Media Regulation Initiative

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Commission updates the children's television programming rules to reflect the changes to the media landscape since these rules were first adopted in the 1990s following passage of the Children's Television Act of 1990 (CTA). The revised rules will give broadcasters greater flexibility in serving the educational and informational needs of children, allow broadcasters to offer more diverse and innovative educational programming, and relieve unnecessary burdens on broadcasters, while also ensuring that high quality educational programming remains available to all children.

DATES: This rule is effective September 16, 2019, except for amendatory instructions 3 (§ 73.671(c)(5) and (7) and (e)(1) and (2)), 4 (§ 73.673), and 5 (§ 73.3526(e)(1)(ii) and (iii)), which are

delayed. The Commission will publish a document in the **Federal Register** announcing the effective date.

FOR FURTHER INFORMATION CONTACT: For additional information, contact Kathy Berthot, *Kathy.Berthot@fcc.gov,* of the Media Bureau, Policy Division, (202) 418–7454.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Report and Order,* FCC 19–67, adopted on July 10, 2019 and released on July 12, 2019. The full text is available for public inspection and copying during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street SW, CY–A257, Washington, DC 20554. This document will also be available via ECFS *http://www.fcc.gov/cgb/ecfs/.* Documents will be available electronically in ASCII, Word 97, and/or Adobe Acrobat. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Paperwork Reduction Act of 1995 Analysis: This document contains new or modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, will invite the general public and the OMB to comment on the information collection requirements contained in the amendments to §§ 73.671(c)(5) and (7) and (e)(1) and (2), 73.673, and 73.3526(e)(11)(ii) and (iii) in a separate **Federal Register** document, as required by the Paperwork Reduction Act of 1995, Public Law 104–13, *see* 44 U.S.C. 3507. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4), we previously sought specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

Congressional Review Act: The Commission will send a copy of this *Report and Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

Summary of the Report and Order

I. Introduction

1. In this *Report and Order,* we take steps to modernize the children's television programming rules and give broadcasters greater flexibility in serving the educational and informational needs of children. The media landscape has changed dramatically since the Commission first adopted children's television programming rules in 1991. Today, children have an abundance of educational and informational programming options available from both broadcast stations and non-broadcast sources, including children's cable networks and online video providers. In addition, our record shows that there has been a major shift in the way young viewers access video programming. Live viewing of broadcast television among children has declined sharply, as children's viewing of video content on other media platforms and time-shifted viewing have risen. At the same time, we recognize that children in minority and low-income households are more likely to rely exclusively on over-the-air broadcast television and to watch live rather than time-shifted television. The rules we adopt today will provide broadcasters additional scheduling flexibility, allow broadcasters to offer more diverse and innovative educational programming, and relieve unnecessary burdens on broadcasters, while also ensuring that high quality educational programming remains available to all children. Our action in this proceeding is a continuation of the Commission's efforts to modernize its media regulations and reduce outdated requirements that can impede competition and innovation in the media marketplace.

II. Background

2. The CTA requires the Commission to consider, in reviewing television license renewals, the extent to which the licensee ''has served the educational and informational needs of children through the licensee's overall programming, including programming specifically designed to serve such needs.'' The CTA provides that, in addition to considering the licensee's programming in its review of television license renewals, the Commission also may consider: (1) Any special non-broadcast efforts by the licensee which enhance the educational and informational value of such programming to children; and (2) any special efforts by the licensee to produce or support programming broadcast by another station in the licensee's marketplace which is specifically designed to serve the educational and informational needs of children.

3. The Commission initially adopted rules implementing the CTA in 1991, and revised these rules in 1996, 2004, and 2006. Under the current children's programming rules, ''educational and informational programming'' is defined as ''any television programming that furthers the educational and informational needs of children 16 years of age and under in any respect, including the child's intellectual/cognitive or social/emotional needs.'' Programming specifically designed to serve the educational and informational needs of children, also known as ''Core Programming,'' is educational and informational programming that satisfies the following additional criteria: (1) It has serving the educational and informational needs of children ages 16 and under as a significant purpose; (2) it is aired between the hours of 7:00 a.m. and 10:00 p.m.; (3) it is a regularly scheduled weekly program; (4) it is at least 30 minutes in length; (5) the program is identified as specifically designed to educate and inform children by the display on the television screen throughout the program of the symbol ''E/I''; (6) instructions for listing the program as educational/informational, including an indication of the age group for which the program is intended, are provided to publishers of program guides; and (7) the educational and informational objective and the target child audience are specified in writing in the licensee's Children's Television Programming Report (FCC Form 2100 Schedule H or Report).

4. The children's programming rules include a three-hour per week safe harbor processing guideline for determining a license renewal applicant's compliance with the rules. Under the processing guideline, the Media Bureau staff is authorized to approve the children's programming portion of a licensee's renewal application if the station has aired approximately three hours per week (as averaged over a six-month period) of Core Programming on its primary program stream. Renewal applications are divided into two categories for purposes of staff-level CTA review. Under Category A, a licensee can demonstrate compliance with the processing guideline by checking a box on its renewal application and providing supporting information indicating that the station has aired three hours per week (as averaged over a six-month period) of Core Programming. Under Category B, the Bureau staff will approve the children's programming portion of a licensee's renewal application where the licensee makes a showing that the station has aired a package of different types of educational and informational

programming that, while containing somewhat less than three hours per week of Core Programming, demonstrates a level of commitment to educating and informing children that is at least equivalent to airing three hours per week of Core Programming. Specials, PSAs, short-form programs, and regularly scheduled non-weekly programs with a significant purpose of educating and informing children can count toward the processing guideline under Category B. Licensees whose showings do not fall within Category A or B of the processing guideline will have their renewal applications referred to the full Commission, where they will have the opportunity to demonstrate compliance with the CTA by relying in part on special non-broadcast efforts which enhance the value of children's educational and informational programming and/or special efforts by the licensee to produce or support programming broadcast by another station in the licensee's marketplace which is specifically designed to serve the educational and informational needs of children.

5. In addition to the requirement to air an average of three hours of Core Programming on their primary program stream, digital broadcasters that multicast also have an obligation to air educational and informational programming on their multicast streams. Specifically, such stations must air an additional one-half hour per week of Core Programming for every increment of one to 28 hours of video programming provided on free multicast streams. Thus, for example, a digital broadcaster must provide an additional three hours per week of Core Programming for each multicast stream that airs free programming 24 hours per day, seven days per week. Stations that multicast may air all of their additional Core Programming on either one free digital video channel or distribute it across multiple free digital video channels, at their discretion, as long as the stream on which the Core Programming is aired has comparable carriage on MVPDs as the stream triggering the additional Core Programming obligation. At least 50% of the Core Programming counted toward meeting the additional processing guideline cannot consist of program episodes that aired during the previous week on either the station's primary program stream or one of its free multicast streams.

6. The existing rules also require broadcasters to submit detailed Reports on a quarterly basis on a standardized reporting form; to publicize the existence and location of their Reports; to provide a brief explanation in their Reports of how particular programs meet the definition of ''Core Programming''; and to designate a liaison for children's programming and include the name and method of contacting that individual in the station's Reports. Moreover, the Commission has implemented a procedure to address when a station can count preempted Core Programming toward meeting the processing guideline. Under this procedure, Core Programming will be counted as preempted only if it was not aired in a fixed substitute time slot of the station's choice (known as a ''second home'') with an on-air notification of the schedule change occurring at the time of preemption during the previously scheduled time slot. The on-air notification must announce the alternate date and time when the preempted show will air. All networks requesting preemption flexibility must file a request with the Media Bureau by August 1 of each year stating the number of preemptions the network expects, when the program will be rescheduled, whether the rescheduled time is the program's second home, and the network's plan to notify viewers of the schedule change. Finally, the children's programming rules apply to both commercial and noncommercial stations, except that the Commission has exempted noncommercial stations from the reporting requirements in view of their demonstrated commitment to serving the educational and informational needs of children.

7. The CTA additionally requires the Commission to limit the number of minutes that commercial broadcast licensees and cable operators may air during children's programming. Specifically, the CTA provides that television broadcast licensees and cable operators shall limit the duration of advertising in children's programming to ''not more than 10.5 minutes per hour on weekends and not more than 12 minutes per hour on weekdays.'' The Commission initially adopted rules implementing this statutory provision in 1991, and extended these rules to DBS providers in 2004. Among other requirements, these rules require broadcast stations, cable operators, and DBS providers to place records sufficient to demonstrate compliance with the limits on commercial matter in children's programming in their public files on a quarterly basis.

8. On July 12, 2018, in response to comments received in the Modernization of Media Regulation Initiative proceeding, the Commission adopted a notice of proposed rulemaking (*NPRM*) (83 FR 35158, July 25, 2018) proposing to revise the children's television programming rules to modify outdated requirements and to give broadcasters greater flexibility in serving the educational and informational needs of children. The Commission received comments from approximately 50 entities and individuals, including broadcasters and broadcast industry organizations, cable operators and cable industry organizations, nonprofit organizations, and program producers. Broadcast commenters urge the Commission to update the children's programming rules to reflect the 21st century video marketplace better, to give stations greater flexibility to offer educational and informational programming tailored to how children and their families consume video content today, and to eliminate unnecessary regulatory burdens. The nonprofit organizations and program producers generally support the Commission's efforts to undertake a review of the children's programming rules, but raise concerns that some proposals could significantly reduce the availability of high quality children's educational and informational programming, particularly for children in low-income and minority households, and the availability of video-described and closed-captioned children's educational and informational programming.

III. Discussion

A. Statutory Authority

9. As an initial matter, we conclude that the Commission has the authority to update the children's programming rules to reflect the changes that have occurred in the video marketplace for children's programming since the rules were originally adopted. We reject the argument that the Commission lacks the authority to adopt most of the proposals set forth in the *NPRM* because doing so would violate congressional intent expressed in the CTA, as well as the public interest obligation set forth in the 1934 Act and the Telecommunications Act of 1996 (1996 Act). The CTA requires the FCC to ''consider the extent to which the licensee has served the educational and informational needs of children through the licensee's overall programming, including programming specifically designed to serve such needs,'' when reviewing TV stations' license renewal applications. We agree with NAB that the CTA grants the Commission considerable discretion in its implementation, and that the statute does not mandate that the Commission adopt specific quantitative standards or

any other particular requirements for children's television programming. Moreover, the 1934 Act and the 1996 Act do not directly address the obligations of television stations to serve the educational and informational needs of children. The general public interest standard established in the 1934 Act requires all broadcast stations to serve ''the public interest, convenience, and necessity,'' but does not mandate that the Commission impose any particular requirements on television licensees to serve children's educational needs through programming. Similarly, while section 336 of the Act, as added by the 1996 Act, imposes a general public interest obligation on digital television stations, this section does not require the Commission to adopt specific children's programming requirements. We thus conclude that the Commission has ample authority to revise the children's programming rules in light of marketplace changes.

B. The Current State of the Marketplace for Children's Programming

10. The marketplace for children's programming has undergone a dramatic transformation since the passage of the CTA in 1990. The record in this proceeding convincingly shows that there is more educational and informational programming available to children today than ever before. The digital transition has enabled broadcasters to offer multiple free, over-the-air digital streams or channels of programming simultaneously, using the same amount of spectrum previously required for one stream of analog programming. Multicasting allows broadcasters to offer additional programming choices to consumers, which is particularly beneficial to households that rely exclusively on over-the-air television. Public television has taken advantage of the opportunities afforded by multicasting by launching a 24/7 PBS KIDS multicast and online streaming channel, which is available to more than 95% of U.S. TV households, including many children who may not attend pre-school. According to PTV, the PBS KIDS channel has performed especially well among underserved children. Children's time spent viewing PBS has increased 47% among low-income families and 32% in broadcast-only homes since the PBS KIDS channel was launched. PTV explains that African-American, Hispanic, and low-income households make up a larger percentage of the PBS KIDS audience as compared to their representation in the U.S. population, with PBS stations reaching 5.3 million African-American children, 8.4 million Hispanic children, and four million children from low-income homes each year. PTV asserts that the expansive reach of PBS KIDS television and digital content is meaningful because research confirms the positive impact of this content on children's learning. A recent study measuring the short- and long-term effects of PBS KIDS content on young children's literacy found that children who consumed PBS KIDS media gained the equivalent of 1.5 months of literacy development beyond typical growth and that PBS KIDS literacy-themed content was particularly effective at promoting children's vocabulary and language sound knowledge. PTV asserts that its commitment to educating young people has long gone above and beyond the statutory and regulatory requirements and this fact will not change regardless of how the Commission proceeds in this rulemaking.

11. ION also provides a free, 24/7 multicast channel for children, Qubo, which is distributed by each of ION's 65 stations and receives approximately 67% national coverage. ION states that Qubo has aired almost six times the amount of children's educational and informational programming required by the Commission's rules each year. ION currently airs 111 hours of educational and informational content per week on Qubo, representing 66% of its current schedule, and Qubo introduced eight new programs in 2018 alone. ION asserts that it ''will remain dedicated to serving the needs of children through top-quality, values-based educational programming regardless of the outcome of this proceeding.''

12. In addition, as NAB observes, there is an abundance of children's educational and informational programming available on over-the-air broadcast television today that did not exist when Congress passed the CTA in 1990. As of March 31, 2019, there were 270 more full-power commercial stations and 25 more noncommercial educational television stations than there were in 1990, as well as 387 Class A TV stations, a service that did not even exist in 1990. All of these 682 additional stations currently provide children's programming.

13. Moreover, the record reflects that non-broadcast platforms today offer a wealth of options in children's educational programming. There is wide array of full-time children's cable channels that air educational programming, including Baby First TV Network, Disney, Disney Junior, Disney XD, Nickelodeon, Nick Jr., Teen Nick, and Universal Kids, as well as family-oriented cable channels that provide educational and informational programming for viewers of all ages, including National Geographic, National Geographic Wild, Animal Planet, and Smithsonian Channel. Additionally, original and previously-aired children's programming is available on over-the-top (OTT) platforms such as Netflix, Amazon, and Hulu. There are also myriad online sites that provide children's educational and informational content for free or via subscription, such as PBS KIDS, YouTube and YouTube Kids, LeapFrog, National Geographic Kids, Scholastic Kids, Smithsonian Kids, Time for Kids, Noggin, Funbrain, Coolmath, and Apple iTunes U. For example, PTV notes that PBS KIDS averages 253 million video streams per month across all digital platforms and that streaming on PBS KIDS accounts for 35% of all time spent watching children's videos online. PBS Learning Media, a pre-K through 12th grade classroom service with more than a million registered users that reaches over 25 million students, also makes PBS's educational content freely available to every classroom across the country. Given all of these programming choices, it is not surprising that broadcasters report that viewership among children of educational and informational programming on most commercial stations has been declining. In this regard, NAB notes that data from NBC and CBS show that 95% of the audience for children's educational and informational programming on their owned-and-operated and affiliated stations is older than 18 and around two-thirds is over the age of 55. NAB further notes that during the 2017–18 season, children's educational and informational programming on hundreds of NBC and CBS owned-and-operated and affiliated stations each averaged only 57,000 viewers between the ages of two and 17. Moreover, across each of these stations fewer than 90 children ages two to 17 on average watched any given Core Program via broadcast antenna.

14. Some commenters claim that the vast majority of the programming provided on non-broadcast platforms is entertainment rather than educational programming and that the educational programming offered on these platforms may not be age-appropriate or specifically produced for children under 17 years of age. We recognize that not all of the content available on these non-broadcast platforms is programming ''specifically designed to serve the educational and informational needs of children.'' As NAB points out, however, ''broadcast channels are not child-oriented for most of the viewing day,

and they may also include programs that some parents would prefer their children not view. Cable channels and OTT platforms therefore cannot be dismissed merely because they are not solely devoted to educational content suitable for children.'' Notably, there are many programs available on non-broadcast platforms that are recommended as educational programming for children by trusted sources for evaluating children's programming, including Common Sense Media. Further, some OTT platforms and online sites such as YouTube have extensive libraries of previously-aired children's educational and informational programming, including many popular and highly-acclaimed educational and informational PBS programs.

15. Several commenters also assert that online programming is not an appropriate substitute for educational and informational children's programming on broadcast television because online sources of media content are not subject to the FCC's indecency rules or limits on advertising in children's programming and may raise privacy concerns for children. We acknowledge that internet-based content may present risks to children that are not present on broadcast television. We do not believe, however, that the presence of such risks means that we should disregard the vast and diverse selection of educational content available for children on the internet and the reality discussed below that children are viewing an ever-increasing amount of that content. Parents can monitor and take appropriate steps to safeguard their children's internet use. And parents who lack the resources or technical knowledge to do so or who are simply concerned about exposing their children to potential online threats will still have an abundant supply of children's educational and informational programming from which to choose, including programming on free, over-the-air television.

16. There has been a major change in the way children consume video programming as well. Children's live viewing of broadcast television has decreased substantially, as children's viewing of video content on other media platforms has risen. Nielsen data cited by NAB indicate that in 2000, children ages two to 16 spent an average of four hours and 19 minutes per day watching video content, including one hour and 55 minutes watching broadcast television (live and time-shifted), two hours and 14 minutes watching pay/cable television (live and time-shifted), eight minutes watching DVD content, and two minutes watching internet-based content. The Nielsen data further indicate that in 2013, children ages two to 16 spent an average of four hours and 35 minutes per day watching video content, including 53 minutes watching broadcast television (live and time-shifted), two hours and 50 minutes watching pay/cable television (live and time-shifted), four minutes watching DVD/Blueray content, and 48 minutes watching internet-based content. In 2017, children ages two to 16 spent an average of four hours and 30 minutes per day watching video content, including 37 minutes watching broadcast television (live and time-shifted), one hour and 49 minutes watching pay/cable television (live and time-shifted), one minute watching DVD/Blueray content, and two hours and three minutes watching internet-based content. So to summarize, from 2000 to 2017, children's viewing of broadcast television has dropped from an average of 115 minutes to 37 minutes per day while their viewing of internet-based content has increased from an average of two minutes to 123 minutes per day. Commenters also assert that the type of video programming children access has changed in recent years, with young viewers today preferring video on demand, particularly in shorter segments. NCTA cites data indicating that in households with children between the ages of five to seven, 49% of the online video programming that parents watch with their children are non-traditional, short videos on YouTube and that 72% of children between the ages of eight to 11 prefer YouTube videos over traditional broadcast television. Data provided by NAB shows that in 2017, children ages two to 16 spent an average of 47 minutes per day watching YouTube/short-form videos.

17. Furthermore, the record reflects a change in the hours during which children consume video content. Specifically, the record indicates that a significant number of children today are watching television programming or viewing video content earlier than 7:00 a.m. Nielsen data provided by NAB and Network Commenters indicate that during an average week from January 1, 2017, to June 30, 2018, 11.5 million unique children ages two to 15 (or 20.7%) used their TV between 6:00 a.m. and 7:00 a.m. NAB also cites a recent survey in which 65% of teens reported watching video content before school or work.

18. Nevertheless, while it is clear that the media landscape has evolved dramatically since the children's programming rules were adopted, we recognize that not all children, particularly children in minority and low-income households, have access to the wealth of children's educational programming available on non-broadcast platforms. Nielsen data indicate that as of May 2018, more than 14% of television households in the U.S. (over 16 million households) are over-the-air households (*i.e.,* they do not subscribe to cable or satellite television). Of these over-the-air households, 41% are traditional over-the-air households, without any streaming service provider. These traditional over-the-air households are more likely to be minority households. In addition, children from low-income families are more likely to rely on over-the-air television and watch live rather than time-shifted programming. According to a 2017 Common Sense Media report, among lower-income families with children ages zero to eight, only 74% have high-speed internet (compared to 96% among higher-income families), 58% have an internet-connected television set (compared to 82% among higher-income families), 61% have cable or satellite subscriptions (compared to 70% among higher-income families), 60% have subscription video service such as Netflix, Amazon, or Hulu (compared to 77% among higher-income families), and 32% have DVR service (compared to 52% among higher-income families).

19. The revisions to the children's programming rules set forth below are intended to strike a balance between our interest in modernizing our rules to reflect the growth in the amount of children's educational programming available on broadcast and non-broadcast platforms and the decline in appointment viewing among children, with the reality that some children in minority and low-income households still rely on live, over-the-air broadcast television. We conclude that the revisions we are adopting will afford broadcasters greater flexibility in serving the educational and informational needs of children, while ensuring that quality educational programming continues to be available to all children.

C. Core Programming

20. As discussed below, we modify the requirements applicable to Core Programming to provide broadcasters greater flexibility in meeting their children's programming obligations in light of the changes in the media landscape since these requirements were originally adopted. Specifically, we expand the Core Programming time frame to give broadcasters additional

scheduling flexibility and help avoid the need for preemptions. Additionally, while we continue to require that the substantial majority of Core Programming aired by broadcast stations be provided on a regularly scheduled weekly basis and be at least 30 minutes in length, we provide broadcast stations additional flexibility under our revised safe harbor processing guidelines to air programming that is not regularly scheduled on a weekly basis, including educational specials, as well as short-form programs, during a limited portion of their total Core Programming hours.

1. Core Programming Hours

21. We expand the 7:00 a.m. to 10:00 p.m. Core Programming time frame to allow broadcast stations to begin airing Core Programming one hour earlier, at 6:00 a.m., as proposed by several commenters. The end of the time frame during which Core Programming must be aired remains unchanged at 10:00 p.m. Commenters overwhelmingly favor expanding the Core Programming hours. The current Core Programming time frame was adopted in 1996 because data showed that there was a ''relatively small percentage'' of children watching television prior to 7:00 a.m. and a considerable drop-off in children viewing television after 10:00 p.m. As discussed above, recent data reflect that a significant percentage of children ages 16 and under now watch television programming or view video content earlier than 7:00 a.m. Expanding the Core Programming hours will give broadcasters the flexibility to air educational programming for those children who are watching television between 6:00 a.m. and 7:00 a.m. Providing an additional seven hours a week to air Core Programming will also help broadcast stations avoid preemptions.

22. However, we decline to eliminate the Core Programming hours at this time. As discussed above, the one-hour per day expansion of the Core Programming hours will provide broadcasters additional flexibility. Moreover, while two commenters suggest that Core Programming hours may no longer be necessary given the prevalence today of on-demand and time-shifted viewing and the accompanying decline in appointment viewing by children, a number of U.S. households, particularly minority and low-income households, still rely on live, over-the-air television. Accordingly, we find that expanding the Core Programming hours, rather than eliminating them altogether, is preferable to ensure that Core Programming is available during time periods when a substantial number of children, particularly children that rely exclusively on live, over-the-air television, are watching video programming.

2. Regularly Scheduled Weekly Programming Requirement

23. We require broadcast stations to continue to air the majority of their Core Programming on a regularly scheduled weekly basis, but we give broadcast stations the option of airing a limited amount of programming that is not regularly scheduled weekly programming and count that programming as Core Programming. While the *NPRM* tentatively concluded that the regularly scheduled weekly programming requirement should be eliminated altogether, the record has convinced us not to adopt that tentative conclusion.

24. As we explain in more detail below in the Processing Guidelines Section, under Category A of the safe harbor processing guidelines, a broadcast station will be able to demonstrate compliance with the children's programming rules by airing either (i) three hours per week (as averaged over a six-month period) of Core Programming, all of which is regularly scheduled weekly programming, or (ii) a total of 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming and up to 52 hours annually of Core Programs of at least 30 minutes in length that are not regularly scheduled on a weekly basis. Such programs may include, for example, educational specials and other non-regularly scheduled programming, as well as regularly scheduled non-weekly programs. All such programs must be specifically designed to serve the educational and informational needs of children and, as stated, must be at least 30 minutes in length. Under Category B of the processing guidelines, a broadcast station will be able to demonstrate compliance by airing a total of 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming. The remaining Core Programming hours under Category B (up to 52 hours annually) may consist of Core Programs that are not aired on a regularly scheduled weekly basis, including educational specials, other non-regularly scheduled programming, and regularly scheduled non-weekly programming, and short-form programming. Short-form programs are programs less than 30 minutes in length, including PSAs and interstitials (*i.e.,* programming of brief duration that is used as a bridge between two longer programs), that are specifically designed to serve the educational and informational needs of children. The key distinction between Category A and Category B is that short-form programming will be permitted only under Category B. Under both Category A and B, a minimum of 26 hours per quarter of Core Programming aired by broadcast stations must be regularly scheduled weekly programming.

25. We conclude that this approach will ensure that children are able to reap the benefits of viewing educational and informational programming on a regularly scheduled weekly basis, while also providing broadcasters greater scheduling flexibility and the opportunity to offer a greater variety of educational programming. The Commission adopted the regularly scheduled weekly programming requirement in 1996, finding that such programming ''is more likely to be anticipated by parents and children, to develop audience loyalty, and to build successfully upon and reinforce educational and informational messages, thereby better serving the educational and informational needs of children.'' We continue to believe that viewing educational programming on a regularly scheduled weekly basis can provide valuable benefits to children. As Common Sense notes, numerous studies have demonstrated that children learn and retain lessons better by watching the same show or different episodes of the same series than by watching one-off videos or singly aired specials. Common Sense explains that regularly scheduled weekly programming gives children an opportunity to learn from familiar characters and similar situations by watching different episodes of the same show from week to week, increasing children's comprehension and retention of the lessons contained in the programming when compared to singly aired specials. Common Sense also observes that regularly scheduled weekly programming allows parents to plan ahead regarding children's media use, as recommended by the American Academy of Pediatrics and other health and childhood organizations. Given the clear educational benefits to children of watching regularly scheduled weekly programming, we find that the public interest will be served by continuing to require broadcasters to air the majority of their Core Programming on a regularly scheduled weekly basis.

26. At the same time, we recognize that the marketplace for children's programming has evolved since the

regularly scheduled weekly programming requirement was adopted in 1996. Broadcasters correctly note that appointment viewing among children has declined and many children now prefer to binge-watch or watch video on demand. In today's on demand world, where multiple episodes of video programs ''drop'' at the same time on OTT providers such as Netflix and Amazon, broadcasters assert that they should have the flexibility to offer educational and informational programs other than weekly series of uniform length episodes and to offer blocks of several different episodes of the same Core Program on a single day. Additionally, broadcasters observe that viewership of regularly scheduled children's educational programming on commercial stations has declined, as the educational program offerings available to children on broadcast and non-broadcast platforms have exploded. We agree with broadcasters that programming that is not regularly scheduled on a weekly basis can serve the educational and informational needs of children. We also acknowledge that the regularly scheduled weekly programming requirement may create a disincentive for broadcasters to invest in innovative programming, such as educational specials, if such programming may not be counted toward compliance with the children's programming rules. Accordingly, we conclude that it is appropriate to give broadcasters the option of airing a limited amount of Core Programming that is not regularly scheduled on a weekly basis.

27. Several commenters express concern that it will be difficult for parents and children to identify and locate programming that is not regularly scheduled on a weekly basis. We expect that most such programming will be listed in program guides and TV listings available in print and online, as well as in any TV listings posted on a station's website. Moreover, we agree with NAB that broadcasters have strong incentives to ensure that as many viewers as possible watch their programs and thus will make it as easy as possible for children and parents to find their educational and informational programs. Therefore, we find that it is unnecessary to mandate specific promotional requirements for Core Programming that is not aired on a regularly scheduled weekly basis. Rather, we encourage broadcast stations to undertake efforts to inform their intended audiences when such programming will air beyond listing it in program guides and TV listings.

3. Requirement That Core Programming Be at Least 30 Minutes in Length

28. We require that a majority of Core Programming be at least 30 minutes in length, but we permit a limited portion of the programming to be short-form programming and still count as Core Programming. The *NPRM* tentatively concluded that the requirement that Core Programming be at least 30 minutes in length should be eliminated altogether, but, as we explain below, the record has convinced us not to adopt that tentative conclusion. Specifically, under Category B of the processing guidelines, a broadcast station will be permitted to air up to 52 hours annually of Core Programming that is not regularly scheduled on a weekly basis, including educational specials and regularly scheduled non-weekly programs, and short-form programs, including PSAs and interstitials. Allowing broadcasters to air a limited amount of short-form programs will enable them to produce or acquire a diverse array of original, innovative, and high quality short-form content that appeals to young audiences. It will also give broadcasters additional scheduling flexibility.

29. The record shows that short-form programs can be used effectively to educate and inform children. NAB asserts that numerous sources conclude that children's attention spans for learning are short. Moreover, as discussed above, data show that many children today prefer video on demand in shorter segments. Thus, we agree with NAB that children have a demonstrated interest in diversity of programming and formats and may be more engaged by educational and informational programming of different lengths and greater variety.

30. We are not persuaded by NHMC's assertion that allowing broadcast stations to air short-form programming will ''compromise[] the cognitive development of American children.'' NHMC contends that the 30-minute length requirement is ''backed by science,'' asserting that 30-minute programming is more effective than short-form programming because it provides more content, allows for the development of a theme, and permits educational messages to be told in the form of a story. NHMC maintains that during the 1996 revisions to the children's programming rules, the Commission found this ''scientifically-backed argument'' more persuasive than the unsubstantiated argument for short-form programming based on the notion children have short attention spans. We note that in adopting the requirement that Core Programming be at least 30 minutes in length, the Commission relied primarily on the fact that the dominant broadcast television format was 30 minutes or longer in length. The Commission found it reasonable that the children's programming rules, which are intended to promote the accessibility of children's educational and informational programming, reflect this current industry practice because programs in the standard 30 minute or longer format are more likely than shorter programming to be regularly scheduled and to be listed in program guides and thus are easier for parents to identify for their child's viewing.

31. To be sure, we do not dispute, as the Commission found in 1996, that programs that are 30 minutes or longer allow more time for educational content to be presented and may be particularly beneficial to children. Furthermore, as NHMC points out, the dominant broadcast television format is still 30 minutes or longer in length. Nevertheless, there is evidence in the record that short-form video content may be more effective for engagement and that many children in fact prefer short-form programming. Moreover, the Commission recognized in 1996 that ''some short segments have significant public interest benefits'' and ''encourage[d] all broadcasters to continue to provide a diverse mix of educational and informational programming, including short segments and PSAs, toward their overall obligation to provide programming for children.'' Broadcasters confirm, however, that the requirement that educational and informational programming be at least 30 minutes in length to count as Core Programming under our current rules strongly discourages the production of quality short-form programs. While short-form programs and PSAs can count toward the processing guidelines under existing Category B when broadcasters air somewhat less than three hours per week of Core Programming, the uncertainty as to how much Core Programming must be provided under existing Category B has deterred broadcasters from utilizing this option. The approach we are adopting in this order clarifies this issue and recognizes that programs that are at least 30 minutes in length and short-form programs *both* may provide valuable educational benefits to children.

32. While commenters raise concerns that it will be difficult for parents to identify and locate short-form programs, as discussed above, we believe that broadcasters have strong incentives to ensure that children and parents are

able to find their educational and informational programs easily in order to increase their audience size. Therefore, we find that it is unnecessary to mandate specific promotional requirements for short-form programs aired by broadcast stations. Instead, we encourage broadcasters to promote their short-form programs.

33. We acknowledge that short-form programming may not necessarily be video-described. In this regard, Litton asserts that due to budgetary constraints, it is unlikely that short-form children's educational and informational programming will be video-described. However, the fact that we are providing broadcasters greater flexibility with regard to program length has no impact on the total number of hours that must be video-described under our rules. Further, as explained below, broadcasters will be required to air the substantial majority of their Core Programming on their primary streams.

D. Processing Guidelines

34. We modify the safe harbor processing guidelines for determining compliance with the CTA in order to provide broadcasters greater flexibility to address scheduling demands and better serve the needs of children in the current media environment. As we outline above, the marketplace for children's programming has changed considerably since the Commission adopted the processing guidelines more than two decades ago. There is a vast array of children's educational and informational programming available on broadcast stations and non-broadcast platforms and many children today prefer video on demand over live viewing of broadcast television.

35. In addition, the record indicates that the current three-hour per week processing guideline presents significant scheduling challenges for many broadcasters. When Congress enacted the CTA in 1990, few stations offered local newscasts on weekend mornings; broadcast networks offered fewer hours of national morning news shows; and network affiliated stations offered far less live sports coverage. In response to consumer demand, broadcasters have increased their local and national news, public affairs programming, and sports programming. NAB states that these types of ''DVR-resistant'' live programming help broadcasters stay competitive with online and on-demand services, but the growth in such live programming on broadcast television has severely limited the windows during which stations can consistently schedule children's educational and informational programming. For example, during the third quarter when Major League Baseball, the National Football League, and college football all have daytime games on the weekends, stations outside of the Eastern time zone routinely have their children's educational and informational programming preempted due to live network sports, which in turn leads to conflicts between rescheduled Core Programs and other programming, including local news. Broadcasters cite numerous instances where stations either have preempted or declined to air local news and public affairs programming due to children's programming obligations. Commenters assert that preempting or foregoing local news and public affairs programming because of children's programming obligations results in lost advertising and sponsorship revenues for the stations. We find that these scheduling challenges along with the marketplace changes noted above warrant revision of the safe harbor processing guidelines.

36. The revised safe harbor processing guidelines we adopt today will give broadcasters greater flexibility in today's competitive marketplace to schedule their children's educational programs around programming with strong local interest, including news, live sports, and coverage of local events. At the same time, these guidelines will ensure that an ample supply of educational and informational programming is available to children throughout the year. As set forth below, Category A of the processing guidelines will provide broadcast stations enhanced flexibility by allowing them to choose between the existing three-hours per week guideline and a new 156-hour annual guideline. We are also revisiting Category B of the processing guidelines to provide clarity on the extent to which broadcasters may count educational specials and short-form programming toward their total Core Programming hours.

37. *Category A.* We revise Category A of the processing guidelines to provide broadcasters two separate options for demonstrating compliance with the children's programming requirements. Specifically, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the station airs either (i) three hours per week (as averaged over a six-month period) of Core Programming that is regularly scheduled on a weekly basis, or (ii) 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming. Under both of these options, a Core Program must be at least 30 minutes long, as is the case under our Category A processing guideline today. We are expressly retaining the existing three hour per week option because we believe that other revisions we are making in this proceeding, including the expanded Core Programming hours and the ability to air 13 hours per quarter of regularly scheduled weekly programming on a multicast stream, may provide sufficient scheduling flexibility such that some broadcasters may wish to continue offering three hours per week (as averaged over a six-month period) of Core Programming. For example, some broadcasters, particularly small broadcasters, may prefer the certainty and simplicity of scheduling an average of three hours per week of Core Programming, instead of having to decide how to allocate their Core Programming hours every quarter and continually track their Core Programming hours to ensure they are in compliance with our children's programming rules. In addition, some broadcasters may decide that it would better serve the needs of their local communities to continue providing an average of three hours per week of Core Programming throughout the year.

38. The second option under revised Category A is an annual guideline that will allow a broadcast station to demonstrate compliance with the children's programming rules by airing 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programs that are at least 30 minutes long. As NAB notes, airing 156 hours per year of Core Programming is equivalent to the current requirement of airing three hours per week on a full-time program stream. By requiring broadcast stations to air at least 26 hours per quarter of regularly scheduled weekly programming, this option will ensure that children have access to free, over-the-air educational and informational programming on a regularly scheduled weekly basis throughout the year. It will also ensure that children can obtain the educational benefits of viewing the same Core Program on a weekly basis. As discussed above, studies have shown that watching the same show or different episodes of the same series helps children learn and retain lessons.

39. The remaining hours of Core Programming under Category A (up to 52 hours annually) may consist of Core Programs of at least 30 minutes in length that are not regularly scheduled on a weekly basis, including educational specials, other non-regularly scheduled programming, and regularly scheduled non-weekly

programming, which the station will have the discretion to air at any time during the year. For example, a station may wish to air educational specials or blocks of a Core Program during school breaks when more children are likely to be watching. Permitting stations to tailor their programming lineups to times when children are more likely to be at home and air increased amounts of educational and informational programming over shorter time periods (*e.g.,* during spring break or summer vacation) could potentially have a strong educational impact. Or, a station may want to schedule these Core Programming hours during periods of the year when they will not interfere with the airing of live network or non-network sports programs that may cause children's programming to be preempted. By allowing stations to air up to 52 hours annually of Core Programs that are not regularly scheduled on a weekly basis, this option should help to alleviate the scheduling difficulties that many stations experience, particularly during periods of heavy coverage of live sports events. Repeats and reruns of Core Programming will continue to be counted toward fulfillment of the processing guideline under Category A. To help children who are blind or visually impaired have access to Core Programs that are not regularly scheduled on a weekly basis that are video described, we strongly encourage broadcast stations to ensure their programing schedules are publicized with appropriate metadata indicating which programs will include video description.

40. *Category B.* We also modify Category B of the safe harbor processing guidelines to make it a viable alternative to compliance with Category A. Under the existing Category B guideline, Media Bureau staff will approve the children's programming portion of a licensee's renewal application where the licensee makes a showing that the station has aired a package of different types of educational and informational programming that, while containing somewhat less than three hours per week of Core Programming, demonstrates a level of commitment to educating and informing children that is at least equivalent to airing three hours per week of Core Programming. Specials, short-form programs and PSAs, and regularly scheduled non-weekly programs with a significant purpose of educating and informing children can count toward the processing guidelines under existing Category B. However, due to uncertainty as to how much Core Programming a licensee is expected to provide, licensees have rarely attempted to demonstrate compliance with the children's programming rules under Category B. The modifications we adopt today will bring clarity to Category B and make it a viable option for broadcasters.

41. Under revised Category B, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the broadcast station airs 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programs that are at least 30 minutes long. The remaining hours of Core Programming (up to 52 hours annually) may include Core Programs that are not regularly scheduled on a weekly basis, such as educational specials, other non-regularly scheduled programming, and regularly scheduled non-weekly programming, as well as short-form programs. Category B is distinct from the second option of Category A in that short-form programming, including PSAs and interstitials, will be permitted only under Category B. The requirement to air a minimum of 26 hours per quarter of regularly scheduled weekly programming will ensure that children have access to free, over-the-air educational and informational programming throughout the year and that children can obtain the educational benefits of viewing the same Core Program on a weekly basis. Allowing broadcast stations to air up to 52 hours of Core Programs that are not regularly scheduled on a weekly basis and short-form programs will provide broadcasters additional scheduling flexibility and give them the opportunity to offer a wide array of innovative programming of varying lengths that will appeal to children.

42. We decline to eliminate quantitative processing guidelines for determining compliance of television licensees with the children's programming rules. Only two commenters advocate elimination of quantitative processing guidelines. In contrast, several commenters express concern that eliminating quantitative processing guidelines entirely would lead to a severe decline in the amount of children's educational and informational programming available on free, over-the-air television. These commenters suggest that absent a quantitative guideline, broadcasters will have little or no financial incentive to air children's educational and informational programming. As we explain above, the media landscape has changed dramatically since the children's programming rules were first adopted, as reflected by the multitude of children's educational programming now available on non-broadcast platforms and the sharp decline in live viewing of broadcast television among children. The record, however, indicates that some children in minority and low-income households still rely exclusively on live, over-the-air broadcast television. It is unclear from the record how much children's educational and informational programming broadcasters would choose to air in the absence of specific quantitative guidelines, although PTV and ION state that they would continue to air far more children's educational and information programming than is currently required by the Commission. We conclude therefore that the public interest is best served by retaining quantitative processing guidelines to ensure that an adequate supply of quality educational programming continues to be available to all children.

E. Airing of Core Programming

1. Requirement to Air Core Programming on Primary Stream

43. We require broadcast stations to air the substantial majority of their Core Programming hours under either Category A or B on their primary program streams, but we permit broadcast stations under either Category A or B to air up to 13 hours per quarter of their regularly scheduled weekly programming on a multicast stream. Thus, we require broadcast stations to air at least two-thirds of their total annual Core Programming hours (*i.e.,* 104 hours) on their primary streams and no more than one-third of their total Core Programming (*i.e.,* 52 hours) hours on a multicast stream. All Core Programming that is not regularly scheduled weekly programming aired under Category A or B must be aired on a station's primary stream. We believe that this approach strikes an appropriate balance between the benefits of airing educational and informational programming on primary program streams and the benefits of providing stations that multicast with additional flexibility to air valued programming such as local newscasts on their primary streams.

44. This framework is also appropriate because it takes into account, as we discuss in detail above, that there is a tremendous wealth of children's programming available today on both broadcast and non-broadcast platforms. Each of the 330 PBS member

stations is required by its membership to offer a minimum of seven hours of children's educational and informational programming each weekday (35 hours per week); the 24/7 PBS KIDS multicast stream is available to 95% of U.S. TV households; and ION currently airs 111 hours per week of children's educational and informational programming on its 24/7 multicast stream, Qubo, which receives 67% national coverage. Further, there are 682 more free, over-the-air television stations than there were when the CTA was adopted in 1990, all of which must provide children's programming. In addition to the vast array of children's programming available on free, over-the-air television, there is a surplus of educational content available for children on cable children's networks, over-the-top video providers, and online sites. Given the substantial increase in the amount of educational programming choices available to children today, we conclude that it is appropriate to reduce the amount of Core Programming that must be aired on a station's primary stream, while still requiring that most Core Programming be aired on a station's primary stream. Allowing broadcasters to air a minority of their Core Programming hours on a multicast stream will enable them to offer viewers more programming options on their primary streams, including more news and programming of local community interest.

45. We acknowledge that multicast streams do not have the same level of viewership among children as primary streams. As Hearst explains, this is due in part to the fact that MVPDs are not obligated to carry multicast streams. Some commenters express concern that, given this lower level of viewership of multicast streams, allowing broadcast stations to move their programming to multicast streams would be expected to have a significant adverse effect on advertising revenue for such programming, which in turn would adversely impact the production of high quality educational and informational programming. In this regard, Litton asserts that moving as little as one hour per week of Core Programming to multicast streams would adversely affect the market for quality children's programming because Litton is able to subsidize the production costs of some of its programming by spreading its production costs across the six half-hour programs it produces for each network. According to Litton, because of the substantially lower advertising revenue a producer would earn on programming moved to a multicast stream, its ability to spread the overall production costs would be reduced from six half-hour programs to four, resulting in a decrease in production budgets and, in turn, a decline in the quality of children's programming.

46. We acknowledge that allowing broadcasters to air up to 13 hours of regularly scheduled weekly programming per quarter on multicast streams may impact Litton's current business model. We find it speculative, however, the extent to which, if at all, the overall quality of children's programming will be affected. We note, for example, that Litton makes no attempt to quantify the impact of the change and their claims are based on a series of assumptions that may or may not be accurate. Moreover, under our revised rules, broadcasters will be able to produce or acquire a wider variety of innovative children's programming, such as educational specials and short-form programming, that may attract more young viewers and therefore more advertising dollars, thus leading to an increase in program quality. Furthermore, new business models may emerge that improve the quality of children's programming. Further, as NAB observes, broadcasters will be required to air 156 total hours of Core Programming annually, two-thirds of which must be aired on their primary streams, so there will continue to be a strong demand from broadcasters for children's educational and informational programming. Moreover, while multicast streams do not have the same level of viewership as primary streams, a station's multicast streams have the same over the-air coverage area as its primary stream. Therefore, any Core Programming moved to a multicast stream will remain available to young viewers that rely exclusively on free, over-the-air television. In sum, we believe that our approach is a reasonable one that appropriately balances competing concerns and reflects the significant changes that have taken place in the children's programming market.

47. Several consumer groups raise concerns that allowing broadcasters to air short-form programming during a limited portion of their Core Programming hours and to air up to 13 hours per quarter of regularly scheduled weekly programming on a multicast stream may reduce the amount of educational programming accessible to children with visual or hearing disabilities. As discussed throughout this *Report and Order,* we highly encourage broadcasters to ensure that programming remains accessible to children with disabilities and are confident that there will remain ample educational programming available to such children. However, to monitor the extent to which Core Programming remains accessible to children with disabilities, we direct the Media Bureau to issue a Public Notice no later than two years after the effective date of these revisions to our children's programming rules seeking information from the broadcast industry and viewers on the extent to which short-form programming and Core Programming aired on multicast streams is closed-captioned and/or video-described, including on multicast channels like PBS KIDS and Qubo that provide captioning today. Such information will enable us to assess the state of educational children's programming in terms of its accessibility to children with visual or hearing disabilities.

2. Elimination of Processing Guideline Applicable to Multicast Streams

48. Consistent with the tentative conclusion in the *NPRM,* we eliminate the additional Core Programming processing guideline applicable to digital stations that multicast, which requires broadcasters providing streams of free video programming in addition to their primary program stream to air additional Core Programming based on the amount of programming that is aired on their multicast streams. We agree with commenters that neither the CTA nor section 336 of the Act requires that the Commission impose additional children's programming requirements on multicast streams. The CTA directs the Commission to consider at renewal whether a television licensee has served the educational and informational needs of children through its ''programming,'' but it does not mandate that the Commission assess such programming on a stream-by-stream basis. Section 336, which establishes the statutory framework for the DTV transition, provides that the Commission ''shall prescribe such other regulations as may be necessary for the protection of the public interest, convenience, and necessity.'' For the reasons set forth below, we conclude that additional children's programming requirements for multicast streams are not necessary for the protection of the public interest, convenience, and necessity.

49. We acknowledge that elimination of the additional processing guideline will result in a reduction in the overall amount of Core Programming available on free, over-the-air television but find that overall the costs of the additional processing guideline outweigh the benefits to children. In adopting the additional processing guideline for

digital stations that multicast, the Commission stated that ''any increase in multicasting channel capacity that broadcasters choose to implement as a result of digital technology should translate to a commensurate increase in the amount of educational programming available to children.'' However, as we explain in detail above, the marketplace for children's programming has changed dramatically in recent years. There is a wealth of educational and informational programming available to children today on both broadcast and non-broadcast platforms. Even in households that lack access to both MVPD and internet services, children now have access to considerably more free, over-the-air educational and informational programming than when the Commission adopted the additional processing guideline for multicast streams. Moreover, the record reflects that live viewing of broadcast television by children has decreased substantially, while children's viewing of video content on other media platforms and time-shifted viewing has risen. Nexstar also asserts that ''[t]he burden of providing an additional 3.0 average hours of children's television for every stream disincentivizes broadcasters from expanding their program offerings to all other viewers beyond their primary station,'' which ''results in the inefficient use of spectrum and a restriction of programming choices.'' On balance, we think that the benefit to children of the additional processing guideline for multicast streams is outweighed by the burden that this requirement imposes on broadcasters. Accordingly, we conclude that elimination of the additional processing guideline and related rules is justified.

3. MVPD Comparable Carriage Requirement

50. We adopt our proposal to eliminate the MVPD comparable carriage requirement. Under this requirement, the Commission has allowed stations that multicast to air all of their additional Core Programming (beyond the three hours per week of Core Programming that must be aired on the primary stream) on any free over-the-air stream only where the stream has MVPD carriage comparable to the stream whose programming generated the Core Programming obligation. Given that we are eliminating the additional processing guideline and will require broadcasters to air a majority of their Core Programming on their primary streams, we conclude that the MVPD comparable carriage requirement is no longer necessary.

F. Preemptions

51. We anticipate that the added flexibility afforded to broadcasters by the rule changes that we adopt in this proceeding will reduce the need for preemptions. In particular, we believe that the expanded Core Programming hours and the processing guideline options detailed above will enable broadcasters to schedule their Core Programming more easily so that it does not conflict with live programming content, such as sports, local and national news, and public affairs programming. Nevertheless, we conclude that revision of our policies governing preemptions is warranted to ensure that broadcasters have sufficient flexibility to reschedule any preempted Core Programming and still count that programming toward compliance with our processing guidelines.

52. We eliminate the ''second home'' policy. Under this policy, a station that preempts an episode of a Core Program for any reason other than breaking news is required to air the rescheduled program in a previously-selected substitute time slot or ''second home'' and provide an on-air notification of the schedule change in order for the rescheduled program to count toward compliance with the processing guidelines. No commenters expressly support retaining the ''second home'' policy. Commenters aver that requiring broadcasters to keep ''second home'' windows available for rescheduling preempted Core Programs needlessly restricts their ability to schedule programming in a manner that best serves the needs of their communities. While stations may still choose to use a second home as a strategy for rescheduling preempted children's programming, we agree that for many this policy is unnecessarily burdensome and accordingly eliminate it as a requirement for counting rescheduled children's programming toward compliance with the processing guidelines.

53. In order to provide broadcasters greater scheduling flexibility, we permit a station that preempts an episode of a regularly scheduled weekly program on its primary stream to air the rescheduled episode on its primary stream at any time during Core Programming hours (*i.e.,* between 6:00 a.m. and 10:00 p.m.) within seven days before or seven days after the date the episode was originally scheduled to air. The broadcast station must provide an on-air notification of the schedule change during the same timeslot as the preempted episode. If a station intends to air the rescheduled episode within the seven days before the date the preempted episode was originally scheduled to air, the station must make the on-air notification during the same timeslot as the preceding week's episode of that program. If the station intends to air the rescheduled episode within the seven days after the date the preempted episode was originally scheduled to air, the station must make the on-air notification during the timeslot when the preempted episode was originally scheduled to air. The on-air notification must include the alternate date and time when the preempted program will air. Preempted Core Programs that are rescheduled in this manner will count toward a station's total number of Core Programming hours under the processing guidelines. We also permit a station that preempts a regularly scheduled weekly program on a multicast stream to air the rescheduled episode on that same multicast stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air, provided it follows the announcement requirement set forth earlier in this paragraph.

54. As proposed by NAB, we also expand the breaking news exemption, under which broadcast stations are permitted to preempt Core Programs for breaking news without rescheduling them, to permit a station to preempt an episode of a regularly scheduled weekly program in order to air non-regularly scheduled live programming produced locally by the station without any requirement to reschedule the episode. We emphasize that this exception to the requirement that preempted Core Programming be rescheduled in order to count toward a broadcaster's children's programming obligations applies only to ''non-regularly scheduled live programming.'' Examples of ''non-regularly scheduled live programming'' include but are not limited to non-breaking live news, such as coverage of an elected official swearing-in ceremony, public affairs specials on issues of interest to the local community, live coverage of a local parade, a local election debate, or live coverage of a local sports team's playoff or championship game. Furthermore, the programming must be produced locally by the station to serve the community where the station is located. This exception will promote localism by providing viewers greater access to programming that is of interest to their local community. The very limited nature of this exception will ensure that it cannot be used to circumvent the children's programming requirements.

55. Finally, we no longer require networks seeking preemption flexibility to file an annual request for such flexibility with the Media Bureau. We note that licensees are required to provide detailed information in their Reports regarding each Core Program that was preempted during the most recent reporting period, including the date and time the program was rescheduled (if rescheduled), the reason for the preemption, and whether promotional efforts were made to notify the public of the rescheduled date and time. We conclude that there is little practical utility or public benefit to requiring licensees both to submit information about expected future preemptions in an annual request for preemption flexibility and to submit information about preemptions that occurred during the reporting period in the Report. Accordingly, we eliminate the duplicative requirement to file an annual preemption flexibility request.

G. Public Information and Reporting Requirements

1. On-Air Notification Requirement

56. We no longer require noncommercial stations to identify their Core Programming with the ''E/I'' symbol at the beginning of the program and display this symbol throughout the program, consistent with the tentative conclusion in the *NPRM.* The Commission adopted this requirement for both commercial and noncommercial broadcasters in 2004 to address concerns that there was a continued lack of awareness on the part of parents regarding the availability of Core Programming, finding that use of the E/I symbol could greatly improve the public's ability to recognize and locate Core Programs at minimal cost to broadcasters. Although noncommercial stations previously were exempt from the on-air identification requirement in view of their strong commitment to children's educational and informational programming, the Commission determined that requiring all stations to display the E/I symbol throughout the program would help ''reinforce viewer awareness of the meaning of this symbol.''

57. We conclude that elimination of the requirement that noncommercial stations identify their Core Programming by displaying the E/I symbol throughout the programming is warranted. PTV asserts that ''[t]he [E/I] symbol is added to programming prior to delivery to stations and it would be cost prohibitive to later adjust its display on broadcast or any other distribution platform, including mobile devices where PTV now live streams all of its educational children's content for free. As a result of limited resources, the existing requirement on public stations is effectively transferred to all new and emerging platforms.'' Moreover, no commenter specifically objects to eliminating this requirement for noncommercial stations. Given the educational nature of most programming on noncommercial stations, it is reasonable to expect that parents will know that a children's program on a noncommercial station is specifically designed to meet the educational and informational needs of children. In addition, given that much of the children's educational and informational programming aired on noncommercial stations is targeted to pre-school and elementary school aged children and is familiar to parents, we do not believe that it will be difficult for parents to distinguish programming aired on noncommercial stations that is specifically designed to educate and inform children from programming aired on noncommercial stations that may be educational or informative but is intended for general audiences. We also note that PBS member stations, which make up 90% of all noncommercial stations, identify and provide detailed descriptions of their educational and informational children's programs on their websites.

58. We retain the on-air notification requirement for commercial stations. Contrary to NAB's suggestion, we find that the fact that the E/I symbol is now familiar to parents does not mean that it is not necessary to display the symbol during Core Programs aired on commercial stations. As noted by commenters, some parents continue to rely on the E/I symbol to identify educational programming for their children. Further, noncommercial stations generally air far more children's educational programming than commercial stations, whereas it is more difficult for parents to locate children's educational programming in commercial stations' more varied line-ups. Parents also may have more uncertainty as to whether a program aired on a commercial station is intended to be educational than they will for PBS programming, given the overall educational mission of PBS. Accordingly, we conclude that it is important to continue to require commercial stations to display the E/I symbol throughout Core Programs to help parents identify educational programming for their children.

2. Program Guides

59. We retain the requirement that broadcasters provide information identifying programming specifically designed to educate and inform children to publishers of program guides. This requirement was intended to improve the information available to parents regarding programming specifically designed for children's educational and informational needs and to make broadcasters more accountable in classifying programming as specifically designed to educate and inform. We recognize that publishers of program guides are not obligated to include children's programming information provided by stations in their guides. Nevertheless, commenters indicate that some parents continue to rely on program guides to make informed decisions about educational and informational programming for their children. Further, we find that it is not a significant burden for broadcasters to provide information identifying programming specifically designed to educate and inform children to program guide publishers. Moreover, given that broadcast stations will have the flexibility to air a limited amount of programming that is not regularly scheduled on a weekly basis under the revised processing guidelines, we think that it will remain important for broadcasters to provide information identifying such programming to publishers of program guides to assist parents in locating this programming for their children. However, we will no longer require broadcasters to provide program guides publishers an indication of the age group intended to watch their educational and informational programming since it appears that very few program guides include this information. We are confident that parents can decide whether a particular Core Program is age-appropriate for their children based on the description of the program or by watching the program with their children.

3. Reporting Requirements

60. We revise the children's programming reporting requirements to streamline them and eliminate unnecessary and burdensome requirements. As discussed above, commercial television broadcasters currently are required to file a Children's Television Programming Report on FCC Form 2100 Schedule H on a quarterly basis providing detailed information regarding efforts made during the preceding quarter, and efforts planned for the next quarter, to serve the educational and informational needs

of children. The record reflects that compiling these reports places significant burdens on stations, particularly smaller stations with limited staff resources. Further, it appears that some of the information required by these Reports has little practical utility or benefit to the public today. Our revisions will reduce reporting burdens on broadcasters, while ensuring that Commission staff and the public still have sufficient information to verify stations' compliance with the children's programming rules.

61. We require that broadcasters file the Reports on an annual rather than quarterly basis, consistent with the tentative conclusion in the *NPRM.* We concur with commenters that quarterly reporting places an undue burden on stations, especially smaller stations. Broadcasters assert that the level of granularity and redundant information required by the current form requires that stations devote a significant amount of time and resources to compiling these Reports each quarter. NAB notes, for example, that in the first quarter of 2018, the Reports of the 16 television stations owned by one NAB member station group totaled 492 pages, with an average of nearly 31 pages per station, and that based on the first quarter's numbers, this group expected to file an estimated total of 1,968 pages in 2018 detailing its children's programming. Another NAB member station group reported that each quarter, its stations' legal, programming, and operations departments spend a combined 30 hours compiling information for the Reports, submitting the Reports to the Commission, and updating station records to reflect that the work was completed. Gray asserts that staff at its stations in the smaller markets of Charlottesville, Virginia, and Sioux Falls, South Dakota, spend up to six or seven hours per quarter preparing the Reports.

62. Moreover, while the quarterly reporting requirement was intended to ''provide[ ] more current information about station performance and encourage[ ] more consistent focus on educational programming efforts,'' it does not appear that requiring broadcasters to file these Reports on a quarterly basis serves any useful purpose today. Broadcasters confirm that there is little variation in the Reports from quarter to quarter. Further, while the record reflects that some interested parties examine the Reports at license renewal time to verify stations' compliance with the CTA, there is no evidence in the record that the public regularly uses the Reports on a quarterly basis to monitor station compliance with the CTA or for any other purpose. In addition, most programming information is readily available on the internet and will likely be available through at least some program guides. Accordingly, we conclude that the burdens to broadcasters of preparing these Reports on a quarterly basis outweigh the benefits to the public of having this information on a quarterly basis.

63. We require that broadcasters file their annual Form 2100 Schedule H within 30 days after the end of the calendar year, rather than ten days after the end of the reporting period as is currently required. We agree with NAB that a 30-day deadline will provide broadcasters sufficient time to prepare and file the Reports without unduly delaying the posting of the Reports in stations' online public files. Broadcasters may begin filing their Reports on January 1, and we encourage broadcasters to implement processes to ensure accurate completion and timely filing of their annual Reports.

64. We also modify Form 2100 Schedule H to eliminate the need for broadcasters to submit duplicative and unnecessary information and to both simplify and streamline the form. We eliminate the requirement that Reports include information on the educational and informational programming that a broadcast station intends to air during the next reporting period. As NAB observes, there is no evidence that parents or children consult the Reports to plan their future viewing. Further, as discussed above, there is little change in programming over the course of the year. Moreover, information about upcoming programming is available in program guides and online. Thus, there appears to be no public benefit to requiring stations to report in detail on the programming they expect to air in the future.

65. In addition, we no longer require stations to describe the educational and informational objective of each Core Program and how it meets the definition of Core Programming. This requirement was intended to ensure that licensees devote attention to the educational and informational goals of Core Programming and allow parents and other interested parties to participate more actively in monitoring licensee compliance with the CTA. As Nexstar points out, however, ''the act of providing a program narrative does not necessarily incentivize broadcasters to 'devote attention to the goals of Core Programming.' Indeed, since broadcasters generally purchase Core compliant children's television programming packages, the narratives are usually provided by the program provider.'' Thus, requiring stations to include this narrative in their Reports does not appear to serve the intended purpose of ensuring that licensees devote attention to the educational and informational goals of Core Programming. Further, as discussed above, it does not appear that the public routinely relies on the programming descriptions contained in the Reports to monitor station compliance or to identify and locate programming for their children. Rather, we expect that parents today are more likely to rely on online sources, such as online TV listings and programming guides and program producers' websites, to find program descriptions. Given that descriptions of Core Programming are readily available from numerous other sources, we conclude that eliminating this information from the Form 2100 Schedule H will reduce reporting burdens on broadcasters without impairing the ability of the public or Commission staff to monitor stations' compliance with their children's programming obligations. We retain the requirement to identify the target age of Core Programming in the Form 2100 Schedule H. The purpose of this requirement is to ensure that Core Programs effectively target a specific child audience and to provide information to parents regarding the appropriate age for Core Programs. While it does not appear that the public routinely uses this information to monitor station compliance or to identify programming for their children, the Commission uses this information in determining a station's compliance with the commercial limits in children's programming. Since the commercial limits apply only to programming intended for children 12 years old and younger, we streamline the Form 2100 Schedule H to allow licensees to check a box on the form indicating whether programming is designed to serve the educational and informational needs of young children (ages 12 and under) or teenage viewers (ages 13 to 16). This will be sufficient to ensure that Core Programs target a specific child audience and provide the Commission with the information it needs to determine compliance with the commercial time limits while decreasing reporting burdens.

66. Furthermore, we modify the form to eliminate the requirement to identify which program guide publishers were sent information identifying each Core Program aired on the station. There is no evidence that the public uses this

information and, as noted by commenters, program guide publishers are not obligated to include children's programming information provided by stations in their guides. Broadcasters are still required to certify that they sent the required information to program guide publishers.

67. We also make other modifications to Form 2100 Schedule H as needed to conform the form with the revisions to the children's programming rules we are adopting in this proceeding, including the changes to the processing guidelines and preemption policies. We direct the Media Bureau to make the necessary changes to Form 2100 Schedule H to implement our revised rules and policies in a manner that is consistent with this *Report and Order.*

68. We decline, however, to further streamline the Report to permit broadcasters to certify their compliance with the children's programming requirements, instead of providing detailed information documenting their compliance, a proposal on which we sought comment in the *NPRM* and which is supported by a number of commenters. We believe that the modifications we are making to the reporting requirements and Form 2100 Schedule H, as discussed above, are warranted to provide broadcasters relief from unnecessary reporting burdens. We conclude, however, that it continues to be necessary to require broadcasters to provide certain details concerning their Core Programming to enable Commission staff and the public to verify their compliance with the children's programming rules. Child Advocates note, for example, how information from past Reports served as the basis for petitions to deny the renewal applications of two stations in Washington, DC, and two stations in Cleveland, Ohio, for failing to provide a sufficient quantity of programming specifically designed to educate and inform children. We agree with Child Advocates that if stations were not required, at a minimum, to identify their Core Programs and when they were aired, the public would not be able to determine if a station actually complied with its public interest obligations, let alone have information sufficient to file a petition to deny, and Commission staff would likewise lack the information necessary to determine whether a station had satisfied its children's programming obligations. Particularly considering the revisions to the Core Programming requirements and processing guidelines we are making in this proceeding to provide broadcasters additional flexibility, we think it is necessary that Commission staff and the public have the ability to effectively monitor stations' compliance with the children's programming rules.

69. Finally, consistent with the tentative conclusion in the *NPRM,* we eliminate the requirement that licensees publicize the existence and location of their Children's Television Programming Reports. This requirement was originally intended to ''heighten awareness of the CTA and invite members of the public to take an active role in monitoring compliance.'' As NAB notes, this requirement predates the hosting of television stations' public files, which include the Reports, on the Commission's website. Given that television stations are now required to provide a link to their Commission-hosted online public files from the home page of their own websites, this requirement serves little purpose today. Additionally, there is no evidence in the record that this requirement encourages viewers to seek out stations' Reports or to take an active role in monitoring stations' compliance with the CTA.

4. Recordkeeping Requirements for Commercial Limits

70. We revise our rules to require broadcasters, cable operators, and DBS providers to place records sufficient to demonstrate compliance with the limits on commercial matter in children's programming in their public files on an annual basis, rather than on a quarterly basis as is currently required. We agree with commenters that collecting documentation from programming networks to verify compliance with the commercial limits on a quarterly basis is burdensome for cable operators and DBS providers that must collect such documentation from dozens, if not hundreds, of programming networks. ACA states that its members, most of which are small cable operators, report spending 16 to 20 hours per quarter—a total of 64 to 80 hours per year—attempting to collect the necessary documents. Further, we conclude that permitting these entities to post their records demonstrating compliance with the commercial limits in their public files annually rather than quarterly will not result in any loss of accountability or transparency. We reject a proposal by AT&T and NCTA that cable operators and DBS providers be permitted to file documentation demonstrating compliance with the commercial limits only in the event of a complaint. We find that this proposal is outside the scope of this proceeding.

71. We also extend the deadline for broadcasters, cable operators, and DBS providers to post to their public files the documents demonstrating compliance with the commercial limits to 30 days after the end of the calendar year. Commenters assert that it is unnecessarily burdensome to collect, scan and upload hundreds of certifications within ten days of the close of a reporting period, as is currently required. We agree and find that there is no reason to believe that granting broadcasters, cable operators, and DBS providers an additional 20 days to post this documentation in their public files would undermine the purpose of the recordkeeping obligation. We decline, however, to give these entities 45 days from the end of the calendar year to post the documentation to their public files, as requested by ACA. We expect that 30 days will provide sufficient time for broadcasters, cable operators, and DBS providers to collect and post the required documentation. We also decline to adopt ACA's proposal to make clear that ''the Media Bureau will not adopt an official Notice of Apparent Liability for Forfeiture against any small or medium-sized cable operator for violating the children's programming recordkeeping requirement if that operator can demonstrate in response to a Bureau inquiry that it made a good faith effort to collect and post to [its] online file all necessary programmer certificates and program lists by the Commission's deadline.'' ACA's proposal is outside of the scope of this proceeding. Nevertheless, we note that any good faith efforts to comply with this requirement would be taken into account as a mitigating factor in a forfeiture proceeding.

72. Finally, we also reject requests by commenters for revision of the website display rules, which permit the display of website addresses during programs directed to children ages 12 and under only if the website meets certain criteria. These requests raise issues that are beyond the scope of this proceeding.

H. Effective Date of Revised Children's Programming Rules

73. The revised children's programming rules we adopt in this proceeding will become effective 30 days after publication in the **Federal Register**. The Commission will publish a document in the **Federal Register** announcing the effective date for those requirements involving Paperwork Reduction Act issues that are awaiting OMB approval. If a broadcast station chooses to switch from the current safe harbor processing guideline of three-hours per week (as averaged over a six-month period) to one of the new annual processing guidelines for the remainder of 2019 after the effective date of the

new guidelines, we will apply the current and new processing guidelines on a pro-rated basis to the periods before and after the effective date in determining whether the station satisfied the processing guidelines for 2019. We direct the Media Bureau to issue a public notice before the effective date of the new processing guidelines detailing how the pro-rated guidelines will apply.

74. In addition, we note that the current eight-year license terms for broadcast television stations will start to expire in 2020. In this renewal cycle (*i.e.,* for renewal applications filed between June 1, 2020 and December 1, 2023), license renewals will cover licensee performance that both pre-dates and post-dates the effective date of the revised children's programming rules. Licensee performance during the period of the license term that pre-dates the effective date of the revised rules will be evaluated under the standards existing at that time and licensee performance that post-dates the effective date of the revised rules will be evaluated in accordance with the provisions as revised herein.

IV. Procedural Matters

A. Final Regulatory Flexibility Act Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Initial Regulatory Flexibility Analysis (IRFA) was incorporated into the *NPRM* released in July 2018 in this proceeding. The Federal Communications Commission (Commission) sought written public comment on the proposals in the *NPRM,* including comment on the IRFA. The Commission received no comments on the IRFA. This Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.

B. Need for, and Objectives of, the Report and Order

2. The *Report and Order* modernizes the children's television programming rules to relieve unnecessary burdens on broadcasters, allow broadcasters to offer more diverse and innovative educational programming, and provide broadcasters greater flexibility in serving the educational and informational needs of children. The *Report and Order* revises the Core Programming requirements to expand the time frame during which Core Programming must be aired to 6:00 a.m. to 10:00 p.m.; require that a majority of Core Programming be regularly scheduled weekly programming, but permit broadcast stations to air a limited amount of programming that is not regularly scheduled on a weekly basis, including educational specials and regularly scheduled non-weekly programming, and have it count as Core Programming; and require that a majority of Core Programming be at least 30 minutes in length, but permit broadcast stations to air a limited amount of short-form programming, including public service announcements and interstitials, and have it count as Core Programming.

3. In addition, the *Report and Order* modifies the safe harbor processing guidelines for determining compliance with the children's programming rules. Under Category A of the revised guidelines, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the broadcast station airs either (i) three hours per week (as averaged over a six-month period) of Core Programming, or (ii) 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming and up to 52 hours of Core Programs that are not regularly scheduled weekly programs. Under Category B, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the broadcast station airs 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming. The remaining hours of Core Programs (up to 52 hours) may consist educational specials, other non-regularly scheduled programming, and regularly scheduled non-weekly programming, as well as short-form programming, including public service announcements and interstitials. The difference between Category A and Category B is that innovative short-form programming is permitted under Category B. Under both Category A and Category B, broadcast stations that multicast will be permitted to air up to 13 hours per quarter of regularly scheduled weekly programming on a multicast stream. The remainder of a broadcast station's Core Programming must be aired on the station's primary stream. The *Report and Order* eliminates the additional processing guideline applicable to stations that multicast and the MVPD comparable carriage requirement.

4. The *Report and Order* also modifies the Commission's policies addressing when a station can count preempted Core Programming toward meeting the processing guidelines. The *Report and Order* eliminates the ''second home'' policy, under which a station that preempts an episode of a Core Program for any reason other than breaking news is required to air the rescheduled program in a previously-selected substitute time slot or ''second home'' and provide an on-air notification of the schedule change in order for the rescheduled program to count toward compliance with the processing guidelines. Instead, a station that preempts an episode of a regularly schedule weekly program on its primary stream will be permitted to air the rescheduled episode on its primary stream at any time during Core Programming hours (6:00 a.m. to 10:00 p.m.) within seven days before or seven days after the date the episode was originally scheduled to air, provided that the station makes an on-air notification of the schedule change. Similarly, a station that preempts an episode of a regularly schedule weekly program on its multicast stream will be permitted to air the rescheduled episode on the same multicast stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air, provided that the station makes an on-air notification of the schedule change. Additionally, the *Report and Order* expands the breaking news exemption to the requirement that preempted Core Programs be rescheduled to permit a broadcast station to preempt an episode of a regularly scheduled weekly program in order to air non-regularly scheduled live programming produced locally by the station without any requirement to reschedule the episode. These preemption rules will apply to both network and non-network stations.

5. Finally, the *Report and Order* revises the public information and reporting requirements as follows:

- Eliminates the requirement that noncommercial broadcast stations identify their Core Programming with the ''E/I'' symbol at the beginning of the program and display this symbol throughout the program;
- Retains the requirement that broadcasters provide information identifying programming specifically designed to educate and inform children to publishers of program guides but eliminates the requirement that broadcasters provide program guide publishers an indication of the intended age group of their educational and informational programming;
- Modifies the children's programming reporting requirements by requiring Children's Television Programming Reports (FCC Form 2100 Schedule H) to be filed annually rather

than quarterly; requiring the filing of the Reports within 30 days after the end of the calendar year; eliminating the requirements that the Reports include information describing the educational and informational purpose of each Core Program aired during the current reporting period and each Core Program that the licensee expects to aired during the next reporting period; eliminating the requirement to identify the program guide publishers who were sent information regarding the licensee's Core Programs; eliminating the requirement to publicize Form 2100 Schedule H; and otherwise streamlining and simplifying the Report; and

• Revises the rules to permit broadcast stations, cable operators, and DBS operators to file their certifications of compliance with the commercial limits in children's programming annually rather than quarterly and to permit the filing of these certifications within 30 days after the end of the calendar year.

C. Summary of Significant Issues Raised in Response to the IRFA

6. No comments were filed in response to the IRFA.

D. Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration

7. Pursuant to the Small Business Jobs Act of 2010, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA), and to provide a detailed statement of any change made to the proposed rules as a result of those comments. The Chief Counsel did not file any comments in response to the proposed rules in this proceeding.

E. Description and Estimate of the Number of Small Entities To Which the Rules Will Apply

8. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA. The rules proposed herein will directly affect small television broadcast stations. Below, we provide a description of these small entities, as well as an estimate of the number of such small entities, where feasible.

9. *Television Broadcasting.* This Economic Census category ''comprises establishments primarily engaged in broadcasting images together with sound.'' These establishments operate television broadcast studios and facilities for the programming and transmission of programs to the public. These establishments also produce or transmit visual programming to affiliated broadcast television stations, which in turn broadcast the programs to the public on a predetermined schedule. Programming may originate in their own studio, from an affiliated network, or from external sources. The SBA has created the following small business size standard for such businesses: Those having $38.5 million or less in annual receipts. The 2012 Economic Census reports that 751 firms in this category operated in that year. Of this number, 656 had annual receipts of $25 million or less. Based on this data we therefore estimate that the majority of commercial television broadcasters are small entities under the applicable SBA size standard.

10. The Commission has estimated the number of licensed commercial television stations to be 1,383. Of this total, 1,257 stations had revenues of $38.5 million or less, according to Commission staff review of the BIA Kelsey Inc. Media Access Pro Television Database (BIA) on January 8, 2018, and therefore these licensees qualify as small entities under the SBA definition. In addition, the Commission has estimated the number of licensed noncommercial educational (NCE) television stations to be 378. The Commission does not compile and otherwise does not have access to information on the revenue of NCE stations that would permit it to determine how many such stations would qualify as small entities.

11. We note, however, that in assessing whether a business concern qualifies as ''small'' under the above definition, business (control) affiliations must be included. Our estimate, therefore, likely overstates the number of small entities that might be affected by our action, because the revenue figure on which it is based does not include or aggregate revenues from affiliated companies. In addition, another element of the definition of ''small business'' requires that an entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific television broadcast station is dominant in its field of operation. Accordingly, the estimate of small businesses to which rules may apply does not exclude any television station from the definition of a small business on this basis and is therefore possibly over-inclusive. Also, as noted above, an additional element of the definition of ''small business'' is that the entity must be independently owned and operated. The Commission notes that it is difficult at times to assess these criteria in the context of media entities and its estimates of small businesses to which they apply may be over-inclusive to this extent.

12. *Cable Companies and Systems (Rate Regulation).* The Commission has developed its own small business size standards for the purpose of cable rate regulation. Under the Commission's rules, a ''small cable company'' is one serving 400,000 or fewer subscribers nationwide. Industry data indicate that there are currently 4,600 active cable systems in the United States. Of this total, all but nine cable operators nationwide are small under the 400,000-subscriber size standard. In addition, under the Commission's rate regulation rules, a ''small system'' is a cable system serving 15,000 or fewer subscribers. Current Commission records show 4,600 cable systems nationwide. Of this total, 3,900 cable systems have fewer than 15,000 subscribers, and 700 systems have 15,000 or more subscribers, based on the same records. Thus, under this standard as well, we estimate that most cable systems are small entities.

13. *Cable System Operators (Telecom Act Standard).* The Communications Act of 1934, as amended, also contains a size standard for small cable system operators, which is ''a cable operator that, directly or through an affiliate, serves in the aggregate fewer than 1% of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed $250,000,000.'' There are approximately 52,403,705 cable video subscribers in the United States today. Accordingly, an operator serving fewer than 524,037 subscribers shall be deemed a small operator if its annual revenues, when combined with the total annual revenues of all its affiliates, do not exceed $250 million in the aggregate. Based on available data, we find that all but nine incumbent cable operators are small entities under this size standard. We note that the Commission neither requests nor collects information on whether cable system operators are affiliated with entities whose gross annual revenues exceed $250 million. Although it seems certain that some of these cable system

operators are affiliated with entities whose gross annual revenues exceed $250,000,000, we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

14. *Direct Broadcast Satellite (DBS) Service.* DBS Service is a nationally distributed subscription service that delivers video and audio programming via satellite to a small parabolic dish antenna at the subscriber's location. DBS is now included in SBA's economic census category ''Wired Telecommunications Carriers.'' The Wired Telecommunications Carriers industry comprises establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks. Transmission facilities may be based on a single technology or combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution; and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry. The SBA determines that a wireline business is small if it has fewer than 1500 employees. Census data for 2012 indicate that 3,117 wireline companies were operational during that year. Of that number, 3,083 operated with fewer than 1,000 employees. Based on that data, we conclude that the majority of wireline firms are small under the applicable standard. However, currently only two entities provide DBS service, which requires a great deal of capital for operation: DIRECTV (owned by AT&T) and DISH Network. DIRECTV and DISH Network each report annual revenues that are in excess of the threshold for a small business. Accordingly, we must conclude that internally developed FCC data are persuasive that in general DBS service is provided only by large firms.

F. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

15. In this section, we identify the reporting, recordkeeping, and other compliance requirements adopted in the *Report and Order* and consider whether small entities are affected disproportionately by any such requirements.

16. *Reporting Requirements.* The *Report and Order* streamlines the children's television reporting requirements. The quarterly reporting requirement is replaced with an annual reporting requirement and broadcast stations will be permitted to file their Reports within 30 days after the end of the calendar year, rather than ten days after the end of the reporting period, as currently required. In addition, broadcast stations will no longer be required to include in their Reports information describing the educational and informational purpose of each Core Program aired during the current reporting period and each Core Program that the licensee expects to aired during the next reporting period. The requirements that broadcast stations identify in their Reports the program guide publishers who were sent information regarding the licensee's Core Programs and that broadcast stations publicize their Reports are also eliminated. Furthermore, the Reports will be simplified and revised consistent with other modifications to the children's programming rules made in this proceeding.

17. *Recordkeeping Requirements.* The rules are revised to permit broadcast stations, cable operators, and DBS operators to file their certifications of compliance with the commercial limits in children's programming on an annual rather than quarterly basis. In addition, broadcast stations, cable operators, and DBS operators will be permitted to file these certifications within 30 days after the end of the calendar year, rather than ten days after the end of the reporting period, as currently required.

18. *Other Compliance Requirements.* The processing guidelines for determining compliance with the children's programming rules are revised. Under Category A of the processing guidelines, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the broadcast station airs either (i) three hours per week (as averaged over a six-month period) of Core Programming, or (ii) 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming and up to 52 hours annually of Core Programs of at least 30 minutes in length that are not regularly scheduled weekly programs. Under Category B of the processing guidelines, Media Bureau staff will be authorized to approve the children's programming portion of a broadcaster's license renewal application if the broadcast station airs 156 hours of Core Programming annually, including a minimum of 26 hours per quarter of regularly scheduled weekly programming. The remaining hours of Core Programs (up to 52 hours annually) may consist of educational specials, other non-regularly scheduled programming, and regularly scheduled non-weekly programming, as well as short-form programming, including public service announcements and interstitials. Under both Category A and Category B, a broadcast station that multicasts will be permitted to air up to 13 hours per quarter of regularly scheduled weekly programming on a multicast stream. The remainder of a broadcast station's Core Programming must be aired on the station's primary stream. The additional processing guideline applicable to stations that multicast is eliminated.

19. The Commission's policies governing preemption of children's programming are revised to eliminate the ''second home'' policy. Instead, a station that preempts an episode of a regularly schedule weekly program on its primary stream will be permitted to air the rescheduled episode on its primary stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air, provided that the station makes an on-air notification of the schedule change. Similarly, a station that preempts an episode of a regularly scheduled weekly program on its multicast stream will be permitted to air the rescheduled episode on the same multicast stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air, provided that the station makes an on-air notification of the schedule change. Additionally, the breaking news exemption to the requirement that preempted Core Programs be rescheduled is expanded to permit a broadcast station to preempt an episode of a regularly scheduled weekly program in order to air non-regularly scheduled live programming produced locally by the station without any requirement to reschedule the episode. The revised preemption rules will apply to both network and non-network stations.

20. The revisions to the processing guidelines and the preemption policies will benefit all broadcasters, particularly small entities, by providing them additional flexibility in scheduling their children's programming.

G. Steps Taken To Minimize Significant Economic Impact on Small Entities and Significant Alternatives Considered

21. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): ''(1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities; (3) the use of performance, rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.''

22. The *Report and Order* modernizes the children's television programming rules by streamlining reporting and recordkeeping requirements, eliminating outdated and burdensome requirements, and providing broadcasters greater flexibility in scheduling their children's programming. The revised rules are expected to benefit affected entities, including small entities.

23. The changes in our reporting requirements will benefit all broadcast stations, including small entities, by relieving unnecessary reporting burdens and reducing costs. For example, one broadcaster noted that staff at two of its small market stations spend up to six or seven hours per quarter completing the Reports. Replacing the quarterly reporting requirement with an annual reporting requirement and streamlining the reporting form is expected to significantly reduce the time and resources needed to complete and file the Report.

24. The changes in our Recordkeeping Requirements will reduce recordkeeping burdens and costs on all affected entities, including small entities. For example, the American Cable Association, which represents hundreds of small cable operators, indicates that its members report spending 16 to 20 hours per quarter (a total of 64 to 80 hours per year) attempting to collect the required certifications of compliance from their programming networks. Replacing the quarterly requirement with an annual requirement will substantially ease the recordkeeping burden on these small entities.

H. Report to Congress

25. The Commission will send a copy of the *Report and Order,* including this FRFA, in a report to be sent to Congress pursuant to the Congressional Review Act. In addition, the Commission will send a copy of the *Report and Order,* including this FRFA, to the Chief Counsel for Advocacy of the SBA. The *Report and Order* and FRFA (or summaries thereof) will also be published in the **Federal Register**.

A. Paperwork Reduction Act of 1995 Analysis

26. This *Report and Order* contains either new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA). It will be submitted to the OMB for review under section 3507(d) of the PRA. The OMB, the general public, and other federal agencies will be invited to comment on the new or modified information collection requirements contained in this proceeding.

B. Additional Information

27. For additional information on this proceeding, contact Kathy Berthot, *Kathy.Berthot@fcc.gov,* of the Media Bureau, Policy Division, (202) 418–2120.

V. Ordering Clauses

28. Accordingly, *it is ordered,* pursuant to the authority contained in sections 303, 303b, 307, 335, and 336 of the Communications Act of 1934, as amended, 47 U.S.C. 303, 303b, 307, 335, and 336, that this *Report and Order is adopted.*

29. *It is further ordered* that the Commission's rules *are hereby amended* as set forth in Final Rules and such rule amendments shall be effective 30 days after publication in the **Federal Register**. The Commission will publish a document in the **Federal Register** announcing the effective dates for the amendments to §§ 73.671(c)(5) and (7) and (e)(1) and (2), 73.673, and 73.3526(e)(11)(ii) and (iii), which contain new or modified information collection requirements that require approval by the OMB under the Paperwork Reduction Act.

30. *It is further ordered* that the Media Bureau is hereby directed to make all necessary changes to FCC Form 2100, Schedule H, to implement the changes adopted in the *Report and Order.*

31. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall send* a copy of this *Report and Order* including the Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

Federal Communications Commission.

Marlene Dortch,

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICES

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 155, 301, 303, 307, 309, 310, 334, 336, 339.

■ 2. Effective September 16, 2019, amend § 73.671 by revising paragraphs (c)(1) through (4) and (6), adding paragraph (d), and revising paragraph (e) to read as follows:

§ 73.671 Educational and informational programming for children.

* * * * *

(c) * * *

(1) It has serving the educational and informational needs of children ages 16 and under as a significant purpose;

(2) It is aired between the hours of 6:00 a.m. and 10:00 p.m.;

(3) It is a regularly scheduled weekly program, except that a licensee may air a limited amount of programming that is not regularly scheduled on a weekly basis, including educational specials and regularly scheduled non-weekly programming, and have that programming count as Core Programming, as described in paragraph (d) of this section;

(4) It is at least 30 minutes in length, except that a licensee may air a limited amount of short-form programming, including public service announcements and interstitials, and have that programming count as Core Programming, as described in paragraph (d) of this section;

* * * * *

(6) The target child audience is specified in writing in the licensee's Children's Television Programming Report, as described in § 73.3526(e)(11)(iii); and

* * * * *

(d) The Commission will apply the processing guideline in this paragraph (d) to digital stations in assessing whether a television broadcast licensee has complied with the Children's Television Act of 1990 (''CTA'') on its digital channel(s). A digital television

licensee will be deemed to have satisfied its obligation to air such programming and shall have the CTA portion of its license renewal application approved by the Commission staff if it has aired: At least three hours per week of Core Programming (as defined in paragraph (c) of this section and as averaged over a six-month period), or a total of 156 hours of Core Programming annually, including at least 26 hours per quarter of regularly scheduled weekly programming and up to 52 hours annually of Core Programming of at least 30 minutes in length that is not regularly scheduled weekly programming, such as educational specials and regularly scheduled non-weekly programming. A licensee will also been deemed to have satisfied the obligation in this paragraph (d) and be eligible for such staff approval if it has aired a total of 156 hours of Core Programming annually, including at least 26 hours per quarter of regularly scheduled weekly programming and up to 52 hours of Core Programming that is not regularly scheduled on a weekly basis, such as educational specials and regularly scheduled non-weekly programming, and short-form programs of less than 30 minutes in length, including public service announcements and interstitials. Licensees that multicast are permitted to air up to 13 hours per quarter of regularly scheduled weekly programming on a multicast stream. The remainder of a station's Core Programming must be aired on the station's primary stream. Licensees that do not meet the processing guidelines in this paragraph (d) will be referred to the Commission, where they will have full opportunity to demonstrate compliance with the CTA by relying in part on sponsorship of Core educational/informational programs on other stations in the market that increases the amount of Core educational and informational programming on the station airing the sponsored program and/or on special non-broadcast efforts which enhance the value of children's educational and informational television programming.

(e) A station that preempts an episode of a regularly scheduled weekly Core Program will be permitted to count the episode toward the processing guidelines set forth in paragraph (d) of this section as follows:

(1)–(2) [Reserved]

(3) A station that preempts an episode of a regularly scheduled weekly Core Program to air non-regularly scheduled live programming produced locally by the station will not be required to reschedule the episode.

* * * * *

■ 3. Effective upon publication of a rule document in the **Federal Register** announcing the effective date, amend § 73.671 by revising paragraphs (c)(5) and (7) and adding paragraphs (e)(1) and (2) to read as follows:

§ 73.671 Educational and informational programming for children.

* * * * *

(c) * * *

(5) For commercial broadcast stations only, the program is identified as specifically designed to educate and inform children by the display on the television screen throughout the program of the symbol E/I;

* * * * *

(7) Instructions for listing the program as educational/informational are provided by the licensee to publishers of program guides, as described in § 73.673.

* * * * *

(e) * * *

(1) A station that preempts an episode of a regularly scheduled weekly Core Program on its primary stream will be permitted to air the rescheduled episode on its primary stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air. The broadcast station must make an on-air notification of the schedule change during the same time slot as the preempted episode. If a station intends to air the rescheduled episode within the seven days before the date the episode was originally scheduled to air, the station must make the on-air notification during the same timeslot as the preceding week's episode of that program. If the station intends to air the rescheduled episode within the seven days after the date the preempted episode was originally scheduled to air, the station must make the on-air notification during the timeslot when the preempted episode was originally scheduled to air. The on-air notification must include the alternate date and time when the program will air.

(2) A station that preempts an episode of a regularly scheduled weekly Core Program on a multicast stream will be permitted to air the rescheduled episode on that same multicast stream at any time during Core Programming hours within seven days before or seven days after the date the episode was originally scheduled to air. The broadcast station must make an on-air notification of the schedule change during the same time slot as the preempted episode. If a station intends to air the rescheduled episode within the seven days before the date the episode was originally scheduled to air, the station must make the on-air notification during the same timeslot as the preceding week's episode of that program. If the station intends to air the rescheduled episode within the seven days after the date the preempted episode was originally scheduled to air, the station must make the on-air notification during the timeslot when the preempted episode was originally scheduled to air. The on-air notification must include the alternate date and time when the program will air.

* * * * *

§ 73.673 [Amended]

■ 4. Effective upon publication of a rule document in the **Federal Register** announcing the effective date, amend § 73.673 by removing the second sentence.

■ 5. Effective upon publication of a rule document in the **Federal Register** announcing the effective date, amend § 73.3526 by revising paragraphs (e)(11)(ii) and (iii) to read as follows:

§ 73.3526 Local public inspection file of commercial stations.

* * * * *

(e) * * *

(11) * * *

(ii) *Records concerning commercial limits.* For commercial TV and Class A TV broadcast stations, records sufficient to permit substantiation of the station's certification, in its license renewal application, of compliance with the commercial limits on children's programming established in 47 U.S.C. 303a and § 73.670. The records for each calendar year must be filed by the thirtieth day of the succeeding calendar year. These records shall be retained until final action has been taken on the station's next license renewal application.

(iii) *Children's television programming reports.* For commercial TV broadcast stations on an annual basis, a completed Children's Television Programming Report (''Report''), on FCC Form 2100 Schedule H, reflecting efforts made by the licensee during the preceding year to serve the educational and informational needs of children. The Report is to be electronically filed with the Commission by the thirtieth (30) day of the succeeding calendar year. A copy of the Report will also be linked to the station's online public inspection file by the FCC. The Report shall identify the licensee's educational and informational programming efforts, including programs aired by the station

that are specifically designed to serve the educational and informational needs of children. The Report shall include the name of the individual at the station responsible for collecting comments on the station's compliance with the Children's Television Act, and it shall be separated from other materials in the public inspection file. These Reports shall be retained in the public inspection file until final action has been taken on the station's next license renewal application.

BILLING CODE 6712–01–P

Proposed Rules

Federal Register
Vol. 84, No. 159
Friday, August 16, 2019

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2019–0590; Airspace Docket No. 19–AEA–10]

RIN 2120–AA66

Proposed Amendment of Class E Airspace, Grove City, PA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E airspace extending upward from 700 feet above the surface at Grove City Airport, Grove City, PA, by updating the geographic coordinates of this airport. Also, this action would update the name and geographic coordinates of Grove City Medical Center Heliport (formerly United Community Hospital Heliport). Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations in the area.

DATES: Comments must be received on or before September 30, 2019.

ADDRESSES: Send comments on this proposal to: The U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001; Telephone: (800) 647–5527, or (202) 366–9826. You must identify the Docket No. FAA–2019–0590; Airspace Docket No. 19–AEA–10, at the beginning of your comments. You may also submit comments through the internet at *http://www.regulations.gov.*

FAA Order 7400.11C, Airspace Designations and Reporting Points, and subsequent amendments can be viewed on line at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11C at NARA, email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Avenue, College Park, GA 30337; telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would amend Class E airspace in the Grove City, PA area.

Comments Invited

Interested persons are invited to comment on this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (Docket No. FAA–2019–0590 and Airspace Docket No. 19–AEA–10) and be submitted in triplicate to DOT Docket Operations (see **ADDRESSES** section for the address and phone number.) You may also submit comments through the internet at *http://www.regulations.gov.*

Persons wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: ''Comments to FAA Docket No. FAA–2019–0590; Airspace Docket No. 19–AEA–10.'' The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this document may be changed in light of the comments received. All comments submitted will be available for examination in the public docket both before and after the comment closing date. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *http://www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined between 8:00 a.m. and 4:30 p.m., Monday through Friday, except federal holidays at the office of the Eastern Service Center, Federal Aviation Administration, Room 350, 1701 Columbia Avenue, College Park, GA 30337.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018. FAA Order 7400.11C is publicly available as listed

in the **ADDRESSES** section of this document. FAA Order 7400.11C lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA proposes an amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 to amend Class E airspace extending upward from 700 feet or more above the surface at Grove City Airport, Grove City, PA, by updating the geographic coordinates of the airport, and Grove City Medical Center Heliport (formerly United Community Hospital Heliport) to coincide with the FAA's aeronautical database.

Class E airspace designations are published in Paragraph 6005, of FAA Order 7400.11C, dated August 13, 2018, and effective September 15, 2018, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AEA PA E5 Grove City, PA [Amended]

Grove City Airport, PA
(Lat. 41°08′46″ N, long. 80°10′04″ W)
Grove City Medical Center Heliport, PA
(Lat. 41°10′17″N, long. 80°05′03″ W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Grove City Airport, and within a 6-mile radius of the Point In Space serving Grove City Medical Center Heliport.

Issued in College Park, Georgia, on August 8, 2019.

Matthew Cathcart,

Acting Manager, Operations Support Group, Eastern Service Center, Air Traffic Organization.

RIN 2120–AA66

Proposed Amendment of Class E Airspace, Pittsfield, MA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E airspace extending upward from 700 feet above the surface at Pittsfield Municipal Airport, Pittsfield, MA, to accommodate airspace reconfiguration due to the redesign of the Localizer Runway 26 approach. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations at this airport. This action also would update the geographic coordinates of this airport.

DATES: Comments must be received on or before September 30, 2019.

ADDRESSES: Send comments on this proposal to: The U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001; Telephone: (800) 647–5527, or (202) 366–9826. You must identify the Docket No. FAA–2019–0563; Airspace Docket No. 19–ANE–4, at the beginning of your comments. You may also submit comments through the internet at *http://www.regulations.gov.*

FAA Order 7400.11C, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *http://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11C at NARA, email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Avenue, College Park, GA 30337; telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would

amend Class E airspace at Pittsfield Municipal Airport, Pittsfield, MA to support IFR operations in the area.

Comments Invited

Interested persons are invited to comment on this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (Docket No. FAA–2019–0563 and Airspace Docket No. 19–ANE–4) and be submitted in triplicate to DOT Docket Operations (see **ADDRESSES** section for the address and phone number). You may also submit comments through the internet at *http://www.regulations.gov.*

Persons wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: ''Comments to FAA Docket No. FAA–2018–0563; Airspace Docket No. 19–ANE–4.'' The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this document may be changed in light of the comments received. All comments submitted will be available for examination in the public docket both before and after the comment closing date. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *http://www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined between 8:00 a.m. and 4:30 p.m., Monday through Friday, except federal holidays at the office of the Eastern Service Center, Federal Aviation Administration, Room 350, 1701 Columbia Avenue, College Park, GA 30337.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018. FAA Order 7400.11C is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11C lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA proposes an amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 to amend Class E airspace extending upward from 700 feet or more above the surface at Pittsfield Municipal Airport, Pittsfield, MA, by increasing the airport radius to 9.6 miles (from 4 miles), enlarging the northeast extension of the airport to 6-miles each side of a 064° bearing of the airport, extending from the 9.6-mile radius to 18-miles northeast of the airport, and eliminating the southwest extension of the airport to accommodate airspace reconfiguration due to the redesign of the LOC/DME Rwy 26 approach into the airport. Also, the geographic coordinates of the airport would be adjusted to coincide with the FAA's aeronautical database.

Class E airspace designations are published in Paragraph 6005, of FAA Order 7400.11C, dated August 13, 2018, and effective September 15, 2018, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.11C, Airspace Designations and Reporting Points, dated August 13, 2018, and effective September 15, 2018, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ANE MA E5 Pittsfield, MA [Amended]

Pittsfield Municipal Airport, MA
(Lat. 42°25′39″ N, long. 73°17′27″ W)

That airspace extending upward from 700 feet above the surface within a 9.6-mile radius of the Pittsfield Municipal Airport, and within 6-miles each side of the 064° bearing of the airport, extending from the 9.6-mile radius to 18-miles northeast of the airport.

Issued in College Park, Georgia, on August 8, 2019.

Matt Cathcart,

Acting Manager, Operations Support Group, Eastern Service Center, Air Traffic Organization.

BILLING CODE 4910–13–P

DEPARTMENT OF JUSTICE

28 CFR Part 16

[CPCLO Order No. 005–2019]

Privacy Act of 1974; Implementation

AGENCY: Executive Office for Immigration Review, United States Department of Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: In the Notices section of this issue of the **Federal Register**, the Executive Office for Immigration Review, (EOIR), a component within the United States Department of Justice (DOJ or Department), has published a notice of a new system of records: Office of the Chief Administrative Hearing Officer (OCAHO) Case Management System (CMS), JUSTICE/EOIR–002. In this notice of proposed rulemaking, the Department proposes for the reasons listed below to exempt this system of records from certain provisions of the Privacy Act in order to ensure the integrity of investigatory and adjudicatory records in cases before OCAHO. Public comment is invited.

DATES: Send comments by September 16, 2019.

ADDRESSES: You may send comments by any of the following methods:

- *Email: privacy.compliance@usdoj.gov.* To ensure proper handling, please reference the CPCLO Order No. in the subject line of the message.
- *Fax:* 202–307–0693.
- *Mail:* United States Department of Justice, Office of Privacy and Civil Liberties, ATTN: Privacy Analyst, 145 N Street NE, Suite 8W.300, Washington, DC 20530. All comments sent via regular or express mail will be considered timely if postmarked on the day the comment period closes. To ensure proper handling, please reference the CPCLO Order No. in your correspondence.
- *Federal eRulemaking Portal: http://www.regulations.gov.* When submitting comments electronically, you must include the CPCLO Order No. in the subject box. Please note that electronic comments must be submitted before midnight Eastern Daylight Saving Time on the day the comment period closes, and the website for comments, *http://www.regulations.gov,* will stop receiving comments at that time. Commenters in other time zones should adjust the times for their submission accordingly.

Posting of Public Comments: Please note that all comments received are considered part of the public record and made available for public inspection online at *http://www.regulations.gov* and in the Department's public docket. Such information includes any personally identifying information (such as name, address, etc.) voluntarily submitted by the commenter. If you want to submit personally identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online or made available in the public docket, you must include the phrase ''PERSONALLY IDENTIFYING INFORMATION'' in the first paragraph of your comment. All personally identifying information that you do not want posted online or made available in the public docket should be placed in the first paragraph of your comment, where you should identify what information you want redacted.

If you want to submit confidential business information as part of your comment, but do not want it to be posted online or made available in the public docket, you must include the phrase ''CONFIDENTIAL BUSINESS INFORMATION'' in the first paragraph of your comment. You must also prominently identify confidential business information that you wish to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted online or made available in the public docket.

Personally identifying information and confidential business information identified and located as set forth above, will to the extent feasible be redacted, and the comment, in redacted form, may be posted online and placed in the Department's public docket file. Please note that the Freedom of Information Act applies to all comments received. If you wish to inspect the agency's public docket file in person by appointment, please see the **FOR FURTHER INFORMATION CONTACT** section, below.

FOR FURTHER INFORMATION CONTACT: Marta Rothwarf and Michelle Curry, Associate General Counsels and Co-Senior Component Officials for Privacy, Office of the General Counsel, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2600, Falls Church, VA 22041, by email at *marta.rothwarf2@usdoj.gov* and *michelle.curry@usdoj.gov,* or by facsimile at 703–305–0443.

SUPPLEMENTARY INFORMATION: EOIR proposes to establish a new system of records subject to the Privacy Act of 1974, 5 U.S.C. 552a. The proposed system of records will be used by OCAHO to facilitate adjudication of its cases and may include paper and electronic files maintained by OCAHO. The records to be maintained in this new system historically have been included as part of EOIR–001, Records and Management Information System. They are being transferred into this new system to improve efficiency, improve records management practices, and provide better access for parties to proceedings.

OCAHO Administrative Law Judges (ALJs) hear cases and adjudicate issues arising under the provisions of the Immigration and Nationality Act (INA) relating to: (1) Knowingly hiring, recruiting or referring for a fee, or continuing to employ unauthorized aliens, failure to comply with employment eligibility verification requirements, and requiring indemnity bonds from employees in violation of section 274A of the INA (8 U.S.C. 1324a), (2) immigration-related unfair employment practices in violation of section 274B of the INA (8 U.S.C. 1324b), and (3) immigration-related document fraud in violation of section 274C of the INA (8 U.S.C. 1324c).

Complaints under sections 274A and 274C of the INA are filed by the U.S. Department of Homeland Security (DHS), Immigration and Customs Enforcement (ICE). Complaints under section 274B of the INA may be filed by private individuals or entities, or by the U.S. Department of Justice, Civil Rights Division, Immigrant and Employee Rights Section (DOJ/CRT). The respondents in OCAHO cases are typically businesses or employers. The parties to 274A and 274C cases may seek administrative review of ALJ decisions and orders by the Chief Administrative Hearing Officer (CAHO). Parties in all case types may appeal final agency orders to the appropriate United States Circuit Court of Appeals.

In order to process and adjudicate cases and appeals, OCAHO must collect certain information and documents from and about complainants and respondents. The DOJ/CRT and DHS ICE can file complaints with OCAHO. Often, these agencies will submit investigatory records as exhibits or attachments to other filings. The investigatory records include, but are not limited to, notices of inspection, summaries of inspection results, affidavits or memoranda from investigators, results from searches of internal agency databases, and similar records. These exhibits or attachments then become part of OCAHO's official case record.

To improve tracking and storage of case-related information and documents, OCAHO is implementing a new electronic case management system (CMS). The OCAHO CMS will manage the entire life cycle of OCAHO's case

processes, including tracking and managing case information and documents, facilitating case research, and reporting on key business functions and metrics. The OCAHO CMS will also include an electronic filing capability, which will enable parties to submit case information and documents electronically through a secure web-based portal. The portal will also provide notifications and updates on case status, and will allow authorized parties to access copies of all case-related documents electronically. The system is segregated by ''need to know'' user controls and allows authorized users to track various stages of the proceedings. The system also contains templates to generate letters, notices, and decisions used in the OCAHO process. The system can generate reports by case status and disposition.

Executive Orders 12866, 13563, 13771—Regulatory Review

In accordance with 5 U.S.C. 552a(j) and 552a(k), this proposed action is subject to rulemaking procedures by giving interested persons an opportunity to participate in the rulemaking process ''through submission of written data, views, or arguments,'' pursuant to 5 U.S.C. 553. The exemptions claimed by the system, as detailed below, do not raise novel legal or policy issues, nor do they adversely affect the economy, the budgetary impact of entitlements, grants, user fees, loan programs, or the rights and obligations of recipients thereof in a material way. The Department of Justice has determined that this rule is not a ''significant regulatory action'' under Executive Order 12866, section 3(f), and accordingly this rule has not been reviewed by the Office of Information and Regulatory Affairs within the Office of Management and Budget.

Regulatory Flexibility Act

This proposed rule will only impact Privacy Act-protected records, which are personal and generally do not apply to an individual's entrepreneurial capacity, subject to limited exceptions. Accordingly, the Chief Privacy and Civil Liberties Officer, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this regulation and by approving it certifies that this regulation will not have a significant economic impact on a substantial number of small entities.

Congressional Review Act

This proposed rule is not a major rule as defined by 5 U.S.C. 804 of the Congressional Review Act.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995, 44 U.S.C. 3507(d), requires the Department to consider the impact of paperwork and other information collection burdens imposed on the public. The Paperwork Reduction Act applies to some of the records collected as part of this system of records. The following approved information collection is associated with this system of records: Form EOIR–58, Unfair Immigration-Related Employment Practices Complaint Form, and OMB #1125–0016. This system of records will also collect information via a web-based electronic filing portal. The Department is in the process of seeking approval of this information collection under the Paperwork Reduction Act.

Unfunded Mandates Reform Act of 1995

This proposed rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000, as adjusted for inflation, or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

List of Subjects in 28 CFR Part 16

Administrative practices and procedures, Courts, Freedom of information, and the Privacy Act.

Pursuant to the authority vested in the Attorney General by 5 U.S.C. 552a and delegated to me by Attorney General Order 2940–2008, the Department of Justice proposes to amend 28 CFR part 16 as follows:

PART 16—PRODUCTION OR DISCLOSURE OF MATERIAL OR INFORMATION

■ 1. The authority citation for part 16 continues to read as follows:

Authority: 5 U.S.C. 301, 552, 552a, 553; 28 U.S.C. 509, 510, 534; 31 U.S.C. 3717.

■ 2. Amend § 16.83 by adding paragraphs (e) and (f) to read as follows:

§ 16.83 Exemption of the Executive Office for Immigration Review System—limited access.

* * * * *

(e) The following system of records is exempt from 5 U.S.C. 552a(d):

Office of the Chief Administrative Hearing Officer (OCAHO) Case Management System (CMS) (JUSTICE/EOIR–002). This exemption applies only to the extent that information in the system is subject to exemption pursuant to 5 U.S.C. 552a(k)(1) and (2).

(f) Exemption from the particular subsections are justified for the following reasons:

(1) In limited circumstances, from subsection (d) when access to the records contained in this system of records could inform the subject of an ongoing investigation of an actual or potential criminal, civil, or regulatory violation or the existence of that investigation; of the nature and scope of the information and evidence obtained as to the subject's activities; of the identity of confidential sources, witnesses, and law enforcement personnel; and of information that may enable the subject to avoid detection or apprehension. These factors would present a serious impediment to effective law and regulatory enforcement where they prevent the successful completion of the investigation, endanger the physical safety of confidential sources, witnesses, and law enforcement personnel; and/or lead to the improper influencing of witnesses, the destruction of evidence, or the fabrication of testimony. In addition, granting access to such information could disclose security-sensitive or confidential business information or information that would constitute an unwarranted invasion of the personal privacy of third parties.

(2) From subsection (d)(2), (3), and (4) because the administrative case files constitute an official record which includes transcripts of administrative proceedings, investigatory materials, evidentiary materials such as exhibits, decisional memoranda, and other case-related papers. Administrative due process could not be achieved by the ex parte ''correction'' of such materials by the individual who is the subject thereof.

Dated: August 7, 2019.

Peter A. Winn,

Acting Chief Privacy and Civil Liberties Officer, United States Department of Justice.

[EPA–R03–OAR–2019–0362; FRL–9998–32–Region 3]

Approval and Promulgation of Air Quality Implementation Plans; District of Columbia; Infrastructure Requirements for the 2015 Ozone National Ambient Air Quality Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a state implementation plan (SIP) revision from the District of Columbia (the District). This SIP revision addresses certain infrastructure requirements to implement, maintain, and enforce the 2015 ozone national ambient air quality standards (NAAQS), including the requirements for interstate transport. This action is being taken under the Clean Air Act (CAA).

DATES: Written comments must be received on or before September 16, 2019.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R03–OAR–2019–0362 at *https://www.regulations.gov,* or via email to *spielberger.susan@epa.gov*. For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets*.

FOR FURTHER INFORMATION CONTACT: Emlyn Vélez-Rosa, Planning & Implementation Branch (3AD30), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. The telephone number is (215) 814–2038. Ms. Vélez-Rosa can also be reached via electronic mail at *velez-rosa.emlyn@epa.gov*.

SUPPLEMENTARY INFORMATION: On August 24, 2018, the District Department of Environment and Energy (DOEE) submitted a revision to its SIP addressing infrastructure requirements for the 2015 ozone NAAQS.

I. Background

On October 26, 2015, EPA issued a final rule strengthening both the primary and secondary ozone NAAQS for ground-level ozone to 70 parts per billion (ppb), based on the fourth-highest maximum daily 8-hour ozone concentration per year (hereafter the 2015 ozone NAAQS). 80 FR 65292.

Whenever EPA promulgates a new or revised NAAQS, CAA section 110(a)(1) requires states to make SIP submissions to provide for the implementation, maintenance, and enforcement of the NAAQS. This particular type of SIP revision is commonly referred to as an ''infrastructure SIP revision.'' Infrastructure SIP revisions must meet the various requirements of CAA section 110(a)(2), as applicable. Section 110(a)(2) includes a list of specific elements that each infrastructure SIP revision must address. The infrastructure requirements of section 110(a)(2) are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA for implementation of a particular NAAQS.

Due to ambiguity in some of the language of CAA section 110(a)(2), EPA believes that it is appropriate to interpret these provisions in the specific context of acting on infrastructure SIP revisions.[1] EPA has previously provided comprehensive guidance on the application of these provisions through a guidance document for infrastructure SIP submissions and through regional actions on infrastructure submissions. Unless otherwise noted below, EPA is following that existing approach in acting on the District's infrastructure SIP revision. In addition, in the context of acting on such infrastructure SIP revision, EPA evaluates the submitting state's overall SIP for facial compliance with statutory and regulatory requirements, not for the state's implementation of its SIP.[2] EPA has other authority to address any issues concerning a state's implementation of the rules, regulations, consent orders, etc. that comprise its SIP.

II. Summary of SIP Revision and EPA Analysis

On August 24, 2018, DOEE submitted a formal SIP revision to EPA to satisfy the infrastructure requirements of CAA section 110(a)(2) for the 2015 ozone NAAQS. This SIP revision addresses the following infrastructure elements, or portions thereof, for the 2015 ozone NAAQS: CAA section 110(a)(2)(A), (B), (C), (D)(i)(I), D(i)(II), D(ii), (E), (F), (G), (H), (J), (K), (L), and (M). The August 24, 2018 SIP revision addresses the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS (also known as good neighbor provisions). The SIP revision provides technical information supporting the conclusion that the emissions from the District do not significantly contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any other state.

The August 24, 2018 SIP revision did not address the portion of element (C) or element (I) referring to the nonattainment requirements of part D, title I of the CAA. Part D, title I of the CAA addresses SIP requirements and submission deadlines for designated nonattainment areas for each NAAQS. Such nonattainment SIP revisions are required if an area is designated nonattainment and would be due to EPA by the dates statutorily prescribed in subparts 1 through 5 under part D, title I of the CAA. EPA believes that because the CAA directs states to submit these nonattainment SIP requirements on a separate schedule, it is not necessary for states to include neither element (I) nor the portion of element (C) referring to part D as part of the infrastructure SIP revisions due three years after adoption or revision of any NAAQS.[3]

[1] EPA explains and elaborates on these ambiguities and its approach to address them in its September 13, 2013 guidance document titled ''Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2)'' (''the 2013 Infrastructure SIP Guidance''), as well as in numerous agency actions, including EPA's prior action on the District's infrastructure SIP revision to address the 2012 fine particulate matter ($PM_{2.5}$) NAAQS. See 81 FR 54504 (August 16, 2016). A copy of the 2013 Infrastructure Guidance can be found in the docket for this rulemaking action.

[2] See U.S. Court of Appeals for the Ninth Circuit decision in *Montana Environmental Information Center* v. *EPA,* No. 16–71933 (August 30, 2018).

[3] See EPA's 2013 Infrastructure SIP Guidance.

Upon receipt, EPA evaluated the District's August 24, 2018 SIP revision submittal for technical and administrative completeness, in accordance with 40 CFR part 51, appendix V. EPA determined that the submittal was technically incomplete with respect to the portions of the infrastructure elements in CAA section 110(a)(2)(C), (D)(i)(II), (D)(ii), and (J) relating to the Prevention of Significant Deterioration (PSD) permitting program under part C, title I of the CAA, because the District has not adequately addressed its part C requirement of having a SIP-approved PSD program. By contrast, EPA found the remainder of the August 24, 2018 SIP revision submittal to be administratively and technically complete in accordance with 40 CFR part 51, appendix V.

On February 27, 2019, EPA sent a letter to DOEE notifying the District of this completeness determination. As a result of this finding, EPA can only proceed in taking rulemaking action on the complete portions of the District's August 24, 2018 submittal, and cannot take rulemaking action on the PSD-related portions of CAA section 110(a)(2)(C), (D)(i)(II), (D)(ii), and (J) for the 2015 ozone NAAQS, until DOEE submits a SIP revision to address the PSD permit requirements of part C, title I of the CAA.

EPA recognizes, however, that the District is already subject to a Federal implementation plan (FIP) containing the Federal PSD program,[4] which EPA issued to correct the District's PSD SIP deficiency, and that DOEE does not have to take further action for the FIP-based permitting program to be implemented. Notably, EPA does not anticipate any adverse consequences to DOEE from the February 27, 2019 incompleteness finding for the PSD-related portions of the elements listed above for the District's 2015 ozone NAAQS submission. Mandatory sanctions would not apply to the District under CAA section 179, because the failure to submit a PSD SIP revision is neither with respect to a submission that is required under CAA title I part D, nor in response to a SIP call under CAA section 110(k)(5). In addition, EPA is not subject to any further FIP duties from this incompleteness finding, because there is already a PSD FIP for the District, which addresses the District's SIP deficiency. This rulemaking action is only addressing the complete portions of the District's August 24, 2018 infrastructure SIP revision submittal for the 2015 ozone NAAQS.

Based upon EPA's review of the District's August 24, 2018 SIP revision, EPA believes that the District has met its obligations under CAA section 110(a)(2)(A), (B), (C), (D)(i)(I), D(i)(II), D(ii), (E), (F), (G), (H), (J), (K), (L), and (M), with exception of the PSD-related portions of section 110(a)(2)(C), (D)(i)(II), (D)(ii), and (J), for the reasons discussed earlier. Thus, EPA determines that the August 24, 2018 SIP revision adequately satisfies the District's applicable infrastructure requirements, or portions thereof, listed above for the 2015 ozone NAAQS. A detailed summary of EPA's review and rationale for taking rulemaking action on the District's infrastructure SIP revision may be found in the technical support document (TSD) for this proposed rulemaking action which is available online at *www.regulations.gov,* docket number EPA–R03–OAR–2019–0362.

III. Proposed Action

EPA is proposing to approve the District's August 24, 2018 SIP revision as meeting the requirements of section 110(a)(2) of the CAA to implement, maintain, and enforce the 2015 ozone NAAQS, including specifically section 110(a)(2)(A), (B), (C), (D)(i)(I), (D)(i)(II), (D)(ii), (E), (F), (G), (H), (J), (K), (L), and (M) for this NAAQS, with exception of those portions addressing requirements related to the PSD permitting program of part C, title I of the CAA in section 110(a)(2)(C), (D)(i)(II), (D)(ii), and (J), which EPA has deemed incomplete pursuant to 40 CFR part 51, appendix V. This proposed rulemaking action does not include action on section 110(a)(2)(I) or portions of section 110(a)(2)(C) referring to the permit program under part D, title I of the CAA. EPA is soliciting public comments on the issues discussed in this document which will be considered before taking final rulemaking action.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed rule, pertaining to the District of Columbia's infrastructure requirements for the 2015 ozone NAAQS under CAA section 110(a)(2), does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

Approval and Promulgation of Air Quality Implementation Plans; West Virginia; State Implementation Plans for the Cross-State Air Pollution Rule and for the Interstate Transport Requirements of the 2008 Ozone Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve two state implementation plan (SIP) revisions submitted by the State of West Virginia, one submitted on March 27, 2018, and one on June 5, 2019. The June 5, 2019 submittal consists of a regulation that adopts the Cross-State Air Pollution Rule (CSAPR). Under the Federal CSAPR, large electricity generating units (EGUs) in West Virginia are subject to Federal Implementation Plans (FIPs) requiring the units to participate in CSAPR's Federal trading program for annual emissions of nitrogen oxides (NO_X), one of CSAPR's two Federal trading programs for annual emissions of sulfur dioxide (SO_2), and one of CSAPR's two Federal trading programs for ozone season emissions of NO_X. This action would approve the State's regulation requiring large West Virginia EGUs to participate in new CSAPR state trading programs for annual NO_X, annual SO_2, and ozone season NO_X emissions integrated with the CSAPR Federal trading programs, replacing the corresponding FIP requirements. EPA is proposing to approve the SIP revision because the submittal meets the requirements of the Clean Air Act (CAA) and EPA's regulations for approval of a CSAPR full SIP revision replacing the requirements of a CSAPR FIP. Under the CSAPR regulations, approval of the SIP revision would automatically eliminate West Virginia EGU's requirements under the corresponding CSAPR FIPs, thereby addressing West Virginia's interstate transport (or ''good neighbor'') obligations for the 1997 fine particulate matter ($PM_{2.5}$) national ambient air quality standard (NAAQS), the 2006 $PM_{2.5}$ NAAQS, and the 2008 ozone NAAQS. Like the CSAPR FIP requirements that would be replaced, approval of the SIP revision would fully satisfy West Virginia's good neighbor obligations for the 1997 $PM_{2.5}$ NAAQS, the 2006 $PM_{2.5}$ NAAQS, and the 2008 ozone NAAQS.

In conjunction with EPA's proposed approval of West Virginia's June 5, 2019 CSAPR regulation, EPA is also proposing to approve West Virginia's March 27, 2018 submittal related to West Virginia's good neighbor obligations under the 2008 ozone NAAQS. These actions are being taken in accordance with the CAA.

DATES: Written comments must be received on or before September 16, 2019.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R03–OAR–2013–0299 (for the West Virginia 2008 ozone good neighbor SIP) and EPA–R03–OAR–2019–0349 (for the West Virginia CSAPR SIP) at *https://www.regulations.gov,* or via email to *spielberger.susan@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Marilyn Powers, Planning & Implementation Branch (3AD30), Air and Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Ms. Powers can be reached at (215) 814–2308, or via electronic mail at *powers.marilyn@epa.gov.*

SUPPLEMENTARY INFORMATION: On March 27, 2018, West Virginia, through the West Virginia Department of Environmental Protection (WVDEP), supplemented its February 17, 2012 infrastructure SIP for the 2008 ozone NAAQS to satisfy the requirements of CAA section 110(a)(2)(D)(i)(I). The March 27, 2018 submittal requested conditional approval contingent on the State's adoption of the emission reduction requirements of 40 CFR 97, subpart EEEEE, the CSAPR NO_X Ozone Season Group 2 Trading Program. On June 5, 2019, EPA received a SIP revision submittal from WVDEP seeking to incorporate the requirements of 40 CFR 97, subparts AAAAA (CSAPR NO_X Annual Trading Program), CCCCC (CSAPR SO_2 Group 1 Trading Program), and EEEEE (CSAPR NO_X Ozone Season Group 2 Trading Program) into the West Virginia SIP (West Virginia CSAPR SIP). The June 5, 2019 submittal requested that EPA fully approve the March 27, 2018 submittal instead of the conditional approval West Virginia originally requested.

I. Background

1. Cross-State Air Pollution Rule (CSAPR)

On August 8, 2011, and October 26, 2016, EPA issued the Cross-State Air Pollution Rule (CSAPR) and the CSAPR Update, respectively, to address the requirements of CAA section 110(a)(2)(D)(i)(I) concerning interstate transport of air pollution.[1] As amended (including by the CSAPR Update), CSAPR requires 27 eastern states to limit their statewide emissions of sulfur dioxide (SO_2) and/or oxides of nitrogen (NO_X) in order to mitigate transported air pollution unlawfully impacting other states' ability to attain or maintain four national ambient air quality standards (NAAQS): The 1997 annual fine particulate matter ($PM_{2.5}$) NAAQS, the 2006 24-hour $PM_{2.5}$ NAAQS, the 1997 ozone NAAQS, and the 2008 ozone NAAQS. The CSAPR emissions limitations are defined in terms of maximum statewide ''budgets'' for emissions of annual SO_2, annual NO_X, and/or ozone season NO_X by each covered state's large EGUs. The CSAPR state budgets are implemented in two phases of general increasing stringency:

[1] *See* 76 FR 48208 (August 8, 2011) and 81 FR 74504 (October 26, 2016).

The Phase 1 budgets apply to emissions in 2015 and 2016; and the Phase 2 and CSAPR Update budgets apply to emissions in 2017 and later years. As a mechanism for achieving compliance with the emissions limitations, CSAPR establishes five Federal emissions trading programs: A program for annual NO_X emissions; two geographically separate programs for annual SO_2 emissions; and two geographically separate programs for ozone season NO_X emissions. CSAPR also establishes requirements in a FIP applicable to the large EGUs in each covered state.[2] Currently, the CSAPR FIP provisions require each state's units to participate in up to three of the five CSAPR trading programs.

CSAPR includes provisions under which states may submit and EPA may approve SIP revisions to modify or replace the CSAPR FIP requirements while allowing states to continue to meet their transport-related obligations using either CSAPR's Federal emissions trading programs or state emissions trading programs integrated with the Federal programs, provided that the SIP revisions meet all relevant criteria.[3] Through such a SIP revision, a state may replace EPA's default provisions for allocating emission allowances among the state's units, employing any states elected methodology to allocate or auction the allowances, subject to timing conditions and limits on overall allowance quantities. In the case of CSAPR's Federal trading programs for ozone season NO_X emissions (or an integrated state trading program), a state may also expand trading program applicability to include certain smaller EGUs.[4] If a state wants to replace the CSAPR FIP requirements with SIP requirements under which the state's units participate in a state trading program that is integrated with and identical to the Federal trading program even as to the allocation and applicability provisions, the state may submit a SIP revision for that purpose as well. However, no emissions budget increases or other substantive changes to the trading program provisions are allowed. A state whose units are subject to multiple CSAPR Federal trading programs may submit SIP revisions to modify or replace the FIP requirements with respect to some or all of those trading programs.

States can submit two basic forms of CSAPR-related SIP revisions effective for emissions control periods in 2017 or later years.[5] Specific conditions for approval of each form of SIP revision are set forth in the CSAPR regulations. Under the first alternative—an ''abbreviated'' SIP revision—a state may submit a SIP revision that upon approval replaces the default allowance allocation and/or applicability provisions of a CSAPR Federal trading program for the state.[6] Approval of an abbreviated SIP revision leaves the corresponding CSAPR FIP and all other provisions of the relevant Federal trading program in place for the state's units. Under the second alternative—a ''full'' SIP revision—a state may submit a SIP revision that upon approval replaces a CSAPR Federal trading program for the state with a state trading program integrated with the Federal trading program, so long as the state trading program is substantively identical to the Federal trading program or does not substantively differ from the Federal trading program except as discussed above with regard to the allowance allocation and/or applicability provisions.[7] For purposes of a full SIP revision, a state may either adopt state rules with complete trading program language, incorporate the Federal trading program language into its state rules by reference (with appropriate conforming changes), or employ a combination of these approaches.

The CSAPR regulations identify several important consequences and limitations associated with approval of a full SIP revision, two of which are potentially relevant to West Virginia.[8] First, upon EPA's approval of a full SIP revision as correcting the deficiency in the state's SIP that was the basis for a particular set of CSAPR FIP requirements, the obligation to participate in the corresponding CSAPR Federal trading program is automatically eliminated for units subject to the state's jurisdiction without the need for a separate EPA withdrawal action, so long as EPA's approval of the SIP revision as meeting the requirements of the CSAPR regulations is full and unconditional.[9] Second, if at the time a full SIP revision is approved EPA has already started recording allocations of allowances for a given control period to a state's units, the Federal trading program provisions authorizing EPA to complete the process of allocating and recording allowances for that control period to those units will continue to apply, unless EPA's approval of the SIP revision provides otherwise.[10]

In the 2011 CSAPR rulemaking, EPA determined that air pollution transported from West Virginia would unlawfully affect other states' ability to attain or maintain the 1997 $PM_{2.5}$ NAAQS, the 2006 24-hour $PM_{2.5}$ NAAQS, and the 1997 ozone NAAQS and therefore included the State's EGUs in the CSAPR Federal trading programs for SO_2 and annual NO_X, fully addressing the State's obligations regarding transported $PM_{2.5}$ pollution, and the original CSAPR Federal trading program for ozone season NO_X, fully addressing the State's obligations regarding transported ozone pollution with respect to the 1997 ozone NAAQS.[11] Upon judicial review, the State's CSAPR Phase 2 budget for ozone season NO_X was remanded to EPA for reconsideration.[12] In the 2016 CSAPR Update rulemaking, based on updated data and analysis, EPA determined that air pollution transported from West Virginia would no longer unlawfully affect other states' ability to attain or maintain the 1997 ozone NAAQS but would unlawfully affect other states' ability to attain or maintain the 2008 ozone NAAQS, and EPA therefore included the State's EGUs in the CSAPR Update Federal trading program for ozone season NO_X as a partial remedy addressing the State's good neighbor obligations with respect to the 2008 ozone NAAQS.[13] Most recently, in a 2018 action, based on further updated data and analyses, EPA determined that implementation of the ozone season

[2] States are required to submit good neighbor SIPs three years after a NAAQS is promulgated. CAA section 110(a)(1) and (2). Where EPA finds that a state fails to submit a required SIP or disapproves a SIP, EPA is obligated to promulgate a FIP addressing the deficiency. CAA section 110(c)(1).

[3] *See* 40 CFR 52.38 and 52.39. States also retain the ability to submit SIP revisions to meet their transport-related obligations using mechanisms other than the CSAPR Federal trading programs or integrated state trading programs.

[4] States covered by both the CSAPR Update and the NO_X SIP Call have the additional option to expand applicability under the CSAPR NO_X Ozone Season Group 2 Trading Program to include non-EGUs that would have participated in the NO_X Budget Trading Program.

[5] CSAPR also provides for a third, more streamlined form of SIP revision that is effective only for control periods in 2016 (or 2018 for CSAPR NO_X Ozone Season Group 2 units) and is not relevant here. *See* 40 CFR 52.38(a)(3), (b)(3), (b)(7); 52.39(d), (g).

[6] *See* 40 CFR 52.38(a)(4), (b)(4), (b)(8); 52.29(e), (h).

[7] *See* 40 CFR 52.38(a)(5), (b)(5), (b)(9); 52.39(f), (i).

[8] Because there is no Indian country within West Virginia's borders, the possible consequences of construction of new EGUs in Indian country are not relevant here.

[9] *See* 40 CFR 52.38(a)(6), (b)(10)(i); 52.39(j)

[10] *See* 40 CFR 52.38(a)(7), (b)(11); 52.39(k).

[11] *See* 76 FR at 48209–13; *see also* 40 CFR 52.38(a)(2)(i), 52.39(b).

[13] *See* 81 FR at 74506–09. EPA also ended requirements for West Virginia's EGUs to participate in the original CSAPR ozone season NO_X trading program after 2016. *See* 40 CFR 52.38(b)(2)(ii)–(iii).

NO_X budgets established in the 2016 CSAPR Update rulemaking for West Virginia and 19 other states now represents a full remedy for the states' interstate transport obligations with respect to the 2008 ozone NAAQS.[14]

As a result of the three actions just discussed, West Virginia units meeting the CSAPR applicability criteria are currently subject to FIP requirements for participation in three CSAPR (or CSAPR Update) Federal trading programs that fully address the State's interstate transport obligations with respect to the 1997 and 2006 $PM_{2.5}$ NAAQS and the 2008 ozone NAAQS. This proposed action would incorporate into the SIP the CSAPR state trading program regulations to replace the three currently applicable CSAPR Federal trading program regulations for West Virginia units, thereby fully addressing through SIP provisions the State's interstate transport obligations with respect to each of these three NAAQS.[15]

2. Infrastructure SIP for the 2008 Ozone NAAQS

On March 27, 2008 (73 FR 16436), EPA promulgated an ozone NAAQS that revised the levels of the primary and secondary 8-hour ozone standards from 0.08 parts per million (ppm) to 0.075 ppm. Pursuant to CAA section 110(a)(1), within three years after promulgation of a new or revised NAAQS (or shorter, if EPA prescribes), states must submit SIPs that meet the applicable requirements of section 110(a)(2). EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of sections 110(a)(1) and 110(a)(2) as ''infrastructure SIP'' submissions. One of the structural requirements of section 110(a)(2) is section 110(a)(2)(D)(i), also known as the ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on neighboring states due to interstate transport of air pollution. There are four sub-elements, or ''prongs,'' within section 110(a)(2)(D)(i) of the CAA. CAA section 110(a)(2)(D)(i)(I) requires SIPs to include provisions prohibiting any source or other type of emissions activity in one state from emitting any air pollutant in amounts that will contribute significantly to nonattainment, or interfere with maintenance, of the NAAQS in another state. The two provisions of this section are referred to as prong 1 (significant contribution to nonattainment) and prong 2 (interference with maintenance). Section 110(a)(2)(D)(i)(II) requires SIPs to contain adequate provisions to prohibit emissions that will interfere with measures required to be included in the applicable implementation plan for any other state under part C to prevent significant deterioration of air quality (prong 3) or to protect visibility (prong 4). This proposed action addresses only prongs 1 and 2 of section 110(a)(2)(D)(i). The other portions of section 110(a)(2)(D), specifically 110(a)(2)(D)(i)(II) and 110(a)(2)(D)(ii), were addressed in EPA's approval of West Virginia's February 17, 2012 SIP submission.[16]

II. Summary of West Virginia's SIP Revisions

Because EPA had not at that time determined that the CSAPR Update constituted a full remedy, on March 27, 2018, West Virginia submitted a SIP revision to address its remaining interstate transport obligations for the 2008 8-hour ozone NAAQS. The submittal was intended to show that the emission reductions required by the CSAPR Update, along with other existing measures, are adequate to prohibit emissions in West Virginia from significantly contributing to nonattainment, or interfering with the maintenance, of downwind states with respect to the 2008 ozone NAAQS. In the submittal, West Virginia stated its intent to adopt the requirements of 40 CFR 97, subpart EEEEE. The submittal letter requested that EPA conditionally approve the submittal, with the condition that West Virginia adopt the requirements of the CSAPR NO_X Ozone Season Group 2 Trading Program under subpart EEEEE (West Virginia rule 45 CSR 43) and submit the rule to EPA for approval.

West Virginia's June 5, 2019 submittal is comprised of West Virginia regulation 45 CSR 43, entitled *Cross-State Air Pollution to Control Annual Nitrogen Oxides Emissions, Annual Sulfur Dioxide Emissions, and Ozone Season Nitrogen Oxides Emissions,* which is intended to replace the CSAPR FIP for the corresponding Federal trading programs. The regulation generally incorporates by reference the requirements of 40 CFR 97, subparts AAAAA, CCCCC, and EEEEE, with exception of the provisions that are applicable to Indian Country and the provisions for allowance allocations (for which 45 CSR 43 established new provisions substantively identical to the analogous provisions of 40 CFR 97 applicable to West Virginia, with budgets starting in 2019).[17] Specifically, section 45–43–3 incorporates by reference most of the provisions of the three Federal trading programs, while sections 45–43–4, 45–43–5, and 45–43–6 adopt the amounts of the emissions budgets, new unit set-asides, and variability limits that apply to West Virginia units for, respectively, the CSAPR NO_X Annual Trading Program, the CSAPR NO_X Ozone Season Group 2 Trading Program, and the CSAPR SO_2 Group 1 Trading Program. In its June 5, 2019 submittal, WVDEP also requested that EPA grant full rather than conditional approval of its March 27, 2018 transport SIP submittal because the reason for previously requesting only conditional approval of the transport SIP submittal no longer applied.

III. EPA Analysis

West Virginia's June 5, 2019 submittal is a full CSAPR SIP submission that is intended to replace the Federal CSAPR trading programs with state trading programs integrated with the Federal trading programs and does not seek to alter either allowance allocations or applicability. Under 40 CFR 52.38 and 52.39, a full CSAPR SIP revision of this nature must meet the following criteria:

- *Complete, substantively identical trading program provisions.* The SIP revision must adopt complete state trading program regulations substantively identical to the complete Federal trading program regulations at 40 CFR 97.402 through 97.435, 97.502 through 97.535, 97.602 through 97.635, 97.702 through 97.735, or 97.802 through 97.835, as applicable.
- *Only non-substantive substitutions for the term ''State.''* The SIP revision may substitute the name of the state for the term ''State'' as used in the Federal trading program regulations, but only to the extent that EPA determines that the substitutions do not substantively change the trading program regulations.
- *Exclusion of provisions addressing units in Indian country.* The SIP

[14] *See* 83 FR 65878 (December 21, 2018).

[15] As noted earlier, EPA determined in the CSAPR Update that West Virginia has no remaining good neighbor obligation with respect to the 1997 ozone NAAQS.

[16] EPA approved West Virginia's February 17, 2012 infrastructure SIP submittal on April 7, 2014 (79 FR 19001), which did not include a submission for the 2008 ozone good neighbor SIP.

[17] Although West Virginia rule 45 CSR 43 establishes 2019 as the beginning year for EGU budgets, new unit set-asides, and variability limits under the State's rule, allocations have already been recorded under the CSAPR FIPs for the control periods through 2022 for the CSAPR NO_X Ozone Season Group 2 trading program and through 2023 for the CSAPR NO_X Annual and CSAPR SO_2 Group 1 trading programs. Allocations under the West Virginia CSAPR SIP (which are identical to the allocations under the FIPs) will therefore start with the 2023 and 2024 control periods.

revision may not impose requirements on any unit in any Indian country within the state's borders and must not include the Federal trading program provisions governing allocation of allowances from any Indian country new unit set-aside for the state.

Under the West Virginia CSAPR SIP, the subject EGUs in the State would participate in state trading programs that are integrated with and identical to the Federal trading programs with respect to the applicability provisions, allocation methodology, NO_X ozone season budget, and other provisions that apply to units in West Virginia under the Federal trading programs. As noted above, the West Virginia CSAPR SIP submittal generally incorporates by reference the corresponding Federal trading programs under the CSAPR FIP, and is therefore substantively identical to the CSAPR FIP West Virginia seeks to replace. The SIP submittal replaces the provisions in 40 CFR 97.404, 97.604, and 97.804 that generically refer to a ''State'' and to ''Indian Country'' within a state to refer instead only to West Virginia. The SIP submittal also adopts only the emissions budget, new unit set-aside, and variability limit amounts that apply to West Virginia and omits the analogous amounts that apply to other states. These changes are appropriate for the State's trading program regulations, which will apply only to units subject to West Virginia's jurisdiction. The SIP submittal does not otherwise substitute for the term ''State'' and makes no other changes to the Federal trading program regulations besides the required exclusion of provisions that would impose requirements on units in Indian country or that would govern allocation of allowances from Indian country new unit set-asides. Because the West Virginia CSAPR SIP maintains the applicable requirements of subparts AAAAA, CCCCC, and EEEEE, is substantively identical to the Federal trading programs under CSAPR as applied to units in West Virginia, makes no substantive substitutions for the term ''State'', and excludes provisions addressing units in Indian County, the SIP revision meets the approvability conditions in 40 CFR 52.38 and 52.39 for a CSAPR SIP revision.

As discussed earlier, EPA has determined that participation of West Virginia's EGUs in the CSAPR Update trading program under 40 CFR 97, subpart EEEEE, fully addresses the State's good neighbor obligation with respect to the 2008 ozone NAAQS. The June 5, 2019 submittal of West Virginia regulation 45 CSR 43 that includes West Virginia's CSAPR ozone season NO_X trading program meets the commitment by West Virginia in its March 27, 2018 SIP submittal for 2008 ozone transport to address this Good Neighbor obligation through SIP provisions rather than FIP provisions. With West Virginia's adoption and submittal of a CSAPR ozone season NO_X trading program that is substantively identical to the Federal ozone season NO_X trading program under 40 CFR part 97, subpart EEEEE, with the exceptions previously noted, and which is approvable as discussed in the previous paragraph, West Virginia's March 27, 2018 transport SIP submittal, as supplemented by West Virginia's June 5, 2019 CSAPR SIP submittal, is approvable.

Proposed Action

For the reasons discussed in this document, EPA is proposing to approve West Virginia's CSAPR SIP submittal, Regulation 45 CSR 43, of June 5, 2019. This state rule establishes West Virginia CSAPR state trading programs for annual NO_X, ozone season NO_X, and annual SO_2 emissions for units in the state. The West Virginia CSAPR state trading programs would be integrated with the Federal CSAPR NO_X Annual Trading Program, the Federal CSAPR NO_X Ozone Season Group 2 Trading Program, and the Federal CSAPR SO_2 Group 1 Trading Program, respectively, and would be substantively identical to the Federal trading programs.

EPA is also proposing to approve the West Virginia 2008 transport SIP submittal of March 27, 2018, as supplemented with the portion of the June 5, 2019 submittal relating to subpart EEEEE (the CSAPR NO_X Ozone Season Group 2 Trading Program). Although WVDEP originally requested conditional approval of its March 27, 2018 submittal demonstrating compliance with its transport obligations under section 110(a)(2)(D)(i)(I) for the 2008 ozone NAAQS, the State has now met its commitment to submit its CSAPR SIP ozone season NO_X trading program through the June 5, 2019 submittal. EPA is soliciting public comments on the issues discussed in this document.[18] These comments will be considered before taking final action. We propose to find that, if approval of West Virginia's CSAPR SIP is finalized, the State will have addressed its section 110(a)(2)(D)(i)(I) obligations with respect to the 1997 and 2006 $PM_{2.5}$ and 2008 ozone NAAQS, consistent with the determinations made in the various CSAPR rulemakings.

[18] EPA is not reopening for public comment any of the analysis or conclusions finalized in any of the CSAPR rulemakings. Rather, this action simply evaluates and seeks comment on whether the SIP submissions from West Virginia are consistent with the regulations issued and determinations made in those prior actions.

IV. Incorporation by Reference

In this document, EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is proposing to incorporate by reference West Virginia regulation 45 CSR 43. EPA has made, and will continue to make, these materials generally available through *https://www.regulations.gov* and at the EPA Region III Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely y approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866.
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or

safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this action proposing to approve West Virginia's CSAPR SIP submittal and West Virginia's transport submittal for the 2008 8-hour ozone NAAQS, does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

RIN 2040–AF86

Updating Regulations on Water Quality Certification

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; public meeting or (hearing).

SUMMARY: On August 8, 2019, the Environmental Protection Agency (EPA or agency) Administrator signed a notice of proposed rulemaking (NPRM) providing updates and clarifications to the substantive and procedural requirements for water quality certification under Clean Water Act. The agency is announcing that a public hearing will be held in Salt Lake City, Utah on September 5 and 6, 2019, to provide interested parties the opportunity to present data, views, or information concerning the NPRM. The pre-publication version of this proposal can be found at *https://www.epa.gov/cwa-401*.

DATES: The agency will hold a public hearing on Thursday, September 5 and Friday, September 6, 2019, in Salt Lake City, Utah. Please refer to the **SUPPLEMENTARY INFORMATION** section for additional information on the public hearing.

ADDRESSES: The hearing will be held in the Nancy Tessman Auditorium at the Salt Lake City Public Library, Main Library, 210 East 400 South, Salt Lake City, Utah 84111. The September 5 session will convene at 2:00 p.m. (local time) and will conclude no later than 8:00 p.m. and the September 6 session will convene at 9:00 a.m. and will conclude no later than 12:00 p.m.

Documents related to the proposal will be available for public inspection through the Federal eRulemaking Portal: *https://www.regulations.gov,* Docket ID No. EPA–HQ–OW–2019–0405 once the NPRM publishes in the **Federal Register**. Documents can also be viewed at the Environmental Protection Agency Docket Center, located at 1301 Constitution Avenue NW, Room 3334, Washington, DC between 8:30 a.m. and 4:30 p.m., Monday through Friday, excluding legal holidays. In addition, the pre-publication version of the NPRM and the economic analysis for the proposed rulemaking are available at *https://www.epa.gov/cwa-401*.

If you are unable to attend the public hearing on September 5 or 6 you will be able to submit your comments, identified by Docket ID No. EPA–HQ–OW–2019–0405, to the *Federal eRulemaking Portal: https://www.regulations.gov* (our preferred method). Follow the online instructions for submitting comments. All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For additional information on the public hearing, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Lauren Kasparek, Office of Water (4504–T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 564–3351; email address: *cwa401@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On August 8, 2019, the agency Administrator signed a proposed rulemaking providing updates and clarifications to the substantive and procedural requirements for water quality certification under Clean Water Act section 401 and consistent with Executive Order 13868, signed on April 10, 2019, entitled ''Promoting Energy Infrastructure and Economic Growth.'' The agency is holding a public hearing in Salt Lake City, Utah on September 5 and 6, 2019, to provide interested parties the opportunity to present data, views, or information concerning the NPRM. The agency has submitted the proposed rulemaking to the Office of the Federal Register, and it will be published separately in the **Federal Register**. The comment period on the proposed action will end 60 days after the NPRM publishes in the **Federal Register**. The pre-publication version of the NPRM can be found at *https://www.epa.gov/cwa-401* and will be replaced with the official version of the NPRM after it publishes.

II. Public Participation

A. Participation in Public Hearing

The public is invited to speak during the public hearing on September 5 and 6, 2019. The agency will begin pre-registering speakers for the hearing upon signature of this document. Those interested in speaking at the hearing can sign up for a three-minute speaking slot within an identified 45-minute timeframe. To register to speak at the hearing, please use the online registration form available at *https://www.epa.gov/cwa-401/outreach-and-engagement-cwa-section-401-certification*. The last day to pre-register to speak at the hearing will be August 30, 2019. On September 4, 2019, the agency will post a general agenda for the hearing that will list pre-registered speakers in approximate order at: *https://www.epa.gov/cwa-401/outreach-and-engagement-cwa-section-401-certification*.

The agency will make every effort to follow the schedule as closely as possible on the day of the hearing; however, please plan for the hearings to run either ahead of schedule or behind schedule. Additionally, requests to speak will be taken the day of the hearing at the hearing registration desk. The agency will make every effort to accommodate all speakers who arrive

and register, although preferences on speaking times may not be available.

Each commenter will have three minutes to provide oral testimony. The agency encourages commenters to provide the agency with a copy of their oral testimony electronically (via email) or in hard copy form.

The agency may ask clarifying questions during the oral presentations but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral comments and supporting information presented at the public hearing. Written comments must be received by the last day of the comment period, as specified in the notice of proposed rulemaking. Verbatim transcripts of the hearing and written statements will be included in the docket for the rulemaking.

Please note that any updates made to any aspect of the hearing will be posted online at *https://www.epa.gov/cwa-401/outreach-and-engagement-cwa-section-401-certification*. While the agency expects the hearing to go forward as set forth above, please monitor our website for any updates. The agency does not intend to publish a document in the **Federal Register** announcing updates.

The agency will not provide audiovisual equipment for presentations. Any media presentations should be submitted to the public docket at *https://www.regulations.gov/,* identified by Docket ID No. EPA–HQ–OW–2019–0405. If you require the service of a sign language interpreter, translator, or other special accommodations such as audio description, please pre-register for the hearing and describe your needs by August 22, 2019. We may not be able to arrange accommodations without advanced notice.

Dated: August 7, 2019.

John T. Goodin,

Director, Office of Wetlands, Oceans and Watersheds, Office of Water, Environmental Protection Agency.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket Nos. 18–202 and 17–105; FCC 19–67]

Children's Television Programming Rules

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission seeks further comment on the creation of a framework under which a broadcaster could satisfy its children's programming obligations by relying in part on special efforts to produce or support Core Programming aired on another station or stations in the market. The Children's Television Act (CTA) permits the Commission to consider special sponsorship efforts, in addition to consideration of a licensee's programming, in evaluating whether a licensee has served the educational and informational needs of children. The Commission invites commenters to submit proposals detailing a specific framework under which special sponsorship efforts may be considered as part of a broadcaster's license renewal.

DATES: Comments are due on or before September 16, 2019; reply comments are due on or before October 15, 2019.

ADDRESSES: You may submit comments, identified by MB Docket Nos. 18–202 and 17–105, by any of the following methods:

- *Federal Communications Commission's website: http://www.fcc.gov/cgb/ecfs/.* Follow the instructions for submitting comments.
- *Mail:* Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail (although the Commission continues to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- *People With Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: *FCC504@fcc.gov* or phone: (202) 418–0530 or TTY: (202) 418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: For additional information, contact Kathryn Berthot of the Media Bureau, Policy Division, (202) 418–7454, or Jonathan Mark of the Media Bureau, Policy Division, (202) 418–3634. Direct press inquiries to Janice Wise at (202) 418–8165.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Further Notice of Proposed Rulemaking (*FNPRM*), FCC 19–67, adopted on July 10, 2019, and released on July 12, 2019. The full text of this document is available electronically via the FCC's Electronic Document Management System (EDOCS) website at *http://fjallfoss.fcc.gov/edocs_public/* or via the FCC's Electronic Comment Filing System (ECFS) website at *http://fjallfoss.fcc.gov/ecfs2/.* (Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat.) This document is also available for public inspection and copying during regular business hours in the FCC Reference Information Center, which is located in Room CY–A257 at FCC Headquarters, 445 12th Street SW, Washington, DC 20554. The Reference Information Center is open to the public Monday through Thursday from 8:00 a.m. to 4:30 p.m. and Friday from 8:00 a.m. to 11:30 a.m. The complete text may be purchased from the Commission's copy contractor, 445 12th Street SW, Room CY–B402, Washington, DC 20554. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Synopsis

I. Further Notice of Proposed Rulemaking

1. In this *FNPRM,* we seek further comment on the creation of a framework under which a broadcaster could satisfy its children's programming obligations by relying in part on special efforts to produce or support Core Programming aired on another station or stations in the market. The CTA permits the Commission to consider special sponsorship efforts, in addition to consideration of a licensee's programming, in evaluating whether a licensee has served the educational and informational needs of children. In the *NPRM,* the Commission noted that ''few, if any, broadcasters have taken advantage of this opportunity to date'' because the rules require the full

Commission to approve the children's programming portion of renewal applications relying on such special efforts and there is little guidance on how such special efforts will be counted. The Commission accordingly invited comment on the establishment of a framework that would make the use of special sponsorship efforts a more viable option for broadcasters. We received very few comments on this issue. As NAB asserts, however, ''[n]o broadcaster . . . will increase the risk to its license renewal by relying on a vague, uncertain option for fulfilling its children's TV obligations. To encourage stations to explore sponsorships, the standards for this option must be clear.'' Because the current record does not provide an adequate foundation for the Commission to adopt a clear standard for special sponsorship efforts, this *FNPRM* aims to create a more robust record and to solicit industry proposals for a detailed framework for evaluating special sponsorship efforts.

2. We invite commenters to submit proposals detailing a specific framework under which special sponsorship efforts may be considered as part of a broadcaster's license renewal. We tentatively conclude that such proposals should include, at a minimum, the following three elements: (1) The station must sponsor programming on a noncommercial television broadcast station located in the same DMA; (2) the proposal must establish a benchmark for how much funding a sponsoring station would be required to provide based on the size or circumstances of the sponsoring station; and (3) the sponsorship must result in the creation of new Core Programming or expanded hours of an existing Core Program. We discuss these three elements and seek comment on our tentative conclusions below.

3. First, we tentatively conclude that a proposed framework for special sponsorship efforts should require that the station sponsor programming on an in-market noncommercial station. We think that it would be beneficial to foster sponsorship of children's educational and informational programming on stations that are more likely to attract child audiences. Noncommercial stations in general, and PBS stations in particular, have a demonstrated commitment to serving the educational and informational needs of children and therefore may be more likely to attract larger audiences for their children's programming. NAB states that public television's experience with the 24/7 PBS KIDS channel illustrates that fostering more educational content on child-focused stations or program streams could boost viewership, as children's viewing of PBS has increased 47% among low-income families and 32% in broadcast-only homes since the inception of PBS KIDS. We seek comment on our tentative conclusion. Should we require that there be significant overlap between the coverage area of the sponsoring station and that of the noncommercial station? Are there other benefits to promoting sponsorship of children's programming on noncommercial stations? For example, is it reasonable to expect that it would be easier for parents to identify and locate Core Programming aired on noncommercial stations? Alternatively, should we consider a framework that also would permit special sponsorship efforts on in-market commercial stations?

4. Second, we tentatively conclude that a proposed framework for special sponsorship efforts should include a funding benchmark that takes into account the size or circumstances of the sponsoring station. Specifically, we tentatively conclude that large broadcast stations and/or stations with greater resources should be required to undertake more substantial sponsorship efforts (*i.e.,* by providing a higher level of funding) than small broadcast stations and/or stations with less resources in order to receive sponsorship credit. We seek comment on this tentative conclusion. In addition, we seek comment on how to define or categorize sponsoring stations for purposes of such a requirement. For example, should sponsoring stations be categorized based on annual revenues, network affiliation and market size, or some other measure that appropriately factors the size and resources of the station? How many separate categories of sponsoring stations should there be? Further, we seek comment on how much funding a station in each of these categories should be required to provide to receive credit for sponsoring programming on an in-market noncommercial station. Should such funding levels be defined as a percentage of the cost to produce the Core Program for a noncommercial station, a percentage of the sponsoring station's annual revenues, a percentage of the sponsoring station's advertising revenues for the timeslot ''freed up'' as a result of the sponsorship, or should such funding levels be based on some other measure?

5. Third, consistent with the Commission's previous guidance on this issue, we tentatively conclude that a proposed framework for special sponsorship efforts must require that the sponsorship result in the creation of new Core Programming or expand the hours of an existing Core Program on the in-market noncommercial station. We think that a licensee should receive credit only where its sponsorship results in a net increase in the amount of Core Programming on the in-market noncommercial station. We seek comment on this tentative conclusion.

6. We invite commenters to address the costs and benefits of the proposed framework discussed above and to suggest alternatives. In particular, we invite noncommercial stations to provide input on how this or any alternative proposed framework would be effective in facilitating the sponsorship of children's educational and informational programming on noncommercial stations. We reiterate that without a clear framework for evaluating the sponsorship efforts of broadcast stations, broadcasters are unlikely to risk their license renewals by pursuing this option; thus, we urge commenters to offer detailed proposals so that we are able to provide specific guidance on how special sponsorship efforts will be evaluated.

7. We seek comment on how a station's sponsorship efforts should be attributed to its overall Core Programming hours. We tentatively conclude that a sponsored Core Program that satisfies each element of the proposed framework discussed above should be counted on a minute-for-minute basis (*i.e.,* count each minute of a sponsored program as the equivalent of a minute of Core Programming). We request comment on this tentative conclusion and invite commenters to suggest alternative proposals for quantifying sponsorship efforts. Should multiple stations in the same market be permitted to jointly sponsor a Core Program on an in-market noncommercial station? If so, how should each station's individual sponsorship efforts count toward its overall Core Programming hours?

8. As noted above, the CTA states that special sponsorship efforts may be considered only ''in addition to considering the licensee's [educational] programming.'' Thus, we think it is clear that the statute requires that each broadcast station air some amount of Core Programming on its own station. We seek comment on whether broadcasters that sponsor Core Programs on in-market noncommercial stations should have the flexibility to decide how much Core Programming to air on their own stations, provided that their Core Programming hours when combined with their special sponsorship efforts are the equivalent of 156 annual Core Programming hours

under the revised processing guidelines, or whether we should establish a minimum number. Additionally, we seek comment on how special sponsorship efforts will work in conjunction with our revised processing guidelines. We tentatively conclude that a station that sponsors programming on an in-market noncommercial station should treat all such sponsored programming as regularly scheduled weekly programming for purposes of the processing guidelines. Thus, for example, if a station sponsors a half hour per week of Core Programming on an in-market noncommercial station for 52 weeks, the station will be credited with airing 26 hours of regularly scheduled weekly programming. The station could then satisfy the processing guidelines by complying with either Category A or B for the remaining hours. We seek comment on this tentative conclusion.

9. Finally, we tentatively conclude that Media Bureau staff, rather than the full Commission, should be permitted to approve the children's programming portion of renewal applications of licensees relying in part on special sponsorship efforts that satisfy the proposed framework discussed above. We tentatively conclude that requiring full Commission review of the renewal applications of stations engaging in sponsorship efforts effectively discourages any station from exploring such an option. We seek comment on this tentative conclusion. In addition, we note that FCC Form 2100 Schedule H (formerly, Form 398), Children's Television Programming Report, requires stations to provide certain information regarding each Core Program sponsored on another station. We request comment on any changes to this portion of the form that may be necessitated as a result of guidance on special sponsorship efforts provided in this proceeding.

II. Procedural Matters

A. Initial Paperwork Reduction Act Analysis

10. This document may result in new or modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget (OMB) to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995 (PRA). Public and agency comments are due 60 days after publication of this document in the **Federal Register**. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4), we seek specific comment on how we might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

B. Initial Regulatory Flexibility Analysis

11. As required by the Regulatory Flexibility Act of 1980, as amended, (RFA) the Commission has prepared this Initial Regulatory Flexibility Act Analysis (IRFA) concerning the possible significant economic impact on small entities by the rules proposed in this Further Notice of Proposed Rulemaking. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments provided on the first page of the *FNPRM.* Pursuant to the requirements established in 5 U.S.C. 603(a), The Commission will send a copy of the *FNPRM,* including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

12. *Need for, and Objectives of, the FNPRM.* The Children's Television Act of 1990 (CTA) requires that the Commission consider, in its review of television license renewals, the extent to which the licensee ''has served the educational and informational needs of children through its overall programming, including programming specifically designed to serve such needs.'' The CTA provides that, in addition to considering the licensee's programming, the Commission also may consider in its review of television license renewals any special efforts by the licensee to produce or support programming broadcast by another station in the licensee's marketplace which is specifically designed to serve the educational and informational needs of children. The Commission adopted rules implementing the CTA in 1991, and revised these rules in 1996, 2004, and 2006.

13. On July 12, 2018, the Commission released a Notice of Proposed Rulemaking seeking comment on the creation of a framework under which broadcasters could satisfy their children's programming obligations by relying in part on special sponsorship efforts. The Commission, however, received very few comments on this issue. Because the current record does not provide an adequate foundation for the Commission to adopt a clear standard for evaluating special sponsorship efforts, the *FNPRM* invites commenters to submit proposals detailing a specific framework under which special sponsorship efforts may be considered as part of a broadcaster's license renewal. The *FNPRM* tentatively concludes that such proposals should include, at a minimum, the following three elements: (1) The station must sponsor programming on a noncommercial television broadcast station located in the same DMA; (2) the proposal must establish a benchmark for how much funding a sponsoring station would be required to provide based on the size or circumstances of the sponsoring station; and (3) the sponsorship must result in the creation of new Core Programming or expanded hours of an existing Core Program. Further, the *FNPRM* tentatively concludes that Media Bureau staff, rather than the full Commission, should be permitted to approve the children's programming portion of renewal applications of licensees relying in part on special sponsorship efforts that satisfy the proposed sponsorship framework.

14. *Legal Basis.* The proposed action is authorized pursuant to sections 303, 303b, 307, and 336 of the Communications Act of 1934, as amended, 47 U.S.C. 303, 303b, 307, and 336.

15. *Description and Estimates of the Number of Small Entities to Which the Proposed Rules Will Apply.* The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA. The rules proposed herein will directly affect certain small television stations. Below is a description of these small entities, as well as an estimate of the number of such small entities, where feasible.

16. *Television Broadcasting.* This Economic Census category ''comprises establishments primarily engaged in broadcasting images together with sound.'' These establishments operate television broadcast studios and facilities for the programming and transmission of programs to the public. These establishments also produce or transmit visual programming to affiliated broadcast television stations,

which in turn broadcast the programs to the public on a predetermined schedule. Programming may originate in their own studio, from an affiliated network, or from external sources. The SBA has created the following small business size standard for such businesses: Those having $38.5 million or less in annual receipts. The 2012 Economic Census reports that 751 firms in this category operated in that year. Of that number, 656 had annual receipts of $25,000,000 or less. Based on this data, we estimate that the majority of commercial television broadcasters are small entities under the applicable SBA size standard.

17. In addition, the Commission has estimated the number of licensed commercial television stations to be 1,383. Of this total, 1,257 stations had revenues of $38.5 million or less, according to Commission staff review of the BIA Kelsey Inc. Media Access Pro Television Database (BIA) on February 24, 2017. Such entities, therefore, qualify as small entities under the SBA definition. The Commission has estimated the number of licensed noncommercial educational (NCE) television stations to be 378. The Commission, however, does not compile and does not have access to information on the revenue of NCE stations that would permit it to determine how many such stations would qualify as small entities.

18. We note, however, that in assessing whether a business concern qualifies as ''small'' under the above definition, business (control) affiliations must be included. Our estimate, therefore likely overstates the number of small entities that might be affected by our action, because the revenue figure on which it is based does not include or aggregate revenues from affiliated companies. In addition, another element of the definition of ''small business'' requires that an entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific television broadcast station is dominant in its field of operation. Accordingly, the estimate of small businesses to which the proposed rules would apply does not exclude any television station from the definition of a small business on this basis and therefore could be over-inclusive.

19. There are also 417 Class A stations. Given the nature of this service, we will presume that all 417 of these stations qualify as small entities under the above SBA small business size standard.

20. *Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements.* In this section, we identify the reporting, recordkeeping, and other compliance requirements proposed in the *FNPRM* and consider whether small entities are affected disproportionately by any such requirements.

21. *Reporting Requirements.* The *FNPRM* may result in modifications to the special sponsorship efforts portion of FCC Form 398.

22. *Recordkeeping Requirements.* The *FNPRM* does not propose to adopt recordkeeping requirements.

23. *Other Compliance Requirements.* The *FNPRM* seeks further comment on the creation of a framework under which broadcasters could satisfy their children's programming obligations by relying in part on special sponsorship efforts.

24. *Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered.* The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

25. The framework proposed in the *FNPRM* is intended to provide broadcasters, including small entities, greater flexibility in fulfilling their children's programming obligations. The *FNPRM* tentatively concludes that a proposed framework for special sponsorship efforts should include a funding benchmark that takes into account the size or circumstances of the sponsoring station and seeks comment on whether such a funding benchmark should be based on a station's annual revenues, network affiliation and market size, or some other measure. Thus, we expect that the proposed revisions, if adopted, will only benefit affected small entities.

26. *Federal Rules that May Duplicate, Overlap, or Conflict With the Proposed Rule.* None.

C. Ex Parte Rules

27. *Permit-But-Disclose.* This proceeding shall be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

D. Filing Requirements

28. *Comments and Replies.* Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). *See Electronic Filing of Documents in Rulemaking Proceedings,* 63 FR 24121 (1998).

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *http://fjallfoss.fcc.gov/ecfs2/.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in

the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW, Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of *before* entering the building.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW, Washington, DC 20554.

29. *Availability of Documents.* Comments, reply comments, and *ex parte* submissions will be available for public inspection during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street SW, CY–A257, Washington, DC 20554. These documents will also be available via ECFS. Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat.

30. *People With Disabilities.* To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the FCC's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

31. Accordingly, *it is ordered,* pursuant to the authority contained in sections 303, 303b, 307, 335, and 336 of the Communications Act of 1934, as amended, 47 U.S.C. 303, 303b, 307, 335, and 336, that this Further Notice of Proposed Rulemaking *is adopted.*

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Chapter 2

[Docket DARS–2019–0043]

Defense Federal Acquisition Regulation Supplement: Public Meetings on DFARS Cases Regarding Technical Data Rights

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Rescheduling of public meetings.

SUMMARY: DoD is rescheduling public meetings to obtain views of experts and interested parties in Government and the private sector regarding amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement statutory amendments and revise policies and procedures for acquisition of technical data and computer software, and associated license rights.

DATES:

Public Meeting Dates: The public meetings previously scheduled for September 6 and 16, 2019, are rescheduled for the following dates:

- November 15, 2019, from 10:00 a.m. to 1:00 p.m., Eastern time.
- November 21, 2019, from 1:30 p.m. to 4:30 p.m., Eastern time.

The public meetings will end at the stated times, or when the discussion ends, whichever comes first.

Registration Dates: Registration to attend the public meetings must be received no later than close of business on the following dates:

- November 8, 2019, for the meeting on November 15th.
- November 14, 2019, for the meeting on November 21st.

Information on how to register for the public meetings may be found in the **SUPPLEMENTARY INFORMATION** section of this document.

ADDRESSES: The public meeting scheduled for November 15, 2019, will be held in the Pentagon Library and Conference Center (PLCC), Conference Room B6, 1155 Defense Pentagon, Washington, DC 20301. Conference Room B6 is located on the lower level of the PLCC. The public meeting scheduled for November 21, 2019, will be held in the Mark Center Auditorium, 4800 Mark Center Drive, Alexandria, VA 22350–3603. The Mark Center Auditorium is located on level B–1 of the building.

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer D. Johnson, telephone 571–372–6100.

SUPPLEMENTARY INFORMATION: DoD is hosting public meetings to obtain the views of experts and interested parties in Government and the private sector regarding amending the DFARS to implement statutory amendments and revise policies and procedures for acquisition of technical data and computer software, and associated license rights. DoD also seeks to obtain information on the potential increase or decrease in public costs or savings that would result from such amendments to the DFARS. In addition to the statutory changes, DoD is considering recommendations related to that statutory subject matter that were provided in the November 13, 2018, Final Report of the Government-Industry Advisory Panel on Technical Data Rights (Section 813 Panel), established pursuant to section 813 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2016.

To facilitate discussion at the public meetings, DoD anticipates publication of advance notices of proposed rulemaking, which will include initial drafts of the DFARS amendments, prior to the public meetings. This approach is based in part on a recommendation of the Section 813 Panel to invite industry to participate in the drafting of rules concerning technical data rights. For the two public meetings listed in the **DATES** section of this document, DoD anticipates discussion of the following DFARS cases:

- 2018–D069, Validation of Proprietary and Technical Data, which implements section 865 of the NDAA for FY 2019.
- 2018–D071, Negotiation of Price for Technical Data and Preference for Specially Negotiated Licenses, which implements section 835 of the NDAA for FY 2018 and section 867 of the NDAA for FY 2019.

After these two meetings, DoD anticipates scheduling and hosting additional public meetings, structured in the same manner and for the same overall objective, to address the following DFARS cases:

- 2018–D070, Continuation of Technical Data Rights during Challenges, which implements section 866 of the NDAA for FY 2018.

• 2018–D018, Noncommercial Computer Software, which implements section 871 of the NDAA for FY 2018.
• A new case that will implement section 809 of the NDAA for FY 2017.
• A new case that will implement section 815 of the NDAA for FY 2012, as amended by section 809 of the NDAA for FY 2017.

Registration: To ensure adequate room accommodations and to facilitate security screening and entry to the PLCC and the Mark Center, individuals wishing to attend the public meeting must register by close of business on the dates listed in the **DATES** section of this document, by sending the following information via email to *osd.dfars@mail.mil:*

(1) Full name.
(2) Valid email address.
(3) Valid telephone number.
(4) Company or organization name.
(5) Whether the individual is a U.S. citizen.
(6) The date(s) of the public meeting(s) the individual wishes to attend.
(7) Whether the individual intends to make a presentation, and, if so, the individual's title.

Individual who registered for the prior meetings date(s), will need to re-register for the public meeting date they would like to attend.

Building Entry: Upon receipt of an email requesting registration, the Defense Acquisition Regulations System will provide notification to the Pentagon Force Protection Agency (PFPA) that the individual is requesting approval for entry to the PLCC or the Mark Center on the date(s) provided. PFPA will send additional instructions to the email address provided in the request for registration. The registrant must follow the instructions in the PFPA email in order to be approved for entry to the PLCC or the Mark Center.

One valid government-issued photo identification card (*i.e.,* driver's license or passport) will be required in order to enter the building.

Attendees are encouraged to arrive at least 30 minutes prior to the start of the meeting to accommodate security procedures.

Public parking is not available at the PLCC or the Mark Center.

Presentations: If you wish to make a presentation, please submit an electronic copy of your presentation to *osd.dfars@mail.mil* no later than the registration date for the specific meeting listed in the **DATES** section of this document. Each presentation should be in PowerPoint to facilitate projection during the public meeting and should include the presenter's name, organization affiliation, telephone number, and email address on the cover page. Please submit presentations only and cite ''Public Meeting, DFARS Technical Data Rights Cases'' in all correspondence related to the public meeting. There will be no transcription at the meeting. The submitted presentations will be the only record of the public meeting and will be posted to the following website at the conclusion of the public meeting: *https://www.acq.osd.mil/dpap/dars/technical_data_rights.html.*

Special accommodations: The public meeting is physically accessible to persons with disabilities. Requests for reasonable accommodations, sign language interpretation, or other auxiliary aids should be directed to Valencia Johnson, telephone 571–672–6099, by no later than the registration date for the specific meeting listed in the **DATES** section of this document.

The TTY number for further information is: 1–800–877–8339. When the operator answers the call, let him or her know the agency is the Department of Defense and the point of contact is Valencia Johnson at 571–672–6099.

Jennifer Lee Hawes,

Regulatory Control Officer, Defense Acquisition Regulations System.

BILLING CODE 5001–06–P

AGENCY FOR INTERNATIONAL DEVELOPMENT

48 CFR Chapter 7

RIN 0412–AA86

Agency for International Development Acquisition Regulation (AIDAR): Leave and Holidays for U.S. Personal Services Contractors, Including Family and Medical Leave

AGENCY: U.S. Agency for International Development.

ACTION: Supplemental notice of proposed rulemaking.

SUMMARY: The U.S. Agency for International Development (USAID) hereby further amends a proposed rule published in the **Federal Register** on June 21, 2019 regarding amending the AIDAR to revise the General Provision contract clause (hereafter ''clause'') 5 entitled ''Leave and Holidays (APR 1997)'' for U.S. personal services contractors (USPSCs.) This action addresses conforming changes to annual and sick leave, and compensatory time off.

DATES: Submit comments on or before August 20, 2019.

ADDRESSES: Submit comments by any of the following methods:

1. Through the Federal eRulemaking Portal at *http://www.regulations.gov* by following the instructions for submitting comments.

2. *By Mail Addressed to:* U.S. Agency for International Development (USAID), Bureau for Management, Office of Acquisition & Assistance, Policy Division, Attn: Richard E. Spencer, Room 867–E, SA–44, 1300 Pennsylvania Ave. NW, Washington, DC 20523–2052.

FOR FURTHER INFORMATION CONTACT: Richard E. Spencer, Telephone: 202–567–4781 or Email: *rspencer@usaid.gov.*

SUPPLEMENTARY INFORMATION: On June 21, 2019 (84 FR 29140), USAID proposed amending its acquisition regulations by revising the General Provision contract clause 5 in appendix D of the AIDAR, chapter 7 of title 48 of the Code of Federal Regulations. Those changes included revisions and clarifications for all types of leave for USPSCs, including adding a new provision for family and medical leave. In this supplemental notice of proposed rulemaking, we are clarifying that both earning and use of compensatory time off follows the same policies as apply to USAID direct-hires, and adding language that conforms to unchanged provisions elsewhere in the regulation about prorating annual and sick leave accrual rates for less than full-time work.

A. Instructions

All comments must be in writing and submitted through one of the methods specified in the **ADDRESSES** section above. USAID encourages all commenters to include the title of the action and RIN for this rulemaking. Please include your name, title, organization, postal address, telephone number, and email address in the text of your comment.

Please note that USAID recommends sending all comments to the Federal eRulemaking Portal.

All comments will be made available at *http://www.regulations.gov* for public review without change, including any personal information provided. We recommend that you do not submit information that you consider confidential business information or any information that is otherwise protected from disclosure by statute.

USAID will only address comments that are relevant and within the scope of this proposed rule.

B. Background

USAID is seeking comments on this proposed rule to revise AIDAR

appendix D as originally published in the **Federal Register** on June 21, 2019, and as described below for this supplemental notice of proposed rulemaking:

(1) Annual leave.

This paragraph is clarified to indicate that accrual of annual leave will be prorated for less than full-time work.

(2) Sick Leave.

This paragraph is clarified to indicate that accrual of sick leave will be prorated for less than full-time work.

(3) Compensatory Time.

A sentence is added to clarify that both earning and use of compensatory time off follow the same policies as apply to USAID direct-hires.

C. Impact assessment

(1) Regulatory Planning and Review. Under E.O. 12866, OIRA has designated the proposed rule ''significant'' and therefore subject to the requirements of the E.O. and subject to review by the Office of Management and Budget (OMB). OIRA has determined that this Rule is not an ''economically significant regulatory action'' under Section 3(f)(1) of E.O. 12866. This proposed rule is not a major rule under 5 U.S.C. 804.

The costs and benefit of the revisions described as published in the **Federal Register** on June 21 remain unchanged, and there is no additional impact for the conforming changes proposed by this supplemental notice of proposed rulemaking.

(2) Regulatory Flexibility Act. The Director, Bureau for Management, Office of Acquisition and Assistance, acting as the Head of the Agency for purposes of the Federal Acquisition Regulation, certifies that this proposed rule will not impact a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* Therefore, an Initial Regulatory Flexibility Analysis has not been performed.

(3) Paperwork Reduction Act. This proposed rule does not establish or modify a collection of information that requires the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. Chapter 35).

List of Subjects in 48 CFR Chapter 7, Appendix D

Government procurement.

For the reasons discussed in the preamble, 48 CFR chapter 7, as proposed to be amended on June 21, 2019 at 84 FR 29140, is further amended as follows:

Title 48—Federal Acquisition Regulations System

Chapter 7—Agency for International Development

■ 1. The authority citation for appendix D to 48 CFR chapter 7 continues to read as follows:

Authority: Sec. 621, Pub. L. 87–195, 75 Stat. 445, (22 U.S.C. 2381), as amended; E.O. 12163, Sept. 29, 1979, 44 FR 56673; and 3 CFR, 1979 Comp., p. 435.

■ 2. Appendix D to chapter 7, is amended by revising paragraphs (a)(2), (b), and (h) of clause 5 in section 12 to read as follows:

Appendix D to Chapter 7—Direct USAID Contracts With a U.S. Citizen or a U.S. Resident Alien for Personal Services Abroad

* * * * *

12. General Provisions for a Contract With a U.S. Citizen or a U.S. Resident Alien for Personal Services Abroad

* * * * *

5. Leave and Holidays

* * * * *

(a) * * *

(2) The contractor will accrue annual leave based on the contractor's time in service according to the table of this paragraph (a)(2). The accrual rates are based on a full-time, 40-hour workweek, which will be prorated if the contract provides for a shorter workweek:

Time in service	Annual leave (AL) accrual rate
0 to 3 years	4 hours of leave for each 2-week period.
over 3, and up to 15 years	6 hours of AL for each 2-week period (including 10 hours AL for the final pay period of a calendar year).
over 15 years	8 hours of AL for each 2-week period.

* * * * *

(b) *Sick Leave.* The contractor may use sick leave on the same basis and for the same purposes as USAID employees. The contractor will accrue sick leave at a rate not to exceed four (4) hours every two (2) weeks for a maximum of thirteen (13) work-days per year based on a full-time, 40-hour workweek, which will be prorated if the contract provides for a shorter workweek. The contractor may carry over unused sick leave from year to year under the same contract, and to a new follow-on contract for the same work at the same place of performance. The contractor is not authorized to carry over sick leave to a new contract for a different position or at a different location. The contractor will not be compensated for unused sick leave at the completion of this contract.

* * * * *

(h) *Compensatory Time.* USAID may grant compensatory time off only with the written approval of the contracting officer or Mission Director in rare instances when it has been determined absolutely essential and under the policies that apply to USAID direct-hire employees. The contractor may use earned compensatory time off in accordance with policies that apply to USAID direct-hire employees.

* * * * *

Mark A. Walther,

Acting Chief Acquisition Officer.

Federal Register
Vol. 84, No. 159
Friday, August 16, 2019

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Arizona Advisory Committee

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act (FACA) that a meeting of the Arizona Advisory Committee (Committee) to the Commission will be held at 12:00 p.m. (Arizona Time) Wednesday, August 28, 2019. The purpose of the meeting is for the Committee to discuss its briefing on subminimum wages for disabled persons.

DATES: The meeting will be held on Wednesday, August 28, 2019 at 12:00 p.m. Arizona Time.

Public Call Information: Dial: 800–367–2403, Conference ID: 5419039.

FOR FURTHER INFORMATION CONTACT: Alejandro Ventura (DFO) at *aventura@usccr.gov* or (213) 894–3437.

SUPPLEMENTARY INFORMATION: This meeting is available to the public through the following toll-free call-in number: 800–367–2403, conference ID number: 5419039. Any interested member of the public may call this number and listen to the meeting. Callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the conference call number and conference ID number.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the meeting. Written comments may be mailed to the Western Regional Office, U.S. Commission on Civil Rights, 300 North Los Angeles Street, Suite 2010, Los Angeles, CA 90012. They may be faxed to the Commission at (213) 894–0508, or emailed Alejandro Ventura at *aventura@usccr.gov.* Persons who desire additional information may contact the Regional Programs Unit at (213) 894–3437.

Records and documents discussed during the meeting will be available for public viewing prior to and after the meetings at *https://www.facadatabase.gov/FACA/FACAPublicViewCommitteeDetails?id=a10t0000001gzl2AAA.* Please click on the ''Committee Meetings'' tab. Records generated from these meetings may also be inspected and reproduced at the Regional Programs Unit, as they become available, both before and after the meetings. Persons interested in the work of this Committee are directed to the Commission's website, *https://www.usccr.gov,* or may contact the Regional Programs Unit at the above email or street address.

Agenda

I. Welcome and Roll Call
II. Approval of minutes from June 21, 2019 meeting
III. Discussion of Briefing on Subminimum Wages for Disabled Persons
IV. Next Steps
V. Public Comment
VI. Adjournment

Exceptional Circumstance: Pursuant to 41 CFR 102–3.150, the notice for this meeting is given less than 15 calendar days prior to the meeting because of the exceptional circumstances of recovery from the government shutdown.

Dated: August 12, 2019.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

Foreign-Trade Zones Board

[S–24–2019]

Approval of Subzone Status; Adams Warehousing, LLC; Sidney, Nebraska

On February 21, 2019, the Executive Secretary of the Foreign-Trade Zones (FTZ) Board docketed an application submitted by the Lincoln Foreign-Trade Zone, Inc., grantee of FTZ 59, requesting subzone status subject to the existing activation limit of FTZ 59, on behalf of Adams Warehousing, LLC, in Sidney, Nebraska.

The application was processed in accordance with the FTZ Act and Regulations, including notice in the **Federal Register** inviting public comment (84 FR 6360, February 27, 2019). The FTZ staff examiner reviewed the application and determined that it meets the criteria for approval. Pursuant to the authority delegated to the FTZ Board's Executive Secretary (15 CFR Sec. 400.36(f)), the application to establish Subzone 59D was approved on August 13, 2019, subject to the FTZ Act and the Board's regulations, including Section 400.13, and further subject to FTZ 59's 2,000-acre activation limit.

Dated: August 13, 2019.

Elizabeth Whiteman,

Acting Executive Secretary.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–51–2019]

Foreign-Trade Zone 201—Holyoke, Massachusetts Application for Subzone ProAmpac Holdings, Inc.; Westfield, Massachusetts

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by the Holyoke Economic Development and Industrial Corporation, grantee of FTZ 201, requesting subzone status for the facilities of ProAmpac Holdings, Inc. (ProAmpac), located in Westfield, Massachusetts. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the FTZ Board (15 CFR

part 400). It was formally docketed on August 13, 2019.

The proposed subzone would consist of the following sites: *Site 1* (9.452 acres) 132 N Elm Street, Westfield, Hampden County; and *Site 2* (19.439 acres) 175 Ampad Road, Westfield, Hampden County. A notification of proposed production activity has been submitted and is being processed under 15 CFR 400.37 (Doc. B–47–2019).

In accordance with the FTZ Board's regulations, Elizabeth Whiteman of the FTZ Staff is designated examiner to review the application and make recommendations to the FTZ Board.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary and sent to: *ftz@trade.gov.* The closing period for their receipt is September 25, 2019. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to October 10, 2019.

A copy of the application will be available for public inspection in the ''Reading Room'' section of the FTZ Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Elizabeth Whiteman at *Elizabeth.Whiteman@trade.gov* or (202) 482–0473.

Dated: August 13, 2019.

Elizabeth Whiteman,

Acting Executive Secretary.

National Oceanic and Atmospheric Administration

RIN 0648–XR036

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Oil and Gas Activities in Cook Inlet, Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments on modification of Letter of Authorization.

SUMMARY: Pursuant to the Marine Mammal Protection Act (MMPA), as amended, and implementing regulations, NMFS is requesting comments on its proposal to modify a Letter of Authorization issued to Hilcorp Alaska LLC (Hilcorp) to take marine mammals incidental to oil and gas activities in Cook Inlet, Alaska.

DATES: Comments and information must be received no later than September 16, 2019.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service. Physical comments should be sent to 1315 East-West Highway, Silver Spring, MD 20910 and electronic comments should be sent to *ITP.Young@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/action/incidental-take-authorization-hilcorp-alaska-llc-oil-and-gas-activities-cook-inlet-alaska* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Sara Young, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An incidental take authorization shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term ''take'' means to harass, hunt, capture, kill or attempt to harass, hunt, capture, or kill any marine mammal.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: Any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

NMFS issued regulations governing the take of eleven species of marine mammal, by Level A and Level B harassment, incidental to Hilcorp's oil and gas activities on July 31, 2019; 84 FR 37442). These regulations include mitigation, monitoring, and reporting requirements for the incidental take of marine mammals during the specified activities. As detailed in the regulations (50 CFR 217.167), adaptive management measures allow NMFS to modify or renew Letters of Authorization as necessary if doing so creates a reasonable likelihood of more effectively accomplishing the goals of mitigation and monitoring set forth in those regulations.

NMFS proposes to modify a mitigation measure pertaining to 3D seismic surveying during Year 1 of Hilcorp's activity. NMFS published a mitigation measure in error that stated before ramp up of seismic airguns during the 3D seismic survey, the entire exclusion zone (EZ) must be visually cleared by protected species observers (PSOs). This measure is correct for operations beginning in daylight hours. However, visually clearing the entirety of the EZ to ramp up airgun activity at night was not NMFS' intent. The intent was that PSOs should monitor the EZ to the greatest extent possible for 30 minutes prior to ramp-up of nighttime operations, but with the understanding that it is not possible to observe the entirety of the EZ at night and that Hilcorp would still be allowed to initiate ramp-up as long as no marine mammals were seen during this time. If any marine mammal is observed in the EZ, during daylight hours or at night, ramp up would not commence until

either the animal has voluntarily left and been visually confirmed outside the EZ or the required amount of time (15 for porpoises and pinnipeds, 30 minutes for cetaceans) have passed without re-detection of the animal. The analysis and findings contained in the final rule were made under the premise that nighttime ramp up of airguns is allowable.

Ramping up airgun activity at night is essential to Hilcorp's survey design and minimizes the amount of days that active acoustic sources are emitting sound into the marine environment. As described in Hilcorp's application, acquisition of one line of 3D seismic takes approximately five hours. At the end of a line while the vessel turns to prepare for the next line acquisition, NMFS requires that airguns are turned off, to reduce the amount of unnecessary noise emitted into the marine environment. Turning the source vessel takes approximately one and a half hours, during which no noise is emitted from airguns. By allowing ramp up of airguns at night, the total number of 3D seismic survey days is notably reduced and marine mammal habitat noise will sooner be reduced to ambient noise levels.

Specifically, while there is a somewhat higher probability that a marine mammal might go unseen within the clearance zone when the airguns are initiated at night, the likelihood of injury is still low because of the ramp-up requirement, which ensures that any initial injury zone is small and allows animals time to move away from the source, and the fact that PSOs are on duty monitoring the exclusion zone to the degree possible at that time. Further, any potential slight increase in the probability of injury (in the form of a small degree of PTS, and not considered at all likely, or authorized, for beluga whales or other mid-frequency specialists) is offset by the reduced behavioral harassment and reduced potential for more serious energetic effects expected to result from the significant reduction in the overall number of days across which the area will be ensonified by the airgun operation.

Ramp up of airguns at night is also the most practicable survey design, which allows the survey to be completed as quickly as possible before weather conditions deteriorate and daylight decreases in Cook Inlet, and at less cost.

Of important note, this change in mitigation does not change either the predicted take numbers or the negligible impact analysis, as the predicted Level A harassment (injury) numbers conservatively do not include any sort of an adjustment to account for the effectiveness of any of the measures.

Request for Public Comments

In order to maintain a transparent process for issuance of incidental take authorizations and because the public was not able to comment on this mitigation measure, NMFS is requesting comment on amending the Year 1 Letter of Authorization to allow ramp up of airguns at night without requiring full clearance of the EZ by PSOs. Full clearance of the EZ by PSOs would still be required for all operations in daylight hours. A draft of the amended LOA is available at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-hilcorp-alaska-llc-oil-and-gas-activities-cook-inlet-alaska.*

Dated: August 13, 2019.

Cathryn E. Tortorici,

Acting Director, Office of Protected Resources, National Marine Fisheries Service.

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Bremerton Ferry Terminal Dolphin Relocation Project in Washington State

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization renewal.

SUMMARY: In accordance with the regulations implementing the Marine Mammal Protection Act (MMPA), as amended, notification is hereby given that NMFS has issued an incidental harassment authorization (IHA) Renewal to the Washington State Department of Transportation (WSDOT) to incidentally harass marine mammals incidental to the dolphin (a man-made structure that protects other structures from being struck by boats) relocation project at the Bremerton Ferry Terminal in Washington State.

DATES: This IHA Renewal is valid from August 8, 2019 through August 7, 2020.

FOR FURTHER INFORMATION CONTACT: Amy Fowler, Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the original application, Renewal request, and supporting documents (including NMFS **Federal Register** notices of the original proposed and final authorizations, and the previous IHA), as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act.* In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

The Marine Mammal Protection Act (MMPA) prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed incidental take authorization is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stocks for taking for certain subsistence uses (referred to here as ''mitigation measures''). Monitoring and reporting of such takings are also required. The meaning of key terms such as ''take,'' ''harassment,'' and ''negligible impact'' can be found in section 3 of the MMPA (16 U.S.C. 1362) and the agency's regulations at 50 CFR 216.103.

NMFS' regulations implementing the MMPA at 50 CFR 216.107(e) indicate that IHAs may be renewed for additional periods of time not to exceed one year for each reauthorization. In the notice of proposed IHA for the initial authorization, NMFS described the circumstances under which we would consider issuing a Renewal for this activity, and requested public comment on a potential Renewal under those circumstances. Specifically, on a case-

by-case basis, NMFS may issue a one-year IHA Renewal when (1) another year of identical or nearly identical activities as described in the Specified Activities section is planned or (2) the activities would not be completed by the time the IHA expires and a Renewal would allow for completion of the activities beyond that described in the Dates and Duration section of the initial IHA. All of the following conditions must be met in order to issue a Renewal:

- A request for Renewal is received no later than 60 days prior to expiration of the current IHA;
- The request for Renewal must include the following:

(1) An explanation that the activities to be conducted beyond the initial dates either are identical to the previously analyzed activities or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, take estimates, or mitigation and monitoring requirements; and

(2) A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

- Upon review of the request for Renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures remain the same and appropriate, and the initial findings remain valid.

An additional public comment period of 15 days (for a total of 45 days), with direct notice by email, phone, or postal service to commenters on the initial IHA, is provided to allow for any additional comments on the proposed Renewal. A description of the Renewal process may be found on our website at: *www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-harassment-authorization-renewals.*

History of Request

On August 24, 2018, NMFS issued an IHA to WSDOT to take marine mammals incidental to Bremerton and Edmonds Ferry Terminal Dolphin Relocation Project in Washington State (83 FR 45897; September 11, 2018), effective from October 1, 2018 through September 31, 2019. On May 8, 2019, NMFS received a request for the Renewal of that initial IHA. As described in the request for Renewal, the activities for which incidental take was requested consist of activities that are covered by the initial authorization but will not be completed prior to its expiration. As required, the applicant also provided a preliminary monitoring report (available at *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act*) which confirms that the applicant has implemented the required mitigation and monitoring, and which also shows that no impacts of a scale or nature not previously analyzed or authorized have occurred as a result of the activities conducted.

Description of the Specified Activities and Anticipated Impacts

WSDOT plans to relocate one dolphin to improve safety at the Bremerton Ferry Terminal. The Olympic Class ferries have an atypical shape, which at some terminals causes the vessels to make contact with the inner dolphin prior to the stern of the vessel reaching the intermediate or outer dolphin. This tends to cause rotation of the vessel away from the wingwalls, which presents a safety issue. Relocating the dolphin will reduce the risk of landing issues for Olympic Class ferries at the Bremerton ferry terminal. Due to NMFS and the U.S. Fish and Wildlife Service (USFWS) in-water work timing restrictions to protect ESA-listed salmonids, planned WSDOT in-water construction at the Bremerton ferry terminal is limited to August 1, 2019 through February 15, 2020. All work planned by WSDOT would be conducted within this window.

The specified activities described for this Renewal are an identical subset of the activities covered by the initial IHA. NMFS previously published notices of proposed IHA (83 FR 16330; April 16, 2018) and issued IHA (83 FR 45897; September 11, 2018). These documents, as well as WSDOT's initial IHA application and the preliminary monitoring report for the previously issued IHA, are available at *https://www.fisheries.noaa.gov/action/incidental-take-authorization-washington-state-department-transportation-ferry-terminal.*

Similarly, the anticipated impacts are identical to those described in the initial IHA. Specifically, we anticipate the take of individuals of eleven marine mammal stocks (including four pinniped and seven cetacean stocks), by Level B harassment only, incidental to noise resulting from pile driving associated with the planned activities. WSDOT was not able to complete the pile driving activities analyzed in the initial IHA by the date that IHA is set to expire and anticipates the need for additional pile driving to complete the project.

The following documents are referenced in this notice and include important supporting information, and may be found at the indicated location:

Available at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-washington-state-department-transportation-ferry-terminal;*
- *Initial Final IHA:* Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Bremerton and Edmonds Ferry Terminals Dolphin Relocation Project in Washington State (83 FR 45897; September 11, 2018). Available at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-washington-state-department-transportation-ferry-terminal;* and
- *Preliminary Monitoring Report from Initial IHA. Available at: https://www.fisheries.noaa.gov/action/incidental-take-authorization-washington-state-department-transportation-ferry-terminal.*

Detailed Description of the Activity

As described above, WSDOT was not able to complete the activities analyzed in the initial IHA by the date that IHA is set to expire (September 30, 2019). As such, the activities WSDOT plans to conduct between August 1, 2019 and February 15, 2020 would be a continuation of the activities as described in the initial 2018 IHA and would be identical to the activities analyzed in the initial IHA (*e.g.,* same location, equipment, methods, seasonality). The initial IHA analyzed the potential impacts to marine mammals from the relocation of one dolphin each at the Edmonds and Bremerton ferry terminals to accommodate the Olympic Class ferries.

WSDOT completed all planned activities at the Edmonds ferry terminal in the 2018–2019 in-water work period but no work was conducted at the Bremerton ferry terminal. The numbers of each pile size that were planned to be driven during the 2018–2019 work window is shown in Table 1 of the initial proposed IHA (83 FR 16330; April 16, 2018). WETA planned to install and remove a total of 30 piles in the 2018–2019 work window (11 at the Edmonds ferry terminal and 19 at the Bremerton ferry terminal). However, as described above, WSDOT was only able to complete pile driving at the Edmonds ferry terminal. Four 36-inch steel pipe

piles were removed with a vibratory hammer and seven steel pipe piles (three 30-inch and four 36-inch) were installed with a vibratory hammer at the Edmonds ferry terminal. Construction occurred on six days between January 29 and February 7, 2019. WSDOT therefore plans to complete pile driving activities at the Bremerton ferry terminal in the 2019–2020 work window.

The planned activities at the Bremerton ferry terminal include vibratory installation and removal of steel pipe piles. A total of 19 steel pipe piles will be installed and removed at the Bremerton ferry terminal. One temporary 36-inch indicator pile will be installed with a vibratory hammer. The temporary indicator pile will be used as a visual landing aid for vessel captains during construction. Once the indicator pile is in place, the 6 36-inch piles that comprise the left outer dolphin will be removed with a vibratory hammer and/or by direct pull and clamshell removal. Using a vibratory hammer, three 30-inch reaction piles will be installed as a back group of piles to provide stability to the dolphin. A concrete diaphragm atop the back piles will be installed, followed by four additional 30-inch reaction piles installed with a vibratory hammer. Three 36-inch steel pipe fender piles will be installed with a vibratory hammer. Fenders and rub panels will be installed to absorb energy from the vessel as it makes contact with the dolphin. Finally, using a vibratory hammer, the 36-inch temporary indicator pile will be removed and reinstalled as the last fender pile. Vibratory removal of both 30- and 36-inch piles is expected to take up to 15 minutes per pile. Vibratory installation of 30- and 36-inch piles is expected to take up to 20 minutes per pile. Underwater sound resulting from pile driving could result in the harassment of marine mammals. This Renewal is effective from August 1, 2019 through July 31, 2020.

Description of Marine Mammals

A description of the marine mammals in the area of the activities for which take is authorized, including information on abundance, status, distribution, and hearing, may be found in the Notice of the proposed IHA for the initial authorization (83 FR 16330; April 16, 2018). The marine mammal species for which take was authorized in the initial IHA, and for which take is authorized in this Renewal are: Pacific harbor seal (*Phoca vitulina richardii*), Northern elephant seal (*Mirounga angustirostris*), California sea lion (*Zalophus californianus*), eastern Distinct Population Segment (eDPS) Steller sea lion (*Eumetopias jubatus*), transient killer whales (*Orcinus orca*), gray whale (*Eschrichtius robustus*), humpback whale (*Megaptera novaeangliae*), minke whale (*Balaenoptera acutorostrata*), harbor porpoise (*Phocoena phocoena*), Dall's porpoise (*Phocoenoides dalli*), and common dolphin (*Delphinus delphis*).

NMFS has reviewed the monitoring data from the initial IHA, recent draft Stock Assessment Reports, information on relevant Unusual Mortality Events, and other scientific literature. The 2018 Stock Assessment Report notes that the estimated abundance of California sea lions has decreased slightly and the estimated abundances of Eastern North Pacific gray whales and California/Oregon/Washington humpback whales increased slightly. Additionally, since January 1, 2019, elevated gray whale strandings have occurred along the west coast of North America from Mexico through Alaska. NMFS declared an Unusual Mortality Event on May 31, 2019. As of July 19, 2019, a total of 103 gray whales have stranded along the U.S. coast, with a combined additional 86 whales stranded in Mexico and Canada. Full or partial necropsy examinations have been conducted on a subset of the stranded gray whales. Preliminary findings in several of the whales have shown evidence of emaciation. However, neither this nor any other new information affects which species or stocks have the potential to be affected or the pertinent information in the *Description of the Marine Mammals in the Area of Specified Activities* contained in the supporting documents for the initial IHA.

Potential Effects on Marine Mammals and Their Habitat

A description of the potential effects of the specified activity on marine mammals and their habitat for the activities for which take is authorized here may be found in the Notice of the proposed IHA for the initial authorization. NMFS has reviewed the monitoring data from the initial IHA, recent draft Stock Assessment Reports, information on relevant Unusual Mortality Events, other scientific literature, and the public comments, and determined that neither this nor any other new information affects our initial analysis of impacts on marine mammals and their habitat.

Estimated Take

A detailed description of the methods and inputs used to estimate take for the specified activity are found in the Notice of proposed IHA (83 FR 16330; April 16, 2018) and issued IHA (83 FR 45897; September 11, 2018) for the initial authorization. The pile driving equipment that may result in take, as well as the source levels, marine mammal stocks taken, and the methods of take estimation remain unchanged from the previously issued IHA. Changes in the density of seven stocks are indicated below, though they result in only minor changes in the take estimates that do not affect our findings, as described.

Authorized takes would be by Level B harassment only, in the form of disruption of behavioral patterns for individual marine mammals resulting from exposure to acoustic sources (*i.e.,* vibratory pile driving). Based on the nature of the activity and the anticipated effectiveness of the mitigation measures (*i.e.,* shutdowns) discussed in detail below in the Mitigation section, Level A harassment is neither anticipated nor authorized.

As described above, WSDOT completed all pile driving activities at the Edmonds ferry terminal in the 2018–2019 in-water work period and plans to install and remove a total of 19 piles at the Bremerton ferry terminal in the 2019–2020 work period to complete the project. All piles to be installed and removed at the Bremerton ferry terminal would be 30- and 36-inch steel pipe piles. The number of piles for each respective size and element are shown in Table 1.

TABLE 1—NUMBER AND SIZES OF PILES PLANNED FOR INSTALLATION AND REMOVAL, AND ESTIMATED DURATION OF PILE DRIVING

Pile element	Method	Size (inch)	Number of piles	Duration/ pile (min)	Number of piles per day	Duration (days)
Indicator pile	Vibratory install	36	1	20	1	1
Indicator pile	Vibratory removal	36	1	15	1	1

TABLE 1—NUMBER AND SIZES OF PILES PLANNED FOR INSTALLATION AND REMOVAL, AND ESTIMATED DURATION OF PILE DRIVING—Continued

Pile element	Method	Size (inch)	Number of piles	Duration/ pile (min)	Number of piles per day	Duration (days)
Existing dolphin	Vibratory removal	36	6	15	3	2
Relocate dolphin install	Vibratory install	36	4	20	3	2
Relocated dolphin install	Vibratory install	30	7	20	3	3
Total			19	345		9

Distances to the isopleths corresponding to the Level B harassment threshold for each pile size are shown in Table 2. Distances to the isopleths corresponding to the Level A harassment thresholds for the various marine mammal functional hearing groups, by pile size and duration of pile driving, are shown in Table 3. Descriptions of the modeling methods used to determine the distances shown in Tables 2 and 3 are described in detail in the Notice of proposed IHA (83 FR 16330; April 16, 2018) for the initial IHA. These methods have not changed from the initial IHA, and all values shown in Tables 2 and 3 have not changed from the initial IHA.

TABLE 2—DISTANCES TO ISOPLETHS CORRESPONDING TO THE LEVEL B HARASSMENT THRESHOLD

Pile driving activity	Distance to Level B harassment threshold (m)
36-inch steel pile (installation and removal)	63,100
30-inch steel pile (installation)	39,800

TABLE 3—DISTANCES TO ISOPLETHS CORRESPONDING TO LEVEL A HARASSMENT THRESHOLDS

Pile driving activity	Distance to Level A harassment threshold (m)				
	LF cetacean	MF cetacean	HF cetacean	Phocid	Otariid
36-inch indicator pile install (1 pile/day)	10	10	25	10	10
36-inch indicator pile removal (1 pile/day)	10	10	10	10	10
36-inch steel pile (existing dolphin) removal (3 piles/day)	25	10	35	10	10
36-inch steel pile (relocated dolphin) install (3 piles/day)	25	10	35	10	10
30-inch steel pile (relocated dolphin) install (3 piles/day)	25	10	25	10	10

As the number of pile driving days that would occur in this year of activity is less than the number of pile driving days analyzed in the initial IHA, the number of takes estimated to occur in the 2019–2020 work season, and authorized in this Renewal, has changed from the number of takes authorized in the initial IHA. Take numbers authorized in the initial IHA are shown in Table 7 in the Notice of issued IHA (83 FR 45897; September 11, 2018), available at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-washington-state-department-transportation-ferry-terminal.*

The number of takes authorized in this Renewal, for each marine mammal stock, are shown in Table 4. Auditory injury (*i.e.,* Level A harassment) is unlikely to occur for any species or stock, given the small injury zones. Since the largest Level A distance is only 35 m from the source for high frequency cetaceans (harbor porpoise and Dall's porpoise, Table 3), NMFS expects that WSDOT can effectively monitor such small zones to implement shutdown measures and avoid Level A takes. Therefore, no Level A take of marine mammal is anticipated or authorized for the pile driving activities at the Bremerton ferry terminal.

To inform take estimates in the initial IHA, marine mammal densities were taken from the U.S. Navy's Marine Species Density Database (MSDD; U.S. Navy 2015). Since then, the Navy has published an updated MSDD for the Phase III Northwest Training and Testing Study Area with updated densities for marine mammal species in the inland waters of Puget Sound (U.S. Navy 2019). In the 2019 MSDD, densities of harbor seals, northern elephant seals, gray whales, and humpback whales increased from those presented in the 2015 MSDD, while densities of harbor porpoises, Dall's porpoises, and transient killer whales decreased. The densities of Steller sea lion and minke whale remained the same in both iterations of the MSDD. While updated densities for marine mammals were used here, the method of calculating estimated takes remains identical to that used in the initial IHA. For all marine mammals except California sea lions, takes were calculated by multiplying the ensonified area by the average animal density in the area (U.S. Navy 2019) and the number of days of pile driving (9 days), rounded up to the nearest integer. Take of California sea lions was calculated by multiplying the average number of California sea lions sighted in daily monitoring at the U.S. Navy's Bremerton Shipyard (69 animals) by the number of days of pile driving (9 days).

Using the take calculation method described above (area × density × days) resulted in estimated zero takes of some species, despite possible presence in the project area. In these cases, take was estimated by incorporating typical group size and/or potential for occurrence during the project work period. Specifically, take of northern elephant seals was calculated by assuming one seal may be present each day for a total of nine takes by Level B harassment. Take of transient killer

whales was calculated by assuming one group of six killer whales (mean group size (Shields *et al.,* 2018)) may enter the Level B harassment zone twice over the course of the project for a total of 12 takes by Level B harassment. Takes of gray whales, humpback whales, and minke whales was estimated by assuming one of each species may be present every other day during the nine days of pile driving, for a total of five takes by Level B harassment for each species. Dall's porpoises are considered rare in Puget Sound waters (U.S. Navy 2019) but a large group of 15 Dall's porpoises may enter the Level B harassment zone once during pile driving activities. Finally, take of common dolphins was calculated by assuming one group of seven dolphins (mean group size (CRC 2017)) may enter the Level B harassment zone once over the course of the project. No takes of Southern Resident killer whales were calculated, and due to required mitigation measures (described in detail below), no takes are anticipated or authorized for this Renewal.

Here, we describe in summary how the changes in density estimates affect the take estimates in this Renewal in relation to the take estimates in the initial IHA. For some species, the updated density estimates had no effect on estimated take. Even with increased densities, calculated takes of northern elephant seals, Southern Resident killer whales, transient killer whales, gray whales, humpback whales, minke whales, and common dolphins were zero animals taken. For these species, the authorized take was estimated as described above, and the updated densities had no effect on the number of takes. The estimated takes of two species were affected by the changes in density estimates, harbor seals and harbor porpoises.

The estimated density of harbor porpoises decreased from the 2015 MSDD (used to calculate takes in the initial IHA) to the 2019 MSDD. As a result, the calculated take estimate decreased, from 69 takes by Level B harassment at the Bremerton ferry terminal in the initial IHA to 64 takes by Level B harassment authorized for take by Level B harassment here. This represents a seven percent decrease. The number of harbor porpoises estimated to be taken by Level B harassment here are fewer than that authorized in the initial IHA, and this change has no effect on our findings.

The initial IHA authorized a total of 2,286 Level B takes of harbor seals, with an estimated 145 harbor seals taken at the Bremerton ferry terminal and 2,141 harbor seals taken at the Edmonds ferry terminal. Using the updated 2019 MSDD, the calculated takes of harbor seals at the Bremerton terminal increased to 465. While this increase is notable, the total estimated take is well below that authorized for both the Bremerton and Edmonds ferry terminals in the initial IHA. Additionally, the monitoring report from pile driving completed at the Edmonds terminal reports only 37 harbor seals taken by Level B harassment, indicating that the actual number of animals that occur and were taken in the initial authorization are/were far below the number of takes authorized.

TABLE 4—TOTAL TAKES AUTHORIZED

Species	Level B	Level A	Total
Harbor seal	465	0	[a] 465
Northern elephant seal	9	0	9
California sea lion	621	0	621
Steller sea lion	6	0	6
Southern Resident killer whale	0	0	0
Transient killer whale	12	0	12
Gray whale	5	0	5
Humpback whale	5	0	5
Minke whale	5	0	5
Harbor porpoise	64	0	[b] 64
Dall's porpoise	15	0	15
Common dolphin	7	0	7

[a] Take estimate increased from initial IHA due to increased density.
[b] Take estimate decreased from initial IHA due to decreased density.

Description of Mitigation, Monitoring and Reporting Measures

The mitigation, monitoring, and reporting measures included as requirements in this authorization are identical to those included in the Notice announcing the issuance of the initial IHA (83 FR 45897; September 11, 2018), and the discussion of the least practicable adverse impact included in that document remains accurate. The following measures are required in this Renewal:

Pre-activity monitoring will take place from 30 minutes prior to initiation of pile driving activity and post-activity monitoring will continue through 30 minutes post-completion of pile driving activity. Pile driving may commence at the end of the 30-minute pre-activity monitoring period, provided observers have determined that the shutdown zone (described below) is clear of marine mammals, which includes delaying start of pile driving activities if a marine mammal is sighted in the zone, as described below. A determination that the shutdown zone is clear must be made during a period of good visibility (*i.e.,* the entire shutdown zone and surrounding waters must be visible to the naked eye).

If a marine mammal approaches or enters the shutdown zone during activities or pre-activity monitoring, all pile driving activities at that location shall be halted or delayed, respectively. If pile driving is halted or delayed due to the presence of a marine mammal, the activity may not resume or commence until either the animal has voluntarily left and been visually confirmed beyond the shutdown zone and 15 or 30 minutes (for pinnipeds/small cetaceans or large cetaceans, respectively) have passed without re-detection of the animal. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than thirty minutes.

To prevent Level A harassment of marine mammals, WSDOT must establish shutdown zones equivalent to the Level A harassment zones. If the Level A harassment zone is less than 10 m, a minimum 10 m shutdown zone must be enforced. The required shutdown zones are presented in Table 5.

TABLE 5—SHUTDOWN DISTANCES FOR PILE DRIVING ACTIVITIES

Pile type, size & pile driving method	Shutdown distance (m)				
	LF cetacean	MF cetacean	HF cetacean	Phocid	Otariid
36-inch indicator pile installation	10	10	25	10	10
36-inch indicator pile removal	10	10	10	10	10
36-inch steel dolphin pile removal	25	10	35	10	10
36-inch steel dolphin pile installation	25	10	35	10	10
30-inch steel dolphin pile installation	25	10	25	10	10

In addition to the Level A shutdown measures described above, WSDOT must implement shutdown measures if Southern Resident killer whales are sighted within the vicinity of the project and are approaching the Level B harassment zone during pile driving activities. If a killer whale approaches the Level B harassment zone and it is unknown if the animal is a Southern Resident or a transient killer whale, it must be assumed to be a Southern Resident killer whale and WSDOT must implement the shutdown measures described above. If a Southern Resident killer whale enters the Level B harassment zone undetected, pile driving must cease upon observation of the animal and must be suspended until the animal exits the Level B harassment zone.

If a species for which authorization has not been granted, or a species for which authorization has been granted but the authorized takes are met, is observed approaching or within the Level B harassment zones, pile driving and removal activities must cease immediately using delay and shutdown procedures. Similarly, if an animal is observed approaching or within the Level A harassment zones, pile driving and removal activities must cease immediately. Activities must not resume until the animal has been confirmed to have left the area or 15 or 30 minutes (pinniped/small cetacean or large cetacean, respectively) has elapsed.

For all pile driving activities, a minimum of three Protected Species Observers (PSOs) will be required, two land-based and one vessel-based. One PSO must be stationed at the active pile driving rig or at the best vantage point practicable to monitor the shutdown zones for marine mammals and implement shutdown or delay procedures when applicable through communication with the equipment operator.

Monitoring of pile driving must be conducted by qualified PSOs (see below) who have no other assigned tasks during monitoring periods. WSDOT will adhere to the following conditions when selecting observers:

- Independent PSOs must be used (*i.e.,* not construction personnel);
- A lead observer or monitoring coordinator must be designated. The lead observer must have prior experience working as a marine mammal observer during construction;
- Other PSOs may substitute education (degree in biological science or related field) or training for experience; and
- WSDOT must submit PSO CVs for approval by NMFS.

WSDOT must ensure that observers have the following additional qualifications:

- Ability to conduct field observations and collect data according to assigned protocols;
- Experience or training in the field identification of marine mammals, including the identification of behaviors;
- Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
- Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and
- Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

PSOs must collect the following information during marine mammal monitoring:

- Dates and times (begin and end) of all marine mammal monitoring;
- Construction activities occurring during each daily observation period, including how many and what type of piles were driven or removed;
- Weather parameters and water conditions during each monitoring period (*e.g.,* wind speed, percent cover, visibility, sea state);
- The number of marine mammals observed, by species, relative to the pile location and if pile driving or removal was occurring at time of sighting;
- Age and sex class, if possible, of all marine mammals observed;
- PSO locations during marine mammal monitoring;
- Distances and bearings of each marine mammal observed to the pile being driven or removed for each sighting (if pile driving or removal was occurring at time of sighting);
- Description of any marine mammal behavior patterns during observation, including direction of travel;
- Number of individuals of each species (differentiated by month as appropriate) detected within the monitoring zone, and estimates of number of marine mammals taken, by species (a correction factor may be applied to total take numbers, as appropriate);
- Detailed information about any implementation of any mitigation triggered (*e.g.,* shutdowns and delays), a description of specific actions that ensued, and resulting behavior of the animal, if any; and
- Description of attempts to distinguish between the number of individual animals taken and the number of incidences of take, such as ability to track groups or individuals.

WSDOT must submit a draft monitoring report within 90 days after completion of the construction work or the expiration of the IHA, whichever comes earlier. This report must include the information described above. A final report must be prepared and submitted

to NMFS within 30 days following resolution of comments from NMFS on the draft report. If NMFS has no comments on the draft report, the draft will be considered the final report.

In addition, NMFS would require WSDOT to notify NMFS' Office of Protected Resources and NMFS' West Coast Region Stranding Coordinator within 48 hours of sighting an injured or dead marine mammal in the construction site. WSDOT must provide NMFS and the Stranding Network with the species or description of the animal(s), the condition of the animal(s) (including carcass condition, if the animal is dead), location, time of first discovery, observed behaviors (if alive), and photo or video (if available). In the event that WSDOT finds an injured or dead marine mammal that is not in the construction area, WSDOT must report the same information as listed above to NMFS as soon as operationally feasible.

Public Comments

A notice of NMFS' proposal to issue a Renewal to WSDOT was published in the **Federal Register** on July 10, 2019 (84 FR 32881). That notice either described, or referenced descriptions of, WSDOT's activity, the marine mammal species that may be affected by the activity, the anticipated effects on marine mammals and their habitat, the amount and manner of take, and required mitigation, monitoring and reporting measures. NMFS received a comment letter from the Marine Mammal Commission (Commission). The comments and our responses are summarized below.

Comment 1: The Commission noted that recent monitoring reports submitted by WSDOT did not incorporate an estimation of the total number of animals taken, including those in areas that were unable to be observed by PSOs. The Commission suggested that WSDOT estimate total takes by extrapolating the number of animals seen in the observable area to the total area ensonified to the relevant threshold.

Response: NMFS has included a requirement in the final authorization for WSDOT to estimate the total number of takes that occurred and suggested WSDOT use the area extrapolation method described by the Commission.

Comment 2: The Commission questioned whether the public notice provisions for IHA renewals fully satisfy the public notice and comment provision in the MMPA and discussed the potential burden on reviewers of reviewing key documents and developing comments quickly. Additionally, the Commission recommended that NMFS use the IHA Renewal process sparingly and selectively for activities expected to have the lowest levels of impacts to marine mammals and that require less complex analysis.

Response: NMFS has responded to this comment in full in our **Federal Register** notice announcing the issuance of an IHA to Avangrid Renewables, and we refer the reader to that response (84 FR 31035; June 28, 2019).

National Environmental Policy Act

Issuance of an MMPA 101(a)(5)(D) authorization requires compliance with the National Environmental Policy Act (NEPA). NMFS determined the issuance of this Renewal is consistent with categories of activities identified in CE B4 (issuance of incidental harassment authorizations under section 101(a)(5)(A) and (D) of the MMPA for which no serious injury or mortality is anticipated) of NOAA's Companion Manual for NAO 216–6A, and we have not identified any extraordinary circumstances listed in Chapter 4 of the Companion Manual for NAO 216–6A that would preclude this categorical exclusion under NEPA.

Determinations

WSDOT's planned activity is identical to the activity analyzed in our previously issued Notices of proposed IHA and issued IHA (with the exception of the number of piles planned for installation and removal, which is less than the number analyzed in those documents). We concluded that the initial IHA would have a negligible impact on all marine mammal stocks and species and that the taking would be small relative to population sizes. The marine mammal information, potential effects, and the mitigation and monitoring measures remain the same as those analyzed in the previously issued Notices of proposed IHA and issued IHA, therefore the extensive analysis, as well as the associated findings, included in the prior documents remain applicable.

The only differences between the initial IHA and this Renewal is that the number of piles planned for installation and removal, and the numbers of marine mammal takes expected to occur incidental to the planned activities (including consideration of changes in marine mammal density for several stocks), are lower than the numbers analyzed and authorized in the previously issued IHA. As both the number of piles and the number of takes expected to occur for this Renewal, are lower than in the initial IHA, we have concluded that the effects of this Renewal would be the same or less than those that were analyzed in the Notices of the initial proposed IHA and issued IHA.

NMFS has concluded that there is no new information suggesting that our analysis or findings should change from those reached for the initial IHA. This includes consideration of the estimated abundance of California sea lions decreasing and the estimated abundances of gray whales and humpback whales increasing, as well as the ongoing gray whale Unusual Mortality Event, none of which change our assessment of the effects of the takes from this activity. Based on the information and analysis contained here and in the referenced documents, NMFS has determined the following: (1) The required mitigation measures will effect the least practicable impact on marine mammal species or stocks and their habitat; (2) the authorized takes will have a negligible impact on the affected marine mammal species or stocks; (3) the authorized takes represent small numbers of marine mammals relative to the affected stock abundances; (4) WSDOT's activities will not have an unmitigable adverse impact on taking for subsistence purposes as no relevant subsistence uses of marine mammals are implicated by this action, and; (5) appropriate monitoring and reporting requirements are included.

Endangered Species Act

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA: 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally, in this case with the West Coast Region Protected Resources Division, whenever we propose to authorize take for endangered or threatened species. The effects of this federal action were adequately analyzed in NMFS' Biological Opinion for the Bremerton and Edmonds Ferry Terminals Dolphin Replacement Project, dated March 22, 2018, which concluded that the take NMFS has authorized through this IHA would not jeopardize the continued existence of any endangered or threatened species or destroy or adversely modify any designated critical habitat.

Renewal

NMFS has issued an IHA Renewal to WSDOT for the take of marine mammals incidental to pile driving associated with the Dolphin Relocation Project at the Bremerton ferry terminal.

Dated: August 13, 2019.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XV027

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Groundfish Management Team (GMT) will hold a week-long work session that is open to the public.

DATES: The GMT meeting will be held Monday, October 7, 2019, from 1 p.m. (Pacific Daylight Time) until business for the day is completed. The GMT meeting will reconvene Tuesday, October 8 through Friday, October 11, 2017, from 8:30 a.m. until business for each day has been completed.

ADDRESSES: The meeting will be held at the Pacific Council Office, Large Conference Room, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: Mr. Todd Phillips, Pacific Council, phone: (503) 820–2426.

SUPPLEMENTARY INFORMATION: The primary purpose of the GMT meeting is to develop recommendations for consideration by the Pacific Council at its November 13–20, 2019 meeting in Costa Mesa, CA. Specific agenda topics include the development of the 2021–22 harvest specifications and management measures, including rebuilding analyses. The GMT may also address other groundfish and administrative agenda items scheduled for the November Pacific Council meeting. A detailed agenda will be available on the Pacific Council's website prior to the meeting. No management actions will be decided by the GMT.

Although nonemergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The public listening station is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820–2411 at least 10 business days prior to the meeting date.

Dated: August 13, 2019.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting (webinar).

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) will convene a webinar meeting of its Groundfish Management Team (GMT) to discuss harvest specifications and other items related the team's in-person meeting scheduled for October 7–11, 2019.

DATES: A webinar meeting will be held Thursday, September 26, 2019, from 10 a.m. until 4 p.m., Pacific Daylight Time. The scheduled ending time for the GMT webinar is an estimate, the meeting will adjourn when business for the day is completed.

ADDRESSES: This meeting will be held via webinar. A public listening station is available at the Pacific Council office (address below). To attend the webinar: (1) Join the GoToWebinar by visiting this link *https://www.gotomeeting.com/webinar* (Click ''Join a Webinar'' in top right corner of page), (2) Enter the Webinar ID: 811–527–651 and (3) enter your name and email address (required). After logging into the webinar, you must use your telephone for the audio portion of the meeting. Dial this TOLL number 1–415–655–0052, enter the Attendee phone audio access code 820–357–513 and enter your audio phone pin (shown after joining the webinar). System Requirements: For PC-based attendees: Required: Windows® 10, 8, 7, Vista, or XP; for Mac®-based attendees: Required: Mac OS® X 10.5 or newer; for Mobile attendees: Required: iPhone®, iPad®, Android™ phone or Android tablet (see *https://www.gotomeeting.com/webinar/ipad-iphone-android-webinar-apps*). You may send an email to Mr. Kris Kleinschmidt at *kris.kleinschmidt@noaa.gov* or contact him at (503) 820–2411 for technical assistance.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220.

FOR FURTHER INFORMATION CONTACT: Mr. Todd Phillips, Pacific Council; phone: (503) 820–2426.

SUPPLEMENTARY INFORMATION: The primary purpose of the GMT webinar is to discuss the development of the 2021–22 harvest specifications and management measures including rebuilding analyses. The GMT may also address other groundfish and administrative agenda items scheduled for its in-person October meeting. A detailed agenda will be available on the Pacific Council's website prior to the meeting. No management actions will be decided by the GMT.

Although nonemergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The public listening station is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820–2411 at least 10 business days prior to the meeting date.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XS004

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of receipt of an application for an amended exempted fishing permit; request for comments.

SUMMARY: NMFS announces the receipt of an application from the Florida Fish and Wildlife Conservation Commission (FWC) to expand the scope of an exempted fishing permit (EFP) issued in November 2018. The amended EFP would increase the sampling area from specified waters of the South Atlantic to all Federal waters of the South Atlantic off Monroe County, Florida and Federal waters of the Gulf of Mexico (Gulf) near Pulley Ridge. The amended EFP would also increase the amount of traps in the water at any one time, extend the trap soak period, would no longer require research traps to have a current stamp, endorsement, or certificate, and would no longer allow commercial fishermen to harvest and sell any species but lionfish from the research traps. The project seeks to determine the effectiveness of traps, as applicable, for attracting and collecting invasive lionfish while avoiding impacts to non-target species, protected species, and habitats.

DATES: Written comments must be received on or before August 31, 2019.

ADDRESSES: You may submit comments on the application, identified by ''NOAA–NMFS–2019–0084'' by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2019-0084,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Kelli O'Donnell, Southeast Regional Office, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701.
- *Instructions:* Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Electronic copies of the application and programmatic environmental assessment (PEA) may be obtained from the Southeast Regional Office website at *https://www.fisheries.noaa.gov/southeast/commercial-fishing/lionfish-traps-exempted-fishing-permit-applications.*

FOR FURTHER INFORMATION CONTACT: Kelli O'Donnell, 727–824–5305; email: *Kelli.ODonnell@noaa.gov.*

SUPPLEMENTARY INFORMATION: The amended EFP is requested under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C 1801 *et seq.*), and regulations at 50 CFR 600.745(b) concerning exempted fishing.

Lionfish is an invasive marine species that occurs in both the Gulf and South Atlantic and is not currently managed by NMFS in Federal waters. The amended EFP application submitted by FWC requests the use of prohibited gear in Federal waters. Federal regulations prohibit the use or possession of a fish trap in Federal waters in the Gulf and South Atlantic (50 CFR 622.9(c)). In South Atlantic Federal waters, the term ''fish trap'' refers to a trap capable of taking fish, except for a seabass pot, a golden crab trap, or a crustacean trap (that is, a type of trap historically used in the directed fishery for blue crab, stone crab, red crab, jonah crab, or spiny lobster and that contains at any time not more than 25 percent, by number, of fish other than blue crab, stone crab, red crab, jonah crab, and spiny lobster). In Gulf Federal waters, the term ''fish trap'' refers to a trap capable of taking fish, except for a trap historically used in the directed fishery for crustaceans (that is, blue crab, stone crab, and spiny lobster) (50 CFR 622.2). The amended EFP would exempt these activities from the regulation prohibiting the use or possession of a fish trap in Federal waters of the South Atlantic or the Gulf at 50 CFR 622.9(c), and would allow the applicant to use modified spiny lobster traps to target lionfish. Because FWC requested that the amended EFP remove the requirement that research traps have a current endorsement, stamp, or certification and allow sampling during the spiny lobster closed season, the EFP would exempt research traps from the gear identification requirements at 50 CFR 622.402(a) and exempt the activities from the seasonal closures at 50 CFR 622.403. The amended EFP would also exempt the project activities from the closed seasons, size limits, and bag limits at 50 CFR 622.34, 622.37, and 622.38 to allow FWC to retain other fish for species identification verification and scientific research.

The applicant's original EFP tests the effectiveness of different trap modifications in capturing lionfish while avoiding impacts to non-target species, protected species, and habitats. NMFS analyzed the effects of testing traps that target lionfish on the environment, including effects on Endangered Species Act (ESA)-listed species and designated critical habitat, and other non-target species and habitat, in the Gulf and South Atlantic regions through a PEA titled ''Testing Traps to Target Lionfish in the Gulf of Mexico and South Atlantic, including within the Florida Keys National Marine Sanctuary.'' This PEA was used to support the original EFP for this research in certain South Atlantic Federal waters off Monroe County, Florida. The application notice for the original EFP request published in the **Federal Register** on July 2, 2018 (83 FR 30916) and the EFP was subsequently issued by NMFS on November 13, 2018. Before issuing the amended EFP, NMFS will analyze whether the proposed effort fits within the scope of the PEA and the ESA analysis on the expected effort under the PEA. If the proposed activities fit within the PEA and the ESA consultation, NMFS will document that determination for the record. Otherwise, NMFS will complete the required analyses.

The specific amended EFP request noticed here is further described and summarized below.

FWC is requesting authorization to test standard and modified wire spiny lobster traps in the South Atlantic and the Gulf to harvest lionfish aboard federally permitted commercial spiny lobster fishing vessels. Like the original EFP, the proposed activities would examine the effectiveness and performance of modified trap designs for capturing lionfish, with the goal of identifying the best lobster trap modification to maximize lionfish catch and reduce bycatch of other species. Traps would be fished in a trawl

configuration with a maximum of 32 traps and 2 surface buoys per trawl. Spiny lobster trap modifications to be tested by the applicant would include funnel and escape gap dimensions and locations, in addition to bait types. Some traps may be outfitted with lionfish optical recognition technology. Modified traps would be compared to standard wire spiny lobster trap controls. As described in the application, the sampling area would increase from Alligator and Looe Key in the Florida Keys of the South Atlantic to all Federal waters of the South Atlantic off Monroe County, Florida and portions of the Gulf. In the Gulf, sampling with traps would occur in depths from 150–300 feet (46–91 meters) southwest of a line defined by 25°21′ N lat., 84°00′ W long. at the northwest corner and by 24°28′ N lat., 83°00′ W long., at the southeast corner. The amended EFP would increase sampling from two times per month in the South Atlantic to two to four times per month in the South Atlantic and Gulf. Only areas open to commercial lobster fishing will be included in the study area and fishing would occur throughout the calendar year, including during the spiny lobster closed season. The amended EFP would increase the number of traps allowed in the water at any one time from 100 to 300 (200 and 100 in the South Atlantic and Gulf regions, respectively). The amended EFP would increase the maximum trap soak period from 21 to 28 days per deployment. The amended EFP would also increase the maximum number of sampling trips from 40 to 160 trips per year. Bait to be used in the traps could include live lionfish, plastic decoy lionfish, artificial lures, fish oil, and fish heads. As practicable, video and still photos of trap deployment and animal behavior in and near traps would be recorded using cameras.

FWC would contract commercial trap fishermen with experience fishing within the study area. The amended EFP would no longer require research traps to have a current stamp, endorsement, or certificate, but FWC would mark each research trap. Additionally, the contractors must have demonstrable experience in the catch and handling of lionfish. The applicant expects the activities to be conducted from up to eight federally permitted commercial fishing vessels. At least one FWC scientist would be on board a vessel at all times, *i.e.,* on both deployment trips and retrieval trips. Data to be collected per trip would include: gear configuration and fishing effort data (*e.g.,* date and time of deployment and retrieval, latitude, longitude, and water depth of each deployed trawl, bait type used); soak time for each trawl; trap loss and movement from original set position; protected species interactions; bycatch species (amount, length, and disposition); and lionfish catch data for each trap type. Some species would be returned to the water as soon as possible; other species would be retained for species identification verification and scientific research. All lionfish would be retained and either used for research, sold, or destroyed. NMFS notes that the original EFP allowed contracted fishermen to sell any legally harvested species. FWC has now requested that NMFS remove this provision from the EFP and allow fishermen to retain and sell only lionfish. FWC would be allowed to retain representative sub-samples of any fish species for species identification verification and research in the laboratory.

The applicant has requested to amend its current EFP as described, but to retain the original EFP's effective period of 3 years from the date of original issuance of the permit by NMFS on November 13, 2018.

NMFS finds the application warrants further consideration based on a preliminary review. Possible conditions the agency may impose on the permit, if granted, include but are not limited to, a prohibition on conducting activities within marine protected areas, marine sanctuaries, special management zones, or areas where they might interfere with managed fisheries without additional authorization. Additionally, NMFS may require special protections for ESA-listed species and designated critical habitat, and may require particular gear markings. A final decision on issuance of the amended EFP will depend on NMFS' review of public comments received on the application, consultations with the appropriate fishery management agencies of the affected states, Councils, and the U.S. Coast Guard, and a determination that the activities to be taken under the EFP are consistent with all applicable laws and regulations.

Authority: 16 U.S.C 1801 *et seq.*

Dated: August 5, 2019.

Jennifer M. Wallace,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Mid-Atlantic Fishery Management Council (MAFMC); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The Mid-Atlantic Fishery Management Council's (Council) Scientific and Statistical Committee (SSC) will hold a meeting.

DATES: The meeting will be held on Monday, September 9, 2019, starting at 1 p.m. and continue through 12 noon on Wednesday, September 11, 2019. See **SUPPLEMENTARY INFORMATION** for agenda details.

ADDRESSES: The meeting will take place at the Royal Sonesta Harbor Place, 550 Light Street, Baltimore, MD 21202; telephone: (410) 234–0550.

Council address: Mid-Atlantic Fishery Management Council, 800 N State Street, Suite 201, Dover, DE 19901; telephone: (302) 674–2331; website: *www.mafmc.org.*

FOR FURTHER INFORMATION CONTACT: Christopher M. Moore, Ph.D., Executive Director, Mid-Atlantic Fishery Management Council, telephone: (302) 526–5255.

SUPPLEMENTARY INFORMATION: The purpose of this meeting is to make multi-year acceptable biological catch (ABC) recommendations for scup, black sea bass and bluefish based on the results of the recently completed operational stock assessment updates. The SSC will recommend 2020–21 ABC specifications for all three species. The SSC will also review the most recent survey and fishery data and the previously recommended 2020 ABC for summer flounder and spiny dogfish. The SSC will review and provide feedback on the development of the Council's 2020–24 Research Plan and will review and discuss future SSC membership. In addition, the SSC may take up any other business as necessary.

A detailed agenda and background documents will be made available on the Council's website (*www.mafmc.org*) prior to the meeting.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aid should be directed to M.

Jan Saunders, (302) 526–5251, at least 5 days prior to the meeting date.

Dated: August 13, 2019.

Tracey L. Thompson,

BILLING CODE 3510–22–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Additions to and deletions from the Procurement List.

SUMMARY: This action adds a product and service to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes a product and services from the Procurement List previously furnished by such agencies.

DATES: *Date added to and deleted from the Procurement List:* September 15, 2019

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 603–2117, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Additions

On 11/9/2018 and 6/28/2019, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed additions to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the product and service and impact of the additions on the current or most recent contractors, the Committee has determined that the product and service listed below are suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the products and service to the Government.

2. The action will result in authorizing small entities to furnish the product and service to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the product and service proposed for addition to the Procurement List.

End of Certification

Accordingly, the following product and service are added to the Procurement List:

Product

NSN—Product Name: 7920–00–NIB–0728—Dust Mop, Microfiber with Handle, Blue, 13″ x 10″
Mandatory Source of Supply: Mississippi Industries for the Blind, Jackson, MS
Mandatory For: Total Government Requirement
Contracting Activity: FEDERAL ACQUISITION SERVICE, GSA/FSS GREATER SOUTHWEST ACQUISITI

Service

Service Type: Facilities Maintenance Service
Mandatory for: US Coast Guard, US Coast Guard Training Center, Yorktown, VA
Mandatory Source of Supply: Skookum Educational Programs, Bremerton, WA
Contracting Activity: U.S. COAST GUARD, SILC BSS(00084)

Deletions

On 7/5/2019 and 7/12/2019, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the product and services listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the product and services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the product and services deleted from the Procurement List.

End of Certification

Accordingly, the following products and services are deleted from the Procurement List:

Product

NSN—Product Name: 8465–00–174–0808—Bag, Personal Effects
Mandatory Source of Supply: Mount Rogers Community Services Board, Wytheville, VA
Contracting Activity: DLA TROOP SUPPORT, PHILADELPHIA, PA

Services

Service Type: Administrative Services
Mandatory for: Department of Health and Human Services, Region 8: 1961 Stout Street, Denver, CO
Mandatory Source of Supply: Bayaud Industries, Inc., Denver, CO
Contracting Activity: HEALTH AND HUMAN SERVICES, DEPARTMENT OF, DEPT OF HHS

Service Type: Grounds Maintenance
Mandatory for: Department of Energy: Nevada Support Facility, North Las Vegas, NV
Contracting Activity: ENERGY, DEPARTMENT OF, HEADQUARTERS PROCUREMENT SERVICES

Service Type: Janitorial/Custodial
Mandatory for: Walnut Creek National Wildlife Refuge, Prairie City, IA
Mandatory Source of Supply: Progress Industries—Deleted, Newton, IA
Contracting Activity: OFFICE OF POLICY, MANAGEMENT, AND BUDGET, NBC ACQUISITION SERVICES DIVISION

Service Type: Grounds Maintenance
Mandatory for: Bureau of Reclaimation: 6850 Studhorse Flat Road, New Melones Lake Visitors Center, Sonora, CA
Contracting Activity: OFFICE OF POLICY, MANAGEMENT, AND BUDGET, NBC ACQUISITION SERVICES DIVISION

Service Type: Laundry Service
Mandatory for: Billings Fire Cache: 551 Northview Drive, Billings, MT
Mandatory Source of Supply: Community Option Resource Enterprises, Inc. (COR Enterprises), Billings, MT
Contracting Activity: OFFICE OF POLICY, MANAGEMENT, AND BUDGET, NBC ACQUISITION SERVICES DIVISION

Service Type: Full Food Service
Mandatory for: Fort Drum: 45 West Street, Fort Drum, NY
Mandatory Source of Supply: Jefferson County Chapter, NYSARC, Watertown, NY
Contracting Activity: DEPT OF THE ARMY, W40M RHCO–ATLANTIC USAHCA

Service Type: Remanufacturing HP4 Laser Toner Cartridg
Mandatory for: Malmstrom Air Force Base, Malmstrom AFB, MT

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from the Procurement List.

SUMMARY: The Committee is proposing to add products and a service to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes products and services previously furnished by such agencies.

DATES: Comments must be received on or before: September 15, 2019.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 603–2117, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products and service listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following products and service are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Products

NSNs—Product Names:
4240–00–NIB–0237—Illuminating Grip Wrap, Roll, 1–1/2″ x 5′
4240–00–NIB–0238—Illuminating Grip Wrap, Roll, 1–1/2″ x 10′
4240–00–NIB–0239—Self-Contained Breathing Apparatus Identifier Tags
4240–00–NIB–0240—One-Sided Exit Sign, Silver with Photo Luminescent Letters and Silver Frame, Post Mount
4240–00–NIB–0241—Two-Sided Exit Sign, Silver with Photo Luminescent letters and Silver Frame, Post Mount
4240–00–NIB–0242—One-Sided Exit Sign, Silver with Photo Luminescent Letters and Silver Frame, Wall Mount Bracket
4240–00–NIB–0243—One-Sided Exit Sign with Photo Luminescent Letters, No Frame or Mount
4240–00–NIB–0244—Illuminating Multipurpose Adhesive Tape, Roll, 1–1/4″ x 25′

BILLING CODE 5001–03–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2019–HA–0095]

Proposed Collection; Comment Request

AGENCY: Office of the Assistant Secretary of Defense for Health Affairs, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Healthy Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by October 15, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24 Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Office of the Defense Health Agency Information Management Control Officer, 7700 Arlington Boulevard, Falls Church, VA 22042, Ms. Wanda Oka or call 703–681–1697.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Women, Infants, and Children Overseas Program (WIC Overseas) Eligibility Application; OMB Control Number 0720–0030.

Needs and Uses: The information collection requirement is necessary for individuals to apply for certification and periodic recertification to receive WIC Overseas benefits.

Affected Public: Individuals or Households.

Annual Burden Hours: 7,275.

Number of Respondents: 14,550.

Responses per Respondent: 2.

Annual Responses: 29,100.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

Dated: August 13, 2019.

Shelly E. Finke,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Active Duty Dental Program (ADDP) Claim Form; OMB Control Number 0720–0053.

Needs and Uses: The information collection is necessary to obtain and record the dental readiness of Service Members using the Active Duty Dental Program (ADDP) and at the same time submit the claim for the dental procedures provided so that claims can be processed and reimbursement made to the provider. Many Service Members are not located near a military dental treatment facility and receive their dental care in the private sector.

Affected Public: Business or other for-profit; Not-for-profit institutions.

Annual Burden Hours: 75,000.

Number of Respondents: 75,000.

Responses per Respondent: 4.

Annual Responses: 300,000.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

Dated: August 13, 2019.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Travel Management Office, 4800 Mark Center Drive, Suite 04J25–01, Alexandria, VA 22350–6000, ATTN: Angela Wiggins, or call (571) 372–1300.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Defense Travel System (DTS); OMB Control Number 0704–0577.

Needs and Uses: Information is collected for the purpose of official travel. The information is used to satisfy reporting requirements and detect fraud and abuse. Non-DoD personnel whose information is in DTS includes dependents of DoD Military and Civilian personnel and guests of the DoD such as foreign nationals.

Affected Public: Individuals or households.

Annual Burden Hours: 271.83.

Number of Respondents: 1,631.

Responses per Respondent: 1.

Annual Responses: 1631.

Average Burden per Response: 10 minutes.

Frequency: On occasion.

Respondents provide personal information to facilitate reserving travel and distribution of payment for travel such as financial routing and account number, US Passport number and home mailing address. To collect the personal information for DTS, users login and authenticate to the electronic DTS

application. The users create a profile upon their initial access to the system, and they can modify the profile electronically as needed. The primary respondents of DTS are DoD civilians and military personnel. The secondary respondents (less than 1%) are members of the public, specifically dependents of DoD personnel and, in very rare cases, travel guests of DoD such as Academy students or foreign nationals.

Dated: August 13, 2019.

Shelly E. Finke,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Office of the Assistant Secretary of Defense for Research and Engineering Information Management Control Officer, 3030 Defense Pentagon, RM 3C152, Washington, DC 20301, Mr. Steve Lippi or call 703–614–4161.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Representations to Implement Appropriation Act Provisions on Felony Convictions and Unpaid Federal Tax Liabilities, OMB Control Number 0704–0494.

Needs and Uses: The information collection requirement is necessary to enable DoD awarding officials to exercise due diligence and continue to comply with provisions found in Sections 745 and 746 of the Financial Services and General Government Appropriations Act, 2016 (Division E of Pub. L. 114–113, the Consolidated Appropriations Act, 2016), as well as similar provisions that future years' appropriations acts may include. The requirements of these provisions were originally enacted in three Fiscal Year (FY) 2012 appropriations acts that made funds available to DoD Components for obligation. The details of the provisions in the three FY 2012 acts varied somewhat but they generally required DoD to consider suspension or debarment before using appropriated funding to enter into a grant or cooperative agreement with a corporation if the awarding official was aware that the corporation had an unpaid federal tax liability or was convicted of a felony criminal violation within the preceding 24 months. The FY 2012 provisions were in:

Sections 8124 and 8125 of the Department of Defense Appropriations Act, 2012 (Division A of Pub. L. 112–74, the Consolidated Appropriations Act, 2012);

Section 514 of the Military Construction and Veterans Affairs and Related Agencies Appropriations Act, 2012 (Division H of Pub. L. 112–74); and

Sections 504 and 505 of the Energy and Water Development Appropriations Act, 2012 (Division B of Pub. L. 112–74).

Generally, the requirements related to these provisions of the FY 2012 appropriations acts have been included in each subsequent fiscal year's appropriations acts. Since FY 2015, the provisions related to felony convictions and unpaid federal tax liabilities have been enacted in the government-wide general provisions portion of the Financial Services and General Government Appropriations Act.

Affected Public: Not-For-Profit institutions; Individuals or Households; Business or Other For-Profit; Farms; Federal Government; or State, Local or Tribal Government.

Annual Burden Hours: 1,250.

Number of Respondents: 2,500.

Responses per Respondent: 6.

Annual Responses: 15,000.

Average Burden per Response: 5 minutes.

Frequency: On occasion.

Dated: August 13, 2019.

Shelly E. Finke,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2019–OS–0097]

Proposed Collection; Comment Request

AGENCY: The Office of the Under Secretary of Defense, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Finance and Accounting Service announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by October 15, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Office of the Defense Finance and Accounting Service Information Management Control Officer, 8899 E 56th St., Indianapolis, IN 46249, Ms. Denise Shaffer or call 317–212–4461.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Application for Trusteeship, DD Form 2827, OMB License 0730–0013.

Needs and Uses: The information collection is needed to identify the prospective trustees for active duty military and retirees. The information is required in order for the Defense Finance and Accounting Service (DFAS) to make payments on behalf of incompetent military members or retirees. DFAS is representing all services as the functional proponent for Retired and Annuitant Pay.

Affected Public: Individuals or households.

Annual Burden Hours: 19 hours.

Number of Respondents: 75.

Responses per Respondent: 1.

Annual Responses: 75.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

Dated: August 13, 2019.

Shelly E. Finke,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

TRICARE; Accountable Care Organization Demonstration

AGENCY: Office of the Secretary, Department of Defense.

ACTION: Notice of demonstration.

SUMMARY: Section 705(a) of the National Defense Authorization Act for Fiscal Year 2017 (NDAA for FY17) requires the Secretary of Defense to develop and implement value-based incentive programs for the TRICARE Program. It also outlines recommendations for adapting existing value-based models, to include value-based incentive programs. The Defense Health Agency (DHA) intends to conduct and evaluate value-driven initiatives to move from volume-based reimbursement to value-based reimbursement for health care services. The proposed Accountable Care Organization (ACO) demonstration will help DHA assess whether value-driven incentives can reduce health care spending and improve health care quality for TRICARE beneficiaries.

DATES: This demonstration is a value-based incentive program consistent with Section 705(a) of the NDAA for FY17, with an effective and implementation date of January 1, 2020. This demonstration authority will remain in effect until December 31, 2022, unless terminated or extended by the DHA via a subsequent **Federal Register** notice. KP and HGB may begin marketing and beneficiary education activities on or after August 16, 2019.

FOR FURTHER INFORMATION CONTACT: Mr. Joseph Mirrow at *joseph.b.mirrow.civ@mail.mil.*

SUPPLEMENTARY INFORMATION: This notice is to advise all parties of a DHA demonstration project under the authority of Title 10, United States Code, Section 1092, entitled, ''TRICARE Accountable Care Organization Demonstration'' that will monitor whether higher levels of beneficiary satisfaction, cost containment, efficiency and effectiveness can be reached using an ACO. The demonstration will develop and evaluate an incentive payment model that: (1) Links improvement of health (core performance metrics); (2) improves beneficiary experience as Section 705(a) requires; and (3) compares the health outcomes of geographically overlapping TRICARE Prime beneficiary populations. This demonstration is being conducted in compliance with Section 705(a) of the NDAA for FY17. The demonstration will be conducted under the purview of the DHA and administered through the Managed Care Support Contractor (MCSC), Humana Government Business, Inc. (HGB), in conjunction with Kaiser Permanente (KP).

The DHA will monitor several areas of the ACO demonstration including but not limited to:

—Beneficiary experience and whether it is impacted, positively or negatively, by delivering care through an ACO model, which will be measured through existing tools (*e.g.* the Joint Outpatient Experience Survey) and reenrollment rates.

—Financial costs incurred under traditional TRICARE Prime and Select plans, and compare those cost to the negotiated capitated per member, per month (PMPM) rate under this demonstration. The demonstration will enable DHA to demonstrate proof of concept for future implementations throughout the TRICARE Program.

—Evaluate quality of care delivered under the ACO model compared to other TRICARE plans.

A. Background

Section 705(a) of the National Defense Authorization Act (NDAA) for FY 2017 directed the Department of Defense to conduct demonstration projects on incentives to improve health care provided under the TRICARE Program, also known as paying for value, or value-based reimbursement, rather than paying for volume. The incentive programs should link payments to hospitals and health care providers under the TRICARE Program to improve performance with respect to quality, cost, and reduction in the provision of inappropriate care. In addition, Section 705(a) of NDAA FY 17 authorizes adaptation of existing value-based models, including value-based incentive programs. As such, this demonstration program is partially based on a capitation payment model with the outpatient and pharmacy portions of the care being capitated while inpatient care will be provided through a joint TRICARE network with Humana. A full or partial capitation model requires that a health care provider undertake the full (or partial) risk for health care quality and spending. This model is frequently used by commercial health plans as part of an overall approach to value-based reimbursement.

In an effort to mitigate rising health care costs and develop higher-quality patient care, the DHA intends to conduct an ACO demonstration to determine if greater levels of beneficiary satisfaction, cost containment, efficiency, and effectiveness can be

reached using a capitation model. To achieve this goal, the DHA will conduct a three-year demonstration program that will address the NDAA FY 17, Section 705(a) requirements. The ACO demonstration will be conducted in Atlanta, Georgia. This area was selected due to the lack of Military Medical Treatment Facilities (MTFs), the existence of which could confound the demonstration outcomes, as well as providing an ideal population size in the Atlanta metropolitan area.

B. Description of the Demonstration Project

TRICARE's three-year demonstration project will be voluntary for TRICARE Prime Active Duty Family Members, Prime Retirees, Prime Retiree Family Members, and TRICARE Select beneficiaries in the metro Atlanta area. Beneficiaries will be invited to participate in any of the three years during the demonstration time period by enrolling in the ACO demonstration. From the ACO demonstration enrolled beneficiary's perspective, this will be a TRICARE Prime option, with KP serving as the primary care manager (PCM), and coordinating referrals to other KP specialties, or affiliated providers, as appropriate. KP will provide education to all interested beneficiaries regarding plan differences at the time of enrollment in the ACO demonstration. To ensure a sufficient number of beneficiaries participate in the demonstration, a target of 3,000 to 4,000 demonstration enrollees is set for year one with a goal of 8,000 to 10,000 enrollees by year three. The total number of eligible beneficiaries in the Atlanta area is approximately 70,000.

This demonstration will be implemented as an integrated ACO model with HGB serving as the DHA MCSC with KP working under HGB in compliance with HGB's contract. HGB will provide oversight, management, billing and enrollment, operational support, customer service for beneficiaries and military, a provider network for out-of-area care, delegated medical management and referral services for beneficiaries, and management of claims payments, encounter reporting and beneficiary eligibility. KP will provide ACO demonstration enrollees access to all KP primary and specialty providers in the Atlanta, Georgia area, virtual and video visits and consults, as well as match the current TRICARE Prime benefit and prescription benefits to include copayments, cost shares, deductibles, and coinsurance.

Applicable annual TRICARE enrollment fees will be waived for TRICARE beneficiaries who elect to participate in the ACO demonstration, for the first year in which they enroll. TRICARE Prime and TRICARE Select beneficiaries are eligible to participate in the demonstration. Under this demonstration, TRICARE beneficiaries are subject to the current Open Season enrollment restrictions unless they have a Qualifying Life Event. Beneficiaries with Other Health Insurance, TRICARE for Life beneficiaries not eligible to enroll in TRICARE Prime, Continued Health Benefit Care Benefit Program beneficiaries, Sponsors in the Guard/Reserves, and Active Duty Service Members are not eligible to participate in the program.

ACO demonstration enrolled beneficiaries will have the option to select a provider via the KP website located at KP.org, telephone, or while in a network provider's medical office. KP will send a letter to the ACO demonstration enrolled beneficiary if a choice is not made after a 60 day period and a Primary Care Manager (PCM) will be assigned to the enrolled beneficiary based on their residential zip code. KP will also send a letter to the ACO demonstration enrolled beneficiary if there are provider panel or location changes. ACO demonstration enrolled beneficiaries may change their primary care provider as long as the provider is within the KP provider network. TRICARE beneficiaries, enrolled under the ACO demonstration, will use the online KP provider network directory to include national vendors for durable medical equipment (DME), ambulance transport, transplants, and centers of excellence.

The TRICARE Pharmacy benefit will be matched by KP for the ACO demonstration. This will include the KP formulary listing, mail order, and specialty drugs. However, demonstration enrolled beneficiaries will not be eligible to receive vaccinations administered at a pharmacy. All beneficiaries enrolled in the demonstration will be able to fill prescriptions at KP pharmacies including mail service and specialty/compounded drugs.

C. Communications

The DHA will proactively educate beneficiaries and other stakeholders about this change through the TRICARE MCSC—HGB—as well as through marketing materials presented by KP. Marketing materials will explain the ACO demonstration benefit to the beneficiaries while allowing TRICARE sponsors and beneficiaries to make the best choice for their families. KP will begin marketing to potential beneficiaries on or after the date of publication of this notice. KP will inform and collect the consent of beneficiaries at the time of demonstration enrollment of any benefit or process differences compared to the traditional TRICARE Prime and Select programs.

D. Evaluation

This demonstration project will assist the DHA in evaluating whether capitated payment models will result in a reduction in health care spending and/or improvements in health care quality for TRICARE beneficiaries. The demonstration will add to the DHA's body of knowledge regarding the requirements for implementing successful value-based payments. Regular status reports and a full analysis of the demonstration outcomes will be conducted consistent with the requirements in Section 705(a) of the NDAA FY17.

Regular evaluations of health care claims, patient satisfaction, and cost of care for the ACO demonstration beneficiaries and a comparison group will provide data relating to the impact of health care spending in order to ascertain whether accountable care and capitation reimbursement result in positive changes in cost trends and/or if there has been an improvement in the quality of health care. Following the conclusion of each demonstration year, costs and performance will be analyzed and compared to previous years of the demonstration as well as to care received across the TRICARE Program to determine whether capitated payment structures, as well as incentive payments were effective in reducing health care spending and/or improving health care quality. The DHA Director reserves the right to terminate the demonstration early if the enrollment, cost, or quality do not support continuation of the demonstration.

E. Reimbursement

The PMPM will be negotiated based on DHA claims history from the prior three years of beneficiaries enrolled in the same geographic area. Reimbursement under the ACO demonstration will be notionally modeled after a capitation reimbursement structure with care being divided into three separate Parts; A, B, and D (modeled after the traditional Medicare program). KP will receive a PMPM payment for all ambulatory care as aligned with Part B and D services (as outlined below).

Notional Part A Fund expenses include, but are not limited to: Costs identified for inpatient hospital medical

and surgical services; inpatient hospital psychiatric services; home health care services; skilled nursing facility care; and inpatient rehabilitation. HGB will reimburse all inpatient care, as aligned with Part A services, utilizing existing reimbursement systems (*e.g.,* Diagnosis Related Groups) with inpatient providers submitting claims for reimbursement to HGB. As long as the inpatient admission was directed by a KP provider, ACO beneficiaries will be subject to ''in network'' cost-sharing. HGB will report reimbursements for Part A services to KP on a monthly basis. Expenses will also include the cost of other covered services or costs which may be mutually defined and approved by KP, HGB, and the DHA.

Notional Part B Fund expenses include, but are not limited to: Primary care; hospital-based physician fees; specialists fees; hospital outpatient services; outpatient surgery procedures; podiatry; outpatient rehabilitation; physical therapy; occupational therapy; speech therapy; vision; supply costs of covered immunizations; therapeutic radiology; outpatient renal dialysis; outpatient laboratory; outpatient radiology; durable equipment and durable medical equipment;, Medicare defined Part B drugs; ambulance; and other outpatient diagnostic or treatment services. Expenses will also include the cost of other covered services or costs which may be mutually defined and approved by KP, HGB, and the DHA.

Notional Part D Fund expenses include all costs for outpatient prescription drugs and vaccines that are not otherwise included in the Parts A or B Fund. Expenses will also include the cost of other covered services or costs which may be mutually defined and approved by KP, HGB, and the DHA.

Part A Services

As noted earlier, HGB will reimburse inpatient claims (Part A) for care rendered for TRICARE beneficiaries enrolled in the ACO demonstration utilizing existing TRICARE reimbursement methodologies. Prior to each demonstration year, the DHA will evaluate, and if appropriate, approve an annual cost target prepared by HGB and reviewed by KP, for Part A services defined above, with a risk corridor that results in equal sharing of risk between KP and the DHA for gains and losses. Part A services will be reconciled to the target on an annual basis using three months of run out (April 1 of each year) with settlement to occur at 6 months following close of period (July 1 of each demonstration year). The approved DHA Part A cost target will be prepared by HGB and reviewed by KP. The Director, DHA, will have the ultimate authority to approve or reject the proposed cost target.

Part B and Part D Services

The intent of this demonstration is to fully capitate all outpatient and professional care, defined in this demonstration as ''Part B'' and ''Part D'' services. Prior to the start of each demonstration year, Humana, with KP, shall propose a PMPM to the DHA. The Director, DHA, shall approve or deny the proposed PMPM amount. If the PMPM is denied and cannot be negotiated, then the demonstration will be terminated. When an ACO enrolled beneficiary receives care from KP, KP will submit the encounter data record to HGB, who will in turn, submit the TRICARE encounter data record to the DHA for reimbursement, in accordance with TRICARE operational and systems polices. However, KP will be paid on the basis of a PMPM methodology. The DHA will pay KP an additional PMPM amount (the incentive payment, mentioned earlier in this Notice) for achieving specific value and quality performance goals, as negotiated by the DHA.

Beneficiaries enrolled in the ACO demonstration who visit a provider outside of the KP demonstration may be subject to point of service charges consistent with TRICARE claims processing rules. Rarely, the DHA may elect to remove specific enrolled beneficiaries from the demonstration (or decline to re-enroll them), and require the beneficiary to make a new plan election (*e.g.,* TRICARE Prime or Select) in accordance with TRICARE procedures if the beneficiary does not follow KP processes. This demonstration is patient-centered, and changes in enrollment are disruptive to beneficiaries, and therefore will generally be considered inappropriate unless in the most extraordinary of cases. Such a determination will be made by the Director, DHA, or designee, on a case-by-case basis, when brought to the attention of DHA by HGB. Requests from HGB for patient removal must include: A beneficiary-specific justification regarding patient unwillingness to follow KP rules; a description of the specific efforts made by HGB and KP to engage the patient in care and care decisions; a description of patient and/or caregiver education efforts; along with data showing that failure to follow such rules has resulted in significant impact to the beneficiary's health, quality of care, or total cost of care to the Government or beneficiary. The Director, DHA, shall be the final authority on patient disenrollment, and decisions shall be made on the basis of the best interest of the specific patient (health, quality of care, and cost to the Government/beneficiary), and not on a basis that disenrollment is needed for financial reasons by KP or HGB.

F. Implementation

Care for ACO demonstration enrolled beneficiaries demonstration will begin effective January 1, 2020, and will continue for a period of three years from the date of the original demonstration unless terminated earlier by the Director, DHA. KP and HGB may begin patient education and marketing efforts regarding this demonstration on or after the date of publication of this notice.

Dated: August 12, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2019–ICCD–0051]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Consolidated State Performance Report Renewal (Part 1 and Part 2)

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before September 16, 2019.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2019–ICCD–0051. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, ED will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for

information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 550 12th Street SW, PCP, Room 9086, Washington, DC 20202–0023.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Sarah Newman, 202–453–6956.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Consolidated State Performance Report Renewal (Part 1 and Part 2).

OMB Control Number: 1810–0724.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 14,653.

Total Estimated Number of Annual Burden Hours: 16,455.

Abstract: The Consolidated State Performance Report (CSPR) is the required annual reporting tool for each State, the Bureau of Indian Education, District of Columbia, and Puerto Rico as authorized under Section 8303 of the Elementary and Secondary Education Act (ESEA), as amended by the Every Student Succeeds Act (ESSA). The CSPR collects data on programs authorized by:

- Title I, Part A;
- Title I, Part C;
- Title I, Part D;
- Title II, Part A;
- Title III, Part A;
- Title IV Part A;
- Title V, Part A;
- Title V, Part B, Subparts 1 and 2; and
- The McKinney-Vento Act.

The information in this collection relate to the performance and monitoring activities of the aforementioned programs under ESSA and the McKinney-Vento Act. These data are needed for reporting on GPRA as well as other reporting requirements under ESSA.

There is one major change from the last approved collection. Reporting requirements on Title IV, Part A have been added to the collection.

Dated: August 12, 2019.

Kate Mullan,

PRA Coordinator, Information Collection Clearance Program, Information Management Branch, Office of the Chief Information Officer.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2019–ICCD–0070. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, ED will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 550 12th Street SW, PCP, Room 9086, Washington, DC 20202–0023.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Guaranty Agency Financial Report.

OMB Control Number: 1845–0026.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments; Private Sector.

Total Estimated Number of Annual Responses: 528.

Total Estimated Number of Annual Burden Hours: 29,040.

Abstract: The Guaranty Agency Financial Reports is used by a guaranty agency to request payments of reinsurance for defaulted student loans; make payments for amounts due the Department, for collections on default and lender of last resort loan (default) claims on which reinsurance has been paid and for refunding amounts previously paid for reinsurance claims. The form is also used to determine required reserve levels for agencies and to collect debt information as required for the ''Report on Accounts and Loans Receivable Due from the Public,'' SF 220–9 (Schedule 9 Report) as required by the U.S. Department of Treasury.

Dated: August 13, 2019.

Kate Mullan,

PRA Coordinator, Information Collection Clearance Program, Information Management Branch, Office of the Chief Information Officer.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket ID ED–2017–FSA–0083]

Privacy Act of 1974; System of Records

AGENCY: Federal Student Aid, Department of Education.

ACTION: Notice of a modified system of records.

SUMMARY: In accordance with the Privacy Act of 1974, as amended (Privacy Act), the Department of Education (Department) modifies the system of records entitled ''Common Origination and Disbursement (COD) System'' (18–11–02).

The COD System is a system of records about applicants for, and recipients of, a Federal grant or loan under any of the Federal student financial assistance programs authorized under title IV of the Higher Education Act of 1965, as amended (HEA). The Department uses the COD system of records to document origination and disbursement of loans, account for awarded grants, reconcile school cash drawdowns from the U.S. Department of the Treasury to individual student disbursements, and ensure that institutions of higher education participating in the HEA programs receive the appropriate amount of funds during the respective time periods.

DATES: Submit your comments on or before September 16, 2019.

This modified system of records will become applicable upon publication in the **Federal Register** on August 16, 2019. New routine use disclosures (1)(i), (1)(j), (1)(k), and 14, and modified routine uses (1)(f), (4)(c), (5)(a), (10), (11), (12), and (13) outlined in the ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES will become applicable on September 16, 2019, unless the modified system of records notice needs to be changed as a result of public comment. The Department will publish any significant changes resulting from public comment.

ADDRESSES: Submit your comments through the Federal eRulemaking Portal or via postal mail, commercial delivery, or hand delivery. We will not accept comments submitted by fax or by email or those submitted after the comment period. To ensure that we do not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

- *Federal eRulemaking Portal:* Go to *www.regulations.gov* to submit your comments electronically. Information on using *Regulations.gov*, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under the ''help'' tab.
- *Postal Mail, Commercial Delivery, or Hand Delivery:* If you mail or deliver your comments about this modified system of records, address them to: Director, COD System, Program Management Services, Federal Student Aid (FSA), U.S. Department of Education, Union Center Plaza (UCP), Room 112J2, 830 First Street NE, Washington, DC 20202–5454.

Privacy Note: The Department's policy is to make all comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at *www.regulations.gov*. Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request, we will supply an appropriate accommodation or auxiliary aid, to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for this notice. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Margaret M. Glick, Director, COD System, Program Management Services, FSA, U.S. Department of Education, UCP, Room 64E1, 830 First Street NE, Washington, DC 20202–5454. Telephone: (202) 377–4563.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), you may call the Federal Relay Service (FRS) at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Among other purposes described in this notice, the COD System includes information needed for the Department to administer the Federal grant and loan HEA programs. The COD System contains records associated with Federal grant and loan origination activities under HEA-authorized programs for which the Department provides funds directly to participating institutions of higher education on a student or recipient level. Such activities include establishing an individual's eligibility to receive a Federal grant or loan under these HEA-authorized programs. The system also contains records evidencing the disbursement of program funds by participating institutions of higher education to those individuals whose eligibility has been previously established.

Records maintained in the COD System include information provided by recipients of title IV, HEA program assistance, the legal parents of dependent recipients, endorsers, and the spouses of married, independent student borrowers, and references, as required. The records contain individually identifying information, including, but not limited to: Name, Social Security number (SSN), address, date of birth, email address, and citizenship status. The COD System also assists the Department in administering the title IV Campus Based Programs, which include the Federal Perkins Loan, Federal Supplemental Educational Opportunity Grant (FSEOG), and Federal Work-Study (FWS) Programs.

This notice of a modified system of records for the COD System: Updates the security classification, system locations, and system manager; expands the categories of individuals covered by the system and the categories of records maintained in the system; expands the system's purposes; and updates the current programmatic routine use disclosures needed to carry out the Department's responsibilities under title IV of the HEA. This notice also updates some of the wording of the routine uses in this system of records notice to standardize it with the wording of the same routine uses in many of the Department's other systems of records notices, deletes a standard routine use

that is no longer needed, and adds a new standard routine use that is needed to comply with Office of Management and Budget requirements on data breaches involving personally identifiable information. This notice also updates the policies and practices for the storage of records, the policies and practices for retrieval of records, the policies and procedures for retention and disposal of records, and the record source categories. The Department is also modifying the sections of the notice entitled ''RECORD ACCESS PROCEDURES'' and ''NOTIFICATION PROCEDURES'' and is adding a new section entitled ''HISTORY.''

The Department is updating the section of the notice entitled ''SECURITY CLASSIFICATION'' by revising it from ''none'' to ''unclassified'' and the section of the notice entitled ''SYSTEM LOCATION'' by adding additional locations of records, and removing the locations no longer utilized. The Department is changing the section of the notice entitled ''SYSTEM MANAGER(S)'' to reflect that the Director of the COD System is the system manager.

The Department is updating the section of the notice entitled ''PURPOSE(S) OF THE SYSTEM'' to expand the system's purposes related to students and borrowers. The Department is adding additional purposes to identify individuals who: Completed a Special Direct Consolidation Loan application and promissory note; completed counseling in the Direct Loan or Teacher Education Assistance for College and Higher Education (TEACH) Grant programs; filed an electronic request to repay a Direct Loan under an income-based or income contingent (hereafter ''income-driven'') repayment plan; or filed an electronic Federal Direct Consolidation Loan application and promissory note. The Department also is including an additional purpose to track the level of study, the Classification of Instructional Program (CIP) code (field of study), and the educational program length in which the borrower enrolled to track the limit on eligibility for Direct Subsidized Loans to no more than 150 percent of the published length of the educational program in which the student is enrolled, and to enable Federal Loan Servicers to determine the periods for which a borrower who enrolls after reaching the 150 percent limit will be responsible for the accruing interest on outstanding Direct Subsidized Loans, and also for tracking student enrollments by educational program for purposes of determining educational program outcomes, including using that information to obtain average earnings of students by educational program from another Federal agency.

The Department also is expanding the system's purposes related to institutions of higher education participating in and administering title IV, HEA programs to include assisting an institution of higher education with student loan default prevention and with reconciling its cash drawdowns from the U.S. Department of the Treasury with its reported disbursements and to ensure that the institution receives the appropriate amount of dollars during the respective time period. Also, the Department is revising a purpose to clarify that an institution of higher education can request online credit checks to determine a borrower's eligibility for title IV, HEA Federal Direct PLUS Loans.

The Department also is expanding the system's purposes related to the Department's oversight of title IV, HEA programs to include performing data analytics and reporting to inform and optimize the effectiveness of the Department's student financial assistance programs.

The Department is expanding the section of the notice entitled ''CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM'' to cover individuals who apply for a Federal grant or applied for a loan under the Federal Perkins Loan Program, the Federal Family Education Loan (FFEL) Program, the Federal Insured Student Loan (FISL) Program, the Auxiliary Loans to Assist Students (ALAS) Program, the Health Professions Student Loans (HPSL) Program, and the Health Education Assistance Loan (HEAL) Program. This section also has been expanded to contain student enrollment data on title IV recipients and cohort default rate (CDR) by institution of higher education.

The Department is modifying the section entitled ''CATEGORIES OF RECORDS IN THE SYSTEM'' to expand the data elements maintained in the system. For individuals who apply for or receive a Federal grant or loan under the programs authorized by title IV of the HEA the Department is now maintaining additional demographic information, including Federal income tax information (tax return status, adjusted gross income, Internal Revenue Service exemptions, and tax year), family size, marital status, and spouse identifiers. For recipients of Direct Loans, FFEL Program loans, Perkins Loans, and FISL Program loans, the Department is expanding borrower loan information to include the period from the origination of the loan through final payment, and milestones, including, but not limited to: Cancellation, consolidation, discharge, or other final disposition including details such as loan amount, disbursements, balances, loan status, repayment plan and related information, collections, claims, deferments, forbearances, and refunds. On Federal grant recipients, the Department is expanding information to include grant amounts, grant awards, verification status, lifetime eligibility used (LEU), Iraq and Afghanistan Service Grant (IASG) eligible veteran's dependent indicator, Children of Fallen Heroes Scholarship eligibility indicator, and Pell over-award indicator.

The Department is further expanding the section entitled ''CATEGORIES OF RECORDS IN THE SYSTEM'' to include Direct Loan award information; FFEL Loan Program records including demographic and contact information; Pell Grant overpayment collection information; promissory notes, Direct PLUS Loan request, endorser addendum, and confirmation of counseling completion by Direct Loan borrowers and TEACH Grant program recipients; PLUS Loan credit report information; applicant identifier information for an electronic request to repay a Direct Loan under an income-driven repayment plan and endorser/spouse information; Electronic Direct Consolidation Loan applicant identifier information; information concerning the date of any default on a loan; and demographic and contact information for borrower accounts that are assigned to a Federal Loan Servicer(s). This section has also been expanded to include data about students that is provided by institutions of higher education that apply and are accepted by the Department for participation in an experiment under the Experimental Sites Initiatives. Also, this section has been expanded to include data elements that are used to perform data analysis regarding improper payments. Additionally, this section has been expanded to contain records on the level of study, CIP code (field of study), and published length of an educational program in which a student receiving title IV, HEA Federal student aid is enrolled.

An appendix has also been added to the notice detailing the data in this system of records as a result of exchanges of data within FSA.

The section entitled ''RECORD SOURCE CATEGORIES'' has been updated to include information that is provided by spouses of applicants who request to repay a Direct Loan under an income-driven repayment plan and that is obtained from Federal Direct

Consolidation Loan application forms and promissory notes. Also, the section has been updated to specify that completion information for Direct Loan and TEACH Grant program counseling is received through *StudentLoans.gov* (the student-facing portion of the website) or from institutions of higher education, or both. The section also has been updated to indicate that the system receives information on PLUS LOAN applicants from credit reporting agencies. The section has been further updated to include other persons or entities from which data is obtained under the routine uses set forth in the system of records notice. Additionally, this section has been updated to include various Privacy Act systems of records notices maintained by the Department that share information with the COD System.

The Department is making a number of changes which expand the current routine use disclosures in the system.

First, the Department is revising programmatic routine use (1)(f) to clarify that an institution of higher education can request online credit checks to determine a borrower's eligibility for title IV, HEA Federal Direct PLUS Loans.

Second, the Department is adding programmatic routine use (1)(i) to allow the Department to disclose records to institutions of higher education as to whether borrowers or students have completed the required counseling in the Direct Loan or TEACH Grant programs to assist institutions of higher education with student loan default prevention.

Third, the Department is adding programmatic routine use (1)(j) to permit the Department to disclose records to guaranty agencies, educational institutions, financial institutions and servicers, and to Federal and State agencies in order to assist the Department in complying with requirements that limit eligibility for Direct Subsidized Loans.

Fourth, the Department is adding programmatic routine use (1)(k) to permit the Department to disclose records to credit reporting agencies to assist the Department with the determination of eligibility for a PLUS Loan.

The Department is deleting prior routine use (3), which was entitled ''Disclosure for Use by Other Law Enforcement Agencies,'' because Program Management Services within Federal Student Aid (FSA) that is responsible for managing this system of records is not a law enforcement agency. Further, another routine use in this system of records and subsection (b)(7) of the Privacy Act will continue to permit FSA to disclose records for law enforcement purposes provided their conditions are met.

The Department is modifying routine use (4)(c) entitled ''Litigation and Alternative Dispute Resolution (ADR) Disclosure'' to insert the word ''person'' in place of the word ''individual'' to avoid confusion because ''individual'' is a defined term in the Privacy Act.

The Department is also modifying routine use (5)(a) entitled ''Employment, Benefit, and Contracting Disclosure'' to add language to describe the records as ''civil, criminal, or other relevant enforcement or other pertinent records'' that are maintained by a Federal, State, or local agency, or by another public authority or professional organization, to which the Department may disclose records under this routine use if necessary to obtain information in such an agency's or organization's records that would be relevant to a Departmental decision involving personnel actions, the issuance of benefits, or the letting of a contract.

The Department is modifying routine use (10) entitled ''Contract Disclosure'' and routine use (11) entitled ''Research Disclosure'' to remove the language therein that had referenced ''Privacy Act safeguards.'' The Department revised the language in these routine uses to clarify that contractors and researchers to whom disclosures are made under these routine uses will be required to agree to establish and maintain safeguards to protect the security and confidentiality of the disclosed records. With respect to routine use (10), the Department also removed language that had indicated that the Department would require these safeguards ''before entering into such a contract'' to instead indicate that these safeguards will be required ''as part of such a contract.'' With respect to routine use (11), the Department also revised this routine use to indicate that an appropriate official of the Department must determine that the individual or organization to which the disclosure would be made is qualified to carry out specific research related to the functions or purposes of the system of records and that the disclosure and research must be consistent with the uses and restrictions set forth in Sections 483(a)(3)(E), 485B(d)(2), and 485B(d)(5)(B) of the HEA, and the Family Educational Rights and Privacy Act, 20 U.S.C. 1232g and 34 CFR part 99.

The Department is modifying routine use (12) to permit the Department to disclose records to the Congressional Budget Office, in addition to the Office of Management and Budget (OMB), as necessary to fulfill the requirements of the Federal Credit Reform Act of 1990, as amended, in accordance with 2 U.S.C. 661b.

Pursuant to the requirements in OMB Memorandum 17–12 entitled ''Preparing for and Responding to a Breach of Personally Identifiable Information,'' the Department is modifying the routine use (13) entitled ''Disclosure in the Course of Responding to a Breach of Data.''

Finally, the Department is adding a new routine use (14) to permit the Department to disclose records from this system, in compliance with the requirements set forth in OMB Memorandum 17–12, to another Federal agency or Federal entity, when the Department determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (a) responding to a suspected or confirmed breach or (b) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

The Department is updating the section entitled ''POLICIES AND PRACTICES FOR STORAGE OF RECORDS'' to include the storage of electronic student demographic, and title IV aid data information for the entire Federal Student Aid lifecycle, from application through loan payoff. The section is also being updated to include the storage of electronic master promissory notes and the hard disk storage of electronic Special Direct Consolidation Loan applications and promissory notes, electronic requests to repay a Direct Loan under an income-driven repayment plan, and Federal Direct Consolidation Loan applications and promissory notes.

The Department is updating the section entitled ''POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS'' to explain that the applicable Department records schedule is being amended, pending approval by the National Archives and Records Administration (NARA).

Finally, the Department is modifying the sections entitled ''RECORD ACCESS PROCEDURES'' and ''NOTIFICATION PROCEDURES'' to specify the necessary particulars that an individual must provide when making a request for access to or notification of a record. The Department is also adding a new section entitled ''HISTORY'' in compliance with the requirements in OMB Circular No. A–108.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) on request to the person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov*. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov*. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: August 12, 2019.

Mark A. Brown,

Chief Operating Officer, Federal Student Aid.

For the reasons discussed in the preamble, the Chief Operating Officer, Federal Student Aid of the U.S. Department of Education (Department) publishes a notice of a modified system of records to read as follows:

SYSTEM NAME AND NUMBER:

Common Origination and Disbursement (COD) System (18–11–02).

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Program Management Services, Federal Student Aid (FSA), U.S. Department of Education (Department), Union Center Plaza (UCP), Room 64E1, 830 First Street NE, Washington, DC 20202–5454.

Amazon Web Services (AWS), 1200 12th Ave., Suite 1200, Seattle, WA 98114. (This is the Computer Center for the COD application, where all electronic COD information is processed and stored.) This information includes data about individuals who completed counseling required by the William D. Ford Federal Direct Loan (Direct Loan) and the Teacher Education Assistance for College and Higher Education (TEACH) Grant programs, and who apply for or receive a Federal grant or loan under one of the programs authorized by title IV of the Higher Education Act of 1965, as amended (HEA), including, but not limited to: The Direct Loan Program, the Federal Family Education Loan (FFEL) Program, the Campus-Based Programs (Federal Perkins Loans, Federal Work Study, and Federal Supplemental Education Opportunity Grants (FSEOG)), the Federal Pell Grant Program, the Academic Competitiveness Grant (ACG) Program, the National Science and Mathematics Access to Retain Talent (National SMART) Grant Program, the TEACH Grant Program, the Iraq and Afghanistan Service Grant (IASG) Program, the Federal Insured Student Loan (FISL) Program, the Auxiliary Loans to Assist Students (ALAS) Program, the Health Profession Student Loans (HPSL) Program, and the Health Education Assistance Loans (HEAL) Program. Also included are: Direct Loan electronic promissory notes, TEACH Agreement to Serve (ATS) documents, PLUS Loan endorser addendums, Special Direct Consolidation Loan applications and promissory notes, electronic requests to repay a Direct Loan under an income-driven repayment plan, Federal Direct Consolidation Loan application and promissory notes, student enrollment information which includes dates and statuses (*i.e.,* full-time or part-time).

Accenture, 22451 Shaw Road, Sterling, VA 20166–4319. (The COD Sterling Cloud-based Operations is located here.)

Accenture DC, 810 First Street NE, Washington, DC 20202–4227. (This is the COD Operations Center.)

Atlanta Federal Records Center, National Archives and Records Administration (NARA), 4712 Southpark Blvd., Ellenwood, GA 30294. (This is where master promissory notes (MPN), Endorser Addenda, and Power of Attorney documents are stored.)

The following five listings are the locations of the COD Customer Service Centers:

ASM Research 2429 Military Road, Suite 200, Niagara Falls, NY 14304–1551. (This center images and stores all of the Direct Loan paper Master Promissory Notes (MPNs) and Endorser Addenda);

Senture, LLC, 4255 W Highway 90 Monticello, KY 42633–3398;

Senture, LLC 460 Industrial Blvd., London, KY 40741–7285;

Cooney Solutions Group, 8415 Datapoint Drive, San Antonio, Texas 78229–3298; and

Veteran Call Center, 53 Knightsbridge Rd., Suite 201, Piscataway, NJ 08854–3925.

SYSTEM MANAGER(S):

Director, COD System, Program Management Services, Federal Student Aid (FSA), U.S. Department of Education (Department), Union Center Plaza (UCP), Room 64E1, 830 First Street NE, Washington, DC 20202–5454.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

This system of records is authorized under title IV of the HEA, 20 U.S.C. 1070 *et seq.*

PURPOSE(S) OF THE SYSTEM:

The information contained in this system is maintained for the following purposes related to students and borrowers:

(1) To determine recipient eligibility and benefits under the title IV, HEA programs;

(2) To store electronic data and documentation, including promissory notes and other agreements, that evidence the existence of a legal obligation to repay funds disbursed under the title IV, HEA programs;

(3) To identify whether an individual may have received a title IV, HEA Federal grant or loan at more than one educational institution for the same enrollment period in violation of the title IV program regulations;

(4) To identify whether an individual may have exceeded the annual award limits under title IV, HEA Federal grant or loan programs in violation of title IV program regulations;

(5) To identify an individual who completed a Special Direct Consolidation Loan application and promissory note;

(6) To identify an individual who completed counseling in the Direct Loan or TEACH Grant programs;

(7) To identify an individual who completed an electronic request to repay a Direct Loan under an income-based or income contingent (hereafter ''income-driven'') repayment plan;

(8) To identify an individual who completed an electronic Federal Direct Consolidation Loan application and promissory note; and

(9) To track the level of study, Classification of Instructional Program (CIP) code (field of study), and educational program length to limit eligibility for Direct Subsidized Loans to no more than 150 percent of the published length of the educational program in which the student is enrolled, to enable Federal Loan Servicers to determine the periods for which a borrower who enrolls after reaching the 150 percent limit will be responsible for the accruing interest on outstanding Direct Subsidized Loans, and also for tracking student

enrollments by educational program for purposes of determining educational program outcomes, including using that information to obtain average earnings of students by educational program from another Federal agency.

The information in this system is also maintained for the following purposes relating to institutions of higher education participating in and administering title IV, HEA programs:

(1) To enable an institution of higher education to reconcile, on an aggregate and recipient-level basis, the amount of title IV, HEA Federal grant and Direct Loan funds that an institution received for disbursements it made to, or on behalf of, eligible students (including reconciling verification codes, reconciling the funds received with disbursements made by type of funds received, and making necessary adjustments);

(2) To enable an institution of higher education to request online credit checks to determine the eligibility of a borrower for title IV, HEA Federal Direct PLUS Loans;

(3) To assist an institution of higher education, a software vendor, or a third-party servicer with questions about a title IV, HEA Federal grant or loan;

(4) To assist an institution of higher education with student loan default prevention; and

(5) To reconcile an institution of higher education's cash drawdowns from the U.S. Department of the Treasury with its reported disbursements and to ensure that the institution of higher education receives the appropriate amount of funds during the respective time period.

The information in this system is also maintained for the following purposes relating to the Department's oversight of title IV, HEA programs:

(1) To support the investigation of possible fraud and abuse and to detect and prevent fraud and abuse in the title IV, HEA Federal grant and loan programs;

(2) To confirm that an institution of higher education, or a program offered by an institution of higher education, is eligible to receive title IV, HEA program funds;

(3) To set and adjust program funding authorization levels for each institution;

(4) To enforce institutional compliance with Department reporting deadlines;

(5) To apply appropriate title IV, HEA funding controls; and

(6) To perform data analytics and reporting to inform and optimize the effectiveness of the Department's student financial assistance programs.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

This system contains records of individuals who apply for a Federal grant or loan under one of the programs authorized under title IV of the HEA, including, but not limited to the: (1) Federal Pell Grant Program; (2) Federal Perkins Loans Program; (3) ACG Program; (4) National SMART Grant Program; (5) TEACH Grant Program; (6) Iraq and Afghanistan Service Grant Program; (7) Direct Loan Program, which includes Federal Direct Stafford/Ford Loans, Federal Direct Unsubsidized Stafford/Ford Loans and Federal Direct PLUS Loans and Federal Direct Consolidation Loans; (8) FFEL Program; (9) FISL Program; (10) ALAS Program; (11) HPSL Program; and (12) the HEAL Program.

The COD System also contains records of individuals who are title IV recipients and are currently or were previously enrolled at an institution of higher education, and cohort default rates (CDR) by institution of higher education.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records in the COD System include, but are not limited to, the following data about individuals who apply for or receive a Federal grant or loan under one of the programs authorized under title IV of the HEA:

(1) Identifier information, including name, Social Security number (SSN), and date of birth (DOB);

(2) Demographic information, including address, email address, driver's license number, telephone number, citizenship status, dependency status, estimated family contribution, cost of attendance, postsecondary school identifier, Federal income tax information (tax return status, adjusted gross income, Internal Revenue Service exemptions, and tax year), family size, marital status, spousal identifiers, and enrollment information;

(3) Borrowers' loan(s) information including information about recipients of Direct Loan, FFEL program loans, Perkins Loans, and FISL program loans. This includes the period from the origination of the loan through final payment, and milestones, including, but not limited to: Cancellation, consolidation, discharge, or other final disposition including details such as loan amount, disbursements, balances, loan status, repayment plan and related information, collections, claims, deferments, forbearances, and refunds;

(4) Information about students receiving Federal grants, including recipients of Pell Grants, ACG, National SMART Grants, TEACH Grants, Iraq and Afghanistan Service Grants, and including grant amounts, grant awards, verification status, lifetime eligibility used (LEU), IASG eligible veteran's dependent indicator, Children of Fallen Heroes Scholarship eligibility indicator, and the Pell Grant over-award indicator;

(5) Direct Loan awards. This includes loan amounts and dates of disbursements;

(6) FFEL Loan program records including demographic and contact information from the guaranty agency that guarantees the borrower's FFEL loan(s) and the lender(s), holder(s), and servicer(s) of the borrower's loan(s);

(7) Pell Grant overpayment collection information;

(8) Direct Loan promissory notes including promissory note identification numbers, loan type, current servicer, principal balance, and the accrued interest of Direct Loans or Department-held FFEL Loans;

(9) TEACH Agreements to Serve;

(10) Promissory notes, Direct Loan Entrance Counseling forms, Federal Student Loan Exit Counseling forms, PLUS Loan Counseling forms, Direct PLUS Loan Requests, endorser addendums, and counseling in the Direct Loan and TEACH Grant programs, such as the date that applicant completed counseling;

(11) PLUS Loan credit report information;

(12) Applicant identifier information for an electronic request to repay a Direct Loan under an income-driven repayment plan and endorser/spouse information, such as the SSN, date that applicant completed the income-driven repayment plan application, and current loan balances;

(13) Electronic Direct Consolidation Loan borrower identifier information, such as the borrower's SSN, the date that borrower completed the Federal Direct Consolidation Loan application and promissory note, and current loan balances;

(14) Information concerning the date of any default on a loan;

(15) Demographic and contact information for borrower accounts that are assigned to the Federal Loan Servicer(s) for collection of the borrower's title IV, HEA loans.

The system also contains the following data about students provided by institutions of higher education that participate in an experiment under the Experimental Sites Initiative: award year, experiment number, Office of Postsecondary Education identification number (OPEID), student SSN, student last name, and any data collection instrument elements authorized under

the Information Collection Request associated with each experiment.

In addition to identifying and demographic information listed above the following data elements that are used to perform data analysis regarding improper payments: Internal Identifier (ID), Email Modified Date, Flag for Email Verified, Email Verified Date, Challenge Question/Answers (CQA), Password, Notes, Security universally unique identifier (UUID), Social Security Administration Match, Quarantined Status, Language Preference, Account Disabled by FSA, Account Disabled by User, PAS Suspect Activity Flag, Date CQA becomes unlocked, Keys for Verification, Short Message Service (SMS) Opted In Status, Flag for SMS Verified, SMS Verified Date, Date User Accepted Disclaimer, Event ID, Session ID, Event Type, User UUID, App ID, Referrer App ID, Uniform Resource Locator (URL), Referrer URL, Authentication Flag, Remote internet Protocol (IP) address, Client IP address, User Agent String, Timestamp, WebSEAL Version, UUID, Authorization Token, Challenge Question 1, Response 1, Challenge Question 2, Response 2, Challenge Question 3, Response 3, Challenge Question 4, Response 4, Challenge Question 5, Response 5, and Created Time.

The system also contains records on the level of study, CIP code (field of study), and published length of an educational program in which a student receiving title IV, HEA Federal student aid is enrolled to assist the Department in enforcing the limit on the borrower's eligibility for Direct Subsidized Loans to no more than 150 percent of the published length of the educational program in which the student is enrolled, and to determine the periods for which a borrower who enrolls after reaching the 150 percent limit will be responsible for the accruing interest on outstanding Direct Subsidized Loans.

The Appendix contains a detailed description of the data added to this system of records as a result of the exchanges of data within FSA.

RECORD SOURCE CATEGORIES:

This system includes records on individuals who have received title IV, HEA program assistance. These records include information provided by recipients of title IV, HEA program assistance, the parents of dependent recipients, spouses of applicants who request to repay a Direct Loan under an income-driven repayment plan, and from Federal Direct Consolidation Loan application forms and promissory notes. This system also includes Federal grant and Direct Loan origination and disbursement records provided to the Department by institutions of higher education or their agents. The system also receives completion information for Direct Loan and TEACH Grant program counseling through *StudentLoans.gov* (the student-facing portion of the website) or from institutions of higher education, or both.

The system also receives information on PLUS Loan applicants from credit reporting agencies.

The Central Processing System (CPS) (covered by the Department's Privacy Act of 1974, as amended (Privacy Act) system of records notice entitled ''Federal Student Aid Application File'' (18–11–01)) electronically sends the COD System the Demographic Data Exchange (DDE) file to validate all CPS-processed Free Application for Federal Student Aid (FAFSA) records with the Federal grant and Direct Loan disbursement data processed through the COD System.

The National Student Loan Data System (NSLDS) (covered by the Department's Privacy Act system of records notice entitled ''National Student Loan Data System'' (18–11–06)) electronically sends the COD System student aid data for the Special Direct Consolidation Loan borrowers, Financial Awareness Counseling, the income-driven repayment plan application processed through the COD System, the Federal Direct Loan Consolidation Loan application and promissory notes, and the data to perform analytics and reporting to inform and optimize the effectiveness of the Department's student financial assistance programs.

The Financial Management System (FMS) (covered by the Department's Privacy Act system of records notice entitled ''Financial Management System (FMS)'' (18–11–17)) sends the COD System funding information at the institutional level, refunds of cash, and reallocation information.

The Postsecondary Education Participants System (PEPS) (covered by the Department's Privacy Act system of records notice entitled ''Postsecondary Education Participants System (PEPS)'' (18–11–09)) sends the COD System school demographic information.

The Common Services for Borrowers system (CSB) (covered by the Privacy Act system of records notice entitled ''Common Services for Borrowers (CSB)'' (18–11–16)) sends the COD System discharge information, payments to servicer data, and payments on grant overpayments that are being serviced by FSA's Default Division.

The system may also obtain information from other persons or entities from which data is obtained under routine uses set forth below.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USES AND PURPOSES OF SUCH USES:

The Department may disclose information contained in a record in this system of records under the routine uses listed in this system of records without the consent of the individual if the disclosure is compatible with the purposes for which the record was collected. The Department may make these disclosures on a case-by-case basis or, if the Department has complied with the computer matching requirements of the Privacy Act, under a computer matching agreement.

(1) *Program Disclosures.* The Department may disclose records from the system of records for the following program purposes:

(a) To verify the identity of the recipient involved or the accuracy of the record, or to assist with the determination of program eligibility and benefits, the Department may disclose records to institutions of higher education, financial institutions, third-party servicers, and Federal, State, or local agencies;

(b) To store electronic data that supports the existence of a legal obligation to repay funds disbursed under title IV, HEA programs, including documentation such as promissory notes and other agreements, the Department may disclose records to institutions of higher education, third-party servicers, and Federal agencies;

(c) To identify whether an individual may have received a title IV, HEA Federal grant or loan at more than one institution of higher education for the same enrollment period in violation of title IV, HEA regulations, the Department may disclose records to institutions of higher education, third-party servicers, and Federal, State, or local agencies;

(d) To identify whether an individual may have exceeded the annual award limits under the title IV, HEA Federal grant or Direct Loan programs in violation of title IV, HEA regulations, the Department may disclose records to institutions of higher education, third-party servicers, and Federal agencies;

(e) To enable institutions of higher education to reconcile, on an aggregate and recipient-level basis, the amount of title IV, HEA Federal grant and Direct Loan funds that an institution received with the disbursements it made to, or on behalf of, eligible students (including reconciling verification codes,

reconciling the funds received with disbursements made by type of funds received, and making necessary corrections and adjustments), the Department may disclose records to institutions of higher education, third-party servicers, and Federal, State, or local agencies;

(f) To enable an institution of higher education to request online credit checks to determine the eligibility of applicants or borrowers for a title IV, HEA Federal Direct PLUS Loan, disclosures may be made to institutions of higher education, third-party servicers, credit reporting agencies, and Federal agencies;

(g) To assist individuals, institutions of higher education, third-party servicers, or software vendors with questions about a title IV, HEA Federal grant or loan, disclosures may be made to institutions of higher education, software vendors, third-party servicers, and Federal, State, or local agencies;

(h) To support the investigation of possible fraud and abuse and to detect and prevent fraud and abuse in title IV, HEA Federal grant and loan programs, disclosures may be made to institutions of higher education, third-party servicers, and Federal, State, or local agencies;

(i) To assist institutions of higher education with student loan default prevention, disclosures may be made to institutions of higher education as to whether a borrower or student has completed required counseling in the Direct Loan or TEACH Grant programs;

(j) To assist the Department in complying with requirements that limit eligibility for Direct Subsidized Loans to no more than 150 percent of the published length of the educational program in which the student is enrolled, and to determine when a borrower who enrolls after reaching the 150 percent limit will be responsible for the interest accruing on outstanding Direct Subsidized Loans thereafter, the Department may disclose records to guaranty agencies, educational institutions, financial institutions and servicers, and to Federal and State agencies; and

(k) To assist the Department in determining eligibility for a PLUS Loan, disclosures may be made to credit reporting agencies.

(2) *Congressional Member Disclosure.* The Department may disclose the records of an individual to a member of Congress or the member's staff when necessary to respond to an inquiry from the member made at the written request of that individual. The member's right to the information is no greater than the right of the individual who requested it.

(3) *Enforcement Disclosure.* If information in this system of records indicates, either on its face or in connection with other information, a violation or potential violation of any applicable statute, regulation, or order of a competent authority, the Department may disclose the relevant records to the appropriate agency, whether foreign, Federal, State, tribal, or local, charged with investigating or prosecuting that violation or charged with enforcing or implementing the statute, regulation, or order issued pursuant thereto.

(4) *Litigation and Alternative Dispute Resolution (ADR) Disclosure.*

(a) *Introduction.* In the event that one of the following parties listed in sub-paragraphs (i) through (v) is involved in judicial or administrative litigation or ADR, or has an interest in judicial or administrative litigation or ADR, the Department may disclose certain records from this system of records to the parties described in paragraphs (b), (c), and (d) of this routine use under the conditions specified in those paragraphs:

(i) The Department or any of its components;

(ii) Any Department employee in his or her official capacity;

(iii) Any Department employee in his or her individual capacity if the Department of Justice (DOJ) has been requested to or has agreed to provide or arrange for representation of the employee;

(iv) Any Department employee in his or her individual capacity when the Department has agreed to represent the employee;

(v) The United States when the Department determines that the litigation is likely to affect the Department or any of its components.

(b) *Disclosure to the DOJ.* If the Department determines that disclosure of certain records to the DOJ is relevant and necessary to judicial or administrative litigation or ADR, the Department may disclose those records as a routine use to the DOJ.

(c) *Adjudicative Disclosure.* If the Department determines that it is relevant and necessary to litigation or ADR to disclose certain records from this system of records to an adjudicative body before which the Department is authorized to appear or to a person or an entity designated by the Department or otherwise empowered to resolve or mediate disputes, the Department may disclose those records as a routine use to the adjudicative body, person, or entity.

(d) *Disclosure to Parties, Counsel, Representatives, and Witnesses.* If the Department determines that disclosure of certain records to a party, counsel, representative, or witness is relevant and necessary to the judicial or administrative litigation or ADR, the Department may disclose those records as a routine use to the party, counsel, representative, or witness.

(5) *Employment, Benefit, and Contracting Disclosure.*

(a) *For Decisions by the Department.* The Department may disclose information from this system of records to a Federal, State, or local agency, or to another public authority or professional organization, maintaining civil, criminal, or other relevant enforcement or other pertinent records, if necessary to obtain information relevant to a Department decision concerning the hiring or retention of an employee or other personnel action; the issuance of a security clearance; the letting of a contract; or the issuance of a license, grant, or other benefit.

(b) *For Decisions by Other Public Agencies and Professional Organizations.* The Department may disclose records to a Federal, State, local, or foreign agency or other public authority or professional organization, in connection with the hiring or retention of an employee or other personnel action; the issuance of a security clearance; the reporting of an investigation of an employee; the letting of a contract; or the issuance of a license, grant, or other benefit, to the extent that the record is relevant and necessary to the receiving entity's decision on the matter.

(6) *Employee Grievance, Complaint, or Conduct Disclosure.* If a record is relevant and necessary to a grievance, complaint, or disciplinary proceeding involving a present or former employee of the Department, the Department may disclose the record in the course of investigation, fact-finding, or adjudication to any party to the grievance, complaint, or action; to the party's counsel or representative; to a witness; or to a designated fact-finder, mediator, or other person designated to resolve issues or decide the matter. The disclosure may only be made during the course of investigation, fact-finding, or adjudication.

(7) *Labor Organization Disclosure.* The Department may disclose a record to an arbitrator to resolve disputes under a negotiated grievance procedure or to officials of a labor organization recognized under 5 U.S.C. chapter 71 when relevant and necessary to their duties of exclusive representation.

(8) *Freedom of Information Act (FOIA) and Privacy Act Advice Disclosure.* The Department may

disclose records to the DOJ or the Office of Management and Budget (OMB) if the Department concludes that disclosure is desirable or necessary in determining whether particular records are required to be disclosed under the FOIA or the Privacy Act.

(9) *Disclosure to the DOJ.* The Department may disclose records to the DOJ to the extent necessary for obtaining DOJ advice on any matter relevant to an audit, inspection, or other inquiry related to the programs covered by this system.

(10) *Contract Disclosure.* If the Department contracts with an entity to perform any function that requires disclosure of records in this system to employees of the contractor, the Department may disclose the records to those employees. As part of such a contract, the Department shall require the contractor to agree to establish and maintain safeguards to protect the security and confidentiality of the disclosed records.

(11) *Research Disclosure.* The Department may disclose records to a researcher if an appropriate official of the Department determines that the individual or organization to which the disclosure would be made is qualified to carry out specific research related to the functions or purposes of this system of records, provided that such disclosure and research is consistent with the uses and restrictions set forth in Sections 483(a)(3)(E), 485B(d)(2), and 485B(d)(5)(B) of the HEA, and the Family Educational Rights and Privacy Act, 20 U.S.C. 1232g and 34 CFR part 99. The Department may disclose records from this system of records to that researcher solely for the purpose of carrying out that research related to the functions or purposes of this system of records. The researcher shall be required to agree to establish and maintain safeguards to protect the security and confidentiality of the disclosed records.

(12) *Disclosure to OMB and the Congressional Budget Office (CBO) for Federal Credit Reform Act (CRA) Support.* The Department may disclose records to OMB and CBO as necessary to fulfill CRA requirements in accordance with 2 U.S.C. 661b.

(13) *Disclosure in the Course of Responding to a Breach of Data.* The Department may disclose records from this system of records to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that there has been a breach of the system of records; (b) the Department has determined that as a result of the suspected or confirmed breach, there is a risk of harm to individuals, the Department (including its information systems, programs, and operations), the Federal government, or national security; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

(14) *Disclosure in Assisting another Agency in Responding to a Breach of Data.* The Department may disclose records from this system to another Federal agency or Federal entity, when the Department determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (a) responding to a suspected or confirmed breach or (b) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Disclosures pursuant to 5 U.S.C. 552a(b)(12): The Department may disclose to a consumer reporting agency the following information regarding a valid, overdue claim of the Department: (1) The name, address, taxpayer identification number, and other information necessary to establish the identity of the individual responsible for the claim; (2) the amount, status, and history of the claim; and (3) the program under which the claim arose. The Department may disclose the information specified in this paragraph under 5 U.S.C. 552a(b)(12) and the procedures contained in 31 U.S.C. 3711(e). A consumer reporting agency to which these disclosures may be made is defined at 15 U.S.C. 1681a(f) and 31 U.S.C. 3701(a)(3).

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

The Department electronically stores, for the entire Federal Student Aid lifecycle from application through loan payoff, student demographic, and title IV, HEA aid data information such as, but not limited to, FFEL program, FISL program, and Perkins aid records, on hard disk at AWS Data Center in Seattle, Washington. The Department stores electronic master promissory notes, electronic Special Direct Consolidation Loan opportunity applications and promissory notes, electronic requests to repay a Direct Loan under an income-driven repayment plan, and Federal Direct Consolidation Loan applications and promissory notes on hard disk at the AWS Data Center in Seattle, Washington. Paper Direct Loan promissory notes and endorser addendums are stored in locked vaults in ASM Research in Niagara Falls, New York and at the NARA-operated Atlanta Federal Records Center near Atlanta, Georgia. Data obtained from the paper promissory notes are stored on hard disks at the AWS Data Center in Seattle, Washington. This data is referred to as metadata and is used by the system to link promissory notes to borrower data. The Department also creates and stores electronic images of the paper promissory notes at the ASM Research facility in Niagara Falls, New York. For information on the storage of other documents see paragraph entitled ''SYSTEM LOCATIONS''.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records in the COD System are retrieved by the individual's SSN or name, or by the institution's OPEID.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

All records are retained and disposed of in accordance with Department Records Schedule 072: FSA Application, Origination, and Disbursement Records (DAA–0441–2013–0002) (ED 072). ED 072 is being amended, pending approval by NARA. Records will not be destroyed until NARA-approved amendments to ED 072 are in effect, as applicable.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Physical access to the sites of the Department's contractors, where this system of records is maintained, is controlled and monitored by security personnel who check each individual entering the buildings for his or her employee or visitor badge.

In accordance with the Department's Administrative Communications System Directive OM: 5–101 entitled ''Contractor Employee Personnel Security Screenings,'' all contract and Department personnel who have facility access and system access must undergo a security clearance investigation. Individuals requiring access to Privacy Act data are required to hold, at a minimum, a moderate-risk security clearance level. These individuals are required to undergo periodic screening at five-year intervals.

In addition to undergoing security clearances, contract and Department employees are required to complete security awareness training on an annual basis. Annual security awareness

training is required to ensure that contract and Department users are appropriately trained in safeguarding Privacy Act data.

The computer system employed by the Department offers a high degree of resistance to tampering and circumvention. This security system limits data access to Department and contract staff on a ''need-to-know'' basis and controls individual users' ability to access and alter records within the system. All users of this system of records are given unique user identification. The Department's FSA Information Security and Privacy Policy require the enforcement of a complex password policy. In addition to the enforcement of the complex password policy, users are required to change their password at least every 90 days in accordance with the Department's information technology standards.

RECORD ACCESS PROCEDURES:

If you wish to gain access to a record in this system, contact the system manager at the address listed above. You must provide necessary particulars of your name, DOB, SSN, and any other identifying information requested by the Department while processing the request to distinguish between individuals with the same name. Requests by an individual for access to a record must meet the requirements in 34 CFR 5b.5.

CONTESTING RECORD PROCEDURES:

If you wish to contest the content of your personal record within the system of records, contact the system manager at the address listed above and provide your name, DOB, and SSN. Identify the specific items to be changed, and provide a written justification for the change. Requests to amend a record must meet the requirements in 34 CFR 5b.7.

NOTIFICATION PROCEDURES:

If you wish to determine whether a record exists regarding you in the system of records, contact the system manager at the address listed above. You must provide necessary particulars such as your name, DOB, SSN, and any other identifying information requested by the Department while processing the request to distinguish between individuals with the same name. Requests must meet the requirements in 34 CFR 5b.5.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

The most recent notice modifying the COD system of records was published in the **Federal Register** on September 27, 2010 (75 FR 59242–59246). The Department renamed the system of records entitled ''Recipient Financial Management System'' (RFMS) as the ''Common Origination and Disbursement (COD) System'' on September 27, 2010. The Department previously published the RFMS system of records notice on June 4, 1999 (64 FR 30106, 30161–30162).

Appendix to 18–11–02

The following is a detailed description of the data added to the COD system of records as a result of the exchanges of data within FSA:

The COD System receives applicant data from the Department's CPS system each time an application is processed or corrected. This process assesses student aid eligibility, updates financial aid history, and ensures compliance with title IV, HEA regulations. Some of these data appear on the applicant's Student Aid Report and the Institutional Student Information Record. Federal Perkins Loan data and FSEOG overpayment data are sent from postsecondary institutions or their third-party servicers. The Department's COD System obtains school demographic information from the PEPS system.

The COD System receives booking acknowledgements, discharge information, and payments to servicer data from Federal Loan Servicers.

The COD System receives payment information from the CSB system on title IV, HEA grant overpayments that are being serviced by FSA's Default Division. This payment information assesses student aid eligibility, updates financial aid history, and ensures compliance with title IV, HEA regulations.

The FMS system provides funding information at the institution level, refunds of cash, and reallocation information.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Agency Information Collection Extension

AGENCY: Energy Efficiency and Renewable Energy, U.S. Department of Energy.

ACTION: Notice and request for comments.

SUMMARY: The Department of Energy (DOE), pursuant to the Paperwork Reduction Act of 1995, intends to extend for three years an information collection request with the Office of Management and Budget (OMB).

DATES: Comments regarding this proposed information collection must be received on or before October 15, 2019. If you anticipate difficulty in submitting comments within that period, contact the person listed below as soon as possible.

ADDRESSES: Written comments may be sent to Mr. Chris Early, U.S. Department of Energy, Building Technologies Program, Mail Stop EE–5B, Forrestal Building, 1000 Independence Avenue SW, Washington, DC 20585–0121 or by fax at 202–287–1460 or by email to *Chris.Early@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Mr. Chris Early, U.S. Department of Energy, Building Technologies Program, Mail Stop EE–5B, Forrestal Building, 1000 Independence Avenue SW, Washington, DC 20585–0121,or by email at *Chris.Early@ee.doe.gov,* telephone: (202) 586–0514.

SUPPLEMENTARY INFORMATION: Comments are invited on: (a) Whether the extended collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

This information collection request contains: (1) *OMB No.:* 1910–5184 (2) *Information Collection Request Title:* Programs for Improving Energy Efficiency in Buildings; (3) *Type of Review:* Extension; (4) *Purpose:* The proposed collection will enable DOE to understand the universe of organizations participating in building energy load management programs including the following four voluntary programs: The Home Performance with ENERGY STAR Program, the Home Energy Score Program, the Better Buildings Residential Network, and the Zero Energy Ready Home Program. DOE encourages and assists the people and organizations that voluntarily participate in energy efficiency programs to build or renovate buildings for the purposes of improved efficiency, reliability, and affordability. The partners who voluntarily participate in the programs include: Home builders, building trades and building-related associations, home design professionals, home energy raters and auditors, home

inspectors, building consultants, manufacturers of building products, retailers, utility companies, financial institutions, non-profit organizations, educational institutions, energy program administrators and implementers, Home Performance with ENERGY STAR sponsors, state or local government energy offices or agencies, and other organizations that believe peer sharing will help them improve their effectiveness in encouraging effective energy upgrades. DOE proposes to continue to collect information such as names of program participants and names of organizations and addresses; estimates of how many homes they can get to participate in the programs, and information about building stock (no building owner information is collected) and load management strategies. The collected information helps DOE understand the participating partners' activities and progress toward achieving scheduled milestones enabling DOE to make decisions about the best way to respond to partners' needs to improve their operations and actions to lower energy consumption and improve affordability; (5) *Annual Estimated Number of Respondents:* 2037; (6) *Annual Estimated Number of Total Responses:* 92,824. (7) *Annual Estimated Number of Burden Hours:* 15,828. (8) *Annual Estimated Reporting and Recordkeeping Cost Burden:* zero dollars. DOE estimates that there are no additional costs to participants other than the costs associated with the burden hours.

Statutory Authority: The U.S. Code, Title 42, Chapter 149, Subchapter IX, Part A, Section 16191—Energy Efficiency.

Signed in Washington, DC, on August 7, 2019.

David Nemtzow,

Director, Building Technologies Office, Energy Efficiency and Renewable Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

High Energy Physics Advisory Panel

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of renewal.

SUMMARY: Pursuant to the Federal Advisory Committee Act, App. 2, and Code of Federal Regulations, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the High Energy Physics Advisory Panel (HEPAP) has been renewed for a two-year period.

The Committee will provide advice and recommendations to the Director, Office of Science (DOE), and the Assistant Director, Directorate for Mathematical and Physical Sciences (NSF), on scientific priorities within the field of basic high energy physics research.

Additionally, the Secretary of Energy has determined that renewal of the HEPAP is essential to conduct business of the Department of Energy and the National Science Foundation and is in the public interest in connection with the performance duties imposed by law upon the Department of Energy. The Committee will continue to operate in accordance with the provisions of the Federal Advisory Committee Act, the Department of Energy Organization Act (Pub. L. 95–91), and the rules and regulations in implementation of these acts.

FOR FURTHER INFORMATION CONTACT: Dr. John Kogut at (301) 903–1298, or email: *john.kogut@science.doe.gov.*

Signed in Washington, DC, on August 9, 2019.

Rachael J. Beitler,

Acting Committee Management Officer.

BILLING CODE 6560–50–P

FEDERAL MEDIATION AND CONCILIATION SERVICE

Labor-Management Relations Information Collection Requests

AGENCY: Federal Mediation and Conciliation Service.

ACTION: Submission for OMB review: 30-Day request for comments.

SUMMARY: The Federal Mediation and Conciliation Service (FMCS) hereby announces the submission of the following public information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments must be submitted on or before September 16, 2019.

ADDRESSES: Submit written comments to: Email: *oira_submissions@omb.eop.gov.* Please include the FMCS form number, the information collection title, and the OMB control number in the subject line of the message. Comments may also be sent to fax

number 202.395.5806 to the attention of Desk Officer for FMCS.

SUPPLEMENTARY INFORMATION: The information collection request is the Request for Arbitration Services (Agency Form F–43), OMB control number 3076–0016. No comments were received pursuant to FMCS's prior 60-day notice in the **Federal Register** on June 7, 2019. This information collection request was previously approved by OMB.

OMB is interested in comments on specific aspects of the collection. The OMB is particularly interested in comments that:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluates the accuracy of the agency's estimates of the burden of the proposed collection information;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collections of information on those who are to respond, including the use of appropriate automated, electronic collection technologies or other forms of information technology.

Burden: FMCS receives approximately 16,000 responses to the form Request for Arbitration Services (OMB No. 3076–0016).

Affected Entities: Employers and their representatives, and labor unions, their representatives and employees, who request arbitration services.

For additional information, see the related 60-day notice published in the **Federal Register** at 84 FR 26683 on June 7, 2019.

Dated: August 12, 2019.

Jeannette Walters-Marquez,

Deputy General Counsel.

BILLING CODE 6732–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the proposed information collection project ''Systematic Review Data Repository.''

This proposed information collection was previously published in the **Federal Register** on June 14, 2019 and allowed 60 days for public comment. There were no substantive comments received by AHRQ. The purpose of this notice is to allow an additional 30 days for public comment.

DATES: Comments on this notice must be received by 30 days after date of publication.

ADDRESSES: Written comments should be submitted to: AHRQ's OMB Desk Officer by fax at (202) 395–6974 (attention: AHRQ's desk officer) or by email at *OIRA_submission@omb.eop.gov* (attention: AHRQ's desk officer).

FOR FURTHER INFORMATION CONTACT: Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427–1477, or by email at *doris.lefkowitz@AHRQ.hhs.gov*.

SUPPLEMENTARY INFORMATION:

Proposed Project

Systematic Review Data Repository (SRDR)

In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501–3521, AHRQ invites the public to comment on this proposed information collection. In 1997, AHRQ launched an initiative to promote evidence-based practice in everyday care through establishment of the Evidence-based Practice Center (EPC) Program. Since then, the EPCs have been reviewing all relevant scientific literature on a wide spectrum of clinical and health services topics to produce various types of evidence reports. A majority of these evidence reports are systematic reviews (SRs), which are used as evidence bases for clinical practice guidelines, research agendas, healthcare coverage, and other health related policies. Performing SRs is costly in time, labor, and money. Moreover, there is an increasing expectation of quicker turnaround in producing SRs to accommodate the fast moving pace of innovations and new scientific discoveries in healthcare. Some SRs overlap or are replicated; independent teams of SR producers often extract data from the same studies, resulting in replication of work. Current methodology makes it difficult to harness and reuse previous work when updating SRs.

In an effort to reduce the economic burden of conducting SRs, the EPC Program undertook development of a collaborative, Web-based repository of systematic review data called the Systematic Review Data Repository (SRDR). This resource serves as both an archive and data extraction tool, shared among organizations and individuals producing SRs worldwide, enabling the creation of a central database of SR data. This database is collaboratively vetted, freely accessible, and integrates seamlessly with reviewers' existing workflows, with the ultimate goal of facilitating the efficient generation and update of evidence reviews, and thus speeding and improving policy-making with regard to health care. Currently, there are two versions of the database: (1) The original version called ''SRDR''; and (2) an upgraded version with increased functionality. Further upgrade of the database is planned for the next year (to be called ''SRDR 2.0''). The SRDR project encompass there various iterations of the database.

The SRDR project aims to achieve the following goals:

(1) Create online easy-to-use Web-based tools for conducting systematic reviews to facilitate extraction of data from primary studies;

(2) Develop an open-access searchable archive of key questions addressed in systematic reviews;

(3) Maintain a public repository of primary study data including provision of technical support for repository users; and

(4) Develop a process for making summary data from systematic reviews digitally shareable to end-users.

This study is being conducted by AHRQ through its contractor, Brown University, pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency, appropriateness and value of healthcare services, including database development. 42 U.S.C. 299a(a)(1) and (8).

Method of Collection

To achieve the goals of this project the following data collections will be implemented:

(1) Collect registration data and information on SRs from SR producers who will populate the SRDR system.

SRDR uses a three-tiered categorization of users and collection of registration data that depends on the type of user: (1) ''Contributors'' are SR producers who use SRDR as a tool to support production of the SR and share scientific data from their SRs. Registration data will be collected from these users; (2) ''Commentators''

provide comments (*i.e.,* opinions) on publicly available scientific data in SRDR. Registration data will be collected from these users; (3) ''General public'' users only view scientific data publicly available in SRDR. No data will be collected from these type of users.

All Contributors and Commentators will undergo a simple self-registration process by providing a username, password, email address, and institution. Collection of registration data from Contributors and Commentators is required due to the use of SRDR both as a database and as a tool for assisting in the production of a SR, including providing comments in the various sections of a particular project on SRDR. In addition, provision of an email address and institution information allows the administrators of SRDR to confirm that requests are being made by actual people and not potentially malicious software code such as bots and other cybersecurity threats.

Estimated Annual Respondent Burden

Exhibit 1 shows the estimated annualized burden hours for the respondents' time to participate in the SRDR. In 2017, 176 users registered as Commentators and 206 users registered as Contributors. Registration will take approximately 2 minutes per user. We thus calculate the total burden hours required for registration for all users annually is 12.73 hours.

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours
Registration of users as Commentators or Contributors	382	1	2/60	12.73
Total	382			12.73

Exhibit 2 shows the estimated cost burden associated with the respondents' time to participate in the SRDR. The total cost burden to respondents is estimated at an average of $501.82 annually.

EXHIBIT 2—ESTIMATED ANNUALIZED COST BURDEN

Form name	Number of respondents	Total burden hours	Average hourly wage rate *	Total cost burden
Registration of users as Commentators or Contributors	382	12.73	[a] $39.42	$501.82
Total	382	12.73		501.82

* National Compensation Survey: Occupational wages in the United States May 2018, ''U.S. Department of Labor, Bureau of Labor Statistics.'' Available at: *https://www.bls.gov/oes/current/oes290000.htm.*

[a] Based on the mean wages for Healthcare Practitioners and Technical Occupations, 29–0000.

Request for Comments

In accordance with the Paperwork Reduction Act, comments on AHRQ's information collection are requested with regard to any of the following: (a) Whether the proposed collection of information is necessary for the proper performance of AHRQ's health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in AHRQ's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Dated: August 13, 2019.

Virginia L. Mackay-Smith,

Associate Director.

[FR Doc. 2019–17652 Filed 8–15–19; 8:45 am]

BILLING CODE 4160–90–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Meeting of the Community Preventive Services Task Force (CPSTF)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: The Centers for Disease Control and Prevention within the Department of Health and Human Services announces the next meeting of the Community Preventive Services Task Force (CPSTF) on October 16–17, 2019, in Atlanta, Georgia.

DATES: The meeting will be held on Wednesday, October 16, 2019, from 8:30 a.m. to 6:00 p.m. EDT, and Thursday, October 17, 2019, from 8:30 a.m. to 1:00 p.m. EDT.

ADDRESSES: The CPSTF Meeting will be held at the CDC Edward R. Roybal Campus, Centers for Disease Control and Prevention Headquarters (Building 19), 1600 Clifton Road NE, Atlanta, GA 30329. You should be aware that the meeting location is in a Federal government building; therefore, Federal security measures are applicable. For additional information, please see Roybal Campus Security Guidelines under **SUPPLEMENTARY INFORMATION**. Information regarding meeting logistics will be available on the Community Guide website (*www.thecommunityguide.org*) closer to the date of the meeting.

FOR FURTHER INFORMATION CONTACT: Onslow Smith, Center for Surveillance, Epidemiology and Laboratory Services; Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–

E–69, Atlanta, GA 30329, phone: (404) 498–6778, email: *CPSTF@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Meeting Accessibility: This space-limited meeting is open to the public. All meeting attendees must register. To ensure completion of required security procedures and access to the CDC's Global Communications Center, *U.S. citizens intending to attend in person must register by October 11, 2019, and non-U.S. citizens intending to attend in person must register by September 11, 2019.* Failure to register by the dates identified could result in the inability to attend the CPSTF meeting in person.

Those unable to attend the meeting in person are able to do so via Webcast. CDC will send the Webcast URL to registrants upon receipt of their registration. *All meeting attendees must register by October 11, 2019 to receive the webcast information.* CDC will email webcast information from the *CPSTF@cdc.gov* mailbox.

To register for the meeting, whether to attend in person or via webcast, individuals should send an email to *CPSTF@cdc.gov* and include the following information: name, title, organization name, organization address, phone, email, and whether attending in person or via webcast.

Public Comment: A public comment period, limited to three minutes per person, will follow the CPSTF's discussion of each systematic review. Individuals wishing to make public comments must indicate their desire to do so with their registration by providing their name, organizational affiliation, and the topic to be addressed (if known). Public comments will become part of the meeting summary. Public comment is not possible via Webcast.

Background on the CPSTF: The CPSTF is an independent, nonfederal panel whose members are appointed by the CDC Director. CPSTF members represent a broad range of research, practice, and policy expertise in prevention, wellness, health promotion, and public health. The CPSTF was convened in 1996 by the Department of Health and Human Services (HHS) to identify community preventive programs, services, and policies that increase healthy longevity, save lives and dollars, and improve Americans' quality of life. CDC is mandated to provide ongoing administrative, research, and technical support for the operations of the CPSTF. During its meetings, the CPSTF considers the findings of systematic reviews on existing research and practice-based evidence and issues recommendations. CPSTF recommendations are not mandates for compliance or spending. Instead, they provide information about evidence-based options that decision makers and stakeholders can consider when they are determining what best meets the specific needs, preferences, available resources, and constraints of their jurisdictions and constituents. The CPSTF's recommendations, along with the systematic reviews of the evidence on which they are based, are compiled in the *The Community Guide.*

Matters proposed for discussion: Cancer Prevention and Control; Obesity Prevention and Control; Pregnancy Health; and Tobacco Cessation.

The agenda is subject to change without notice.

Roybal Campus Security Guidelines: The Edward R. Roybal Campus is the headquarters of the CDC and is located at 1600 Clifton Road NE, Atlanta, Georgia. The meeting is being held in a Federal government building; therefore, Federal security measures are applicable.

All meeting attendees must register by the dates outlined under *Meeting Accessability*. In planning your arrival time, please take into account the need to park and clear security. All visitors must enter the Edward R. Roybal Campus through the front entrance on Clifton Road. Vehicles may be searched, and the guard force will then direct visitors to the designated parking area. Upon arrival at the facility, visitors must present government-issued photo identification (*e.g.,* a valid federal identification badge, state driver's license, state non-driver's identification card, or passport). Non-United States citizens must complete the required security paperwork prior to the meeting date and must present a valid passport, visa, Permanent Resident Card, or other type of work authorization document upon arrival at the facility. Instructions for completing the required security paperwork will be provided after registration. All persons entering the building must pass through a metal detector. CDC Security personnel will issue a visitor's ID badge at the entrance to Building 19. Visitors may receive an escort to the meeting room. All items brought to HHS/CDC are subject to inspection.

Dated: August 13, 2019.

Sandra Cashman,

Executive Secretary, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10137 and CMS–10191]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by October 15, 2019.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number ____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' website address at website address at *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.html.*

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov.*

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10137 Title Solicitation for Applications for Medicare Prescription Drug Plan 2021 Contracts

CMS–10191 Medicare Parts C and D Program Audit Protocols and Data Requests

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Solicitation for Applications for Medicare Prescription Drug Plan 2021 Contracts; *Use:* Coverage for the prescription drug benefit is provided through contracted prescription drug plans (PDPs) or through Medicare Advantage (MA) plans that offer integrated prescription drug and health care coverage (MA–PD plans). Cost Plans that are regulated under Section 1876 of the Social Security Act, and Employer Group Waiver Plans (EGWP) may also provide a Part D benefit. Organizations wishing to provide services under the Prescription Drug Benefit Program must complete an application, negotiate rates, and receive final approval from CMS. Existing Part D Sponsors may also expand their contracted service area by completing the Service Area Expansion (SAE) application.

Collection of this information is mandated in Part D of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) in Subpart 3. The application requirements are codified in Subpart K of 42 CFR 423 entitled ''*Application Procedures and Contracts with PDP Sponsors.*''

The information will be collected under the solicitation of proposals from PDP, MA–PD, Cost Plan, Program of All Inclusive Care for the Elderly (PACE), and EGWP applicants. The collected information will be used by CMS to: (1) Ensure that applicants meet CMS requirements for offering Part D plans (including network adequacy, contracting requirements, and compliance program requirements, as described in the application), (2) support the determination of contract awards. *Form Number:* CMS–10137 (OMB control number: 0938–0936); *Frequency:* Yearly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 243; *Total Annual Responses:* 290; *Total Annual Hours:* 1,384.79. (For policy questions regarding this collection contact Arianne Spaccarelli at 410–786–5715.)

2. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Medicare Parts C and D Program Audit Protocols and Data Requests; *Use:* Under the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 and implementing regulations at 42 CFR parts 422 and 423, Medicare Part D plan sponsors and Medicare Advantage organizations are required to comply with all Medicare Parts C and D program requirements. CMS' annual audit plan ensures that we evaluate sponsoring organizations' compliance with these requirements. CMS program audits focus on high-risk areas that have the greatest potential for beneficiary harm. As such, CMS has developed several audit protocols that are included within the program area data request documents and that are posted to the CMS website each year for use by sponsoring organizations to prepare for their audit. As part of a robust audit process, CMS also requires sponsoring organizations who have been audited and found to have deficiencies to undergo a validation audit to ensure correction. The validation audit utilizes the same audit protocols, but only tests the elements where deficiencies were found, as opposed to re-administering the entire audit.

Currently CMS utilizes the following 5 protocols to audit sponsoring organization performance: Part D Formulary and Benefit Administration (FA); Coverage Determinations, Appeals, and Grievances (CDAG); Organization Determinations, Appeals, and Grievances (ODAG); Special Needs Model of Care (SNP–MOC) (only administered on organizations who operate SNPs); and, Compliance Program Effectiveness (CPE). The data collected is detailed in each of these protocols and the exact fields are located in the record layouts, at the end of each protocol. In addition, this collection request includes a pre-audit issue summary, three CPE questionnaires, one CPE organizational structure presentation template, one FA impact analysis template, two CDAG impact analysis templates, four OAG impact analysis templates, and three SNP–MOC impact analysis templates.

The information gathered during this audit will be used by the Medicare Parts C and D Oversight and Enforcement Group (MOEG) within the Center for Medicare (CM) and CMS Regional Offices to assess sponsoring organizations' compliance with Medicare program requirements. If outliers or other data anomalies are detected, Regional Offices will work in collaboration with (MOEG) and other divisions within CMS for follow-up and resolution. Additionally, MA and Part D organizations will receive the audit results and will be required to implement corrective action to correct any identified deficiencies. *Form Number:* CMS–10191 (OMB control number: 0938–1000); *Frequency:* Yearly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 201; *Total Annual Responses:* 207; *Total Annual Hours:* 17,525. (For policy questions regarding this collection contact Brenda Hudson at 303–844–7056.)

Dated: August 13, 2019.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Neurological Disorders and Stroke, Interagency Pain Research Coordinating Committee Call for Committee Membership Nominations

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The Department of Health and Human Services (HHS) (Department) has created the Interagency Pain Research Coordinating Committee (IPRCC) and is seeking nominations for this committee.

DATES: Nominations are due by COB September 23, 2019.

ADDRESSES: Nominations must be submitted through the webform on the IPRCC website: *https://iprcc.nih.gov/About/Membership-Agency-Representation/Nomination-Form.*

FOR FURTHER INFORMATION CONTACT: Linda Porter, *porterl@ninds.nih.gov* or 301–451–4460.

SUPPLEMENTARY INFORMATION: As specified in Public Law 111–148 (''Patient Protection and Affordable Care Act'') the Committee will:

(A) Develop a summary of advances in pain care research supported or conducted by the Federal agencies relevant to the diagnosis, prevention, and treatment of pain and diseases and disorders associated with pain;

(B) identify critical gaps in basic and clinical research on the symptoms and causes of pain;

(C) make recommendations to ensure that the activities of the National Institutes of Health and other Federal agencies are free of unnecessary duplication of effort;

(D) make recommendations on how best to disseminate information on pain care; and (e) make recommendations on how to expand partnerships between public entities and private entities to expand collaborative, cross-cutting research.

Membership on the committee will include six (6) non-Federal members from among scientists, physicians, and other health professionals and six (6) non-Federal members of the general public who are representatives of leading research, advocacy, and service organizations for individuals with pain-related conditions. Members will serve overlapping three year terms. It is anticipated that the committee will meet at least once a year.

The Department strives to ensure that the membership of HHS Federal advisory committees is fairly balanced in terms of points of view represented and the committee's function. Every effort is made to ensure that the views of diverse ethnic and racial groups and people with disabilities are represented on HHS Federal advisory committees, and the Department therefore, encourages nominations of qualified candidates from these groups. The Department also encourages geographic diversity in the composition of the Committee. Appointment to this Committee shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, disability, and cultural, religious, or socioeconomic status.

The Department is soliciting nominations for 1 non-federal member from among scientists, physicians, and other health professionals and for 3 non-federal members of the general public who represent a leading research, advocacy, or service organization for people with pain-related conditions. These candidates will be considered to fill positions opened through completion of current member terms. Nominations are due by COB September 23, 2019, using the IPRCC nomination webform: *https://iprcc.nih.gov/About/Membership-Agency-Representation/Nomination-Form.*

Dated: August 9, 2019.

Walter J. Koroshetz,

Director, National Institute of Neurological Disorders and Stroke, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2019–0002; Internal Agency Docket No. FEMA–B–1953]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain

management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

[FR Doc. 2019–17578 Filed 8–15–19; 8:45 am]

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2019–0002]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: New or modified Base (1-percent annual chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, and/or regulatory floodways (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities. The flood hazard determinations modified by each LOMR will be used to calculate flood insurance premium rates for new buildings and their contents.

DATES: Each LOMR was finalized as in the table below.

ADDRESSES: Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at *https://msc.fema.gov.*

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services

Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and 90 days have elapsed since that publication. The Deputy Associate Administrator for Insurance and Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard information is the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

This new or modified flood hazard information, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities.

This new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP and are used to calculate the appropriate flood insurance premium rates for new buildings, and for the contents in those buildings. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each community or online through the FEMA Map Service Center at *https://msc.fema.gov.*

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2019–0002; Internal Agency Docket No. FEMA–B–1954]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR

60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7011–N–33]

30-Day Notice of Proposed Information Collection: Service Coordinators in Multifamily Housing

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* September 16, 2019.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD has submitted to OMB a request for approval of the information collection described in Section A. The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on February 27, 2019 at 84 FR 6433.

A. Overview of Information Collection

Title of Information Collection: Service Coordinators in Multifamily Housing.

OMB Approval Number: 2502–0447.

Type of Request: Reinstatement with change, on a previously approved collection.

Form Number: HUD–91186, HUD–91186–A, HUD–50080–SCMF, HUD–2530, HUD–2880, SF–424, SF–424-Supp and SF–LLL.

Description of the need for the information and proposed use:

The collection of information is necessary to ensure efficient and proper use of funds for eligible activities. This information collection will assist HUD in better determining the need and eligibility when reviewing a new request for funding. Further, without this information, HUD staff cannot effectively assess the continued need for renewals. The information will also enable HUD and the grantees to more effectively evaluate their program performance, account for funds and maintain appropriate program records.

Grant funds are taken to pay costs previously incurred and are obtained through use of the electronic Line of Credit Control System (eLOCCS). Grantees are required to draw down from eLOCCS monthly or quarterly. Grantees will submit the revised form HUD–50080–SCMF on a semi-annual basis. Grantees will complete one worksheet per draw down. Each worksheet will list every expense incurred during that month or quarter. Grantees will be required to maintain detailed expense documentation in their files. HUD may request copies of such documentation if additional program review is warranted. The data reported will allow HUD staff to track expenses and drawdown of funds for eligible costs at intervals within the grant term.

Respondents: Multifamily Housing assisted housing owners.

Estimated Number of Respondents: 4,230.

Estimated Number of Responses: 9,420.

Frequency of Response: Quarterly to Annually.

Average Hours per Response: 1.5.

Total Estimated Burdens: 8,560.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: August 2, 2019.

Colette Pollard,

Department Reports Management Officer, Office of the Chief Information Officer.

[Docket No. FR–7011–N–35]

30-Day Notice of Proposed Information Collection: Enterprise Income Verification (EIV) Systems—Access Authorization Form and Rules of Behavior and User Agreement

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* September 16, 2019.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD has submitted to OMB a request for approval of the information collection described in Section A. The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on April 26, 2019 at 84 FR 17871.

A. Overview of Information Collection

Title of Information Collection: Enterprise Income Verification (EIV) Systems-Access Authorization Form and Rules of Behavior and User Agreement.

OMB Approval Number: 2577–0267.

Type of Request: Revision of currently approved collection.

Form Number: HUD 52676 and HUD 526761.

Description of the need for the information and proposed use:

In accordance with statutory requirements at 5 U.S.C. 552a, as amended (most commonly known as the Federal Privacy Act of 1974), the Department is required to account for all disclosures of information contained in a system of records. Specifically, the Department is required to keep an accurate accounting of the name and address of the person or agency to which the disclosure is made. The Enterprise Income Verification (EIV) System (HUD/PIH–5) is classified as a System of Records, as initially published on July 20, 2005, in the **Federal Register** at page 41780 (70 FR 41780), and as amended and published on September 1, 2009, in the **Federal Register** on page 45235 (74 FR 45235).

As a condition of granting access to the EIV system, each prospective user of the system must (1) request access to the system; (2) agree to comply with HUD's established rules of behavior; and (3) review and signify their understanding of their responsibilities of protecting data protected under the Federal Privacy Act (5 U.S.C. 522a, as amended). As such, the collection of information about the user and the type of system access required by the prospective user is required by HUD to: (1) Identify the user; (2) determine if the prospective user in fact requires access to the EIV system and in what capacity; (3) provide the prospective user with information related to the Rules of Behavior for system usage and the user's responsibilities to safeguard data accessed in the system once access is granted; and (4) obtain the signature of the prospective user to certify the user's understanding of the Rules of Behavior and responsibilities associated with his/her use of the EIV system.

HUD collects the following information from each prospective user: Public Housing Agency (PHA) code, organization name, organization address, prospective user's full name, HUD-assigned user ID, position title, office telephone number, facsimile number, type of work which involves the use of the EIV system, type of system action requested, requested access roles to be assigned to prospective user, public housing development numbers to be assigned to prospective PHA user, and prospective user's signature and date of request. The information is collected electronically and manually (for those who are unable to transmit electronically) via a PDF-fillable or Word-fillable document, which can be emailed, faxed or mailed to HUD. If this information is not collected, the Department will not be in compliance with the Federal Privacy Act and be subject to civil penalties.

Respondents: Business (mortgage lenders).

Estimated Number of Respondents: 13,192.

Estimated Number of Responses: 1.04.

Frequency of Response: 13,719.68.

Average Hours per Response: 0.78.

Total Estimated Burdens: 10,701.35.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: August 7, 2019.

Colette Pollard,

Department Reports Management Officer, Office of the Chief Information Officer.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R4–ES–2019–N097; FXES11140400000–190–FF04E00000]

Endangered Species; Recovery Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, have received applications for permits to conduct activities intended to enhance the propagation or survival of endangered species under the Endangered Species

Act of 1973, as amended. We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

DATES: We must receive written data or comments on the applications by September 16, 2019.

ADDRESSES: Reviewing Documents: Documents and other information submitted with the applications are available for review, subject to the requirements of the Privacy Act and Freedom of Information Act. Submit a request for a copy of such documents to Karen Marlowe (see **FOR FURTHER INFORMATION CONTACT**).

Submitting Comments: If you wish to comment, you may submit comments by one of the following methods:

- *U.S. mail or hand-delivery:* U.S. Fish and Wildlife Service Regional Office, Ecological Services, 1875 Century Boulevard, Atlanta, GA 30345 (Attn: Karen Marlowe, Permit Coordinator).
- *Email: permitsR4ES@fws.gov.* Please include your name and return address in your email message. If you do not receive a confirmation from the U.S. Fish and Wildlife Service that we have received your email message, contact us directly at the telephone number listed in **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFOMATION CONTACT: Karen Marlowe, Permit Coordinator, 404–679–7097 (telephone), *karen_marlowe@fws.gov* (email), or 404–679–7081 (fax). Individuals who are hearing or speech impaired may call the Federal Relay Service at 1–800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION: We invite review and comment from local, State, and Federal agencies and the public on applications we have received for permits to conduct certain activities with endangered and threatened species under section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), and our regulations in the Code of Federal Regulations (CFR) at 50 CFR part 17. With some exceptions, the ESA prohibits activities that constitute take of listed species unless a Federal permit is issued that allows such activities. The ESA's definition of ''take'' includes hunting, shooting, harming, wounding, or killing, and also such activities as pursuing, harassing, trapping, capturing, or collecting.

A recovery permit issued by us under section 10(a)(1)(A) of the ESA authorizes the permittee to conduct activities with endangered or threatened species for scientific purposes that promote recovery or for enhancement of propagation or survival of the species. These activities often include such prohibited actions as capture and collection. Our regulations implementing section 10(a)(1)(A) for these permits are found at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Permit Applications Available for Review and Comment

Proposed activities in the following permit requests are for the recovery and enhancement of propagation or survival of the species in the wild. The ESA requires that we invite public comment before issuing these permits. Accordingly, we invite local, State, Tribal, and Federal agencies and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Permit Application No.	Applicant	Species/numbers	Location	Activity	Type of take	Permit action
TE 011542–1	Conservation Fisheries, Inc., Knoxville, TN. DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2019–0082; FXIA16710900000–190–FF09A30000]

Foreign Endangered Species; Receipt of Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on applications to conduct certain activities with foreign species that are listed as endangered under the Endangered Species Act (ESA). With some exceptions, the ESA prohibits activities with listed species unless Federal authorization is issued that allows such activities. The ESA also requires that we invite public comment before issuing permits for any activity otherwise prohibited by the ESA with respect to any endangered species.

DATES: We must receive comments by September 16, 2019.

ADDRESSES: Obtaining Documents: The applications, application supporting materials, and any comments and other materials that we receive will be available for public inspection at *http://www.regulations.gov* in Docket No. FWS–HQ–IA–2019–0082.

Submitting Comments: When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. You may submit comments by one of the following methods:

- *Internet: http://www.regulations.gov.* Search for and submit comments on Docket No. FWS–HQ–IA–2019–0082.
- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2019–0082; U.S. Fish and Wildlife Service Headquarters, MS: PERMA; 5275 Leesburg Pike; Falls Church, VA 22041–3803.

For more information, see Public Comment Procedures under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, by phone at 703–358–2104, via email at *DMAFR@fws.gov,* or via the Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I comment on submitted applications?

We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

You may submit your comments and materials by one of the methods in **ADDRESSES**. We will not consider comments sent by email or fax, or to an address not in **ADDRESSES.** We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**).

When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. Provide sufficient information to allow us to authenticate any scientific or commercial data you include. The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) those that include citations to, and analyses of, the applicable laws and regulations.

B. May I review comments submitted by others?

You may view and comment on others' public comments at *http://*

www.regulations.gov, unless our allowing so would violate the Privacy Act (5 U.S.C. 552a) or Freedom of Information Act (5 U.S.C. 552).

C. Who will see my comments?

If you submit a comment at *http://www.regulations.gov,* your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, such as your address, phone number, or email address, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(c) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), we invite public comments on permit applications before final action is taken. With some exceptions, the ESA prohibits certain activities with listed species unless Federal authorization is issued that allows such activities. Permits issued under section 10(a)(1)(A) of the ESA allow otherwise prohibited activities for scientific purposes or to enhance the propagation or survival of the affected species. Service regulations regarding prohibited activities with endangered species, captive-bred wildlife registrations, and permits for any activity otherwise prohibited by the ESA with respect to any endangered species are available in title 50 of the Code of Federal Regulations in part 17.

III. Permit Applications

We invite comments on the following applications.

Applicant: U.S. Fish and Wildlife Service, Texas Coastal Ecological Services Field Office, Corpus Christi, TX; Permit No. 35574D

The applicant requests a permit to import 9 male and 2 female wild caught Kemp's ridley sea turtles (*Lepidochelys kempii*) from Cayman Turtle Centre: Island Wildlife Encounter, Grand Cayman, Cayman Islands for the purpose of enhancing the propagation or survival of the species. This notification is for a single import.

Applicant: Zoological Society of Philadelphia dba Philadelphia Zoo, Philadelphia, PA; Permit No. 43693D

The applicant requests a permit to export 2 male captive-born western lowland gorillas (*Gorilla gorilla gorilla*) from the Philadelphia Zoo in Philadelphia, PA to the Zoo de Granby in Quebec, Canada for the purpose of enhancing the propagation or survival of the species. This notification is for a single export.

Applicant: 4 J Conservation Center Inc., Dade City, FL; Permit No. 36848D

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for ring-tailed lemur (*Lemur catta*), black and white ruffed lemur (*Varecia variegata*), and red ruffed lemur (*Varecia rubra*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Smithsonian National Zoological Park, Washington, DC; Permit No. 46629D

The applicant requests a permit to export one male captive-born giant panda (*Ailuropoda melanoleuca*) to the China Conservation and Research Center for Giant Panda, Ya'an City, Sichuan, China, for the purpose of enhancing the propagation or survival of the species. This notification is for a single export.

Applicant: Zoo Foundation dba Alabama Gulf Coast Zoo, Gulf Shores, AL; Permit No. 25202B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g), to enhance the propagation or survival of the following species: black and white ruffed lemur (*Varecia variegata*), red ruffed lemur (*Varecia rubra*), ring-tailed lemur (*Lemur catta*), brown lemur (*Eulemur fulvus*), and leopard (*Panthera pardus*). This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Potter Park Zoo, Ingham County, Lansing, MI; Permit No. 15052D

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
Black rhinoceros	*Diceros bicornis.*
Golden lion tamarin	*Leontopithecus rosalia.*
Tiger	*Panthera tigris.*
Snow leopard	*Uncia uncia.*
Mandrill	*Mandrillus sphinx.*
Cottontop marmoset	*Saguinus oedipus.*

Applicant: John Seymour, Hunt, TX; Permit No. 13263B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for swamp deer (*Rucervus duvaucelii*) and Arabian oryx (*Oryx leucoryx*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Joann Holland, Indianapolis, IN; Permit No. 26837B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for golden parakeet (*Guarouba guarouba*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Nashville Zoo at Grassmere, Nashville, TN; Permit No. 95132C

On May 3, 2019, we published a **Federal Register** notice inviting the public to comment on an application for a captive-bred wildlife registration (84 FR 19103). The comment period closed on June 3, 2019. We are now reopening the comment period for this application, because our May 3, 2019, notice listed seven species, inadvertently omitting one species, the tiger (*Panthera tigris*). The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following eight species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
Baird's tapir	*Tapirus bairdii.*
Clouded leopard	*Neofelis nebulosi.*
Cotton-top tamarin	*Saguinus oedipus.*
Red-ruffed lemur	*Varecia rubra.*
Ring-tailed lemur	*Lemur catta.*
Siamang	*Symphalangus syndactylus.*
Northern white-cheeked gibbon.	*Nomascus leucogenys.*
Tiger	*Panthera tigris.*

Multiple Trophy Applicants

The following applicants request permits to import sport-hunted trophies of male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancing the propagation or survival of the species.

Applicant: James Lines, Colleyville, TX; Permit No. 40226D

Applicant: Robert Buker, Moore Haven, FL; Permit No. 41797D
Applicant: Steven Fetters, Saint Joe, IN; Permit No. 46627D
Applicant: Robert Anderson, Deer Island, OR; Permit No. 46994D
Applicant: Bernard McMasters, Belton, TX; Permit No. 46595D

IV. Next Steps

After the comment period closes, we will make decisions regarding permit issuance. If we issue permits to any of the applicants listed in this notice, we will publish a notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching *http://www.regulations.gov* for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to regulations.gov and search for ''12345A''.

V. Authority

We issue this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and its implementing regulations.

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

III. Permit Applications

We invite comments on the following applications.

Applicant: The Peregrine Fund, Inc., Boise, ID; Permit No. 065258

The applicant requests renewal of their import permit of biological samples derived from wild and captive-bred hawks, falcons, vultures, eagles, and owls (*Falconiformes* and *Strigiformes*) for the purpose of scientific research. This notification

covers activities to be conducted by the applicant over a 5-year period.

Applicant: Florida International University, North Miami, FL; Permit No. 04321D

The applicant requests a permit to import biological samples from Hawksbill turtle (*Eretmochelys imbricata*) from MADA Megafauna, Nosy Be, Madagascar, for the purpose of scientific research. This notification is for a single import.

Applicant: Elyse Ellsworth—University of Oklahoma, Norman, OK; Permit No. 40838D

The applicant requests a permit to import biological samples from wild Central American river turtles (*Dermatemys mawii*) from Belize for the purpose of scientific research. This notification is for a single import.

Applicant: Stephen Dunbar, Loma Linda, CA; Permit No. 42451D

The applicant requests a permit to import biological samples of Hawksbill sea turtle (*Eretmochelys imbricata*), green sea turtle (*Chelonia mydas*), loggerhead sea turtle (*Caretta caretta*), and olive ridley sea turtle (*Lepidochelys olivacea*) sea turtles from Casa Elwin, Roatan, Honduras, for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Lake Superior Zoo, Duluth, MN; Permit No. 03672A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for cotton-top marmoset (*Saguinus oedipus*) and ring-tailed lemur (*Lemur catta*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Busch Gardens, Tampa, FL; Permit No. 24014C

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for African penguin (*Spheniscus demersus*) and Komodo dragon (*Varanus komodoensis*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Craig Stanford, South Pasadena, CA; Permit No. 47036C

The applicant requests an amendment to a captive-bred wildlife registration under 50 CFR 17.21(g) for radiated tortoise (*Astrochelys radiata*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 4-year period.

Multiple Trophy Applicants

The following applicants request permits to import sport-hunted trophies of male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancing the propagation or survival of the species.

Applicant: Arthur Mikelsen, Snohomish, WA; Permit No. 43451D

Applicant: Anthony Osterkamp, San Clemente, CA; Permit No. 41616D

Applicant: Charles Welden, Birmingham, AL; Permit No. 45795D

IV. Next Steps

After the comment period closes, we will make decisions regarding permit issuance. If we issue permits to any of the applicants listed in this notice, we will publish a notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching *http://www.regulations.gov* for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to regulations.gov and search for ''12345A''.

V. Authority

We issue this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and its implementing regulations.

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–HQ–ES–2019–N033; FXES11130100000C4–190–FF02ENEH00]

Endangered and Threatened Wildlife and Plants; 28 Draft Recovery Plan Revisions for 53 Species in the Southeast, Mountain-Prairie, and Pacific Southwest Regions of the United States

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; correction.

SUMMARY: On August 6, 2019, we, the U.S. Fish and Wildlife Service, announced via a **Federal Register** notice the availability for public review and comment of 28 draft recovery plan revisions, which update recovery criteria for 53 endangered or threatened species located in 12 States (Alabama, Arizona, Arkansas, California, Florida, Georgia, Kentucky, Mississippi, Nevada, Oregon, Tennessee, and Utah) and the Commonwealth of Puerto Rico. Our notice inadvertently included an incorrect URL for the recovery plan revision for the Virgin River chub. In this notice, we correct the error.

SUPPLEMENTARY INFORMATION: On August 6, 2019, we, the U.S. Fish and Wildlife Service, announced via a **Federal Register** notice (84 FR 38284) the availability for public review and comment of 28 draft recovery plan revisions, which update recovery criteria for 53 endangered or threatened species located in 12 States (Alabama, Arizona, Arkansas, California, Florida, Georgia, Kentucky, Mississippi, Nevada, Oregon, Tennessee, and Utah) and the Commonwealth of Puerto Rico. Our **Federal Register** notice inadvertently included an incorrect URL for the recovery plan revision for the Virgin River chub. In this notice, we correct the error.

Correction

In the portion of the table on page 38286 of the published **Federal Register** notice, the first row under the subheading Mountain-Prairie Region (Colorado, Kansas, Montana, Nebraska, North Dakota, South Dakota, Utah, Wyoming) contains an entry for Virgin River chub (*Gila robusta seminuda*). The entry for the Virgin River chub is being republished to correct the URL address in the sixth column (the column header is internet availability of proposed recovery plan revision). The correct URL is *https://ecos.fws.gov/docs/recovery_plan/Virgin%20River%20chub%20recovery%20criteria_20181206_FINAL.pdf.* The corrected row in the table reads as follows.

Common name	Scientific name	Listing status [1]	Current range	Recovery plan name	Internet availability of proposed recovery plan revision	Contact person, phone, email	Contact person's U.S. mail address
Virgin River chub	*Gila robusta seminuda.*	E	AZ, NV, UT	Recovery Plan for the Virgin River Fishes.	*https://ecos.fws.gov/docs/recovery_plan/Virgin%20River%20chub%20recovery%20criteria_20181206_FINAL.pdf.*	Larry Crist, 801–975–3330, *utahfieldoffice_esa@fws.gov.*	Utah Ecological Services Field Office, 2369 West Orton Circle, Suite 50, West Valley City, UT 84119.

Authority

The authority for this action is section 4(f) of the Endangered Species Act (16 U.S.C. 1533 (f)).

Sara Prigan,

Federal Register Liaison, U.S. Fish and Wildlife Service.

BILLING CODE 4333–15–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1149]

Certain Semiconductor Devices, Integrated Circuits, and Consumer Products Containing the Same; Commission Determination Not To Review an Initial Determination Granting a Motion To Amend the Complaint and Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination (''ID'') (Order No. 24) issued by the presiding administrative law judge (''ALJ''), granting a motion to amend the complaint and notice of investigation.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–5468. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on April 3, 2019, based on a complaint filed by Innovative Foundry Technologies LLC of Portsmouth, New Hampshire (''IFT''). 84 FR 13065. The complaint, as supplemented, alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain semiconductor devices, integrated circuits, and consumer products containing the same by reason of infringement of certain claims of U.S. Patent Nos. 6,583,012; 6,797,572; 7,009,226; 7,880,236; and 9,373,548. *Id.* The Commission's notice of investigation named as respondents BBK Communication Technology Co., Ltd., of Dongguan, China; Vivo Mobile Communication Co., Ltd., of Dongguan, China; OnePlus Technology (Shenzhen) Co., Ltd., of Shenzhen, China; Guangdong OPPO Mobile Telecommunications Co., Ltd., of Dongguan, China; Hisense Electric Co., Ltd. of Quingdao, China; Hisense USA Corporation of Suwanee, Georgia; Hisense USA Multimedia R & D Center Inc. of Suwanee, Georgia; TCL Corporation of Huizhou City, China, TCL Communication, Inc. of Irvine, California, TTE Technology, Inc. (d/b/a TCL America) of Wilmington, Delaware, and TCT Mobile (US) Inc. of Irvine, California (collectively, the ''TCL Respondents''); VIZIO, Inc. of Irvine, California; MediaTek Inc. of Hsinchu City, Taiwan; MediaTek USA Inc. of San Jose, California; Mstar Semiconductor, Inc. of ChuPei City, Taiwan; Qualcomm Incorporated of San Diego, California; Qualcomm Technologies, Inc. of San Diego, California; Taiwan Semiconductor Manufacturing Company Limited of Hsinchu City, Taiwan; TSMC North America of San Jose, California; and TSMC Technology, Inc. of San Jose, California. *Id.* at 13066. The Office of Unfair Import Investigations (''OUII'') is participating in this investigation. *Id.*

On July 1, 2019, IFT moved to amend the complaint and notice of investigation to add two respondents: TCL Mobile Communication (HK) Co., Ltd., and Huizhou TCL Mobile Communication Co. Ltd. IFT stated that good cause exists to amend the complaint and notice of investigation because it recently learned through discovery the entities had a role in the production of the TCL Respondents' accused products. No party opposed the motion. On July 9, 2019, OUII filed a response in support of the motion.

On July 22, 2019, the ALJ, pursuant to Commission Rule 210.14(b) (19 CFR 210.14(b)), issued the subject ID, granting the motion to amend the complaint and notice of investigation. No petitions for review of the ID were received.

The Commission has determined not to review the subject ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 13, 2019.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1170]

Certain Mobile Devices With Multifunction Emulators; Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on July 12, 2019, under section 337 of the Tariff Act of 1930, as amended, on behalf of Dynamics Inc. of Cheswick, Pennsylvania. A supplement to the complaint was filed on July 15, 2019.

The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain mobile devices with multifunction emulators by reason of infringement of certain claims of U.S. Patent No. 8,827,153 (''the '153 patent''); U.S. Patent No. 10,032,100 (''the '100 patent''); U.S. Patent No. 10,223,631 (''the '631 patent''); and U.S. Patent No. 10,255,545 (''the '545 patent''). The complaint further alleges that an industry in the United States exists or is in the process of being established as required by the applicable Federal Statute.

The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Room 112, Washington, DC 20436, telephone (202) 205–2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Katherine Hiner, Office of Docket Services, U.S. International Trade Commission, telephone (202) 205–1802.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2018).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on August 8, 2019, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1 and 5–8 of the '153 patent; claims 1–20 of the '100 patent; claims 1–7, 9–13, 19, 21, and 22 of the '631 patent; and claims 1–16 of the '545 patent, and whether an industry in the United States exists or is in the process of being established as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is ''mobile phones and smartwatches;''

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainant is: Dynamics Inc., 492 Nixon Road, Cheswick, PA 15024.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Samsung Electronics Co., Ltd, 129, Samseong-Ro, Yoeongtong-Gu, Suwon, Gyeonggi 16677, Republic of Korea

Samsung Electronics America, Inc., 85 Challenger Road, Ridgefield Park, NJ 07660–2118

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

The Office of Unfair Import Investigations will not participate as a party in this investigation.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), such responses will be considered by the Commission if received not later than 20 days after the date of service by the Commission of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 12, 2019.

Lisa Barton,

Secretary to the Commission.

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1012]

Certain Magnetic Data Storage Tapes and Cartridges Containing the Same Notice of Commission Determination To Rescind Remedial Orders; Termination of Enforcement Proceeding

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''Commission'') has determined to rescind the limited exclusion order and cease and desist orders issued in the above-captioned investigation and to terminate the enforcement proceeding.

FOR FURTHER INFORMATION CONTACT: Ron Traud, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–3427. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by

contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted the original investigation on July 1, 2016, based on a complaint filed by Fujifilm Corporation of Tokyo, Japan and Fujifilm Recording Media U.S.A., Inc. of Bedford, Massachusetts (collectively, ''Fujifilm''). 81 FR 43243 (July 1, 2016). The complaint alleged violations of 19 U.S.C. 1337, as amended (''Section 337''), through the importation into the United States, sale for importation, or sale within the United States after importation of certain magnetic data storage tapes and tape cartridges containing same that allegedly infringe certain asserted claims of U.S. Patent Nos. 6,641,891 (''the '891 patent''), 6,767,612 (''the '612 patent''), 6,703,106 (''the '106 patent''), 8,236,434 (''the '434 patent''), and 7,355,805 (''the '805 patent''). *Id.* The Commission's notice of investigation named Sony Corporation of Tokyo, Japan; Sony Corporation of America of New York, New York; and Sony Electronics Inc. of San Diego, California (collectively, ''Sony'') as respondents. *Id.* The Office of Unfair Import Investigations (''OUII'') was also named as a party to the investigation.

On March 14, 2018, the Commission determined that a violation of Section 337 occurred with respect to the '891 patent but not the '612, '106, '434, or '805 patents. 83 FR 11245 (March 14, 2018). The Commission issued a limited exclusion order and cease and desist orders against the Sony respondents, but exempted magnetic data storage tapes and tape cartridges that are imported or used for the purpose of fulfilling Sony's warranty, service, repair, or compliance verification obligations. *Id.; see also* Comm'n Opinion (March 8, 2018).

On June 13, 2018, the Commission instituted an enforcement proceeding and named the original three Sony entities as respondents, in addition to Sony Storage Media Solutions Corporation of Tokyo, Japan; Sony Storage Media Manufacturing Corporation of Miyagi, Japan; Sony DADC US Inc. of Terre Haute, Indiana; and Sony Latin America Inc. of Miami, Florida (collectively, ''the Sony Respondents''). 83 FR 27626 (June 13, 2018). OUII was also named as a party. *Id.*

While the enforcement proceeding was ongoing, the Sony Respondents filed a request for an advisory opinion and petition for modification of the remedial orders to clarify that certain of its redesigned tape products are outside the scope of the remedial orders. *See* 83 FR 42690 (Aug. 23, 2018). The Commission instituted the modification proceeding on August 23, 2018, and consolidated it with the enforcement proceeding. *Id.* The Commission, however, subsequently terminated the modification proceeding that had been consolidated with the enforcement proceeding on a motion filed by the Sony Respondents. 83 FR 58594 (Nov. 20, 2018).

On July 3, 2019, the presiding administrative law judge (''ALJ'') issued an initial determination in the enforcement proceeding (''EID''), finding that the Sony Respondents violated the cease and desist orders and recommending a civil penalty of $210,134 as the appropriate enforcement measure. EID at 1, 60–61.

The Sony Respondents filed a petition to review the EID on July 15, 2019. On July 17, 2019, however, the parties filed a joint motion for an extension of time to file a response to the Sony Respondents' petition in order to accommodate the parties' settlement discussions.

On July 25, 2019, Fujifilm and the Sony Respondents filed a joint petition to rescind the remedial orders and a joint motion to terminate the enforcement proceeding due to their settlement agreement and patent cross-license. *See* 19 U.S.C. 1337(k); 19 CFR 210.21(b), 210.76(a). On August 1, 2019, OUII filed a response in support of the parties' joint petition to rescind the remedial orders and their joint motion to terminate the enforcement proceeding.

The Commission, having reviewed the parties' joint petition and other materials, has determined to grant the parties' petition and motion, rescind the limited exclusion order and cease and desist orders issued in the underlying investigation, and terminate the enforcement proceeding.

The authority for the Commission's determination is contained in Section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 13, 2019.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 4410–11–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Peter John Ulbrich, M.D.; Decision and Order

On March 4, 2019, the Assistant Administrator, Diversion Control Division, Drug Enforcement Administration (hereinafter, Government), issued an Order to Show Cause to Peter John Ulbrich, M.D., (hereinafter, Registrant), of Peachtree City, Georgia. Order to Show Cause (hereinafter, OSC), at 1. The OSC proposes the revocation of Registrant's Certificate of Registration No. FU2662523 on the ground that Registrant does ''not have authority to handle controlled substances in Georgia, the state in which [Registrant is] registered with the DEA.'' *Id.* (citing 21 U.S.C. 823(f) and 824(a)(3)).

Specifically, the OSC alleges that the Georgia Composite Medical Board (hereinafter, Board) issued an Initial Decision indefinitely suspending Registrant's medical license on February 9, 2018. *Id.* at 1.

The OSC notified Registrant of the right to request a hearing on the allegations or to submit a written statement, while waiving the right to a hearing, the procedures for electing each option, and the consequences for failing to elect either option. *Id.* at 2 (citing 21 CFR 1301.43). The OSC also notified Registrant of the opportunity to submit a corrective action plan. OSC, at 2–3 (citing 21 U.S.C. 824(c)(2)(C)).

Adequacy of Service

In a Declaration dated June 24, 2019, a Diversion Investigator (hereinafter, DI) assigned to the Atlanta Division Office stated that on May 7, 2019, he and another DI met with Registrant at an agreed location and he personally served him with the OSC. Government's Request for Final Agency Action (hereinafter, RFAA), GX 10 (Declaration of the Diversion Investigator (hereinafter DI's Declaration)), at 2–3. Registrant signed a DEA Form 12, Receipt for Cash or Other Items, to acknowledge his receipt of the Show Cause Order. *Id.* at 3; *see also* GX 6.

In its RFAA, the Government represents that ''more than [thirty] days have passed since Registrant received the [OSC]; however, Registrant has not submitted to DEA a request for a hearing . . . nor has he corresponded in writing or otherwise'' regarding a hearing. RFAA at 2. The Government requests the issuance of a revocation order on the basis that ''Registrant has waived his opportunity for a hearing'' and his registration should be revoked pursuant to 21 U.S.C. 802(21), 823(f) and 824(a)(3). *Id.* at 2.

Based on the DI's Declaration, the Government's written representations, and my review of the record, I find that the Government accomplished service of the OSC on Registrant on May 7, 2019. I also find that more than thirty days have now passed since the Government accomplished service of the OSC. Further, based on the Government's written representations, I find that neither Registrant, nor anyone purporting to represent the Registrant, requested a hearing, submitted a written statement while waiving Registrant's right to a hearing, or submitted a corrective action plan. Accordingly, I find that Registrant has waived the right to a hearing and the right to submit a written statement and corrective action plan. 21 CFR 1301.43(d) and 21 U.S.C. 824(c)(2)(C).

I, therefore, issue this Decision and Order based on the record submitted by the Government, which constitutes the entire record before me. 21 CFR 1301.43(e).

Findings of Fact

Registrant's DEA Registration

Registrant is the holder of DEA Certificate of Registration No. FU2662523 at the registered address of Cosmedical, 401 Highway 74 North, Peachtree City, Georgia 30269. RFAA, GX 1 (Facsimile of Registrant's DEA Certificate of Registration); GX 2 (Certification of Registration Status). Pursuant to this registration, Registrant is authorized to dispense controlled substances in schedules II through V as a practitioner. *Id.* Registrant's registration expires on May 31, 2020, and is ''in an active pending status.'' GX 2 (Certification of Registration Status) at 1.

The Status of Registrant's State License

On May 17, 2018, the Georgia Composite Medical Board (hereinafter, Board) issued a Final Decision and Order (hereinafter, Order) indefinitely suspending [Registrant's] license to practice medicine in the State of Georgia, effective on that date. RFAA, GX 4 (Order), at 2. The Order provided that after two years the ''[Registrant] may request his suspension be lifted following treatment by a Board-approved physician and advocacy from a physician.'' *Id.* The Order upheld an Initial Decision (hereinafter, Initial Decision) issued after a hearing by a state administrative law judge (hereinafter, ALJ) on February 9, 2018. The ALJ's Initial Decision found that, based on unrebutted expert testimony, ''[Registrant's] history of sexual misconduct, receipt of intensive inpatient and outpatient treatment, 'relapse' behaviors, lack of transparency, poor insight and judgment demonstrates that, without further treatment, he cannot practice with reasonable skill and safety.'' *Id.* at 18. Therefore, the ALJ recommended Registrant's ''license to practice medicine in the State of Georgia be indefinitely suspended until [Registrant] undergoes any treatment ordered by the Board and it is determined that he can practice with reasonable skill and safety.'' RFAA, GX 3 (Initial Decision), at 19.

According to the website of the Georgia Composite Medical Board, of which I take official notice, Registrant's license is still indefinitely suspended. *https://gcmb.mylicense.com/verification/* (last visited August 5, 2019).[1] The State of Georgia online records show that Registrant's medical license remains suspended and that Registrant is not authorized in the State of Georgia to prescribe controlled substances. *Id.*

Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General is authorized to suspend or revoke a registration issued under section 823 of the Controlled Substances Act (hereinafter, CSA), ''upon a finding that the registrant . . . has had his State license or registration suspended . . . [or] revoked . . . by competent State authority and is no longer authorized by State law to engage

[1] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979). Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' Accordingly, Registrant may dispute my finding by filing a properly supported motion for reconsideration within 15 calendar days of the date of this Order. Any such motion shall be filed with the Office of the Administrator and a copy shall be served on the Government. In the event Registrant files a motion, the Government shall have 15 calendar days to file a response.

in the . . . dispensing of controlled substances.'' With respect to a practitioner, the DEA has also long held that the possession of authority to dispense controlled substances under the laws of the State in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371 (2011), *pet. for rev. denied,* 481 Fed. Appx. 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).

This rule derives from the text of two provisions of the CSA. First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . ., to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(f). Because Congress has clearly mandated that a practitioner possess State authority in order to be deemed a practitioner under the CSA, the DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the State in which he practices. *See, e.g., Hooper, supra,* 76 FR at 71,371–72; *Sheran Arden Yeates, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Blanton, supra,* 43 FR at 27,617.

The Georgia Controlled Substances Act requires that ''every person who manufactures, distributes, or dispenses any controlled substances within this state or who proposes to engage in the manufacture, distribution, or dispensing of any controlled substance within this state must obtain annually a registration issued by the State Board of Pharmacy in accordance with its rules.'' Ga. Code Ann. § 16–13–35(a) (West 1982). The Act exempts from separate controlled substance registration requirements, ''persons licensed as a physician, dentist, or veterinarian under the laws of the state to use, mix, prepare, dispense, prescribe, and administer drugs in connection with medical treatment to the extent provided by the laws of this state.'' *Id.* at 16–13–35(g)(2).

According to the Medical Practice Act of the State of Georgia, the definition of a ''physician'' is a ''person licensed to practice medicine under this article,'' and the definition of ''to practice medicine'' is ''to hold oneself out to the public as being engaged in the diagnosis or treatment of disease, defects, or injuries of human beings; or the suggestion, recommendation, or prescribing of any form of treatment for the intended palliation, relief, or cure of any physical, mental, or functional ailment or defect of any person.'' Ga. Code Ann. §§ 43–34–21(2), (3) (West 1981).

Here, the undisputed evidence in the record is that Registrant currently lacks authority to practice medicine in Georgia. As already discussed, a person must be registered to dispense a controlled substance in Georgia, unless he is licensed as a physician. Thus, because Registrant is no longer a licensed physician in Georgia and, therefore, is no longer registered to or authorized to dispense controlled substances in Georgia, I will order that Registrant's DEA registration be revoked.

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. FU2662523 issued to Peter John Ulbrich, M.D. This Order is effective September 16, 2019.

Dated: August 2, 2019.

Uttam Dhillon,

Acting Administrator.

[FR Doc. 2019–17621 Filed 8–15–19; 8:45 am]

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Brent E. Silvers, M.D.; Decision and Order

On May 9, 2019, the Assistant Administrator, Diversion Control Division, Drug Enforcement Administration (hereinafter, DEA or Government), issued an Order to Show Cause to Brent E. Silvers, M.D. (hereinafter, Registrant) of Irvine, California. Order to Show Cause (hereinafter, OSC), at 1. The OSC proposed the revocation of Registrant's Certificate of Registration No. BS2811392 on the ground that Registrant ''is without authority to handle controlled substances in the State of California, the state in which [Registrant is] registered with the DEA.'' *Id.* at 1–2 (citing 21 U.S.C. 824(a)(3)).

Specifically, the OSC alleged that on January 11, 2019, the Medical Board of California (hereinafter, Board) issued a Decision revoking Registrant's California medical license, effective February 8, 2019. *Id.*

The OSC notified Registrant of the right to request a hearing on the allegations or to submit a written statement while waiving the right to a hearing, the procedures for electing each option, and the consequences for failing to elect either option. *Id.,* at 2 (citing 21 CFR 1301.43). The OSC also notified Registrant of the opportunity to submit a corrective action plan. *Id.* at 2–3 (citing 21 U.S.C. 824(c)(2)(C)).

Adequacy of Service

In a Declaration dated June 19, 2019, a Diversion Investigator (hereinafter, DI) assigned to the Riverside District office, Los Angeles Field Division, stated that he and another DI traveled to Registrant's registered address located at 2 Hughes, Suite 150, Irvine, California 92618 on May 10, 2019. Request for Final Agency Action dated July 10, 2019 (hereinafter, RFAA), Government Exhibit (hereinafter, GX) GX 4 (DI's Declaration). The DI stated that upon arrival at the registered address, ''Registrant identified himself . . . as Dr. Silvers'' to the DIs. *Id.* The DI then ''personally served the [OSC] on Registrant by handing it to him.''. Registrant signed a DEA Form 12, Receipt for Cash or Other Items, to acknowledge his receipt of the Show Cause Order. *Id.; see also* GX 4B.

In its RFAA, the Government represents that ''at least [thirty] days have passed since the time the [OSC] was served on Registrant'' and he ''has not requested a hearing and has not otherwise corresponded or communicated with DEA.'' RFAA, at 1. The Government requests that ''Registrant's DEA Registration [ ] be revoked based on 21 U.S.C. 824(a)(3) because Registrant has no valid medical license in California . . . [and] is without state authority to handle controlled substances in California.'' *Id.* at 2–3.

Based on the DI's Declaration, the Government's written representations, and my review of the record, I find that the Government accomplished service of the OSC on Registrant on May 10, 2019. I also find that more than thirty days have now passed since the Government accomplished service of the OSC. Further, based on the Government's written representations, I find that neither Registrant, nor anyone purporting to represent the Registrant, requested a hearing, submitted a written statement while waiving Registrant's

right to a hearing, or submitted a corrective action plan. Accordingly, I find that Registrant has waived the right to a hearing and the right to submit a written statement and corrective action plan. 21 CFR 1301.43(d) and 21 U.S.C. 824(c)(2)(C). I, therefore, issue this Decision and Order based on the record submitted by the Government, which constitutes the entire record before me. 21 CFR 1301.43(e).

Findings of Fact

Registrant's DEA Registration

Registrant is the holder of DEA Certificate of Registration No. BS2811392 at the registered address of 2 Hughes, Suite 150, Irvine, California 92618. GX 1 (Certification of Registration Status). Pursuant to this registration, Registrant is authorized to dispense controlled substances in schedules II through V as a practitioner. *Id.* Registrant's registration expires on February 28, 2021, and is ''in an active pending status.'' *Id.*

The Status of Registrant's State License

On January 11, 2019, the Medical Board of California (hereinafter, Board) issued a Decision and Order (hereinafter, Order) revoking Registrant's medical license, effective February 8, 2019. GX 3 (Order). The Board's Order adopted the Proposed Decision of a state Administrative Law Judge (ALJ) following a lengthy hearing resulting from Accusations brought by the Board against Registrant. GX 3 (ALJ Proposed Decision), at 1. According to the ALJ's Proposed Decision, the Board initiated an investigation into Registrant's medical practice after receiving anonymous complaints in February and March 2016 and a consumer complaint in July 2017, which was accompanied by a copy of a Complaint for Medical Negligence filed in the Superior Court of California. *Id.* at 2. On September 26, 2017, the Board issued an ''Interim Suspension Order No Practice'' against Registrant, which was upheld on October 27, 2017. *Id.* On April 26, 2018, the Board filed its First Amended Accusation against Registrant and it filed its Second Amended Accusation on November 16, 2018. *Id.* The ALJ affirmed the Board's Second Amended Accusation on December 28, 2018, and issued the Proposed Decision revoking Registrant's California Physician's and Surgeon's Certificate. *Id.* at 17.

The ALJ found that Registrant ''has complied with the terms of the Interim Suspension Order and he has tested negative for alcohol in random testing.'' *Id.* at 2. However, the ALJ ultimately found that ''clear and convincing evidence established that [Registrant] has a mild cognitive disorder and severe alcohol use disorder,'' which ''is adversely affecting [his] memory and judgment'' and that his ''ability to practice medicine safely is impaired because a mental or physical illness [is] affecting his competency.'' *Id.* at 13. He further found that ''clear and convincing evidence'' established that Registrant engaged in ''unprofessional conduct based on gross negligence or repeated acts of negligence'' and ''unprofessional conduct by engaging in acts of sexual misconduct.'' *Id.* at 14, 15. He concluded that ''[p]ublic protection is best served by revocation of [Registrant's] license.'' *Id.* at 17. The Board adopted the ALJ's Proposed Decision and ordered that revocation become effective on February 8, 2019. GX 3 (Order).

According to the website of the California Department of Consumer Affairs, of which I take official notice, Registrant's license is still revoked.[1] *https://search.dca.ca.gov/details/8002/A/49201/cdbaeea6d15fdfd3a0d8a46e76dde3f9* (last visited July 19, 2019).

Accordingly, I find that Registrant currently is not licensed to engage in the practice of medicine in California, the State in which he is registered with the DEA.

Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General is authorized to suspend or revoke a registration issued under section 823 of the Controlled Substances Act (hereinafter, CSA), ''upon a finding that the registrant . . . has had his State license or registration suspended . . . [or] revoked . . . by competent State authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances.'' With respect to a practitioner, the DEA has also long held that the possession of authority to dispense controlled substances under the laws of the State in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371 (2011), *pet. for rev. denied,* 481 Fed. Appx. 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).

This rule derives from the text of two provisions of the CSA. First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . ., to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(f). Because Congress has clearly mandated that a practitioner possess State authority in order to be deemed a practitioner under the CSA, the DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the State in which he practices. *See, e.g., Hooper, supra,* 76 FR at 71,371–72; *Sheran Arden Yeates, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Blanton, supra,* 43 FR at 27,617.

According to the California Uniform Controlled Substances Act, ''No person other than a physician . . . shall write or issue a prescription.'' Cal. Health & Safety Code § 11150 (West, Westlaw current with urgency legislation through Ch. 5 of 2019 Reg. Sess.). Further, ''physician,'' as defined by California statute, is a person who is ''licensed to practice'' in California. Cal. Health & Safety Code § 11024 (West, Westlaw current with urgency legislation through Ch. 5 of 2019 Reg. Sess.).

Here, the undisputed evidence in the record is that Registrant currently lacks authority to practice medicine in California. As already discussed, a physician must be a licensed practitioner to dispense a controlled substance in California. Thus, because Registrant lacks authority to practice medicine in California and, therefore, is not authorized to handle controlled substances in California, I will order

[1] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979). Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' Accordingly, Registrant may dispute my finding by filing a properly supported motion for reconsideration within 15 calendar days of the date of this Order. Any such motion shall be filed with the Office of the Administrator and a copy shall be served on the Government. In the event Registrant files a motion, the Government shall have 15 calendar days to file a response.

that Registrant's DEA registration be revoked.

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. BS2811392 issued to Brent E. Silvers, M.D. Further, I hereby deny any pending application of Brent E. Silvers, M.D. to renew or modify this registration, as well as any pending application of Brent E. Silvers, M.D. for registration in California. This Order is effective September 16, 2019.

Dated: August 2, 2019.

Uttam Dhillon,

Acting Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

[OMB Number 1110-New]

Agency Information Collection Activities; Proposed eCollection eComments Requested; New Collection; Background Investigation Medical Release Forms

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice, Federal Bureau of Investigation, is submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: The Department of Justice encourages public comment and will accept input until September 16, 2019.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Gabrielle Fournet, Unit Chief, Federal Bureau of Investigation, 935 Pennsylvania Avenue NW, Washington, DC, *HQ-Div11-OGA1@FBI.gov,* 202–651–2906.

Written comments and/or suggestions can also be sent to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

➢ Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Federal Bureau of Investigation, including whether the information will have practical utility;

➢ Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

➢ Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

➢ Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* New Collection.

2. *The Title of the Form/Collection:* Background Investigation Medical Release Forms.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* FD–1152 and FD–1153. The applicable component within the Department of Justice is the Federal Bureau of Investigation.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* This form is needed for obtaining medical information for non FBI personnel, for which the FBI has been requested to obtain medical release information. For instance, when the FBI has been requested to conduct background investigations on non-FBI employees applying for positions with other government agencies, sometimes medical information must be obtained. When it occurs, the non-FBI employee applying for the position is asked to complete the medical release form so the FBI has the authority to seek the medical information.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that not more than 50 people would need to complete this form in a year. It should only take each person about 15 minutes to complete the form.

6. *An estimate of the total public burden (in hours) associated with the collection:* There is an estimated 12.5 total annual burden hours associated with this collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E.405A, Washington, DC 20530.

Dated: August 13, 2019.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2019–17613 Filed 8–15–19; 8:45 am]

BILLING CODE 4410–02–P

DEPARTMENT OF JUSTICE

[CPCLO Order No. 004–2019]

Privacy Act of 1974; Systems of Records

AGENCY: Executive Office for Immigration Review, United States Department of Justice.

ACTION: Notice of a new system of records.

SUMMARY: Pursuant to the Privacy Act of 1974, and Office of Management and Budget (OMB) Circular No. A–108, notice is hereby given that the Executive Office for Immigration Review (EOIR), a component within the United States Department of Justice (DOJ or Department), proposes to develop a new system of records titled Office of the Chief Administrative Hearing Officer (OCAHO) Case Management System (CMS), JUSTICE/EOIR–002. The EOIR proposes to establish this system of records to track and manage case information and documents for OCAHO cases. The system provides an electronic platform to track cases and electronically maintain records previously maintained in paper form for the purpose of more efficiently managing these records and providing better access to the records for parties to the proceedings.

DATES: In accordance with 5 U.S.C. 552a(e)(4) and (11), this system of records will begin operation on the publication date, subject to a 30-day period in which to comment on the routine uses, described below. Please submit any comments by September 16, 2019.

ADDRESSES: The public, OMB, and Congress are invited to submit any

comments to the United States Department of Justice, Office of Privacy and Civil Liberties, ATTN: Privacy Analyst, 145 N Street NE, Suite 8W.300, Washington, DC 20530, or by facsimile at 202–307–0693, or email at *privacy.compliance@usdoj.gov.* To ensure proper handling, please reference the above CPCLO Order No. on your correspondence.

FOR FURTHER INFORMATION CONTACT: Marta Rothwarf and Michelle Curry, Associate General Counsels and Co-Senior Component Officials for Privacy, Office of the General Counsel, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2600, Falls Church, VA 22041, by email at *marta.rothwarf2@usdoj.gov* and *michelle.curry@usdoj.gov,* or by facsimile at 703–305–0443.

SUPPLEMENTARY INFORMATION: EOIR proposes to establish a new system of records subject to the Privacy Act of 1974, 5 U.S.C. 552a. The proposed system of records will be used by OCAHO to facilitate adjudication of its cases, track and manage cases and records, consisting of paper and electronic files maintained by OCAHO. The records to be maintained in this new system historically have been included as part of EOIR–001, Records and Management Information System. They are being transferred into this new system to improve efficiency, improve records management practices, and provide more convenient access for parties to proceedings.

OCAHO Administrative Law Judges (ALJs) hear cases and adjudicate issues arising under the provisions of the Immigration and Nationality Act (INA) relating to: (1) Knowingly hiring, recruiting or referring for a fee, or continuing to employ unauthorized aliens, failure to comply with employment eligibility verification requirements, and requiring indemnity bonds from employees in violation of section 274A of the INA (8 U.S.C. 1324a); (2) immigration-related unfair employment practices in violation of section 274B of the INA (8 U.S.C. 1324b); and (3) immigration-related document fraud in violation of section 274C of the INA (8 U.S.C. 1324c).

Complaints under sections 274A and 274C of the INA are filed by the U.S. Department of Homeland Security, Immigration and Customs Enforcement. Complaints under section 274B of the INA may be filed by private individuals or entities, or by the U.S. Department of Justice, Civil Rights Division, Immigrant and Employee Rights Section. The respondents in the cases handled by OCAHO are typically businesses or employers. The parties to 274A and 274C cases may seek administrative review of ALJ decisions and orders by the Chief Administrative Hearing Officer (CAHO). Parties in all OCAHO cases may appeal final agency orders to the appropriate United States Circuit Court of Appeals.

In connection with the cases and appeals handled by OCAHO, it collects certain information and documents from and about complainants and respondents. The Immigrant and Employee Rights Section (DOJ/CRT) and Immigration and Customs Enforcement (DHS), which file complaints with OCAHO, often will submit investigatory records as exhibits or attachments to their filings. These investigatory records may include notices of inspection, summaries of inspection results, affidavits or memoranda from investigators, results from searches of internal agency databases, and other records related to their investigations. The exhibits or attachments then become part of OCAHO's official case record. As a result, these investigatory records may be exempt from access or amendment rights.

To improve tracking and storage of case-related information and documents, OCAHO is implementing a new electronic case management system (CMS). The OCAHO CMS will manage the entire life cycle of OCAHO's case processes, including: (1) Tracking and managing case information and documents from complaint through adjudication, review, and when applicable, appeal; (2) facilitating case research; (3) and reporting on key business functions and metrics. The OCAHO CMS includes an electronic filing capability, which will enable parties to submit case information and documents electronically through a secure web-based portal. The portal will also provide notifications and updates on case status to system users, and will allow authorized parties to a proceeding to access copies of case-related documents electronically. The system contains templates to generate letters, notices, and decisions used in the OCAHO adjudicatory process, and the system generates reports by case status and disposition.

Information from the system may be shared pursuant to the requirements of the Privacy Act and, in the case of its routine uses, when the disclosure is compatible with the purpose for which the information was collected. The system is segregated by ''need to know'' user controls, and allows authorized users to track various stages of the proceedings.

In accordance with 5 U.S.C. 552a(r), the Department has provided a report to OMB and Congress on this new system of records.

Dated: August 7, 2019.

Peter A. Winn,

Acting Chief Privacy and Civil Liberties Officer United States Department of Justice.

JUSTICE/EOIR–002

SYSTEM NAME AND NUMBER:

EOIR–002, Office of the Chief Administrative Hearing Officer (OCAHO) Case Management System (CMS).

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Office of Information Technology, 5109 Leesburg Pike, Suite 900, Falls Church, VA 22041 and EOIR OCAHO, 5107 Leesburg Pike, Suite 2500, Falls Church, VA 22041.

SYSTEM MANAGER(S):

EOIR Chief Information Officer, Office of Information Technology, 5109 Leesburg Pike, Suite 900, Falls Church, VA 22041 and EOIR OCAHO, 5107 Leesburg Pike, Suite 2500, Falls Church, VA 22041.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

8 U.S.C. 1324a; 8 U.S.C. 1324b; 8 U.S.C. 1324c; 28 CFR part 68 and 8 CFR 1003.0.

PURPOSE(S) OF THE SYSTEM:

The system will manage the entire life cycle of OCAHO's case processes, reviews and appeals, from the filing of complaints through adjudication, review, and when applicable, appeals, including tracking, managing, and storing all case-related information and documents, facilitating case research, and reporting and creating statistics on key business functions and metrics. The scope of the system of records, as proposed, is commensurate with the purpose(s) of the system because the records collected are limited to those necessary to exercise actions required for the adjudication and review of cases by OCAHO.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The system will include information pertaining to individuals who appear as complainants or respondents in OCAHO cases, other individuals directly or indirectly involved in these proceedings, including investigators, witnesses, and others involved with the business in question, adjudicators such as the ALJs, the CAHO, OCAHO personnel as necessary, as well as individuals who appear as attorneys or

representatives for complainants or respondents in OCAHO cases.

CATEGORIES OF RECORDS IN THE SYSTEM:

The system contains paper and electronic case-related information for the following categories of records: Complaints; petitions for review; answers and responses; subpoenas; motions, requests, and briefs; exhibits and other supporting documentation; investigatory records, including, but not limited to, notices of inspection, summaries of inspection results, affidavits or memoranda from investigators, and results from searches of internal agency databases; and notices, orders, and decisions issued by OCAHO ALJs and the CAHO. Records maintained within the system may include: CAHO and adjudicator names and electronic signatures; the parties' full names; addresses; phone numbers; email addresses; business and employment records (including copies of Employment Eligibility Verification Forms (Forms I–9) that may contain social security numbers, payroll records, and other similar records); electronic signatures; and, in some cases, information about an individual complainant's citizenship or immigration status.

In order to register and create an account to use the web-based portal, individuals will be asked to provide their first and last name, the office or agency that they are associated with (if applicable), their email address, and a user-chosen password.

RECORD SOURCE CATEGORIES:

Records contained within the system may be submitted by the parties to OCAHO cases and/or their attorneys or representatives or may be generated by the courts and court personnel. Parties may include individuals, businesses or non-profit entities, and Federal Government agencies (Immigration and Customs Enforcement in the Department of Homeland Security, and the Immigrant and Employee Rights Section in the Civil Rights Division of the Department of Justice).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b), all or a portion of the records or information contained in this system of records may be disclosed as a routine use pursuant to 5 U.S.C. 552a(b)(3) under the circumstances or for the purposes described below, to the extent such disclosures are compatible with the purposes for which the information was collected:

1. Where a record, either alone or in conjunction with other information, indicates a violation or potential violation of law—criminal, civil, or regulatory in nature—the relevant records may be referred to the appropriate federal, state, local, territorial, tribal, or foreign law enforcement authority or other appropriate entity charged with the responsibility for investigating or prosecuting such violation or charged with enforcing or implementing such law.

2. To complainants and/or victims to the extent necessary to provide such persons with information and explanations concerning the progress and/or results of the investigation or case arising from the matters of which they complained and/or of which they were a victim.

3. To any person or entity that EOIR/OCAHO has reason to believe possesses information regarding a matter within the jurisdiction of EOIR/OCAHO, to the extent deemed to be necessary by EOIR/OCAHO in order to elicit such information or cooperation from the recipient for use in the performance of an EOIR/OCAHO authorized activity.

4. In an appropriate proceeding before a court, grand jury, or administrative or adjudicative body, when the Department of Justice determines that the records are arguably relevant to the proceeding; or in an appropriate proceeding before an administrative or adjudicative body when the adjudicator determines the records to be relevant to the proceeding.

5. To an actual or potential party to litigation or the party's authorized representative for the purpose of negotiation or discussion of such matters as settlement, plea bargaining, or informal discovery proceedings.

6. To the news media and the public, including disclosures pursuant to 28 CFR 50.2, unless it is determined that release of the specific information in the context of a particular case would constitute an unwarranted invasion of personal privacy.

7. To contractors, grantees, experts, consultants, students, and others performing or working on a contract, service, grant, cooperative agreement, or other assignment for the Federal Government, when necessary to accomplish an agency function related to this system of records.

8. To designated officers and employees of state, local, territorial, or tribal law enforcement or detention agencies in connection with the hiring or continued employment of an employee or contractor, where the employee or contractor would occupy or occupies a position of public trust as a law enforcement officer or detention officer having direct contact with the public or with prisoners or detainees, to the extent that the information is relevant and necessary to the recipient agency's decision.

9. To appropriate officials and employees of a Federal agency or entity that requires information relevant to a decision concerning the hiring, appointment, or retention of an employee; the assignment, detail, or deployment of an employee; the issuance, renewal, suspension, or revocation of a security clearance; the execution of a security or suitability investigation; the letting of a contract, or the issuance of a grant or benefit.

10. To a former employee of the Department for purposes of: Responding to an official inquiry by a federal, state, or local government entity or professional licensing authority, in accordance with applicable Department regulations; or facilitating communications with a former employee that may be necessary for personnel-related or other official purposes where the Department requires information and/or consultation assistance from the former employee regarding a matter within that person's former area of responsibility.

11. To Federal, state, local, territorial, tribal, foreign, or international licensing agencies or associations which require information concerning the suitability or eligibility of an individual for a license or permit.

12. To a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

13. To the National Archives and Records Administration for purposes of records management inspections conducted under the authority of 44 U.S.C. 2904 and 2906.

14. To appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that there has been a breach of the system of records, (2) the Department has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, the Department (including its information systems, programs, and operations), the Federal Government, or national security, and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

15. To another Federal agency or Federal entity, when the Department determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

16. To any agency, organization, or individual for the purpose of performing authorized audit or oversight operations of the Department/EOIR and meeting related reporting requirements.

17. To such recipients and under such circumstances and procedures as are mandated by Federal statute or treaty.

18. To Federal agencies involved in statistical analysis of data, and publication and/or reporting of aggregated or de-identified information designed to improve the efficiency and effectiveness of immigration proceedings at those agencies or to better meet EOIR's mission of adjudicating cases fairly and expeditiously, and uniformly interpreting and administering the Nation's immigration laws.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Paper copies of records are maintained in file folders in secure locations. Electronic records are stored on secure servers and storage media.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Authorized internal users may retrieve paper records through OCAHO case numbers and electronic records through an internet portal that will allow searches by a party's name, OCAHO case number, region, city and state, or fiscal or calendar year. External users granted access because they are a party or authorized representative of a party will be able to retrieve records related to the cases in which they are involved by party name or case number.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Paper and electronic records will be retained and disposed of in accordance with OCAHO's revised records retention schedule, DAA–0582–2017–0005, currently under review by NARA.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

DOJ/EOIR/OCAHO will implement administrative, technical, and physical safeguards to protect information in the system. For example, internet connections are protected by multiple firewalls, and security personnel conduct periodic vulnerability scans using DOJ-approved software to ensure security compliance. Security logs are enabled for computers to assist in troubleshooting and forensic analysis during incident investigations. Need-to-know access is provided and verified by Personal Identity Verification (PIV) access which requires a valid user identification and password. Electronic records are segregated and stored in secure cloud-based redundant server locations. Paper records are segregated and stored in secure locations with locked cabinets. Both paper and electronic records are accessible only to those with a need to access the information for the performance of their official duties and who have appropriate clearances or permissions.

RECORD ACCESS PROCEDURES:

All requests for access to records must be in writing and should be addressed to the Senior Component Official for Privacy at the EOIR Office of the General Counsel, 5107 Leesburg Pike, Suite 2600, Falls Church, VA 22041, or *doj.eoirogc@usdoj.gov.* The envelope and letter should be clearly marked ''Privacy Act Access Request.'' The request must describe the records sought in sufficient detail to enable Department personnel to locate them with a reasonable amount of effort. The request must include a general description of the records sought and must include the requester's full name, current address, and date and place of birth, to enable EOIR to verify that the requester is legally authorized to access the records.

The request must be signed and either notarized or submitted under penalty of perjury. Some information may be exempt from the access provisions as described in the ''EXEMPTIONS CLAIMED FOR THE SYSTEM'' section, below. An individual who is the subject of a record in this system of records may access those records that are not exempt from access. A determination whether a record may be accessed will be made at the time a request is received.

Although no specific form is required, you may obtain forms for this purpose from the FOIA/Privacy Act Mail Referral Unit, United States Department of Justice, 950 Pennsylvania Avenue NW, Washington, DC 20530, or on the Department of Justice website at *http://www.justice.gov/oip/oip-request.html.*

More information regarding the Department's procedures for accessing records in accordance with the Privacy Act can be found at 28 CFR part 16 subpart D, ''Protection of Privacy and Access to Individual Records Under the Privacy Act of 1974.''

CONTESTING RECORD PROCEDURES:

Individuals seeking to contest or amend records maintained in this system of records must direct their requests to the address indicated in the ''RECORD ACCESS PROCEDURES'' section, above. All requests to contest or amend records must be in writing and the envelope and letter should be clearly marked ''Privacy Act Amendment Request.'' All requests must state clearly and concisely what record is being contested, the reasons for contesting it, and the proposed amendment to the record. Some information may be exempt from the amendment provisions as described in the ''EXEMPTIONS PROMULGATED FOR THE SYSTEM'' section, below. An individual who is the subject of a record in this system of records may contest or amend those records that are not exempt. A determination of whether a record is exempt from the amendment provisions will be made after a request is received.

More information regarding the Department's procedures for amending or contesting records in accordance with the Privacy Act can be found at 28 CFR 16.46, ''Requests for Amendment or Correction of Records.''

NOTIFICATION PROCEDURES:

Individuals may be notified if a record in this system of records pertains to them when the individuals request information utilizing the same procedures as those identified in the ''RECORD ACCESS PROCEDURES'' section, above.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

The Attorney General has exempted this system from subsections 5 U.S.C. 552a(d) of the Privacy Act pursuant to 5 U.S.C. 552a(k) subsections. The exemptions will be applied only to the extent that the information in the system is subject to exemption pursuant to 5 U.S.C. 552a(k) subsections. Rules are in the process of being promulgated in accordance with the requirements of 5 U.S.C. 553(b), (c) and (e), and are in the process of being published in the **Federal Register**.

HISTORY:

This system was previously part of EOIR–001 Records and Management Information System, 60 FR 52694 (Oct. 10, 1995); 66 FR 35458 (July 5, 2001); 69 FR 26179 (May 11, 2004); 72 FR 3410

(Jan. 25, 2007) (rescinded by 82 FR 24147); 82 FR 24147 (May 25, 2017).

BILLING CODE 4410–30–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Employee Retirement Income Security Act of 1974 Investment Manager Electronic Registration

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting the Employee Benefits Security Administration (EBSA) sponsored information collection request (ICR) titled, ''Employee Retirement Income Security Act of 1974 Investment Manager Electronic Registration,'' to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 16, 2019.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the *RegInfo.gov* website at *http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201906-1210-008* (this link will only become active on the day following publication of this notice) or by contacting Frederick Licari by telephone at 202–693–8073 TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request by mail to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL–EBSA, Office of Management and Budget, Room 10235, 725 17th Street NW, Washington, DC 20503; by Fax: 202–395–5806 (this is not a toll-free number); or by email: *OIRA_submission@omb.eop.gov.* Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW, Washington, DC 20210; or by email: *DOL_PRA_PUBLIC@dol.gov.*

FOR FURTHER INFORMATION CONTACT: Frederick Licari by telephone at 202–693–8073, TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the Employee Retirement Income Security Act of 1974 Investment Manager Electronic Registration information collection. The Department's regulation provides that, in order to meet the definition of investment manager in section 3(38) of the Employee Retirement Income Security Act of 1974, state-registered investment advisers must register electronically through a centralized electronic filing system established by the SEC or a State investment authority called the Investment Adviser Registration Depository (''IARD''), rather than providing a paper copy of their state registration to the Secretary of Labor. Under section 402(c)(3) of the Employee Retirement Income Security Act of 1974 (ERISA), if an ''investment manager'' (as defined in section 3(38)) of ERISA manages plan assets, the plan's trustee is relieved from certain fiduciary obligations relating to the management of the assets for which the investment manager is responsible. ERISA section 3(38) authorizes this information collection. *See* 29 U.S.C. 1002(38)(B).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1210–0125.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on August 31, 2019. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on March 27, 2019 (84 FR 11573).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1210–0125. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Agency: DOL–EBSA.

Title of Collection: Employee Retirement Income Security Act of 1974 Investment Manager Electronic Registration.

OMB Control Number: 1210–0125.

Affected Public: Private Sector. Not-for-profit institutions, businesses or other for-profits.

Total Estimated Number of Respondents: 4.

Total Estimated Number of Responses: 4.

Total Estimated Annual Time Burden: 4 hours.

Total Estimated Annual Other Costs Burden: $270.

Authority: 44 U.S.C. 3507(a)(1)(D).

Dated: August 12, 2019.

Frederick Licari,

Departmental Clearance Officer.

NATIONAL SCIENCE FOUNDATION

Proposal Review Panel for International Science and Engineering; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation (NSF) announces the following meeting:

Name and Committee Code: Proposal Review Panel for Office of International Science and Engineering—PIRE Investigation of Multi-scale, Multi-phase Phenomena in Complex Fluids for the Energy Industries (10749).

Date and Time: September 19, 2019, 7:00 a.m.–9:30 p.m., September 20, 2019, 7:00 a.m.–4:30 p.m.

Place: CUNY City College of New York, New York, NY 10031.

Type of Meeting: Part-open.

Contact Person: Maija M. Kukla, PIRE Program Director, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Telephone 703–292–4940.

Purpose of Meeting: NSF site visit to conduct a review during year 3 of the five-year award period. To conduct an in-depth evaluation of performance, to assess progress towards goals, and to provide recommendations.

Agenda: See attached.

Reason for Closing: Topics to be discussed and evaluated during closed portions of the site review will include information of a proprietary or confidential nature, including technical information; and information on personnel. These matters are exempt under 5 U.S.C. 552b(c), (4) and (6) of the Government in the Sunshine Act.

Dated: August 13, 2019.

Crystal Robinson,

Committee Management Officer.

PIRE Site Visit Agenda

Day 1

7:00 a.m.–8:00 a.m.:
Travel to Site Review Location, Breakfast
8:00 a.m.–12 noon:
Introductions
PIRE Rationale and Research Goals
Research Accomplishments
Administration, Management, and Budget Plans
Review of Responses to Issues by Past Reviewers
10:00 a.m.–10:20 a.m.:
NSF Executive Session/Break (**CLOSED**)
Research
Facilities and Physical Infrastructure
12 noon–12:30 p.m.:
NSF Executive Session (**CLOSED**)
12:30 p.m.–1:30 p.m.:
Lunch—Discussion with Students (**CLOSED**)
1:30 p.m.–3:00 p.m.:
Integrating Research and Education
Developing Human Resources
Integrating Diversity
3:00 p.m.–3:30 p.m.:
NSF Executive Session/Break (**CLOSED**)
3:30 p.m.–4:15 p.m.:
Partnerships
4:15 p.m.–5:15 p.m.:
Wrap up
5:15 p.m.–6:15 p.m.:
Executive Session/Break (**CLOSED**)
6:15 p.m.:
Critical Feedback Provided to PI
8:00 p.m.–9:30 p.m.:
NSF Executive Session/Working Dinner (**CLOSED**)

Day 2

7:00 a.m.–8:00 a.m.:
Travel to Site Visit Location, Breakfast
8:00 a.m.–9:00 a.m.:
Meeting with Administrators and Investigator Only (Topic: Institutional Support) (**CLOSED**)
9:00 a.m.–10:00 a.m.:
Summary/Proposing Team to Critical Feedback
10:00 a.m.–4:00 p.m.:
Site Review Tea.m. Prepares Site Visit Report (Working Lunch Provided) (**CLOSED**)
4:15 p.m.–4:30 p.m.:
Presentation of Site Visit Report to Principal Investigator

[FR Doc. 2019–17655 Filed 8–15–19; 8:45 am]

BILLING CODE 7555–01–P

NATIONAL SCIENCE FOUNDATION

Notice of Availability of the Final Comprehensive Environmental Evaluation (CEE) for Continuation and Modernization of McMurdo Station Area Activities in Antarctica

AGENCY: National Science Foundation.

ACTION: Notice of availability.

SUMMARY: The National Science Foundation (NSF) gives notice of the availability of the Final Comprehensive Environmental Evaluation (CEE) for Continuation and Modernization of McMurdo Station Area Activities, pursuant to the Antarctic Conservation Act, as amended, its implementing regulations, and in accordance with the Protocol on Environmental Protection to the Antarctic Treaty. The proposed activity would implement modernization projects at McMurdo Station while continuing United States Antarctic Program (USAP) science and operations at McMurdo Station and locations supported by the Station.

DATES: The waiting period ends October 15, 2019, after which the Modernization and Continuation of McMurdo Area Activities are planned to commence.

The Final CEE may be viewed by interested parties at *https://www.nsf.gov/geo/opp/antarct/treaty/cees/AIMS/Final%20CEE_McMurdo%20Modernization_v8_05Aug2019.pdf.*

ADDRESSES: Dr. Polly A. Penhale, Senior Advisor, Environment, Office of Polar Programs, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, Virginia 22314 or *CEE.comments@nsf.gov.*

FOR FURTHER INFORMATION CONTACT: For further information regarding the CEE process, please contact Dr. Polly A. Penhale, at the above address, 703–292–8030, or *CEE.comments@nsf.gov.*

SUPPLEMENTARY INFORMATION: Article 3 of Annex I to the Protocol on Environmental Protection to the Antarctic Treaty requires the preparation of a CEE for any proposed Antarctic activity likely to have more than a minor or transitory impact. The draft CEE was made available to Antarctic Treaty Parties and the Committee for Environmental Protection to the Antarctic Treaty for a 120-day period, as specified above.

The draft CEE was published in the **Federal Register** (Vol. 84, No. 76/Friday, April 19, 2019, Page 16547) for a 90-comment period, as specified in 45 CFR 641.18.

The draft CEE was also made available through the Environmental Protection Agency's Environmental Impact Statement Database at *https://cdxnodengn.epa.gov/cdx-enepa-II/public/action/eis/details?eisId=269627.*

Additional information on the proposed actions and purpose and need was provided in the Notice of Intent to prepare a CEE published in the **Federal Register** (Vol. 81, No. 164/Wednesday, August 24, 2016, Pages 57940–57941).

Dated: August 12, 2019.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

NATIONAL SCIENCE FOUNDATION

Proposal Review Panel for Physics; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science

Foundation (NSF) announces the following meeting:

Name and Committee Code: Proposal Review Panel for Physics—Reverse Site Visit for ATLAS FDR Review (1208).

Date and Time: September 11–13, 2019; 8:00 a.m.–5:00 p.m.

Place: National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314.

Type of Meeting: Part-Open.

Contact Person: Dr. Mark Coles, Program Director, Division of Physics, NSF, 2415 Eisenhower Avenue, Room W 9216, Alexandria, VA 22314; Telephone: (703) 292–4432.

Purpose of Meeting: Reverse site visit to provide an evaluation of the progress of the projects at the host site for the Division of Physics at the National Science Foundation.

Agenda

September 11, 2019

08:00 a.m.–08:30 a.m.
Executive Session—Closed
08:30 a.m.–10:15 a.m.
Plenary—Open
10:15 a.m.–10:30 a.m.
Break—Open
10:30 a.m.–12:00 p.m.
Plenary—Open
12:00 p.m.–01:00 p.m.
Lunch—Open
01:00 p.m.–04:00 p.m.
Trigger—Closed
04:00 p.m.–05:00 p.m.
Executive Session—Closed

September 12, 2019

08:00 a.m.–09:00 a.m.
Executive Session/Follow Up—Closed
09:00 a.m.–12:00 p.m.
Liquid Argon—Open
12:00 p.m.–01:00 p.m.
Lunch—Closed
01:00 a.m.–04:00 p.m.
Tile Cal—Open
04:00 p.m.–05:00 p.m.
Executive Session—Closed

September 13, 2019

08:00 a.m.–09:00 a.m.
Executive Session/Follow Up—Closed
09:00 a.m.–12:00 p.m.
Muon—Open
12:00 p.m.–01:00 p.m.
Lunch—Closed
01:00 p.m.–02:00 p.m.
Executive Session—Closed
02:00 p.m.–03:00 p.m.
Follow Up from Morning session—Open
03:00 p.m.–05:00 p.m.
Executive Session—Closed
05:00 p.m.
Panel Closeout summary in plenary—Closed

Reason for Closing: The work being reviewed during closed portions of the reverse site visit include information of a proprietary or confidential nature, including technical information; financial data, such as salaries and personal information concerning individuals associated with the project. These matters are exempt under 5 U.S.C. 552b(c), (4) and (6) of the Government in the Sunshine Act.

Dated: August 13, 2019.

Crystal Robinson,

Committee Management Officer.

NATIONAL SCIENCE FOUNDATION

Advisory Committee for Cyberinfrastructure; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation (NSF) announces the following meeting:

Name and Committee Code: Advisory Committee for Cyberinfrastructure (25150).

Date and Time: September 18, 2019; 12:00 p.m.–6:00 p.m.; September 19, 2019; 8:30 a.m.–3:00 p.m.

Place: National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Room C 2010 (September 18) and Room E 3430 (September 19).

Type of Meeting: Open.

Contact Person: Amy Friedlander, CISE, Office of Advanced Cyberinfrastructure; National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Telephone: 703–292–8970.

Minutes: May be obtained from the contact person listed above.

Purpose of Meeting: To advise NSF on the impact of its policies, programs and activities in the OAC community. To provide advice to the Director/NSF on issues related to long-range planning.

Agenda: Updates on NSF wide OAC activities.

Dated: August 13, 2019.

Crystal Robinson,

Committee Management Officer.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 72–17; NRC–2019–0165]

Portland General Electric Company; Eugene Water and Electric Board, and PacifiCorp; Trojan Independent Spent Fuel Storage Installation

AGENCY: Nuclear Regulatory Commission.

ACTION: License renewal; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has issued a renewed license to Portland General Electric (PGE), Eugene Water and Electric Board, and PacifiCorp (together ''licensee'') for Special Nuclear Materials (SNM) License No. SNM–2509 for the receipt, possession, transfer, and storage of spent fuel from the Trojan Nuclear Plant in the Trojan Independent Spent Fuel Storage Installation (ISFSI), located in Columbia County, Oregon. The renewed license authorizes operation of the Trojan ISFSI in accordance with the provisions of the renewed license and its technical specifications. The renewed license expires on March 31, 2059.

DATES: The license referenced in this document is available on August 9, 2019.

ADDRESSES: Please refer to Docket ID NRC–2019–0165 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2019–0165. Address questions about NRC docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov*. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html*. To begin the search select ''*Begin Web-based ADAMS Search*.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov*. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document. In addition, for the convenience of the reader, the ADAMS accession numbers are provided in a table in the ''Availability of Documents'' section of this document.
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Christopher T. Markley, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–6293, email: *Christopher.Markley@nrc.gov*.

SUPPLEMENTARY INFORMATION:

I. Discussion

Based upon the application dated March 23, 2017, as supplemented January 29, 2019, February 21, 2019, and June 10, 2019, the NRC has issued a renewed license to the licensee for the Trojan ISFSI, located in Columbia County, Oregon. The renewed license SNM–2509 authorizes and requires operation of the Trojan ISFSI in accordance with the provisions of the renewed license and its technical specifications. The renewed license will expire on March 31, 2059.

The licensee's application for a renewed license complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the NRC's rules and regulations. The NRC has made appropriate findings as required by the Act and the NRC's regulations in Chapter 1 of title 10 of the *Code of Federal Regulations* (10 CFR), and sets forth those findings in the renewed license. The agency afforded an opportunity for a hearing in the Notice of Opportunity for a Hearing published in the **Federal Register** on August 18, 2017 (82 FR 39463). The NRC received no request for a hearing or petition for leave to intervene following the notice.

The NRC staff prepared a safety evaluation report for the renewal of the ISFSI license and concluded, based on that evaluation, the ISFSI will continue to meet the regulations in 10 CFR part 72. The NRC staff also prepared an environmental assessment and finding of no significant impact for the renewal of this license, which were published on July 8, 2019 (84 FR 32478). The NRC staff's consideration of the impacts of continued storage of spent nuclear fuel (as documented in NUREG–2157, ''Generic Environmental Impact Statement for Continued Storage of Spent Fuel'') was included in the environmental assessment. The NRC staff concluded that renewal of this ISFSI license will not have a significant impact on the quality of the human environment.

II. Availability of Documents

The following table includes the ADAMS accession numbers for the documents referenced in this notice. For additional information on accessing ADAMS, see the **ADDRESSES** section of this document.

Document	ADAMS accession No.
Licensee's application, dated March 23, 2017	ML17086A039.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2019–0132]

Standard Review Plan for Spent Fuel Transportation

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft NUREG; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) requests public comment on draft NUREG–2216, Revision 0, ''Standard Review Plan for Spent Fuel Transportation''. This Standard Review Plan (SRP) provides guidance to NRC staff for reviewing an application for package approval. NRC approval of a package design typically results in issuance of a certificate of compliance (CoC) or a letter amendment for a transportation package. This draft SRP will replace NUREG–1609, ''Standard Review Plan for Transportation Packages for Radioactive Material'', NUREG–1617, ''Standard Review Plan for Transportation Packages for Spent Nuclear Fuel'', and all Interim Staff Guidance (ISGs) that were used to enhance these NUREGs.

DATES: Submit comments by September 30, 2019. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received before this date.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2019–0132. Address questions about NRC docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Jeremy Smith, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–7308; email: *Jeremy.Smith@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2019–0132 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov;* and search for Docket ID NRC–2019–0132.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* Draft NUREG–2216, Revision 0, ''Standard Review Plan for Spent Fuel Transportation'' is available in ADAMS under Accession No. ML19214A229.
- *NRC'S PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2019–0132 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov/* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

The NRC utilizes information that is currently contained in multiple documents (NUREG–1609, NUREG–1617, and numerous ISGs) to assist the NRC staff in its reviews of packages containing radioactive material. The NRC's intent in combining and updating these documents into one document is to assist NRC staff in its reviews by promoting a consistent regulatory review of transportation packages; by promoting quality and uniformity of these reviews across each technical discipline; presenting a basis for the review's scope; identifying acceptable approaches to meeting regulatory requirements; and suggesting possible evaluation findings that can be used in the safety evaluation report for applications submitted under part 71 of title 10 of the *Code of Federal Regulations* (10 CFR).

III. Discussion

This SRP provides guidance to the NRC staff for reviewing an application for a package approval issued under 10 CFR part 71, ''Packaging and Transportation of Radioactive Material.'' NRC approval of a package design typically results in issuance of a CoC or a letter amendment for a transportation package.

The objectives of this SRP are to assist the NRC staff in its reviews by:

- Providing a basis that promotes uniform quality and a consistent regulatory review of an application for a CoC for a transportation package.
- presenting a basis for the review's scope.
- identifying acceptable approaches to meeting regulatory requirements.
- suggesting possible evaluation findings that can be used in the safety evaluation report.

This SRP may be revised and updated as the need arises on a chapter-by-chapter basis to clarify the content, correct errors, or incorporate modifications approved by the Director of the NRC Division of Spent Fuel Management.

Proposed Action

By this action, the NRC is requesting public comments on draft NUREG–2216, Revision 0. The NRC invites comments on all portions of this Standard Review Plan that the

commenter thinks the NRC should consider. The NRC will make a final determination regarding issuance of the NUREG after it considers any public comments received in response to this request.

Dated at Rockville, Maryland, this 12th day of August, 2019.

For the Nuclear Regulatory Commission.

Michael C. Layton,

Director, Division of Spent Fuel Management, Office of Nuclear Material Safety and Safeguards.

[FR Doc. 2019–17584 Filed 8–15–19; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–275 and 50–323; NRC–2019–0131]

Pacific Gas and Electric Company; Diablo Canyon Nuclear Power Plant, Units 1 and 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering issuance of exemptions in response to a December 13, 2018, request from Pacific Gas and Electric Company (PG&E, the licensee) for Diablo Canyon Nuclear Power Plant (Diablo Canyon), Units 1 and 2. One exemption would allow the licensee to use an amount of funds from the Diablo Canyon Nuclear Decommissioning Trust (NDT) for decommissioning planning above the amount limitations specified in NRC's regulations. Another exemption would allow the licensee to use withdrawals from the NDT to fund planning activities associated with spent fuel management and site restoration. The NRC staff is issuing a final environmental assessment (EA) and final finding of no significant impact (FONSI) associated with the proposed exemptions.

DATES: The EA and FONSI referenced in this document are available on August 16, 2019.

ADDRESSES: Please refer to Docket ID NRC–2019–0131 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2019–0131. Address questions about NRC docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Balwant K. Singal, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington DC 20555–0001; telephone: 301–415–3016, email: *Balwant.Singal@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering issuance of exemptions from sections 50.82(a)(8)(i)(A) and 50.82(a)(8)(ii) of title 10 of the *Code of Federal Regulations* (10 CFR) for Facility Operating License Nos. DPR–80 and DPR–82, issued to PG&E for operation of Diablo Canyon, Units 1 and 2, located in San Luis Obispo, California. The licensee requested the exemptions by letter dated December 13, 2018 (ADAMS Accession No. ML18347B552) pursuant to 10 CFR 50.12. In accordance with 10 CFR 51.21, the NRC prepared the following EA that analyzed the environmental impacts of the proposed licensing action. Based on the results of this EA that follow, and in accordance with 10 CFR 51.31(a), the NRC has determined not to prepare an environmental impact statement for these exemption requests and is issuing a FONSI.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would exempt PG&E from the requirements of 10 CFR 50.82(a)(8)(i)(A) and 10 CFR 50.82(a)(8)(ii). One exemption would allow the licensee to use an amount of funds from the Diablo Canyon NDT for decommissioning planning above the amount limitations specified in NRC regulations for operating reactors. Another exemption would allow the licensee to use withdrawals from the NDT for planning activities associated with spent fuel management and site restoration. Overall, the proposed action would allow PG&E to withdraw $187.8 million ($2017) [1] from the Diablo Canyon NDT to fund radiological decommissioning, spent fuel management, and site restoration planning activities necessary prior to permanent cessation of operations of Diablo Canyon, Units 1 and 2, in 2024 and 2025, respectively. The proposed action is in accordance with the licensee's application dated December 13, 2018.

Need for the Proposed Action

By letter dated November 27, 2018 (ADAMS Accession No. ML18331A553), PG&E informed the NRC of its intention to permanently cease operation of Diablo Canyon, Units 1 and 2, on November 2, 2024, and August 26, 2025, respectively.

The requirements of 10 CFR 50.82(a)(8)(ii) restrict the use of NDT for decommissioning planning for operating reactors to three percent of the generic minimum decommissioning amount calculated, consistent with a formula set forth by the regulations at 10 CFR 50.75. Furthermore, as required by 10 CFR 50.82(a)(8)(i)(A), decommissioning trust funds may be used by the licensee if the withdrawals are for legitimate decommissioning planning activities, consistent with the definition of decommissioning in 10 CFR 50.2. This definition addresses radiological decontamination and does not include activities associated with irradiated fuel management or site restoration activities. Therefore, these regulations would limit withdrawal from the Diablo Canyon NDT to $37.2 million ($18.6 million per unit) and would allow spending only on planning activities for radiological decommissioning.

PG&E has estimated that a total of $187.8 million ($2017) would be required to be spent on pre-shutdown planning activities; $148.4 million would be for radiological decommissioning, and $39.4 million would be for spent fuel management and site restoration planning activities.

[1] In its application, PG&E submitted the decommissioning costs in 2017 dollars to be consistent with presentation of a year-end asset balance in the NDT. If the NRC grants the exemptions, funds would be withdrawn from the NDT in nominal (current) dollars.

The estimated $148.4 million amount is more than three percent of the generic minimum decommissioning amount calculated, consistent with a formula set forth by regulations at 10 CFR 50.75. Furthermore, withdrawals from the decommissioning trust fund cannot be used to fund the PG&E estimated $39.4 million for spent fuel management and site restoration planning activities absent (1) a clear indication that monies in the fund were collected for those purposes and are clearly and consistently accounted for separately,[2] or (2) an exemption from the requirements of 10 CFR 50.82(a)(8)(i)(A) for use of funds for those purposes.

Therefore, pursuant to 10 CFR 50.12, PG&E requests exemptions from 10 CFR 50.82(a)(8)(i)(A) and 10 CFR 50.82(a)(8)(ii) to allow withdrawal of a total of $187.8 million ($2017) from the Diablo Canyon NDT to fund radiological decommissioning, spent fuel management, and site restoration planning activities prior to permanent cessation of operations of Diablo Canyon, Units 1 and 2, in 2024 and 2025, respectively, to support direct transition to decommissioning upon permanent cessation of operations.

Environmental Impacts of the Proposed Action

The proposed action involves exemptions from the requirements related to use of the NDT that are of a financial nature and allow PG&E to pay for decommissioning planning activities necessary to support direct transition to physical decommissioning upon permanent shutdown of Diablo Canyon, Units 1 and 2. The proposed action also allows PG&E to use these funds to support planning for spent fuel management and site restoration activities.

The NRC has completed its evaluation and concludes that there is reasonable assurance that adequate funds are available in the NDT to complete all activities associated with radiological decommissioning. There is no decrease in safety associated with the NDT being used to fund planning activities associated with radiological decommissioning, spent fuel management, and site restoration. As required by 10 CFR 50.75, PG&E has submitted a Decommissioning Funding Report for Diablo Canyon by letter dated March 26, 2019 (ADAMS Accession No. ML19094B780), which includes a site-specific decommissioning cost estimate for Diablo Canyon, Units 1 and 2.

The regulations at 10 CFR 50.75 require, in part, that the report include the amount of decommissioning funds accumulated, modifications occurring to a licensee's current method of providing financial assurance since the last submitted report, and plans to adjust levels of funds assured for decommissioning to demonstrate that a reasonable level of assurance will be provided that funds will be available when needed to cover the cost of decommissioning. A licensee for a plant that is within five years of its projected end of operation is required to submit this report annually.

The proposed action will not significantly increase the probability or consequences of radiological accidents. Additionally, the NRC staff has concluded that the proposed changes would have no direct radiological environmental impacts. There are no changes in the types or amounts of effluents that are, or may be, released offsite resulting from these exemptions. PG&E must continue to comply with all appropriate NRC regulations related to occupational and public radiation exposure, and thus, the exemptions will not result in an increase to occupational or public doses.

With regard to the potential nonradiological environmental impacts, the proposed action would have no direct impacts on land use or water resources, including terrestrial and aquatic biota, as it involves no new land disturbing activities, new construction or modification of plant operational systems. There would be no changes to the quality or quantity of nonradiological effluents, and no changes to the plant's National Pollutant Discharge Elimination System permits would be needed. In addition, there would be no noticeable effect on socioeconomic conditions in the region, no environmental justice impacts, no air quality impacts, and no impacts to historic and cultural resources from the proposed changes. Therefore, there are no significant nonradiological environmental impacts associated with the proposed action.

Accordingly, the NRC concludes that there will be no significant environmental impacts associated with the proposed action.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the NRC staff considered denial of the proposed action (*i.e.,* the ''no-action'' alternative). Denial of these exemption requests would result in no change in current environmental impacts. Therefore, the environmental impacts of the proposed action and alternative action are similar.

Alternative Use of Resources

There are no unresolved conflicts concerning alternative uses of available resources under the proposed action.

Agencies and Persons Consulted

On June 6, 2019, the NRC notified the State of California of this EA and FONSI. No additional agencies or persons were consulted regarding the environmental impact of the proposed action.

III. Finding of No Significant Impact

The proposed action would exempt PG&E from the requirements of 10 CFR 50.82(a)(8)(i)(A) and 10 CFR 50.82(a)(8)(ii) to allow PG&E to withdraw $187.8 million ($2017) from the Diablo Canyon NDT to fund radiological decommissioning, spent fuel management, and site restoration planning activities. The proposed action would not significantly affect plant safety, would not have a significant adverse effect on the probability of an accident occurring, and would not have any significant radiological or non-radiological impacts. The reason the human environment would not be significantly affected is that the proposed action involves an exemption from requirements that are of a financial nature that do not have an impact on the human environment.

The related environmental document is the Diablo Canyon Final Environmental Statement dated May 1973 (ADAMS Accession No. ML15043A481),[3] which provides the latest environmental review of operations of Diablo Canyon, Units 1 and 2.

Consistent with 10 CFR 51.21, the NRC conducted the EA for the proposed action, which concluded that there will be no significant environmental impacts associated with the proposed action. This FONSI incorporates by reference the EA included in Section II of this document. Accordingly, the NRC has decided not to prepare an

[2] In 1999, some licensees reporting under 10 CFR 50.75(f) did not distinguish between estimates of costs to complete decommissioning required by the NRC (radiological decommissioning) and other costs associated with cleaning up the site. The NRC staff issued Regulatory Issue Summary 2001–07, Revision 1, ''10 CFR 50.75 Reporting and Recordkeeping for Decommissioning Planning,'' to clarify for licensees the need to preserve the distinction between radiological decommissioning cost estimates and all other decommissioning cost estimates in the reports licensees must submit in accordance with 10 CFR 50.75.

[3] Final Environmental Statement Related to the Nuclear Generating Station Diablo Canyon, Units 1 and 2, Pacific Gas and Electric Company, Docket Nos. 50–275 and 50–323, May 1973.

environmental impact statement for the proposed action.

The finding and other related environmental documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. Publicly available records are accessible electronically from ADAMS Public Electronic Reading Room on the internet at the NRC's website: *https://www.nrc.gov/reading-rm/adams.html.* Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC's PDR Reference staff by telephone at 1–800–397–4209 or 301–415–4737, or by email to *pdr.resource@nrc.gov.*

Dated at Rockville, Maryland, this 12th day of August 2019.

For the Nuclear Regulatory Commission.

Balwant K. Singal,

Senior Project Manager, Plant Licensing Branch IV, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

POSTAL REGULATORY COMMISSION

[Docket Nos. CP2017–96; MC2019–186 and CP2019–208]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning negotiated service agreements. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 20, 2019.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3007.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3010, and 39 CFR part 3020, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* CP2017–96; *Filing Title:* USPS Notice of Amendment to Priority Mail Contract 282, Filed Under Seal; *Filing Acceptance Date:* August 12, 2019; *Filing Authority:* 39 CFR 3015.5; *Public Representative:* Christopher C. Mohr; *Comments Due:* August 20, 2019.

2. *Docket No(s).:* MC2019–186 and CP2019–208; *Filing Title:* USPS Request to Add Priority Mail & First-Class Package Service Contract 114 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 12, 2019; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3020.30 *et seq.,* and 39 CFR 3015.5; *Public Representative:* Christopher C. Mohr; *Comments Due:* August 20, 2019.

This Notice will be published in the **Federal Register**.

SECURITIES AND EXCHANGE COMMISSION

[Release Nos. 33–10670; 34–86628; File No. 265–28]

Investor Advisory Committee Meeting

AGENCY: Securities and Exchange Commission.

ACTION: Notice of telephonic meeting of Securities and Exchange Commission Dodd-Frank Investor Advisory Committee.

SUMMARY: The Securities and Exchange Commission Investor Advisory Committee, established pursuant to Section 911 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, is providing notice that it will hold a telephonic public meeting. The public is invited to submit written statements to the Committee.

DATES: The meeting will be held on Thursday, September 5, 2019 from 11:00 a.m. until 12:30 p.m. (ET) and will be open to the public *via* telephone at 1–800–260–0719 in the United States or (651) 291–1170 outside the United States, participant code 470756. Written statements should be received on or before September 5, 2019.

ADDRESSES: Written statements may be submitted by any of the following methods:

Electronic Statements

• Use the Commission's internet submission form (*http://www.sec.gov/rules/other.shtml*); or

• Send an email message to *rules-comments@sec.gov.* Please include File No. 265–28 on the subject line; or

Paper Statements

• Send paper statements to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File No. 265–28. This file number should be included on the subject line if email is used. To help us process and review your statement more efficiently, please use only one method.

Statements also will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Room 1503, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. All statements received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly.

FOR FURTHER INFORMATION CONTACT: Marc Oorloff Sharma, Chief Counsel, Office of the Investor Advocate, at (202) 551–3302, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

SUPPLEMENTARY INFORMATION: The meeting will be open to the public *via* telephone. Persons needing special accommodations to take part because of a disability should notify the contact person listed in the section above entitled **FOR FURTHER INFORMATION CONTACT.**

The agenda for the meeting includes: Welcome remarks; a discussion regarding the proxy process (which will include a Recommendation of the Investor as Owner subcommittee).

Dated: August 12, 2019.

Vanessa A. Countryman,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–86631; File No. SR–NYSEArca–2019–39]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change To Amend NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares) and To List and Trade Shares of the United States Bitcoin and Treasury Investment Trust Under NYSE Arca Rule 8.201–E

August 12, 2019.

On June 12, 2019, NYSE Arca, Inc. (''NYSE Arca'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares) and to list and trade shares of the United States Bitcoin and Treasury Investment Trust under NYSE Arca Rule 8.201–E. The proposed rule change was published for comment in the **Federal Register** on July 1, 2019.[3] As of August 12, 2019, the Commission has received 6 comment letters on the proposed rule change.[4]

Section 19(b)(2) of the Act [5] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding, or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is August 15, 2019. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[6] designates September 29, 2019, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–NYSEArca–2019–39).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Jill M. Peterson,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 33588; 812–15012]

Collaborative Investment Series Trust and Tactical Fund Advisors, LLC; Notice of Application

August 12, 2019.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice.

Notice of an application under section 6(c) of the Investment Company Act of 1940 (''Act'') for an exemption from section 15(a) of the Act and rule 18f–2 under the Act, as well as from certain disclosure requirements in rule 20a–1 under the Act, Item 19(a)(3) of Form N–1A, Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8) and 22(c)(9) of Schedule 14A under the Securities Exchange Act of 1934, and Sections 6–07(2)(a), (b), and (c) of Regulation S–X (''Disclosure Requirements''). The requested exemption would permit an investment adviser to hire and replace certain sub-advisers without shareholder approval and grant relief from the Disclosure Requirements as they relate to fees paid to the sub-advisers.

Applicants: Collaborative Investment Series Trust (the ''Trust''), a Delaware statutory trust registered under the Act

as an open-end management investment company with multiple series, and Tactical Fund Advisors, LLC (the ''Initial Adviser''), an Ohio limited liability company registered as an investment adviser under the Investment Advisers Act of 1940.

Filing Dates: The application was filed on March 20, 2019 and amended on July 17, 2019.

Hearing or Notification of Hearing: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on September 6, 2019, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, U.S. Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090. Applicants: Collaborative Investment Series Trust, Attn: Gregory Skidmore, 8000 Town Center Drive, Suite 400, Broadview Heights, OH 44147; and Tactical Fund Advisors, LLC, Attn: Drew Horter, 8316 Cornell Road, Cincinnati, OH 45249.

FOR FURTHER INFORMATION CONTACT: Christine Y. Greenlees, Senior Counsel, at (202) 551–6879, or Andrea Ottomanelli Magovern, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's website by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Summary of the Application

1. The Initial Adviser is the investment adviser to the Tactical Growth Allocation Fund, Tactical Moderate Allocation Fund, and Tactical Conservative Allocation Fund (together, the ''Initial Funds''), each a series of the Trust, pursuant to an investment management agreement with the Trust (''Investment Management Agreement'').[1] Under the terms of the Investment Management Agreement, the Adviser, subject to the supervision of the board of trustees of the Trust (''Board''), provides continuous investment management of the assets of each Subadvised Fund. Consistent with the terms of the Investment Management Agreement, the Adviser may, subject to the approval of the Board, delegate portfolio management responsibilities of all or a portion of the assets of a Subadvised Fund to one or more Sub-Advisers.[2] The Adviser will continue to have overall responsibility for the management and investment of the assets of each Subadvised Fund. The Adviser will evaluate, select, and recommend Sub-Advisers to manage the assets of a Subadvised Fund and will oversee, monitor and review the Sub-Advisers and their performance and recommend the removal or replacement of Sub-Advisers.

2. Applicants request an order to permit the Adviser, subject to the approval of the Board, to enter into investment sub-advisory agreements with the Sub-Advisers (each, a ''Sub-Advisory Agreement'') and materially amend such Sub-Advisory Agreements without obtaining the shareholder approval required under section 15(a) of the Act and rule 18f–2 under the Act.[3] Applicants also seek an exemption from the Disclosure Requirements to permit a Subadvised Fund to disclose (as both a dollar amount and a percentage of the Subadvised Fund's net assets): (a) The aggregate fees paid to the Adviser and any Wholly-Owned Sub-Adviser; (b) the aggregate fees paid to Non-Affiliated Sub-Advisers; and (c) the fee paid to each Affiliated Sub-Adviser (collectively, Aggregate Fee Disclosure'').[4]

3. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the application. Such terms and conditions provide for, among other safeguards, appropriate disclosure to Subadvised Funds' shareholders and notification about sub-advisory changes and enhanced Board oversight to protect the interests of the Subadvised Funds' shareholders.

4. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or any rule thereunder, if such relief is necessary or appropriate in the public interest and consistent with the protection of investors and purposes fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard because, as further explained in the application, the Investment Management Agreements will remain subject to shareholder approval, while the role of the Sub-Advisers is substantially equivalent to that of individual portfolio managers, so that requiring shareholder approval of Sub-Advisory Agreements would impose unnecessary delays and expenses on the Subadvised Funds. Applicants believe that the requested relief from the Disclosure Requirements meets this standard because it will improve the Adviser's ability to negotiate fees paid to the Sub-Advisers that are more advantageous for the Subadvised Funds.

[1] Applicants request relief with respect to the Initial Funds, as well as to any future series of the Trust and any other existing or future registered open-end management investment company or series thereof that, in each case, is advised by the Initial Adviser or any entity controlling, controlled by, or under common control with, the Initial Adviser or its successors (each, also an ''Adviser''), uses the multi-manager structure described in the application, and complies with the terms and conditions set forth in the application (each, a ''Subadvised Fund''). For purposes of the requested order, ''successor'' is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization. Future Subadvised Funds may be operated as a master-feeder structure pursuant to section 12(d)(1)(E) of the Act. In such a structure, certain series of the Trust (each, a ''Feeder Fund'') may invest substantially all of their assets in a Subadvised Fund (a ''Master Fund'') pursuant to section 12(d)(1)(E) of the Act. No Feeder Fund will engage any sub-advisers other than through approving the engagement of one or more of the Master Fund's sub-advisers.

[2] As used herein, a ''Sub-Adviser'' for a Subadvised Fund is (1) an indirect or direct ''wholly owned subsidiary'' (as such term is defined in the Act) of the Adviser for that Subadvised Fund, or (2) a sister company of the Adviser for that Subadvised Fund that is an indirect or direct ''wholly-owned subsidiary'' of the same company that, indirectly or directly, wholly owns the Adviser (each of (1) and (2) a ''Wholly-Owned Sub-Adviser'' and collectively, the ''Wholly-Owned Sub-Advisers''), or (3) not an ''affiliated person'' (as such term is defined in section 2(a)(3) of the Act) of the Subadvised Fund, any Feeder Fund invested in a Master Fund, the Trust, or the Adviser, except to the extent that an affiliation arises solely because the Sub-Adviser serves as a sub-adviser to a Subadvised Fund (''Non-Affiliated Sub-Advisers'').

[3] The requested relief will not extend to any sub-adviser, other than a Wholly-Owned Sub-Adviser, who is an affiliated person, as defined in section 2(a)(3) of the Act, of the Subadvised Fund, of any Feeder Fund, or of the Adviser, other than by reason of serving as a sub-adviser to one or more of the Subadvised Funds (''Affiliated Sub-Adviser'').

[4] For any Subadvised Fund that is a Master Fund, the relief would also permit any Feeder Fund invested in that Master Fund to disclose Aggregate Fee Disclosure.

For the Commission, by the Division of Investment Management, under delegated authority.

Jill M. Peterson,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–86636; File No. SR–NYSEArca–2018–98]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Amendment No. 4 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 4, To List and Trade Shares of the iShares Commodity Multi-Strategy ETF Under NYSE Arca Rule 8.600–E

August 12, 2019.

I. Introduction

On December 21, 2018, NYSE Arca, Inc. (''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares (''Shares'') of the iShares Commodity Multi-Strategy ETF (''Fund'') under NYSE Arca Rule 8.600–E. On February 1, 2019, pursuant to Section 19(b)(1) of the Act,[3] the Commission noticed the proposed rule change and, pursuant to Section 19(b)(2) of the Act,[4] designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to approve or disapprove the proposed rule change.[5] On March 6, 2019, the Exchange filed Amendment No. 1 to the proposed rule change, which replaced and superseded the proposed rule change as originally filed, and on March 14, 2019, the Exchange filed Amendment No. 2 to the proposed rule change, which replaced and superseded the proposed rule change, as modified by Amendment No. 1. On March 20, 2019, the Commission noticed the proposed rule change, as modified by Amendment No. 2, and instituted proceedings under Section 19(b)(2)(B) of the Act [6] to determine whether to approve or disapprove the proposed rule change, as modified by Amendment No. 2.[7] On March 29, 2019, the Exchange filed Amendment No. 3 to the proposed rule change, which replaced and superseded the proposed rule change, as modified by Amendment No. 2. On June 13, 2019, the Commission designated a longer period for Commission action on the proceedings to determine whether to approve or disapprove the proposed rule change.[8] On August 8, 2019, the Exchange filed Amendment No. 4 to the proposed rule change, which replaced and superseded the proposed rule change, as modified by Amendment No. 3.[9] The Commission has received no comment letters on the proposal.

The Commission is publishing this notice and order to solicit comments on the proposed rule change, as modified by Amendment No. 4, from interested persons and is approving the proposed rule change, as modified by Amendment No. 4, on an accelerated basis.

II. Summary of the Exchange's Description of the Proposal, as Modified by Amendment No. 4 [10]

The Exchange proposes to list and trade Shares of the Fund under NYSE Arca Rule 8.600–E, which governs the listing and trading of Managed Fund Shares on the Exchange. The Shares will be offered by iShares U.S. ETF Trust (''Trust''), which is registered with the Commission as an open-end management investment company.[11] The Fund is a series of the Trust.

BlackRock Fund Advisors (''Adviser'') will be the investment adviser for the Fund.[12] BlackRock Investments, LLC will be the distributor for the Fund's Shares. State Street Bank and Trust Company will serve as the administrator, custodian and transfer agent for the Fund.

A. Fund Investments

According to the Exchange, the investment objective of the Fund will be to seek to provide exposure, on a total

[5] *See* Securities Exchange Act Release No. 85033, 84 FR 2618 (February 7, 2019). The Commission designated March 21, 2019, as the date by which the Commission would approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to approve or disapprove the proposed rule change.

[6] 15 U.S.C. 78s(b)(2)(B).

[7] *See* Securities Exchange Act Release No. 85375, 84 FR 11375 (March 26, 2019) (''Order Instituting Proceedings'').

[8] *See* Securities Exchange Act Release No. 86104, 84 FR 28602 (June 19, 2019). The Commission extended the date by which the Commission shall approve or disapprove the proposed rule change to August 18, 2019.

[9] In Amendment No. 4, the Exchange: (1) Modified the description of the commodity futures included in the Reference Benchmark (as defined below); (2) modified the types of reference assets for the derivative instruments in which the Fund may invest; (3) clarified that the Fund may invest in Short-Term Fixed Income Securities (as defined below) other than cash equivalents on an ongoing basis for cash management purposes only; (4) modified the instruments included in the Short-Term Fixed Income Securities that the Fund may invest in for cash management purposes (and which would be excluded from the requirements of Commentary .01(b)(1)–(4) to NYSE Arca Rule 8.600–E); (5) represented that the Fund's holdings in non-convertible corporate debt securities will not exceed 30% of the weight of Fund's holdings in cash equivalents and Short-Term Fixed Income Securities, collectively; (6) specified that all exchange-traded notes (''ETNs'') which the Fund may hold will be listed and traded in the U.S. on a national securities exchange and the Fund will not invest in inverse or leveraged ETNs; (7) amended representations relating to the Fund's holdings in OTC Derivatives (as defined below) to, among other things, (a) add a representation that the Fund's holdings in OTC Derivatives will comply with the requirements of Commentary .01(f) to NYSE Arca Rule 8.600–E; and (b) remove a representation that the aggregate gross notional value of OTC Derivatives based on any five or fewer underlying reference assets will not exceed 65% of the weight of the portfolio (including gross notional exposures), and the aggregate gross notional value of OTC Derivatives based on any single underlying reference asset will not exceed 30% of the weight of the portfolio (including gross notional exposures); (8) added a representation by the Adviser that futures on all commodities in the Reference Benchmark are traded on futures exchanges that are members of the Intermarket Surveillance Group (''ISG'') or with which the Exchange has in place a comprehensive surveillance sharing agreement (''CSSA''); (9) specified that quotation and last sale information for exchange-traded funds (''ETFs'') and ETNs that the Fund may hold will be available via the Consolidated Tape Association (''CTA'') high-speed line; and (10) made other technical and conforming changes. Amendment No. 4 is available at: *https://www.sec.gov/comments/sr-nysearca-2018-98/srnysearca201898-5945207-189091.pdf.*

[10] For a complete description of the Exchange's proposal, as amended, *see* Amendment No. 4, *supra* note 9.

[11] According to the Exchange, on December 3, 2018, the Trust filed with the Commission its registration statement on Form N–1A under the Securities Act of 1933 and under the Investment Company Act of 1940 (''1940 Act'') relating to the Fund (File Nos. 333–179904 and 811–22649) (''Registration Statement''). In addition, the Exchange states that the Commission has issued an order upon which the Trust may rely, granting certain exemptive relief under the 1940 Act. *See* Investment Company Act Release No. 29571 (January 24, 2011) (File No. 812–13601).

[12] According to the Exchange, the Adviser is not registered as a broker-dealer but is affiliated with a broker-dealer and has implemented and will maintain a fire wall with respect to its broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio. In the event (a) the Adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement and maintain a fire wall with respect to its relevant personnel or its broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio. The Exchange also represents that the Adviser and its related personnel are subject to the provisions of Rule 204A–1 under the Investment Advisers Act of 1940 relating to codes of ethics.

return basis, to a group of commodities with characteristics of carry, momentum, and value. The Fund is actively managed and seeks to achieve its investment objective in part [13] by, under normal market conditions,[14] investing in listed and over-the-counter (''OTC'') total return swaps referencing the ICE BofAML Commodity Multi-Factor Total Return Index (''Reference Benchmark'').[15] In connection with investments in swaps on the Reference Benchmark, the Fund is expected to establish new swaps contracts on an ongoing basis and replace expiring contracts.[16] Swaps subsequently entered into by the Fund may have terms that differ from the swaps the Fund previously held. The Fund expects generally to pay a fixed payment rate and certain swap related fees to the swap counterparty and receive the total return of the Reference Benchmark, including, in the event of negative performance by the Reference Benchmark, negative return (*i.e.,* a payment from the Fund to the swap counterparty). In seeking total return, the Fund additionally aims to generate interest income and capital appreciation through a cash management strategy consisting primarily of cash, cash equivalents,[17] and fixed income securities other than cash equivalents, as described below.

The Fund intends to follow a multifactor strategy reflected by the Reference Benchmark, which Reference Benchmark equally weights three sub-indices designed to provide exposure to carry, momentum, and value factors. The Fund will invest in financial instruments described below that provide exposure to commodities and not in the physical commodities themselves. The ''carry'' sub-index emphasizes commodities and contract months with the greatest degree of backwardation or lowest degree of contango.[18] Second, the ''momentum'' sub-index underweights or overweights commodities based on the strength of performance patterns over multiple time periods. Third, the ''value'' sub-index measures value for each commodity by the ratio of its 3-month average spot price to its 5-year average. Sector weights are held constant versus a broad non-factor weighted commodity index, but within each sector, weights of individual commodities are tilted to favor those with the lowest valuation ratio. Within each sub-index, contract months are selected to maximize backwardation and minimize contango.

The Fund expects to obtain a substantial amount of its exposure to the carry, momentum, and value strategies by entering into total return swaps that pay the returns of the commodity futures contracts referenced in the Reference Benchmark. The Reference Benchmark includes 20 futures contracts on physical agricultural, energy, livestock, precious metals, and industrial metals listed on U.S. regulated futures exchanges or non-U.S. futures exchanges with which the Exchange has in place a CSSA.[19]

The Fund (through its Subsidiary (as defined below)) may hold the following listed derivative instruments: Futures, options, and swaps on the Reference Benchmark or commodities (which commodities are from the same sectors as those included in the Reference Benchmark); currencies; U.S. and non-U.S. equity securities; fixed income securities (as defined in Commentary .01(b) to NYSE Arca Rule 8.600–E, but excluding Short-Term Fixed Income Securities (as defined below)); and interest rates; or a basket or index of any of the foregoing (collectively, ''Listed Derivatives'').[20] Listed Derivatives will comply with the criteria in Commentary .01(d) of NYSE Arca Rule 8.600–E.

The Fund (through its Subsidiary) may hold the following OTC derivative instruments: Forwards, options, and swaps on the Reference Benchmark or commodities (which commodities are from the same sectors as those included in the Reference Benchmark); currencies; U.S. and non-U.S. equity securities; fixed income securities (as defined in Commentary .01(b) to NYSE Arca Rule 8.600–E, but excluding Short-Term Fixed Income Securities); and interest rates; or a basket or index of any of the foregoing (collectively, ''OTC Derivatives,'' [21] and together with Listed Derivatives, ''Commodity Investments'').[22]

The Fund may hold cash, cash equivalents, and fixed income securities other than cash equivalents, as described further below.

Specifically, the Fund may invest in Short-Term Fixed Income Securities (as defined below) other than cash equivalents on an ongoing basis for cash management purposes.[23] Short-Term Fixed Income Securities will have a maturity of no longer than 397 days and include only the following: (i) Money market instruments; (ii) obligations issued or guaranteed by the U.S. government, its agencies or instrumentalities (including government-sponsored enterprises); (iii) negotiable certificates of deposit, bankers' acceptances, fixed-time deposits and other obligations of U.S. and non-U.S. banks (including non-U.S. branches) and similar institutions; (iv) commercial paper; (v) non-convertible corporate debt securities (*e.g.,* bonds and debentures); (vi) repurchase agreements; and (vii) sovereign debt obligations of non-U.S. countries excluding emerging market countries [24]

---

[13] The Fund's investment objective is also achieved by investing in cash, cash equivalents, Commodity Investments, Fixed Income Securities and Short-Term Fixed Income Securities (each as defined or described below).

[14] The term ''normal market conditions'' is defined in NYSE Arca Rule 8.600–E(c)(5).

[15] Although the Fund may hold swaps on the Reference Benchmark, or direct investments in the same futures contracts as those included in the Reference Benchmark, the Fund is not obligated to invest in any futures contracts included in, and does not seek to replicate the performance of, the Reference Benchmark.

[16] Swaps on the Reference Benchmark are included in ''Commodity Investments'' as defined below.

[17] Cash equivalents are the short-term instruments enumerated in Commentary .01(c) to NYSE Arca Rule 8.600–E.

[18] According to the Exchange, in order to maintain exposure to a futures contract on a particular commodity, an investor must sell the position in the expiring contract and buy a new position in a contract with a later delivery month, which is referred to as ''rolling.'' If the price for the new futures contract is less than the price of the expiring contract, then the market for the commodity is said to be in ''backwardation.'' In these markets, roll returns are positive, which is referred to as ''positive carry.'' The term ''contango'' is used to describe a market in which the price for a new futures contract is more than the price of the expiring contract. In these markets, roll returns are negative, which is referred to as ''negative carry.'' The ''carry'' sub-index seeks to employ a positive carry strategy that emphasizes commodities and futures contract months with the greatest degree of backwardation and lowest degree of contango, resulting in net gains through positive roll returns.

[19] The commodity futures included in the Reference Benchmark are traded on the CME Group, ICE U.S., ICE Europe, Inc. and the London Metal Exchange (''LME''). ICE U.S., ICE Europe, Inc., and CME are members of the ISG. The Exchange represents that it has in place a CSSA with the LME.

[20] Examples of Listed Derivatives the Fund may invest in include: Exchange traded futures contracts similar to those found in the Reference Benchmark, exchange traded futures contracts on the Reference Benchmark, swaps on commodity futures contracts similar to those found in the Reference Benchmark, and futures and options that correlate to the investment returns of commodities without investing directly in physical commodities.

[21] As discussed below under ''Application of Generic Listing Requirements,'' the Fund's and the Subsidiary's holdings in OTC Derivatives will not comply with the criteria in Commentary .01(e) of NYSE Arca Rule 8.600–E.

[22] Examples of OTC Derivatives the Fund may invest in include swaps on commodity futures contracts similar to those found in the Reference Benchmark and options that correlate to the investment returns of commodities without investing directly in physical commodities.

[23] As discussed under ''Application of Generic Listing Requirements'' below, investments in Short-Term Fixed Income Securities will not comply with the requirements of Commentary .01(b)(1)–(4) to NYSE Arca Rule 8.600–E.

[24] According to the Exchange, an ''emerging market country'' is a country that, at the time the

Continued

(''Non-U.S. Sovereign Debt'') (collectively, ''Short-Term Fixed Income Securities''). Any of these securities may be purchased on a current or forward-settled basis.[25]

The Fund also may invest in fixed income securities as defined in Commentary .01(b) to NYSE Arca Rule 8.600–E,[26] other than cash equivalents and Short-Term Fixed Income Securities, with remaining maturities longer than 397 days (''Fixed Income Securities''). Such Fixed Income Securities will comply with requirements of Commentary .01(b) to NYSE Arca Rule 8.600–E.[27]

The Fund may also hold ETNs [28] and ETFs.[29]

The Fund's exposure to Commodity Investments is obtained by investing through a wholly-owned subsidiary organized in the Cayman Islands (''Subsidiary'').[30] The Fund controls the Subsidiary, and the Subsidiary is advised by the Adviser and has the same investment objective as the Fund. In compliance with the requirements of Sub-Chapter M of the Internal Revenue Code of 1986, the Fund may invest up to 25% of its total assets in the Subsidiary. The Subsidiary is not an investment company registered under the 1940 Act and is a company organized under the laws of the Cayman Islands. The Trust's Board of Trustees (''Board'') has oversight responsibility for the investment activities of the Fund, including its investment in the Subsidiary, and the Fund's role as sole shareholder of the Subsidiary.

The Fund's Commodity Investments held in the Subsidiary are intended to provide the Fund with exposure to broad commodities. The Subsidiary may hold cash and cash equivalents.

B. Investment Restrictions

The Fund and the Subsidiary will not invest in securities or other financial instruments that have not been described in the proposed rule change.

The Fund's holdings in non-convertible corporate debt securities shall not exceed 30% of the weight of Fund's holdings in cash equivalents and Short-Term Fixed Income Securities, collectively.

The Fund's investments, including derivatives, will be consistent with the Fund's investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*e.g.,* 2X or -3X) of the Fund's Reference Benchmark.

C. Use of Derivatives by the Fund

Investments in derivative instruments will be made in accordance with the Fund's investment objective and policies. To limit the potential risk associated with such transactions, the Fund will enter into offsetting transactions or segregate or ''earmark'' assets determined to be liquid by the Adviser in accordance with procedures established by the Board). In addition, the Fund has included appropriate risk disclosure in its offering documents, including leveraging risk. Leveraging risk is the risk that certain transactions of the Fund, including the Fund's use of derivatives, may give rise to leverage, causing the Fund to be more volatile than if it had not been leveraged.

The Adviser believes there will be minimal, if any, impact to the arbitrage mechanism as a result of the Fund's use of derivatives. The Adviser understands that market makers and participants should be able to value derivatives as long as the positions are disclosed with relevant information. The Adviser believes that the price at which Shares of the Fund trade will continue to be disciplined by arbitrage opportunities created by the ability to purchase or redeem Shares of the Fund at their net asset value (''NAV''), which should ensure that Shares of the Fund will not trade at a material discount or premium in relation to their NAV.

The Exchange states that the Adviser does not believe there will be any significant impacts to the settlement or operational aspects of the Fund's arbitrage mechanism due to the use of derivatives.

D. Application of Generic Listing Requirements

The Exchange represents that the portfolio for the Fund will not meet all of the ''generic'' listing requirements of Commentary .01 to NYSE Arca Rule 8.600–E applicable to the listing of Managed Fund Shares. The Exchange represents that, other than Commentary .01(b)(1)–(4) (with respect to Short-Term Fixed Income Securities) and .01(e) (with respect to OTC Derivatives) to NYSE Arca Rule 8.600–E, as described below, the Fund's portfolio will meet all other requirements of NYSE Arca Rule 8.600–E.[31]

According to the Exchange, the Fund's investments in Short-Term Fixed Income Securities will not comply with the requirements set forth in Commentary .01(b)(1)–(4) to NYSE Arca Rule 8.600–E.[32] The Exchange states

Fund invests in the related fixed income instruments, is classified as an emerging or developing economy by any supranational organization such as the International Bank of Reconstruction and Development or any affiliate thereof (the ''World Bank'') or the United Nations, or related entities, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

[25] To the extent that the Fund and the Subsidiary invest in cash and Short-Term Fixed Income Securities that are cash equivalents (*i.e.,* that have maturities of less than 3 months) as specified in Commentary .01(c) to NYSE Arca Rule 8.600–E, such investments will comply with Commentary .01(c) and may be held without limitation. Non-convertible corporate debt securities and Non-U.S. Sovereign Debt are not included as cash equivalents in Commentary .01(c).

[26] Commentary .01(b) to NYSE Arca Rule 8.600–E defines fixed income securities as debt securities that are notes, bonds, debentures or evidence of indebtedness that include, but are not limited to, U.S. Department of Treasury securities (''Treasury Securities''), government-sponsored entity securities (''GSEs''), municipal securities, trust preferred securities, supranational debt and debt of a foreign country or a subdivision thereof, investment grade and high yield corporate debt, bank loans, mortgage and asset backed securities, and commercial paper.

[27] Among the Fixed Income Securities in which the Fund may invest are commodity-linked notes.

[28] ETNs are securities as described in NYSE Arca Rule 5.2–E(j)(6) (Equity Index-Linked Securities, Commodity-Linked Securities, Currency-Linked Securities, Fixed Income Index-Linked Securities, Futures-Linked Securities and Multifactor Index-Linked Securities). All ETNs will be listed and traded in the U.S. on a national securities exchange. The Fund will not invest in inverse or leveraged (*e.g.,* 2X, -2X, 3X or -3X) ETNs.

[29] For purposes of the filing, the term ''ETFs'' includes Investment Company Units (as described in NYSE Arca Rule 5.2–E(j)(3)); Portfolio Depositary Receipts (as described in NYSE Arca Rule 8.100–E); and Managed Fund Shares (as described in NYSE Arca Rule 8.600–E). All ETFs will be listed and traded in the U.S. on a national securities exchange. The Fund will not invest in inverse or leveraged (*e.g.,* 2X, -2X, 3X or -3X) ETFs.

[30] The Exchange represents that all statements related to the Fund's investments and restrictions are applicable to the Fund and Subsidiary collectively.

[31] The Exchange states that the Adviser represents, in particular, that the Fund's holdings in OTC Derivatives will comply with the requirements of Commentary .01(f) to NYSE Arca Rule 8.600–E, which provides, in part, that to the extent that OTC derivatives are used to gain exposure to individual equities and/or fixed income securities, or to indexes of equities and/or indexes of fixed income securities, the aggregate gross notional value of such exposure will meet the generic listing criteria applicable to equities and fixed income securities (including gross notional exposures) set forth in Commentary .01(a) and .01(b) to NYSE Arca Rule 8.600–E, respectively.

[32] Commentary .01(b)(1)–(4) to NYSE Arca Rule 8.600–E requires that the components of the fixed income portion of a portfolio meet the following criteria initially and on a continuing basis: (1) Components that in the aggregate account for at least 75% of the fixed income weight of the portfolio each shall have a minimum original principal amount outstanding of $100 million or more; (2) no component fixed-income security (excluding Treasury Securities and GSEs) shall represent more than 30% of the fixed income weight of the portfolio, and the five most heavily weighted component fixed income securities in the portfolio (excluding Treasury Securities and GSEs) shall not in the aggregate account for more than 65% of the fixed income weight of the portfolio; (3) an underlying portfolio (excluding exempted securities) that includes fixed income securities

that while the requirements set forth in Commentary .01(b)(1)–(4) include rules intended to ensure that the fixed income securities included in a fund's portfolio are sufficiently large and diverse, and have sufficient publicly available information regarding the issuances, the Exchange believes that any concerns, regarding non-compliance are mitigated by the types of instruments that the Fund would hold. The Exchange represents that the Fund's Short-Term Fixed Income Securities primarily would include those instruments that are included in the definition of cash and cash equivalents,[33] but are not considered cash and cash equivalents because they have maturities of three months or longer. The Exchange believes, however, that, all Short-Term Fixed Income Securities, including non-convertible corporate debt securities [34] and Non-U.S. Sovereign Debt (which are not cash equivalents as enumerated in Commentary .01(c) to NYSE Arca Rule 8.600–E), are less susceptible than other types of fixed income instruments both to price manipulation and volatility and that the holdings as proposed are generally consistent with the policy concerns which Commentary .01(b)(1)–(4) is intended to address. Because the Short-Term Fixed Income Securities will consist of high-quality fixed income securities described above, the Exchange believes that the policy concerns that Commentary .01(b)(1)–(4) are intended to address are otherwise mitigated and that the Fund should be permitted to hold these securities in a manner that may not comply with Commentary .01(b)(1)–(4).

The Exchange represents that the Fund's portfolio with respect to OTC Derivatives will not comply with the requirements set forth in Commentary .01(e) to NYSE Arca Rule 8.600–E.[35] Specifically, the Exchange states that up to 60% of the Fund's assets (calculated as the aggregate gross notional value) may be invested in OTC Derivatives. The Exchange states that the Adviser believes that it is important to provide the Fund with additional flexibility to manage risk associated with its investments and, depending on market conditions, it may be critical that the Fund be able to utilize available OTC Derivatives to efficiently gain exposure to the multiple commodities that underlie the Reference Benchmark, as well as commodity futures contracts similar to those found in the Reference Benchmark. The Exchange states that OTC Derivatives can be tailored to provide specific exposure to the Fund's Reference Benchmark, as well as commodity futures contracts similar to those found in the Reference Benchmark, allowing the Fund to more efficiently meet its investment objective.[36] The Exchange further states that if the Fund were to gain commodity exposure exclusively through the use of listed futures, the Fund's holdings in Listed Derivatives would be subject to position limits and accountability levels established by an exchange, and such limitations would restrict the Fund's ability to gain efficient exposure to the commodities in the Reference Benchmark, or futures contracts similar to those found in the Reference Benchmark, thereby impeding the Fund's ability to satisfy its investment objective.

The Exchange represents that the Adviser and its affiliates actively monitor counterparty credit risk exposure (including for OTC derivatives) and evaluate counterparty credit quality on a continuous basis. With respect to the Fund's (and the Subsidiary's) investments in derivatives on the Reference Benchmark or commodities (which commodities are from the same sectors as those included in the Reference Benchmark), the Exchange states that the Reference Benchmark provides broad-based exposure to commodities as an asset class, as it includes at least 20 futures contracts on physical agricultural, energy, livestock, precious metals, and industrial metals. In addition, the Exchange states that the Adviser represents that futures on all commodities in the Reference Benchmark are traded on futures exchanges that are members of the ISG or with which the Exchange has in place a CSSA.

III. Discussion and Commission's Findings

After careful review, the Commission finds that the proposed rule change, as modified by Amendment No. 4, is consistent with the Act and the rules and regulations thereunder applicable to a national securities exchange.[37] In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 4, is consistent with Section 6(b)(5) of the Act,[38] which requires, among other things, that the Exchange's rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

According to the Exchange, other than Commentary .01(b)(1)–(4) with respect to Short-Term Fixed Income Securities and Commentary .01(e), the Fund's portfolio will meet all other requirements of Commentary .01 to NYSE Arca Rule 8.600–E, and the Shares of the Fund will conform to the initial and continued listing criteria under NYSE Arca Rule 8.600–E.

The Fund's investments in Short-Term Fixed Income Securities will not meet the requirements for fixed income securities set forth in Commentary .01(b)(1)–(4) to NYSE Arca Rule 8.600–E.[39] The Commission, however, believes that the limited nature of the Fund's investment in, and certain restrictions on, the Short Term Fixed Income Securities helps to mitigate concerns regarding the Shares being susceptible to manipulation because of the Fund's investment in the Short Term Fixed

shall include a minimum of 13 non-affiliated issuers, provided, however, that there shall be no minimum number of non-affiliated issuers required for fixed income securities if at least 70% of the weight of the portfolio consists of equity securities as described in Commentary .01(a); and (4) component securities that in aggregate account for at least 90% of the fixed income weight of the portfolio must be either (a) from issuers that are required to file reports pursuant to Sections 13 and 15(d) of the Act; (b) from issuers that have a worldwide market value of its outstanding common equity held by non-affiliates of $700 million or more; (c) from issuers that have outstanding securities that are notes, bonds debentures, or evidence of indebtedness having a total remaining principal amount of at least $1 billion; (d) exempted securities as defined in Section 3(a)(12) of the Act; or (e) from issuers that are a government of a foreign country or a political subdivision of a foreign country.

[33] *See supra* note 17.

[34] The Exchange notes that the Fund's holdings in non-convertible corporate debt securities will not exceed 30% of the weight of the Fund's holdings in cash equivalents and Short-Term Fixed Income Securities, collectively.

[35] Commentary .01(e) to NYSE Arca Rule 8.600–E provides that, on an initial and continuing basis, no more than 20% of the assets in the portfolio may be invested in OTC derivatives (calculated as the aggregate gross notional value of the OTC derivatives).

[36] As an example, the Exchange states that the Reference Benchmark is composed of 20 futures contracts across 20 physical commodities, which may not be sufficiently liquid and would not provide the commodity exposure the Fund requires to meet its investment objective if the Fund were to invest in the futures directly. The Exchange states that a total return swap can be structured to provide exposure to the same futures contracts as exist in the Reference Benchmark, as well as commodity futures contracts similar to those found in the Reference Benchmark, while providing sufficient efficiency to allow the Fund to more easily meet its investment objective.

[37] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[38] 15 U.S.C. 78f(b)(5).

[39] *See supra* note 32.

Income Securities.[40] Specifically, the Exchange states that Short-Term Fixed Income Securities primarily will include instruments that are included in the definition of cash equivalents,[41] but are not considered cash equivalents because they have maturities of three months or longer. As proposed, the Fund's investments in Short-Term Fixed Income Securities will also include non-convertible corporate debt securities, but such holdings would be limited to 30% of the weight of Fund's holdings in cash equivalents and Short-Term Fixed Income Securities, collectively. In addition, the Fund's investments in Short-Term Fixed Income Securities would include sovereign debt, but they exclude sovereign debt obligations of emerging market countries. Further, the Fund will invest in Short Term Fixed Income Securities for cash management purposes only, and the Short Term Fixed Income Securities in which the Fund may invest will have maturities of no longer than 397 days.[42]

In addition, the Fund's investments in OTC Derivatives will not comply with Commentary .01(e) to NYSE Arca Rule 8.600–E, which requires that no more than 20% of the assets of the Fund be invested in OTC derivatives (calculated as the aggregate gross notional value of such OTC derivatives). In the alternative, the Exchange proposes that up to 60% of the Fund's assets (calculated as the aggregate gross notional value) may be invested in OTC Derivatives.[43] The Exchange states that it may be necessary for the Fund to utilize OTC Derivatives in order to more efficiently hedge its portfolio or to meet its investment objective.[44]

The Commission, however, believes that certain factors help to mitigate concerns that the Fund's investment in OTC Derivatives will make the Shares more susceptible to manipulation. Specifically, with respect to OTC Derivatives on the Reference Benchmark (or on the commodities underlying the futures contracts included in the Reference Benchmark), the Exchange represents that the Reference Benchmark includes at least 20 futures contracts on physical agricultural, energy, livestock, precious metals, and industrial metals, and that futures on all of the commodities in the Reference Benchmark are traded on futures exchanges that are members of the ISG or with which the Exchange has in place a CSSA. Moreover, on a daily basis, the Fund will be required to disclose on its website the information regarding the Disclosed Portfolio required under NYSE Arca Rule 8.600–E(c)(2), to the extent applicable,[45] and the website information will be publicly available at no charge.[46]

The Exchange represents that all statements and representations made in the filing regarding: (1) The description of the portfolio holdings or reference assets; (2) limitations on portfolio holdings or reference assets; or (3) the applicability of Exchange listing rules specified in the rule filing constitute continued listing requirements for listing the Shares on the Exchange. In addition, the Exchange represents that the issuer must notify the Exchange of any failure by the Fund to comply with the continued listing requirements and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor[47] for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5–E(m).

For the foregoing reasons, the Commission finds that the proposed rule change, as modified by Amendment No. 4, is consistent with Section 6(b)(5) of the Act[48] and the rules and regulations thereunder applicable to a national securities exchange.

IV. Solicitation of Comments on Amendment No. 4 to the Proposed Rule Change

Interested persons are invited to submit written views, data, and arguments concerning whether Amendment No. 4 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEArca–2018–98 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2018–98. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change.

[40] The Commission notes that all the fixed income securities the Fund may invest in other than those included in Short-Term Fixed Income Securities and cash equivalents will comply with the requirements of Commentary .01(b) to NYSE Arca Rule 8.600–E, and the cash equivalents the Fund may invest in will comply with the requirements of Commentary .01(c). *See supra* Section II.A.

[41] *See supra* note 17.

[42] *See supra* Section II.A.

[43] The Exchange represents that the Adviser and its affiliates actively monitor counterparty credit risk exposure for OTC derivatives and evaluate counterparty credit quality on a continuous basis. *See supra* Section II.D. Moreover, the Exchange states that investments in derivative instruments will be made in accordance with the Fund's investment objective and policies. To limit the potential risk associated with such transactions, the Fund will enter into offsetting transactions or segregate or ''earmark'' assets determined to be liquid by the Adviser in accordance with procedures established by the Trust's Board of Trustees. In addition, the Fund has included appropriate risk disclosure in its offering documents, including leveraging risk. *See supra* Section II. C.

[44] *See supra* Section II.D.

[45] NYSE Arca Rule 8.600–E(c)(2) requires that the website for each series of Managed Fund Shares disclose the following information regarding the Disclosed Portfolio, to the extent applicable: (A) Ticker symbol; (B) CUSIP or other identifier; (C) description of the holding; (D) with respect to holdings in derivatives, the identity of the security, commodity, index or other asset upon which the derivative is based; (E) the strike price for any options; (F) the quantity of each security or other asset held as measured by (i) par value, (ii) notional value, (iii) number of shares, (iv) number of contracts, and (v) number of units; (G) maturity date; (H) coupon rate; (I) effective date; (J) market value; and (K) percentage weighting of the holding in the portfolio.

[46] *See* Amendment No. 4, *supra* note 9, at 17.

[47] The Commission notes that certain proposals for the listing and trading of exchange-traded products include a representation that the exchange will ''surveil'' for compliance with the continued listing requirements. *See, e.g.,* Securities Exchange Act Release No. 77499 (April 1, 2016), 81 FR 20428, 20432 (April 7, 2016) (SR–BATS–2016–04). In the context of this representation, it is the Commission's view that ''monitor'' and ''surveil'' both mean ongoing oversight of compliance with the continued listing requirements. Therefore, the Commission does not view ''monitor'' as a more or less stringent obligation than ''surveil'' with respect to the continued listing requirements.

[48] 15 U.S.C. 78f(b)(5).

Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2018–98 and should be submitted on or before September 6, 2019.

V. Accelerated Approval of the Proposed Rule Change, as Modified by Amendment No. 4

The Commission finds good cause to approve the proposed rule change, as modified by Amendment No. 4, prior to the thirtieth day after the date of publication of notice of the filing of Amendment No. 4 in the **Federal Register**. The Commission notes that Amendment No. 4 clarified the permitted investments of the Fund and the application of NYSE Arca Rule 8.600–E, Commentary .01 to the Fund's investments. Amendment No. 4 also provided other clarifications and additional information to the proposed rule change. The changes and additional information in Amendment No. 4 assist the Commission in evaluating the Exchange's proposal and in determining that the listing and trading of the Shares is consistent with the Act. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[49] to approve the proposed rule change, as modified by Amendment No. 4, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[50] that the proposed rule change (SR–NYSEArca–2018–98), as modified by Amendment No. 4 thereto, be, and it hereby is, approved on an acceleratedbasis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[51]

Jill M. Peterson,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Public Law 94–409, the Securities and Exchange Commission will hold an Open Meeting on Wednesday, August 21, 2019 at 10:00 a.m.

PLACE: The meeting will be held in Auditorium LL–002 at the Commission's headquarters, 100 F Street NE, Washington, DC 20549.

STATUS: This meeting will begin at 10:00 a.m. (ET) and will be open to the public. Seating will be on a first-come, first-served basis. Visitors will be subject to security checks. The meeting will be webcast on the Commission's website at *www.sec.gov.*

MATTERS TO BE CONSIDERED:

1. The Commission will consider whether to publish guidance regarding the proxy voting responsibilities of investment advisers under Rule 206(4)–6 under the Investment Advisers Act of 1940, and Form N–1A, Form N–2, Form N–3, and Form N–CSR under the Investment Company Act of 1940.

2. The Commission will consider whether to publish an interpretation and related guidance regarding the applicability of certain rules, which the Commission has promulgated under Section 14 of the Securities Exchange Act of 1934, to proxy voting advice.

At times, changes in Commission priorities require alterations in the scheduling of meeting items.

CONTACT PERSON FOR MORE INFORMATION: For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact Vanessa A. Countryman, Office of the Secretary, at (202) 551–5400.

Dated: August 13, 2019.

Vanessa A. Countryman,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–86630; File No. SR–CboeBZX–2019–004]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Designation of a Longer Period for Commission Action on Proceedings to Determine Whether To Approve or Disapprove a Proposed Rule Change To List and Trade Shares of the VanEck SolidX Bitcoin Trust

August 12, 2019.

On January 30, 2019, Cboe BZX Exchange, Inc. (''BZX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of SolidX Bitcoin Shares issued by the VanEck SolidX Bitcoin Trust under BZX Rule 14.11(e)(4), Commodity-Based Trust Shares. The proposed rule change was published for comment in the **Federal Register** on February 20, 2019.[3]

On March 29, 2019, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On May 20, 2019, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act [6] to determine whether to approve or disapprove the proposed rule change.[7] As of August 12, 2019, the Commission has received 38 comment letters on the proposed rule change.[8]

Section 19(b)(2) of the Act [9] provides that, after initiating disapproval proceedings, the Commission shall issue an order approving or disapproving the proposed rule change not later than 180 days after the date of publication of notice of filing of the proposed rule change. The Commission may extend the period for issuing an order approving or disapproving the proposed rule change, however, by not more than 60 days if the Commission determines that a longer period is appropriate and publishes the reasons for such determination. The date of publication of notice of filing of the proposed rule change was February 20, 2019. August 19, 2019, is 180 days from that date, and October 18, 2019, is 240 days from that date.

The Commission finds it appropriate to designate a longer period within which to issue an order approving or disapproving the proposed rule change

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–86629; File No. SR–NYSEArca–2019–01]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Designation of a Longer Period for Commission Action on Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change, as Modified by Amendment No. 1, Relating to the Listing and Trading of Shares of the Bitwise Bitcoin ETF Trust Under NYSE Arca Rule 8.201–E

August 12, 2019.

On January 28, 2019, NYSE Arca, Inc. (''NYSE Arca'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of the Bitwise Bitcoin ETF Trust under NYSE Arca Rule 8.201–E. The proposed rule change was published for comment in the **Federal Register** on February 15, 2019.[3]

On March 29, 2019, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On May 7, 2019, the Exchange filed Amendment No. 1 to the proposed rule change, which replaced and superseded the proposed rule change as originally filed.[6] On May 14, 2019, the Commission published Amendment No. 1 for notice and comment and instituted proceedings under Section 19(b)(2)(B) of the Act [7] to determine whether to approve or disapprove the proposed rule change, as modified by Amendment No. 1.[8] As of August 12, 2019, the Commission has received 50 comment letters on the proposed rule change.[9]

Section 19(b)(2) of the Act [10] provides that, after initiating disapproval proceedings, the Commission shall issue an order approving or disapproving the proposed rule change not later than 180 days after the date of publication of notice of filing of the proposed rule change. The Commission may extend the period for issuing an order approving or disapproving the proposed rule change, however, by not more than 60 days if the Commission determines that a longer period is appropriate and publishes the reasons for such determination. The date of publication of notice of filing of the proposed rule change was February 15, 2019. August 14, 2019, is 180 days from that date, and October 13, 2019, is 240 days from that date.

The Commission finds it appropriate to designate a longer period within which to issue an order approving or disapproving the proposed rule change so that it has sufficient time to consider this proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[11] designates October 13, 2019, as the date by which the Commission shall either approve or disapprove the proposed rule change (File No. SR–NYSEArca–2019–01).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[12]

Jill M. Peterson,

Assistant Secretary.

BILLING CODE 8011–01–P

SMALL BUSINESS ADMINISTRATION

Meeting of the Interagency Task Force on Veterans Small Business Development

AGENCY: U.S. Small Business Administration (SBA).

ACTION: Notice of open Federal Advisory Committee meeting.

SUMMARY: The SBA is issuing this notice to announce the location, date, time and agenda for the next meeting of the Interagency Task Force on Veterans Small Business Development (IATF). The meeting is open to the public.

DATES: Wednesday, September 4, 2019, from 1:00 p.m. to 4:00 p.m. EDT.

ADDRESSES: The meeting will be held at SBA Headquarters, 409 3rd Street SW, Eisenhower Conference Room B, Washington, DC 20416, and via webinar.

FOR FURTHER INFORMATION CONTACT: The meeting is open to the public; however advance notice of attendance is requested. To RSVP and confirm attendance, the general public should email *veteransbusiness@sba.gov* with subject line—''RSVP for September 4, 2019 IATF Public Meeting.''

Anyone wishing to make comments to the Task Force must contact SBA's Office of Veterans Business Development (OVBD) no later than August 15, 2019 via email *veteransbusiness@sba.gov,* or via phone at (202) 205–6773. Comments for the record will be limited to five minutes to accommodate as many participants as possible.

Special accommodation requests should also be directed to OVBD at (202) 205–6773 or *veteransbusiness@sba.gov.* For more information on veteran owned small business programs, please visit *www.sba.gov/ovbd.*

Skype for Business will be utilized for this meeting. Those wishing to attend via Skype should test their systems prior to the meeting to ensure access. Help for Skype can be found at *https://support.office.com/en-us/skype-for-business.* Participants can join the Skype meeting at *https://meet.lync.com/sba123/csimms/9W78JWM0?sl=1.* For those joining by teleconference call 1–202–765–1264, Conference ID: 88227066#.

Those attending the meeting are encouraged to arrive early to allow for

security clearance into the building. Attendees should use the main entrance to access SBA Headquarters, at 3rd and D Streets SW. For security purposes attendees must:

1. Present a valid photo ID to receive a visitor badge.

2. Know the name of the event being attended: The meeting event is the Interagency Task Force on Veterans Small Business Development (IATF)

3. Visitor badges are issued by the security officer at the main entrance. Visitors are required to display their visitor badge at all times while inside the building.

4. Laptops and other electronic devices may be inspected and logged for identification purposes.

5. Due to limited parking options, Metro's Federal Center SW station is the easiest way to access SBA Headquarters.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C., Appendix 2), SBA announces the meeting of the Interagency Task Force on Veterans Small Business Development (IAFT). The IATF is established pursuant to Executive Order 13540 to coordinate the efforts of Federal agencies to improve capital, business development opportunities, and pre-established federal contracting goals for small business concerns owned and controlled by veterans and service-disabled veterans.

The purpose of this meeting is to discuss efforts that support service-disabled veteran-owned small businesses, updates on past and current events, and the IATF's objectives for fiscal year 2019.

Dated: August 13, 2019.

Nicole Nelson,

Committee Management Officer (Acting).

DEPARTMENT OF STATE

[Public Notice 10824]

30-Day Notice of Proposed Information Collection: Application for a U.S. Passport

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to September 16, 2019.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email: oira_submission@omb.eop.gov.* You must include the DS form number, information collection title, and the OMB control number in the subject line of your message.
- *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Application for a U.S. Passport.
- *OMB Control Number:* 1405–0004.
- *Type of Request:* Revision of a Currently Approved Collection.
- *Originating Office:* Bureau of Consular Affairs, Passport Services (CA/PPT).
- *Form Number:* DS–11.
- *Respondents:* United States Citizens and Nationals.
- *Estimated Number of Respondents:* 11,015,000.
- *Estimated Number of Responses:* 11,015,000.
- *Average Time Per Response:* 85 minutes.
- *Total Estimated Burden Time:* 15,604,583 hours.
- *Frequency:* On occasion.
- *Obligation to Respond:* Required to Obtain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The DS–11 solicits data necessary for Passport Services to issue a United States passport (book and/or card format) pursuant to authorities granted to the Secretary of State by 22 U.S.C. 211a *et seq.,* and Executive Order (E.O.) 11295 (August 5, 1966) for the issuance of passports to U.S. nationals.

The issuance of U.S. passports requires the determination of identity, nationality, and entitlement with reference to the provisions of Title III of

the Immigration and Nationality Act (INA) (8 U.S.C. 1401–1504), the 14th Amendment to the Constitution of the United States, other applicable treaties and laws, and implementing regulations at 22 CFR parts 50 and 51. The specific regulations pertaining to the Application for a U.S. Passport are at 22 CFR 51.20 through 51.28.

Methodology

The information collected on the DS–11 is used to facilitate the issuance of passports to U.S. citizens and nationals. The primary purpose of soliciting the information is to establish citizenship, identity, and entitlement to the issuance of a U.S. passport, and to properly administer and enforce the laws pertaining to the issuance thereof.

Passport Services collects information from U.S. citizens and non-citizen nationals when they complete and submit the Application for a U.S. Passport. Passport applicants can either download the DS–11 from the internet or obtain one from an Acceptance Facility/Passport Agency. The form must be completed and executed at an acceptance facility or passport agency, and submitted with evidence of citizenship and identity.

Barry J. Conway,

Acting Deputy Assistant Secretary for Passport Services, Bureau of Consular Affairs, Department of State.

BILLING CODE 4710–06–P

SURFACE TRANSPORTATION BOARD

[Docket No. 36335]

Progressive Rail Incorporated—Continuance in Control Exemption—Chicago St. Paul & Pacific Railroad LLC

Progressive Rail Incorporated (PGR), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to continue in control of Chicago St. Paul & Pacific Railroad LLC (CSP), a noncarrier subsidiary of PGR, upon CSP's becoming a Class III rail carrier.

CSP has concurrently filed a verified notice of exemption in *Chicago St. Paul & Pacific Railroad—Change in Operators Exemption—Chicago Terminal Railroad,* Docket No. FD 36327. In that docket, CSP seeks to acquire a leasehold and operating interest in a 3.47-mile line of railroad (the Line) near Bensenville, Ill., owned by Soo Line Railroad Company and currently operated by Chicago Terminal Railroad. PGR notes that CSP is a new entity established by PGR to operate the Line.

The earliest this transaction may be consummated is August 31, 2019, the effective date of the exemption (30 days after the verified notice was filed). PGR states that it intends to consummate the transaction concurrently with CSP's commencement of operations, pursuant to Docket No. FD 36327, on or about September 1, 2019.

PGR will continue in control of CSP upon CSP's becoming a Class III rail carrier, while remaining in control of nine other Class III carriers: Airlake Terminal Railway Company, LLC; Central Midland Railway Company; Iowa Traction Railway Company; Iowa Southern Railway Company; Piedmont & Northern Railroad, LLC; Chicago Junction Railway Company; St. Paul & Pacific Railroad Company, LLC; Clackamas Valley Railway Company, LLC; and St. Paul & Pacific Northwest Railroad Company, LLC.

PGR verifies that: (1) The Line does not connect with the lines of PGR or the lines of any of the other nine Class III rail carriers controlled by PGR; (2) this continuance in control transaction is not part of a series of anticipated transactions that would result in such a connection; and (3) the transaction does not involve a Class I rail carrier. Therefore, the transaction is exempt from the prior approval requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Section 11326(c), however, does not provide for labor protection for transactions under sections 11324 and 11325 that involve only Class III rail carriers. Accordingly, the Board may not impose labor protective conditions here because all the carriers involved are Class III carriers.

If the notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 23, 2019 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36335, must be filed with the Surface Transportation Board either via e-filing or in writing addressed to 395 E Street SW, Washington, DC 20423. In addition, a copy of each pleading must be served on PGR's representative, Bradon J. Smith, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

According to PGR, this action is excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b)(1).

Board decisions and notices are available at *www.stb.gov.*

Decided: August 13, 2019.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36327]

Chicago St. Paul & Pacific Railroad LLC—Change in Operators Exemption—Chicago Terminal Railroad

Chicago St. Paul & Pacific Railroad LLC (CSP) has filed a verified notice of exemption under 49 CFR 1150.31 to assume operations over approximately 3.47 miles of track (the Line) owned by Soo Line Railroad Company (Soo Line) and currently operated by Chicago Terminal Railroad (CTM) in Bensenville, Ill. The verified notice states that CSP will operate and provide all rail common carrier service to shippers on the Line pursuant to a lease agreement between its parent, Progressive Rail Incorporated (PGR), and Soo Line. According to CSP, it will replace CTM as the Line's operator, and, upon consummation of the transaction, CTM will cease to serve as a common carrier on the Line. CSP states that it understands, based on information from Soo Line, that CTM does not object to the proposed change in operators.

This transaction is related to a concurrently filed verified notice of exemption in *Progressive Rail Incorporated—Continuance in Control Exemption—Chicago St. Paul & Pacific Railroad,* Docket No. FD 36335, in which PGR seeks to continue in control of CSP upon CSP's becoming a Class III rail carrier.

CSP states that its proposed lease and operation of the Line does not involve any provision or agreement that would limit future interchange with a third-party connecting carrier and certifies that its projected revenues as a result of this proposed transaction will not result in the creation of a Class II or Class I rail carrier. On July 1, 2019, PGR filed the certification of notice to employees

required under 49 CFR 1150.42(e) for new carriers whose projected annual revenue exceeds $5 million. Further, under 49 CFR 1150.32(b), a change in operators exemption requires that notice be given to shippers. CSP states that it has provided notice of the proposed change in operators to all shippers on the Line.

The earliest this transaction may be consummated is August 31, 2019, the effective date of the exemption (30 days after the verified notice was filed). CSP states that it intends to consummate the proposed lease transaction and assume operation of the Line on September 1, 2019.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 23, 2019 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36327, must be filed with the Surface Transportation Board either via e-filing or in writing addressed to 395 E Street SW, Washington, DC 20423. In addition, a copy of each pleading must be served on CSP's representative, Bradon J. Smith, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

According to CSP, this action is excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b)(1).

Board decisions and notices are available at *www.stb.gov.*

Decided: August 13, 2019.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36340]

Watco Holdings, Inc.—Continuance in Control Exemption—Wisconsin Rapids Railroad, L.L.C.

Watco Holdings, Inc. (Watco), a noncarrier, has filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to continue in control of Wisconsin Rapids Railroad, L.L.C. (WRR), a noncarrier controlled by Watco, upon WRR's becoming a Class III rail carrier.

This transaction is related to a verified notice of exemption filed concurrently in *Wisconsin Rapids Railroad—Lease & Operation Exemption—Line of Wisconsin Central Ltd.,* Docket No. FD 36339, in which WRR seeks to lease from Wisconsin Central Ltd. (WCL) and operate approximately 1.1 miles of rail line extending from milepost 0.4 at Plover Road to milepost 1.5 at Biron Drive in Biron, Wis.

The transaction may be consummated on or after September 1, 2019, the effective date of the exemption (30 days after the verified notice of exemption was filed).

According to the verified notice of exemption, Watco currently controls indirectly 37 Class III railroads [1] and one Class II railroad, collectively operating in 27 states.[2] For a complete list of these rail carriers and the states in which they operate, see the August 2, 2019 verified notice of exemption at page 8. The verified notice is available at *www.stb.gov.*

Watco represents that: (1) The rail line to be operated by WRR does not connect with any of the rail lines operated by railroads in the Watco corporate family; (2) this transaction is not part of a series of anticipated transactions that would connect WRR with any railroad in the Watco corporate family; and (3) the transaction does not involve a Class I rail carrier. The proposed transaction is therefore exempt from the prior approval requirements of 49 U.S.C.11323 pursuant to 49 CFR 1180.2(d)(2). Watco states that the transaction will allow it to exercise common control of its existing rail carrier subsidiaries and WRR and that, in turn, the control exemption will allow WRR to proceed with the lease and operation of the Line as contemplated in Docket No. FD 36339.

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Because the transaction involves the control of one Class II and one or more Class III rail carriers, the transaction is subject to the labor protection requirements of 49 U.S.C. 11326(b) and *Wisconsin Central Ltd.—Acquisition Exemption—Lines of Union Pacific Railroad,* 2 S.T.B. 218 (1997).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 23, 2019 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36340, must be filed with the Surface Transportation Board either via e-filing or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Watco's representative, Audrey L. Brodrick, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606–3208.

According to Watco, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: August 13, 2019.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

[FR Doc. 2019–17664 Filed 8–15–19; 8:45 am]

BILLING CODE 4915–01–P

[1] Watco states that Geaux Geaux Railroad is a trade name for Bogalusa Bayou Railroad, L.L.C.; however, it is unclear whether that is the case. Geaux Geaux Railroad may be an additional, distinct carrier. *See* Watco Notice of Exemption, 8–9, *Watco Holdings, Inc.—Continuance in Control Exemption—Savannah & Old Fort R.R.,* FD 36337 (listing ''Geaux Geaux River'' as an additional Watco carrier); *see also* Watco, *https://www.watcocompanies.com/services/rail/geaux-geaux-railroad-gogr/* and *https://www.watcocompanies.com/services/rail/bogalusa-bayou-railroad-bbay/* (separately listing Geaux Geaux Railroad and Bogalusa Bayou Railroad as apparently distinct carriers). Moreover, Watco's exemption to continue in control of an additional entity, Savannah & Old Fort Railroad, on its becoming a Class III railroad is scheduled to become effective on August 29, 2019. *See Watco Holdings, Inc.—Continuance in Control Exemption—Savannah & Old Fort R.R.,* FD 36337 (STB served Aug. 15, 2019).

[2] Although Watco's verified notice indicates that the carriers it controls operate in 25 states, the notice lists 27 different states.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36339]

Wisconsin Rapids Railroad, L.L.C.—Lease and Operation Exemption—Line of Wisconsin Central Ltd.

Wisconsin Rapids Railroad, L.L.C. (WRR), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to lease from Wisconsin Central Ltd. (WCL) and operate approximately 1.1 miles of rail line (the Line), extending from milepost 0.4 at Plover

Road to milepost 1.5 at Biron Drive in Biron, Wis.

This transaction is related to a concurrently filed verified notice of exemption in *Watco Holdings, Inc.—Continuance in Control Exemption—Wisconsin Rapids R.R.,* Docket No. FD 36340, in which Watco Holdings, Inc., seeks to continue in control of WRR upon WRR's becoming a Class III rail carrier.

WRR states that it and WCL will shortly execute a Track Lease and Operating Agreement pursuant to which WRR will lease the Line from WCL and will be the operator of the Line.[1] WRR further states that the proposed agreement between WRR and WCL does not contain any provision that limits WRR's future interchange of traffic on the Line with a third-party connecting carrier.

WRR certifies that its projected annual revenues as a result of this transaction will not result in WRR's becoming a Class II or Class I rail carrier. WRR further certifies that the projected annual revenue of WRR will not exceed $5 million.

The transaction may be consummated on or after September 1, 2019, the effective date of the exemption (30 days after the verified notice was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 23, 2019 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36339, must be filed with the Surface Transportation Board either via e-filing or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on WRR's representative, Audrey L. Brodrick, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

According to WRR, this action is excluded from environmental review under 49 CFR 1105.6(c) and from historic reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: August 13, 2019.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

BILLING CODE 4915–01–P

[1] WRR states that it, WCL, and ND Paper, Inc. (ND), the sole shipper on the Line, have entered into arrangements that contemplate WCL's abandonment of, and WRR's discontinuance of service on, the Line; ND's subsequent acquisition of the trackage as a noncarrier; and WRR's provision of switching service for ND on what will then be ND industry trackage. WRR states that it is leasing the Line from WCL and submitting its verified notice of exemption here at the request of ND, so that WRR service to ND can begin immediately while the parties' longer-term arrangements are implemented. Acquisitions of active rail lines under 49 U.S.C. 10901 are supposed to be for continued rail use. *See, e.g., Land Conservancy—Acquis. & Operation Exemption—Burlington N. & Santa Fe Ry.,* 2 S.T.B. 673 (1997), *recons. denied,* FD 33389 (STB served May 13, 1998), *pet. for judicial review dismissed sub nom. Land Conservancy of Seattle & King Cty.* v. *STB,* 238 F.3d 429 (9th Cir. 2000). If WRR elects to file for discontinuance authority, it must submit evidence showing that discontinuance of service over the Line is warranted under the Board's statutory authority and rules, and must, under these circumstances, demonstrate (*e.g.,* by providing the parties' agreement or a statement from ND) that the interests of the shipper here will be protected. *See Almono LP—Acquis. & Operation Exemption—Line of Monogahela Connecting R.R.,* FD 34250, slip op. 1 n.2 (STB served Oct. 2, 2002).

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Highway in California

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by the California Department of Transportation (Caltrans), pursuant to 23 U.S.C. 327.

SUMMARY: The FHWA, on behalf of Caltrans, is issuing this notice to announce actions taken by Caltrans that are final. The actions relate to a proposed highway project, the San Antonio Creek Bridge Scour Mitigation Project located approximately 12 miles north of the City of Lompoc in the County of Santa Barbara, California. Those actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA, on behalf of Caltrans, is advising the public of final agency actions subject to 23 U.S.C. 139(*l*)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before January 13, 2020. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For Caltrans, Matt Fowler, Branch Chief, Central Region Environmental, Caltrans District 5, 50 Higuera Street, San Luis Obispo, CA 93401, 805–542–4603, *matt.c.fowler@dot.ca.gov,* Monday–Friday, 9:00 a.m.–5:00 p.m. PDT.

SUPPLEMENTARY INFORMATION: Effective July 1, 2007, the Federal Highway Administration (FHWA) assigned, and the California Department of Transportation (Caltrans) assumed, environmental responsibilities for this project pursuant to 23 U.S.C. 327. Notice is hereby given that the Caltrans, have taken final agency actions subject to 23 U.S.C. 139(*l*)(1) by issuing licenses, permits, and approvals for the following highway project in the State of California: San Jose Creek Bridge Scour Mitigation Project on State Route 1 at postmile 33.1, approximately 12 miles north from the City of Lompoc in the County of Santa Barbara, California. Caltrans proposes to prevent further scour damage on the southwestern bank of the San Antonio Creek by extending the existing erosion control features in order to protect the foundations of San Antonio Creek Bridge. Project activities will occur in an area of less than one acre, within existing Caltrans right-of-way and outside of the creek channel. FHWA project reference number P001(610). The actions by the Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Assessment (FEA) with Finding of No Significant Impact (FONSI) for the project, approved on June 12, 2019 and in other documents in Caltrans' project records. The FEA, FONSI and other project records are available by contacting Caltrans at the addresses provided above.

This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. National Environmental Policy Act (NEPA) [42 U.S.C. 4321–4335]
2. The National Historic Preservation Act (NHPA) of 1966 [16 U.S.C. 470(f) *et seq.*]
3. Archaeological Resource Protection Act (ARPA) of 1977 [16 U.S.C. 470(aa)–470(ll)
4. Archaeological and Historic Preservation Act [16 U.S.C. 469–489(c)]
5. Native American Grave protection and Repatriation Act (NAGPRA) [25 U.S.C. 30001–3013]
6. Clean Water Act [33 U.S.C. 1344]
7. Wild and Scenic Rivers Act [16 U.S.C. 1271–1287]
8. Federal Endangered Species Act (FESA) [16 U.S.C. 1531–1543]
9. Migratory Bird Treaty Act [16 U.S.C. 760c–760g]

10. Invasive Species Executive Order 11988

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: August 12, 2019.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2020 Rates; Quality Reporting Requirements for Specific Providers; Medicare and Medicaid Promoting Interoperability Programs Requirements for Eligible Hospitals and Critical Access Hospitals

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: We are revising the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems for FY 2020 and to implement certain recent legislation. We also are making changes relating to Medicare graduate medical education (GME) for teaching hospitals and payments to critical access hospital (CAHs). In addition, we are providing the market basket update that will apply to the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis, subject to these limits for FY 2020. We are updating the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) for FY 2020. In this FY 2020 IPPS/LTCH PPS final rule, we are addressing wage index disparities impacting low wage index hospitals; providing for an alternative IPPS new technology add-on payment pathway for certain transformative new devices and qualified infectious disease products; and revising the calculation of the IPPS new technology add-on payment. In addition, we are revising and clarifying our policies related to the substantial clinical improvement criterion used for evaluating applications for the new technology add-on payment under the IPPS.

We are establishing new requirements or revising existing requirements for quality reporting by specific Medicare providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs). We also are establishing new requirements and revising existing requirements for eligible hospitals and critical access hospitals (CAHs) participating in the Medicare and Medicaid Promoting Interoperability Programs. We are updating policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

DATES: This final rule is effective October 1, 2019.

SUPPLEMENTARY INFORMATION:

Tables Available Through the Internet on the CMS Website

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to the proposed rule and the final rule were published in the **Federal Register**, as part of the annual proposed and final rules. However, beginning in FY 2012, the majority of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables, generally, will be available only through the internet. The IPPS tables for this FY 2020 final rule are available through the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled, ''FY 2020 IPPS Final Rule Home Page'' or ''Acute Inpatient—Files for Download.'' The LTCH PPS tables for this FY 2020 final rule are available through the internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1716–F. For further details on the contents of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this FY 2020 IPPS/LTCH PPS final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact Michael Treitel at (410) 786–4552.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2020 IPPS/LTCH PPS final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This final rule also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this final rule, we are addressing wage index disparities impacting low wage index hospitals; providing for an alternative IPPS new technology add-on payment pathway for certain transformative new devices and qualified infectious disease products; revising the calculation of the IPPS new technology add-on payment; and making revisions and clarifications related to the substantial clinical improvement criterion under the IPPS.

We are establishing new requirements and revising existing requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs) that are participating in Medicare. We also are establishing new requirements and revising existing requirements for eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs. We are updating policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

Under various statutory authorities, we are making changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2020 and subsequent fiscal years. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the BBRA (Pub. L. 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act requires the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries (dual-eligibles) in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.

• Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016, and provides for a 4-year transitional blended payment rate for discharges occurring in LTCH cost reporting periods beginning in FYs 2016 through 2019. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

• Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.

2. Summary of the Major Provisions

In this final rule, we provide a summary of the major provisions in this FY 2020 IPPS/LTCH PPS final rule. In general, these major provisions are part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the proposed changes that were included in the FY 2020 IPPS/LTCH PPS proposed rule is presented in section I.D. of the preamble of this final rule.

a. MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling $11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2020, we are making an adjustment of +0.5 percent to the standardized amount.

b. Revisions and Clarifications to the New Technology Add-On Payment Policy Substantial Clinical Improvement Criterion Under the IPPS

In the proposed rule, in addition to a broad request for public comments for potential rulemaking in future years, in order to respond to stakeholder feedback requesting greater understanding of CMS' approach to evaluating substantial clinical improvement, we solicited public comments on specific changes or clarifications to the IPPS and Outpatient Prospective Payment System (OPPS) substantial clinical improvement criterion used to evaluate applications for new technology add-on payments under the IPPS and the transitional pass-through payment for additional costs of innovative devices under the OPPS that CMS might consider making in this FY 2020 IPPS/LTCH PPS final rule for applications received beginning in FY 2020 for the IPPS and CY 2020 for the OPPS, to provide greater clarity and predictability.

In this final rule, after consideration of public comments, we are revising and clarifying certain aspects of our evaluation of the substantial clinical improvement criterion under the IPPS in 42 CFR 412.87.

c. Alternative Inpatient New Technology Add-On Payment Pathway for Transformative New Devices and Antimicrobial Resistant Products

As discussed in section III.H.8. of the preamble of this final rule, after consideration of public comments, given the Food and Drug Administration's (FDA's) expedited programs, and consistent with the Administration's commitment to addressing barriers to health care innovation and ensuring that Medicare beneficiaries have access to critical and life-saving new cures and technologies that improve beneficiary health outcomes, we are adopting an alternative pathway for the inpatient new technology add-on payment for certain transformative medical devices. In situations where a new medical device has received FDA marketing authorization (that is, the device has received pre-market approval (PMA); 510(k) clearance; or the granting of a De Novo classification request) and is the subject of the FDA's Breakthrough Devices Program, we are finalizing our proposal to create an alternative inpatient new technology add-on payment pathway to facilitate access to this technology for Medicare beneficiaries. In addition, after consideration of public comments and concerns related to antimicrobial resistance and its serious impact on Medicare beneficiaries and public health overall, we are finalizing an alternative inpatient new technology add-for Qualified Infectious Disease Products (QIDPs).

Specifically, we are establishing that, for applications received for IPPS new technology add-on payments for FY 2021 and subsequent fiscal years, if a medical device is the subject of the FDA's Breakthrough Devices Program or if a medical product technology receives the FDA's QIDP designation and received FDA marketing authorization, such a device or product will be considered new and not substantially similar to an existing technology for purposes of new technology add-on payment under the IPPS. We are also establishing that the medical device or product will not need to meet the requirement under 42 CFR 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

d. Revision of the Calculation of the Inpatient Hospital New Technology Add-On Payment

The current calculation of the new technology add-on payment is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs), as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS–DRG payment plus 50 percent of the estimated costs of the new technology or medical service.

As discussed in section III.H.9. of the preamble of this final rule, after consideration of the concerns raised by

commenters and other stakeholders, we agree that capping the add-on payment amount at 50 percent could, in some cases, not adequately reflect the costs of new technology or sufficiently support healthcare innovations.

After consideration of public comments, we are finalizing the proposed modification to the current payment amount to increase the maximum add-on payment amount to 65 percent of the costs of the new technology or medical service (except with respect to a medical product designated by the FDA as a QIDP). Therefore, we are establishing that, beginning with discharges occurring on or after October 1, 2019, for a new technology other than a medical product designated as a QIDP by the FDA, if the costs of a discharge involving a new medical service or technology exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment. In addition, after consideration of public comments and concerns related to antimicrobial resistance and its serious impact on Medicare beneficiaries and public health overall, we are establishing that, beginning with discharges occurring on or after October 1, 2019, for a new technology that is a medical product designated as a QIDP by the FDA, if the costs of a discharge involving a new medical service or technology exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment.

e. Finalized Policies To Address Wage Index Disparities

In the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20372), we invited the public to submit further comments, suggestions, and recommendations for regulatory and policy changes to the Medicare wage index. Many of the responses received from this request for information (RFI) reflect a common concern that the current wage index system perpetuates and exacerbates the disparities between high and low wage index hospitals. Many respondents also expressed concern that the calculation of the rural floor has allowed a limited number of States to manipulate the wage index system to achieve higher wages for many urban hospitals in those States at the expense of hospitals in other States, which also contributes to wage index disparities.

To help mitigate these wage index disparities, including those resulting from the inclusion of hospitals with rural reclassifications under 42 CFR 412.103 in the rural floor, in this final rule, we are reducing the disparity between high and low wage index hospitals by increasing the wage index values for certain hospitals with low wage index values and doing so in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals, as well as changing the calculation of the rural floor. We also are providing for a transition for hospitals experiencing significant decreases in their wage index values as compared to their final FY 2019 wage index. We are making these changes in a budget neutral manner.

In this final rule, we are increasing the wage index for hospitals with a wage index value below the 25th percentile wage index value for a fiscal year by half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals. Furthermore, this policy will be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. In order to offset the estimated increase in IPPS payments to hospitals with wage index values below the 25th percentile wage index value, we are applying a uniform budget neutrality factor to the standardized amount.

In addition, we are removing urban to rural reclassifications from the calculation of the rural floor, such that, beginning in FY 2020, the rural floor is calculated without including the wage data of hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act (as implemented in the regulations at § 412.103). Also, for the purposes of applying the provisions of section 1886(d)(8)(C)(iii) of the Act, we are removing urban to rural reclassifications from the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in the statute.

Lastly, for FY 2020, we are placing a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in FY 2019. We are applying a budget neutrality adjustment to the standardized amount so that our transition for hospitals that could be negatively impacted is implemented in a budget neutral manner.

f. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare disproportionate share hospital (DSH) payment methodology, beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, DSHs receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this FY 2020 IPPS/LTCH PPS final rule, we have updated our estimates of the three factors used to determine uncompensated care payments for FY 2020. We continue to use uninsured estimates produced by CMS' Office of the Actuary (OACT), as part of the development of the National Health Expenditure Accounts (NHEA) in the calculation of Factor 2. We also are using a single year of data on uncompensated care costs from Worksheet S–10 for FY 2015 to determine Factor 3 for FY 2020. In addition, we are continuing to use only data regarding low-income insured days (Medicaid days for FY 2013 and FY 2017 SSI days) to determine the amount of uncompensated care payments for Puerto Rico hospitals, and Indian Health Service and Tribal hospitals. We did not adopt specific Factor 3 polices for all-inclusive rate providers for FY 2020. In this final rule, we also are continuing to use the following established policies: (1) For providers with multiple cost reports, beginning in the same fiscal year, to use the longest cost report and annualize Medicaid data and uncompensated care data if a hospital's cost report does not equal 12 months of data; (2) in the rare case where a provider has multiple cost reports beginning in the same fiscal year, but one report also spans the entirety of the following fiscal year, such that the hospital has no cost report for that fiscal year, to use the cost report that spans both fiscal years for the latter fiscal year;

and (3) to apply statistical trim methodologies to potentially aberrant cost-to-charge ratios (CCRs) and potentially aberrant uncompensated care costs reported on the Worksheet S–10.

g. Changes to the LTCH PPS

In this FY 2020 IPPS/LTCH PPS final rule, we set forth changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2020. We also are establishing the payment adjustment for LTCH discharges when the LTCH does not meet the applicable discharge payment percentage and a reinstatement process, as required by section 1886(m)(6)(C) of the Act. An LTCH will be subject to this payment adjustment if, for cost reporting periods beginning in FY 2020 and subsequent fiscal years, the LTCH's percentage of Medicare discharges that meet the criteria for exclusion from the site neutral payment rate (that is, discharges paid the LTCH PPS standard Federal payment rate) of its total number of Medicare FFS discharges paid under the LTCH PPS during the cost reporting period is not at least 50 percent. We are adopting a probationary cure period as part of the reinstatement process.

h. Reduction of Hospital Payments for Excess Readmissions

We are making changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2017 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. In this FY 2020 IPPS/LTCH PPS final rule, we are establishing the following policies: (1) A measure removal policy that aligns with the removal factor policies previously adopted in other quality reporting and quality payment programs; (2) an update to the Program's definition of ''dual-eligible,'' beginning with the FY 2021 program year to allow for a 1-month lookback period in data sourced from the State Medicare Modernization Act (MMA) files to determine dual-eligible status for beneficiaries who die in the month of discharge; (3) a subregulatory process to address any potential future nonsubstantive changes to the payment adjustment factor components; and (4) an update to the Program's regulations at 42 CFR 412.152 and 412.154 to reflect policies we are finalizing in this final rule and to codify additional previously finalized policies.

i. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this FY 2020 IPPS/LTCH PPS final rule, we are establishing that the Hospital VBP Program will use the same data used by the HAC Reduction Program for purposes of calculating the Centers for Disease Control and Prevention (CDC) National Health Safety Network (NHSN) Healthcare-Associated Infection (HAI) measures beginning with CY 2020 data collection, which is when the Hospital IQR Program will no longer collect data on those measures, and will rely on HAC Reduction Program validation to ensure the accuracy of CDC NHSN HAI measure data used in the Hospital VBP Program. We also are newly establishing certain performance standards.

j. Hospital-Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act establishes an incentive to hospitals to reduce the incidence of hospital-acquired conditions by requiring the Secretary to make an adjustment to payments to applicable hospitals, effective for discharges beginning on October 1, 2014. This 1-percent payment reduction applies to hospitals that rank in the worst-performing quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital's discharges for the specified fiscal year. As part of our agency-wide Patients over Paperwork and Meaningful Measures Initiatives, discussed in section I.A.2. of the FY 2019 IPPS/LTCH PPS final rule (83 FR 41147 and 41148), we are: (1) Adopting a measure removal policy that aligns with the removal factor policies previously adopted in other quality reporting and quality payment programs; (2) clarifying administrative policies for validation of the CDC NHSN HAI measures; (3) adopting the data collection periods for the FY 2022 program year; and (4) updating 42 CFR 412.172(f) to reflect policies finalized in the FY 2019 IPPS/LTCH PPS final rule.

k. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase that would otherwise apply to the standardized amount applicable to discharges occurring in that fiscal year.

In this FY 2020 IPPS/LTCH PPS final rule, we are making several changes. We are: (1) Adopting the Safe Use of Opioids—Concurrent Prescribing eCQM beginning with the CY 2021 reporting period/FY 2023 payment determination with a clarification and update; (2) adopting the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure (NQF #2879) in a stepwise fashion, beginning with two voluntary reporting periods which will run from July 1, 2021 through June 30, 2022, and from July 1, 2022 through June 30, 2023, before requiring reporting of the measure for the reporting period that will run from July 1, 2023 through June 30, 2024, impacting the FY 2026 payment determination and for subsequent years; and (3) removing the Claims-Based Hospital-Wide All-Cause Unplanned Readmission Measure (NQF #1789) (HWR claims-only measure), beginning with the FY 2026 payment determination. We are not finalizing our proposal to adopt the Hospital Harm—Opioid-Related Adverse Events eCQM. We also are establishing reporting and submission requirements for eCQMs, including policies to: (1) Extend current eCQM reporting and submission requirements for both the CY 2020 reporting period/FY 2022 payment determination and CY 2021 reporting period/FY 2023 payment determination; (2) change the eCQM reporting and submission requirements for the CY 2022 reporting period/FY 2024 payment determination, such that hospitals will be required to report one, self-selected calendar quarter of data for three self-selected eCQMs and the Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e), for a total of four eCQMs; and (3) continue requiring that EHRs be certified to all available eCQMs used in the Hospital IQR Program for the CY 2020 reporting period/FY 2022 payment determination and subsequent years. These eCQM reporting and submission policies are in alignment with policies under the Promoting Interoperability Program. We also are establishing reporting and submission requirements

for the Hybrid HWR measure. In addition, we are summarizing public comments we received on three measures we are considering for potential future inclusion in the Hospital IQR Program.

l. Medicare and Medicaid Promoting Interoperability Programs

For purposes of an increased level of stability, reducing the burden on eligible hospitals and CAHs, and clarifying certain existing policies, we are finalizing several changes to the Promoting Interoperability Program. Specifically, we are: (1) Eliminating the requirement that, for the FY 2020 payment adjustment year, for an eligible hospital that has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period in CY 2019 must end before and the eligible hospital must successfully register for and attest to meaningful use no later than the October 1, 2019 deadline; (2) establishing an EHR reporting period of a minimum of any continuous 90-day period in CY 2021 for new and returning participants (eligible hospitals and CAHs) in the Medicare Promoting Interoperability Program attesting to CMS; (3) requiring that the Medicare Promoting Interoperability Program measure actions must occur within the EHR reporting period, beginning with the EHR reporting period in CY 2020; (4) revising the Query of PDMP measure to make it an optional measure worth 5 bonus points in CY 2020, removing the exclusions associated with this measure in CY 2020, requiring a yes/no response instead of a numerator and denominator for CY 2019 and CY 2020, and clearly stating our intended policy that the measure is worth a full 5 bonus points in CY 2019 and CY 2020; (5) changing the maximum points available for the e-Prescribing measure from 5 points to 10 points beginning in CY 2020; (6) removing the Verify Opioid Treatment Agreement measure beginning in CY 2020 and clearly stating our intended policy that this measure is worth a full 5 bonus points in CY 2019; and (7) revising the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to more clearly capture the previously established policy regarding CEHRT use. We also are amending our regulations to incorporate several of these finalized policies.

For CQM reporting under the Medicare and Medicaid Promoting Interoperability Programs, we are generally aligning our requirements with requirements under the Hospital IQR Program. Specifically, we are: (1) Adopting one opioid-related CQM (Safe Use of Opioids—Concurrent Prescribing CQM beginning with the reporting period in CY 2021 (we are not finalizing our proposal to add the Hospital Harm—Opioid-Related Adverse Events CQM); (2) extending current CQM reporting and submission requirements for the reporting periods in CY 2020 and CY 2021; and (3) establishing CQM reporting and submission requirements for the reporting period in CY 2022, which will require all eligible hospitals and CAHs to report on the Safe Use of Opioids—Concurrent Prescribing eCQM beginning with the reporting period in CY 2022.

We sought public comments on whether we should consider proposing to adopt in future rulemaking the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure, beginning with the reporting period in CY 2023, a measure which we adopted under the Hospital IQR Program, and we sought information on a variety of issues regarding the future direction of the Medicare and Medicaid Promoting Interoperability Programs. We may use the input we received to inform further rulemaking.

3. Summary of Costs and Benefits

• *Adjustment for MS–DRG Documentation and Coding Changes.* Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percentage point positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percentage point by section 15005 of the 21st Century Cures Act.) For FY 2020, we are making an adjustment of +0.5 percentage point to the standardized amount consistent with the MACRA.

• *Alternative Inpatient New Technology Add-On Payment Pathway for Transformative New Devices:* In this FY 2020 IPPS/LTCH PPS final rule, we are establishing an alternative inpatient new technology add-on payment pathway for a new medical device that is subject to the FDA Breakthrough Devices Program and has received FDA authorization (that is, received PMA approval, 510(k) clearance, or the granting of De Novo classification request). We are also establishing that, if a medical product is designated by the FDA as a Qualified Infectious Disease Product (QIDP) and received FDA market authorization. Under these alternative inpatient new technology add-on payment pathways, such a medical device or product will be considered new and not substantially similar to an existing technology for purposes of new technology add-on payment under the IPPS, and such a medical product or device will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

Given the relatively recent introduction of FDA's Breakthrough Devices Program, there have not been any medical devices that were part of the Breakthrough Devices Program and received FDA marketing authorization and for which the applicant applied for a new technology add-on payment under the IPPS and was not approved. If all of the future new medical devices that were part of the Breakthrough Devices Program and QIDPs that would have applied for new technology add-on payments would have been approved under the existing criteria, this policy has no impact. To the extent that there are future medical devices that were part of the Breakthrough Devices Program or QIDPs that are the subject of applications for new technology add-on payments, and those applications would have been denied under the current new technology add-on payment criteria, this policy is a cost, but that cost is not estimable. Therefore, it is not possible to quantify the impact of this policy.

• *Revisions to the Calculation of the Inpatient Hospital New Technology Add-On Payment:* The current calculation of the new technology add-on payment is based on the cost to hospitals for the new medical service or technology. Under existing § 412.88, if the costs of the discharge exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare makes an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology or medical service; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment.

As discussed in section II.H.9. of the preamble of this final rule, we have modified the current payment mechanism to increase the amount of the maximum add-on payment amount to 65 percent (and 75 percent for QIDPs). Specifically, for technologies other than QIDPs, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare

will make an add-on payment equal to the lesser of: (1) 65 percent (or 75 percent for QIDPs) of the costs of the new medical service or technology; or (2) 65 percent (75 percent for QIDPs) of the amount by which the costs of the case exceed the standard DRG payment.

We estimate that for the nine technologies for which we are continuing to make new technology add on payments in FY 2020 and for the nine FY 2020 new technology add-on payment applications that we are approving for new technology add-on payments for FY 2020, these changes to the calculation of the new technology add-on payment will increase IPPS spending by approximately $94 million in FY 2020.

• *Technologies Approved for FY 2020 New Technology Add-On Payments:* In section II.H.5. of the preamble to this final rule, we discuss 13 technologies for which we received applications for add-on payments for new medical services and technologies for FY 2020. We also discuss the status of the new technologies that were approved to receive new technology add-on payments in FY 2019 in section II.H.4. of the preamble to this final rule. As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. Based on those technologies approved for new technology add-on payments for FY 2020, new technology add-on payment are projected to increase approximately $162 million as compared to FY 2019 (which also reflects the estimated changes to the calculation of the inpatient new technology add-on payment described above).

• *Changes To Address Wage Index Disparities.* As discussed in section III.N. of the preamble of this final rule, to help mitigate wage index disparities, including those resulting from the inclusion of hospitals with rural reclassifications under 42 CFR 412.103 in the rural floor, we are reducing the disparity between high and low wage index hospitals by increasing the wage index values for certain hospitals with low wage index values (that is, hospitals with wage index values below the 25th percentile wage index value across all hospitals), as well as changing the calculation of the rural floor. In order to offset the estimated increase in IPPS payments to hospitals with wage index values below the 25th percentile wage index value, we have applied a uniform budget neutrality adjustment to the standardized amount. We also are establishing a transition for FY 2020 for hospitals experiencing significant decreases in their wage index values, and we are implementing this in a budget neutral manner by applying a budget neutrality adjustment to the standardized amount.

• *Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care.* For FY 2020, we are updating our estimates of the three factors used to determine uncompensated care payments. We are continuing to use uninsured estimates produced by OACT, as part of the development of the NHEA in the calculation of Factor 2. We also are using a single year of data on uncompensated care costs from Worksheet S–10 for FY 2015 to determine Factor 3 for FY 2020. To determine the amount of uncompensated care for purposes of calculating Factor 3 for Puerto Rico hospitals and Indian Health Service and Tribal hospitals, we are continuing to use only data regarding low-income insured days (Medicaid days for FY 2013 and FY 2017 SSI days).

We project that the amount available to distribute as payments for uncompensated care for FY 2020 will increase by approximately $78 million, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2019. The payments have redistributive effects, based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges.

• *Update to the LTCH PPS Payment Rates and Other Payment Policies.* Based on the best available data for the 384 LTCHs in our database, we estimate that the changes to the payment rates and factors that we presented in the preamble of and Addendum to this FY 2020 IPPS/LTCH PPS final rule, which reflect the end of the transition of the statutory application of the site neutral payment rate and the update to the LTCH PPS standard Federal payment rate for FY 2020, will result in an estimated increase in payments in FY 2020 of approximately $43 million.

• *Changes to the Hospital Readmissions Reduction Program.* For FY 2020 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. Overall, in this FY 2020 IPPS/LTCH PPS final rule, we estimate that 2,583 hospitals would have their base operating DRG payments reduced by their determined proxy FY 2020 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program will save approximately $563 million in FY 2020.

• *Value-Based Incentive Payments Under the Hospital VBP Program.* We estimate that there will be no net financial impact to participating hospitals under the Hospital VBP Program for the FY 2020 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS–DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS–DRG payment amount reductions for the FY 2020 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2020 discharges is approximately $1.9 billion.

• *Changes to the HAC Reduction Program.* A hospital's Total HAC score and its ranking in comparison to other hospitals in any given year depend on several different factors. The FY 2020 program year is the first year in which we are implementing our equal measure weights scoring methodology. Any significant impact due to the HAC Reduction Program changes for FY 2020, including which hospitals will receive the adjustment, will depend on the actual experience of hospitals in the Program. We also are updating the hourly wage rate associated with burden for CDC NHSN HAI validation under the HAC Reduction Program.

• *Changes to the Hospital Inpatient Quality Reporting (IQR) Program.* Across 3,300 IPPS hospitals, we estimate that our changes for the Hospital IQR Program in this FY 2020 IPPS/LTCH PPS final rule would result in changes to the information collection burden compared to previously adopted requirements. The only policy that will affect the information collection burden for the Hospital IQR Program is the policy to adopt the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure (NQF #2879) in a stepwise fashion, beginning with two voluntary reporting periods which will run from July 1, 2021 through June 30, 2022, and from July 1, 2022 through June 30, 2023, before requiring reporting of the measure for the reporting period that will run from July 1, 2023 through

June 30, 2024, impacting the FY 2026 payment determination and for subsequent years. We estimate that the impact of this change is a total collection of information burden increase of 2,211 hours and a total cost increase of approximately $83,266 for all participating IPPS hospitals annually.

• *Changes to the Medicare and Medicaid Promoting Interoperability Programs.* We believe that, overall, the revised policies in this FY 2020 IPPS/LTCH PPS final rule will reduce burden, as described in detail in section X.B.9. of the preamble and Appendix A, section I.N. of this final rule.

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. Through and including FY 2006, an MDH received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate was exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded

from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH's payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006 through September 30, 2015 all LTCHs were paid 100 percent of the Federal rate. Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, based on a rolling effective date that is linked to the date on which a given LTCH's Federal FY 2016 cost reporting period begins, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation That Are Implemented in This Final Rule

1. Pathway for SGR Reform Act of 2013 (Pub. L. 113–67)

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) introduced new payment rules in the LTCH PPS. Under section 1206 of this law, discharges in cost reporting periods beginning on or after October 1, 2015, under the LTCH PPS, receive payment under a site neutral rate unless the discharge meets certain patient-specific criteria. In this FY 2020 IPPS/LTCH PPS final rule, we are continuing to update certain policies that implemented provisions under section 1206 of the Pathway for SGR Reform Act.

2. Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185)

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), enacted on October 6, 2014, made a number of changes that affect the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). In this final rule, we are continuing to implement portions of section 1899B of the Act, as added by section 2(a) of the IMPACT Act, which, in part, requires LTCHs, among other post-acute care providers, to report standardized patient assessment data, data on quality measures, and data on resource use and other measures.

3. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through 2017 to fully offset $11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

4. The 21st Century Cures Act (Pub. L. 114–255)

The 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, contained the following provision affecting payments under the Hospital Readmissions Reduction Program, which we are continuing to implement in this final rule:

- Section 15002, which amended section 1886(q)(3) of the Act by adding subparagraphs (D) and (E), which requires the Secretary to develop a methodology for calculating the excess readmissions adjustment factor for the Hospital Readmissions Reduction Program, based on cohorts defined by the percentage of dual-eligible patients (that is, patients who are eligible for both Medicare and full-benefit Medicaid coverage) cared for by a hospital. In this FY 2020 IPPS/LTCH PPS final rule, we are continuing to implement changes to the payment adjustment factor to assess penalties, based on a hospital's performance, relative to other hospitals

treating a similar proportion of dual-eligible patients.

D. Issuance of Notice of Proposed Rulemaking

In the FY 2020 IPPS/LTCH PPS proposed rule appearing in the **Federal Register** on May 3, 2019 (84 FR 19158), we set forth proposed payment and policy changes to the Medicare IPPS for FY 2020 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2020.

In this final rule is a general summary of the changes that we proposed to make.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we included—

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2020.
- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2020 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2020 status of new technologies approved for add-on payments for FY 2019 and a presentation of our evaluation and analysis of the FY 2020 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting).
- A request for public comments on the substantial clinical improvement criterion used to evaluate applications for both the IPPS new technology add-on payments and the OPPS transitional pass-through payment for devices, and a discussion of potential revisions that we were considering adopting as final policies related to the substantial clinical improvement criterion for applications received beginning in FY 2020 for the IPPS (that is, for FY 2021 and later new technology add-on payments) and beginning in CY 2020 for the OPPS.
- A proposed alternative IPPS new technology add-on payment pathway for certain transformative new devices.
- Proposed changes to the calculation of the IPPS new technology add-on payment.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to the proposed rule we proposed to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed included, but were not limited to, the following:

- The proposed FY 2020 wage index update using wage data from cost reporting periods beginning in FY 2016.
- Proposals to address wage index disparities between high and low wage index hospitals.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2020 based on the 2016 Occupational Mix Survey.
- Proposed application of the rural floor and the frontier State floor.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed change to Lugar county assignments.
- Proposed adjustment to the wage index for acute care hospitals for FY 2020 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for the proposed FY 2020 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section IV. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed changes to MS–DRGs subject to the postacute care transfer policy and special payment policy.
- Proposed changes to the inpatient hospital update for FY 2020.
- Proposed conforming changes to the regulations for the low-volume hospital payment adjustment policy.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- The statutorily required IME adjustment factor for FY 2020.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- A request for public comments on PRRB appeals related to a hospital's Medicaid fraction in the DSH payment adjustment calculation.
- Proposed changes to the policies for payment adjustments under the Hospital Readmissions Reduction Program based on hospital readmission measures and the process for hospital review and correction of those rates for FY 2020.
- Proposed changes to the requirements and provision of value-based incentive payments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2020.
- Proposed changes related to CAHs as nonproviders for direct GME and IME payment purposes.
- Discussion of the implementation of the Rural Community Hospital Demonstration Program in FY 2020.

4. Proposed FY 2020 Policy Governing the IPPS for Capital-Related Costs

In section V. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2020.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VI. of the preamble of the proposed rule, we discussed—

- Proposed changes to payments to certain excluded hospitals for FY 2020.
- Proposed change related to CAH payment for ambulance services.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VII. of the preamble of the is proposed rule, we set forth—

- Proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2020.
- Proposed payment adjustment for discharges of LTCHs that do not meet the applicable discharge payment percentage.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section VIII. of the preamble of the proposed rule, we addressed—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting

program for PPS-exempt cancer hospitals (PCHQR Program).

- Proposed changes to the requirements under the LTCH Quality Reporting Program (LTCH QRP).

- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs.

8. Provider Reimbursement Review Board Appeals

In section XI. of the preamble of the proposed rule, we discussed the growing number of Provider Reimbursement Review Board appeals made by providers and the action initiatives that are being implemented with the goal to: Decrease the number of appeals submitted; decrease the number of appeals in inventory; reduce the time to resolution; and increase customer satisfaction.

9. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to the proposed rule, we set forth the proposed changes to the amounts and factors for determining the proposed FY 2020 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases, including a proposed change to the methodology for calculating those threshold amounts for FY 2020 to incorporate a projection of outlier payment reconciliations. In addition, in section IV. of the Addendum to the proposed rule, we addressed the update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2020 for certain hospitals excluded from the IPPS.

10. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2020 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2020. We proposed to establish the adjustments for wage levels, the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

11. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs, and PCHs.

12. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2020 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

13. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2019 recommendations concerning hospital inpatient payment policies addressed the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these recommendations in Appendix B of this FY 2020 IPPS/LTCH PPS final rule. For further information relating specifically to the MedPAC March 2019 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at: *http://www.medpac.gov*.

E. Advancing Health Information Exchange

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of interoperable health information technology and to promote nationwide health information exchange to improve health care. The Office of the National Coordinator for Health Information Technology (ONC) and CMS work collaboratively to advance interoperability across settings of care, including post-acute care.

To further interoperability in post-acute care, we developed a Data Element Library (DEL) to serve as a publicly available centralized, authoritative resource for standardized data elements and their associated mappings to health IT standards. The DEL furthers CMS' goal of data standardization and interoperability. These interoperable data elements can reduce provider burden by allowing the use and exchange of health care data, support provider exchange of electronic health information for care coordination, person-centered care, and support real-time, data driven, clinical decision making. Standards in the Data Element Library (*https://del.cms.gov/*) can be referenced on the CMS website and in the ONC Interoperability Standards Advisory (ISA). The 2019 ISA is available at: *https://www.healthit.gov/isa*.

The 21st Century Cures Act (the Cures Act) (Pub. L. 114–255, enacted December 13, 2016) requires HHS to take new steps to enable the electronic sharing of health information ensuring interoperability for providers and settings across the care continuum. In an important provision, Congress defined ''information blocking'' as practices likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information, and established new authority for HHS to discourage these practices. In March 2019, ONC and CMS published the proposed rules, ''21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program'' (84 FR 7424 through 7610) and ''Interoperability and Patient Access'' (84 FR 7610 through 7680), to promote secure and more immediate access to health information for patients and health care providers through the implementation of information blocking provisions of the Cures Act and the use of standardized application programming interfaces (APIs) that enable easier access to electronic health information. These two proposed rules extended their comment period by 30 days and closed on June 3, 2019. The proposed rules can be found at: *www.regulations.gov*.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19158), we invited providers to learn more about these important developments and how they are likely to affect hospitals paid under the IPPS and the LTCH PPS.

II. Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS–DRG Reclassifications

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2019 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085, and 83 FR 41158 through 41258, respectively).

C. Adoption of the MS–DRGs in FY 2008

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

D. FY 2020 MS–DRG Documentation and Coding Adjustment

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110–90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of −4.8 percentage points to the national standardized amount. We provided for phasing in this −4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of −1.2 percentage points for FY 2008, −1.8 percentage points for FY 2009, and −1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to −0.6 percentage point for FY 2008 and −0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013 but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90.

In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling $11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustments Made for FY 2018 and FY 2019 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point positive adjustment to a 0.4588 percentage point positive

adjustment. As we discussed in the FY 2018 rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), consistent with the requirements of section 414 of the MACRA, we implemented a 0.5 percentage point positive adjustment to the standardized amount for FY 2019. We indicated that both the FY 2018 and FY 2019 adjustments were permanent adjustments to payment rates. We also stated that we plan to propose future adjustments required under section 414 of the MACRA for FYs 2020 through 2023 in future rulemaking.

3. Adjustment for FY 2020

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19170 through 19171) consistent with the requirements of section 414 of the MACRA, we proposed to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2020. We indicated that this would constitute a permanent adjustment to payment rates. We stated in the proposed rule that we plan to propose future adjustments required under section 414 of the MACRA for FYs 2021 through 2023 in future rulemaking.

Comment: Several commenters stated that in order to comply with ATRA requirements, CMS anticipated that a cumulative −3.2 percentage point adjustment to the standardized amount would achieve the mandated $11 billion recoupment. Commenters stated that CMS misinterpreted the relevant statutory authority, which they asserted explicitly assumes that recoupment under section 631 of the ATRA would result in an estimated −3.2 percentage point cumulative adjustment by FY 2017. Commenters asserted that the additional −0.7 percentage point adjustment made in FY 2017 has been improperly continued in FY 2018 and FY 2019, and failure to restore the additional 0.7 percentage point adjustment will make this reduction in hospital payments a permanent part of the baseline calculation of the IPPS rates, which, they contend, was not Congress's legislative intent in implementing the series of adjustments required under section 414 of the MACRA. Commenters urged CMS to use its exceptions and adjustments authority under section 1886(d)(5)(I) to restore an additional 0.7 percentage point payment adjustment in FY2020 to restore payment equity to hospitals and comply with what they asserted was Congressional intent. Other commenters suggested CMS implement an approximate positive adjustment of 1.0 percentage point by FY 2024 to fully and permanently restore the entire −3.9 percentage point recoupment adjustment to IPPS rates. A commenter requested that CMS provide its rationale for failing to do so. Finally, some of the commenters, while acknowledging that CMS may be bound by law, expressed opposition to the permanent reductions and requested that CMS refrain from making any additional coding adjustments in the future.

Response: As we discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19170 through 19171), and in response to similar comments in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), we believe section 414 of the MACRA and section 15005 of the 21st Century Cures Act set forth the levels of positive adjustments for FYs 2018 through 2023. We are not convinced that the adjustments prescribed by MACRA were predicated on a specific adjustment level estimated or implemented by CMS in previous rulemaking. While we had anticipated making a positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA, section 414 of the MACRA required that we implement a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023, and not the single positive adjustment we intended to make in FY 2018. As discussed in the FY 2017 IPPS/LTCH PPS final rule, by phasing in a total positive adjustment of only 3.0 percentage points, section 414 of the MACRA would not fully restore even the 3.2 percentage point adjustment originally estimated by CMS in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515). Moreover, as discussed in the FY 2018 IPPS/LTCH PPS final rule, Public Law 114–255, which further reduced the positive adjustment required for FY 2018 from 0.5 percentage point to 0.4588 percentage point, was enacted on December 13, 2016, after CMS had proposed and finalized the final negative −1.5 percentage point adjustment required under section 631 of the ATRA. We see no evidence that Congress enacted these adjustments with the intent that CMS would make an additional +0.7 percentage point adjustment in FY 2018 to compensate for the higher than expected final ATRA adjustment made in FY 2017, nor are we persuaded that it would be appropriate to use the Secretary's exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to adjust payments in FY 2020 to restore any additional amount of the original 3.9 percentage point reduction, given Congress' prescriptive adjustment levels under section 414 of the MACRA and section 15005 of the 21st Century Cures Act.

After consideration of the public comments we received, we are finalizing our proposal to implement a 0.5 percentage point adjustment to the standardized amount for FY 2020.

E. Refinement of the MS–DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS DRGs and MS–DRGs. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785 through 56787) for a detailed discussion of the history of changes to the number of cost centers used in calculating the DRG relative weights. Since FY 2014, we have calculated the IPPS MS–DRG relative weights using 19 CCRs, which now include distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization.

2. Discussion of Policy for FY 2020

Consistent with our established policy, we calculated the final MS–DRG relative weights for FY 2020 using two data sources: The MedPAR file as the claims data source and the HCRIS as the cost report data source. We adjusted the charges from the claims to costs by applying the 19 national average CCRs developed from the cost reports. The description of the calculation of the 19 CCRs and the MS–DRG relative weights for FY 2020 is included in section II.G. of the preamble to this FY 2020 IPPS/LTCH PPS final rule. As we did with the FY 2019 IPPS/LTCH PPS final rule, for this FY 2020 final rule, we are providing the version of the HCRIS from which we calculated these 19 CCRs on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled ''FY 2020 IPPS Final Rule Home Page'' or ''Acute Inpatient Files for Download.''

Comment: A commenter recommended that CMS work with stakeholders to update cost reporting instructions and improve the accuracy and validity of the national average CCRs. The commenter expressed concern that the differences between hospitals' use of nonstandard cost center codes and CMS' procedures for mapping and rolling up nonstandard codes to the standard cost centers will continue to result in invalid CCRs and inaccurate payments. The commenter stressed the need for flexibility in cost reporting, to accommodate any new or unique services that certain hospitals may provide, which may not be easily captured through the cost reporting software. Finally, the commenter again recommended, as it had done in response to prior IPPS rules, that CMS pay particular attention to data used for CT scan and MRI cost centers; the commenter believed that the hospital payment rates established by CMS from the CT scan and MRI CCRs simply do not correlate with resources used for these capital-intensive services.

Response: We have addressed similar public comments in prior rulemaking and refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787) for our response to these issues. We note that we will continue to explore ways in which we can improve the accuracy of the cost report data and calculated CCRs used in the cost estimation process.

F. Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2020 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for FY 2020 MS–DRG Updates

CMS has previously encouraged input from our stakeholders concerning the annual IPPS updates when that input was made available to us by December 7 of the year prior to the next annual proposed rule update. As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38010), as we work with the public to examine the ICD–10 claims data used for updates to the ICD–10 MS–DRGs, we would like to examine areas where the MS–DRGs can be improved, which will require additional time for us to review requests from the public to make specific updates, analyze claims data, and consider any proposed updates. Given the need for more time to carefully evaluate requests and propose updates, we changed the deadline to request updates to the MS–DRGs to November 1 of each year. This will provide an additional 5 weeks for the data analysis and review process. Interested parties had to submit any comments and suggestions for FY 2020 by November 1, 2018, and should submit any comments and suggestions for FY 2021 by November 1, 2019 via the CMS MS–DRG Classification Change Request Mailbox located at: *MSDRGClassificationChange@cms.hhs.gov*. The comments that were submitted in a timely manner for FY 2020 are discussed in this section of the preamble of this final rule. As discussed in the proposed rule and in the sections that follow, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking.

Following are the changes that we proposed to the MS–DRGs for FY 2020 in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19171 through 19257). We invited public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in the proposed rule. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we proposed to maintain the existing MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. For the FY 2020 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2018 update of the FY 2018 MedPAR file, which contains hospital bills received through September 30, 2018, for discharges occurring through September 30, 2018. In our discussion of the proposed MS–DRG reclassification changes, we referred to our analysis of claims data from the ''September 2018 update of the FY 2018 MedPAR file.''

In this FY 2020 IPPS/LTCH PPS final rule, we summarize the public comments we received on our proposals, present our responses, and state our final policies. For this FY 2020 final rule, we generally did not perform any further MS–DRG analysis of claims data. Therefore, our MS–DRG analysis is based on ICD–10 claims data from the September 2018 update of the FY 2018 MedPAR file, which contains hospital bills received through September 30, 2018, for discharges occurring through September 30, 2018, except as otherwise noted.

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In our examination of the claims data, we apply the following criteria established in FY 2008 (72 FR 47169) to determine if the creation of a new complication or comorbidity (CC) or major complication or comorbidity

(MCC) subgroup within a base MS–DRG is warranted:

- A reduction in variance of costs of at least 3 percent;
- At least 5 percent of the patients in the MS–DRG fall within the CC or MCC subgroup;
- At least 500 cases are in the CC or MCC subgroup;
- There is at least a 20-percent difference in average costs between subgroups; and
- There is a $2,000 difference in average costs between subgroups.

In order to warrant creation of a CC or MCC subgroup within a base MS–DRG, the subgroup must meet all five of the criteria.

We are making the FY 2020 ICD–10 MS–DRG GROUPER and Medicare Code Editor (MCE) Software Version 37, the ICD–10 MS–DRG Definitions Manual files Version 37 and the Definitions of Medicare Code Edits Manual Version 37 available to the public on our CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*.

2. Pre-MDC

a. Peripheral ECMO

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41166 through 41169), we discussed a request we received to review cases reporting the use of extracorporeal membrane oxygenation (ECMO) in combination with the insertion of a percutaneous short-term external heart assist device. We also noted that a separate request to create a new ICD–10–PCS procedure code specifically for percutaneous ECMO was discussed at the March 6–7, 2018 ICD–10 Coordination and Maintenance Committee Meeting for which we finalized the creation of three new procedure codes to identify and describe different types of ECMO treatments currently being utilized. These three new procedure codes were included in the FY 2019 ICD–10–PCS procedure codes files (which are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/2019-ICD-10-PCS.html*) and were made publicly available in May 2018. We received recommendations from commenters on suggested MS–DRG assignments for the two new procedure codes that uniquely identify percutaneous (peripheral) ECMO, including assignment to MS–DRG 215 (Other Heart Assist System Implant), or to Pre-MDC MS–DRG 004 (Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedure) specifically for the new procedure code describing percutaneous veno-venous (VV) ECMO or an alternate MS–DRG within MDC 4 (Diseases and Disorders of the Respiratory System). In our response, we noted that because these codes were not finalized at the time of the proposed rule, there were no proposed MDC or MS–DRG assignments or O.R. and non-O.R. designations for these new procedure codes and they were not reflected in Table 6B.—New Procedure Codes (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) associated with the FY 2019 IPPS/LTCH PPS proposed rule.

We further noted that, consistent with our annual process of assigning new procedure codes to MDCs and MS–DRGs, and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignment. For the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, our clinical advisors did not support assigning the new procedure codes for the percutaneous (peripheral) ECMO procedures to the same MS–DRG as the predecessor code for open (central) ECMO in pre-MDC MS–DRG 003.

Effective with discharges occurring on and after October 1, 2018, the three ECMO procedure codes and their corresponding MS–DRG assignments are as shown in the following table.

ICD-10-PCS Code	Code Description	MS-DRG	MS-DRG Description
5A1522F	Extracorporeal Oxygenation, Membrane, Central	Pre-MDC MS-DRG 003	ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure
5A1522G	Extracorporeal Oxygenation, Membrane, Peripheral Veno-arterial	MS-DRG 207	Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 291	Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 296	Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 870	Septicemia Or Severe Sepsis with Mechanical Ventilation >96 Hours Or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
5A1522H	Extracorporeal Oxygenation, Membrane, Peripheral Veno-venous	MS-DRG 207	Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 291	Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 296	Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)
		MS-DRG 870	Septicemia Or Severe Sepsis with Mechanical Ventilation >96 Hours Or Peripheral Extracorporeal Membrane Oxygenation (ECMO)

As noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19173), after publication of the FY 2019 IPPS/LTCH PPS final rule, we received comments and feedback from stakeholders expressing concern with the MS–DRG assignments for the two new procedure codes describing peripheral ECMO. Specifically, these stakeholders stated that: (1) The MS–DRG assignments for ECMO should not be based on how the patient is cannulated (open versus peripheral) because most of the costs for both central and peripheral ECMO can be attributed to the severity of illness of the patient; (2) there was a lack of opportunity for public comment on the finalized MS–DRG assignments; (3) patient access to ECMO treatment and programs is now at risk because of inadequate payment; and (4) CMS did not appear to have access to enough patient data to evaluate for appropriate MS–DRG assignment consideration. They also stated that the new procedure codes do not account for an open cut-down approach that may be performed on a peripheral vessel during a peripheral ECMO procedure. These stakeholders recommended that, consistent with the usual process of assigning new procedure codes to the same MS–DRG as the predecessor code, the MS–DRG assignment for peripheral ECMO procedures should be revised to allow assignment of peripheral ECMO procedures to Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure). They stated that this revision would also allow for the collection of further claims data for patients treated with ECMO and assist in determining the appropriateness of any future modifications in MS–DRG assignment.

We also received feedback from a few stakeholders that, for some cases involving peripheral ECMO, the current designation provides compensation that these stakeholders believe is ''reasonable'' (for example, for peripheral ECMO in certain patients admitted with acute respiratory failure and sepsis). Some of these stakeholders agreed with CMS that once claims data become available, the volume, length of stay and cost data of claims with these new codes can be examined to determine if modifications to MS–DRG assignment or O.R. and non-O.R. designation are warranted. However, some of these stakeholders also expressed concerns that the current assignments and designation do not appropriately compensate for the resources used when peripheral ECMO is used to treat certain patients (for example, patients who are admitted with cardiac arrest and cardiogenic shock of known cause or patients admitted with a different principal diagnosis or patients who develop a diagnosis after admission that requires

ECMO). These stakeholders stated that the current MS–DRG assignments for such cases involving peripheral ECMO do not provide sufficient payment and do not fully consider the severity of illness of the patient and the level of resources involved in treating such patients, such as surgical team, general anesthesia, and other ECMO support such as specialized monitoring.

We stated in the proposed rule that with regard to stakeholders' concerns that we did not allow the opportunity for public comment on the MS–DRG assignment for the three new procedure codes that describe central and peripheral ECMO, as noted above and as explained in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41168), these new procedure codes were not finalized at the time of the proposed rule. We noted that although there were no proposed MDC or MS–DRG assignment or O.R. and non-O.R. designations for these three new procedure codes, we did, in fact, review and respond to comments on the recommended MDC and MS–DRG assignments and O.R./non-O.R. designations in the final rule (83 FR 41168 through 41169). For FY 2019, consistent with our annual process of assigning new procedure codes to MDCs and MS–DRGs and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignments. Upon completing the review, our clinical advisors did not support assigning the two new ICD–10–PCS procedure codes for peripheral ECMO procedures to the same MS–DRG as the predecessor code for open (central) ECMO procedures. Further, our clinical advisors also did not agree with designating peripheral ECMO procedures as O.R. procedures because they stated that these procedures are less resource intensive compared to open ECMO procedures.

As noted, our annual process for assigning new procedure codes involves review of the predecessor procedure code's MS–DRG assignment. However, this process does not automatically result in the new procedure code being assigned (or proposed for assignment) to the same MS–DRG as the predecessor code. There are several factors to consider during this process that our clinical advisors take into account. For example, in the absence of volume, length of stay, and cost data, they may consider the specific service, procedure, or treatment being described by the new procedure code, the indications, treatment difficulty, and the resources utilized. For FY 2020, as discussed in the FY 2020 IPPS/LTCH PPS proposed rule, we have continued to consider how these and other factors may apply in the context of classifying procedures under the ICD–10 MS–DRGs, including with regard to the specific concerns raised by stakeholders.

In the absence of claims data for the new ICD–10–PCS procedure codes describing peripheral ECMO, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting the predecessor ICD–10–PCS procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) in Pre-MDC MS–DRG 003, including those cases reporting secondary diagnosis MCC and CC conditions, that were grouped under the ICD–10 MS–DRG Version 35 GROUPER. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 003--All cases	14,456	29.6	$122,168
MS-DRG 003--Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous)	2,086	20.2	$128,168
MS-DRG 003--Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) with MCC	2,000	20.7	$131,305
MS-DRG 003--Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) with CC	79	7.6	$58,231

The total number of cases reported in MS-DRG 003 was 14,456, with an average length of stay of 29.6 days and average costs of $122,168. For the cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous), there was a total of 2,086 cases, with an average length of stay of 20.2 days and average costs of $128,168. For the cases reporting procedure code 5A15223 with an MCC, there was a total 9 of 2,000 cases, with an average length of stay of 20.7 days and average costs of $131,305. For the cases reporting procedure 5A15223 with a CC, there was a total of 79 cases, with an average length of stay of 7.6 days and average costs of $58,231.

In the proposed rule, we stated that our clinical advisors reviewed these data and noted that the average length of stay for the cases reporting ECMO with procedure code 5A15223 of 20.2 days may not necessarily be a reliable indicator of resources that can be attributed to ECMO treatment. We also stated that our clinical advisors believed that a more appropriate measure of resource consumption for ECMO would be the number of hours or days that a patient was specifically receiving ECMO treatment, rather than the length of hospital stay. However, they noted that this information is not currently available in the claims data. Further, we noted that our clinical advisors also stated that the average costs of $128,168 for the cases reporting ECMO with procedure code 5A15223 are not necessarily reflective of the resources utilized for ECMO treatment alone, as the average costs represent a combination of factors, including the principal diagnosis, any secondary diagnosis CC and/or MCC conditions necessitating initiation of ECMO, and potentially any other procedures that may be performed during the hospital stay. Our clinical advisors recognized that patients who require ECMO treatment are severely ill and recommended we review the claims data to identify the number (frequency) and types of principal and secondary diagnosis CC and/or MCC conditions that were reported among the 2,086 cases reporting procedure code 5A15223. Our findings are shown in the following tables for the top 10 principal diagnosis codes, followed by the top 10

secondary diagnosis MCC and secondary diagnosis CC conditions that were reported within the claims data with procedure code 5A15223.

Top 10 Principal Diagnosis Codes Reported with Procedure Code 5A1223 (Extracorporeal membrane oxygenation, continuous)		
ICD-10-CM Code	**Description**	**Number of Times Reported**
A41.9	Sepsis, unspecified organism	145
I21.4	Non-ST elevation (NSTEMI) myocardial infarction	137
I35.0	Nonrheumatic aortic (valve) stenosis	81
J84.112	Idiopathic pulmonary fibrosis	68
I25.110	Atherosclerotic heart disease of native coronary artery with unstable angina pectoris	55
J96.01	Acute respiratory failure with hypoxia	52
I21.09	STEMI involving other coronary artery of anterior wall	49
I25.10	Atherosclerotic heart disease of native coronary artery w/o angina pectoris	48
I13.0	Hypertensive heart & chronic kidney disease w heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease	46
I21.19	ST elevation (STEMI) myocardial infarction involving other coronary artery of inferior wall	43

BILLING CODE 4120–01–P

Top 10 Secondary Diagnosis MCC Conditions Reported with Procedure Code 5A1223 (Extracorporeal membrane oxygenation, continuous)				
ICD-10-CM Code	**Description**	**Number of Times Reported**	**Average Length of Stay**	**Average Costs**
A41.9	Sepsis, unspecified organism	322	29.7	$186,055
E43	Unspecified severe protein-calorie malnutrition	220	41.5	$213,742
G93.40	Encephalopathy, unspecified	217	27.2	$165,193
J18.9	Pneumonia, unspecified organism	220	23.5	$150,242
J96.01	Acute respiratory failure with hypoxia	944	17.9	$122,614
J96.02	Acute respiratory failure with hypercapnia	220	20.9	$139,511
K72.00	Acute and subacute hepatic failure without coma	524	19	$140,878
N17.0	Acute kidney failure with tubular necrosis	741	26.2	$162,583
R57.0	Cardiogenic shock	448	27.7	$153,878
R65.21	Severe sepsis with septic shock	504	29.7	$177,992

Top 10 Secondary Diagnosis CC Conditions Reported with Procedure Code 5A1223 (Extracorporeal membrane oxygenation, continuous)				
ICD-10-CM Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
D62	Acute posthemorrhagic anemia	1,139	21.8	$144,033
D68.9	Coagulation defect, unspecified	402	20.5	$138,417
E87.0	Hyperosmolality and hypernatremia	585	26.6	$162,028
E87.1	Hypo-osmolality and hyponatremia	316	26.1	$151,824
E87.2	Acidosis	937	17.3	$120,881
E87.4	Mixed disorder of acid-base balance	268	26	$150,257
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease	314	18.4	$121,962
I47.2	Ventricular tachycardia	384	17.5	$123,383

N17.9	Acute kidney failure, unspecified	757	18.5	$122,180

BILLING CODE 4120–01–C

We stated in the proposed rule that these data show that the conditions reported for these patients requiring treatment with ECMO and reported with predecessor ICD–10–PCS procedure code 5A1223 represent a greater severity of illness, present greater treatment difficulty, have poorer prognoses, and have a greater need for intervention. While the data analysis was based on the conditions reported with the predecessor ICD–10–PCS procedure code 5A1223 (Extracorporeal membrane oxygenation, continuous), we stated that our clinical advisors believe the data may provide an indication of how cases reporting the new procedure codes describing peripheral (percutaneous) ECMO may be represented in future claims data with regard to indications for treatment, a patient's severity of illness, resource utilization, and treatment difficulty.

Based on the results of our data analysis and further review of the cases reporting ECMO, including consideration of the stakeholders' concerns that the MS–DRG assignments for ECMO procedures should not be based on the method of cannulation, we stated in the proposed rule that our clinical advisors agreed that resource consumption for both central and peripheral ECMO cases can be primarily attributed to the severity of illness of the patient, and that the method of cannulation is less relevant when considering the overall resources required to treat patients on ECMO. Specifically, we stated that our clinical advisors noted that consideration of resource consumption for cases reporting the use of ECMO may extend well beyond the duration of time that a patient was actively receiving ECMO treatment, which may range anywhere from less than 24 hours to 10 days or more. As noted in the proposed rule and above, in the absence of unique procedure codes that specify the duration of time that a patient was receiving ECMO treatment, we cannot ascertain from the claims data the resource use specifically attributable to treatment with ECMO during a hospital stay (84 FR 19175). However, when reviewing consumption of hospital resources for the cases in which ECMO was reported during a hospital stay, the claims data clearly show that the patients placed on ECMO typically have multiple MCC and CC conditions. These data provide additional information on the expanding indications for ECMO treatment as well as an indication of the complexities and the treatment difficulty associated with these patients. We also stated in the proposed rule that, while our clinical advisors continue to believe that central (open) ECMO may be more resource intensive and carries significant risks for complications, including bleeding, infection, and vessel injury because it requires an incision along the sternum (sternotomy) and is performed for open heart surgery, they believe that the subset of patients who require treatment with ECMO, regardless of the cannulation method, would be similar in terms of overall hospital resource consumption. We also

noted that while we do not yet have Medicare claims data to evaluate the new peripheral ECMO procedure codes, review of limited registry data provided by stakeholders for patients treated with a reported peripheral ECMO procedure did not contradict that costs for peripheral ECMO appear to be similar to the costs of overall resources required to treat patients on ECMO (regardless of method of cannulation) and appear to be attributable to the severity of illness of the patient.

With regard to stakeholders who stated that the two new procedure codes do not account for an open cut-down approach that may be performed on a peripheral vessel during a peripheral ECMO procedure, we noted in the proposed rule that a request and proposal to create ICD–10–PCS codes to differentiate between peripheral vessel percutaneous and peripheral vessel open cutdown according to the indication (VA or VV) for ECMO was discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting. We refer readers to the website at: *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html* for the committee meeting materials and discussion regarding this proposal. We also noted that, in this same proposal, another coding option to add duration values to allow the reporting of the number of hours or the number of days a patient received ECMO during the stay was also made available for public comment.

Upon further review and consideration of peripheral ECMO procedures, including the indications, treatment difficulty, and the resources utilized, for the reasons discussed above, in the FY 2020 IPPS/LTCH PPS proposed rule, we stated that our clinical advisors supported the assignment of the new ICD–10–PCS procedure codes for peripheral ECMO procedures to the same MS–DRG as the predecessor code for open (central) ECMO procedures for FY 2020. Therefore, based on our review, including consideration of the comments and input from our clinical advisors, we proposed to reassign the following procedure codes describing peripheral ECMO procedures from their current MS–DRG assignments to Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure) as shown in the table below. We stated in the proposed rule that, if this proposal is finalized, we also would make conforming changes to the titles for MS–DRGs 207, 291, 296, and 870 to no longer reflect the ''or Peripheral Extracorporeal Membrane Oxygenation (ECMO)'' terminology in the title. We also noted in the proposed rule that this proposal included maintaining the designation of these peripheral ECMO procedures as non-O.R. Therefore, we stated in the proposed rule that, if finalized, the procedures would be defined as non-O.R. affecting the MS–DRG assignment for Pre-MDC MS–DRG 003.

BILLING CODE 4120–01–P

ICD-10-PCS Code	Code Description	Current MS-DRG	Proposed MS-DRG
5A1522G	Extracorporeal Oxygenation, Membrane, Peripheral Veno-arterial	MS-DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 291 (Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 296 (Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 870 (Septicemia or Severe Sepsis with Mechanical Ventilation>96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
5A1522H	Extracorporeal Oxygenation, Membrane, Peripheral Veno-venous	MS-DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 291(Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 296 (Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)
		MS-DRG 870 (Septicemia Or Severe Sepsis with Mechanical Ventilation >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure)

BILLING CODE 4120–01–C

Comment: Several commenters expressed support for the proposal to reassign procedure codes 5A1522G and 5A1522H describing peripheral ECMO procedures from their current MS–DRG assignments to Pre-MDC MS–DRG 003 and to revise the titles for MS–DRGs 207, 291, 296 and 870 as shown in the table above. The commenters stated that this reassignment more appropriately reflects the resource utilization of patients requiring this treatment. A commenter also stated their appreciation of CMS' research for the proposal which they believe was needed to maintain the financial viability of ECMO programs. Another commenter stated they agreed with the non-O.R. designation of peripheral ECMO procedures noting these procedures are typically performed at the bedside or in

an ICU setting due to the emergent condition of the patient. This commenter also stated that the delivery of ECMO support in a non-O.R. setting does not diminish the resource intensive nature of the treatment however, and therefore agreed with the designation of non-O.R. affecting Pre-MDC MS–DRG 003.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that ICD–10–PCS procedure codes 5A1522G and 5A1522H be assigned to MS–DRG 215 (Other Heart Assist System Implant) as opposed to Pre-MDC MS–DRG 003. The commenters stated that MS–DRG 215 is the primary MS–DRG for peripheral heart assist pumps with similar patient conditions and clinical coherence. A commenter stated that assigning percutaneous (peripheral) ECMO into a different category for payment than percutaneous VAD (Ventricular Assist Device) creates a system of winners and losers by device.

Response: We thank the commenters for their recommendation. We note that as stated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41168), in cases where a percutaneous external heart assist device is utilized, in combination with a percutaneous ECMO procedure, effective October 1, 2018, the ICD–10 MS–DRG GROUPER logic results in a case assignment to MS–DRG 215 because the percutaneous external heart assist device procedure is designated as an O.R. procedure and assigned to MS–DRG 215. We also note that under the ICD–10–PCS classification, ECMO is not defined as a device. The procedure codes in Table 5A0, specifically any procedure code for ECMO, do not contain a device value for the sixth character, rather they contain a function value for the sixth character to identify oxygenation.

Comment: A commenter expressed concern with the proposal to continue designating peripheral ECMO procedures as non-O.R. procedures, however, the commenter acknowledged that these procedures may be performed in non-O.R. locations such as the ER or ICU. The commenter noted that the determining factor for the location where ECMO is initiated is typically dictated by the patient's situation. According to the commenter, for critically ill patients who require life-saving ECMO, cannulation and initiation of the ECMO circuit is usually done in an emergent manner. The commenter also noted that these patients are often at risk of imminent death and cannot safely be moved to another location for cannulation and ECMO initiation. The commenter requested that CMS review the designation of the ECMO codes and consider the unique nature of these procedures during the comprehensive review of the ICD–10–PCS procedure codes.

Response: We appreciate the commenter's feedback. As noted in the proposed rule and in section II.F.13.a. of the preamble of this final rule, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes, including the ECMO procedure codes, and as part of that comprehensive procedure code review, we will also review the process for determining when a procedure is considered an operating room procedure.

Comment: A commenter noted that the FY 2020 ICD–10–PCS codes were made publicly available in June 2019 and that new procedure codes describing intraoperative ECMO were created. The commenter requested that CMS provide guidance on the correct reporting of these procedure codes when performed in the cardiac catheterization lab, the electrophysiology lab or other inpatient places of service, including the O.R., since the designation of these new procedure codes is non-O.R.

Response: The commenter is correct that the FY 2020 ICD–10–PCS procedure code files were made publicly available in June 2019 (which are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/2020-ICD-10-PCS.html*) and that new procedure codes describing intraoperative ECMO have been created. As shown in Table 6B.—New Procedure Codes, associated with this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*), procedure codes 5A15A2F (Extracorporeal oxygenation, membrane, central, intraoperative), 5A15A2G (Extracorporeal oxygenation, membrane, peripheral veno-arterial, intraoperative) and 5A15A2H (Extracorporeal oxygenation, membrane, peripheral veno-venous, intraoperative) are effective with discharges on and after October 1, 2019 and are designated as non-O.R. procedures. We note that, historically, we have not provided coding advice in rulemaking with respect to policy. We collaborate with the American Hospital Association (AHA) through the Coding Clinic for ICD–10–CM and ICD–10–PCS to promote proper coding (81 FR 56841).

Comment: Some commenters suggested that CMS should assign the new procedure codes describing intraoperative peripheral ECMO procedures (as discussed above) to Pre-MDC MS–DRG 003 until claims data is available to analyze their impact on resource utilization.

Response: We appreciate the commenters' suggestion, however, as discussed at the ICD–10 Coordination and Maintenance Committee meeting held on March 5–6, 2019, the request (and subsequent finalization) for new procedure codes describing the intraoperative use of ECMO was specifically to address those situations in which the use of the ECMO was in support of a surgical (O.R.) procedure and the ECMO was discontinued at the conclusion of the procedure. For example, a patient who undergoes a lung transplant and receives ECMO support during the transplant procedure and the ECMO is discontinued at the conclusion of the lung transplant procedure. In this scenario, it is the lung transplant that is the surgical (O.R.) procedure and case assignment to MS–DRG 007 (Lung Transplant) by the GROUPER logic is what is appropriately reflected in the MedPAR claims data. As stated in the proposed rule and in this final rule, our annual process of assigning new procedure codes to MDCs and MS–DRGs, and designating a procedure as an O.R. or non-O.R. procedure involves review of the predecessor procedure code assignment. However, this process does not automatically result in the new procedure code being assigned to the same MS–DRG as the predecessor code. Consistent with our annual process of reviewing the MS–DRGs, we will continue to monitor cases to determine if any additional adjustments are warranted to account for changes in resource consumption.

Comment: A few commenters requested that CMS consider reprocessing claims for cases reporting procedure code 5A1522G or 5A1522H in MS–DRGs 207, 291, 296 or 870 in FY 2019 as a result of the financial impact it has had on providers and their belief that the codes were inappropriately classified. Specifically, commenters questioned if CMS would permit acute care hospitals to re-bill all FY 2019 ECMO cases under MS–DRG 003 to recoup lost revenues.

Response: As previously discussed, consistent with our annual process of assigning new procedure codes to MDCs and MS–DRGs, we reviewed the predecessor procedure code assignments, as well as other factors relevant to the MS–DRG assignment. As

discussed in the proposed rule, after further consideration of these factors and review of these cases, including the data analysis described previously, CMS proposed to change the assignment of these cases beginning in FY 2020. As such, and consistent with our general approach to changes in MS–DRG assignment, the finalized policy we are adopting with regard to the assignment of cases reporting peripheral ECMO procedures is prospective, effective with discharges beginning in FY 2020 and is not applicable to discharges in FY 2019. We also note that section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs. To qualify for outlier payments, a case must have costs above a fixed-loss cost threshold amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for outliers).

Comment: A commenter stated that Tables 7A and 7B associated with the proposed rule show a decline of the case counts in Pre-MDC MS–DRG 003 from Version 36 to Version 37 of the ICD–10 MS–DRG GROUPER (15,749 vs. 15,164). The commenter stated that under the current proposal to reassign cases reporting peripheral ECMO procedures, they would expect to see a shift in cases to Pre-MDC MS–DRG 003 from MS–DRGs 207, 291, 296, and 870 for the cases reporting procedures for peripheral ECMO. The commenter requested that CMS revisit these tables to provide insight and clarification concerning a potential issue with the surgical hierarchy given that the peripheral ECMO procedure codes are not recognized as O.R. procedures and the Version 36 volume of cases is higher than the Version 37 volume of cases based on the data within these tables.

Response: We reviewed the cases assigned to Pre-MDC MS–DRG 003 and found that the majority of the reduction in the case counts between Version 36 and Version 37 of the GROUPER was attributable to the proposed change in the designation of the ICD–10–PCS procedure codes describing bronchoalveolar lavage from O.R. to non-O.R. status, which is discussed in section II.F.13.b.1. of the preamble of this final rule. Since these procedures were the only operating room procedure reported for these cases, the proposed change in the O.R. status of these codes resulted in the reassignment or ''shift'' of these cases reporting these procedures from Pre-MDC MS–DRG 003 to Pre-MDC MS–DRG 004. As discussed in section II.F.13.b.1, we are finalizing this proposed change in designation for these procedure codes, and therefore Tables 7A and 7B associated with this final rule reflect similar ''shifts'' in the volume of cases reported to MS–DRG 003 between Version 36 and Version 37 of the GROUPER.

After consideration of the public comments we received, we are finalizing our proposal to reassign the procedure codes describing peripheral ECMO procedures from their current MS–DRG assignments to Pre-MDC MS–DRG 003 and maintain the designation of the peripheral ECMO procedures as non-O.R. We are also finalizing our proposal to make changes to the titles for MS–DRGs 207, 291, 296, and 870 to no longer reflect the ''or Peripheral Extracorporeal Membrane Oxygenation (ECMO)'' terminology in the title under the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

b. Allogeneic Bone Marrow Transplant

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19176), we received a request to create new MS–DRGs for cases that would identify patients who undergo an allogeneic hematopoietic cell transplant (HCT) procedure. The requestor asked us to split MS–DRG 014 (Allogeneic Bone Marrow Transplant) into two new MS–DRGs and assign cases to the recommended new MS–DRGs according to the donor source, with cases for allogeneic *related* matched donor source assigned to one MS–DRG and cases for allogeneic *unrelated* matched donor source assigned to the other MS–DRG. The requestor stated that by creating two new MS–DRGs for allogeneic related and allogeneic unrelated donor source, respectively, the MS–DRGs would more appropriately recognize the clinical characteristics and cost differences in allogeneic HCT cases.

The requestor stated that allogeneic related and allogeneic unrelated HCT cases are clinically different and have significantly different donor search and cell acquisition charges. According to the requestor, 70 percent of patients do not have a matched sibling donor (that is, an allogeneic related matched donor) in their family. The requestor also stated that this rate is higher for Medicare beneficiaries. According to the requestor, the current payment for allogeneic HCT cases is inadequate and affects patient's access to care.

The requestor performed its own analysis and stated that it found the average costs for HCT cases reporting revenue code 0815 (Stem cell acquisition) alone or revenue code 0819 (Other organ acquisition) in combination with revenue code 0815 with one of the ICD–10–PCS procedure codes for allogeneic unrelated donor source were significantly higher than the average costs for HCT cases reporting revenue code 0815 alone or both revenue codes 0815 and 0819 in combination with one of the ICD–10–PCS procedure codes for allogeneic related donor source. Further, the requestor reported that, according to its analysis, the average costs for HCT cases reporting revenue code 0815 alone or both revenue codes 0815 and 0819 in combination with one of the ICD–10–PCS procedure codes for unspecified allogeneic donor source were also significantly higher than the average costs for HCT cases reporting the ICD–10–PCS procedure codes for allogeneic related donor source. The requestor suggested that cases reporting the unspecified donor source procedure code are highly likely to represent unrelated donors, and recommended that, if the two new MS–DRGs are created as suggested, the cases reporting the procedure codes for unspecified donor source be included in the suggested new ''unrelated donor'' MS–DRG. The requestor also suggested that CMS apply a code edit through the inpatient Medicare Code Editor (MCE), similar to the edit in the Integrated Outpatient Code Editor (I/OCE) which requires reporting of revenue code 0815 on the claim with the appropriate procedure code or the claim may be subject to being returned to the provider.

As noted in the proposed rule, the ICD–10–PCS procedure codes assigned to MS–DRG 014 that identify related, unrelated and unspecified donor source for an allogeneic HCT are shown in the following table.

BILLING CODE 4120–01–P

ICD-10-PCS Code	Code Description
30230G2	Transfusion of allogeneic related bone marrow into peripheral vein, open approach
30230G3	Transfusion of allogeneic unrelated bone marrow into peripheral vein, open approach
30230G4	Transfusion of allogeneic unspecified bone marrow into peripheral vein, open approach
30230X2	Transfusion of allogeneic related cord blood stem cells into peripheral vein, open approach
30230X3	Transfusion of allogeneic unrelated cord blood stem cells into peripheral vein, open approach
30230X4	Transfusion of allogeneic unspecified cord blood stem cells into peripheral vein, open approach
30230Y2	Transfusion of allogeneic related hematopoietic stem cells into peripheral vein, open approach
30230Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into peripheral vein, open approach
30230Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into peripheral vein, open approach
30233G2	Transfusion of allogeneic related bone marrow into peripheral vein, percutaneous approach
30233G3	Transfusion of allogeneic unrelated bone marrow into peripheral vein, percutaneous approach
30233G4	Transfusion of allogeneic unspecified bone marrow into peripheral vein, percutaneous approach
30233X2	Transfusion of allogeneic related cord blood stem cells into peripheral vein, percutaneous approach
30233X3	Transfusion of allogeneic unrelated cord blood stem cells into peripheral vein, percutaneous approach
30233X4	Transfusion of allogeneic unspecified cord blood stem cells into peripheral vein, percutaneous approach
30233Y2	Transfusion of allogeneic related hematopoietic stem cells into peripheral vein, percutaneous approach
30233Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into peripheral vein, percutaneous approach
30233Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into peripheral vein, percutaneous approach
30240G2	Transfusion of allogeneic related bone marrow into central vein, open approach
30240G3	Transfusion of allogeneic unrelated bone marrow into central vein, open approach
30240G4	Transfusion of allogeneic unspecified bone marrow into central vein, open approach
30240X2	Transfusion of allogeneic related cord blood stem cells into central vein, open approach
30240X3	Transfusion of allogeneic unrelated cord blood stem cells into central vein, open approach
30240X4	Transfusion of allogeneic unspecified cord blood stem cells into central vein, open approach
30240Y2	Transfusion of allogeneic related hematopoietic stem cells into central vein, open approach
30240Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into central vein, open approach
30240Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into central vein, open approach
30243G2	Transfusion of allogeneic related bone marrow into central vein, percutaneous approach
30243G3	Transfusion of allogeneic unrelated bone marrow into central vein, percutaneous approach
30243G4	Transfusion of allogeneic unspecified bone marrow into central vein, percutaneous approach
30243X2	Transfusion of allogeneic related cord blood stem cells into central vein, percutaneous approach
30243X3	Transfusion of allogeneic unrelated cord blood stem cells into central vein, percutaneous approach
30243X4	Transfusion of allogeneic unspecified cord blood stem cells into central vein, percutaneous approach
30243Y2	Transfusion of allogeneic related hematopoietic stem cells into central vein, percutaneous approach
30243Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into central vein, percutaneous approach
30243Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into central vein, percutaneous approach
30250G1	Transfusion of nonautologous bone marrow into peripheral artery, open approach
30250X1	Transfusion of nonautologous cord blood stem cells into peripheral artery, open approach
30250Y1	Transfusion of nonautologous hematopoietic stem cells into peripheral artery, open approach
30253G1	Transfusion of nonautologous bone marrow into peripheral artery, percutaneous approach
30253X1	Transfusion of nonautologous cord blood stem cells into peripheral artery, percutaneous approach
30253Y1	Transfusion of nonautologous hematopoietic stem cells into peripheral artery, percutaneous approach
30260G1	Transfusion of nonautologous bone marrow into central artery, open approach
30260X1	Transfusion of nonautologous cord blood stem cells into central artery, open approach
30260Y1	Transfusion of nonautologous hematopoietic stem cells into central artery, open approach
30263G1	Transfusion of nonautologous bone marrow into central artery, percutaneous approach
30263X1	Transfusion of nonautologous cord blood stem cells into central artery, percutaneous approach
30263Y1	Transfusion of nonautologous hematopoietic stem cells into central artery, percutaneous approach

As noted in the FY 2020 IPPS/LTCH PPS proposed rule, we examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRG 014 and identified the subset of cases within MS–DRG 014 reporting procedure codes for allogeneic HCT related donor source, allogeneic HCT unrelated donor source, and allogeneic HCT unspecified donor source, respectively. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 014–All cases	854	28.2	$91,446
MS-DRG 014–Cases reporting allogeneic HCT related donor source	292	29.5	$87,444
MS-DRG 014–Cases reporting allogeneic HCT unrelated donor source	466	27.9	$95,146
MS-DRG 014–Cases reporting allogeneic HCT unspecified donor source	90	26.2	$90,945

BILLING CODE 4120–01–C

The total number of cases reported in MS–DRG 014 was 854, with an average length of stay of 28.2 days and average costs of $91,446. For the subset of cases reporting procedure codes for allogeneic HCT related donor source, there were a total of 292 cases with an average length of stay of 29.5 days and average costs of $87,444. For the subset of cases reporting procedure codes for allogeneic HCT unrelated donor source, there was a total of 466 cases with an average length of stay of 27.9 days and average costs of $95,146. For the subset of cases reporting procedure codes for allogeneic HCT unspecified donor source, there was a total of 90 cases with an average length of stay of 26.2 days and average costs of $90,945.

We stated in the proposed rule that based on the analysis described above, the current MS–DRG assignment for the cases in MS–DRG 014 that identify patients who undergo an allogeneic HCT procedure, regardless of donor source, appears appropriate. The data analysis reflects that each subset of cases reporting a procedure code for an allogeneic HCT procedure (that is, related, unrelated, or unspecified donor source) has an average length of stay and average costs that are comparable to the average length of stay and average costs of all cases in MS–DRG 014. We also noted that, in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we do not consider the reported revenue codes. Rather, as stated previously, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We do this by evaluating the ICD–10–CM diagnosis and/or ICD–10–PCS procedure codes that identify the patient conditions, procedures, and the relevant MS–DRG(s) that are the subject of a request. Specifically, we stated that, for this request, as noted above, we analyzed the cases reporting the ICD–10–PCS procedure codes that identify an allogeneic HCT procedure according to the donor source. We then evaluated patient care costs using average costs and average lengths of stay (based on the MedPAR data) and rely on the judgment of our clinical advisors to determine whether the patients are clinically distinct or similar to other patients represented in the MS–DRG. We stated that because MS–DRG 014 is defined by patients who undergo an allogeneic HCT transplant procedure, our clinical advisors state they are all clinically similar in that regard. We also noted that the ICD–10–PCS procedure codes that describe an allogeneic HCT procedure were revised effective October 1, 2016 to uniquely identify the donor source in response to a request and proposal that was discussed at the March 9–10, 2016 ICD–10 Coordination and Maintenance Committee meeting. We refer readers to the website at: *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html* for the committee meeting materials and discussion regarding this proposal.

In the proposed rule, in response to the requestor's statement that allogeneic related and allogeneic unrelated HCT cases are clinically different and have significantly different donor search and cell acquisition charges, we stated that our clinical advisors supported maintaining the current structure for MS–DRG 014 because they believe that MS–DRG 014 appropriately classifies all patients who undergo an allogeneic HCT procedures and, therefore, it is clinically coherent. While the requestor stated that there are clinical differences in the related and unrelated HCT cases, they did not provide any specific examples of these clinical differences. With regard to the donor search and cell acquisition charges, the requestor noted that the unrelated donor cases are more expensive than the related donor cases because of the donor search process, which includes a registry search to identify the best donor source, extensive donor screenings, evaluation, and cell acquisition and transportation services for the patient. The requestor appeared to base that belief according to the donor source and average charges reported with revenue code 0815. As noted in the proposed rule and above, we use MedPAR data and do not consider the reported revenue codes in deciding whether to propose to make further modifications to the MS–DRGs. Based on our analysis of claims data for MS–DRG 014, our clinical advisors stated that the resources are similar for patients who undergo an allogeneic HCT procedure regardless of the donor source.

In reviewing this request, we also reviewed the instructions on billing for stem cell transplantation in Chapter 3 of the Medicare Claims Processing Manual and found that there appears to be inadvertent duplication under Section 90.3.1 and Section 90.3.3 of Chapter 3, as both sections provide instructions on Billing for Stem Cell Transplantation. Therefore, in the proposed rule, we stated that we are further reviewing the Medicare Claims Processing Manual to identify potential revisions to address this duplication. However, we also noted that section 90.3.1 and section 90.3.3 provide different instruction regarding which revenue code should be reported. Section 90.3.1 instructs providers to report revenue code 0815 and Section 90.3.3 instructs providers to report revenue code 0819. We noted that we issued instructions as a One-Time Notification, Pub. No. 100–04, Transmittal 3571, Change Request 9674, effective January 1, 2017, which instructs that the appropriate revenue code to report on claims for allogeneic stem cell acquisition/donor services is revenue code 0815. Accordingly, in the proposed rule, we stated that we also are considering additional revisions as needed to conform the instructions for reporting these codes in the Medicare Claims Processing Manual.

With regard to the requestor's recommendation that we create a new code edit through the inpatient MCE similar to the edit in the I/OCE which requires reporting of revenue code 0815 on the claim, in the proposed rule we noted that the MCE is not designed to include revenue codes for claims editing purposes. Rather, as stated in section II.F.16. of the preamble of this final rule, it is a software program that detects and reports errors in the coding of Medicare claims data. The coding of Medicare claims data refers to diagnosis and procedure coding, as well as demographic information.

For the reasons described above, in the FY 2020 IPPS/LTCH PPS proposed

rule, we did not propose to change the current structure of MS–DRG 014. In addition, we did not propose to split MS–DRG 014 into two new MS–DRGs that assign cases according to whether the allogeneic donor source is related or unrelated, as the requestor suggested.

In addition, while conducting our analysis of cases reporting ICD–10–PCS procedure codes for allogeneic HCT procedures that are assigned to MS–DRG 014, in the proposed rule, we noted that 8 procedure codes for autologous HCT procedures are currently included in MS–DRG 014, as shown in the following table. We stated that these codes are not properly assigned because MS–DRG 014 is defined by cases reporting allogenic HCT procedures.

In the proposed rule, we stated that the 8 ICD–10–PCS procedure codes for autologous HCT procedures were inadvertently included in MS–DRG 014 as a result of efforts to replicate the ICD–9–CM MS–DRGs. Under the ICD–9–CM MS–DRGs, procedure code 41.06 (Cord blood stem cell transplant) was used to identify these procedures and was also assigned to MS–DRG 014. As shown in the ICD–9–CM code description, the reference to ''autologous'' is not included. However, because the ICD–10–PCS autologous HCT procedure codes were considered as plausible translations of the ICD–9–CM procedure code (41.06), they were inadvertently included in MS–DRG 014. We also noted that, of these 8 procedure codes, there are 4 procedure codes that describe a transfusion via arterial access. As noted in the proposed rule and described in more detail below, because a transfusion procedure always uses venous access rather than arterial access, these codes are considered clinically invalid and were the subject of a proposal discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting to delete these codes effective October 1, 2019 (FY 2020).

The majority of ICD–10–PCS procedure codes specifying autologous HCT procedures are currently assigned to MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy and Autologous Bone Marrow Transplant without CC/MCC, respectively). These codes are listed in the following table.

ICD-10-PCS Code	Code Description
30230AZ	Transfusion of embryonic stem cells into peripheral vein, open approach
30230G0	Transfusion of autologous bone marrow into peripheral vein, open approach
30230Y0	Transfusion of autologous hematopoietic stem cells into peripheral vein, open approach
30233AZ	Transfusion of embryonic stem cells into peripheral vein, percutaneous approach
30233G0	Transfusion of autologous bone marrow into peripheral vein, percutaneous approach
30233Y0	Transfusion of autologous hematopoietic stem cells into peripheral vein, percutaneous approach
30240AZ	Transfusion of embryonic stem cells into central vein, open approach
30240G0	Transfusion of autologous bone marrow into central vein, open approach
30240Y0	Transfusion of autologous hematopoietic stem cells into central vein, open approach
30243AZ	Transfusion of embryonic stem cells into central vein, percutaneous approach
30243G0	Transfusion of autologous bone marrow into central vein, percutaneous approach
30243Y0	Transfusion of autologous hematopoietic stem cells into central vein, percutaneous approach
30250G0	Transfusion of autologous bone marrow into peripheral artery, open approach
30250Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, open approach
30253G0	Transfusion of autologous bone marrow into peripheral artery, percutaneous approach
30253Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, percutaneous approach
30260G0	Transfusion of autologous bone marrow into central artery, open approach
30260Y0	Transfusion of autologous hematopoietic stem cells into central artery, open approach
30263G0	Transfusion of autologous bone marrow into central artery, percutaneous approach
30263Y0	Transfusion of autologous hematopoietic stem cells into central artery, percutaneous approach

We stated in the proposed rule that, while we believe, as indicated, the cases reporting ICD–10–PCS procedure codes for autologous HCT procedures may be improperly assigned to MS–DRG 014, we also examined claims data for this subset of cases to determine the frequency with which they were reported and the relative resource use as compared with all cases assigned to MS–DRGs 016 and 017. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 014–Cases reporting autologous cord blood stem cell donor source	6	23.5	$38,319
MS-DRG 016–All cases	2,150	18	$47,546
MS-DRG 017–All cases	104	11	$33,540

For the subset of cases in MS–DRG 014 reporting ICD–10–PCS codes for autologous HCT procedures, there was a total of 6 cases with an average length of stay of 23.5 days and average costs of $38,319. The total number of cases reported in MS–DRG 016 was 2,150, with an average length of stay of 18 days and average costs of $47,546. The total number of cases reported in MS–DRG 017 was 104, with an average length of stay of 11 days and average costs of $33,540.

As indicated in the FY 2020 IPPS/LTCH PPS proposed rule, the results of our analysis indicate that the frequency with which these autologous HCT procedure codes were reported in MS–

DRG 014 is low and that average costs of cases reporting autologous HCT procedures assigned to MS–DRG 014 are more aligned with the average costs of cases assigned to MS–DRGs 016 and 017, with the average costs being lower than the average costs for all cases assigned to MS–DRG 016 and higher than the average costs for all cases assigned to MS–DRG 017. We further stated in the proposed rule that our clinical advisors also indicated that the procedure codes for autologous HCT procedures are more clinically aligned with cases that are assigned to MS–DRGs 016 and 017 that are comprised of autologous HCT procedures. Therefore, in the FY 2020 IPPS/LTCH PPS proposed rule, we proposed to reassign the following 4 procedure codes for HCT procedures specifying autologous cord blood stem cell as the donor source via venous access to MS–DRGs 016 and 017 for FY 2020.

ICD-10-PCS Code	Code Description
30230X0	Transfusion of autologous cord blood stem cells into peripheral vein, open approach
30233X0	Transfusion of autologous cord blood stem cells into peripheral vein, percutaneous approach
30240X0	Transfusion of autologous cord blood stem cells into central vein, open approach
43X0	Transfusion of autologous cord blood stem cells into central vein, percutaneous approach

As discussed in the proposed rule and earlier in this section, the 4 procedure codes for HCT procedures that describe an autologous cord blood stem cell transfusion via arterial access currently assigned to MS–DRG 014, as listed previously, are considered clinically invalid. These procedure codes were discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting, along with additional procedure codes that are also considered clinically invalid, as described in the section below.

We stated in the proposed rule that during our analysis of procedure codes that describe a HCT procedure, we identified 128 clinically invalid codes from the transfusion table (table 302) in the ICD–10–PCS classification identifying a transfusion using arterial access, as listed in Table 6P.1a. associated with the proposed rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*). As shown in Table 6P.1a., these 128 procedure codes describe transfusion procedures with body system/region values ''5'' Peripheral Artery and ''6'' Central Artery. Because a transfusion procedure always uses venous access rather than arterial access, these codes are considered clinically invalid and were proposed for deletion at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.html* for the Committee meeting materials regarding this proposal.

As discussed in the proposed rule, we examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 014, 016, and 017 to determine if there were any cases that reported one of the 128 clinically invalid codes from the transfusion table in the ICD–10–PCS classification identifying a transfusion using arterial access, and as listed in Table 6P.1a. associated with the proposed rule. Our clinical advisors agreed that because a transfusion procedure always uses venous access rather than arterial access, these codes are considered invalid. We stated in the proposed rule that because these procedure codes describe clinically invalid procedures, we would not expect these codes to be reported in any claims data. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 014, 016, and 017–All cases	3,108	20.4	$59,140
MS-DRGs 014, 016, and 017–Cases with invalid transfusion codes	31	19.6	$52,912

As shown in this table, we found a total of 3,108 cases across MS–DRGs 014, 016, and 017 with an average length of stay of 20.4 days and average costs of $59,140. We found a total of 31 cases (0.9 percent) reporting a procedure code for an invalid transfusion procedure, identifying the body system/region value ''5'' Peripheral Artery or ''6'' Central Artery, with an average length of stay of 19.6 days and average costs of $52,912.

The results of the data analysis demonstrate that these invalid transfusion procedures represent approximately 1 percent of all discharges across MS–DRGs 014, 016, and 017.

To summarize, in the FY 2020 IPPS/LTCH PPS proposed rule, we proposed to: (1) Reassign the four ICD–10–PCS codes for HCT procedures specifying autologous cord blood stem cell as the donor source from MS–DRG 014 to MS–DRGs 016 and 017 (procedure codes 30230X0, 30233X0, 30240X0, 30243X0); and (2) delete the 128 clinically invalid codes from the transfusion table in the ICD–10–PCS Classification describing a transfusion using arterial access that were discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting and listed in Table 6P.1a associated with the proposed rule. As discussed previously, we did not propose to split MS–DRG 014 into the two requested new MS–DRGs that would assign cases according to whether the allogeneic donor source is related or unrelated.

Comment: Commenters supported the proposal to maintain the current structure of MS–DRG 014. Commenters also supported the proposals to (1) reassign the four ICD–10–PCS codes for HCT procedures specifying autologous cord blood stem cell as the donor source from MS–DRG 014 to MS–DRGs 016 and 017 (procedure codes 30230X0, 30233X0, 30240X0, 30243X0); and (2) delete the 128 clinically invalid codes from the transfusion table in the ICD–10–PCS Classification. A commenter specifically expressed their appreciation with CMS' diligence in ensuring the clinical appropriateness of the ICD–10 codes. This commenter also requested that CMS create an edit (similar to what was implemented in the CY 2017 Hospital Outpatient Prospective Payment System final rule, which states outpatient claims assigned to C–APC 5224 with CPT code 38240 must be

reported with revenue code 0815, and if that code is missing, the claim is returned by an edit to the provider) for inpatient claims utilizing ICD–10–PCS codes and revenue code 0815. According to the commenter, this would better inform CMS future ratesetting and reimbursement, as well as provide access to the more robust data in revenue code 0815 which the commenter asserted would allow CMS to do a meaningful analysis on the differences between search and procurement costs for related versus unrelated transplants. The commenter also recommended that CMS look at bone marrow and stem cell transplant services holistically and consider the process that providers must follow in order to correctly code and submit a claim.

Response: We appreciate the commenters' support. With regard to the recommendation that we create a new code edit for ICD–10–PCS codes reported with revenue code 0815 on the claim, as we noted in the proposed rule, the MCE is not designed to include revenue codes for claims editing purposes. Rather, as stated in section II.F.16. of the preamble of this final rule, it is a software program that detects and reports errors in the coding of Medicare claims data. In response to the commenter's recommendation that we consider the process that providers must follow in order to correctly code and submit a claim, we note that, as stated in the proposed rule, and above, we issued instructions as a One-Time Notification, Pub. No. 100–04, Transmittal 3571, Change Request 9674, effective January 1, 2017, which instructs that the appropriate revenue code to report on claims for allogeneic stem cell acquisition/donor services is revenue code 0815. As indicated, we are considering additional revisions as needed to conform the instructions for reporting these codes in the Medicare Claims Processing Manual.

After consideration of the public comments we received, we are finalizing our proposal to (1) reassign the four ICD–10–PCS codes for HCT procedures specifying autologous cord blood stem cell as the donor source from MS–DRG 014 to MS–DRGs 016 and 017 (procedure codes 30230X0, 30233X0, 30240X0, 30243X0); and (2) delete the 128 clinically invalid codes from the transfusion table in the ICD–10–PCS Classification and listed in Table 6P.1a associated with the proposed rule and this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) under the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

c. Chimeric Antigen Receptor (CAR) T-Cell Therapies

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19180), we received a request to create a new MS–DRG for procedures involving CAR T-cell therapies. The requestor stated that creation of a new MS–DRG would improve payment for CAR T-cell therapies in the inpatient setting. According to the requestor, while cases involving CAR T-cell therapy may now be eligible for new technology add-on payments and outlier payments, there continue to be significant financial losses by providers. The requestor also suggested that CMS modify its existing payment mechanisms to use a CCR of 1.0 for charges associated with CAR T-cell therapy.

In addition, the requestor included technical and operational suggestions related to CAR T-cell therapy, such as the development of unique CAR T-cell therapy revenue and cost centers for billing and cost reporting purposes. In the proposed rule, we stated that we will consider these technical and operational suggestions in the development of future billing and cost reporting guidelines and instructions.

In the FY 2020 IPPS/LTCH PPS proposed rule, we noted that, currently, procedures involving CAR T-cell therapies are identified with ICD–10–PCS procedure codes XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3) and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3), which became effective October 1, 2017. In the FY 2019 IPPS/LTCH PPS final rule, we finalized our proposal to assign cases reporting these ICD–10–PCS procedure codes to Pre-MDC MS–DRG 016 for FY 2019 and to revise the title of this MS–DRG to ''Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy''. We refer readers to section II.F.2.d. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a complete discussion of these final policies (83 FR 41172 through 41174).

As stated in the proposed rule and earlier, the current procedure codes for CAR T-cell therapies both became effective October 1, 2017. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), we indicated we should collect more comprehensive clinical and cost data before considering assignment of a new MS–DRG to these therapies. We stated in the FY 2020 IPPS/LTCH PPS proposed rule that, while the September 2018 update of the FY 2018 MedPAR data file does contain some claims that include those procedure codes that identify CAR T-cell therapies, the number of cases is limited, and the submitted costs vary widely due to differences in provider billing and charging practices for this therapy. Therefore, while these claims could potentially be used to create relative weights for a new MS–DRG, we stated that we do not have the comprehensive clinical and cost data that we generally believe are needed to do so. Furthermore, we stated in the proposed rule that given the relative newness of CAR T-cell therapy and our proposal to continue new technology add-on payments for FY 2020 for the two CAR T-cell therapies that currently have FDA approval (KYMRIAH™ and YESCARTA™), as discussed in section II.G.4.d. of the preamble of the proposed rule and this final rule, at this time we believe it may be premature to consider creation of a new MS–DRG specifically for cases involving CAR T-cell therapy for FY 2020.

Therefore, we did not propose to modify the current MS–DRG assignment for cases reporting CAR T-cell therapies for FY 2020. We noted that cases reporting ICD–10–PCS codes XW033C3 and XW043C3 would continue to be eligible to receive new technology add-on payments for discharges occurring in FY 2020 if our proposal to continue such payments is finalized. We stated that currently, we expect that, in future years, we would have additional data that exhibit more stability and greater consistency in charging and billing practices that could be used to evaluate the potential creation of a new MS–DRG specifically for cases involving CAR T-cell therapies.

Comment: Several commenters supported our proposal not to modify the current MS–DRG assignment for cases reporting CAR T-cell therapies for FY 2020, stating that CMS should wait until more clinical and cost data are available. Commenters indicated that CMS should wait until claims are coded and billed in a uniform manner so that consistent and accurate claims data is available for rate-setting. MedPAC also stated that incorporating new technologies into the Medicare program by using an existing MS–DRG in conjunction with new technology add-on payments and outlier payments has created incentives for efficiency and risk-sharing between providers and the Medicare program.

Response: We appreciate the commenters' support for our proposal and agree that incorporating new technologies into the Medicare program by using an existing MS–DRG in conjunction with new technology add-on payments, and outlier payments if applicable, is consistent with our policies regarding how new technologies are incorporated into the IPPS.

Comment: Several other commenters encouraged CMS to develop a new MS–DRG for cases reporting CAR T-cell therapies for FY 2020 in order to adequately cover the costs of treatment and so as not to dis-incentivize hospitals from providing CAR T-cell therapies due to inadequate reimbursement. Most of these commenters recommended alternative payment approaches for the CAR T-cell product if a new MS–DRG were created.

A commenter stated that claims analyses from the FY 2019 IPPS/LTCH PPS proposed rule for the KYMRIAH™ and YESCARTA™ new technology add-on payment applications found a significant number of patients who may be eligible for use of these therapies, which may be reflective of the potential growth of these therapies in the future. The commenter also stated that according to the FY 2018 MEDPAR update, other pre-MDC MS–DRGs contain fewer cases than the 386 CAR T-cell discharges that CMS estimated would qualify for new technology add-on payments. The commenter stated that this suggests that there are enough cases for CAR T-cell therapies to be considered for their own MS–DRG assignment. Another commenter stated that in the FY 2019 IPPS/LTCH PPS proposed rule, CMS expressed concern about the potential redistributive effects away from core hospital services over time toward specialized hospitals and how that may affect payment for core services if a new MS–DRG is created. The commenter stated they shared these concerns; however, believed they are mitigated to the extent that CMS creates a new MS–DRG during a time when the volume of CAR T-cell cases is very low. They also noted the technology will likely become less expensive, not more expensive over time, as commonly occurs with expensive new technologies. The commenter urged CMS to create a new MS–DRG specific to CAR T-cell cases for use in FY 2020. The commenter expressed concern that if CMS waits to make an MS–DRG change at a time when volume is higher, but before the CAR T-cell cases have become less expensive, the CAR T-cell cases will draw a higher amount of additional payments at the expense of all other cases.

Response: As discussed in the proposed rule, we continue to believe that we do not have the comprehensive clinical and cost data that we generally believe is needed to create a new MS–DRG. As stated earlier, we also continue to believe that incorporating new technologies into the Medicare program by using an existing MS–DRG in conjunction with new technology add-on payments, and outlier payments if applicable, is consistent with our policies regarding how new technologies are incorporated into the IPPS. We note that we address additional comments relating to the creation of a separate MS–DRG, including potential payment approaches, in the discussion of alternative payment for CAR T-cell therapy cases that follows.

With respect to the number of cases, we note that the new technology add-on payment estimate is a projection of future cases. Our standard practice in determining whether to create a new MS–DRG is to examine the number of cases, and the clinical and cost characteristics of those cases in the historical claims data. We do not have the clinical and cost data about these projected future FY 2020 cases available at this time.

With respect to the commenter who expressed concern that waiting to create a new MS–DRG would draw a higher amount of additional payments at the expense of all other cases, we are unclear as to the specific concern being raised by the commenter. Each year, we calculate the relative weights by dividing the average cost for cases within each MS–DRG by the average cost for cases across all MS–DRGs. Since the relative weight is recalculated each year, the implications for the payments for other cases do not differ based on when a new MS–DRG is created.

Therefore, after consideration of the comments we received, and for the reasons discussed, we are finalizing our proposal not to modify the MS–DRG assignment for cases reporting CAR–T cell therapies for FY 2020. As noted previously, we address additional comments we received relating to the creation of any potential new MS–DRG, including payment under any such MS–DRG, in the discussion that follows.

As part of our solicitation of public comment on the potential creation of a new MS–DRG for CAR–T cell therapy procedures, in the proposed rule we also invited comment on the most appropriate way to develop the relative weight if we were to finalize the creation of a new MS–DRG in future rulemaking. We stated that, while the data are limited, it may be operationally possible to create a relative weight by dividing the average costs of cases that include the CAR T-cell procedures by the average costs of all cases, consistent with our current methodology for setting the relative weights for FY 2020 and using the same applicable data sources used for other MS–DRGs (for FY 2020, the FY 2018 MedPAR data and FY 2016 HCRIS data). We invited public comments on whether this is the most accurate method for determining the relative weight, given the current variation in the claims data for these procedures, and also on how to address the significant number of cases involving clinical trials. We stated in the proposed rule that, while we do not typically exclude cases in clinical trials when developing the relative weights, in this case, the absence of the drug costs on claims for cases involving clinical trial claims could have a significant impact on the relative weight. We also stated that it is unclear whether a relative weight calculated using cases for which hospitals do and do not incur drug costs would accurately reflect the resource costs of caring for patients who are not involved in clinical trials. We stated that a different approach might be to develop a relative weight using an appropriate portion of the average sales price (ASP) for these drugs as an alternative way to reflect the costs involved in treating patients receiving CAR T-cell therapies. We requested public comments on these approaches or other approaches for setting the relative weight if we were to finalize a new MS–DRG. We noted that any such new MS–DRG would be established in a budget neutral manner, consistent with section 1886(d)(4)(C)(iii) of the Act, which specifies that the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected.

Comment: We received many comments on the most appropriate way to develop the relative weight and modify rate setting trims if we were to finalize the creation of a new MS–DRG, including different ways to determine the cost of the CAR T-cell therapy product, such as the use of Average Sales Price data or acquisition cost data, and technical comments on claims inclusion and exclusion criteria related to clinical trials.

Response: As discussed previously in this section, we are finalizing our proposal not to modify the MS–DRG assignment for cases reporting CAR–T cell therapies for FY 2020. We will

consider these comments in connection with any future rulemaking relating to the MS–DRG assignment for the CAR–T cell therapy cases.

As discussed further in section II.G.7. of the preamble to the proposed rule, we also requested public comment on payment alternatives for CAR T-cell cases, including eliminating the use of the CCR in calculating the new technology add-on payment for KYMRIAH® and YESCARTA® by making a uniform add-on payment that equals the proposed maximum add-on payment. We also requested public comments on whether we should consider utilizing a specific CCR for ICD–10–PCS procedure codes used to report the performance of procedures involving the use of CAR T-cell therapies; for example, a CCR of 1.0, when determining outlier payments, when determining the new technology add-on payments, and when determining payments to IPPS-excluded cancer hospitals for CAR T-cell therapies.

We invited public comments on how payment alternatives for CAR T-cell therapy would affect access to care, as well as how they would affect incentives to encourage lower drug prices, which is a high priority for this Administration. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174) and the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19279), we are considering approaches and authorities to encourage value-based care and lower drug prices. We solicited public comments on how the effective dates of any potential payment methodology alternatives, if any were to be adopted, may intersect and affect future participation in any such alternative approaches.

Comment: Some commenters indicated that CMS should pay for CAR T-cell therapy products based on the Average Sales Price. Some commenters noted that CMS pays for hemophilia blood clotting factors in this manner. A commenter recognized that payment for blood clotting factors in this manner was established by statute, but suggested that CMS may have the statutory authority to pay using this approach, or CMS could seek statutory authority from Congress. Another commenter urged CMS to pay for CAR T-cell therapies at Wholesale Acquisition Cost (WAC) plus six percent. Some commenters suggested that CMS require hospitals to submit on the claim the particular CAR T-cell product's NDC code. Other commenters stated given the similarity of CAR T-cell therapies to solid organ transplants, in that they are high-cost, low-volume services, CMS should pay for CAR T-cell therapies on a reasonable cost basis. Some commenters indicated that CMS should require providers to report value code 86, the actual invoice/acquisition cost, on their claims and include the actual product acquisition cost on the claim for payment purposes.

Several commenters suggested that CMS adopt a CCR of 1.0 for CAR T-cell products for all payment purposes, including new technology add-on payments, outlier payments, and payments to IPPS-excluded cancer hospitals. These commenters stated that utilizing a CCR of 1.0 will ensure uniformity among providers, many of whom are currently marking up the CAR–T charge, which impacts CMS' ability to analyze claims data that are critical for rate setting. These commenters also stated that they believe the use of a CCR of 1.0 would ensure consistent billing practices and payment that would be mutually beneficial for CMS and providers, including eliminating the need for providers to mark-up the CAR T-cell product cost. MedPAC expressed concern about using a CCR of 1.0, which would presume the hospitals charged their actual costs despite what it stated was the clear financial incentive to increase charges. MedPAC also expressed concern that this could set a precedent for other items going forward, and instead recommended the use of a lagged ASP based payment. Another commenter stated that using a CCR of 1.0 is a radical departure from previous payment methods and CMS should carefully consider possible issues that may result.

Many commenters requested structural changes in new technology add-on payments for the drug therapy, including the use of a uniform add-on payment. Many commenters also requested a higher new technology add-on payment percentage for CAR T-cell therapy products, up to 100 percent, rather than our proposed 65 percent for all new technologies, indicating that the proposed 65 percent would result in inadequate payment.

Some commenters suggested that CMS develop and release for comment an outcomes-based payment model for CAR T-cell therapy payments in the future and encouraged CMS to consider a payment alternative for CAR T-cell therapy under which CMS would test a new payment model through the Innovation Center and would pay for these technologies based on outcome and value rather than service.

Response: After a review of the comments received, we continue to believe, similar to last year, that given the relative newness of CAR T-cell therapy, and our continued consideration of approaches and authorities to encourage value-based care and lower drug prices, it would be premature to adopt structural changes to our existing payment mechanisms, either under the IPPS or for IPPS-excluded cancer hospitals, specifically for CAR T-cell therapy. For these reasons, we disagree with the commenters' requested changes to our current payment mechanisms for FY 2020, including, but not limited to, the creation of a pass-through payment; structural changes in new technology add-on payments and/or a differentially higher new technology add-on payment percentage specifically for CAR T-cell products, and changes in the usual cost-to-charge ratios (CCRs) used in ratesetting and payment, including those used in determining new technology add-on payments, outlier payments, and payments to IPPS excluded cancer hospitals. However, as discussed elsewhere in this final rule, we are finalizing a maximum new technology add-on payment percentage of 65 percent of the costs of the new technology for FY 2020, a 30 percent ((0.65/0.50)-1) increase from the current 50 percent. This increase to 65 percent will apply to all approved new technologies (except products designated by the FDA as a Qualified Infectious Disease Products, for which the maximum add-on amount will be 75 percent of the costs of the new technology), including CAR T-cell therapy products.

We stated in the proposed rule that another potential consideration if we were to create a new MS–DRG is the extent to which it would be appropriate to geographically adjust the payment under any such new MS–DRG. Under the methodology for determining the Federal payment rate for operating costs under the IPPS, the labor-related proportion of the national standardized amounts is adjusted by the wage index to reflect the relative differences in labor costs among geographic areas. The IPPS Federal payment rate for operating costs is calculated as the MS–DRG relative weight × [(labor-related applicable standardized amount × applicable wage index) + (nonlabor-related applicable standardized amount × cost-of-living adjustment)]. Given our understanding that the costs for CAR T-cell therapy drugs do not vary among geographic areas, and given that costs for CAR T-cell therapy would likely be an extremely high portion of the costs for the MS–DRG, in the proposed rule we invited public comments on whether we

should not geographically adjust the payment for cases assigned to any potential new MS–DRG for CAR–T cell therapy procedures. We also invited public comments on whether to instead apply the geographic adjustment to a lower proportion of payments under any potential new MS–DRG and, if so, how that lower proportion should be determined. We noted that while the prices of other drugs may also not vary significantly among geographic areas, generally speaking, those other drugs would not have estimated costs as high as those of CAR T-cell therapies, nor would they represent as significant a percentage of the average costs for the case. We invited public comments on the use of our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act (or other relevant authorities) to implement any such potential changes.

Comment: Some commenters stated that CMS should include adjustments for the wage index in a potential future MS–DRG for CAR T-cell therapies, including commenters that expressed concern that not applying the wage index would increase provider losses on these services. Some commenters stated that they did not believe CMS had the statutory flexibility to selectively apply the wage index. Many other commenters stated that CMS should not apply the wage index to the cost of the drug, as the cost does not vary by location, and hospitals with a wage index greater than 1 would be overpaid for the drug, while hospitals with a wage index less than 1 would be underpaid.

Response: We appreciate the commenters' input on the application of the wage index to a potential future MS–DRG for CAR T-cell therapies. We will consider these comments should we develop a proposed MS–DRG for CAR T-cell therapies in the future.

As discussed in the proposed rule, section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved graduate medical education (GME) program receive an additional payment for a Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment, known as the indirect medical education (IME) adjustment, are located at 42 CFR 412.105. The formula is traditionally described in terms of a certain percentage increase in payment for every 10-percent increase in the resident-to-bed ratio. For some hospitals, this percentage increase can exceed an additional 25 percent or more of the otherwise applicable payment. Some hospitals, sometimes the same hospitals, can also receive a large percentage increase in payments due to the Medicare disproportionate hospital (DSH) adjustment provision under section 1886(d)(5)(F) of the Act. The regulations regarding the calculation of the additional DSH payment are located at 42 CFR 412.106.

In the proposed rule we stated that, given that the payment for cases assigned to a new MS–DRG for CAR T-cell therapy could significantly exceed the historical payment for any existing MS–DRG, these percentage add-on payments could arguably result in unreasonably high additional payments for CAR T-cell therapy cases unrelated in any significant empirical way to the costs of the hospital in providing care. For example, consider a teaching hospital that has an IME adjustment factor of 0.25, and a DSH adjustment factor of 0.10. If we were to create a new MS–DRG for CAR T-cell therapy procedures that resulted in an average IPPS Federal payment rate for operating costs of $400,000, under the current payment mechanism, the hospital would receive an IME payment of $100,000 ($400,000 × 0.25) and a DSH payment of $40,000 ($400,000 × 0.10), such that the total IPPS Federal payment rate for operating costs including IME and DSH payments would be $540,000 ($400,000 + $100,000 + $40,000). We invited public comments on whether the IME and DSH payments should not be made for cases assigned to any new MS–DRG for CAR T-cell therapy. We also invited public comments on whether we should instead reduce the applicable percentages used to determine these add-ons and, if so, how those lower percentages should be determined. We invited public comments on the use of our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act (or other relevant authorities) to implement any potential changes.

Comment: Several commenters stated that CMS should include adjustments for DSH and IME in a potential future MS–DRG for CAR T-cell therapies (as described below); some commenters stated that they did not believe CMS had the statutory flexibility to selectively apply these adjustments. Commenters also expressed concern that not applying these adjustments would increases provider losses on these services. Several commenters stated that the IME adjustment is not based on a requirement that the costs for each service at a teaching hospital are greater than at a non-teaching hospital, but is instead due to the recognition that overall the costs are greater. A commenter stated that teaching hospitals are under considerable financial strain, that they will disproportionately shoulder the burdens of new, higher cost services, and that CMS should consider these costs and burdens before determining that the IME adjustment to CAR T-cell therapy cases would result in a payment that is too high. This commenter also stated that hospitals that receive DSH payments are less profitable than hospitals serving better-insured populations. Therefore, in order for these hospitals to access expensive new technologies, they need to receive a level of reimbursement that can support these services.

Many commenters stated that CMS should not apply the DSH and IME adjustments to the entire MS–DRG payment for CAR T-cell therapy cases, as this would result in a higher than appropriate payment. Several of these commenters also suggested that CMS consider ''carving out'' payment for CAR T-cell therapy cases to avoid this problem.

Response: We appreciate the commenters' input on the application of the DSH and IME adjustments to a potential future MS–DRG for CAR T-cell therapies. We will consider these comments should we develop a proposed MS–DRG for CAR T-cell therapies in the future.

3. MDC 1 (Diseases and Disorders of the Nervous System): Carotid Artery Stent Procedures

The logic for case assignment to MS–DRGs 034, 035, and 036 (Carotid Artery Stent Procedures with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD–10 MS–DRG Version 36 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*) is comprised of two lists of logic that include procedure codes for operating room (O.R.) procedures involving dilation of a carotid artery (common, internal or external) with intraluminal device(s). The first list of logic is entitled ''Operating Room Procedures'' and the second list of logic is entitled ''Operating Room Procedures with Operating Room Procedures''. In the FY 2020 IPPS/LTCH PPS proposed rule, we identified 46 ICD–10–PCS procedure codes in the second logic list that do not describe dilation of a carotid artery with an intraluminal device. Of these 46 procedure codes, we identified 24 codes describing dilation of a carotid artery without an intraluminal device; 8 codes describing dilation of the vertebral

artery; and 14 codes describing dilation of a vein (jugular, vertebral and face), as shown in the following table.

BILLING CODE 4120–01–P

ICD-10 PCS Codes That Involve Dilation of a Neck Artery or Vein With and Without an Intraluminal Device	
ICD-10-PCS Code	**Code Description**
037H3Z6	Dilation of right common carotid artery, bifurcation, percutaneous approach
037H3ZZ	Dilation of right common carotid artery, percutaneous approach
037H4Z6	Dilation of right common carotid artery, bifurcation, percutaneous endoscopic approach
037H4ZZ	Dilation of right common carotid artery, percutaneous endoscopic approach
037J3Z6	Dilation of left common carotid artery, bifurcation, percutaneous approach
037J3ZZ	Dilation of left common carotid artery, percutaneous approach
037J4Z6	Dilation of left common carotid artery, bifurcation, percutaneous endoscopic approach
037J4ZZ	Dilation of left common carotid artery, percutaneous endoscopic approach
037K3Z6	Dilation of right internal carotid artery, bifurcation, percutaneous approach
037K3ZZ	Dilation of right internal carotid artery, percutaneous approach
037K4Z6	Dilation of right internal carotid artery, bifurcation, percutaneous endoscopic approach
037K4ZZ	Dilation of right internal carotid artery, percutaneous endoscopic approach
037L3Z6	Dilation of left internal carotid artery, bifurcation, percutaneous approach
037L3ZZ	Dilation of left internal carotid artery, percutaneous approach
037L4Z6	Dilation of left internal carotid artery, bifurcation, percutaneous endoscopic approach
037L4ZZ	Dilation of left internal carotid artery, percutaneous endoscopic approach
037M3Z6	Dilation of right external carotid artery, bifurcation, percutaneous approach
037M3ZZ	Dilation of right external carotid artery, percutaneous approach
037M4Z6	Dilation of right external carotid artery, bifurcation, percutaneous endoscopic approach
037M4ZZ	Dilation of right external carotid artery, percutaneous endoscopic approach
037N3Z6	Dilation of left external carotid artery, bifurcation, percutaneous approach
037N3ZZ	Dilation of left external carotid artery, percutaneous approach
037N4Z6	Dilation of left external carotid artery, bifurcation, percutaneous endoscopic approach
037N4ZZ	Dilation of left external carotid artery, percutaneous endoscopic approach
037P3Z6	Dilation of right vertebral artery, bifurcation, percutaneous approach
037P3ZZ	Dilation of right vertebral artery, percutaneous approach
037P4Z6	Dilation of right vertebral artery, bifurcation, percutaneous endoscopic approach
037P4ZZ	Dilation of right vertebral artery, percutaneous endoscopic approach
037Q3Z6	Dilation of left vertebral artery, bifurcation, percutaneous approach
037Q3ZZ	Dilation of left vertebral artery, percutaneous approach
037Q4Z6	Dilation of left vertebral artery, bifurcation, percutaneous endoscopic approach
037Q4ZZ	Dilation of left vertebral artery, percutaneous endoscopic approach
057M3DZ	Dilation of right internal jugular vein with intraluminal device, percutaneous approach
057M4DZ	Dilation of right internal jugular vein with intraluminal device, percutaneous endoscopic approach
057N3DZ	Dilation of left internal jugular vein with intraluminal device, percutaneous approach
057N4DZ	Dilation of left internal jugular vein with intraluminal device, percutaneous endoscopic approach
057P3DZ	Dilation of right external jugular vein with intraluminal device, percutaneous approach
057P4DZ	Dilation of right external jugular vein with intraluminal device, percutaneous endoscopic approach
057Q3DZ	Dilation of left external jugular vein with intraluminal device, percutaneous approach
057Q4DZ	Dilation of left external jugular vein with intraluminal device, percutaneous endoscopic approach
057R3DZ	Dilation of left vertebral vein with intraluminal device, percutaneous approach
057R4DZ	Dilation of right vertebral vein with intraluminal device, percutaneous endoscopic approach
057S3DZ	Dilation of left vertebral vein with intraluminal device, percutaneous approach
057S4DZ	Dilation of left vertebral vein with intraluminal device, percutaneous endoscopic approach
057T3DZ	Dilation of right face vein with intraluminal device, percutaneous approach
057T4DZ	Dilation of right face vein with intraluminal device, percutaneous endoscopic approach

BILLING CODE 4120–01–C

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 034, 035, and 036 and identified cases reporting any one of the 46 ICD–10–PCS procedure codes listed in the tables above. Our findings are shown in the following table.

MS-DRGs for Carotid Artery Stent Procedures			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 034--All cases	863	6.8	$27,600
MS-DRG 034--Cases with procedure code other than dilation of a carotid artery with an intraluminal device	15	8.8	$36,596
MS-DRG 035--All cases	2,369	3	$16,731
MS-DRG 035--Cases with procedure code other than dilation of a carotid artery with an intraluminal device	52	3.5	$17,815
MS-DRG 036--All cases	3,481	1.4	$12,637
MS-DRG 036--Cases with procedure code other than dilation of a carotid artery with an intraluminal device	67	1.4	$12,621

As shown in the table above, we found a total of 863 cases with an average length of stay of 6.8 days and average costs of $27,600 in MS–DRG 034. There were 15 cases reporting at least one of the 46 procedure codes that do not describe dilation of the carotid artery with an intraluminal device in MS–DRG 034 with an average length of stay of 8.8 days and average costs of $36,596. For MS–DRG 035, we found a total of 2,369 cases with an average length of stay of 3 days and average costs of $16,731. There were 52 cases reporting at least one of the 46 procedure codes that do not describe dilation of the carotid artery with an intraluminal device in MS–DRG 035 with an average length of stay of 3.5 days and average costs of $17,815. For MS–DRG 036, we found a total of 3,481 cases with an average length of stay of 1.4 days and average costs of $12,637. There were 67 cases reporting at least one of the 46 procedure codes that do not describe dilation of the carotid artery with an intraluminal device in MS–DRG 036 with an average length of stay of 1.4 days and average costs of $12,621.

In the proposed rule, we noted that our clinical advisors stated that MS–DRGs 034, 035, and 036 are defined to include only those procedure codes that describe procedures that involve dilation of a carotid artery with an intraluminal device. Therefore, we proposed to remove the procedure codes listed in the table above from MS–DRGs 034, 035, and 036 that describe procedures which (1) do not include an intraluminal device; (2) describe procedures performed on arteries other than a carotid; and (3) describe procedures performed on a vein.

We also indicated in the proposed rule that the 46 ICD–10–PCS procedure codes listed in the table above are also assigned to MS–DRGs 037, 038, and 039 (Extracranial Procedures with MCC, with CC, and without CC/MCC, respectively). Therefore, we also examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 037, 038, and 039. Our findings are shown in the following table.

MS-DRGs for Extracranial Procedures			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 037--All cases	3,612	7.1	$23,703
MS-DRG 038--All cases	11,406	3.1	$12,480
MS-DRG 039-All cases	22,938	1.5	$8,400

We found a total of 3,612 cases in MS–DRG 037 with an average length of stay of 7.1 days and average costs of $23,703. We found a total of 11,406 cases in MS–DRG 038 with an average length of stay of 3.1 days and average costs of $12,480. We found a total of 22,938 cases in MS–DRG 039 with an average length of stay of 1.5 days and average costs of $8,400.

In the proposed rule, we stated that during our review of claims data for MS–DRGs 037, 038, and 039, we also discovered 96 ICD–10–PCS procedure codes describing dilation of a carotid artery with an intraluminal device that were inadvertently included as a result of efforts to replicate the ICD–9 based MS–DRGs. These procedure codes are also included in the logic for MS–DRGs 034, 035, and 036. Under ICD–9–CM, procedure codes 00.61 (Percutaneous angioplasty of extracranial vessel(s)) and 00.63 (Percutaneous insertion of carotid artery stent(s)) are both required to be reported on a claim to identify that a carotid artery stent procedure was performed and for assignment of the case to MS–DRGs 034, 035, and 036. Procedure code 00.61 is designated as an O.R. procedure, while procedure code 00.63 is designated as a non-O.R. procedure. Under ICD–10–PCS, a carotid artery stent procedure is described by one unique code that includes both clinical concepts of the angioplasty (dilation) and the insertion of the stent (intraluminal device). This ''combination code'' under ICD–10–PCS is designated as an O.R. procedure. Under ICD–9–CM, procedure code 00.61 reported in the absence of procedure code 00.63 results in assignment to MS–DRGs 037, 038, and 039 according to the MS–DRG logic because procedure code 00.61 has an inclusion term for vertebral vessels, as well as for the carotid vessels. Therefore, when all of the comparable translations of procedure code 00.61 as an O.R. procedure were replicated from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs, this replication inadvertently results in the assignment of ICD–10–PCS procedure codes that identify and

describe a carotid artery stent procedure to MS–DRGs 037, 038, and 039. Therefore, we proposed to remove the 96 ICD–10–PCS procedure codes describing dilation of a carotid artery with an intraluminal device from MS–DRGs 037, 038, and 039.

We also found 6 procedure codes describing dilation of a carotid artery with an intraluminal device in MS–DRGs 037, 038, and 039 that are not currently assigned to MS–DRGs 034, 035, and 036. In the proposed rule, we stated that our clinical advisors recommended that these 6 procedure codes be reassigned from MS–DRGs 037, 038, and 039 to MS–DRGs 034, 035, and 036 because the 6 procedure codes are consistent with the other procedures describing dilation of a carotid artery with an intraluminal device that are currently assigned to MS–DRGs 034, 035, and 036. We refer readers to Table 6P.1b. associated with the proposed rule (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) for the complete list of procedure codes that we proposed to remove from MS–DRGs 037, 038, and 039.

We also noted that, as discussed in the proposed rule and section II.F.14.f. of the preamble of this final rule, we are deleting a number of codes that include the ICD–10–PCS qualifier term ''bifurcation'' as the result of the finalized proposal discussed at the September 11–12, 2018 ICD–10 Coordination and Maintenance Committee meeting. We refer readers to the website at: *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html* for the committee meeting materials and discussion regarding this proposal. We noted in the proposed rule that, of the 96 procedure codes that we proposed to remove from the logic for MS–DRGs 037, 038, and 039, there are 48 procedure codes that include the qualifier term ''bifurcation''. Therefore, we stated in the proposed rule that these 48 procedure codes will be deleted effective October 1, 2019. We stated that the 48 remaining valid procedure codes that do not include the term ''bifurcation'' that we proposed to remove from MS–DRGs 037, 038, and 039 will continue to be assigned to MS–DRGs 034, 035, and 036.

Lastly, we stated in the proposed rule that, if the applicable proposed MS–DRG changes are finalized, we would make a conforming change to the ICD–10 MS–DRG Version 37 Definitions Manual for FY 2020 by combining all the procedure codes identifying a carotid artery stent procedure within MS–DRGs 034, 035, and 036 into one list entitled ''Operating Room Procedures'' to better reflect the definition of these MS–DRGs based on the discussion and proposals described above.

Comment: Several commenters supported this proposal stating that only procedures involving dilation of a carotid artery using intraluminal devices should be included in MS–DRGs 034–036 and that procedures that do not involve both a carotid artery and an intraluminal device should be removed from MS–DRGs 034–036. Several commenters also supported our proposal to remove 96 ICD–10 PCS codes describing dilation of a carotid artery with intraluminal device from MS–DRGs 037, 038 and 039 and to delete the 48 procedure codes from MS–DRGs 037, 038, and 039 that include the qualifier term ''bifurcation.

Response: We appreciate the commenters' support.

Comment: A commenter expressed concern and disagreed with the proposal to delete the procedure codes that include the qualifier term ''bifurcation''. The commenter stated that in vascular surgery, use of the term bifurcation may be used to document when a procedure occurs in a branch vessel.

Response: We appreciate the commenter's suggestion, however, as discussed at the ICD–10 Coordination and Maintenance Committee meeting held on September 11–12, 2018, the qualifier value Bifurcation was proposed (and subsequently finalized) to be deleted from the following ICD–10–PCS tables—037 Dilation of Upper Arteries, 03C Extirpation of Upper Arteries, 047 Dilation of Lower Arteries, 04C Extirpation of Lower Arteries and 04V Restriction of Lower Arteries. The original proposal for the qualifier Bifurcation was intended to capture data specifically regarding procedures on coronary arteries. The term bifurcation describes diagnosis related information, and generally, under ICD–10 PCS we do not include diagnosis related information in the procedure classification.

After consideration of the public comments we received, we are finalizing our proposal to remove the procedure codes listed previously from MS–DRGs 034, 035, and 036 that describe procedures which (1) do not include an intraluminal device; (2) describe procedures performed on arteries other than a carotid; and (3) describe procedures performed on a vein. We are also finalizing our proposal to remove 96 ICD–10 PCS codes describing dilation of a carotid artery with intraluminal device from MS–DRGs 037, 038 and 039 and are finalizing our proposal to reassign the 6 procedure codes discussed above from MS–DRGs 037, 038, and 039 to MS–DRGs 034, 035, and 036 because the 6 procedure codes are consistent with the other procedures describing dilation of a carotid artery with an intraluminal device that are currently assigned to MS–DRGs 034, 035, and 036. We refer readers to Table 6P.1b. associated with this final rule (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) for the complete list of procedure codes that we removed from MS–DRGs 037, 038, and 039. Additionally, we are finalizing our proposal to delete the 48 procedure codes from MS–DRGs 037, 038, and 039 that include the qualifier term ''bifurcation''. Finally, we are finalizing our proposal to make a conforming change to the ICD–10 MS–DRG Version 37 Definitions Manual for FY 2020 by combining all the procedure codes identifying a carotid artery stent procedure within MS–DRGs 034, 035, and 036 into one list entitled ''Operating Room Procedures'' to better reflect the definition of these MS–DRGs.

4. MDC 4 (Diseases and Disorders of the Respiratory System): Pulmonary Embolism

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19185), we discussed that we received a request to reassign three ICD–10–CM diagnosis codes for pulmonary embolism with acute cor pulmonale from MS–DRG 176 (Pulmonary Embolism without MCC) to the higher severity level MS–DRG 175 (Pulmonary Embolism with MCC). The three diagnosis codes are identified in the following table.

ICD-10-CM Code	Code Description
I26.01	Septic pulmonary embolism with acute cor pulmonale
I26.02	Saddle embolus of pulmonary artery with acute cor pulmonale
I26.09	Other pulmonary embolism with acute cor pulmonale

The requestor noted that, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41231 through 41234), we finalized the proposal to remove the special logic in the GROUPER for processing claims containing a code on the Principal Diagnosis Is Its Own CC or MCC Lists and deleted the relevant tables from the ICD–10 MS–DRG Definitions Manual Version 36, effective October 1, 2018. As a result of this change, cases reporting any one of the three ICD–10–CM diagnosis codes describing a pulmonary embolism with acute cor pulmonale were reassigned from MS–DRG 175 to MS–DRG 176, absent a secondary diagnosis code to trigger assignment to MS–DRG 175. The requestor stated that this change in the MS–DRG assignment for these cases resulted in a reduction in payment for cases involving pulmonary embolism with acute cor pulmonale and that the FY 2019 payment rate for MS–DRG 176 does not appropriately account for the costs and resource utilization associated with these cases because the subset of patients with pulmonary embolism with acute cor pulmonale often represents a more severe set of patients with pulmonary embolism.

The logic for case assignment to MS–DRGs 175 and 176 is displayed in the ICD–10 MS–DRG Version 36 Definitions Manual, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*.

As indicated in the FY 2020 IPPS/LTCH PPS proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 175 and 176 to identify cases reporting diagnosis codes describing pulmonary embolism with acute cor pulmonale as listed above (ICD–10–CM diagnosis codes I26.01, I26.02 or I26.09) as the principal diagnosis or as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs for Pulmonary Embolism			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 175--All cases	24,389	5.2	$10,294
MS-DRG 175--Cases with pulmonary embolism with acute cor pulmonale	2,326	5.7	$13,034
MS-DRG 176--All cases	30,215	3.3	$6,356
MS-DRG 176--Cases with pulmonary embolism with acute cor pulmonale	1,821	3.9	$9,630

As shown in the table, for MS–DRG 175, there was a total of 24,389 cases with an average length of stay of 5.2 days and average costs of $10,294. Of these 24,389 cases, there were 2,326 cases reporting pulmonary embolism with acute cor pulmonale, with an average length of stay 5.7 days and average costs of $13,034. For MS–DRG 176, there was a total of 30,215 cases with an average length of stay of 3.3 days and average costs of $6,356. Of these 30,215 cases, there were 1,821 cases reporting pulmonary embolism with acute cor pulmonale with an average length of stay of 3.9 days and average costs of $9,630.

As stated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41231 through 41234), available ICD–10 data can now be used to evaluate other indicators of resource utilization and, as shown by our claims analysis, the data indicate that the average costs of cases reporting pulmonary embolism or saddle embolus with acute cor pulmonale ($9,630) in MS–DRG 176 are closer to the average costs for all pulmonary embolism cases in MS–DRG 175 ($10,294) as compared to the average costs for all cases in MS–DRG 176 ($6,356). We stated in the proposed rule that our clinical advisors also agreed that this subset of patients with acute cor pulmonale often represents a more severe set of patients and that these cases are more appropriately assigned to the higher severity level ''with MCC'' MS–DRG. Therefore, in the proposed rule, we proposed to reassign cases reporting diagnosis code I26.01, I26.02, or I26.09 to the higher severity level MS–DRG 175 and to revise the title for MS–DRG 175 to ''Pulmonary Embolism with MCC or Acute Cor Pulmonale'' to more accurately reflect the diagnoses assigned there.

Comment: Commenters supported our proposed reassignment of diagnosis codes I26.01, I26.02, and I26.09 to the higher severity level MS–DRG 175 and revision of the title for MS–DRG 175 to ''Pulmonary Embolism with MCC or Acute Cor Pulmonale'' to more accurately reflect the diagnoses.

Response: We thank the commenters for their support. After consideration of the public comments we received, we are finalizing our proposal to reassign cases reporting diagnosis code I26.01, I26.02, or I26.09 to the higher severity level MS–DRG 175 and to revise the title for MS–DRG 175 to ''Pulmonary Embolism with MCC or Acute Cor Pulmonale''.

5. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Transcatheter Mitral Valve Repair With Implant

As we did for the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28008 through 28010) and for the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24985 through 24989), for FY 2020, as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19185 through 19193), we received a request to modify the MS–DRG assignment for transcatheter mitral valve repair (TMVR) with implant procedures. ICD–10–PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) identifies and describes this procedure. This request also included the suggestion that CMS give consideration to reclassifying other endovascular cardiac valve repair procedures. Specifically, the requestor recommended that cases reporting procedure codes describing an endovascular cardiac valve repair with implant be reassigned to MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with and without MCC, respectively) and that the MS–DRG titles be revised to Endovascular Cardiac Valve Interventions with Implant with and without MCC, respectively. We refer readers to detailed discussions of the MitraClip® System (hereafter referred to as MitraClip®) for transcatheter mitral valve repair in previous rulemakings, including the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25822) and final rule (76 FR 51528 through 51529), the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27902 through 27903) and final rule (77 FR 53308 through 53310), the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28008 through 28010) and final rule (79 FR 49889 through 49892), the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24356 through 24359) and final rule (80 FR 49363 through 49367), and the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24985 through 24989) and final rule (81 FR 56809 through 56813), in response to requests for MS–DRG reclassification, as well as the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27547 through 27552), under the new technology add-on payment policy. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50575), we were unable to consider further the application for a new technology add-on payment for MitraClip® because the technology had not received FDA approval by the July 1, 2013 deadline.

In the FY 2015 IPPS/LTCH PPS final rule, we finalized our proposal to not create a new MS–DRG or to reassign cases reporting ICD–9–CM procedure code 35.97 that described procedures involving the MitraClip® to another MS–DRG (79 FR 49889 through 49892). Under a new application, the request for new technology add-on payments for the MitraClip® System was approved for FY 2015 (79 FR 49941 through 49946). The new technology add-on payment for MitraClip® was subsequently discontinued effective FY 2017.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49371), we finalized a modification to the MS–DRGs to which procedures involving the MitraClip® were assigned. For the ICD–10 based MS–DRGs to fully replicate the ICD–9–CM based MS–DRGs, ICD–10–PCS code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach), which identifies the MitraClip® technology and is the ICD–10–PCS code translation for ICD–9–CM procedure code 35.97 (Percutaneous mitral valve repair with implant), was assigned to new MS–DRGs 273 and 274 (Percutaneous Intracardiac Procedures with MCC and without MCC, respectively) and continued to be assigned to MS–DRGs 231 and 232 (Coronary Bypass with PTCA with MCC and without MCC, respectively).

In the FY 2017 IPPS/LTCH PPS proposed and final rules, we also discussed our analysis of MS–DRGs 228, 229, and 230 (Other Cardiothoracic Procedures with MCC, with CC, and without CC/MCC, respectively) with regard to the possible reassignment of cases reporting ICD–10–PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach). We finalized our proposal to collapse these MS–DRGs (228, 229, and 230) from three severity levels to two severity levels by deleting MS–DRG 230 and revising the structure of MS–DRG 229. We also finalized our proposal to reassign ICD–10–PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) from MS–DRGs 273 and 274 to MS–DRG 228 and revised MS–DRG 229 (81 FR 56813).

As we discussed in the proposed rule, according to the requestor, there are substantial clinical and resource differences between the transcatheter mitral valve repair (TMVR) procedure and other procedures currently grouping to MS–DRGs 228 and 229. The requestor noted that, currently, ICD–10–PCS procedure code 02UG3JZ is the only endovascular valve intervention with implant procedure that maps to MS–DRGs 228 and 229. The requestor also noted that other ICD–10–PCS procedure codes describing procedures for endovascular (transcatheter) cardiac valve repair with implant map to MS–DRGs 273 and 274 or to MS–DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures with and without Cardiac Catheterization with MCC, with CC and without CC/MCC, respectively). The requestor further noted that all ICD–10–PCS procedure codes for endovascular cardiac valve replacement procedures map to MS–DRGs 266 (Endovascular Cardiac Valve Replacement with MCC) and 267 (Endovascular Cardiac Valve Replacement without MCC).

As noted in the proposed rule, the ICD–10–PCS procedure codes describing a transcatheter cardiac valve repair procedure with an implant are listed in the following table.

BILLING CODE 4120–01–P

ICD-10-PCS Code	Description
02UF37J	Supplement aortic valve created from truncal valve with autologous tissue substitute, percutaneous approach
02UF37Z	Supplement aortic valve with autologous tissue substitute, percutaneous approach
02UF38J	Supplement aortic valve created from truncal valve with zooplastic tissue, percutaneous approach
02UF38Z	Supplement aortic valve with zooplastic tissue, percutaneous approach
02UF3JJ	Supplement aortic valve created from truncal valve with synthetic substitute, percutaneous approach
02UF3JZ	Supplement aortic valve with synthetic substitute, percutaneous approach
02UF3KJ	Supplement aortic valve created from truncal valve with nonautologous tissue substitute, percutaneous approach
02UF3KZ	Supplement aortic valve with nonautologous tissue substitute, percutaneous approach
02UG37E	Supplement mitral valve created from left atrioventricular valve with autologous tissue substitute, percutaneous approach
02UG37Z	Supplement mitral valve with autologous tissue substitute, percutaneous approach
02UG38E	Supplement mitral valve created from left atrioventricular valve with zooplastic tissue, percutaneous approach
02UG38Z	Supplement mitral valve with zooplastic tissue, percutaneous approach
02UG3KE	Supplement mitral valve created from left atrioventricular valve with nonautologous tissue substitute, percutaneous approach
02UG3KZ	Supplement mitral valve with nonautologous tissue substitute, percutaneous approach
02UG3JE	Supplement mitral valve created from left atrioventricular valve with synthetic substitute, percutaneous approach
02UG3JZ	Supplement mitral valve with synthetic substitute, percutaneous approach
02UH37Z	Supplement pulmonary valve with autologous tissue substitute, percutaneous approach
02UH38Z	Supplement pulmonary valve with zooplastic tissue, percutaneous approach
02UH3JZ	Supplement pulmonary valve with synthetic substitute, percutaneous approach
02UH3KZ	Supplement pulmonary valve with nonautologous tissue substitute, percutaneous approach
02UJ37G	Supplement tricuspid valve created from right atrioventricular valve with autologous tissue substitute, percutaneous approach
02UJ37Z	Supplement tricuspid valve with autologous tissue substitute, percutaneous approach
02UJ38G	Supplement tricuspid valve created from right atrioventricular valve with zooplastic tissue, percutaneous approach
02UJ38Z	Supplement tricuspid valve with zooplastic tissue, percutaneous approach
02UJ3JG	Supplement tricuspid valve created from right atrioventricular valve with synthetic substitute, percutaneous approach
02UJ3JZ	Supplement tricuspid valve with synthetic substitute, percutaneous approach
02UJ3KG	Supplement tricuspid valve created from right atrioventricular valve with nonautologous tissue substitute, percutaneous approach
02UJ3KZ	Supplement tricuspid valve with nonautologous tissue substitute, percutaneous approach

As also noted in the proposed rule, the ICD–10–PCS procedure codes describing a transcatheter cardiac valve replacement procedure are listed in the following table.

ICD-10-PCS Code	Description
02RF37H	Replacement of aortic valve with autologous tissue substitute, transapical, percutaneous approach
02RF37Z	Replacement of aortic valve with autologous tissue substitute, percutaneous approach
02RF38H	Replacement of aortic valve with zooplastic tissue, transapical, percutaneous approach
02RF38Z	Replacement of aortic valve with zooplastic tissue, percutaneous approach
02RF3JH	Replacement of aortic valve with synthetic substitute, transapical, percutaneous approach
02RF3JZ	Replacement of aortic valve with synthetic substitute, percutaneous approach
02RF3KH	Replacement of aortic valve with nonautologous tissue substitute, transapical, percutaneous approach
02RF3KZ	Replacement of aortic valve with nonautologous tissue substitute, percutaneous approach
02RG37H	Replacement of mitral valve with autologous tissue substitute, transapical, percutaneous approach
02RG37Z	Replacement of mitral valve with autologous tissue substitute, percutaneous approach
02RG38H	Replacement of mitral valve with zooplastic tissue, transapical, percutaneous approach
02RG38Z	Replacement of mitral valve with zooplastic tissue, percutaneous approach
02RG3JH	Replacement of mitral valve with synthetic substitute, transapical, percutaneous approach
02RG3JZ	Replacement of mitral valve with synthetic substitute, percutaneous approach
02RG3KH	Replacement of mitral valve with nonautologous tissue substitute, transapical, percutaneous approach
02RG3KZ	Replacement of mitral valve with nonautologous tissue substitute, percutaneous approach
02RH37H	Replacement of pulmonary valve with autologous tissue substitute, transapical, percutaneous approach
02RH37Z	Replacement of pulmonary valve with autologous tissue substitute, percutaneous approach
02RH38H	Replacement of pulmonary valve with zooplastic tissue, transapical, percutaneous approach
02RH38Z	Replacement of pulmonary valve with zooplastic tissue, percutaneous approach
02RH3JH	Replacement of pulmonary valve with synthetic substitute, transapical, percutaneous approach
02RH3JZ	Replacement of pulmonary valve with synthetic substitute, percutaneous approach
02RH3KH	Replacement of pulmonary valve with nonautologous tissue substitute, transapical, percutaneous approach
02RH3KZ	Replacement of pulmonary valve with nonautologous tissue substitute, percutaneous approach
02RJ37H	Replacement of tricuspid valve with autologous tissue substitute, transapical, percutaneous approach
02RJ37Z	Replacement of tricuspid valve with autologous tissue substitute, percutaneous approach
02RJ38H	Replacement of tricuspid valve with zooplastic tissue, transapical, percutaneous approach
02RJ38Z	Replacement of tricuspid valve with zooplastic tissue, percutaneous approach
02RJ3JH	Replacement of tricuspid valve with synthetic substitute, transapical, percutaneous approach
02RJ3JZ	Replacement of tricuspid valve with synthetic substitute, percutaneous approach
02RJ3KH	Replacement of tricuspid valve with nonautologous tissue substitute, transapical, percutaneous approach
02RJ3KZ	Replacement of tricuspid valve with nonautologous tissue substitute, percutaneous approach
X2RF332	Replacement of aortic valve using zooplastic tissue, rapid deployment technique, percutaneous approach, new technology group 2

BILLING CODE 4120–01–C

We noted in the proposed rule that the requestor performed its own analyses, first comparing TMVR procedures (ICD–10–PCS procedure code 02UG3JZ) to other procedures currently assigned to MS–DRGs 228 and 229, as well as to the transcatheter cardiac valve replacement procedures in MS–DRGs 266 and 267. We refer the reader to the ICD–10 MS–DRG Version 36 Definitions Manual for complete documentation of the logic for case assignment to MS–DRGs 228 and 229 (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*). According to the requestor, its findings indicate that TMVR is more closely aligned with MS–DRGs 266 and 267 than MS–DRGs 228 and 229 with regard to average length of stay and average [standardized] costs. The requestor also examined the impact of removing cases reporting a TMVR procedure (ICD–10–PCS procedure code 02UG3JZ) from MS–DRGs 228 and 229 and adding those cases to MS–DRGs 266 and 267. The requestor noted this movement would have minimal impact to MS–DRGs 266 and 267 based on its analysis. In addition, the requestor stated that its request is in alignment with CMS' policy goal of creating and maintaining clinically coherent MS–DRGs.

The requestor acknowledged that CMS has indicated in prior rulemaking that TMVR procedures are not clinically similar to endovascular cardiac valve replacement procedures, and the requestor agreed that they are distinct procedures. However, the requestor also believed that TMVR is more similar to the replacement procedures in MS–DRGs 266 and 267 compared to the other procedures currently assigned to MS–DRGs 228 and 229. The requestor provided the following table of procedures in volume order (highest to lowest) to illustrate the clinical differences between TMVR procedures and other procedures currently assigned to MS–DRGs 228 and 229.

Procedure	Approach	Anatomy Treated	ICD-10-PCS Root Operation	Implanted Device
TMVR	Percutaneous	Valves	Supplement	Substitute
Destruction	Open	Atria	Destruction	None
Coronary Atherectomy	Open	Coronary Artery	Extirpation	None
Insertion	Percutaneous	Atria or Ventricles	Insertion	Pacemaker or Intraluminal Device
Destruction	Percutaneous	Atria	Destructions	None
Structural Heart Repair	Open	Septum, Heart, Chordae Tendinae, or Papillary Muscle	Repair	None
Structural Heart Excision	Open	Septum, Atria, Ventricles, Chordae Tendinae, or Papillary Muscle	Excision	None

The requestor noted that, among the procedures listed in the table, TMVR is the only procedure that involves treatment of a cardiac valve and is the only procedure that involves implanting a synthetic substitute.

To illustrate the similarities between TMVR procedures and endovascular cardiac valve replacements in MS–DRGs 266 and 267, the requestor provided the following table.

Procedure	Approach	Anatomy Treated	ICD-10-PCS Root Operation	Implanted Device
TMVR	Percutaneous	Valves	Supplement	Substitute
Endovascular Cardiac Valve Replacement	Percutaneous	Valves	Replacement	Substitute

The requestor noted that both TMVR procedures and endovascular cardiac valve replacements use a percutaneous approach, treat cardiac valves, and use an implanted device for purposes of improving the function of the specified valve. The requestor believed that the analyses support the request to group TMVR procedures with endovascular cardiac valve replacements from a resource perspective and an improvement to clinical coherence could be achieved because TMVR procedures are more similar to the endovascular cardiac valve replacements compared to the other procedures in MS–DRGs 228 and 229, where TMVR is currently assigned.

As noted in the proposed rule and earlier in this section, the request also included the suggestion that CMS give consideration to reclassifying other endovascular cardiac valve repair with implant procedures to MS–DRGs 266 and 267; specifically, endovascular cardiac valve repair with implant procedures involving the aortic, pulmonary, tricuspid and other non-TMVR mitral valve procedures that currently group to MS–DRGs 273 and 274 or MS–DRGs 216, 217, 218, 219, 220 and 221. The requestor acknowledged that endovascular cardiac valve repair with implant procedures involving these other cardiac valves have lower volumes in comparison to the TMVR procedure (ICD–10–PCS procedure code 02UG3JZ), which makes analysis of these procedures a little more difficult. However, the requestor suggested that movement of these procedures to MS–DRGs 266 and 267 would enable the ability to maintain clinical coherence for all endovascular cardiac valve interventions. The requestor also stated that there is an anticipated increase in the volume of not only the TMVR procedure described by ICD–10–PCS procedure code 02UG3JZ (which has grown annually since the MitraClip® was approved for new technology add-on payment in FY 2015), but also for the other endovascular cardiac valve repair with implant procedures, such as those involving the tricuspid valve, which are currently under study in the United States and Europe. Based on this anticipated increase in volume for endovascular cardiac valve repair with implant procedures, the requestor believed that it would be advantageous to take this opportunity to restructure the MS–DRGs by moving all the endovascular cardiac valve repair with implant procedures to MS–DRGs 266 and 267 with revised titles as noted previously, to improve clinical consistency beginning in FY 2020. The requestor further noted that while the

requestor believes its request reflects the best approach for appropriate MS–DRG assignment for TMVR and other endovascular cardiac valve repair with implant procedures, the requestor understands that CMS may consider other alternatives.

As indicated in the proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting ICD–10–PCS procedure code 02UG3JZ in MS–DRGs 228 and 229 as well as cases reporting one of the procedure codes listed above describing a transcatheter cardiac valve repair with implant procedure in MS–DRGs 216, 217, 218, 219, 220, 221, 273, and 274. Our findings are shown in the tables below.

MS-DRGs for Transcatheter Cardiac Valve Repair with Implant Procedures			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 216--All cases	5,909	16	$70,435
MS-DRG 216--Cases with procedure codes for transcatheter cardiac valve repair	48	12.6	$72,556
MS-DRG 217--All cases	2,166	9.4	$47,299
MS-DRG 217--Cases with procedure codes for transcatheter cardiac valve repair	25	3.4	$40,707
MS-DRG 218--All cases	268	6.8	$39,501
MS-DRG 218--Cases with procedure codes for transcatheter cardiac valve repair	4	1.3	$45,903
MS-DRG 219--All cases	15,105	10.9	$55,423
MS-DRG 219--Cases with procedure codes for transcatheter cardiac valve repair	55	7.1	$65,880
MS-DRG 220--All cases	15,889	6.6	$38,313
MS-DRG 220--Cases with procedure codes for transcatheter cardiac valve repair	40	3	$38,906
MS-DRG 221--All cases	2,652	4.7	$33,577
MS-DRG 221--Cases with procedure codes for transcatheter cardiac valve repair	13	2.2	$29,646
MS-DRG 228--All cases	5,583	9.2	$46,613
MS-DRG 228--Cases with procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach)	1,688	5.6	$49,569
MS-DRG 229--All cases	6,593	4.3	$32,322
MS-DRG 229--Cases with procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach)	2,018	1.7	$38,321
MS-DRG 273--All cases	7,785	6.9	$27,200
MS-DRG 273--Cases with procedure codes for transcatheter cardiac valve repair	6	7.5	$52,370
MS-DRG 274--All cases	20,434	2.3	$22,771
MS-DRG 274--Cases with procedure codes for transcatheter cardiac valve repair	7	1.4	$28,152

As shown in the table, we found a total of 5,909 cases for MS–DRG 216 with an average length of stay of 16 days and average costs of $70,435. Of those 5,909 cases, there were 48 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 12.6 days and average costs of $72,556. We found a total of 2,166 cases for MS–DRG 217 with an average length of stay of 9.4 days and average costs of $47,299. Of those 2,166 cases, there was a total of 25 cases reporting a procedure for a transcatheter cardiac valve repair with an average length of stay of 3.4 days and average costs of $40,707. We found a total of 268 cases for MS–DRG 218 with an average length of stay of 6.8 days and average costs of $39,501. Of those 268 cases, there were 4 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 1.3 days and average costs of $45,903. We found a total of 15,105 cases for MS–DRG 219 with an average length of stay of 10.9 days and average costs of $55,423. Of those 15,105 cases, there were 55 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 7.1 days and average costs of $65,880. We found a total of 15,889 cases for MS–DRG 220 with an average length of stay of 6.6 days and average costs of $38,313. Of those 15,889 cases, there were 40 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 3 days and average costs of $38,906. We found a total of 2,652 cases for MS–DRG 221 with an average length of stay of 4.7 days and average costs of $33,577. Of those 2,652 cases, there were 13 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 2.2 days and average costs of $29,646.

For MS–DRG 228, we found a total of 5,583 cases with an average length of stay of 9.2 days and average costs of $46,613. Of those 5,583 cases, there were 1,688 cases reporting ICD–10–PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) with an average length of stay of 5.6 days and average costs of $49,569. As noted previously and in the proposed rule, ICD–10–PCS procedure code 02UG3JZ is the only endovascular cardiac valve repair with implant procedure assigned to MS–DRGs 228 and 229. We found a total of 6,593 cases for MS–DRG 229 with an average length of stay of 4.3 days and average costs of $32,322. Of those 6,593 cases, there were 2,018 cases reporting ICD–10–PCS procedure code 02UG3JZ with an average length of stay of 1.7 days and average costs of $38,321.

For MS–DRG 273, we found a total of 7,785 cases with an average length of stay of 6.9 days and average costs of $27,200. Of those 7,785 cases, there were 6 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 7.5 days and average costs of $52,370. We found a total of 20,434 cases in MS–DRG 274 with an average length of stay of 2.3 days and average costs of $22,771. Of those 20,434 cases, there were 7 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 1.4 days and average costs of $28,152.

As also indicated in the proposed rule, we also analyzed cases reporting any one of the procedure codes listed above describing a transcatheter cardiac valve replacement procedure in MS–DRGs 266 and 267. Our findings are shown in the table below.

MS-DRGs for Transcatheter Cardiac Valve Replacement Procedures			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 266--All cases	15,079	5.6	$51,402
MS-DRG 267--All cases	20,845	2.4	$41,891

As shown in the table, there was a total of 15,079 cases with an average length of stay of 5.6 days and average costs of $51,402 in MS–DRG 266. For MS–DRG 267, there was a total of 20,845 cases with an average length of stay of 2.4 days and average costs of $41,891.

As stated previously and in the proposed rule, the requestor noted that ICD–10–PCS procedure code 02UG3JZ describing a transcatheter mitral valve repair with implant procedure is the only endovascular cardiac valve intervention with implant procedure assigned to MS–DRGs 228 and 229. The data analysis shows that for the cases reporting procedure code 02UG3JZ in MS–DRGs 228 and 229, the average length of stay and average costs are aligned with the average length of stay and average costs of cases in MS–DRGs 266 and 267, respectively.

The data also show that, for MS–DRGs 216, 217, 218, 219, 220, and 221 and for MS–DRG 274, the average length of stay for cases reporting a transcatheter cardiac valve with implant procedure is shorter than the average length of stay for all the cases in their assigned MS–DRG. For MS–DRG 273, the average length of stay for cases reporting a transcatheter cardiac valve with implant procedure is slightly longer (7.5 days versus 6.9 days). In addition, the average costs for the cases reporting a transcatheter cardiac valve with implant procedure are higher when compared to all the cases in their assigned MS–DRG with the exception of MS–DRG 217 ($40,707 versus $47,299) and MS–DRG 221($29,646 versus $33,577).

In the proposed rule, we stated that our clinical advisors continue to believe that transcatheter cardiac valve repair procedures are not the same as a transcatheter (endovascular) cardiac valve replacement. However, we stated that they agreed with the requestor and, based on our data analysis, that these procedures are more clinically coherent in that they also describe endovascular cardiac valve interventions with implants and are similar in terms of average length of stay and average costs to cases in MS–DRGs 266 and 267 when compared to other procedures in their current MS–DRG assignment. For these reasons, we stated that our clinical advisors agreed that we should propose to reassign the endovascular cardiac valve repair procedures (supplement procedures) listed previously to the endovascular cardiac valve replacement MS–DRGs.

We also analyzed the impact of grouping the endovascular cardiac valve repair with implant (supplement) procedures with the endovascular cardiac valve replacement procedures. The following table reflects our findings for the proposed revised endovascular cardiac valve (supplement) procedures with the endovascular cardiac valve replacement MS–DRGs with a 2-way severity level split.

Proposed Revised MS-DRGs for Endovascular Cardiac Valve Replacement and Supplement Procedures			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 266 (Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC)	16,922	5.7	$51,564
MS-DRG 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC)	22,958	2.4	$41,563

As shown in the table, there was a total of 16,922 cases for the endovascular cardiac valve replacement and supplement procedures with MCC group, with an average length of stay of 5.7 days and average costs of $51,564. There was a total of 22,958 cases for the endovascular cardiac valve replacement and supplement procedures without MCC group, with an average length of stay of 2.4 days and average costs of $41,563. As indicated in the proposed rule, we applied the criteria to create subgroups for the two-way severity level split for the proposed revised MS–DRGs and found that all five criteria were met. For the proposed revised MS–DRGs, there is at least (1) 500 or more cases in the MCC group or in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group or in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

As stated in the proposed rule, during our review of the transcatheter cardiac valve repair (supplement) procedures in MS–DRGs 216, 217, 218, 219, 220, and 221, MS–DRGs 228 and 229, and MS–DRGs 273 and 274, our clinical advisors recommended that we also analyze the claims data to identify other (non-supplement) transcatheter (endovascular) procedures that involve the cardiac valves and are assigned to those same MS–DRGs to determine if additional modifications may be warranted, consistent with our ongoing efforts to refine the ICD–10 MS–DRGs.

We analyzed the following ICD–10–PCS procedure codes that are currently assigned to MS–DRGs 216, 217, 218, 219, 220, and 221.

ICD-10-PCS Code	Description
02QF3ZJ	Repair aortic valve created from truncal valve, percutaneous approach
02QF3ZZ	Repair aortic valve, percutaneous approach
02QG3ZE	Repair mitral valve created from left atrioventricular valve, percutaneous approach
02QG3ZZ	Repair mitral valve, percutaneous approach
02QH3ZZ	Repair pulmonary valve, percutaneous approach
02QJ3ZG	Repair tricuspid valve created from right atrioventricular valve, percutaneous approach
02QJ3ZZ	Repair tricuspid valve, percutaneous approach
02TH3ZZ	Resection of pulmonary valve, percutaneous approach
02VG3ZZ	Restriction of mitral valve, percutaneous approach
02WF38Z	Revision of zooplastic tissue in aortic valve, percutaneous approach
02WF3JZ	Revision of synthetic substitute in aortic valve, percutaneous approach
02WF3KZ	Revision of nonautologous tissue substitute in aortic valve, percutaneous approach
02WG37Z	Revision of autologous tissue substitute in mitral valve, percutaneous approach
02WG38Z	Revision of zooplastic tissue in mitral valve, percutaneous approach
02WG3JZ	Revision of synthetic substitute in mitral valve, percutaneous approach
02WG3KZ	Revision of nonautologous tissue substitute in mitral valve, percutaneous approach
02WH37Z	Revision of autologous tissue substitute in pulmonary valve, percutaneous approach
02WH38Z	Revision of zooplastic tissue in pulmonary valve, percutaneous approach
02WH3JZ	Revision of synthetic substitute in pulmonary valve, percutaneous approach
02WH3KZ	Revision of nonautologous tissue substitute in pulmonary valve, percutaneous approach
02WJ37Z	Revision of autologous tissue substitute in tricuspid valve, percutaneous approach
02WJ38Z	Revision of zooplastic tissue in tricuspid valve, percutaneous approach
02WJ3JZ	Revision of synthetic substitute in tricuspid valve, percutaneous approach
02WJ3KZ	Revision of nonautologous tissue substitute in tricuspid valve, percutaneous approach

We also analyzed ICD–10–PCS procedure code 02TH3ZZ (Resection of pulmonary valve, percutaneous approach) that is currently assigned to MS–DRGs 228 and 229. Lastly, we analyzed the following ICD–10–PCS procedure codes that are currently assigned to MS–DRGs 273 and 274.

ICD-10-PCS Code	Description
025F3ZZ	Destruction of aortic valve, percutaneous approach
025G3ZZ	Destruction of mitral valve, percutaneous approach
025H3ZZ	Destruction of pulmonary valve, percutaneous approach
025J3ZZ	Destruction of tricuspid valve, percutaneous approach
027F34Z	Dilation of aortic valve with drug-eluting intraluminal device, percutaneous approach
027F3DZ	Dilation of aortic valve with intraluminal device, percutaneous approach
027F3ZZ	Dilation of aortic valve, percutaneous approach
027G34Z	Dilation of mitral valve with drug-eluting intraluminal device, percutaneous approach
027G3DZ	Dilation of mitral valve with intraluminal device, percutaneous approach
027G3ZZ	Dilation of mitral valve, percutaneous approach
027H34Z	Dilation of pulmonary valve with drug-eluting intraluminal device, percutaneous approach
027H3DZ	Dilation of pulmonary valve with intraluminal device, percutaneous approach
027H3ZZ	Dilation of pulmonary valve, percutaneous approach
027J34Z	Dilation of tricuspid valve with drug-eluting intraluminal device, percutaneous approach
027J3DZ	Dilation of tricuspid valve with intraluminal device, percutaneous approach
027J3ZZ	Dilation of tricuspid valve, percutaneous approach
02BF3ZZ	Excision of aortic valve, percutaneous approach
02BG3ZZ	Excision of mitral valve, percutaneous approach
02BH3ZZ	Excision of pulmonary valve, percutaneous approach
02BJ3ZZ	Excision of tricuspid valve, percutaneous approach

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting any of the above listed procedure codes in MS–DRGs 216, 217, 218, 219, 220, and 221, MS–DRGs 228 and 229, and MS–DRGs 273 and 274. Our findings are shown in the following tables. We noted in the proposed rule that there were no cases found in MS–DRGs 228 and 229 reporting ICD–10–PCS procedure code 02TH3ZZ (Resection of pulmonary valve, percutaneous approach).

Other Cardiac Valve Procedures in MS-DRGs 216 through 221				
ICD-10-PCS Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
02QF3ZZ	Repair aortic valve, percutaneous approach	58	9.7	$33,588
02QG3ZE	Repair mitral valve created from left atrioventricular valve, percutaneous approach	4	1.3	$38,680
02QG3ZZ	Repair mitral valve, percutaneous approach	40	3.4	$30,160
02QH3ZZ	Repair pulmonary valve, percutaneous approach	1	1	$33,014
02QJ3ZG	Repair tricuspid valve created from right atrioventricular valve, percutaneous approach	1	9	$51,294
02QJ3ZZ	Repair tricuspid valve, percutaneous approach	15	5	$25,208
02VG3ZZ	Restriction of mitral valve, percutaneous approach	11	8.1	$53,798
02WF38Z	Revision of zooplastic tissue in aortic valve, percutaneous approach	26	8.9	$61,124
02WF3JZ	Revision of synthetic substitute in aortic valve, percutaneous approach	37	7.1	$26,605
02WF3KZ	Revision of nonautologous tissue substitute in aortic valve, percutaneous approach	2	1	$69,030
02WG38Z	Revision of zooplastic tissue in mitral valve, percutaneous approach	2	7.5	$16,982
02WG3JZ	Revision of synthetic substitute in mitral valve, percutaneous approach	31	7.3	$28,682
02WH3JZ	Revision of synthetic substitute in pulmonary valve, percutaneous approach	1	6	$30,340
02WJ3JZ	Revision of synthetic substitute in tricuspid valve, percutaneous approach	1	3	$14,145
	Total	**230**	**7.1**	**$34,968**

Other Cardiac Valve Procedures in MS-DRGs 273 and 274				
ICD-10-PCS Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
025F3ZZ	Destruction of aortic valve, percutaneous approach	6	4.7	$11,130
025J3ZZ	Destruction of tricuspid valve, percutaneous approach	21	3.9	$18,320
027F34Z	Dilation of aortic valve with drug-eluting intraluminal device, percutaneous approach	1	16	$53,786
027F3DZ	Dilation of aortic valve with intraluminal device, percutaneous approach	5	8.4	$20,951
027F3ZZ	Dilation of aortic valve, percutaneous approach	1,720	8.6	$25,265
027G3ZZ	Dilation of mitral valve, percutaneous approach	86	6.4	$19,791
027H3ZZ	Dilation of pulmonary valve, percutaneous approach	5	3.8	$10,506
02BJ3ZZ	Excision of tricuspid valve, percutaneous approach	1	4	$30,843
	Total	**1,845**	**8.4**	**$24,851**

In the proposed rule, we stated we found that the overall frequency with which cases reporting at least one of the above ICD–10–PCS procedure codes were reflected in the claims data was 2,075 times with an average length of stay of 8.5 days and average costs of $27,838. ICD–10–PCS procedure code 027F3ZZ (Dilation of aortic valve, percutaneous approach) had the highest frequency of 1,720 times with an average length of stay of 8.6 days and average costs of $25,265. We also found that cases reporting ICD–10–PCS procedure code 02WF3KZ (Revision of nonautologous tissue substitute in aortic valve, percutaneous approach) had the highest average costs of $69,030 with an average length of stay of 1 day. While not displayed above, we also noted that, of the 7,785 cases found in MS–DRG 273, from the remaining procedure codes describing procedures other than those performed on a cardiac valve, there were 4,920 cases reporting ICD–10–PCS procedure code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) with an average length of stay of 6.6 days and average costs of $26,800, representing approximately 63 percent of all the cases in that MS–DRG. In addition, of the 20,434 cases in MS–DRG 274, from the remaining procedure codes describing procedures other than those performed on a cardiac valve, there were 9,268 cases reporting ICD–10–PCS procedure code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) with an average length of stay of 3.2 days and average costs of $21,689, and 8,775 cases reporting ICD–10–PCS procedure code 02L73DK (Occlusion of left atrial appendage with intraluminal device, percutaneous approach) with an average length of stay of 1.2 days and average costs of $25,476, representing approximately 88 percent of all the cases in that MS–DRG.

We stated in the proposed rule that after analyzing the claims data to identify the overall frequency with which the other (non-supplement) ICD–10–PCS procedure codes describing a transcatheter (endovascular) cardiac valve procedure were reported and assigned to MS–DRGs 216, 217, 218, 219, 220, and 221, MS–DRGs 228 and 229, and MS–DRGs 273 and 274, our clinical advisors suggested that these other cardiac valve procedures should be grouped together because the procedure codes are describing procedures performed on a cardiac valve with a percutaneous (transcatheter/endovascular) approach, they can be performed in a cardiac catheterization laboratory, they require that the interventional cardiologist have special additional training and skills, and often require additional ancillary procedures and equipment, such as trans-esophageal echocardiography, to be available at the time of the procedure. Our clinical advisors noted that these procedures are generally considered more complicated and resource-intensive, and form a clinically coherent group. They also noted that the majority of procedures currently being reported in MS–DRGs 273 and 274 are procedures other than those involving a cardiac valve and, therefore, believed that reassignment of the other (non-supplement) ICD–10–PCS procedure codes describing a transcatheter (endovascular) cardiac valve procedure would have minimal impact to those MS–DRGs.

We then analyzed the impact of grouping the other transcatheter cardiac valve procedures. The following table reflects our findings for the suggested other endovascular cardiac valve procedures MS–DRGs with a 2-way severity level split.

Suggested MS-DRGs for Other Endovascular Cardiac Valve Procedures			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG XXX (Other Endovascular Cardiac Valve Procedures with MCC)	1,527	9.7	$27,801
MS-DRG XXX (Other Endovascular Cardiac Valve Procedures without MCC)	560	3.9	$17,027

As shown in the table, there were 1,527 cases for the other endovascular cardiac valve procedures with MCC group, with an average length of stay of 9.7 days and average costs of $27,801. There was a total of 560 cases for the other endovascular cardiac valve procedures without MCC group, with an average length of stay of 3.9 days and average costs of $17,027. As stated in the proposed rule, we applied the criteria to create subgroups for the two-way severity level split for the suggested MS–DRGs and found that all five criteria were met. For the suggested MS–DRGs, there is at least (1) 500 or more cases in the MCC group or in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group or in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) at least a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

For FY 2020, we proposed to modify the structure of MS–DRGs 266 and 267 by reassigning the procedure codes describing a transcatheter cardiac valve repair (supplement) procedure from the list above and to revise the title of these MS–DRGs. We also proposed to revise the title of MS–DRGs 266 from ''Endovascular Cardiac Valve Replacement with MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC'' and the title of MS–DRG 267 from ''Endovascular Cardiac Valve Replacement without MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC'', to reflect the proposed restructuring. In addition, we proposed to create two new MS–DRGs with a two-way severity level split for the remaining (non-supplement) transcatheter cardiac valve procedures listed above. These proposed new MS–DRGs are proposed new MS–DRG 319 (Other Endovascular Cardiac Valve Procedures with MCC) and proposed new MS–DRG 320 (Other Endovascular Cardiac Valve Procedures without MCC), which would also conform with the severity level split of MS–DRGs 266 and 267. We proposed to reassign the procedure codes from their current MS–DRGs to the proposed new MS–DRGs.

Comment: Several commenters agreed with the proposal to reassign the procedure codes describing a transcatheter cardiac valve repair (supplement) procedure from their current MS–DRG assignments as displayed and discussed above, to proposed revised MS–DRGs 266 and 267. Commenters also agreed with our proposal to revise the titles for MS–DRGs 266 and 267 to reflect the proposed restructuring. Commenters noted the procedural technique, skills, staff, equipment and average costs of the transcatheter cardiac valve repair (supplement) procedures closely correspond with other transcatheter valve procedures that are currently classified within MS–DRGs 266 and 267. Commenters stated the proposal ensures that the new MS–DRG assignments accurately capture the resource utilization and clinical coherence for these transcatheter cardiac valve procedures. Commenters stated that the procedure for transcatheter mitral valve repair (TMVR) with implant (*e.g.,* Mitraclip®), identified by ICD–10–PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) has demonstrated evidence-based clinical benefits and the proposal would allow effective treatment options for high risk patients where open heart surgery is not an option. Other commenters commended CMS for reviewing the MS–DRG assignment for transcatheter cardiac valve procedures and proposing to reassign the supplement procedures to MS–DRGs 266 and 267 since, according to the commenters, these MS–DRGs were specifically created to classify these kinds of patients. Commenters also stated that the proposal ensures more appropriate payment to providers for these procedures. A commenter who expressed support for the proposal encouraged CMS to continue to monitor these MS–DRGs as therapies continue to evolve and future modifications may be warranted.

Response: We appreciate the commenters' support. We agree the proposal would accurately capture the resource utilization and clinical coherence for these transcatheter cardiac valve procedures. Consistent with our annual process of reviewing the MS–DRGs, we will continue to monitor cases to determine if any additional adjustments are warranted.

Comment: Some commenters also agreed with the proposal to create new MS–DRGs 319 and 320 for the other transcatheter (non-supplement) cardiac valve procedures and stated this would better reflect the resource consumption for these patients. A commenter who supported the proposal requested that CMS clarify that the procedures can be performed by both interventional cardiologists, as well as cardiothoracic surgeons. This commenter agreed that, regardless of the provider performing the procedure, additional training and skills are required. The commenter also recommended that CMS continue to monitor the claims data for the affected procedure codes to ensure that unintended consequences do not occur and patient access is not at risk.

A few commenters recommended that CMS delay the proposed reassignment of non-supplement transcatheter cardiac valve procedures to proposed new MS–DRGs 319 and 320 until more data informing resource use for non-supplement percutaneous cardiac valve procedures becomes available and further consideration is given to clinical coherence. A commenter believed that reassignment of these procedures at this time is premature and that a decision by CMS to delay the implementation of this proposed policy specific to non-

supplement valve procedures by percutaneous approach would have minimal impact on the adoption and implementation of the proposed separate policy related to the reassignment of transcatheter cardiac valve repair (supplement) procedures to MS–DRGs 266 and 267. Another commenter expressed concern that not all the procedure codes describing non-supplement transcatheter cardiac valve procedures included in the proposed reassignment to proposed new MS–DRGs 319 and 320 appear to be consistent with the rationale presented in the proposed rule nor did the analysis identify all the potentially impacted cases and therefore, according to the commenter, the analysis does not sufficiently estimate the impact on providers for FY 2020.

Response: We thank the commenters for their support and feedback. We wish to clarify that the transcatheter (non-supplement) cardiac valve procedures can be performed by both interventional cardiologists, as well as cardiothoracic surgeons. Our clinical advisors agree with the commenter that regardless of the provider performing the procedure, additional training and skills are required.

We disagree with delaying the proposed reassignment of non-supplement transcatheter cardiac valve procedures to proposed new MS–DRGs 319 and 320 and that reassignment of these procedures at this time is premature. We also disagree with the commenter who expressed concern that not all the procedure codes describing non-supplement transcatheter cardiac valve procedures included in the proposed reassignment to proposed new MS–DRGs 319 and 320 appear to be consistent with the rationale presented in the proposed rule. As discussed in the proposed rule and previously in this section, our clinical advisors, as well as several other commenters, supported grouping these other cardiac valve procedures together because the procedure codes are describing procedures performed on a cardiac valve with a percutaneous (transcatheter/endovascular) approach, they can be performed in a cardiac catheterization laboratory, they require special additional training and skills, and often require additional ancillary procedures and equipment. With regard to the commenter's concern that the analysis did not identify all the potentially impacted cases and therefore does not sufficiently estimate the impact on providers for FY 2020, we note that the analysis we provided was based on the MS–DRGs that were discussed under the proposal for cases that reported any of the non-supplement transcatheter cardiac valve procedures. (If no cases were found to report one of the listed procedure codes describing a non-supplement transcatheter cardiac valve procedure then that procedure code was not reflected in the data analysis table). As stated in the proposed rule, we presented the impact of grouping the transcatheter (non-supplement) cardiac valve procedures with a 2-way severity level split. The analysis was based on the September 2018 update of the FY 2018 MedPAR data and included the proposed changes to the CC/MCC severity level designations. While, as previously noted, we do not generally perform any further MS–DRG analysis of claims data for purposes of the final rule, in response to the commenter's concern regarding whether the analysis identified all potentially impacted cases, we further examined the proposed 2-way severity level split using the March 2019 update of the FY 2018 MedPAR data.

New MS-DRGs for Other Endovascular Cardiac Valve Procedures

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 319 (Other Endovascular Cardiac Valve Procedures with MCC)	1,700	10.1	$29,181
MS-DRG 320 (Other Endovascular Cardiac Valve Procedures without MCC)	624	3.9	$16,706

As shown in the table, there were 1,700 cases for the other endovascular cardiac valve procedures with MCC group, with an average length of stay of 10.1 days and average costs of $29,181. There was a total of 624 cases for the other endovascular cardiac valve procedures without MCC group, with an average length of stay of 3.9 days and average costs of $16,706. Similar to our process discussed in the proposed rule, we again applied the criteria to create subgroups for the two way severity level split for the proposed MS–DRGs and found that all five criteria were met. We note that, as discussed in section II.F.14.c.1. of the preamble of this final rule, we are generally not finalizing the proposed changes to the CC/MCC severity level designations that were considered under the comprehensive CC/MCC analysis. Therefore, the above updated analysis reflects the finalized policy.

For the reasons noted previously, we continue to believe it is appropriate to group all the non-supplement transcatheter cardiac valve procedures together, and the updated data analysis also continues to support the two way severity level split. In response to the commenter's recommendation that we monitor the claims data for the affected procedure codes to ensure that unintended consequences do not occur and patient access is not put at risk, consistent with our annual process of reviewing the MS–DRGs, we will continue to monitor cases to determine if any additional modifications are warranted. For the reasons described above and after consideration of the public comments we received, we are finalizing our proposal to modify the structure of MS–DRGs 266 and 267 by reassigning the procedure codes describing a transcatheter cardiac valve repair (supplement) procedure from the list above and to revise the title of MS–DRG 266 from ''Endovascular Cardiac Valve Replacement with MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC'' and to revise the title of MS–DRG 267 from ''Endovascular Cardiac Valve Replacement without MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC''. In addition, we are finalizing our proposal to create new MS–DRG 319 (Other Endovascular Cardiac Valve Procedures with MCC) and new MS–DRG 320 (Other Endovascular Cardiac Valve Procedures without MCC) and reassigning the non-

supplement transcatheter cardiac valve procedure codes displayed and discussed earlier in this section from their current MS–DRGs to these new MS–DRGs, under the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

b. Revision of Pacemaker Lead

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19193), in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41189 through 41190), we finalized our proposal to maintain the Version 35 ICD–10 MS–DRG GROUPER logic for the Version 36 ICD–10 MS–DRG GROUPER logic within MS–DRGs 260, 261, and 262 (Cardiac Pacemaker Revision Except Device Replacement with MCC, with CC and without CC/MCC, respectively) so that cases reporting any of the ICD–10–PCS procedure codes describing procedures involving pacemakers and related procedures and associated devices would continue to be assigned to those MS–DRGs under MDC 5 because they are reported when a pacemaker device requires revision and they have a corresponding circulatory system diagnosis. We also discussed and finalized the addition of ICD–10–PCS procedure codes 02H63MZ (Insertion of cardiac lead into right atrium, percutaneous approach) and 02H73MZ (Insertion of cardiac lead into left atrium, percutaneous approach) to the GROUPER logic as non-O.R. procedures that impact the MS–DRG assignment when reported as stand-alone codes for the insertion of a pacemaker lead within MS–DRGs 260, 261, and 262 in response to a commenter's suggestion.

After publication of the FY 2019 IPPS/LTCH PPS final rule, it was brought to our attention that ICD–10–PCS procedure code 02H60JZ (Insertion of pacemaker lead into right atrium, open approach) was inadvertently omitted from the GROUPER logic for MS–DRGs 260, 261, and 262. This procedure code is designated as a non-O.R. procedure. However, we note that, within MDC 5, in MS–DRGs 242, 243, and 244, this procedure code is part of a code pair that requires another procedure code (cluster). In the FY 2020 IPPS/LTCH PPS proposed rule, we proposed to add procedure code 02H60JZ to the list of non-O.R. procedures that would impact MS–DRGs 260, 261, and 262 when reported as a stand-alone procedure code, consistent with ICD–10–PCS procedure codes 02H63JZ (Insertion of pacemaker lead into right atrium, percutaneous approach) and 02H64JZ (Insertion of pacemaker lead into right atrium, percutaneous endoscopic approach), which also describe the insertion of a pacemaker lead into the right atrium. We stated in the proposed rule that, if the proposal is finalized, we would make conforming changes to the ICD–10 MS–DRG Definitions Manual Version 37.

Comment: Commenters agreed with the proposal to add procedure code 02H60JZ to the list of non-O.R. procedures that would impact MS–DRGs 260, 261, and 262 when reported as a stand-alone procedure code.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add procedure code 02H60JZ to the list of non-O.R. procedures that would impact MS–DRGs 260, 261, and 262 when reported as a stand-alone procedure code under the ICD–10 MS–DRGs Version 37, effective October 1, 2019, and will make conforming changes to the ICD–10 MS–DRG Definitions Manual Version 37.

6. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Knee Procedures With Principal Diagnosis of Infection

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19193 through 19199), we received a request to add ICD–10–CM diagnosis codes M00.9 (Pyogenic arthritis, unspecified) and A54.42 (Gonococcal arthritis) to the list of principal diagnoses for MS–DRGs 485, 486, and 487 (Knee Procedure with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively) in MDC 8. The requestor believed that adding diagnosis code M00.9 is necessary to accurately recognize knee procedures that are performed with a principal diagnosis of infectious arthritis, including those procedures performed when the specific infectious agent is unknown. The requestor stated that, currently, only diagnosis codes describing infections caused by a specific bacterium are included in MS–DRGs 485, 486, and 487. The requestor stated that additional diagnosis codes such as M00.9 are indicated for knee procedures performed as a result of infection because pyogenic arthritis can reasonably be diagnosed based on the patient's history and clinical symptoms, even if a bacterial infection is not confirmed by culture. For example, the requestor noted that a culture may present negative for infection if a patient has been treated with antibiotics prior to knee surgery, but other clinical signs may indicate a principal diagnosis of joint infection. In the absence of a culture identifying an infection by a specific bacterium, the requestor stated that ICD–10–CM diagnosis code M00.9 should also be included as a principal diagnosis in MS–DRGs 485, 486, and 487.

The requestor also asserted that ICD–10–CM diagnosis code A54.42 should be added to the list of principal diagnoses for MS–DRGs 485, 486, and 487 because gonococcal arthritis is also an infectious type of arthritis that can be an indication for a knee procedure.

We noted in the proposed rule that, currently, cases reporting ICD–10–CM diagnosis codes M00.9 or A54.42 as a principal diagnosis group to MS–DRGs 488 and 489 (Knee Procedures without Principal Diagnosis of Infection with and without CC/MCC, respectively) when a knee procedure is also reported on the claim.

As indicated in the proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for ICD–10–CM diagnosis codes M00.9 and A54.42, which are currently assigned to medical MS–DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) in the absence of a surgical procedure. Our findings are shown in the following table.

MS-DRGs for Septic Arthritis with Pyogenic Arthritis or Gonococcal Arthritis			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 548—All cases	601	8.1	$13,974
MS-DRG 548—Cases with pyogenic arthritis as principal diagnosis	312	7.6	$13,177
MS-DRG 549—All cases	1,169	5.0	$8,547
MS-DRG 549—Cases with pyogenic arthritis as principal diagnosis	686	4.7	$7,976
MS-DRG 549—Cases with gonococcal arthritis as principal diagnosis	2	8.0	$7,070
MS-DRG 550—All cases	402	3.5	$6,317
MS-DRG 550—Cases with pyogenic arthritis as principal diagnosis	260	3.2	$6,209
MS-DRG 550—Cases with gonococcal arthritis as principal diagnosis	3	2.3	$3,929

As shown in the table, we found a total of 2,172 cases in MS–DRGs 548, 549, and 550. A total of 601 cases were reported in MS–DRG 548, with an average length of stay of 8.1 days and average costs of $13,974. Cases in MS–DRG 548 with a principal diagnosis of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) accounted for 312 of these 601 cases, and reported an average length of stay of 7.6 days and average costs of $13,177. As we stated in the proposed rule, none of the cases in MS–DRG 548 had a principal diagnosis of gonococcal arthritis (ICD–10–CM diagnosis code A54.42).

The total number of cases reported in MS–DRG 549 was 1,169, with an average length of stay of 5 days and average costs of $8,547. Within this MS–DRG, 686 cases had a principal diagnosis described by ICD–10–CM diagnosis code M00.9, with an average length of stay of 4.7 days and average costs of $7,976. Two of the cases reported in MS–DRG 549 had a principal diagnosis described by ICD–10–CM diagnosis code A54.42. These 2 cases had an average length of stay of 8 days and average costs of $7,070.

The total number of cases reported in MS–DRG 550 was 402, with an average length of stay of 3.5 days and average costs of $6,317. Within this MS–DRG, 260 cases had a principal diagnosis described by ICD–10–CM diagnosis code M00.9 with an average length of stay of 3.2 days and average costs of $6,209. Three of the cases reported in MS–DRG 550 had a principal diagnosis described by ICD–10–CM diagnosis code A54.42. These 3 cases had an average length of stay of 2.3 days and average costs of $3,929.

In summary, for MS–DRGs 548, 549, and 550, there were 1,258 cases that reported ICD–10–CM diagnosis code M00.9 as the principal diagnosis and 5 cases that reported ICD–10–CM diagnosis code A54.42 as the principal diagnosis. We noted that, overall, our data analysis suggests that the MS–DRG assignment for cases reporting ICD–10–CM diagnosis codes M00.9 and A54.42 is appropriate based on the average costs and average length of stay. However, we stated in the proposed rule that it is unclear how many of these cases involved infected knee joints because neither ICD–10–CM diagnosis code M00.9 nor A54.42 is specific to the knee.

We then analyzed claims data for MS–DRGs 485, 486, and 487 (Knee Procedures with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively) and for MS–DRGs 488 and 489 (Knee Procedures without Principal Diagnosis of Infection with and without CC/MCC, respectively). For MS–DRGs 488 and 489, we also analyzed claims data for cases reporting a knee procedure with ICD–10–CM diagnosis code M00.9 or A54.42 as a principal diagnosis, as these are the MS–DRGs to which such cases would currently group. Our findings are shown in the following table.

MS-DRGs for Knee Procedures with and without Infection			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 485—All cases	1,021	9.7	$23,980
MS-DRG 486—All cases	2,260	6	$16,060
MS-DRG 487—All cases	614	4.2	$12,396
MS-DRG 488—All cases	2,857	4.8	$14,197
MS-DRG 488--Cases with pyogenic arthritis as principal diagnosis	524	7.1	$16,894
MS-DRG 489—All cases	2,416	2.4	$9,217
MS-DRG 489--Cases with pyogenic arthritis as principal diagnosis	195	4.1	$9,526
MS-DRG 489--Cases with gonococcal arthritis as principal diagnosis	1	8	$10,810

As shown in the table, we found a total of 1,021 cases reported in MS–DRG 485, with an average length of stay of 9.7 days and average costs of $23,980. We found a total of 2,260 cases reported in MS–DRG 486, with an average length of stay of 6.0 days and average costs of $16,060. The total number of cases reported in MS–DRG 487 was 614, with

an average length of stay of 4.2 days and average costs of $12,396. For MS–DRG 488, we found a total of 2,857 cases with an average length of stay of 4.8 days and average costs of $14,197. Of these 2,857 cases, we found 524 cases that reported a principal diagnosis of pyogenic arthritis (ICD–10–CM diagnosis code M00.9), with an average length of stay of 7.1 days and average costs of $16,894. There were no cases found that reported a principal diagnosis of gonococcal arthritis (ICD–10–CM diagnosis code A54.42). For MS–DRG 489, we found a total of 2,416 cases with an average length of stay of 2.4 days and average costs of $9,217. Of these 2,416 cases, we found 195 cases that reported a principal diagnosis of pyogenic arthritis (ICD–10–CM diagnosis code M00.9), with an average length of stay of 4.1 days and average costs of $9,526. We found 1 case that reported a principal diagnosis of gonococcal arthritis (ICD–10–CM diagnosis code A54.42) in MS–DRG 489, with an average length of stay of 8 days and average costs of $10,810.

Upon review of the data, we noted in the proposed rule that the average costs and average length of stay for cases reporting a principal diagnosis of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) in MS–DRG 488 are higher than the average costs and average length of stay for all cases in MS–DRG 488. We found similar results for MS–DRG 489 for the cases reporting diagnosis code M00.9 or A54.42 as the principal diagnosis.

As stated in the proposed rule and earlier, the requestor recommended that ICD–10–CM diagnosis codes M00.9 and A54.42 be added to the list of principal diagnoses in MS–DRGs 485, 486, and 487 to recognize knee procedures that are performed with a principal diagnosis of an infectious type of arthritis. As we stated in the proposed rule, because these diagnosis codes are not specific to the knee in the code description, we examined the ICD–10–CM Alphabetic Index to review the entries that refer and correspond to these diagnosis codes. Specifically, we searched the Index for codes M00.9 and A54.42 and found the following entries.

Index entries referring to M00.9
Abscess (connective tissue) (embolic) (fistulous) (infective) (metastatic) (multiple) (pernicious) (pyogenic) (septic) > knee > joint
Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > pyogenic or pyemic (any site except spine)
Disease, diseased > hip (joint) > suppurative
Infection, infected, infective (opportunistic) > acromioclavicular
Infection, infected, infective (opportunistic) > hip (joint) NEC
Infection, infected, infective (opportunistic) > joint NEC
Infection, infected, infective (opportunistic) > knee (joint) NEC
Infection, infected, infective (opportunistic) > knee (joint) NEC > joint
Infection, infected, infective (opportunistic) > metatarsophalangeal
Infection, infected, infective (opportunistic) > shoulder (joint) NEC
Index entries referring to A54.42
Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > blennorrhagic (gonococcal)
Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > gonococcal
Gonococcus, gonococcal (disease) (infection) > joint
Gonococcus, gonococcal (disease) (infection) > musculoskeletal > arthritis
Hydrarthrosis > gonococcal
Periarthritis (joint) > gonococcal

We stated in the proposed rule that our clinical advisors agreed that the results of our ICD–10–CM Alphabetic Index review combined with the data analysis results support the addition of ICD–10–CM diagnosis code M00.9 to the list of principal diagnoses of infection for MS–DRGs 485, 486, and 487. The entries for diagnosis code M00.9 include infection of the knee, and as discussed above, in our data analysis, we found cases reporting ICD–10–CM diagnosis code M00.9 as a principal diagnosis in MS–DRGs 488 and 489, indicating that knee procedures are, in fact, being performed for an infectious arthritis of the knee. In addition, the average costs for cases reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) in MS–DRG 488 are similar to the average costs of cases in MS–DRG 486 ($16,894 and $16,060, respectively). We stated in the proposed rule that, because MS–DRG 488 includes cases with a CC or an MCC, we reviewed how many of the 524 cases reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) were reported with a CC or an MCC. We found that there were 361 cases reporting a CC with an average length of stay of 6 days and average costs of $14,092 and 163 cases reporting an MCC with an average length of stay of 9.5 days and average costs of $23,100. Therefore, the cases in MS–DRG 488 reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) with an MCC have average costs that are consistent with the average costs of cases in MS–DRG 485 ($23,100 and $23,980, respectively), and the cases with a CC have average costs that are consistent with the average costs of cases in MS–DRG 486 ($14,092 and $16,060, respectively), as noted above. We also noted that the average length of stay for cases reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) with an MCC in MS–DRG 488 is similar to the average length of stay for cases in MS–DRG 485 (9.5 days and 9.7 days, respectively), and the cases with a CC have an average length of stay that is equivalent to the average length of stay for cases in MS–DRG 486 (6 days and 6 days, respectively). We further noted that the average length of stay for cases reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) in MS–DRG 489 is similar to the average length of stay for cases in MS–DRG 487 (4.1 days and 4.2 days, respectively). Lastly, the

average costs for cases reporting a principal diagnosis code of pyogenic arthritis (ICD–10–CM diagnosis code M00.9) in MS–DRG 489 are consistent with the average costs for cases in MS–DRG 487 ($9,526 and $12,396, respectively), with a difference of $2,870. For these reasons, we proposed to add ICD–10–CM diagnosis code M00.9 to the list of principal diagnosis codes for MS–DRGs 485, 486, and 487.

Comment: Commenters agreed with CMS' proposal to add ICD–10–CM diagnosis code M00.9 to the list of principal diagnosis codes for assignment to MS–DRGs 485, 486 and 487. The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis code and the information provided.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–CM diagnosis code M00.9 to the list of principal diagnosis codes for assignment to MS–DRGs 485, 486 and 487 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

In the proposed rule, we stated that our clinical advisors did not support the addition of ICD–10–CM diagnosis code A54.42 to the list of principal diagnosis codes for MS–DRGs 485, 486, and 487 because ICD–10–CM diagnosis code A54.42 is not specifically indexed to include the knee or any infection in the knee. Therefore, we did not propose to add ICD–10–CM diagnosis code A54.42 to the list of principal diagnosis codes for these MS–DRGs.

Comment: Commenters did not support CMS' proposal to not add ICD–10–CM diagnosis code A54.42 to the list of codes for these MS–DRGs. Commenters noted that although A54.42 is not specific to the knee, the code is intended to be used for any joint, similar to code M00.9. Commenters also noted that the GROUPER logic for MS–DRGs 485, 486 and 487 that requires the combination of a principal diagnosis code and an ICD–10–PCS procedure code for a knee procedure will ensure that cases that report a principal diagnosis code of A54.42 and a knee procedure are clinically similar to other cases in MS–DRGs 485, 486 and 487.

Response: We agree with commenters that diagnosis code A54.42 would be the appropriate code for a diagnosis of gonococcal arthritis of the knee although the Index entry is not specific. Our clinical advisors reviewed this issue and the ICD–10–CM Alphabetic index and noted that there are no other diagnosis codes in the subcategory A54.- series (Gonococcal infection) that are more specific to the knee. Our clinical advisors noted that although there was only one case reporting gonococcal arthritis as the principal diagnosis with a knee procedure performed in the September 2018 update of the FY 2018 MedPAR file, they agreed that based on the result of further review, including consideration of the commenters' concerns, there is merit in adding A54.42 to MS–DRGs 485, 486 and 487 because diagnosis code A54.42 would be the appropriate code to report a diagnosis of gonococcal arthritis of the knee. We agree with commenters that this reassignment is consistent with the reassignment of ICD–10–CM diagnosis code M00.9 because, although the Index entries do not specifically include the knee or any infection of the knee, diagnosis code A54.42 would also be used to report an infection of the knee. Therefore, after consideration of the public comments that we received and for the reasons described, we are finalizing the assignment of ICD–10–CM diagnosis code A54.42 to the list of principal diagnosis codes for assignment to MS–DRGs 485, 486, and 487 (Knee Procedure with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively) in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that upon review of the existing list of principal diagnosis codes for MS–DRGs 485, 486, and 487, our clinical advisors recommended that we review the following ICD–10–CM diagnosis codes currently included on the list of principal diagnosis codes because the codes are not specific to the knee.

ICD-10-CM Code	Code Description
M86.9	Osteomyelitis, unspecified
T84.50XA	Infection and inflammatory reaction due to unspecified internal joint prosthesis, initial encounter
T84.51XA	Infection and inflammatory reaction due to internal right hip prosthesis, initial encounter
T84.52XA	Infection and inflammatory reaction due to internal left hip prosthesis, initial encounter
T84.59XA	Infection and inflammatory reaction due to other internal joint prosthesis, initial encounter
T84.60XA	Infection and inflammatory reaction due to internal fixation device of unspecified site, initial encounter
T84.63XA	Infection and inflammatory reaction due to internal fixation device of spine, initial encounter
T84.69XA	Infection and inflammatory reaction due to internal fixation device of other site, initial encounter

These ICD–10–CM diagnosis codes are currently assigned to medical MS–DRGs 559, 560, and 561 (Aftercare, Musculoskeletal System and Connective Tissue with MCC, with CC, and without CC/MCC, respectively) within MDC 8 in the absence of a surgical procedure. Similar to the process described above, in the proposed rule, we stated that we examined the ICD–10–CM Alphabetic Index to review the entries that refer and correspond to the diagnosis codes shown in the table above. We found the following entries.

Index entries referring to M86.9: Osteomyelitis (general) (infective) (localized) (neonatal) (purulent) (septic) (staphylococcal) (streptococcal) (suppurative) (with periostitis)
Index entries referring to T84.50XA: Complication(s) (from) (of) > joint prosthesis, internal > infection or inflammation Infection, infected, infective (opportunistic) > joint NEC > due to internal joint prosthesis
Index entries referring to T84.51XA: Infection, infected, infective (opportunistic) > hip (joint) NEC > due to internal joint prosthesis > right
Index entries referring to T84.52XA: Infection, infected, infective (opportunistic) > hip (joint) NEC > due to internal joint prosthesis > left
Index entries referring to T84.59XA: Complication(s) (from) (of) > joint prosthesis, internal > infection or inflammation > specified joint NEC Infection, infected, infective (opportunistic) > shoulder (joint) NEC > due to internal joint prosthesis
Index entries referring to T84.60XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation
Index entries referring to T84.63XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation > spine
Index entries referring to T84.69XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation > specified site NEC

The Index entries for the ICD–10–CM diagnosis codes listed above reflect terms relating to an infection. However, none of the entries is specific to the knee. In addition, in the proposed rule we noted that there are other diagnosis codes in the subcategory T84.5-series (Infection and inflammatory reaction due to internal joint prosthesis) that are specific to the knee. For example, ICD–10–CM diagnosis code T84.53X- (Infection and inflammatory reaction due to internal right knee prosthesis) or ICD–10–CM diagnosis code T84.54X- (Infection and inflammatory reaction due to internal left knee prosthesis) with the appropriate 7th digit character to identify initial encounter, subsequent encounter or sequela, would be reported to identify a documented infection of the right or left knee due to an internal prosthesis. We further noted that these ICD–10–CM diagnosis codes (T84.53X- and T84.54X-) with the 7th character ''A'' for initial encounter are currently already in the list of principal diagnosis codes for MS–DRGs 485, 486, and 487.

We stated in the proposed rule that our clinical advisors supported the removal of the above ICD–10–CM diagnosis codes from the list of principal diagnosis codes for MS–DRGs 485, 486, and 487 because they are not specifically indexed to include an infection of the knee and there are other diagnosis codes in the subcategory T84.5-series that uniquely identify an infection and inflammatory reaction of the right or left knee due to an internal prosthesis as noted above.

As indicated in the proposed rule, we also analyzed claims data for MS–DRGs 485, 486 and 487 to identify cases reporting one of the above listed ICD–10–CM diagnosis codes not specific to the knee as a principal diagnosis. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 485--Cases reporting principal diagnosis code not specific to the knee	13	11.2	$30,765
MS-DRG 486--Cases reporting principal diagnosis code not specific to the knee	43	6.5	$15,837
MS-DRG 487--Cases reporting principal diagnosis code not specific to the knee	7	2.6	$11,362

For MS–DRG 485, we found 13 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 11.2 days and average costs of $30,765. For MS–DRG 486, we found 43 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 6.5 days and average costs of $15,837. For MS–DRG 487, we found 7 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 2.6 days and average costs of $11,362.

We stated in the proposed rule that, overall, for MS–DRGs 485, 486, and 487, there were a total of 63 cases reporting one of the ICD–10–CM diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 7 days and average costs of $18,421. Of those 63 cases, there were 32 cases reporting a principal diagnosis code from the ICD–10–CM subcategory T84.5-series (Infection and inflammatory reaction due to internal joint prosthesis); 23 cases reporting a principal diagnosis code from the ICD–10–CM subcategory T84.6-series (Infection and inflammatory reaction due to internal fixation device), with 22 of the 23 cases reporting ICD–10–CM diagnosis code T84.69XA (Infection and inflammatory reaction due to internal fixation device of other site, initial encounter) and 1 case reporting ICD–10–CM diagnosis code T84.63XA (Infection and inflammatory reaction due to internal fixation device of spine, initial encounter); and 8 cases reporting ICD–10–CM diagnosis code M86.9 (Osteomyelitis, unspecified) as a principal diagnosis.

We stated in the proposed rule that our clinical advisors believe that there may have been coding errors among the 63 cases reporting a principal diagnosis of infection not specific to the knee. For

example, 32 cases reported a principal diagnosis code from the ICD–10–CM subcategory T84.5-series (Infection and inflammatory reaction due to internal joint prosthesis) that was not specific to the knee and, as stated previously and in the proposed rule, there are other codes in this subcategory that uniquely identify an infection and inflammatory reaction of the right or left knee due to an internal prosthesis.

Based on the results of our claims analysis and input from our clinical advisors, in the FY 2020 IPPS/LTCH PPS proposed rule, we proposed to remove the following ICD–10–CM diagnosis codes that do not describe an infection of the knee from the list of principal diagnosis codes for MS–DRGs 485, 486, and 487: M86.9, T84.50XA, T84.51XA, T84.52XA, T84.59XA, T84.60XA, T84.63XA, and T84.69XA. We did not propose to change the current assignment of these diagnosis codes in MS–DRGs 559, 560, and 561.

Comment: Many commenters agreed with the proposal to remove the eight diagnosis codes that do not describe an infection specific to the knee from the list of principal diagnosis codes for MS–DRGs 485, 486, and 487, and to maintain their current assignment in MS–DRGs 559, 560, and 561. A commenter did not support the proposal and believed the diagnosis of osteomyelitis should continue to be included in MS–DRGs 485, 486 and 487 because osteomyelitis describes an infection of the knee which includes cartilage, ligaments, tendons and bones.

Response: We appreciate the commenters' support. We agree that osteomyelitis as a diagnostic term describes an infection which can include cartilage, ligaments, tendons and bones. However, as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19196), the diagnosis codes that are the subject of this proposal, including diagnosis code M86.9 (Osteomyelitis, unspecified) are not specific to the knee. There are other diagnosis codes in the subcategory M86.-series (Osteomyelitis) that are specific to the knee and will continue to be included in MS–DRGs 485, 486 and 487.

Therefore, after consideration of the comments we received, we are finalizing our proposal to remove ICD–10–CM diagnosis codes M86.9, T84.50XA, T84.51XA, T84.52XA, T84.59XA, T84.60XA, T84.63XA, and T84.69XA from the list of principal diagnosis codes for MS–DRGs 485, 486, and 487, and maintain their current assignment in MS–DRGs 559, 560, and 561 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

In addition, we stated in the proposed rule that our clinical advisors recommended that we add the following ICD–10–CM diagnosis codes as principal diagnosis codes for MS–DRGs 485, 486, and 487 because they are specific to the knee and describe an infection.

ICD-10-CM Code	Code Description
A18.02	Tuberculous arthritis of other joints
M01.X61	Direct infection of right knee in infectious and parasitic diseases classified elsewhere
M01.X62	Direct infection of left knee in infectious and parasitic diseases classified elsewhere
M01.X69	Direct infection of unspecified knee in infectious and parasitic diseases classified elsewhere
M71.061	Abscess of bursa, right knee
M71.062	Abscess of bursa, left knee
M71.069	Abscess of bursa, unspecified knee
M71.161	Other infective bursitis, right knee
M71.162	Other infective bursitis, left knee
M71.169	Other infective bursitis, unspecified knee

As indicated in the proposed rule, ICD–10–CM diagnosis code A18.02 (Tuberculous arthritis of other joints) is currently assigned to medical MS–DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) within MDC 8 and MS–DRGs 974, 975, and 976 (HIV with Major Related Condition with MCC, with CC, and without CC/MCC, respectively) within MDC 25 (Human Immunodeficiency Virus Infections) in the absence of a surgical procedure. ICD–10–CM diagnosis codes M01.X61 (Direct infection of right knee in infectious and parasitic diseases classified elsewhere), M01.X62 (Direct infection of left knee in infectious and parasitic diseases classified elsewhere), and M01.X69 (Direct infection of unspecified knee in infectious and parasitic diseases classified elsewhere) are currently assigned to medical MS–DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) within MDC 8 in the absence of a surgical procedure. ICD–10–CM diagnosis codes M71.061 (Abscess of bursa, right knee), M71.062 (Abscess of bursa, left knee), M71.069 (Abscess of bursa, unspecified knee), M71.161 (Other infective bursitis, right knee), M71.162 (Other infective bursitis, left knee), and M71.169 (Other infective bursitis, unspecified knee) are currently assigned to medical MS–DRGs 557 and 558 (Tendonitis, Myositis and Bursitis with and without MCC, respectively) within MDC 8 in the absence of a surgical procedure.

Similar to the process described above, in the proposed rule we examined the ICD–10–CM Alphabetic Index to review the entries that refer and correspond to the diagnosis codes shown in the table above. We found the following entries.

BILLING CODE 4120–01–P

Index entries referring to A18.02:
Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > tuberculous
Caries > hip (tuberculous)
Caries > knee (tuberculous)
Chondritis > tuberculous NEC
Coxalgia, coxalgic (nontuberculous) > tuberculous
Cyst (colloid) (mucous) (simple) (retention) > Baker's > tuberculous
Disease, diseased > hip (joint) > tuberculous
Inflammation, inflamed, inflammatory (with exudation) > knee (joint) > tuberculous
Morbus > coxae senilis > tuberculous
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > bone > hip
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > bone > knee
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > hip
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > hip
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > knee
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > specified NEC
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > knee
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > ankle (joint) (bone)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > arthritis (chronic) (synovial)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > bone > hip

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > bone > knee
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > cartilage
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > coxae
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > coxalgia
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > elbow
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > genu
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > hip (joint) (disease) (bone)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > joint
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > knee (joint)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > shoulder (joint)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > sternoclavicular joint
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > swelling, joint (see also category M01)
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > symphysis pubis
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > synovitis > articular
Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaseous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > wrist (joint)

BILLING CODE 4120–01–C

We noted that there were no Index entries specifically for ICD–10–CM diagnosis codes M71.061, M71.062, M71.069, M71.161, M71.162, and M71.169. Rather, there were Index entries at the subcategory levels of M71.06- and M71.16-. We found the following entries.

Index entry referring to M71.06-: (connective tissue) (embolic) (fistulous) (infective) (metastatic) (multiple) (pernicious) (pyogenic) (septic) > bursa > knee
Index entry referring to M71.16-: Infective NEC > knee

We stated that our clinical advisors agreed that the results of our review of the ICD–10–CM Alphabetic Index support the addition of these ICD–10–CM diagnosis codes to MS–DRGs 485, 486, and 487 because the Index entries and/or the code descriptions clearly describe or include an infection that is specific to the knee.

Therefore, we proposed to add the following ICD–10–CM diagnosis codes to the list of principal diagnosis codes for MS–DRGs 485, 486, and 487: A18.02, M01.X61, M01.X62, M01.X69, M71.061, M71.062, M71.069, M71.161, M71.162, and M71.169.

Comment: Commenters agreed with CMS' proposal to add 10 additional ICD–10–CM diagnosis codes that are specific to the knee and describe an infection to the list of principal diagnosis codes for assignment to MS–DRGs 485, 486 and 487. The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis codes and the information provided.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–CM diagnosis codes A18.02, M01.X61, M01.X62, M01.X69, M71.061, M71.062, M71.069, M71.161, M71.162, and M71.169 to the list of principal diagnosis codes for assignment to MS–DRGs 485, 486 and 487 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

b. Neuromuscular Scoliosis

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19201 through 19202), we received a request to add ICD–10–CM diagnosis codes describing neuromuscular scoliosis to the list of principal diagnosis codes for MS–DRGs 456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). As we stated in the proposed rule, excluding the ICD–10–CM diagnosis codes that address the cervical spine, the following ICD–10–CM diagnosis codes are used to describe neuromuscular scoliosis.

ICD-10-CM Code	Code Description
M41.40	Neuromuscular scoliosis, site unspecified
M41.44	Neuromuscular scoliosis, thoracic region
M41.45	Neuromuscular scoliosis, thoracolumbar region
M41.46	Neuromuscular scoliosis, lumbar region
M41.47	Neuromuscular scoliosis, lumbosacral region

The requestor asserted that all levels of neuromuscular scoliosis, except cervical, should group to the non-cervical spinal fusion MS–DRGs for spinal curvature (MS–DRGs 456, 457, and 458). The requestor also noted that the current MS–DRG logic only groups cases reporting neuromuscular scoliosis to MS–DRGs 456, 457, and 458 when neuromuscular scoliosis is reported as a secondary diagnosis. The requestor contended that it would be rare for a diagnosis of neuromuscular scoliosis to be reported as a secondary diagnosis because there is not a ''code first'' note in the ICD–10–CM Tabular List of Diseases and Injuries indicating to ''code first'' the underlying cause. We stated in the proposed rule that, according to the requestor, when a diagnosis of neuromuscular scoliosis is the reason for an admission for non-cervical spinal fusion, neuromuscular scoliosis must be sequenced as the principal diagnosis because it is the chief condition responsible for the admission. However, this sequencing, which adheres to the ICD–10–CM Official Guidelines for Coding and Reporting, prevents the admission from grouping to the non-cervical spinal fusion MS–DRGs for spinal curvature caused by neuromuscular scoliosis.

As indicated in the proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting any of the ICD–10–CM diagnosis codes describing neuromuscular scoliosis (as listed previously) as a principal diagnosis with a non-cervical spinal fusion, which are currently assigned to MS–DRGs 459 and 460 (Spinal Fusion except Cervical with MCC and without MCC, respectively). Our findings are shown in the following table.

MS-DRGs for Cases Involving Non-Cervical Spinal Fusion with Principal Diagnosis of Neuromuscular Scoliosis			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 459—All cases	3,903	8.6	$46,416
MS-DRG 459—Cases with principal diagnosis of neuromuscular scoliosis	3	15.3	$95,745
MS-DRG 460—All cases	52,597	3.3	$28,754
MS-DRG 460—Cases with principal diagnosis of neuromuscular scoliosis	8	4.3	$71,406

The data reveal that there was a total of 56,500 cases in MS–DRGs 459 and 460. We found 3,903 cases reported in MS–DRG 459, with an average length of stay of 8.6 days and average costs of $46,416. Of these 3,903 cases, 3 reported a principal diagnosis code of neuromuscular scoliosis, with an average length of stay of 15.3 days and average costs of $95,745. We found a total of 52,597 cases in MS–DRG 460, with an average length of stay of 3.3

days and average costs of $28,754. Of these 52,597 cases, 8 cases reported a principal diagnosis code describing neuromuscular scoliosis, with an average length of stay of 4.3 days and average costs of $71,406. We stated in the proposed rule that the data clearly demonstrate that the average costs and average length of stay for the small number of cases reporting a principal diagnosis of neuromuscular scoliosis are higher in comparison to all the cases in their assigned MS–DRG.

We also analyzed claims data for MS–DRGs 456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) to identify the spinal fusion cases reporting any of the ICD–10–CM codes describing neuromuscular scoliosis (as listed previously) as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs for Cases Involving Non-Cervical Spinal Fusion with Spinal Curvature or Malignancy or Infection or Extensive Fusions with Secondary Diagnosis of Neuromuscular Scoliosis

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 456—All cases	1,344	12.0	$66,012
MS-DRG 456—Cases with secondary diagnosis of neuromuscular scoliosis	6	18.2	$79,809
MS-DRG 457—All cases	3,654	6.2	$47,577
MS-DRG 457—Cases with secondary diagnosis of neuromuscular scoliosis	12	4.5	$31,646
MS-DRG 458—All cases	1,245	3.4	$34,179
MS-DRG 458—Cases with secondary diagnosis of neuromuscular scoliosis	6	3.3	$31,117

As we noted in the proposed rule, the data indicate that there were 1,344 cases reported in MS–DRG 456, with an average length of stay of 12 days and average costs of $66,012. Of these 1,344 cases, 6 cases reported a secondary diagnosis code describing neuromuscular scoliosis, with an average length of stay of 18.2 days and average costs of $79,809. We found a total of 3,654 cases in MS–DRG 457, with an average length of stay of 6.2 days and average costs of $47,577. Twelve of these 3,654 cases reported a secondary diagnosis code describing neuromuscular scoliosis, with an average length of stay of 4.5 days and average costs of $31,646. Finally, the 1,245 cases reported in MS–DRG 458 had an average length of stay of 3.4 days and average costs of $34,179. Of these 1,245 cases, 6 cases reported neuromuscular scoliosis as a secondary diagnosis, with an average length of stay of 3.3 days and average costs of $31,117.

We reviewed the ICD–10–CM Tabular List of Diseases for subcategory M41.4 and confirmed there is a ''Code also underlying condition'' note. We also reviewed the ICD–10–CM Official Guidelines for Coding and Reporting for the ''code also'' note at Section 1.A.12.b., which states: ''A 'code also' note instructs that two codes may be required to fully describe a condition, but this note does not provide sequencing direction.'' We stated in the proposed rule that our clinical advisors agreed that the sequencing of the ICD–10–CM diagnosis codes is determined by which condition leads to the encounter and is responsible for the admission. They also note that there may be instances in which the underlying cause of the diagnosis of neuromuscular scoliosis is not treated or responsible for the admission.

As discussed in the proposed rule and earlier, our review of the claims data shows that a small number of cases reported neuromuscular scoliosis either as a principal diagnosis in MS–DRGs 459 and 460 or as a secondary diagnosis in MS–DRGs 456, 457, and 458. We stated that our clinical advisors agreed that while the volume of cases is small, the average costs and average length of stay for the cases reporting neuromuscular scoliosis as a principal diagnosis with a non-cervical spinal fusion currently grouping to MS–DRGs 459 and 460 are more aligned with the average costs and average length of stay for the cases reporting neuromuscular scoliosis as a secondary diagnosis with a non-cervical spinal fusion currently grouping to MS–DRGs 456, 457, and 458. Therefore, for the reasons described above, we proposed to add the following ICD–10–CM codes describing neuromuscular scoliosis to the list of principal diagnosis codes for MS–DRGs 456, 457, and 458: M41.40, M41.44, M41.45, M41.46, and M41.47.

Comment: Commenters agreed with CMS' proposal to add ICD–10–CM diagnosis codes M41.40, M41.44, M41.45, M41.46, and M41.47 that describe neuromuscular scoliosis to the list of principal diagnosis codes for assignment to MS–DRGs 456, 457 and 458 (Spinal Fusion except Cervical with Spinal Curvature of Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis codes and the information provided. A commenter specifically expressed appreciation for CMS' display of cost and length of stay data in the analysis, in addition to the clinical factors that support our decision making.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–CM diagnosis codes M41.40, M41.44, M41.45, M41.46, and M41.47 to the list of principal diagnosis codes for assignment to MS–DRGs 456, 457 and 458 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

c. Secondary Scoliosis and Secondary Kyphosis

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19202 through 19204), we received a request to add ICD–10–CM diagnosis codes describing secondary scoliosis and secondary kyphosis to the list of principal diagnoses for MS–DRGs 456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or

Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). As we indicated in the proposed rule, excluding the ICD–10–CM diagnosis codes that address the cervical spine, the following ICD–10–CM diagnosis codes are used to describe secondary scoliosis.

ICD-10-CM Code	Code Description
M41.50	Other secondary scoliosis, site unspecified
M41.54	Other secondary scoliosis, thoracic region
M41.55	Other secondary scoliosis, thoracolumbar region
M41.56	Other secondary scoliosis, lumbar region
M41.57	Other secondary scoliosis, lumbosacral region

Excluding the ICD–10–CM diagnosis codes that address the cervical spine, the following ICD–10–CM diagnosis codes are used to describe secondary kyphosis.

ICD-10-CM Code	Code Description
M40.10	Other secondary kyphosis, site unspecified
M40.14	Other secondary kyphosis, thoracic region
M40.15	Other secondary kyphosis, thoracolumbar region

The requestor stated that generally in cases of diagnoses of secondary scoliosis or kyphosis, the underlying cause of the condition is not treated or is not responsible for the admission. If a patient is admitted for surgery to correct non-cervical spinal curvature, it is appropriate to sequence the diagnosis of secondary scoliosis or secondary kyphosis as principal diagnosis. However, reporting a diagnosis of secondary scoliosis or secondary kyphosis as the principal diagnosis with a non-cervical spinal fusion procedure results in the case grouping to MS–DRG 459 or 460 (Spinal Fusion except Cervical with MCC and without MCC, respectively), instead of the spinal fusion with spinal curvature MS–DRGs 456, 457, and 458.

As indicated in the proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 459 and 460 to determine the number of cases reporting an ICD–10–CM diagnosis code describing secondary scoliosis or secondary kyphosis as the principal diagnosis. Our findings are shown in the following table.

MS-DRGs for Cases Involving Non-Cervical Spinal Fusion with a Principal Diagnosis of Secondary Scoliosis or Secondary Kyphosis			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 459—All cases	3,903	8.6	$46,416
MS-DRG 459—Cases with a principal diagnosis of secondary scoliosis	4	7.3	$56,024
MS-DRG 459—Cases with a principal diagnosis of secondary kyphosis	4	5.8	$41,883
MS-DRG 460—All cases	52,597	3.3	$28,754
MS-DRG 460—Cases with a principal diagnosis of secondary scoliosis	34	3.6	$34,424
MS-DRG 460—Cases with a principal diagnosis of secondary kyphosis	31	4.6	$42,315

As shown in the table, we found a total of 3,903 cases in MS–DRG 459, with an average length of stay of 8.6 days and average costs of $46,416. Of these 3,903 cases, we found 4 cases that reported a principal diagnosis of secondary scoliosis, with an average length of stay of 7.3 days and average costs of $56,024. We also found 4 cases that reported a principal diagnosis of secondary kyphosis, with an average length of stay of 5.8 days and average costs of $41,883. For MS–DRG 460, we found a total of 52,597 cases with an average length of stay of 3.3 days and average costs of $28,754. Of these 52,597 cases, we found 34 cases that reported a principal diagnosis of secondary scoliosis, with an average length of stay of 3.6 days and average costs of $34,424. We found 31 cases that reported a principal diagnosis of secondary kyphosis in MS–DRG 460, with an average length of stay of 4.6 days and average costs of $42,315.

We also analyzed claims data for MS–DRGs 456, 457, and 458 to determine the number of cases reporting an ICD–10–CM diagnosis code describing secondary scoliosis or secondary kyphosis as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs for Cases Involving Non-Cervical Spinal Fusion with Spinal Curvature or Malignancy or Infection or Extensive Fusions with Secondary Diagnosis of Secondary Scoliosis or Secondary Kyphosis			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 456—All cases	1,344	12	$66,012
MS-DRG 456—Cases with a secondary diagnosis of secondary scoliosis	37	7.7	$58,009
MS-DRG 456—Cases with a secondary diagnosis of secondary kyphosis	52	12	$78,865
MS-DRG 457—All cases	3,654	6.2	$47,577
MS-DRG 457—Cases with a secondary diagnosis of secondary scoliosis	187	4.9	$37,655
MS-DRG 457—Cases with a secondary diagnosis of secondary kyphosis	114	5.2	$37,357
MS-DRG 458—All cases	1,245	3.4	$34,179
MS-DRG 458—Cases with a secondary diagnosis of secondary scoliosis	190	3.0	$29,052
MS-DRG 458—Cases with a secondary diagnosis of secondary kyphosis	39	3.7	$31,015

As we stated in the proposed rule, the data indicate that there were 1,344 cases in MS–DRG 456, with an average length of stay of 12 days and average costs of $66,012. Of these 1,344 cases, there were 37 cases that reported a secondary diagnosis of secondary scoliosis, with an average length of stay of 7.7 days and average costs of $58,009. There were also 52 cases in MS–DRG 456 reporting a secondary diagnosis of secondary kyphosis, with an average length of stay of 12 days and average costs of $78,865. In MS–DRG 457, there was a total of 3,654 cases, with an average length of stay of 6.2 days and average costs of $47,577. Of these 3,654 cases, there were 187 cases that reported secondary scoliosis as a secondary diagnosis, with an average length of stay of 4.9 days and average costs of $37,655. In MS–DRG 457, there were also 114 cases that reported a secondary diagnosis of secondary kyphosis, with an average length of stay of 5.2 days and average costs of $37,357. Finally, there was a total of 1,245 cases in MS–DRG 458, with an average length of stay of 3.4 days and average costs of $34,179. Of these 1,245 cases, there were 190 cases that reported a secondary diagnosis of secondary scoliosis, with an average length of stay of 3 days and average costs of $29,052. There were 39 cases in MS–DRG 458 that reported a secondary diagnosis of secondary kyphosis, with an average length of stay of 3.7 days and average costs of $31,015.

We stated in the proposed rule that our clinical advisors agreed that the average length of stay and average costs for the small number of cases reporting secondary scoliosis or secondary kyphosis as a principal diagnosis with a non-cervical spinal fusion currently grouping to MS–DRGs 459 and 460 are generally more aligned with the average length of stay and average costs for the cases reporting secondary scoliosis or secondary kyphosis as a secondary diagnosis with a non-cervical spinal fusion currently grouping to MS–DRGs 456, 457, and 458. They also noted that there may be instances in which the underlying cause of the diagnosis of secondary scoliosis or secondary kyphosis is not treated or responsible for the admission. Therefore, for the reasons described above, we proposed to add the following ICD–10–CM diagnosis codes describing secondary scoliosis and secondary kyphosis to the list of principal diagnosis codes for MS–DRGs 456, 457, and 458: M40.10, M40.14, M40.15, M41.50, M41.54, M41.55, M41.56, and M41.57.

Comment: Commenters agreed with CMS' proposal to add ICD–10–CM diagnosis codes M40.10, M40.14, M40.15, M41.50, M41.54, M41.55, M41.56, and M41.57 that describe secondary scoliosis and secondary kyphosis to the list of principal diagnosis codes for assignment to MS–DRGs 456, 457 and 458 (Spinal Fusion except Cervical with Spinal Curvature of Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis codes and the information provided.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–CM diagnosis codes M40.10, M40.14, M40.15, M41.50, M41.54, M41.55, M41.56, and M41.57 that describe secondary scoliosis and secondary kyphosis to the list of principal diagnosis codes for assignment to MS–DRGs 456, 457 and 458 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

As also discussed in the proposed rule, during our review of MS–DRGs 456, 457, and 458, we found the following diagnosis codes that describe conditions involving the cervical region.

ICD-10-CM Code	Code Description
M40.03	Postural kyphosis, cervicothoracic region
M40.202	Unspecified kyphosis, cervical region
M40.203	Unspecified kyphosis, cervicothoracic region
M40.292	Other kyphosis, cervical region
M40.293	Other kyphosis, cervicothoracic region
M41.02	Infantile idiopathic scoliosis, cervical region
M41.03	Infantile idiopathic scoliosis, cervicothoracic region
M41.112	Juvenile idiopathic scoliosis, cervical region
M41.113	Juvenile idiopathic scoliosis, cervicothoracic region
M41.122	Adolescent idiopathic scoliosis, cervical region
M41.123	Adolescent idiopathic scoliosis, cervicothoracic region
M41.22	Other idiopathic scoliosis, cervical region
M41.23	Other idiopathic scoliosis, cervicothoracic region
M41.82	Other forms of scoliosis, cervical region
M41.83	Other forms of scoliosis, cervicothoracic region
M42.01	Juvenile osteochondrosis of spine, occipito-atlanto-axial region
M42.02	Juvenile osteochondrosis of spine, cervical region
M42.03	Juvenile osteochondrosis of spine, cervicothoracic region
M43.8X1	Other specified deforming dorsopathies, occipito-atlanto-axial region
M43.8X2	Other specified deforming dorsopathies, cervical region
M43.8X3	Other specified deforming dorsopathies, cervicothoracic region
M46.21	Osteomyelitis of vertebra, occipito-atlanto-axial region
M46.22	Osteomyelitis of vertebra, cervical region
M46.23	Osteomyelitis of vertebra, cervicothoracic region
M48.51XA	Collapsed vertebra, not elsewhere classified, occipito-atlanto-axial region, initial encounter for fracture
M48.52XA	Collapsed vertebra, not elsewhere classified, cervical region, initial encounter for fracture
M48.53XA	Collapsed vertebra, not elsewhere classified, cervicothoracic region, initial encounter for fracture
M40.12	Other secondary kyphosis, cervical region
M40.13	Other secondary kyphosis, cervicothoracic region
M41.41	Neuromuscular scoliosis, occipito-atlanto-axial region
M41.42	Neuromuscular scoliosis, cervical region
M41.43	Neuromuscular scoliosis, cervicothoracic region
M41.52	Other secondary scoliosis, cervical region
M41.53	Other secondary scoliosis, cervicothoracic region

We stated that our clinical advisors noted that because the diagnosis codes shown in the table above describe conditions involving the cervical region, they are not clinically appropriate for assignment to MS–DRGs 456, 457, and 458, which are defined by non-cervical spinal fusion procedures (with spinal curvature or malignancy or infection or extensive fusions). Therefore, our clinical advisors recommended that these codes be removed from the MS–DRG logic for these MS–DRGs. As such, in the FY 2020 IPPS/LTCH PPS proposed rule, we proposed to remove the diagnosis codes that describe conditions involving the cervical region as shown in the table above from MS–DRGs 456, 457, and 458.

Comment: Commenters agreed with the proposal to remove 34 diagnosis codes that describe conditions involving the cervical region from the list of principal diagnosis codes for MS–DRGs 456, 457, and 458, to improve clinical homogeneity and better reflect resource costs since these MS–DRGs are defined by non-cervical spinal fusion procedures. The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis codes and the information provided.

Response: We appreciate the commenters' support. Therefore, we are finalizing our proposal to remove the ICD–10–CM diagnosis codes that describe conditions involving the cervical region as shown the table above from the list of principal diagnosis codes for MS–DRGs 456, 457, and 458 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

7. MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract): Extracorporeal Shock Wave Lithotripsy (ESWL)

As discussed in the FY 2020 IPPS/LTCH PPS (84 FR 19204 through 19210), we received two separate, but related requests to add ICD–10–CM diagnosis code N13.6 (Pyonephrosis) and ICD–10–CM diagnosis code T83.192A (Other mechanical complication of indwelling ureteral stent, initial encounter) to the list of principal diagnosis codes for MS–DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively) in MDC 11 so that cases are assigned more appropriately when an Extracorporeal Shock Wave Lithotripsy (ESWL) procedure is performed.

As noted in the proposed rule, ICD–10–CM diagnosis code N13.6 currently groups to MS–DRGs 689 and 690 (Kidney and Urinary Tract Infections with MCC and without MCC, respectively) and ICD–10–CM diagnosis code T83.192A currently groups to MS–DRGs 698, 699, and 700 (Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively).

As stated in the proposed rule, the ICD–10–PCS procedure codes for identifying procedures involving ESWL are designated as non-O.R. procedures and are shown in the following table.

ICD-10-PCS Code	Code Description
0TF3XZZ	Fragmentation in right kidney pelvis, external approach
0TF4XZZ	Fragmentation in left kidney pelvis, external approach
OTF6XZZ	Fragmentation in right ureter, external approach
OTF7XZZ	Fragmentation in left ureter, external approach
OTFBXZZ	Fragmentation in bladder, external approach
OTFCXZZ	Fragmentation in bladder neck, external approach
OTFDXZZ	Fragmentation in urethra, external approach

Pyonephrosis can be described as an infection of the kidney with pus in the upper collecting system which can progress to obstruction. Patients with an obstruction in the upper urinary tract due to urinary stones (calculi), tumors, fungus balls or ureteropelvic obstruction (UPJ) may also have a higher risk of developing pyonephrosis. If pyonephrosis is not recognized and treated promptly, it can result in serious complications, including fistulas, septic shock, irreversible damage to the kidneys, and death.

As noted in the proposed rule and above, the requestor recommended that ICD–10–CM diagnosis codes N13.6 and T83.192A be added to the list of principal diagnosis codes for MS–DRGs 691 and 692. There are currently four MS–DRGs that group cases for diagnoses involving urinary stones, which are subdivided to identify cases with and without an ESWL procedure: MS–DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with and without CC/MCC, respectively) and MS–DRGs 693 and 694 (Urinary Stones without ESW Lithotripsy with and without MCC, respectively).

The requestor stated that when patients who have been diagnosed with hydronephrosis secondary to renal and ureteral calculus obstruction undergo an ESWL procedure, ICD–10–CM diagnosis code N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) is reported and groups to MS–DRGs 691 and 692. However, if a patient with a diagnosis of hydronephrosis has a urinary tract infection (UTI) in addition to a renal calculus obstruction and undergoes an ESWL procedure, ICD–10–CM diagnosis code N13.6 must be coded and reported as the principal diagnosis, which groups to MS–DRGs 689 and 690. The requestor stated that ICD–10–CM diagnosis code N13.6 should be grouped to MS–DRGs 691 and 692 when reported as a principal diagnosis because this grouping will more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi, while also receiving treatment for urinary tract infections.

With regard to ICD–10–CM diagnosis code T83.192A, the requestor believed that when an ESWL procedure is performed for the treatment of calcifications within and around an indwelling ureteral stent, it is comparable to an ESWL procedure performed for the treatment of urinary calculi. Therefore, the requestor recommended adding ICD–10–CM diagnosis code T83.192A to MS–DRGs 691 and 692 when reported as a principal diagnosis and an ESWL procedure is also reported on the claim.

We stated in the proposed rule that, to analyze these separate, but related requests, we first reviewed the reporting of ICD–10–CM diagnosis code N13.6 within the ICD–10–CM classification. We noted that ICD–10–CM diagnosis code N13.6 is to be assigned for conditions identified in the code range N13.0–N13.5 with infection. (Codes in this range describe hydronephrosis with obstruction.) Infection may be documented by the patient's provider as urinary tract infection (UTI) or as specific as acute pyelonephritis. We agreed with the requestor that if a patient with a diagnosis of hydronephrosis has a urinary tract infection (UTI) in addition to a renal calculus obstruction and undergoes an ESWL procedure, ICD–10–CM diagnosis code N13.6 must be coded and reported as the principal diagnosis, which groups to MS–DRGs 689 and 690. In this case scenario, we stated that the ESWL procedure is designated as a non-O.R. procedure and does not impact the MS–DRG assignment when reported with ICD–10–CM diagnosis code N13.6.

The ICD–10–CM classification instructs that when both a urinary obstruction and a genitourinary infection co-exist, the correct code assignment for reporting is ICD–10–CM diagnosis code N13.6, which is appropriately grouped to MS–DRGs 689 and 690 (Kidney and Urinary Tract Infections with MCC and without MCC, respectively) because it describes a type of urinary tract infection. Therefore, in response to the requestor's suggestion that ICD–10–CM diagnosis code N13.6 be grouped to MS–DRGs 691 and 692 when reported as a principal diagnosis to more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi while also receiving treatment for urinary tract infections, we noted in the proposed rule that the ICD–10–CM classification provides instruction to identify the conditions reported with ICD–10–CM diagnosis code N13.6 as an infection, and not as urinary stones. We stated that our clinical advisors agreed with this classification and the corresponding MS–DRG assignment for diagnosis code N13.6. In addition, our clinical advisors noted that an ESWL procedure is a non-O.R. procedure and we stated that they do not believe that this procedure is a valid indicator of resource consumption for cases that involve an infection and obstruction. We stated that our clinical advisors believe that the resources used for a case that involves an infection and an obstruction are clinically distinct from the cases that involve an obstruction only in the course of treatment. Therefore, our clinical advisors did not agree with the request to add ICD–10–CM diagnosis code N13.6 to the list of principal diagnoses for MS–DRGs 691 and 692.

As also indicated in the proposed rule, we also performed various analyses of claims data to evaluate this request. We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 689 and 690 to identify cases reporting ICD–10–CM diagnosis code N13.6 as the principal diagnosis with and without an ESWL procedure. Our findings are reflected in the table below.

Kidney and Urinary Tract Infections with Principal Diagnosis of Pyonephrosis with and without ESWL			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 689—All cases	68,020	4.8	$7,873
MS-DRG 689—Cases with principal diagnosis of pyonephrosis	1,024	6.1	$13,809
MS-DRG 689—Cases with principal diagnosis of pyonephrosis with ESWL	6	14.2	$45,489
MS-DRG 690—All cases	131,999	3.5	$5,692
MS-DRG 690—Cases with principal diagnosis of pyonephrosis	4,625	3.6	$5,483
MS-DRG 690—Cases with principal diagnosis of pyonephrosis with ESWL	24	4.8	$14,837

For MS–DRG 689, we found a total of 68,020 cases with an average length of stay of 4.8 days and average costs of $7,873. Of those 68,020 cases, we found 1,024 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis with an average length of stay of 6.1 days and average costs of $13,809. Of those 1,024 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis, there were 6 cases that also reported an ESWL procedure with an average length of stay of 14.2 days and average costs of $45,489. For MS–DRG 690, we found a total of 131,999 cases with an average length of stay of 3.5 days and average costs of $5,692. Of those 131,999 cases, we found 4,625 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis with an average length of stay of 3.6 days and average costs of $5,483. Of those 4,625 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis, there were 24 cases that also reported an ESWL procedure with an average length of stay of 4.8 days and average costs of $14,837.

As we stated in the proposed rule, the data indicate that the 1,024 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis in MS–DRG 689 have a longer average length of stay (6.1 days versus 4.8 days) and higher average costs ($13,809 versus $7,873) compared to all the cases in MS–DRG 689. The data also indicate that the 6 cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis that also reported an ESWL procedure have a longer average length of stay (14.2 days versus 4.8 days) and higher average costs ($45,489 versus $7,873) in comparison to all the cases in MS–DRG 689. We found similar results for cases reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a principal diagnosis with an ESWL procedure in MS–DRG 690, where the average length of stay was slightly longer (4.8 days versus 3.5 days) and the average costs were higher ($14,837 versus $5,692).

We then conducted further analysis for the six cases in MS–DRG 689 that reported a principal diagnosis of pyonephrosis with ESWL to determine what factors may be contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed the MCC conditions that were reported across the six cases. Our findings are shown in the table below.

Secondary Diagnosis MCC Conditions Reported in MS-DRG 689 with Principal Diagnosis of Pyonephrosis with ESWL				
ICD-10-CM Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
A41.9	Sepsis, unspecified organism	2	26.5	$96,525
G82.50	Quadriplegia, unspecified	1	7	$13,782
I50.23	Acute on chronic systolic (congestive) heart failure	1	7	$13,304
J96. 01	Acute respiratory failure with hypoxia	1	7	$13,304
K66.1	Hemoperitoneum	1	10	$26,314
L89.153	Pressure ulcer of sacral region, stage 3	1	8	$26,487
R57.1	Hypovolemic shock	1	10	$26,314
	Total	**8**	**12.8**	**$39,069**

We found seven secondary diagnosis MCC conditions reported among the six cases in MS–DRG 689 that had a principal diagnosis of pyonephrosis with ESWL. We stated that these MCC conditions appear to have contributed to the longer lengths of stay and higher average costs for those six cases. As shown in the table above, the overall

average length of stay for the cases reporting these conditions is 12.8 days with average costs of $39,069, which we stated in the proposed rule is consistent with the average length of stay of 14.2 days and average costs of $45,489 for the cases in MS–DRG 689 that had a principal diagnosis of pyonephrosis with ESWL.

We then analyzed the 24 cases in MS–DRG 690 that reported a principal diagnosis of pyonephrosis with ESWL to determine what factors may be contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed the CC conditions that were reported across the 24 cases. Our findings are shown in the table below.

BILLING CODE 4120–01–P

Secondary Diagnosis CC Conditions Reported in MS-DRG 690 with Principal Diagnosis of Pyonephrosis with ESWL

ICD-10-CM Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
B37.0	Candidal stomatitis	2	9.5	$18,895
B37.49	Other urogenital candidiasis	2	7.5	$30,458
C79.89	Secondary malignant neoplasm of other specified sites	1	3	$5,882
E22.2	Syndrome of inappropriate secretion of antidiuretic hormone	1	2	$5,979
E44.0	Moderate protein-calorie malnutrition	1	6	$9,027
E46	Unspecified protein-calorie malnutrition	2	5.5	$8,704
E87.0	Hyperosmolality and hypernatremia	1	6	$9,027
E87.1	Hypo-osmolality and hyponatremia	1	5	$12,339
F11.20	Opioid dependence, uncomplicated	1	1	$8,209
F33.1	Major depressive disorder, recurrent, moderate	1	12	$55,034
G81.94	Hemiplegia, unspecified affecting left nondominant side	3	9.3	$25,390
G82.20	Paraplegia, unspecified	1	10	$15,142
G93.40	Encephalopathy, unspecified	2	7	$10,277
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney dis	1	4	$12,348
I48.1	Persistent atrial fibrillation	1	12	$55,034
I50.22	Chronic systolic (congestive) heart failure	1	12	$55,034
I50.32	Chronic diastolic (congestive) heart failure	2	3.5	$9,115
I69.351	Hemiplegia and hemiparesis following cerebral infarction affecting right dominant side	1	3	$4,845
I69.859	Hemiplegia and hemiparesis following other cerebrovascular disease affecting unspecified side	1	4	$18,160
I97.791	Other intraoperative cardiac functional disturbances during other surgery	1	8	$8,114
J44.0	Chronic obstructive pulmonary disease with acute lower respiratory infection	1	11	$25,641

Secondary Diagnosis CC Conditions Reported in MS-DRG 690 with Principal Diagnosis of Pyonephrosis with ESWL				
ICD-10-CM Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
J44.1	Chronic obstructive pulmonary disease with (acute) exacerbation	2	5	$11,283
J96.10	Chronic respiratory failure, unspecified whether with hypoxia or hypercapnia	1	12	$55,034
J96.11	Chronic respiratory failure with hypoxia	2	7	$15,243
K57.92	Diverticulitis of intestine, part unspecified, without perforation or abscess without bleeding	1	8	$12,150
N12	Tubulo-interstitial nephritis, not specified as acute or chronic	1	11	$25,641
N13.8	Other obstructive and reflux uropathy	1	5	$32,854
N17.9	Acute kidney failure, unspecified	1	2	$21,329
N20.1	Calculus of ureter	1	10	$15,142
N20.2	Calculus of kidney with calculus of ureter	1	6	$9,027
R44.3	Hallucinations, unspecified	1	2	$21,329
R47.01	Aphasia	1	4	$10,161
R78.81	Bacteremia	1	11	$4,849
S37.012A	Minor contusion of left kidney, initial encounter	1	2	$21,329
T83.511A	Infection and inflammatory reaction due to indwelling urethral catheter, initial encounter	1	10	$15,142
Z68.1	Body mass index (BMI) 19.9 or less, adult	2	4.5	$10,040
Z68.43	Body mass index (BMI) 50-59.9, adult	1	3	$6,145
	Total	**47**	**6.6**	**$18,173**

BILLING CODE 4120–01–C

We found 37 secondary diagnosis CC conditions reported among the 24 cases in MS–DRG 690 that had a principal diagnosis of pyonephrosis with ESWL. We stated that these CC conditions appear to have contributed to the longer length of stay and higher average costs for those 24 cases. As shown in the table above, the overall average length of stay for the cases reporting these conditions is 6.6 days with average costs of $18,173, which we stated is higher, although comparable, to the average length of stay of 4.8 days and average costs of $14,837 for the cases in MS–DRG 690 that had a principal diagnosis of pyonephrosis with ESWL. We noted that it appears that 1 of the 24 cases had at least 4 secondary diagnosis CC conditions (F33.1, I48.1, I50.22, and J96.10) with an average length of stay of 12 days and average costs of $55,034, which we believed contributed greatly overall to the longer length of stay and higher average costs for those secondary diagnosis CC conditions reported among the 24 cases.

We stated that our clinical advisors agreed that the resource consumption for the 6 cases in MS–DRG 689 and the 24 cases in MS–DRG 690 that reported a principal diagnosis of pyonephrosis with ESWL cannot be directly attributed to ESWL and believe that it is the secondary diagnosis MCC and CC conditions that are the major contributing factors to the longer average length of stay and higher average costs for these cases.

As also indicated in the proposed rule, we also analyzed claims data for MS–DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively) and MS–DRGs 693 and 694 (Urinary Stones without ESW Lithotripsy with MCC and without MCC, respectively) to identify claims reporting pyonephrosis (ICD–10–CM diagnosis code N13.6) as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs for Urinary Stones with Secondary Diagnosis of Pyonephrosis with and without ESWL			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 691--All cases	140	3.9	$11,997
MS-DRG 691--Cases with secondary diagnosis of pyonephrosis and ESWL	3	8	$24,280
MS-DRG 692--All cases	124	2.1	$8,326
MS-DRG 693--All cases	1,315	5.1	$9,668
MS-DRG 693--Cases with secondary diagnosis of pyonephrosis	16	5.5	$9,962
MS-DRG 694--All cases	7,240	2.7	$5,263
MS-DRG 694--Cases with secondary diagnosis of pyonephrosis	89	3.5	$6,678

As shown in the table above, in MS–DRG 691, there was a total of 140 cases with an average length of stay of 3.9 days and average costs of $11,997. Of those 140 cases, there were 3 cases that reported pyonephrosis as a secondary diagnosis and an ESWL procedure with an average length of stay of 8.0 days and average costs of $24,280. There was a total of 124 cases found in MS–DRG 692 with an average length of stay of 2.1 days and average costs of $8,326. We stated in the proposed rule that there were no cases in MS–DRG 692 that reported pyonephrosis as a secondary diagnosis with an ESWL procedure. For MS–DRG 693, there was a total of 1,315 cases with an average length of stay of 5.1 days and average costs of $9,668. Of those 1,315 cases, there were 16 cases reporting pyonephrosis as a secondary diagnosis with an average length of stay of 5.5 days and average costs of $9,962. For MS–DRG 694, there was a total of 7,240 cases with an average length of stay of 2.7 days and average costs of $5,263. Of those 7,240 cases, there were 89 cases reporting pyonephrosis as a secondary diagnosis with an average length of stay of 3.5 days and average costs of $6,678.

Similar to the process described above, we then conducted further analysis for the three cases in MS–DRG 691 that reported a secondary diagnosis of pyonephrosis with ESWL to determine what factors may be contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed what other MCC and CC conditions were reported across the three cases. We stated in the proposed rule that we found no other MCC conditions reported for those three cases. Our findings for the CC conditions reported for those three cases are shown in the table below.

Secondary Diagnosis CC Conditions Reported in MS-DRG 691				
ICD-10-CM Code	**Description**	**Number of Times Reported**	**Average Length of Stay**	**Average Costs**
E44.0	Moderate protein-calorie malnutrition	1	15	$52,384
J96.10	Chronic respiratory failure, unspecified whether with hypoxia or hypercapnia	1	7	$15,110
N13.6	Pyonephrosis	2	8.5	$28,865
N17.9	Acute kidney failure, unspecified	1	2	$5,346
N39.0	Urinary tract infection, site not specified	1	2	$5,346
Q79.6	Ehlers-Danlos syndrome	1	2	$5,346
	Total	**7**	**6.4**	**$20,181**

We found six secondary diagnosis CC conditions reported among the three cases in MS–DRG 691 that had a secondary diagnosis of pyonephrosis with ESWL. We stated in the proposed rule that these CC conditions appear to have contributed to the longer lengths of stay and higher average costs for those three cases. As shown in the table above, the overall average length of stay for the cases reporting these conditions is 6.4 days with average costs of $20,181, which we stated is more consistent with the average length of stay of 8.0 days and average costs of $24,280 for the cases in MS–DRG 691 that had a secondary diagnosis of pyonephrosis with ESWL.

We stated in the proposed rule that our clinical advisors believe that the resource consumption for those three cases cannot be directly attributed to ESWL and that it is the secondary diagnosis CC conditions reported in addition to pyonephrosis, which is also designated as a CC condition, that are the major contributing factors for the longer average lengths of stay and higher average costs for these cases in MS–DRG 691.

As indicated in the proposed rule, we did not conduct further analysis for the 16 cases in MS–DRG 693 or the 89 cases in MS–DRG 694 that reported a secondary diagnosis of pyonephrosis because MS–DRGs 693 and 694 do not include ESWL procedures and the average length of stay and average costs for those cases were consistent with the

data findings for all of the cases in their assigned MS–DRG.

As discussed earlier in this section and the proposed rule, the requestor suggested that ICD–10–CM diagnosis code N13.6 should be grouped to MS–DRGs 691 and 692 when reported as a principal diagnosis because this grouping will more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi, while also receiving treatment for urinary tract infections. However, as we stated in the proposed rule, based on the results of the data analysis and input from our clinical advisors, we believe that cases for which ICD–10–CM diagnosis code N13.6 was reported as a principal diagnosis or as a secondary diagnosis with an ESWL procedure should not be utilized as an indicator for increased utilization of resources based on the performance of an ESWL procedure. Rather, we stated that we believe that the resource consumption is more likely the result of secondary diagnosis CC and/or MCC diagnosis codes.

In the proposed rule, with respect to the requestor's concern that cases reporting ICD–10–CM diagnosis code T83.192A (Other mechanical complication of indwelling ureteral stent, initial encounter) and an ESWL procedure are not appropriately assigned and should be added to the list of principal diagnoses for MS–DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively), we stated that our clinical advisors note that ICD–10–CM diagnosis code T83.192A is not necessarily indicative of a patient having urinary stones. As such, they did not support adding ICD–10–CM diagnosis code T83.192A to the list of principal diagnosis codes for MS–DRGs 691 and 692.

As indicated in the proposed rule, we analyzed claims data to identify cases reporting ICD–10–CM diagnosis code T83.192A as a principal diagnosis with ESWL in MS–DRGs 698, 699, and 700 (Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively). Our findings are shown in the following table.

MS-DRGs for Other Kidney and Urinary Tract Diagnoses with Principal Diagnosis of Other Mechanical Complications of Indwelling Ureteral Stent with ESWL

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 698—All cases	56,803	6.1	$11,220
MS-DRG 698—Cases with diagnosis code T83.192A reported as principal diagnosis	35	7.1	$14,574
MS-DRG 699—All cases	33,693	4.2	$7,348
MS-DRG 699—Cases with diagnosis code T83.192A reported as principal diagnosis	63	4.1	$7,652
MS-DRG 699--Cases with diagnosis code T83.192A reported as principal diagnosis with ESWL	1	3	$7,986
MS-DRG 700—All cases	3,719	3	$5,356

For MS–DRG 698, there was a total of 56,803 cases reported, with an average length of stay of 6.1 days and average costs of $11,220. Of these 56,803 cases, 35 cases reported ICD–10–CM diagnosis code T83.192A as the principal diagnosis, with an average length of stay of 7.1 days and average costs of $14,574. We stated that there were no cases that reported an ESWL procedure with ICD–10–CM diagnosis code T83.192A as the principal diagnosis in MS–DRG 698. For MS–DRG 699, there was a total of 33,693 cases reported, with an average length of stay of 4.2 days and average costs of $7,348. Of the 33,693 cases in MS–DRG 699, there were 63 cases that reported ICD–10–CM diagnosis code T83.192A as the principal diagnosis, with an average length of stay of 4.1 days and average costs of $7,652. We stated that there was only 1 case in MS–DRG 699 that reported ICD–10–CM diagnosis code T83.192A as the principal diagnosis with an ESWL procedure, with an average length of stay of 3 days and average costs of $7,986. For MS–DRG 700, there was a total of 3,719 cases reported, with an average length of stay of 3 days and average costs of $5,356. We stated that there were no cases that reported ICD–10–CM diagnosis code T83.192A as the principal diagnosis in MS–DRG 700. Of the 98 cases in MS–DRGs 698 and 699 that reported a principal diagnosis of other mechanical complication of indwelling ureteral stent (diagnosis code T83.192A), only 1 case also reported an ESWL procedure. Based on the results of our data analysis and input from our clinical advisors, we did not propose to add ICD–10–CM diagnosis code T83.192A to the list of principal diagnosis codes for MS–DRGs 691 and 692.

Comment: Commenters supported CMS' proposal to not add ICD–10–CM diagnosis codes N13.6 and T83.192A to the list of principal diagnosis codes for MS–DRGs 691 and 692. Commenters commended CMS for conducting the analysis and continuing to make further refinements to the MS–DRGs. The commenters stated that the proposal was reasonable, given the ICD–10–CM diagnosis codes and the information provided.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to not add ICD–10–CM diagnosis codes N13.6 and T83.192A to the list of principal diagnosis codes for MS–DRGs 691 and 692 in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule, in connection with these requests, our clinical advisors recommended that we evaluate the frequency with which ESWL is reported in the inpatient setting across all the MS–DRGs. Therefore, we also analyzed claims data from the September 2018 update of the FY 2018 MedPAR file to identify the other MS–DRGs to which claims reporting an ESWL procedure were reported. Our findings are shown in the following table.

BILLING CODE 4120–01–P

MS-DRGs	MS-DRG Description
654	Major Bladder Procedures with CC
657	Kidney and Ureter Procedures for Neoplasm with CC
659, 660, 661	Kidney and Ureter Procedures for Non-Neoplasm with MCC, with CC, without CC/MCC, respectively
662, 663	Minor Bladder Procedures with MCC and with CC, respectively
665, 666	Prostatectomy with MCC and with CC, respectively
668, 669, 670	Transurethral Procedures with MCC, with CC, and without CC/MCC, respectively.
671	Urethral Procedures with CC/MCC
682,683	Renal Failure with MCC and with CC, respectively
689, 690	Kidney and Urinary Tract Infections with MCC and without MCC, respectively
691, 692	Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively
696	Kidney and Urinary Tract Signs and Symptoms without MCC
698, 699,700	Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively
982	Extensive O.R. Procedure Unrelated to Principal Diagnosis with CC

As noted in the proposed rule, our findings with respect to the cases reporting an ESWL procedure in each of these MS–DRGs, as compared to all cases in the applicable MS–DRG, are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 654—All cases	3,838	6.7	$19,805
MS-DRG 654—Cases reporting ESWL	1	5	$9,102
MS-DRG 657—All cases	7,242	4.1	$14,047

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 657—Cases reporting ESWL	2	2	$19,021
MS-DRG 659—All cases	7,761	8.1	$18,717
MS-DRG 659—Cases reporting ESWL	71	11.1	$26,366
MS-DRG 660—All cases	17,617	4.1	$10,292
MS-DRG 660—Cases reporting ESWL	193	4	$13,627
MS-DRG 661—All cases	12,434	2.3	$7,997
MS-DRG 661—Cases reporting ESWL	154	2.7	$12,639
MS-DRG 662—All cases	614	10.2	$23,110
MS-DRG 662—Cases reporting ESWL	1	22	$57,520
MS-DRG 663—All cases	1,349	5	$11,213
MS-DRG 663—Cases reporting ESWL	2	3.5	$15,870
MS-DRG 665—All cases	589	9.4	$21,328
MS-DRG 665—Cases reporting ESWL	2	16.5	$17,710
MS-DRG 666—All cases	1,517	5.6	$13,060
MS-DRG 666—Cases reporting ESWL	2	9.5	$16,521
MS-DRG 668—All cases	2,065	9	$20,229
MS-DRG 668—Cases reporting ESWL	1	4	$19,383
MS-DRG 669—All cases	5,259	4.9	$11,217
MS-DRG 669—Cases reporting ESWL	5	2.4	$13,006
MS-DRG 670—All cases	1,707	2.6	$7,177
MS-DRG 670—Cases reporting ESWL	5	3	$18,416
MS-DRG 671—All cases	367	6.4	$13,519
MS-DRG 671—Cases reporting ESWL	1	3	$29,731
MS-DRG 682—All cases	97,347	5.7	$10,384

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 682—Cases reporting ESWL	5	10	$26,773
MS-DRG 683—All cases	132,206	3.9	$6,450
MS-DRG 683—Cases reporting ESWL	4	13.3	$19,706
MS-DRG 689—All cases	68,020	4.8	$7,873
MS-DRG 689—Cases reporting ESWL	11	13.3	$35,510
MS-DRG 690—All cases	131,999	3.5	$5,692
MS-DRG 690—Cases reporting ESWL	39	4.9	$13,567
MS-DRG 691—All cases	140	3.9	$11,997
MS-DRG 691—Cases reporting ESWL	140	3.9	$11,997
MS-DRG 692—All cases	124	2.1	$8,326
MS-DRG 692—Cases reporting ESWL	124	2.1	$8,326
MS-DRG 696—All cases	5,933	2.9	$4,938
MS-DRG 696—Cases reporting ESWL	2	2.5	$6,238
MS-DRG 698—All cases	56,803	6.1	$11,220
MS-DRG 698—Cases reporting ESWL	18	9.2	$27,818
MS-DRG 699—All cases	33,693	4.2	$7,348
MS-DRG 699—Cases reporting ESWL	9	4.4	$10,986
MS-DRG 700—All cases	3,719	3	$5,356
MS-DRG 700—Cases reporting ESWL	1	1	$7,580
MS-DRG 982—All cases	16,834	6.3	$16,939
MS-DRG 982—Cases reporting ESWL	2	11	$74,751

We stated in the proposed rule that our data analysis indicates that, generally, the subset of cases reporting an ESWL procedure appear to have a longer average length of stay and higher average costs when compared to all the cases in their assigned MS–DRG. However, we noted in the proposed rule that this same subset of cases also reported at least one O.R. procedure and/or diagnosis designated as a CC or an MCC, which our clinical advisors believe are contributing factors to the longer average lengths of stay and higher average costs, with the exception of the case assigned to MS–DRG 700, which is a medical MS–DRG and has no CC or MCC conditions in the logic. Therefore, we stated that our clinical advisors do not believe that cases reporting an ESWL procedure should be considered as an indication of increased resource consumption for inpatient hospitalizations.

Our clinical advisors also suggested that we evaluate the reporting of ESWL procedures in the inpatient setting over the past few years. We analyzed claims data for MS–DRGs 691 and 692 from the FY 2012 through the FY 2016 MedPAR

files, which were used in our analysis of claims data for MS–DRG reclassification requests effective for FY 2014 through FY 2018. We note that the analysis findings shown in the following table reflect ICD–9–CM, ICD–10–CM and ICD–10–PCS coded claims data.

MS-DRG	FY 2014 (Version 31)			FY 2015 (Version 32)			FY 2016 (Version 33)			FY 2017 (Version 34)			FY 2018 (Version 35)		
	Number of Cases	Average Length of Stay	Average Costs	Number of Cases	Average Length of Stay	Average Costs	Number of Cases	Average Length of Stay	Average Costs	Number of Cases	Average Length of Stay	Average Costs	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 691--Urinary Stones with ESW Lithotripsy w CC/MCC	898	3.77	$10,274	832	3.81	$11,141	812	3.72	$11,534	750	4.06	$11,907	448	3.4	$11,502
MS-DRG 692—Urinary Stones with ESW Lithotripsy without CC/MCC	231	2.02	$7,292	197	2.14	$8,041	133	2.32	$9,273	103	2.39	$9,398	61	2.3	$8,702

As indicated in the proposed rule, the data show a steady decline in the number of cases reporting urinary stones with an ESWL procedure for the

BILLING CODE 4120–01–C

past 5 years. As previously noted, the total number of cases reporting urinary stones with an ESWL procedure for MS–DRGs 691 and 692 based on our analysis of the September 2018 update of the FY 2018 MedPAR file was 264, which again is a decline from the prior year's figures. As discussed throughout this section and in the proposed rule, an ESWL procedure is a non-O.R. procedure which currently groups to medical MS–DRGs 691 and 692. Therefore, we stated in the proposed rule that because an ESWL procedure is a non-O.R. procedure and due to decreased usage of this procedure in the inpatient setting for the treatment of urinary stones, our clinical advisors believe that there is no longer a clinical reason to subdivide the MS–DRGs for urinary stones (MS–DRGs 691, 692, 693, and 694) based on ESWL procedures.

Therefore, we proposed to delete MS–DRGs 691 and 692 and to revise the titles for MS–DRGs 693 and 694 from ''Urinary Stones without ESW Lithotripsy with MCC'' and ''Urinary Stones without ESW Lithotripsy without MCC'', respectively to ''Urinary Stones with MCC'' and ''Urinary Stones without MCC'', respectively.

Comment: Commenters supported the proposal to delete MS–DRGs 691 and 692 and to revise the titles for MS–DRGs 693 and 694 from ''Urinary Stones without ESW Lithotripsy with MCC'' and ''Urinary Stones without ESW Lithotripsy without MCC'', respectively to ''Urinary Stones with MCC'' and ''Urinary Stones without MCC''. Commenters agreed that deleting MS–DRGs 691 and 692 and revising the titles for MS–DRGs 693 and 694 will better reflect utilization of resources for cases reporting urinary stones with a EWSL procedure as well as provide for appropriate payment for the procedures. The commenters noted that the proposal was reasonable, given the data, the ICD–10–PCS procedure codes, and information provided.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to delete MS–DRGs 691 and 692 and to revise the titles for MS–DRGs 693 and 694 from ''Urinary Stones without ESW Lithotripsy with MCC'' and ''Urinary Stones without ESW Lithotripsy without MCC'', respectively to ''Urinary Stones with MCC'' and ''Urinary Stones without MCC'', in the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

8. MDC 12 (Diseases and Disorders of the Male Reproductive System): Diagnostic Imaging of Male Anatomy

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19210 through 10211), we received a request to review four ICD–10–CM diagnosis codes describing body parts associated with male anatomy that are currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System) in MS–DRGs 302 and 303 (Atherosclerosis with MCC and Atherosclerosis without MCC, respectively). The four codes are listed in the following table.

ICD-10-CM Code	Code Description
R93.811	Abnormal radiologic findings on diagnostic imaging of right testicle
R93.812	Abnormal radiologic findings on diagnostic imaging of left testicle
R93.813	Abnormal radiologic findings on diagnostic imaging of testicles, bilateral
R93.819	Abnormal radiologic findings on diagnostic imaging of unspecified testicle

The requestor recommended that the four diagnosis codes shown in this table be considered for assignment to MDC 12 (Diseases and Disorders of the Male Reproductive System), consistent with other diagnosis codes that include the male anatomy. However, the requestor did not suggest a specific MS–DRG assignment within MDC 12.

As indicated in the proposed rule, we examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 302 and 303 to identify any cases reporting a diagnosis code for abnormal radiologic findings on diagnostic imaging of the testicles. We did not find any such cases.

We stated in the proposed rule that our clinical advisors reviewed this request and determined that the assignment of diagnosis codes R93.811, R93.812, R93.813, and R93.819 to MDC 5 in MS–DRGs 302 and 303 was a result of replication from ICD–9–CM diagnosis code 793.2 (Nonspecific (abnormal) findings on radiological and other examination of other intrathoracic organs) which was assigned to those MS–DRGs. Therefore, we stated that our clinical advisors supported reassignment of these codes to MDC 12. Our clinical advisors agreed that this reassignment is clinically appropriate because these diagnosis codes are specific to the male anatomy, consistent with other diagnosis codes in MDC 12 that include the male anatomy. Specifically, we stated in the proposed rule that our clinical advisors suggested reassignment of the four diagnosis codes to MS–DRGs 729 and 730 (Other Male Reproductive System Diagnoses with CC/MCC and without CC/MCC, respectively). Therefore, we proposed to reassign ICD–10–CM diagnosis codes R93.811, R93.812, R93.813, and R93.819 from MDC 5 in MS–DRGs 302 and 303 to MDC 12 in MS–DRGs 729 and 730.

Comment: Commenters supported our proposed reassignment of ICD–10–CM diagnosis codes R93.811, R93.812, R93.813, and R93.819 from MDC 5 to MDC 12.

Response: We thank the commenters for their support. After consideration of the public comments we received, we are finalizing our proposal to reassign ICD–10–CM diagnosis codes R93.811, R93.812, R93.813, and R93.819 from MDC 5 in MS–DRGs 302 and 303 to MDC 12 in MS–DRGs 729 and 730.

9. MDC 14 (Pregnancy, Childbirth and the Puerperium): Reassignment of Diagnosis Code O99.89

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19211 through 19214), we received a request to review the MS–DRG assignment for cases reporting ICD–10–CM diagnosis code O99.89 (Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium). The requestor stated that it is experiencing

MS–DRG shifts to MS–DRG 769 (Postpartum and Post Abortion Diagnoses with O.R. Procedure) as a result of the new obstetric MS–DRG logic when ICD–10–CM diagnosis code O99.89 is reported as a principal diagnosis in the absence of a delivery code on the claim (to indicate the patient delivered during that hospitalization), or when there is no other secondary diagnosis code on the claim indicating that the patient is in the postpartum period. As we stated in the proposed rule, according to the requestor, claims reporting ICD–10–CM diagnosis code O99.89 as a principal diagnosis for conditions described as occurring during the antepartum period that are reported with an O.R. procedure are grouping to MS–DRG 769. In the example provided by the requestor, ICD–10–CM diagnosis code O99.89 was reported as the principal diagnosis, with ICD–10–CM diagnosis codes N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) and Z3A.25 (25 weeks of gestation of pregnancy) reported as secondary diagnoses with ICD–10–PCS procedure code 0T68DZ (Dilation of right ureter with intraluminal device, endoscopic approach), resulting in assignment to MS–DRG 769. The requestor noted that, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212), we stated ''If there was not a principal diagnosis of abortion reported on the claim, the logic asks if there was a principal diagnosis of an antepartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to one of the proposed new MS–DRGs 817, 818, or 819.'' In the requestor's example, there were not any codes reported to indicate that the patient was in the postpartum period, nor was there a delivery code reported on the claim. Therefore, the requestor suggested that a more appropriate assignment for ICD–10–CM diagnosis code O99.89 may be MS–DRGs 817, 818, and 819 (Other Antepartum Diagnoses with O.R. Procedure with MCC, with CC and without CC/MCC, respectively).

As noted in the proposed rule, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41202 through 41216), we finalized our proposal to restructure the MS–DRGs within MDC 14 (Pregnancy, Childbirth and the Puerperium) which established new concepts for the GROUPER logic. We stated that, as a result of the modifications made, ICD–10–CM diagnosis code O99.89 was classified as a postpartum condition and is currently assigned to MS–DRG 769 (Postpartum and Post Abortion Diagnoses with O.R. Procedure) and MS–DRG 776 (Postpartum and Post Abortion Diagnoses without O.R. Procedure) under the Version 36 ICD–10 MS–DRGs. As also discussed and displayed in Diagram 2 in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212 through 41213), we explained in the proposed rule that the logic asks if there was a principal diagnosis of a postpartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to MS–DRG 769. If no, the logic assigns the case to MS–DRG 776. Therefore, we stated in the proposed rule that the MS–DRG assignment for the example provided by the requestor is grouping accurately according to the current GROUPER logic.

As indicated in the proposed rule, we analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting diagnosis code O99.89 in MS–DRGs 769 and 776 as a principal diagnosis or as a secondary diagnosis. Our findings are shown in the following table.

Postpartum MS-DRGs with Principal or Secondary Diagnosis of Other Specified Diseases and Conditions Complicating Pregnancy, Childbirth and the Puerperium

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 769--All cases	91	4.3	$11,015
MS-DRG 769--Cases reporting diagnosis code O99.89 as principal diagnosis	7	5.6	$19,059
MS-DRG 769--Cases reporting diagnosis code O99.89 as secondary diagnosis	61	12.1	$41,717
MS-DRG 776--All cases	560	3.1	$5,332
MS-DRG 776--Cases reporting diagnosis code O99.89 as principal diagnosis	57	3.5	$6,439

As shown in the table above, we found a total of 91 cases in MS–DRG 769 with an average length of stay of 4.3 days and average costs of $11,015. Of these 91 cases, 7 cases reported ICD–10–CM diagnosis code O99.89 as a principal diagnosis with an average length of stay of 5.6 days and average costs of $19,059, and 61 cases reported ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 12.1 days and average costs of $41,717. For MS–DRG 776, we found a total of 560 cases with an average length of stay of 3.1 days and average costs of $5,332. Of these 560 cases, 57 cases reported ICD–10–CM diagnosis code O99.89 as a principal diagnosis with an average length of stay of 3.5 days and average costs of $6,439. We stated in the proposed rule that there were no cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis in MS–DRG 776.

For MS–DRG 769, the data show that the 68 cases reporting ICD–10–CM diagnosis code O99.89 as a principal or secondary diagnosis have a longer average length of stay and higher average costs compared to all the cases in MS–DRG 769. For MS–DRG 776, the data show that the 57 cases reporting a principal diagnosis of ICD–10–CM diagnosis code O99.89 have a similar average length of stay compared to all the cases in MS–DRG 776 (3.5 days versus 3.1 days) and average costs that are consistent with the average costs of all cases in MS–DRG 776 ($6,439 versus $5,332).

We noted in the proposed rule that the description for ICD–10–CM diagnosis code O99.89 ''Other specified diseases and conditions complicating pregnancy, childbirth and the

puerperium'', describes conditions that may occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium). In addition, in the ICD–10–CM Tabular List of Diseases, there is an inclusion term at subcategory O99.8- instructing users that the reporting of any diagnosis codes in that subcategory is intended for conditions that are reported in certain ranges of the classification. Specifically, the inclusion term states ''Conditions in D00–D48, H00–H95, M00–N99, and Q00–Q99.'' There is also an instructional note to ''Use additional code to identify condition.'' As a result, we stated that ICD–10–CM diagnosis code O99.89 may be reported to identify conditions that occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium). However, it is not restricted to the reporting of obstetric specific conditions only. In the example provided by the requestor, ICD–10–CM diagnosis code O99.89 was reported as the principal diagnosis with ICD–10–CM diagnosis code N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) as a secondary diagnosis. In the proposed rule, we stated that ICD–10–CM diagnosis code N13.2 is within the code range referenced earlier in this section (M00–N99) and qualifies as an appropriate condition for reporting according to the instruction.

As noted in the proposed rule and earlier, ICD–10–CM diagnosis code O99.89 is intended to report conditions that occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium) and is not restricted to the reporting of obstetric specific conditions only. However, because the diagnosis code description includes three distinct obstetric related stages, we stated in the proposed rule that it is not clear what stage the patient is in by this single code. For example, upon review of subcategory O99.8-, we recognized that the other ICD–10–CM diagnosis code sub-subcategories are expanded to include unique codes that identify the condition as occurring or complicating pregnancy, childbirth or the puerperium. Specifically, sub-subcategory O99.81- (Abnormal glucose complicating pregnancy, childbirth, and the puerperium) is expanded to include the following ICD–10–CM diagnosis codes.

ICD-10-CM Code	Code Description
O99.810	Abnormal glucose complicating pregnancy
O99.814	Abnormal glucose complicating childbirth
O99.815	Abnormal glucose complicating the puerperium

These codes specifically identify at what stage the abnormal glucose was a complicating condition. We stated in the proposed rule that, because each code uniquely identifies a stage, the code can be easily classified under MDC 14 as an antepartum condition (ICD–10–CM diagnosis code O99.810), occurring during a delivery episode (ICD–10–CM diagnosis code O99.814), or as a postpartum condition (ICD–10–CM diagnosis code O99.815). The same is not true for ICD–10–CM diagnosis code O99.89 because it includes all three stages in the single code.

Therefore, we examined the number and type of secondary diagnoses reported with ICD–10–CM diagnosis code O99.89 as a principal diagnosis for MS–DRGs 769 and 776 to identify how many secondary diagnoses were related to other obstetric conditions and how many were related to non-obstetric conditions.

MS-DRG	Number of Secondary Diagnoses Reported with O99.89 as Principal	Number of Secondary OB Related Diagnoses	Number of Secondary OB Related Antepartum Diagnoses	Number of Secondary OB Related Postpartum Diagnoses	Number of Secondary OB Related Delivery Diagnoses	Number of Secondary Non-OB Related Diagnoses
MS-DRG 769	59	13	11	1	1	46
MS-DRG 776	376	113	88	19	6	263

As shown in the table above, there was a total of 59 secondary diagnoses reported with diagnosis code O99.89 as the principal diagnosis for MS–DRG 769. Of those 59 secondary diagnoses, 13 were obstetric (OB) related diagnosis codes (11 antepartum, 1 postpartum and 1 delivery) and 46 were non-obstetric (Non-OB) related diagnosis codes. For MS–DRG 776, there was a total of 376 secondary diagnoses reported with diagnosis code O99.89 as the principal diagnosis. Of those 376 secondary diagnoses, 113 were obstetric (OB) related diagnosis codes (88 antepartum, 19 postpartum and 6 delivery) and 263 were non-obstetric (Non-OB) related diagnosis codes.

The data reflect that, for MS–DRGs 769 and 776, the number of secondary diagnoses identified as OB-related antepartum diagnoses is greater than the number of secondary diagnoses identified as OB-related postpartum diagnoses (99 antepartum diagnoses versus 20 postpartum diagnoses). The data also indicate that, of the 435 secondary diagnoses reported with ICD–10–CM diagnosis code O99.89 as the principal diagnosis, 309 (71 percent) of those secondary diagnoses were non-OB-related diagnosis codes. Because there was a greater number of secondary

diagnoses identified as OB-related antepartum diagnoses compared to the OB-related postpartum diagnoses within the postpartum MS–DRGs when ICD–10–CM diagnosis code O99.89 was reported as the principal diagnosis, we performed further analysis of diagnosis code O99.89 within the antepartum MS–DRGs.

Under the Version 35 ICD–10 MS–DRGs, diagnosis code O99.89 was classified as an antepartum condition and was assigned to MS–DRG 781 (Other Antepartum Diagnoses with Medical Complications). Therefore, we also analyzed claims data for MS–DRGs 817, 818 and 819 (Other Antepartum Diagnoses with O.R. Procedure with MCC, with CC and without CC/MCC, respectively) and MS–DRGs 831, 832, and 833 (Other Antepartum Diagnoses without O.R. Procedure with MCC, with CC and without CC/MCC, respectively) for cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis. We noted in the proposed rule that the analysis for the proposed FY 2020 ICD–10 MS–DRGs is based upon the September 2018 update of the FY 2018 MedPAR claims data that were grouped through the ICD–10 MS–DRG GROUPER Version 36. Our findings are shown in this table.

Antepartum MS-DRGs with Secondary Diagnosis of Other Specified Diseases and Conditions Complicating Pregnancy, Childbirth and the Puerperium

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 817--All cases	63	5.7	$14,948
MS-DRG 817--Cases reporting diagnosis code O99.89 as secondary diagnosis	8	10.8	$24,359
MS-DRG 818--All cases	78	4.1	$9,343
MS-DRG 818-- Cases reporting diagnosis code O99.89 as secondary diagnosis	7	3.4	$14,182
MS-DRG 819--All cases	25	2.2	$5,893
MS-DRG 819-- Cases reporting diagnosis code O99.89 as secondary diagnosis	1	1	$4,990
MS-DRG 831--All cases	747	4.8	$7,714
MS-DRG 831-- Cases reporting diagnosis code O99.89 as secondary diagnosis	127	5.4	$7,050
MS-DRG 832--All cases	1,142	3.6	$5,159
MS-DRG 832-- Cases reporting diagnosis code O99.89 as secondary diagnosis	145	4.2	$5,656
MS-DRG 833--All cases	537	2.6	$3,807
MS-DRG 833-- Cases reporting diagnosis code O99.89 as secondary diagnosis	47	2.6	$3,307

As shown in the table above, we found a total of 63 cases in MS–DRG 817 with an average length of stay of 5.7 days and average costs of $14,948. Of these 63 cases, there were 8 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 10.8 days and average costs of $24,359. For MS–DRG 818, we found a total of 78 cases with an average length of stay of 4.1 days and average costs of $9,343. Of these 78 cases, there were 7 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 3.4 days and average costs of $14,182. For MS–DRG 819, we found a total of 25 cases with an average length of stay of 2.2 days and average costs of $5,893. Of these 25 cases, there was 1 case reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 1 day and average costs of $4,990.

For MS–DRG 831, we found a total of 747 cases with an average length of stay of 4.8 days and average costs of $7,714. Of these 747 cases, there were 127 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 5.4 days and average costs of $7,050. For MS–DRG 832, we found a total of 1,142 cases with an average length of stay of 3.6 days and average costs of $5,159. Of these 1,142 cases, there were 145 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 4.2 days and average costs of $5,656. For MS–DRG 833, we found a total of 537 cases with an average length of stay of 2.6 days and average costs of $3,807. Of these 537 cases, there were 47 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 2.6 days and average costs of $3,307.

As we stated in the proposed rule, overall, there was a total of 335 cases reporting ICD–10–CM diagnosis code O99.89 as a secondary diagnosis within the antepartum MS–DRGs. Of those 335 cases, 16 cases involved an O.R. procedure and 319 cases did not involve an O.R. procedure. The data indicate that ICD–10–CM diagnosis code O99.89 is reported more often as a secondary diagnosis within the antepartum MS–DRGs (335 cases) than it is reported as a principal or secondary diagnosis within the postpartum MS–DRGs (125 cases).

Further, we stated that our clinical advisors believe that, because ICD–10–CM diagnosis code O99.89 can be reported during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium), there is not a clear clinical indication as to which set of MS–DRGs (antepartum, delivery, or postpartum) would be the most

appropriate assignment for this diagnosis code. They recommended that we collaborate with the National Center for Health Statistics (NCHS) at the Centers for Disease Control and Prevention (CDC), in consideration of a proposal to possibly expand ICD–10–CM diagnosis code O99.89 to become a sub-subcategory that would result in the creation of unique codes with a sixth digit character to specify which obstetric related stage the patient is in. For example, under subcategory O99.8-, a proposed new sub-subcategory for ICD–10–CM diagnosis code O99.89- could include the following proposed new diagnosis codes:

- O99.890 (Other specified diseases and conditions complicating pregnancy);
- O99.894 (Other specified diseases and conditions complicating childbirth); and
- O99.895 (Other specified diseases and conditions complicating the puerperium).

We noted in the proposed rule that, if such a proposal to create this new sub-subcategory and new diagnosis codes were approved and finalized, it would enable improved data collection and more appropriate MS–DRG assignment, consistent with the current MS–DRG assignments of the existing obstetric related diagnosis codes. We stated, for instance, a new diagnosis code described as ''complicating pregnancy'' would be clinically aligned with the antepartum MS–DRGs, a new diagnosis code described as ''complicating childbirth'' would be clinically aligned with the delivery MS–DRGs, and a new diagnosis code described as ''complicating the puerperium'' would be clinically aligned with the postpartum MS–DRGs. (We note that all requests for new diagnosis codes require that a proposal be approved for discussion at a future ICD–10 Coordination and Maintenance Committee meeting.)

We stated in the proposed rule that, while our clinical advisors could not provide a strong clinical justification for classifying ICD–10–CM diagnosis code O99.89 as an antepartum condition versus as a postpartum condition for the reasons described above, they did consider the claims data to be informative as to how the diagnosis code is being reported for obstetric patients. In analyzing both the postpartum MS–DRGs and the antepartum MS–DRGs discussed earlier in this section, they agreed that the data clearly show that ICD–10–CM diagnosis code O99.89 is reported more frequently as a secondary diagnosis within the antepartum MS–DRGs than it is reported as a principal or secondary diagnosis within the postpartum MS–DRGs.

Based on our analysis of claims data and input from our clinical advisors, we proposed to reclassify ICD–10–CM diagnosis code O99.89 from a postpartum condition to an antepartum condition under MDC 14. We stated in the proposed rule that, if finalized, ICD–10–CM diagnosis code O99.89 would follow the logic as described in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212) which asks if there was a principal diagnosis of an antepartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to MS–DRG 817, 818, or 819. If no (there was not an O.R. procedure reported on the claim), the logic assigns the case to MS–DRG 831, 832, or 833.

Comment: Commenters supported the proposal to reclassify ICD–10–CM diagnosis code O99.89 from a postpartum condition to an antepartum condition under MDC 14. Commenters also agreed with the recommendation to expand diagnosis code O99.89 to create a new sub-subcategory that would result in the creation of unique codes with a sixth digit character to specify which obstetric related stage the patient is in.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to reclassify ICD–10–CM diagnosis code O99.89 from a postpartum condition to an antepartum condition. For FY 2020, cases reporting diagnosis code O99.89 will follow the logic as previously described in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212) which asks if there was a principal diagnosis of an antepartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to MS–DRG 817, 818, or 819 (Other Antepartum Diagnoses with O.R. Procedure with MCC, with CC and without CC/MCC, respectively). If no (there was not an O.R. procedure reported on the claim), the logic assigns the case to MS–DRG 831, 832, or 833 (Other Antepartum Diagnoses without O.R. Procedure with MCC, with CC and without CC/MCC, respectively).

10. MDC 22 (Burns): Skin Graft to Perineum for Burn

As discussed in the FY 2020 IPPS/LTCH PPS (84 FR 19214 through 19215), we received a request to add seven ICD–10–PCS procedure codes that describe a skin graft to the perineum to MS–DRG 927 (Extensive Burns Or Full Thickness Burns with MV >96 Hours with Skin Graft) and MS–DRGs 928 and 929 (Full Thickness Burn with Skin Graft Or Inhalation Injury with CC/MCC and without CC/MCC, respectively) in MDC 22. The seven procedure codes are listed in the following table.

ICD-10-PCS Code	Code Description
0HR9X73	Replacement of perineum skin with autologous tissue substitute, full thickness, external approach
0HR9X74	Replacement of perineum skin with autologous tissue substitute, partial thickness, external approach
0HR9XJ3	Replacement of perineum skin with synthetic substitute, full thickness, external approach
0HR9XJ4	Replacement of perineum skin with synthetic substitute, partial thickness, external approach
0HR9XJZ	Replacement of perineum skin with synthetic substitute, external approach
0HR9XK3	Replacement of perineum skin with non-autologous tissue substitute, full thickness, external approach
0HR9XK4	Replacement of perineum skin with non-autologous tissue substitute, partial thickness, external approach

As indicated in the proposed rule, these seven procedure codes are currently assigned to MS–DRGs 746 and 747 (Vagina, Cervix and Vulva Procedures with CC/MCC and without CC/MCC, respectively). In addition, we stated in the proposed rule that when reported in conjunction with a principal diagnosis in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs), these codes group to MS–DRGs 907, 908, and 909 (Other O.R. Procedures For Injuries with MCC, with CC and without CC/MCC, respectively), and when reported in conjunction with a principal diagnosis in MDC 24 (Multiple Significant Trauma), these codes group to MS–DRGs 957, 958, and 959 (Other O.R. Procedures For Multiple Significant Trauma with MCC, with CC and without CC/MCC, respectively). In addition, we stated that these procedures are designated as non-extensive O.R. procedures and are assigned to MS–DRGs 987, 988 and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when a principal diagnosis that is unrelated to the procedure is reported on the claim.

The requestor provided an example in which it identified one case where a patient underwent debridement and split thickness skin graft (STSG) to the perineum area (only), and expressed concern that the case did not route to MS–DRGs 928 and 929 to recognize operating room resources. (We note that the requestor did not specify the diagnosis associated with this case nor the MS–DRG to which this one case was grouped.) The requestor stated that providers may document various terminologies for this anatomic site, including *perineum, groin,* and *buttocks crease;* therefore, when a provider deems a burn to affect the perineum as opposed to the groin or buttock crease, cases should route to MS–DRGs which compensate hospitals for skin grafting operating room resources. Therefore, the requestor recommended that the cited seven ICD–10–PCS codes be added to the list of procedure codes for a skin graft within MS–DRGs 927, 928, and 929.

As noted in the proposed rule, we reviewed this request by analyzing claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting any of the above seven procedure codes in MS–DRGs 746, 747, 907, 908, 909, 957, 958, 959, 987, 988, and 989. Our findings are shown in the following table.

Cases Involving Skin Graft to the Perineum

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 746--All cases	1,344	5	$11,847
MS-DRG 746--Cases with skin graft to the perineum procedure	1	2	$10,830
MS-DRG 907--All cases	7,843	10	$28,919
MS-DRG 907-- Cases with skin graft to the perineum procedure	1	8	$21,909
MS-DRG 908--All cases	9,286	5.3	$14,601
MS-DRG 908--Cases with skin graft to the perineum procedure	1	6	$8,410
MS-DRG 988--All cases	8,391	5.7	$12,294
MS-DRG 988-Cases with skin graft to the perineum procedure	2	3	$6,906
MS-DRG 989--All cases	1,551	3.1	$8,171
MS-DRG 989--Cases with skin graft to the perineum procedure	1	7	$14,080

As shown in the table above, the overall volume of cases reporting a skin graft to the perineum procedure is low, with a total of 6 cases found. In MS–DRG 746, we found a total of 1,344 cases with an average length of stay of 5 days and average costs of $11,847. The single case reporting a skin graft to the perineum procedure in MS–DRG 746 had a length of stay of 2 days and a cost of $10,830. In MS–DRG 907, we found a total of 7,843 cases with an average length of stay of 10 days and average costs of $28,919. The single case reporting a skin graft to the perineum procedure in MS–DRG 907 had a length of stay of 8 days and a cost of $21,909. In MS–DRG 908, we found a total of 9,286 cases with an average length of stay of 5.3 days and average costs of $14,601. The single case reporting a skin graft to the perineum procedure in MS–DRG 908 had a length of stay of 6 days and a cost of $8,410. In MS–DRG 988, we found a total of 8,391 cases with an average length of stay of 5.7 days and average costs of $12,294. The 2 cases reporting a skin graft to the perineum procedure in MS–DRG 988 had an average length of stay of 3 days and average costs of $6,906. In MS–DRG 989, we found a total of 1,551 cases with an average length of stay of 3.1 days and average costs of $8,171. The single case reporting a skin graft to the perineum procedure in MS–DRG 989 had a length of stay of 7 day and a cost of $14,080. We stated that we found no cases reporting a skin graft to the perineum procedure in MS–DRG 747, 909, 957, 958, 959, or 987. Further, we stated that cases reporting a skin graft to the perineum procedure generally had shorter length of stays and lower average costs than those of their assigned MS–DRGs overall.

We then analyzed claims data for MS–DRGs 927, 928, and 929 (the MS–DRGs to which the requestor suggested that these cases group) for all cases reporting a procedure describing a skin graft to the perineum listed in the table above to consider how the resources involved in the cases reporting a procedure describing a skin graft to the perineum compared to those of all cases in MS–DRGs 927, 928, and 929. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 927--All cases	146	30.9	$147,903
MS-DRG 928--All cases	1,149	15.7	$45,523
MS-DRG 928--Cases with skin graft to the perineum procedure	5	39	$64,041
MS-DRG 929--All cases	296	7.9	$21,474

As shown in the table above, for MS–DRG 927, we found a total of 146 cases with an average length of stay of 30.9 days and average costs of $147,903; no cases reporting a skin graft to the perineum procedure were found. For MS–DRG 928, we found a total of 1,149 cases with an average length of stay of 15.7 days and average costs of $45,523. We found 5 cases reporting a skin graft to the perineum procedure with an average length of stay of 39 days and average costs of $64,041. For MS–DRG 929, we found a total of 296 cases with an average length of stay of 7.9 days and average costs of $21,474; and no cases reporting a skin graft to the perineum procedure were found. We noted in the proposed rule that none of the 5 cases reporting a skin graft to the perineum in MS–DRGs 927, 928, and 929 reported a skin graft to the perineum procedure as the only operating room procedure. Therefore, we stated in the proposed rule that it is not possible to determine how much of the operating room resources for these 5 cases were attributable to the skin graft to the perineum procedure.

We further stated that our clinical advisors reviewed the claims data described above and noted that none of the cases reporting the seven identified procedure codes that grouped to MS–DRGs 746, 907, 908, 988, and 989 (listed in the table above) had a principal or secondary diagnosis of a burn, which suggests that these skin grafts were not performed to treat a burn. We stated that therefore, our clinical advisors believe that it would not be appropriate for these cases that report a skin graft to the perineum procedure to group to MS–DRGs 927, 928, and 929, which describe burns. Our clinical advisors state that the seven ICD–10–PCS procedure codes that describe a skin graft to the perineum are more clinically aligned with the other procedures in MS–DRGs 746 and 747, to which they are currently assigned. Therefore, we did not propose to add the seven identified procedure codes to MS–DRGs 927, 928, and 929 in the proposed rule.

Comment: Commenters did not support the proposal to not add ICD–10–PCS procedure codes 0HR9X73, 0HR9X74, 0HR9XJ3, 0HR9XJ4, 0HR9XJZ, 0HR9XK3, and 0HR9XK4 that describe a skin graft to the perineum to MS–DRGs 927, 928 and 929. The commenters noted that in the hypothetical scenario in which the principal diagnoses code T21.37XA, third degree burn of (female) perineum, or T21.36XA, third degree burn of the (male) perineum, is coded as the principal diagnosis in combination with ICD–10–PCS codes describing skin graft to the perineum, the case would group to MS–DRG 934 (Full Thickness Burn without Skin Graft or Inhalation Injury). A commenter stated that since CMS' DRG tables are referenced nationally by other payers, the GROUPER logic should change in spite of the fact that CMS's data reflects little or no volume for these cases.

Response: We appreciate the commenters' feedback.

In response to public comments, our clinical advisors reviewed the claims data in the September 2018 update of the FY 2018 MedPAR file and again noted that none of the cases reporting the seven identified procedure codes that grouped to MS–DRGs 746, 907, 908, 988, and 989 had a principal or secondary diagnosis of a burn. Therefore, our clinical advisors continue to believe that it would not be appropriate for these cases that report a skin graft to the perineum procedure to group to MS–DRGs 927, 928, and 929, which describe burns, in the absence of MedPAR data indicating that these skin grafts are performed to treat burns. Our clinical advisors believe that the seven ICD–10–PCS procedure codes that describe a skin graft to the perineum are more clinically aligned with the other procedures in MS–DRGs 746 and 747, to which they are currently assigned. As additional claims data becomes available, we can determine if future modifications to the assignment of these procedure codes are warranted at a later date.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to maintain the current structure of MS–DRGs 927, 928 and 929 for FY 2020.

11. MDC 23 (Factors Influencing Health Status and Other Contacts With Health Services): Assignment of Diagnosis Code R93.89

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19216), we received a request to consider reassignment of ICD–10–CM diagnosis code R93.89 (Abnormal finding on diagnostic imaging of other specified body structures) from MDC 5 (Diseases and Disorders of the Circulatory System) in MS–DRGs 302 and 303 (Atherosclerosis with and without MCC and Atherosclerosis without MCC, respectively) to MDC 23 (Factors Influencing Health Status and Other Contact with Health Services), consistent with other diagnosis codes that include abnormal findings. However, the requestor did not suggest a specific MS–DRG assignment within MDC 23.

As indicated in the proposed rule, we examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 302 and 303 and identified cases reporting diagnosis code R93.89. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 302--All cases	3,750	3.8	$7,956
MS-DRG 302--Cases reporting diagnosis code R93.89	3	7.7	$10,818
MS-DRG 303--All cases	12,986	2.3	$4,920
MS-DRG 303--Cases reporting diagnosis code R93.89	10	2	$3,416

As shown in the table, for MS–DRG 302, there was a total of 3,750 cases with an average length of stay of 3.8 days and average costs of $7,956. Of these 3,750 cases, there were 3 cases reporting abnormal finding on diagnostic imaging of other specified body structures, with an average length of stay 7.7 days and average costs of $10,818. For MS–DRG 303, there was a total of 12,986 cases with an average length of stay of 2.3 days and average costs of $4,920. Of these 12,986 cases, there were 10 cases reporting abnormal finding on diagnostic imaging of other specified body structures, with an average length of stay 2 days and average costs of $3,416.

We stated in the proposed rule that our clinical advisors reviewed this request and determined that the assignment of diagnosis code R93.89 to MDC 5 in MS–DRGs 302 and 303 was a result of replication from ICD–9–CM diagnosis code 793.2 (Nonspecific (abnormal) findings on radiological and other examination of other intrathoracic organs), which was assigned to those MS–DRGs. Therefore, they supported reassignment of diagnosis code R93.89 to MDC 23. Our clinical advisors agree this reassignment is clinically appropriate as it is consistent with other diagnosis codes in MDC 23 that include abnormal findings from other nonspecified sites. Specifically, we stated in the proposed rule that our clinical advisors suggested reassignment of diagnosis code R89.93 to MS–DRGs 947 and 948 (Signs and Symptoms with and without MCC, respectively). Therefore, we proposed to reassign ICD–10–CM diagnosis code R93.89 from MDC 5 in MS–DRGs 302 and 303 to MDC 23 in MS–DRGs 947 and 948.

Comment: Commenters supported our proposed reassignment of ICD–10–CM diagnosis code R93.89 from MDC 5 to MDC 23.

Response: We thank the commenters for their support. After consideration of the public comments we received, we are finalizing our proposal to reassign ICD–10–CM diagnosis code R93.89 from MDC 5 in MS–DRGs 302 and 303 to MDC 23 in MS–DRGs 947 and 948.

12. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

a. Adding Procedure Codes and Diagnosis Codes Currently Grouping to MS–DRGs 981 Through 983 or MS–DRGs 987 Through 989 Into MDCs

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned. Based on the results of our review of the claims data from the September 2018 update of the FY 2018 MedPAR file, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19216 through 19224), we proposed to move the cases reporting the procedures and/or principal diagnosis codes described below from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

(1) Gastrointestinal Stromal Tumors With Excision of Stomach and Small Intestine

As discussed in the proposed rule, gastrointestinal stromal tumors (GIST) are tumors of connective tissue, and are currently assigned to MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue). The ICD–10–CM diagnosis codes describing GIST are listed in the table below.

ICD-10-CM Diagnosis Code	Code Description
C49.A0	Gastrointestinal stromal tumor, unspecified site
C49.A1	Gastrointestinal stromal tumor of esophagus
C49.A2	Gastrointestinal stromal tumor of stomach
C49.A3	Gastrointestinal stromal tumor of small intestine
C49.A4	Gastrointestinal stromal tumor of large intestine
C49.A5	Gastrointestinal stromal tumor of rectum
C49.A9	Gastrointestinal stromal tumor of other sites

We stated in the proposed rule that during our review of cases that group to MS–DRGs 981 through 983, we noted that when procedures describing open excision of the stomach or small intestine (ICD–10–PCS procedure codes 0DB60ZZ (Excision of stomach, open approach) and 0DB80ZZ (Excision of small intestine, open approach)) were reported with a principal diagnosis of GIST, the cases group to MS–DRGs 981 through 983. These two excision codes are assigned to several MDCs, as listed in the table below. We stated in the proposed rule that whenever there is a surgical procedure reported on the claim, which is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

DRG Assignments for ICD-10-PCS Procedure Codes 0DB60ZZ and 0DB80ZZ

MDC	DRG	DRG Description
5	264	Other Circulatory O.R. Procedures
6	326-328	Stomach, Esophageal and Duodenal Procedures
10	619-621	Procedures for Obesity
17	820-822	Lymphoma and Leukemia with Major Procedure
17	826-828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major Procedure
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

We first examined cases that reported a principal diagnosis of GIST and ICD–10–PCS procedure code 0DB60ZZ or 0DB80ZZ that currently group to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the table below.

MS-DRGs 981-983: All Cases and Cases with Principal Diagnosis of GIST and Procedure Code 0DB60ZZ or 0DB80ZZ

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--All cases	29,192	11.3	$29,862
MS-DRG 981-Cases with procedure code 0DB60ZZ	46	12.4	$35,723
MS-DRG 981--Cases with procedure code 0DB80ZZ	12	10.8	$28,059
MS-DRG 982--All cases	16,834	6.3	$16,939
MS-DRG 982--Cases with procedure code 0DB60ZZ	104	6.8	$17,442
MS-DRG 982--Cases with procedure code 0DB80ZZ	41	8	$18,961
MS-DRG 983--All cases	3,166	3.3	$11,872
MS-DRG 983---Cases with procedure code 0DB60ZZ	97	4.5	$11,901
MS-DRG 983--Cases with procedure code 0DB80ZZ	19	4.5	$9,971

Of the MDCs to which these gastrointestinal excision procedures are currently assigned, we stated that our clinical advisors indicated that cases with a principal diagnosis of GIST that also report an open gastrointestinal excision procedure code would logically be assigned to MDC 6 (Diseases and Disorders of the Digestive System). Within MDC 6, ICD–10–PCS procedures codes 0DB60ZZ and 0DB80ZZ are currently assigned to MS–DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures with MCC, CC, and without CC/MCC, respectively). To understand how the resources associated with the subset of cases reporting a principal diagnosis of GIST and procedure code 0DB60ZZ or 0DB80ZZ compare to those of cases in MS–DRGs 326, 327, and 328 as a whole, we examined the average costs and average length of stay for all cases in MS–DRGs 326, 327, and 328. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 326--All cases	9,898	13	$36,129
MS-DRG 327--All cases	9,602	6.6	$18,736
MS-DRG 328--All cases	7,634	2.9	$11,555

In the proposed rule, we stated that our clinical advisors reviewed these data and noted that the average length of stay and average costs of this subset of cases were similar to those of cases in MS–DRGs 326, 327, and 328 in MDC 6. To consider whether it was appropriate to move the GIST diagnosis codes from MDC 8, we examined the other procedure codes reported for cases that report a principal diagnosis of GIST and noted that almost all of the O.R. procedures most frequently reported were assigned to MDC 6 rather than MDC 8. Further, we stated that our clinical advisors believe that, given the similarity in resource use between this subset of cases and cases in MS–DRGs 326, 327, and 328, and that the GIST diagnosis codes are gastrointestinal in nature, they would be more appropriately assigned to MS–DRGs 326, 327, and 328 in MDC 6 than their current assignment in MDC 8. Therefore, we proposed to move the GIST diagnosis codes listed above from MDC 8 to MDC 6 within MS–DRGs 326, 327, and 328. We stated that, under our proposal, cases reporting a principal diagnosis of GIST would group to MS–DRGs 326, 327, and 328.

We note that every diagnosis code is assigned to a medical MS–DRG to define the logic of the MS–DRG either as a principal or secondary diagnosis. We also note that, as discussed in section II.F.13.a., certain procedure codes may affect the MS–DRG and result in a surgical MS–DRG assignment. We are clarifying that under this proposal, cases reporting a principal diagnosis of GIST would group to MS–DRGs 326, 327, and 328 only in the presence of a surgical procedure assigned to MS–DRGs 326, 327, and 328; in the absence of a surgical procedure, cases with a principal diagnosis of GIST would group to MS–DRGs 374, 375, and 376 (Digestive Malignancy with MCC, with CC, and without CC/MCC, respectively), which is the medical MS–DRG that contains digestive malignancies, and to which they would be assigned within MDC 6. We refer the reader to the ICD–10 MS–DRG Version 36 Definitions Manual for complete documentation of the logic for case assignment to surgical MS–DRGs 326, 327, and 328 and to medical MS–DRGs 374, 375, and 376 (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*).

Comment: Several commenters supported our proposal. A commenter stated that placing the ICD–10–CM diagnosis codes describing GIST in the proposed DRGs would better reflect the gastrointestinal nature of the underlying GIST disease and the resource use associated with this subset of cases relative to others within the same MDC/DRG groupings.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to move the GIST diagnosis codes listed above from MDC 8 to MDC 6, with the additional clarification that in the absence of a surgical procedure, these cases are assigned to the medical MS–DRGs 374, 375 and 376 under the ICD–10 MS–DRGs Version 37, effective October 1, 2019. As a result, cases reporting a principal diagnosis of GIST and a procedure code that is assigned to MS–DRGs 326, 327, and 328 (such as ICD–10–PCS codes 0DB60ZZ and 0DB80ZZ) will group to MS–DRGs 326, 327, and 328.

(2) Peritoneal Dialysis Catheter Complications

As discussed in the proposed rule, during our review of the cases currently grouping to MS–DRGs 981–983, we noted that cases reporting a principal diagnosis of complications of peritoneal dialysis catheters with procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters group to MS–DRGs 981 through 983. The ICD–10–CM diagnosis codes that describe complications of peritoneal dialysis catheters, listed in the table below, are assigned to MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs). These principal diagnoses are frequently reported with the procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters.

ICD-10-CM Code	Code Description
T85.611A	Breakdown (mechanical) of intraperitoneal dialysis catheter, initial encounter
T85.621A	Displacement of intraperitoneal dialysis catheter, initial encounter
T85.631A	Leakage of intraperitoneal dialysis catheter, initial encounter
T85.691A	Other mechanical complication of intraperitoneal dialysis catheter, initial encounter
T85.71XA	Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter
T85.898A	Other specified complication of other internal prosthetic devices, implants and graft, initial encounter

The procedure codes in the table below describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes and are currently assigned to MDC 6 (Diseases and Disorders of the Digestive System) in MS–DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

ICD-10-PCS Procedure Code	Code Description
0WHG03Z	Insertion of infusion device into peritoneal cavity, open approach
0WHG43Z	Insertion of infusion device into peritoneal cavity, percutaneous endoscopic approach
0WPG03Z	Removal of infusion device from peritoneal cavity, open approach
0WPG43Z	Removal of infusion device from peritoneal cavity, percutaneous endoscopic approach
0WWG03Z	Revision of infusion device in peritoneal cavity, open approach
0WWG0JZ	Revision of synthetic substitute in peritoneal cavity, open approach
0WWG43Z	Revision of infusion device in peritoneal cavity, percutaneous endoscopic approach
0WWG4JZ	Revision of synthetic substitute in peritoneal cavity, percutaneous endoscopic approach

As indicated in the proposed rule, we examined the claims data from the September 2018 update of the FY 2018 MedPAR file for the average costs and length of stay for cases that report a principal diagnosis of complications of peritoneal dialysis catheters with a procedure describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes. Our findings are shown in the table below. We noted in the proposed rule that we did not find any such cases in MS–DRG 983.

MS-DRG 981 through 982: Peritoneal Dialysis Catheter Procedures with Principal Diagnosis of Complications of Peritoneal Dialysis Catheters			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting peritoneal dialysis catheter procedures with a principal diagnosis of complications of peritoneal dialysis catheters	1,603	8.5	$20,676
MS-DRG 982--Cases reporting peritoneal dialysis catheter procedures with a principal diagnosis of complications of peritoneal dialysis catheters	5	8.6	$11,694

We stated that our clinical advisors indicated that, within MDC 21, the procedures describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes most suitably group to MS–DRGs 907, 908, and 909, which contain all procedures for injuries that are not specific to the hand, skin, and wound debridement. To determine how the resources for this subset of cases compared to cases in MS–DRGs 907, 908, and 909 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 907, 908, and 909. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 907--All cases	9,482	9.7	$27,492
MS-DRG 908--All cases	9,305	5.3	$14,597
MS-DRG 909--All cases	3,011	3	$9,587

Further, we stated in the proposed rule that our clinical advisors considered these data and noted that the average costs and length of stay for this subset of cases, most of which group to MS–DRG 981, are lower than the average costs and length of stay for cases of the same severity level in MS–DRGs 907. However, we further stated that our clinical advisors believe that the procedures describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes are clearly related to the principal diagnosis codes describing complications of peritoneal dialysis catheters and, therefore, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add the eight procedure codes listed in the table above that describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes to MDC 21 (Injuries, Poisonings & Toxic Effects of Drugs) in MS–DRGs 907, 908, and 909. As indicated in the proposed rule, under this proposal, cases reporting a principal diagnosis of complications of peritoneal dialysis catheters with a procedure describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes would group to MS–DRGs 907, 908, and 909.

Comment: Commenters supported our proposal to add the eight procedure codes listed in the table above that describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes to MDC 21.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the eight procedure codes listed in the table above that describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes to MDC 21.

(3) Bone Excision With Pressure Ulcers

As discussed in the proposed rule, during our review of the cases that group to MS–DRGs 981 through 983, we noted that when procedures describing excision of the sacrum, pelvic bones, and coccyx (ICD–10–PCS procedure codes 0QB10ZZ (Excision of sacrum, open approach), 0QB20ZZ (Excision of right pelvic bone, open approach), 0QB30ZZ (Excision of left pelvic bone, open approach), and 0QBS0ZZ (Excision of coccyx, open approach)) are reported with a principal diagnosis of pressure ulcers in MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast), the cases group to MS–DRGs 981 through 983. As noted in the proposed rule, the procedures describing excision of the sacrum, pelvic bones, and coccyx group to several MDCs, which are listed in the table below.

MS-DRG Assignments for ICD-10-PCS Codes 0QB10ZZ, 0QB20ZZ, 0QB30ZZ, and 0QBS0ZZ		
MDC	**MS-DRG**	**MS-DRG Description**
3	133-134	Other Ear, Nose, Mouth and Throat O.R. Procedures with CC/MCC and without CC/MCC, respectively
8	515-517	Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively
10	628-630	Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

We stated in the proposed rule that, when cases reporting procedure codes describing excision of the sacrum, pelvic bones, and coccyx report a principal diagnosis from MDC 9, the ICD–10–CM diagnosis codes that are most frequently reported as principal diagnoses are listed below.

ICD-10-CM Diagnosis Code	Code Description
L89.150	Pressure ulcer of sacral region, unstageable
L89.153	Pressure ulcer of sacral region, stage 3
L89.154	Pressure ulcer of sacral region, stage 4
L89.214	Pressure ulcer of right hip, stage 4
L89.224	Pressure ulcer of left hip, stage 4
L89.314	Pressure ulcer of right buttock, stage 4
L89.324	Pressure ulcer of left buttock, stage 4
L89.894	Pressure ulcer of other site, stage 4

As indicated in the proposed rule, we examined the claims data from the September 2018 update of the FY 2018 MedPAR file for the average costs and length of stay for cases that report procedures describing excision of the sacrum, pelvic bones, and coccyx in conjunction with a principal diagnosis of pressure ulcers.

MS-DRGs 981 through 983: Cases Reporting Excision of the Sacrum, Pelvic Bones, and Coccyx Reported with a Principal Diagnosis of Pressure Ulcers

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	394	11.9	$24,398
MS-DRG 982--Cases Reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	477	9.4	$16,464
MS-DRG 983--Cases Reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	38	4.8	$8,519

We stated that our clinical advisors indicated that, given the nature of these procedures, they could not be appropriately assigned to the specific surgical MS–DRGs within MDC 9, which are: Skin graft; skin debridement; mastectomy for malignancy; and breast biopsy, local excision, and other breast procedures. Therefore, we stated in the proposed rule that our clinical advisors believe that these procedures would most suitably group to MS–DRGs 579, 580, and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively), which contain procedures assigned to MDC 9 that do not fit within the specific surgical MS–DRGs in MDC 9. Therefore, as indicated in the proposed rule, we examined the claims data for the average length of stay and average costs for MS–DRGs 579, 580, and 581 in MDC 9. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 579	4,091	9.2	$19,873
MS-DRG 580	10,048	5.2	$11,229
MS-DRG 581	4,364	3	$8,987

We stated that our clinical advisors reviewed these data and noted that, in this subset of cases, most cases group to MS–DRGs 981 and 982 and have greater average length of stay and average costs than those cases of the same severity level in MS–DRGs 579 and 580. We further stated that the smaller number of cases that group to MS–DRG 983 have lower average costs than cases in MS–DRG 581. However, we stated that our clinical advisors believe that the procedure codes describing excision of the sacrum, pelvic bones, and coccyx are clearly related to the principal diagnosis codes describing pressure ulcers, as these procedures would be performed to treat pressure ulcers in the

sacrum, hip, and buttocks regions. Therefore, we stated in the proposed rule that our clinical advisors believe that it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add the ICD–10–PCS procedure codes describing excision of the sacrum, pelvic bones, and coccyx to MDC 9 in MS–DRGs 579, 580, and 581. As noted in the proposed rule, under this proposal, cases reporting a principal diagnosis in MDC 9 (such as pressure ulcers) with a procedure describing excision of the sacrum, pelvic bones, and coccyx would group to MS–DRGs 579, 580, and 581.

Comment: Commenters did not support our proposal to add the ICD–10–PCS procedure codes describing excision of the sacrum, pelvic bones, and coccyx to MDC 9 in MS–DRGs 579, 580, and 581. Commenters stated that it is not appropriate for procedures performed on muscles to be grouped to MS–DRGs for skin and subcutaneous tissues. A commenter stated that once a pressure ulcer extends into the muscle or bone, it is no longer a disease of the skin and subcutaneous tissue, but a disease of the musculoskeletal tissue.

Response: We note that all pressure ulcers, including those that extend to the muscle or bone, are assigned to MDC 9, so that for purposes of DRG assignment, the GROUPER categorizes all pressure ulcers as diseases of the skin and subcutaneous tissue. As noted in the proposed rule, our clinical advisors believe that these procedures would be performed to treat pressure ulcers in the sacrum, hip, and buttocks regions. The surgical MS–DRGs within each MDC that include 'other' procedures are intended to encompass procedures that, while not directly related to the MDC, can and do occur with principal diagnoses in that MDC with sufficient frequency.

Comment: A commenter stated that they recognize that CMS may have selected MDC 9 as it includes all pressure ulcers, but recommended that CMS consider MDC 8 instead. A commenter stated that if the debridement is performed to the level of the soft tissue, then the case should group to MS–DRGs 501, 502, and 503 (Soft tissue procedures with MCC, with CC, and without CC/MCC respectively). The commenter stated that they believe it should be the procedure that determines the MDC and DRG to which the case groups.

Response: As explained in the proposed rule, when conducting the review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, the objective is to identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls, or to move the principal diagnosis codes to the MDC in which the procedure falls. During this analysis, we noted that procedures describing excision of the sacrum, pelvic bones, and coccyx group to MS–DRGs 981 through 983 when reported with a principal diagnosis in MDC 9. If we were to add these procedures to MDC 8, that would not address the matter of these procedures producing assignment to MS–DRGs 981 through 983. Since our clinical advisors believe that these procedures are clearly related to the principal diagnoses assigned to MDC 9, our clinical advisors believe that it is appropriate to add these procedures to MDC 9. We also note that, with the exception of the pre-MDC, assignment to MDCs is driven by the principal diagnosis and not by the procedure. Therefore, it is inconsistent with GROUPER logic to determine the MDC based on the procedure.

After consideration of the public comments we received, we are finalizing our proposal to add the ICD–10–PCS procedure codes describing excision of the sacrum, pelvic bones, and coccyx to MDC 9 in MS–DRGs 579, 580, and 581.

(4) Lower Extremity Muscle and Tendon Excision

As discussed in the proposed rule, during the review of the cases that group to MS–DRGs 981 through 983, we noted that when several ICD–10–PCS procedure codes describing excision of lower extremity muscles and tendons are reported in conjunction with ICD–10–CM diagnosis codes in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), the cases group to MS–DRGs 981 through 983. As indicated in the proposed rule, these ICD–10–PCS procedure codes are listed in the table below, and are assigned to several MS–DRGs, which are also listed below.

ICD-10-PCS Procedure Code	Code Description
0KBN0ZZ	Excision of right hip muscle, open approach
0KBP0ZZ	Excision of left hip muscle, open approach
0KBS0ZZ	Excision of right lower leg muscle, open approach
0KBT0ZZ	Excision of left lower leg muscle, open approach
0KBV0ZZ	Excision of right foot muscle, open approach
0KBW0ZZ	Excision of left foot muscle, open approach
0LBV0ZZ	Excision of right foot tendon, open approach
0LBW0ZZ	Excision of left foot tendon, open approach

MDC	MS-DRG	MS-DRG Description
01	040-042	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively
08	500-502	Soft Tissue Procedures with MCC, with CC, and without CC/MCC, respectively
09	579-581	Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

As noted in the proposed rule, the ICD–10–CM diagnosis codes in MDC 10 that are most frequently reported as the principal diagnosis with a procedure describing excision of lower extremity muscles and tendons are listed in the table below. We stated in the proposed rule that the combination indicates debridement procedures for more complex diabetic ulcers.

ICD-10-CM Diagnosis Code	Code Description
E11.621	Type 2 diabetes mellitus with foot ulcer
E11.69	Type 2 diabetes mellitus with other specified complication
E11.628	Type 2 diabetes mellitus with other skin complications
E11.622	Type 2 diabetes mellitus with other skin ulcer
E10.621	Type 1 diabetes mellitus with foot ulcer

To understand the resource use for the subset of cases reporting procedure codes describing excision of lower extremity muscles and tendons that are currently grouping to MS–DRGs 981 through 983, as indicated in the proposed rule, we examined claims data for the average length of stay and average costs for these cases. Our findings are shown in the table below.

MS-DRGs 981 – 983: Cases Reporting Procedures Describing Excision of Lower Extremity Muscles and Tendons with a Principal Diagnosis in MDC 10

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	125	9.1	$19,031
MS-DRG 982--Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	561	6.2	$12,000
MS-DRG 983--Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	16	4.8	$9,003

We stated in the proposed rule that our clinical advisors examined cases reporting procedures describing excision of lower extremity muscles and tendons with a principal diagnosis in the MS–DRGs within MDC 10 and determined that these cases would most suitably group to MS–DRGs 622, 623, and 624 (Skin Grafts and Wound Debridement for Endocrine, Nutritional and Metabolic Disorders with MCC, with CC, and without CC/MCC, respectively). Therefore, we examined the average length of stay and average costs for cases assigned to MS–DRGs 622, 623, and 624. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 622	1,540	11.7	$25,114
MS-DRG 623	4,849	6.6	$13,490
MS-DRG 624	232	3.7	$7,442

As indicated in the proposed rule, our clinical advisors reviewed these data and noted that most of the cases reporting procedures describing excision of lower extremity muscles and tendons group to MS–DRGs 981 and 982. For these cases, the average length of stay and average costs are lower than those of cases that currently group to MS–DRGs 622 and 623. However, our clinical advisors believe that these procedures are clearly related to the principal diagnoses in MDC 10, as they would be performed to treat skin-related complications of diabetes and, therefore, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add the procedure codes listed previously describing excision of lower extremity muscles and tendons to MDC 10. We stated in the proposed rule that, under our proposal, cases reporting these procedure codes with a principal diagnosis in MDC 10 would group to MS–DRGs 622, 623, and 624.

Comment: A commenter supported our proposal to add the procedure codes describing excision of lower extremity muscles and tendons to MDC 10.

Response: We appreciate the commenter's support.

Comment: Other commenters did not support our proposal to add the procedure codes describing excision of lower extremity muscles and tendons to MDC 10. Commenters stated that muscle and tendon procedures are more resource intensive than skin procedures. A commenter stated that cases involving tendon excisions should group to MS–DRGs 501, 502, and 503 in MDC 8, and that cases involving excisions of muscle group to MS–DRGs 515, 516, and 517 in MDC 8. This commenter stated that the procedure should drive the MDC and DRGs to which the case is assigned.

Response: Our clinical advisors believe that these procedures are clearly related to the principal diagnoses assigned to MDC 10 with which they are most frequently reported (that is, codes describing diabetes with complications), and are therefore appropriately assigned to MDC 10, and specifically to MS–DRGs 622, 623, and 624, which describe wound debridement. We also note that, with the exception of the pre-MDC, assignment to MDCs is driven by the principal diagnosis and not by the procedure. Therefore, it is inconsistent with the GROUPER logic to determine the MDC based on the procedure.

After consideration of the public comments we received, we are finalizing our proposal to add the procedure codes listed previously describing excision of lower extremity muscles and tendons to MDC 10.

(5) Kidney Transplantation Procedures

As discussed in the proposed rule, during our review of the cases that group to MS–DRGs 981 through 983, we noted that when procedures describing transplantation of kidneys (ICD–10–PCS procedure codes 0TY00Z0 (Transplantation of right kidney, allogeneic, open approach) and 0TY10Z0 (Transplantation of left kidney, allogeneic, open approach)) are reported in conjunction with ICD–10–CM diagnosis codes in MDC 5 (Diseases and Disorders of the Circulatory System), the cases group to MS–DRGs 981 through 983. We stated that the ICD–10–CM diagnosis codes in MDC 5 that are reported with the kidney transplantation codes are I13.0 (Hypertensive heart and chronic kidney disease with heart failure and with stage 1 through stage 4 chronic kidney disease) and I13.2 (Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease), which group to MDC 5. Procedure codes describing transplantation of kidneys are assigned to MS–DRG 652 (Kidney Transplant) in MDC 11. As indicated in the proposed rule, we examined claims data to identify the average length of stay and average costs for cases reporting procedure codes describing transplantation of kidneys with a principal diagnosis in MDC 5, which are currently grouping to MS–DRGs 981 through 983. Our findings are shown in the table below. We stated in the proposed rule that we did not find any such cases in MS–DRG 983.

MS-DRGs 981 through 983: Cases Reporting Procedures Describing Transplantation of Kidney with a Principal Diagnosis in MDC 5

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting transplantation of kidney and a principal diagnosis in MDC 5	285	6.8	$25,340
MS-DRG 982--Cases reporting transplantation of kidney and a principal diagnosis in MDC 5	2	3.5	$21,678

We further stated that our clinical advisors examined the MS–DRGs within MDC 5 and indicated that, given the nature of the procedures compared to the specific surgical procedures contained in the other surgical MS–

DRGs in MDC 5, they could not be appropriately assigned to any of the specific surgical MS–DRGs. Therefore, they determined that these cases would most suitably group to MS–DRG 264 (Other Circulatory System O.R. Procedures), which contains a broader range of procedures related to MDC 5 diagnoses. As indicated in the proposed rule, we examined claims data to determine the average length of stay and average costs for cases assigned to MS–DRG 264. We found a total of 10,073 cases, with an average length of stay of 9.3 days and average costs of $22,643.

Our clinical advisors reviewed these data and noted that the average costs for cases reporting transplantation of kidney with a diagnosis from MDC 5 are similar to the average costs of cases in MS–DRG 264 ($22,643 in MS–DRG 264 compared to $25,340 in MS–DRG 981), while the average length of stay is shorter than that of cases in MS–DRG 264 (9.3 days in MS–DRG 264 compared to 6.8 days for this subset of cases in MS–DRG 981). We stated in the proposed rule that our clinical advisors noted that ICD–10–CM diagnosis codes describing hypertensive heart and chronic kidney disease without heart failure (I13.10 (Hypertensive heart and chronic kidney disease without heart failure, with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) and I13.11 (Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease, or end stage renal disease group) group to MS–DRG 652 (Kidney Transplant) in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract)). Our clinical advisors also noted that the counterpart codes describing hypertensive heart and chronic kidney disease with heart failure are as related to the kidney transplantation codes as the codes without heart failure, but because the codes with heart failure group to MDC 5, cases reporting a kidney transplant procedure with a diagnosis code of hypertensive heart and chronic kidney disease with heart failure currently group to MS–DRGs 981 through 983. Therefore, we proposed to add ICD–10–PCS procedure codes 0TY00Z0 and 0TY10Z0 to MS–DRG 264 in MDC 5. We stated in the proposed rule that, under this proposal, cases reporting a principal diagnosis in MDC 5 with a procedure describing kidney transplantation would group to MS–DRG 264 in MDC 5. We also noted in the proposed rule that, because MDC 5 covers the circulatory system and kidney transplants generally group to MDC 11, we invited public comments on whether the procedure codes should instead continue to group to MS–DRGs 981 through 983.

Comment: Commenters opposed our proposal to add ICD–10–PCS procedure codes 0TY00Z0 and 0TY10Z0 to MS–DRG 264 in MDC 5. A commenter stated that the proposed relative weight for MS–DRG 652, where most kidney transplant procedures are grouped, is 3.384, while the proposed weight for MS–DRG 264 is 3.2357. Some commenters stated that this proposal would reduce the reimbursement for kidney transplantation of recipients with serious cardiac conditions by 33 percent. Commenters stated that cases that involve both chronic kidney disease and heart failure should not be paid less than cases that involve patients without serious comorbid conditions. Commenters suggested that CMS instead assign these cases to MDC 652, noting that the length of stay for the vast majority of kidney transplant cases involving serious cardiac conditions approximates the length of stay for kidney transplants in general. Commenters also stated that assigning all kidney transplant cases to the same MS–DRG simplifies collection of cost data, stating that when cases are split among several MS–DRG ''families'' it complicates the analysis required to determine whether additional severity-based MS–DRGs would be appropriate. Commenters stated that if it was not possible to assign these cases to MS–DRG 652, then the cases should remain in MS–DRGs 981 through 983. Commenters disagreed with assigning these cases to a circulatory DRG because the procedure is performed on the urinary system.

Response: We appreciate the comments and concerns raised on our proposal. Our clinical advisors generally believe that it is preferable to assign these cases to a discrete MS–DRG within the GROUPER rather than allowing them to continue to group to MS–DRGs 981 through 983, which do not contain a group of clinically coherent principal diagnoses, but instead consist of cases from various MDCs that are unrelated to one another. However, we believe it would be appropriate to take additional time to review the concerns raised by commenters consistent with the President's recent Executive Order on Advancing American Kidney Health (see *https://www.whitehouse.gov/presidential-actions/executive-order-advancing-american-kidney-health/*). Therefore, after consideration of public comments, we are not finalizing our proposal to add ICD–10–PCS procedure codes 0TY00Z0 and 0TY10Z0 to MS–DRG 264 in MDC 5. Accordingly, cases reporting a principal diagnosis in MDC 5 with a procedure describing kidney transplantation (*i.e.,* procedure code 0TY00Z0 or 0TY10Z0) will continue to group to MS–DRGs 981 through 983 under the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

(6) Insertion of Feeding Device

As discussed in the proposed rule, during our review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure code 0DH60UZ (Insertion of feeding device into stomach, open approach) is reported with ICD–10–CM diagnosis codes assigned to MDC 1 (Diseases and Disorders of the Nervous System) or MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), the cases group to MS–DRGs 981 through 983. ICD–10–PCS procedure code 0DH60UZ is currently assigned to MDC 6 (Diseases and Disorders of the Digestive System) in MS–DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures) and MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries). We stated in the proposed rule that we also noticed that: (1) When ICD–10–PCS procedure code 0DH60UZ is reported with a principal diagnosis in MDC 1, the ICD–10–CM diagnosis codes reported with this procedure code describe cerebral infarctions of various etiology and anatomic locations and resulting complications; and (2) when ICD–10–PCS procedure code 0DH60UZ is reported with a principal diagnosis in MDC 10, the ICD–10–CM diagnosis codes reported with this procedure code pertain to dehydration, failure to thrive, and various forms of malnutrition.

As indicated in the proposed rule, we examined claims data to identify the average length of stay and average costs for cases in MS–DRGs 981 through 983 reporting ICD–10–PCS procedure code 0DH60UZ in conjunction with a principal diagnosis from MDC 1 or MDC 10. Our findings are shown in the table below.

MS-DRGs 981 through 983: Cases Reporting Procedure Code 0DH60UZ with a Principal Diagnosis in MDC 1 or MDC 10			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 981--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	115	19.3	$40,598
MS-DRG 982--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	43	13.2	$25,042
MS-DRG 983--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	4	14.3	$26,954
MS-DRG 981--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	47	13.4	$24,690
MS-DRG 982--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	20	7.2	$12,792
MS-DRG 983--Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	5	5.0	$8,608

In the proposed rule we stated that our clinical advisors determined that the feeding tube procedure was related to specific diagnoses within MDC 1 and MDC 10 and, therefore, could be assigned to both MDCs. Therefore, they reviewed the MS–DRGs within MDC 1 and MDC 10. We stated that they determined that the most suitable MS–DRG assignment within MDC 1 would be MS–DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively), which contain procedures assigned to MDC 1 that describe insertion of devices into anatomical areas that are not part of the nervous system. Our clinical advisors determined that the most suitable MS–DRG assignment within MDC 10 would be MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), which contain the most clinically similar procedures assigned to MDC 10, such as those describing insertion of infusion pump into subcutaneous tissue and fascia. Therefore, we examined claims data to identify the average length of stay and average costs for cases assigned to MDC 1 in MS–DRGs 040, 041, and 042 and MDC 10 in MS–DRGs 628, 629, and 630. Our findings are shown in the tables below.

MS-DRGs in MDC 1	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 040	4,211	10.2	$27,096
MS-DRG 041	6,153	5.1	$16,917
MS-DRG 042	2,249	3.0	$13,365

MS-DRGs in MDC 10	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 628	3,004	9.9	$25,472
MS-DRG 629	5,435	7.2	$16,391
MS-DRG 630	237	3.2	$10,659

Our clinical advisors reviewed these data and noted that the average length of stay and average costs for the subset of cases reporting ICD–10–PCS procedure code 0DH60UZ with a principal diagnosis assigned to MDC 1 are higher than those cases in MS–DRGs 040, 041, and 042. For example, the cases reporting ICD–10–PCS procedure code 0DH60UZ and a principal diagnosis in MDC 1 that currently group to MS–DRG 981 have an average length of stay of 19.3 days and average costs of $40,598, while the cases in MS–DRG 040 have an average length of stay of 10.2 days and average costs of $27,096. We stated in the proposed rule that our clinical advisors noted that the average length of stay and average costs for the subset of cases reporting ICD–10–PCS procedure code 0DH60UZ with a principal diagnosis assigned to MDC 10 are more closely aligned with those cases in MS–DRGs 628, 629, and 630. We stated that in both cases, our clinical advisors believe that the insertion of feeding device is clearly related to the principal diagnoses in MDC 1 and MDC 10 and, therefore, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add ICD–10–PCS procedure code 0DH60UZ to MDC 1 and MDC 10. We stated in the proposed rule that, under this proposal, cases reporting procedure code 0DH60UZ with a principal diagnosis in MDC 1 would group to MS–DRGs 040, 041, and 042, while cases reporting ICD–10–PCS procedure code 0DH60UZ with a principal diagnosis in MDC 10 would group to MS–DRGs 628, 629, and 630.

Comment: Commenters supported our proposal to add ICD–10–PCS procedure code 0DH60UZ to MDC 1 and MDC 10.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure code 0DH60UZ to MDC 1 and MDC 10.

(7) Basilic Vein Reposition in Chronic Kidney Disease

As discussed in the proposed rule, during our review of the cases that group to MS–DRGs 981 through 983, we noted that when procedures codes describing reposition of basilic vein (ICD–10–PCS procedure codes 05SB0ZZ (Reposition right basilic vein, open approach), 05SB3ZZ (Reposition right basilic vein, percutaneous approach), 05SC0ZZ (Reposition left basilic vein, open approach), and 05SC3ZZ (Reposition left basilic vein, percutaneous approach)) are reported with a principal diagnosis in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) (typically describing chronic kidney disease), the cases group to MS–DRGs 981 through 983. We stated in the proposed rule that this code combination suggests a revision of an arterio-venous fistula in a patient on chronic hemodialysis. As indicated in the proposed rule, we examined claims data to identify the average length of stay and average costs for cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11, which are currently grouping to MS–DRGs 981 through 983. Our findings are shown in the table below.

MS-DRGs 981 – 983: Cases Reporting Procedures Describing Reposition of Basilic Vein with Principal Diagnosis in MDC 11

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	48	4.6	$12,232
MS-DRG 982--Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	10	6.9	$18,481
MS-DRG 983--Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	1	3.0	$3,552

We stated in the proposed rule that our clinical advisors examined claims data for cases in the MS–DRGs within MDC 11 and determined that cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11 would most suitably group to MS–DRGs 673, 674, and 675 (Other Kidney and Urinary Tract Procedures with MCC, with CC, and without CC/MCC, respectively), to which MDC 11 procedures describing reposition of veins (other than renal veins) are assigned. Therefore, we examined claims data to identify the average length of stay and average costs for cases assigned to MS–DRGs 673, 674, and 675. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 673	10,542	10.8	$25,842
MS-DRG 674	6,167	7.4	$17,685
MS-DRG 675	437	3.9	$11,858

As indicated in the proposed rule, our clinical advisors reviewed these data and noted that the average length of stay and average costs for cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11 with an MCC are significantly lower than for those cases in MS–DRG 673. The average length of stay and average costs are similar for those cases with a CC, while the single case without a CC or MCC had significantly lower costs than the average costs of cases in MS–DRG 675. However, we stated that our clinical advisors believe that when the procedures describing reposition of basilic vein are reported with a principal diagnosis describing chronic kidney disease, the procedure is likely related to arteriovenous fistulas for dialysis associated with the chronic kidney disease. Therefore, we stated in the proposed rule that our clinical advisors believe that it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add ICD–10–PCS procedures codes 05SB0ZZ, 05SB3ZZ, 05SC0ZZ, and 05SC3ZZ to MDC 11. We stated that, under our proposal, cases reporting procedure codes describing reposition of basilic vein with a principal diagnosis in MDC 11 would group to MS–DRGs 673, 674, and 675.

Comment: Commenters supported our proposal to add ICD–10–PCS procedures codes 05SB0ZZ, 05SB3ZZ, 05SC0ZZ, and 05SC3ZZ to MDC 11.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedures codes 05SB0ZZ, 05SB3ZZ, 05SC0ZZ, and 05SC3ZZ to MDC 11.

(8) Colon Resection With Fistula

As discussed in the proposed rule, during our review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure code 0DTN0ZZ (Resection of sigmoid colon, open approach) is reported with a principal diagnosis in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract), the cases group to MS–DRGs 981 through 983. We stated that the principal diagnosis most frequently reported with ICD–10–PCS procedure code 0DTN0ZZ in MDC 11 is ICD–10–CM code N32.1 (Vesicointestinal fistula). As indicated in the proposed rule, ICD–10–PCS procedure code 0DTN0ZZ currently groups to several MDCs, which are listed in the table below.

MS-DRG Assignments for ICD-10-PCS Procedure Code 0DTN0ZZ		
MDC	**MS-DRG**	**MS-DRG Description**
6	329-331	Major Small and Large Bowel Procedures
17	820-822	Lymphoma and Leukemia with Major Procedure
17	826-828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major Procedure
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

As we stated in the proposed rule, we examined claims data to identify the average length of stay and average costs for cases reporting procedure code 0DTN0ZZ with a principal diagnosis in MDC 11, which are currently grouping to MS–DRGs 981 through 983. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	27	15.81	$44,743
MS-DRG 982--Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	33	8.48	$20,105
MS-DRG 983--Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	5	3.60	$12,351

Our clinical advisors examined the MS–DRGs within MDC 11 and determined that the cases reporting procedure code 0DTN0ZZ with a principal diagnosis in MDC 11 would most suitably group to MS–DRGs 673, 674, and 675, which contain procedures performed on structures other than kidney and urinary tract anatomy. We note that the claims data describing the average length of stay and average costs for cases in these MS–DRGs are included in a table earlier in this section. Because vesicointestinal fistulas involve both the bladder and the bowel, some procedures in both MDC 6 (Diseases and Disorders of the Digestive System) and MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) would be expected to be related to a principal diagnosis of vesicointestinal fistula (ICD–10–CM code N32.1). We stated in the proposed rule that our clinical advisors observed that procedure code 0DTN0ZZ is the second most common procedure reported in conjunction with a principal diagnosis of code N32.1, after ICD–10–PCS procedure code 0TQB0ZZ (Repair bladder, open approach), which is assigned to both MDC 6 and MDC 11. Our clinical advisors reviewed the data and noted that the average length of stay and average costs for this subset of cases are generally higher for this subset of cases than for cases in MS–DRGs 673, 674, and 675. However, we stated that our clinical advisors believe that when ICD–10–PCS procedure code 0DTN0ZZ is reported with a principal diagnosis in MDC 11 (typically vesicointestinal fistula), the procedure is related to the principal diagnosis. Therefore, we proposed to add ICD–10–PCS procedure code 0DTN0ZZ to MDC 11. We stated in the proposed rule that, under our proposal, cases reporting procedure code 0DTN0ZZ with a principal diagnosis of vesicointestinal fistula (diagnosis code N32.1) in MDC 11 would group to MS–DRGs 673, 674, and 675.

Comment: Some commenters supported our proposal to add ICD–10–PCS procedure code 0DTN0ZZ to MDC 11.

Response: We appreciate the commenters' support.

Comment: A commenter opposed our proposal to add ICD–10–PCS procedure code 0DTN0ZZ to MDC 11 in MS–DRGs 673, 674, and 675 because these MS–DRGs does not account for the organ in which the disease originates. This commenter stated that the disease process that causes the formation of a vesicointestinal fistula generally do not originate in the bladder. This commenter recommended that CMS instead consider assigning ICD–10–PCS procedure code 0DTN0ZZ to MS–DRGs 329, 330, and 331 (Major small and large bowel procedures with MCC, with CC, and without CC/MCC, respectively).

Response: As we stated in the proposed rule, ICD–10–PCS procedure code 0DTN0ZZ is already assigned to MDC 6 in MS–DRGs 329, 330, and 331. As described above, when conducting the review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, the objective is to identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls, or to move the principal diagnosis codes to the MDC in which the procedure falls. During this analysis, we noted that ICD–10–PCS procedure code 0DTN0ZZ groups to MS–DRGs 981 through 983 when reported with a principal diagnosis in MDC 11. Given that the only way to address this grouping issue is to move or add the diagnosis code and procedure codes, in this case we proposed to add ICD–10–PCS procedure code 0DTN0ZZ to MDC 11. While the disease process that causes the formation of a vesicointestinal fistula may not originate in the bladder, our clinical advisors believe that when ICD–10–PCS procedure code 0DTN0ZZ is reported in conjunction with the vesicointestinal fistula, it is related to the diagnosis.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure code 0DTN0ZZ to MDC 11.

b. Reassignment of Procedures Among MS–DRGs 981 Through 983 and 987 Through 989

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS–DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS–DRGs to the other group of MS–DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS–DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

Based on the results of our review of claims data in the September 2018 update of the FY 2018 MedPAR file, we did not propose to change the current structure of MS–DRGs 981 through 983 and MS–DRGs 987 through 989.

We did not receive any public comments on our maintaining the current structure of MS–DRGs 981 through 983 and MS–DRGs 987 through 989. Therefore, we are finalizing the

current structure of MS–DRGs 981 through 983 and MS–DRGs 987 through 989 without modification.

c. Additions for Diagnosis and Procedure Codes to MDCs

As we did in the FY 2020 IPPS/LTCH PPS proposed rule, below we summarize the requests we received to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned.

(1) Stage 3 Pressure Ulcers of the Hip

We received a request to reassign cases for a stage 3 pressure ulcer of the left hip when reported with procedures involving excision of pelvic bone or transfer of hip muscle from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRG 579 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC) in MDC 9. ICD–10–CM diagnosis code L89.223 (Pressure ulcer left hip, stage 3) is used to report this condition and is currently assigned to MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast). We refer readers to section II.F.12.a. of the preamble of this final rule, where we address ICD–10–PCS procedure code 0QB30ZZ (Excision of left pelvic bone, open approach), which was reviewed as part of our ongoing analysis of the unrelated MS–DRGs and which we proposed, and are finalizing, to add to MS–DRGs 579, 580, and 581 in MDC 5. (While the requestor only referred to base MS–DRG 579, in the proposed rule we stated that we believe it is appropriate to assign the cases to MS–DRGs 579, 580, and 581 by severity level.) We stated that ICD–10–PCS procedure codes 0KXP0ZZ (Transfer left hip muscle, open approach) and 0KXN0ZZ (Transfer right hip muscle, open approach) may be reported to describe transfer of hip muscle procedures and are currently assigned to MDC 1 (Diseases and Disorders of the Nervous System) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue). We included ICD–10–PCS procedure code 0KXN0ZZ in our analysis because it describes the identical procedure on the right side.

Our analysis of this grouping issue confirmed that, when a stage 3 pressure ulcer of the left hip (ICD–10–CM diagnosis code L89.223) is reported as a principal diagnosis with ICD–10–PCS procedure code 0KXP0ZZ or 0KXN0ZZ, these cases group to MS–DRGs 981, 982, and 983. The reason for this grouping is because whenever there is a surgical procedure reported on a claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures.'' In the example provided, because ICD–10–CM diagnosis code L89.223 describing a stage 3 pressure ulcer of left hip is classified to MDC 9 and because ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ are classified to MDC 1 (Diseases and Disorders of the Nervous System) in MS–DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) in MS–DRGs 500, 501, and 502 (Soft Tissue Procedures with MCC, with CC, and without CC/MCC, respectively), the GROUPER logic assigns this case to the ''unrelated operating room procedures'' set of MS–DRGs.

For our review of this grouping issue and the request to have procedure code 0KXP0ZZ added to MDC 9, in the proposed rule we examined claims data for cases reporting procedure code 0KXP0ZZ or 0KXN0ZZ in conjunction with a diagnosis code that typically groups to MDC 9. Our findings are shown in the table below.

MS-DRGs 981 through 983: Cases with Hip Muscle Transfer and Principal Diagnosis in MDC 9

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	72	12.6	$25,023
MS-DRG 982--Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	130	10.5	$17,955
MS-DRG 983--Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	16	6.5	$13,196

As indicated in the proposed rule and earlier, the requestor suggested that we move ICD–10–PCS procedure code 0KXP0ZZ to MS–DRG 579. However, we stated that our clinical advisors believe that, within MDC 9, these procedure codes are more clinically aligned with the procedure codes assigned to MS–DRGs 573, 574, and 575 (Skin Graft for Skin Ulcer or Cellulitis with MCC, with CC and without CC/MCC, respectively), which are more specific to the care of stage 3, 4 and unstageable pressure ulcers than MS–DRGs 579, 580, and 581. Therefore, as indicated in the proposed rule, we examined claims data to identify the average length of stay and average costs for cases assigned to MS–DRGs 573, 574, and 575. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 573	548	15.4	$34,549
MS-DRG 574	1,254	9.8	$21,251
MS-DRG 575	238	5.4	$12,006

We noted in the proposed rule that the average costs for cases in MS–DRGs 573 and 574 are higher than the average costs of the subset of cases with the same severity reporting a hip muscle transfer and a principal diagnosis in MDC 9, while the average costs of those cases in MS–DRG 575 are similar to the average costs of those cases that are currently grouping to MS–DRG 983. However, we stated in the proposed rule that our clinical advisors believe that the cases of hip muscle transfer represent a distinct, recognizable clinical group similar to those cases in MS–DRGs 573, 574, and 575, and that the procedures are clearly related to the principal diagnosis codes. Therefore, we stated that they believe that it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ to MDC 9. We stated in the proposed rule that, under our proposal, cases reporting ICD–10–PCS procedure code 0KXP0ZZ or 0KXN0ZZ with a principal diagnosis in MDC 9 would group to MS–DRGs 573, 574, and 575. We are clarifying that under our proposal, cases reporting ICD–10–PCS codes 0KXP0ZZ or 0KXN0ZZ would also group to MS–DRGs 576, 577, and 578 in the absence of a principal diagnosis of skin ulcer or cellulitis. The reason for this additional assignment is that under the GROUPER logic, all of the procedures assigned to MS–DRGs 573, 574, and 575 are also assigned to MS–DRGs 576, 577, and 578; the presence or absence of a principal diagnosis of skin ulcer or cellulitis determines whether the case groups to MS–DRGs 573, 574, and 575 or to MS–DRGs 576, 577, and 578. We refer the reader to the ICD–10 MS–DRG Version 36 Definitions Manual for complete documentation of the logic for case assignment to MS–DRGs 573, 574, 575, 576, 577, and 578 (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*).

Comment: A commenter supported our proposal to add ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ to MDC 9.

Response: We appreciate the commenter's support.

Comment: Other commenters did not support our proposal to add ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ to MDC 9. The commenters stated that it is not appropriate for procedures performed on muscles to group to MS–DRGs for skin and subcutaneous tissues. These commenters also stated that transfer procedures are more clinically significant and resource intensive than grafts to the skin and subcutaneous tissue.

Response: Our clinical advisors agree that procedures performed on muscles would not generally be expected to group to MS–DRGs for skin and subcutaneous tissues. However, while they believe that principal diagnoses from MDC 9 would not be the principal diagnoses most often reported with ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ, the claims data indicate that there are cases reporting a principal diagnosis assigned to MDC 9, as identified by the requestor. Our clinical advisors continue to believe that these cases involving hip muscle transfer represent a distinct, recognizable clinical group, which is similar to those cases in MS–DRGs 573, 574, and 575, and that the procedures are clearly related to the principal diagnosis codes. With respect to the comment that transfer procedures are more clinically significant and resource intensive than grafts to the skin and subcutaneous tissue, our clinical advisors believe that the transfer procedures are sufficiently similar to procedures involving grafts to the skin and subcutaneous tissue, particularly given that a review of the data presented in the proposed rule and described previously in this section demonstrate that the average costs for MS–DRGs 573, 574, and 575 are generally greater than those of the subset of cases involving hip muscle transfer with a diagnosis in MDC 9. Most of the cases that currently group to MS–DRGs 981 through 983 occur in MS–DRGs 981 and 982, which have average costs of $25,023 and $17,955 respectively, while the MS–DRGs with the same severity level, MS–DRGs 573 and 574, have average costs of $34,549 and $21,251, respectively. We also believe it is preferable to assign these cases to a discrete MS–DRG within the GROUPER logic rather than allowing them to continue to group to MS–DRGs 981 through 983, which do not contain a group of clinically coherent principal diagnoses. MS–DRGs 573, 574, 575, 576, 577, and 578, which are specific to the care of conditions that necessitate skin grafts, represent a group of clinically coherent principal diagnoses to which procedures describing transfer of muscles are more appropriately assigned than those in MS–DRGs 981 through 983.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure codes 0KXP0ZZ and 0KXN0ZZ to MDC 9.

(2) Gastrointestinal Stromal Tumor

We received a request to reassign cases for gastrointestinal stromal tumor of the stomach when reported with a procedure describing laparoscopic bypass of the stomach to jejunum from MS–DRGs 981, 982, and 983 to MS–DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures with MCC, with CC, and without CC/MCC, respectively) by adding ICD–10–PCS procedure code 0D164ZA (Bypass stomach to jejunum, percutaneous endoscopic approach) to MDC 6. ICD–10–CM diagnosis code C49.A2 (Gastrointestinal stromal tumor of stomach) is used to report this condition and is currently assigned to MDC 8. ICD–10–PCS procedure code 0D164ZA is used to report the stomach bypass procedure and is currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System), MDC 6 (Diseases and Disorders of the Digestive System), MDC 7 (Diseases and Disorders of the Hepatobiliary System and Pancreas), MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), and MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms). We refer readers to section II.F.12.a. of the preamble of this final rule where we discuss our finalized policy to move the listed diagnosis

codes describing gastrointestinal stromal tumors, including ICD–10–CM diagnosis code C49.A2, into MDC 6. Therefore, in the proposed rule, we stated that this proposal, if finalized, would address the cases grouping to MS–DRGs 981 through 983 by instead moving the diagnosis codes to MDC 6, which would result in the diagnosis code and the procedure code referenced by the requestor grouping to the same MDC.

We did not receive comments on our proposal to address this grouping issue by moving the diagnosis codes to MDC 6 rather than moving the procedure codes as requested. We refer the reader to section II.F.12.a. of this final rule for the comments regarding our proposal to move the GIST diagnosis codes to MDC 6, as well as our finalization of this proposal.

(3) Finger Cellulitis

We received a request to reassign cases for cellulitis of the right finger when reported with a procedure describing open excision of the right finger phalanx from MS–DRGs 981, 982, and 983 to MS–DRGs 579, 580, and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively). In the proposed rule, we stated that, currently, ICD–10–CM diagnosis code L03.011 (Cellulitis of right finger) is used to report this condition and is currently assigned to MDC 09 in MS–DRGs 573, 574, and 575 (Skin Graft for Skin Ulcer or Cellulitis with MCC, CC, and without CC/MCC, respectively), 576, 577, and 578 (Skin Graft except for Skin Ulcer or Cellulitis with MCC, CC, and without CC/MCC, respectively), and 602 and 603 (Cellulitis with MCC and without MCC, respectively). ICD–10–PCS procedure code 0PBT0ZZ (Excision of right finger phalanx, open approach) is used to identify the excision procedure, and is currently assigned to MDC 03 (Diseases and Disorders of the Ear, Nose, Mouth and Throat) in MS–DRGs 133 and 134 (Other Ear, Nose, Mouth and Throat O.R. Procedures with CC/MCC, and without CC/MCC, respectively); MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) in MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively); MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) in MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively); MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively); and MDC 24 (Multiple Significant Trauma) in MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively).

Our analysis of this grouping issue confirmed that when a procedure such as open excision of right finger phalanx (ICD–10–PCS procedure code 0PBT0ZZ) is reported with a principal diagnosis from MDC 9, such as cellulitis of the right finger (ICD–10–CM diagnosis code L03.011), these cases group to MS–DRGs 981, 982, and 983. As we stated in the proposed rule, during our review of this issue, we also examined claims data for similar procedures describing excision of phalanges (which are listed in the table below) and noted the same pattern. We further noted that the ICD–10–PCS procedure codes describing excision of phalanx procedures with the diagnostic qualifier ''X'', which are used to report these procedures when performed for diagnostic purposes, are already assigned to MS–DRGs 579, 580, and 581 (to which the requestor suggested these cases group). We stated in the proposed rule that our clinical advisors also believe that procedures describing resection of phalanges should be assigned to the same MS–DRG as the excisions, because the resection procedures would also group to MS–DRGs 981, 982, and 983 when reported with a principal diagnosis from MDC 9.

ICD-10-PCS Procedure Code	Code Description
0PBR0ZZ	Excision of right thumb phalanx, open approach
0PBR3ZZ	Excision of right thumb phalanx, percutaneous approach
0PBR4ZZ	Excision of right thumb phalanx, percutaneous endoscopic approach
0PBS0ZZ	Excision of left thumb phalanx, open approach
0PBS3ZZ	Excision of left thumb phalanx, percutaneous approach
0PBS4ZZ	Excision of left thumb phalanx, percutaneous endoscopic approach
0PBT0ZZ	Excision of right finger phalanx, open approach
0PBT3ZZ	Excision of right finger phalanx, percutaneous approach
0PBT4ZZ	Excision of right finger phalanx, percutaneous endoscopic approach
0PBV0ZZ	Excision of left finger phalanx, open approach
0PBV3ZZ	Excision of left finger phalanx, percutaneous approach
0PBV4ZZ	Excision of left finger phalanx, percutaneous endoscopic approach
0PTR0ZZ	Resection of right thumb phalanx, open approach
0PTS0ZZ	Resection of left thumb phalanx, open approach
0PTT0ZZ	Resection of right finger phalanx, open approach
0PTV0ZZ	Resection of left finger phalanx, open approach
0RTW0ZZ	Resection of right finger phalangeal joint, open approach
0RTX0ZZ	Resection of left finger phalangeal joint, open approach

As noted in the previous discussion and the proposed rule, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

We examined the claims data for the three codes describing cellulitis of the finger (ICD–10–CM diagnosis codes L03.011 (Cellulitis of the right finger), L03.012 (Cellulitis of left finger), and L03.019 (Cellulitis of unspecified finger)) to identify the average length of stay and average costs for cases reporting a principal diagnosis of cellulitis of the finger in conjunction with the excision of phalanx procedures listed in the table above. We also noted in the proposed rule that there were no cases reporting a principal diagnosis of cellulitis of the finger in conjunction with the resection of phalanx procedures listed in the table above.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981-- Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	2	3.5	$7,934
MS-DRG 982--Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	11	4.2	$7,244
MS-DRG 983--Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	4	4.8	$8,058

We also examined the claims data to identify the average length of stay and average costs for all cases in MS–DRGs 579, 580, and 581. Our findings are shown in the table in section II.F.12.A.3.of the preamble of this final rule.

We stated in the proposed rule that while our clinical advisors noted that the average length of stay and average costs for cases in MS–DRGs 579, 580, and 581 are generally higher than the average length of stay and average costs for the subset of cases reporting a principal diagnosis of cellulitis of the finger and a procedure describing excision of phalanx, they believe that the procedures are clearly related to the principal diagnosis codes and, therefore, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses, particularly given that procedures describing excision of phalanx with the diagnostic qualifier ''X'' are already assigned to these MS–DRGs. In addition, we stated that our clinical advisors believe it is clinically appropriate for the procedures describing resection of phalanx to be assigned to MS–DRGs 579, 580, and 581 as well. Therefore, we proposed to add the procedure codes describing excision and resection of phalanx listed above to MS–DRGs 579, 580, and 581. We stated that, under this proposal, cases reporting one of the excision or resection procedures listed in the table above in conjunction with a principal diagnosis from MDC 9 would group to MS–DRGs 579, 580, and 581.

Comment: A commenter supported our proposal to add the procedure codes describing excision and resection of phalanx listed above to MS–DRGs 579, 580, and 581 in MDC 9.

Response: We appreciate the commenter's support.

Comment: Other commenters did not support our proposal to add the procedure codes describing excision and resection of phalanx listed above to MS–DRGs 579, 580, and 581 in MDC 9. Commenters stated that it does not appear clinically appropriate for bone procedures to be grouped to skin and subcutaneous tissue MS–DRGs, and that the small number of cases suggests that this may be a coding issue.

Response: We note that MS–DRGs 579, 580, and 581 already contain many bone-related procedures, such as those beginning with 0PD, which describe extraction of bone. In addition, our clinical advisors believe that it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses, particularly given that procedures describing excision of phalanx with the diagnostic qualifier ''X'' are already assigned to these MS–DRGs.

After consideration of the public comments we received, we are finalizing our proposal to add procedure codes describing excision and resection of phalanx listed above to MS–DRGs 579, 580, and 581 in MDC 9.

(4) Multiple Trauma With Internal Fixation of Joints

We received a request to reassign cases involving multiple significant trauma with internal fixation of joints from MS–DRGs 981, 982, and 983 to MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively). The requestor provided an example of several ICD–10–CM diagnosis codes that together described multiple significant trauma in conjunction with ICD–10–PCS procedure codes in tables 0SH and 0RH that describe internal fixation of joints. The requestor provided several suggestions to address this assignment, including: adding all ICD–10–PCS procedure codes in MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) with the exception of codes that group to MS–DRG 956 (Limb Reattachment, Hip and Femur Procedures for Multiple Significant Trauma) to MS–DRGs 957, 958, and 959; adding codes within the ICD–10–PCS tables 0SH and 0RH to MDC 24; and adding ICD–10–PCS procedure codes from all MDCs except those that currently group to MS–DRG 955 (Craniotomy for Multiple Significant Trauma) or MS–DRG 956 (Limb Reattachment, Hip and Femur Procedures for Multiple Significant Trauma) to MS–DRGs 957, 958, and 959.

We stated in the proposed rule that, while we understand the requestor's concern about these multiple significant trauma cases, we believe any potential reassignment of these cases requires significant analysis. We further stated that, similar to our analysis of MDC 14 (initially discussed at 81 FR 56854), there are multiple logic lists in MDC 24 that would need to be reviewed. For example, to satisfy the logic for multiple significant trauma, the logic requires a diagnosis code from the significant trauma principal diagnosis list and two

or more significant trauma diagnoses from different body sites. The significant trauma logic lists for the other body sites (which include head, chest, abdominal, kidney, urinary system, pelvis or spine, upper limb, and lower limb) allow the extensive list of diagnosis codes included in the logic to be reported as a principal or secondary diagnosis. The analysis of the reporting of all the codes as a principal and/or secondary diagnosis within MDC 24, combined with the analysis of all of the ICD–10–PCS procedure codes within MDC 8, is anticipated to be a multi-year effort. Therefore, we stated that we plan to consider this issue for future rulemaking as part of our ongoing analysis of the unrelated procedure MS–DRGs.

(5) Totally Implantable Vascular Access Devices

We received a request to reassign cases for insertion of totally implantable vascular access devices (TIVADs) listed in the table below when reported with principal diagnoses in MDCs other than MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) from MS–DRGs 981 through 983 to a surgical MS–DRG within the appropriate MDC based on the principal diagnosis. The requestor noted that the insertion of TIVAD procedures are newly designated as O.R. procedures, effective October 1, 2018, and are assigned to MDCs 9 and 11. The requestor stated that TIVADs can be placed for a variety of purposes and are used to treat a wide range of malignancies at various sites and, therefore, would likely have a relationship to the principal diagnosis within any MDC. The requestor suggested that procedures describing the insertion of TIVADs group to surgical MS–DRGs within every MDC (other than MDCs 2, 20, and 22, which do not contain surgical MS–DRGs). The requestor further stated that the surgical hierarchy should assign more significant O.R. procedures within each MDC to a higher position than procedures describing the insertion of TIVADs because these procedures consume less O.R. resources than more invasive procedures.

ICD-PCS Code	Code Description
0JH60WZ	Insertion of totally implantable vascular access device into chest subcutaneous tissue and fascia, open approach
0JH80WZ	Insertion of totally implantable vascular access device into abdomen subcutaneous tissue and fascia, open approach
0JHD0WZ	Insertion of totally implantable vascular access device into right upper arm subcutaneous tissue and fascia, open approach
0JHF0WZ	Insertion of totally implantable vascular access device into left upper arm subcutaneous tissue and fascia, open approach
0JHG0WZ	Insertion of totally implantable vascular access device into right lower arm subcutaneous tissue and fascia, open approach
0JHH0WZ	Insertion of totally implantable vascular access device into left lower arm subcutaneous tissue and fascia, open approach
0JHL0WZ	Insertion of totally implantable vascular access device into right upper leg subcutaneous tissue and fascia, open approach
0JHM0WZ	Insertion of totally implantable vascular access device into left upper leg subcutaneous tissue and fascia, open approach
0JHN0WZ	Insertion of totally implantable vascular access device into right lower leg subcutaneous tissue and fascia, open approach
0JHP0WZ	Insertion of totally implantable vascular access device into left lower leg subcutaneous tissue and fascia, open approach

We stated in the proposed rule that, while we agreed that TIVAD procedures may be performed in connection with a variety of principal diagnoses, we note that because these procedures are newly designated as O.R. procedures effective October 1, 2018, we do not yet have sufficient data to analyze this request. We further stated that we plan to consider this issue in future rulemaking as part of our ongoing analysis of the unrelated procedure MS–DRGs.

(6) Gastric Band Procedure Complications or Infections

We received a request to reassign cases for infection or complications due to gastric band procedures when reported with a procedure describing revision of or removal of extraluminal device in/from the stomach from MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively) to MS–DRGs 326, 327, and 328 (Stomach, Esophageal, and Duodenal Procedures with MCC, with CC, and without CC/MCC, respectively). We stated in the proposed rule that ICD–10–CM diagnosis codes K95.01 (Infection due to gastric band procedure) and K95.09

(Other complications of gastric band procedure) are used to report these conditions and are currently assigned to MDC 6 (Diseases and Disorders of the Digestive System). ICD–10–PCS procedure codes 0DW64CZ (Revision of extraluminal device in stomach, percutaneous endoscopic approach) and 0DP64CZ (Removal of extraluminal device from stomach, percutaneous endoscopic approach) are used to report the revision of, or removal of, an extraluminal device in/from the stomach and are currently assigned to MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) in MS–DRGs 619, 620, and 621 (O.R. Procedures for Obesity with MCC with CC, and without CC/MCC, respectively).

Our analysis of this grouping issue confirmed that when procedures describing the revision of or removal of an extraluminal device in/from the stomach are reported with principal diagnoses in MDC 6 (such as ICD–10–CM diagnosis codes K95.01 and K95.09), in the absence of a procedure assigned to MDC 6, these cases group to MS–DRGs 987, 988, and 989. As noted in the previous discussion and in the proposed rule, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

As indicated in the proposed rule, we examined the claims data to identify cases involving ICD–10–PCS procedure codes 0DW64CZ and 0DP64CZ reported with a principal diagnosis of K95.01 or K95.09 that are currently grouping to MS–DRGs 987, 988, and 989. Our findings are shown in the table below.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 987--All cases	8,674	11	$23,885
MS-DRG 987--Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	20	6.6	$17,873
MS-DRG 988--All cases	8,391	5.7	$12,294
MS-DRG 988--Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	105	2.2	$7,253
MS-DRG 989--All cases	1,551	3.1	$8,171
MS-DRG 989--Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	120	1.6	$6,010

We also examined the data for cases in MS–DRGs 326, 327, and 328, and our findings are provided in a table presented in section II.F.12.a. of the preamble of this final rule. We stated in the proposed rule that, while our clinical advisors noted that the average length of stay and average costs of cases in MS–DRGs 326, 327, and 328 are significantly higher than the average length of stay and average costs for the subset of cases reporting procedure code 0DW64CZ or 0DP64CZ and a principal diagnosis code of K95.01 or K95.09, they believe that the procedures are clearly related to the principal diagnosis and, therefore, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. In addition, we stated that our clinical advisors believe that because these procedures are intended to treat a complication of a procedure related to obesity, rather than the obesity itself, they are more appropriately assigned to stomach, esophageal, and duodenal procedures (MS–DRGs 326, 327, and 328) in MDC 6 than to procedures for obesity (MS–DRGs 619, 620, and 621) in MDC 10.

Therefore, we proposed to add ICD–10–PCS procedure codes 0DW64CZ and 0DP64CZ to MDC 6 in MS–DRGs 326, 327, and 328. We stated in the proposed rule that, under this proposal, cases reporting procedure code 0DW64CZ or 0DP64CZ in conjunction with a principal diagnosis code of K95.01 or K95.09 would group to MS–DRGs 326, 327, and 328.

Comment: Commenters supported our proposal to add ICD–10–PCS procedure codes 0DW64CZ and 0DP64CZ to MDC 6 in MS–DRGs 326, 327, and 328.

Response: We appreciate the commenters' support.

After consideration of the public comments received, we are finalizing our proposal to add ICD–10–PCS procedure codes 0DW64CZ and 0DP64CZ to MDC 6 in MS–DRGs 326, 327, and 328.

(7) Peritoneal Dialysis Catheters

We received a request to reassign cases for complications of peritoneal dialysis catheters when reported with procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters from MS–DRGs 981 through 983 to MS–DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 6 by adding the diagnosis codes describing complications of peritoneal dialysis catheters to MDC 6. We stated in the proposed rule that our clinical advisors believe it is more appropriate to add the procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters to MS–DRGs 907, 908, and 909 than to move the diagnosis codes describing complications of peritoneal dialysis catheters to MDC 6 because the diagnosis codes describe complications, rather than initial placement, of peritoneal dialysis catheters, and therefore, are most clinically aligned with the diagnosis codes assigned to MDC 21 (where they are currently assigned). In section II.F.12.a. of the preamble of the proposed rule, we proposed, and as discussed in this final rule, are finalizing, to add procedures

describing removal, revision, and/or insertion of peritoneal dialysis catheters to MS–DRGs 907, 908, and 909 in MDC 21. We refer readers to section II.F.12.a. of the preamble of this final rule in which we describe our analysis of this issue as part of our broader review of the unrelated MS–DRGs.

(8) Occlusion of Left Renal Vein

We received a request to reassign cases for varicose veins in the pelvic region when reported with an embolization procedure from MS–DRGs 981, 982 and 983 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 715 and 716 (Other Male Reproductive System O.R. Procedures for Malignancy with CC/MCC and without CC/MCC, respectively) and MS–DRGs 717 and 718 (Other Male Reproductive System O.R. Procedures Except Malignancy with CC/MCC and without CC/MCC, respectively) in MDC 12 (Diseases and Disorders of the Male Reproductive System) and to MS–DRGs 749 and 750 (Other Female Reproductive System O.R. Procedures with CC/MCC and without CC/MCC, respectively) in MDC 13 (Diseases and Disorders of the Female Reproductive System). We stated in the proposed rule that ICD–10–CM diagnosis code I86.2 (Pelvic varices) is reported to identify the condition of varicose veins in the pelvic region and is currently assigned to MDC 12 and to MDC 13. ICD–10–PCS procedure code 06LB3DZ (Occlusion of left renal vein with intraluminal device, percutaneous approach) may be reported to describe an embolization procedure performed for the treatment of pelvic varices and is currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System) in MS–DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures with MCC, with CC, and without CC/MCC, respectively), MDC 6 (Diseases and Disorders of the Digestive System) in MS–DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, CC, without CC/MCC, respectively), and MDC 24 (Multiple Significant Trauma) in MS–DRGs 957, 958, 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively). The requestor also noted that when this procedure is performed on pelvic veins on the right side, such as the ovarian vein, (which is reported with ICD–10–PCS code 06L03DZ (Occlusion of inferior vena cava with intraluminal device, percutaneous approach)) for varicose veins in the right pelvic region, the case groups to MS–DRGs 715 and 716 and MS–DRGs 717 and 718 in MDC 12 (for male patients) or MS–DRGs 749 and 750 in MDC 13 (for female patients). We note that there was an inadvertent error in the proposed rule in which the term ''renal vein'' was referenced rather than ''pelvic veins on the right side'' or ''ovarian vein''.

Our analysis of this grouping issue confirmed that when ICD–10–CM diagnosis code I86.2 (Pelvic varices) is reported with ICD–10–PCS procedure code 06LB3DZ, the case groups to MS–DRGs 981, 982, and 983. As noted above in previous discussions and in the proposed rule, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures.''

As indicated in the proposed rule, we examined the claims data to identify cases involving procedure code 06LB3DZ in MS–DRGs 981, 982, and 983 reported with a principal diagnosis code of I86.2. We found no cases in the claims data.

In the absence of data to examine, we indicated that our clinical advisors reviewed this request and agreed with the requestor that when the embolization procedure is performed on the left ovarian vein (reported with ICD–10–PCS procedure code 06LB3DZ), it should group to the same MS–DRGs as when it is performed on the right ovarian vein. Therefore, we proposed to add ICD–10–PCS procedure code 06LB3DZ to MDC 12 in MS–DRGs 715, 716, 717, and 718 and to MDC 13 in MS–DRGs 749 and 750. We stated in the proposed rule that, under this proposal, cases reporting ICD–10–CM diagnosis code I86.2 with ICD–10–PCS procedure code 06LB3DZ would group to MDC 12 (for male patients) or MDC 13 (for female patients).

Comment: A commenter stated that this issue should be reevaluated, because 06L03DZ is not the correct code to report procedures done on the right renal vein; rather, 06L93DZ (Occlusion of right renal vein with intraluminal device, percutaneous approach) would be reported instead.

Response: We appreciate the commenter's request for clarification. We wish to clarify that certain specific pelvic veins do not have their own body part value in the ICD–10–PCS, and the ICD–10–PCS Body Part Key instructs coders to assign the inferior vena cava body part for veins such as the right ovarian vein and the right testicular vein, and to assign the left renal vein body part for veins such as the left ovarian vein and the left testicular vein. Therefore, ICD–10–PCS codes 06L03DZ or 06LB3DZ indeed may be reported to describe an embolization procedure performed for the treatment of pelvic varices of these respective sites. As such, our clinical advisors believe that when the embolization procedure is performed on veins classified to the left renal vein, such as the left ovarian vein and the left testicular vein, it should group to the same MS–DRGs as when it is performed on veins classified to the inferior vena cava, such as the right ovarian vein and the right testicular vein.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure code 06LB3DZ to MDC 12 in MS–DRGs 715, 716, 717, and 718 and to MDC 13 in MS–DRGs 749 and 750.

13. Operating Room (O.R.) and Non-O.R. Issues

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed. Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated

as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non-O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, our clinical advisors recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.F.15. of the preamble of this final rule, we are making Table 6B.—New Procedure Codes—FY 2020 available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. We also refer readers to the ICD–10 MS–DRG Version 36 Definitions Manual at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multi-year project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10. Therefore, as we stated in the proposed rule, we are again soliciting public comments on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration. Commenters should submit their recommendations to the following email address: *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2019.

We stated in the proposed rule that, as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS–DRGs based on a specific surgical approach. We plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

We will provide more detail on this analysis and the methodology for conducting this review in future rulemaking. As we noted in the proposed rule, as we continue to develop our process and methodology, as noted above, we are soliciting public comments on other factors to consider in our refinement efforts to recognize and differentiate consumption of resources for the ICD–10 MS–DRGs.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19231 through 19235), we addressed requests that we received regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures, or changing the designation from O.R. procedure to non-O.R. procedure. Below we discuss the process that was utilized for evaluating the requests that were received for FY 2020 consideration. For each procedure, our clinical advisors considered:

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a nonextensive procedure; and
- To which MS–DRGs the procedure should be assigned.

We noted in the proposed rule that many MS–DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS–DRG would, by default, be grouped to that MS–DRG. Therefore, we do not list these MS–DRGs in our discussion below. Instead, we only discuss MS–DRGs that require explicitly adding the relevant procedures codes to the GROUPER logic in order for those procedure codes to affect the MS–DRG assignment as intended. In cases where we proposed to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also proposed one or more MS–DRGs with which these procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS–DRG 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRG 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures need not be assigned to MS–DRGs 981 through 989 in order for this to occur. Therefore, if requestors included some or all of MS–DRGs 981 through 989 in their request or included MS–DRGs that require the presence of any O.R. procedure, we did not specifically

address that aspect in summarizing their request or our response to the request in the section below.

For procedures that would not typically require the resources of an operating room, our clinical advisors determined if the procedure should affect the MS–DRG assignment.

As indicated in the proposed rule, we received several requests to change the designation of specific ICD–10–PCS procedure codes from non-O.R. procedures to O.R. procedures, or to change the designation from O.R. procedures to non-O.R. procedures. Below, as we did in the proposed rule, in this final rule, we detail and respond to some of those requests and, further, summarize and respond to the public comments we received in response to our proposals, if applicable. With regard to the remaining requests, as stated in the proposed rule, our clinical advisors believe it is appropriate to consider these requests as part of our comprehensive review of the procedure codes discussed above.

b. O.R. Procedures to Non-O.R. Procedures

(1) Bronchoalveolar Lavage

Bronchoalveolar lavage (BAL) is a diagnostic procedure in which a bronchoscope is passed through the patient's mouth or nose into the lungs. A small amount of fluid is squirted into an area of the lung and then collected for examination. Two requestors identified 13 ICD–10–PCS procedure codes describing BAL procedures that generally can be performed at bedside and would not require the resources of an operating room. In the ICD–10 MS–DRG Version 36 Definitions Manual, these 13 ICD–10–PCS procedure codes are currently recognized as O.R. procedures for purposes of MS–DRG assignment.

In the proposed rule, we stated that we agreed with the requestors that these procedures do not typically require the resources of an operating room. Therefore, we proposed to remove the following 13 procedure codes from the FY 2020 ICD–10 MS–DRGs Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. We stated in the proposed rule that, under this proposal, these procedures would no longer impact MS–DRG assignment.

ICD-10-PCS Code	Code Description
0B9H8ZX	Drainage of lung lingula, via natural or artificial opening endoscopic, diagnostic
0B9K8ZX	Drainage of right lung, via natural or artificial opening endoscopic, diagnostic
0B9L8ZX	Drainage of left lung, via natural or artificial opening endoscopic, diagnostic
0B9M8ZX	Drainage of bilateral lungs, via natural or artificial opening endoscopic, diagnostic
0B9C8ZZ	Drainage of right upper lung lobe, via natural or artificial opening endoscopic
0B9D8ZZ	Drainage of right middle lung lobe, via natural or artificial opening endoscopic
0B9F8ZZ	Drainage of right lower lung lobe, via natural or artificial opening endoscopic
0B9G8ZZ	Drainage of left upper lung lobe, via natural or artificial opening endoscopic
0B9H8ZZ	Drainage of Lung Lingula, via natural or artificial opening endoscopic
0B9J8ZZ	Drainage of left lower lung lobe, via natural or artificial opening endoscopic
0B9K8ZZ	Drainage of right lung, via natural or artificial opening endoscopic
0B9L8ZZ	Drainage of left lung, via natural or artificial opening endoscopic
0B9M8ZZ	Drainage of bilateral lungs, via natural or artificial opening endoscopic

Comment: Some commenters supported our proposal to designate the 13 procedure codes above as non-O.R. procedures.

Response: We appreciate the commenters' support.

Comment: Other commenters opposed our proposal to designate the 13 procedure codes above as non-O.R. procedures. A commenter stated that due to the complexity of the procedures being performed, they should continue to be designated as an O.R. procedure, while another commenter stated that CMS should not reassign any procedures as O.R. or non-O.R. until it has completed its comprehensive review.

Response: As indicated in the proposed rule, our clinical advisors believe that these procedures do not typically require the resources of an operating room. The commenter did not provide information to the contrary. We also do not agree with the commenter who stated that we should not reassign any procedures as O.R. or non-O.R; rather, while some requests may involve a broader review of additional ranges of ICD–10–PCS codes, such that we believe they are more appropriately considered as part of our comprehensive review of procedure codes, we generally believe it is more accurate to address requests to change the designation of procedures as OR or non-OR as they arise rather than waiting for the comprehensive review, which is a multiyear project.

After consideration of the public comments we received, we are finalizing our policy to designate the 13 codes above as non-O.R.

(2) Percutaneous Drainage of Pelvic Cavity

One requestor identified two ICD–10–PCS procedure codes that describe procedures involving percutaneous drainage of the pelvic cavity. The two ICD–10–PCS procedure codes are: 0W9J3ZX (Drainage of pelvic cavity, percutaneous approach, diagnostic) and 0W9J3ZZ (Drainage of pelvic cavity, percutaneous approach).

ICD–10–PCS procedure code 0W9J3ZX is currently recognized as an O.R. procedure for purposes of MS–DRG assignment, while the nondiagnostic ICD–10–PCS procedure code 0W9J3ZZ is not recognized as an O.R. procedure

for purposes of MS–DRG assignment. The requestor stated that percutaneous drainage procedures of the pelvic cavity for both diagnostic and nondiagnostic purposes are not complex procedures and both types of procedures are usually performed in a radiology suite. The requestor stated that both procedures should be classified as non-O.R. procedures.

We stated in the proposed rule that we agreed with the requestor that these procedures do not typically require the resources of an operating room. Therefore, we proposed to remove procedure code 0W9J3ZX from the FY 2020 ICD–10 MS–DRG Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure. We stated that, under this proposal, this procedure would no longer impact MS–DRG assignment.

Comment: Commenters supported the proposal to change the designation of 0W9J3ZX to a non-O.R. procedure. The commenters stated that the proposal was reasonable, given the data and information provided.

A commenter stated that CMS should not consider any requests to modify the designation of procedures as O.R. or non-O.R. for FY 2020. As stated in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19230), CMS plans to conduct a comprehensive systematic review of the ICD–10–PCS procedure codes. The commenter suggested that reassignment requests should be held until the review has been completed.

Response: We appreciate the commenters' support. We do not agree with the commenter who stated that we should not reassign any procedures as O.R. or non-O.R; rather, while some requests may involve a broader review of additional ranges of ICD–10–PCS codes, such that we believe they are more appropriately considered as part of our comprehensive review of procedure codes, we generally believe it is more accurate to address requests to change the designation of procedures as OR or non-OR as they arise rather than waiting for the comprehensive review, which is a multiyear project. After consideration of the public comments we received, we are finalizing our proposal to change the designation of 0W9J3ZX from an O.R. procedure to non-O.R. procedure, effective October 1, 2019.

(3) Percutaneous Removal of Drainage Device

One requestor identified two ICD–10–PCS procedure codes that describe procedures involving the percutaneous placement and removal of drainage devices from the pancreas. These two ICD–10–PCS procedure codes are: 0FPG30Z (Removal of drainage device from pancreas, percutaneous approach) and 0F9G30Z (Drainage of pancreas with drainage device, percutaneous approach). ICD–10–PCS procedure code 0FPG30Z is currently recognized as an O.R. procedure for purposes of MS–DRG assignment, while ICD–10–PCS procedure code 0F9G30Z is not recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor stated that percutaneous placement of drains is typically performed in a radiology suite under image guidance and removal of a drain would not be more resource intensive than its placement.

We stated in the proposed rule that we agreed with the requestor that these procedures do not typically require the resources of an operating room. Therefore, we proposed to remove ICD–10–PCS procedure code 0FPG30Z from the FY 2020 ICD–10 MS–DRG Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure. We stated that, under this proposal, this procedure would no longer impact MS–DRG assignment.

Comment: Commenters supported the proposal to change the designation of 0FPG30Z to a non-O.R. procedure. The commenters stated that the proposal was reasonable, given the data and information provided.

A commenter stated that CMS should not consider any requests to modify the designation of procedures as O.R. or non-O.R. for FY 2020. As stated in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19230), CMS plans to conduct a comprehensive systematic review of the ICD–10–PCS procedure codes. The commenter suggested that reassignment requests should be held until the review has been completed.

Response: We appreciate the commenters' support. We do not agree with the commenter who stated that we should not reassign any procedures as O.R. or non-O.R; rather, while some requests may involve a broader review of additional ranges of ICD–10–PCS codes, such that we believe they are more appropriately considered as part of our comprehensive review of procedure codes, we generally believe it is more accurate to address requests to change the designation of procedures as OR or non-OR as they arise rather than waiting for the comprehensive review, which is a multiyear project. After consideration of the public comments we received, we are finalizing our proposal to change the designation of 0FPG30Z from an O.R. procedure to a non-O.R. procedure, effective October 1, 2019.

c. Non-O.R. Procedures to O.R. Procedures

(1) Percutaneous Occlusion of Gastric Artery

One requestor identified two ICD–10–PCS procedure codes that describe percutaneous occlusion and restriction of the gastric artery with intraluminal device, ICD–10–PCS procedure codes 04L23DZ (Occlusion of gastric artery with intraluminal device, percutaneous approach) and 04V23DZ (Restriction of gastric artery with intraluminal device, percutaneous approach), that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor noted that transcatheter endovascular embolization of the gastric artery with intraluminal devices uses comparable resources to transcatheter endovascular embolization of the gastroduodenal artery. The requestor stated that ICD–10–PCS procedure codes 04L33DZ (Occlusion of hepatic artery with intraluminal device, percutaneous approach) and 04V33DZ (Restriction of hepatic artery with intraluminal device, percutaneous approach) are recognized as O.R. procedures for purposes of MS–DRG assignment, and ICD–10–PCS procedure codes 04L23DZ and 04V23DZ should therefore also be recognized as O.R. procedures for purposes of MS–DRG assignment. We note that, contrary to the requestor's statement, ICD–10–PCS procedure code 04V23DZ is already recognized as an O.R. procedure for purposes of MS–DRG assignment.

We stated in the proposed rule that we agreed with the requestor that ICD–10–PCS procedure code 04L23DZ typically requires the resources of an operating room. Therefore, we proposed to add this code to the FY 2020 ICD–10 MS–DRG Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure assigned to MS–DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures with MCC, CC, without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System); MS–DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures, with MCC, CC, without CC/MCC, respectively) in MDC 06 (Diseases and Disorders of the Digestive System); MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, CC, without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC,

CC, without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

Comment: Commenters supported the proposal to change the designation of 04L23DZ from a non-O.R. to O.R. procedure. The commenters stated that the proposal was reasonable, given the data and information provided. A commenter noted that this change better reflects the resources required to perform the procedure and better aligns its designation with the designation of other procedures of similar technical difficulty.

A commenter stated that CMS should not consider any requests to modify the designation of procedures as O.R. or non-O.R. for FY 2020. As stated in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19230), CMS plans to conduct a comprehensive systematic review of the ICD–10–PCS procedure codes. The commenter suggested that reassignment requests should be held until the review has been completed.

Response: We appreciate the commenters' support. We do not agree with the commenter who stated that we should not reassign any procedures as O.R. or non-O.R; rather, while some requests may involve a broader review of additional ranges of ICD–10–PCS codes, such that we believe they are more appropriately considered as part of our comprehensive review of procedure codes, we generally believe it is more accurate to address requests to change the designation of procedures as OR or non-OR as they arise rather than waiting for the comprehensive review, which is a multiyear project. After consideration of the public comments we received, we are finalizing our proposal to change the designation of 04L23DZ from non-O.R. procedure to O.R. procedure, effective October 1, 2019.

(2) Endoscopic Insertion of Endobronchial Valves

As noted in the FY 2020 IPPS/LTCH PPS proposed rule, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41257), we discussed a comment we received in response to the FY 2019 IPPS/LTCH PPS proposed rule regarding eight ICD–10–PCS procedure codes that describe endobronchial valve procedures that the commenter believed should be designated as O.R. procedures. The codes are identified in the following table.

ICD-10-PCS Code	Code Description
0BH38GZ	Insertion of endobronchial valve into right main bronchus, via natural or artificial opening endoscopic
0BH48GZ	Insertion of endobronchial valve into right upper lobe bronchus, via natural or artificial opening endoscopic
0BH58GZ	Insertion of endobronchial valve into right middle lobe bronchus, via natural or artificial opening endoscopic
0BH68GZ	Insertion of endobronchial valve into right lower lobe bronchus, via natural or artificial opening endoscopic
0BH78GZ	Insertion of endobronchial valve into left main bronchus, via natural or artificial opening endoscopic
0BH88GZ	Insertion of endobronchial valve into left upper lobe bronchus, via natural or artificial opening endoscopic
0BH98GZ	Insertion of endobronchial valve into lingula bronchus, via natural or artificial opening endoscopic
0BHB8GZ	Insertion of endobronchial valve into left lower lobe bronchus, via natural or artificial opening endoscopic

The commenter stated that these procedures are most commonly performed in the O.R., given the need for better monitoring and support through the process of identifying and occluding a prolonged air leak using endobronchial valve technology. The commenter also noted that other endobronchial valve procedures have an O.R. designation. We noted that, in the ICD–10 MS–DRGs Version 35, these eight ICD–10–PCS procedure codes are not recognized as O.R. procedures for purposes of MS–DRG assignment. The commenter requested that these eight procedure codes be assigned to MS–DRG 163 (Major Chest Procedures with MCC) due to similar cost and resource use. As discussed in the FY 2019 IPPS/LTCH PPS final rule, our clinical advisors disagreed with the commenter that the eight identified procedures typically require the use of an operating room, and believed that these procedures would typically be performed in an endoscopy suite. Therefore, we did not finalize a change to the eight procedure codes describing endoscopic insertion of an endobronchial valve listed in the table above for FY 2019 under the ICD–10 MS–DRGs Version 36.

After publication of the FY 2019 IPPS/LTCH PPS final rule, we received feedback from several stakeholders expressing continued concern with the designation of the eight ICD–10–PCS procedure codes describing the endoscopic insertion of an endobronchial valve listed in the table

above, including requests to reconsider the designation of these codes for FY 2020. Some requestors stated that while they appreciated CMS' attention to the issue, they believed that important clinical and financial factors had been overlooked. The requestors noted that while the site of care is an important consideration for MS–DRG assignment, there are other clinical factors such as case complexity, patient health risk and the need for anesthesia that also affect hospital resource consumption and should influence MS–DRG assignment. With regard to complexity, the requestors stated that many of these patients are high-risk, often recovering from major lung surgery and have significantly compromised respiratory function. According to one requestor, these patients may have major comorbidities, such as cancer or emphysema contributing to longer lengths of stay in the hospital. This requestor acknowledged that procedures performed for the endoscopic insertion of an endobronchial valve are often, but not always, performed in the O.R., however, the requestor also noted this should not preclude the designation of these procedures as O.R. procedures since there have been other examples of reclassification requests where the combination of factors, such as treatment difficulty, resource utilization, patient health status, and anesthesia administration were considered in the decision to change the designation for a procedure from non-O.R. to O.R. Another requestor stated that CMS' current designation of a procedure involving the endoscopic insertion of an endobronchial valve as a non-O.R. procedure is not reflective of actual practice and this designation has payment consequences that may affect access to the treatment for a vulnerable patient population, with limited treatment options. The requestor recommended that procedures involving the endoscopic insertion of an endobronchial valve should be designated as O.R. procedures and assigned to MS–DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC and without CC/MCC, respectively). In addition, a few of the requestors also conducted their own analyses and indicated that if procedures involving the endoscopic insertion of an endobronchial valve were to be assigned to MS–DRGs 163, 164, and 165, the average costs of the cases reporting a procedure code describing the endoscopic insertion of an endobronchial valve would still be higher compared to all the cases in the assigned MS–DRG.

As indicated in the FY 2020 IPPS/LTCH PPS proposed rule, we examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS–DRGs 163, 164 and 165 to identify cases reporting any one of the eight procedure codes listed in the above table describing the endoscopic insertion of an endobronchial valve. We stated that cases reporting one of these procedure codes would be assigned to MS–DRG 163, 164, or 165 if at least one other procedure that is designated as an O.R. procedure and assigned to these MS–DRGs was also reported on the claim. In addition, cases reporting a procedure code describing the endoscopic insertion of an endobronchial valve with a different surgical approach are assigned to MS–DRGs 163, 164, and 165. Our findings are shown in the following table.

MS-DRGs for Major Chest Procedures with Endoscopic Insertion of Endobronchial Valve Procedures

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 163--All cases	10,812	11.6	$33,433
MS-DRG 163--Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	49	21.1	$53,641
MS-DRG 164--All cases	14,800	5.6	$18,202
MS-DRG 164--Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	23	14	$37,287
MS-DRG 165--All cases	7,907	3.3	$13,408
MS-DRG 165--Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	3	18.3	$39,249

We found a total of 10,812 cases in MS–DRG 163 with an average length of stay of 11.6 days and average costs of $33,433. Of those 10,812 cases, we found 49 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 21.1 days and average costs of $53,641. For MS–DRG 164, we found a total of 14,800 cases with an average length of stay of 5.6 days and average costs of $18,202. Of those 14,800 cases, we found 23 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 14 days and average costs of $37,287. For MS–DRG 165, we found a total of 7,907 cases with an average length of stay of 3.3 days and average costs of $13,408. Of those 7,907 cases, we found 3 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 18.3 days and average costs of $39,249.

We also examined claims data to identify any cases reporting any one of the eight procedure codes listed in the table above describing the endoscopic insertion of an endobronchial valve within MS–DRGs 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). We further stated that cases reporting one of these procedure codes would be assigned to MS–DRG 166, 167, or 168 if at least one other procedure that is designated as an O.R. procedure and assigned to these MS–DRGs was also reported on the claim. In addition, MS–DRGs 166, 167, and 168 are the other

surgical MS–DRGs where cases reporting a respiratory diagnosis within MDC 4 would be assigned. Our findings are shown in the following table.

MS-DRGs for Other Respiratory System O.R. Procedures with Endoscopic Insertion of Endobronchial Valve

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 166--All cases	16,050	10.6	$26,645
MS-DRG 166--Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	11	25.7	$71,700
MS-DRG 167--All cases	8,165	5.3	$13,687
MS-DRG 167--Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	4	10	$28,847
MS-DRG 168 – All cases	2,430	2.8	$9,645

We found a total of 16,050 cases in MS–DRG 166 with an average length of stay of 10.6 days and average costs of $26,645. Of those 16,050 cases, we found 11 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 25.7 days and average costs of $71,700. For MS–DRG 167, we found a total of 8,165 cases with an average length of stay of 5.3 days and average costs of $13,687. Of those 8,165 cases, we found 4 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 10 days and average costs of $28,847. For MS–DRG 168, we found a total of 2,430 cases with an average length of stay of 2.8 days and average costs of $9,645. Of those 2,430 cases, we indicated that we did not find any cases reporting a procedure for the endoscopic insertion of an endobronchial valve.

The results of our data analysis indicate that cases reporting a procedure for the endoscopic insertion of an endobronchial valve in MS–DRGs 163, 164, 165, 166, and 167 have a longer length of stay and higher average costs when compared to all the cases in their assigned MS–DRG. We stated in the proposed rule that because the data are based on surgical MS–DRGs 163, 164, 165, 166 and 167, and the procedure codes for endoscopic insertion of an endobronchial valve are currently designated as non-O.R. procedures, there was at least one other O.R. procedure reported on the claim resulting in case assignment to one of those MS–DRGs. Our clinical advisors indicated that because there was another O.R. procedure reported, the insertion of the endobronchial valve procedure may or may not have been the main determinant of resource use for those cases. Therefore, we conducted further analysis to evaluate cases for which no other O.R. procedure was performed with the endoscopic insertion of an endobronchial valve and case assignment resulted in a medical MS–DRG. Our findings are shown in the following table.

Medical MS-DRGs with Insertion of Endobronchial Valve Procedures

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 069 (Transient Ischemia without Thrombolytic)	1	9	$26,002
MS-DRG 177 (Respiratory Infections and Inflammations with MCC)	11	19.5	$33,877
MS-DRG 178 (Respiratory Infections and Inflammations with CC)	4	10.8	$20,109
MS-DRG 180 (Respiratory Neoplasms with MCC)	2	11.5	$19,273
MS-DRG 181 (Respiratory Neoplasms with MCC)	1	3	$12,641
MS-DRG 186 (Pleural Effusion with MCC)	1	8	$23,609
MS-DRG 187 (Pleural Effusion with CC)	1	18	$49,214
MS-DRG 189 (Pulmonary Edema and Respiratory Failure)	2	13.5	$65,431
MS-DRG 190 (Chronic Obstructive Pulmonary Disease with MCC)	2	9	$39,925
MS-DRG 191 (Chronic Obstructive Pulmonary Disease with CC)	1	15	$55,958

Medical MS-DRGs with Insertion of Endobronchial Valve Procedures			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 192 (Chronic Obstructive Pulmonary Disease without CC/MCC)	1	5	$10,394
MS-DRG 193 (Simple Pneumonia and Pleurisy with MCC)	1	18	$27,182
MS-DRG 197 (Interstitial Lung Disease with CC)	1	12	$11,458
MS-DRG 199 (Pneumothorax with MCC)	28	16.4	$38,384
MS-DRG 200 (Pneumothorax with CC)	11	8.3	$20,764
MS-DRG 201 (Pneumothorax without CC/MCC)	2	10	$20,243
MS-DRG 205 (Other Respiratory System Diagnoses with MCC)	2	4.5	$10,851
MS-DRG 207 (Respiratory System Diagnosis with Ventilation Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	4	20	$67,299
MS-DRG 208 (Respiratory System Diagnosis with Ventilation Support <=96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	8	13.6	$32,533
MS-DRG 815 (Reticuloendothelial and Immunity Disorders with CC)	1	5	$17,379
MS-DRG 871 (Septicemia or Severe Sepsis without Mechanical Ventilation >96 Hours with MCC)	3	15	$39,706
MS-DRG 919 (Complications of Treatment with MCC)	2	5	$36,143
MS-DRG 920 (Complications of Treatment with CC)	1	5	$14,923
Total	**91**	**13.7**	**$33,377**

We further stated in the proposed rule that the data indicate that there is a wide variation in the average length of stay and average costs for cases reporting a procedure for the endoscopic insertion of an endobronchial valve, with volume generally low across MS–DRGs. As shown in the table, for several of the medical MS–DRGs, there was only one case reporting a procedure for the endoscopic insertion of an endobronchial valve. The highest volume of cases reporting a procedure for the endoscopic insertion of an endobronchial valve was found in MS–DRG 199 (Pneumothorax with MCC) with a total of 28 cases with an average length of stay of 16.4 days and average costs of $38,384. The highest average costs and longest average length of stay for cases reporting a procedure for the endoscopic insertion of an endobronchial valve was $67,299 in MS–DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)) where 4 cases were found with an average length of stay of 20 days. Overall, there was a total of 91 cases reporting the insertion of an endobronchial valve procedure with an average length of stay of 13.7 days and average costs of $33,377 across the medical MS–DRGs.

Our clinical advisors agreed that the subset of patients who undergo endoscopic insertion of an endobronchial procedure are complex and may have multiple comorbidities such as severe underlying lung disease that impact the hospital length of stay. We stated that they also believe that, as we begin the process of refining how procedure codes may be classified under ICD–10–PCS, including designation of a procedure as O.R. or non-O.R., we should take into consideration whether the procedure is driving resource use for the admission. (We refer the reader to section II.F.13.a. of the preamble of this final rule for the discussion of our plans to conduct a comprehensive review of the ICD–10–PCS procedure codes). Based on the claims data analysis, which show a wide variation in average costs for cases reporting endoscopic insertion of an endobronchial valve without an O.R. procedure, we stated that our clinical advisors are not convinced that endoscopic insertion of an endobronchial valve is a key contributing factor to the consumption of resources as reflected in the data. We stated that they also believe, in review of the procedures that are currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, that further refinement of these MS–DRGs may be warranted. For these reasons, we stated in the proposed rule that, at this time, our clinical advisors do not support designating endoscopic insertion of an endobronchial valve as an O.R. procedure, nor do they support assignment of these procedures to MS–DRGs 163, 164, and 165 until additional analyses can be performed for this subset of patients as part of the comprehensive procedure code review.

For the reasons described above and in the proposed rule, we did not propose to change the current non-O.R. designation of the eight ICD–10–PCS procedure codes that describe endoscopic insertion of an endobronchial valve. However, we stated that because we agreed that endoscopic insertion of an endobronchial valve procedures are performed on clinically complex patients, we believe it may be

appropriate to consider designating these procedures as non-O.R. affecting specific MS–DRGs for FY 2020. Therefore, we requested public comment on designating these procedure codes as non-O.R. procedures affecting the MS–DRG assignment, including the specific MS–DRGs that cases reporting the endoscopic insertion of an endobronchial valve should affect for FY 2020. As we noted in the proposed rule, it is not clear based on the claims data to what degree the endoscopic insertion of an endobronchial valve is a contributing factor for the consumption of resources for these clinically complex patients and given the potential refinement that may be needed for MS–DRGs 163, 164, 165, 166, 167, and 168, we solicited comment on whether cases reporting the endoscopic insertion of an endobronchial valve should affect any of these MS–DRGs or other MS–DRGs.

Comment: Several commenters disagreed with our proposal to not designate the eight procedure codes describing endoscopic insertion of an endobronchial valve procedure as an O.R. procedure until additional analyses can be performed as part of the comprehensive procedure code review. Commenters urged CMS to include the eight procedure codes discussed above in the GROUPER logic for MS–DRGs 163, 164, and 165 based on the analysis that was presented in the proposed rule effective FY 2020. A commenter noted that the analysis showed that cases in surgical MS–DRGs 163, 164, 165, 166 and 167 reporting the endoscopic insertion of an endobronchial valve had longer length of stays and higher average costs than other cases in those MS–DRGs. The commenter stated that the analysis showed that most cases in the medical MS–DRGs reporting the endoscopic insertion of an endobronchial valve had costs significantly higher than the relative weights of the medical DRGs. This commenter also stated that the skill level required for placement, anesthesia (even if performed outside the O.R.), and the severity level of the patient increase costs beyond that recognized within the medical MS–DRGs. The commenter further stated that because CMS's data supports a higher severity level, higher costs, and longer length of stays for patients who undergo endoscopic insertion of an endobronchial valve, they recommended reclassifying the eight procedure codes to O.R. status effective FY 2020, and grouping to MS–DRGs 163, 164 and 165 within MDC 4, to MS–DRG 853 when sepsis is principal diagnosis, and to MS–DRGs 981, 982, and 983 when there is an unrelated principal diagnosis. The commenter stated their belief that further delay of a relative weight increase for these procedures is not warranted nor supported. Another commenter commended CMS for soliciting comments on whether to consider any of the eight procedure codes describing the endoscopic insertion of an endobronchial valve procedure as non-O.R. impacting the MS–DRG assignment. This commenter recommended assigning all eight procedure codes identifying the endoscopic insertion of an endobronchial valve without another O.R. procedure to MS–DRGs 163, 164, and 165 for clinical coherence. According to the commenter, there are currently no medical MS–DRGs with clinically similar procedures or costs, therefore, assignment to MS–DRGs 163, 164 and 165 would ensure adequate payment to providers for these procedures. This commenter also stated that the costs associated with the endoscopic insertion of an endobronchial valve are a significant contributing factor to the higher average costs and length of stay in comparison to clinically similar cases that do not involve the endoscopic insertion of an endobronchial valve.

Response: We appreciate the commenters' feedback on the designation of the eight procedure codes describing the endoscopic insertion of an endobronchial valve. We agree with the commenter that the analysis in the proposed rule showed that cases reporting a procedure for the endoscopic insertion of an endobronchial valve in MS–DRGs 163, 164, 165, 166, and 167 have a longer length of stay and higher average costs when compared to all the cases in their assigned MS–DRG. As noted above, we stated in the proposed rule that because the data are based on surgical MS–DRGs 163, 164, 165, 166 and 167, there was at least one other O.R. procedure reported on the claim resulting in case assignment to one of those MS–DRGs. We also acknowledge that the analysis in the proposed rule showed that most cases in the medical MS–DRGs reporting the endoscopic insertion of an endobronchial valve demonstrated costs higher than the relative weights of the medical DRGs. While our clinical advisors continue to believe it is unclear (based on the claims data) to what degree the endoscopic insertion of an endobronchial valve is a contributing factor for the consumption of resources for these clinically complex patients, they agree, as noted in the proposed rule, that the subset of patients who undergo endoscopic insertion of an endobronchial procedure are complex and may have multiple comorbidities such as severe underlying lung disease that impact the hospital length of stay. Our clinical advisors also continue to believe that further refinement of surgical MS–DRGs 163, 164, 165, 166 and 167 may be warranted because there are other procedure codes describing the insertion of endobronchial valve procedures by various approaches that are currently assigned to MS–DRGs 163, 164, and 165 and are designated as O.R. procedures, which our clinical advisors believe may require further analysis with respect to utilization of resources and designation as O.R. versus non-O.R. There are also other procedure codes currently assigned to MS–DRGs 163, 164 and 165 that describe procedures being performed on body parts other than those related to the chest. For example, we found codes describing laser interstitial thermal therapy (LITT) of several gastrointestinal body parts that do not appear to be clinically coherent. With regard to MS–DRGs 166 and 167, our clinical advisors believe that these MS–DRGs may require further consideration for potential restructuring in connection with the ongoing evaluation of severity level designations and also as a result of the finalized policy (as discussed in section II.F.3. of the preamble of this final rule) regarding the deletion of several procedure codes that contain the qualifier ''bifurcation'' which are currently assigned to MS–DRGs 166 and 167 (as well as MS–DRG 168). For these reasons, our clinical advisors believe additional analysis of these surgical MS–DRGs is needed. In response to the commenter who suggested that cases reporting one of the eight procedure codes describing the endoscopic insertion of an endobronchial procedure should group to MS–DRG 853 (Infectious & Parasitic Diseases with O.R. Procedure with MCC) when sepsis is the principal diagnosis, and to MS–DRGs 981, 982, and 983 when there is an unrelated principal diagnosis, we note that, as shown in the proposed rule and above, our analysis of the cases reporting the endoscopic insertion of an endobronchial valve in a medical MS–DRG did not result in any cases being found in MS–DRG 853 and our clinical advisors do not agree with assignment of these procedures to that MS–DRG in the absence of further analysis. We also note that, because our clinical advisors continue to believe that endoscopic insertion of an endobronchial valve

should not be designated as an O.R. procedure, they do not support the recommendation for assignment to MS–DRGs 981, 982, and 983 as those MS–DRGs are defined by procedures designated as extensive O.R. procedures. We refer the reader to section II.F.13.a. of the preamble in this final rule, for detailed information on how the designation of each ICD–10–PCS procedure code on a claim impacts the MS–DRG assignment.

In the proposed rule we stated that we agreed that endoscopic insertion of an endobronchial valve procedures are performed on clinically complex patients and that we believed it may be appropriate to consider designating these procedures as non-O.R. affecting specific MS DRGs for FY 2020. Our clinical advisors support the commenters' recommendation for the assignment of cases reporting the endoscopic insertion of an endobronchial valve to MS–DRGs 163, 164, and 165 under the current structure of the ICD–10 MS–DRGs for clinical coherence with the other insertion of endobronchial valve procedures currently assigned to those MS–DRGs and based on the data analysis. Our clinical advisors acknowledge that the data analysis presented in the proposed rule demonstrated that cases reporting a procedure for the endoscopic insertion of an endobronchial valve in MS–DRGs 163, 164, 165, 166, and 167 have a longer length of stay and higher average costs when compared to all the cases in their assigned MS–DRG, however, the average costs and length of stay for those cases are more aligned with MS–DRGs 163, 164 and 165 than MS- DRGs 166, 167, and 168 or any other MS–DRGs within MDC 4 at this time. (As noted in the proposed rule, we did not find any cases reporting a procedure for the insertion of an endobronchial valve in MS–DRG 168).

After consideration of the public comments we received and for the reasons described above, we are finalizing the designation of the eight procedure codes listed earlier in this section that describe the endoscopic insertion of an endobronchial valve as non-O.R. affecting MS–DRGs 163, 164 and 165 (Major Chest Procedures with MCC, with CC and without CC/MCC, respectively) under the ICD–10 MS–DRGs Version 37, effective October 1, 2019.

14. Changes to the MS–DRG Diagnosis Codes for FY 2020

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (non-CC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS–DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as an MCC, a CC, or a non-CC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since this comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when receiving requests to change the severity level of specific diagnosis codes. However, given the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since this review, we stated in the proposed rule that we believe it is necessary to conduct a comprehensive analysis once again. We further stated that we had completed this analysis and we were discussing our findings in the proposed rule. We used the same methodology utilized in FY 2008 to conduct this analysis, as described below.

For each secondary diagnosis, we measured the impact in resource use for the following three subsets of patients:

(1) Patients with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs.

(2) Patients with at least one other secondary diagnosis that is a CC but none that is an MCC.

(3) Patients with at least one other secondary diagnosis that is an MCC.

Numerical resource impact values were assigned for each diagnosis as follows:

Value	Meaning
0	Significantly below expected value for the non-CC subgroup
1	Approximately equal to expected value for the non-CC subgroup
2	Approximately equal to expected value for the CC subgroup
3	Approximately equal to expected value for the MCC subgroup
4	Significantly above the expected value for the MCC subgroup

Each diagnosis for which Medicare data were available was evaluated to determine its impact on resource use and to determine the most appropriate CC subclass (non-CC, CC, or MCC) assignment. In order to make this determination, the average cost for each subset of cases was compared to the expected cost for cases in that subset. The following format was used to evaluate each diagnosis:

Code	Diagnosis	Cnt1	C1	Cnt2	C2	Cnt3	C3

Count (Cnt) is the number of patients in each subset and C1, C2, and C3 are a measure of the impact on resource use of patients in each of the subsets. The C1, C2, and C3 values are a measure of the ratio of average costs for patients with these conditions to the expected average cost across all cases. The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC but none that is a major CC. The C3 value reflects a patient with at least one other secondary diagnosis that is a major CC. A value close to 1.0 in the C1 field would suggest that the code produces the same expected value as a non-CC diagnosis. That is, average costs for the case are similar to the expected average costs for that subset and the diagnosis is not expected to increase resource usage. A higher value in the C1 (or C2 and C3) field suggests more resource usage is associated with the diagnosis and an increased likelihood that it is more like a CC or major CC than a non-CC. Thus, a value close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or non-CC. For example, a C1 value of 1.8 for a secondary diagnosis means that for the subset of patients who have the secondary diagnosis and have either no other secondary diagnosis present, or all the other secondary diagnoses present are non-CCs, the impact on resource use of the secondary diagnoses is greater than the expected value for a non-CC by an amount equal to 80 percent of the difference between the expected value of a CC and a non-CC (that is, the impact on resource use of the secondary diagnosis is closer to a CC than a non-CC).

These mathematical constructs are used as guides in conjunction with the judgment of our clinical advisors to classify each secondary diagnosis reviewed as an MCC, a CC, or a non-CC. Our clinical advisors reviewed the resource use impact reports and suggested modifications to the initial CC subclass assignments when clinically appropriate.

c. Changes to Severity Levels

(1) General

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246), the diagnosis codes for which we proposed a change in severity level designation as a result of the analysis described in that proposed rule were shown in Table 6P.1c. associated with that proposed rule (which is available via the internet on the CMS website at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*). Using the method described above to perform our comprehensive CC/MCC analysis, our clinical advisors recommended a change in the severity level designation for 1,492 ICD–10–CM diagnosis codes. As shown in Table 6P.1c. associated with the FY 2020 IPPS/LTCH PPS proposed rule, the proposed changes to severity level resulting from our comprehensive analysis moved some diagnosis codes to a higher severity level designation and other diagnosis codes to a lower severity level designation, as indicated in the two columns which display CMS' FY 2019 classification in column C and the proposed changes for FY 2020 in column D. We refer readers to the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) for a complete discussion of our proposals, including a summary of the proposed changes and illustrations of proposed severity level changes.

We invited public comments on our proposed severity level designations for the diagnosis codes as shown in Table 6P.1c associated with the proposed rule. We received many comments on the proposals, with the majority of commenters requesting that the adoption of the proposed changes be delayed in order to provide additional time to evaluate given the broad scope of the proposed changes. As discussed in more detail below, after consideration of the public comments we received, we are generally not finalizing our proposed changes to the severity level designations for the ICD–10–CM diagnosis codes as shown in Table 6P.1c associated with the proposed rule, with the exception of the proposed changes to the codes related to antimicrobial resistance as discussed in greater detail below. Below we provide a summary of the comments we received and our response.

Comment: Commenters expressed support for a limited number of the proposed changes in severity level, including the proposed change in severity level designation for diagnosis codes E83.39 (Other disorders of phosphorus metabolism), E83.51 (Hypocalcemia), R62.7 (Adult failure to thrive), R63.3 (Feeding difficulties), Z16.12 (Extended spectrum beta lactamase (ESBL) resistance), Z16.21 (Resistance to vancomycin), Z16.24 (Resistance to multiple antibiotics), and Z16.39 (Resistance to other specified antimicrobial drug) from a non-CC to a CC. Commenters stated their belief that these proposals were reasonable and reflect the resource utilization for these diagnoses.

However, many commenters expressed concern with the proposed severity level designation changes overall and recommended CMS conduct further analysis prior to finalizing any proposals. Specifically, commenters expressed concern that the extensive changes proposed to the severity level designations for the ICD–10–CM diagnosis codes as shown in Table 6P.1c, the majority of which would be a lower severity level (for example, CC to a non-CC), would no longer appropriately reflect resource use for patient care and could have a significant unintended or improper adverse financial impact. In addition, some commenters believed there was not sufficient time to review the nearly 1,500 diagnosis codes for which a change to the severity designation was proposed, noting that CMS engaged in its analysis for over a year before making any comprehensive proposals, and because there have been significant changes that have occurred to diagnosis codes since the transition to ICD–10–CM, in particular the exponential increase in the number of codes. Other general themes reflected in the comments included desire for more transparency and stakeholder

engagement, the belief that clinical severity was not consistently reflected in the proposed severity level designations, and concern regarding the impact on Medicaid and private payers, stating such payers often base their payment amount on Medicare.

Some commenters stated that the information provided was not sufficient to adequately explain the proposed changes in severity level designations for certain diagnosis codes or families of codes. Other commenters were concerned that CMS' stated criteria were not met for some of the proposed changes to severity designations and specifically noted instances where diagnoses that appear to be clinically less severe (and therefore require less resources) were proposed to be assigned a higher severity level designation than other diagnoses that they believe require more resources. Another commenter recommended that any changes be phased in to allow time to assess the impacts such modifications would have on hospitals and patients.

Response: We thank commenters for their comments on our proposed changes. After consideration of the public comments we received, and for the reasons discussed below, we agree it would be premature to adopt broad changes to the severity designations at this time. We agree with commenters that there have been significant changes to the scope and complexity of diagnosis codes since the transition to ICD–10–CM. We also believe that at this time it would be prudent to further examine the proposed severity designations to ensure they would appropriately reflect resource use based on review of the data as well as consideration of relevant clinical factors (for example, the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses, as explained above) and improve the overall accuracy of the IPPS payments. Postponing the adoption of comprehensive changes in severity level designations will allow us to incorporate review of additional ICD–10 claims data as it becomes available and to fully consider the technical feedback provided from the public on the proposed rule. This would also allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review, such as making a test GROUPER publicly available to allow for impact testing. In addition, we can consider further whether it is appropriate to propose to make such comprehensive changes all at once or in phases, as suggested by some commenters.

Furthermore, this will afford an opportunity for us to explore additional means of eliciting feedback on the current severity level designations after the final rule and prior to the November 1, 2019 deadline for MS–DRG requests, comments and suggestions for FY 2021, such as holding an open door forum to solicit additional feedback. When providing additional feedback or comments, we encourage the public to provide a detailed explanation of why a specific severity level designation for a diagnosis code would ensure that designation appropriately reflects resource use. We also invite feedback regarding other possible ways we can approach the implementation of our proposed comprehensive changes to severity level designations, such as a phased-in approach or changes by specific code categories or MDCs. In summary, for the reasons discussed above, we are generally not finalizing our proposed changes to the severity designations for the ICD–10–CM diagnosis codes as shown in Table 6P.1c associated with the proposed rule, other than the changes to the severity level designations for the diagnosis codes in category Z16- (Resistance to antimicrobial drugs) from a non-CC to a CC, as discussed in more detail below.

Comment: As noted above, we received comments supporting our proposed change in severity level designation for diagnosis codes related to antimicrobial resistance (that is, Z16.12 (Extended spectrum beta lactamase (ESBL) resistance), Z16.21 (Resistance to vancomycin), Z16.24 (Resistance to multiple antibiotics), and Z16.39 (Resistance to other specified antimicrobial drug) from a non-CC to a CC. These commenters stated that they agree that patients with an ICD–10–CM secondary diagnosis code indicating that they were treated for an infection resistant to antibiotics should be, at a minimum, assigned a CC severity level designation. They asserted that the resources required to treat patients suffering from antimicrobial resistant infections should warrant a higher severity designation, and indicated that caring for patients with these complications is more resource intensive, including the need for stronger, different, or extra antibiotics. Commenters further indicated that the higher resources required to treat patients suffering from antimicrobial resistant infections are particularly relevant with respect to Medicare beneficiaries because they are vulnerable to drug-resistant infections due to greater exposure to resistant bacteria (*e.g.,* via catheter infection or from other chronic diseases). These commenters expressed significant concerns related to the public health crisis represented by antimicrobial resistance and urged CMS to also apply the change in the severity level designation from non-CC to CC to the other ICD 10–CM diagnosis codes specifying antimicrobial drug resistance. A few of these commenters made recommendations for certain ICD–10–CM diagnosis codes that specify antimicrobial drug resistance either in addition to or in lieu of the codes included in our proposal. However, many of these commenters recommended that we also apply the change in the severity level designation from non-CC to CC to the other ICD–10–CM diagnosis codes specifying antimicrobial drug resistance (that is, the other diagnosis codes in category Z16-(Resistance to antimicrobial drugs).

Response: We understand the concerns expressed by commenters related to the public health crisis that antimicrobial resistance represents. Addressing these concerns is consistent with the Administration's key priorities, and we have taken into consideration their statements that it clinically requires greater resources to treat patients suffering from antimicrobial resistant infections. For example, antimicrobial resistance results in a substantial number of additional hospital days for Medicare beneficiaries (estimated to be more than 600,000 additional days in the hospital each year), resulting in additional costs and resources to care for these patients.[1] For these reasons, while we are continuing to examine the implementation of broader comprehensive changes to the CC/MCC designations, we believe it is appropriate to finalize the change in the severity level designations from non-CC to CC for the ICD–10–CM diagnosis codes specifying antimicrobial drug resistance. We also agree with the commenters that the change in severity level designation should also apply to the other ICD–10–CM diagnosis codes that specify antimicrobial drug resistance. We believe this would be consistent with our proposal because these codes, which identify the resistance and non-responsiveness of a condition to antimicrobial drugs, are in the same family of codes (Z16) as the previously listed diagnosis codes related to antimicrobial resistance (that is, Z16.12, Z16.21, Z16.24, and Z16.39). Therefore, we are finalizing a change to the severity level designation for all of

[1] Internal analysis from the Centers for Disease Control and Prevention.

the codes in category Z16- (Resistance to antimicrobial drugs), which are listed below, from a non-CC to a CC designation.

ICD-10-CM Diagnosis Code	Code Description
Z16.10	Resistance to unspecified beta lactam antibiotics
Z16.11	Resistance to penicillins
Z16.12	Extended spectrum beta lactamase (ESBL) resistance
Z16.19	Resistance to other specified beta lactam antibiotics
Z16.20	Resistance to unspecified antibiotic
Z16.21	Resistance to vancomycin
Z16.22	Resistance to vancomycin related antibiotics
Z16.23	Resistance to quinolones and fluoroquinolones
Z16.24	Resistance to multiple antibiotics
Z16.29	Resistance to other single specified antibiotic
Z16.30	Resistance to unspecified antimicrobial drugs
Z16.31	Resistance to antiparasitic drug(s)
Z16.32	Resistance to antifungal drug(s)
Z16.33	Resistance to antiviral drug(s)
Z16.341	Resistance to single antimycobacterial drug
Z16.342	Resistance to multiple antimycobacterial drugs
Z16.35	Resistance to multiple antimicrobial drugs
Z16.39	Resistance to other specified antimicrobial drug

(We refer readers to sections II.H.8. and II.H.9. of the preamble of this final rule for a discussion of new technology add-on payment policies related to antimicrobial resistance.)

d. Requested Changes to Severity Levels

In the FY 2020 IPPS/LTCH PPS proposed rule (19246 through 19250) we discussed the external requests we received to make changes for the severity level designations of diagnosis codes in seven specific groups which included (1) Acute Right Heart Failure, (2) Chronic Right Heart Failure, (3) Ascites in Alcoholic Liver Disease and Toxic Liver Disease, (4) Factitious Disorder Imposed on Self, (5) Nonunion and Malunion of Physeal Metatarsal Fractures, (6) Other Encephalopathy, and (7) Obstetrics Chapter Codes. As these requests were external requests we discussed them separately from the comprehensive CC/MCC analysis, however, we utilized the same approach and methodology, consistent with our annual process of reviewing requested changes to severity levels. We note that, for the seven groups of external requests we received, we did not propose any changes to the severity levels of the diagnosis codes based on the results of our data analysis and the input of our clinical advisors, with the exception of group (7) Obstetrics Chapter Codes. We also note that we solicited comments on, but did not specifically propose changes for, the diagnosis codes discussed from group (1) Acute Right Heart Failure.

Some commenters disagreed with our decision not to propose changes in the severity level designation for certain groups of codes, for example the acute right heart failure and ascites codes, and recommended that we finalize changes to the severity levels, stating that the resources required are similar to the existing codes. Other commenters specifically recommended that we postpone any decisions related to the obstetrics chapter codes and work with a panel of provider stakeholders. As we indicated in the proposed rule, given the limited number of cases reporting ICD–10–CM obstetrical codes in the Medicare claims data, we are considering use of datasets other than MedPAR cost data for future evaluation of severity level designation for the ICD–10–CM diagnosis codes from the Obstetrics chapter of the ICD–10–CM classification.

As discussed above, after consideration of the public comments received, we are generally not finalizing our proposed changes to the severity level designations for the ICD–10–CM diagnosis codes that were reviewed as part of the comprehensive CC/MCC analysis and shown in Table 6P.1c associated with the proposed rule. Similarly, we are not finalizing any proposed changes to the obstetric chapter diagnosis codes for FY 2020, to allow for further consideration of these codes as part of our comprehensive analysis as well as further consideration of the use of additional data sets for these particular codes, given the limited number of cases reported in the Medicare claims data. We are also finalizing our proposals to maintain the current severity level designations for the remaining six groups of diagnosis codes listed above for FY 2020. We will continue to consider the public comments received on the external requests for changes to severity level designations as we review and consider the public comments on our comprehensive CC/MCC analysis.

e. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2020

The following tables identify the additions and deletions to the diagnosis code MCC severity levels list and the

additions and deletions to the diagnosis code CC severity levels list for FY 2020 and are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

Table 6I.1—Additions to the MCC List—FY 2020;

Table 6I.2—Deletions to the MCC List—FY 2020;

Table 6J.1—Additions to the CC List—FY 2020; and

Table 6J.2—Deletions to the CC List—FY 2020.

f. CC Exclusions List for FY 2020

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 36 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*, and includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. If the code designated as a CC or MCC is allowed with all principal diagnoses, the phrase ''NoExcl'' (for no exclusions) follows the CC or MCC designation. For example, ICD–10–CM diagnosis code A17.83 (Tuberculous neuritis) has this ''NoExcl'' entry. For all other diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when used as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a non-CC. Part 2 is the list of diagnosis codes designated as a MCC only for patients discharged alive; otherwise, they are assigned as a non-CC. After publication of the proposed rule, we found inconsistencies in the assignment of this ''NoExcl'' entry to the diagnoses designated as a CC or MCC. Generally, each CC or MCC diagnosis excludes itself from acting as a CC or MCC diagnosis, however, there are approximately 229 diagnosis codes we identified in Appendix C that have the phrase ''NoExcl'' and should instead contain a link to exclude themselves from acting as a CC or MCC. Therefore, we have corrected the list of diagnosis codes for the ICD–10 MS–DRG Definitions Manual Version 37, Appendix C—Complications or Comorbidities Exclusion List by providing a link to a collection of diagnosis codes which, when used as the principal diagnosis, will cause the CC or MCC to be considered as only a non-CC, for each of the 229 diagnosis codes identified. We have also removed the sentence that states, ''If the CC or MCC is allowed with all principal diagnoses, then the phrase NoExcl follows the CC/MCC indicator'' as there are no longer any entries for which this phrase applies. We note that these corrections to Appendix C do not represent a change in MS–DRG assignment (or IPPS payment) and are being made to conform the appendix and tables to current policy. We also note these corrections are reflected for Table 6K.—Complete List of CC Exclusions—FY 2020.

In the FY 2020 IPPS/LTCH PPS proposed rule, for FY 2020, we proposed changes to the ICD–10 MS–DRGs Version 37 CC Exclusion List. Therefore, we developed Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2020; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2020; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2020; and Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2020. For Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code proposed for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the proposed deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with the proposed rule are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

The proposed CC Exclusions for a subset of the diagnosis codes as set forth in Tables 6G.1, 6G.2, 6H.1 and 6H.2 associated with the FY 2020 IPPS/LTCH PPS proposed rule reflected the proposed severity level designations as discussed in section II.F.14.c.1. of the preamble of the proposed rule which were based on our comprehensive CC/MCC analysis. As discussed in section II.F.14.c.1. of the preamble of this final rule, we are not finalizing the proposed changes to the severity level designations after consideration of the public comments received (with the exception of the specified ICD–10–CM diagnosis codes in category Z16–Resistance to antimicrobial drugs). Therefore, the finalized CC Exclusions List as displayed in Tables 6G.1, 6G.2,

6H.1, 6H.2. and 6K. associated with this final rule reflect the severity levels under Version 36 of the ICD–10 MS–DRGs for a subset of the diagnosis codes.

15. Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2020, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this final rule.

These tables are not published in the Addendum to the proposed rule or final rule, but are available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this final rule. As discussed in section II.F.18. of the preamble of this final rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19250) we proposed the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. We also stated that the proposed severity level designations for the new diagnosis codes were set forth in Table 6A. and the proposed O.R. status for the new procedure codes were set forth in Table 6B.

Comment: A commenter expressed support for the proposed MS–DRG assignments under MDC 5 (Diseases and Disorders of the Circulatory System) for new procedure codes describing the insertion, removal, and revision of subcutaneous defibrillator leads via open and percutaneous approaches as reflected in Table 6B.—New Procedure Codes, that was associated with the proposed rule. However, the commenter stated it was not clear why MS–DRGs 040 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC), 041 (Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator), and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC) under MDC 1 (Diseases and Disorders of the Nervous System) were also proposed as MS–DRG assignments for the procedures describing removal and revision of subcutaneous defibrillator lead. The commenter requested that CMS provide information in the FY 2020 IPPS/LTCH PPS final rule regarding those proposed MS–DRG assignments, including the diagnosis and procedure codes that would result in assignment to those MS–DRGs. The commenter provided the following table to display the proposed MS–DRG assignments as reflected in Table 6B- New Procedure Codes that was associated with the proposed rule.

New code	Description	MDC	MS-DRG Assignments
0JH60FZ	Insertion of subcutaneous defibrillator lead into chest subcutaneous tissue and fascia, open approach	05	222(2), 223(2), 224(2), 225(2), 226(2), 227(2), 265 981, 982, 983
0JH63FZ	Insertion of subcutaneous defibrillator lead into chest subcutaneous tissue and fascia, percutaneous approach	05	222(2), 223(2), 224(2), 225(2), 226(2), 227(2), 265 981, 982, 983
0JPT0FZ	Removal of subcutaneous defibrillator lead from trunk subcutaneous tissue and fascia, open approach	01 05 21 24	040, 041, 042 265 907, 908, 909 957, 958, 959, 987, 988, 989
0JPT3FZ	Removal of subcutaneous defibrillator lead from trunk subcutaneous tissue and fascia, percutaneous approach	01 05 21 24	040, 041, 042 265 907, 908, 909 957, 958, 959, 987, 988, 989
0JWT0FZ	Revision of subcutaneous defibrillator lead in trunk subcutaneous tissue and fascia, open approach	01 05 09 21 24	040, 041, 042 265 579, 580, 581 907, 908, 909 957, 958, 959, 981, 982, 983

Response: We thank the commenter for their support. With regard to why MS–DRGs 040, 041, and 042 under MDC 1 were also proposed as MS–DRG assignments for the procedures describing removal and revision of subcutaneous defibrillator lead, we note that, as described in section II.F.2.a. of the preamble of this final rule, consistent with our annual process of assigning new procedure codes to MDCs and MS–DRGs, and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignment. The predecessor procedure codes for the above listed removal and revision of subcutaneous defibrillator lead procedure codes are procedure codes 0JPT0PZ (Removal of cardiac rhythm related device from trunk subcutaneous

tissue and fascia, open approach), 0JPT3PZ (Removal of cardiac rhythm related device from trunk subcutaneous tissue and fascia, percutaneous approach), 0JWT0PZ (Revision of cardiac rhythm related device in trunk subcutaneous tissue and fascia, open approach) and 0JWT3PZ (Revision of cardiac rhythm related device in trunk subcutaneous tissue and fascia, percutaneous approach) which are currently assigned to MS–DRGs 040, 041, and 042 under MDC 1. We also note that, in each MDC there is usually a medical and a surgical class referred to as ''other medical diseases'' and ''other surgical procedures,'' respectively. The ''other'' medical and surgical classes are not as precisely defined from a clinical perspective. The other classes would include diagnoses or procedures which were infrequently encountered or not well defined clinically. The ''other'' surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC. Within MDC 1, MS–DRGs 040, 041, and 042 are defined as a set of the ''other'' surgical classes as indicated in their MS–DRG titles with the ''Other Nervous System Procedures'' terminology. With regard to the diagnosis codes, we note that the diagnoses in each MDC correspond to a single organ system or etiology and in general are associated with a particular medical specialty. As such, the diagnoses assigned to MDC 1 correspond to the central nervous system. While we agree that it would be rare for a diagnosis related to a disease or disorder of the nervous system to be reported with a procedure that involves the removal or revision of a subcutaneous defibrillator lead, we note that, as discussed and displayed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41184), cases with procedure codes that identify the insertion of a cardiac rhythm related device (the predecessor code for insertion of subcutaneous defibrillator lead procedures) were previously assigned to MS–DRGs 040, 041, and 042 and a small number of cases were found to be reported in those MS–DRGs, thus indicating that the combination of a diagnosis code from MDC 1 and one of the procedures describing the insertion of a cardiac rhythm related device did occur. While we did not specifically conduct analysis of claims data for the procedures describing a removal or revision of a cardiac rhythm related device, our clinical advisors continue to support assignment of the new procedure codes describing removal and revision of subcutaneous defibrillator lead procedures to MS–DRGs 040, 041, and 042 as reflected in Table 6B. New Procedure Codes, associated with this final rule.

Additionally, as discussed in section II.F.2.a. of the preamble of this final rule, in our discussion of the annual process for assigning new procedure codes to MS–DRGs, a similar process is also utilized for assigning new diagnosis codes to MS–DRGs that involves review of the predecessor diagnosis code's MDC and MS–DRG assignment and severity level designation. However, this process does not automatically result in the new diagnosis code being assigned (or proposed for assignment) to the same severity level and/or MS–DRG and MDC as the predecessor code. There are several factors to consider during this process that our clinical advisors take into account.

The proposed severity level designations for a subset of the new diagnosis codes as set forth in Table 6A associated with the FY 2020 IPPS/LTCH PPS proposed rule reflected the proposed severity level designations as discussed in section II.F.14.c.1. of the preamble of the proposed rule which were based on our comprehensive CC/MCC analysis. For example, new diagnosis codes in the category L89- series describing pressure-induced deep tissue damage of various anatomical sites were proposed to be designated at a CC severity level. However, as discussed in section II.F.14.c.1. of the preamble of this final rule, we are not finalizing the proposed changes to the severity level designations based on our comprehensive CC/MCC analysis after consideration of the public comments received (with the exception of the specified ICD–10–CM diagnosis codes in category Z16–Resistance to antimicrobial drugs). Therefore, consistent with our annual process for assigning new diagnosis codes to MDCs and MS–DRGs and designating a new diagnosis code as an MCC, a CC or a non-CC, we reviewed the predecessor code MDC and MS–DRG assignments and the severity level designations for for these new codes and determined the appropriate severity level designation for these codes is the same severity level as the predecessor code under Version 36 of the ICD–10 MS–DRGs. The finalized severity level designations for these new diagnosis codes as set forth in Table 6A associated with this final rule therefore reflect the same severity level as the predecessor code under Version 36 of the ICD–10 MS–DRGs.

We also note that after publication of the proposed rule we identified procedures identified by procedure codes beginning with the prefix 0D1 describing bypass procedures of the small and large intestines in Table 6B.—New Procedure Codes that were inadvertently proposed for assignment to MS–DRGs 829 and 830 (Myeloproliferative Disorders Or Poorly Differentiated Neoplasms with Other Procedure with CC/MCC and without CC/MCC, respectively). Assignment of these procedures to MS–DRGs 829 and 830 is not applicable because the procedures would not result in assignment to these MS–DRGs due to the logic of the surgical hierarchy. Therefore, we have removed MS–DRGs 829 and 830 from the list of MS–DRGs to which these bypass procedures of the small and large intestine are assigned for FY 2020 as reflected in Table 6B.—New Procedure Codes associated with this final rule.

We are finalizing the MDC and MS–DRG assignments for the new diagnosis and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, the finalized O.R. status for the new procedure codes are set forth in Table 6B. We are making available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following tables associated with this final rule:

- Table 6A.—New Diagnosis Codes–FY 2020;
- Table 6B.—New Procedure Codes–FY 2020;
- Table 6C.—Invalid Diagnosis Codes–FY 2020;
- Table 6D.—Invalid Procedure Codes–FY 2020;
- Table 6E.—Revised Diagnosis Code Titles–FY 2020;
- Table 6F.—Revised Procedure Code Titles–FY 2020;
- Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List–FY 2020;
- Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List–FY 2020;
- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List–FY 2020;
- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List–FY 2020;
- Table 6I.—Complete MCC List–FY 2020;
- Table 6I.1.—Additions to the MCC List–FY 2020;
- Table 6I.2.–Deletions to the MCC List–FY 2020;
- Table 6J.—Complete CC List–FY 2020;
- Table 6J.1.—Additions to the CC List–FY 2020;

- Table 6J.2.—Deletions to the CC List–FY 2020; and
- Table 6K.—Complete List of CC Exclusions–FY 2020

16. Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41220), we made available the FY 2019 ICD–10 MCE Version 36 manual file. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 36 (and ICD–10 MS–DRGs) are posted on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*.

In the FY 2020 IPPS/LTCH PPS proposed rule, we addressed the MCE requests we received by the November 1, 2018 deadline. We also discussed the proposals we were making based on internal review and analysis. In this FY 2020 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to the MCE requests and proposals presented based on internal reviews and analyses in the proposed rule, our responses to those comments, and our finalized policies.

In addition, as a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, we routinely make changes to the MCE. In the past, in both the IPPS proposed and final rules, we have only provided the list of changes to the MCE that were brought to our attention after the prior year's final rule. We historically have not listed the changes we have made to the MCE as a result of the new and modified codes approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting. These changes are approved too late in the rulemaking schedule for inclusion in the proposed rule. Furthermore, although our MCE policies have been described in our proposed and final rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule. However, we make available the finalized Definitions of Medicare Code Edits (MCE) file. Therefore, we are making available the FY 2020 ICD–10 MCE Version 37 Manual file, along with the link to the mainframe and computer software for the MCE Version 37 (and ICD–10 MS–DRGs), on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html*.

a. Age Conflict Edit: Maternity Diagnoses

In the MCE, the Age conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age conflict edit and are listed in the manual and written in the software program:

- Perinatal/Newborn—Age of 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0–17 years inclusive (for example, Reye's syndrome, routine child health exam).
- Maternity—Age range is 12–55 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15–124 years inclusive (for example, senile delirium, mature cataract).

Under the ICD–10 MCE, the maternity diagnoses category for the Age conflict edit considers the age range of 12 to 55 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

We stated in the proposed rule that we received a request to reconsider the age range associated with the maternity diagnoses category for the Age conflict edit. According to the requestor, pregnancies can and do occur prior to age 12 and after age 55. The requestor suggested that a more appropriate age range would be from age 9 to age 64 for the maternity diagnoses category.

We agreed with the requestor that pregnancies can and do occur prior to the age of 12 and after the age of 55. We further stated in the proposed rule that we also agreed that the suggested range, age 9 to age 64, is an appropriate age range. Therefore, we proposed to revise the maternity diagnoses category for the Age conflict edit to consider the new age range of 9 to 64 years inclusive.

Comment: Commenters agreed with CMS' proposal to revise the maternity diagnoses category for the Age conflict edit by expanding the age range.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to revise the maternity diagnoses category for the Age conflict edit to consider the new age range of 9 to 64 years inclusive under the ICD–10 MCE Version 37, effective October 1, 2019.

b. Sex Conflict Edit: Diagnoses for Females Only Edit

In the MCE, the Sex conflict edit detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record; for example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient's diagnosis, procedure, or sex is presumed to be incorrect.

As discussed in section II.F.15. of the preamble of this final rule, Table 6A.—New Diagnosis Codes which is associated with this final rule (and is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2019. We stated in the proposed rule that ICD–10–CM diagnosis code N99.85 (Post endometrial ablation syndrome) is a new code that describes a condition consistent with the female sex. We proposed to add this diagnosis code to the Diagnoses for Females Only edit code list under the Sex conflict edit.

Comment: Commenters agreed with the proposal to add diagnosis code N99.85 to the Diagnoses for Females Only edit code list under the Sex conflict edit.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add diagnosis code N99.85 (Post endometrial ablation syndrome) to the Diagnoses for Females Only edit code list under the Sex conflict edit under the ICD–10 MCE Version 37, effective October 1, 2019.

c. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance that influences an individual's health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered ''acceptable'' when a specified secondary diagnosis is also coded and reported on the claim.

In the proposed rule we stated that ICD–10–CM diagnosis codes I46.2 (Cardiac arrest due to underlying cardiac condition) and I46.8 (Cardiac arrest due to other underlying condition) are codes that clearly specify cardiac arrest as being due to an underlying condition. Also, in the ICD–10–CM Tabular List, there are instructional notes to ''Code first underlying cardiac condition'' at ICD–10–CM diagnosis code I46.2 and to ''Code first underlying condition'' at ICD–10–CM diagnosis code I46.8. Therefore, we proposed to add ICD–10–CM diagnosis codes I46.2 and I46.8 to the Unacceptable Principal Diagnosis Category edit code list.

As discussed in section II.F.15. of the preamble of this final rule, Table 6A.—New Diagnosis Codes associated with this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) lists the new diagnosis codes that have been approved to date that will be effective with discharges occurring on and after October 1, 2019.

As indicated in the proposed rule, we proposed to add the new ICD–10–CM diagnosis codes listed in the following table to the Unacceptable Principal Diagnosis Category edit code list, as these codes are consistent with other ICD–10–CM diagnosis codes currently included on the Unacceptable Principal Diagnosis Category edit code list.

ICD-10-CM Code	Code Description
T50.915A	Adverse effect of multiple unspecified drugs, medicaments and biological substances, initial encounter
T50.915D	Adverse effect of multiple unspecified drugs, medicaments and biological substances, subsequent encounter
T50.915S	Adverse effect of multiple unspecified drugs, medicaments and biological substances, sequela
T50.916A	Underdosing of multiple unspecified drugs, medicaments and biological substances, initial encounter
T50.916D	Underdosing of multiple unspecified drugs, medicaments and biological substances, subsequent encounter
T50.916S	Underdosing of multiple unspecified drugs, medicaments and biological substances, sequela
Z11.7	Encounter for testing for latent tuberculosis infection
Z22.7	Latent tuberculosis
Z71.84	Encounter for health counseling related to travel
Z86.002	Personal history of in-situ neoplasm of other and unspecified genital organs
Z86.003	Personal history of in-situ neoplasm of oral cavity, esophagus and stomach
Z86.004	Personal history of in-situ neoplasm of other and unspecified digestive organs
Z86.005	Personal history of in-situ neoplasm of middle ear and respiratory system
Z86.006	Personal history of melanoma in-situ

Comment: Commenters agreed with our proposal to add diagnosis codes I46.2 and I46.8, as well as the new ICD–10–CM diagnosis codes listed in the table above, to the Unacceptable Principal Diagnosis Category edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add diagnosis codes I46.2 and I46.8 to the Unacceptable Principal Diagnosis Category edit code list. We are also finalizing our proposal to add the new ICD–10–CM diagnosis codes previously listed in the table to the Unacceptable Principal Diagnosis Category edit code list under the ICD–10 MCE Version 37, effective October 1, 2019.

d. Non-Covered Procedure Edit

In the MCE, the Non-Covered Procedure edit identifies procedures for which Medicare does not provide payment. Payment is not provided due to specific criteria that are established in the National Coverage Determination (NCD) process. We refer readers to the website at: *https://www.cms.gov/Medicare/Coverage/DeterminationProcess/howtorequestanNCD.html* for additional information on this process. In addition, there are procedures that would normally not be paid by Medicare but, due to the presence of certain diagnoses, are paid.

As discussed in section II.F.15. of the preamble of this final rule, Table 6D.—Invalid Procedure Codes associated with this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) lists the procedure codes that are no longer effective as of October 1, 2019. Included in this table are the following ICD–10–PCS procedure codes listed on the Non-Covered Procedure edit code list.

ICD-10-PCS Code	Code Description
037G3Z6	Dilation of intracranial artery, bifurcation, percutaneous approach
037G4Z6	Dilation of intracranial artery, bifurcation, percutaneous endoscopic approach

In the proposed rule, we proposed to remove these codes from the Non-Covered Procedure edit code list.

In addition, as discussed in section II.F.2.b. of the preamble of the proposed rule, a number of ICD–10–PCS procedure codes describing bone marrow transplant procedures were the subject of a proposal discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting, to be deleted effective October 1, 2019. We proposed that if the applicable proposal is finalized, we would delete the subset of those ICD–10–PCS procedure codes that are currently listed on the Non-Covered Procedure edit code list as shown in the following table.

ICD-10-PCS Code	Code Description
30250G0	Transfusion of autologous bone marrow into peripheral artery, open approach
30250Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, open approach
30253G0	Transfusion of autologous bone marrow into peripheral artery, percutaneous approach
30253Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, percutaneous approach
30260G0	Transfusion of autologous bone marrow into central artery, open approach
30260Y0	Transfusion of autologous hematopoietic stem cells into central artery, open approach
30263G0	Transfusion of autologous bone marrow into central artery, percutaneous approach
30263Y0	Transfusion of autologous hematopoietic stem cells into central artery, percutaneous approach

Comment: Commenters agreed with our proposal to remove the ICD–10–PCS procedure codes previously listed in the tables from the Non-Covered Procedure edit code list.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the ICD–10–PCS procedure codes previously listed in the tables that are no longer valid from the Non-Covered Procedure edit code list within the ICD–10 MCE Version 37 effective October 1, 2019. We note that the proposal involving ICD–10–PCS procedure codes describing bone marrow transplant procedures was finalized after the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting, as reflected in Table 6D.—Invalid Procedure Codes associated with this final rule (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*).

e. Future Enhancement

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38053 through 38054), we noted the importance of ensuring accuracy of the coded data from the reporting, collection, processing, coverage, payment, and analysis aspects. We have engaged a contractor to assist in the review of the limited coverage and noncovered procedure edits in the MCE that may also be present in other claims processing systems that are utilized by our MACs. The MACs must adhere to criteria specified within the National Coverage Determinations (NCDs) and may implement their own edits in addition to what are already incorporated into the MCE, resulting in duplicate edits. The objective of this review is to identify where duplicate edits may exist and to determine what the impact might be if these edits were to be removed from the MCE.

We have noted that the purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims

processing. As we indicated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41228), we are considering whether the inclusion of coverage edits in the MCE necessarily aligns with that specific goal because the focus of coverage edits is on whether or not a particular service is covered for payment purposes and not whether it was coded correctly.

As we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits. As noted in the FY 2020 IPPS/LTCH PPS proposed rule, we continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the MS–DRG Classification Change Mailbox located at: *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2019 for FY 2021 rulemaking.

17. Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this final rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we proposed to make in the FY 2020 IPPS/LTCH PPS proposed rule, as discussed in section II.F.5.a. of the preamble of this final rule, in the proposed rule we proposed to revise the surgical hierarchy for MDC 5 (Diseases and Disorders of the Circulatory System) as follows: In MDC 5, we proposed to sequence proposed new MS–DRGs 319 and 320 (Other Endovascular Cardiac Valve Procedures with and without MCC, respectively) above MS–DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively) and below MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with and without MCC, respectively). We also note that, as discussed in section II.F.5.a. of the preamble of this final rule, we proposed to revise the titles for MS–DRGs 266 and 267 to ''Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC'' and ''Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC'', respectively.

Our proposal for Appendix D—MS–DRG Surgical Hierarchy by MDC and MS–DRG of the ICD–10 MS–DRG Definitions Manual Version 37 is illustrated in the following table.

Proposed Surgical Hierarchy: MDC 5	
MS-DRG 215	Other Heart Assist System Implant
MS-DRGs 216-221	Cardiac Valve and Other Major Cardiothoracic Procedures
MS-DRGs 266 and 267	Endovascular Cardiac Valve Procedures
Proposed New MS-DRGs 319 and 320	Other Endovascular Cardiac Valve Procedures
MS-DRGs 222-227	Cardiac Defibrillator Implant

Comment: Commenters supported our proposal to sequence proposed new MS–DRGs 319 and 320 above MS–DRGs 222, 223, 224, 225, 226, and 227, and below MS- DRGs 266 and 267. However, a commenter proposed an alternate option upon reviewing Table 5.—List Of Medicare Severity Diagnosis-Related Groups (MS–DRGs), Relative Weighting Factors, And Geometric And Arithmetic Mean Length Of Stay—FY 2020 associated with the proposed rule. The commenter noted that because multiple procedures may be performed during an encounter and MS–DRGs 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 231, 232, 233, 234, 235, and 236 (MS–DRG 230 was deleted effective FY 2017) are weighted higher than the proposed new MS–DRGs 319 and 320, sequencing proposed new MS–DRGs 319 and 320 above MS–DRGs 239, 240, and 241 (Amputation for Circulatory System Disorders except Upper Limb & Toe with MCC, with CC, and without CC/MCC, respectively) and below MS–DRG 270, 271 and 272 (Other Major Cardiovascular Procedures with MCC, with CC, and without CC/MCC, respectively) appeared more appropriate to result in the most resource intensive MS–DRG assignment when multiple cardiac procedures are performed.

Response: We thank the commenters for their support. As discussed in section II.F.5.a. of the preamble of this final rule, we are finalizing our proposal to create new MS–DRGs 319 and 320. In response to the commenter's suggestion that we sequence new MS–DRGs 319 and 320 above MS–DRGs 239, 240, and 241 and below MS–DRGs 270, 271 and 272, we reviewed the surgical hierarchy once again. Upon our review, we agree that the initial proposed sequencing did not adequately account for the most resource intensive MS–DRG assignment. However, our clinical advisors also did not completely agree with the suggested alternative option offered by the commenter and recommended that new MS–DRGs 319 and 320 be sequenced above MS–DRGs 270, 271 and 272 and below MS–DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with and without MCC, respectively) because they believe this sequencing more appropriately reflects resource utilization when multiple cardiac procedures are performed and will result in the most suitable MS–DRG assignment.

After consideration of the public comments we received and the input of our clinical advisors, we are finalizing the below changes to the surgical hierarchy for new MS–DRGs 319 and 320 within Appendix D—MS–DRG Surgical Hierarchy by MDC and MS–DRG of the ICD–10 MS–DRG Definitions Manual Version 37 as illustrated in the following table.

Surgical Hierarchy: MDC 5	
MS-DRG 215	Other Heart Assist System Implant
MS-DRGs 216-221	Cardiac Valve and Other Major Cardiothoracic Procedures
MS-DRGs 266 and 267	Endovascular Cardiac Valve Procedures
MS-DRGs 222-227	Cardiac Defibrillator Implant
MS-DRGs 228-229	Other Cardiothoracic Procedures
MS-DRGs 231-236	Coronary Bypass
MS-DRGs 268-269	Aortic and Heart Assist Procedures
New MS-DRGs 319 and 320	Other Endovascular Cardiac Valve Procedures
MS-DRGs 270-272	Other Major Cardiovascular Procedures

As with other MS–DRG related issues, we encourage commenters to submit requests to examine ICD–10 claims pertaining to the surgical hierarchy via the CMS MS–DRG Classification Change Request Mailbox located at: *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2019 for consideration for FY 2021.

18. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS), the Centers for Disease Control and Prevention (CDC), and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: *http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html.* The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html.*

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates

recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2020 at a public meeting held on September 11–12, 2018, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 13, 2018.

The Committee held its 2019 meeting on March 5–6, 2019. The deadline for submitting comments on these code proposals was April 5, 2019. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by May 2019 would be included in the October 1, 2019 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. As discussed in earlier sections of the preamble of this final rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this final rule, which are available via the internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. The code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed rule, they are not subject to comment in the proposed rule. Because of the length of these tables, they are not published in the Addendum to the proposed rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to the proposed rule.

Live Webcast recordings of the discussions of the diagnosis and procedure codes at the Committee's September 11–12, 2018 meeting can be obtained from the CMS website at: *http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/03_meetings.asp*. The live webcast recordings of the discussions of the diagnosis and procedure codes at the Committee's March 5–6, 2019 meeting can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.html*.

The materials for the discussions relating to diagnosis codes at the September 11–12, 2018 meeting and March 5–6, 2019 meeting can be found at: *http://www.cdc.gov/nchs/icd/icd10cm_maintenance.html*. These websites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD–10 Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by Email to: *nchsicd10cm@cdc.gov*.

Questions and comments concerning the procedure codes should be submitted via Email to: *ICDProcedureCodeRequest@cms.hhs.gov*.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD–10 (previously the ICD–9–CM) Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 3 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS website. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS websites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4–5, 2005 ICD–9–CM Coordination and Maintenance Committee Meeting minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requestor at the Committee's public

meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting materials and live webcast are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. We indicated in the proposed rule that there were not any requests approved for an expedited April l, 2019 implementation of a code at the September 11–12, 2018 Committee meeting. Therefore, there were not any new codes for implementation on April 1, 2019.

ICD–9–CM addendum and code title information is published on the CMS website at: *http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/01overview.asp#TopofPage*. ICD–10–CM and ICD–10–PCS addendum and code title information is published on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html*. CMS also sends copies of all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers.

Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can also be found on the CDC website at: *http://www.cdc.gov/nchs/icd/icd10.htm*. Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the *Coding Clinic for ICD–10*. AHA also distributes coding update information to publishers and software vendors.

The following chart shows the number of ICD–10–CM and ICD–10–PCS codes and code changes since FY 2016 when ICD–10 was implemented.

Total Number of Codes and Changes in Total Number of Codes per Fiscal Year ICD-10-CM and ICD-10-PCS Codes

Fiscal Year	Number	Change
FY 2016		
ICD-10-CM	69,823	
ICD-10-PCS	71,974	
FY 2017		
ICD-10-CM	71,486	+1,663
ICD-10-PCS	75,789	+3,815
FY 2018		
ICD-10-CM	71,704	+218
ICD-10-PCS	78,705	+2,916
FY 2019		
ICD-10-CM	71,932	+228
ICD-10-PCS	78,881	+176
FY 2020		
ICD-10-CM	72,184	+252
ICD-10-PCS	77,559	-1,322

As mentioned previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD–10 Coordination and Maintenance Committee meeting.

19. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Changes for FY 2020

As discussed in the FY 2020 IPPS/LTCH proposed rule (84 FR 19255 through 19257), for FY 2020, we proposed to create new MS–DRGs 319 and 320 (Other Endovascular Cardiac Valve Procedures with and without MCC, respectively) and to revise the title for MS–DRG 266 from ''Endovascular Cardiac Valve Replacement with MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC'' and the title for MS–DRG 267 from ''Endovascular Cardiac Valve Replacement without MCC'' to ''Endovascular Cardiac Valve

Replacement and Supplement Procedures without MCC''.

We noted in the proposed rule, as stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS–DRGs onto the list when they are formed from procedures previously assigned to MS–DRGs that are already on the list. Currently, MS–DRGs 216 through 221 are on the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the table below. A subset of the procedures currently assigned to MS–DRGs 216 through 221 was proposed for assignment to proposed new MS–DRGs 319 and 320. Therefore, we proposed that if the applicable proposed MS–DRG changes are finalized, we also would add proposed new MS–DRGs 319 and 320 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit and make conforming changes to the titles of MS–DRGs 266 and 267 as reflected in the table below. We also proposed to continue to include the existing MS–DRGs currently subject to the policy as also displayed in the table below.

BILLING CODE 4120–01–C

As discussed in section II.F.5.a. of the preamble of this final rule, we are finalizing our proposal to add new MS–DRGs 319 and 320. We did not receive any public comments opposing our proposal to add MS–DRGs 319 and 320 to the policy for replaced devices offered without cost or with credit, make conforming changes to the titles of MS–DRGs 266 and 267 as reflected in the table above or to continue to include the existing MS–DRGs currently subject to the policy. Therefore, we are finalizing the list of MS–DRGs in the table included in the proposed rule and above that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2019.

The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will also be issued to providers in the form of a Change Request (CR).

20. Out of Scope Public Comments Received

We received public comments regarding a number of MS–DRG and related issues that were outside the scope of the proposals included in the FY 2020 IPPS/LTCH PPS proposed rule.

Because we consider these public comments to be outside the scope of the proposed rule, we are not addressing them in this final rule. As stated in section II.F.1.b. of the preamble of this final rule, we encourage individuals with comments about MS–DRG classification to submit these comments no later than November 1 of each year so that they can be considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

G. Recalibration of the FY 2020 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

In developing the FY 2020 system of weights, we proposed to use two data sources: Claims data and cost report data. As in previous years, the claims data source is the MedPAR file. This file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2018 MedPAR data used in this final rule include discharges occurring on October 1, 2017, through September 30, 2018, based on bills received by CMS through March 31, 2019, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS). The FY 2018 MedPAR file used in calculating the relative weights includes data for approximately 9,514,788 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the December 31, 2018 update of the FY 2018 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2020 also excludes claims with claim type values not equal

to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the FY 2020 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2018 MedPAR claims data, grouped through the ICD–10 version of the FY 2020 GROUPER (Version 37).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. Normally, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, we used cost report data from the March 31, 2018 update of the FY 2017 HCRIS for calculating the FY 2020 cost-based relative weights.

2. Methodology for Calculation of the Relative Weights

As we explain in section II.E.2. of the preamble of this final rule, we calculated the FY 2020 relative weights based on 19 CCRs, as we did for FY 2019. The methodology we proposed to use to calculate the FY 2020 MS–DRG cost-based relative weights based on claims data in the FY 2018 MedPAR file and data from the FY 2017 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2020 MS–DRG classifications discussed in sections II.B. and II.F. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2018 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.
- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.
- At least 92.3 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at: *http://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the Bundled Payments for Care Improvement (BPCI) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: As a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: *https://innovation.cms.gov/initiatives/bpci-advanced/*. As noted in the proposed rule, consistent with our policy for FY 2019, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2020, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted above, these hospitals are still receiving IPPS payments under section 1886(d) of the Act.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2017 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in the following table. The table shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs. We stated in the proposed rule that, if stakeholders had comments about the groupings in this table, we may consider those comments as we finalize our policy. However, we did not receive any comments on the groupings in this table, and therefore, we are finalizing the groupings as proposed.

We invited public comments on our proposals related to recalibration of the FY 2020 relative weights and the changes in relative weights from FY 2019.

Comment: Several commenters expressed concern about significant reductions to the relative weight for MS–DRG 215. Commenters stated that the reduction in the proposed relative weight was 29 percent, which is the largest decrease of any MS–DRG; commenters also noted that the cumulative decrease to the relative weight for MS–DRG 215 would be 43% since FY 2017. Commenters stated that the proposed relative weights would result in significant underpayments to facilities, which would in turn limit access to heart assist devices.

Some commenters specifically referenced the Impella®, one of the heart assist devices used to provide ventricular support. Commenters also stated that the proposed reduction in the relative weight resulted from several coding changes and a new FDA indication for the Impella®, for the treatment of cardiomyopathy with cardiogenic shock. The commenters stated that these changes in coding guidance are still not reflected in claims for the FY 2020 proposed rule, and that 68% of claims for procedures utilizing the Impella® device did not have a charge for the Impella® in the Other Implants revenue center. Other commenters stated that 22% of claims did not have a charge for the device. Some commenters stated that they expect the future claims data to result in an increase to the relative weight for MS–DRG 215 for FY 2021.

Commenters requested that CMS maintain the relative weight at the FY 2018 relative weight for any MS–DRG that was held harmless last year and continues to face a 20% or greater reduction from its FY 2018 relative weight. Commenters stated that a hold harmless policy is consistent with prior rulemaking, in which CMS provided for transition periods for changes that have significant payment implications.

Response: As we indicated in the FY 2018 IPPS/LTCH final rule (82 FR 38103), and in response to similar comments in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41273), we do not believe it is normally appropriate to address relative weight fluctuations that appear to be driven by changes in the underlying data. Nevertheless, after reviewing the comments received and the data used in our ratesetting calculations, we acknowledge an outlier circumstance where the weight for an MS–DRG is seeing a significant reduction for each of the 3 years since CMS began using the ICD–10 data in calculating the relative weights. While we would ordinarily consider this weight change to be appropriately driven by the underlying data, given the comments received and the potential for these declines to be associated with the implementation of ICD–10, we are adopting a temporary one-time measure for FY 2020 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2020 relative weight would have declined by 20 percent or more from the FY 2019 relative weight, which was maintained at the FY 2018 relative weight. Specifically, for an MS–DRG meeting this criterion, we will continue the current policy of maintaining the relative weight at the FY 2018 level. In other words, the FY 2020 relative weight will be set equal to the FY 2019 relative weight, which was in turn set equal to the FY 2018 relative weight.

We believe this policy is consistent with our general authority to assign and update appropriate weighting factors under sections 1886(d)(4)(B) and (C) of the Act. We also believe that it appropriately addresses the situation in which the reduction to the FY 2020 relative weights may potentially continue to be associated with the implementation of ICD–10. We continue to believe that changes in relative weights that are not of this outlier magnitude over the 3 years since we first incorporated the ICD–10 data in our ratesetting are appropriately being driven by the underlying data and not associated with the implementation of ICD–10.

BILLING CODE 4120–01–C

3. Development of National Average CCRs

We developed the national average CCRs as follows:

Using the FY 2017 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. We then created CCRs for each provider for each cost center (see prior table for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. We then took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the

standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the relative weight.

The FY 2020 cost-based relative weights were then normalized by an adjustment factor of 1.789031 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

The 19 national average CCRs for FY 2020 are as follows:

Group	CCR
Routine Days	0.432
Intensive Days	0.358
Drugs	0.189
Supplies & Equipment	0.299
Implantable Devices	0.299
Therapy Services	0.297
Laboratory	0.109
Operating Room	0.173
Cardiology	0.098
Cardiac Catheterization	0.106
Radiology	0.140
MRIs	0.072
CT Scans	0.034
Emergency Room	0.152
Blood and Blood Products	0.283
Other Services	0.346
Labor & Delivery	0.373
Inhalation Therapy	0.150
Anesthesia	0.077

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We proposed to use that same case threshold in recalibrating the MS–DRG relative weights for FY 2020. Using data from the FY 2018 MedPAR file, there were 8 MS–DRGs that contain fewer than 10 cases. For FY 2020, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we proposed to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2019 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2019 to FY 2020. The crosswalk table is shown below.

Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
338	Appendectomy with Complicated Principal Diagnosis with MCC	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

After consideration of the comments we received, we are finalizing our proposals, with the modification for recalibrating the relative weights for FY 2020 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2020 relative weight would have declined by 20 percent or more from the FY 2019 relative weight, which was maintained at the FY 2018 relative weight.

H. Add-On Payments for New Services and Technologies for FY 2020

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. We note that, beginning with discharges occurring in FY 2008, CMS transitioned from CMS–DRGs to MS–DRGs. The regulations at 42 CFR 412.87 implement these provisions and specify three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In this final rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For a complete discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574).

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will be considered ''new'' for purposes of new medical service or technology add-on payments until such time as Medicare data are available to fully reflect the cost of the technology in the MS–DRG weights through recalibration. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a

new FDA approval or clearance, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically: (1) Whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) whether a product is assigned to the same or a different MS–DRG; and (3) whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352), and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges for cases involving the new technology exceed certain threshold amounts. The MS–DRG threshold amounts used in evaluating new technology add-on payment applications for FY 2020 are presented in a data file that is available, along with the other data files associated with the FY 2019 IPPS/LTCH PPS final rule and correction notice, on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2019-IPPS-Final-Rule-Home-Page-Items/FY2019-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending.* As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the final thresholds for applications for new technology add-on payments for FY 2021 are presented in a data file that is available on the CMS website, along with the other data files associated with this FY 2020 final rule, by clicking on the FY 2020 IPPS Final Rule Home Page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for complete information on this issue.

Under the third criterion, § 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. For example, a new technology represents a substantial clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits, or reduces recovery time compared to the technologies previously available. (We refer readers to the September 7, 2001 final rule for a more detailed discussion of this criterion (66 FR 46902). We also refer readers to section II.H.8. of the preamble of this final rule for a discussion of our final policy regarding an alternative inpatient new technology add-on payment pathway for transformative new devices. We also refer readers to section II.H.10. of the preamble of this final rule for a discussion of our final policy regarding an alternative inpatient new technology add-on payment pathway for certain antimicrobials.)

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology or medical service (if the estimated costs for the case including the new technology or medical service exceed Medicare's payment); or (2) 50 percent of the difference between the full DRG payment and the hospital's estimated cost for the case. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS–DRG payment plus 50 percent of the estimated costs of the new technology or medical service. We refer readers to section II.H.9. of the preamble of this final rule for a discussion of our final policy regarding the change to the calculation of the new technology add-on payment beginning in FY 2020, including our finalized amendments to § 412.88 of the regulations.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and later years have not been subjected to budget neutrality.

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulations at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We amended § 412.87(c) to specify that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered.

The Council on Technology and Innovation (CTI) at CMS oversees the agency's cross-cutting priority on coordinating coverage, coding and payment processes for Medicare with respect to new technologies and

procedures, including new drug therapies, as well as promoting the exchange of information on new technologies and medical services between CMS and other entities. The CTI, composed of senior CMS staff and clinicians, was established under section 942(a) of Public Law 108–173. The Council is co-chaired by the Director of the Center for Clinical Standards and Quality (CCSQ) and the Director of the Center for Medicare (CM), who is also designated as the CTI's Executive Coordinator.

The specific processes for coverage, coding, and payment are implemented by CM, CCSQ, and the local Medicare Administrative Contractors (MACs) (in the case of local coverage and payment decisions). The CTI supplements, rather than replaces, these processes by working to assure that all of these activities reflect the agency-wide priority to promote high-quality, innovative care. At the same time, the CTI also works to streamline, accelerate, and improve coordination of these processes to ensure that they remain up to date as new issues arise. To achieve its goals, the CTI works to streamline and create a more transparent coding and payment process, improve the quality of medical decisions, and speed patient access to effective new treatments. It is also dedicated to supporting better decisions by patients and doctors in using Medicare-covered services through the promotion of better evidence development, which is critical for improving the quality of care for Medicare beneficiaries.

To improve the understanding of CMS' processes for coverage, coding, and payment and how to access them, the CTI has developed an ''Innovator's Guide'' to these processes. The intent is to consolidate this information, much of which is already available in a variety of CMS documents and in various places on the CMS website, in a user friendly format. This guide was published in 2010 and is available on the CMS website at: *https://www.cms.gov/Medicare/Coverage/CouncilonTechInnov/Downloads/Innovators-Guide-Master-7-23-15.pdf*.

As we indicated in the FY 2009 IPPS final rule (73 FR 48554), we invite any product developers or manufacturers of new medical services or technologies to contact the agency early in the process of product development if they have questions or concerns about the evidence that would be needed later in the development process for the agency's coverage decisions for Medicare.

The CTI aims to provide useful information on its activities and initiatives to stakeholders, including Medicare beneficiaries, advocates, medical product manufacturers, providers, and health policy experts. Stakeholders with further questions about Medicare's coverage, coding, and payment processes, or who want further guidance about how they can navigate these processes, can contact the CTI at *CTI@cms.hhs.gov*.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19274), we noted that applicants for add-on payments for new medical services or technologies for FY 2021 must submit a formal request, including a full description of the clinical applications of the medical service or technology and, as applicable, the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Complete application information, along with final deadlines for submitting a full application, will be posted on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2021, the CMS website also will post the tracking forms completed by each applicant. We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA; it is currently being revised based on the finalized policies discussed in this section of the final rule and approved under OMB control number 0938–1347, which expires on December 31, 2020.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement or advancement. The process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries;
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending;
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement; and
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2020 prior to publication of the FY 2020 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on October 5, 2018 (83 FR 50379), and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on December 4, 2018. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for each of the FY 2020 new medical service and technology add-on payment applications before the publication of the FY 2020 IPPS/LTCH PPS proposed rule.

We stated in the FY 2020 IPPS/LTCH PPS proposed rule that approximately 100 individuals registered to attend the town hall meeting in person, while additional individuals listened over an open telephone line. We also live-streamed the town hall meeting and posted the morning and afternoon sessions of the town hall on the CMS YouTube web page at: *https://www.youtube.com/watch?v=4z1AhEuGHqQ* and *https://www.youtube.com/watch?v=m26Xj1EzbIY*, respectively. We considered each applicant's presentation made at the town hall meeting, as well as written comments submitted on the applications that were received by the due date of December 14, 2018, in our evaluation of the new technology add-on payment applications for FY 2020 in the

development of the FY 2020 IPPS/LTCH PPS proposed rule.

In response to the published notice and the December 4, 2018 New Technology Town Hall meeting, we received written comments regarding the applications for FY 2020 new technology add-on payments. (We refer readers to section II.H.2. of the preamble of the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19275) for summaries of the comments we received in response to the published notice and the New Technology Town Hall meeting and our responses.) We also noted in the FY 2020 IPPS/LTCH PPS proposed rule that we do not summarize comments that are unrelated to the ''substantial clinical improvement'' criterion. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (83 FR 50379 through 50381), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion in regard to pending new technology add-on payment applications for FY 2020. Therefore, we did not summarize those written comments in the proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.H.5. of the preamble of the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19284 through 19367), we summarized comments regarding individual applications, or, if applicable, indicated that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/2016-ICD-10-PCS-and-GEMs.html*, including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

4. FY 2020 Status of Technologies Approved for FY 2019 New Technology Add-On Payments

a. Defitelio® (Defibrotide)

Jazz Pharmaceuticals submitted an application for new technology add-on payments for FY 2017 for defibrotide (Defitelio®), a treatment for patients who have been diagnosed with hepatic veno-occlusive disease (VOD) with evidence of multi-organ dysfunction. VOD, also known as sinusoidal obstruction syndrome (SOS), is a potentially life-threatening complication of hematopoietic stem cell transplantation (HSCT), with an incidence rate of 8 percent to 15 percent. Diagnoses of VOD range in severity from what has been classically defined as a disease limited to the liver (mild) and reversible, to a severe syndrome associated with multi-organ dysfunction or failure and death. Patients who have received treatment involving HSCT who develop VOD with multi-organ failure face an immediate risk of death, with a mortality rate of more than 80 percent when only supportive care is used. The applicant asserted that Defitelio® improves the survival rate of patients who have been diagnosed with VOD with multi-organ failure by 23 percent.

Defitelio® received Orphan Drug Designation for the treatment of VOD in 2003 and for the prevention of VOD in 2007. It has been available to patients as an investigational drug through an Expanded Access Program since 2006. The applicant's New Drug Application (NDA) for Defitelio® received FDA approval on March 30, 2016. The applicant confirmed that Defitelio® was not available on the U.S. market as of the FDA NDA approval date of March 30, 2016. According to the applicant, commercial packaging could not be completed until the label for Defitelio® was finalized with FDA approval, and that commercial shipments of Defitelio® to hospitals and treatment centers began on April 4, 2016. Therefore, we agreed that, based on this information, the newness period for Defitelio® begins on April 4, 2016, the date of its first commercial availability.

The applicant received approval to use unique ICD–10–PCS procedure codes to describe the use of Defitelio®, with an effective date of October 1, 2016. The approved ICD–10–PCS procedure codes are: XW03392 (Introduction of defibrotide sodium anticoagulant into peripheral vein, percutaneous approach); and XW04392 (Introduction of defibrotide sodium anticoagulant into central vein, percutaneous approach).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Defitelio® and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved Defitelio® for new technology add-on payments for FY 2017 (81 FR 56906). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 25 mg/kg/day for a minimum of 21 days of treatment. The recommended dose is 6.25 mg/kg given as a 2-hour intravenous infusion every 6 hours. Dosing should be based on a patient's baseline body weight, which is assumed to be 70 kg for an average adult patient. All vials contain 200 mg at a cost of $825 per vial. Therefore, we determined that cases involving the use of the Defitelio® technology would incur an average cost per case of $151,800 (70 kg adult × 25 mg/kg/day × 21 days = 36,750 mg per patient/200 mg vial = 184 vials per patient × $825 per vial = $151,800). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of Defitelio® is $75,900 for FY 2019.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

With regard to the newness criterion for Defitelio®, we considered the

beginning of the newness period to commence on the first day Defitelio® was commercially available (April 4, 2016). Because the 3-year anniversary date of the entry of the Defitelio® onto the U.S. market (April 4, 2019) would occur during FY 2019, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19276), we proposed to discontinue new technology add-on payments for this technology for FY 2020. We invited public comments on our proposal to discontinue new technology add-on payments for Defitelio® for FY 2020.

Comment: A commenter supported CMS' proposal to discontinue new technology add-on payments for FY 2020 for Defitelio®.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for Defitelio® for FY 2020.

b. Ustekinumab (Stelara®)

Janssen Biotech submitted an application for new technology add-on payments for the Stelara® induction therapy for FY 2018. Stelara® received FDA approval on September 23, 2016 as an intravenous (IV) infusion treatment for adult patients who have been diagnosed with moderately to severely active Crohn's disease (CD) who have failed or were intolerant to treatment using immunomodulators or corticosteroids, but never failed a tumor necrosis factor (TNF) blocker, or failed or were intolerant to treatment using one or more TNF blockers. Stelara® IV is intended for induction—subcutaneous prefilled syringes are intended for maintenance dosing. Stelara® must be administered intravenously by a health care professional in either an inpatient hospital setting or an outpatient hospital setting.

Stelara® for IV infusion is packaged in single 130 mg vials. Induction therapy consists of a single IV infusion dose using the following weight-based dosing regimen: Patients weighing 55 kg or less than (<) 55 kg are administered 260 mg of Stelara® (2 vials); patients weighing more than (>) 55 kg, but 85 kg or less than (<) 85 kg are administered 390 mg of Stelara® (3 vials); and patients weighing more than (>) 85 kg are administered 520 mg of Stelara® (4 vials). An average dose of Stelara® administered through IV infusion is 390 mg (3 vials). Maintenance doses of Stelara® are administered at 90 mg, subcutaneously, at 8-week intervals and may occur in the outpatient hospital setting.

CD is an inflammatory bowel disease of unknown etiology, characterized by transmural inflammation of the gastrointestinal (GI) tract. Symptoms of CD may include fatigue, prolonged diarrhea with or without bleeding, abdominal pain, weight loss and fever. CD can affect any part of the GI tract including the mouth, esophagus, stomach, small intestine, and large intestine. Most commonly used pharmacologic treatments for CD include antibiotics, mesalamines, corticosteroids, immunomodulators, tumor necrosis alpha (TNFα) inhibitors, and anti-integrin agents. Surgery may be necessary for some patients who have been diagnosed with CD in which conventional therapies have failed.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Stelara® and consideration of the public comments we received in response to the FY 2018 IPPS/LTCH PPS proposed rule, we approved Stelara® for new technology add-on payments for FY 2018 (82 FR 38129). Cases involving Stelara® that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure code XW033F3 (Introduction of other New Technology therapeutic substance into peripheral vein, percutaneous approach, new technology group 3). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 390 mg (3 vials) at a hospital acquisition cost of $1,600 per vial (for a total of $4,800). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of Stelara® is $2,400 for FY 2019.

With regard to the newness criterion for Stelara®, we considered the beginning of the newness period to commence when Stelara® received FDA approval as an IV infusion treatment for Crohn's disease (CD) on September 23, 2016. Because the 3-year anniversary date of the entry of Stelara® onto the U.S. market (September 23, 2019) will occur during FY 2019, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19276 through 19277), we proposed to discontinue new technology add-on payments for this technology for FY 2020. We invited public comments on our proposal to discontinue new technology add-on payments for Stelara® for FY 2020.

Comment: A commenter supported CMS' proposal to discontinue new technology add-on payments for FY 2020 for Stelara®.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for Stelara® for FY 2020.

c. Bezlotoxumab (ZINPLAVA™)

Merck & Co., Inc. submitted an application for new technology add-on payments for ZINPLAVA™ for FY 2018. ZINPLAVA™ is indicated as a treatment to reduce recurrence of Clostridium difficile infection (CDI) in adult patients who are receiving antibacterial drug treatment for a diagnosis of CDI and who are at high risk for CDI recurrence. ZINPLAVA™ is not indicated for the treatment of the presenting episode of CDI and is not an antibacterial drug. ZINPLAVA™ should only be used in conjunction with an antibacterial drug treatment for CDI.

Clostridium difficile (*C-diff*) is a disease-causing anaerobic, spore forming bacterium that affects the gastrointestinal (GI) tract. Some people carry the *C-diff* bacterium in their intestines, but never develop symptoms of an infection. The difference between asymptomatic colonization and disease is caused primarily by the production of an enterotoxin (Toxin A) and/or a cytotoxin (Toxin B). The presence of either or both toxins can lead to symptomatic CDI, which is defined as the acute onset of diarrhea with a documented infection with toxigenic *C-diff*. The GI tract contains millions of bacteria, commonly referred to as ''normal flora'' or ''good bacteria,'' which play a role in protecting the body from infection. Antibiotics can kill these good bacteria and allow *C-diff* to multiply and release toxins that damage the cells lining the intestinal wall, resulting in a CDI. CDI is a leading cause of hospital-associated gastrointestinal illnesses. Persons at increased risk for CDI include people who are currently on or who have recently been treated with antibiotics, people who have encountered current or recent hospitalization, people who are older than 65 years, immunocompromised patients, and people who have recently had a diagnosis of CDI. CDI symptoms include, but are not limited to, diarrhea, abdominal pain, and fever. CDI symptoms range in severity from mild (abdominal discomfort, loose stools) to severe (profuse, watery diarrhea, severe abdominal pain, and high fevers). Severe CDI can be life-threatening and,

in rare cases, can cause bowel rupture, sepsis and organ failure. CDI is responsible for 14,000 deaths per year in the United States.

C-diff produces two virulent, pro-inflammatory toxins, Toxin A and Toxin B, which target host colonic endothelial cells by binding to endothelial cell surface receptors via combined repetitive oligopeptide (CROP) domains. These toxins cause the release of inflammatory cytokines leading to intestinal fluid secretion and intestinal inflammation. The applicant asserted that ZINPLAVA™ targets Toxin B sites within the CROP domain rather than the *C-diff* organism itself. According to the applicant, by targeting *C-diff* Toxin B, ZINPLAVA™ neutralizes Toxin B, prevents large intestine endothelial cell inflammation, symptoms associated with CDI, and reduces the recurrence of CDI.

ZINPLAVA™ received FDA approval on October 21, 2016, as a treatment to reduce the recurrence of CDI in adult patients receiving antibacterial drug treatment for CDI and who are at high risk of CDI recurrence. As previously stated, ZINPLAVA™ is not indicated for the treatment of CDI. ZINPLAVA™ is not an antibacterial drug, and should only be used in conjunction with an antibacterial drug treatment for CDI. ZINPLAVA™ became commercially available on February 10, 2017. Therefore, the newness period for ZINPLAVA™ began on February 10, 2017. The applicant submitted a request for a unique ICD–10–PCS procedure code and was granted approval for the following procedure codes: XW033A3 (Introduction of bezlotoxumab monoclonal antibody, into peripheral vein, percutaneous approach, new technology group 3) and XW043A3 (Introduction of bezlotoxumab monoclonal antibody, into central vein, percutaneous approach, new technology group 3).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for ZINPLAVA™ and consideration of the public comments we received in response to the FY 2018 IPPS/LTCH PPS proposed rule, we approved ZINPLAVA™ for new technology add-on payments for FY 2018 (82 FR 38119). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 10 mg/kg of ZINPLAVA™ administered as an IV infusion over 60 minutes as a single dose. According to the applicant, the WAC for one dose is $3,800. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of ZINPLAVA™ is $1,900 for FY 2019.

With regard to the newness criterion for ZINPLAVA™, we considered the beginning of the newness period to commence on February 10, 2017. As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of ZINPLAVA™ onto the U.S. market (February 10, 2020) will occur in the first half of FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19277), we proposed to discontinue new technology add-on payments for this technology for FY 2020. We invited public comments on our proposal to discontinue new technology add-on payments for ZINPLAVA™ technology for FY 2020.

Comment: A commenter supported CMS' proposal to discontinue new technology add-on payments for FY 2020 for ZINPLAVA™.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for ZINPLAVA™ for FY 2020.

d. KYMRIAH® (Tisagenlecleucel) and YESCARTA® (Axicabtagene Ciloleucel)

Two manufacturers, Novartis Pharmaceuticals Corporation and Kite Pharma, Inc., submitted separate applications for new technology add-on payments for FY 2019 for KYMRIAH® (tisagenlecleucel) and YESCARTA® (axicabtagene ciloleucel), respectively. Both of these technologies are CD–19-directed T-cell immunotherapies used for the purposes of treating patients with aggressive variants of non-Hodgkin lymphoma (NHL).

On May 1, 2018, Novartis Pharmaceuticals Corporation received FDA approval for KYMRIAH®'s second indication, the treatment of adult patients with relapsed or refractory (r/r) large B-cell lymphoma after two or more lines of systemic therapy including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, high grade B-cell lymphoma and DLBCL arising from follicular lymphoma. On October 18, 2017, Kite Pharma, Inc. received FDA approval for the use of YESCARTA® indicated for the treatment of adult patients with r/r large B-cell lymphoma after two or more lines of systemic therapy, including DLBCL not otherwise specified, primary mediastinal large B-cell lymphoma, high grade B-cell lymphoma, and DLBCL arising from follicular lymphoma.

Procedures involving the KYMRIAH® and YESCARTA® therapies are both reported using the following ICD–10–PCS procedure codes: XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3); and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3). In the FY 2019 IPPS/LTCH PPS final rule, we finalized our proposal to assign cases reporting these ICD–10–PCS procedure codes to Pre-MDC MS–DRG 016 for FY 2019 and to revise the title of this MS–DRG to Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy. We refer readers to section II.F.2.d. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a complete discussion of these final policies (83 FR 41172 through 41174).

With respect to the newness criterion, according to both applicants, KYMRIAH® and YESCARTA® are the first CAR T-cell immunotherapies of their kind. As discussed in the FY 2019 IPPS/LTCH PPS proposed and final rules, because potential cases representing patients who may be eligible for treatment using KYMRIAH® and YESCARTA® would group to the same MS–DRGs (because the same ICD–10–CM diagnosis codes and ICD–10–PCS procedures codes are used to report treatment using either KYMRIAH® or YESCARTA®), and we believed that these technologies are intended to treat the same or similar disease in the same or similar patient population, and are purposed to achieve the same therapeutic outcome using the same or similar mechanism of action, we believed these two technologies are substantially similar to each other and that it was appropriate to evaluate both technologies as one application for new technology add-on payments under the IPPS. For these reasons, we stated that we intended to make one determination regarding approval for new technology add-on payments that would apply to both applications, and in accordance with our policy, would use the earliest market availability date submitted as the beginning of the newness period for both KYMRIAH® and YESCARTA®.

As summarized in the FY 2019 IPPS/LTCH PPS final rule, we received comments from the applicants for KYMRIAH® and YESCARTA® regarding whether KYMRIAH® and YESCARTA® were substantially similar to each other. The applicant for YESCARTA® stated that it believed each technology consists of notable differences in the construction, as well as manufacturing processes and successes that may lead to differences in activity. The applicant encouraged CMS to evaluate YESCARTA® as a separate new technology add-on payment application and approve separate new technology add-on payments for YESCARTA®, effective October 1, 2018, and to not move forward with a single new technology add-on payment evaluation determination that covers both CAR T-cell therapies, YESCARTA® and KYMRIAH®. The applicant for KYMRIAH® indicated that, based on FDA's approval, it agreed with CMS that KYMRIAH® is substantially similar to YESCARTA®, as defined by the new technology add-on payment application evaluation criteria. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a more detailed summary of these and other public comments we received regarding substantial similarity for KYMRIAH® and YESCARTA®.

After consideration of the public comments we received and for the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, we stated that we believed that KYMRIAH® and YESCARTA® are substantially similar to one another. We also noted that for FY 2019, there was no payment impact regarding this determination of substantial similarity because the cost of the technologies is the same. However, we stated that we welcomed additional comments in future rulemaking regarding whether KYMRIAH® and YESCARTA® are substantially similar and intended to revisit this issue in the FY 2020 IPPS/LTCH PPS proposed rule. As stated in the FY 2020 IPPS/LTCH PPS proposed rule, for the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, we continue to believe that KYMRIAH® and YESCARTA® are substantially similar to each other for purposes of new technology add-on payments under the IPPS. As we noted in the FY 2020 IPPS/LTCH PPS proposed rule, for FY 2020, the pricing for KYMRIAH® and YESCARTA® remains the same and, therefore, for FY 2020, there would continue to be no payment impact regarding the determination that the two technologies are substantially similar to each other for purposes of new technology add-on payments under the IPPS. In the proposed rule, similar to last year, we welcomed public comments regarding whether KYMRIAH® and YESCARTA® are substantially similar to each other. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a complete discussion on newness and substantial similarity regarding KYMRIAH® and YESCARTA®.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for KYMRIAH® and YESCARTA® and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved new technology add-on payments for KYMRIAH® and YESCARTA® for FY 2019 (83 FR 41299). Cases involving KYMRIAH® or YESCARTA® that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure codes XW033C3 or XW043C3. The applicants for both KYMRIAH® and YESCARTA® estimated that the average cost for an administered dose of KYMRIAH® or YESCARTA® is $373,000. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, for FY 2019, the maximum new technology add-on payment for a case involving the use of KYMRIAH® or YESCARTA® is $186,500.

As previously stated, our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. With regard to the newness criterion for KYMRIAH® and YESCARTA®, as discussed in the FY 2019 IPPS/LTCH PPS final rule, according to the applicant for YESCARTA®, the first commercial shipment of YESCARTA® was received by a certified treatment center on November 22, 2017. As previously stated, we use the earliest market availability date submitted as the beginning of the newness period for both KYMRIAH® and YESCARTA®. Therefore, we consider the beginning of the newness period for both KYMRIAH® and YESCARTA® to commence November 22, 2017.

Because the 3-year anniversary date of the entry of the technology onto the U.S. market (November 22, 2020) will occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19278 through 19279), we proposed to continue new technology add-on payments for KYMRIAH® and YESCARTA® for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of KYMRIAH® and YESCARTA® would be increased to $242,450 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving KYMRIAH® or YESCARTA® would remain at $186,500 for FY 2020.

For the reasons discussed in section II.F.2.c. of the proposed rule (84 FR 19180 through 19182), we proposed not to modify the current MS–DRG assignment for cases reporting CAR T-cell therapies for FY 2020. Alternatively, we stated that we were seeking public comments on payment alternatives for CAR–T cell therapies. We also invited public comments on how these payment alternatives would affect access to care, as well as how they affect incentives to encourage lower drug prices, which is a high priority for this Administration. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), we are considering approaches and authorities to encourage value-based care and lower drug prices. We solicited public comments on how the effective dates of any potential payment methodology alternatives, if any were to be adopted, may intersect and affect future participation in any such alternative approaches. In the proposed rule, we stated that such payment alternatives could include adjusting the CCRs used to calculate new technology add-on payments for cases involving the use of KYMRIAH® and YESCARTA®. We noted that we also considered this payment alternative for FY 2019, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), and are revisiting this approach given the additional experience with CAR T-cell therapy being provided in hospitals paid under the IPPS and in IPPS-excluded cancer hospitals. We also requested public comments on other payment alternatives for these cases, including eliminating the use of CCRs in calculating the new technology add-on payments for cases involving the use of

KYMRIAH® and YESCARTA® by making a uniform add-on payment that equals the proposed maximum add-on payment, that is, 65 percent of the cost of the technology (in accordance with the proposed increase in the calculation of the maximum new technology add-on payment amount), which in this instance would be $242,450; and/or using a higher percentage than the proposed 65 percent to calculate the maximum new technology add-on payment amount. We stated in the proposed rule that, if we were to finalize any such changes to the new technology add-on payment for cases involving the use of KYMRIAH® and YESCARTA®, we would also revise our proposed amendments to § 412.88 accordingly.

We refer readers to section II.F.2.c. of this final rule for discussion of the comments we received in response to the proposals and solicitations for public comment above.

After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for KYMRIAH® and YESCARTA®. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of KYMRIAH® and YESCARTA® will be $242,450 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

e. VYXEOS™ (Cytarabine and Daunorubicin Liposome for Injection)

Jazz Pharmaceuticals, Inc. submitted an application for new technology add-on payments for the VYXEOS™ technology for FY 2019. VYXEOS™ was approved by FDA on August 3, 2017, for the treatment of adults with newly diagnosed therapy-related acute myeloid leukemia (t-AML) or AML with myelodysplasia-related changes (AML–MRC).

Treatment of AML diagnoses usually consists of two phases; remission induction and post-remission therapy. Phase one, remission induction, is aimed at eliminating as many myeloblasts as possible. The most common used remission induction regimens for AML diagnoses are the ''7+3'' regimens using an antineoplastic and an anthracycline. Cytarabine and daunorubicin are two commonly used drugs for ''7+3'' remission induction therapy. Cytarabine is continuously administered intravenously over the course of 7 days, while daunorubicin is intermittently administered intravenously for the first 3 days. The ''7+3'' regimen typically achieves a 70 to 80 percent complete remission (CR) rate in most patients under 60 years of age.

VYXEOS™ is a nano-scale liposomal formulation containing a fixed combination of cytarabine and daunorubicin in a 5:1 molar ratio. This formulation was developed by the applicant using a proprietary system known as CombiPlex. According to the applicant, CombiPlex addresses several fundamental shortcomings of conventional combination regimens, specifically the conventional ''7+3'' free drug dosing, as well as the challenges inherent in combination drug development, by identifying the most effective synergistic molar ratio of the drugs being combined in vitro, and fixing this ratio in a nano-scale drug delivery complex to maintain the optimized combination after administration and ensuring exposure of this ratio to the tumor.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for VYXEOS™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved VYXEOS™ for new technology add-on payments for FY 2019 (83 FR 41304). Cases involving VYXEOS™ that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure codes XW033B3 (Introduction of cytarabine and caunorubicin liposome antineoplastic into peripheral vein, percutaneous approach, new technology group 3) or XW043B3 (Introduction of cytarabine and daunorubicin liposome antineoplastic into central vein, percutaneous approach, new technology group 3). In its application, the applicant estimated that the average cost of a single vial for VYXEOS™ is $7,750 (daunorubicin 44 mg/m^2 and cytarabine 100 mg/m^2). As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41305), we computed a maximum average of 9.4 vials used in the inpatient hospital setting with the maximum average cost for VYXEOS™ used in the inpatient hospital setting equaling $72,850 ($7,750 cost per vial * 9.4 vials). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of VYXEOS™ is $36,425 for FY 2019.

With regard to the newness criterion for VYXEOS™, we consider the beginning of the newness period to commence when VYXEOS™ was approved by the FDA (August 3, 2017). As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the VYXEOS™ onto the U.S. market (August 3, 2020) will occur in the second half of FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19279 through 19280), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of VYXEOS™ would be $47,353.50 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving VYXEOS™ would remain at $36,425 for FY 2020. We invited public comments on our proposals to continue new technology add-on payments for VYXEOS™ for FY 2020.

Comment: A commenter supported CMS' proposal to continue new technology add-on payments for FY 2020 for VYXEOS™.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for VYXEOS™ for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of VYXEOS™ will be $47,352.50 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65

percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

f. VABOMERE™ (meropenem-vaborbactam)

Melinta Therapeutics, Inc., submitted an application for new technology add-on payments for VABOMERE™ for FY 2019. VABOMERE™ is indicated for use in the treatment of adult patients who have been diagnosed with complicated urinary tract infections (cUTIs), including pyelonephritis, caused by designated susceptible bacteria. VABOMERE™ received FDA approval on August 29, 2017.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for VABOMERE™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved VABOMERE™ for new technology add-on payments for FY 2019 (83 FR 41311). We noted in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41311) that the applicant did not request approval for the use of a unique ICD–10–PCS procedure code for VABOMERE™ for FY 2019 and that as a result, hospitals would be unable to uniquely identify the use of VABOMERE™ on an inpatient claim using the typical coding of an ICD–10–PCS procedure code. We noted that in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53352), with regard to the oral drug DIFICID™, we revised our policy to allow for the use of an alternative code set to identify oral medications where no inpatient procedure is associated for the purposes of new technology add-on payments. We established the use of a NDC as the alternative code set for this purpose and described our rationale for this particular code set. This change was effective for payments for discharges occurring on or after October 1, 2012. In the FY 2019 IPPS/LTCH PPS final rule, we acknowledged that VABOMERE™ is not an oral drug and is administered by IV infusion, but it was the first approved new technology aside from an oral drug with no uniquely assigned inpatient procedure code. Therefore, we believed that the circumstances with respect to the identification of eligible cases using VABOMERE™ are similar to those addressed in the FY 2013 IPPS/LTCH PPS final rule with regard to DIFICID™ because we did not have current ICD–10–PCS code(s) to uniquely identify the use of VABOMERE™ to make the new technology add-on payment. We stated that because we have determined that VABOMERE™ has met all of the new technology add-on payment criteria and cases involving the use of VABOMERE™ would be eligible for such payments for FY 2019, we needed to use an alternative coding method to identify these cases and make the new technology add-on payment for use of VABOMERE™ in FY 2019. Therefore, for the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule and similar to the policy in the FY 2013 IPPS/LTCH PPS final rule, cases involving VABOMERE™ that are eligible for new technology add-on payments for FY 2019 are identified by National Drug Codes (NDC) 65293–0009–01 or 70842–0120–01 (VABOMERE™ Meropenem-Vaborbactam Vial).

According to the applicant, the cost of VABOMERE™ is $165 per vial. A patient receives two vials per dose and three doses per day. Therefore, the per-day cost of VABOMERE™ is $990 per patient. The duration of therapy, consistent with the Prescribing Information, is up to 14 days. Therefore, the estimated cost of VABOMERE™ to the hospital, per patient, is $13,860. We stated in the FY 2019 IPPS/LTCH PPS final rule that based on the limited data from the product's launch, approximately 80 percent of VABOMERE™'s usage would be in the inpatient hospital setting, and approximately 20 percent of VABOMERE™'s usage may take place outside of the inpatient hospital setting. Therefore, the average number of days of VABOMERE™ administration in the inpatient hospital setting is estimated at 80 percent of 14 days, or approximately 11.2 days. As a result, the total inpatient cost for VABOMERE™ is $11,088 ($990 * 11.2 days). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of VABOMERE™ is $5,544 for FY 2019.

With regard to the newness criterion for VABOMERE™, we consider the beginning of the newness period to commence when VABOMERE™ received FDA approval (August 29, 2017). As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of VABOMERE™ onto the U.S. market (August 29, 2020) will occur during the second half of FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19280 through 19281), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of VABOMERE™ would be $7,207.20 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving VABOMERE™ would remain at $5,544 for FY 2020.

As we previously noted in this rule and in the proposed rule, because there was no ICD–10–PCS code(s) to uniquely identify the use of VABOMERE™, we indicated in the FY 2019 IPPS/LTCH PPS final rule that FY 2019 cases involving the use of VABOMERE™ that are eligible for the FY 2019 new technology add-on payments would be identified using an NDC code. Subsequent to the issuance of that final rule, new ICD–10–PCS codes XW033N5 (Introduction of Meropenem-vaborbactam Anti-infective into Peripheral Vein, Percutaneous Approach, New Technology Group 5) and XW043N5 (Introduction of Meropenem-vaborbactam Anti-infective into Central Vein, Percutaneous Approach, New Technology Group 5) were finalized to identify cases involving the use of VABOMERE™, effective October 1, 2019, as shown in Table 6B—New Procedure Codes, associated with the FY 2020 IPPS final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* and then clicking on the link on the left titled ''FY 2022 IPPS Final Rule Home Page''. Therefore, we stated in the proposed rule that, for FY 2020, we will use these two ICD–10–PCS codes (XW033N5 and XW043N5) to identify cases involving the use of VABOMERE™ that are eligible for the new technology add-on payments.

While these newly approved ICD–10–PCS procedure codes can be used to uniquely identify cases involving the use of VABOMERE™ for FY 2020, we stated in the proposed rule that we are concerned that limiting new technology add-on payments only to cases reporting

these new ICD–10–PCS codes for FY 2020 could cause confusion because it is possible that some providers may inadvertently continue to bill some claims with the NDC codes rather than the new ICD–10–PCS codes. Therefore, for FY 2020, we proposed that in addition to using the new ICD–10–PCS codes to identify cases involving the use of VABOMERE™, we would also continue to use the NDC codes to identify cases and make the new technology add-on payments. As a result, we proposed that cases involving the use of VABOMERE™ that are eligible for new technology add-on payments for FY 2020 would be identified by ICD–10–PCS codes XW033N5 or XW043N5 or NDCs 65293–0009–01 or 70842–0120–01. We invited public comments on our proposal to continue new technology add-on payments for VABOMERE™ for FY 2020 and our proposals for identifying and making new technology add-on payments for cases involving the use of VABOMERE™.

Comment: A commenter supported CMS' proposal to continue new technology add-on payments for FY 2020 for VABOMERE™. This commenter also supported CMS' proposal to identify cases involving the use of VABOMERE™ that are eligible for new technology add-on payments for FY 2020 using ICD–10–PCS codes XW033N5 or XW043N5 or NDCs 65293–0009–01 or 70842–0120–01.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for VABOMERE™ for FY 2020, as well as our proposal to identify cases involving the use of VABOMERE™ that are eligible for new technology add-on payments for FY 2020 using ICD–10–PCS codes XW033N5 or XW043N5 or NDCs 65293–0009–01 or 70842–0120–01. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of VABOMERE™ will be $8,316 for FY 2020; that is, 75 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

g. remedē® System

Respicardia, Inc. submitted an application for new technology add-on payments for the remedē® System for FY 2019. According to the applicant, the remedē® System is indicated for use as a transvenous phrenic nerve stimulator in the treatment of adult patients who have been diagnosed with moderate to severe central sleep apnea (CSA). The remedē® System consists of an implantable pulse generator, and a stimulation and sensing lead. The pulse generator is placed under the skin, in either the right or left side of the chest, and it functions to monitor the patient's respiratory signals. A transvenous lead for unilateral stimulation of the phrenic nerve is placed either in the left pericardiophrenic vein or the right brachiocephalic vein, and a second lead to sense respiration is placed in the azygos vein. Both leads, in combination with the pulse generator, function to sense respiration and, when appropriate, generate an electrical stimulation to the left or right phrenic nerve to restore regular breathing patterns.

On October 6, 2017, the remedē® System was approved by the FDA as an implantable phrenic nerve stimulator indicated for the use in the treatment of adult patients who have been diagnosed with moderate to severe CSA. The device was available commercially upon FDA approval. Therefore, the newness period for the remedē® System is considered to begin on October 6, 2017.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the remedē® System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the remedē® System for new technology add-on payments for FY 2019. Cases involving the use of the remedē® System that are eligible for new technology add-on payments are identified by ICD–10–PCS procedures codes 0JH60DZ and 05H33MZ in combination with procedure code 05H03MZ (Insertion of neurostimulator lead into right innominate vein, percutaneous approach) or 05H43MZ (Insertion of neurostimulator lead into left innominate vein, percutaneous approach). According to the application, the cost of the remedē® System is $34,500 per patient. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the remedē® System is $17,250 for FY 2019 (83 FR 41320).

With regard to the newness criterion for the remedē® System, we consider the beginning of the newness period to commence when the remedē® System was approved by the FDA on October 6, 2017. Because the 3-year anniversary date of the entry of the remedē® System onto the U.S. market (October 6, 2020) will occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19281), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of the remedē® System would be $22,425 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving the remedē® System would remain at $17,250 for FY 2020. We invited public comments on our proposals to continue new technology add-on payments for the remedē® System for FY 2020.

Comment: Several commenters supported CMS' proposal to continue new technology add-on payments for FY 2020 for the remedē® System. A commenter, who was also the applicant, believed that the newness period for the remedē® System should start on February 1, 2018 instead of the FDA approval date of October 6, 2017. The commenter stated that due to the required build out of operational and commercial capabilities, the remedē® System was not commercially available upon FDA approval and the first case involving its use did not occur until February 1, 2018. The commenter asserted that the date of the first implant should mark the start of the newness period as before that the technology was not commercially available.

Several commenters asserted that the descriptor of one of the ICD–10–PCS procedure codes used to uniquely identify cases involving the use of the remedē® System is incorrect. Per the commenters, CMS indicated in the proposed rule that cases involving the use of the remedē® System that are eligible for new technology add-on payments are identified by ICD–10–PCS

procedure codes 0JH60DZ and 05H33MZ in combination with procedure code 05H03MZ (Insertion of neurostimulator lead into right innominate vein, percutaneous approach) or 05H43MZ (Insertion of neurostimulator lead into left innominate vein, percutaneous approach). The commenters asserted that the descriptor of the code 05H03MZ was incorrectly stated in the proposed rule as involving the right innominate vein, whereas the correct body part for this code is the azygos vein.

Furthermore, the commenters noted that the codes listed for the remedē® System in the proposed rule do not match the advice that was published in the Fourth Quarter 2016 issue of Coding Clinic for ICD–10–CM/PCS regarding insertion of a phrenic neurostimulator. Per the commenters, the Coding Clinic advised assigning code 0JH60MZ for insertion of the stimulator generator into the chest subcutaneous tissue and fascia and code 05H032Z for the insertion of monitoring device into the azygos vein, plus the appropriate code for insertion of neurostimulator lead into either the left or right innominate vein. The commenters asserted that the device values for both the code for the stimulator generator and the code for the insertion of the lead in the azygos vein in the Coding Clinic advice were different than the ones indicated by CMS in the proposed rule. Commenters indicated that, according to Coding Clinic, for coding purposes, the sensing lead is designated as a monitoring device to differentiate between the sensing lead that monitors the respiratory activity and the electrode that delivers the electrical stimulation. The commenters requested that CMS revisit this topic and revise as applicable the stated codes to identify placement of the remedē® System to be consistent with the advice published in Coding Clinic for ICD–10–CM/PCS. A commenter requested that CMS also make the appropriate retroactive payments consistent with the revised codes.

Response: We appreciate the commenters' support. Regarding newness, we will consider the additional information the applicant provided when proposing whether to continue new technology add-on payments for the remedē® System for FY 2021.

Regarding codes, we acknowledge the error in our description of the ICD–10–PCS procedure code *05H03MZ in the Proposed Rule and agree with the commenters that* the correct body part for this code is the azygos vein, *not the* innominate vein as stated in the Proposed Rule. We also acknowledge that the finalized codes used to identify cases involving the remedē® System that are eligible for the add-on payment differ from those that were published in the Fourth Quarter 2016 issue of Coding Clinic for ICD–10–CM/PCS regarding insertion of a phrenic neurostimulator. However, we believe that the finalized codes from the March 2018 Coordination & Maintenance Committee meeting supercede the Coding Clinic advice for the technology. Therefore, cases involving the remedē® System that are eligible for the add-on payment will continue to be identified with the procedure codes 0JH60DZ (*Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach*) and 05H03MZ (*Insertion of neurostimulator lead into azygos vein, percutaneous approach*) in combination with procedure code 05H33MZ (Insertion of neurostimulator lead into right innominate vein, percutaneous approach) or 05H43MZ (Insertion of neurostimulator lead into left innominate vein, percutaneous approach).

After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for the remedē® System for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of the remedē® System will be $22,425 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

h. ZEMDRI™ (Plazomicin)

Achaogen, Inc. submitted an application for new technology add-on payments for ZEMDRI™ (Plazomicin) for FY 2019. According to the applicant, ZEMDRI™ (Plazomicin) is a next-generation aminoglycoside antibiotic, which has been found in vitro to have enhanced activity against many multi-drug resistant (MDR) gram-negative bacteria. The applicant received approval from the FDA on June 25, 2018, for use in the treatment of adults who have been diagnosed with cUTIs, including pyelonephritis.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for ZEMDRI™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved ZEMDRI™ for new technology add-on payments for FY 2019 (83 FR 41334). Cases involving ZEMDRI™ that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure codes XW033G4 (Introduction of Plazomicin anti-infective into peripheral vein, percutaneous approach, new technology group 4) or XW043G4 (Introduction of Plazomicin anti-infective into central vein, percutaneous approach, new technology group 4). In its application, the applicant estimated that the average Medicare beneficiary would require a dosage of 15 mg/kg administered as an IV infusion as a single dose. According to the applicant, the WAC for one dose is $330, and patients will typically require 3 vials for the course of treatment with ZEMDRI™ per day for an average duration of 5.5 days. Therefore, the total cost of ZEMDRI™ per patient is $5,445. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of ZEMDRI™ is $2,722.50 for FY 2019.

With regard to the newness criterion for ZEMDRI™, we consider the beginning of the newness period to commence when ZEMDRI™ was approved by the FDA on June 25, 2018. Because the 3-year anniversary date of the entry of ZEMDRI™ onto the U.S. market (June 25, 2021) will occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19281 through 19282), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of ZEMDRI™ would be $3,539.25 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving ZEMDRI™ would remain at $2,722.50 for FY 2020.

We invited public comments on our proposals to continue new technology add-on payments for ZEMDRI™ for FY 2020.

Comment: A commenter supported CMS' proposal to continue new technology add-on payments for FY 2020 for ZEMDRI™.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for ZEMDRI™ for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of ZEMDRI™ will be $4,083.75 for FY 2020; that is, 75 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

i. GIAPREZA™

The La Jolla Pharmaceutical Company submitted an application for new technology add-on payments for GIAPREZA™ for FY 2019. GIAPREZA™, a synthetic human angiotensin II, is administered through intravenous infusion to raise blood pressure in adult patients who have been diagnosed with septic or other distributive shock.

GIAPREZA™ was granted a Priority Review designation under FDA's expedited program and received FDA approval on December 21, 2017, for the use in the treatment of adults who have been diagnosed with septic or other distributive shock as an intravenous infusion to increase blood pressure.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for GIAPREZA™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved GIAPREZA™ for new technology add-on payments for FY 2019 (83 FR 41342). Cases involving GIAPREZA™ that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure codes XW033H4 (Introduction of synthetic human angiotensin II into peripheral vein, percutaneous approach, new technology, group 4) or XW043H4 (Introduction of synthetic human angiotensin II into central vein, percutaneous approach, new technology group 4). In its application, the applicant estimated that the average Medicare beneficiary would require a dosage of 20 ng/kg/min administered as an IV infusion over 48 hours, which would require 2 vials. The applicant explained that the WAC for one vial is $1,500, with each episode-of-care costing $3,000 per patient. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of GIAPREZA™ is $1,500 for FY 2019.

With regard to the newness criterion for GIAPREZA™, we consider the beginning of the newness period to commence when GIAPREZA™ was approved by the FDA (December 21, 2017). Because the 3-year anniversary date of the entry of GIAPREZA™ onto the U.S. market (December 21, 2020) would occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19282), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of GIAPREZA™ would be $1,950 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving GIAPREZA™ would remain at $1,500 for FY 2020. We invited public comments on our proposals to continue new technology add-on payments for GIAPREZA™ for FY 2020.

Comment: A commenter supported CMS' proposal to continue new technology add-on payments for FY 2020 for GIAPREZA™.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for GIAPREZA™ for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of GIAPREZA™ will be $4,083.75 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

j. Cerebral Protection System (Sentinel® Cerebral Protection System)

Claret Medical, Inc. submitted an application for new technology add-on payments for the Cerebral Protection System (Sentinel® Cerebral Protection System) for FY 2019. According to the applicant, the Sentinel Cerebral Protection System is indicated for the use as an embolic protection (EP) device to capture and remove thrombus and debris while performing transcatheter aortic valve replacement (TAVR) procedures. The device is percutaneously delivered via the right radial artery and is removed upon completion of the TAVR procedure. The De Novo request for the Sentinel® Cerebral Protection System was granted by FDA on June 1, 2017 (DEN160043).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the Sentinel® Cerebral Protection System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the Sentinel® Cerebral Protection System for new technology add-on payments for FY 2019 (83 FR 41348). Cases involving the Sentinel® Cerebral Protection System that are eligible for new technology add-on payments are identified by ICD–10–PCS code X2A5312 (Cerebral embolic filtration, dual filter in innominate artery and left common carotid artery, percutaneous approach). In its application, the applicant estimated that the cost of the Sentinel® Cerebral Protection System is $2,800. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the Sentinel® Cerebral Protection System is $1,400 for FY 2019.

With regard to the newness criterion for the Sentinel® Cerebral Protection System, we consider the beginning of the newness period to commence when the FDA granted the De Novo request for the Sentinel® Cerebral Protection System (June 1, 2017). As discussed

previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the Sentinel® Cerebral Protection System onto the U.S. market (June 1, 2020) will occur in the second half of FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19282 through 19283), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of the Sentinel® Cerebral Protection System would be $1,820 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving the Sentinel® Cerebral Protection System would remain at $1,400 for FY 2020. We invited public comments on our proposals to continue new technology add-on payments for the Sentinel® Cerebral Protection System for FY 2020.

Comment: Several commenters supported CMS' proposal to continue new technology add-on payments for FY 2020 for the Sentinel® Cerebral Protection System.

Response: We appreciate the commenters' support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for the Sentinel® Cerebral Protection System for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of the Sentinel® Cerebral Protection System will be $1,820 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

k. The AQUABEAM System (Aquablation)

PROCEPT BioRobotics Corporation submitted an application for new technology add-on payments for the AQUABEAM System (Aquablation) for FY 2019. According to the applicant, the AQUABEAM System is indicated for the use in the treatment of patients experiencing lower urinary tract symptoms caused by a diagnosis of benign prostatic hyperplasia (BPH). The AQUABEAM System consists of three main components: A console with two high-pressure pumps, a conformal surgical planning unit with trans-rectal ultrasound imaging, and a single-use robotic hand-piece. The applicant reported that the AQUABEAM System provides the operating surgeon a multi-dimensional view, using both ultrasound image guidance and endoscopic visualization, to clearly identify the prostatic adenoma and plan the surgical resection area. The applicant stated that, based on the planning inputs from the surgeon, the system's robot delivers Aquablation, an autonomous waterjet ablation therapy that enables targeted, controlled, heat-free and immediate removal of prostate tissue used for the purpose of treating lower urinary tract symptoms caused by a diagnosis of BPH. Per the applicant, the combination of surgical mapping and robotically-controlled resection of the prostate is designed to offer predictable and reproducible outcomes, independent of prostate size, prostate shape or surgeon experience.

The FDA granted the AQUABEAM System's De Novo request on December 21, 2017, for use in the resection and removal of prostate tissue in males suffering from lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia. The applicant stated that the AQUABEAM System was made available on the U.S. market immediately after the FDA granted the De Novo request.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the AQUABEAM System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the AQUABEAM System for new technology add-on payments for FY 2019 (83 FR 41355). Cases involving the AQUABEAM System that are eligible for new technology add-on payments are identified by ICD–10–PCS code XV508A4 (Destruction of prostate using robotic waterjet ablation, via natural or artificial opening endoscopic, new technology group 4). The applicant estimated that the average Medicare beneficiary would require the transurethral procedure of one AQUABEAM System per patient. According to the application, the cost of the AQUABEAM System is $2,500 per procedure. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the AQUABEAM System's Aquablation System is $1,250 for FY 2019.

With regard to the newness criterion for the AQUABEAM System, we consider the beginning of the newness period to commence on the date the FDA granted the De Novo request (December 21, 2017). As noted previously and in the FY 2019 rulemaking, the applicant stated that the AQUABEAM System was made available on the U.S. market immediately after the FDA granted the De Novo request.

We note that in the FY 2019 IPPS/LTCH PPS final rule, we inadvertently misstated the newness period beginning date as April 19, 2018 (83 FR 41351). As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41350), in its public comment in response to the FY 2019 IPPS/LTCH PPS proposed rule, the applicant explained that, while the AQUABEAM System received approval from the FDA for its De Novo request on December 21, 2017, local non-coverage determinations in the Medicare population resulted in the first case being delayed until April 19, 2018. Therefore, the applicant believed that the newness period should begin on April 19, 2018, instead of the date FDA granted the De Novo request. In the final rule, we responded that with regard to the beginning of the technology's newness period, as discussed in the FY 2005 IPPS final rule (69 FR 49003), the timeframe that a new technology can be eligible to receive new technology add-on payments begins when data begin to become available. While local non-coverage determinations may limit the use of a technology in different regions in the country, a technology may be available in regions where no local non-coverage decision existed (with data beginning to become available). We also explained that under our historical policy we do not consider how frequently the medical service or technology has been used in the Medicare population in our determination of newness (as discussed

in the FY 2006 IPPS final rule (70 FR 47349)). We stated in the FY 2019 IPPS/LTCH PPS proposed rule that consistent with this response, and as indicated in the FY 2019 proposed rule and elsewhere in the final rule, we believe the beginning of the newness period to commence on the first day the AQUABEAM System was commercially available (December 21, 2017). As noted, the later statement that the newness period beginning date for the AQUABEAM System is April 19, 2018 was an inadvertent error. We stated in the FY 2020 IPPS/LTCH PPS proposed rule that, as we indicated in the FY 2019 IPPS/LTCH PPS final rule, we welcomed further information from the applicant for consideration regarding the beginning of the newness period.

Because the 3-year anniversary date of the entry of the AQUABEAM System onto the U.S. market (December 21, 2020) will occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19283), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of the AQUABEAM System would be $1,625 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving the AQUABEAM System would remain at $1,250 for FY 2020. We invited public comments on our proposals to continue new technology add-on payments for the AQUABEAM System for FY 2020.

Comment: A few commenters supported CMS' proposal to continue new technology add-on payments for the AQUABEAM System for FY 2020.

Several commenters disagreed with CMS' belief that the newness period for the AQUABEAM System commenced on December 21, 2017, the day that FDA granted the De Novo request for the AQUABEAM System. These commenters, including the applicant, asserted that the American Medical Association assigned Aquablation therapy to a Category III CPT code prior to FDA clearance, and as a result Aquablation therapy was non-covered by all Medicare Administrative Contractors prior to the date of FDA clearance through to the present day. Per the commenters, this is equivalent to a uniform, non-coverage policy for the entire nation. The commenters further stated that CMS has consistently recognized that the start of the newness period can occur months after FDA approval if there are delays in availability—including nationwide non-coverage—as indicated in the FY 2005 IPPS Final Rule, the FY 2006 IPPS Final Rule, and the CY 2016 OPPS Final Rule. The commenters asserted that based on longstanding rules and policy statements, the appropriate beginning of the newness period for the AQUABEAM System should be April 19, 2018, or the date of the first procedure in a commercially-insured patient.

Response: We appreciate the commenters' support. With regard to newness, we note that Category III CPT codes are not recognized on inpatient claims. We continue to consider the beginning of the newness period for the AQUABEAM System to commence on December 21, 2017, or the date the FDA granted the applicant's De Novo request.

After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for the AQUABEAM System for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of the AQUABEAM System will be $1,625 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

l. AndexXa™ (Andexanet alfa)

Portola Pharmaceuticals, Inc. (Portola) submitted an application for new technology add-on payments for FY 2019 for the use of AndexXa™ (Andexanet alfa).

AndexXa™ received FDA approval on May 3, 2018, and is indicated for use in the treatment of patients who are receiving treatment with rivaroxaban and apixaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for AndexXa™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved AndexXa™ for new technology add-on payments for FY 2019 (83 FR 41362). Cases involving the use of AndexXa™ that are eligible for new technology add-on payments are identified by ICD–10–PCS procedure codes XW03372 (Introduction of Andexanet alfa, Factor Xa inhibitor reversal agent into peripheral vein, percutaneous approach, new technology group 2) or XW04372 (Introduction of Andexanet alfa, Factor Xa inhibitor reversal agent into central vein, percutaneous approach, new technology group 2). The applicant explained that the WAC for 1 vial is $2,750, with the use of an average of 10 vials for the low dose and 18 vials for the high dose. The applicant noted that per the clinical trial data, 90 percent of cases were administered a low dose and 10 percent of cases were administered the high dose. The weighted average between the low and high dose is an average of 10.22727 vials. Therefore, the cost of a standard dosage of AndexXa™ is $28,125 ($2,750 × 10.22727). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of AndexXa™ is $14,062.50 for FY 2019.

With regard to the newness criterion for AndexXa™, we consider the beginning of the newness period to commence when AndexXa™ received FDA approval (May 3, 2018). Because the 3-year anniversary date of the entry of AndexXa™ onto the U.S. market (May 3, 2021) will occur after FY 2020, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19283 through 19284), we proposed to continue new technology add-on payments for this technology for FY 2020. In addition, under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of the proposed rule (84 FR 19373), we proposed that the maximum new technology add-on payment amount for a case involving the use of AndexXa™ would be $18,281.25 for FY 2020; that is, 65 percent of the average cost of the technology. However, we stated that if we did not finalize the proposed change to the calculation of the new technology add-on payment amount, we were proposing that the maximum new technology add-on payment for a case involving AndexXa™ would remain at $14,062.50 for FY 2020. We invited public comments on our proposals to

continue new technology add-on payments for AndexXa™ for FY 2020.

Comment: A commenter supported CMS' proposal to continue new technology add-on payments for FY 2020 for AndexXa™.

Response: We appreciate the commenter's support. After consideration of the public comments we received, we are finalizing our proposal to continue new technology add-on payments for AndexXa™ for FY 2020. Under the revised calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this final rule, the maximum new technology add-on payment amount for a case involving the use of AndexXa™ will be $18,281.25 for FY 2020; that is, 65 percent of the average cost of the technology. (As discussed in section II.H.9. of the preamble of this final rule, we are revising the maximum new technology add-on payment to 65 percent, or 75 percent for certain antimicrobial products, of the average cost of the technology.)

5. FY 2020 Applications for New Technology Add-On Payments

We received 18 applications for new technology add-on payments for FY 2020. In accordance with the regulations under § 412.87(c), applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. One applicant withdrew its application prior to the issuance of the proposed rule.

Since the issuance of the FY 2020 IPPS/LTCH PPS proposed rule, three applicants, AbbVie Pharmaceuticals, Inc. (the applicant for VENCLEXTA®), Somahlution, Inc. (the applicant for DURAGRAFT®), and Nabriva Therapeutics U.S., Inc. (the applicant for CONTEPO™), withdrew their applications. One applicant, Merck & Co., Inc (the applicant for Imipenem, Cilastatin, and Relebactam (IMI/REL) Injection), did not meet the deadline of July 1 for FDA approval or clearance of the technology and, therefore, the technology is not eligible for consideration for new technology add-on payments for FY 2020. A discussion of the remaining 13 applications is presented in this final rule.

a. AZEDRA® (Ultratrace® iobenguane Iodine-131) Solution

Progenics Pharmaceuticals, Inc. submitted an application for new technology add-on payments for AZEDRA® (Ultratrace® iobenguane Iodine-131) for FY 2020. (We note that Progenics Pharmaceuticals, Inc. previously submitted an application for new technology add-on payments for AZEDRA® for FY 2019, which was withdrawn prior to the issuance of the FY 2019 IPPS/LTCH PPS final rule.) AZEDRA® is a drug solution formulated for intravenous (IV) use in the treatment of patients who have been diagnosed with obenguane avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma (PPGL). AZEDRA® contains a small molecule ligand consisting of meta-iodobenzylguanidine (MIBG) and ^{131}Iodine (^{131}I) (hereafter referred to as ''^{131}I–MIBG''). The applicant noted that iobenguane Iodine-131 is also known as ^{131}I–MIBG.

The applicant reported that PPGLs are rare tumors with an incidence of approximately 2 to 8 people per million per year.[2] [3] Both tumors are catecholamine-secreting neuroendocrine tumors, with pheochromocytomas being the more common of the two and comprising 80 to 85 percent of cases. While 10 percent of pheochromocytomas are malignant, whereby ''malignant'' is defined by the World Health Organization (WHO) as ''the presence of distant metastases,'' paragangliomas have a malignancy frequency of 25 percent.[4] [5] Approximately one-half of malignant tumors are pronounced at diagnosis, while other malignant tumors develop slowly within 5 years.[6] Pheochromocytomas and paragangliomas tend to be indistinguishable at the cellular level and frequently at the clinical level. For example catecholamine-secreting paragangliomas often present clinically like pheochromocytomas with hypertension, episodic headache, sweating, tremor, and forceful palpitations.[7] Although pheochromocytomas and paragangliomas can share overlapping histopathology, epidemiology, and molecular pathobiology characteristics, there are differences between these two neuroendocrine tumors in clinical behavior, aggressiveness and metastatic potential, biochemical findings and association with inherited genetic syndrome differences, highlighting the importance of distinguishing between the presence of malignant pheochromocytoma and the presence of malignant paraganglioma. At this time, there is no curative treatment for malignant pheochromocytomas and paragangliomas. Successful management of these malignancies requires a multidisciplinary approach of decreasing tumor burden, controlling endocrine activity, and treating debilitating symptoms. According to the applicant, decreasing metastatic tumor burden would address the leading cause of mortality in this patient population, where the 5-year survival rate is 50 percent for patients with untreated malignant pheochromocytomas and paragangliomas.[8] The applicant stated that controlling catecholamine hypersecretion (for example, severe paroxysmal or sustained hypertension, palpitations and arrhythmias) would also mean decreasing morbidity associated with hypertension (for example, risk of stroke, myocardial infarction and renal failure), and begin to address the 30-percent cardiovascular mortality rate associated with malignant pheochromocytomas and paragangliomas.

The applicant reported that, prior to the introduction of AZEDRA®, controlling catecholamine activity in pheochromocytomas and paragangliomas was medically achieved with administration of combined alpha and beta-adrenergic blockade, and surgically with tumor tissue reduction. Because there is no curative treatment for malignant pheochromocytomas and paragangliomas, resecting both primary and metastatic lesions whenever possible to decrease tumor burden [9] provides a methodology for controlling catecholamine activity and lowering cardiovascular mortality risk. Besides surgical removal of tumor tissue for lowering tumor burden, there are other

treatment options that depend upon tumor type (that is, pheochromocytoma tumors versus paraganglioma tumors), anatomic location, and the number and size of the metastatic tumors. These treatment options include: (1) Radiation therapy; (2) nonsurgical local ablative therapy with radiofrequency ablation, cryoablation, and percutaneous ethanol injection; (3) transarterial chemoembolization for liver metastases; and (4) radionuclide therapy using metaiodobenzylguanidine (MIBG) or somatostatin. Regardless of the method to reduce local tumor burden, periprocedural medical care is needed to prevent massive catecholamine secretion and hypertensive crisis.[10]

The applicant stated that AZEDRA® specifically targets neuroendocrine tumors arising from chromaffin cells of the adrenal medulla (in the case of pheochromocytomas) and from neuroendocrine cells of the extra-adrenal autonomic paraganglia (in the case of paragangliomas).[11] According to the applicant, AZEDRA® is a more consistent form of ^{131}I–MIBG compared to compounded formulations of ^{131}I–MIBG that are not approved by the FDA. AZEDRA® (iobenguane I 131) (AZEDRA) was approved by the FDA on July 30, 2018, and according to the applicant, is the first and only drug indicated for the treatment of adult and pediatric patients 12 years and older who have been diagnosed with iobenguane scan positive, unresectable, locally advanced or metastatic pheochromocytoma or paraganglioma who require systemic anticancer therapy. Among local tumor tissue reduction options, use of external beam radiation therapy (EBRT) at doses greater than 40 Gy can provide local pheochromocytoma and paraganglioma tumor control and relief of symptoms for tumors at a variety of sites, including the soft tissues of the skull base and neck, abdomen, and thorax, as well as painful bone metastases.[12] However, the applicant stated that EBRT irradiated tissues are unresponsive to subsequent treatment with ^{131}I- MIBG radionuclide.[13] MIBG was initially used for the imaging of paragangliomas and pheochromocytomas because of its similarity to noradrenaline, which is taken up by chromaffin cells. Conventional MIBG used in imaging expanded to off-label use in patients who had been diagnosed with malignant pheochromocytomas and paragangliomas. Because ^{131}I–MIBG is sequestered within pheochromocytoma and paraganglioma tumors, subsequent malignant cell death occurs from radioactivity. Approximately 50 percent of tumors are eligible for treatment involving ^{131}I–MIBG therapy based on having MIBG uptake with diagnostic imaging. According to the applicant, despite uptake by tumors, studies have also found that ^{131}I–MIBG therapy has been limited by total radiation dose, hematologic side effects, and hypertension. While the pathophysiology of total radiation dose and hematologic side effects are more readily understandable, hypertension is believed to be precipitated by large quantities of non-iodinated MIBG or ''cold'' MIBG being introduced along with radioactive ^{131}I–MIBG therapy.[14] The ''cold'' MIBG blocks synaptic reuptake of norepinephrine, which can lead to tachycardia and paroxysmal hypertension within the first 24 hours, the majority of which occur within 30 minutes of administration and can be dose-limiting.[15]

The applicant asserted that its new proprietary manufacturing process called Ultratrace® allows AZEDRA® to be manufactured without the inclusion of unlabeled or ''cold'' MIBG in the final formulation. The applicant also noted that targeted radionuclide MIBG therapy to reduce tumor burden is one of two treatments that have been studied the most. The other treatment is cytotoxic chemotherapy and, specifically, Carboplatin, Vincristine, and Dacarbazine (CVD). The applicant stated that cytotoxic chemotherapy is an option for patients who experience symptoms with rapidly progressive, non-resectable, high tumor burden, and that cytotoxic chemotherapy is another option for a large number of metastatic bone lesions.[16] According to the applicant, CVD was believed to have an effect on malignant pheochromocytomas and paragangliomas due to the embryonic origin being similar to neuroblastomas. The response rates to CVD have been variable between 25 percent and 50 percent.[17] [18] These patients experience side effects consistent with chemotherapeutic treatment with CVD, with the added concern of the precipitation of hormonal complications such as hypertensive crisis, thereby requiring close monitoring during cytotoxic chemotherapy.[19] According to the applicant, use of CVD relative to other tumor burden reduction options is not an ideal treatment because of nearly 100 percent recurrence rates, and the need for chemotherapy cycles to be continually readministered at the risk of increased systemic toxicities and eventual development of resistance. Finally, there is a subgroup of patients that are asymptomatic and have slower progressing tumors where frequent follow-up is an option for care.[20] Therefore, the applicant believed that AZEDRA® offers cytotoxic radioactive therapy for the indicated population that avoids harmful side effects that typically result from use of low-specific activity products.

The applicant reported that the recommended AZEDRA® dosage and frequency for patients receiving treatment involving ^{131}I–MIBG therapy for a diagnosis of avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors is:

- Dosimetric Dosing—5 to 6 micro curies (mCi) (185 to 222 MBq) for a patient weighing more than or equal to 50 kg, and 0.1 mCi/kg (3.7 MBq/kg) for patients weighing less than 50 kg. Each

recommended dosimetric dose is administered as an IV injection.

• Therapeutic Dosing—500 mCi (18.5 GBq) for patients weighing more than 62.5 kg, and 8 mCi/kg (296 MBq/kg) for patients weighing less than or equal to 62.5 kg. Therapeutic doses are administered by IV infusion, in ~50 mL over a period of ~30 minutes (100 mL/hour), administered approximately 90 days apart.

With respect to the newness criterion, the applicant indicated that FDA granted Orphan Drug designation for AZEDRA® on January 18, 2006, followed by Fast Track designation on March 8, 2006, and Breakthrough Therapy designation on July 26, 2015. The applicant's New Drug Application (NDA) proceeded on a rolling basis, and was completed on November 2, 2017. AZEDRA® was approved by the FDA on July 30, 2018, for the treatment of adult and pediatric patients 12 years and older who have been diagnosed with iobenguane scan positive, unresectable, locally advanced or metastatic pheochromocytoma or paraganglioma who require systemic anticancer therapy through a New Drug Approval (NDA) filed under Section 505(b)(1) of the Federal Food, Drug and Cosmetic Act and 21 CFR 314.50. Currently, there are no approved ICD–10–PCS procedure codes to uniquely identify procedures involving the administration of AZEDRA®. In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19286), we noted that the applicant submitted a request for approval for a unique ICD–10–PCS code for the administration of AZEDRA® beginning in FY 2020. The following ICD–10–PCS codes are now assigned for the use of AZEDRA®: XW033S5 (Introduction of Iobenguane I–131 Antineoplastic into Peripheral Vein, Percutaneous Approach, New Technology Group 5), and XW043S5 (Introduction of Iobenguane I–131 Antineoplastic into Central Vein, Percutaneous Approach, New Technology Group 5).

As discussed earlier, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or similar mechanism of action, the applicant stated that while AZEDRA® and low-specific activity conventional I–131 MIBG both target the same transporter sites on the tumor cell surface, the therapies' safety and efficacy outcomes are different. These differences in outcomes are because AZEDRA® is manufactured using the proprietary Ultratrace® technology, which maximizes the molecules that carry the tumoricidal component (I–131 MIBG) and minimizes the extraneous unlabeled component (MIBG, free ligands), which could cause cardiovascular side effects. Therefore, according to the applicant, AZEDRA® is designed to increase efficacy and decrease safety risks, whereas conventional I–131 MIBG uses existing technologies and results in a product that overwhelms the normal reuptake system with excess free ligands, which leads to safety issues as well as decreasing the probability of the ^{131}I–MIBG binding to the tumor cells.

With regard to the second criterion, whether a product is assigned to the same or a different MS–DRG, the applicant noted that there are no specific MS–DRGs for the assignment of cases involving the treatment of patients who have been diagnosed with pheochromocytoma and paraganglioma. We stated in the proposed rule that we believed potential cases representing patients who may be eligible for treatment involving the administration of AZEDRA® would be assigned to the same MS–DRGs as cases representing patients who receive treatment for a diagnosis of iobenguane avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma. We also refer readers to the cost criterion discussion in this final rule, which includes the applicant's list of the MS–DRGs to which potential cases involving treatment with the administration of AZEDRA® most likely would map.

With regard to the third criterion, whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, AZEDRA® is the only FDA-approved drug indicated for use in the treatment of patients who have been diagnosed with malignant pheochromocytoma and paraganglioma tumors that avidly take up ^{131}I–MIBG and are recurrent and/or unresectable. The applicant stated that these patients face serious mortality and morbidity risks if left untreated, as well as potentially suffer from side effects if treated by available off-label therapies.

The applicant also contended that AZEDRA® can be distinguished from other currently available treatments because it potentially provides the following advantages:

• AZEDRA® will have a very limited impact on normal norepinephrine reuptake due to the negligible amount of unlabeled MIBG present in the dose. Therefore, AZEDRA® is expected to pose a much lower risk of acute drug-induced hypertension.

• There is minimal unlabeled MIBG to compete for the norepinephrine transporter binding sites in the tumor, resulting in more effective delivery of radioactivity.

• Current off-label therapeutic use of ^{131}I is compounded by individual pharmacies with varied quality and conformance standards.

• Because of its higher specific activity (the activity of a given radioisotope per unit mass), AZEDRA® infusion times are significantly shorter than conventional ^{131}I administrations.

Therefore, with these potential advantages, the applicant maintained that AZEDRA® represents an option for the treatment of patients who have been diagnosed with malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, where there is a clear, unmet medical need.

For the reasons cited earlier, the applicant believed that AZEDRA® is not substantially similar to other currently available therapies and/or technologies and meets the ''newness'' criterion. We invited public comments on whether AZEDRA® is substantially similar to other currently available therapies and/or technologies and meets the ''newness'' criterion.

Comment: We received multiple comments in support of applicant's assertion that AZEDRA® is not substantially similar to other currently available therapies and/or technologies. A commenter described AZEDRA® as highly unique technology that is unlike any pre-existing treatment with a structure unlike any pre-existing treatment option given the use of the proprietary Ultratrace® technology, leading to increases in efficacy due to its unique ''carrier-free'' structure with less non-radioactive drug to compete for uptake by tumors. Commenters mentioned that prior to AZEDRA®'s approval, there was no FDA-approved drug treatment for advanced pheochromocytomas and paragangliomas patients. Commenters asserted that compared to other off-label treatments, AZEDRA provides an important new option with substantial clinical improvement in terms of both safety and efficacy for patients with metastatic and/or recurrent and/or unresectable PPGL.

Response: We thank commenters for their input. After consideration of the comments received, we agree that AZEDRA® utilizes a new mechanism of action from prior therapeutic uses of MIBG and therefore is not substantially

similar to an existing technology and meets the criteria for ''newness.''

With regard to the cost criterion, the applicant conducted an analysis using FY 2015 MedPAR data to demonstrate that AZEDRA® meets the cost criterion. The applicant searched for potential cases representing patients who may be eligible for treatment involving AZEDRA® that had one of the following ICD–9–CM diagnosis codes (which the applicant believed is indicative of diagnosis appropriate for treatment involving AZEDRA®): 194.0 (Malignant neoplasm of adrenal gland), 194.6 (Malignant neoplasm of aortic body and other paraganglia), 209.29 (Malignant carcinoid tumor of other sites), 209.30 (Malignant poorly differentiated neuroendocrine carcinoma, any site), 227.0 (Benign neoplasm of adrenal gland), 237.3 (Neoplasm of uncertain behavior of paraganglia)—in combination with one of the following ICD–9–CM procedure codes describing the administration of a radiopharmaceutical: 00.15 (High-dose infusion interleukin-2); 92.20 (Infusion of liquid brachytherapy radioisotope); 92.23 (Radioisotopic teleradiotherapy); 92.27 (Implantation or insertion of radioactive elements); 92.28 (Injection or instillation of radioisotopes). The applicant reported that the potential cases used for this analysis mapped to MS–DRGs 054 and 055 (Nervous System Neoplasms with and without MCC, respectively), MS–DRG 271 (Other Major Cardiovascular Procedures with CC), MS–DRG 436 (Malignancy of Hepatobiliary System or Pancreas with CC), MS–DRG 827 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedure with CC), and MS–DRG 843 (Other Myeloproliferative Disorders or Poorly Differentiated Neoplastic Diagnosis with MCC). Due to patient privacy concerns, because the number of cases under each MS–DRG was less than 11 in total, the applicant assumed an equal distribution between these 6 MS–DRGs. Based on the FY 2019 IPPS/LTCH PPS final rule correction notice data file thresholds, the average case-weighted threshold amount was $60,136. Using the identified cases, the applicant determined that the average unstandardized charge per case ranged from $21,958 to $152,238 for the 6 evaluated MS–DRGs. After removing charges estimated to be associated with precursor agents, the applicant used a 3-year inflation factor of 1.1436 (a yearly inflation factor of 1.04574 applied over 3 years), based on the FY 2018 IPPS/LTCH PPS final rule (82 FR 38527), to inflate the charges from FY 2015 to FY 2018. The applicant provided an estimated average of $151,000 per therapeutic dose per patient, based on the wholesale acquisition cost of the drug and the average dosage amount for most patients, with a total cost per patient estimated to be approximately $980,000. After including the cost of the technology, the applicant determined an inflated average case-weighted standardized charge per case of $1,078,631.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19287), we stated that we were concerned with the limited number of cases the applicant analyzed. However, we acknowledged the difficulty in obtaining cost data for such a rare condition. We invited public comments on whether the AZEDRA® technology meets the cost criterion.

Comment: The applicant submitted a comment in response to CMS's concern, stating that although the number of cases under each MS–DRG identified for its analysis included fewer than 11 total cases, the information provided a meaningful and workable data set based on the MedPAR files and is consistent with a product used to treat an ultra-rare disease. Furthermore, the applicant stated that the cost information and analysis submitted with the application demonstrated that AZEDRA® will significantly exceed the relevant cost threshold for the MS–DRGs to which cases map, both in the aggregate (based on case-weighted threshold amounts), and for each individual MS–DRG.

Response: We appreciate the applicant's comment in response to our concerns. After consideration of the public comments we received, we believe that AZEDRA® meets the cost criterion.

With regard to substantial clinical improvement, the applicant maintained that the use of AZEDRA® has been shown to reduce the incidence of hypertensive episodes and use of antihypertensive medications, reduce tumor size, improve blood pressure control, and reduce secretion of tumor biomarkers. In addition, the applicant asserted that AZEDRA® provides a treatment option for those outlined in its indication patient population. The applicant asserted that AZEDRA® meets the substantial clinical improvement criterion based on the results from two clinical studies: (1) MIP–IB12 (IB12): A Phase I Study of Iobenguane (MIBG) I–131 in Patients With Malignant Pheochromocytoma/Paraganglioma; [21] and (2) MIP–IB12B (IB12B): A Study Evaluating Ultratrace® Iobenguane I–131 in Patients With Malignant Relapsed/Refractory Pheochromocytoma/Paraganglioma. The applicant explained that the IB12B study is similar to the IB12 study in that both studies evaluated two open-label, single-arm studies. The applicant reported that both studies included patients who had been diagnosed with malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, and both studies assessed objective tumor response, biochemical tumor response, overall survival rates, occurrence of hypertensive crisis, and the long-term benefit of AZEDRA® treatment relative to the need for antihypertensives. However, according to the applicant, the study designs differed in dose regimens (1 dose administered to patients in the IB12 study, and 2 doses administered to patients in the IB12B study) and primary study endpoints. Differences in the designs of the studies prevented direct comparison of study endpoints and pooling of the data. In addition, the applicant stated that results from safety data from the IB12 study and the IB12B study were pooled and used to support substantial clinical improvement assertions. In the proposed rule, we noted that neither the IB12 study nor the IB12B study compared the effects of the use of AZEDRA® to any of the other treatment options to decrease tumor burden (for example, cytotoxic chemotherapy, radiation therapy, and surgical debulking).

Regarding the data results from the IB12 study, the applicant asserted that, based on the reported safety and tolerability, and primary endpoint of radiological response at 12 months, high-specific-activity I–131 MIBG may be an effective alternative therapeutic option for patients who have been diagnosed with iobenguane-avid, metastatic and/or recurrent pheochromocytoma and paraganglioma tumors for whom there are no other approved therapies and for those patients who have failed available treatment options. In addition, the applicant used the exploratory finding of decreased or discontinuation of anti-hypertensive medications relative to baseline medications as evidence that AZEDRA® has clinical benefit and positive impact on the long-term effects of hypertension induced norepinephrine producing malignant pheochromocytoma and paraganglioma tumors. In the proposed rule, we stated that we understand that the applicant used antihypertensive medications as a

[21] Noto, Richard B., et al., ''Phase 1 Study of High-Specific-Activity I–131 MIBG for Metastatic and/or Recurrent Pheochromocytoma or Paraganglioma (IB12 Phase 1 Study),'' *J Clin Endocrinol Metab,* vol. 103(1), pp. 213–220.

proxy to assess the long-term effects of hypertension such as renal, myocardial, and cerebral end organ damage. The applicant reported that it studied 15 of the original IB12 study's 21-patient cohort, and found 33 percent (n=5) had decreased or discontinuation of antihypertensive medications during the 12 months of follow-up. However, the applicant did not provide additional data on the incidence of renal insufficiency/failure, myocardial ischemic/infarction events, or transient ischemic attacks or strokes. Therefore, in the proposed rule, we stated that it is unclear to us if these five patients also had decreased urine metanephrines, changed their diet, lost significant weight, or if other underlying comorbidities that influence hypertension were resolved, making it difficult to understand the significance of this exploratory finding.

Regarding the applicant's assertion that the use of AZEDRA® is safer and more effective than alternative therapies, in the proposed rule we noted that the IB12 study was a dose-escalating study and did not compare current therapies with the use of AZEDRA®. We also noted the following: (1) The average age of the 21 enrolled patients in the IB12 study was 50.4 years old (a range of 30 to 72 years old); (2) the gender distribution was 61.9 percent (n=13) male and 38.1 percent (n=8) female; and (3) 76.2 percent (n=16) were white, 14.3 percent (n=3) were black or African American, and 9.5 percent (n=2) were Asian. We agreed with the study's conductor [22] that the size of the study is a limitation, and with a younger, predominately white, male patient population, generalization of study results to a more diverse population may be difficult. The applicant reported that one other aspect of the patient population indicated that all 21 patients received prior anti-cancer therapy for treatment of malignant pheochromocytoma and paraganglioma tumors, which included the following: 57.1 percent (n=12) received radiation therapy including external beam radiation and conventional MIBG; 28.6 percent (n=6) received cytotoxic chemotherapy (for example, CVD and other chemotherapeutic agents); and 14.3 percent (n=3) received Octreotide.[23] Although this study's patient population illustrates a population that has failed some of the currently available therapy options, which may potentially support a finding of substantial clinical improvement for those with no other treatment options, we stated in the proposed rule that we were unclear which patients benefited from treatment involving AZEDRA®, especially in view of the finding of a Fitzgerald, et al. study cited earlier [24] that concluded tissues previously irradiated by EBRT were found to be unresponsive to subsequent treatment with ^{131}I–MIBG radionuclide. It was not clear in the application how previously EBRT-treated patients who failed EBRT fared with the Response Evaluation Criteria in Solid Tumors (RECIST) scores, biotumor marker results, and reduction in antihypertensive medications. We stated that we also lacked information to draw the same correlation between previously CVD-treated patients and their RECIST scores, biotumor marker results, and reduction in antihypertensive medications.

The applicant asserted that the use of AZEDRA® reduces tumor size and reduces the secretion of tumor biomarkers, thereby providing important clinical benefits to patients. The IB12 study assessed the overall best tumor response based on RECIST.[25] Tumor biomarker response was assessed as complete or partial response for serum chromogranin A and total metanephrines in 80 percent and 64 percent of patients, respectively. The applicant noted that both the overall best tumor response based on RECIST and tumor biomarker response favorable results are at doses higher than 500 mCi. In the proposed rule, we stated that we noticed that tumor burden improvement, as measured by RECIST criteria, showed that none of the 21 patients achieved a complete response. In addition, although 4 patients showed partial response, these 4 patients also experienced dose-limiting toxicity with hematological events, and all 4 patients received administered doses greater than 18.5 GBq (500mCi). We also noted that, regardless of total administered activity (for example, greater than or less than 18.5 GBq (500mCi)), 61.9 percent (n=13) of the 21 patients enrolled in the study had stable disease and 14.3 percent (n=2) of the 14 patients who received greater than administered doses of 18.5 GBq (500mCi) had progressive disease. Finally, we also stated that we noticed that, for most tumor biomarkers, there were no dose relationship trends. We stated that while we appreciate the applicant's contention that there is no other FDA-approved drug therapy for patients who have been diagnosed with ^{131}I–MIBG avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, we had questions as to whether the overall tumor best response and overall best tumor biomarker data results from the IB12 study support a finding that the use of the AZEDRA® technology represents a substantial clinical improvement.

Finally, regarding the applicant's assertion that, based on the IB12 study data, AZEDRA® provides a safe alternative therapy for those patients who have failed other currently available treatment therapies, we stated in the proposed rule that we noted none of the patients experienced hypertensive crisis, and that 76 percent (n=16) of the 21 patients enrolled in the study experienced Grade III or IV adverse events. Although the applicant indicated the adverse events were related to the study drug, the applicant also noted that there was no statistically significant difference between the greater than or less than 18.5 GBq administered doses; both groups had adverse events rates greater than 75 percent. Specifically, 5 of 7 patients (76 percent) who received less than or equal to 18.5 GBq administered doses, and 11 of 14 patients (79 percent) who received greater than 18.5 GBq administered doses experienced Grade III or IV adverse advents. The most common (greater than or equal to 10 percent) Grade III and IV adverse events were neutropenia, leukopenia, thrombocytopenia, nausea, and vomiting. We also noted that: (1) There were 5 deaths during the study that occurred from approximately 2.5 months up to 22 months after treatment and there was no detailed data regarding the 5 deaths, especially related to the total activity received during the study; (2) there was no information about which patients received prior radiation therapy with EBRT and/or conventional MIBG relative to those who experienced Grade III or IV adverse events; and (3) the total lifetime radiation dose was not provided by the applicant.

The applicant provided study data results from the IB12B study (MIP–IB12B), an open-label, prospective 5-year follow-up, single-arm, multi-center,

Available at: *http://www.eortc.be/Services/Doc/RECIST.pdf.*

Phase II pivotal study to evaluate the safety and efficacy of the use of AZEDRA® for the treatment of patients who have been diagnosed with malignant and/or recurrent pheochromocytoma and paraganglioma tumors to support the assertion of substantial clinical improvement. The applicant reported that the IB12B's primary endpoint is the proportion of patients with a reduction (including discontinuation) of all anti-hypertensive medication by at least 50 percent for at least 6 months. Seventy-four patients who received at least 1 dosimetric dose of AZEDRA® were evaluated for safety and 68 patients who received at least 1 therapeutic dose of AZEDRA®, each at 500 mCi (or 8 mCi/kg for patients weighing less than or equal to 62.5 kg), were assessed for specific clinical outcomes. The applicant asserted that results from this prospective study met the primary endpoint (reduction or discontinuation of anti-hypertensive medications), as well as demonstrated strong supportive evidence from key secondary endpoints (overall tumor response, tumor biomarker response, and overall survival rates) that confers important clinical relevance to patients who have been diagnosed with malignant pheochromocytoma and paraganglioma tumors. The applicant also indicated that the use of AZEDRA® was shown to be generally well tolerated at doses administered at 8 mCi/kg. In the proposed rule, we stated that we noted the data results from the IB12B study did not have a comparator arm, making it difficult to interpret the clinical outcome data relative to other currently available therapies.

As discussed for the IB12 study, the applicant reported that antihypertension treatment was a proxy for effectiveness of the use of AZEDRA® on norepinephrine induced hypertension producing tumors. In the IB12B study, 25 percent (17/68) of patients met the primary endpoint of having a greater than 50 percent reduction in anti-hypertensive agents for at least 6 months. The applicant further indicated that an additional 16 patients showed a greater than 50 percent reduction in anti-hypertensive agents for less than 6 months, and by pooling data results from these 33 patients the applicant concluded that 49 percent (33/68) of patients achieved a greater than 50 percent reduction at any time during the study's 12-month follow-up period. The study's primary endpoint data also revealed that 11 percent of the 88 patients who received a therapeutic dose of AZEDRA® experienced a worsening of preexisting hypertension defined as an increase in systolic blood pressure to ≥160 mmHg with an increase of 20 mmHg or an increase in diastolic blood pressure ≥100 mmHg with an increase of 10 mmHg. All changes in blood pressure occurred within the first 24 hours post infusion. The applicant further compared its data results from the IB12B study regarding antihypertension medication and the frequency of post-infusion hypertension with published studies on MIBG and CVD therapy. The applicant noted a retrospective analysis of CVD therapy of 52 patients who had been diagnosed with metastatic pheochromocytoma and paraganglioma tumors that found only 15 percent of CVD-treated patients achieved a 50-percent reduction in anti-hypertensive agents. The applicant also compared its data results for post-infusion hypertension with literature reporting on MIBG and found 14 and 19 percent (depending on the study) of patients receiving MIBG experience hypertension within 24 hours of infusion. Comparatively, the applicant stated that the use of AZEDRA® had no acute events of hypertension following infusion.

Regarding reduction in tumor burden (as defined by RECIST scores), the applicant indicated that at the conclusion of the IB12B study's 12-month follow-up period, 23.4 percent (n=15) of the 68 patients showed a partial response, 68.8 percent (n=44) of the 68 patients achieved stable disease, and 4.7 percent (n=3) of the 68 patients showed progressive disease. None of the patients showed completed response. The applicant maintained that achieving stable disease is important for patients who have been treated for malignant pheochromocytoma and paraganglioma tumors because this is a progressive disease without a cure at this time. The applicant also indicated that literature shows that stable disease is maintained in approximately 47 percent of treatment naïve patients who have been diagnosed with metastatic pheochromocytoma and paraganglioma tumors at 1 year due to the indolent nature of the disease.[26] In the IB12B study, the data results equated to 23 percent of patients achieving partial response and 69 percent of patients achieving stable disease. According to the applicant, this compares favorably to treatment with both conventional radiolabeled MIBG and CVD chemotherapy.

The applicant stated that the data results demonstrated effective tumor response rates. The applicant reported that the IB12 and IB12B study data showed overall tumor response rates of 80 percent and 92 percent, respectively. In addition, the applicant contended that the study data across both trials show that patients demonstrated improved blood pressure control, reductions in tumor biomarker secretion, and strong evidence in overall survival rates. The overall median time to death from the first dose was 36.7 months in all treated patients. Patients who received 2 therapeutic doses had an overall median survival rate of 48.7 months, compared to 17.5 months for patients who only received a single dose. In the proposed rule, we stated that we noted the IB12B study reported 12-month Kaplan-Meier estimate of survival of 91 percent, while the drug dosing study IB12 reported overall subject survival of 86 percent at 12 months, 62 percent at 24 months, 38 percent at 36 months, and 4.8 percent at 48 months. We also noted that only 45 of 68 patients who received at least 1 therapeutic dose completed the 12-month efficacy phase.

The applicant indicated that comparison of the IB12B study data regarding overall survival rate with historical data is difficult due to the differences in the retrospective nature of the published clinical studies and heterogeneous patient characteristics, especially when overall survival is calculated from the time of initial diagnosis. In the proposed rule, we stated that we agreed with the applicant regarding the difficulties in comparing the results of the published clinical studies, and also believed that the differences in these studies may make it more difficult to evaluate whether the use of the AZEDRA® technology improves overall survival rates relative to other therapies.

We stated that we acknowledge the challenges with constructing robust clinical studies due to the extremely rare occurrence of patients who have been diagnosed with pheochromocytoma and paraganglioma tumors. However, in the proposed rule, we stated we were concerned that because the data for both of these studies is mainly based upon retrospective studies and small, heterogeneous patient cohorts, it is difficult to draw precise conclusions regarding efficacy. We stated that only very limited nonpublished data from two, single-arm, noncomparative studies were available to evaluate the safety and

[26] Hescot, S., Leboulleux, S., Amar, L., Vezzosi, D., Borget, I., Bournaud-Salinas, C., de la Fouchardiere, C., Libé, R., Do Cao, C., Niccoli, P., Tabarin, A., ''One-year progression-free survival of therapy-naive patients with malignant pheochromocytoma and paraganglioma,'' *The J Clin Endocrinol Metab,* 2013, vol. 98(10), pp. 4006–4012.

effectiveness of AZEDRA®, leading to a comparison of outcomes with historical controls.

We invited public comments on whether the use of the AZEDRA® technology meets the substantial clinical improvement criterion, including with respect to the specific concerns we had raised, which included whether the safety data profile from the IB12 study supports a finding that the use of AZEDRA® represents a substantial clinical improvement for patients who received treatment with ^{131}I–MIBG for a diagnosis of avid malignant and/or recurrent and/or unresectable PPGL tumors, and whether the data results regarding hypertension support a finding that the use of the AZEDRA® technology represents a substantial clinical improvement, and if anti-hypertensive medication reduction is an adequate proxy for improvement in renal, cerebral, and myocardial end organ damage.

Comment: We received multiple comments in support of AZEDRA®'s meeting the substantial clinical improvement criterion. Commenters stated that the clinical data demonstrates important benefits and meaningful clinical improvements for patients compared to other treatments that may be unavailable to patients with advanced PPGL. Commenters stated that certain drug treatments have been used that are not specifically approved by FDA, such as certain chemotherapy regimens or low specific-activity iobenguane I–131, are not effective and frequently lead to serious and harmful side effects, including chemical toxicity and acute hypertensive crisis. Another commenter encouraged CMS to consider the very rare nature of advanced PPGL when considering the sizes of the clinical study patient populations and other aspects of the information relating to AZEDRA®'s application, particularly when a therapy is for an orphan condition and/or is the first and only FDA approved treatment option for the relevant patient population.

The applicant also provided comments regarding substantial clinical improvement. The applicant highlighted AZEDRA®'s FDA ''Breakthrough Therapy'', ''Fast Track'', ''Priority Review'', and ''Orphan Drug'' designations to demonstrate the meaningful efficacy and safety criteria that a product must meet to obtain these statuses. The applicant also reiterated its contention that AZEDRA® represents a substantial clinical improvement over currently available treatments because it (1) offers a treatment option for a patient population that is unresponsive to or ineligible for currently available treatments for advanced disease and (2) significantly improves clinical outcomes compared to existing treatments for patients who have advanced PPGL and require systemic anticancer treatment. The applicant also responded to some specific issues raised by CMS in the proposed rule. The applicant pointed out that at one point, CMS incorrectly described the IB12B and IB12 as ''retrospective'' studies, when in fact they were prospective in nature. The applicant clarified that, consistent with prospectively designed clinical trials, the protocol for IB12B included pre-specified endpoints that were statistically powered to demonstrate clinical benefit for patients with advanced PPGL. These endpoints and statistical analyses were used to define the study's success criteria prior to collecting any subject data to prevent the possibility of bias. As such, Study IB12B was a prospective study, specifically designed to demonstrate that AZEDRA® offers a treatment option for a patient population that is unresponsive to or ineligible for currently available treatments. The applicant also provided background to support its claim that the number of patients enrolled in IB12B was statistically meaningful and noteworthy for a last-line therapy study for an ultra-rare disease state.

In response to CMS's concern whether safety data from the IB12 study could provide relevant clinical improvement data, the applicant stated that while the IB12 study was prospectively designed to assess the safety, dosimetry, and preliminary efficacy for AZEDRA® in patients with advanced PPGL, it included several secondary efficacy endpoints that provide preliminary data such as overall tumor response (RECIST), biochemical tumor response, and survival time. The applicant stated that the overall tumor response endpoints were included in FDA's consideration of AZEDRA®'s efficacy, although it was not included in the final AZEDRA® prescribing information.

The applicant stated the primary endpoint of reduction in antihypertension medication was selected because a more traditional endpoint, such as overall survival, was not practical or possible given the nature of PPGL. The applicant stated: ''PPGL may progress slowly, and overall have a variable natural history, which makes the use of a traditional endpoint such as overall survival difficult and time-consuming.'' According to the applicant, the endpoint was chosen to evaluate a key cause of morbidity in PPGL and thereby reflect direct clinical benefit.

Response: We appreciate the additional information provided by the applicant, and the input from all commenters. After a review of the public comments we received, and upon review of all information provided by the applicant and review of the FDA Evaluation and Review of AZEDRA®'s NDA/BLA 209607 (*https://www.accessdata.fda.gov/drugsatfda_docs/nda/2019/021200Orig1s015MultidisciplineR.pdf*), we believe the technology offers a treatment option for the FDA indicated approved population for whom no other FDA approved treatment is available. Additionally, we note that, per the FDA's Multidisciplinary Evaluation and Review, use of the technology suggested a durable response in the reduction of hypertension as measured by the primary endpoint plus the confirmed overall tumor response measures of direct clinical benefit in this population of patients with serious, life threatening and rare disease (*https://www.accessdata.fda.gov/drugsatfda_docs/nda/2019/021200Orig1s015MultidisciplineR.pdf* pages 12, 20). CMS also notes FDA's adverse events of cytopenias, sialoadenitis and renal failure in those who received two doses of 131I–MIBG, as well as the most common adverse reactions of Myelosuppression and Gastrointestinal related adverse events. CMS notes FDA's postmarketing requirement (PMR) for the applicant to fully characterize the risk of developing secondary malignancies (*i.e.,* development of myelodysplastic syndrome, acute leukemia, and other secondary malignancies) in patients treated with ^{131}I–MIBG. Risk management will also include product labeling and routine pharmacovigilance to ensure the safe and effective use of ^{131}I–MIBG (*https://www.accessdata.fda.gov/drugsatfda_docs/nda/2019/021200Orig1s015MultidisciplineR.pdf* page 21). Also, CMS will monitor any additional data as it becomes available.

In summary, we have determined that AZEDRA® meets all of the criteria for approval of new technology add-on payments, and we are approving new technology add-on payments for FY 2020.

Cases involving AZEDRA® that are eligible for new technology add-on payments will be identified by ICD–10–PCS code XW033S5 and XW043S5. In its application, the applicant stated that the price of AZEDRA (Wholesale Acquisition Cost) is $302.00 per millicurie (mCi) prescribed. Most patients (*i.e.,* those weighing 62.5 kg or more) receive a therapeutic dose of 500

mCi. Accordingly, the applicant estimated an average cost of $302/mCi times 500 mCi, or approximately $151,000. Therefore, according to the applicant, the cost of AZEDRA® is $151,000. Under § 412.88(a)(2) (revised as discussed in this final rule), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of AZEDRA® is $98,150 for FY 2020.

b. CABLIVI® (caplacizumab-yhdp)

The Sanofi Company submitted an application for new technology add-on payments for CABLIVI® (caplacizumab-yhdp) for FY 2020. The applicant described CABLIVI® as a humanized bivalent nanobody consisting of two identical building blocks joined by a tri alanine linker, which is administered through intravenous and subcutaneous injection to inhibit microclot formation in adult patients who have been diagnosed with acquired thrombotic thrombocytopenic purpura (aTTP). The applicant stated that aTTP is a life-threatening, immune-mediated thrombotic microangiopathy characterized by severe thrombocytopenia, hemolytic anemia, and organ ischemia with an estimated 3 to 11 cases per million per year in the U.K. and U.S.[27] [28] [29] Further, the applicant stated that aTTP is an ultra-orphan disease caused by inhibitory autoantibodies to von Willebrand Factor-cleaving protease (vWFCP) also known as ''a disintegrin and metalloprotease with thrombospondin type 1 motif, member 13 (ADAMTS13),'' resulting in a severe deficiency in WFCP. The applicant further explained that von Willebrand Factor (vWF) is a key protein in hemostasis and is an adhesive, multimeric plasma glycoprotein with a pivotal role in the recruitment of platelets to sites of vascular injury. According to the applicant, more than 90 percent of circulating vWF is expressed by endothelial cells and secreted into the systemic circulation as ultra-large von Willebrand Factor (ULvWF) multimers. The applicant stated that decreased ADAMTS13 activity leads to an accumulation of ULvWF multimers, which bind to platelets and induce platelet aggregation. According to the applicant, the consumption of platelets in these microthrombi causes severe thrombocytopenia, tissue ischemia and organ dysfunction (commonly involving the brain, heart, and kidneys) and may result in acute thromboembolic events such as stroke, myocardial infarction, venous thrombosis, and early death. The applicant indicated that the aforementioned tissue and organ damage resulting from the ischemia leads to increased levels of lactate dehydrogenase (LDH), troponins, and creatinine (organ damage markers) and that faster normalization of these organ damage markers and platelet counts is believed to be linked with faster resolution of the ongoing microthrombotic process and the associated tissue ischemia. According to the applicant, in diagnoses of aTTP there is no consensual, validated surrogate marker that defines the subpopulation at greatest risk of death or significant morbidity. Therefore, the applicant stated that all patients who have been diagnosed with aTTP should be considered severe cases and treated in order to prevent death and significant morbidity.

The applicant explained that the two standard-of-care (SOC) treatment options for a diagnosis of aTTP are plasma exchange (PE), in which a patient's blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly also rituximab), which is often administered as adjunct to plasma exchange in the treatment for a diagnosis of aTTP.[30] [31] According to the applicant, despite the current SOC treatment options, acute aTTP episodes are still associated with a mortality rate of up to 20 percent, which generally occurs within the first weeks of diagnosis. The applicant asserted that, although the 20-percent mortality rate reflects substantial improvement because of PE treatment, in spite of greater understanding of disease pathogenesis and the use of newer immunosuppressants, the mortality rate has not been further improved.[32] [33] [34] [35] [36] [37] The applicant also noted that another important limitation of the currently available therapies (PE and immunosuppression) is the delayed onset of effect of days to weeks of these therapies because such therapies do not directly address the pathophysiological platelet aggregation that leads to the formation of microthrombi, which is ultimately associated with death or with the severe outcomes reported with diagnoses of aTTP. The applicant explained that despite current treatment, exacerbation and relapse occur and frequently lead to hospitalization and the need to restart daily PE treatment and optimize immunosuppression. In addition, the applicant noted that patients may experience exacerbations after discontinuing plasma exchange treatment due to continuing formation of microthrombi as a result of unresolved underlying autoimmune disease, and patients remain at risk of thrombotic complications or early death until the episode is completely resolved.[38]

According to the information provided by the applicant, CABLIVI® is administered as an adjunct to PE treatment and immunosuppressive therapy immediately upon diagnosis of aTTP through a bolus intraveneous injection for the first dose and subcutaneous injection for all subsequent doses. The recommended treatment regimen and dosage of CABLIVI® consists of administering 10 mg on the first day of treatment via intravenous injection prior to the

standard plasma exchange treatment. After completion of PE treatment on the first day, a 10 mg subcutaneous injection is administered. After the first day, and for the rest of the plasma exchange treatment period, a daily 10 mg subcutaneous injection is administered following each day's PE treatment. After the PE treatment period is completed, a daily 10 mg subcutaneous injection is administered for 30 days. If the underlying immunological disease (aTTP) is not resolved, the treatment period should be extended beyond 30 days and be accompanied by optimization of immunosuppression (another SOC treatment option, in addition to PE treatment). According to the applicant and as discussed later, the use of CABLIVI® produces faster normalization of platelet count response compared to that of SOC treatment options alone. The applicant indicated that this contributes to a decrease in the length of the SOC treatment period with respect to the number of days of PE treatment, the mean length of intensive care unit stays, and the mean length of hospitalizations.

With respect to the newness criterion, CABLIVI® received FDA approval on February 6, 2019, for the treatment of adult patients who have been diagnosed with aTTP, in combination with plasma exchange and immunosuppressive therapy. According to information provided by the applicant, CABLIVI® was previously granted Fast Track and Orphan Drug designations in the United States for the treatment of aTTP by the FDA and Orphan Drug designation in Europe for the treatment of aTTP. Currently, there are no ICD–10–PCS procedure codes to uniquely identify procedures involving CABLIVI®. In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19291), we noted that the applicant submitted a request for approval for a unique ICD–10–PCS procedure code for the administration of CABLIVI® beginning in FY 2020. The applicant was granted approval for the following procedure codes: XW013W5 (Introduction of Caplacizumab into Subcutaneous Tissue, Percutaneous Approach, New Technology Group 5), XW033W5 (Introduction of Caplacizumab into Peripheral Vein, Percutaneous Approach, New Technology Group 5) and XW043W5 (Introduction of Caplacizumab into Central Vein, Percutaneous Approach, New Technology Group 5).

As previously discussed, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome, according to the applicant, CABLIVI® is a first-in-class therapy with an innovative mechanism of action. The applicant explained that CABLIVI® binds to the A1 domain of vWF and specifically inhibits the interaction between vWF and platelets. Furthermore, the applicant indicated that in patients who have been diagnosed with aTTP, proteolysis of ULvWF multimers by ADAMTS13 is impaired due to the presence of inhibiting or clearing anti-ADAMTS13 auto-antibodies, resulting in the persistence of the constitutively active A1 domain and, as a consequence, platelets spontaneously bind to ULvWF and generate microvascular blood clots in high shear blood vessels. The applicant noted that CABLIVI® is able to interact with vWF in both its active (that is, ULvWF multimers or normal multimers activated through immobilization or shear stress) and inactive forms (that is, multimers prior to conformational change of the A1 domain), thereby immediately blocking the interaction of vWF with the platelet receptor (GPIb–IX–V) and further preventing spontaneous interaction of ULvWF with platelets that would lead to platelet microthrombi formation in the microvasculature, local schemia and platelet consumption. The applicant highlighted that this immediate platelet-protective effect differentiates CABLIVI® from slower-acting therapies, such as PE and immunosuppressants, which need days to exert their effect. The applicant explained that PE acts by removing ULvWF and the circulating auto-antibodies against ADAMTS13, thereby replenishing blood levels of ADAMTS13, while immunosuppressants aim to stop or reduce the formation of auto-antibodies against ADAMTS13.

With respect to the second criterion, whether a product is assigned to the same or a different MS–DRG, the applicant believed that potential cases representing patients who may be eligible for treatment involving CABLIVI® would be assigned to the same MS– DRGs as cases representing patients who receive SOC treatment for a diagnosis of aTTP. As explained in this final rule in the discussion of the cost criterion, the applicant believed that potential cases representing patients who may be eligible for treatment involving CABLIVI® would be assigned to MS–DRGs that contain cases representing patients who were diagnosed with aTTP and received therapeutic PE procedures during hospitalization.

With respect to the third criterion, whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, there are no other specific therapies approved for the treatment of patients diagnosed with aTTP. As stated earlier, according to the applicant, patients who have been diagnosed with aTTP have two currently available SOC treatment options: PE, in which a patient's blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly rituximab), which is administered as an adjunct to PE in the treatment of aTTP. The applicant further explained that immunosuppression consisting of glucocorticoids is often administered as adjunct to PE in the initial treatment of a diagnosis of aTTP,[39] [40] but their use is based on historical evidence that some patients with limited symptoms might respond to corticosteroids alone.[41] [42] The applicant noted that there have been no studies specifically comparing treatment involving the combination of PE with corticosteroids, versus PE alone; that they are not specifically approved for the treatment of a diagnosis of aTTP, and that other immunosuppressive agents used to treat a diagnosis of aTTP, such as rituximab, have not been studied in properly controlled, double-blind studies. The applicant also noted that rituximab, aside from not being licensed for the treatment of a diagnosis of aTTP, is not fully effective during the first 2 weeks of treatment, with a reported delay of onset of its effect that may extend up to 27 days, with at least 3 to 7 days needed to achieve adequate B-cell depletion (given the B-cells may also contain ADAMTS13 antibodies),

[42] Phillips, E.H., et al., ''The role of ADAMTS–13 activity and complement mutational analysis in differentiating acute thrombotic microangiopathies,'' *J. Thromb. Haemost.,* 2016, vol. 14(1), pp. 175–85.

and even longer to restore ADAMTS13 activity levels.[43] [44]

Based on the applicant's statements as previously summarized, the applicant believes that CABLIVI® provides a new treatment option for patients who have been diagnosed with aTTP. However, we stated in the proposed rule that it is not clear that CABLIVI® would involve the treatment of a different type of disease or a different patient population. As stated earlier, according to the applicant, patients who have been diagnosed with aTTP have two SOC treatment options for a diagnosis of aTTP: PE, in which a patient's blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly also rituximab), which is administered as an adjunct to PE in the initial treatment for a diagnosis of aTTP. We stated that therefore, it appears that CABLIVI® is used to treat the same or similar type of disease (a diagnosis of aTTP) and a similar patient population as currently available treatment options.

We invited public comments on whether CABLIVI® is substantially similar to other technologies and whether CABLIVI® meets the newness criterion.

Comment: Several commenters stated that CABLIVI® is not substantially similar to other technologies and meets the newness criterion. Commenters stated that CABLIVI® is the only FDA approved therapy for aTTP and is a novel technological approach to the disease. Other commenters stated that CABLIVI® is a unique anti-vWF blocking nanobody and the first of its kind in treating acute TTP that should be used at the earliest possible time after presentation of patients with immune-mediated TTP. The commenters stated that they believe CABLIVI® to be potentially lifesaving because no other treatment modalities act in this specific manner. A commenter stated that CABLIVI® differs from the treatments currently available for aTTP because it immediately prevents platelets from binding to the abnormally large vWF molecules, a key abnormality of TTP. A commenter stated that CABLIVI® is a nanobody that directly and specifically targets the pathophysiologic interaction between vWF and platelets, thus rapidly halting the life-threatening process that causes morbidity and mortality in those with aTTP. According to this commenter, no other drug is capable of doing this. Finally, this commenter stated that CABLIVI® is a novel therapy against a rare but potentially fatal autoimmune disease, aTTP that has not had significant short-term developments in almost 30 years.

The applicant commented that CABLIVI® has been approved for the treatment of aTTP in a similar patient population as currently available treatment options. However the applicant also stated that CABLIVI® is a very different technology consisting of a different mode of action that results in improved outcomes with respect to platelet count response, recurrence, and other pre-specified clinical outcome endpoints. The applicant stated that CABLIVI® is the only FDA-approved therapy for treating aTTP in conjunction with PE and immunosuppressive therapy.

The applicant also re-iterated information previously submitted with its application, and previously summarized in this final rule, that CABLIVI® is the only therapeutic agent that is designed to rapidly and specifically reduce the microthrombi formation via reduction in platelet aggregation for patients with an acute aTTP episode. According to the applicant, CABLIVI®'s novel mechanism of action works by targeting the A1 domain of vWF, thus preventing the interaction between vWF and platelets and thereby reducing the subsequent microvascular thrombosis. Regarding the current SOC, the applicant stated that as no randomized controlled prospective clinical studies have been performed to evaluate the efficacy and safety of the immunosuppressive therapies currently used to treat aTTP, the safe and effective dosing regimens of these agents are not known. The applicant further stated that while PE can provide rapid replenishment of new platelets and new ADAMTS 13 to reduce large platelet string formation, it is suboptimal in efficacy with a remaining mortality of up to 20 percent and substantial patient burden and side effects.

Response: We appreciate the commenters' input and the additional detail regarding whether CABLIVI® is substantially similar to existing technologies.

After consideration of the public comments we received and information submitted by the applicant in its application, we believe that while potential cases representing patients who may be eligible for treatment involving CABLIVI® would be assigned to the same MS– DRGs as cases representing patients who receive SOC treatment for a diagnosis of aTTP, and that CABLIVI® is used to treat the same or similar type of disease (a diagnosis of aTTP) and a similar patient population as currently available treatment options, we agree with the applicant that CABLIVI® does not use the same or similar mechanism of action as other technologies used for the treatment of aTTP. We believe that CABLIVI®'s mechanism of action, which targets the A1 domain of vWF, thus preventing the interaction between vWF and platelets and thereby reducing the subsequent microvascular thrombosis, is unique and distinct from other available forms of treatment for aTTP and, therefore, we believe that CABLIVI® meets the newness criterion. We consider the beginning of the newness period to commence when CABLIVI® was approved by the FDA on February 6, 2019.

With regard to the cost criterion, the applicant conducted the following analysis to demonstrate that the technology meets the cost criterion. In order to identify the range of MS–DRGs that cases representing potential patients who may be eligible for treatment using CABLIVI® may map to, the applicant identified all MS– DRGs for patients who had been hospitalized for a diagnosis of aTTP. Specifically, the applicant searched the FY 2017 MedPAR file for Medicare fee-for-service inpatient hospital claims submitted between October 1, 2016 and September 30, 2017, and identified potential cases by ICD–10–CM diagnosis code M31.1 (Thrombotic microangiopathy) and ICD–10–PCS procedure codes 6A550Z3 (Pheresis of plasma, single) and 6A551Z3 (Pheresis of plasma, multiple). The applicant noted that it excluded cases with an ICD–10–CM diagnosis code of D59.3 (Hemolytic-uremic syndrome).

This resulted in 360 cases spanning 61 MS–DRGs, with approximately 67.2 percent of all potential cases mapping to the following 5 MS–DRGs:

[43] Coppo, P., ''Management of thrombotic thrombocytopenic purpura,'' *Transfus Clin Biol.,* Sep 2017, vol. 24(3), pp. 148–153.

[44] Froissart, A., et al., ''Rituximab in autoimmune thrombotic thrombocytopenic purpura: A success story,'' *Eur. J. Intern. Med.,* 2015, vol. 26(9), pp. 659–65.

MS-DRG	MS-DRG Title
MS–DRG 545	Connective Tissue Disorders with MCC
MS–DRG 546	Connective Tissue Disorders without CC
MS–DRG 547	Connective Tissue Disorders without CC/MCC
MS-DRG 682	Renal Failure with MCC
MS–DRG 698	Other Kidney and Urinary Tract Diagnoses with MCC

Using the 242 identified cases that mapped to the top 5 MS–DRGs previously described, the applicant determined that the average case-weighted unstandardized charge per case was $188,765. The applicant then standardized the charges and then removed historic charges for items that are expected to be avoided for patients who receive treatment involving CABLIVI®. The applicant determined that 31 percent of historical routine bed charges, 65 percent of historical ICU charges, and 38 percent of historical blood administration charges (which includes charges for therapeutic PE) would be reduced because of the use of CABLIVI®, based on the findings from the Phase III clinical study HERCULES. The applicant indicated it used the FY 2017 MedPAR file to determine the appropriate amount of charges to remove. The applicant then inflated the adjusted standardized charges by 8.864 percent utilizing the 2-year inflation factor published by CMS in the FY 2019 IPPS/LTCH PPS final rule to adjust the outlier threshold (83 FR 41722). (In the FY 2020 IPPS/LTCH PPS proposed rule, we noted that this figure was revised in the FY 2019 IPPS/LTCH PPS final rule correction notice. The corrected final 2-year inflation factor is 1.08986 (83 FR 49844). We further noted that even when using the corrected final rule values to inflate the charges, the average case-weighted standardized charge per case exceeded the average case-weighted threshold amount.) The applicant explained that the anticipated price for CABLIVI®'s indication for the treatment of patients who have been diagnosed with aTTP, in combination with plasma exchange and immunosuppressive therapy, has yet to be determined and, therefore, no charges for CABLIVI® were added in the analysis. Based on the FY 2019 IPPS/LTCH PPS final rule correction notice data file thresholds for FY 2020, the applicant determined the average case-weighted threshold amount was $49,904. The final inflated average case-weighted standardized charge per case was $145,543. Because the final inflated average case-weighted standardized charge per case exceeds the average case-weighted threshold amount, the applicant maintained that the technology meets the cost criterion. We invited public comments on whether CABLIVI® meets the cost criterion.

Comment: The applicant submitted a revised analysis using the 2-year inflation factor of 1.08986 from the FY 2019 IPPS correction notice to inflate charges from FY 2017 to FY 2019. The applicant also added charges to reflect the current wholesale acquisition cost (WAC) price for CABLIVI®. According to the applicant, after changing the 2-year inflation factor from 8.864 percent to 8.986 percent and adding charges for the new technology, the inflated average case-weighted standardized charge per case was $413,246. Based on this analysis, the applicant determined that the inflated average case-weighted standardized charge per case for CABLIVI® exceeded the threshold amount of $49,904 and that CABLIVI® meets the cost criterion.

Response: We appreciate the applicant's input and revised analysis. After consideration of the public comments we received, we believe that CABLIVI® meets the cost criterion.

With respect to the substantial clinical improvement criterion, the applicant asserted that it believes that CABLIVI® represents a substantial clinical improvement compared to the use of currently available treatments (PE and immunosuppressants) because it: (1) Significantly reduces time to platelet count response, which is consistent with the halting of platelet consumption in microthrombi; (2) significantly reduces the number of patients with aTTP-related death, recurrence of aTTP-related episodes, or a major thromboembolic event; (3) reduces mortality; (4) reduces the proportion of patients with recurrence of aTTP diagnoses; (5) reduces the proportion of patients who develop refractory disease; (6) reduces the number of days of PE; (7) reduces the mean length of intensive care unit stay and the mean length of hospitalization; and (8) shows a trend of more rapid normalization of organ damage markers. The applicant provided further detail regarding these assertions, referencing the results of Phase II and Phase III studies and an integrated efficacy analysis of both studies.

The applicant reported that the Phase II study was a randomized, single-blind, placebo controlled study entitled ALX–0681–2.1/10 (TITAN) that examined the efficacy and safety of the use of CABLIVI® compared to a placebo, with the primary endpoint being achievement of a statistically significant reduction in time to platelet count response. Seventy-five patients, 66 of which were white, (19 to 72 years old, with a mean of 41.6 years old; 44 women and 31 men) with an episode of aTTP were randomized 1:1 to receive either CABLIVI® (n = 36) or placebo (n = 39), in addition to daily PE.[45] Patients received their first dose of CABLIVI® administered through intravenous injection prior to the first PE, followed by daily doses administered subcutaneously after each PE. After discontinuing PE, daily doses of CABLIVI® administered through subcutaneous injection were continued for 30 days. The median treatment duration with CABLIVI® was 36 days.

According to the applicant, significantly more patients in the treatment arm met the primary endpoint [95 percent Confidence Interval (CI) (3.78, 1.28)]. The applicant indicated that the time to platelet count response improvement constitutes a significant substantial clinical improvement because it demonstrated that patients treated with CABLIVI® were 2.2 times more likely to achieve an acceptable time to platelet count response than patients receiving treatment with the placebo. Additionally, the applicant noted that exacerbation of aTTP occurred in fewer patients who were treated with CABLIVI® (8.3 percent) than placebo (28.2 percent). During the 1-month follow-up period, 8 relapses (defined as a recurrence more than 30 days after discontinuing PE) occurred in the CABLIVI® group with 7 of the

[45] Peyvandi, F., Scully, M., Kremer Hovinga, J.A., Cataland, S., Knöbl, P., Wu, H., Artoni, A., Westwood, J.P., Mansouri Taleghani, M., Jilma, B., Callewaert, F., Ulrichts, H., Duby, C., Tersago, D., TITAN Investigators, ''Caplacizumab for Acquired Thrombotic Thrombocytopenic Purpura,'' *N Engl J Med.,* February 11, 2016, vol. 374(6), pp. 511–22. PMID: 26863353.

relapses occurring within 10 days of discontinuing the study drug. In all seven of the relapses, ADAMTS13 activity was still severely suppressed at the end of the treatment period, evidence of ongoing underlying immunological disease and indicating an imminent risk of another relapse. The applicant explained that according to post-hoc analyses, the group of patients who were treated with CABLIVI® compared to placebo showed a decrease in the percentage of patients with refractory disease (0 percent versus 10.8 percent), a reduction in the number of days of PE (7.7 days versus 11.7 days) and a trend to more rapid normalization of organ damage markers (lactate dehydrogenase, cardiac troponin I and serum creatinine). Finally, the applicant noted that there were no deaths in the group of patients who were treated with CABLIVI®. However, 2 of the 39 placebo-treated patients (5.1 percent) died.

The applicant explained that the Phase III study was a randomized, double-blind, placebo controlled study entitled ALX0681–C301 (HERCULES) that examined the efficacy and safety of the use of CABLIVI® compared to a placebo, with the primary endpoint being achievement of a statistically significant reduction in time to platelet count response. One hundred forty-five patients (18 to 79 years old, with a mean of 46 years old, 100 women and 45 men), with an episode of aTTP were randomized 1:1 to receive either CABLIVI® (n=72) or placebo (n=73) in addition to daily PE and immunosuppression.[46] The applicant explained that patients received a single 10 mg CABLIVI® intravenous injection or placebo prior to the first PE, followed by a daily CABLIVI® 10 mg subcutaneous injection or placebo after completion of PE, for the duration of the daily PE treatment period and for 30 days thereafter. According to the applicant, if at the end of this treatment period (daily PE treatment period and 30 days after) there was evidence of persistent underlying immunological disease activity (indicative of an imminent risk for recurrence), treatment could be extended weekly for a maximum of 4 weeks, together with optimization of immunosuppression. The applicant indicated that patients who experienced a recurrence while undergoing study drug treatment were switched to open-label CABLIVI® and they were again treated for the duration of daily PE treatment and for 30 days thereafter. If at the end of this treatment period (daily PE treatment period and 30 days after) there was evidence of ongoing underlying immunological disease, open-label treatment with CABLIVI® could be extended weekly for a maximum of 4 weeks, together with optimization of immunosuppression. Patients were followed for 28 days after discontinuation of treatment. Upon recurrence during the follow-up period (that is, after all study drug treatment had been discontinued), there was no re-initiation of the study drug because recurrence at this point was treated according to the SOC. The median treatment duration with CABLIVI® in the double-blind period was 35 days.

According to the applicant, patients in the treatment arm were more likely to achieve platelet count response at any given time point, compared to the placebo [95 percent CI (1.1, 2.2)]. The applicant believed that this constitutes a significant substantial clinical improvement because patients who were treated with CABLIVI® were 1.55 times more likely to achieve platelet count response at any given time point, compared to placebo. The applicant also indicated that, compared to placebo, treatment with CABLIVI® resulted in a 74 percent reduction in the number of patients with aTTP-related death, recurrence of aTTP diagnosis, or a major thromboembolic event, during the study drug treatment period ($p<0.0001$).

The applicant noted that the proportion of patients with a recurrence of an aTTP diagnosis in the Phase III study period (that is, the drug treatment period plus the 28-day follow-up after discontinuation of the drug treatment) was 67 percent lower in the CABLIVI® group (12.7 percent) compared to the placebo group (38.4 percent) ($p<0.001$). The applicant also indicated that in all 6 patients in the CABLIVI® group who experienced a recurrence of an aTTP diagnosis during the follow-up period (that is, a relapse), ADAMTS13 activity levels were less than 10 percent at the end of the study drug treatment, indicating that the underlying immunological disease was still active at the time CABLIVI® was discontinued. Furthermore, the applicant stated that there were no patients who were treated with CABLIVI® that had refractory disease (defined as absence of platelet count doubling after 4 days of standard treatment and elevated LDH), compared to 3 patients (4.2 percent) who had refractory disease that were treated with placebo. The applicant also explained that a trend to faster normalization of the organ damage markers lactate dehydrogenase, cardiac troponin I and serum creatinine was observed in patients who were treated with CABLIVI®. The applicant noted that during the study drug treatment, there were no deaths in patients who were treated with CABLIVI®, while 3 of the 73 placebo-treated patients (4.1 percent) died. Finally, the applicant stated that during the Phase III study drug treatment period, treatment with CABLIVI® resulted in a 38 percent reduction in the mean number of PE treatment days versus placebo (reduction of 3.6 days) and a 41 percent reduction in the mean volume of PE (reduction of 14.6L). Furthermore, treatment with CABLIVI® resulted in a 65 percent reduction in the mean length of ICU stay (reduction of 6.3 days) and a 31 percent reduction in the mean length of hospitalization (reduction of 4.5 days) during the Phase III study drug treatment period.

The applicant submitted integrated data from the blinded periods of the Phase II and Phase III studies that show a statistically significant difference in favor of CABLIVI® (n=108) in time to platelet count response compared to placebo (n=112). The applicant indicated that patients who were treated with CABLIVI® were 1.65 times more likely to achieve platelet count response at any given time point during the blinded period than patients who were treated with placebo (95 percent CI: 1.23, 2.20; $p<0.001$). Additionally, according to the applicant, integrated data from the blinded periods of the Phase II and Phase III studies showed that compared to placebo, treatment with CABLIVI® resulted in a 72.6 percent reduction in the percentage of patients with aTTP-related death, a recurrence of a aTTP diagnosis, or at least one treatment-emergent major thromboembolic event during the blinded treatment period ($p<0.0001$). More specifically, the applicant indicated that during the blinded treatment period no aTTP-related deaths occurred in the CABLIVI® group compared to 4 aTTP-related deaths in the placebo group ($p<0.05$), treatment with CABLIVI® resulted in an 84.0 percent reduction in the proportion of patients with a recurrence of a aTTP diagnosis (exacerbation, relapse) during the blinded treatment period ($p<0.0001$), and treatment with CABLIVI® resulted in a reduction of 40.8 percent in the proportion of patients with at least one treatment-emergent major thromboembolic event during the blinded treatment period.

According to the applicant, pooled data from the two studies showed that none of the patients who were treated with CABLIVI® developed refractory disease (that is, absence of platelet

[46] Scully, M., et al., ''Treatment of Acquired Thrombotic Thrombocytopenic Purpura with Caplacizumab,'' *N. Engl. J. Med.,* (In Press).

count doubling after 4 days of standard treatment and elevated LDH) compared to 7 patients (6.3 percent; 7/112) who were treated with placebo during the blinded period ($p<0.01$). Finally, the applicant noted that across both studies, treatment with CABLIVI® resulted in a 37.5 percent reduction in the mean number of days of PE treatment (reduction of 3.9 days).

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that although the applicant asserts that CABLIVI® represents a substantial clinical improvement compared to the use of currently available treatments (PE and immunosuppressants), we were concerned that the Phase II TITAN and Phase III HERCULES studies may not provide enough evidence to support that the use of CABLIVI® represents a substantial clinical improvement.

Regarding the Phase II TITAN study, we stated that we were concerned that because 66 of the 75 patients in the study population were white, the results of the study may not be generalizable to a more diverse population that may be at risk for diagnosis of aTTP. Additionally, we noted that CABLIVI® was associated with fewer aTTP exacerbations during therapy, but was associated with more aTTP exacerbations after therapy was discontinued, suggesting a lack of effect on long-term anti-ADAMTS13 antibody levels. Although this is consistent with CABLIVI®'s mechanism of action, we stated our concern in the proposed rule that without long-term data to determine the impact of adjunct use of CABLIVI® on exacerbations and relapse it may be difficult to determine if the use of CABLIVI® represents a substantial clinical improvement over existing therapy.

Based on data from the Oklahoma TTP–HUS Registry, the incidence of aTTP is approximately three cases per 1 million adults per year.[47] Additionally, the median age for a diagnosis of aTTP is 41, with a wide range between 9 years old and 78 years old. In the proposed rule, we acknowledged the challenges of constructing robust clinical studies due to the extremely rare occurrence of patients who have been diagnosed with aTTP. However, we stated that we were nonetheless concerned that the study population in the Phase III HERCULES study was small, 145 people. Additionally, we indicated that it was unclear if the response rate may differ in those who have a *de novo* diagnosis versus those with recurrent disease. We noted that PE treatment alone has been attributed to an 80 percent survival rate,[48] and because CABLIVI® is given in combination with or after SOC therapies, we stated in the proposed rule that we were concerned that we may not have sufficient information to determine the extent to which the study results were attributable to the use of CABLIVI®. Furthermore, we stated that with the follow-up period for the Phase III HERCULES study being only 28 days, we were concerned that there is a lack of long-term data. We further stated that, in the absence of long-term data, we were concerned about the impact of the use of CABLIVI® on the relapse rate beyond the overall study period, including the 28-day follow-up period.

Finally, although both the Phase II and III studies consisted of key secondary endpoints such as death or major thromboembolic events, in the proposed rule we indicated that we were concerned these endpoints were not clearly defined. We also stated that we were concerned the studies did not appear to account for other clearly defined endpoints such as heart attack, stroke, a bleeding episode, and power calculations for the expected differences in such endpoints that would be biologically important.

We invited public comments on whether CABLIVI® meets the substantial clinical improvement criterion.

Comment: Several commenters provided comments in support of CABLIVI®. A commenter stated that CABLIVI® utilizes a monoclonal antibody that binds to vWF, causing platelets to clump and clog up the microcirculation of patients and thereby reducing the number of plasma exchanges required to bring patients back to normal platelet counts. The commenter stated that the clinical benefit of reducing the amount of plasma exchanges include lowering the amount of plasma required to maintain the blood bank's supply, lessening the chance of TRALI, reducing time spent in the intensive care unit, reducing time in hospitalization, replacing many hours of expensive plasma exchange in the inpatient and outpatient settings with a subcutaneous injection, and tremendous increase in patient satisfaction in their overall care.

A commenter stated that CABLIVI® has the potential to save the lives of those individuals who do not respond to current conventional treatment, plasma exchange, corticosteroids, and rituximab. The commenter stated that without bound platelets, the thrombosis is prevented. Finally, the commenter stated that CABLIVI® blocks the tissue injury, but corticosteroids, rituximab, and plasma exchange are still needed to affect the cause of the disease.

Another commenter stated that with the pathophysiology of aTTP rapidly and durably crippled as long as CABLIVI® is administered, immunosuppression and other therapies such as plasma exchange can be provided to these patients to help obtain a prolonged remission after cessation of CABLIVI®. The commenter stated that CABLIVI® is a valuable tool for the treatment of aTTP that provides significantly improved clinical care compared to the current standard of care. According to the commenter, by creating a window period during CABLIVI® administration in which the pathophysiology of aTTP is crippled in a targeted fashion, patients with aTTP can be treated for existing organ damage (for example, injuries to heart, brain, gut, RBCs) and have an earlier opportunity for immunosuppression to begin working against this dangerous autoimmune disease. The commenter stated that in two randomized controlled trials, CABLIVI® has demonstrated the ability to rapidly normalize platelet count in a sustained manner while drug is being administered, as well as decrease the composite endpoint of death, disease recurrence, and thromboembolic events.

The applicant provided information in response to CMS' concerns regarding whether CABLIVI® meets the substantial clinical improvement criterion. The information provided by the applicant was in response to CMS' concerns regarding whether CABLIVI® meets the overall substantial clinical improvement criterion, the demographics of the Phase II TITAN study patient population, the need for longer-term studies to identify the effect of CABLIVI® on exacerbations and relapse, the small sample size included in the Phase III HERCULES study and the clinical trial design of the Phase II TITAN and Phase III HERCULES studies due to short follow-up period, unclear defined secondary endpoints and inclusion of biologically important endpoints.

The applicant stated that the multi-discipline review of CABLIVI® by the

[47] Reese, J.A., Muthurajah, D.S., Kremer-Hovinga, J.A., Vesely, S.K., Terrell, D.R., George, J.N., ''Children and adults with thrombotic thrombocytopenic purpura associated with severe, acquired Adamts13 deficiency: comparison of incidence, demographic and clinical features,'' *Pediatr Blood Cancer,* October 2013, vol. 60(10), pp. 1676–82, Epub June 1, 2013.

[48] Rock, G.A., Shumak, K.H., Buskard, N.A., et al., ''Comparison of plasma exchange with plasma infusion in the treatment of thrombotic thrombocytopenic purpura. Canadian Apheresis Study Group,'' *N Engl J Med,* 1991, vol. 325, pp. 393–397.

FDA concluded that the Phase III HERCULES study provided substantial evidence of CABLIVI®'s effectiveness when added to daily PE and immunosuppression compared to PE and immunosuppression alone. The applicant stated that the primary endpoint of the Phase III HERCULES study was time to platelet response in which the study produced a median time to platelet response of 2.7 days in the CABLIVI® treatment group compared to 2.9 days in the placebo treatment group. According to the applicant, other equally important clinical outcomes consist of the proportion of patients with aTTP-related death, recurrence of aTTP or at least one treatment emergent major thromboembolic event (a composite endpoint). The applicant stated that these outcomes were significantly lower in the CABLIVI® treatment group (9/72 (13 percent) compared to the placebo treatment group 36/73 (49 percent) ($p<0.0001$). The applicant further stated that the proportion of patients with a recurrence of aTTP in the overall study period was significantly lower in the CABLIVI® treatment group (9/72 (13 percent) patients) compared to the placebo treatment group (28/73 (38 percent) patients) ($p<0.001$). The applicant noted that in the 6 patients treated with CABLIVI® who experienced a recurrence of aTTP during the follow-up period (that is, a relapse defined as recurrent thrombocytopenia after initial recovery of platelet count (platelet count 2: 150,000/μL) that required re-initiation of daily plasma exchange, occurring after the 30-day post daily plasma exchange period), ADAMTS13 activity levels were <10 percent at the end of the study drug treatment suggesting that the underlying immunological disease was still active at the time CABLIVI® was stopped.

The applicant also stated that during the overall study drug treatment period, which included, for all patients, the period on double-blind treatment, as well as, for patients who had an exacerbation and were switched, the period on open-label CABLIVI®-treatment resulted in a 38 percent reduction in the number of PE days (average reduction 3.6 days) and a 41 percent reduction in the volume of plasma exchanged (average reduction 15 L). The applicant also stated that there was a 65 percent reduction in length of intensive care unit (ICU) stay (average reduction 6.3 days) and a 31 percent reduction in length of hospitalization (average reduction 4.5 days).

In response to CMS's concerns regarding the patient population demographics of the Phase II TITAN trial, the applicant stated that the FDA assessed the substantial clinical improvement of CABLIVI® based on the Phase III HERCULES study, whereas the Phase II TITAN trial was considered supportive evidence. The applicant also noted that it is important to understand that both the Phase II TITAN and Phase III HERCULES studies included US sites (8 sites/15 patients in TITAN and 10 sites/32 patients in HERCULES). According to the applicant the Phase III HERCULES study is the pivotal study for efficacy evaluation and was a study in which US patients represented overall 22 percent of the overall patient population. Also, the applicant stated that in the Phase III HERCULES study, 28 patients were black or African American (21.1 percent of the overall aTTP population and only 13.8 percent of the US population) and as such the applicant considers the results of the studies applicable to the US population. The applicant also stated that the FDA did not raise any concerns related to the demographics of the patient population during the Biologics License Application (BLA) review process.

Regarding the CMS concern on the need for longer-term studies to identify the effect of CABLIVI® on exacerbations and relapse the applicant re-iterated information previously submitted with its application and previously summarized. The applicant stated that the trial results show the proportion of patients with a recurrence of aTTP in the overall study period was significantly lower in the CABLIVI® group (9/72 (13 percent) patients) compared to the placebo group (28/73 (38 percent) patients) ($p<0.001$) and that in the 6 patients treated with CABLIVI® who experienced a recurrence of aTTP during the follow-up period, ADAMTS13 activity levels were <10 percent at the end of the study drug treatment suggesting that the underlying immunological disease was still active at the time CABLIVI® was stopped.

The applicant also acknowledged that long-term studies and clinical experiences are needed to better understand CABLIVI®'s effectiveness in preventing recurrences of aTTP episodes and as such it is conducting a 3 year follow-up study for those patients enrolled in the Phase III HERCULES study in which data will be available in the near future. In addition, the applicant stated they are working with the medical community to explore real world data generation opportunities, including registries.

In response to CMS' concerns regarding the small sample size included in the Phase III HERCULES study, the applicant stated that as aTTP is an ultra-rare blood disorder with a reported incidence of 4 to 5 cases per million in the US, enrolling a large number of patients in a clinical study is challenging. Furthermore, the applicant explained that the sample size calculation of the Phase III HERCULES study was assessed in the BLA review process by the FDA and described accurately as being based on superiority testing of CABLIVI® over placebo with respect to time to platelet response and satisfying the following criteria:

- 80 percent power;
- Log-rank test at 2-sided a = 0.05;
- Accrual period lasting 2.5 years;
- Time-to-event period set at 45 days (note: for the primary endpoint, a patient is censored if there is no platelet response by day 45);
- 40 percent reduction in time-platelet response. Assuming a median time-to-response of 7 days among placebo, this is tantamount to a median time-to-response of 4.2 days in the CABLIVI® arm; and
- Expected dropout rate of 10 percent in the first 10 days after first administration of study drug.

The applicant stated that under these criteria, 121 events are required resulting in a sample size of 132 patients and that the actual number of patients randomized in the study exceeded this threshold at 145. Also, according to the applicant, the FDA did not have any major comments or concerns about the sample size of Phase III HERCULES study, endpoint definition or other relevant methodological questions or concerns during the BLA review process. The applicant also stated that the Phase III HERCULES study was the largest study ever conducted in this rare condition in which the results were recently published in the New England Journal of Medicine with no significant questions or remarks from the editors on the sample size, endpoint definition or any other relevant methodological questions raised by journal editors or reviewers.

In response to CMS' concerns regarding the clinical trial design of the Phase II TITAN and Phase III HERCULES studies due to short follow-up period, the applicant stated that the 1-month follow-up period was defined based on current evidence that this is the period for which patients are at higher risk of recurrence for the presenting episode of a TTP. The applicant re-iterated information previously submitted with its application and previously summarized in this final rule stating that the proportion of patients with a recurrence of aTTP in the overall study period was

significantly lower in the CABLIVI® group (9/72 (13 percent) patients) compared to the placebo group (28/73 (38 percent) patients) (p<0.001). Again, the applicant indicated that in the 6 patients treated with CABLIVI® who experienced a recurrence of aTTP during the follow-up period, ADAMTS13 activity levels were <10 percent at the end of the study drug treatment suggesting that the underlying immunological disease was still active at the time CABLIVI® was stopped.

In response to CMS' concerns regarding clinical trial design of the Phase II TITAN and Phase III HERCULES studies due to unclear defined secondary endpoints and inclusion of biologically important endpoints, the applicant stated that the Phase III HERCULES study was designed to understand the potential role of CABLIVI® in the treatment of aTTP by comparing CABLIVI® with placebo with respect to time to normalization of platelet count (primary endpoint) and the risk of death and complications caused by thrombotic events and organ damage (secondary and other endpoints). According to the applicant, the trial also evaluated the potential of CABLIVI® to reduce the risk of recurrence by allowing for treatment to continue until immunosuppressive therapy resolved the underlying autoimmune disease. The applicant noted that the endpoints of this study were defined a priori and detailed in the clinical study protocol.

The applicant re-iterated information previously submitted with its application and previously summarized in this final rule stating that primary outcome of the studies was the time to a response, which was defined as the time from the first intravenous administration of CABLIVI® or placebo to normalization of the platelet count (that is, a platelet count of at least 150,000 per cubic millimeter), with discontinuation of daily plasma exchange within 5 days thereafter. According to the applicant, the results showed a statistically significant shorter median time to normalization of platelet count in CABLIVI® group (p=0.01) comparing to placebo.

The applicant also referenced four key secondary outcomes of the studies, which were hierarchically ranked on the basis of clinical relevance, as the following:

1. A composite of TTP-related death, recurrence of TTP, or a major thromboembolic event (for example, myocardial infarction, stroke, bleeding episodes) during the trial treatment period. Results were statistically significant favoring CABLIVI® arm (p<0.001);

2. Recurrence of TTP at any time during the trial, including the follow-up period. Results were statistically significant favoring CABLIVI® arm (p<0.001);

3. Refractory TTP (defined by the lack of a doubling of the platelet count after 4 days of treatment and a lactate dehydrogenase level that remained above the upper limit of the normal range). Results were not statistically significant (p=0.06); and

4. The time to normalization (that is, to a level below the defined upper limit of the normal range) of three organ-damage markers (lactate dehydrogenase, cardiac troponin I, and serum creatinine). Not tested for statistical significance as prior endpoint was not statistically significant.

The applicant stated that a recurrence was defined as a new decrease in the platelet count that necessitated the re-initiation of plasma exchange after normalization of the platelet count had occurred, an exacerbation was defined as a recurrence that occurred within 30 days after the last plasma exchange and a relapse was defined as a recurrence that occurred more than 30 days after cessation of plasma exchange. Furthermore, the applicant conveyed that outcomes that were not part of the hierarchy included the number of days of PE and the volume of plasma exchanged, the duration of stay in an ICU and in the hospital, mortality rate, pharmacodynamic and pharmacokinetic variables, and immunogenicity. Finally, according to the applicant, safety assessments were performed throughout the course of the trial and included evaluation of vital signs, physical examinations, clinical laboratory testing, and 12-lead electrocardiography.

Response: We appreciate all the comments received related to CABLIVI®, including the applicant's submission of additional information to address the concerns presented in the proposed rule.

After consideration of the public comments we received, we believe that the applicant has addressed our concerns regarding whether CABLIVI® meets the substantial clinical improvement criterion, and that CABLIVI® represents a substantial clinical improvement over existing technologies (PE and immunosuppression alone) based on the results of the Phase II TITAN and Phase III HERCULES studies with respect to time to platelet count response, which is consistent with the halting of platelet consumption in microthrombi; the number of patients with aTTP-related death and recurrence of aTTP-related episodes or a major thromboembolic event, and mortality. Additionally, we note that CABLIVI® is the only FDA-approved therapy for treating aTTP in conjunction with PE and immunosuppressive therapy.

In summary, we have determined that CABLIVI® meets all of the criteria for approval of new technology add-on payments. Therefore, we are approving new technology add-on payments for CABLIVI® for FY 2020. Cases involving CABLIVI® that are eligible for new technology add-on payments will be identified by ICD–10–PCS procedure codes XW013W5, XW033W5 and XW043W5. In its application and subsequent public comment, the applicant estimated that the average Medicare beneficiary would require a dosage of 11 mg/kg administered as an intravenous injection as a single dose and of 10 mg/kg administered as a subcutaneous injection as a single dose. According to the applicant, the WAC for one dose of 10 mg/kg is $7,300, and patients will typically require 1.16 vials for the course of treatment with CABLIVI® per day for an average duration of 6 days for an average total of 7 vials. Therefore, the total cost of CABLIVI® per patient is $51,100. Under § 412.88(a)(2) (revised as discussed in this final rule), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of CABLIVI® is $33,215 for FY 2020.

c. CivaSheet®

CivaTech Oncology, Inc. submitted an application for new technology add-on payments for CivaSheet® for FY 2020. CivaSheet® received FDA clearance of a 510(k) premarket notification on August 29, 2014. CivaSheet® was approved as a ''sealed source'' by the Nuclear Regulatory Commission (NRC) and added to the Registry of Radioactive Sealed Source and Devices on October 24, 2014. On May 9, 2018, CivaSheet® was registered by the American Association of Physicists in Medicine (AAPM) on the ''Joint AAPM/IROC Houston Registry of Brachytherapy Sources Complying with AAPM Dosimetric Prerequisites.'' According to the applicant, inclusion on this AAPM registry is a long-standing requirement imposed on brachytherapy sources used in all National Cancer Institute clinical trials and that all other available brachytherapy sources are included on

this registry. According to the applicant, CivaSheet® was not commercially distributed among IPPS hospitals until May 2018, after meeting the requirements for inclusion in the AAPM registry. Therefore, according to the applicant the ''newness'' period for the CivaSheet®, if approved for FY 2020 new technology add-on payments, should commence on May 9, 2018. Based on this information, in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19295), we stated that we believe the newness period for CivaSheet® would begin on May 9, 2018. However, we invited public comments on whether inclusion on the AAPM registry is an appropriate indicator of the first availability of the CivaSheet® brachytherapy sources on the U.S. market and whether the date of inclusion on the AAPM registry is appropriate to consider as the beginning of the newness period for CivaSheet®.

Comment: The applicant submitted public comments reiterating that CivaSheet was registered by the American Association of Physicists in Medicine (AAPM) on the Joint AAPM/IROC Houston Registry of Brachytherapy Sources Complying with AAPM Dosimetric Prerequisites. The applicant reiterated that while the CivaSheet was cleared by the Food and Drug Administration and approved by the Nuclear Regulatory Commission as a ''sealed source'' somewhat earlier, inclusion of a brachytherapy source on this Registry is essentially a prerequisite for commercial acceptance of such a source. For acceptance of a new brachytherapy source outside of essentially experimental contexts, completion of dosimetric studies is necessary. The applicant indicated that it is the AAPM's validation that the results of these studies indicate compliance with its prerequisites, rather than FDA clearance, that appropriately marks the readiness of a source for the market and the CivaSheet® was added to the registry, May 9, 2018.

Response: We appreciate the applicant's comments. After consideration of the comments we received, it appears that CivaSheet® was not commercially distributed among IPPS hospitals until May 2018, after meeting the requirements for inclusion in the AAPM registry. As we have stated in prior rulemaking (69 FR 28237), the 2-year to 3-year period of newness for a technology or medical service would ordinarily begin with FDA approval, unless there was some documented delay in bringing the product onto the market after that approval. Therefore, we believe that the newness period for the CivaSheet® would begin May 9, 2018. CivaSheet® is intended for medical purposes to be placed into a body cavity or tissue as a source for the delivery of radiation therapy. CivaSheet® is indicated for use as a permanent interstitial brachytherapy source for the treatment of selected localized tumors. The device may be used either for primary treatment or for the treatment of residual disease after excision of the primary tumor. CivaSheet® may be used concurrently, or sequentially, with other treatment modalities, such as external beam radiation therapy or chemotherapy. In the proposed rule, we noted that the applicant had submitted a request for approval for a unique ICD–10–PCS procedure code to describe procedures involving the use of the CivaSheet® device, beginning in FY 2020. Approval was granted for the following procedure codes effective October 1, 2019:

ICD-10-PCS Code	Code description
D010BB1	Low Dose Rate (LDR) Brachytherapy of Brain using Palladium 103 (Pd-103), Unidirectional Source

DW12BB1	Low Dose Rate (LDR) Brachytherapy of Chest using Palladium 103 (Pd-103), Unidirectional Source

As discussed previously, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and, therefore, would not be considered ''new'' for

purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome, according to the applicant, CivaSheet® does not have a similar mechanism of action in comparison to existing brachytherapy technologies. The applicant asserted that the unique construction and configuration of the CivaSheet® device permits delivery of radiation intra-operatively in a highly targeted fashion. The applicant explained that the CivaSheet® is cut to size in the operation room (OR) and conformed to the patient's anatomy and surgical site, which allows radiation to be delivered to the resected tumor bed margins at the time of the original surgery. The applicant further explained that, it is generally believed that ''hot'' spots should be avoided in the delivery of radiotherapy because they lead to complications, citing the finding that ''[i]n brachytherapy, dose homogeneity is difficult to achieve, but efforts to minimize ''hot'' spots have been regarded as virtuous and implant-planning guidelines were developed to assist in this regard.'' [49] The applicant stated that implants are rarely geometrically perfect and, to avoid under-dosing some parts of the target volume, it may be necessary to create ''hot spots'' in other parts of the anatomy. However, as a result, a ''hotter'' dose compared to that achievable with external beam technologies can be delivered to the intended area. In contrast, the applicant indicated that CivaSheet®'s unidirectional configuration substantially reduces the dose delivered to neighboring radiosensitive structures. The applicant further stated that other forms of radiation delivery do not have these capabilities, and no other shielded low-dose radiation (LDR) sources are currently available on the market. According to the applicant, external beam radiation generally cannot be delivered intra-operatively, partly because dosage requirements make this impractical and potentially risky and because appropriate aiming cannot be computed in the timeframe of a performed surgery.

The applicant believed that, in the absence of the use of the CivaSheet® device, a patient requiring radiation therapy to accompany surgery would most likely receive radiation therapy as an outpatient service following the inpatient hospitalization after surgery. Moreover, the applicant stated that not only does this typically require multiple, fractionated treatments, in some cases, outpatient external beam radiation may not be possible due to excessive toxicity to normal surrounding tissues. According to the applicant, radiation therapy can be delivered intra-operatively directly to surgical margins through use of a linear accelerator. However, the applicant stated that these technologies deliver radiation in a single ''flash,'' whereas the CivaSheet® device enables the delivery of radiation over time, increasing the efficacy of the radiation therapy.

Further, the applicant stated that external beam radiation devices have a fixed ball or cone-shaped applicator, which does not necessarily conform well to the irregular shapes of surgical cavities or permit effective screening of adjacent tissues. Additionally, the applicant stated that this form of radiation therapy requires a specialized linear accelerator and a specially shielded operating room, which the applicant believes restricts its use to IPPS-exempt cancer centers.

The applicant further stated that, in the past, cylindrical brachytherapy seeds have been used with various mesh products as a form of intra-operative radiation therapy (IORT). However, according to the applicant, the use of cylindrical brachytherapy seeds used with various mesh products has not developed as part of standard clinical practice. According to the applicant, patients treated with previous cylindrical brachytherapy seeds faced considerable challenges with toxicity from the unfocused, unshielded seed sources when placed in proximity of sensitive organs.[50] Additionally the surgical meshes previously used were not designed to maximize source orientation and spacing, and also ran the risk of source dispersion as the mesh degraded.[51] The applicant maintains that the CivaSheet® is the first low-dose radiation (LDR) brachytherapy device designed specifically for the delivery of IORT. CivaSheet®'s individual brachytherapy sources are flat with a gold shielding on one side of the seed, a design that focuses radiation in one direction, in contrast to the cylindrical shape of LDR brachytherapy seeds, which emit radiation in all directions. According to the applicant, properties of the flat, gold-shielded sources and the bioabsorbable polymer encapsulation make the CivaSheet® uniquely suited for intra-operative delivery. As such, the applicant asserted that the CivaSheet® does not have a similar mechanism of action when compared to existing LDR brachytherapies.

With regard to the second criterion, whether a product is assigned to the same or a different MS–DRG, the applicant asserted that patients who may be eligible for treatment using the CivaSheet® include hospitalized patients having tumors removed from the pancreas, colon and anus, pelvic area, head and neck, soft tissue sarcomas, non-small-cell lung cancer, ocular melanoma, atypical meningioma and retroperitoneum and that cases involving the use of the CivaSheet® would map primarily into the following MS–DRGs listed below. In the proposed rule, we indicated that we believe that cases involving the use of existing technologies would be assigned to these same MS–DRGs as previously listed.

With regard to the third criterion, whether the use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, clinical conditions that may require use of the CivaSheet® include treatment of the same patient population as those who have been diagnosed with a variety of types of cancer, including pancreatic cancer, colorectal cancer, anal cancer, pelvic area/gynecological cancer, retroperitoneal sarcoma and head and neck cancers.

The applicant asserted that the CivaSheet® device is not substantially similar to any existing technology because it uses a unique mechanism of action, when compared to existing LDR brachytherapy technologies, to achieve a therapeutic outcome and, therefore, meets the newness criterion.

We invited public comments on whether the CivaSheet® device meets the newness criterion.

Comment: The applicant submitted public comments stating that it believes that the CivaSheet® meets CMS' newness criterion. The applicant stated that in particular, the CivaSheet® enables intraoperative delivery of radiation in circumstances where this was not previously possible, whether using brachytherapy or other forms of radiation, without adverse effects on neighboring, radiosensitive tissue. The applicant stated that the capability for one-directional delivery of radiation, attributable to the gold shielding on each source and the persisting matrix in which the sources are embedded and which maintains their orientation within the body as the surgical wound is closed and heals, is unique. The applicant further stated that the customizable, conformable, planar design allows positional stability, homogenous distribution of radiation in the surgical cavity, features not available in radioactive seed technology previously available. *Response:* We appreciate the applicant's comments with regard to the newness criterion. After consideration of the comments we received, we believe the mechanism of action of the CivaSheet® is unique from other brachytherapy technologies because of. the unidirectional delivery of intraoperatively applied radiation due to its shielded gold layer. Therefore, we believe the CivaSheet® is not substantially similar to existing technology and that it meets the newness criterion.

With regard to the cost criterion, the applicant conducted the following analysis to demonstrate that the technology meets the cost criterion. To determine the MS–DRGs that potential cases representing patients who may be eligible for treatment involving CivaSheet® would map to, the applicant identified all MS–DRGs for cases that included ICD–10–CM diagnosis codes for either pancreatic cancer, colorectal cancer, anal cancer, pelvic area/gynecological cancer, retroperitoneal sarcoma and head and neck cancers as a primary or secondary diagnosis. Based on the FY 2017 MedPAR Hospital Limited Data Set (LDS), the applicant identified a total of 22,835 potential cases. The applicant limited its analyses to the most relevant 32 MS–DRGs, which represented 80 percent of all the cases. The applicant excluded the following cases: statistical outliers which the applicant defined as 3 standard deviations from the geometric mean, HMO cases and claims submitted only for graduate medical education payments and cases at hospitals that were not included in the FY 2019 IPPS/LTCH PPS final rule impact file (the applicant noted that these are predominately cancer hospitals not subject to the IPPS). After applying the trims as previously described, the applicant identified 17,173 remaining cases.

Using the 17,173 cases, the applicant determined an average case-weighted unstandardized charge per case of $122,565. The applicant standardized the charges for each case and inflated each case's charges from FY 2017 to FY 2019 by applying the outlier charge inflation factor of 1.085868 from the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20581). The applicant indicated that the current average cost of the CivaSheet® device is $24,132.86. The applicant then added charges for CivaSheet® by taking the cost of the device and converting it to a charge by dividing the costs by the national average CCR of 0.309 for implants from the FY 2019 IPPS/LTCH PPS final rule (83 FR 41273). The applicant calculated an average case-weighted standardized charge per case of $188,897 using the percent distribution of MS–DRGs as case weights. Based on this analysis, the applicant determined that the final inflated average case-weighted standardized charge per case for CivaSheet® exceeded the average case-weighted threshold amount of $87,446 by $101,451.

In the proposed rule, we noted that the inflation factor used by the applicant was the proposed 2-year inflation factor, which was discussed in the FY 2019 IPPS/LTCH PPS final rule summation of the calculation of the FY 2019 IPPS outlier charge inflation factor for the proposed rule (83 FR 41718 through 41722). The final 2-year inflation factor published in the FY 2019 IPPS/LTCH PPS final rule was 1.08864 (83 FR 41722), which was revised in the FY 2019 IPPS/LTCH PPS final rule correction notice to 1.08986 (83 FR 49844). However, we noted that even when using either the final rule values or the corrected final rule values published in the correction notice to inflate the charges, the final inflated average case-weighted standardized charge per case for CivaSheet® would exceed the average case-weighted threshold amount. We invited public comments on whether the CivaSheet® meets the cost criterion.

Comment: The applicant submitted public comments reiterating its previously submitted cost analysis. The applicant further stated that it believes the technology meets the cost criterion.

Response: After consideration of the public comments we received, we agree that the CivaSheet® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that CivaSheet® represents a substantial clinical improvement over existing technologies because it provides the following: (1) Improved local control of different cancers; [52] (2) reduced rate of device-related complications; [53] (3) reduced rate of radiation toxicity; [54] (4) decreased future hospitalizations; [55] (5) decreased rate of subsequent therapeutic interventions; [56] (6) improvement in back pain and appetite in pancreatic cancer patients [57] and (7) improved local control for pancreatic cancer patients.[58]

With regard to improved local control of different cancers, the applicant provided the clinical outcomes results

of a 20-month report of a patient who had been diagnosed with leiomyosarcoma of the pelvic sidewall.[59] According to the report, the purpose of the report was to document the experience of using the CivaSheet® implant as adjuvant intraoperative treatment in a patient who had been diagnosed with locally advanced leiomyosarcoma of the lateral pelvic sidewall. The patient analyzed in this report is a 62-year-old African American male who was found to have a mass incidentally in the left pelvic sidewall. The patient presented with lower abdominal pain, hematuria, and lower left flank pain radiating to the left groin. A CT scan revealed a mass in the left pelvic sidewall that measured 8.1 x 6.4 x 3.7 cm, with encasement of the left common iliac vein and no distant metastasis. A biopsy revealed a high-grade leiomyosarcoma. Given his advanced clinical stage and iliac vein encasement, neoadjuvant pelvic radiotherapy with IMRT, surgical resection with reconstruction, and a boost with intraoperative LDR brachytherapy were performed. The patient was treated with pelvic IMRT (50.4 Gy/28 fractions). The patient then underwent gross total resection and the CivaSheet® was implanted intraoperatively. The patient recovered well from the interventions, according to the report. At 20 months after implantation of the LDR brachytherapy device, clinical evaluations and CT imaging surveillance demonstrated no evidence of residual disease, according to the report.

With regard to reducing the rate of device-related complications, the applicant summarized four case series. In the four case series, the CivaSheet® device was used to treat: (1) Axillary squamous cell carcinoma; [60] (2) retroperitoneal sarcoma; [61] [62] [63] (3) gastric signet ring adenocarcinoma; (4) pancreatic cancer; and (5) other abdominal malignancies. There were 13 patients associated with these 4 case series.

Seneviratne, et al.'s case series report documented experience with the use of the CivaSheet® device in a 78 year old male patient who had been diagnosed with axillary squamous cell carcinoma. According to the case series report, prior to surgery a dose of 58 Gy, prescribed to the 95 percent isodose line (±5 percent), was delivered in 2 Gy fractions with 3-dimensional conformal EBRT with concurrent weekly administration of cisplatin 40 mg/m^2 at an outside facility. Magnetic resonance imaging scans obtained 3 months post-treatment revealed that the mass had decreased in size to 3.8 cm × 2.5 cm × 3.9 cm, but maintained encasement of the axillary artery, axillary vein, and several inferior branches of the brachial plexus. Concerns with regard to increased toxicity to the axillary structures discouraged further EBRT, and the CivaSheet® device was implanted immediately post tumor resection. Given that microscopic disease within formerly irradiated tissue was being treated, a prescription dose of 20 Gy at 5 mm from the surface of the mesh was considered adequate because of its delivery of a biologically effective dose (BED)-10 of 39.8 Gy and equivalent dose (EQD)-2 of 33.2 Gy to the tumor bed, while limiting the D2cc for the brachial plexus to a BED3 of 27.9 Gy and EQD2 of 16.7 Gy, based on post implant analysis. According to the Seneviratne, et al. analysis, this approach allowed for a significantly limited dose to be delivered to the brachial plexus. A composite dose constraint of D2cc of 75 Gy was selected on the basis of recent data showing elevated clinical brachial plexopathy rates beyond this threshold. This constraint was met with an estimated composite EQD2 of 74.7 Gy, which, according to the applicant, would not have been obtainable with EBRT to a tumor bed EQD2 of greater than or equal to 30 Gy. The patient was discharged on the same day with instructions on wound care and radiation safety. According to the applicant, the incision healed well, with no signs of infection, seroma, or lymphadenopathy during monthly follow-up visits. At the 8-month follow-up visit, the patient was documented to only have minor shoulder pain. Seneviratne, et al., also discussed their views on the advantages of the use of the CivaSheet® device, which include its bio-absorbability, ease of visualization with imaging, potential for intra-operative customization, ability to complement various treatment approaches including EBRT and surgical resection, and ease of implantation with minimal training.

To further substantiate its assertions of a reduced rate of device-related complications regarding the CivaSheet® device, the applicant stated that its malleability is likely to be particularly useful in treating irregularly shaped surgical cavities, such as those created after breast lumpectomies or pelvic side wall resections. According to the applicant, the CivaSheet® device also overcomes several shortcomings observed even among those LDR mesh devices that use the same isotope. According to the applicant, as the vicryl sutures of traditional LDR mesh devices bend and curve around irregular surfaces during placement, the spacing and orientation of the radioactive seeds may be altered, leading to unpredictable variations in isodose geometry. The applicant stated that, in contrast, the polymer encapsulation of the Pd-103 Civa seeds before embedding within the membrane allows the sources to maintain their orientation in space and deliver radiation in accordance with the predetermined geometry. According to the applicant, additionally, unlike older LDR mesh devices that run the risk of source dispersion after mesh degradation, the polymer encapsulation allows the seeds to maintain their placement even as the membrane is absorbed over time. In this same case study, Seneviratne, et al., stated that a 3-month post implantation imaging of the CivaSheet® device demonstrated that the radioactive source geometry had remained stable since the initial implantation.

The applicant also provided Howell, et al.'s case series results of six patients diagnosed with recurrent retroperitoneal sarcoma who had been treated with the use of the CivaSheet® device to support its claims of reduced rate of toxicity and improved local control. Similar to the Seneviratne, et al. case series report, Howell, et al.'s case series' report also noted concerns regarding prior EBRT, costs associated with intra-operative radiation therapy both for the patient and the hospital, and concerns of at-risk surrounding anatomic structures. Given these concerns, Howell, et al.'s case series report also investigated LDR brachytherapy using CivaSheet®. Amongst the six patients observed, five patients had diagnoses of recurrent disease in the retroperitoneum or pelvic side wall; one patient had a diagnosis of locally-advanced leiomyosarcoma with no previous treatment. Regarding prior treatment, two patients had prior EBRT

[59] Castaneda, S.A., Emrich, J., Bowne, W.B., Kemmerer, E.J., Sangani, R., Khalili, M., Rivard, M.J., Poli, J., ''Clinical outcomes using a novel directional Pd-103 brachytherapy device: 20-month report of a patient with leiomyosarcoma of the pelvic sidewall,'' ACRO 2018 Annual Meeting.

[61] Zhen, H., Turian, J.V., Sen, N., et al.,''Initial clinical experience using a novel Pd-103 surface applicator for the treatment of retroperitoneal and abdominal wall malignancies,'' Advances in Radiation Oncology, 2018, vol. 3, pp. 216–220.

[62] Howell, K.J., Meyer, J.E., Rivard, M.J., et al., ''Initial Clinical Experience with Directional LDR Brachytherapy for Retroperitoneal Sarcoma,'' submitted Int J of Rad Onc Biol Phys, 2018.

[63] Turian, J.V., ''Emerging Technologies for IORT: Unidirectional Planar Brachytherapy Sources,'' Presented at AAPM 2017 Annual Meeting.

at first diagnosis. Four patients received neoadjuvant EBRT prior to surgery in addition to treatment involving CivaSheet® brachytherapy. The LDR brachytherapy dose was determined using radiobiological calculations of biological effective dose (BED) based on the linear-quadratic model and EQD2 values. An LDR brachytherapy dose of 20 to 60 Gy (36 Gy mean) was administered, corresponding to BED values of 15 to 53 Gy (29 Gy mean) and EQD2 values of 12 to 43 Gy (23 Gy mean). Because the goal was to provide a conformal radiation boost for an additional 15 to 20 Gy EQD2, the prescribed absorbed doses were considered appropriate. All patients were followed by CT scan to assess implant migration, observed radiation-related toxicities, and evidence for local recurrence between 2.5 weeks and 3 months. No evidence of implant migration or radiation-related toxicities was found. Based on these results, the study concluded that LDR directional brachytherapy delivered a targeted dose distribution that was successfully used to treat retroperitoneal sarcoma, and that the utilized device is an important option for the treatment of patients who have been diagnosed with retroperitoneal sarcoma having close/positive surgical margins and/or in combination with EBRT to optimize local control.

Two other case series, by Zhen, H. *et al.*,[64] and Turian, *et al.,*[65] were submitted by the applicant to support the assertion of reduced rate of device-related complications. Both case series assessed the use of LDR brachytherapy using the CivaSheet® device in the tumor bed given the same clinical challenges outlined in case series observed and investigated in the Seneviratne, et al., and Howell, et al. analyses in patients previously treated with chemoradiation protocols and in patients who had been diagnosed with recurrent tumors close to important functional tissues. Both case series assessed LDR brachytherapy using the CivaSheet® device in the treatment of different cancers like retroperitoneal sarcomas, pancreatic cancers, and gastric singnet ring adenocarcinoma or other abdominal carcinomas. Both case series followed the patients with CT imaging sometime between 2.5 weeks and 86 weeks. Both case series' study concluded that LDR brachytherapy with the use of the CivaSheet® device was a feasible alternative treatment modality for the cancers treated in each case series. According to Zhen, et al., an advantage of using the CivaSheet® device is that the CivaDot sheets can be easily cut to any size and shape at the time of implant. The author further stated that the CivaDot sheet is malleable and can conform to curved surfaces. This device characteristic, according to the author, gives the physician more flexibility to treat tumor beds with irregular shapes and surface curvatures compared with electron beam cylindrical applicators, thereby reducing the rate of device-related complications. However, the analysis by Zhen, et al. also indicated that a limitation in dosimetric evaluation using CT imaging is related to the inability to identify the orientation of the individual CivaDot mainly because of limited resolution and metal artifact caused by the gold plating. CivaDot orientation is inferred from the fact that all dots are embedded in a membrane that is sutured to the tumor bed and because the post-implant CT scan shows the shape of the CivaSheet® seeds being maintained. Also, Zhen, et al. noted that surgical clips could be mistakenly identified as CivaDots. The analysis by Zhen, et al. recommended that the use of surgical clips should be minimized.

With regard to the reduced rate of toxicity, the applicant provided a clinical case series by Howell, *et al.*[66] to show that shielding healthy tissues while irradiating the tumor bed after surgical resection was achieved by providing a conformal radiotherapy, a novel Pd-103 low-dose rate (LDR) brachytherapy device. Methods and materials of the case include the following: the LDR brachytherapy device was considered for patients who had been diagnosed with recurrent retroperitoneal sarcoma, had received prior radiotherapy to the area, and/or had anatomy concerning for high-risk margins predicted for recurrence after resection. The case series included the clinical conclusions for five patients who had been diagnosed with recurrent disease in the retroperitoneum or pelvic side wall, one patient who had been diagnosed with locally-advanced leiomyosarcoma with no previous treatment, two patients who had prior EBRT at first diagnosis, and four patients who received neoadjuvant EBRT prior to surgery in combination with brachytherapy. The LDR brachytherapy dose was determined using radiobiological calculations of biological effective dose (BED) based on the linear-quadratic model and EQD2 values. An LDR brachytherapy dose of 20 to 60 Gy (36 Gy mean) was administered, corresponding to BED values of 15 to 53 Gy (29 Gy mean) and EQD2 values of 12 to 43 Gy (23 Gy mean). Because the goal was to provide a conformal radiation boost for an additional 15 to 20 Gy EQD2, the prescribed absorbed doses were considered appropriate. According to the applicant, results showed that radiation was delivered to the at-risk tissues with minimal irradiation of adjacent healthy structures or structures occupying the surgical cavity after tumor resection. According to the applicant, clinical outcomes indicated feasibility for surgical implantation and promising results in comparison to current standards-of-care. The device did not migrate over the course of follow-up and there were no observed radiation-related toxicities.

The Howell, et al. clinical case series concluded that LDR directional brachytherapy delivered a targeted dose distribution that was successfully used to treat retroperitoneal sarcoma and that the utilized device is an important option for the treatment of patients who have been diagnosed with retroperitoneal sarcoma having close/positive surgical margins and/or in combination with EBRT to optimize local control.

The applicant also cited three additional case series to support their assertions of reduced rate of device-related complications and reduced rate of radiation toxicity. The first is on file at CivaTech in which they indicated that more than 60 patients, since 2015, had CivaSheet® implanted with no reported device-related toxicity in patients previously treated with maximal EBRT. No other details were provided by the applicant. The second case series by Taunk, et al.[67] assessed the use of CivaSheet® in three patients who had been diagnosed with colorectal adenocarcinoma who had undergone prior induction chemotherapy and neoadjuvant chemoradiation. CivaSheet® was placed in the tumor bed and patients were followed with CT imaging to assess implant migration, 30- and 90-day radiation toxicity and local recurrence. One patient was deemed not a feasible candidate because the

[64] Zhen, H., Turian, J.V., Sen, N., et al.,''Initial clinical experience using a novel Pd-103 surface applicator for the treatment of retroperitoneal and abdominal wall malignancies'', Advances in Radiation Oncology, 2018, vol. 3, pp. 216–220.

[66] Howell, K.J., Meyer, J.E.,Rivard, M.J. et al., ''Initial Clinical Experiences with Directional LDR Brachytherapy for Retroperitoneal Sarcomo, submitted to Int J of Rad Onc Biol Phys, 2018.

[67] Taunk, N.K., Cohen, G., Taggar, A.S., et al., ''Preliminary Clinical Experience from a Phase I Feasibility Study of a Novel Permanent Unidirectional Intraoperative Brachytherapy Device,'' ABS 2017 Annual Meeting.

CivaSheet® could not be uniformly opposed to the sacrum due to the degree of concavity. The other two patients underwent successful CivaSheet® implantation, and at 30 days showed stability of the device and no apparent toxicity. In the final additional case series from Rivard, *et al.*,[68] a single patient who had been diagnosed with pelvic side wall cancer (type not indicated) was implanted with CivaSheet® and the CivaSheet® dose distributions were compared to those of conventional low-dose rate, low-energy photon-emitting brachytherapy seeds (that is, palladium 103, Iodine-125, and Cesium-131). According to the applicant, results suggest gold-shielding CivaDots attenuate radiation for directional brachytherapy and CivaSheet® provides a therapeutic target dose, while substantially minimizing critical structure doses. In this specific case study, the applicant stated that the use of CivaSheet® showed decreased radiation to adjacent organs, such as the bowel and the bladder.
