

considered is the no-action alternative, under which the staff would leave things as they are by simply denying the exemption request. This no-action alternative is not feasible as it conflicts with 10 CFR 30.36(d), requiring that a license (permit in this case) be terminated when no principal activities under the license have been conducted for a period of 24 months. It has been greater than 24 months since the licensee (permittee) conducted any principal activities with the sources. Additionally, denying the amendment request would result in no change in current environmental impacts, since the sources are irretrievable. The environmental impacts of the proposed action and the no-action alternative are therefore the same, and would not result in significant environmental impacts.

The staff also considered requiring the Navy to again attempt to retrieve RTGs as a potential alternative. However, based on the information submitted by the Navy and reviewed by the NRC staff, this is not a feasible option, and is therefore not considered further.

Agencies and Persons Consulted

The NRC staff has determined that the proposed action is of a procedural nature, and will not affect listed species or critical habitat. Therefore, no further consultation is required under Section 7 of the Endangered Species Act. The NRC staff has also determined that the proposed action is not the type of activity that has the potential to cause effects on historic properties. Therefore, no further consultation is required

under Section 106 of the National Historic Preservation Act.

III. Finding of No Significant Impact

The NRC staff has prepared this environmental assessment in support of the proposed action. On the basis of this environmental assessment, the NRC finds that there are no significant environmental impacts from the proposed action, and that preparation of an environmental impact statement is not warranted. Accordingly, the NRC has determined that a finding of no significant impact is appropriate.
