requires each individual, corporation, partnership, commercial grade
dedicating entity, or other entity subject to the regulations in this part to adopt
appropriate procedures to evaluate deviations and failures to comply to
determine whether a defect exists that could result in a substantial safety
hazard. Depending upon the outcome of the evaluation, a report of the defect
must be submitted to the NRC. Reports submitted under 10 CFR part 21 are
reviewed by the NRC staff to determine whether the reported defects or failures
to comply in basic components at the NRC licensed facilities or activities are
potentially generic safety problems. These reports have been the basis for the
issuance of numerous NRC Generic Communications that have contributed
to the improved safety of the nuclear industry. The records required to be
maintained in accordance with 10 CFR
which were the basis for safety problems.
