The estimated institutional cost is $242,540 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

TABLE 10—SUMMARY OF PROPOSED BURDEN AND HOURS SAVED FOR ADDITIONAL PROCEDURES CERTAIN INSTITUTIONAL AGENCIES MUST HAVE

Changes	Hours	Branch campus	Total burden	Hours saved
Business Plans—Applications	2	53		106
Teach-out Plans & Agreements	1	5,347	5,347	
Credit Hours	2 ×	5,347 × 20		2,140
Total	1		5,347	2,246

Section 602.31—Agency Applications and Reports To Be Submitted to the Department

Requirements

Given the increased number of Freedom of Information Act (FOIA) requests, in § 602.31(f), we will require that accrediting agencies redact personally identifiable information and other sensitive information prior to sending documents to the Department to help prevent public disclosure of that sensitive information.

Burden Calculation

In FY 2018, the Department closed 10 FOIA requests that were associated with accreditation. The estimated calculations are based on the time Department staff spent redacting PII, not the total time staff used to conduct searches and process the requests. Using the FY 2018 FOIA data related to accrediting agencies, we estimate that, on average, it will take an agency 5.37 hours to comply with the final redaction requirements under § 602.31(f).

The estimated burden for § 602.31 is 285 hours ([285 hours/53 agencies] = 5.37) under OMB Control Number 1840–0788. The estimated institutional cost is $12,928 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

TABLE 11—SUMMARY OF BURDEN FOR AGENCIES TO REDACT PII

	Hours	Cost per hour	Total cost burden	Per agency
Total	285	$45.36	$12,928	$244

Section 602.32—Procedures for Applying for Recognition, Renewal of Recognition, or for Expansion of Scope, Compliance Reports, and Increases in Enrollment

Requirements

Under § 602.32(a), we will specify what accrediting agencies preparing for recognition renewal will submit to the Department 24 months prior to the date their current recognition expires.

Under § 602.32(j)(1), we will outline the process for an agency seeking an expansion of scope, either as a part of the regular renewal of recognition process or during a period of recognition.

Burden Calculation

Under § 602.32(a), we anticipate that, on average, it will take an agency 3 hours to gather, in conjunction with materials required by § 602.31(a), a list of all institutions or programs that the agency plans to consider for an award of initial or renewed accreditation over the next year or, if none, over the succeeding year, and any institutions subject to compliance reports or reporting requirements. Also, under § 602.32(j)(1), we anticipate that, on average, it will take an agency 20 hours to compose and submit a request for an expansion of scope of recognition.

Over the last five years, the Department has received fewer than five requests for expansion of scope.

The estimated burden for § 602.32 is 179 hours (53 × 3) + (1 × 20) under OMB Control Number 1840–0788. The estimated institutional cost is $8,119 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

Section 602.36—Senior Department Official's Decision

Requirements

Under final § 602.36(f), the SDO will determine whether an agency is compliant or substantially compliant, which will give accrediting agencies opportunities to make minor modifications to reflect progress toward full compliance using periodic monitoring reports.

Burden Calculation

If we determine that an agency is substantially compliant, the SDO will allow the agency to submit periodic monitoring reports for review by Department staff in place of the currently used compliance report; the compliance report, requires a review by the NACIQI, attendance at one of its bi-annual meetings, and conceivably comments filed with the SDO and an appeal to the Secretary. From 2014 through 2018, the Department reviewed 17 compliance reports. Under final § 602.36(f) these 17 compliance reports would have had the following designations: Five monitoring reports (one annually); two requiring both compliance and monitoring reports (less than one annually); and 10 (two annually) as compliance reports. Using data from our findings during reviews, we anticipate that final changes will reduce the burden on an agency.

If an accrediting agency is required to submit a monitoring report, we estimate that, on average, the final changes will save an agency 72 hours for travel and meeting attendance, given we will not require attendance at one of NACIQI's bi-annual meetings unless the agency does not address the initial areas of noncompliance satisfactorily through the use of monitoring reports. However, if we require an accrediting agency to submit both a monitoring report and a compliance report, we estimate that the final changes in § 602.36(f) will increase the burden for an accrediting agency by 8 hours as the agency completes its application for renewal of recognition by the Secretary.

We estimate that, on average, the burden for § 602.36 will increase 8 hours (1 × 8) under OMB Control Number 1840–0788. However, considering the time saved for travel, we estimate (72 − 8 = 64) 64 saved hours overall. The estimated institutional cost is $363 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

TABLE 12—SUMMARY OF BURDEN AND HOURS SAVED USING MONITORING REPORTS

Report type	Number	Hours	Total burden	Hours saved
Monitoring	1	72	....	72
Monitoring and Compliance	1	8	8	....

Section 668.26—End of an Institution's Participation in the Title IV, HEA Programs

Requirements

Under final § 668.26, the Secretary may permit an institution that has ended its participation in title IV programs to continue to originate, award, or disburse title IV funds for up to 120 days under specific circumstances. The institution must notify the Secretary of its plans to conduct an orderly closure in accordance with its accrediting agency, teach out its students, agree to abide by the conditions of the program participation agreement in effect at the time of the loss of participation, and provide written assurances of the health and safety of the students, the adequate financial resources to complete the teach-out and the institution is not subject to adverse action by the institution's State authorizing body or the accrediting agency.

Burden Calculation

We estimate that, on average, an institution will need 5 hours to draft, and finalize for the appropriate institutional management signature, the written request for extension of eligibility from the Secretary. We anticipate that 5 institutions may utilize this opportunity annually.

TABLE 13—§ 668.26

Respondent	Responses	Time per Response (hours)	Total hours
Public	1	5	= 5
Private	2	5	= 10
Proprietary	2	5	= 10
Total	....	....	= 25

The estimated burden for § 668.26 is 25 hours under OMB Control Number 1845–0156. The estimated institutional cost is $1,134 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

Section 668.43—Institutional Information

Requirements

The final regulations in § 668.43(a)(5) will require an institution to disclose whether the program will fulfill educational requirements for licensure or certification if the program is designed to or advertised as meeting such requirements. Institutions will be required to disclose, for each State, whether the program did or did not meet such requirements, or whether the institution had not made such a determination.

The final regulations in § 668.43(a)(11) will revise the information about an institution's transfer of credit policies to require the disclosure of any types of institutions from which the institution will not accept transfer credits. Institutions will also be required to disclose any written criteria used to evaluate and award credit for prior learning experience.

The final regulations in § 668.43(a)(12) will require institutions to provide disclosures in the program description regarding written arrangements under which an entity other than the institution itself provides all or part of a program.

The final regulations will add disclosure requirements that are in statute but not reflected fully in the regulations as well as new disclosure requirements. These disclosures will include: In § 668.43(a)(13), the percentage of the institution's enrolled students disaggregated by gender, race, ethnicity, and those who are Pell Grant recipients; in § 668.43(a)(14) placement in employment of, and types of employment obtained by, graduates of the institution's degree or certificate programs; in § 668.43(a)(15) the types of graduate and professional education in which graduates of the institution's four-year degree programs enrolled; in § 668.43(a)(16) the fire safety report prepared by the institution pursuant to § 668.49; in § 668.43(a)(17) the retention rate of certificate- or degree-seeking, first-time, full-time, undergraduate students; and in § 668.43(a)(18) institutional policies regarding vaccinations.

The final regulations in § 668.43(a)(19) will require an institution to disclose to students if its accrediting agency requires it to maintain a teach-out plan under § 602.24(c)(1), and to indicate the reason why the accrediting agency required such a plan.

The final regulations in § 668.43(a)(20) will require that an institution must disclose enforcement actions or prosecutions by law enforcement agencies that, upon a final judgment, would result in an adverse action by an accrediting agency, revocation of State authorization, or suspension, limitation or termination of eligibility to participate in title IV. Investigations that have not progressed to pending enforcement actions or prosecutions need not be disclosed—regardless of their subject matter.

The final regulations will add a new paragraph (c) requiring an institution to make direct disclosures to individual students in certain circumstances.

Institutions will be required to disclose to a prospective student that the program in which they intended to enroll did not meet the educational requirements for licensure in the State in which the student was located, or if such a determination of whether the program met the licensure requirements in that State had not been made. We will also require an institution to make a similar disclosure to a student who was enrolled in a program previously meeting those requirements which ceased to meet the educational requirements for licensure in that State. The final regulations will hold the institutions responsible for establishing and consistently applying policies for determining the State in which each of its students is located. Such a determination will have to be made at the time of initial enrollment, and upon receipt of information from the student, in accordance with institutional policies, that his or her location had changed to another State. The final regulations require institutions to provide the Secretary, on request, with written documentation of its determination regarding a student's location.

Comments

Several commenters disagreed with the proposed estimated time in the NPRM regarding the licensure and certification disclosure requirements as well as the estimated time to gather and complete the individualized disclosures. They felt that the proposed hours per institution was underestimating the time it would take an institution to research and maintain programmatic license or certification information.

Discussion

As we stated in the preamble, the Department does not require that an institution determine the licensure and certification requirements for their eligible programs for each State. If an institution does not make such a determination for each State, it can inform students that it has not made such a determination and comply with the regulations. The Department has not made an adjustment to the estimated burden hours.

Burden Calculation

We anticipate that most institutions will provide this disclosure information electronically on either the general institution website or individual program websites as required. Using data from the National Center for Educational Statistics, there were approximately 226,733 certificate and degree granting programs in 2017 identified for the public, private and proprietary sectors. Of those, public institutions offered 134,387 programs, private institutions offered 70,678 programs, and proprietary institutions offered 21,668 programs.

For § 668.43(a)(5)(v), we estimate that five percent or 11,337 of all programs will be designed for specific professional licenses or certifications required for employment in an occupation or is advertised as meeting such State requirements. We further estimate that it will take an institution an estimated 50 hours per program to research individual State requirements, determine program compatibility and provide a listing of the States where the program curriculum meets the State requirements, where it does not meet the State requirements, or list the States where no such determination has been made. We base this estimate on institutions electing not to research and report licensing requirements for States in which they had no enrollment or expressed interest. Additionally, we believe that some larger institutions and associations have gathered such data and have shared it with other institutions so there is less burden as they complete this research.

The estimated burden for § 668.43(a)(5)(v) will be 566,850 hours under OMB Control Number 1845–0156.

TABLE 14—§ 668.43(a)(5)(v)

Respondent	Responses	Time per response (hours)	Total hours
Public	6,719	50	= 335,950
Private	3,534	50	= 176,700
Proprietary	1,084	50	= 54,200
Total			= 566,850

For § 668.43(a)(11) through (20), we estimate that it will take institutions an average of 2 hours to research, develop and post on institutional or programmatic websites the required information. The estimated burden for § 668.43(a)(13) through (20) will be 10,694 hours under OMB Control Number 1845–0156.

TABLE 15—§ 668.43(a)(11) THROUGH (20)

Respondent	Responses	Time per response (hours)	Total hours
Public	1,860	2	= 3,720
Private	1,704	2	= 3,408
Proprietary	1,783	2	= 3,566
Total			= 10,694

For § 668.43(c), we anticipate that institutions will provide this information electronically to prospective students regarding the determination of a program's curriculum to meet State requirements for students located in that State or if no such determination has been made. Likewise, we anticipate that institutions will provide this information electronically to enrolled students when a determination has been made that the program's curriculum no longer meets State requirements. We estimate that institutions will take an average of 2 hours to develop the language for the individualized disclosures. We estimate that it will take an additional average of 4 hours for the institutions to disclose this information to prospective and enrolled students for a total of 6 hour of burden. We estimate that five percent of the institutions will meet the criteria to require these disclosures. The estimated burden for § 668.43(c) will be 1,602 hours under OMB Control Number 1845–0156.

TABLE 16—§ 668.43(c)

Respondent	Responses	Time per response (hours)	Total hours
Public	1,860 × 5% = 93	6	= 558
Private	1,704 × 5% = 85	6	= 510
Proprietary	1,783 × 5% = 89	6	= 534
Total			= 1,602

Section	Total hours
668.43(a)(5)	566,850
668.43(a)(11)–(20)	10,694
668.43(c)	1,602

The total estimated burden for final § 668.43 will be 579,146 hours under OMB Control Number 1845–0156. The estimated institutional cost is $26,270,062.56 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

668.50—Institutional Disclosures for Distance or Correspondence Programs

Requirements

The final regulatory package will remove the current regulatory requirements in § 668.50, add in its place a severability provision.

Burden Calculation

The final regulatory package will remove the current regulatory requirements in § 668.50. This removes seven public disclosures that institutions offering distance education or correspondence courses were required to provide to students enrolled or seeking enrollment in such programs. These disclosures included whether the distance education program was authorized by the State where the student resided, if the institution was part of a State reciprocity agreement and consequences of a student moving to a State where the institution did not meet State authorization requirements.

Other disclosures covered the process of submitting a complaint to the appropriate State agency where the main campus is located, process of submitting a complaint if the institution is covered under a State reciprocity agreement, disclosure of adverse actions initiated by the institution's State entity related to distance education, disclosure of adverse actions initiated by the institution accrediting agency, the disclosure of any refund policy required by any State in which the institution enrolls a student, and disclosure of whether the distance education program meets the applicable prerequisites for professional licensure or certification in the State where the student resides, if such a determination has been made. Also, there were two disclosures that were required to be provided directly to currently enrolled and prospective students in either distance education. Those disclosures included notice of an adverse action taken by a State or accrediting agency related to the distance education program and provided within 30 days of when the institution became aware of the action; and, a notice of the institution's determination the distance education program no longer meets the prerequisites for licensure or certification of a State. This disclosure had to be made within seven days of such a determination.

The removal of these regulations will eliminate the burden as assessed § 668.50 which is associated with OMB Control Number 1845–0145. The total burden hours of 152,405 are currently in the information collection 1845–0145 that will be discontinued upon the final effective date of the regulatory package. The estimated institutional cost savings is $ − 6,913,091 based on $45.36 per hour for Postsecondary Education Administrators, from the 2019 Bureau of Labor Statistics Occupational Outlook Handbook.

Consistent with the discussion above, the following chart describes the sections of the final regulations involving information collection, the information being collected and the collections that the Department will submit to OMB for approval and public comment under the PRA, and the estimated costs associated with the information collections. The monetized costs of the increased burden on institutions and accrediting agencies using wage data developed using Bureau of Labor Statistics data, available at *https://www.bls.gov/ooh/management/postsecondary-education-adminstrators.htm* is $26,696,265 as shown in the chart below. At the effective date of July 1, 2020, there will be a savings of $7,033,522 for a total annual net cost of $19,662,744. This cost is based on the estimated hourly rate of $45.36 for institutions and accrediting agencies.

COLLECTION INFORMATION

Regulatory section	Information collection	OMB control No. and estimated burden	Estimated costs	Estimated savings absent ICR requirement
§ 600.9(c)(2)(i), § 600.9(c)(2)(ii)—State authorization.	Institution must determine in which State a student is located while enrolled in a distance education or correspondence course when the institution participates in a State authorization reciprocity agreement under which it is covered in accordance with the institution's policies and procedures, and make such determinations consistently and apply them to all students. Institution must, upon request, provide the Secretary with written documentation of its determination of a student's location, including the basis for such determination.	OMB 1845–0144. We estimate that the burden will increase by 2,809 hours.	$127,417.	
§ 602.12(b)(1)—Accrediting experience.	Agency will notify the Department of a geographic expansion and publicly disclose it on the agency's website, without requesting permission.	OMB 1840–0788. We estimate that the burden will increase by 1 hour.	$45	We estimate that, on average, agencies will save 19 hours given they will inform the Department of a geographic expansion rather than request it, amounting to a $861.84 savings.
§ 602.18(a)(6)—Ensuring consistency in decision-making. § 602.20(a)(2); § 602.20(b), § 602.20(d)—Enforcement of standards. § 602.22(a)(3)(i), § 602.22(a)(3)(ii), § 602.22(b)—Substantive changes and other reporting requirements. § 602.23(f)(1)(ii)—Operating procedures all agencies must have. § 602.24(a), § 602.24(c), § 602.24(f)—Additional procedures certain institutional agencies must have. § 602.26(b)—Notifications of accrediting decisions.	Agency will publish and distribute new policies, with detailed requirements.	OMB 1840–0788. We estimate that the burden will increase by 636 hours.	$28,849.	
§ 602.22(a)(3)(i)—Substantive changes and other reporting requirements.	Agency will designate a staff member to approve or disapprove certain substantive changes.			We estimate agencies will save, on average, 318 hours, given designated substantive approvals could be determined by a senior staff member in place of the now required decision-making body, amounting to $14,424.48.
§ 602.23(a)(2), § 602.23(f)(1)(ii)—Operating procedures all agencies must have.	Agency will make publicly available the procedures that institutions or programs must follow in applying for accreditation, preaccreditation, or substantive changes and the sequencing of those steps relative to any applications or decisions required by States or the Department relative to the agency's preaccreditation, accreditation or substantive change decisions; require that all preaccredited institutions have a teach-out plan with specific requirements.	OMB 1840–0788. We estimate that the burden will increase by 106 hours.	$4,808.	
§ 602.24—Additional procedures certain institutional agencies must have.	Agency will delete existing credit hour policy requirements and overly prescriptive language; and add new language with definition clarifications.	OMB 1840–0788. We estimate that the burden will increase by 5,347 hours.	$242,540	We estimate that agencies will save overall, on average, 2,246 hours given the final regulation will delete existing requirements related to evaluating credit hours amounting to a $101,878.56 savings.
§ 602.31(f)—Agency applications and reports to be submitted to the Department.	Agency will redact personally identifiable information and other sensitive information prior to sending documents to the Department.	OMB 1840–0788. We estimate that the burden will increase by 285 hours.	$12,928.	

COLLECTION INFORMATION—Continued

Regulatory section	Information collection	OMB control No. and estimated burden	Estimated costs	Estimated savings absent ICR requirement
§ 602.32(a), § 602.32(j)(1)—Procedures for applying for recognition, renewal of recognition, or for expansion of scope, compliance reports, and increases in enrollment.	Specifies what accrediting agencies preparing for recognition renewal will submit to the Department 24 months prior to the date their current recognition expires; outlines the process for an agency seeking an expansion of scope, either as a part of the regular renewal of recognition process or during a period of recognition.	OMB 1840–0788. We estimate that the burden will increase by 179 hours.	$8,119.	
§ 602.36(f)—Senior Department official's decision.	Senior Department Official will determine whether an agency is compliant or substantially compliant, which will give accrediting agencies opportunities to make minor modifications to reflect progress toward full compliance using periodic monitoring reports.	OMB 1840–0788. We estimate that the burden will increase by 8 hours.	$363	The increase in burden does not reflect the time saved for preparing and attending NACIQI meetings. We estimate that there will be 72 hours saved, on average, amounting to $3,265.92.
§ 668.26—End of an institution's participation in the Title IV, HEA programs.	Secretary may permit an institution that has ended its participation in title IV programs to continue to originate, award, or disburse title IV funds for up to 120 days under specific circumstances. The institution must notify the Secretary of its plans to conduct an orderly closure in accordance with its accrediting agency, teach out its students, agree to abide by the conditions of the program participation agreement in effect at the time of the loss of participation, and provide written assurances of the health and safety of the students, the adequate financial resources to complete the teach-out and the institution is not subject to adverse action by the institution's State authorizing body or the accrediting agency.	OMB 1845–0156. We estimate that the burden will increase by 25 hours.	$1,134.	
§ 668.43(a)(5)—Institutional information.	The final regulations will require an institution to disclose whether a program will fulfill educational requirements for licensure or certification if the program is designed to or advertised as meeting such requirements. Institutions will be required to disclose, for each State, whether the program did or did not meet such requirements, or whether the institution had not made such a determination.	OMB 1845–0156. We estimate that the burden will increase by 566,850 hours.	$25,712,316.	
§ 668.43(a)(11) through (20)—Institutional information.	The final regulations will add disclosure requirements that are in statute but not reflected fully in the regulations as well as new disclosure requirements.	OMB 1845–0156. We estimate that the burden will increase by 10,694 hours.	$485,080.	
§ 668.43(c)—Institutional information.	The final regulations will require direct disclosure to individual students in circumstances where an offered program no longer met the education requirements for licensure in a State where a prospective student was located, as well as to students enrolled in a program that ceased to meet such requirements.	OMB 1845–0156. We estimate that the burden will increase by 1,602 hours.	$72,667.	
§ 668.50—Institutional Disclosure for Distance or Correspondence Programs.	The final regulations will remove and replace this language with a severability provision. The final regulations have moved some of the disclosure requirements from this section to § 668.43. Other requirements have been deemed duplicative.	OMB 1845–0145. We estimate a decrease of 152,405 hours. We will discontinue this collection upon the final effective date of the regulatory package.	This represents a cost savings of $6,913,091.	

The total burden hours and change in burden hours associated with each OMB Control number affected by the regulations follows:

Control No.	Total burden hours	Change in burden hours
1840–0788	10,550	+6,562
1845–0144	2,969	+2,809
1845–0145	−152,405	−152,405
1845–0156	579,171	+579,171

If you want to comment on the final information collection requirements, please send your comments to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for U.S. Department of Education. Send these comments by email to *OIRA_DOCKET@omb.eop.gov* or by fax to (202) 395–6974. You may also send a copy of these comments to the Department contact named in the **ADDRESSES** section of this preamble.

We have prepared an Information Collection Request (ICR) for these collections. You may to review the ICR, which is available at *www.reginfo.gov.* Click on Information Collection Review. These final collections are identified as final collections 1840–0788, 1845–0012, 1845–0144, 1845–0145, and 1845–0156.

Regulatory Flexibility Act Certification

The Secretary certifies that these final regulations will not have a significant economic impact on a substantial number of small entities.

Of the entities that the final regulations will affect, we consider many institutions to be small. The Department recently proposed a size classification based on enrollment using IPEDS data that established the percentage of institutions in various sectors considered to be small entities, as shown in Table 17. We described this size classification in the NPRM published in the **Federal Register** on July 31, 2018 for the proposed borrower defense rule (83 FR 37242, 37302). The Department discussed the proposed standard with the Chief Counsel for Advocacy of the Small Business Administration, and while no change has been finalized, the Department continues to believe this approach better reflects a common basis for determining size categories that is linked to the provision of educational services.

TABLE 17—SMALL ENTITIES UNDER ENROLLMENT BASED DEFINITION

Level	Type	Small	Total	Percent
2-year	Public	342	1,240	28
2-year	Private	219	259	85
2-year	Proprietary	2,147	2,463	87
4-year	Public	64	759	8
4-year	Private	799	1,672	48
4-year	Proprietary	425	558	76
Total		3,996	6,951	57

However, we do not expect the final regulations to have a significant economic impact on small entities. Nothing in the final regulations will compel institutions, small or not, to engage in substantive changes to programs that will trigger reporting to accrediting agencies or the Department. The final regulations will consolidate or relocate several institutional disclosures and add disclosure requirements under § 668.43, including disclosures relating to whether a program meets requirements for licensure, transfer of credit policies, written criteria to evaluate and award credit for prior learning experience, and written agreements under which an entity other than the institution itself provides all or part of a program. The final regulations will also add disclosure requirements that exist in statute but are not currently reflected in the regulations, including: (1) The percentage of the institution's enrolled students who are Pell Grant recipients, disaggregated by race, ethnicity, and gender; (2) placement in employment of, and types of employment obtained by, graduates of the institution's degree or certificate programs if its accrediting agency or State required it to calculate such rates; (3) the types of graduate and professional education in which graduates of the institution's four-year degree programs enrolled; (4) the fire safety report prepared by the institution pursuant to § 668.49; (5) the retention rate of certificate- or degree-seeking, first-time, full-time, undergraduate students; and (6) institutional policies regarding vaccinations. The small institutions that have distance education or correspondence programs will benefit from the elimination of the disclosure requirement related to the complaints process. Across all institutions, the net result of the institutional disclosure changes is $19,485,522 and there is no reason to believe the burden will fall disproportionately on small institutions. Using the 57 percent figure for small institutions in Table 17, the estimated cost of the disclosures in the final regulations for small institutions is $11,106,748. Institutions of any size will benefit from the opportunity to seek out a different or additional accreditation in a timeframe that suits them, but there is no requirement to do so.

The other group affected by the final regulations are accrediting agencies. The State agencies that act as accrediting are not small, as we define public institutions as ''small organizations'' if they are operated by a government overseeing a population below 50,000.

The Department does not have revenue information for accrediting agencies and believes most organize as nonprofit entities that we define as ''small entities'' if they are independently owned and operated and not dominant in their field of operation. While dominance in accreditation is hard to determine, as it currently stands, the Department believes regional accrediting agencies are dominant within their regions and programmatic accrediting agencies very often dominate their field. Therefore, we do not consider the 53 accrediting agencies to be small entities.

Even if we considered the accrediting agencies to be small entities, we designed these final regulations to grant the agencies greater operational flexibility and to reduce administrative burden so they can focus on higher risk changes to institutions and programs. Nothing in the final regulations will require accrediting agencies to expand their operations or take on new institutions, but they will give them that opportunity. There could even be potential opportunities for accrediting agencies that are small entities to develop in specialized areas and potentially grow.

Thus, the Department believes small entities will experience regulatory relief and a positive economic impact as a result of these final regulations with effects that will develop over years as accrediting agencies and institutions decide how to react to the changes in the final regulations.

Intergovernmental Review

These programs are subject to the requirements of Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for these programs.

Assessment of Educational Impact

Based on the response to the NPRM and on our review, we have determined that these final regulations do not require transmission of information that any other agency or authority of the United States gathers or makes available.

Federalism

Executive Order 13132 requires us to ensure meaningful and timely input by State and local elected officials in the development of regulatory policies that have federalism implications. ''Federalism implications'' means substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

In the NPRM we noted that §§ 600, 602, 603, and 668 may have federalism implications and encouraged State and local elected officials to review and provide comments on these final regulations. In the *Public Comment* section of this preamble, we discuss any comments we received on this subject.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (*e.g.,* Braille, large print, audiotape, or compact disc) on request to one of the program contact persons listed under **FOR FURTHER INFORMATION CONTACT.**

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.*

At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

List of Subjects

34 CFR Part 600

Colleges and universities, Foreign relations, Grant programs—education, Loan programs—education, Reporting and recordkeeping requirements, Student aid, Vocational education.

34 CFR Part 602

Colleges and universities, Reporting and recordkeeping requirements.

34 CFR Part 603

Colleges and universities, Vocational education.

34 CFR Part 654

Grant programs-education, Reporting and recordkeeping requirements, Scholarships and fellowships.

34 CFR Part 668

Administrative practice and procedure, Colleges and universities, Consumer protection, Grant programs—education, Loan programs—education, Reporting and recordkeeping requirements, Selective Service System, Student aid, Vocational education.

34 CFR Part 674

Loan programs-education, Reporting and recordkeeping, Student aid.

Dated: October 18, 2019.

Betsy DeVos,

Secretary of Education.

For the reasons discussed in the preamble, the Secretary of Education amends parts 600, 602, 603, 654, 668 and 674 of title 34 of the Code of Federal Regulations as follows:

PART 600—INSTITUTIONAL ELIGIBILITY UNDER THE HIGHER EDUCATION ACT OF 1965 AS AMENDED

■ 1. The authority citation for part 600 continues to read as follows:

Authority: 20 U.S.C. 1001, 1002, 1003, 1088, 1091, 1094, 1099b, and 1099c, unless otherwise noted.

■ 2. Section 600.2 is amended by:

■ a. Adding in alphabetical order a definition for ''Additional location'';

■ b. Revising the definition of ''Branch Campus'';

■ c. Adding in alphabetical order a definition for ''Preaccreditation'';

■ d. Removing the definition of ''Preaccredited'';

■ e. Adding in alphabetical order a definition for ''Religious mission'';

■ f. Revising in alphabetical order the definition of ''State authorization reciprocity agreement'';

■ g. Adding in alphabetical order definitions for Teach-out'' and ''Teach-out agreement''; and

■ h. Revising the definition of ''Teach-out plan''.

The additions and revisions read as follows:

§ 600.2 Definitions.

* * * * *

Additional location: A facility that is geographically apart from the main campus of the institution and at which the institution offers at least 50 percent of a program and may qualify as a branch campus.

* * * * *

Branch campus: An additional location of an institution that is geographically apart and independent of the main campus of the institution. The Secretary considers a location of an institution to be independent of the main campus if the location—

(1) Is permanent in nature;

(2) Offers courses in educational programs leading to a degree, certificate, or other recognized educational credential;

(3) Has its own faculty and administrative or supervisory organization; and

(4) Has its own budgetary and hiring authority.

* * * * *

Preaccreditation: The status of accreditation and public recognition that a nationally recognized accrediting agency grants to an institution or program for a limited period of time that signifies the agency has determined that the institution or program is progressing toward full accreditation and is likely to attain full accreditation before the expiration of that limited period of time (sometimes referred to as ''candidacy'').

* * * * *

Religious mission: A published institutional mission that is approved by the governing body of an institution of postsecondary education and that includes, refers to, or is predicated upon religious tenets, beliefs, or teachings.

* * * * *

State authorization reciprocity agreement: An agreement between two or more States that authorizes an institution located and legally authorized in a State covered by the agreement to provide postsecondary education through distance education or correspondence courses to students located in other States covered by the agreement and cannot prohibit any member State of the agreement from enforcing its own general-purpose State laws and regulations outside of the State authorization of distance education.

* * * * *

Teach-out: A process during which a program, institution, or institutional location that provides 100 percent of at least one program engages in an orderly closure or when, following the closure of an institution or campus, another institution provides an opportunity for the students of the closed school to complete their program, regardless of their academic progress at the time of closure.

Teach-out agreement: A written agreement between institutions that provides for the equitable treatment of students and a reasonable opportunity for students to complete their program of study if an institution, or an institutional location that provides 100 percent of at least one program offered, ceases to operate or plans to cease operations before all enrolled students have completed their program of study.

Teach-out plan: A written plan developed by an institution that provides for the equitable treatment of students if an institution, or an institutional location that provides 100 percent of at least one program, ceases to operate or plans to cease operations before all enrolled students have completed their program of study.

* * * * *

■ 3. Section 600.4 is amended by revising paragraph (c) to read as follows:

§ 600.4 Institution of higher education.

* * * * *

(c) The Secretary does not recognize the accreditation or preaccreditation of an institution unless the institution agrees to submit any dispute involving an adverse action, such as the final denial, withdrawal, or termination of accreditation, to arbitration before initiating any other legal action.

* * * * *

■ 4. Section 600.5 is amended by revising paragraphs (d) and (e) to read as follows:

§ 600.5 Proprietary institution of higher education.

* * * * *

(d) The Secretary does not recognize the accreditation of an institution unless the institution agrees to submit any dispute involving an adverse action, such as the final denial, withdrawal, or termination of accreditation, to arbitration before initiating any other legal action.

(e) For purposes of this section, a ''program leading to a baccalaureate degree in liberal arts'' is a program that is a general instructional program falling within one or more of the following generally accepted instructional categories comprising such programs, but including only instruction in regular programs, and excluding independently designed programs, individualized programs, and unstructured studies:

(1) A program that is a structured combination of the arts, biological and physical sciences, social sciences, and humanities, emphasizing breadth of study.

(2) An undifferentiated program that includes instruction in the general arts or general science.

(3) A program that focuses on combined studies and research in humanities subjects as distinguished from the social and physical sciences, emphasizing languages, literature, art, music, philosophy, and religion.

(4) Any single instructional program in liberal arts and sciences, general studies, and humanities not listed in paragraphs (e)(1) through (3) of this section.

* * * * *

■ 5. Section 600.6 is amended by revising paragraph (d) to read as follows:

§ 600.6 Postsecondary vocational institution.

* * * * *

(d) The Secretary does not recognize the accreditation or preaccreditation of an institution unless the institution agrees to submit any dispute involving an adverse action, such as the final denial, withdrawal, or termination of accreditation, to arbitration before initiating any other legal action.

* * * * *

■ 6. Section 600.9 is amended by:

■ a. Revising paragraphs (b) and (c); and

■ b. Revising paragraph (d)(1)(iii). The revisions read as follows:

§ 600.9 State authorization.

* * * * *

(b) An institution is considered to be legally authorized to operate educational programs beyond secondary education if it is exempt as a religious institution from State authorization under the State constitution or by State law.

(c)(1)(i) If an institution that meets the requirements under paragraph (a)(1) or (b) of this section offers postsecondary education through distance education or correspondence courses to students located in a State in which the institution is not physically located or in which the institution is otherwise subject to that State's jurisdiction as determined by that State, except as provided in paragraph (c)(1)(ii) of this section, the institution must meet any of that State's requirements for it to be legally offering postsecondary distance education or correspondence courses in that State. The institution must, upon request, document the State's approval to the Secretary; or

(ii) If an institution that meets the requirements under paragraph (a)(1) or (b) of this section offers postsecondary education through distance education or correspondence courses in a State that participates in a State authorization reciprocity agreement, and the institution is covered by such agreement, the institution is considered to meet State requirements for it to be legally offering postsecondary distance education or correspondence courses in that State, subject to any limitations in that agreement and to any additional requirements of that State not relating to State authorization of distance education. The institution must, upon request, document its coverage under such an agreement to the Secretary.

(c)(2)(i) For purposes of this section, an institution must make a determination, in accordance with the institution's policies or procedures, regarding the State in which a student is located, which must be applied consistently to all students.

(ii) The institution must, upon request, provide the Secretary with written documentation of its determination of a student's location, including the basis for such determination.

(iii) An institution must make a determination regarding the State in which a student is located at the time of the student's initial enrollment in an educational program and, if applicable, upon formal receipt of information from the student, in accordance with the institution's procedures, that the student's location has changed to another State.

* * * * *

(d) * * *

(1) * * *

(iii) The additional location or branch campus must be approved by the institution's recognized accrediting agency in accordance with § 602.22(a)(2)(ix) and (c).

* * * * *

■ 7. Section 600.11 is amended by revising paragraphs (a) and (b)(2) to read as follows:

§ 600.11 Special rules regarding institutional accreditation or preaccreditation.

(a) *Change of accrediting agencies.* (1) For purposes of §§ 600.4(a)(5)(i), 600.5(a)(6), and 600.6(a)(5)(i), the Secretary does not recognize the accreditation or preaccreditation of an otherwise eligible institution if that institution is in the process of changing its accrediting agency, unless the institution provides the following to the Secretary and receives approval:

(i) All materials related to its prior accreditation or preaccreditation.

(ii) Materials demonstrating reasonable cause for changing its accrediting agency. The Secretary will not determine such cause to be reasonable if the institution—

(A) Has had its accreditation withdrawn, revoked, or otherwise terminated for cause during the preceding 24 months, unless such withdrawal, revocation, or termination has been rescinded by the same accrediting agency; or

(B) Has been subject to a probation or equivalent, show cause order, or suspension order during the preceding 24 months.

(2) Notwithstanding paragraph (a)(1)(ii) of this section, the Secretary may determine the institution's cause for changing its accrediting agency to be reasonable if the agency did not provide the institution its due process rights as defined in § 602.25, the agency applied its standards and criteria inconsistently, or if the adverse action or show cause or suspension order was the result of an agency's failure to respect an institution's stated mission, including religious mission.

(b) * * *

(2) Demonstrates to the Secretary reasonable cause for that multiple accreditation or preaccreditation.

(i) The Secretary determines the institution's cause for multiple accreditation to be reasonable unless the institution—

(A) Has had its accreditation withdrawn, revoked, or otherwise terminated for cause during the preceding 24 months, unless such withdrawal, revocation, or termination has been rescinded by the same accrediting agency; or

(B) Has been subject to a probation or equivalent, show cause order, or suspension order during the preceding 24 months.

(ii) Notwithstanding paragraphs (b)(2)(i)(A) and (B) of this section, the Secretary may determine the institution's cause for seeking multiple accreditation or preaccreditation to be reasonable if the institution's primary interest in seeking multiple accreditation is based on that agency's geographic area, program-area focus, or mission; and

* * * * *

■ 8. Add § 600.12 to read as follows:

§ 600.12 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

■ 9. Section 600.31 is amended by:

■ a. Revising paragraph (a)(1);

■ b. In paragraph (b), revising the definitions of "Closely-held corporation", "Ownership or ownership interest", "Parent", and "Person"; and

■ c. Revising paragraphs (c)(3) through (5).

The revisions read as follows:

§ 600.31 Change in ownership resulting in a change in control for private nonprofit, private for-profit and public institutions.

(a)(1) Except as provided in paragraph (a)(2) of this section, a private nonprofit, private for-profit, or public institution that undergoes a change in ownership that results in a change in control ceases to qualify as an eligible institution upon the change in ownership and control. A change of ownership that results in a change in control includes any change by which a person who has or thereby acquires an ownership interest in the entity that owns the institution or the parent of that entity, acquires or loses the ability to control the institution.

* * * * *

(b) * * *

Closely-held corporation. Closely-held corporation (including the term "close corporation") means—

(1) A corporation that qualifies under the law of the State of its incorporation or organization as a closely-held corporation; or

(2) If the State of incorporation or organization has no definition of closely-held corporation, a corporation the stock of which—

(i) Is held by no more than 30 persons; and

(ii) Has not been and is not planned to be publicly offered.

* * * * *

Ownership or ownership interest. (1) Ownership or ownership interest means a legal or beneficial interest in an institution or its corporate parent, or a right to share in the profits derived from the operation of an institution or its corporate parent.

(2) Ownership or ownership interest does not include an ownership interest held by—

(i) A mutual fund that is regularly and publicly traded;

(ii) A U.S. institutional investor, as defined in 17 CFR 240.15a–6(b)(7);

(iii) A profit-sharing plan of the institution or its corporate parent, provided that all full-time permanent employees of the institution or its corporate parent are included in the plan; or

(iv) An employee stock ownership plan (ESOP).

Parent. The parent or parent entity is the entity that controls the specified entity directly or indirectly through one or more intermediaries.

Person. Person includes a legal entity or a natural person.

* * * * *

(c) * * *

(3) *Other entities.* The term "other entities" includes limited liability companies, limited liability partnerships, limited partnerships, and similar types of legal entities. A change in ownership and control of an entity that is neither closely-held nor required to be registered with the SEC occurs when—

(i) A person who has or acquires an ownership interest acquires both control of at least 25 percent of the total of outstanding voting stock of the corporation and control of the corporation; or

(ii) A person who holds both ownership or control of at least 25 percent of the total outstanding voting stock of the corporation and control of the corporation, ceases to own or control that proportion of the stock of the corporation, or to control the corporation.

(4) *General partnership or sole proprietorship.* A change in ownership and control occurs when a person who has or acquires an ownership interest acquires or loses control as described in this section.

(5) *Wholly owned subsidiary.* An entity that is a wholly owned subsidiary changes ownership and control when its parent entity changes ownership and control as described in this section.

* * * * *

■ 10. Section 600.32 is amended by revising paragraphs (c) introductory text, (c)(1) and (2), (d)(1), (d)(2)(i) introductory text, and (d)(2)(i)(A) and (B) to read as follows:

§ 600.32 Eligibility of additional locations.

* * * * *

(c) Notwithstanding paragraph (b) of this section, an additional location is not required to satisfy the two-year requirement of § 600.5(a)(7) or § 600.6(a)(6) if the applicant institution and the original institution are not related parties and there is no commonality of ownership, control, or management between the institutions, as described in 34 CFR 668.188(b) and 34 CFR 668.207(b) and the applicant institution agrees—

(1) To be liable for all improperly expended or unspent title IV, HEA program funds received during the current academic year and up to one academic year prior by the institution that has closed or ceased to provide educational programs;

(2) To be liable for all unpaid refunds owed to students who received title IV, HEA program funds during the current academic year and up to one academic year prior; and

* * * * *

(d)(1) An institution that conducts a teach-out at a site of a closed institution or an institution engaged in a teach-out plan approved by the institution's agency may apply to have that site approved as an additional location if—

(i) The closed institution ceased operations, or the closing institution is engaged in an orderly teach-out plan and the Secretary has evaluated and approved that plan; and

(ii) The teach-out plan required under 34 CFR 668.14(b)(31) is approved by the closed or closing institution's accrediting agency.

(2)(i) An institution that conducts a teach-out and is approved to add an additional location described in paragraph (d)(1) of this section—

(A) Does not have to meet the requirement of § 600.5(a)(7) or § 600.6(a)(6) for the additional location described in paragraph (d)(1) of this section;

(B) Is not responsible for any liabilities of the closed or closing institution as provided under paragraph (c)(1) and (c)(2) of this section if the institutions are not related parties and there is no commonality of ownership or management between the institutions, as described in 34 CFR 668.188(b) and 34 CFR 668.207(b); and

* * * * *

■ 11. Add § 600.33 to read as follows:

§ 600.33 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

■ 12. Section 600.41 is amended by:

■ a. Removing paragraph (a)(1)(ii)(B) and redesignating paragraphs (a)(1)(ii)(C) through (G) as paragraphs (a)(1)(ii)(B) through (F); and

■ b. Revising paragraph (d) introductory text.

The revision reads as follows:

§ 600.41 Termination and emergency action proceedings.

* * * * *

(d) After a termination under this section of the eligibility of an institution as a whole or as to a location or educational program becomes final, the institution may not originate applications for, make awards of or commitments for, deliver, or disburse funds under the applicable title IV, HEA program, except—

* * * * *

■ 13. Add § 600.42 to read as follows:

§ 600.42 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

PART 602—THE SECRETARY'S RECOGNITION OF ACCREDITING AGENCIES

■ 14. The authority citation for part 602 continues to read as follows:

Authority: 20 U.S.C. 1099b, unless otherwise noted.

■ 15. Section 602.3 is amended by:

■ a. Redesignating the introductory text as paragraph (b);

■ b. Adding paragraph (a); and

■ c. In newly redesignated paragraph (b):

■ i. Removing the definition of ''Branch campus'';

■ ii. Revising the definition of ''Compliance report'';

■ iii. Removing the definition of ''Correspondence education'' and ''Direct assessment program'';

■ iv. Revising the definition of ''Final accrediting action'';

■ v. Removing the definition of ''Institution of higher education or institution'';

■ vi. Adding in alphabetical order a definition for ''Monitoring report'';

■ vii. Removing the definitions of ''Nationally recognized accrediting agency, nationally recognized agency, or recognized agency'' and ''Preaccreditation'';

■ viii. Revising the definitions of ''Programmatic accrediting agency'' and ''Scope of recognition or scope'';

■ ix. Removing the definition of ''Secretary'';

■ x. Revising the definition of ''Senior Department official'';

■ ix. Removing the definition of ''State'';

■ x. Adding in alphabetical order a definition for ''Substantial compliance''; and

■ xi. Removing the definitions of ''Teach-out agreement'' and ''Teach-out plan''.

The additions and revisions read as follows:

§ 602.3 What definitions apply to this part?

(a) The following definitions are contained in the regulations for Institutional Eligibility under the Higher Education Act of 1965, as amended, 34 CFR part 600:

(1) Accredited
(2) Additional location
(3) Branch campus
(4) Correspondence course
(5) Direct assessment program
(6) Institution of higher education
(7) Nationally recognized accrediting agency
(8) Preaccreditation
(9) Religious mission
(10) Secretary
(11) State
(12) Teach-out
(13) Teach-out agreement
(14) Teach-out plan

(b) * * *

* * * * *

Compliance report means a written report that the Department requires an agency to file when the agency is found to be out of compliance to demonstrate that the agency has corrected deficiencies specified in the decision letter from the senior Department official or the Secretary. Compliance reports must be reviewed by Department staff and the Advisory Committee and approved by the senior Department official or, in the event of an appeal, by the Secretary.

* * * * *

Final accrediting action means a final determination by an accrediting agency regarding the accreditation or preaccreditation status of an institution or program. A final accrediting action is a decision made by the agency, at the conclusion of any appeals process available to the institution or program under the agency's due process policies and procedures.

* * * * *

Monitoring report means a report that an agency is required to submit to Department staff when it is found to be substantially compliant. The report contains documentation to demonstrate that—

(i) The agency is implementing its current or corrected policies; or

(ii) The agency, which is compliant in practice, has updated its policies to align with those compliant practices.

* * * * *

Programmatic accrediting agency means an agency that accredits specific educational programs, including those that prepare students in specific academic disciplines or for entry into a profession, occupation, or vocation.

* * * * *

Scope of recognition or *scope* means the range of accrediting activities for which the Secretary recognizes an agency. The Secretary may place a limitation on the scope of an agency's recognition for title IV, HEA purposes. The Secretary's designation of scope defines the recognition granted according to—

(i) Types of degrees and certificates covered;

(ii) Types of institutions and programs covered;

(iii) Types of preaccreditation status covered, if any; and

(iv) Coverage of accrediting activities related to distance education or correspondence courses.

Senior Department official means the official in the U.S. Department of Education designated by the Secretary who has, in the judgment of the Secretary, appropriate seniority and relevant subject matter knowledge to make independent decisions on accrediting agency recognition.

Substantial compliance means the agency demonstrated to the Department that it has the necessary policies, practices, and standards in place and generally adheres with fidelity to those policies, practices, and standards; or the agency has policies, practices, and standards in place that need minor modifications to reflect its generally compliant practice.

* * * * *

■ 16. Add § 602.4 to read as follows:

§ 602.4 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

■ 17. Section 602.10 is amended by revising paragraph (a) to read as follows:

§ 602.10 Link to Federal programs.

* * * * *

(a) If the agency accredits institutions of higher education, its accreditation is a required element in enabling at least one of those institutions to establish eligibility to participate in HEA programs. If, pursuant to 34 CFR 600.11(b), an agency accredits one or more institutions that participate in HEA programs and that could designate the agency as its link to HEA programs, the agency satisfies this requirement, even if the institution currently designates another institutional accrediting agency as its Federal link; or

* * * * *

■ 18. Section 602.11 is revised to read as follows:

§ 602.11 Geographic area of accrediting activities.

The agency must demonstrate that it conducts accrediting activities within—

(a) A State, if the agency is part of a State government;

(b) A region or group of States chosen by the agency in which an agency provides accreditation to a main campus, a branch campus, or an additional location of an institution. An agency whose geographic area includes a State in which a branch campus or additional location is located is not required to also accredit a main campus in that State. An agency whose geographic area includes a State in which only a branch campus or additional location is located is not required to accept an application for accreditation from other institutions in such State; or

(c) The United States.

(Authority: 20 U.S.C. 1099b)

■ 19. Section 602.12 is revised to read as follows:

§ 602.12 Accrediting experience.

(a) An agency seeking initial recognition must demonstrate that it has—

(1) Granted accreditation or preaccreditation prior to submitting an application for recognition—

(i) To one or more institutions if it is requesting recognition as an institutional accrediting agency and to one or more programs if it is requesting recognition as a programmatic accrediting agency;

(ii) That covers the range of the specific degrees, certificates, institutions, and programs for which it seeks recognition; and

(iii) In the geographic area for which it seeks recognition; and

(2) Conducted accrediting activities, including deciding whether to grant or deny accreditation or preaccreditation, for at least two years prior to seeking recognition, unless the agency seeking initial recognition is affiliated with, or is a division of, an already recognized agency.

(b)(1) A recognized agency seeking an expansion of its scope of recognition must follow the requirements of §§ 602.31 and 602.32 and demonstrate that it has accreditation or preaccreditation policies in place that meet all the criteria for recognition covering the range of the specific degrees, certificates, institutions, and programs for which it seeks the expansion of scope and has engaged and can show support from relevant constituencies for the expansion. A change to an agency's geographic area of accrediting activities does not constitute an expansion of the agency's scope of recognition, but the agency must notify the Department of, and publicly disclose on the agency's website, any such change.

(2) An agency that cannot demonstrate experience in making accreditation or preaccreditation decisions under the expanded scope at the time of its application or review for an expansion of scope may—

(i) If it is an institutional accrediting agency, be limited in the number of institutions to which it may grant accreditation under the expanded scope for a designated period of time; or

(ii) If it is a programmatic accrediting agency, be limited in the number of programs to which it may grant accreditation under that expanded scope for a certain period of time; and

(iii) Be required to submit a monitoring report regarding accreditation decisions made under the expanded scope.

(Authority: 20 U.S.C. 1099b)

§ 602.13 [Removed and Reserved]

■ 20. Section 602.13 is removed and reserved.

■ 21. Section 602.14 is revised to read as follows:

§ 602.14 Purpose and organization.

(a) The Secretary recognizes only the following four categories of accrediting agencies:

(1) A State agency that—

(i) Has as a principal purpose the accrediting of institutions of higher education, higher education programs, or both; and

(ii) Has been listed by the Secretary as a nationally recognized accrediting agency on or before October 1, 1991.

(2) An accrediting agency that—

(i) Has a voluntary membership of institutions of higher education;

(ii) Has as a principal purpose the accrediting of institutions of higher education and that accreditation is used to provide a link to Federal HEA programs in accordance with § 602.10; and

(iii) Satisfies the ''separate and independent'' requirements in paragraph (b) of this section.

(3) An accrediting agency that—

(i) Has a voluntary membership; and

(ii) Has as its principal purpose the accrediting of institutions of higher education or programs, and the accreditation it offers is used to provide a link to non-HEA Federal programs in accordance with § 602.10.

(4) An accrediting agency that, for purposes of determining eligibility for title IV, HEA programs—

(i)(A) Has a voluntary membership of individuals participating in a profession; or

(B) Has as its principal purpose the accrediting of programs within institutions that are accredited by another nationally recognized accrediting agency; and

(ii) Satisfies the ''separate and independent'' requirements in paragraph (b) of this section or obtains a waiver of those requirements under paragraph (d) of this section.

(b) For purposes of this section, ''separate and independent'' means that—

(1) The members of the agency's decision-making body, who decide the accreditation or preaccreditation status of institutions or programs, establish the agency's accreditation policies, or both, are not elected or selected by the board or chief executive officer of any related, associated, or affiliated trade association, professional organization, or membership organization and are not staff of the related, associated, or affiliated trade association, professional organization, or membership organization;

(2) At least one member of the agency's decision-making body is a representative of the public, and at least one-seventh of the body consists of representatives of the public;

(3) The agency has established and implemented guidelines for each member of the decision-making body including guidelines on avoiding conflicts of interest in making decisions;

(4) The agency's dues are paid separately from any dues paid to any related, associated, or affiliated trade association or membership organization; and

(5) The agency develops and determines its own budget, with no review by or consultation with any other entity or organization.

(c) The Secretary considers that any joint use of personnel, services, equipment, or facilities by an agency and a related, associated, or affiliated trade association or membership organization does not violate the ''separate and independent'' requirements in paragraph (b) of this section if—

(1) The agency pays the fair market value for its proportionate share of the joint use; and

(2) The joint use does not compromise the independence and confidentiality of the accreditation process.

(d) For purposes of paragraph (a)(4) of this section, the Secretary may waive the ''separate and independent'' requirements in paragraph (b) of this section if the agency demonstrates that—

(1) The Secretary listed the agency as a nationally recognized agency on or before October 1, 1991, and has recognized it continuously since that date;

(2) The related, associated, or affiliated trade association or membership organization plays no role in making or ratifying either the accrediting or policy decisions of the agency;

(3) The agency has sufficient budgetary and administrative autonomy to carry out its accrediting functions independently;

(4) The agency provides to the related, associated, or affiliated trade association or membership organization only information it makes available to the public.

(e) An agency seeking a waiver of the ''separate and independent'' requirements under paragraph (d) of this section must apply for the waiver each time the agency seeks recognition or continued recognition.

(Authority: 20 U.S.C. 1099b)

■ 22. Section 602.15 is revised to read as follows:

§ 602.15 Administrative and fiscal responsibilities.

The agency must have the administrative and fiscal capability to carry out its accreditation activities in light of its requested scope of recognition. The agency meets this requirement if the agency demonstrates that—

(a) The agency has—

(1) Adequate administrative staff and financial resources to carry out its accrediting responsibilities;

(2) Competent and knowledgeable individuals, qualified by education or experience in their own right and trained by the agency on their responsibilities, as appropriate for their roles, regarding the agency's standards, policies, and procedures, to conduct its on-site evaluations, apply or establish its policies, and make its accrediting and preaccrediting decisions, including, if applicable to the agency's scope, their responsibilities regarding distance education and correspondence courses;

(3) Academic and administrative personnel on its evaluation, policy, and decision-making bodies, if the agency accredits institutions;

(4) Educators, practitioners, and/or employers on its evaluation, policy, and decision-making bodies, if the agency accredits programs or single-purpose institutions that prepare students for a specific profession;

(5) Representatives of the public, which may include students, on all decision-making bodies; and

(6) Clear and effective controls, including guidelines, to prevent or resolve conflicts of interest, or the appearance of conflicts of interest, by the agency's—

(i) Board members;

(ii) Commissioners;

(iii) Evaluation team members;

(iv) Consultants;

(v) Administrative staff; and

(vi) Other agency representatives; and

(b) The agency maintains complete and accurate records of—

(1) Its last full accreditation or preaccreditation review of each institution or program, including on-site evaluation team reports, the institution's or program's responses to on-site reports, periodic review reports, any reports of special reviews conducted by the agency between regular reviews, and a copy of the institution's or program's most recent self-study; and

(2) All decision letters issued by the agency regarding the accreditation and preaccreditation of any institution or program and any substantive changes.

(Authority: 20 U.S.C. 1099b)

■ 23. Section 602.16 is revised to read as follows:

§ 602.16 Accreditation and preaccreditation standards.

(a) The agency must demonstrate that it has standards for accreditation, and preaccreditation, if offered, that are sufficiently rigorous to ensure that the agency is a reliable authority regarding the quality of the education or training provided by the institutions or programs it accredits. The agency meets this requirement if the following conditions are met:

(1) The agency's accreditation standards must set forth clear expectations for the institutions or programs it accredits in the following areas:

(i) Success with respect to student achievement in relation to the institution's mission, which may include different standards for different institutions or programs, as established by the institution, including, as appropriate, consideration of State licensing examinations, course completion, and job placement rates.

(ii) Curricula.

(iii) Faculty.

(iv) Facilities, equipment, and supplies.

(v) Fiscal and administrative capacity as appropriate to the specified scale of operations.

(vi) Student support services.

(vii) Recruiting and admissions practices, academic calendars, catalogs, publications, grading, and advertising.

(viii) Measures of program length and the objectives of the degrees or credentials offered.

(ix) Record of student complaints received by, or available to, the agency.

(x) Record of compliance with the institution's program responsibilities under title IV of the Act, based on the most recent student loan default rate data provided by the Secretary, the results of financial or compliance audits, program reviews, and any other information that the Secretary may provide to the agency; and

(2) The agency's preaccreditation standards, if offered, must—

(i) Be appropriately related to the agency's accreditation standards; and

(ii) Not permit the institution or program to hold preaccreditation status for more than five years before a final accrediting action is made.

(b) Agencies are not required to apply the standards described in paragraph (a)(1)(x) of this section to institutions that do not participate in title IV, HEA programs. Under such circumstance, the agency's grant of accreditation or preaccreditation must specify that the grant, by request of the institution, does not include participation by the institution in title IV, HEA programs.

(c) If the agency only accredits programs and does not serve as an institutional accrediting agency for any of those programs, its accreditation standards must address the areas in paragraph (a)(1) of this section in terms of the type and level of the program rather than in terms of the institution.

(d)(1) If the agency has or seeks to include within its scope of recognition the evaluation of the quality of institutions or programs offering distance education, correspondence courses, or direct assessment education, the agency's standards must effectively address the quality of an institution's distance education, correspondence courses, or direct assessment education in the areas identified in paragraph (a)(1) of this section.

(2) The agency is not required to have separate standards, procedures, or policies for the evaluation of distance education or correspondence courses.

(e) If none of the institutions an agency accredits participates in any title IV, HEA program, or if the agency only accredits programs within institutions that are accredited by a nationally recognized institutional accrediting agency, the agency is not required to have the accreditation standards described in paragraphs (a)(1)(viii) and (a)(1)(x) of this section.

(f) An agency that has established and applies the standards in paragraph (a) of this section may establish any additional accreditation standards it deems appropriate.

(g) Nothing in paragraph (a) of this section restricts—

(1) An accrediting agency from setting, with the involvement of its members, and applying accreditation standards for or to institutions or programs that seek review by the agency;

(2) An institution from developing and using institutional standards to show its success with respect to student achievement, which achievement may be considered as part of any accreditation review; or

(3) Agencies from having separate standards regarding an institution's or a program's process for approving curriculum to enable programs to more effectively meet the recommendations of—

(i) Industry advisory boards that include employers who hire program graduates;

(ii) Widely recognized industry standards and organizations;

(iii) Credentialing or other occupational registration or licensure; or

(iv) Employers in a given field or occupation, in making hiring decisions.

(4) Agencies from having separate faculty standards for instructors teaching courses within a dual or concurrent enrollment program, as defined in 20 U.S.C. 7801, or career and technical education courses, as long as the instructors, in the agency's judgment, are qualified by education or work experience for that role.

(Authority: 20 U.S.C. 1099b)

■ 24. Section 602.17 is revised to read as follows:

§ 602.17 Application of standards in reaching accreditation decisions.

The agency must have effective mechanisms for evaluating an institution's or program's compliance with the agency's standards before reaching a decision to accredit or preaccredit the institution or program. The agency meets this requirement if the agency demonstrates that it—

(a) Evaluates whether an institution or program—

(1) Maintains clearly specified educational objectives that are consistent with its mission and appropriate in light of the degrees or certificates awarded;

(2) Is successful in achieving its stated objectives at both the institutional and program levels; and

(3) Maintains requirements that at least conform to commonly accepted academic standards, or the equivalent, including pilot programs in § 602.18(b);

(b) Requires the institution or program to engage in a self-study process that assesses the institution's or program's education quality and success in meeting its mission and objectives, highlights opportunities for improvement, and includes a plan for making those improvements;

(c) Conducts at least one on-site review of the institution or program during which it obtains sufficient information to determine if the institution or program complies with the agency's standards;

(d) Allows the institution or program the opportunity to respond in writing to the report of the on-site review;

(e) Conducts its own analysis of the self-study and supporting documentation furnished by the institution or program, the report of the on-site review, the institution's or program's response to the report, and any other information substantiated by the agency from other sources to determine whether the institution or program complies with the agency's standards;

(f) Provides the institution or program with a detailed written report that assesses the institution's or program's compliance with the agency's standards, including areas needing improvement, and the institution's or program's performance with respect to student achievement;

(g) Requires institutions to have processes in place through which the institution establishes that a student who registers in any course offered via distance education or correspondence is the same student who academically engages in the course or program; and

(h) Makes clear in writing that institutions must use processes that protect student privacy and notify students of any projected additional student charges associated with the verification of student identity at the time of registration or enrollment.

(Authority: 20 U.S.C. 1099b)

■ 25. Section 602.18 is revised to read as follows:

§ 602.18 Ensuring consistency in decision-making.

(a) The agency must consistently apply and enforce standards that respect the stated mission of the institution, including religious mission, and that ensure that the education or training offered by an institution or program, including any offered through distance education, correspondence courses, or direct assessment education is of sufficient quality to achieve its stated objective for the duration of any accreditation or preaccreditation period.

(b) The agency meets the requirement in paragraph (a) of this section if the agency—

(1) Has written specification of the requirements for accreditation and preaccreditation that include clear standards for an institution or program to be accredited or preaccredited;

(2) Has effective controls against the inconsistent application of the agency's standards;

(3) Bases decisions regarding accreditation and preaccreditation on the agency's published standards and does not use as a negative factor the institution's religious mission-based policies, decisions, and practices in the areas covered by § 602.16(a)(1)(ii), (iii), (iv), (vi), and (vii) provided, however, that the agency may require that the institution's or program's curricula include all core components required by the agency;

(4) Has a reasonable basis for determining that the information the agency relies on for making accrediting decisions is accurate;

(5) Provides the institution or program with a detailed written report that clearly identifies any deficiencies in the institution's or program's compliance with the agency's standards; and

(6) Publishes any policies for retroactive application of an accreditation decision, which must not provide for an effective date that predates either—

(i) An earlier denial by the agency of accreditation or preaccreditation to the institution or program; or

(ii) The agency's formal approval of the institution or program for consideration in the agency's accreditation or preaccreditation process.

(c) Nothing in this part prohibits an agency, when special circumstances exist, to include innovative program delivery approaches or, when an undue hardship on students occurs, from applying equivalent written standards, policies, and procedures that provide alternative means of satisfying one or more of the requirements set forth in 34 CFR 602.16, 602.17, 602.19, 602.20, 602.22, and 602.24, as compared with written standards, policies, and procedures the agency ordinarily applies, if—

(1) The alternative standards, policies, and procedures, and the selection of institutions or programs to which they will be applied, are approved by the agency's decision-making body and otherwise meet the intent of the agency's expectations and requirements;

(2) The agency sets and applies equivalent goals and metrics for assessing the performance of institutions or programs;

(3) The agency's process for establishing and applying the alternative standards, policies, and procedures is set forth in its published accreditation manuals; and

(4) The agency requires institutions or programs seeking the application of alternative standards to demonstrate the need for an alternative assessment approach, that students will receive equivalent benefit, and that students will not be harmed through such application.

(d) Nothing in this part prohibits an agency from permitting the institution or program to be out of compliance with one or more of its standards, policies, and procedures adopted in satisfaction of §§ 602.16, 602.17, 602.19, 602.20, 602.22, and 602.24 for a period of time, as determined by the agency annually, not to exceed three years unless the agency determines there is good cause to extend the period of time, and if—

(1) The agency and the institution or program can show that the circumstances requiring the period of noncompliance are beyond the institution's or program's control, such as—

(i) A natural disaster or other catastrophic event significantly impacting an institution's or program's operations;

(ii) Accepting students from another institution that is implementing a teach-out or closing;

(iii) Significant and documented local or national economic changes, such as an economic recession or closure of a large local employer;

(iv) Changes relating to State licensure requirements;

(v) The normal application of the agency's standards creates an undue hardship on students; or

(vi) Instructors who do not meet the agency's typical faculty standards, but who are otherwise qualified by education or work experience, to teach courses within a dual or concurrent enrollment program, as defined in 20 U.S.C. 7801, or career and technical education courses;

(2) The grant of the period of noncompliance is approved by the agency's decision-making body;

(3) The agency projects that the institution or program has the resources necessary to achieve compliance with the standard, policy, or procedure postponed within the time allotted; and

(4) The institution or program demonstrates to the satisfaction of the agency that the period of noncompliance will not—

(i) Contribute to the cost of the program to the student without the student's consent;

(ii) Create any undue hardship on, or harm to, students; or

(iii) Compromise the program's academic quality.

(Authority: 20 U.S.C. 1099b)

■ 26. Section 602.19 is revised to read as follows:

§ 602.19 Monitoring and reevaluation of accredited institutions and programs.

(a) The agency must reevaluate, at regularly established intervals, the institutions or programs it has accredited or preaccredited.

(b) The agency must demonstrate it has, and effectively applies, monitoring and evaluation approaches that enable the agency to identify problems with an institution's or program's continued compliance with agency standards and that take into account institutional or program strengths and stability. These approaches must include periodic reports, and collection and analysis of key data and indicators, identified by the agency, including, but not limited to, fiscal information and measures of student achievement, consistent with the provisions of § 602.16(g). This provision does not require institutions or programs to provide annual reports on each specific accreditation criterion.

(c) Each agency must monitor overall growth of the institutions or programs it accredits and, at least annually, collect head-count enrollment data from those institutions or programs.

(d) Institutional accrediting agencies must monitor the growth of programs at institutions experiencing significant enrollment growth, as reasonably defined by the agency.

(e) Any agency that has notified the Secretary of a change in its scope in accordance with § 602.27(a) must monitor the headcount enrollment of each institution it has accredited that offers distance education or correspondence courses. The Secretary will require a review, at the next meeting of the National Advisory Committee on Institutional Quality and Integrity, of any change in scope undertaken by an agency if the enrollment of an institution that offers distance education or correspondence courses that is accredited by such agency increases by 50 percent or more within any one institutional fiscal year. If any such institution has experienced an increase in head-count enrollment of 50 percent or more within one institutional fiscal year, the agency must report that information to the Secretary within 30 days of acquiring such data.

(Authority: 20 U.S.C. 1099b)

■ 27. Section 602.20 is revised to read as follows:

§ 602.20 Enforcement of standards.

(a) If the agency's review of an institution or program under any standard indicates that the institution or program is not in compliance with that standard, the agency must—

(1) Follow its written policy for notifying the institution or program of the finding of noncompliance;

(2) Provide the institution or program with a written timeline for coming into compliance that is reasonable, as determined by the agency's decision-making body, based on the nature of the finding, the stated mission, and educational objectives of the institution or program. The timeline may include intermediate checkpoints on the way to full compliance and must not exceed the lesser of four years or 150 percent of the—

(i) Length of the program in the case of a programmatic accrediting agency; or

(ii) Length of the longest program at the institution in the case of an institutional accrediting agency;

(3) Follow its written policies and procedures for granting a good cause extension that may exceed the standard timeframe described in paragraph (a)(2) of this section when such an extension is determined by the agency to be warranted; and

(4) Have a written policy to evaluate and approve or disapprove monitoring or compliance reports it requires, provide ongoing monitoring, if warranted, and evaluate an institution's or program's progress in resolving the finding of noncompliance.

(b) Notwithstanding paragraph (a) of this section, the agency must have a policy for taking an immediate adverse action, and take such action, when the agency has determined that such action is warranted.

(c) If the institution or program does not bring itself into compliance within the period specified in paragraph (a) of this section, the agency must take adverse action against the institution or program, but may maintain the institution's or program's accreditation or preaccreditation until the institution or program has had reasonable time to complete the activities in its teach-out plan or to fulfill the obligations of any teach-out agreement to assist students in transferring or completing their programs.

(d) An agency that accredits institutions may limit the adverse or other action to particular programs that are offered by the institution or to particular additional locations of an institution, without necessarily taking action against the entire institution and all of its programs, provided the noncompliance was limited to that particular program or location.

(e) All adverse actions taken under this subpart are subject to the arbitration requirements in 20 U.S.C. 1099b(e).

(f) An agency is not responsible for enforcing requirements in 34 CFR 668.14, 668.15, 668.16, 668.41, or 668.46, but if, in the course of an agency's work, it identifies instances or potential instances of noncompliance with any of these requirements, it must notify the Department.

(g) The Secretary may not require an agency to take action against an institution or program that does not participate in any title IV, HEA or other Federal program as a result of a requirement specified in this part.

(Authority: 20 U.S.C. 1099b)

■ 28. Section 602.21 is amended by revising paragraphs (a) and (c) and adding paragraph (d) to read as follows:

§ 602.21 Review of standards.

(a) The agency must maintain a comprehensive systematic program of review that involves all relevant constituencies and that demonstrates that its standards are adequate to evaluate the quality of the education or training provided by the institutions and programs it accredits and relevant to the educational or training needs of students.

* * * * *

(c) If the agency determines, at any point during its systematic program of review, that it needs to make changes to its standards, the agency must initiate action within 12 months to make the changes and must complete that action within a reasonable period of time.

(d) Before finalizing any changes to its standards, the agency must—

(1) Provide notice to all of the agency's relevant constituencies, and other parties who have made their interest known to the agency, of the changes the agency proposes to make;

(2) Give the constituencies and other interested parties adequate opportunity to comment on the proposed changes; and

(3) Take into account and be responsive to any comments on the proposed changes submitted timely by the relevant constituencies and other interested parties.

* * * * *

■ 29. Section 602.22 is revised to read as follows:

§ 602.22 Substantive changes and other reporting requirements.

(a)(1) If the agency accredits institutions, it must maintain adequate substantive change policies that ensure that any substantive change, as defined in this section, after the agency has accredited or preaccredited the institution does not adversely affect the capacity of the institution to continue to meet the agency's standards. The agency meets this requirement if—

(i) The agency requires the institution to obtain the agency's approval of the substantive change before the agency includes the change in the scope of accreditation or preaccreditation it previously granted to the institution; and

(ii) The agency's definition of substantive change covers high-impact, high-risk changes, including at least the following:

(A) Any substantial change in the established mission or objectives of the institution or its programs.

(B) Any change in the legal status, form of control, or ownership of the institution.

(C) The addition of programs that represent a significant departure from the existing offerings or educational programs, or method of delivery, from those that were offered or used when the agency last evaluated the institution.

(D) The addition of graduate programs by an institution that previously offered only undergraduate programs or certificates.

(E) A change in the way an institution measures student progress, including whether the institution measures progress in clock hours or credit-hours, semesters, trimesters, or quarters, or uses time-based or non-time-based methods.

(F) A substantial increase in the number of clock hours or credit hours awarded, or an increase in the level of credential awarded, for successful completion of one or more programs.

(G) The acquisition of any other institution or any program or location of another institution.

(H) The addition of a permanent location at a site at which the institution is conducting a teach-out for students of another institution that has ceased operating before all students have completed their program of study.

(I) The addition of a new location or branch campus, except as provided in paragraph (c) of this section. The agency's review must include assessment of the institution's fiscal and administrative capability to operate the location or branch campus, the regular evaluation of locations, and verification of the following:

(*1*) Academic control is clearly identified by the institution.

(*2*) The institution has adequate faculty, facilities, resources, and academic and student support systems in place.

(*3*) The institution is financially stable.

(*4*) The institution had engaged in long-range planning for expansion.

(J) Entering into a written arrangement under 34 CFR 668.5 under which an institution or organization not certified to participate in the title IV, HEA programs offers more than 25 and up to 50 percent of one or more of the accredited institution's educational programs.

(K) Addition of each direct assessment program.

(2)(i) For substantive changes under only paragraph (a)(1)(ii)(C), (E), (F), (H), or (J) of this section, the agency's decision-making body may designate agency senior staff to approve or disapprove the request in a timely, fair, and equitable manner; and

(ii) In the case of a request under paragraph (a)(1)(ii)(J) of this section, the agency must make a final decision within 90 days of receipt of a materially complete request, unless the agency or its staff determine significant circumstances related to the substantive change require a review by the agency's decision-making body to occur within 180 days.

(b) Institutions that have been placed on probation or equivalent status, have been subject to negative action by the agency over the prior three academic years, or are under a provisional certification, as provided in 34 CFR 668.13, must receive prior approval for the following additional changes (all other institutions must report these changes within 30 days to their accrediting agency):

(1) A change in an existing program's method of delivery.

(2) An aggregate change of 25 percent or more of the clock hours, credit hours, or content of a program since the agency's most recent accreditation review.

(3) The development of customized pathways or abbreviated or modified courses or programs to—

(i) Accommodate and recognize a student's existing knowledge, such as knowledge attained through employment or military service; and

(ii) Close competency gaps between demonstrated prior knowledge or competency and the full requirements of a particular course or program.

(4) Entering into a written arrangement under 34 CFR 668.5 under which an institution or organization not certified to participate in the title IV, HEA programs offers up to 25 percent of one or more of the accredited institution's educational programs.

(c) Institutions that have successfully completed at least one cycle of accreditation and have received agency approval for the addition of at least two additional locations as provided in paragraph (a)(1)(ii)(I) of this section, and that have not been placed on probation or equivalent status or been subject to a negative action by the agency over the prior three academic years, and that are not under a provisional certification, as provided in 34 CFR 668.13, need not apply for agency approval of subsequent additions of locations, and must report these changes to the accrediting agency within 30 days, if the institution has met criteria established by the agency indicating sufficient capacity to add additional locations without individual prior approvals, including, at a minimum, satisfactory evidence of a system to ensure quality across a distributed enterprise that includes—

(1) Clearly identified academic control;

(2) Regular evaluation of the locations;

(3) Adequate faculty, facilities, resources, and academic and student support systems;

(4) Financial stability; and

(5) Long-range planning for expansion.

(d) The agency must have an effective mechanism for conducting, at reasonable intervals, visits to a representative sample of additional locations approved under paragraphs (a)(1)(ii)(H) and (I) of this section.

(e) The agency may determine the procedures it uses to grant prior approval of the substantive change. However, these procedures must specify an effective date, on which the change is included in the program's or institution's grant of accreditation or preaccreditation. The date of prior approval must not pre-date either an earlier agency denial of the substantive change, or the agency's formal acceptance of the application for the substantive change for inclusion in the program's or institution's grant of accreditation or preaccreditation. An agency may designate the date of a change in ownership as the effective date of its approval of that substantive change if the accreditation decision is made within 30 days of the change in ownership. Except as provided in paragraphs (d) and (f) of this section, an agency may require a visit before granting such an approval.

(f) Except as provided in paragraph (c) of this section, if the agency's accreditation of an institution enables the institution to seek eligibility to participate in title IV, HEA programs, the agency's procedures for the approval of an additional location that is not a branch campus where at least 50 percent of an educational program is offered must include—

(1) A visit, within six months, to each additional location the institution establishes, if the institution—

(i) Has a total of three or fewer additional locations;

(ii) Has not demonstrated, to the agency's satisfaction, that the additional location is meeting all of the agency's standards that apply to that additional location; or

(iii) Has been placed on warning, probation, or show cause by the agency or is subject to some limitation by the agency on its accreditation or preaccreditation status;

(2) A mechanism for conducting, at reasonable intervals, visits to a representative sample of additional locations of institutions that operate more than three additional locations; and

(3) A mechanism, which may, at the agency's discretion, include visits to additional locations, for ensuring that accredited and preaccredited institutions that experience rapid growth in the number of additional locations maintain education quality.

(g) The purpose of the visits described in paragraph (f) of this section is to verify that the additional location has the personnel, facilities, and resources the institution claimed it had in its application to the agency for approval of the additional location.

(h) The agency's substantive change policy must define when the changes made or proposed by an institution are or would be sufficiently extensive to require the agency to conduct a new comprehensive evaluation of that institution.

(Authority: 20 U.S.C. 1099b)

■ 30. Section 602.23 is amended by:

■ a. Revising paragraphs (a)(2), (a)(5) introductory text, and (d);

■ b. Redesignating paragraph (f) as paragraph (g); and

■ c. Adding a new paragraph (f).

The revisions and addition read as follows:

§ 602.23 Operating procedures all agencies must have.

(a) * * *

(2) The procedures that institutions or programs must follow in applying for accreditation, preaccreditation, or substantive changes and the sequencing of those steps relative to any applications or decisions required by States or the Department relative to the agency's preaccreditation, accreditation, or substantive change decisions;

* * * * *

(5) A list of the names, academic and professional qualifications, and relevant employment and organizational affiliations of—

* * * * *

(d) If an institution or program elects to make a public disclosure of its accreditation or preaccreditation status, the agency must ensure that the institution or program discloses that status accurately, including the specific academic or instructional programs covered by that status and the name and contact information for the agency.

* * * * *

(f)(1) If preaccreditation is offered—

(i) The agency's preaccreditation policies must limit the status to institutions or programs that the agency has determined are likely to succeed in obtaining accreditation;

(ii) The agency must require all preaccredited institutions to have a teach-out plan, which must ensure students completing the teach-out would meet curricular requirements for professional licensure or certification, if any, and which must include a list of academic programs offered by the institution and the names of other institutions that offer similar programs and that could potentially enter into a teach-out agreement with the institution;

(iii) An agency that denies accreditation to an institution it has preaccredited may maintain the institution's preaccreditation for currently enrolled students until the institution has had a reasonable time to complete the activities in its teach-out plan to assist students in transferring or completing their programs, but for no more than 120 days unless approved by the agency for good cause; and

(iv) The agency may not move an accredited institution or program from accredited to preaccredited status unless, following the loss of accreditation, the institution or program applies for initial accreditation and is awarded preaccreditation status under the new application. Institutions that participated in the title IV, HEA programs before the loss of accreditation are subject to the requirements of 34 CFR 600.11(c).

(2) All credits and degrees earned and issued by an institution or program holding preaccreditation from a nationally recognized agency are considered by the Secretary to be from an accredited institution or program.

* * * * *

■ 31. Section 602.24 is revised to read as follows:

§ 602.24 Additional procedures certain institutional agencies must have.

If the agency is an institutional accrediting agency and its accreditation or preaccreditation enables those institutions to obtain eligibility to participate in title IV, HEA programs, the agency must demonstrate that it has established and uses all of the following procedures:

(a) *Branch campus.* The agency must require the institution to notify the agency if it plans to establish a branch campus and to submit a business plan for the branch campus that describes—

(1) The educational program to be offered at the branch campus; and

(2) The projected revenues and expenditures and cash flow at the branch campus.

(b) *Site visits.* The agency must undertake a site visit to a new branch campus or following a change of ownership or control as soon as practicable, but no later than six months, after the establishment of that campus or the change of ownership or control.

(c) *Teach-out plans and agreements.* (1) The agency must require an institution it accredits to submit a teach-out plan as defined in 34 CFR 600.2 to the agency for approval upon the occurrence of any of the following events:

(i) For a nonprofit or proprietary institution, the Secretary notifies the agency of a determination by the institution's independent auditor expressing doubt about the institution's ability to operate as a going concern or indicating an adverse opinion or a finding of material weakness related to financial stability.

(ii) The agency acts to place the institution on probation or equivalent status.

(iii) The Secretary notifies the agency that the institution is participating in title IV, HEA programs under a provisional program participation agreement and the Secretary has required a teach-out plan as a condition of participation.

(2) The agency must require an institution it accredits or preaccredits to submit a teach-out plan and, if practicable, teach-out agreements (as defined in 34 CFR 600.2) to the agency for approval upon the occurrence of any of the following events:

(i) The Secretary notifies the agency that it has placed the institution on the reimbursement payment method under 34 CFR 668.162(c) or the heightened cash monitoring payment method requiring the Secretary's review of the institution's supporting documentation under 34 CFR 668.162(d)(2).

(ii) The Secretary notifies the agency that the Secretary has initiated an emergency action against an institution, in accordance with section 487(c)(1)(G) of the HEA, or an action to limit, suspend, or terminate an institution participating in any title IV, HEA program, in accordance with section 487(c)(1)(F) of the HEA.

(iii) The agency acts to withdraw, terminate, or suspend the accreditation or preaccreditation of the institution.

(iv) The institution notifies the agency that it intends to cease operations entirely or close a location that provides one hundred percent of at least one program, including if the location is being moved and is considered by the Secretary to be a closed school.

(v) A State licensing or authorizing agency notifies the agency that an institution's license or legal authorization to provide an educational program has been or will be revoked.

(3) The agency must evaluate the teach-out plan to ensure it includes a list of currently enrolled students, academic programs offered by the institution, and the names of other institutions that offer similar programs and that could potentially enter into a teach-out agreement with the institution.

(4) If the agency approves a teach-out plan that includes a program or institution that is accredited by another recognized accrediting agency, it must notify that accrediting agency of its approval.

(5) The agency may require an institution it accredits or preaccredits to enter into a teach-out agreement as part of its teach-out plan.

(6) The agency must require a closing institution to include in its teach-out agreement—

(i) A complete list of students currently enrolled in each program at the institution and the program requirements each student has completed;

(ii) A plan to provide all potentially eligible students with information about how to obtain a closed school discharge and, if applicable, information on State refund policies;

(iii) A record retention plan to be provided to all enrolled students that delineates the final disposition of teach-out records (*e.g.,* student transcripts, billing, financial aid records);

(iv) Information on the number and types of credits the teach-out institution is willing to accept prior to the student's enrollment; and

(v) A clear statement to students of the tuition and fees of the educational program and the number and types of credits that will be accepted by the teach-out institution.

(7) The agency must require an institution it accredits or preaccredits that enters into a teach-out agreement, either on its own or at the request of the agency, to submit that teach-out agreement for approval. The agency may approve the teach-out agreement only if the agreement meets the requirements of 34 CFR 600.2 and this section, is consistent with applicable standards and regulations, and provides for the equitable treatment of students being served by ensuring that the teach-out institution—

(i) Has the necessary experience, resources, and support services to provide an educational program that is of acceptable quality and reasonably similar in content, delivery modality, and scheduling to that provided by the institution that is ceasing operations either entirely or at one of its locations; however, while an option via an alternate method of delivery may be made available to students, such an option is not sufficient unless an option via the same method of delivery as the original educational program is also provided;

(ii) Has the capacity to carry out its mission and meet all obligations to existing students; and

(iii) Demonstrates that it—

(A) Can provide students access to the program and services without requiring them to move or travel for substantial distances or durations; and

(B) Will provide students with information about additional charges, if any.

(8) Irrespective of any teach-out plan or signed teach-out agreement, the agency must not permit an institution to serve as a teach-out institution under the following conditions:

(i) The institution is subject to the conditions in paragraph (c)(1) or (2) of this section.

(ii) The institution is under investigation, subject to an action, or being prosecuted for an issue related to academic quality, misrepresentation, fraud, or other severe matters by a law enforcement agency.

(9) The agency is permitted to waive requirements regarding the percentage of credits that must be earned by a student at the institution awarding the educational credential if the student is completing his or her program through a written teach-out agreement or transfer.

(10) The agency must require the institution to provide copies of all notifications from the institution related to the institution's closure or to teach-out options to ensure the information accurately represents students' ability to transfer credits and may require corrections.

(d) *Closed institution.* If an institution the agency accredits or preaccredits closes without a teach-out plan or agreement, the agency must work with the Department and the appropriate State agency, to the extent feasible, to assist students in finding reasonable opportunities to complete their education without additional charges.

(e) *Transfer of credit policies.* The accrediting agency must confirm, as part of its review for initial accreditation or preaccreditation, or renewal of accreditation, that the institution has transfer of credit policies that—

(1) Are publicly disclosed in accordance with § 668.43(a)(11); and

(2) Include a statement of the criteria established by the institution regarding the transfer of credit earned at another institution of higher education.

(f) *Agency designations.* In its accrediting practice, the agency must—

(1) Adopt and apply the definitions of ''branch campus'' and ''additional location'' in 34 CFR 600.2;

(2) On the Secretary's request, conform its designations of an institution's branch campuses and additional locations with the Secretary's if it learns its designations diverge; and

(3) Ensure that it does not accredit or preaccredit an institution comprising fewer than all of the programs, branch campuses, and locations of an institution as certified for title IV participation by the Secretary, except with notice to and permission from the Secretary.

(Authority: 20 U.S.C. 1099b)

■ 32. Section 602.25 is amended by revising paragraphs (f)(1)(iii) and (iv) to read as follows:

§ 602.25 Due process.

* * * * *

(f) * * *

(1) * * *

(iii) Does not serve only an advisory or procedural role, and has and uses the authority to make the following decisions: To affirm, amend, or remand adverse actions of the original decision-making body; and

(iv) Affirms, amends, or remands the adverse action. A decision to affirm or amend the adverse action is implemented by the appeals panel or by the original decision-making body, at the agency's option; however, in the event of a decision by the appeals panel to remand the adverse action to the original decision-making body for further consideration, the appeals panel must explain the basis for a decision that differs from that of the original decision-making body and the original decision-making body in a remand must act in a manner consistent with the appeals panel's decisions or instructions.

* * * * *

■ 33. Section 602.26 is amended by:

■ a. Redesignating paragraphs (b), (c), (d), and (e) as paragraphs (c), (d), (e), and (f);

■ b. Adding a new paragraph (b); and

■ c. Revising newly redesignated paragraphs (c), (d), (e), and (f).

The addition and revisions read as follows:

§ 602.26 Notification of accrediting decisions.

* * * * *

(b) Provides written notice of a final decision of a probation or equivalent status or an initiated adverse action to the Secretary, the appropriate State licensing or authorizing agency, and the appropriate accrediting agencies at the same time it notifies the institution or program of the decision and requires the institution or program to disclose such an action within seven business days of receipt to all current and prospective students;

(c) Provides written notice of the following types of decisions to the Secretary, the appropriate State licensing or authorizing agency, and the appropriate accrediting agencies at the same time it notifies the institution or program of the decision, but no later than 30 days after it reaches the decision:

(1) A final decision to deny, withdraw, suspend, revoke, or terminate the accreditation or preaccreditation of an institution or program.

(2) A final decision to take any other adverse action, as defined by the agency, not listed in paragraph (c)(1) of this section;

(d) Provides written notice to the public of the decisions listed in paragraphs (b) and (c) of this section within one business day of its notice to the institution or program;

(e) For any decision listed in paragraph (c) of this section, requires the institution or program to disclose the decision to current and prospective students within seven business days of receipt and makes available to the Secretary, the appropriate State licensing or authorizing agency, and the public, no later than 60 days after the decision, a brief statement summarizing the reasons for the agency's decision and the official comments that the affected institution or program may wish to make with regard to that decision, or evidence that the affected institution has been offered the opportunity to provide official comment;

(f) Notifies the Secretary, the appropriate State licensing or authorizing agency, the appropriate accrediting agencies, and, upon request, the public if an accredited or preaccredited institution or program—

(1) Decides to withdraw voluntarily from accreditation or preaccreditation, within 10 business days of receiving notification from the institution or program that it is withdrawing voluntarily from accreditation or preaccreditation; or

(2) Lets its accreditation or preaccreditation lapse, within 10 business days of the date on which accreditation or preaccreditation lapses.

* * * * *

■ 34. Section 602.27 is revised to read as follows:

§ 602.27 Other information an agency must provide the Department.

(a) The agency must submit to the Department—

(1) A list, updated annually, of its accredited and preaccredited institutions and programs, which may be provided electronically;

(2) A summary of the agency's major accrediting activities during the previous year (an annual data summary), if requested by the Secretary to carry out the Secretary's responsibilities related to this part;

(3) Any proposed change in the agency's policies, procedures, or accreditation or preaccreditation standards that might alter its—

(i) Scope of recognition, except as provided in paragraph (a)(4) of this section; or

(ii) Compliance with the criteria for recognition;

(4) Notification that the agency has expanded its scope of recognition to include distance education or correspondence courses as provided in section 496(a)(4)(B)(i)(I) of the HEA. Such an expansion of scope is effective on the date the Department receives the notification;

(5) The name of any institution or program it accredits that the agency has reason to believe is failing to meet its title IV, HEA program responsibilities or is engaged in fraud or abuse, along with the agency's reasons for concern about the institution or program; and

(6) If the Secretary requests, information that may bear upon an accredited or preaccredited institution's compliance with its title IV, HEA program responsibilities, including the eligibility of the institution or program to participate in title IV, HEA programs.

(b) If an agency has a policy regarding notification to an institution or program of contact with the Department in accordance with paragraph (a)(5) or (6) of this section, it must provide for a case-by-case review of the circumstances surrounding the contact, and the need for the confidentiality of that contact. When the Department determines a compelling need for confidentiality, the agency must consider that contact confidential upon specific request of the Department.

■ 35. Add § 602.29 to read as follows:

§ 602.29 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

(Authority: 20 U.S.C. 1099b)

§ 602.30 [Removed and Reserved]

■ 36. Section 602.30 is removed and reserved.

■ 37. Section 602.31 is revised to read as follows:

§ 602.31 Agency applications and reports to be submitted to the Department.

(a) *Applications for recognition or renewal of recognition.* An accrediting agency seeking initial or continued recognition must submit a written application to the Secretary. Each accrediting agency must submit an application for continued recognition at least once every five years, or within a shorter time period specified in the final recognition decision, and, for an agency seeking renewal of recognition, 24 months prior to the date on which the current recognition expires. The application, to be submitted concurrently with information required by § 602.32(a) and, if applicable, § 602.32(b), must consist of—

(1) A statement of the agency's requested scope of recognition;

(2) Documentation that the agency complies with the criteria for recognition listed in subpart B of this part, including a copy of its policies and procedures manual and its accreditation standards; and

(3) Documentation of how an agency that includes or seeks to include distance education or correspondence courses in its scope of recognition applies its standards in evaluating programs and institutions it accredits that offer distance education or correspondence courses.

(b) *Applications for expansions of scope.* An agency seeking an expansion of scope by application must submit a written application to the Secretary. The application must—

(1) Specify the scope requested;

(2) Provide copies of any relevant standards, policies, or procedures developed and applied by the agency for its use in accrediting activities conducted within the expansion of scope proposed and documentation of the application of these standards, policies, or procedures; and

(3) Provide the materials required by § 602.32(j) and, if applicable, § 602.32(l).

(c) *Compliance or monitoring reports.* If an agency is required to submit a compliance or monitoring report, it must do so within 30 days following the end of the period for achieving compliance as specified in the decision of the senior Department official or Secretary, as applicable.

(d) *Review following an increase in headcount enrollment.* If an agency that has notified the Secretary in writing of its change in scope to include distance education or correspondence courses in accordance with § 602.27(a)(4) reports an increase in headcount enrollment in accordance with § 602.19(e) for an institution it accredits, or if the Department notifies the agency of such an increase at one of the agency's accredited institutions, the agency must, within 45 days of reporting the increase or receiving notice of the increase from the Department, as applicable, submit a report explaining—

(1) How the agency evaluates the capacity of the institutions or programs it accredits to accommodate significant growth in enrollment and to maintain education quality;

(2) The specific circumstances regarding the growth at the institution or program that triggered the review and the results of any evaluation conducted by the agency; and

(3) Any other information that the agency deems appropriate to demonstrate the effective application of the criteria for recognition or that the Department may require.

(e) *Consent to sharing of information.* By submitting an application for recognition, the agency authorizes Department staff throughout the application process and during any period of recognition—

(1) To observe its site visits to one or more of the institutions or programs it accredits or preaccredits, on an announced or unannounced basis;

(2) To visit locations where agency activities such as training, review and evaluation panel meetings, and decision meetings take place, on an announced or unannounced basis;

(3) To obtain copies of all documents the staff deems necessary to complete its review of the agency; and

(4) To gain access to agency records, personnel, and facilities.

(f) *Public availability of agency records obtained by the Department.*

(1) The Secretary's processing and decision-making on requests for public disclosure of agency materials reviewed under this part are governed by the Freedom of Information Act, 5 U.S.C. 552; the Trade Secrets Act, 18 U.S.C. 1905; the Privacy Act of 1974, as amended, 5 U.S.C. 552a; the Federal Advisory Committee Act, 5 U.S.C. Appdx. 1; and all other applicable laws. In recognition proceedings, agencies must, before submission to the Department—

(i) Redact the names and any other personally identifiable information about individual students and any other individuals who are not agents of the agency or of an institution or program the agency is reviewing;

(ii) Redact the personal addresses, personal telephone numbers, personal email addresses, Social Security numbers, and any other personally identifiable information regarding individuals who are acting as agents of the agency or of an institution or program under review;

(iii) Designate all business information within agency submissions that the agency believes would be exempt from disclosure under exemption 4 of the Freedom of Information Act (FOIA), 5 U.S.C. 552(b)(4). A blanket designation of all information contained within a submission, or of a category of documents, as meeting this exemption will not be considered a good faith effort and will be disregarded; and

(iv) Ensure documents submitted are only those required for Department review or as requested by Department officials.

(2) The agency may, but is not required to, redact the identities of institutions or programs that it believes are not essential to the Department's review of the agency and may identify any other material the agency believes would be exempt from public disclosure under FOIA, the factual basis for the request, and any legal basis the agency has identified for withholding the document from public disclosure.

(3) The Secretary processes FOIA requests in accordance with 34 CFR part 5 and makes all documents provided to the Advisory Committee available to the public.

(4) Upon request by Department staff, the agency must disclose to Department staff any specific material the agency has redacted that Department staff believes is needed to conduct the staff review. Department staff will make any arrangements needed to ensure that the materials are not made public if prohibited by law.

(g) *Length of submissions.* The Secretary may publish reasonable, uniform limits on the length of submissions described in this section.

(Authority: 20 U.S.C. 1099b)

■ 38. Section 602.32 is revised to read as follows:

§ 602.32 Procedures for submitting an application for recognition, renewal of recognition, expansion of scope, compliance reports, and increases in enrollment.

(a) An agency preparing for renewing recognition will submit, 24 months prior to the date on which the current recognition expires, and in conjunction with the materials required by § 602.31(a), a list of all institutions or programs that the agency plans to consider for an award of initial or renewed accreditation over the next year or, if none, over the succeeding year, as well as any institutions or programs currently subject to compliance report review or reporting requirements. An agency that does not anticipate a review of any institution or program for an initial award of accreditation or renewed accreditation in the 24 months prior to the date of recognition expiration may submit a list of institutions or programs it has reviewed for an initial award of accreditation or renewal of accreditation at any time since the prior award of recognition or leading up to the application for an initial award of recognition.

(b) An agency seeking initial recognition must follow the policies and procedures outlined in paragraph (a) of this section, but in addition must also submit—

(1) Letters of support for the agency from at least three accredited institutions or programs, three educators, and, if appropriate, three employers or practitioners, explaining the role for such an agency and the reasons for their support; and

(2) Letters from at least one program or institution that will rely on the agency as its link to a Federal program upon recognition of the agency or intends to seek multiple accreditation which will allow it in the future to designate the agency as its Federal link.

(c) Department staff publishes a notice of the agency's submission of an application in the **Federal Register** inviting the public to comment on the agency's compliance with the criteria for recognition and establishing a deadline for receipt of public comment.

(d) The Department staff analyzes the agency's application for initial or renewal of recognition, to determine whether the agency satisfies the criteria for recognition, taking into account all available relevant information concerning the compliance of the agency with those criteria and the agency's consistency in applying the criteria. The analysis of an application may include and, after January 1, 2021, will include—

(1)(i) Observations from site visits, on an announced or unannounced basis, to the agency or to a location where the agency conducts activities such as training, review and evaluation panel meetings, or decision meetings;

(ii) Observations from site visits, on an announced or unannounced basis, to one or more of the institutions or programs the agency accredits or preaccredits;

(iii) A file review at the agency of documents, at which time Department staff may retain copies of documents needed for inclusion in the administrative record;

(iv) Review of the public comments and other third-party information Department staff receives by the established deadline, the agency's responses to the third-party comments, as appropriate, and any other information Department staff obtains for purposes of evaluating the agency under this part; and

(v) Review of complaints or legal actions involving the agency; and

(2) Review of complaints or legal actions against an institution or program accredited or preaccredited by the agency, which may be considered but are not necessarily determinative of compliance.

(e) The Department may view as a negative factor when considering an application for initial, or expansion of scope of, recognition as proposed by an agency, among other factors, any evidence that the agency was part of a concerted effort to unnecessarily restrict the qualifications necessary for a student to sit for a licensure or certification examination or otherwise be eligible for entry into a profession.

(f) Department staff's evaluation of an agency may also include a review of information directly related to institutions or programs accredited or preaccredited by the agency relative to their compliance with the agency's standards, the effectiveness of the standards, and the agency's application of those standards, but must make all materials relied upon in the evaluation available to the agency for review and comment.

(g) If, at any point in its evaluation of an agency seeking initial recognition, Department staff determines that the agency fails to demonstrate compliance with the basic eligibility requirements in §§ 602.10 through 602.15, the staff—

(1) Returns the agency's application and provides the agency with an explanation of the deficiencies that caused staff to take that action; and

(2) Requires that the agency withdraw its application and instructs the agency that it may reapply when the agency is able to demonstrate compliance.

(h) Except with respect to an application that has been returned and is withdrawn under paragraph (g) of this section, when Department staff completes its evaluation of the agency, the staff may and, after July 1, 2021, will—

(1) Prepare a written draft analysis of the agency's application;

(2) Send to the agency the draft analysis including any identified areas of potential noncompliance and all third-party comments and complaints, if applicable, and any other materials the Department received by the established deadline or is including in its review;

(3) Invite the agency to provide a written response to the draft analysis and third-party comments or other material included in the review, specifying a deadline that provides at least 180 days for the agency's response;

(4) Review the response to the draft analysis the agency submits, if any, and prepares the written final analysis—

(i) Indicating that the agency is in full compliance, substantial compliance, or noncompliance with each of the criteria for recognition; and

(ii) Recommending that the senior Department official approve, renew with compliance reporting requirements due in 12 months, renew with compliance reporting requirements with a deadline in excess of 12 months based on a finding of good cause and extraordinary circumstances, approve with monitoring or other reporting requirements, or deny, limit, suspend, or terminate recognition; and

(5) Provide to the agency, no later than 30 days before the Advisory Committee meeting, the final staff analysis and any other available information provided to the Advisory Committee under § 602.34(c).

(i) The agency may request that the Advisory Committee defer acting on an application at that Advisory Committee meeting if Department staff fails to provide the agency with the materials described, and within the timeframes provided, in paragraphs (g)(3) and (5) of this section. If the Department staff's failure to send the materials in accordance with the timeframe described in paragraph (g)(3) or (5) of this section is due to the failure of the agency to, by the deadline established by the Secretary, submit reports to the Department, other information the Secretary requested, or its response to the draft analysis, the agency forfeits its right to request a deferral of its application.

(j) An agency seeking an expansion of scope, either as part of the regular renewal of recognition process or during a period of recognition, must submit an application to the Secretary, separately or as part of the policies and procedures outlined in paragraph (a) of this section, that satisfies the requirements of §§ 602.12(b) and 602.31(b) and—

(1) States the reason for the expansion of scope request;

(2) Includes letters from at least three institutions or programs that would seek accreditation under one or more of the elements of the expansion of scope; and

(3) Explains how the agency must expand capacity to support the expansion of scope, if applicable, and, if necessary, how it will do so and how its budget will support that expansion of capacity.

(k) The Department may view as a negative factor when considering an application for initial or expansion of scope of recognition as proposed by an agency, among other factors, any evidence that the agency was part of a concerted effort to unnecessarily restrict the qualifications necessary for a student to sit for a licensure or certification examination or otherwise be eligible for entry into a profession.

(l) Department staff's evaluation of a compliance report includes review of public comments solicited by Department staff in the **Federal Register** received by the established deadline, the agency's responses to the third-party comments, as appropriate, other third-party information Department staff receives, and additional information described in paragraphs (d) and (e) of this section, as appropriate.

(m) The Department will process an application for an expansion of scope, compliance report, or increase in enrollment report in accordance with paragraphs with paragraphs (c) through (h) of this section.

(Authority: 20 U.S.C. 1099b)

■ 39. Section 602.33 is revised to read as follows:

§ 602.33 Procedures for review of agencies during the period of recognition, including the review of monitoring reports.

(a) Department staff may review the compliance of a recognized agency with the criteria for recognition at any time—

(1) Based on the submission of a monitoring report as directed by a decision by the senior Department official or Secretary; or

(2) Based on any information that, as determined by Department staff, appears credible and raises concerns relevant to the criteria for recognition.

(b) The review may include, but need not be limited to, any of the activities described in § 602.32(d) and (f).

(c) If, in the course of the review, and after providing the agency the documentation concerning the inquiry and consulting with the agency, Department staff notes that one or more deficiencies may exist in the agency's compliance with the criteria for recognition or in the agency's effective application of those criteria, Department staff—

(1) Prepares a written draft analysis of the agency's compliance with the criteria of concern;

(2) Sends to the agency the draft analysis including any identified areas of noncompliance and all supporting documentation;

(3) Invites the agency to provide a written response to the draft analysis within 90 days; and

(4) Reviews any response provided by the agency, including any monitoring report submitted, and either—

(i) Concludes the review;

(ii) Continues monitoring of the agency's areas of deficiencies; or

(iii)(A) Notifies the agency, in the event that the agency's response or monitoring report does not satisfy the staff, that the draft analysis will be finalized for presentation to the Advisory Committee;

(B) Publishes a notice in the **Federal Register** with an invitation for the public to comment on the agency's compliance with the criteria in question and establishing a deadline for receipt of public comment;

(C) Provides the agency with a copy of all public comments received and invites a written response from the agency;

(D) Finalizes the staff analysis as necessary to reflect its review of any agency response and any public comment received;

(E) Provides to the agency, no later than 30 days before the Advisory Committee meeting, the final staff analysis and a recognition recommendation and any other information provided to the Advisory Committee under § 602.34(c); and

(F) Submits the matter for review by the Advisory Committee in accordance with § 602.34.

(Authority: 20 U.S.C. 1099b)

■ 40. Section 602.34 is revised to read as follows:

§ 602.34 Advisory Committee meetings.

(a) Department staff submits a proposed schedule to the Chairperson of the Advisory Committee based on anticipated completion of staff analyses.

(b) The Chairperson of the Advisory Committee establishes an agenda for the next meeting and, in accordance with the Federal Advisory Committee Act, presents it to the Designated Federal Official for approval.

(c) Before the Advisory Committee meeting, Department staff provides the Advisory Committee with—

(1) The agency's application for recognition, renewal of recognition, or expansion of scope when Advisory Committee review is required, or the agency's compliance report and supporting documentation submitted by the agency;

(2) The final Department staff analysis of the agency developed in accordance with § 602.32 or § 602.33, and any supporting documentation;

(3) The agency's response to the draft analysis;

(4) Any written third-party comments the Department received about the agency on or before the established deadline;

(5) Any agency response to third-party comments; and

(6) Any other information Department staff relied upon in developing its analysis.

(d) At least 30 days before the Advisory Committee meeting, the Department publishes a notice of the meeting in the **Federal Register** inviting interested parties to make oral presentations before the Advisory Committee.

(e) The Advisory Committee considers the materials provided under paragraph (c) of this section in a public meeting and invites Department staff, the agency, and other interested parties to make oral presentations during the meeting. A transcript is made of all Advisory Committee meetings.

(f) The written motion adopted by the Advisory Committee regarding each agency's recognition will be made available during the Advisory Committee meeting. The Department will provide each agency, upon request, with a copy of the motion on recognition at the meeting. Each agency that was reviewed will be sent an electronic copy of the motion relative to that agency as soon as practicable after the meeting.

(g) After each meeting of the Advisory Committee, the Advisory Committee forwards to the senior Department official its recommendation with respect to each agency, which may include, but is not limited to—

(1)(i) For an agency that is fully compliant, approve initial or renewed recognition;

(ii) Continue recognition with a required compliance report to be submitted to the Department within 12 months from the decision of the senior Department official;

(iii) In conjunction with a finding of exceptional circumstances and good cause, continue recognition for a specified period in excess of 12 months pending submission of a compliance report;

(iv) In the case of substantial compliance, grant initial recognition or renewed recognition and recommend a monitoring report with a set deadline to be reviewed by Department staff to ensure that corrective action is taken, and full compliance is achieved or maintained (or for action by staff under § 602.33 if it is not); or

(v) Deny, limit, suspend, or terminate recognition;

(2) Grant or deny a request for expansion of scope; or

(3) Revise or affirm the scope of the agency.

(Authority: 20 U.S.C. 1099b)

■ 41. Section 602.35 is amended:

■ a. In paragraph (a), by adding the word ''business'' between ''ten'' and ''days'';

■ b. In paragraph (c)(1), by removing the words ''documentary evidence'' and adding in their place the word ''documentation''; and

■ c. In paragraph (c)(2), by adding the word ''business'' between ''ten'' and ''days'' and adding a sentence to the end of the paragraph.

The addition reads as follows:

§ 602.35 Responding to the Advisory Committee's recommendation.

* * * * *

(c) * * *

(2) * * * No additional comments or new documentation may be submitted after the responses described in this paragraph are submitted.

* * * * *

■ 42. Section 602.36 is revised to read as follows:

§ 602.36 Senior Department official's decision.

(a) The senior Department official makes a decision regarding recognition of an agency based on the record compiled under §§ 602.32, 602.33, 602.34, and 602.35 including, as applicable, the following:

(1) The materials provided to the Advisory Committee under § 602.34(c).

(2) The transcript of the Advisory Committee meeting.

(3) The recommendation of the Advisory Committee.

(4) Written comments and responses submitted under § 602.35.

(5) New documentation submitted in accordance with § 602.35(c)(1).

(6) A communication from the Secretary referring an issue to the senior Department official's consideration under § 602.37(e).

(b) In the event that statutory authority or appropriations for the Advisory Committee ends, or there are fewer duly appointed Advisory Committee members than needed to constitute a quorum, and under extraordinary circumstances when there are serious concerns about an agency's compliance with subpart B of this part that require prompt attention, the senior Department official may make a decision on an application for renewal of recognition or compliance report on the record compiled under § 602.32 or § 602.33 after providing the agency with an opportunity to respond to the final staff analysis. Any decision made by the senior Department official under this paragraph from the Advisory Committee may be appealed to the Secretary as provided in § 602.37.

(c) Following consideration of an agency's recognition under this section, the senior Department official issues a recognition decision.

(d) Except with respect to decisions made under paragraph (f) or (g) of this section and matters referred to the senior Department official under § 602.37(e) or (f), the senior Department official notifies the agency in writing of the senior Department official's decision regarding the agency's recognition within 90 days of the Advisory Committee meeting or conclusion of the review under paragraph (b) of this section.

(e) The senior Department official's decision may include, but is not limited to, approving for recognition; approving with a monitoring report; denying, limiting, suspending, or terminating recognition following the procedures in paragraph (g) of this section; granting or denying an application for an expansion of scope; revising or affirming the scope of the agency; or continuing recognition pending submission and review of a compliance report under §§ 602.32 and 602.34 and review of the report by the senior Department official under this section.

(1)(i) The senior Department official approves recognition if the agency has demonstrated compliance or substantial compliance with the criteria for recognition listed in subpart B of this part. The senior Department official may determine that the agency has demonstrated compliance or substantial compliance with the criteria for recognition if the agency has a compliant policy or procedure in place but has not had the opportunity to apply such policy or procedure.

(ii) If the senior Department official approves recognition, the recognition decision defines the scope of recognition and the recognition period. The recognition period does not exceed five years, including any time during which recognition was continued to permit submission and review of a compliance report.

(iii) If the scope of recognition is less than that requested by the agency, the senior Department official explains the reasons for continuing or approving a lesser scope.

(2)(i) Except as provided in paragraph (e)(3) of this section, if the agency fails to comply with the criteria for recognition listed in subpart B of this part, the senior Department official denies, limits, suspends, or terminates recognition.

(ii) If the senior Department official denies, limits, suspends, or terminates recognition, the senior Department official specifies the reasons for this decision, including all criteria the agency fails to meet and all criteria the agency has failed to apply effectively.

(3)(i) If the senior Department official concludes an agency is noncompliant, the senior Department official may continue the agency's recognition, pending submission of a compliance report that will be subject to review in the recognition process, provided that—

(A) The senior Department official concludes that the agency will demonstrate compliance with, and effective application of, the criteria for recognition within 12 months from the date of the senior Department official's decision; or

(B) The senior Department official identifies a deadline more than 12 months from the date of the decision by which the senior Department official concludes the agency will demonstrate full compliance with, and effective application of, the criteria for recognition, and also identifies exceptional circumstances and good cause for allowing the agency more than 12 months to achieve compliance and effective application.

(ii) In the case of a compliance report ordered under paragraph (e)(3)(i) of this section, the senior Department official specifies the criteria the compliance report must address, and the time period for achieving compliance and effective application of the criteria. The compliance report documenting compliance and effective application of criteria is due not later than 30 days after the end of the period specified in the senior Department official's decision.

(iii) If the record includes a compliance report required under paragraph (e)(3)(i) of this section, and the senior Department official determines that an agency has not complied with the criteria for recognition, or has not effectively applied those criteria, during the time period specified by the senior Department official in accordance with paragraph (e)(3)(i) of this section, the senior Department official denies, limits, suspends, or terminates recognition, except, in extraordinary circumstances, upon a showing of good cause for an extension of time as determined by the senior Department official and detailed in the senior Department official's decision. If the senior Department official determines good cause for an extension has been shown, the senior Department official specifies the length of the extension and what the agency must do during it to merit a renewal of recognition.

(f) If the senior Department official determines that the agency is substantially compliant, or is fully compliant but has concerns about the agency maintaining compliance, the senior Department official may approve the agency's recognition or renewal of recognition and require periodic monitoring reports that are to be reviewed and approved by Department staff.

(g) If the senior Department official determines, based on the record, that a decision to deny, limit, suspend, or terminate an agency's recognition may be warranted based on a finding that the agency is noncompliant with one or more criteria for recognition, or if the agency does not hold institutions or programs accountable for complying with one or more of the agency's standards or criteria for accreditation that were not identified earlier in the proceedings as an area of noncompliance, the senior Department official provides—

(1) The agency with an opportunity to submit a written response addressing the finding; and

(2) The staff with an opportunity to present its analysis in writing.

(h) If relevant and material information pertaining to an agency's compliance with recognition criteria, but not contained in the record, comes to the senior Department official's attention while a decision regarding the agency's recognition is pending before the senior Department official, and if the senior Department official concludes the recognition decision should not be made without consideration of the information, the senior Department official either—

(1)(i) Does not make a decision regarding recognition of the agency; and

(ii) Refers the matter to Department staff for review and analysis under § 602.32 or § 602.33, as appropriate, and consideration by the Advisory Committee under § 602.34; or

(2)(i) Provides the information to the agency and Department staff;

(ii) Permits the agency to respond to the senior Department official and the Department staff in writing, and to include additional documentation relevant to the issue, and specifies a deadline;

(iii) Provides Department staff with an opportunity to respond in writing to the agency's submission under paragraph (h)(2)(ii) of this section, specifying a deadline; and

(iv) Issues a recognition decision based on the record described in paragraph (a) of this section, as supplemented by the information provided under this paragraph (h).

(i) No agency may submit information to the senior Department official, or ask others to submit information on its behalf, for purposes of invoking paragraph (h) of this section. Before invoking paragraph (h) of this section, the senior Department official will take into account whether the information, if submitted by a third party, could have been submitted in accordance with § 602.32(a) or § 602.33(e)(2).

(j) If the senior Department official does not reach a final decision to approve, deny, limit, suspend, or terminate an agency's recognition before the expiration of its recognition period, the senior Department official automatically extends the recognition period until a final decision is reached.

(k) Unless appealed in accordance with § 602.37, the senior Department official's decision is the final decision of the Secretary.

(Authority: 20 U.S.C. 1099b)

■ 43. Section 602.37 is revised to read as follows:

§ 602.37 Appealing the senior Department official's decision to the Secretary.

(a) The agency may appeal the senior Department official's decision to the Secretary. Such appeal stays the decision of the senior Department official until final disposition of the appeal. If an agency wishes to appeal, the agency must—

(1) Notify the Secretary and the senior Department official in writing of its intent to appeal the decision of the senior Department official, no later than 10 business days after receipt of the decision;

(2) Submit its appeal to the Secretary in writing no later than 30 days after receipt of the decision; and

(3) Provide the senior Department official with a copy of the appeal at the same time it submits the appeal to the Secretary.

(b) The senior Department official may file a written response to the appeal. To do so, the senior Department official must—

(1) Submit a response to the Secretary no later than 30 days after receipt of a copy of the appeal; and

(2) Provide the agency with a copy of the senior Department official's response at the same time it is submitted to the Secretary.

(c) Once the agency's appeal and the senior Department official's response, if any, have been provided, no additional written comments may be submitted by either party.

(d) Neither the agency nor the senior Department official may include in its submission any new documentation it did not submit previously in the proceeding.

(e) On appeal, the Secretary makes a recognition decision, as described in § 602.36(e). If the decision requires a compliance report, the report is due within 30 days after the end of the period specified in the Secretary's decision. The Secretary renders a final decision after taking into account the senior Department official's decision, the agency's written submissions on appeal, the senior Department official's response to the appeal, if any, and the entire record before the senior Department official. The Secretary notifies the agency in writing of the Secretary's decision regarding the agency's recognition.

(f) The Secretary may determine, based on the record, that a decision to deny, limit, suspend, or terminate an agency's recognition may be warranted based on a finding that the agency is noncompliant with, or ineffective in its application with respect to, a criterion or criteria for recognition not identified as an area of noncompliance earlier in the proceedings. In that case, the Secretary, without further consideration of the appeal, refers the matter to the senior Department official for consideration of the issue under § 602.36(g). After the senior Department official makes a decision, the agency may, if desired, appeal that decision to the Secretary.

(g) If relevant and material information pertaining to an agency's compliance with recognition criteria, but not contained in the record, comes to the Secretary's attention while a decision regarding the agency's recognition is pending before the Secretary, and if the Secretary concludes the recognition decision should not be made without consideration of the information, the Secretary either—

(1)(i) Does not make a decision regarding recognition of the agency; and

(ii) Refers the matter to Department staff for review and analysis under § 602.32 or § 602.33, as appropriate; review by the Advisory Committee under § 602.34; and consideration by the senior Department official under § 602.36; or

(2)(i) Provides the information to the agency and the senior Department official;

(ii) Permits the agency to respond to the Secretary and the senior Department official in writing, and to include additional documentation relevant to the issue, and specifies a deadline;

(iii) Provides the senior Department official with an opportunity to respond in writing to the agency's submission under paragraph (g)(2)(ii) of this section, specifying a deadline; and

(iv) Issues a recognition decision based on all the materials described in paragraphs (e) and (g) of this section.

(h) No agency may submit information to the Secretary, or ask others to submit information on its behalf, for purposes of invoking paragraph (g) of this section. Before invoking paragraph (g) of this section, the Secretary will take into account whether the information, if submitted by a third party, could have been submitted in accordance with § 602.32(a) or § 602.33(c).

(i) If the Secretary does not reach a final decision on appeal to approve, deny, limit, suspend, or terminate an agency's recognition before the expiration of its recognition period, the Secretary automatically extends the recognition period until a final decision is reached.

(Authority: 20 U.S.C. 1099b)

■ 44. Add § 602.39 to read as follows:

§ 602.39 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

(Authority: 20 U.S.C. 1099b)

PART 603—SECRETARY'S RECOGNITION PROCEDURES FOR STATE AGENCIES

■ 45. The authority citation for part 603 continues to read as follows:

Authority: 20 U.S.C. 1094(C)(4), unless otherwise noted.

§ 603.24 [Amended]

■ 46. Section 603.24 is amended by removing paragraph (c) and redesignating paragraph (d) as paragraph (c).

■ 47. Add § 603.25 to read as follows:

§ 603.25 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

PART 654—[REMOVED AND RESERVED]

■ 48. Under the authority of 20 U.S.C. 1099b, part 654 is removed and reserved.

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

■ 49. The authority citation for part 668 continues to read as follows:

Authority: 20 U.S.C. 1001–1003, 1070g, 1085, 1088, 1091, 1092, 1094, 1099c–1, 1221–3, and 1231a, unless otherwise noted.

§ 668.8 [Amended]

■ 50. Section 668.8 is amended in paragraph (l)(2) introductory text by removing the words ''in accordance with 34 CFR 602.24(f) or, if applicable, 34 CFR 603.24(c),''.

■ 51. Section 668.26 is amended by:

■ a. Redesignating paragraph (e) as paragraph (f); and

■ b. Adding new paragraph (e).

The addition reads as follows:

§ 668.26 End of an institution's participation in the Title IV, HEA programs.

* * * * *

(e)(1) Notwithstanding the requirements of any other provision in this section, with agreement from the institution's accrediting agency and State, the Secretary may permit an institution to continue to originate, award, or disburse funds under a Title IV, HEA program for no more than 120 days following the date of a final, non-appealable decision by an accrediting agency to withdraw, suspend, or terminate accreditation, by a State authorizing agency to remove State authorization, or by the Secretary to end the institution's participation in title IV, HEA programs if—

(i) The institution has notified the Secretary of its plans to conduct an orderly closure in accordance with any applicable requirements of its accrediting agency;

(ii) As part of the institution's orderly closure, it is performing a teach-out that has been approved by its accrediting agency;

(iii) The institution agrees to abide by the conditions of the program participation agreement that was in effect on the date of the decision under paragraph (e)(1), except that it will originate, award, or disburse funds under that agreement only to enrolled students who can complete the program within 120 days of the decision under paragraph (e)(1) or who can transfer to a new institution; and

(iv) The institution presents the Secretary with acceptable written assurances that—

(A) The health and safety of the institution's students are not at risk;

(B) The institution has adequate financial resources to ensure that instructional services remain available to students during the teach-out; and

(C) The institution is not subject to probation or its equivalent, or adverse action by the institution's State authorizing body or accrediting agency, except as provided in paragraph (e)(1).

(2) An institution is prohibited from engaging in misrepresentation, consistent with 34 CFR part 668 subpart F and consistent with 34 CFR part 685 subpart B, about the nature of its teach-out plans, teach-out agreements, and transfer of credit.

* * * * *

■ 52. Add § 668.29 to read as follows:

§ 668.29 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

§ 668.41 [Amended]

■ 53. Section 668.41 is amended by:

■ a. Removing the word ''calculates'' and adding in its place the phrase ''publishes or uses in advertising'' in paragraph (d)(5)(i)(A);

■ b. Removing and reserving paragraph (d)(5)(ii); and

■ c. Removing paragraph (d)(5)(iii).

■ 54. Section 668.43 is amended by:

■ a. Removing the word ''and'' at the end of paragraph (a)(5)(iii);

■ b. Adding the word ''and'' at the end of paragraph (a)(5)(iv);

■ c. Adding paragraph (a)(5)(v);

■ d. Removing the word ''and'' at the end of paragraph (a)(10)(iii);

■ e. Revising paragraphs (a)(11) and (12);

■ f. Adding paragraphs (a)(13) through (20); and

■ g. Adding paragraph (c).

The additions and revisions read as follows:

§ 668.43 Institutional information.

(a) * * *

(5) * * *

(v) If an educational program is designed to meet educational requirements for a specific professional license or certification that is required for employment in an occupation, or is advertised as meeting such requirements, information regarding whether completion of that program would be sufficient to meet licensure requirements in a State for that occupation, including—

(A) A list of all States for which the institution has determined that its curriculum meets the State educational requirements for licensure or certification;

(B) A list of all States for which the institution has determined that its curriculum does not meet the State educational requirements for licensure or certification; and

(C) A list of all States for which the institution has not made a determination that its curriculum meets the State educational requirements for licensure or certification;

* * * * *

(11) A description of the transfer of credit policies established by the institution, which must include a statement of the institution's current transfer of credit policies that includes, at a minimum—

(i) Any established criteria the institution uses regarding the transfer of credit earned at another institution and any types of institutions or sources from which the institution will not accept credits;

(ii) A list of institutions with which the institution has established an articulation agreement; and

(iii) Written criteria used to evaluate and award credit for prior learning experience including, but not limited to, service in the armed forces, paid or unpaid employment, or other demonstrated competency or learning;

(12) A description in the program description of written arrangements the institution has entered into in accordance with § 668.5, including, but not limited to, information on—

(i) The portion of the educational program that the institution that grants the degree or certificate is not providing;

(ii) The name and location of the other institutions or organizations that are providing the portion of the educational program that the institution that grants the degree or certificate is not providing;

(iii) The method of delivery of the portion of the educational program that the institution that grants the degree or certificate is not providing; and

(iv) Estimated additional costs students may incur as the result of enrolling in an educational program that is provided, in part, under the written arrangement;

(13) The percentage of those enrolled, full-time students at the institution who—

(i) Are male;

(ii) Are female;

(iii) Receive a Federal Pell Grant; and

(iv) Are a self-identified member of a racial or ethnic group;

(14) If the institution's accrediting agency or State requires the institution to calculate and report a placement rate, the institution's placement in employment of, and types of employment obtained by, graduates of the institution's degree or certificate programs, gathered from such sources as alumni surveys, student satisfaction surveys, the National Survey of Student Engagement, the Community College Survey of Student Engagement, State data systems, or other relevant sources approved by the institution's accrediting agency as applicable;

(15) The types of graduate and professional education in which graduates of the institution's four-year degree programs enrolled, gathered from such sources as alumni surveys, student satisfaction surveys, the National Survey of Student Engagement, State data systems, or other relevant sources;

(16) The fire safety report prepared by the institution pursuant to § 668.49;

(17) The retention rate of certificate- or degree-seeking, first-time, full-time, undergraduate students entering the institution;

(18) Institutional policies regarding vaccinations;

(19) If the institution is required to maintain a teach-out plan by its accrediting agency, notice that the institution is required to maintain such teach-out plan and the reason that the accrediting agency required such plan under § 602.24(c)(1); and

(20) If an enforcement action or prosecution is brought against the institution by a State or Federal law enforcement agency in any matter where a final judgment against the institution, if rendered, would result in an adverse action by an accrediting agency against the institution, revocation of State authorization, or limitation, suspension, or termination of eligibility under title IV, notice of that fact.

* * * * *

(c)(1) If the institution has made a determination under paragraph (a)(5)(v) of this section that the program's curriculum does not meet the State educational requirements for licensure or certification in the State in which a prospective student is located, or if the institution has not made a determination regarding whether the program's curriculum meets the State educational requirements for licensure or certification, the institution must provide notice to that effect to the student prior to the student's enrollment in the program.

(2) If the institution makes a determination under paragraph (a)(5)(v)(B) of this section that a program's curriculum does not meet the State educational requirements for licensure or certification in a State in which a student who is currently enrolled in such program is located, the institution must provide notice to that effect to the student within 14 calendar days of making such determination.

(3)(i) Disclosures under paragraphs (c)(1) and (2) of this section must be made directly to the student in writing, which may include through email or other electronic communication.

(ii)(A) For purposes of this paragraph (c), an institution must make a determination regarding the State in which a student is located in accordance with the institution's policies or procedures, which must be applied consistently to all students.

(B) The institution must, upon request, provide the Secretary with written documentation of its determination of a student's location under paragraph (c)(3)(ii)(A) of this section, including the basis for such determination.

(C) An institution must make a determination regarding the State in which a student is located at the time of the student's initial enrollment in an educational program and, if applicable, upon formal receipt of information from the student, in accordance with the institution's procedures under paragraph (c)(3)(ii)(A) of this section, that the student's location has changed to another State.

* * * * *

■ 55. Section 668.50 is revised to read as follows:

§ 668.50 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

§ 668.188 [Amended]

■ 56. Section 668.188 is amended in paragraph (c) introductory text by removing the citation ''34 CFR 602.3'' and adding in its place ''34 CFR 600.2''.

■ 57. Add § 668.198 to read as follows:

§ 668.198 Severability.

If any provision of this subpart or its application to any person, act, or practice is held invalid, the remainder of the subpart or the application of its provisions to any person, act, or practice shall not be affected thereby.

PART 674—FEDERAL PERKINS LOAN PROGRAM

■ 58. The authority citation for part 674 continues to read as follows:

Authority: 20 U.S.C. 1070g, 1087aa–1087hh; Pub. L. 111–256, 124 Stat. 2643; unless otherwise noted.

§ 674.33 [Amended]

■ 59. Section 674.33 is amended in paragraph (g)(4)(i)(C) by removing the citation ''34 CFR 602.2'' and adding in its place ''34 CFR 600.2''.

National Emission Standards for Hazardous Air Pollutants: Surface Coating of Automobiles and Light-Duty Trucks; Surface Coating of Miscellaneous Metal Parts and Products; Surface Coating of Plastic Parts and Products; Surface Coating of Large Appliances; Printing, Coating, and Dyeing of Fabrics and Other Textiles; and Surface Coating of Metal Furniture Residual Risk and Technology Reviews

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is proposing amendments to address the results of the residual risk and technology reviews (RTR) that the EPA is required to conduct in accordance with the Clean Air Act (CAA) with regard to the National Emissions Standards for Hazardous Air Pollutants (NESHAP) for the Surface Coating of Automobiles and Light-Duty Trucks (ALDT), the NESHAP for the Surface Coating of Miscellaneous Metal Parts and Products (MMPP), and the NESHAP for the Surface Coating of Plastic Parts and Products (PPP). The EPA is proposing to find the risks due to emissions of air toxics from these source categories under the current standards are acceptable and the standards provide an ample margin of safety to protect public health. We are proposing no revisions to the numerical emission limits based on these analyses. The EPA is proposing to amend provisions addressing emissions during periods of startup, shutdown, and malfunction (SSM); to amend provisions regarding electronic reporting of performance test results; to amend provisions regarding monitoring requirements; and to make miscellaneous clarifying and technical corrections. This notice also proposes technical corrections to the NESHAP for Surface Coating of Large Appliances; NESHAP for Printing, Coating, and Dyeing of Fabrics and Other Textiles; and NESHAP for Surface Coating of Metal Furniture.

DATES:

Comments. Comments must be received on or before December 16, 2019. Under the Paperwork Reduction Act (PRA), comments on the information collection provisions are best assured of consideration if the Office of Management and Budget (OMB) receives a copy of your comments on or before December 2, 2019.

Public hearing. If anyone contacts us requesting a public hearing on or before November 6, 2019, we will hold a hearing. Additional information about the hearing, if requested, will be published in a subsequent **Federal Register** document and posted at *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-automobiles-and-light-duty-trucks-national-emission, https://www.epa.gov/stationary-sources-air-pollution/surface-coating-miscellaneous-metal-parts-and-products-national* and *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-plastic-parts-and-products-national-emission. See* **SUPPLEMENTARY INFORMATION** for information on requesting and registering for a public hearing.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ–OAR–2019–0314 for 40 Code of Federal Regulations (CFR) part 63, subpart IIII, Automobiles and Light-Duty Trucks; Docket ID No. EPA–HQ–OAR–2019–0312 for 40 CFR part 63, subpart MMMM, Surface Coating of Miscellaneous Metal Parts and Products; Docket ID No. EPA–HQ–OAR–2019–0313 for 40 CFR part 63, subpart PPPP, Surface Coating of Plastic Parts and Products; Docket ID No. EPA–HQ–OAR–2017–0668 for 40 CFR part 63, subpart OOOO, Printing Coating, and Dyeing of Fabrics and Other Textiles; EPA–HQ–OAR–2017–0669 for 40 CFR part 63, subpart RRRR, Surface Coating of Metal Furniture; Docket ID No. EPA–HQ–OAR–2017–0670, for 40 CFR part 63 subpart NNNN for Surface Coating of Large Appliances by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.
- *Email: a-and-r-docket@epa.gov.* Include Docket ID No. EPA–HQ–OAR–2019–0312, EPA–HQ–OAR–2019–0313, EPA–HQ–OAR–2019–0314, HQ–OAR–2017–0668, EPA–HQ–OAR–2017–0669, or EPA–HQ–OAR–2017–0670 (specify the applicable docket number) in the subject line of the message.
- *Fax:* (202) 566–9744. Attention Docket ID No. EPA–HQ–OAR–2019–0312, EPA–HQ–OAR–2019–0313, or EPA–HQ–OAR–2019–0314, HQ–OAR–2017–0668, EPA–HQ–OAR–2017–0669, or EPA–HQ–OAR–2017–0670 (specify the applicable docket number).
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, Docket ID No. EPA–HQ–OAR–2019–0312, EPA–HQ–OAR–2019–0313, or EPA–HQ–OAR–2019–0314, HQ–OAR–2017–0668, EPA–HQ–OAR–2017–0669, or EPA–HQ–OAR–2017–0670 (specify the applicable docket number), Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand/Courier Delivery:* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operation are 8:30 a.m.–4:30 p.m., Monday–Friday (except federal holidays).

Instructions: All submissions received must include the applicable Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, *see* the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: For questions about this proposed action for the Surface Coating of Miscellaneous Metal Parts and Products (MMPP) NESHAP, the Surface Coating of Plastic Parts and Products (PPP) NESHAP, and the technical corrections to the NESHAP for Surface Coating of Large Appliances contact Ms. Kim Teal, Minerals and Manufacturing Group, Sector Policies and Programs Division (D243–04), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–5580; fax number: (919) 541–4991; and email address: *teal.kim@epa.gov.* For questions about the proposed action for the Surface Coating of Automobiles and Light-Duty Trucks (ALDT) NESHAP and the technical corrections to the NESHAP for Surface Coating of Metal Furniture contact Ms. J. Kaye Whitfield, Minerals and Manufacturing Group, Sector Policies and Programs Division (D243–04), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2509; fax number: (919) 541–4991; and email address: *whitfield.kaye@epa.gov.* For questions about the technical corrections to the Printing, Coating, and Dyeing of Fabrics and Other Textiles contact Ms. Paula

Hirtz, Minerals and Manufacturing Group, Sector Policies and Programs Division (D243–04), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2618; fax number: (919) 541–4991; and email address: *hirtz.paula@epa.gov.* For specific information regarding the risk modeling methodology, contact Mr. Chris Sarsony, Health and Environmental Impacts Division (C539–02), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–4843; fax number: (919) 541–0840; and email address: *sarsony.chris@epa.gov.* For information about the applicability of any of these NESHAP to a particular entity, contact Mr. John Cox, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency, EPA WJC South Building (Mail Code 2227A), 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 564–1395; and email address: *cox.john@epa.gov.* For questions about monitoring and testing requirements, contact Mr. Muntasir Ali, Measurement Policy Group, Sector Policies and Programs Division (D221–01), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–0833; fax number: (919) 541–4991; and email address: *ali.muntasir@epa.gov.*

SUPPLEMENTARY INFORMATION:

Public hearing. Please contact Ms. Nancy Perry at (919) 541–5628 or by email at *perry.nancy@epa.gov* to request a public hearing, to register to speak at the public hearing, or to inquire as to whether a public hearing will be held.

Docket. The EPA has established three separate dockets for these rulemakings. Docket ID No. EPA–HQ–OAR–2019–0314 has been established for 40 CFR part 63, subpart IIII, Surface Coating of Automobiles and Light-Duty Trucks. Docket ID No. EPA–HQ–OAR–2019–0312 has been established for 40 CFR part 63, subpart MMMM, Surface Coating of Miscellaneous Metal Parts and Products. EPA–HQ–OAR–2019–0313 has been established for 40 CFR part 63, subpart PPPP, Surface Coating of Plastic Parts and Products. In addition, docket numbers for the technical corrections have been established: Docket ID No. EPA–HQ–OAR–2017–0670 for 40 CFR part 63, subpart NNNN, Surface Coating of Large Appliances; Docket ID No. EPA–HQ–OAR–2017–0669 for 40 CFR part 63, subpart RRRR, Surface Coating of Metal Furniture; and Docket ID No. EPA–HQ–OAR–2017–0668 for 40 CFR part 63, subpart OOOO, Printing, Coating, and Dyeing of Fabrics and Other Textiles. All documents in the dockets are listed in *Regulations.gov.* Although listed, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *Regulations.gov* or in hard copy at the EPA Docket Center, Room 3334, WJC West Building, 1301 Constitution Avenue NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742.

The dockets related to the technical corrections to the NESHAP for Surface Coating of Large Appliances, the NESHAP for Printing, Coating, and Dyeing of Fabrics and Other Textiles, and the NESHAP for Surface Coating of Metal Furniture are discussed in section II.E of this preamble.

Instructions. Direct your comments to Docket ID No. EPA–HQ–OAR–2019–0314 for 40 CFR part 63, subpart IIII, Surface Coating of Automobiles and Light-Duty Trucks, Docket ID No. EPA–HQ–OAR–2019–0312 for 40 CFR part 63, subpart MMMM, Surface Coating of Miscellaneous Metal Parts and Products, or Docket ID No. EPA–HQ–OAR–2019–0313 for 40 CFR part 63, subpart PPPP, Surface Coating of Plastic Parts and Products, as applicable to your comments. Direct your comments for the technical corrections to Docket ID No. EPA–HQ–OAR–2017–0670 for 40 CFR part 63, subpart NNNN, Surface Coating of Large Appliances; Docket ID No. EPA–HQ–OAR–2017–0669 for 40 CFR part 63, subpart RRRR, Surface Coating of Metal Furniture; and Docket ID No. EPA–HQ–OAR–2017–0668 for 40 CFR part 63, subpart OOOO, Printing, Coating, and Dyeing of Fabrics and Other Textiles. The EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *https://www.regulations.gov/,* including any personal information provided, unless the comment includes information claimed to be CBI or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *https://www.regulations.gov/* or email. This type of information should be submitted by mail as discussed below.

The EPA may publish any comment received to its public docket. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the Web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

The *https://www.regulations.gov/* website allows you to submit your comment anonymously, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *https://www.regulations.gov/,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, the EPA recommends that you include your name and other contact information in the body of your comment and with any digital storage media you submit. If the EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, the EPA may not be able to consider your comment. Electronic files should not include special characters or any form of encryption and be free of any defects or viruses. For additional information about the EPA's public docket, visit the EPA Docket Center homepage at *https://www.epa.gov/dockets.*

Submitting CBI. Do not submit information containing CBI to the EPA through *https://www.regulations.gov/* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information on any digital storage media that you mail to the EPA, mark the outside of the digital storage media as CBI and then identify electronically within the digital storage media the specific information that is claimed as CBI. In addition to one complete version of the comments that includes information claimed as CBI, you must submit a copy of the comments that does not contain the information claimed as CBI directly to the public docket through the procedures outlined in *Instructions* above. If you submit any digital storage media that does not contain CBI, mark the outside of the digital storage media clearly that it does not contain CBI. Information not marked as CBI will be included in the public docket and the EPA's electronic public docket without prior notice. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. Send or deliver information identified as CBI only to the following address: OAQPS Document Control Officer (C404–02), OAQPS, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711, Attention Docket ID No. EPA–HQ–OAR–2019–0314 for 40 CFR part 63, subpart IIII, Surface Coating of Automobiles and Light-Duty Trucks (ALDT Docket); Docket ID No. EPA–HQ–OAR–2019–0312 for 40 CFR part 63, subpart MMMM, Surface Coating of Miscellaneous Metal Parts and Products (MMPP Docket); and Docket ID No. EPA–HQ–OAR–2019–0313 for 40 CFR part 63, subpart PPPP, Surface Coating of Plastic Parts and Products (PPP Docket), as applicable.

Preamble acronyms and abbreviations. We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here:

ACA American Coatings Association
AEGL acute exposure guideline level
AERMOD air dispersion model used by the HEM–3 model
ALDT automobile and light-duty truck
BACT best available control technology
CAA Clean Air Act
CalEPA California EPA
CBI Confidential Business Information
CDX Central Data Exchange
CEDRI Compliance and Emissions Data Reporting Interface
CEMS continuous emissions monitoring systems
CFR Code of Federal Regulations
ECHO Enforcement and Compliance History Online
EPA Environmental Protection Agency
EPFP extreme performance fluoropolymer
ERPG emergency response planning guideline
ERT Electronic Reporting Tool
GACT generally available control technology
gal gallon
HAP hazardous air pollutant(s)
HCl hydrochloric acid
HEM–3 Human Exposure Model
HF hydrogen fluoride
HI hazard index
HQ hazard quotient
IBR incorporation by reference
ICAC Institute of Clean Air Companies
IRIS Integrated Risk Information System
kg kilogram
km kilometer
LAER lowest achievable emission rate
lb pound
MACT maximum achievable control technology
MIBK methyl isobutyl ketone
MIR maximum individual risk
MMPP miscellaneous metal parts and products
NAAQS National Ambient Air Quality Standards
NAICS North American Industry Classification System
NEI National Emission Inventory
NESHAP national emission standards for hazardous air pollutants
NSR New Source Review
NTTAA National Technology Transfer and Advancement Act
OAQPS Office of Air Quality Planning and Standards
OMB Office of Management and Budget
OSHA Occupational Safety and Health Administration
PB–HAP hazardous air pollutants known to be persistent and bio-accumulative in the environment
PDF portable document format
POM polycyclic organic matter
PPP plastic parts and products
PRA Paperwork Reduction Act
PTE permanent total enclosure
RACT reasonably available control technology
RBLC RACT/BACT/LAER Clearinghouse
REL reference exposure level
RFA Regulatory Flexibility Act
RfC reference concentration
RfD reference dose
RTO regenerative thermal oxidizer
RTR residual risk and technology review
SAB Science Advisory Board
SSM startup, shutdown, and malfunction
TOSHI target organ-specific hazard index
tpy tons per year
UF uncertainty factor
$\mu g/m^3$ micrograms per cubic meter

Organization of this document. The information in this preamble is organized as follows:

I. General Information
A. Does this action apply to me?
B. Where can I get a copy of this document and other related information?
II. Background
A. What is the statutory authority for this action?
B. What are the source categories and how do the current NESHAP regulate their HAP emissions?
C. What data collection activities were conducted to support this action?
D. What other relevant background information and data are available?
III. Analytical Procedures and Decision-Making
A. How do we consider risk in our decision-making?
B. How do we perform the technology review?
C. How did we estimate post-MACT risks posed by these source categories?
IV. Analytical Results and Proposed Decisions
A. What are the analytical results and proposed decisions for the surface coating of automobiles and light-duty trucks source category?
B. What are the analytical results and proposed decisions for the MMPP source category?
C. What are the analytical results and proposed decisions for the Surface Coating of Plastic Parts and Products source category?
D. Proposed Corrections to Earlier Subparts.
V. Summary of Cost, Environmental, and Economic Impacts
A. What are the affected sources?
B. What are the air quality impacts?
C. What are the cost impacts?
D. What are the economic impacts?
E. What are the benefits?
VI. Request for Comments
VII. Submitting Data Corrections
VIII. Statutory and Executive Order Reviews
A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review
B. Executive Order 13771: Reducing Regulations and Controlling Regulatory Costs
C. Paperwork Reduction Act (PRA)
D. Regulatory Flexibility Act (RFA)
E. Unfunded Mandates Reform Act (UMRA)
F. Executive Order 13132: Federalism
G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments
H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks
I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use
J. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51
K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

I. General Information

A. Does this action apply to me?

Table 1 of this preamble lists the NESHAP and associated regulated industrial source categories that are the subject of this proposal. Table 1 is not intended to be exhaustive, but rather provides a guide for readers regarding the entities that this proposed action is likely to affect. The proposed standards, once promulgated, will be directly applicable to the affected sources. Federal, state, local, and tribal government entities would not be affected by this proposed action. As defined in the *Initial List of Categories of Sources Under Section 112(c)(1) of the Clean Air Act Amendments of 1990* (*see* 57 FR 31576, July 16, 1992) and *Documentation for Developing the Initial Source Category List, Final Report* (*see* EPA–450/3–91–030, July 1992), the Surface Coating of Automobiles and Light-Duty Trucks (ALDT) source category includes any facility that is a major source of hazardous air pollutants (HAP) and is engaged in the surface coating of new automobile or new light-duty truck bodies or body parts for new automobiles or new light-duty trucks. We estimate that 43 major source facilities engaged in surface coating of automobiles and light-duty trucks would be subject to this proposal. The MMPP source category includes any facility engaged in the surface coating of miscellaneous metal parts and products that is a major source of HAP emissions. Miscellaneous metal parts and products include, but are not limited to, metal components of the following types of products as well as the products themselves: Motor vehicle parts and accessories; bicycles and sporting goods; recreational vehicles; extruded aluminum structural components; railroad cars; heavy-duty trucks; medical equipment; lawn and garden equipment; electronic equipment; magnet wire; steel drums; industrial machinery; metal pipes; and numerous other industrial, household, and consumer products. We estimate that 368 major source facilities engaged in surface coating of miscellaneous metal parts and products would be subject to this proposal. The PPP source category includes any facility engaged in the surface coating of plastic parts or products that is a major source of HAP emissions. Plastic parts and products include, but are not limited to, plastic components of the following types of products as well as the products themselves: Motor vehicle parts and accessories for automobiles, trucks, recreational vehicles; sporting and recreational goods; toys; business machines; laboratory and medical equipment; and household and other consumer products. We estimate that 125 major source facilities engaged in plastic parts and products surface coating would be subject to this proposal.

TABLE 1—NESHAP, INDUSTRIAL AND GOVERNMENT SOURCES AFFECTED BY THIS PROPOSED ACTION

NESHAP source category	NAICS code [1]	Regulated entities [2]
Surface Coating of Automobiles and Light-Duty Trucks.	336111, 336112, 336211	Automobile and light-duty truck assembly plants, producers of automobile and light-duty truck bodies.
Surface Coating of Miscellaneous Metal Parts and Products.	335312, 336111, 336211, 336312, 33632, 33633, 33634, 33637, 336399.	Automobile parts (engine parts, vehicle parts and accessories, brakes, axles, etc.).
	331316, 331524, 332321, 332323	Extruded aluminum, architectural components, rod, and tubes.
	33312, 333611, 333618	Heavy equipment (tractors, earth moving machinery).
	332312, 332722, 332813, 332991, 332999, 334119, 336413, 339999.	Job shops (making any of the products from the miscellaneous metal parts and products segments).
	33612, 336211	Large trucks and buses.
	331319, 331422, 335929	Magnet wire.
	332311	Prefabricated metal buildings, carports, docks, dwellings, greenhouses, panels for buildings.
	33242, 81131, 322214, 326199, 331513, 332439.	Metal drums, kegs, pails, shipping containers.
	331111, 33121, 331221, 331511	Metal pipe and foundry (plate, tube, rods, nails, spikes, etc.).
	33651, 336611, 482111	Rail transportation (brakes, engines, freight cars, locomotives.
	3369, 331316, 336991, 336211, 336112, 336213, 336214, 336399.	Recreational vehicles (motorcycles, motor homes, semitrailers, truck trailers).
	326291, 326299	Rubber to metal products (engine mounts, rubberized tank tread, harmonic balancers.
	332311, 332312	Structural steel (joists, railway bridge sections, highway bridge sections).
	336212, 336999, 33635, 56121, 8111. 56211.	Miscellaneous transportation related equipment and parts.
Surface Coating of Plastic Parts and Products.	337214	Office furniture, except wood.
	32614, 32615	Plastic foam products (*e.g.,* pool floats, wrestling mats, life jackets).
	326199	Plastic products not elsewhere classified (*e.g.,* name plates, coin holders, storage boxes, license plate housings, cosmetic caps, cup holders).
	333313	Office machines.
	33422	Radio and television broadcasting and communications equipment (*e.g.,* cellular telephones).
	336211	Motor vehicle body manufacturing.
	336399	Motor vehicle parts and accessories.
	336212	Truck trailer manufacturing.
	336213	Motor home manufacturing.
	336214	Travel trailer and camper manufacturing.
	336999	Transportation equipment not elsewhere classified (*e.g.,* snowmobile hoods, running boards, tractor body panels, personal watercraft parts).
	339111, 339112	Medical equipment and supplies.
	33992	Sporting and athletic goods.
	33995	Signs and advertising specialties.

TABLE 1—NESHAP, INDUSTRIAL AND GOVERNMENT SOURCES AFFECTED BY THIS PROPOSED ACTION—Continued

NESHAP source category	NAICS code [1]	Regulated entities [2]
	339999	Manufacturing industries not elsewhere classified (*e.g.,* bezels, consoles, panels, lenses).

[1] North American Industry Classification System.
[2] Regulated entities means major source facilities that apply surface coatings to these parts or products.

B. Where can I get a copy of this document and other related information?

In addition to being available in the dockets for this action, an electronic copy of this proposed action is available on the internet. Following signature by the EPA Administrator, the EPA will post a copy of this proposed action at *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-automobiles-and-light-duty-trucks-national-emission, https://www.epa.gov/stationary-sources-air-pollution/surface-coating-miscellaneous-metal-parts-and-products-national,* and *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-plastic-parts-and-products-national-emission.* Following publication in the **Federal Register**, the EPA will post the **Federal Register** version of the proposal and key technical documents at these same websites. Information on the overall RTR program is available at *https://www3.epa.gov/ttn/atw/rrisk/rtrpg.html.*

A redline version of the regulatory language that incorporates the proposed changes in this action are available in the Automobiles and Light-Duty Trucks, the Metal Parts and Products, and the Plastic Parts and Products Dockets (Docket ID No. EPA–HQ–OAR–2019–0314, Docket ID No. EPA–HQ–OAR–2019–0312, and Docket ID No. EPA–HQ–OAR–2019–0313, respectively).

II. Background

A. What is the statutory authority for this action?

The statutory authority for this action is provided by sections 112 and 301 of the CAA, as amended (42 U.S.C. 7401 *et seq.*).[1] Section 112 of the CAA establishes a two-stage regulatory process to develop standards for emissions of HAP from stationary sources. Generally, the first stage involves establishing technology-based standards and the second stage involves evaluating those standards that are based on maximum achievable control technology (MACT) to determine whether additional standards are needed to further address any remaining risk associated with HAP emissions. This second stage is commonly referred to as the ''residual risk review.'' In addition to the residual risk review, the CAA also requires the EPA to review standards set under CAA section 112 every 8 years to determine if there are ''developments in practices, processes, or control technologies'' that may be appropriate to incorporate into the standards. This review is commonly referred to as the ''technology review.'' When the two reviews are combined into a single rulemaking, it is commonly referred to as the ''risk and technology review.'' The discussion that follows identifies the most relevant statutory sections and briefly explains the contours of the methodology used to implement these statutory requirements. A more comprehensive discussion appears in the document titled *CAA Section 112 Risk and Technology Reviews: Statutory Authority and Methodology,* in the dockets for each subpart in this rulemaking (Docket ID No. EPA–HQ–OAR–2019–0314 for Automobiles and Light-Duty Trucks, Docket ID No. EPA–HQ–OAR–2019–0312 for Miscellaneous Metal Parts and Products, and Docket ID No. EPA–HQ–OAR–2019–0313 for Plastic Parts and Products).

In the first stage of the CAA section 112 standard setting process, the EPA promulgates technology-based standards under CAA section112(d) for categories of sources identified as emitting one or more of the HAP listed in CAA section 112(b). Sources of HAP emissions are either major sources or area sources, and CAA section 112 establishes different requirements for major source standards and area source standards. ''Major sources'' are those that emit or have the potential to emit 10 tons per year (tpy) or more of a single HAP or 25 tpy or more of any combination of HAP. All other sources are ''area sources.'' For major sources, CAA section 112(d) provides that the technology-based NESHAP must reflect the maximum degree of emission reductions of HAP achievable (after considering cost, energy requirements, and non-air quality health and environmental impacts). These standards are commonly referred to as MACT standards. CAA section 112(d)(3) also establishes a minimum control level for MACT standards, known as the MACT ''floor.'' The EPA must also consider control options that are more stringent than the floor. Standards more stringent than the floor are commonly referred to as beyond-the-floor standards. In certain instances, as provided in CAA section 112(h), the EPA may set work practice standards where it is not feasible to prescribe or enforce a numerical emission standard. For area sources, CAA section 112(d)(5) gives the EPA discretion to set standards based on generally available control technologies or management practices (GACT standards) in lieu of MACT standards.

The second stage in standard-setting focuses on identifying and addressing any remaining (*i.e.,* ''residual'') risk according to CAA section 112(f). For source categories subject to MACT standards, section 112(f)(2) of the CAA requires the EPA to determine whether promulgation of additional standards is needed to provide an ample margin of safety to protect public health or to prevent an adverse environmental effect. Section 112(d)(5) of the CAA provides that this residual risk review is not required for categories of area sources subject to GACT standards. Section 112(f)(2)(B) of the CAA further expressly preserves the EPA's use of the two-step approach for developing standards to address any residual risk and the Agency's interpretation of ''ample margin of safety'' developed in the *National Emissions Standards for Hazardous Air Pollutants: Benzene Emissions from Maleic Anhydride Plants, Ethylbenzene/Styrene Plants, Benzene Storage Vessels, Benzene Equipment Leaks, and Coke By-Product Recovery Plants* (Benzene NESHAP) (54 FR 38044, September 14, 1989). The EPA notified Congress in the Risk Report that the Agency intended to use the Benzene NESHAP approach in making CAA section 112(f) residual risk determinations (EPA–453/R–99–001, p. ES–11). The EPA subsequently adopted this approach in its residual risk determinations and the United States Court of Appeals for the District of

[1] In addition, section 301 of the CAA provides general authority for the Administrator to ''prescribe such regulations as are necessary to carry out his functions'' under the CAA.

Columbia Circuit (the Court) upheld the EPA's interpretation that CAA section 112(f)(2) incorporates the approach established in the Benzene NESHAP. *See NRDC* v. *EPA,* 529 F.3d 1077, 1083 (D.C. Cir. 2008).

The approach incorporated into the CAA and used by the EPA to evaluate residual risk and to develop standards under CAA section 112(f)(2) is a two-step approach. In the first step, the EPA determines whether risks are acceptable. This determination ''considers all health information, including risk estimation uncertainty, and includes a presumptive limit on maximum individual lifetime [cancer] risk (MIR)[2] of approximately [1-in-10 thousand] [*i.e.,* 100-in-1 million].'' 54 FR 38045, September 14, 1989. If risks are unacceptable, the EPA must determine the emissions standards necessary to bring risks to an acceptable level without considering costs. In the second step of the approach, the EPA considers whether the emissions standards provide an ample margin of safety to protect public health ''in consideration of all health information, including the number of persons at risk levels higher than approximately [1-in-1 million], as well as other relevant factors, including costs and economic impacts, technological feasibility, and other factors relevant to each particular decision.'' *Id.* The EPA must promulgate emission standards necessary to provide an ample margin of safety to protect public health or determine that the standards being reviewed provide an ample margin of safety without any revisions. After conducting the ample margin of safety analysis, we consider whether a more stringent standard is necessary to prevent, taking into consideration costs, energy, safety, and other relevant factors, an adverse environmental effect.

CAA section 112(d)(6) separately requires the EPA to review standards promulgated under CAA section 112 and revise them ''as necessary (taking into account developments in practices, processes, and control technologies)'' no less frequently than every 8 years. In conducting this review, which we call the ''technology review,'' the EPA is not required to recalculate the MACT floor. *Natural Resources Defense Council (NRDC)* v. *EPA,* 529 F.3d 1077, 1084 (D.C. Cir. 2008). *Association of Battery Recyclers, Inc.* v. *EPA,* 716 F.3d 667 (D.C. Cir. 2013). The EPA may consider cost in deciding whether to revise the standards pursuant to CAA section 112(d)(6).

[2] Although defined as ''maximum individual risk,'' MIR refers only to cancer risk. MIR, one metric for assessing cancer risk, is the estimated risk if an individual were exposed to the maximum level of a pollutant for a lifetime.

B. What are the source categories and how do the current NESHAP regulate their HAP emissions?

1. What is the surface coating of automobiles and light-duty trucks source category and how does the current NESHAP regulate its HAP emissions?

a. Source Category Description

The NESHAP for the ALDT source category was promulgated on April 26, 2004 (69 FR 22602), and is codified at 40 CFR part 63, subpart IIII. Technical corrections and clarifying amendments were promulgated on December 22, 2006 (71 FR 76922) and April 24, 2007 (72 FR 20227). The ALDT NESHAP applies to any coating operations which apply topcoats to new automobile or new light-duty truck bodies or body parts for new automobiles or new light-duty trucks and/or coatings to new other motor vehicle bodies or body parts for new other motor vehicles; parts intended for use in new automobiles, new light-duty trucks, or new other motor vehicles; or aftermarket repair or replacement parts for automobiles, light-duty trucks, or other motor vehicles; and the affected source is located at a facility that is a major source, is located at a major source, or is part of a major source of emissions of HAP (40 CFR 63.3081). The ALDT NESHAP (40 CFR 63.3176) defines an ''automobile'' as ''a motor vehicle designed to carry up to eight passengers, excluding vans, sport utility vehicles, and motor vehicles designed primarily to transport light loads of property,'' and ''light-duty truck'' as ''vans, sport utility vehicles, and motor vehicles designed primarily to transport light loads of property with gross vehicle weight rating of 8,500 lbs [pounds] or less.''

The ALDT NESHAP defines a ''coating'' as ''a material that is applied to a substrate for decorative, protective or functional purposes. Such materials include, but are not limited to, paints, sealants, caulks, inks, adhesives, primers, deadeners, and maskants. Decorative, protective, or functional materials that consist only of protective oils for metal, acids, bases, or any combination of these substances are not considered coatings for the purposes of this subpart.'' (40 CFR 63.3176).

The ALDT NESHAP does not apply to a surface coating operation that is subject to any other NESHAP as of June 25, 2004, except when a source chooses to comply with the ALDT NESHAP instead of the MMPP NESHAP (40 CFR part 63, subpart MMMM) or the PPP NESHAP (40 CFR part 63, subpart PPPP). (40 CFR 63.3082(c).)

Based on our search of the National Emission Inventory (NEI) (*www.epa.gov/air-emissions-inventories/national-emissions-inventory-nei*) and the EPA's Enforcement and Compliance History Online (ECHO) database (*echo.epa.gov)* and a review of active air emissions permits, we estimate that 43 facilities are subject to the ALDT NESHAP. A complete list of facilities subject to the ALDT NESHAP is available in Table 1 of Appendix 10 to the memorandum titled *Residual Risk Assessment for the Surface Coating of Automobiles and Light-duty Trucks Source Category in Support of the 2019 Risk and Technology Review Proposed Rule (*hereafter referred to as the *Automobiles and Light-Duty Trucks Risk Assessment Report),* in the ALDT Docket (Docket ID No. EPA–HQ–OAR–2019–0314).

b. HAP Emission Sources

The primary HAP emitted from ALDT surface coating operations are organic HAP and included toluene, xylene, glycol ethers, methyl isobutyl ketone (MIBK), ethyl benzene, and methanol. The HAP emissions are from coating application and drying and curing ovens in the ALDT surface coating operations. Some emissions occur from the cleaning of spray booths and equipment. In most cases, HAP emissions from surface preparation, storage and handling are relatively small (*i.e.,* not quantifiable) for this source category.

Inorganic (metal) HAP emissions were considered in the development of the ALDT NESHAP and the EPA determined that, although very low levels of emissions were reported in coatings, no inorganic HAP are emitted. Based on data obtained during development of the 2004 proposed NESHAP (67 FR 78612, December 24, 2002), some coatings in the ALDT source category reported emissions of inorganic HAP that likely were not emitted due to coating application techniques used. Instead, the 2004 proposed NESHAP found that the inorganic HAP components of the coatings mostly remained as solids in the dry coating film on the parts being coated, were collected by the circulating water under the spray booth floor grates, or were deposited on the walls, floor, and grates of the spray booths and other equipment in which they are applied. More recent data from the 2011 NEI data, used to inform this RTR, show total reported source category inorganic HAP emissions of 0.008 tpy from antimony, chromium, manganese, and nickel, and no reported emissions of inorganic HAP in thinners or cleaning materials. (See Appendix 1 to the *Automobiles and Light-Duty Trucks Risk Assessment Report,* in the ALDT Docket). Based on feedback from industry and information gleaned from EPA site visits, facilities in the ALDT source category employ high-efficiency spray equipment (including robotic spraying) to minimize the overall amount of coating used, thereby reducing inorganic HAP emissions further. Therefore, we conclude that, although inorganic HAP are reported components of coatings, no inorganic HAP are emitted.

c. Current NESHAP Requirements for Control of HAP

The NESHAP specifies numerical limits for the organic HAP emissions from both existing sources and new or reconstructed sources. These emissions limits are established for each of several process groupings at the source including (1) electrodeposition primer, primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operations plus all coatings and thinners, except for deadener materials and for adhesive and sealer materials that are not components of glass bonding systems, used in coating operations; (2) primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operation plus all coatings and thinners, except for deadener materials and for adhesive and sealer materials that are not components of glass bonding systems, used in coating operations; (3) adhesives and sealers, other than glass bonding adhesive materials; and (4) deadener materials.

The specific organic HAP emission limits are summarized in Table 2 of the memorandum titled *Technology Review for Surface Coating Operations in the Automobiles and Light-Duty Trucks Source Category* in the ALDT Docket.

Compliance with the ALDT NESHAP emission limits can be achieved using several different options, including a compliant material option, an emission rate without add-on controls option (averaging option), and an emission rate with add-on controls option. For bake ovens used to cure electrodeposition primers, an alternative is to capture the emissions and duct them to a control device having a destruction or removal efficiency of at least 95 percent. For any coating operation(s) on which the facility uses the compliant material option or the emission rate without add-on controls option, the facility is not required to meet any work practice standards. Facilities that have multiple paint lines may choose to group operations from two or more paint lines together, or to make a separate grouping of the operations from individual paint lines. Operating limits may apply for facilities that use an emission capture and control system to reduce emissions.

If the facility uses the emission rate with add-on controls option, they must develop and implement a work practice plan to minimize organic HAP emissions from all processes associated with the coating operations (*i.e.,* storage; mixing and conveying of coatings; thinners; cleaning materials; and waste materials). The plan must specify practices and procedures to ensure that a set of minimum work practices specified in the NESHAP are implemented. The facility must also comply with site-specific operating limits for the emission capture and control system.

2. What is the surface coating of miscellaneous metal parts and products source category and how does the current NESHAP regulate its HAP emissions?

a. Source Category Description

The MMPP NESHAP was promulgated on January 2, 2004 (69 FR 130), and is codified at 40 CFR part 63, subpart MMMM. A technical correction to the final rule was published on April 26, 2004 (69 FR 22602) and December 22, 2006 (71 FR 76922). The MMPP NESHAP applies to owners or operators of metal parts and products surface coating operations at facilities that are major sources of HAP.

Miscellaneous metal parts and products include, but are not limited to, metal components of the following types of products as well as the products themselves: motor vehicle parts and accessories, bicycles and sporting goods, recreational vehicles, extruded aluminum structural components, railroad cars, heavy-duty trucks, medical equipment, lawn and garden equipment, electronic equipment, magnet wire, steel drums, industrial machinery, metal pipes, and numerous other industrial, household, and consumer products. The MMPP NESHAP (40 CFR 63. 3881(c)) does not apply to the surface coating or coating operations that meet the applicability criteria of eleven other surface coating NESHAP, *e.g.,* surface coating of metal components of wood furniture (subpart JJ of 40 CFR part 63), surface coating of metal components of large appliances (subpart NNNN of 40 CFR part 63), and surface coating of metal components of automobiles and light-duty trucks (subpart IIII of 40 CFR part 63).

Based on our search of the NEI and the EPA's ECHO database and a review of active air emission permits, we estimate that 368 facilities are subject to the MMPP NESHAP. A list of facilities we identified as subject to the MMPP NESHAP is available in Table 1 to Appendix 10 to the memorandum titled *Residual Risk Assessment for the Surface Coating of Miscellaneous Metal Parts and Products Source Category in Support of the 2019 Risk and Technology Review Proposed Rule* (hereafter referred to as the *Miscellaneous Metal Parts and Products Risk Assessment Report*), in the MMPP Docket (Docket ID No. EPA–HQ–OAR–2019–0312).

b. HAP Emission Sources

The primary HAP emitted from MMPP surface coating operations are organic HAP and include xylenes, toluene, glycol ethers, ethyl benzene, MIBK, methanol, ethylene glycol, and dimethyl phthalate. The majority of organic HAP emissions can be attributed to the application, drying, and curing of coatings.

Inorganic HAP emissions were considered in the development of the MMPP NESHAP and the EPA determined that inorganic HAP emissions would be very low based on the coating application techniques in place at the time of the rule development. Based on information reported in survey responses during the development of the proposal for the 2004 NESHAP, inorganic HAP, including chromium, cobalt, lead, and manganese compounds, are components of some coatings used by this source category. Inorganic HAP in the coatings would only have the potential to be emitted if they were spray-applied, but the inorganic HAP would be either deposited on the part being coated as part of the surface coating, on the walls and floors of the spray booth, or captured by the spray booth filters (typically either a dry fabric filter or a water-wash filter system). No inorganic HAP were documented in thinners or cleaning materials. Emissions would be further reduced by the use of high efficiency spray equipment, often combined with robotic spraying, that minimize the amount of coating that is sprayed. For more detailed information please see the emissions memorandum in Appendix 1 to the *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket.

In response to comments on the 2004 proposed NESHAP,[3] the EPA argued

[3] *Surface Coating of Miscellaneous Metal Parts and Products, Summary of Public Comments and*

that given the combination of very low usage of coatings containing inorganic HAP in this source category, and the current and expected continued use of controls (dry filters and waterwash systems on spray booths and high efficiency equipment) to reduce overspray emissions, the EPA believed that levels of inorganic HAP emissions did not warrant federal regulation because those regulations would not be expected to result in additional emissions reduction.

c. Current NESHAP Requirements for Control of HAP

The MMPP NESHAP establishes the organic HAP emissions limits for new and existing sources. The final rule contains five subcategories: (1) General use coating, (2) high performance coating, (3) magnet wire coating, (4) rubber-to-metal coating, and (5) extreme performance fluoropolymer coating (EPFP).

Compliance can be demonstrated with using a variety of compliance options including, (1) a compliant coatings option, where all coatings used have organic HAP contents that individually meet the organic HAP emissions limit, and all thinners and cleaning materials contain no organic HAP; (2) an emission rate without add-on controls option, where the organic HAP emission rate, calculated as a rolling 12-month emission rate and determined on a monthly basis, is equal to or less than the organic HAP emissions limit; or (3) an emission rate with add-on controls option, where the organic HAP emission rate, calculated as a rolling 12-month emissions rate and determined on a monthly basis, taking into account the emissions reduction achieved through the use of one or more emissions capture and control devices, is equal to or less than the organic HAP emissions limit. A facility using the add-on control option must also comply with work practice standards to minimize organic HAP emissions from the storage, mixing, and conveying of coatings, thinners, cleaning materials, and waste materials associated with the coating operation(s) and must also comply with operating limits for the emissions capture systems and add-on control devices.

If a facility's surface coating operations meet the applicability criteria of more than one of the coating subcategories in the MMPP NESHAP, the facility may comply separately with each emissions limit or comply using one of the following options:

- If general use coating or magnet wire coating constitute 90 percent or more of the surface coating activity at the facility (*i.e.,* it is the predominant activity), then the facility can comply with that one emissions limit for all surface coating at the facility.
- The facility can comply with a facility-specific emissions limit calculated on the basis of the applicable emissions limits and the amount of coating activity performed in each coating subcategory, where activity is measured as the volume of coating solids used.

The specific organic HAP emission limits for each coating subcategory and the operating limits are summarized in Tables 4 and 5 of the memorandum titled *Technology Review for Surface Coating Operations in the Miscellaneous Metal Parts and Products Category.*

3. What is the surface coating of plastic parts and products source category and how does the current NESHAP regulate its HAP emissions?

a. Source Category Description

The NESHAP for the PPP source category was promulgated on April 19, 2004 (69 FR 20968), and is codified at 40 CFR part 63, subpart PPPP. Technical corrections to the final rule were published on December 22, 2006 (71 FR 76922) and April 24, 2007 (72 FR 20227). The PPP NESHAP applies to owners or operators of PPP surface coating operations at facilities that are major sources of HAP. Plastic parts and products include, but are not limited to, plastic components of the following types of products as well as the products themselves: Motor vehicle parts and accessories for automobiles, trucks, recreational vehicles; sporting and recreational goods; toys; business machines; laboratory and medical equipment; and household and other consumer products. The PPP NESHAP (40 CFR 63. 4481(c)) does not apply to the surface coating or coating operations of items that meet the applicability criteria of eleven other surface coating NESHAP, *e.g.,* surface coating of plastic components of wood furniture (subpart JJ of 40 CFR part 63), surface coating of plastic components of large appliances (subpart NNNN of 40 CFR part 63), and surface coating of plastic components of automobiles and light-duty trucks (subpart IIII of 40 CFR part 63).

Based on our search of the NEI and the EPA's ECHO database and a review of active air emission permits, we estimate that 125 facilities are subject to the PPP NESHAP. A list of facilities we identified as subject to the PPP NESHAP is available in Table 1 to Appendix 10 to the memorandum titled *Residual Risk Assessment for the Surface Coating of Plastic Parts and Products Source Category in Support of the 2019 Risk and Technology Review Proposed Rule* (hereafter referred to as the *Plastic Parts and Products Risk Assessment Report*), in the PPP Docket (Docket ID No. EPA–HQ–OAR–2019–0313).

b. HAP Emission Sources

The primary HAP emitted from PPP surface coating operations are organic HAP and, based on the 2011 NEI, include xylene, toluene, MIBK, ethylbenzene, styrene, glycol ethers, and methanol, in order of decreasing emissions. These compounds account for about 96 percent of the nationwide HAP emissions from this source category, based on an analysis of the NEI.

No inorganic HAP are currently associated with the coatings used in this source category, based on the data in the NEI.

c. Current NESHAP Requirements for Control of HAP

The PPP NESHAP specifies numerical emission limits for existing sources and for new and reconstructed sources for organic HAP emissions. The final rule contains four subcategories: (1) General use coating, (2) thermoplastic olefin coating, (3) automotive lamp coating, and (4) assembled on-road vehicle coating.

Compliance can be demonstrated with a variety of compliance options including, (1) a compliant material option, where the HAP content of each coating used is less than or equal to the applicable organic HAP emissions limit and each thinner, additive, and cleaning material uses no organic HAP; (2) an emission rate without add-on controls option, where the organic HAP emission rate, calculated as a rolling 12-month emission rate and determined on a monthly basis, is equal to or less than the organic HAP emissions limit; or (3) an emission rate with add-on controls option, where the organic HAP emission rate, calculated as a rolling 12-month emissions rate and determined on a monthly basis, taking into account the emissions reduction achieved through the use of one or more emissions capture and control devices, is equal to or less than the organic HAP emissions limit. A facility using the add-on control option must also comply with work practice standards to minimize organic HAP emissions from the storage, mixing, and conveying of coatings, thinners, cleaning materials, and waste materials associated with the coating operation(s) and must also comply with

Responses on Proposed Rule. August 2003. EPA–453/R–03–008; p. 83.

operating limits for the emissions capture systems and add-on control devices.

The specific organic HAP emission limits for each coating subcategory are summarized in Table 2 of the memorandum titled *Technology Review for Surface Coating Operations in the Plastic Parts and Products Category.*

C. What data collection activities were conducted to support this action?

For the risk modeling portion of these RTRs, the EPA used data from the 2011 and 2014 NEI. The NEI is a database that contains information about sources that emit criteria air pollutants, their precursors, and HAP. The database includes estimates of annual air pollutant emissions from point, nonpoint, and mobile sources in the 50 states, the District of Columbia, Puerto Rico, and the Virgin Islands. The EPA collects this information and releases an updated version of the NEI database every 3 years. The NEI includes data necessary for conducting risk modeling, including annual HAP emissions estimates from individual emission points at facilities and the related emissions release parameters. We used NEI emissions and supporting data as the primary data to develop the model input files for the risk assessments for each of these three source categories. Detailed information on the development of the modeling file for the ALDT source category can be found in Appendix 1 to the *Automobiles and Light-Duty Trucks Risk Assessment Report,* in the ALDT Docket (Docket ID No. EPA–HQ–OAR–2017–0314). Detailed information on the development of the modeling file for the MMPP source category can be found in Appendix 1 to the *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket (Docket ID No. EPA–HQ–OAR–2019–0312). Detailed information on the development of the modeling file for the PPP source category can be found in Appendix 1 to the *Plastic Parts and Products Risk Assessment Report,* in the PPP Docket (Docket ID No. EPA–HQ–OAR–2019–0313).

For each risk modeling and technology review portion of these three RTRs, we also gathered data from facility construction and operating permits regarding emission points, air pollution control devices, and process operations. We collected permits and supporting documentation from state permitting authorities through state-maintained online databases for many, but not all, of the facilities in each source category. The facility permits were also used to confirm that the facilities were major sources of HAP and were subject to the NESHAP that are the subject of these risk assessments. In certain cases, we contacted industry associations and facility owners or operators to confirm and clarify the sources of emissions that were reported in the NEI.

For the technology review portion of these RTRs, we also used information from the EPA's ECHO database as a tool to identify which facilities were potentially subject to the NESHAP. The ECHO database provides integrated compliance and enforcement information for approximately 800,000 regulated facilities nationwide. Using the search feature in ECHO, the EPA identified facilities that could potentially be subject to each of these three NESHAP. We then reviewed operating permits for these facilities, when available, to confirm that they were major sources of HAP with emission sources subject to these NESHAP. For many sources in the MMPP source category in the rubber-to-metal bonding and the high-performance coating subcategories, we also reviewed recent semi-annual compliance reports to confirm the compliance option they were using and the emission rates they were achieving.

Also, for the technology reviews, we collected information from the reasonably available control technology (RACT), best available control technology (BACT), and lowest achievable emission rate (LAER) determinations in the EPA's RACT/BACT/LAER Clearinghouse (RBLC).[4] This database contains case-specific information on air pollution technologies that have been required to reduce the emissions of air pollutants from stationary sources. Under the EPA's New Source Review (NSR) program, an NSR permit must be obtained if a facility is planning new construction that increases the air emissions of any regulated NSR pollutant at or above 100 or 250 tpy (could be a lower threshold depending upon nonattainment severity) or a modification that results in a significant emissions increase and a significant net emissions increase of any regulated NSR pollutant (''significant'' emissions increase is defined in the NSR regulations and is pollutant-specific, ranging from less than 1 pound (lb) to 100 tpy of the applicable regulated NSR pollutant). This central database promotes the sharing of information among permitting agencies and aids in case-by-case determinations for NSR permits. We examined information contained in the RBLC to determine what technologies are currently used for these surface coating operations to reduce air emissions.

Additional information about these data collection activities for the technology reviews is contained in the technology review memoranda titled *Technology Review for Surface Coating Operations in the Automobiles and Light-Duty Trucks Category,* July 2019 (hereafter referred to as the *Automobiles and Light-Duty Trucks Technology Review Memo*), *Technology Review for the Surface Coating Miscellaneous Metal Parts and Products Source Category,* July 2019 (hereafter referred to as the *Miscellaneous Metal Parts and Products Technology Review Memo*), and *Technology Review for Surface Coating Operations in the Plastic Parts and Products Category,* July 2019 (hereafter referred to as the *Plastic Parts and Products Technology Review Memo*), available in the respective ALDT, MMPP, and PPP Dockets.

D. What other relevant background information and data are available?

As part of the technology review for the ALDT, the MMPP, and the PPP NESHAP source categories, we reviewed information available in the American Coatings Association's (ACA) *Industry Market Analysis,* 9th Edition (2014—2019).[5] The *ACA Industry Market Analysis* provided information on trends in coatings technology that can affect emissions from the ALDT, the MMPP, and the PPP source categories. Additional details regarding our review of these information sources are contained in the *Automobiles and Light-Duty Trucks Technology Review Memo, Miscellaneous Metal Parts and Products Technology Review Memo,* and the Plastic Parts and Products *Technology Review Memo,* available in the respective ALDT, MMPP, and PPP Dockets.

III. Analytical Procedures and Decision-Making

In this section, we describe the analyses performed to support the proposed decisions for the RTRs and other issues addressed in this proposal.

A. How do we consider risk in our decision-making?

As discussed in section II.A of this preamble and in the Benzene NESHAP, in evaluating and developing standards under CAA section 112(f)(2), we apply a two-step approach to determine

[4] *https://www.epa.gov/catc/ractbactlaer-clearinghouse-rblc-basic-information.*

[5] Prepared for the ACA, Washington, DC, by The ChemQuest Group, Inc., Cincinnati, Ohio. 2015.

whether or not risks are acceptable and to determine if the standards provide an ample margin of safety to protect public health. As explained in the Benzene NESHAP, ''the first step judgment on acceptability cannot be reduced to any single factor'' and, thus, ''[t]he Administrator believes that the acceptability of risk under section 112 is best judged on the basis of a broad set of health risk measures and information.'' 54 FR 38046, September 14, 1989. Similarly, with regard to the ample margin of safety determination, ''the Agency again considers all of the health risk and other health information considered in the first step. Beyond that information, additional factors relating to the appropriate level of control will also be considered, including cost and economic impacts of controls, technological feasibility, uncertainties, and any other relevant factors.'' *Id.*

The Benzene NESHAP approach provides flexibility regarding factors the EPA may consider in making determinations and how the EPA may weigh those factors for each source category. The EPA conducts a risk assessment that provides estimates of the MIR posed by the HAP emissions from each source in the source category, the hazard index (HI) for chronic exposures to HAP with the potential to cause noncancer health effects, and the hazard quotient (HQ) for acute exposures to HAP with the potential to cause noncancer health effects.[6] The assessment also provides estimates of the distribution of cancer risks within the exposed populations, cancer incidence, and an evaluation of the potential for adverse environmental effects. The scope of EPA's risk analysis is consistent with EPA's response to comments on our policy under the Benzene NESHAP where the EPA explained that:

> ''[t]he policy chosen by the Administrator permits consideration of multiple measures of health risk. Not only can the MIR figure be considered, but also incidence, the presence of non-cancer health effects, and the uncertainties of the risk estimates. In this way, the effect on the most exposed individuals can be reviewed as well as the impact on the general public. These factors can then be weighed in each individual case. This approach complies with the *Vinyl Chloride* mandate that the Administrator ascertain an acceptable level of risk to the public by employing his expertise to assess available data. It also complies with the Congressional intent behind the CAA, which did not exclude the use of any particular measure of public health risk from the EPA's consideration with respect to CAA section 112 regulations, and thereby implicitly permits consideration of any and all measures of health risk which the Administrator, in his judgment, believes are appropriate to determining what will 'protect the public health'.''

See 54 FR 38057, September 14, 1989. Thus, the level of the MIR is only one factor to be weighed in determining acceptability of risks. The Benzene NESHAP explained that ''an MIR of approximately one in 10 thousand should ordinarily be the upper end of the range of acceptability. As risks increase above this benchmark, they become presumptively less acceptable under CAA section 112, and would be weighed with the other health risk measures and information in making an overall judgment on acceptability. Or, the Agency may find, in a particular case, that a risk that includes MIR less than the presumptively acceptable level is unacceptable in the light of other health risk factors.'' *Id.* at 38045. In other words, risks that include an MIR above 100-in-1 million may be determined to be acceptable, and risks with an MIR below that level may be determined to be unacceptable, depending on all of the available health information. Similarly, with regard to the ample margin of safety analysis, the EPA stated in the Benzene NESHAP that: ''EPA believes the relative weight of the many factors that can be considered in selecting an ample margin of safety can only be determined for each specific source category. This occurs mainly because technological and economic factors (along with the health-related factors) vary from source category to source category.'' *Id.* at 38061. We also consider the uncertainties associated with the various risk analyses, as discussed earlier in this preamble, in our determinations of acceptability and ample margin of safety.

The EPA notes that it has not considered certain health information to date in making residual risk determinations. At this time, we do not attempt to quantify those HAP risks that may be associated with emissions from other facilities that do not include the source categories under review, mobile source emissions, natural source emissions, persistent environmental pollution, or atmospheric transformation in the vicinity of the sources in the categories.

The EPA understands the potential importance of considering an individual's total exposure to HAP in addition to considering exposure to HAP emissions from the source category and facility. We recognize that such consideration may be particularly important when assessing noncancer risks, where pollutant-specific exposure health reference levels (*e.g.,* reference concentrations (RfCs) are based on the assumption that thresholds exist for adverse health effects. For example, the EPA recognizes that, although exposures attributable to emissions from a source category or facility alone may not indicate the potential for increased risk of adverse noncancer health effects in a population, the exposures resulting from emissions from the facility in combination with emissions from all of the other sources (*e.g.,* other facilities) to which an individual is exposed may be sufficient to result in increased risk of adverse noncancer health effects. In May 2010, the Science Advisory Board (SAB) advised the EPA ''that RTR assessments will be most useful to decision makers and communities if results are presented in the broader context of aggregate and cumulative risks, including background concentrations and contributions from other sources in the area.'' [7]

In response to the SAB recommendations, the EPA is incorporating cumulative risk analyses into its RTR risk assessments, including those reflected in this proposal. The Agency is (1) conducting facility-wide assessments, which include source category emission points, as well as other emission points within the facilities; (2) combining exposures from multiple sources in the same category that could affect the same individuals; and (3) for some persistent and bioaccumulative pollutants, analyzing the ingestion route of exposure. In addition, the RTR risk assessments have always considered aggregate cancer risk from all carcinogens and aggregate noncancer HQs from all noncarcinogens affecting the same target organ system.

Although we are interested in placing source category and facility-wide HAP risks in the context of total HAP risks from all sources combined in the vicinity of each source, we are concerned about the uncertainties of doing so. Estimates of total HAP risk from emission sources other than those that we have studied in depth during this RTR review would have significantly greater associated uncertainties than the source category or

[6] The MIR is defined as the cancer risk associated with a lifetime of exposure at the highest concentration of HAP where people are likely to live. The HQ is the ratio of the potential HAP exposure concentration to the noncancer dose-response value; the HI is the sum of HQs for HAP that affect the same target organ or organ system.

[7] Recommendations of the SAB Risk and Technology Review Methods Panel are provided in their report, which is available at: *http://yosemite.epa.gov/sab/sabproduct.nsf/4AB3966E263D943A8525771F00668381/$File/EPA-SAB-10-007-unsigned.pdf.*

facility-wide estimates. Such aggregate or cumulative assessments would compound those uncertainties, making the assessments too unreliable.

B. How do we perform the technology review?

Our technology reviews focus on the identification and evaluation of developments in practices, processes, and control technologies that have occurred since the MACT standards were promulgated. Where we identify such developments, we analyze their technical feasibility, estimated costs, energy implications, and non-air environmental impacts. We also consider the emission reductions associated with applying each development. This analysis informs our decision of whether it is ''necessary'' to revise the emissions standards. In addition, we consider the appropriateness of applying controls to new sources versus retrofitting existing sources. For this exercise, we consider any of the following to be a ''development'':

- Any add-on control technology or other equipment that was not identified and considered during development of the original MACT standards;
- Any improvements in add-on control technology or other equipment (that were identified and considered during development of the original MACT standards) that could result in additional emissions reduction;
- Any work practice or operational procedure that was not identified or considered during development of the original MACT standards;
- Any process change or pollution prevention alternative that could be broadly applied to the industry and that was not identified or considered during development of the original MACT standards; and
- Any significant changes in the cost (including cost effectiveness) of applying controls (including controls the EPA considered during the development of the original MACT standards).

In addition to reviewing the practices, processes, and control technologies that were considered at the time we originally developed the NESHAPs (*i.e.,* the 2004 ALDT NESHAP; the 2004 MMPP NESHAP; and the 2004 PPP NESHAP), we review a variety of data sources in our investigation of potential practices, processes, or controls that may have not been considered for each of the three source categories during development of the NESHAP. Among the sources we reviewed were the NESHAP for various industries that were promulgated after the MACT standards being reviewed in this action (*e.g.,* NESHAP for Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources (40 CFR part 63, subpart HHHHHH)). We also reviewed the results of other technology reviews for other surface coating source categories since the promulgation of the NESHAPs (*e.g.,* the technology reviews conducted for the Shipbuilding and Ship Repair (Surface Coating) NESHAP (40 CFR part 63, subpart II) and the Wood Furniture Manufacturing Operations NESHAP (40 CFR part 63, subpart JJ)). We reviewed the regulatory requirements and/or technical analyses associated with these regulatory actions to identify any practices, processes, and control technologies considered in these efforts that could be applied to emission sources in the ALDT, the MMPP, and the PPP source categories, as well as the costs, non-air impacts, and energy implications associated with the use of these technologies. Finally, we reviewed information from other sources, such as state and/or local permitting agency databases and industry-specific market analyses and trade journals, to research advancements in add-on controls and lower HAP technology for coatings and solvents. For a more detailed discussion of our methods for performing these technology reviews, refer to the *Automobiles and Light-Duty Trucks Technology Review Memo, the Miscellaneous Metal Parts and Products Technology Review Memo* and the *Plastic Parts and Products Technology Review Memo,* available in the respective ALDT, MMPP, and PPP Dockets.

C. How do we estimate post-MACT risks posed by these source categories?

In this section, we provide a complete description of the types of analyses that we generally perform during the risk assessment process. In some cases, we do not perform a specific analysis because it is not relevant. For example, in the absence of emissions of HAP known to be persistent and bioaccumulative in the environment (PB–HAP), we would not perform a multipathway exposure assessment. Where we do not perform an analysis, we state that we do not and provide the reason. While we present all of our risk assessment methods, we only present risk assessment results for the analyses actually conducted (see the presentation of results in sections IV.A.1, IV.B.1, and IV.C.1 of this preamble).

The EPA conducted risk assessments that provide estimates of the MIR for cancer posed by the HAP emissions from each source in each source category, the HI for chronic exposures to HAP with the potential to cause noncancer health effects, and the HQ for acute exposures to HAP with the potential to cause noncancer health effects. The assessments also provide estimates of the distribution of cancer risks within the exposed populations, cancer incidence, and an evaluation of the potential for adverse environmental effects. The seven sections that follow this paragraph describe how we estimated emissions and conducted the risk assessments. The ALDT, MMPP, and PPP Dockets contain the respective *Automobiles and Light-Duty Trucks Risk Assessment Report, Miscellaneous Metal Parts and Products Risk Assessment Report* and the *Plastic Parts and Products Risk Assessment Report,* which provide more information on the risk assessment inputs and models. The methods used to assess risks (as described in the seven primary steps below) are consistent with those peer-reviewed by a panel of the EPA's SAB in 2009 [8] and described in the SAB review report issued in 2010. They are also consistent with the key recommendations contained in that report.

1. How did we estimate actual emissions and identify the emissions release characteristics?

The actual emissions and the emission release characteristics for each facility were obtained primarily from either the 2011 NEI or the 2014 NEI. Most data were obtained from the 2011 NEI, unless the 2014 NEI included HAP data for emission units or processes for which the 2011 NEI included only volatile organic compounds (VOC) or particulate matter. In some cases, the industry association or the specific facilities were contacted to confirm emissions that appeared to be outliers, that were otherwise inconsistent with our understanding of the industry, or that were associated with high risk values in our initial risk screening analyses. When appropriate, emission values and release characteristics were revised based on these facility contacts, and these changes were documented. Additional information on the development of the modeling file for each source category, including the development of the actual emissions estimates and emissions release characteristics, can be found in Appendix 1 to the *Automobiles and*

[8] U.S. EPA SAB. *Risk and Technology Review (RTR) Risk Assessment Methodologies: For Review by the EPA's Science Advisory Board with Case Studies—MACT I Petroleum Refining Sources and Portland Cement Manufacturing,* June 2009. EPA–452/R–09–0006. *https://www3.epa.gov/airtoxics/rrisk/rtrpg.html.*

Light-Duty Trucks Risk Assessment Report, in the ALDT Docket; in Appendix 1 to the *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket; and Appendix 1 to the *Plastic Parts and Products Risk Assessment Report,* in the PPP Docket.

2. How did we estimate MACT-allowable emissions?

The available emissions data in the RTR emissions dataset include estimates of the mass of HAP emitted during a specified annual time period. These ''actual'' emission levels are often lower than the emission levels allowed under the requirements of the current MACT standards. The emissions level allowed to be emitted under the MACT standards is referred to as the ''MACT-allowable'' emissions level. We discussed the use of both MACT-allowable and actual emissions in the final Coke Oven Batteries RTR (70 FR 19998–19999, April 15, 2005) and in the proposed and final Hazardous Organic NESHAP RTRs (71 FR 34428, June 14, 2006, and 71 FR 76609, December 21, 2006, respectively). In those actions, we noted that assessing the risks at the MACT-allowable level is inherently reasonable since these risks reflect the maximum level facilities could emit and still comply with national emission standards. We also explained that it is reasonable to consider actual emissions, where such data are available, in both steps of the risk analysis, in accordance with the Benzene NESHAP approach. (54 FR 38044, September 14, 1989.)

For the ALDT, MMPP, and PPP source categories, the EPA calculated allowable emissions by developing source category-specific multipliers of 1.1 for Automobiles and Light-duty Trucks and 1.2 for both Miscellaneous Metal Parts and Plastic Parts and Products. These multipliers were applied to the current emissions for each category to estimate the allowable emissions. The multipliers were based on information obtained from the facility operating permits and industry information.

For details on how the EPA estimated the MACT allowable emissions for the ALDT source category, please *see* Appendix 1 to the *Automobiles and Light-Duty Trucks Risk Assessment Report,* in the ALDT Docket (Docket ID No. EPA–HQ–OAR–2019–0314). For details on how the EPA calculated the MACT allowable emissions for the MMPP source category, please *see* Appendix 1 to the *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket (Docket ID No. EPA–HQ–OAR–2019–0312). For details on how the EPA calculated the MACT allowable emissions for the PPP source category, please *see* Appendix 1 to the *Plastic Parts and Products Risk Assessment Report,* in the PPP Docket (Docket ID No. EPA–HQ–OAR–2019–0313).

3. How do we conduct dispersion modeling, determine inhalation exposures, and estimate individual and population inhalation risks?

Both long-term and short-term inhalation exposure concentrations and health risks from the source categories addressed in this proposal were estimated using the Human Exposure Model (HEM–3).[9] The HEM–3 performs three primary risk assessment activities: (1) Conducting dispersion modeling to estimate the concentrations of HAP in ambient air, (2) estimating long-term and short-term inhalation exposures to individuals residing within 50 kilometers (km) of the modeled sources, and (3) estimating individual and population-level inhalation risks using the exposure estimates and quantitative dose-response information.

a. Dispersion Modeling

The air dispersion model AERMOD, used by the HEM–3 model, is one of the EPA's preferred models for assessing air pollutant concentrations from industrial facilities.[10] To perform the dispersion modeling and to develop the preliminary risk estimates, HEM–3 draws on three data libraries. The first is a library of meteorological data, which is used for dispersion calculations. This library includes 1 year (2016) of hourly surface and upper air observations from 824 meteorological stations, selected to provide coverage of the U.S. and Puerto Rico. A second library of U.S. Census Bureau census block [11] internal point locations and populations provides the basis of human exposure calculations (U.S. Census, 2010). In addition, for each census block, the census library includes the elevation and controlling hill height, which are also used in dispersion calculations. A third library of pollutant-specific dose-response values is used to estimate health risks. These are discussed below:

b. Risk From Chronic Exposure to HAP

In developing the risk assessment for chronic exposures, we use the estimated annual average ambient air concentrations of each HAP emitted by each source in the source categories. The HAP air concentrations at each nearby census block centroid located within 50 km of the facility are a surrogate for the chronic inhalation exposure concentration for all the people who reside in that census block. A distance of 50 km is consistent with both the analysis supporting the 1989 Benzene NESHAP (54 FR 38044, September 14, 1989) and the limitation of Gaussian dispersion modules, including AERMOD.

For each facility we calculate the MIR as the cancer risk associated with a continuous lifetime (24 hours per day, 7 days per week, 52 weeks per year, for a 70-year period) exposure to the maximum concentration at the centroid of each inhabited census block. We calculate individual cancer risk by multiplying the estimated lifetime exposure to the ambient concentration of each HAP (in micrograms per cubic meter ($\mu g/m^3$)) by its unit risk estimate (URE). The URE is an upper bound estimate of an individual's probability of contracting cancer over a lifetime of exposure to a concentration of 1 microgram of the pollutant per cubic meter of air. For residual risk assessments, we generally use UREs from the EPA's Integrated Risk Information System (IRIS). For carcinogenic pollutants without IRIS values, we look to other reputable sources of cancer dose-response values, often using California EPA (CalEPA) UREs, where available. In cases where new, scientifically credible dose-response values have been developed in a manner consistent with EPA guidelines and have undergone a peer review process similar to that used by the EPA, we may use such dose-response values in place of, or in addition to, other values, if appropriate. The pollutant-specific dose-response values used to estimate health risk are available at *https://www.epa.gov/fera/dose-response-assessment-assessing-health-risks-associated-exposure-hazardous-air-pollutants.*

To estimate individual lifetime cancer risks associated with exposure to HAP emissions from each facility in the source category, we sum the risks for each of the carcinogenic HAP [12] emitted

[9] For more information about HEM–3, go to *https://www.epa.gov/fera/risk-assessment-and-modeling-human-exposure-model-hem.*

[10] U.S. EPA. Revision to the *Guideline on Air Quality Models: Adoption of a Preferred General Purpose (Flat and Complex Terrain) Dispersion Model and Other Revisions* (70 FR 68218, November 9, 2005).

[11] A census block is the smallest geographic area for which census statistics are tabulated.

[12] The EPA's 2005 *Guidelines for Carcinogen Risk Assessment* classifies carcinogens as: ''carcinogenic to humans,'' ''likely to be carcinogenic to humans,'' and ''suggestive evidence of carcinogenic

Continued

by the modeled facility. We estimate cancer risk at every census block within 50 km of every facility in the source category. The MIR is the highest individual lifetime cancer risk estimated for any of those census blocks. In addition to calculating the MIR, we estimate the distribution of individual cancer risks for the source category by summing the number of individuals within 50 km of the sources whose estimated risk falls within a specified risk range. We also estimate annual cancer incidence by multiplying the estimated lifetime cancer risk at each census block by the number of people residing in that block, summing results for all of the census blocks, and then dividing this result by a 70-year lifetime.

To assess the risk of noncancer health effects from chronic exposure to HAP, we calculate either an HQ or a target organ-specific hazard index (TOSHI). We calculate an HQ when a single noncancer HAP is emitted. Where more than one noncancer HAP is emitted, we sum the HQ for each of the HAP that affects a common target organ or target organ system to obtain a TOSHI. The HQ is the estimated exposure divided by the chronic noncancer dose-response value, which is a value selected from one of several sources. The preferred chronic noncancer dose-response value is the EPA RfC, defined as ''an estimate (with uncertainty spanning perhaps an order of magnitude) of a continuous inhalation exposure to the human population (including sensitive subgroups) that is likely to be without an appreciable risk of deleterious effects during a lifetime'' (*https://iaspub.epa.gov/sor_internet/registry/termreg/searchandretrieve/glossariesandkeywordlists/search.do?details=&vocabName=IRIS%20Glossary*). In cases where an RfC from the EPA's IRIS is not available or where the EPA determines that using a value other than the RfC is appropriate, the chronic noncancer dose-response value can be a value from the following prioritized sources, which define their dose-response values similarly to the EPA: (1) The Agency for Toxic Substances and Disease Registry (ATSDR) Minimum Risk Level (*https://www.atsdr.cdc.gov/mrls/index.asp*); (2) the CalEPA Chronic Reference Exposure Level (REL) (*https://oehha.ca.gov/air/crnr/notice-adoption-air-toxics-hot-spots-program-guidance-manual-preparation-health-risk-0*); or (3) as noted above, a scientifically credible dose-response value that has been developed in a manner consistent with the EPA guidelines and has undergone a peer review process similar to that used by the EPA. The pollutant-specific dose-response values used to estimate health risks are available at *https://www.epa.gov/fera/dose-response-assessment-assessing-health-risks-associated-exposure-hazardous-air-pollutants.*

c. Risk From Acute Exposure to HAP That May Cause Health Effects Other Than Cancer

For each HAP for which appropriate acute inhalation dose-response values are available, the EPA also assesses the potential health risks due to acute exposure. For these assessments, the EPA makes conservative assumptions about emission rates, meteorology, and exposure location. In this proposed rulemaking, as part of our efforts to continually improve our methodologies to evaluate the risks that HAP emitted from categories of industrial sources pose to human health and the environment,[13] we are revising our treatment of meteorological data to use reasonable worst-case air dispersion conditions in our acute risk screening assessments instead of worst-case air dispersion conditions. This revised treatment of meteorological data and the supporting rationale are described in more detail in *Automobiles and Light-Duty Trucks Risk Assessment Report, the Miscellaneous Metal Parts and Products Risk Assessment Report, and the Plastic Parts and Products Risk Assessment Report,* and in Appendix 5 of the report: *Technical Support Document for Acute Risk Screening Assessment.* We will be applying this revision in RTR rulemakings proposed on or after June 3, 2019.

To assess the potential acute risk to the maximally exposed individual, we use the peak hourly emission rate for each emission point,[14] reasonable worst-case air dispersion conditions (*i.e.,* 99th percentile), and the point of highest off-site exposure. Specifically, we assume that peak emissions from the source category and reasonable worst-case air dispersion conditions co-occur and that a person is present at the point of maximum exposure.

To characterize the potential health risks associated with estimated acute inhalation exposures to a HAP, we generally use multiple acute dose-response values, including acute RELs, acute exposure guideline levels (AEGLs), and emergency response planning guidelines (ERPG) for 1-hour exposure durations, if available, to calculate acute HQs. The acute HQ is calculated by dividing the estimated acute exposure concentration by the acute dose-response value. For each HAP for which acute dose-response values are available, the EPA calculates acute HQs.

An acute REL is defined as ''the concentration level at or below which no adverse health effects are anticipated for a specified exposure duration.''[15] Acute RELs are based on the most sensitive, relevant, adverse health effect reported in the peer-reviewed medical and toxicological literature. They are designed to protect the most sensitive individuals in the population through the inclusion of margins of safety. Because margins of safety are incorporated to address data gaps and uncertainties, exceeding the REL does not automatically indicate an adverse health impact. AEGLs represent threshold exposure limits for the general public and are applicable to emergency exposures ranging from 10 minutes to 8 hours.[16] They are guideline levels for

potential.'' These classifications also coincide with the terms ''known carcinogen, probable carcinogen, and possible carcinogen,'' respectively, which are the terms advocated in the EPA's *Guidelines for Carcinogen Risk Assessment,* published in 1986 (51 FR 33992, September 24, 1986). In August 2000, the document, *Supplemental Guidance for Conducting Health Risk Assessment of Chemical Mixtures* (EPA/630/R–00/002), was published as a supplement to the 1986 document. Copies of both documents can be obtained from *https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=20533&CFID=70315376&CFTOKEN=71597944.* Summing the risk of these individual compounds to obtain the cumulative cancer risk is an approach that was recommended by the EPA's SAB in their 2002 peer review of the EPA's National Air Toxics Assessment (NATA) titled *NATA—Evaluating the National-scale Air Toxics Assessment 1996 Data—an SAB Advisory,* available at *https://yosemite.epa.gov/sab/sabproduct.nsf/214C6E915BB04E14852570CA007A682C/$File/ecadv02001.pdf.*

[13] *See, e.g.,* U.S. EPA. ''Screening Methodologies to Support Risk and Technology Reviews (RTR): A Case Study Analysis'' (Draft Report, May 2017. *https://www3.epa.gov/ttn/atw/rrisk/rtrpg.html*).

[14] In the absence of hourly emission data, we develop estimates of maximum hourly emission rates by multiplying the average actual annual emissions rates by a factor to account for variability. This is documented in the *Automobiles and Light-Duty Trucks Risk Assessment Report, the Miscellaneous Metal Parts and Products Risk Assessment Report, and the Plastic Parts and Products Risk Assessment Report* and in Appendix 5 of the report: *Technical Support Document for Acute Risk Screening Assessment.* These documents are available in the ALDT Docket, the MMPP Docket, and the PPP Docket.

[15] CalEPA issues acute RELs as part of its Air Toxics Hot Spots Program, and the 1-hour and 8-hour values are documented in *Air Toxics Hot Spots Program Risk Assessment Guidelines, Part I, The Determination of Acute Reference Exposure Levels for Airborne Toxicants,* which is available at *https://oehha.ca.gov/air/general-info/oehha-acute-8-hour-and-chronic-reference-exposure-level-rel-summary.*

[16] National Academy of Sciences, 2001. *Standing Operating Procedures for Developing Acute*

''once-in-a-lifetime, short-term exposures to airborne concentrations of acutely toxic, high-priority chemicals.'' *Id.* at 21. The AEGL–1 is specifically defined as ''the airborne concentration (expressed as ppm (parts per million) or mg/m^3 (milligrams per cubic meter)) of a substance above which it is predicted that the general population, including susceptible individuals, could experience notable discomfort, irritation, or certain asymptomatic nonsensory effects. However, the effects are not disabling and are transient and reversible upon cessation of exposure.'' The document also notes that ''Airborne concentrations below AEGL–1 represent exposure levels that can produce mild and progressively increasing but transient and nondisabling odor, taste, and sensory irritation or certain asymptomatic, nonsensory effects.'' *Id.* AEGL–2 are defined as ''the airborne concentration (expressed as parts per million or milligrams per cubic meter) of a substance above which it is predicted that the general population, including susceptible individuals, could experience irreversible or other serious, long-lasting adverse health effects or an impaired ability to escape.'' *Id.*

ERPGs are ''developed for emergency planning and are intended as health-based guideline concentrations for single exposures to chemicals.'' [17] *Id.* at 1. The ERPG–1 is defined as ''the maximum airborne concentration below which it is believed that nearly all individuals could be exposed for up to 1 hour without experiencing other than mild transient adverse health effects or without perceiving a clearly defined, objectionable odor.'' *Id.* at 2. Similarly, the ERPG–2 is defined as ''the maximum airborne concentration below which it is believed that nearly all individuals could be exposed for up to one hour without experiencing or developing irreversible or other serious health effects or symptoms which could impair an individual's ability to take protective action.'' *Id.* at 1.

An acute REL for 1-hour exposure durations is typically lower than its corresponding AEGL–1 and ERPG–1. Even though their definitions are slightly different, AEGL–1s are often the same as the corresponding ERPG–1s, and AEGL–2s are often equal to ERPG–2s. The maximum HQs from our acute inhalation screening risk assessment typically result when we use the acute REL for a HAP. In cases where the maximum acute HQ exceeds 1, we also report the HQ based on the next highest acute dose-response value (usually the AEGL–1 and/or the ERPG–1).

For these source categories, we did not have short-term emissions data; therefore, we developed source category-specific factors based on information about each industry. We request comment on our assumptions regarding hour-to-hour variation in emissions and our methods of calculating the multiplier for estimating the peak 1-hour emissions for each source category and any additional information that could help refine our approach.

The ALDT process is a continuous (non-batch) coating application and curing process which results in consistent emission rates. The sources in this category dip and spray-apply coatings onto the surface of the vehicle. The sources employ the use of various compliance options, which include the use of compliant coatings, averaging among coatings to meet the emission limits, and the use of add-on controls by facilities that cannot use the first two options. We expect that the hourly variations in emissions from these processes during routine operations to be minimal. Thus, applying the default multiplier of 10 to estimate the worst-case hourly emission rate is not reasonable for this category. We expect that minimal variations in emissions occur due to variations in the organic HAP content of the coatings. We calculated acute emissions by developing a source category-specific multiplier of 1.2 that was applied to the actual annual emissions, which were then divided by the total number of hours in a year (8,760 hours). A further discussion of why this factor was chosen can be found in Appendix 1 to the *Automobiles and Light-Duty Trucks Risk Assessment Report* in the ALDT Docket.

Similarly, for the MMPP source category, we expect to see minimal hour-to-hour variation in emissions during routine operations because coating operations dip or spray-apply coating onto the surface of metal parts and products in a continuous coating process. Thus, the default multiplier of 10 to estimate the worst-case hourly emission rate is not reasonable for this category. We expect that minimal variation in emissions occur due to variations in the organic HAP content of the coatings from batch to batch. We calculated acute emissions by developing a source category-specific multiplier of 1.2 that was applied to the actual annual emissions, which were then divided by the total number of hours in a year (8,760 hours). A further discussion of why this factor was chosen can be found in Appendix 1 to the *Miscellaneous Metal Parts and Products Risk Assessment Report* in the MMPP Docket.

For the PPP source category, we expect to see minimal hour-to-hour variation in emissions during routine operations because coating operations spray-apply coating onto the surface of plastic parts and products in a continuous coating process. Thus, the default multiplier of 10 to estimate the worst-case hourly emission rate is not reasonable for this category. We expect that minimal variation in emissions occur due to variations in the organic HAP content of the coatings from batch to batch. We calculated acute emissions by developing a source category-specific multiplier of 1.2 that was applied to the actual annual emissions, which were then divided by the total number of hours in a year (8,760 hours). A further discussion of why this factor was chosen can be found in Appendix 1 to the *Plastic Parts and Products Risk Assessment Report* in the PPP Docket.

In our acute inhalation screening risk assessment, acute impacts are deemed negligible for HAP where acute HQs are less than or equal to 1, and no further analysis is performed for these HAP. In cases where an acute HQ from the screening step is greater than 1, we assess the site-specific data to ensure that the acute HQ is at an off-site location. For the three source categories in this action, the acute data refinements consisted of plotting the HEM–3 polar grid results for each HAP with an acute HQ value greater than 1 on aerial photographs of the facilities. We then assessed whether the highest acute HQs were off-site and at locations that may be accessible to the public (*e.g.,* roadways and public buildings). These refinements are discussed more fully in the *Automobiles and Light-Duty Trucks, Miscellaneous Metal Parts and Products,* and *Plastic Parts and Products Risk Assessment Reports,* available in the respective ALDT, MMPP, and PPP Dockets.

Exposure Levels for Hazardous Chemicals, page 2. 4. How do we conduct the multipathway exposure and risk screening assessment?

The EPA conducts a tiered screening assessment examining the potential for significant human health risks due to exposures via routes other than inhalation (*i.e.,* ingestion). We first determine whether any sources in the source categories emitted any HAP known to be persistent and bioaccumulative in the environment, as identified in the EPA's Air Toxics Risk Assessment Library (see Volume 1, Appendix D, at *https://www.epa.gov/sites/production/files/2013–08/documents/volume_1_reflibrary.pdf*).

For the ALDT source category, we identified emissions of lead. In evaluating the potential multipathway risk from emissions of lead compounds, rather than developing a screening threshold emission rate, we compare maximum estimated chronic inhalation exposure concentrations to the level of the current National Ambient Air Quality Standard (NAAQS) for lead (0.15 $\mu g/m^3$).[18] Values below the level of the primary (health-based) lead NAAQS are considered to have a low potential for multipathway risk. For additional discussion of the multipathway screening results for this source category *see* section IV.A of this preamble and the *Automobiles and Light-Duty Trucks Risk Assessment Report* in the ALDT Docket.

For the MMPP source category, we identified emissions of arsenic, cadmium, and lead, so we proceeded to the next step of the evaluation. Except for lead, the human health risk screening assessment for PB–HAP consists of three progressive tiers. In a Tier 1 screening assessment, we determine whether the magnitude of the facility-specific emissions of PB–HAP warrants further evaluation to characterize human health risk through ingestion exposure. To facilitate this step, we use previously developed screening threshold emission rates for several PB–HAP that are based on a hypothetical upper-end screening exposure scenario developed for use in conjunction with the EPA's Total Risk Integrated Methodology.Fate, Transport, and Ecological Exposure (TRIM.FaTE) model. The PB–HAP with screening threshold emission rates are arsenic compounds, cadmium compounds, chlorinated dibenzodioxins and furans, mercury compounds, and polycyclic organic matter (POM). Based on the EPA estimates of toxicity and bioaccumulation potential, the pollutants above represent a conservative list for inclusion in multipathway risk assessments for RTR rules. (See Volume 1, Appendix D at *https://www.epa.gov/sites/production/files/2013–08/documents/volume_1_reflibrary.pdf.*) In this assessment, we compare the facility-specific emission rates of these PB–HAP to the screening threshold emission rates for each PB–HAP to assess the potential for significant human health risks via the ingestion pathway. We call this application of the TRIM.FaTE model the Tier 1 screening assessment. The ratio of a facility's actual emission rate to the Tier 1 screening threshold emission rate is a ''screening value.''

We derive the Tier 1 screening threshold emission rates for these PB–HAP (other than lead compounds) to correspond to a maximum excess lifetime cancer risk of 1-in-1 million (*i.e.,* for arsenic compounds, polychlorinated dibenzodioxins and furans and POM) or, for HAP that cause noncancer health effects (*i.e.,* cadmium compounds and mercury compounds), a maximum HQ of 1. If the emission rate of any one PB–HAP or combination of carcinogenic PB–HAP in the Tier 1 screening assessment exceeds the Tier 1 screening threshold emission rate for any facility (*i.e.,* the screening value is greater than 1), we conduct a second screening assessment, which we call the Tier 2 screening assessment (ingestion rates are decoupled into separate upper-bound ingestion rates for the fisher, farmer, and gardener scenarios). Since, the PB–HAP emissions did not exceed the Tier 1 multipathway screening value of 1, the Tier 2 multipathway screen was not conducted.

In evaluating the potential multipathway risk from emissions of lead compounds, rather than developing a screening threshold emission rate, we compare maximum estimated chronic inhalation exposure concentrations to the level of the current National Ambient Air Quality Standard (NAAQS) for lead.[19] Values below the level of the primary (health-based) lead NAAQS are considered to have a low potential for multipathway risk.

For additional discussion of the multipathway screening results for this source category *see* section IV.B of this preamble and the *Miscellaneous Metal Parts and Products Risk Assessment Report* in the MMPP Docket.

For the PPP source category, we did not identify emissions of any PB–HAP. Therefore, further evaluation of multipathway risk was not conducted for the PPP source category.

5. How do we conduct the environmental risk screening assessment?

a. Adverse Environmental Effects, Environmental HAP, and Ecological Benchmarks

The EPA conducts a screening assessment to examine the potential for adverse environmental effects as required under section 112(f)(2)(A) of the CAA. Section 112(a)(7) of the CAA defines ''adverse environmental effect'' as ''any significant and widespread adverse effect, which may reasonably be anticipated, to wildlife, aquatic life, or other natural resources, including adverse impacts on populations of endangered or threatened species or significant degradation of environmental quality over broad areas.''

The EPA focuses on eight HAP, which are referred to as ''environmental HAP,'' in its screening assessment: Six PB–HAP and two acid gases. The PB–HAP included in the screening assessment are arsenic compounds, cadmium compounds, dioxins/furans, polycyclic organic matter (POM), mercury (both inorganic mercury and methyl mercury), and lead compounds. The acid gases included in the screening assessment are hydrochloric acid (HCl) and hydrogen fluoride (HF).

HAP that persist and bioaccumulate are of particular environmental concern because they accumulate in the soil, sediment, and water. The acid gases, HCl and HF, were included due to their

[18] In doing so, the EPA notes that the legal standard for a primary NAAQS—that a standard is requisite to protect public health and provide an adequate margin of safety (CAA section 109(b))—differs from the CAA section 112(f) standard (requiring, among other things, that the standard provide an ''ample margin of safety to protect public health''). However, the primary lead NAAQS is a reasonable measure of determining risk acceptability (*i.e.,* the first step of the Benzene NESHAP analysis) since it is designed to protect the most susceptible group in the human population—children, including children living near major lead emitting sources. 73 FR 67002/3; 73 FR 67000/3; 73 FR 67005/1. In addition, applying the level of the primary lead NAAQS at the risk acceptability step is conservative, since that primary lead NAAQS reflects an adequate margin of safety.

[19] In doing so, the EPA notes that the legal standard for a primary NAAQS—that a standard is requisite to protect public health and provide an adequate margin of safety (CAA section 109(b))—differs from the CAA section 112(f) standard (requiring, among other things, that the standard provide an ''ample margin of safety to protect public health''). However, the primary lead NAAQS is a reasonable measure of determining risk acceptability (*i.e.,* the first step of the Benzene NESHAP analysis) since it is designed to protect the most susceptible group in the human population—children, including children living near major lead emitting sources. 73 FR 67002/3; 73 FR 67000/3; 73 FR 67005/1. In addition, applying the level of the primary lead NAAQS at the risk acceptability step is conservative, since that primary lead NAAQS reflects an adequate margin of safety.

well-documented potential to cause direct damage to terrestrial plants. In the environmental risk screening assessment, we evaluate the following four exposure media: Terrestrial soils, surface water bodies (includes water-column and benthic sediments), fish consumed by wildlife, and air. Within these four exposure media, we evaluate nine ecological assessment endpoints, which are defined by the ecological entity and its attributes. For PB–HAP (other than lead), both community-level and population-level endpoints are included. For acid gases, the ecological assessment evaluated is terrestrial plant communities.

An ecological benchmark represents a concentration of HAP that has been linked to a particular environmental effect level. For each environmental HAP, we identified the available ecological benchmarks for each assessment endpoint. We identified, where possible, ecological benchmarks at the following effect levels: Probable effect levels, lowest-observed-adverse-effect level, and no-observed-adverse-effect level. In cases where multiple effect levels were available for a particular PB–HAP and assessment endpoint, we use all of the available effect levels to help us to determine whether ecological risks exist and, if so, whether the risks could be considered significant and widespread.

For further information on how the environmental risk screening assessment was conducted, including a discussion of the risk metrics used, how the environmental HAP were identified, and how the ecological benchmarks were selected, *see* Appendix 9 of the *Automobiles and Light-Duty Trucks Risk Assessment Report,* the *Miscellaneous Metal Parts and Products Risk Assessment Report,* and the *Plastic Parts and Products Risk Assessment Report,* in the respective ALDT, MMPP and PPP Dockets.

b. Environmental Risk Screening Methodology

For the environmental risk screening assessment, the EPA first determined whether any facilities in the ALDT, MMPP, and PPP source categories emitted any of the environmental HAP. For the ALDT source category, we identified emissions of lead, HCl and HF. For the MMPP source category, we identified emissions of arsenic, cadmium, lead and HCl. For the PPP source category, we did not identify emissions of any environmental HAP.

Because the environmental HAP evaluated are emitted by at least one facility in the ALDT source category and the MMPP source category, we proceeded to the second step of the evaluation for each of these source categories.

c. PB–HAP Methodology

The environmental screening assessment includes six PB–HAP, arsenic compounds, cadmium compounds, dioxins/furans, POM, mercury (both inorganic mercury and methyl mercury), and lead compounds. With the exception of lead, the environmental risk screening assessment for PB–HAP consists of three tiers. The first tier of the environmental risk screening assessment uses the same health-protective conceptual model that is used for the Tier 1 human health screening assessment. TRIM.FaTE model simulations were used to back-calculate Tier 1 screening threshold emission rates. The screening threshold emission rates represent the emission rate in tons of pollutant per year that results in media concentrations at the facility that equal the relevant ecological benchmark. To assess emissions from each facility in the category, the reported emission rate for each PB–HAP was compared to the Tier 1 screening threshold emission rate for that PB–HAP for each assessment endpoint and effect level. If emissions from a facility do not exceed the Tier 1 screening threshold emission rate, the facility ‘‘passes’’ the screening assessment, and, therefore, is not evaluated further under the screening approach. If emissions from a facility exceed the Tier 1 screening threshold emission rate, we evaluate the facility further in Tier 2.

In Tier 2 of the environmental screening assessment, the screening threshold emission rates are adjusted to account for local meteorology and the actual location of lakes in the vicinity of facilities that did not pass the Tier 1 screening assessment. For soils, we evaluate the average soil concentration for all soil parcels within a 7.5-km radius for each facility and PB–HAP. For the water, sediment, and fish tissue concentrations, the highest value for each facility for each pollutant is used. If emission concentrations from a facility do not exceed the Tier 2 screening threshold emission rate, the facility ‘‘passes’’ the screening assessment and typically is not evaluated further. If emissions from a facility exceed the Tier 2 screening threshold emission rate, we evaluate the facility further in Tier 3.

In Tier 3 of the environmental screening assessment, we examine the suitability of the lakes around the facilities to support life and remove those that are not suitable (*e.g.,* lakes that have been filled in or are industrial ponds), adjust emissions for plume-rise, and conduct hour-by-hour time-series assessments. If these Tier 3 adjustments to the screening threshold emission rates still indicate the potential for an adverse environmental effect (*i.e.,* facility emission rate exceeds the screening threshold emission rate), we may elect to conduct a more refined assessment using more site-specific information. If, after additional refinement, the facility emission rate still exceeds the screening threshold emission rate, the facility may have the potential to cause an adverse environmental effect.

To evaluate the potential for an adverse environmental effect from lead, we compared the average modeled air concentrations (from HEM–3) of lead around each facility in the source category to the level of the secondary NAAQS for lead. The secondary lead NAAQS is a reasonable means of evaluating environmental risk because it is set to provide substantial protection against adverse welfare effects which can include ‘‘effects on soils, water, crops, vegetation, man-made materials, animals, wildlife, weather, visibility and climate, damage to and deterioration of property, and hazards to transportation, as well as effects on economic values and on personal comfort and well-being.’’

d. Acid Gas Environmental Risk Methodology

The environmental screening assessment for acid gases evaluates the potential phytotoxicity and reduced productivity of plants due to chronic exposure to HCl and HF. The environmental risk screening methodology for acid gases is a single-tier screening assessment that compares modeled ambient air concentrations (from AERMOD) to the ecological benchmarks for each acid gas. To identify potential adverse environmental effects (as defined in section 112(a)(7) of the CAA) from emissions of HCl and HF, we evaluate the following metrics: The size of the modeled area around each facility that exceeds the ecological benchmark for each acid gas, in units of acres and squared kilometers; the percentage of the modeled area around each facility that exceeds the ecological benchmark for each acid gas; and the area-weighted average screening value around each facility (calculated by dividing the area-weighted average concentration over the 50-km modeling domain by the ecological benchmark for each acid gas). For further information on the environmental screening assessment approach, *see* Appendix 9 of the

Automobiles and Light-Duty Trucks Risk Assessment Report, the *Miscellaneous Metal Parts and Products Risk Assessment Report,* and the *Plastic Parts and Products Risk Assessment Report,* in the ALDT Docket, the MMPP Docket, and the PPP Docket, respectively.

6. How did we conduct facility-wide assessments?

To put the source category risks in context, we typically examine the risks from the entire ''facility,'' where the facility includes all HAP-emitting operations within a contiguous area and under common control. In other words, we examine the HAP emissions not only from the source category emission points of interest, but also emissions of HAP from all other emission sources at the facility for which we have data. For each of these three source categories, we conducted the facility-wide assessment using a dataset compiled from the 2014 NEI. The source category records of that NEI dataset were removed, evaluated, and updated as described in section II.C of this preamble: ''What data collection activities were conducted to support this action?'' Once a quality assured source category dataset was available, it was placed back with the remaining records from the NEI for that facility. The facility-wide file was then used to analyze risks due to the inhalation of HAP that are emitted ''facility-wide'' for the populations residing within 50 km of each facility, consistent with the methods used for the source category analysis described above. For these facility-wide risk analyses, the modeled source category risks were compared to the facility-wide risks to determine the portion of the facility-wide risks that could be attributed to the source categories addressed in this proposal. We also specifically examined the facility that was associated with the highest estimate of risk and determined the percentage of that risk attributable to the source category of interest. The *Automobiles and Light-Duty Trucks Risk Assessment Report, Miscellaneous Metal Parts and Products Risk Assessment Report,* and *Plastic Parts and Products Risk Assessment Report,* available in the respective dockets for this action, provide the methodology and results of the facility-wide analyses, including all facility-wide risks and the percentage of source category contribution to facility-wide risks.

7. How did we consider uncertainties in risk assessment?

Uncertainty and the potential for bias are inherent in all risk assessments, including those performed for this proposal. Although uncertainty exists, we believe that our approach, which used conservative tools and assumptions, ensures that our decisions are health and environmentally protective. A brief discussion of the uncertainties in the RTR emissions datasets, dispersion modeling, inhalation exposure estimates, and dose-response relationships follows below. Also included are those uncertainties specific to our acute screening assessments, multipathway screening assessments, and our environmental risk screening assessments. A more thorough discussion of these uncertainties is included in the *Automobiles and Light-Duty Trucks Risk Assessment Report, Miscellaneous Metal Parts and Products Risk Assessment Report,* and *Plastic Parts and Products Risk Assessment Report,* available in the respective dockets for this action. If a multipathway site-specific assessment was performed for any of these source categories, a full discussion of the uncertainties associated with that assessment can be found in Appendix 11 of that document, *Site-Specific Human Health Multipathway Residual Risk Assessment Report.*

a. Uncertainties in the RTR Emissions Datasets

Although the development of the RTR emissions datasets involved quality assurance/quality control processes, the accuracy of emissions values will vary depending on the source of the data, the degree to which data are incomplete or missing, the degree to which assumptions made to complete the datasets are accurate, errors in emission estimates, and other factors. The emission estimates considered in this analysis generally are annual totals for certain years, and they do not reflect short-term fluctuations during the course of a year or variations from year to year. The estimates of peak hourly emission rates for the acute effects screening assessment were based on an emission adjustment factor applied to the average annual hourly emission rates, which are intended to account for emission fluctuations due to normal facility operations.

b. Uncertainties in Dispersion Modeling

We recognize there is uncertainty in ambient concentration estimates associated with any model, including the EPA's recommended regulatory dispersion model, AERMOD. In using a model to estimate ambient pollutant concentrations, the user chooses certain options to apply. For RTR assessments, we select some model options that have the potential to overestimate ambient air concentrations (*e.g.,* not including plume depletion or pollutant transformation). We select other model options that have the potential to underestimate ambient impacts (*e.g.,* not including building downwash). Other options that we select have the potential to either under- or overestimate ambient levels (*e.g.,* meteorology and receptor locations). On balance, considering the directional nature of the uncertainties commonly present in ambient concentrations estimated by dispersion models, the approach we apply in the RTR assessments should yield unbiased estimates of ambient HAP concentrations. We also note that the selection of meteorology dataset location could have an impact on the risk estimates. As we continue to update and expand our library of meteorological station data used in our risk assessments, we expect to reduce this variability.

c. Uncertainties in Inhalation Exposure Assessment

Although every effort is made to identify all of the relevant facilities and emission points, as well as to develop accurate estimates of the annual emission rates for all relevant HAP, the uncertainties in our emission inventory likely dominate the uncertainties in the exposure assessment. Some uncertainties in our exposure assessment include human mobility, using the centroid of each census block, assuming lifetime exposure, and assuming only outdoor exposures. For most of these factors, there is neither an under nor overestimate when looking at the maximum individual risk or the incidence, but the shape of the distribution of risks may be affected. With respect to outdoor exposures, actual exposures may not be as high if people spend time indoors, especially for very reactive pollutants or larger particles. For all factors, we reduce uncertainty when possible. For example, with respect to census-block centroids, we analyze large blocks using aerial imagery and adjust locations of the block centroids to better represent the population in the blocks. We also add additional receptor locations where the population of a block is not well represented by a single location.

d. Uncertainties in Dose-Response Relationships

There are uncertainties inherent in the development of the dose-response values used in our risk assessments for cancer effects from chronic exposures and noncancer effects from both chronic and acute exposures. Some uncertainties are generally expressed quantitatively, and others are generally expressed in qualitative terms. We note, as a preface to this discussion, a point on dose-response uncertainty that is stated in the EPA's *2005 Guidelines for Carcinogen Risk Assessment;* namely, that ''the primary goal of EPA actions is protection of human health; accordingly, as an Agency policy, risk assessment procedures, including default options that are used in the absence of scientific data to the contrary, should be health protective'' (the EPA's *2005 Guidelines for Carcinogen Risk Assessment,* page 1–7). This is the approach followed here as summarized in the next paragraphs.

Cancer UREs used in our risk assessments are those that have been developed to generally provide an upper bound estimate of risk.[20] That is, they represent a ''plausible upper limit to the true value of a quantity'' (although this is usually not a true statistical confidence limit). In some circumstances, the true risk could be as low as zero; however, in other circumstances the risk could be greater.[21] Chronic noncancer RfC and reference dose (RfD) values represent chronic exposure levels that are intended to be health-protective levels. To derive dose-response values that are intended to be ''without appreciable risk,'' the methodology relies upon an uncertainty factor (UF) approach,[22] which considers uncertainty, variability, and gaps in the available data. The UFs are applied to derive dose-response values that are intended to protect against appreciable risk of deleterious effects.

Many of the UFs used to account for variability and uncertainty in the development of acute dose-response values are quite similar to those developed for chronic durations. Additional adjustments are often applied to account for uncertainty in extrapolation from observations at one exposure duration (*e.g.,* 4 hours) to derive an acute dose-response value at another exposure duration (*e.g.,* 1 hour). Not all acute dose-response values are developed for the same purpose, and care must be taken when interpreting the results of an acute assessment of human health effects relative to the dose-response value or values being exceeded. Where relevant to the estimated exposures, the lack of acute dose-response values at different levels of severity should be factored into the risk characterization as potential uncertainties.

Uncertainty also exists in the selection of ecological benchmarks for the environmental risk screening assessment. We established a hierarchy of preferred benchmark sources to allow selection of benchmarks for each environmental HAP at each ecological assessment endpoint. We searched for benchmarks for three effect levels (*i.e.,* no-effects level, threshold-effect level, and probable effect level), but not all combinations of ecological assessment/environmental HAP had benchmarks for all three effect levels. Where multiple effect levels were available for a particular HAP and assessment endpoint, we used all of the available effect levels to help us determine whether risk exists and whether the risk could be considered significant and widespread.

Although we make every effort to identify appropriate human health effect dose-response values for all pollutants emitted by the sources in this risk assessment, some HAP emitted by these source categories are lacking dose-response assessments. Accordingly, these pollutants cannot be included in the quantitative risk assessment, which could result in quantitative estimates understating HAP risk. To help to alleviate this potential underestimate, where we conclude similarity with a HAP for which a dose-response value is available, we use that value as a surrogate for the assessment of the HAP for which no value is available. To the extent use of surrogates indicates appreciable risk, we may identify a need to increase priority for an IRIS assessment for that substance. We additionally note that, generally speaking, HAP of greatest concern due to environmental exposures and hazard are those for which dose-response assessments have been performed, reducing the likelihood of understating risk. Further, HAP not included in the quantitative assessment are assessed qualitatively and considered in the risk characterization that informs the risk management decisions, including consideration of HAP reductions achieved by various control options.

For a group of compounds that are unspeciated (*e.g.,* glycol ethers), we conservatively use the most protective dose-response value of an individual compound in that group to estimate risk. Similarly, for an individual compound in a group (*e.g.,* ethylene glycol diethyl ether) that does not have a specified dose-response value, we also apply the most protective dose-response value from the other compounds in the group to estimate risk.

e. Uncertainties in Acute Inhalation Screening Assessments

In addition to the uncertainties highlighted above, there are several factors specific to the acute exposure assessment that the EPA conducts as part of the risk review under section 112 of the CAA. The accuracy of an acute inhalation exposure assessment depends on the simultaneous occurrence of independent factors that may vary greatly, such as hourly emissions rates, meteorology, and the presence of a person. In the acute screening assessment that we conduct under the RTR program, we assume that peak emissions from the source category and reasonable worst-case air dispersion conditions (*i.e.,* 99th percentile) co-occur. We then include the additional assumption that a person is located at this point at the same time. Together, these assumptions represent a reasonable worst-case actual exposure scenario. In most cases, it is unlikely that a person would be located at the point of maximum exposure during the time when peak emissions and reasonable worst-case air dispersion conditions occur simultaneously.

f. Uncertainties in the Multipathway and Environmental Risk Screening Assessments

The ALDT source category emits PB–HAP (lead) and environmental HAP (lead, HF and HCl); therefore, further evaluation of multipathway risk and an environmental risk screening was conducted. The MMPP source category emits PB–HAP (arsenic, cadmium, and lead) and environmental HAP (arsenic, cadmium, lead, HF, and HCl); therefore, an environmental risk screening was conducted for this source category. The PPP source category in this action does not emit any PB–HAP or environmental HAP; therefore, further evaluation of multipathway risk and an environmental risk screening was not conducted for this source category.

For each source category, we generally rely on site-specific levels of PB–HAP or environmental HAP emissions to determine whether a refined assessment of the impacts from multipathway exposures is necessary or whether it is necessary to perform an environmental screening assessment.

[20] IRIS glossary (*https://ofmpub.epa.gov/sor_internet/registry/termreg/searchandretrieve/glossariesandkeywordlists/search.do?details=&glossaryName=IRIS%20Glossary*).

[21] An exception to this is the URE for benzene, which is considered to cover a range of values, each end of which is considered to be equally plausible, and which is based on maximum likelihood estimates.

[22] See *A Review of the Reference Dose and Reference Concentration Processes,* U.S. EPA, December 2002, and *Methods for Derivation of Inhalation Reference Concentrations and Application of Inhalation Dosimetry,* U.S. EPA, 1994.

This determination is based on the results of a three-tiered screening assessment that relies on the outputs from models—TRIM.FaTE and AERMOD—that estimate environmental pollutant concentrations and human exposures for five PB–HAP (dioxins, POM, mercury, cadmium, and arsenic) and two acid gases (HF and HCl). For lead, we use AERMOD to determine ambient air concentrations, which are then compared to the secondary NAAQS standard for lead. Two important types of uncertainty associated with the use of these models in RTR risk assessments and inherent to any assessment that relies on environmental modeling are model uncertainty and input uncertainty.[23]

Model uncertainty concerns whether the model adequately represents the actual processes (*e.g.,* movement and accumulation) that might occur in the environment. For example, does the model adequately describe the movement of a pollutant through the soil? This type of uncertainty is difficult to quantify. However, based on feedback received from previous the EPA SAB reviews and other reviews, we are confident that the models used in the screening assessments are appropriate and state-of-the-art for the multipathway and environmental screening risk assessments conducted in support of RTR.

Input uncertainty is concerned with how accurately the models have been configured and parameterized for the assessment at hand. For Tier 1 of the multipathway and environmental screening assessments, we configured the models to avoid underestimating exposure and risk. This was accomplished by selecting upper-end values from nationally representative datasets for the more influential parameters in the environmental model, including selection and spatial configuration of the area of interest, lake location and size, meteorology, surface water, soil characteristics, and structure of the aquatic food web. We also assume an ingestion exposure scenario and values for human exposure factors that represent reasonable maximum exposures.

For the environmental screening assessment for acid gases, we employ a single-tiered approach. We use the modeled air concentrations and compare those with ecological benchmarks.

For all tiers of the multipathway and environmental screening assessments, our approach to addressing model input uncertainty is generally cautious. We choose model inputs from the upper end of the range of possible values for the influential parameters used in the models, and we assume that the exposed individual exhibits ingestion behavior that would lead to a high total exposure. This approach reduces the likelihood of not identifying high risks for adverse impacts.

Despite the uncertainties, when individual pollutants or facilities do not exceed screening threshold emission rates (*i.e.,* screen out), we are confident that the potential for adverse multipathway impacts on human health is very low. On the other hand, when individual pollutants or facilities do exceed screening threshold emission rates, it does not mean that impacts are significant, only that we cannot rule out that possibility and that a refined assessment for the site might be necessary to obtain a more accurate risk characterization for the source category.

The EPA evaluates the following HAP in the multipathway and/or environmental risk screening assessments, where applicable: Arsenic, cadmium, dioxins/furans, lead, mercury (both inorganic and methyl mercury), POM, HCl, and HF. These HAP represent pollutants that can cause adverse impacts either through direct exposure to HAP in the air or through exposure to HAP that are deposited from the air onto soils and surface waters and then through the environment into the food web. These HAP represent those HAP for which we can conduct a meaningful multipathway or environmental screening risk assessment. For other HAP not included in our screening assessments, the model has not been parameterized such that it can be used for that purpose. In some cases, depending on the HAP, we may not have appropriate multipathway models that allow us to predict the concentration of that pollutant. The EPA acknowledges that other HAP beyond these that we are evaluating may have the potential to cause adverse effects and, therefore, the EPA may evaluate other relevant HAP in the future, as modeling science and resources allow.

IV. Analytical Results and Proposed Decisions

A. What are the analytical results and proposed decisions for the surface coating of automobiles and light-duty trucks source category?

1. What are the results of the risk assessment and analyses?

As described in section III of this preamble, for the ALDT source category, we conducted a risk assessment for all HAP emitted. We present results of the risk assessment briefly below and in more detail in the *Automobiles and Light-Duty Trucks Risk Assessment Report* in the ALDT Docket (Docket ID No. EPA–HQ–OAR–2019–0314).

a. Chronic Inhalation Risk Assessment Results

Table 2 of this preamble provides a summary of the results of the inhalation risk assessment for the source category.

TABLE 2—SURFACE COATING OF AUTOMOBILES AND LIGHT-DUTY TRUCKS SOURCE CATEGORY INHALATION RISK ASSESSMENT RESULTS

Risk assessment	Maximum individual cancer risk (in 1 million)		Estimated population at increased risk of cancer ≥1-in-1 million		Estimated annual cancer incidence (cases per year)		Maximum chronic noncancer TOSHI [1]		Maximum screening acute noncancer HQ [2]
	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions
Source Category	10	10	15,000	19,000	0.01	0.01	0.3	0.3	HQREL = 1.
Whole Facility	10	....	48,000	....	0.02	....	0.3		

[1] The target organ specific hazard index (TOSHI) is the sum of the chronic noncancer HQs for substances that affect the same target organ or organ system.
[2] The maximum estimated acute exposure concentration was divided by available short-term threshold values to develop HQ values.

[23] In the context of this discussion, the term ''uncertainty'' as it pertains to exposure and risk encompasses both *variability* in the range of expected inputs and screening results due to existing spatial, temporal, and other factors, as well as *uncertainty* in being able to accurately estimate the true result.

The results of the inhalation risk modeling using actual emissions data, as shown in Table 2 of this preamble, indicate that the maximum individual cancer risk based on actual emissions (lifetime) could be up to 10-in-1 million (driven by naphthalene and ethyl benzene from miscellaneous industrial processes—other/not classified), the maximum chronic noncancer TOSHI value based on actual emissions could be up to 0.3 (driven by hexamethylene-1,6-diisocyanate from a painting topcoat process), and the maximum screening acute noncancer HQ value (off-facility site) could be up to 1 (driven by formaldehyde). The total estimated annual cancer incidence (national) from these facilities based on actual emission levels is 0.01 excess cancer cases per year or 1 case in every 100 years.

b. Screening Level Acute Risk Assessment Results

Table 2 of this preamble shows the acute risk results for the ALDT source category. The screening analysis for acute impacts was based on an industry specific multiplier of 1.2, to estimate the peak emission rates from the average rates. For more detailed acute risk results, refer to the *Automobiles and Light-Duty Trucks Risk Assessment Report,* in the ALDT Docket.

c. Multipathway Risk Screening Results

The emissions data for the ALDT source category indicate that one PB–HAP is emitted by sources within this source category: Lead. In evaluating the potential for multipathway effects from emissions of lead, we compared modeled annual lead concentrations to the NAAQS for lead (0.15 µg/m3, arithmetic mean concentration over a 3-month period). The highest annual average lead concentration of 1.5×10^{-5} µg/m^3 is below the NAAQS for lead, indicating a low potential for multipathway impacts of concern due to lead even assuming a shorter averaging period is. Therefore, we do not expect any human health multipathway risks as a result of emissions from this source category.

d. Environmental Risk Screening Results

The emissions data for the ALDT source category indicate that three environmental HAP are emitted by sources within this source category: Lead, HCl and HF. Therefore, we conducted a screening-level evaluation of the potential adverse environmental effects associated with emissions of lead, HCl, and HF for the ALDT source category. In evaluating the potential for adverse environmental effects from emissions of lead, we compared modeled annual lead concentrations to the secondary NAAQS for lead (0.15 µg/m^3, arithmetic mean concentration over a 3-month period). The highest annual average lead concentration of 1.5×10^{-5} µg/m^3 is below the secondary NAAQS for lead, indicating a low potential for adverse environmental impacts due to lead even assuming a shorter averaging period is analyzed. For both HCl and HF, each individual concentration (*i.e.,* each off-site data point in the modeling domain) was below the ecological benchmarks for all facilities. Therefore, we do not expect an adverse environmental effect as a result of HAP emissions from this source category.

e. Facility-Wide Risk Results

Fifteen facilities have a facility-wide cancer MIR greater than or equal to 1-in-1 million. The maximum facility-wide cancer MIR is 10-in-1 million, driven by naphthalene and ethyl benzene from miscellaneous industrial processes—other/not classified. The total estimated cancer incidence from the whole facility is 0.02 excess cancer cases per year, or one excess case in every 50 years. Approximately 48,000 people were estimated to have cancer risks above 1-in-1 million from exposure to HAP emitted from both MACT and non-MACT sources at 15 of the 43 facilities in this source category. The maximum facility-wide TOSHI for the source category is estimated to be 0.3, mainly driven by emissions of hexamethylene-1,6-diisocyanate from a painting topcoat process.

f. What demographic groups might benefit from this regulation?

To examine the potential for any environmental justice issues that might be associated with the source category, we performed a demographic analysis, which is an assessment of risks to individual demographic groups of the populations living within 5 km and within 50 km of the facilities. In the analysis, we evaluated the distribution of HAP-related cancer and noncancer risks from the ALDT source category across different demographic groups within the populations living near facilities.[24]

The results of the demographic analysis are summarized in Table 3 of this preamble. These results, for various demographic groups, are based on the estimated risks from actual emissions levels for the population living within 50 km of the facilities.

TABLE 3—SURFACE COATING OF AUTOMOBILES AND LIGHT-DUTY TRUCKS SOURCE CATEGORY DEMOGRAPHIC RISK ANALYSIS RESULTS

	Nationwide	Population with cancer risk at or above 1-in-1 million due to surface coating of automobiles and light-duty trucks	Population with chronic noncancer HI above 1 due to surface coating of automobiles and light-duty trucks
Total Population	317,746,049	15,000	0
White and Minority by Percent			
White	62	60	0
Minority	38	40	0
Minority Detail by Percent			
African American	12	10	0
Native American	0.8	0.2	0
Hispanic or Latino	18	27	0

TABLE 3—SURFACE COATING OF AUTOMOBILES AND LIGHT-DUTY TRUCKS SOURCE CATEGORY DEMOGRAPHIC RISK ANALYSIS RESULTS—Continued

	Nationwide	Population with cancer risk at or above 1-in-1 million due to surface coating of automobiles and light-duty trucks	Population with chronic noncancer HI above 1 due to surface coating of automobiles and light-duty trucks
Other and Multiracial	7	3	0
Income by Percent			
Below the Poverty Level	14	19	0
Above the Poverty Level	86	81	0
Education by Percent			
Over 25 Without High a School Diploma	14	14	0
Over 25 With a High School Diploma	86	86	0
Linguistically Isolated by Percent			
Linguistically Isolated	6	3	0

The results of the ALDT source category demographic analysis indicate that emissions from the source category expose approximately 15,000 people to a cancer risk at or above 1-in-1 million and no one to a chronic noncancer HI greater than 1. The percent of minorities is similar nationally (38 percent) and for the category population with cancer risk greater than or equal to 1-in-1 million (40 percent). However, the category population with cancer risk greater than or equal to 1-in-1 million has a greater percentage of Hispanic (27 percent) as compared to nationally (18 percent).

The methodology and the results of the demographic analysis are presented in a technical report titled *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Automobile and Light-Duty Truck Surface Coating Source Category Operations,* March 2019 (hereafter referred to as the *Automobiles and Light-Duty Trucks Demographic Analysis Report*) in the ALDT Docket.

2. What are our proposed decisions regarding risk acceptability, ample margin of safety, and adverse environmental effects?

a. Risk Acceptability

As noted in section III.A of this preamble, we weigh all health risk factors in our risk acceptability determination, including the cancer MIR, the number of persons in various cancer and noncancer risk ranges, cancer incidence, the maximum noncancer TOSHI, the maximum acute noncancer HQ, the extent of noncancer risks, the distribution of cancer and noncancer risks in the exposed population, and risk estimation uncertainties (54 FR 38044, September 14, 1989).

For the ALDT source category, the risk analysis indicates that the cancer risks to the individual most exposed could be up to 10-in-1 million due to actual emissions or based on allowable emissions. These risks are considerably less than 100-in-1 million, which is the presumptive upper limit of acceptable risk. The risk analysis also shows very low cancer incidence (0.01 cases per year for actual and allowable emissions), and we did not identify a potential for adverse chronic noncancer health effects. The acute noncancer risks are low at an HQ of 1 (based on the REL) for formaldehyde. Therefore, we find there is little potential concern of acute noncancer health impacts from actual emissions. In addition, the risk assessment indicates no significant potential for multipathway health effects.

Considering all of the health risk information and factors discussed above, including the uncertainties discussed in section III.C.7 of this preamble, we propose to find that the risks from the ALDT source category are acceptable.

b. Ample Margin of Safety Analysis

Although we are proposing that the risks from the ALDT source category are acceptable, risk estimates for approximately 15,000 individuals in the exposed population are above 1-in-1 million at the actual emissions level and 19,000 individuals at the allowable emissions level. Consequently, we further considered whether the MACT standards for the ALDT source category provide an ample margin of safety to protect public health. In this ample margin of safety analysis, we investigated available emissions control options that might reduce the risk from the source category. We considered this information along with all of the health risks and other health information considered in our determination of risk acceptability.

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the ALDT source category, and the EPA reviewed various information sources regarding emission sources that are currently regulated by the ALDT NESHAP. Based on our review, we did not identify any cost-effective measures to further reduce HAP. Therefore, considering all of the available health information along with the absence of additional measures for reducing HAP, we are proposing that additional emissions controls for this source category are not necessary and that the current standards provide an ample margin of safety.

c. Environmental Effects

The emissions data for the ALDT source category indicate that three environmental HAP are emitted by sources within this source category: Lead, HCl, and HF. The screening-level evaluation of the potential for adverse environmental effects from emissions of lead indicated that the secondary

NAAQS for lead would not be exceeded by any facility. The screening-level evaluation of the potential for adverse environmental effects associated with emissions of HCl and HF from the ALDT source category indicated that each individual concentration (*i.e.,* each off-site data point in the modeling domain) was below the ecological benchmarks for all facilities. In addition, we are unaware of any adverse environmental effects caused by HAP emitted by this source category. Therefore, we do not expect there to be an adverse environmental effect as a result of HAP emissions from this source category and we are proposing that it is not necessary to set a more stringent standard to prevent, taking into consideration costs, energy, safety, and other relevant factors, an adverse environmental effect.

3. What are the results and proposed decisions based on our technology review?

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the ALDT source category. The EPA reviewed various information sources regarding emission sources that are currently regulated by the ALDT NESHAP to support the technology review. The information sources included the following: The RBLC; state regulations; facility operating permits; regulatory actions, including technology reviews, promulgated for other surface coating NESHAP subsequent to the ALDT NESHAP; site visits; discussions with individual ALDT surface coating facilities; and industry information. The primary emission sources for the technology review included the following: The coating operations; all storage containers and mixing vessels in which coatings, thinners, and cleaning materials are stored or mixed; all manual and automated equipment and containers used for conveying coatings, thinners, and cleaning materials; and all storage containers and all manual and automated equipment and containers used for conveying waste materials generated by a coating operation.

Based on our review, we did not identify any add-on control technologies, process equipment, work practices or procedures that were not previously considered during development of the 2004 ALDT NESHAP, and we did not identify any new or improved add-on control technologies that would result in additional emission reductions. A brief summary of the EPA's findings in conducting the technology review of ALDT surface coating operations follows. For a detailed discussion of the EPA's findings, refer to the memorandum, *Technology Review for Surface Coating Operations in the Automobiles and Light-Duty Trucks Source Category,* in the ALDT Docket.

During 2004 MACT development for the ALDT NESHAP, numerical emission limits were determined for new and existing major sources within the four combinations of coating operations, for a total of eight HAP emissions limits. The emission limits were based on industry survey responses and the industry's use of low- or no-HAP coatings and thinners, high efficiency coatings spray equipment (including robotic spraying), and add-on capture and control technologies. Alternately, the NESHAP provides sources with the option of limiting HAP emissions with capture and add-on control to achieve an overall control efficiency of 95-percent. During development of that rulemaking, we identified the beyond-the-floor option to require the use of capture systems and add-on control devices for all ALDT surface coating operations. This option was rejected because we determined the additional emission reductions achieved using the beyond-the-floor option did not warrant the costs each affected source would incur or the incremental cost per ton of HAP reduced (67 FR 78622, December 24, 2002).

For this technology review, we used the EPA's NEI and the ECHO databases to identify facilities that are currently subject to the ALDT NESHAP. We also consulted Regional and state regulations and operating permits. California has existing surface coating rules for VOC from vehicle assembly plants within two air quality management districts (AQMD): Bay Area AQMD and South Coast AQMD. No state VOC rules for ALDT surface coating operations were identified that had VOC limits that would translate into lower HAP content limits. The VOC content limits in state rules (*e.g.,* BAAQMD Rule 8–13 and SCAQMD Rule 1115) are an order of magnitude higher than the HAP content limits in the ALDT NESHAP. Because the HAP are only a small fraction of the VOC in these coatings, complying with these state VOC standards would not limit HAP emissions to levels that are more stringent than the levels required.

Our search of the RBLC database for improvements in ALDT coating technologies provided results for 22 facilities with permit dates of 2000 or later. Facilities reported the use of VOC and HAP content limits, electrodeposition primers, regenerative thermal oxidizers (RTOs), catalytic oxidation, and thermal oxidation. All of these control technologies were in use by the ALDT surface coating industry during development of the ALDT NESHAP and already were considered in the development of the ALDT NESHAP. Therefore, we concluded that the results of the search did not result in any improvements in add-on control technology or other equipment.

We reviewed other surface coating NESHAP promulgated after the ALDT NESHAP to determine whether any requirements exceed the ALDT MACT level of control or included technologies that were not considered during the development of the original ALDT NESHAP. These NESHAP include Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources (40 CFR part 63, subpart HHHHHH), and Nine Metal Fabrication and Finishing Area Source Categories (40 CFR part 63, subpart XXXXXX). We also reviewed the results of the technology reviews for the following NESHAP: Printing and Publishing (40 CFR part 63, subpart KK), Shipbuilding and Ship Repair (40 CFR part 63, subpart II), Wood Furniture Manufacturing (40 CFR part 63, subpart JJ), and Aerospace Manufacturing and Rework Facilities (40 CFR part 63, subpart GG).

Technology reviews for these NESHAP identified permanent total enclosures (PTE) and/or RTOs as improvements in add-on control technology. The original ALDT NESHAP includes a compliance option involving the use of a PTE and an add-on control device. Because these measures were considered in the development of the original ALDT NESHAP and reflected in the MACT level of control, we concluded that these measures do not represent an improvement in control technology under CAA section 112(d)(6).

The control technology assessment conducted for the Paint Stripping and Miscellaneous Surface Coating NESHAP and Nine Metal Fabrication and Finishing NESHAP confined all coating operations to a spray booth fitted with high-efficiency filters, use of high-transfer efficiency spray guns, and training and certification of spray equipment operator to optimize transfer efficiency for facilities that spray apply coatings containing certain inorganic HAP. The technology controls for inorganic HAP adopted in subparts HHHHHH and XXXXXX, spray booths fitted with overspray filters and the use of high efficiency spray equipment, were already considered in the development of the original ALDT NESHAP, and, therefore, do not constitute a development for the purpose of the technology review.

The technology review conducted for the Wood Furniture NESHAP identified the use of more efficient spray guns as a technology review development and revised the requirements to prohibit the use of conventional spray guns. Air-assisted airless spraying was added as a more efficient coating application technology. The original ALDT NESHAP is based on the use of high-efficiency application technology, such as airless and electrostatic spray equipment. This equipment increases coating transfer efficiency, minimizes emissions by reducing the amount of coating sprayed and still achieves a given film thickness with exceptional finish. The format of the ALDT emission limits, in mass of HAP per mass of coating solids applied to the part, accounts for the transfer efficiency of the application equipment and is based on high-efficiency methods.

The technology review conducted for the Printing and Publishing NESHAP identified the use of a PTE in the form of coating spray booths and curing tunnels. These PTEs are commonly used in ALDT surface coating operations to maintain a clean environment for applying the coatings, and for capturing and removing coating overspray and solvent vapors from the coating area. Therefore, the use of a PTE, as identified in the Printing and Publishing NESHAP technology review, does not represent a development in control technology with respect to ALDT surface coating operations.

In conclusion, we found no improvements in add-on control technology or other equipment during review of the RBLC, the state rules, and subsequent NESHAP that were not already identified and considered during the ALDT NESHAP development.

Alternatives to conventional solvent-borne coatings were identified and considered during MACT development but were not considered to be suitable for all ALDT coating applications. These alternative coatings include higher solids coatings, waterborne coatings, low-energy electron beam ultraviolet (UV) cured coatings, and powder coating. Waterborne and higher solids coatings with lower HAP and VOC content were considered in the development of the proposed and final standards and are already reflected in the HAP emission limitations in the final rule. Industry trends and advances in coating formulation, as documented in the *ACA Industry Market Analysis,* showed that powder coated finishes would be difficult to repair and would likely require refinishing the entire car in case of damage. Further, the *ACA analysis* stated that no progress had been made in overcoming technical hurdles that would make UV-cured coatings applicable to main vehicle body parts (*e.g.,* shadowing of certain areas from UV rays, high energy demands, residual UV photo-initiators in the coating film). Therefore, the EPA did not identify any developments in coating technology, other process changes, or pollution prevention alternatives that would represent a development relative to the coating technologies on which the final rule is based.

Finally, no improvements in work practices or operational procedures were identified for the ALDT source category that were not previously identified and considered during MACT development. The current MACT standards require that, if a facility uses add-on controls to comply with the emission limitations, the facility must develop and implement a work practice plan to minimize organic HAP emissions from the storage, mixing, and conveying of coatings, thinners, and cleaning materials used in, and waste materials generated by, those coating operations. If a facility is not using add-on controls and is using either the compliant material option or the emission rate without add-on controls option, the facility does not need to comply with work practice standards. Under the emission rate option, HAP emitted from spills or from containers would be counted against the facility in the compliance calculations, so facilities must already minimize these losses to maintain compliance.

Based on these findings, we conclude that there have not been any developments in add-on control technology or other equipment not identified and considered during MACT development, nor any improvements in add-on controls, nor any significant changes in the cost (including cost effectiveness) of the add-on controls. Therefore, we are proposing no revisions to the ALDT NESHAP pursuant to CAA section 112(d)(6). For further discussion of the technology review results, refer to the *Automobiles and Light-Duty Trucks Technology Review Memo,* in the ALDT Docket.

4. What other actions are we proposing for the ALDT source category?

We are proposing to require electronic submittal of notifications, semiannual reports, and compliance reports (which include performance test reports) for ALDT surface coating facilities. In addition, we are proposing revisions to the SSM provisions of the MACT rule in order to ensure that they are consistent with the Court decision in *Sierra Club* v. *EPA,* 551 F. 3d 1019 (D.C. Cir. 2008), which vacated two provisions that exempted source owners and operators from the requirement to comply with otherwise applicable CAA section 112(d) emission standards during periods of SSM. We are proposing to require periodic emissions testing of add-on control devices. We also propose other changes, including updating references to equivalent test methods, making technical and editorial revisions, and incorporation by reference (IBR) of alternative test methods. Our analyses and proposed changes related to these issues are discussed in the sections below.

a. Electronic Reporting Requirements

The EPA is proposing that owners and operators of ALDT surface coating facilities submit electronic copies of initial notifications required in 40 CFR 63.9(b) and 63.3110(b), notifications of compliance status required in 40 CFR 63.9(h) and 63.3110(c), performance test reports required in 40 CFR 63.3120(b), and semiannual reports required in 40 CFR 63.3120(a), through the EPA's Central Data Exchange (CDX) using the Compliance and Emissions Data Reporting Interface (CEDRI). For further information regarding the electronic data submission process, please refer to the memorandum titled *Electronic Reporting for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* in the ALDT Docket. The proposed rule requires that performance test results collected using test methods that are supported by the EPA's Electronic Reporting Tool (ERT) as listed on the ERT website [25] at the time of the test be submitted in the format generated through the use of the ERT and that other performance test results be submitted in portable document format (PDF) using the attachment module of the ERT. No specific form is proposed at this time for the initial notifications required in 40 CFR 63.9(b) and notification of compliance status in 40 CFR 63.9(h). Until the EPA has completed electronic forms for these notifications, the notifications will be required to be submitted via CEDRI in PDF. After development of the final forms, we will notify sources about their availability via the CEDRI website and the CHIEF Listserv. For semiannual reports required in 40 CFR 63.3120(a)

[25] *https://www.epa.gov/electronic-reporting-air-emissions/electronic-reporting-tool-ert.*

the proposed rule requires that owners and operators use the appropriate spreadsheet template to submit information to CEDRI. A draft version of the proposed templates for these reports is included in the docket for this rulemaking.[26] The EPA specifically requests comment on the content, layout, and overall design of the templates.

Additionally, the EPA has identified two broad circumstances in which electronic reporting extensions may be provided. In both circumstances, the decision to accept the claim of needing additional time to report is within the discretion of the Administrator, and reporting should occur as soon as possible. The EPA is providing these potential extensions to protect owners and operators from noncompliance in cases where they cannot successfully submit a report by the reporting deadline for reasons outside of their control. The situation where an extension may be warranted due to outages of the EPA's CDX or CEDRI which precludes an owner or operator from accessing the system and submitting required reports is addressed in 40 CFR 63.9(b), notifications of compliance status required in 40 CFR 63.9(h), and semiannual reports required in 40 CFR 63.3120(a). The situation where an extension may be warranted due to a force majeure event, which is defined as an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents an owner or operator from complying with the requirement to submit a report electronically as required by this rule is addressed in 40 CFR 63.3120(g). Examples of such events are acts of nature, acts of war or terrorism, or equipment failure or safety hazards beyond the control of the facility.

The electronic submittal of the reports addressed in this proposed rulemaking will increase the usefulness of the data contained in those reports, is in keeping with current trends in data availability and transparency, will further assist in the protection of public health and the environment, will improve compliance by facilitating the ability of regulated facilities to demonstrate compliance with requirements and by facilitating the ability of delegated state, local, tribal, and territorial air agencies and the EPA to assess and determine compliance, and will ultimately reduce burden on regulated facilities, delegated air agencies, and the EPA. Electronic reporting also eliminates paper-based, manual processes, thereby saving time and resources, simplifying data entry, eliminating redundancies, minimizing data reporting errors, and providing data quickly and accurately to the affected facilities, air agencies, the EPA, and the public. Moreover, electronic reporting is consistent with the EPA's plan[27] to implement Executive Order 13563 and is in keeping with the EPA's agency-wide policy[28] developed in response to the White House's Digital Government Strategy.[29] For more information on the benefits of electronic reporting, see the memorandum *Electronic Reporting Requirements for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* available in Docket ID No. EPA–OAR–2019–0314.

b. SSM Requirements

(1.) Proposed Elimination of the SSM Exemption

In its 2008 decision in *Sierra Club* v. *EPA,* 551 F.3d 1019 (D.C. Cir. 2008), the Court vacated portions of two provisions in the EPA's CAA section 112 regulations governing the emissions of HAP during periods of SSM. Specifically, the Court vacated the SSM exemption contained in 40 CFR 63.6(f)(1) and 40 CFR 63.6(h)(1), holding that under section 302(k) of the CAA, emissions standards or limitations must be continuous in nature and that the SSM exemption violates the CAA's requirement that some CAA section 112 standards apply continuously.

We are proposing the elimination of the SSM exemption in this rule. Consistent with *Sierra Club* v. *EPA,* we are proposing standards in this rule that apply at all times. We are also proposing several revisions to Table 2 to subpart IIII of 40 CFR part 63 (*Applicability of General Provisions to Subpart IIII,* hereafter referred to as the ''General Provisions table to subpart IIII''), as explained in more detail below in section IV.A.4.b.2 of this preamble. For example, we are proposing to eliminate the incorporation of the General Provisions' requirement that the source develop an SSM plan. Further, we are proposing to eliminate and revise certain recordkeeping and reporting requirements related to the SSM exemption as further described below. The EPA has attempted to ensure that the provisions we are proposing to eliminate are inappropriate, unnecessary, or redundant in the absence of the SSM exemption. We are specifically seeking comment on whether we have successfully done so.

In proposing these rule amendments, the EPA has taken into account startup and shutdown periods and, for the reasons explained below, has not proposed alternate standards for those periods. Startups and shutdowns are part of normal operations for the ALDT source category. As currently specified in 40 CFR 63.3100(b), all coating operation(s) must be in compliance with the operating limits for emission capture systems and add-on control devices required by 40 CFR 63.3093 ''at all times except during periods of startup, shutdown, and malfunction.'' Therefore, we will be removing the exemption for periods of startup, and shutdown, as well as for malfunctions. Also, as currently specified in 40 CFR 63.3100(a), you must be in compliance ''at all times'' with the emission limitations in 40 CFR 63.3090 and 63.3091, and as specified in 40 CFR 63.3100(c), you must be in compliance with the work practice standards in 40 CFR 63.3094 ''at all times.'' During startup and shutdown periods, in order for a facility (using add-on controls to meet the standards) to meet the emission and operating standards, the control device for a coating operation needs to be turned on and operating at specified levels before the facility begins coating operations, and the control equipment needs to continue to be operated until after the facility ceases coating operations. In some cases, the facility needs to run thermal oxidizers on supplemental fuel before VOC levels are sufficient for the combustion to be (nearly) self-sustaining. Note that we are also proposing new related language in 40 CFR 63.3100(d) to require that the owner or operator operate and maintain the coating operation, including pollution control equipment, at all times to minimize emissions. *See* section IV.A.4.b.2 of this preamble for further discussion of these proposed revisions.

Periods of startup, normal operations, and shutdown are all predictable and routine aspects of a source's operations. Malfunctions, in contrast, are neither

predictable nor routine. Instead they are, by definition, sudden, infrequent and not reasonably preventable failures of emissions control, process, or monitoring equipment. (40 CFR 63.2) (definition of malfunction). The EPA interprets CAA section 112 as not requiring emissions that occur during periods of malfunction to be factored into development of CAA section 112 standards and this reading has been upheld as reasonable by the Court in *U.S. Sugar Corp.* v. *EPA,* 830 F.3d 579, 606–610 (2016). Under CAA section 112, emissions standards for new sources must be no less stringent than the level ''achieved'' by the best controlled similar source and for existing sources generally must be no less stringent than the average emission limitation ''achieved'' by the best performing 12 percent of sources in the category. There is nothing in CAA section 112 that directs the Agency to consider malfunctions in determining the level ''achieved'' by the best performing sources when setting emission standards. As the Court has recognized, the phrase ''average emissions limitation achieved by the best performing 12 percent of'' sources ''says nothing about how the performance of the best units is to be calculated.'' *Nat'l Ass'n of Clean Water Agencies* v. *EPA,* 734 F.3d 1115, 1141 (D.C. Cir. 2013). While the EPA accounts for variability in setting emissions standards, nothing in CAA section 112 requires the Agency to consider malfunctions as part of that analysis. The EPA is not required to treat a malfunction in the same manner as the type of variation in performance that occurs during routine operations of a source. A malfunction is a failure of the source to perform in a ''normal or usual manner'' and no statutory language compels the EPA to consider such events in setting CAA section 112 standards.

As the Court recognized in *U.S. Sugar Corp,* accounting for malfunctions in setting standards would be difficult, if not impossible, given the myriad different types of malfunctions that can occur across all sources in the category and given the difficulties associated with predicting or accounting for the frequency, degree, and duration of various malfunctions that might occur. *Id.* at 608 (''the EPA would have to conceive of a standard that could apply equally to the wide range of possible boiler malfunctions, ranging from an explosion to minor mechanical defects. Any possible standard is likely to be hopelessly generic to govern such a wide array of circumstances.'') As such, the performance of units that are malfunctioning is not ''reasonably'' foreseeable. *See e.g., Sierra Club* v. *EPA,* 167 F.3d 658, 662 (D.C. Cir. 1999) (''The EPA typically has wide latitude in determining the extent of data-gathering necessary to solve a problem. We generally defer to an agency's decision to proceed on the basis of imperfect scientific information, rather than to 'invest the resources to conduct the perfect study' ''). *See* also, *Weyerhaeuser* v. *Costle,* 590 F.2d 1011, 1058 (D.C. Cir. 1978) (''In the nature of things, no general limit, individual permit, or even any upset provision can anticipate all upset situations. After a certain point, the transgression of regulatory limits caused by 'uncontrollable acts of third parties,' such as strikes, sabotage, operator intoxication or insanity, and a variety of other eventualities, must be a matter for the administrative exercise of case-by-case enforcement discretion, not for specification in advance by regulation''). In addition, emissions during a malfunction event can be significantly higher than emissions at any other time of source operation. For example, if an air pollution control device with 99-percent removal goes off-line as a result of a malfunction (as might happen if, for example, the bags in a baghouse catch fire) and the emission unit is a steady state type unit that would take days to shut down, the source would go from 99-percent control to zero control until the control device was repaired. The source's emissions during the malfunction would be 100 times higher than during normal operations. As such, the emissions over a 4-day malfunction period would exceed the annual emissions of the source during normal operations. As this example illustrates, accounting for malfunctions could lead to standards that are not reflective of (and significantly less stringent than) levels that are achieved by a well-performing non-malfunctioning source. It is reasonable to interpret CAA section 112 to avoid such a result. The EPA's approach to malfunctions is consistent with CAA section 112 and is a reasonable interpretation of the statute.

Although no statutory language compels the EPA to set standards for malfunctions, the EPA has the discretion to do so where feasible. For example, in the Petroleum Refinery Sector Risk and Technology Review, the EPA established a work practice standard for unique types of malfunctions that result in releases from pressure relief devices or emergency flaring events because we had information to determine that such work practices reflected the level of control that applies to the best performing sources (80 FR 75178, 75211–14, December 1, 2015). The EPA will consider whether circumstances warrant setting standards for a particular type of malfunction and, if so, whether the EPA has sufficient information to identify the relevant best performing sources and establish a standard for such malfunctions. We also encourage commenters to provide any such information.

It is unlikely that a malfunction would result in a violation of the standards during ALDT surface coatings operations for facilities complying without the use of add-on controls (*i.e.,* using low-HAP coatings and thinning materials). Facilities using low-HAP coatings and thinning materials have demonstrated that the coatings and thinners used in the coating operations are less than or equal to the applicable emission limit calculated on a monthly basis.

A malfunction event is more likely for ALDT surface coating facilities that use add-on controls as a compliance option. For this option, in addition to demonstrating compliance with the numerical emission rate limits for coatings and thinners used (calculated on a monthly basis), facilities must also demonstrate that their emission capture systems and add-on control devices meet the operating limits established by the ALDT NESHAP. Control device operating limits are listed in Table 4 of the ALDT NESHAP and are specific to the device, and most are based on maintaining an average temperature over a 3-hour block period, which must not fall below the temperature limit established during the facility's initial performance test.

All facilities must also comply with work practice standards to minimize organic HAP emissions from the storage, mixing, and conveying of coatings, thinners, and cleaning materials used in, and waste materials generated by, the coating operation(s), but it is unlikely that a malfunction would result in a violation of the work practice standards.

We currently have no information to suggest that it is feasible or necessary to establish any type of standard for malfunctions associated with the ALDT source category. We encourage commenters to provide any such information, if available.

In the event that a source fails to comply with the applicable CAA section 112(d) standards as a result of a malfunction event, the EPA will determine an appropriate response based on, among other things, the good faith efforts of the source to minimize emissions during malfunction periods, including preventative and corrective actions, as well as root cause analyses to ascertain and rectify excess emissions. The EPA will also consider whether the source's failure to comply with the CAA section 112(d) standard was, in fact, sudden, infrequent, not reasonably preventable, and was not instead caused, in part, by poor maintenance or careless operation. 40 CFR 63.2 (definition of malfunction).

If the EPA determines in a particular case that an enforcement action against a source for violation of an emission standard is warranted, the source can raise any and all defenses in that enforcement action and the federal district court will determine what, if any, relief is appropriate. The same is true for citizen enforcement actions. Similarly, the presiding officer in an administrative proceeding can consider any defense raised and determine whether administrative penalties are appropriate.

In summary, the EPA interpretation of the CAA and, in particular, CAA section 112 is reasonable and encourages practices that will avoid malfunctions. Administrative and judicial procedures for addressing exceedances of the standards fully recognize that violations may occur despite good faith efforts to comply and can accommodate those situations. *U.S. Sugar Corp.* v. *EPA,* 830 F.3d 579, 606–610 (2016).

(2.) Proposed Revisions to the General Provisions Applicability Table

40 CFR 63.3100(d) *General duty.* We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.6(e)(1)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(i) describes the general duty to minimize emissions. Some of the language in that section is no longer necessary or appropriate in light of the elimination of the SSM exemption. We are proposing instead to add general duty regulatory text at 40 CFR 63.3100(d) that reflects the general duty to minimize emissions while eliminating the reference to periods covered by an SSM exemption. The current language in 40 CFR 63.6(e)(1)(i) characterizes what the general duty entails during periods of SSM. With the elimination of the SSM exemption, there is no need to differentiate between normal operations, startup and shutdown, and malfunction events in describing the general duty. Therefore, the language the EPA is proposing for 40 CFR 63.3100(d) does not include that language from 40 CFR 63.6(e)(1)(i).

We are also proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.6(e)(1)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(ii) imposes requirements that are not necessary with the elimination of the SSM exemption or are redundant with the general duty requirement being added at 40 CFR 63.3100(d).

SSM plan. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.6(e)(3) by changing the ''yes'' in column 3 to a ''no.'' Generally, these paragraphs require development of an SSM plan and specify SSM recordkeeping and reporting requirements related to the SSM plan. We are also proposing to remove from 40 CFR part 63, subpart IIII, the current provisions requiring the SSM plan at 40 CFR 63.3100(f). As noted, the EPA is proposing to remove the SSM exemptions. Therefore, affected units will be subject to an emission standard during such events. The applicability of a standard during such events will ensure that sources have ample incentive to plan for and achieve compliance, and, thus, the SSM plan requirements are no longer necessary.

Compliance with standards. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.6(f)(1) by changing the ''yes'' in column 3 to a ''no.'' The current language of 40 CFR 63.6(f)(1) exempts sources from non-opacity standards during periods of SSM. As discussed above, the Court in *Sierra Club* vacated the exemptions contained in this provision and held that the CAA requires that some CAA section 112 standards apply continuously. Consistent with *Sierra Club,* the EPA is proposing to revise the standards in this rule to apply at all times.

We are also proposing to remove rule text in 40 CFR 63.3161(j) clarifying that, in calculating emissions to demonstrate compliance, deviation periods must include deviations during an SSM period. Since the EPA is removing the SSM exemption, this clarifying text is no longer needed.

40 CFR 63.3163 Performance testing. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.7(e)(1) by changing the ''yes'' in column 3 to a ''no.'' Section 63.7(e)(1) describes performance testing requirements. The EPA is instead proposing to add a performance testing requirement at 40 CFR 63.3163 and 40 CFR 63.3164. The performance testing requirements we are proposing to add differ from the General Provisions performance testing provisions in several respects. The regulatory text does not include the language in 40 CFR 63.7(e)(1) that restated the SSM exemption and language that precluded startup and shutdown periods from being considered ''representative'' for purposes of performance testing. The proposed performance testing provisions in 40 CFR 63.3164 will also not allow performance testing during startup or shutdown. As in 40 CFR 63.7(e)(1), performance tests conducted under this subpart should not be conducted during malfunctions because conditions during malfunctions are often not representative of normal operating conditions. Section 63.7(e) requires that the owner or operator maintain records of the process information necessary to document operating conditions during the test and include in such records an explanation to support that such conditions represent normal operation. The EPA is proposing to add language to 40 CFR 63.3164 clarifying that the owner or operator must make such records available to the Administrator upon request.

Monitoring. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.8(c)(1) by changing the ''yes'' in column 3 to a ''no.'' The cross-references to the general duty and SSM plan requirements in 40 CFR 63.8(c)(1) are not necessary in light of other requirements of 40 CFR 63.8 that require good air pollution control practices (40 CFR 63.8(c)(1)) and that set out the requirements of a quality control program for monitoring equipment (40 CFR 63.8(d)). Further, we have determined that 40 CFR 63.8(c)(1)(ii) is redundant to the current monitoring requirement in 40 CFR 63.3168(a)(4) (*i.e.,* ''have available necessary parts for routine repairs of the monitoring equipment,'' except 40 CFR 63.8(c)(1)(ii) specifies ''have readily available.''). We are proposing to revise 40 CFR 63.3168(a)(4) to specify ''readily available.''

40 CFR 63.3512 Recordkeeping. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(b)(2)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(i) describes the recordkeeping requirements during startup and shutdown. These recording provisions are no longer necessary because the EPA is proposing that recordkeeping and reporting applicable to normal operations will apply to startup and shutdown. In the absence of special provisions applicable to startup and shutdown, such as a startup and shutdown plan, there is no reason to retain additional recordkeeping for startup and shutdown periods.

We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(b)(2)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(ii) describes the recordkeeping requirements during a malfunction, requiring a record of ''the occurrence and duration of each malfunction.'' A similar record is already required in 40 CFR 63.3130(g), which requires a record of ''the date, time, and duration of each deviation,'' which the EPA is retaining. The regulatory text in 40 CFR 63.3130(g) differs from the General Provisions in that the General Provisions requires the creation and retention of a record of the occurrence and duration of each malfunction of process, air pollution control, and monitoring equipment; whereas 40 CFR 63.3130(g) applies to any failure to meet an applicable standard and is requiring that the source record the date, time, and duration of the failure rather than the ''occurrence.'' For this reason, the EPA is proposing to add to 40 CFR 63.3130(g) a requirement that sources also keep records that include a list of the affected source or equipment and actions taken to minimize emissions, an estimate of the quantity of each regulated pollutant emitted over the emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions. Examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA is proposing to require that sources keep records of this information to ensure that there is adequate information to allow the EPA to determine the severity of any failure to meet a standard, and to provide data that may document how the source met the general duty to minimize emissions when the source has failed to meet an applicable standard.

We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(b)(2)(iv)–(v) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events when actions were inconsistent with their SSM plan. The requirement in 40 CFR 63.10(b)(2)(iv) is no longer appropriate because SSM plans will no longer be required. The requirement previously applicable under 40 CFR 63.10(b)(2)(iv)(B) to record actions to minimize emissions and record corrective actions is now applicable by reference to 40 CFR 63.3130(g)(4). When applicable, the provision in 40 CFR 63.10(b)(2)(v) requires sources to record actions taken during SSM events to show that actions taken were consistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required.

We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(b)(2)(vi) by changing the ''yes'' in column 3 to a ''no.'' The provision requires sources to maintain records during continuous monitoring system (CMS) malfunctions. Section 63.3130(g) covers records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control. Additional recordkeeping requirements for continuous parameter monitoring systems (CPMS) are also specified in 40 CFR 63.3168.

We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(c)(15) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision allows an owner or operator to use the affected source's SSM plan or records kept to satisfy the recordkeeping requirements of the SSM plan, specified in 40 CFR 63.6(e), to also satisfy the requirements of 40 CFR 63.10(c)(10) through (12). The EPA is proposing to eliminate this requirement because SSM plans would no longer be required, and, therefore, 40 CFR 63.10(c)(15) no longer serves any useful purpose for affected units.

We are proposing to remove the requirement in 40 CFR 63.3130(g) that deviation records specify whether deviations from a standard occurred during a period of SSM. This revision is being proposed due to the proposed removal of the SSM exemption and because, as discussed above in this section, we are proposing that deviation records must specify the cause of each deviation, which could include a malfunction period as a cause. We are also proposing to remove the requirement to report the SSM records in 40 CFR 63.6(e)(3)(iii) through (v) by deleting 40 CFR 63.3130(h).

40 CFR 63.3120 Reporting. We are proposing to revise the General Provisions table to subpart IIII (Table 2) entry for 40 CFR 63.10(d)(5) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(d)(5) describes the reporting requirements for startups, shutdowns, and malfunctions. To replace the General Provisions reporting requirement, the EPA is proposing to add reporting requirements to 40 CFR 63.3120(a)(5) through (a)(9). The replacement language differs from the General Provisions requirement in that it eliminates periodic SSM reports as a stand-alone report. We are proposing language that requires sources that fail to meet an applicable standard at any time to report the information concerning such events in the semi-annual compliance report already required under this rule. Subpart IIII of 40 CFR part 63 currently requires reporting of the date, time period, and cause of each deviation. We are clarifying in the rule that, if the cause of a deviation from the standard is unknown, this should be specified in the report. We are also proposing to change ''date and time period'' to ''date, time, and duration'' (*see* proposed revisions to 40 CFR 63.3130(a)(6)(vii), (viii), and (xiii); 40 CFR 63.3130(a)(7)(i); 40 CFR 63.3130(a)(8)(v), (vi), and (vii); and 40 CFR 63.3130(a)(i)) to use terminology consistent with the recordkeeping section. Further, we are proposing that the report must also contain the number of deviations from the standard, and a list of the affected source or equipment. For deviation reports addressing deviations from an applicable emission limit in 40 CFR 63.3090, 63.3091, or 63.3092, or an operating limit in Table 1 to 40 CFR part 63, subpart IIII, we are proposing that the report also include an estimate of the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions. For deviation reports addressing deviations from work practice standards (40 CFR 63.3120(a)(6)(xiii)), we are retaining the current requirement (including reporting actions taken to correct the deviation), except that we are revising the rule language to reference the new general duty requirement in 40 CFR 63.3100(d), we are clarifying that the description of the deviation must include a list of the affected sources or equipment and the cause of the deviation, we are clarifying that ''time period'' includes the ''time and duration,'' and we are requiring that the report include the number of deviations from the work practice standards in the reporting period.

Regarding the proposed new requirement discussed above to estimate the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions, examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA is proposing this requirement to ensure that there is adequate information to determine compliance, to allow the EPA to determine the severity of the failure to meet an applicable standard, and to provide data that may document how the source met the general duty to minimize emissions during a failure to meet an applicable standard.

We will no longer require owners or operators to determine whether actions taken to correct a malfunction are consistent with an SSM plan, because plans would no longer be required. The proposed amendments, therefore, eliminate 40 CFR 63.3120(c) that requires reporting of whether the source deviated from its SSM plan, including required actions to communicate with the Administrator, and the cross-reference to 40 CFR 63.10(d)(5)(ii) that contains the description of the previously required SSM report format and submittal schedule from this section. These specifications are no longer necessary because the events will be reported in otherwise required reports with similar format and submittal requirements.

Section 63.10(d)(5)(ii) describes an immediate report for startups, shutdowns, and malfunctions when a source failed to meet an applicable standard but did not follow the SSM plan. We will no longer require owners and operators to report when actions taken during a startup, shutdown, or malfunction were not consistent with an SSM plan, because plans would no longer be required.

We are proposing to remove the requirements in 40 CFR 63.3120(a)(6)(viii) that deviation reports must specify whether deviation from an operating limit occurred during a period of SSM. We are also proposing to remove the requirements in 40 CFR 63.3120(a)(6)(x) to break down the total duration of deviations into the startup and shutdown categories. As discussed above in this section, we are proposing to require reporting of the cause of each deviation. Further, the startup and shutdown categories no longer apply because these periods are proposed to be considered normal operation, as discussed in section IV.A.4.b.1 of this preamble.

c. Technical Amendments to the ALDT NESHAP

We propose to amend 40 CFR 63.3166(b) to add the option of conducting EPA Method 18 of appendix A–6 to 40 CFR part 60, ''Measurement of Gaseous Organic Compound Emissions by Gas Chromatography,'' to measure and then subtract methane emissions from measured total gaseous organic mass emissions as carbon. Facilities using add-on controls as a compliance option can use either EPA Method 25 or EPA Method 25A to measure control device destruction efficiency. Unlike EPA Method 25, EPA Method 25A does not exclude methane from the measurement of organic emissions. Because exhaust streams from coating operations may contain methane from natural gas combustion, we are proposing to allow facilities the option to measure methane using EPA Method 18 and to subtract the methane from the emissions as part of their compliance calculations.

We propose to revise the format of references to test methods in 40 CFR part 60. The current reference in 40 CFR 63.3166(a) and (b) to EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 3, 3A, 3B, 4, 25, and 25A specify that each method is in ''appendix A'' of part 60. Appendix A of 40 CFR part 60 has been divided into appendices A–1 through A–8. We propose to revise each reference to appendix A to indicate which of the eight sections of appendix A applies to the method.

We propose to amend 40 CFR 63.3151(a)(1)(i) and (a)(4), and 40 CFR 63.3171(e)(3), which describe how to determine the mass fraction of organic HAP in each material used, to remove references to Occupational Safety and Health Administration (OSHA)-defined carcinogens as specified in 29 CFR 1910.1200(d)(4). The reference to OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4) is intended to specify which compounds must be included in calculating total organic HAP content of a coating material if they are present at 0.1-percent or greater by mass. We are proposing to remove this reference because 29 CFR 1910.1200(d)(4) has been amended and no longer readily defines which compounds are carcinogens. We are proposing to replace these references to OSHA-defined carcinogens and 29 CFR 1910.1200(d)(4) with a list (in proposed new Table 5 to 40 CFR part 63, subpart IIII) of those organic HAP that must be included in calculating total organic HAP content of a coating material if they are present at 0.1-percent or greater by mass.

We propose to include organic HAP in proposed Table 5 to 40 CFR part 63, subpart IIII if they were categorized in the EPA's *Prioritized Chronic Dose-Response Values for Screening Risk Assessments* (dated May 9, 2014), as a ''human carcinogen,'' ''probable human carcinogen,'' or ''possible human carcinogen'' according to *The Risk Assessment Guidelines of 1986* (EPA/600/8–87/045, August 1987),[30] or as ''carcinogenic to humans,'' ''likely to be carcinogenic to humans,'' or with ''suggestive evidence of carcinogenic potential'' according to the *Guidelines for Carcinogen Risk Assessment* (EPA/630/P–03/001F, March 2005).

We propose to revise the monitoring provisions for thermal and catalytic oxidizers to clarify that a thermocouple is part of the gas temperature monitoring device referred to in 40 CFR 63.3168(c)(3).

We propose to add a new paragraph 40 CFR 63.3130(p) and to revise 40 CFR 63.3131(a) to allow that any records required to be maintained by 40 CFR part 63, subpart IIII this part that are submitted electronically via the EPA's CEDRI may be maintained in electronic format. We also propose to add clarification that this ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

d. Ongoing Emissions Compliance Demonstrations Requirement

As part of an ongoing effort to improve compliance with various federal air emission regulations, the EPA reviewed the compliance demonstration requirements in the ALDT NESHAP. Currently, if a source owner or operator chooses to comply with the standards using add-on controls, the results of an initial performance test are used to determine compliance; however, the rule does not require on-going periodic performance testing for these emission capture systems and add-on controls. We are proposing periodic testing of add-on control devices, in addition to the one-time initial emissions and capture efficiency testing and ongoing parametric monitoring to ensure ongoing compliance with the standards.

Although ongoing monitoring of operating parameters is required by the NESHAP, as the control device ages over time, the destruction efficiency of

[30] See *https://www.epa.gov/fera/dose-response-assessment-assessing-health-risks-associated-exposure-hazardous-air-pollutants.*

the control device can be compromised due to various factors. The EPA published several documents that identify potential control device operational problems that could decrease control device efficiency.[31] These factors are discussed in more detail in the memorandum titled *Proposed Periodic Testing Requirement* dated February 1, 2019, included in the ALDT Docket.

The Institute of Clean Air Companies (ICAC), an industry trade group currently representing 50 emission control device equipment manufacturers, corroborated the fact that control equipment degrades over time in their comments on proposed revisions to the NESHAP General Provisions (72 FR 69, January 3, 2007). ICAC stated that ongoing maintenance and checks of control devices are necessary in order to ensure emissions control technology remains effective.[32] ICAC identified both thermal and catalytic oxidizers as effective add-on control devices for VOC reduction and destruction. Thermal oxidizers, in which ''. . . organic compounds are converted into carbon dioxide and water . . .'' allow ''. . . for the destruction of VOCs and HAP up to levels greater than 99-percent . . . '' once ''. . . [t]he oxidation reaction . . .'' begins, typically ''. . . in the 1,450 degrees Fahrenheit range.'' That temperature may need to be elevated, depending on the organic compound to be destroyed. Along with that destruction, ''. . . extreme heat, the corrosive nature of chemical-laden air, exposure to weather, and the wear and tear of non-stop use . . .'' affect thermal oxidizers such that ''. . . left unchecked, the corrosive nature of the gases treated will create equipment downtime, loss of operational efficiency, and eventually failure of the thermal oxidizer.'' While catalytic oxidizers operate at lower operating temperatures—typically 440 to 750 degrees Fahrenheit—than thermal oxidizers, catalytic oxidizers also provide VOC reduction and destruction. In general, the catalyst ''. . . needs to be checked periodically to verify the activity of the catalyst . . .'' because that ''. . . activity or overall ability of the catalyst to convert target emissions to other by-products will naturally diminish over time.'' ICAC also mentions chemical poisoning (deactivation of the catalyst by certain compounds) or masking of the catalyst bed, which may occur due to changes in manufacturing processes, as means of catalyst degradation. Finally, ICAC identifies electrical and mechanical component maintenance as important, for if such components are not operating properly, ''. . . the combustion temperature in the . . . oxidizer could drop below the required levels and hazardous air pollutant (HAP) destruction may not be achieved . . .'' ICAC closes by noting ''. . . it costs more money to operate an oxidizer at peak performance, and if not maintained, performance will deteriorate yielding less destruction of HAP.''

State websites also provide on-line CAA violations and enforcement actions which include performance issues associated with control devices. A recent search resulted in identification of sources in Ohio and Massachusetts that did not achieve compliance even though they maintained the thermal oxidizer operating temperatures established during previous performance tests, which further corroborates with the ICAC comments and conclusions regarding control device degradation.

Based on the need for vigilance in maintaining equipment to stem degradation, we are proposing periodic testing of add-on control devices once every 5 years, in addition to the one-time initial emissions and capture efficiency testing and ongoing temperature measurement to ensure ongoing compliance with the standards.

In this action, we are proposing to require periodic performance testing of add-on control devices on a regular frequency (*e.g.,* every 5 years) to ensure the equipment continues to operate properly for facilities using the emission rate with add-on controls compliance option. We estimate that 18 ALDT surface coating existing sources are already required to perform such testing every 5 years synchronized with 40 CFR part 70 air operating permit renewals and for five facilities this would be a new requirement. This proposed periodic testing requirement includes an exception to the general requirement for periodic testing for facilities using the catalytic oxidizer control option at 40 CFR 63.3167(b) and following the catalyst maintenance procedures in 40 CFR 63.3167(b)(6). This exception is due to the catalyst maintenance procedures that already require annual testing of the catalyst and other maintenance procedures that provide ongoing demonstrations that the control system is operating properly and may, thus, be considered comparable to conducting a performance test.

The proposed periodic performance testing requirement allows an exception from periodic testing for facilities using instruments to continuously measure emissions. Such continuous emissions monitoring systems (CEMS) would show actual emissions. The use of CEMS to demonstrate compliance would obviate the need for periodic oxidizer testing. Moreover, installation and operation of a CEMS with a timesharing component, such that values from more than one oxidizer exhaust could be tabulated in a recurring frequency, could prove less expensive (estimated to have an annual cost below $15,000) than ongoing oxidizer testing.

This proposed requirement does not require periodic testing or CEMS monitoring of facilities using the compliant materials option or the emission-rate without add-on controls compliance option because these two compliance options do not use any add-on controls or control efficiency measurements in the compliance calculations.

The proposed periodic performance testing requirement requires facilities complying with the standards using emission capture systems and add-on controls and which are not already on a 5-year testing schedule conduct the first of the periodic performance tests within 3 years of the effective date of the revised standards. Afterward, they would conduct periodic testing before they renew their operating permits, but no longer than 5 years following the previous performance test. Additionally, facilities that have already tested as a condition of their permit within the last 2 years before the effective date would be permitted to maintain their current 5-year schedule and not be required to move up the date of the next test to the 3-year date specified above. This proposed requirement would require periodic air emissions testing to measure organic HAP destruction or removal efficiency at the inlet and outlet of the add-on control device, or measurement of the control device outlet concentration of organic HAP. The emissions would be measured as total gaseous organic mass emissions as carbon using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60, which are the methods currently

[31] *See Control Techniques for Volatile Organic Compound Emissions from Stationary Sources, EPA/453/R–92–018, December 1992, Control Technologies for Emissions from Stationary Sources, EPA/625/6–91/014, June 1991, and Survey of Control for Low Concentration Organic Vapor Gas Streams,* EPA–456/R–95–003, May 1995. These documents can be found in the Automobiles and Light-Duty Trucks, Miscellaneous Metal Parts, and Plastic Parts and Products Dockets for this action.

[32] *See* Docket Item No. EPA–HQ–OAR–2004–0094–0173, available at *https://www.regulations.gov.* A copy of the ICAC's comments on the proposed revisions to the General Provisions is also included in the Automobiles and Light-Duty Trucks, Miscellaneous Metal Parts, and Plastic Parts and Products Dockets for this action.

required for the initial compliance demonstration.

We estimate that the cost associated with this proposed requirement, which includes a control device emissions destruction or removal efficiency test using EPA Method 25 or 25A, would be approximately $19,000 per control device. The cost estimate is included in the memorandum titled *Estimated Costs/Impacts 40 CFR Part 63 Subparts IIII, MMMM and PPPP Monitoring Review Revisions,* in the ALDT Docket. We have estimated that five facilities subject to the ALDT NESHAP and using the add-on control option for compliance are not currently required to conduct periodic testing as a condition of their permit renewal. Periodic performance tests ensure that any control systems used to comply with the NESHAP in the future would be properly maintained over time, thereby reducing the potential for acute emissions episodes and non-compliance.

e. IBR of Alternative Test Methods Under 1 CFR Part 51

The EPA is proposing new and updated test methods for the ALDT NESHAP that include IBR. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference the following voluntary consensus standards (VCS) into 40 CFR 63.14:

- ASTM Method D1475–13, Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, proposed to be IBR approved for 40 CFR 63.3151(b), 63.3941(b) and (c), 63.3951(c), 63.4551(c);
- ASTM D2111–10 (2015), Standard Test Methods for Specific Gravity of Halogenated Organic Solvents and Their Admixtures, proposed to be IBR approved for 40 CFR 63.3951(c), 63.4551(c);
- ASTM Method D2369–10 (2015), Test Method for Volatile Content of Coatings, proposed to be IBR approved for 40 CFR 63.3151(a)(2), 63.3961(j), 63.4541(a), 63.4561(j);
- ASTM Method D2697–03 (2014), Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, proposed to be IBR approved for 40 CFR 63.3161(f)(1), 63.3941(b);
- ASTM D5066–91 (Reapproved 2017), Standard Test Method for Determination of the Transfer Efficiency Under Production Conditions for Spray Application of Automotive Paints-Weight Basis, proposed to be IBR approved for 40 CFR 63.3161(g);
- ASTM Method D5965–02 (2013), Standard Test Methods for Specific Gravity of Coating Powders, proposed to be ICR approved for 40 CFR 63.3151(b), 63.3951(c);
- ASTM Method D6093–97 (2016), Standard Test Method for Percent Volume Nonvolatile Matter in Clear or Pigmented Coatings Using Helium Gas Pycnometer, proposed to be IBR approved for 40 CFR 63.3161(f)(1), 63.3941(b);

ASTM D6266–00a (Reapproved 2017), Test Method for Determining the Amount of Volatile Organic Compound (VOC) Released from Waterborne Automotive Coatings and Available for Removal in a VOC Control Device (Abatement), proposed to be IBR approved for 40 CFR 63.3165(e); and

EPA–450/3–88–018, Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations, proposed to be IBR approved for 40 CFR 63.3161(f), 63.3165(e).

Older versions of ASTM methods D2697, D5965, and D6093 were incorporated by reference when the ALDT NESHAP was originally promulgated (69 FR 22602, April 26, 2004). We are proposing to replace the older versions of these methods and ASTM Method D1475 with updated versions, which requires IBR revisions. The updated version of the method replaces the older version in the same paragraph of the rule text. We are also proposing the addition of ASTM Method D2369 to the ALDT NESHAP for the first time by incorporating this method by reference in this rulemaking. Refer to section VIII.J of this preamble for further discussion of these VCS.

5. What compliance dates are we proposing?

The EPA is proposing that affected sources must comply with all of the amendments, with the exception of the proposed electronic format for submitting semiannual compliance reports, no later than 181 days after the effective date of the final rule. All affected facilities would have to continue to meet the current requirements of 40 CFR part 63, subpart IIII until the applicable compliance date of the amended rule. The final action is not expected to be a ''major rule'' as defined by 5 U.S.C. 804(2), so the effective date of the final rule will be the promulgation date as specified in CAA section 112(d)(10).

For existing sources, we are proposing one change that would impact ongoing compliance requirements for 40 CFR part 63, subpart IIII. As discussed elsewhere in this preamble, we are proposing to add a requirement that notifications, performance test results, and semiannual compliance reports be submitted electronically. We are proposing that the semiannual compliance report be submitted electronically using a new template, which is available for review and comment as part of this action. We are also proposing to change the requirements for SSM by removing the exemption from the requirements to meet the standard during SSM periods and by removing the requirement to develop and implement an SSM plan. Our experience with similar industries that are required to convert reporting mechanisms to install necessary hardware and software, become familiar with the process of submitting performance test results electronically through the EPA's CEDRI, test these new electronic submission capabilities, and reliably employ electronic reporting shows that a time period of a minimum of 90 days, and, more typically, 180 days, is generally necessary to successfully accomplish these revisions. Our experience with similar industries further shows that this sort of regulated facility generally requires a time period of 180 days to read and understand the amended rule requirements; to evaluate their operations to ensure that they can meet the standards during periods of startup and shutdown as defined in the rule and make any necessary adjustments; and to update their operation, maintenance, and monitoring plan to reflect the revised requirements. The EPA recognizes the confusion that multiple different compliance dates for individual requirements would create and the additional burden such an assortment of dates would impose. From our assessment of the time frame needed for compliance with the entirety of the revised requirements, the EPA considers a period of 180 days to be the most expeditious compliance period practicable and, thus, is proposing that existing affected sources be in compliance with all of this regulation's revised requirements within 181 days of the regulation's effective date.

We solicit comment on these proposed compliance periods, and we specifically request submission of information from sources in this source category regarding specific actions that would need to be undertaken to comply with the proposed amended requirements and the time needed to make the adjustments for compliance with any of the revised requirements. We note that information provided may result in changes to the proposed compliance dates.

B. What are the analytical results and proposed decisions for the MMPP source category?

1. What are the results of the risk assessment and analyses?

As described above in section III of this preamble, for the MMPP source category, we conducted a risk assessment for all HAP emitted. We present results of the risk assessment briefly below and in more detail in the *Miscellaneous Metal Parts and Products Risk Assessment Report* in the MMPP Docket (Docket ID No. EPA–HQ–OAR–2019–0312).

a. Chronic Inhalation Risk Assessment Results

Table 4 below provides a summary of the results of the inhalation risk assessment for the source category.

TABLE 4—SURFACE COATING OF MISCELLANEOUS METAL PARTS AND PRODUCTS SOURCE CATEGORY INHALATION RISK ASSESSMENT RESULTS

Risk assessment	Maximum individual cancer risk (in 1 million)		Estimated population at increased risk of cancer ≥1-in-1 Million		Estimated annual cancer incidence (cases per year)		Maximum chronic noncancer TOSHI [1]		Maximum screening acute noncancer HQ [2]
	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions
Source category	20	30	18,000	24,000	0.008	0.01	0.8	1	HQ_{REL} = 4
Whole facility	100		370,000		0.04		1		

[1] The TOSHI is the sum of the chronic noncancer HQ for substances that affect the same target organ or organ system.
[2] The maximum estimated acute exposure concentration was divided by available short-term threshold values to develop HQ values.

The results of the inhalation risk modeling using actual emissions data, as shown in Table 4 above, indicate that the maximum individual cancer risk based on actual emissions (lifetime) could be up to 20-in-1 million (driven by naphthalene and ethyl benzene from coating operations), the maximum chronic noncancer TOSHI value based on actual emissions could be up to 0.8 (driven by antimony from coating operations), and the maximum screening acute noncancer HQ value (off-facility site) could be up to 4 (driven by glycol ethers). The total estimated annual cancer incidence (national) from these facilities based on actual emission levels is 0.008 excess cancer cases per year or 1 case in every 125 years.

b. Screening Level Acute Risk Assessment Results

Table 4 of this preamble also shows the acute risk results for the MMPP source category. The screening analysis for acute impacts was based on an industry-specific multiplier of 1.2, to estimate the peak emission rates from the average emission rates. For more detailed acute risk results refer to the *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket.

c. Multipathway Risk Screening Results

The emissions data for the MMPP source category indicate that three PB–HAP are emitted by sources within this source category: Arsenic, cadmium, and lead. Of the 368 facilities in the source category, two facilities reported emissions of carcinogenic PB–HAP (arsenic) and two facilities reported emissions of non-carcinogenic PB–HAP (cadmium). The PB–HAP emissions from these facilities did not exceed the Tier 1 multipathway screening value of 1 for cancer or noncancer.

In evaluating the potential for multipathway effects from emissions of lead, we compared modeled annual lead concentrations to the NAAQS for lead (0.15 μg/m³, arithmetic mean concentration over a 3-month period). The highest annual average lead concentration of 0.059 μg/m³ is below the NAAQS level for lead, indicating a low potential for multipathway impacts of concern due to lead even assuming a shorter averaging period is analyzed.

d. Environmental Risk Screening Results

The emissions data for the MMPP source category indicate that four environmental HAP are emitted by sources within this source category: Arsenic, cadmium, lead and HCl. Therefore, we conducted a screening-level evaluation of the potential adverse environmental effects associated with emissions of arsenic, cadmium, lead, and HCl for the MMPP source category. In the Tier 1 screening analysis for PB–HAP (other than lead which was evaluated differently), arsenic and cadmium had no exceedances of any of the ecological benchmarks evaluated.

In evaluating the potential for adverse environmental effects from emissions of lead, we compared modeled annual lead concentrations to the secondary NAAQS for lead (0.15 μg/m³, arithmetic mean concentration over a 3-month period). The highest annual average lead concentration of 0.059 μg/m³ is below the secondary NAAQS for lead, indicating a low potential for adverse environmental impacts due to lead even assuming a shorter averaging period is analyzed. For HCl, each individual concentration (*i.e.,* each off-site data point in the modeling domain) was below the ecological benchmarks for all facilities. Therefore, we do not expect an adverse environmental effect as a result of HAP emissions from this source category.

e. Facility-Wide Risk Results

One hundred and one facilities have a facility-wide cancer MIR greater than or equal to 1-in-1 million. The maximum facility-wide cancer MIR is 100-in-1 million, driven by nickel emissions from welding. The total estimated cancer incidence from the whole facility is 0.01 excess cancer cases per year, or one excess case in every 100 years. Approximately 370,000 people were estimated to have cancer risks above 1-in-1 million from exposure to HAP emitted from both MACT and non-MACT sources of the 368 facilities in this source category. The maximum facility-wide TOSHI for the source category is estimated to be 1, driven by emissions of cobalt from a gel coating operation.

f. What demographic groups might benefit from this regulation?

To examine the potential for any environmental justice issues that might be associated with the source category, we performed a demographic analysis, which is an assessment of risks to individual demographic groups of the populations living within 5 km and within 50 km of the facilities. In the analysis, we evaluated the distribution of HAP-related cancer and noncancer risks from the MMPP source category across different demographic groups within the populations living near facilities.

The results of the demographic analysis are summarized in Table 5 of this preamble. These results, for various demographic groups, are based on the estimated risks from actual emissions levels for the population living within 50 km of the facilities.

TABLE 5—SURFACE COATING OF MISCELLANEOUS METAL PARTS AND PRODUCTS SOURCE CATEGORY DEMOGRAPHIC RISK ANALYSIS RESULTS

	Nationwide	Population with cancer risk at or above 1-in-1 million due to surface coating of miscellaneous metal parts and products	Population with chronic noncancer HI above 1 due to surface coating of miscellaneous metal parts and products
Total Population	317,746,049	18,000	0
White and Minority by Percent			
White	62	75	0
Minority	38	25	0
Minority Detail by Percent			
African American	12	12	0
Native American	0.8	0.6	0
Hispanic or Latino	18	9	0
Other and Multiracial	7	3	0
Income by Percent			
Below the Poverty Level	14	20	0
Above the Poverty Level	86	80	0
Education by Percent			
Over 25 Without High a School Diploma	14	18	0
Over 25 With a High School Diploma	86	82	0
Linguistically Isolated by Percent			
Linguistically Isolated	6	3	0

The results of the MMPP source category demographic analysis indicate that emissions from the source category expose approximately 18,000 people to a cancer risk at or above 1-in-1 million and no one is exposed to a chronic noncancer HI greater than 1. The percentages of the at-risk population in the following specific demographic groups are higher than their respective nationwide percentages: ''White,'' ''Below the Poverty Level,'' and ''Over 25 and without a high school diploma.''

The methodology and the results of the demographic analysis are presented in a technical report, *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Miscellaneous Metal Parts and Products Source Category,* May 2019 (hereafter referred to as the *Miscellaneous Metal Parts and Products Demographic Analysis Report*), available in the MMPP Docket.

2. What are our proposed decisions regarding risk acceptability, ample margin of safety, and adverse environmental effects?

a. Risk Acceptability

As noted in section III.A of this preamble, we weigh all health risk factors in our risk acceptability determination, including the cancer MIR, the number of persons in various cancer and noncancer risk ranges, cancer incidence, the maximum noncancer TOSHI, the maximum acute noncancer HQ, the extent of noncancer risks, the distribution of cancer and noncancer risks in the exposed population, and risk estimation uncertainties (54 FR 38044, September 14, 1989).

For the MMPP source category, the risk analysis indicates that the cancer risks to the individual most exposed could be up to 20-in-1 million due to actual emissions and up to 30-in-1 million due to allowable emissions. These risks are considerably less than 100-in-1 million, which is the presumptive upper limit of acceptable risk. The risk analysis also shows very low cancer incidence (0.008 cases per year for actual emissions and 0.01 cases per year for allowable emissions), and we did not identify potential for adverse chronic noncancer health effects.

The acute screening analysis results in a maximum acute noncancer HQ of 4 at one facility based on use of the acute REL for ethylene glycol monomethyl ether as a surrogate for unspeciated glycol ethers. Since there is not a specified acute dose-response value for unspeciated glycol ethers, we applied the most protective dose-response value from the other glycol ether compounds, the acute REL for ethylene glycol monomethyl ether, to estimate risk. Given that ethylene glycol monomethyl ether is more toxic than other glycol ethers, the use of this surrogate is a health-protective choice in the EPA's risk assessment.

For acute screening analyses, to better characterize the potential health risks associated with estimated worst-case acute exposures to HAP, we examine a wider range of available acute health metrics than we do for our chronic risk assessments. This is in acknowledgement that there are generally more data gaps and uncertainties in acute reference values than there are in chronic reference values. By definition, the acute REL represents a health-protective level of exposure, with effects not anticipated below those levels, even for repeated exposures; however, the level of exposure that would cause health effects is not specifically known. As the exposure concentration increases above the acute REL, the potential for effects increases. Therefore, when an REL is exceeded and an AEGL–1 or ERPG–1 level is available (*i.e.,* levels at which mild, reversible effects are anticipated in the general population for a single exposure), we typically use them as an additional comparative measure, as they provide an upper bound for exposure levels above which exposed individuals could experience effects. However, for glycol ethers, there are no AEGL or ERPG values.

Additional uncertainties in the acute exposure assessment that the EPA conducts as part of the risk review under section 112 of the CAA include several factors. The accuracy of an acute inhalation exposure assessment depends on the simultaneous occurrence of independent factors that may vary greatly, such as hourly emission rates, meteorology, and the presence of a person. In the acute screening assessment that we conduct under the RTR program, we include the conservative (health-protective) assumptions that peak emissions from each emission point in the source category and reasonable worst-case air dispersion conditions (*i.e.,* 99th percentile) co-occur. We then include the additional assumption that a person is located at this point at the same time. Together, these assumptions represent a reasonable exposure. In most cases, it is unlikely that a person would be located at the point of maximum exposure during the time when peak emissions and reasonable worst-case air dispersion conditions occur simultaneously. Thus, as discussed in the document titled *Residual Risk Assessment for the Surface Coating of Miscellaneous Metal Parts and Products Source Category in Support of the Risk and Technology Review 2019 Proposed Rule,* in the docket for this action, by assuming the co-occurrence of independent factors for the acute screening assessment, the results are intentionally biased high and are, thus, health-protective. We conclude that adverse effects from acute exposure to emissions of glycol ethers from this source category are not anticipated.

Considering all of the health risk information and factors discussed above, including the uncertainties discussed in section III.C.7 of this preamble, we propose that the risks from the MMPP source category are acceptable.

b. Ample Margin of Safety Analysis

Although we are proposing that the risks from the MMPP source category are acceptable, risk estimates for approximately 18,000 individuals in the exposed population are above 1-in-1 million at the actual emissions level and 24,000 individuals in the exposed population are above 1-in-1 million at the allowable emissions level. Consequently, we further considered whether the MACT standards for the MMPP source category provide an ample margin of safety to protect public health. In this ample margin of safety analysis, we investigated available emissions control options that might reduce the risk from the source category. We considered this information along with all of the health risks and other health information considered in our determination of risk acceptability.

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the MMPP source category, and we reviewed various information sources regarding emission sources that are currently regulated by the MMPP NESHAP.

Based on our review (described in section IV.B.3 of this preamble), we identified and evaluated the use of add-on control technologies for the rubber-to-metal bonding and high- performance subcategories.

For the rubber-to-metal bonding subcategory, we evaluated the option of lowering the existing source limit to an emission limit of 10 lb HAP/gallon (gal) solids. Two facilities may need to install thermal oxidizers, if alternative low-HAP coatings or other compliance options are not available. The thermal oxidizers would require a total capital investment of $2 million (combined) for the two facilities, and total annual costs of $410,000 (combined). Estimated emission reductions from the two facilities would be 43 tpy of HAP, and the estimated cost effectiveness would $9,500 per ton of HAP reduced.

For the high-performance subcategory, we evaluated lowering both the existing and new source limits to the general use subcategory existing source limit of 2.6 lb HAP/gal solids. One facility in the high-performance coating subcategory may need to install a thermal oxidizer if alternative low-HAP coatings or other compliance options are not available. The cost of installing a thermal oxidizer at this one facility would require a total capital investment of $2.3 million, and total annual costs of $620,000. The estimated emission reduction at this one facility would be 53 tpy of HAP, and the estimated cost effectiveness would be $11,700 per ton of HAP reduced.

We have determined that the added costs and cost effectiveness for these two coating subcategories ($9,500 per ton of HAP reduced for the rubber-to-metal coating subcategory and $11,700 per ton for the high performance subcategory) are not justified. We think these costs are unreasonable particularly because the risks are already low, and the risks would not be reduced in a meaningful manner by the control of these subcategories. We are proposing that additional emissions controls for this source category are not necessary to provide an ample margin of safety.

c. Environmental Effects

The emissions data for the MMPP source category indicate that four environmental HAP are emitted by sources within this source category: Arsenic, cadmium, lead, and HCl. In the Tier 1 screening analysis for PB–HAP (other than lead which was evaluated differently), arsenic and cadmium had no exceedances of any of the ecological benchmarks evaluated. For lead, we did not estimate any exceedances of the secondary lead NAAQS. The screening-level evaluation of the potential for adverse environmental effects associated with emissions of HCl from the MMPP source category indicated that each individual concentration (*i.e.,* each off-site data point in the modeling domain) was below the ecological benchmarks for all facilities. In addition, we are unaware of any adverse environmental effects caused by HAP emitted by this source category.

Therefore, we do not expect there to be an adverse environmental effect as a result of HAP emissions from this source category and we are proposing that it is not necessary to set a more stringent standard to prevent, taking into consideration costs, energy, safety, and other relevant factors, an adverse environmental effect.

3. What are the results and proposed decisions based on our technology review?

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the MMPP source category. The EPA reviewed various information sources regarding emission sources that are currently regulated by the MMPP NESHAP to support the technology review. The information sources include the following: The RBLC; publicly available state air permit databases and facility operating permits compliance reports; regulatory actions, including technology reviews promulgated for other surface coating NESHAP subsequent to the promulgation of the MMPP NESHAP; state regulations; site visits; and industry information.

Based on our review, we identified and evaluated the use of add-on control technologies for two coating subcategories that had not been previously considered during development of the MMPP NESHAP. This analysis is described in detail in the following paragraphs. Aside from this, we did not identify any new or improved process equipment, work practices, or procedures that would further reduce emissions. For a detailed discussion of the EPA's findings, refer to the *Miscellaneous Metal Parts and Products Technology Review Memo,* in the MMPP Docket.

During the development of the 2004 MMPP NESHAP, numerical emission limits were determined for new and existing major sources within five coating subcategories for a total of 10 HAP emissions limits. The MACT emission limits were based on different data sources, depending on the coating subcategory. In the general use coating subcategory and the high- performance coating subcategory, the MACT emission limits were based on the most stringent state VOC limits and HAP-to-VOC ratios to convert the VOC limits to HAP limits. For the general use coating subcategory, the HAP-to-VOC ratio was developed from industry survey data. For the high-performance coating subcategory, the HAP-to-VOC ratio was developed from industry information. For rubber-to-metal coating, the MACT emission limits were based on survey data on the HAP content of the coatings. For magnet wire coating, the MACT emission limits were based on survey data and also accounted for the fact that magnet wire coating uses an oven to cure the coatings that is fueled by coating solvent vapors, reducing overall emissions. For the EPFP coating subcategory, the MACT emission limits were based on data received in public comments on the proposed NESHAP.

With the exception of the emission limits for the magnet wire coating subcategory, none of the emission limits for new or existing sources in the other subcategories accounted for the use of add-on controls, and the documentation of the MACT analysis did not identify facilities that were using add-on controls.

The EPA investigated the use of emissions capture systems and add-on controls but found that the costs would be prohibitive for the incremental emissions reductions achieved. The EPA estimated that it would be technically feasible for capture systems and add-on controls could reduce emissions by at least 95 percent, but the cost for facilities in this source category could be as much as $1 million. The EPA concluded that without information on the benefits that would be achieved by further reducing emissions beyond the floor, the additional emissions reductions did not warrant the cost of add-on controls.[33]

A search of the RBLC database for the MMPP surface coating category provided 42 entries representing 23 facilities with permit dates of 2000 or later. Entries in the RBLC documented facilities subject to VOC content and HAP content limits. Emission control strategies identified in the RBLC included using electrodeposition coatings, using high efficiency and robotic spray guns, and using add-on controls, including catalytic oxidizers, RTOs, and adsorbers. The RBLC review did not identify any facilities subject to HAP limits more stringent than those in 40 CFR part 63, subpart MMMM.

We reviewed other surface coating NESHAP promulgated subsequent to the MMPP NESHAP to determine whether any requirements exceed the MMPP MACT level of control or include technologies that were not considered during the development of the original MMPP NESHAP. These NESHAP include Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources (40 CFR part 63, subpart HHHHHH), and Nine Metal Fabrication and Finishing Area Source Categories (40 CFR part 63, subpart XXXXXX). We also reviewed the results of the technology reviews for other surface coating NESHAP promulgated after the MMPP NESHAP. These technology reviews include the NESHAP for Printing and Publishing (40 CFR part 63, subpart KK), Shipbuilding and Ship Repair (40 CFR part 63, subpart II), Wood Furniture Manufacturing (40 CFR part 63, subpart JJ), and Aerospace Manufacturing and Rework Facilities (40 CFR part 63, subpart GG). The review of these more recently promulgated NESHAP and the technology reviews of other NESHAP did not identify any control technologies that were not already considered during the development of 40 CFR part 63, subpart MMMM, with the exception of some applications of add-on controls, which are discussed in more detail below in this section.

Using the EPA's NEI and the ECHO databases, we identified 368 major source facilities that are currently subject to the MMPP NESHAP. The EPA also collected operating permits for over 100 of these facilities. Based on these permits, we identified a number of facilities that were in the rubber-to-metal coating and high-performance coating subcategories that were using add-on controls to reduce air emissions. We identified six facilities in the high-performance coating subcategory and four of these facilities use a thermal oxidizer to reduce emissions. We identified 15 facilities in the rubber to metal coating subcategory and nine of these use a thermal oxidizer to reduce emissions. Based on these findings, we identified the use of a thermal oxidizer as a potential development for these two subcategories because the MACT emission limits were based on only the HAP content of the coatings and not on the use of an add-on control, such as a thermal oxidizer.

We further evaluated the add-on controls as a technology development by collecting semi-annual compliance reports or inspection reports for all six facilities in the high-performance subcategory and the 15 facilities in the rubber to metal coating subcategory to confirm that the facilities were subject to these subcategory emission limits and to determine the actual emission rate these facilities were achieving. For several facilities, we determined that the facilities were using the add-on controls for complying with limits on VOC emissions, but were not accounting for the add-on controls in demonstrating compliance with the HAP limits in 40 CFR part 63, subpart MMMM.

The current existing source emission limit for the rubber-to-metal subcategory is 37.7 lb HAP/gal solids, and the new source limit is 6.8 lb HAP/gal solids. The EPA evaluated the option of lowering the existing source limit to an emission limit of 10 lb HAP/gal solids. We chose this level because several smaller facilities could meet this limit without having to install controls, based

[33] 67 FR 52792–52793, August 13, 2002.

on their semi-annual compliance reports.

Eight of the 15 facilities in the rubber-to-metal subcategory have emission rates below 10 lb HAP/gal solids through use of a thermal oxidizer. One facility does not have a thermal oxidizer but can meet the 10 lb HAP/gal solids limit through the emissions averaging between the general use and rubber-to-metal subcategories allowed in 40 CFR 63.3890(c)(2) of the current NESHAP. Four rubber-to-metal facilities do not have a thermal oxidizer but their current emission rate is less than 10 lb/gal solids.

For the remaining two facilities, installing thermal oxidizers, if alternative low-HAP coatings or other compliance options are not available, would require a total capital investment of $2 million (combined) for the two facilities, and total annual costs of $410,000 (combined). Estimated emission reductions from the two facilities would be 43 tpy of HAP, and the estimated cost effectiveness would be $9,500 per ton of HAP reduced. The estimated emission reductions are based on the reported HAP emissions for these two facilities in the NEI and their semi-annual compliance reports and assumes a 95-percent emission reduction from thermal oxidation. These costs and emission reductions for the rubber-to-metal subcategory are documented in detail in the *Miscellaneous Metal Parts and Products Technology Review Memo,* in the MMPP Docket.

The current existing and new source emission limits for the high-performance subcategory are both 27.5 lb HAP/gal solids. The EPA evaluated the option of lowering both the existing and new source limits to the general use subcategory existing source limit of 2.6 lb HAP/gal solids. Five of the six facilities in the high-performance subcategory could comply with the general use subcategory limit of 2.6 lb HAP/gal solids for their high-performance coatings operations.

One facility in the high-performance coating subcategory may need to install a thermal oxidizer if alternative low-HAP coatings or other compliance options are not available. The cost of installing a thermal oxidizer at this one facility would require a total capital investment of $2.3 million, and total annual costs of $620,000. The estimated emission reduction this one facility would be 53 tpy of HAP, and the estimated cost effectiveness would be $11,700 per ton of HAP reduced. The estimated emission reduction is based on the reported HAP emissions for this facility's semi-annual compliance report and assumes a 95-percent emission reduction from thermal oxidation. These costs and emission reductions for the high performance subcategory are documented in detail in the *Miscellaneous Metal Parts and Products Technology Review Memo,* in the MMPP Docket.

However, the EPA has determined that the added costs and cost effectiveness for these two coating subcategories ($9,500 per ton of HAP reduced for the rubber-to-metal coating subcategory and $11,700 per ton for the high-performance subcategory) are not justified. Therefore, we are proposing no revisions to the MMPP NESHAP pursuant to CAA section 112(d)(6). For further discussion of the technology review results, refer to the *Miscellaneous Metal Parts and Products Technology Review Memo,* in the MMPP Docket.

4. What other actions are we proposing for the Surface Coating of MMPP source category?

We are proposing to require electronic submittal of notifications (initial and compliance status), semiannual reports, and performance test reports for MMPP surface coating facilities. In addition, we are proposing revisions to the SSM provisions of the MACT rule in order to ensure that they are consistent with the Court decision in *Sierra Club* v. *EPA,* 551 F. 3d 1019 (D.C. Cir. 2008), which vacated two provisions that exempted sources from the requirement to comply with otherwise applicable CAA section 112(d) emission standards during periods of SSM. We are proposing to require periodic emissions testing of add-on control devices. We also are proposing to add optional EPA Method 18, to IBR an alternative test method, and to make various technical and editorial changes. Our analyses and proposed changes related to these issues are discussed in the sections below.

a. Electronic Reporting Requirements

The EPA is proposing that owners and operators of MMPP surface coating facilities submit electronic copies of initial notifications required in 40 CFR 63.9(b) and 63.3910(b), notifications of compliance status required in 40 CFR 63.9(h) and 63.3910(c), performance test reports required in 40 CFR 63.3920(b), and semiannual reports required in 40 CFR 63.3920(a) through the EPA's CDX, using the CEDRI. A description of the EPA's CDX and the EPA's proposed rationale and details on the addition of these electronic reporting requirements for the MMPP source category is the same as for the ALDT source category, as discussed in section IV.A.4.a of this preamble. No specific form is proposed at this time for the initial notifications required in 40 CFR 63.9(b) and notification of compliance status in 40 CFR 63.9(h). Until the EPA has completed electronic forms for these notifications, the notifications will be required to be submitted via CEDRI in PDF. After development of the final forms, we will notify sources about their availability via the CEDRI website and the CHIEF Listserv. For semiannual reports required in 40 CFR 63.3920(a), the proposed rule requires that owners or operators use the appropriate spreadsheet template to submit information to CEDRI. A draft version of the proposed template for this report is included in the docket for this rulemaking.[34] The EPA specifically requests comment on the content, layout, and overall design of the template.

Regarding submittal of performance test reports via the EPA's ERT, as discussed in section IV.A.4.a of this preamble for the ALDT NESHAP, the proposal to submit performance test data electronically to the EPA applies only if the EPA has developed an electronic reporting form for the test method as listed on the EPA's ERT website. For the MMPP NESHAP, all of the EPA test methods listed under 40 CFR part 63, subpart MMMM, are currently supported by the ERT, except for EPA Method 18 (an optional test method proposed in this action), which appears in the proposed text for 40 CFR 63.3966. As mentioned above in section IV.A.4.a of this preamble, the rule proposes that should an owner or operator choose to use EPA Method 18, then its results would be submitted in PDF using the attachment module of the ERT.

Also, as discussed in section IV.A.4.a of this preamble for the ALDT NESHAP, we are proposing to provide facilities with the ability to seek extensions for submitting electronic reports for circumstances beyond the control of the facility. In proposed 40 CFR 63.3920(g), we address the situation for facilities subject to the MMPP NESHAP where an extension may be warranted due to outages of the EPA's CDX or CEDRI, which may prevent access to the system and submittal of the required reports. In proposed 40 CFR 63.3920(h), we address the situation for facilities subject to the MMPP NESHAP where an extension may be warranted due to a force majeure event, which is defined as an event that will be or has been caused

[34] See *Electronic Reporting Template for Surface Coating of Miscellaneous Metal Parts and Products Subpart MMMM Semiannual Reports,* in docket ID NO. EPA–HQ–OAR–0312.

by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents compliance with the requirement to submit a report electronically as required by this rule. Examples of such events are acts of nature, acts of war or terrorism, or equipment failure or safety hazards beyond the control of the facility.

The electronic submittal of the reports addressed in this proposed rulemaking will increase the usefulness of the data contained in those reports, is in keeping with current trends in data availability and transparency, will further assist in the protection of public health and the environment, will improve compliance by facilitating the ability of regulated facilities to demonstrate compliance with requirements and by facilitating the ability of delegated state, local, tribal, and territorial air agencies and the EPA to assess and determine compliance, and will ultimately reduce burden on regulated facilities, delegated air agencies, and the EPA. Electronic reporting also eliminates paper-based, manual processes, thereby saving time and resources, simplifying data entry, eliminating redundancies, minimizing data reporting errors, and providing data quickly and accurately to the affected facilities, air agencies, the EPA, and the public. Moreover, electronic reporting is consistent with the EPA's plan to implement Executive Order 13563 and is in keeping with the EPA's Agency-wide policy developed in response to the White House's Digital Government Strategy. For more information on the benefits of electronic reporting, see the memorandum titled *Electronic Reporting Requirements for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* available in Docket ID No. EPA–HQ–OAR–2019–0312.

b. SSM Requirements

(1.) Proposed Elimination of the SSM Exemption

The EPA is proposing to eliminate the SSM exemption in the MMPP NESHAP. The EPA's proposed rationale for the elimination of the SSM exemption for the MMPP source category is the same as for the ALDT source category, which is discussed in section IV.A.4.b.1 of this preamble. We are also proposing several revisions to Table 2 to Subpart MMMM of 40 CFR part 63 (*Applicability of General Provisions to Subpart MMMM of Part 63,* hereafter referred to as the ''General Provisions table to subpart MMMM'') as is explained in more detail below in section IV.B.4.b.2 of this preamble. For example, we are proposing to eliminate the incorporation of the General Provisions' requirement that the source develop an SSM plan. We are also proposing to eliminate and revise certain recordkeeping and reporting requirements related to the SSM exemption as further described below. The EPA has attempted to ensure that the provisions we are proposing to eliminate are inappropriate, unnecessary, or redundant in the absence of the SSM exemption. We are specifically seeking comment on the specific proposed deletions and revisions and also whether additional provisions should be revised to achieve the stated goal.

In proposing these rule amendments, the EPA has taken into account startup and shutdown periods and, for the same reasons explained in section IV.A.4.b.1 of this preamble for the ALDT source category, has not proposed alternate standards for those periods in the MMPP NESHAP. Startups and shutdowns are part of normal operations for the MMPP source category. As currently specified in 40 CFR 63.3892(b), any coating operation(s) for which you use the emission rate with add-on controls option must meet the applicable operating limits in Table 1 to 40 CFR part 63, subpart MMMM ''at all times,'' except for solvent recovery systems for which you conduct liquid-liquid material balances according to 40 CFR 63.3961(j). (Solvent recovery systems for which you conduct a liquid-liquid material balance require a monthly calculation of the solvent recovery device's collection and recovery efficiency for volatile organic matter.)

Also, as currently specified in 40 CFR 63.3900(a)(2), any coating operation(s) for which you use the emission rate with add-on controls option must be in compliance ''at all times'' with the applicable emission limit in 40 CFR 63.3890. During startup and shutdown periods, in order for a facility (using add-on controls to meet the standards) to meet the emission and operating standards, the control device for a coating operation needs to be turned on and operating at specified levels before the facility begins coating operations, and the control equipment needs to continue to be operated until after the facility ceases coating operations. In some cases, the facility needs to run thermal oxidizers on supplemental fuel before VOC levels are sufficient for the combustion to be (nearly) self-sustaining. Note that we are also proposing new related language in 40 CFR 63.3900(b) to require that the owner or operator operate and maintain the coating operation, including pollution control equipment, at all times to minimize emissions. *See* section IV.A.4.b.2 of this preamble for further discussion of this proposed revision.

Although no statutory language compels the EPA to set standards for malfunctions, the EPA has the discretion to do so where feasible, as discussed previously in section IV.A.4.b.1 of this preamble for the ALDT source category.

It is unlikely that a malfunction would result in a violation of the standards during MMPP surface coatings operations for facilities using the compliant material option or the emission rate without add-on controls option. Facilities using these options have demonstrated that the organic HAP contents of the coating materials do not exceed the emission limits in 40 CFR 63.3890(a) or (b), either on a coating-by-coating basis or by using averaging among coatings.

A malfunction event is more likely for MMPP coating facilities that use the emission rate with add-on controls option. For this option, facilities must demonstrate that the average emission rate does not exceed the emission limits in 40 CFR 63.3890(a) or (b), and the facility is complying with the control device operating limits listed in Table 1 to 40 CFR part 63, subpart MMMM of the MMPP NESHAP. The operating limits are specific to the type of control device and established by the facility during its initial performance test.

In the unlikely event that a source fails to comply with the applicable CAA section 112(d) standards as a result of a malfunction event, the EPA would determine an appropriate response based on, among other things, the good faith efforts of the source to minimize emissions during malfunction periods, including preventative and corrective actions, as well as root cause analyses to ascertain and rectify excess emissions. Refer to section IV.A.4.b.1 of this preamble for further discussion of the EPA's actions in response to a source failing to comply with the applicable CAA section 112(d) standards as a result of a malfunction event for the ALDT source category, which applies to this source category.

(2.) Proposed Revisions to the General Provisions Applicability Table

40 CFR 63.3900(b) General duty. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.6(e)(1)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(i) describes the general duty to minimize emissions. Some of the language in that section is no longer necessary or appropriate in light of the elimination of the SSM exemption. We are proposing instead to add general duty regulatory text at 40 CFR 63.3900(b) that reflects the general duty to minimize emissions while eliminating the reference to periods covered by an SSM exemption. The current language in 40 CFR 63.6(e)(1)(i) characterizes what the general duty entails during periods of SSM. With the elimination of the SSM exemption, there is no need to differentiate between normal operations, startup and shutdown, and malfunction events in describing the general duty. Therefore, the language the EPA is proposing for 40 CFR 63.3900(b) does not include that language from 40 CFR 63.6(e)(1).

We are also proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.6(e)(1)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(ii) imposes requirements that are not necessary with the elimination of the SSM exemption or are redundant with the general duty requirement being added at 40 CFR 63.3900(b).

SSM plan. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.6(e)(3) by changing the ''yes'' in column 3 to a ''no.'' Generally, these paragraphs require development of an SSM plan and specify SSM recordkeeping and reporting requirements related to the SSM plan. We are also proposing to remove from 40 CFR part 63, subpart SSSS, the current provisions requiring the SSM plan in 40 CFR 63.5180(f) and requiring reporting related to the SSM plan in 40 CFR 63.5180(f)(1). As noted, the EPA is proposing to remove the SSM exemptions. Therefore, affected units will be subject to an emission standard during such events. The applicability of a standard during such events will ensure that sources have ample incentive to plan for and achieve compliance, and, thus, the SSM plan requirements are no longer necessary.

Compliance with standards. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.6(f)(1) by changing the ''yes'' in column 3 to a ''no.'' The current language of 40 CFR 63.6(f)(1) exempts sources from non-opacity standards during periods of SSM. As discussed above, the Court in *Sierra Club* vacated the exemptions contained in this provision and held that the CAA requires that some CAA section 112 standards apply continuously. Consistent with *Sierra Club,* the EPA is proposing to revise standards in this rule to apply at all times.

40 CFR 63.3964 Performance testing. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.7(e)(1) by changing the ''yes'' in column 3 to a ''no.'' Section 63.7(e)(1) describes performance testing requirements. The EPA is instead proposing to add a performance testing requirement at 40 CFR 63.3964(a)(1). The performance testing requirements we are proposing to add differ from the General Provisions performance testing provisions in several respects. The regulatory text does not include the language in 40 CFR 63.7(e)(1) that restated the SSM exemption and language that precluded startup and shutdown periods from being considered ''representative'' for purposes of performance testing. Also, the proposed performance testing provisions will not allow performance testing during startup or shutdown. As in 40 CFR 63.7(e)(1), performance tests conducted under this subpart should not be conducted during malfunctions because conditions during malfunctions are often not representative of normal operating conditions. Section 63.7(e) requires that the owner or operator maintain records of the process information necessary to document operating conditions during the test and include in such records an explanation to support that such conditions represent normal operation. The EPA is proposing to add language to 40 CFR 63.3964(a)(1) clarifying that the owner or operator must make such records available to the Administrator upon request.

Monitoring. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.8(c)(1) by changing the ''yes'' in column 3 to a ''no.'' The cross-references to the general duty and SSM plan requirements in those subparagraphs are not necessary in light of other requirements of 40 CFR 63.8 that require good air pollution control practices (40 CFR 63.8(c)(1)) and that set out the requirements of a quality control program for monitoring equipment (40 CFR 63.8(d)). Further, we are proposing to revise 40 CFR 63.3968(a) to add a requirement to maintain the monitoring equipment at all times in accordance with 40 CFR 63.3900(b) and keep the necessary parts readily available for routine repairs of the monitoring equipment, consistent with the requirements in 40 CFR 63.8(c)(1)(ii). The reference to 40 CFR 63.8(c)(1)(ii) is no longer needed since it is redundant to the requirement in 40 CFR 63.3968(a).

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.8(c)(6) by changing the ''yes'' in column 3 to a ''no.'' The reference to 40 CFR 63.8(c)(6) is no longer needed since it is redundant to the requirement in 40 CFR 63.5170 that specifies the requirements for monitoring systems for capture systems and add-on control devices at sources using these to comply.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.8(c)(8) by changing the ''yes'' in column 3 to a ''no.'' The reference to 40 CFR 63.8(c)(8) is no longer needed since it is redundant to the requirements in 40 CFR 63.3920(a) that requires reporting of CPMS out-of-control periods.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.8(d)–(e) by changing the ''yes'' in column 3 to a ''no.'' The requirements for quality control program and performance evaluation of CMS are not required under 40 CFR part 63, subpart MMMM.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.8(g) by changing the ''yes'' in column 3 to a ''no.'' The reference to 40 CFR 63.8(g) is no longer needed since it is redundant to the requirement in 40 CFR 63.3967 and 63.3968 that specify monitoring data reduction.

40 CFR 63.5190 Recordkeeping. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(b)(2)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(i) describes the recordkeeping requirements during startup and shutdown. These recording provisions are no longer necessary because the EPA is proposing that recordkeeping and reporting applicable to normal operations will apply to startup and shutdown. In the absence of special provisions applicable to startup and shutdown, such as a startup and shutdown plan, there is no reason to retain additional recordkeeping for startup and shutdown periods.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(b)(2)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(ii) describes the recordkeeping requirements during a malfunction, requiring a record of ''the occurrence and duration of each malfunction.'' A similar record is already required in 40 CFR 63.3930(j), which requires a record of ''the date, time, and duration of each deviation,'' which the EPA is retaining. The regulatory text in 40 CFR 63.3930(j) differs from the General Provisions in that the General Provisions requires the creation and retention of a record of the occurrence and duration of each malfunction of process, air pollution control, and monitoring equipment; whereas 40 CFR 63.3930(j) applies to any failure to meet an applicable standard and is requiring that the source record the date, time, and duration of the failure rather than the ''occurrence.'' The EPA is also proposing to add to 40 CFR 63.3930(j) a requirement that sources also keep records that include a list of the affected source or equipment and actions taken to minimize emissions, an estimate of the quantity of each regulated pollutant emitted over the emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions. Examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA proposes to require that sources keep records of this information to ensure that there is adequate information to allow the EPA to determine the severity of any failure to meet a standard, and to provide data that may document how the source met the general duty to minimize emissions when the source has failed to meet an applicable standard.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(b)(2)(iv) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events when actions were inconsistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required. The requirement previously applicable under 40 CFR 63.10(b)(2)(iv)(B) to record actions to minimize emissions and record corrective actions is now applicable by reference to 40 CFR 63.3930(j)(4).

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(b)(2)(v) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events to show that actions taken were consistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required.

We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(b)(2)(x)–(xiii) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events to show that actions taken were consistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required.

40 CFR 63.3920 Reporting. We are proposing to revise the General Provisions table to subpart MMMM (Table 2) entry for 40 CFR 63.10(d)(5) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(d)(5) describes the reporting requirements for startups, shutdowns, and malfunctions. To replace the General Provisions reporting requirement, the EPA is proposing to add reporting requirements to 40 CFR 63.3920(a). The replacement language differs from the General Provisions requirement in that it eliminates periodic SSM reports as a stand-alone report. We are proposing language that requires sources that fail to meet an applicable standard at any time to report the information concerning such events in the semi-annual compliance report already required under this rule. Subpart MMMM of 40 CFR part 63 currently requires reporting of the date, time period, and cause of each deviation. We are clarifying in the rule that, if the cause of a deviation from a standard is unknown, this should be specified in the report. We are also proposing to change ''date and time period'' or ''date and time'' to ''date, time, and duration'' (*see* proposed revisions to 40 CFR 63.3920(a)(7)). Further, we are proposing that the report must also contain the number of deviations from the standard and a list of the affected sources or equipment. For deviation reports addressing deviations from an applicable emission limit in 40 CFR 63.3890 or operating limit in Table 1 to 40 CFR part 63, subpart MMMM, we are proposing that the report also include an estimate of the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions.

(3.) Other SSM Changes

Regarding the proposed new requirement discussed above to estimate the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions, examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA is proposing this requirement to ensure that there is adequate information to determine compliance, to allow the EPA to determine the severity of the failure to meet an applicable standard, and to provide data that may document how the source met the general duty to minimize emissions during a failure to meet an applicable standard.

We will no longer require owners or operators to determine whether actions taken to correct a malfunction are consistent with an SSM plan, because plans would no longer be required. The proposed amendments, therefore, eliminate 40 CFR 63.3920(c) that requires reporting of whether the source deviated from its SSM plan, including required actions to communicate with the Administrator, and the cross-reference to 40 CFR 63.10(d)(5) that contains the description of the previously required SSM report format and submittal schedule from this section. These specifications are no longer necessary because the events will be reported in otherwise required reports with similar format and submittal requirements.

We are proposing to remove the requirements in 40 CFR 63.3920(a)(7) that deviation reports must specify whether a deviation from an operating limit occurred during a period of SSM. We are also proposing to remove the requirements in 40 CFR 63. 3920(a)(7) to break down the total duration of deviations into the startup and shutdown categories. As discussed above in this section, we are proposing to require reporting of the cause of each deviation. Further, the startup and shutdown categories no longer apply because these periods are proposed to be considered normal operation, as discussed in section IV.A.4.b.1 of this preamble for the ALDT source category, which also applies to this source category.

c. Technical Amendments to the MMPP NESHAP

We propose to amend 40 CFR 63.3966(b) to add the option of conducting EPA Method 18 of appendix A to 40 CFR part 60, ''Measurement of Gaseous Organic Compound Emissions by Gas Chromatography,'' to measure and then subtract methane emissions from measured total gaseous organic mass emissions as carbon. Facilities using the emission rate with add-on control compliance option can use either EPA Method 25 or EPA Method 25A to measure control device destruction efficiency. Unlike EPA Method 25, Method 25A does not exclude methane from the measurement of organic emissions. Because exhaust streams from coating operations may contain methane from natural gas combustion, we are proposing to allow facilities the option to measure methane using EPA Method 18 and to subtract the methane from the emissions as part of their compliance calculations. We also propose to revise the format of references to test methods in 40 CFR part 60. The current references in 40 CFR 63.5160(d)(1) to EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 3, 3A, 3B, 4, 25, and 25A specify that each method is in ''appendix A'' of 40 CFR part 60. Appendix A of 40 CFR part 60 has been divided into appendices A–1 through A–8. We propose to revise each reference to appendix A to indicate which of the eight sections of appendix A applies to the method.

We propose to amend 40 CFR 63.3941(a)(1)(i) and (a)(4), which describe how to demonstrate compliance with the emission limitations using the compliant material option, and the definition of ''non-HAP coating'' in 40 CFR 63.3981 to remove references to OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4). The reference to OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4) is intended to specify which compounds must be included in calculating total organic HAP content of a coating material if they are present at 0.1percent or greater by mass. We propose to remove this reference because 29 CFR 1910.1200(d)(4) has been amended and no longer readily defines which compounds are carcinogens. We propose to replace these references to OSHA-defined carcinogens at 29 CFR 1910.1200(d)(4) with a list (in proposed new Table 5 to 40 CFR part 63, subpart MMMM) of those organic HAP that must be included in calculating total organic HAP content of a coating material if they are present at 0.1-percent or greater by mass.

We propose to include organic HAP in proposed Table 5 to 40 CFR part 63, subpart MMMM if they were categorized in the EPA's *Prioritized Chronic Dose-Response Values for Screening Risk Assessments* (dated May 9, 2014), as a ''human carcinogen,'' ''probable human carcinogen,'' or ''possible human carcinogen'' according to *The Risk Assessment Guidelines of 1986* (EPA/600/8–87/045, August 1987),[35] or as ''carcinogenic to humans,'' ''likely to be carcinogenic to humans,'' or with ''suggestive evidence of carcinogenic potential'' according to the *Guidelines for Carcinogen Risk Assessment* (EPA/630/P–03/001F, March 2005).

Current 40 CFR 63.3931 specifies how records must be maintained. We propose to add clarification to this provision at 40 CFR 63.3931(a) that specifies the allowance to retain electronic records applies to all records that were submitted as reports electronically via the EPA's CEDRI. We also propose to add text to the same provision clarifying that this ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

d. Ongoing Emissions Compliance Demonstrations

As part of an ongoing effort to improve compliance with various federal air emission regulations, the EPA reviewed the compliance demonstration requirements in the MMPP NESHAP. Currently, if a source owner or operator chooses to comply with the standards using add-on controls, the results of an initial performance test are used to determine compliance; however, the rule does not require on-going periodic performance testing for these emission capture systems and add-on controls. In this action, we are proposing to require periodic testing of add-on control devices, in addition to the one-time initial emissions and capture efficiency testing, and ongoing temperature measurement, to ensure ongoing compliance with the standards.

As described more fully in section IV.A.4.d of this preamble for the ALDT source category, the EPA documented potential operational problems associated with control devices in several publications;[36] the ICAC, in their comments on a separate rulemaking on the proposed revisions related to the NESHAP General Provisions (72 FR 69, January 3, 2007), commented that ongoing maintenance and checks of control devices are necessary in order to ensure emissions control technology, including both thermal and catalytic oxidizers, remains effective;[37] and state websites list CAA enforcement information that further corroborates the potential problems identified by the EPA and ICAC comments and conclusions.

Given the need for vigilance in maintaining equipment to stem degradation, the EPA is proposing to require periodic testing of add-on control devices, in addition to the one-time initial emissions and capture efficiency testing and ongoing temperature measurement, to ensure ongoing compliance with the MMPP NESHAP.

In this action, the EPA is proposing to require periodic performance testing of add-on control devices on a regular frequency (*e.g.,* every 5 years) to ensure the equipment continues to operate properly for facilities using the emission rate with add-on controls compliance option. We note that the majority of state operating permits for existing MMPP surface coating sources already require such testing every 5 years synchronized with 40 CFR part 70 air operating permit renewals. This proposed periodic testing requirement includes an exception to the general requirement for periodic testing for facilities using the catalytic oxidizer control option at 40 CFR 63.3967(b) and following the catalyst maintenance procedures in 40 CFR 63.3967(b)(4). This exception is due to the catalyst maintenance procedures that already require annual testing of the catalyst and other maintenance procedures that provide ongoing demonstrations that the control system is operating properly and may, thus, be considered comparable to conducting a performance test.

The proposed periodic performance testing requirement allows an exception from periodic testing for facilities using instruments to continuously measure emissions. Such CEMS would show actual emissions. The use of CEMS to demonstrate compliance would obviate the need for periodic oxidizer testing. Moreover, installation and operation of a CEMS with a timesharing component, such that values from more than one oxidizer exhaust could be tabulated in a recurring frequency, could prove less expensive (estimated to have an annual cost below $15,000) than ongoing oxidizer testing.

[35] See *https://www.epa.gov/fera/dose-response-assessment-assessing-health-risks-associated-exposure-hazardous-air-pollutants.*

[36] See *Control Techniques for Volatile Organic Compound Emissions from Stationary Sources,* EPA/453/R–92–018, December 1992, *Control Technologies for Emissions from Stationary Sources,* EPA/625/6–91/014, June 1991, and *Survey of Control for Low Concentration Organic Vapor Gas Streams,* EPA–456/R–95–003, May 1995. These documents can be found in the ALDT, MMPP, and PPP Dockets for this action.

[37] See Docket Item No. EPA–HQ–OAR–2004–0094–0173, available at *https://www.regulations.gov/.* A copy of the ICAC's comments on the proposed revisions to the General Provisions is also included in the ALDT, MMPP, and PPP Dockets for this action.

This proposed requirement would not require periodic testing or CEMS monitoring of facilities using the ''as purchased'' or ''as applied'' compliant coatings options because these compliance options do not use any add-on controls or control efficiency measurements in the compliance calculations.

The proposed periodic performance testing requirement would require that facilities complying with the standards using emission capture systems and add-on controls and which are not already on a 5-year testing schedule to conduct the first of the periodic performance tests within 3 years of the effective date of the revised standards. Afterward, they would conduct the periodic testing before they renew their operating permits, but no longer than 5 years following the previous performance test. Additionally, facilities that have already tested as a condition of their permit within the last 2 years before the effective date would be permitted to maintain their current 5-year schedule and not be required to move up the date of the next test to the 3-year date specified above. This proposed requirement would require periodic air emissions testing to measure organic HAP destruction or removal efficiency at the inlet and outlet of the add-on control device, or measurement of the control device outlet concentration of organic HAP. The emissions would be measured as total gaseous organic mass emissions as carbon using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60, which are the methods currently required for the initial compliance demonstration.

We estimate that the cost to perform a control device emissions destruction or removal efficiency test using EPA Method 25 or 25A would be approximately $19,000 per control device. The cost estimate is included in the memorandum titled *Draft Costs/Impacts of the 40 CFR part 63 Subparts IIII, MMMM, and PPPP Monitoring Review Revisions,* in the MMPP Docket. We have reviewed the operating permits for facilities subject to the several other surface coating NESHAP, and we found that affected sources currently using emission capture systems and add-on controls are often, but not always, required to conduct periodic control device performance tests as a condition of their 40 CFR part 70 operating permits. We estimate that seven MMPP surface coating facilities currently are not required to conduct periodic testing of their control devices as a condition of their permit renewal. Periodic performance tests ensure that all control systems used to comply with the NESHAP would be properly maintained over time, thereby reducing the potential for acute emissions episodes and non-compliance.

We are requesting comment on adding periodic testing of add-on control devices to the MMPP NESHAP and on the suggested 5-year schedule for the periodic testing.

e. IBR of Alternative Test Methods Under 1 CFR Part 51

The EPA is proposing new and updated test methods for the MMPP NESHAP that include IBR. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to add the following optional EPA methods and incorporate by reference the VCS described in the amendments to 40 CFR 63.14:

- EPA Method 18 of appendix A to 40 CFR part 60, Measurement of Gaseous Organic Compound Emissions by Gas Chromatography, proposed to be IBR approved for 40 CFR 63.3966(b)(4);
- ASTM Method D1475–13, Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, proposed to be IBR approved for 40 CFR 63.3941(b)(4), 63.3941(c), and 63.3951(c);
- ASTM Method D2111–10 (2015), Standard Test Methods for Specific Gravity of Halogenated Organic Solvents and Their Admixtures, proposed to be IBR approved for 40 CFR 63.3951(c);
- ASTM Method D2369–10 (2015), Test Method for Volatile Content of Coatings, proposed to be IBR approved for 40 CFR 63.3961(j)(3);
- ASTM Method D2697–03 (2014), Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, proposed to be IBR approved for 40 CFR 63.3941(b)(1);
- ASTM Method D5965–02 (2013), Standard Test Methods for Specific Gravity of Coating Powders, proposed to be IBR approved for 40 CFR 3951(c); and
- ASTM Method D6093–97 (2016), Standard Test Method for Percent Volume Nonvolatile Matter in Clear or Pigmented Coatings Using Helium Gas Pycnometer, proposed to be IBR approved for 40 CFR 63.3941(b)(1).

Older versions of ASTM methods D1475, D2697, D5965, and D6093 were incorporated by reference when the MMPP NESHAP was originally promulgated (69 FR 130, January 2, 2004). We are proposing to replace the older versions of these methods with updated versions, which requires IBR revisions. The updated version of the method replaces the older version in the same paragraph of the rule text. We are also proposing the addition of EPA Method 18 and incorporating by reference ASTM methods D2111 and D2369 to the MMPP NESHAP for the first time in this rulemaking. Refer to section VIII.J of this preamble for further discussion of these VCS.

5. What compliance dates are we proposing?

The EPA is proposing that affected sources must comply with all of the amendments, with the exception of the proposed electronic format for submitting semiannual compliance reports, no later than 181 days after the effective date of the final rule. All affected facilities would have to continue to meet the current requirements of 40 CFR part 63, subpart MMMM until the applicable compliance date of the amended rule. The final action is not expected to be a ''major rule'' as defined by 5 U.S.C. 804(2), so the effective date of the final rule will be the promulgation date as specified in CAA section 112(d)(10).

For existing sources, we are proposing two changes that would impact ongoing compliance requirements for 40 CFR part 63, subpart MMMM. As discussed elsewhere in this preamble, we are proposing to add a requirement that notifications, performance test results, and semiannual compliance reports be submitted electronically. We are proposing that the semiannual compliance report be submitted electronically using a new template, which is available for review and comment as part of this action. We are also proposing to change the requirements for SSM by removing the exemption from the requirements to meet the standard during SSM periods and by removing the requirement to develop and implement an SSM plan. Our experience with similar industries that are required to convert reporting mechanisms to install necessary hardware and software, become familiar with the process of submitting performance test results electronically through the EPA's CEDRI, test these new electronic submission capabilities, and reliably employ electronic reporting shows that a time period of a minimum of 90 days, and, more typically, 180 days is generally necessary to successfully accomplish these revisions. Our experience with similar industries further shows that this sort of regulated facility generally requires a time period of 180 days to read and understand the amended rule requirements; to evaluate their operations to ensure that they can meet the standards during periods of startup and shutdown as defined in the rule and make any necessary adjustments; and to update their operation, maintenance, and monitoring plan to reflect the revised requirements. The EPA recognizes the confusion that multiple different compliance dates for individual requirements would create and the additional burden such an assortment of dates would impose. From our assessment of the time frame needed for compliance with the entirety of the revised requirements, the EPA considers a period of 180 days to be the most expeditious compliance period practicable and, thus, is proposing that existing affected sources be in compliance with all of this regulation's revised requirements within 181 days of the regulation's effective date.

We solicit comment on these proposed compliance periods, and we specifically request submission of information from sources in this source category regarding specific actions that would need to be undertaken to comply with the proposed amended requirements and the time needed to make the adjustments for compliance with any of the revised requirements. We note that information provided may result in changes to the proposed compliance dates.

C. What are the analytical results and proposed decisions for the surface coating of plastic parts and products source category?

1. What are the results of the risk assessment and analyses?

As described above in section III of this preamble, for the PPP source category, we conducted a risk assessment for all HAP emitted. We present results of the risk assessment briefly below and in more detail in the *Surface Coating of Plastic Parts and Products Risk Assessment Report,* in the PPP Docket (Docket ID No. EPA–HQ–OAR–2019–0313).

a. Chronic Inhalation Risk Assessment Results

Table 6 of this preamble provides a summary of the results of the inhalation risk assessment for the source category.

TABLE 6—SURFACE COATING OF PLASTIC PARTS AND PRODUCTS SOURCE CATEGORY INHALATION RISK ASSESSMENT RESULTS

Risk assessment	Maximum individual cancer risk (in 1 million)		Estimated population at increased risk of cancer ≥1-in-1 million		Estimated annual cancer incidence (cases per year)		Maximum chronic noncancer TOSHI [1]		Maximum screening acute noncancer HQ [2]
	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions	Based on allowable emissions	Based on actual emissions
Source Category	10	10	600	700	0.001	0.001	1	1	HQ_{REL} = 4.
Whole Facility	70	....	29,000	....	0.006	....	1		

[1] The TOSHI is the sum of the chronic noncancer HQ for substances that affect the same target organ or organ system.

[2] The maximum estimated acute exposure concentration was divided by available short-term threshold values to develop HQ values.

The results of the inhalation risk modeling using actual emissions data, as shown in Table 6 of this preamble, indicate that the maximum individual cancer risk based on actual emissions (lifetime) could be up to 10-in-1 million (driven by ethyl benzene, naphthalene, and formaldehyde from coating operations), the maximum chronic noncancer TOSHI value based on actual emissions could be up to 1 (driven by hexamethylene-1,6-diisocyanate from coating operations), and the maximum screening acute noncancer HQ value (off-facility site) could be up to 4 (driven by glycol ethers). The total estimated annual cancer incidence (national) from these facilities based on actual emission levels is 0.001 excess cancer cases per year or 1 case in every 1,000 years.

b. Screening Level Acute Risk Assessment Results

Table 6 of this preamble also shows the acute risk results for the PPP source category. The screening analysis for acute impacts was based on an industry-specific multiplier of 1.2, to estimate the peak emission rates from the average emission rates. For more detailed acute risk results refer to the *Surface Coating of Plastic Parts and Products Risk Assessment Report,* in the PPP Docket.

c. Multipathway Risk Screening Results

There are no PB–HAP emitted by facilities in the PPP source category. Therefore, we do not expect any human health multipathway risks as a result of emissions from this source category.

d. Environmental Risk Screening Results

The emissions data for the PPP source category indicate that no environmental HAP are emitted by sources within this source category. Therefore, we do not expect an adverse environmental effect as a result of HAP emissions from this source category.

e. Facility-Wide Risk Results

Twenty-two facilities have a facility-wide cancer MIR greater than or equal to 1-in-1 million. The maximum facility-wide cancer MIR is 70-in-1 million, driven by nickel and formaldehyde from a co-located boiler. The total estimated cancer incidence from the whole facility is 0.006 excess cancer cases per year, or one excess case in every 200 years. Approximately 29,000 people were estimated to have cancer risks above 1-in-1 million from exposure to HAP emitted from both MACT and non-MACT sources of the 125 facilities in this source category. The maximum facility-wide TOSHI for the source category is estimated to be 1, driven by emissions of nickel and formaldehyde from a co-located boiler.

f. What demographic groups might benefit from this regulation?

To examine the potential for any environmental justice issues that might be associated with the source category, we performed a demographic analysis, which is an assessment of risks to individual demographic groups of the populations living within 5 km and within 50 km of the facilities. In the analysis, we evaluated the distribution of HAP-related cancer and noncancer risks from the PPP source category across different demographic groups within the populations living near facilities.[38]

[38] Demographic groups included in the analysis are: White, African American, Native American, other races and multiracial, Hispanic or Latino, children 17 years of age and under, adults 18 to 64 years of age, adults 65 years of age and over, adults without a high school diploma, people living below the poverty level, people living above the poverty level, and linguistically isolated people.

The results of the demographic analysis are summarized in Table 7 of this preamble. These results, for various demographic groups, are based on the estimated risks from actual emissions levels for the population living within 50 km of the facilities.

TABLE 7—SURFACE COATING OF PLASTIC PARTS AND PRODUCTS SOURCE CATEGORY DEMOGRAPHIC RISK ANALYSIS RESULTS

	Nationwide	Population with cancer risk at or above 1-in-1 million due to surface coating of plastic parts and products	Population with chronic noncancer HI above 1 due to surface coating of plastic parts and products
Total Population	317,746,049	500	0
White and Minority by Percent			
White	62	92	0
Minority	38	8	0
Minority Detail by Percent			
African American	12	4	0
Native American	0.8	0.1	0
Hispanic or Latino	18	3	0
Other and Multiracial	7	1	0
Income by Percent			
Below the Poverty Level	14	19	0
Above the Poverty Level	86	81	0
Education by Percent			
Over 25 Without High a School Diploma	14	14	0
Over 25 With a High School Diploma	86	86	0
Linguistically Isolated by Percent			
Linguistically Isolated	6	0	0

The results of the PPP source category demographic analysis indicate that emissions from the source category expose approximately 500 people to a cancer risk at or above 1-in-1 million and no one is exposed to a chronic noncancer HI greater than 1. The percentages of the at-risk population in the following specific demographic groups are higher than their respective nationwide percentages: ''White,'' and ''Below the Poverty Level.''

The methodology and the results of the demographic analysis are presented in a technical report, *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Plastic Parts and Products Source Category Operations,* April 2019 (hereafter referred to as the *Plastic Parts and Products Demographic Analysis Report*), available in the PPP Docket.

2. What are our proposed decisions regarding risk acceptability, ample margin of safety, and adverse environmental effects?

a. Risk Acceptability

As noted in section III.A of this preamble, we weigh all health risk factors in our risk acceptability determination, including the cancer MIR, the number of persons in various cancer and noncancer risk ranges, cancer incidence, the maximum noncancer TOSHI, the maximum acute noncancer HQ, the extent of noncancer risks, the distribution of cancer and noncancer risks in the exposed population, and risk estimation uncertainties (54 FR 38044, September 14, 1989).

For the PPP source category, the risk analysis indicates that the cancer risks to the individual most exposed could be up to 10-in-1 million due to actual emissions and allowable emissions. These risks are considerably less than 100-in-1 million, which is the presumptive upper limit of acceptable risk. The risk analysis also shows very low cancer incidence (0.001 cases per year for actual and allowable emissions), and we did not identify any potential for adverse chronic noncancer health effects.

The acute screening analysis results in a maximum acute noncancer HQ of 4 at one facility based on use of the acute REL for ethylene glycol monomethyl ether as a surrogate for unspeciated glycol ethers. Since there is not a specified acute dose-response value for unspeciated glycol ethers, we applied the most protective dose-response value from the other glycol ether compounds, the acute REL for ethylene glycol monomethyl ether, to estimate risk. Given that ethylene glycol monomethyl ether is more toxic than other glycol ethers, the use of this surrogate is a health-protective choice in the EPA's risk assessment.

For acute screening analyses, to better characterize the potential health risks associated with estimated worst-case acute exposures to HAP, we examine a wider range of available acute health metrics than we do for our chronic risk assessments. This is in acknowledgement that there are generally more data gaps and uncertainties in acute reference values than there are in chronic reference values. By definition, the acute REL represents a health-protective level of exposure, with effects not anticipated below those levels, even for repeated exposures; however, the level of exposure that would cause health effects is not specifically known. As the exposure concentration increases above the acute REL, the potential for effects increases. Therefore, when an REL is exceeded and an AEGL–1 or ERPG–1 level is available (*i.e.,* levels at which mild, reversible effects are anticipated in the general population for a single exposure), we typically use them as an additional comparative measure, as they provide an upper bound for exposure levels above which exposed individuals could experience effects. However, for glycol ethers, there are no AEGL or ERPG values.

Additional uncertainties in the acute exposure assessment that the EPA conducts as part of the risk review under section 112 of the CAA include several factors. The accuracy of an acute inhalation exposure assessment depends on the simultaneous occurrence of independent factors that may vary greatly, such as hourly emission rates, meteorology, and the presence of a person. In the acute screening assessment that we conduct under the RTR program, we include the conservative (health-protective) assumptions that peak emissions from each emission point in the source category and reasonable worst-case air dispersion conditions (*i.e.,* 99th percentile) co-occur. We then include the additional assumption that a person is located at this point at the same time. Together, these assumptions represent a reasonable exposure. In most cases, it is unlikely that a person would be located at the point of maximum exposure during the time when peak emissions and reasonable worst-case air dispersion conditions occur simultaneously. Thus, as discussed in the document titled *Residual Risk Assessment for the Surface Coating of Plastic Parts and Products Source Category in Support of the Risk and Technology Review 2019 Proposed Rule,* in the PPP docket for this action, by assuming the co-occurrence of independent factors for the acute screening assessment, the results are intentionally biased high and are, thus, health-protective. We conclude that adverse effects from acute exposure to emissions of glycol ethers from this source category are not anticipated.

Considering all of the health risk information and factors discussed above, including the uncertainties discussed in section III.C.7 of this preamble, we propose that the risks from the PPP source category are acceptable.

b. Ample Margin of Safety Analysis

Although we are proposing that the risks from the PPP source category are acceptable, risk estimates for approximately 500 individuals in the exposed population are above 1-in-1 million at the actual emissions level and 700 individuals in the exposed population are above 1-in-1 million at the allowable emissions level. Consequently, we further considered whether the MACT standards for the PPP source category provide an ample margin of safety to protect public health. In this ample margin of safety analysis, we investigated available emissions control options that might reduce the risk from the source category. We considered this information along with all of the health risks and other health information considered in our determination of risk acceptability.

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the PPP source category, and we reviewed various information sources regarding emission sources that are currently regulated by the PPP NESHAP. Based on our review, we did not identify any cost-effective measures to further reduce HAP. Therefore, considering all of the available health information along with the absence of additional measures for reducing HAP, we are proposing that additional emissions controls for this source category are not necessary and that the current standards provide an ample margin of safety.

c. Environmental Effects

The emissions data for the PPP source category indicate that no environmental HAP are emitted by sources within this source category. In addition, we are unaware of any adverse environmental effects caused by HAP emitted by this source category. Therefore, we do not expect there to be an adverse environmental effect as a result of HAP emissions from this source category and we are proposing that it is not necessary to set a more stringent standard to prevent, taking into consideration costs, energy, safety, and other relevant factors, an adverse environmental effect.

3. What are the results and proposed decisions based on our technology review?

As described in section III.B of this preamble, our technology review focused on identifying developments in practices, processes, and control technologies for the PPP source category. The EPA reviewed various information sources regarding emission sources that are currently regulated by the PPP NESHAP to support the technology review. The information sources included the following: the RBLC; publicly available state air permit databases; regulatory actions, including technology reviews promulgated for other surface coating NESHAP subsequent to the PPP NESHAP; state regulations; facility operating permits; site visits; and industry information.

Based on our review, we did not identify any add-on control technologies, process equipment, work practices, or procedures that had not been previously considered during development of the PPP NESHAP, and we did not identify any new or improved add-on control technologies that would result in additional emission reductions. A brief summary of the EPA's findings in conducting the technology review of plastic part surface coating operations follows. For a detailed discussion of the EPA's findings, refer to the *Plastic Parts and Products Technology Review Memo,* in the PPP Docket.

During the development of the 2004 PPP NESHAP, numerical emission limits were determined for new and existing major sources within four coating subcategories for a total of eight HAP emissions limits. The emission limits were based on industry survey responses and the industry's use of low- or no-HAP coatings and thinners and add-on capture and control technologies.

Using the EPA's NEI and the ECHO databases, we identified 125 major source facilities that are currently subject to the PPP NESHAP. A search of the RBLC database for improvements in plastic parts and product coating technologies provided 20 facilities with permit dates of 2000 or later. The results of the RBLC search included facilities subject to VOC and HAP content limits, and using high volume/low pressure spray guns, robotic electrostatic application, thermal oxidizers, catalytic oxidizers, and adsorbers. All of these control technologies were in use by the plastic parts and product coating industry during development of the PPP NESHAP and were already considered in the development of the PPP NESHAP.

Therefore, we concluded that the results of the RBLC search are consistent with current PPP NESHAP requirements and did not identify any improvements in add-on control technology or processes and work practices that are not already reflected in the rule.

We also collected permit information from about 45 major source surface coating facilities subject to the PPP NESHAP. (Many of these facilities were also subject to 40 CFR part 63, subparts IIII or MMMM.) The review of these permits did not identify a facility subject to HAP limits more stringent than those in the PPP NESHAP and did not identify any control technologies or work practices that were not already considered in the development of the NESHAP.

We reviewed other surface coating NESHAP promulgated subsequent to the PPP NESHAP to determine whether any requirements exceed the PPP MACT level of control or include technologies that were not considered during the development of the original PPP NESHAP. These NESHAP include Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources (40 CFR part 63, subpart HHHHHH), and Nine Metal Fabrication and Finishing Area Source Categories (40 CFR part 63, subpart XXXXXX). We also reviewed the results of the technology reviews for other surface coating NESHAP promulgated after the PPP NESHAP. These technology reviews include the NESHAP for Printing and Publishing (40 CFR part 63, subpart KK), Shipbuilding and Ship Repair (40 CFR part 63, subpart II), Wood Furniture Manufacturing (40 CFR part 63, subpart JJ), and Aerospace Manufacturing and Rework Facilities (40 CFR part 63, subpart GG). The review of these more recently promulgated NESHAP and the technology reviews of other NESHAP did not identify any control technologies that were not already considered during the development of the 2004 PPP NESHAP.

The developments considered in these other technology reviews included the use of emission capture systems and thermal oxidizers to reduce emissions. Because the PPP NESHAP already includes a compliance option involving the use of a PTE and an add-on control device, and because these measures were considered in the development of the PPP NESHAP, we concluded that these measures do not represent a development in control technology under CAA section 112(d)(6). We also identified and considered alternatives to conventional solvent borne coatings during MACT development (*e.g.,* waterborne coatings, low-HAP/high-solids coatings, low energy radiation cured coating) and the presence of facilities using these coatings is reflected in the current MACT standards. We found no other improvements in add-on control technology or other equipment during review of the RBLC, the state operating permits, and subsequent NESHAP that were not already identified and considered during development of the PPP NESHAP.

Finally, we identified no developments in work practices or procedures for the PPP source category that were not previously identified and considered during MACT development.

Based on these findings, we conclude that there have not been any developments in add-on control technology or other equipment not identified and considered during MACT development, nor any improvements in add-on controls, nor any significant changes in the cost (including cost effectiveness) of the add-on controls. Therefore, we are proposing no revisions to the PPP NESHAP pursuant to CAA section 112(d)(6). For further discussion of the technology review results, refer to the *Plastic Parts and Products Technology Review Memo,* in the PPP Docket.

4. What other actions are we proposing for the surface coating of plastic parts and products source category?

We are proposing to require electronic submittal of notifications (initial and compliance status), semiannual reports, and performance test reports for PPP surface coating facilities. In addition, we are proposing revisions to the SSM provisions of the MACT rule in order to ensure that they are consistent with the Court decision in *Sierra Club* v. *EPA,* 551 F. 3d 1019 (D.C. Cir. 2008), which vacated two provisions that exempted sources from the requirement to comply with otherwise applicable CAA section 112(d) emission standards during periods of SSM. We are proposing to require periodic emissions testing of add-on control devices. We also are proposing to add optional EPA Method 18, to IBR an alternative test method, and to make various technical and editorial changes. Our analyses and proposed changes related to these issues are discussed in the sections below.

a. Electronic Reporting Requirements

The EPA is proposing that owners and operators of PPP surface coating facilities submit electronic copies of initial notifications required in 40 CFR 63.9(b) and 63.4510(b), notifications of compliance status required in 40 CFR 63.9(h) and 63.4510(c), performance test reports required in 40 CFR 63.4520(b), and semiannual reports required in 40 CFR 63.4520(a) through the EPA's CDX, using the CEDRI. A description of the EPA's CDX and the EPA's proposed rationale and details on the addition of these electronic reporting requirements for the PPP source category is the same as for the ALDT source category, as discussed in section IV.A.4.a of this preamble. No specific form is proposed at this time for the initial notifications required in 40 CFR 63.9(b) and notifications of compliance status in 40 CFR 63.9(h). Until the EPA has completed electronic forms for these notifications, the notifications will be required to be submitted via CEDRI in PDF. After development of the final forms, we will notify sources about their availability via the CEDRI website and the CHIEF Listserv. For semiannual reports required in 40 CFR 63.4520(a), the proposed rule requires that owners or operators use the appropriate spreadsheet template to submit information to CEDRI. A draft version of the proposed template for this report is included in the docket for this rulemaking.[39] The EPA specifically requests comment on the content, layout, and overall design of the template.

Regarding submittal of performance test reports via the EPA's ERT, as discussed in section IV.A.4.a of this preamble for the ALDT NESHAP, the proposal to submit performance test data electronically to the EPA applies only if the EPA has developed an electronic reporting form for the test method as listed on the EPA's ERT website. For the PPP NESHAP, all of the EPA test methods listed under 40 CFR part 63, subpart PPPP, are currently supported by the ERT, except for EPA Method 18 (an optional test method proposed in this action), which appears in the proposed text for 40 CFR 63.4566. As mentioned above in section IV.A.4.a of this preamble, the rule proposes that should an owner or operator choose to use EPA Method 18, then its results would be submitted in PDF using the attachment module of the ERT.

Also, as discussed in section IV.A.4.a of this preamble for the ALDT NESHAP, we are proposing to provide facilities with the ability to seek extensions for submitting electronic reports for circumstances beyond the control of the facility. In proposed 40 CFR 63.4520(g), we address the situation for facilities subject to the PPP NESHAP where an

[39] See *Electronic Reporting Template for Surface Coating of Plastic Parts and Products Subpart PPPP Semiannual Reports,* in Docket ID NO. EPA–HQ–OAR–2019–0313.

extension may be warranted due to outages of the EPA's CDX or CEDRI, which may prevent access to the system and submittal of the required reports. In proposed 40 CFR 63.4520(h), we address the situation for facilities subject to the PPP NESHAP where an extension may be warranted due to a force majeure event, which is defined as an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents compliance with the requirement to submit a report electronically as required by this rule. Examples of such events are acts of nature, acts of war and terrorism, or equipment failure or safety hazards beyond the control of the facility.

The electronic submittal of the reports addressed in this proposed rulemaking will increase the usefulness of the data contained in those reports, is in keeping with current trends in data availability and transparency, will further assist in the protection of public health and the environment, will improve compliance by facilitating the ability of regulated facilities to demonstrate compliance with requirements and by facilitating the ability of delegated state, local, tribal, and territorial air agencies and the EPA to assess and determine compliance, and will ultimately reduce burden on regulated facilities, delegated air agencies, and the EPA. Electronic reporting also eliminates paper-based, manual processes, thereby saving time and resources, simplifying data entry, eliminating redundancies, minimizing data reporting errors, and providing data quickly and accurately to the affected facilities, air agencies, the EPA, and the public. Moreover, electronic reporting is consistent with the EPA's plan to implement Executive Order 13563 and is in keeping with the EPA's Agency-wide policy developed in response to the White House's Digital Government Strategy. For more information on the benefits of electronic reporting, *see* the memorandum titled *Electronic Reporting Requirements for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* available in Docket ID No. EPA–HQ–OAR–2019–0313.

b. SSM Requirements

(1.) Proposed Elimination of the SSM Exemption

The EPA is proposing to eliminate the SSM exemption in the PPP NESHAP. The EPA's proposed rationale for the elimination of the SSM exemption for the PPP source category is the same as for the ALDT source category, which is discussed in section IV.A.4.b.1 of this preamble. We are also proposing several revisions to Table 2 to subpart PPPP of 40 CFR part 63 (Applicability of General Provisions to Subpart PPPP of Part 63, hereafter referred to as the ''General Provisions table to subpart PPPP'') as is explained in more detail below in section IV.C.4.b.2 of this preamble. For example, we are proposing to eliminate the incorporation of the General Provisions' requirement that the source develop an SSM plan. Further, we are proposing to eliminate and revise certain recordkeeping and reporting requirements related to the SSM exemption as further described below. The EPA has attempted to ensure that the provisions we are proposing to eliminate are inappropriate, unnecessary, or redundant in the absence of the SSM exemption. We are specifically seeking comment on the specific proposed deletions and revisions and also whether additional provisions should be revised to achieve the stated goal.

In proposing these rule amendments, the EPA has taken into account startup and shutdown periods and, for the same reasons explained in section IV.A.4.b.1 of this preamble for the ALDT source category, has not proposed alternate standards for those periods in the PPP NESHAP. Startups and shutdowns are part of normal operations for the PPP source category. As currently specified in 40 CFR 63.4500(a), any coating operation(s) for which you use the emission rate with add-on controls option must meet the applicable operating limits in Table 1 to 40 CFR part 63, subpart PPPP ''at all times,'' except for solvent recovery systems for which you conduct liquid-liquid material balances according to 40 CFR 63.4561(j). (Solvent recovery systems for which you conduct a liquid-liquid material balance require a monthly calculation of the solvent recovery device's collection and recovery efficiency for volatile organic matter.)

Also, as currently specified in 40 CFR 63.4500(a)(2), any coating operation(s) for which you use the emission rate with add-on controls option must be in compliance ''at all times'' with the applicable emission limit in 40 CFR 63.4490. During startup and shutdown periods, in order for a facility (using add-on controls to meet the standards) to meet the emission and operating standards, the control device for a coating operation needs to be turned on and operating at specified levels before the facility begins coating operations, and the control equipment needs to continue to be operated until after the facility ceases coating operations. In some cases, the facility needs to run thermal oxidizers on supplemental fuel before VOC levels are sufficient for the combustion to be (nearly) self-sustaining. Note that we are also proposing new related language in 40 CFR 63.4500(b) to require that the owner or operator operate and maintain the coating operation, including pollution control equipment, at all times to minimize emissions. *See* section IV.A.4.b.2 of this preamble for further discussion of this proposed revision.

Although no statutory language compels the EPA to set standards for malfunctions, the EPA has the discretion to do so where feasible, as discussed previously in section IV.A.4.b.1 of this preamble for the ALDT source category.

It is unlikely that a malfunction would result in a violation of the standards during PPP surface coatings operations for facilities using the compliant material option or the emission rate without add-on controls option. Facilities using these options have demonstrated that the organic HAP contents of the coating materials do not exceed the emission limits in 40 CFR 63.4490(a) or (b), either on a coating-by-coating basis or by using averaging among coatings.

A malfunction event is more likely for PPP coating facilities that use the emission rate with add-on controls option. For this option, facilities must demonstrate that the average emission rate does not exceed the emission limits in 40 CFR 63.4490(a) or (b), and the facility is complying with the control device operating limits listed in Table 1 to 40 CFR part 63, subpart PPPP of the PPP NESHAP. The operating limits are specific to the type of control device and established by the facility during its initial performance test.

In the unlikely event that a source fails to comply with the applicable CAA section 112(d) standards as a result of a malfunction event, the EPA would determine an appropriate response based on, among other things, the good faith efforts of the source to minimize emissions during malfunction periods, including preventative and corrective actions, as well as root cause analyses to ascertain and rectify excess emissions. Refer to section IV.A.4.b.1 of this preamble for further discussion of the EPA's actions in response to a source failing to comply with the applicable CAA section 112(d) standards as a result of a malfunction event for the ALDT source category, which applies to this source category.

(2.) Proposed Revisions to the General Provisions Applicability Table

40 CFR 63.4500(b) General duty. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.6(e)(1)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(i) describes the general duty to minimize emissions. Some of the language in that section is no longer necessary or appropriate in light of the elimination of the SSM exemption. We are proposing instead to add general duty regulatory text at 40 CFR 63.4500(b) that reflects the general duty to minimize emissions while eliminating the reference to periods covered by an SSM exemption. The current language in 40 CFR 63.6(e)(1)(i) characterizes what the general duty entails during periods of SSM. With the elimination of the SSM exemption, there is no need to differentiate between normal operations, startup and shutdown, and malfunction events in describing the general duty. Therefore, the language the EPA is proposing for 40 CFR 63.4500(b) does not include that language from 40 CFR 63.6(e)(1).

We are also proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.6(e)(1)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.6(e)(1)(ii) imposes requirements that are not necessary with the elimination of the SSM exemption or are redundant with the general duty requirement being added at 40 CFR 63.4500(b).

SSM plan. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.6(e)(3) by changing the ''yes'' in column 3 to a ''no.'' Generally, these paragraphs require development of an SSM plan and specify SSM recordkeeping and reporting requirements related to the SSM plan. We are also proposing to remove from 40 CFR part 63, subpart PPPP, the current provisions requiring the SSM plan in 40 CFR 63.4500(c) and requiring reporting related to the SSM plan in 40 CFR 63.4520(c). As noted, the EPA is proposing to remove the SSM exemptions. Therefore, affected units will be subject to an emission standard during such events. The applicability of a standard during such events will ensure that sources have ample incentive to plan for and achieve compliance, and, thus, the SSM plan requirements are no longer necessary.

Compliance with standards. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.6(f)(1) by changing the ''yes'' in column 3 to a ''no.'' The current language of 40 CFR 63.6(f)(1) exempts sources from non-opacity standards during periods of SSM. As discussed above, the Court in *Sierra Club* vacated the exemptions contained in this provision and held that the CAA requires that some CAA section 112 standards apply continuously. Consistent with *Sierra Club,* the EPA is proposing to revise standards in this rule to apply at all times.

40 CFR 63.4564 Performance testing. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.7(e)(1) by changing the ''yes'' in column 3 to a ''no.'' Section 63.7(e)(1) describes performance testing requirements. The EPA is instead proposing to add a performance testing requirement at 40 CFR 63.4564(a)(1). The performance testing requirements we are proposing to add differ from the General Provisions performance testing provisions in several respects. The regulatory text does not include the language in 40 CFR 63.7(e)(1) that restated the SSM exemption and language that precluded startup and shutdown periods from being considered ''representative'' for purposes of performance testing. Also, the proposed performance testing provisions will not allow performance testing during startup or shutdown. As in 40 CFR 63.7(e)(1), performance tests conducted under this subpart should not be conducted during malfunctions because conditions during malfunctions are often not representative of normal operating conditions. Section 63.7(e) requires that the owner or operator maintain records of the process information necessary to document operating conditions during the test and include in such records an explanation to support that such conditions represent normal operation. The EPA is proposing to add language clarifying that the owner or operator must make such records available to the Administrator upon request.

Monitoring. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.8(a)(4) by changing the ''yes'' in column 3 to a ''no.'' Section 63.8(a)(4) describes additional monitoring requirements for control devices. Subpart PPPP of 40 CFR part 63 does not have monitoring requirements for flares.

We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.8(c)(1) by changing the ''yes'' in column 3 to a ''no.'' The cross-references to the general duty and SSM plan requirements in those subparagraphs are not necessary in light of other requirements of 40 CFR 63.8 that require good air pollution control practices (40 CFR 63.8(c)(1)) and that set out the requirements of a quality control program for monitoring equipment (40 CFR 63.8(d)). Further, we are proposing to revise 40 CFR 63.4568(a) to add a requirement to maintain the monitoring equipment at all times in accordance with 40 CFR 63.4500(b) and keep the necessary parts readily available for routine repairs of the monitoring equipment, consistent with the requirements in 40 CFR 63.8(c)(1)(ii). The reference to 40 CFR 63.8(c)(1)(ii) is no longer needed since it is redundant to the requirement in 40 CFR 63.4568(a).

40 CFR 63.4530 Recordkeeping. We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(b)(2)(i) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(i) describes the recordkeeping requirements during startup and shutdown. These recording provisions are no longer necessary because the EPA is proposing that recordkeeping and reporting applicable to normal operations will apply to startup and shutdown. In the absence of special provisions applicable to startup and shutdown, such as a startup and shutdown plan, there is no reason to retain additional recordkeeping for startup and shutdown periods.

We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(b)(2)(ii) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(b)(2)(ii) describes the recordkeeping requirements during a malfunction, requiring a record of ''the occurrence and duration of each malfunction.'' A similar record is already required in 40 CFR 63.4530(h), which requires a record of ''the date, time, and duration of each deviation,'' which the EPA is retaining. The regulatory text in 40 CFR 63.4530(h) differs from the General Provisions in that the General Provisions requires the creation and retention of a record of the occurrence and duration of each malfunction of process, air pollution control, and monitoring equipment; whereas 40 CFR 63.4530(h) applies to any failure to meet an applicable standard and is requiring that the source record the date, time, and duration of the failure rather than the ''occurrence.'' The EPA is also proposing to add to 40 CFR 63.4530(h) a requirement that sources also keep records that include a list of the affected source or equipment and actions taken to minimize emissions, an estimate of the quantity of each regulated pollutant emitted over the emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions. Examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA proposes to require that sources keep records of this information to ensure that there is adequate information to allow the EPA to determine the severity of any failure to meet a standard, and to provide data that may document how the source met the general duty to minimize emissions when the source has failed to meet an applicable standard.

We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(b)(2)(iv) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events when actions were inconsistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required. The requirement previously applicable under 40 CFR 63.10(b)(2)(iv)(B) to record actions to minimize emissions and record corrective actions is now applicable by reference to 40 CFR 63.4530(h)(4).

We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(b)(2)(v) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events to show that actions taken were consistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required.

We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(b)(2)(x)–(xiii) by changing the ''yes'' in column 3 to a ''no.'' When applicable, the provision requires sources to record actions taken during SSM events to show that actions taken were consistent with their SSM plan. The requirement is no longer appropriate because SSM plans will no longer be required.

40 *CFR 63.4520 Reporting.* We are proposing to revise the General Provisions table to subpart PPPP (Table 2) entry for 40 CFR 63.10(d)(5) by changing the ''yes'' in column 3 to a ''no.'' Section 63.10(d)(5) describes the reporting requirements for startups, shutdowns, and malfunctions. To replace the General Provisions reporting requirement, the EPA is proposing to add reporting requirements to 40 CFR 63.4520(a)(7). The replacement language differs from the General Provisions requirement in that it eliminates periodic SSM reports as a stand-alone report. We are proposing language that requires sources that fail to meet an applicable standard at any time to report the information concerning such events in the semi-annual compliance report already required under this rule. Subpart PPPP of 40 CFR part 63 currently requires reporting of the date, time period, and cause of each deviation. We are clarifying in the rule that, if the cause of a deviation from a standard is unknown, this should be specified in the report. We are also proposing to change ''date and time period'' or ''date and time'' to ''date, time, and duration'' (*see* proposed revisions to 40 CFR 63.4520(a)(7)(vi), 63.4520(a)(7)(viii), and 63.4520(a)(7)(xiii)). Further, we are proposing that the report must also contain the number of deviations from the standard and a list of the affected sources or equipment. For deviation reports addressing deviations from an applicable emission limit in 40 CFR 63.4490 or operating limit in Table 1 to 40 CFR part 63, subpart PPPP, we are proposing that the report also include an estimate of the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions.

Regarding the proposed new requirement discussed above to estimate the quantity of each regulated pollutant emitted over any emission limit for which the source failed to meet the standard, and a description of the method used to estimate the emissions, examples of such methods would include product-loss calculations, mass balance calculations, measurements when available, or engineering judgment based on known process parameters (*e.g.,* coating HAP content and application rates and control device efficiencies). The EPA is proposing this requirement to ensure that there is adequate information to determine compliance, to allow the EPA to determine the severity of the failure to meet an applicable standard, and to provide data that may document how the source met the general duty to minimize emissions during a failure to meet an applicable standard.

We will no longer require owners or operators to determine whether actions taken to correct a malfunction are consistent with an SSM plan, because plans would no longer be required. The proposed amendments, therefore, eliminate 40 CFR 63.4520(c) that requires reporting of whether the source deviated from its SSM plan, including required actions to communicate with the Administrator, and the cross-reference to 40 CFR 63.10(d)(5) that contains the description of the previously required SSM report format and submittal schedule from this section. These specifications are no longer necessary because the events will be reported in otherwise required reports with similar format and submittal requirements.

We are proposing to remove the requirements in 40 CFR 63.4520(a)(7)(viii) that deviation reports must specify whether a deviation from an operating limit occurred during a period of SSM. We are also proposing to remove the requirements in 40 CFR 63.4520(a)(7)(viii) to break down the total duration of deviations into the startup and shutdown categories. As discussed above in this section, we are proposing to require reporting of the cause of each deviation. Further, the startup and shutdown categories no longer apply because these periods are proposed to be considered normal operation, as discussed in section IV.A.4.b.1 of this preamble for the ALDT source category, which also applies to this source category.

c. Technical Amendments to the Plastic Parts and Products NESHAP

We propose to amend 40 CFR 63.4566(b)(4) to add the option of conducting EPA Method 18 of appendix A to 40 CFR part 60, ''Measurement of Gaseous Organic Compound Emissions by Gas Chromatography,'' to measure and then subtract methane emissions from measured total gaseous organic mass emissions as carbon. Facilities using the emission rate with add-on control compliance option can use either EPA Method 25 or EPA Method 25A to measure control device destruction efficiency. Unlike EPA Method 25, EPA Method 25A does not exclude methane from the measurement of organic emissions. Because exhaust streams from coating operations may contain methane from natural gas combustion, we are proposing to allow facilities the option to measure methane using EPA Method 18 and to subtract the methane from the emissions as part of their compliance calculations. We also propose to revise the format of references to test methods in 40 CFR part 60. The current references in 40 CFR 63.4566(a) to EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 3, 3A, 3B, 4, 25, and 25A specify that each method is in ''appendix A'' of 40 CFR part 60. Appendix A of 40 CFR part 60 has been divided into appendices A–1 through A–8. We propose to revise each reference to appendix A to indicate which of the eight sections of appendix A applies to the method.

We propose to amend 40 CFR 63.4541(a)(1)(i) and 63.4541(a)(4), which describe how to demonstrate compliance with the emission limitations using the compliant material option, and the definition of ''non-HAP coating'' in 40 CFR 63.4581, to remove references to OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4). The reference to OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4) is intended to specify which compounds must be included in calculating total organic HAP content of a coating material if they are present at 0.1 percent or greater by mass. We propose to remove this reference because 29 CFR 1910.1200(d)(4) has been amended and no longer readily defines which compounds are carcinogens. We propose to replace these references to OSHA-defined carcinogens at 29 CFR 1910.1200(d)(4) with a list (in proposed new Table 5 to 40 CFR part 63, subpart PPPP) of those organic HAP that must be included in calculating total organic HAP content of a coating material if they are present at 0.1-percent or greater by mass.

We propose to include organic HAP in proposed Table 5 to 40 CFR part 63, subpart PPPP if they were categorized in the EPA's *Prioritized Chronic Dose-Response Values for Screening Risk Assessments* (dated May 9, 2014), as a ''human carcinogen,'' ''probable human carcinogen,'' or ''possible human carcinogen'' according to *The Risk Assessment Guidelines of 1986* (EPA/600/8–87/045, August 1987),[40] or as ''carcinogenic to humans,'' ''likely to be carcinogenic to humans,'' or with ''suggestive evidence of carcinogenic potential'' according to the *Guidelines for Carcinogen Risk Assessment* (EPA/630/P–03/001F, March 2005).

Current 40 CFR 63.4530 specifies records that must be maintained. We propose to add clarification to this provision at 40 CFR 63.4530(a) that specifies the allowance to retain electronic records applies to all records that were submitted as reports electronically via the EPA's CEDRI. We also propose to add text to the same provision clarifying that this ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

We propose to clarify and harmonize the general requirement in 40 CFR 63.4500(b) with the reporting requirement in 40 CFR 63.4520(a)(5), 63.4520(a)(6), and 63.4520(a)(7), and the recordkeeping requirement in 40 CFR 63.4530(h)(4).

d. Ongoing Emissions Compliance Demonstrations

As part of an ongoing effort to improve compliance with various federal air emission regulations, the EPA reviewed the compliance demonstration requirements in the PPP NESHAP. Currently, if a source owner or operator chooses to comply with the standards using add-on controls, the results of an initial performance test are used to determine compliance; however, the rule does not require on-going periodic performance testing for these emission capture systems and add-on controls. In this action, we are proposing to require periodic testing of add-on control devices, in addition to the one-time initial emissions and capture efficiency testing, and ongoing temperature measurement, to ensure ongoing compliance with the standards.

As described more fully in section IV.A.4.d of this preamble for the ALDT source category, the EPA documented potential operational problems associated with control devices in several publications;[41] the ICAC, in their comments on a separate rulemaking on the proposed revisions related to the NESHAP General Provisions (72 FR 69, January 3, 2007), commented that ongoing maintenance and checks of control devices are necessary in order to ensure emissions control technology, including both thermal and catalytic oxidizers, remains effective;[42] and state websites list CAA enforcement information that further corroborates the potential problems identified by the EPA and ICAC comments and conclusions.

Given the need for vigilance in maintaining equipment to stem degradation, the EPA is proposing to require periodic testing of add-on control devices, in addition to the one-time initial emissions and capture efficiency testing and ongoing temperature measurement, to ensure ongoing compliance with the PPP NESHAP.

In this action, the EPA is requiring periodic performance testing of add-on control devices on a regular frequency (*e.g.,* every 5 years) to ensure the equipment continues to operate properly for facilities using the emission rate with add-on controls compliance option. We note that about half of the state operating permits for existing plastic parts coating sources already require such testing every 5 years synchronized with 40 CFR part 70 air operating permit renewals. This proposed periodic testing requirement includes an exception to the general requirement for periodic testing for facilities using the catalytic oxidizer control option at 40 CFR 63.4567(b) and following the catalyst maintenance procedures in 40 CFR 63.4567(b)(4). This exception is due to the catalyst maintenance procedures that already require annual testing of the catalyst and other maintenance procedures that provide ongoing demonstrations that the control system is operating properly and may, thus, be considered comparable to conducting a performance test.

The proposed periodic performance testing requirement allows an exception from periodic testing for facilities using instruments to continuously measure emissions. Such CEMS would show actual emissions. The use of CEMS to demonstrate compliance would obviate the need for periodic oxidizer testing. Moreover, installation and operation of a CEMS with a timesharing component, such that values from more than one oxidizer exhaust could be tabulated in a recurring frequency, could prove less expensive (estimated to have an annual cost below $15,000) than ongoing oxidizer testing.

This proposed requirement would not require periodic testing or CEMS monitoring of facilities using the compliant material or the emission rate without add-on controls options because these compliance options do not use any add-on controls or control efficiency measurements in the compliance calculations.

The proposed periodic performance testing requirement would require that facilities complying with the standards using emission capture systems and

These documents can be found in the Automobiles and Light-Duty Trucks, Miscellaneous Metal Parts, and Plastic Parts and Products Dockets for this action.

[42] *See* Docket Item No. EPA–HQ–OAR–2004–0094–0173, available at *www.regulations.gov.* A copy of the ICAC's comments on the proposed revisions to the General Provisions is also included in the Automobiles and Light-Duty Trucks, Miscellaneous Metal Parts, and Plastic Parts and Products Dockets for this action.

add-on controls and which are not already on a 5-year testing schedule to conduct the first of the periodic performance tests within 3 years of the effective date of the revised standards. Afterward, they would conduct the periodic testing before they renew their operating permits, but no longer than 5 years following the previous performance test. Additionally, facilities that have already tested as a condition of their permit within the last 2 years before the effective date would be permitted to maintain their current 5-year schedule and not be required to move up the date of the next test to the 3-year date specified above. This proposed requirement would require periodic air emissions testing to measure organic HAP destruction or removal efficiency at the inlet and outlet of the add-on control device. The emissions would be measured as total gaseous organic mass emissions as carbon using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60, which are the methods currently required for the initial compliance demonstration.

We estimate that the cost to perform a control device emissions destruction or removal efficiency test using EPA Method 25 or 25A would be approximately $19,000 per control device. The cost estimate is included in the memorandum titled *Draft Costs/Impacts of the 40 CFR part 63 Subparts IIII, MMMM and PPPP Monitoring Review Revisions,* in the ALDT, MMPP, and PPP Dockets. We have reviewed the operating permits for facilities subject to the several other surface coating NESHAP, and we found that affected sources currently using emission capture systems and add-on controls are often, but not always, required to conduct periodic control device performance tests as a condition of their 40 CFR part 70 operating permits. We estimate that three PPP surface coating facilities currently are not required to conduct periodic testing of their control devices as a condition of their permit renewal. Periodic performance tests ensure that all control systems used to comply with the NESHAP would be properly maintained over time, thereby reducing the potential for acute emissions episodes and non-compliance.

We are requesting comment on adding periodic testing of add-on control devices to the PPP NESHAP and on the suggested 5-year schedule for the periodic testing.

e. IBR of Alternative Test Methods Under 1 CFR Part 51

The EPA is proposing new and updated test methods for the PPP NESHAP that include IBR. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to add the following optional EPA method and incorporate by reference the VCS described in the amendments to 40 CFR 63.14:

- EPA Method 18 of appendix A to 40 CFR part 60, Measurement of Gaseous Organic Compound Emissions by Gas Chromatography, proposed for 40 CFR 63.4566(b)(4);
- ASTM Method D1475–13, Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, proposed to be IBR approved for 40 CFR 63.4551(c);
- ASTM Method D2111–10 (2015), Standard Test Methods for Specific Gravity of Halogenated Organic Solvents and Their Admixtures, proposed to be IBR approved for 40 CFR 63.4551(c); and
- ASTM Method D2369–10 (2015), Test Method for Volatile Content of Coatings, proposed to be IBR approved for 40 CFR 63.4541(a)(2) and 634561(j)(3).

An older version of ASTM Method D1475 was incorporated by reference when the PPP NESHAP was originally promulgated (69 FR 20968, April 19, 2004). We are proposing to replace the older version of this method with an updated version, which requires IBR revisions. The updated version of the method replaces the older version in the same paragraph of the rule text. We are also proposing the addition of EPA Method 18 and incorporating by reference ASTM Methods D2111 and D2369 to the PPP NESHAP for the first time in this rulemaking. Refer to section VIII.J of this preamble for further discussion of these VCS.

5. What compliance dates are we proposing?

The EPA is proposing that affected sources must comply with all of the amendments, with the exception of the proposed electronic format for submitting semiannual compliance reports, no later than 181 days after the effective date of the final rule. All affected facilities would have to continue to meet the current requirements of 40 CFR part 63, subpart PPPP until the applicable compliance date of the amended rule. The final action is not expected to be a ''major rule'' as defined by 5 U.S.C. 804(2), so the effective date of the final rule will be the promulgation date as specified in CAA section 112(d)(10).

For existing sources, we are proposing two changes that would impact ongoing compliance requirements for 40 CFR part 63, subpart PPPP. As discussed elsewhere in this preamble, we are proposing to add a requirement that notifications, performance test results, and semiannual compliance reports be submitted electronically. We are proposing that the semiannual compliance report be submitted electronically using a new template, which is available for review and comment as part of this action. We are also proposing to change the requirements for SSM by removing the exemption from the requirements to meet the standard during SSM periods and by removing the requirement to develop and implement an SSM plan. Our experience with similar industries that are required to convert reporting mechanisms to install necessary hardware and software, become familiar with the process of submitting performance test results electronically through the EPA's CEDRI, test these new electronic submission capabilities, and reliably employ electronic reporting shows that a time period of a minimum of 90 days, and, more typically, 180 days is generally necessary to successfully accomplish these revisions. Our experience with similar industries further shows that this sort of regulated facility generally requires a time period of 180 days to read and understand the amended rule requirements; to evaluate their operations to ensure that they can meet the standards during periods of startup and shutdown as defined in the rule and make any necessary adjustments; and to update their operation, maintenance, and monitoring plan to reflect the revised requirements. The EPA recognizes the confusion that multiple different compliance dates for individual requirements would create and the additional burden such an assortment of dates would impose. From our assessment of the time frame needed for compliance with the entirety of the revised requirements, the EPA considers a period of 180 days to be the most expeditious compliance period practicable and, thus, is proposing that existing affected sources be in compliance with all of this regulation's revised requirements within 181 days of the regulation's effective date.

We solicit comment on these proposed compliance periods, and we specifically request submission of information from sources in this source category regarding specific actions that would need to be undertaken to comply with the proposed amended requirements and the time needed to make the adjustments for compliance with any of the revised requirements. We note that information provided may result in changes to the proposed compliance dates.

D. Proposed Corrections to Earlier Subparts

We are proposing the following corrections to three subparts that were amended in a final rule notice published in the **Federal Register** on March 15, 2019 (84 FR 9590). The proposed corrections are to the NESHAP for Surface Coating of Large Appliances (40 CFR part 63, subpart NNNN); the NESHAP for Printing, Coating, and Dyeing of Fabrics and Other Textiles (40 CFR part 63, subpart OOOO); and the NESHAP for Surface Coating of Metal Furniture (40 CFR part 63, subpart RRRR). Note that these proposed corrections are not published in the amendatory rule text in the **Federal Register** (*see* 84 FR 9590) and are discussed below.

We are proposing to correct 40 CFR 63.4168 of subpart NNNN. The original instructions to 40 CFR 63.4168 in the final rule were, ''Section 63.4168 is amended by revising paragraphs (a)(4) and (5) and (c)(2) and (3) to read as follows . . .'' (84 FR 9618). The instructions should have said, ''Section 63.4168 is amended by revising paragraphs (a)(4) and (5) and (c)(2) and *the introductory text of* (c)(3) to read as follows . . .'' As a result, the subparagraphs 40 CFR 63.4168(c)(3)(i) through (iii), which were not intended to be affected by this action, were deleted in the CFR. We are proposing to insert these paragraphs back into the CFR. Please submit any comments on this proposed correction to the docket for the Surface Coating of Large Appliances (Docket ID No. EPA–HQ–OAR–2017–0670).

We are proposing to correct 40 CFR 63.4371 of subpart OOOO. The instructions in the final rule were to revise the definition of ''Deviation,'' but the amendatory text contained revised definitions of ''Deviation'' and ''No organic HAP.'' The current definition of ''No organic HAP'' in the CFR contains a reference that is no longer accurate. The instruction to revise the definition of ''No organic HAP'' was inadvertently deleted; and, the new definition was not inserted. We are proposing to insert this new definition as indicated in the amendatory language in the final rule (84 FR 9631, March 15, 2019). Please submit any comments on this proposed correction to the docket for the Printing, Coating, and Dyeing of Fabrics and Other Textiles (Docket ID No. EPA–HQ–OAR–2017–0668).

We are proposing to correct 40 CFR 63.4965 of subpart RRRR. The original instructions to 40 CFR 63.4965 in the final rule were, ''Section 63.4965 is amended by revising paragraphs (a)(1) through (4) and paragraph (b) to read as follows . . .'' (84 FR 9641). The instructions should have said, ''Section 63.4965 is amended by revising paragraphs (a)(1) through (4) and *the introductory text of* paragraph (b) to read as follows . . .'' As a result, the subparagraphs 40 CFR 63.4965(b)(1) through (3), which were not intended to be affected by this action, were deleted in the CFR. We are proposing to insert these paragraphs back into the CFR. Please submit any comments on this proposed correction to the docket for the Surface Coating of Metal Furniture (Docket ID No. EPA–HQ–OAR–2017–0669).

V. Summary of Cost, Environmental, and Economic Impacts

A. What are the affected sources?

Currently, we estimate 43 major source facilities are subject to the ALDT NESHAP and operating in the United States. The affected source under the NESHAP is the collection of all coating operations; all storage containers and mixing vessels in which coatings, thinners, and cleaning materials are stored or mixed; all manual and automated equipment and containers used for conveying coatings, thinners, and cleaning materials; and all storage containers and all manual and automated equipment and containers used for conveying waste materials generated by a coating operation. A coating operation is defined as the equipment used to apply coating to a substrate (coating application) and to dry or cure the coating after application. A single coating operation always includes at least the point at which a coating is applied and all subsequent points in the affected source where organic HAP emissions from that coating occur. There may be multiple coating operations in an affected source. Coating application with hand-held nonrefillable aerosol containers, touchup bottles, touchup markers, marking pens, or pinstriping equipment is not a coating operation for the purposes of this subpart. The application of temporary materials such as protective oils and ''travel waxes'' that are designed to be removed from the vehicle before it is delivered to a retail purchaser is not a coating operation for the purposes of 40 CFR part 63, subpart IIII.

Currently, we estimate 368 major source facilities are subject to the MMPP NESHAP and operating in the United States. The affected source under the NESHAP is the collection of all coating operations; all storage containers and mixing vessels in which coatings, thinners, and cleaning materials are stored or mixed; all manual and automated equipment and containers used for conveying coatings, thinners, and cleaning materials; and all storage containers and all manual and automated equipment and containers used for conveying waste materials generated by a coating operation. A coating operation is defined as the equipment used to apply cleaning materials to a substrate to prepare it for coating application (surface preparation) or to remove dried coating; to apply coating to a substrate (coating application) and to dry or cure the coating after application; or to clean coating operation equipment (equipment cleaning). A single coating operation may include any combination of these types of equipment, but always includes at least the point at which a given quantity of coating or cleaning material is applied to a given part and all subsequent points in the affected source where organic HAP are emitted from the specific quantity of coating or cleaning material on the specific part. There may be multiple coating operations in an affected source. Coating application with handheld, non-refillable aerosol containers, touch-up markers, or marking pens is not a coating operation for the purposes of 40 CFR part 63, subpart MMMM.

Currently, we estimate 125 major source facilities are subject to the PPP NESHAP and operating in the United States. The affected source under the NESHAP is the collection of coating operations; all storage containers and mixing vessels in which coatings, thinners, and cleaning materials are stored or mixed; all manual and automated equipment and containers used for conveying coatings, thinners, and cleaning materials; and all storage containers and all manual and automated equipment and containers used for conveying waste materials generated by a coating operation. A coating operation is defined as the equipment used to apply cleaning materials to a substrate to prepare it for coating application (surface preparation) or to remove dried coating; to apply coating to a substrate (coating application) and to dry or cure the coating after application; or to clean coating operation equipment (equipment cleaning). A single coating operation may include any combination of these types of equipment, but always includes at least the point at which a given quantity of coating or cleaning material is applied to a given part and all subsequent points in the affected source where organic HAP are emitted from the specific quantity of coating or cleaning material on the specific part. There may be multiple coating operations in an affected source. Coating application with handheld, non-refillable aerosol containers, touch-up markers, or marking pens is not a coating operation for the purposes of 40 CFR part 63, subpart PPPP.

B. What are the air quality impacts?

At the current level of control, estimated emissions of volatile organic HAP from the 43 facilities in the ALDT source category are approximately 1,700 tpy. Current estimated emissions of volatile organic HAP from the 368 facilities in the MMPP source category are approximately 2,700 tpy. Current estimated emissions of volatile organic HAP from the 125 facilities in the PPP source category are approximately 760 tpy.

The proposed amendments require that all major sources in the ALDT, MMPP, and PPP source categories comply with the relevant emission standards at all times, including periods of SSM. We were unable to quantify the emissions that occur during periods of SSM or the specific emissions reductions that would occur as a result of this action. However, eliminating the SSM exemption has the potential to reduce emissions by requiring facilities to meet the applicable standard during SSM periods.

Indirect or secondary air emissions impacts are impacts that would result from the increased electricity usage associated with the operation of control devices (*e.g.,* increased secondary emissions of criteria pollutants from power plants). Energy impacts consist of the electricity and steam needed to operate control devices and other equipment. The proposed amendments would have no effect on the energy needs of the affected facilities in any of the three source categories and would, therefore, have no indirect or secondary air emissions impacts.

C. What are the cost impacts?

We estimate that each facility in these three source categories will experience costs as a result of these proposed amendments that are estimated as part of the reporting and recordkeeping costs. Each facility will experience costs to read and understand the rule amendments. Costs associated with elimination of the SSM exemption were estimated as part of the reporting and recordkeeping costs and include time for re-evaluating previously developed SSM record systems. Costs associated with the requirement to electronically submit notifications and semi-annual compliance reports using CEDRI were estimated as part of the reporting and recordkeeping costs and include time for becoming familiar with CEDRI and the reporting template for semi-annual compliance reports. The recordkeeping and reporting costs are presented in section V.III.C of this preamble.

We are also proposing a requirement for performance testing no less frequently than every 5 years for sources in each source category using the add-on controls compliance options. We estimate that five major source facilities subject to the ALDT NESHAP would incur costs to conduct periodic testing because they are currently using the emission rate with add-on controls compliance option. This total does not include facilities in the source category that have add-on controls and are currently required to perform periodic performance testing as a condition of their state operating permit. The cost for a facility to conduct a destruction or removal efficiency performance test using EPA Method 25 or 25A is estimated to be about $19,000, and the total cost for all five facilities subject to the ALDT NESHAP in a single year would be $95,000. Similarly, we estimate that seven major source facilities subject to the MMPP NESHAP would incur costs to conduct periodic testing because they are currently using the emission rate with add-on controls compliance option, at a total cost in a single year of $133,000. Finally, we estimate that three major source facilities subject to the PPP NESHAP, at a cost in a single year of $57,000. For further information on the potential costs, *see* the memorandum titled *Draft Costs/Impacts of the 40 CFR Part 63 Subparts IIII, MMMM, and PPPP Monitoring Review Revisions,* June 2019, in the ALDT, MMPP, and PPP Dockets.

D. What are the economic impacts?

The economic impact analysis is designed to inform decision makers about the potential economic consequences of a regulatory action. For the current proposals, the EPA estimated the cost of becoming familiar with the rule and re-evaluating previously developed SSM record systems and performing periodic emissions testing at certain facilities with add-on controls that are not already required to perform testing. To assess the maximum potential impact, the largest cost expected to be experienced in any one year is compared to the total sales for the ultimate owner of the affected facilities to estimate the total burden for each facility.

For the proposed revisions to the ALDT NESHAP, the total cost is estimated to be approximately $110,000 for the 43 affected entities in the first year of the rule, and an additional $120,000 in testing and reporting costs for five facilities in the third year of the rule and every 5 years thereafter. The 43 affected facilities are owned by 14 different parent companies, and the total costs associated with the proposed requirements range from 0.000002 to 0.0056 percent of annual sales revenue per ultimate owner. These costs are not expected to result in a significant market impact, regardless of whether they are passed on to the purchaser or absorbed by the firms.

For the proposed revisions to the MMPP NESHAP, the total cost is estimated to be approximately $960,000 for the 368 affected entities in the first year of the rule, and an additional $170,000 in testing and reporting costs for seven facilities in the third year of the rule and every 5 years thereafter. The 368 affected facilities are owned by 265 different parent companies, and the total costs associated with the proposed requirements range from 0.000002 to 0.25 percent of annual sales revenue per ultimate owner. These costs are not expected to result in a significant market impact, regardless of whether they are passed on to the purchaser or absorbed by the firms.

For the proposed revisions to the PPP NESHAP, the total cost is estimated to be approximately $330,000 for the 125 affected entities in the first year of the rule, and an additional $74,000 in testing and reporting costs for three facilities in the third year of the rule and every 5 years thereafter. The 125 affected facilities are owned by 94 different parent companies, and the total costs associated with the proposed requirements range from 0.000008 to 0.22 percent of annual sales revenue per ultimate owner. These costs are not expected to result in a significant market impact, regardless of whether they are passed on to the purchaser or absorbed by the firms.

The EPA also prepared a small business screening assessment to determine whether any of the identified affected entities are small entities, as defined by the U.S. Small Business Administration. One of the facilities potentially affected by the proposed revisions to the ALDT NESHAP is a small entity. However, the annualized costs associated with the proposed requirement is 0.0056 percent of annual sales revenue for the owner of that facility. Of the facilities potentially affected by the proposed revisions to the MMPP NESHAP, 110 are small entities. However, the annualized costs associated with the proposed requirements for the 103 ultimate owners of these 110 affected small entities range from 0.001 to 0.25 percent of annual sales revenues per ultimate owner. Of the facilities potentially affected by the proposed revisions to the PPP NESHAP, 35 are small entities. However, the annualized costs associated with the proposed requirements for the 35 ultimate owners of these 35 affected small entities range from 0.0009 to 0.22 percent of annual sales revenues per ultimate owner. Therefore, there are no significant economic impacts on a substantial number of small entities from these proposed amendments.

E. What are the benefits?

As stated above in section V.B. of this preamble, we were unable to quantify the specific emissions reductions associated with eliminating the SSM exemption, although this proposed change has the potential to reduce emissions of volatile organic HAP.

Because these proposed amendments are not considered economically significant, as defined by Executive Order 12866, we did not monetize the benefits of reducing these emissions. This does not mean that there are no benefits associated with the potential reduction in volatile organic HAP from this rule.

VI. Request for Comments

We solicit comments on this proposed action. In addition to general comments on this proposed action, we are also interested in additional data that may improve the risk assessments and other analyses. We are specifically interested in receiving any improvements to the data used in the site-specific emissions profiles used for risk modeling. Such data should include supporting documentation in sufficient detail to allow characterization of the quality and representativeness of the data or information. Section VII of this preamble provides more information on submitting data.

VII. Submitting Data Corrections

The site-specific emissions profiles used in the source category risk and demographic analyses and instructions are available for download on the RTR website at *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-automobiles-and-light-duty-trucks-national-emission,* for the ALDT NESHAP; *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-miscellaneous-metal-parts-and-products-national* for the MMPP NESHAP; and *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-plastic-parts-and-products-national-emission* for the PPP NESHAP. The data files include detailed information for each HAP emissions release point for the facilities in these source categories.

If you believe that the data are not representative or are inaccurate, please identify the data in question, provide your reason for concern, and provide any ''improved'' data that you have, if available. When you submit data, you must provide documentation of the basis for the revised values to support your suggested changes. To submit comments on the data downloaded from the RTR website, complete the following steps:

1. Within this downloaded file, enter suggested revisions to the data fields appropriate for that information.

2. Fill in the commenter information fields for each suggested revision (*i.e.,* commenter name, commenter organization, commenter email address, commenter phone number, and revision comments).

3. Gather documentation for any suggested emissions revisions (*e.g.,* performance test reports, material balance calculations).

4. Send the entire downloaded file with suggested revisions in Microsoft® Access format and all accompanying documentation to the ALDT, MMPP, or PPP Docket, as applicable (through the method described in the **ADDRESSES** section of this preamble).

5. If you are providing comments on a single facility or multiple facilities, you need only submit one file for all facilities. The file should contain all suggested changes for all sources at that facility (or facilities). We request that all data revision comments be submitted in the form of updated Microsoft® Excel files that are generated by the Microsoft® Access file. These files are provided on the RTR website at *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-automobiles-and-light-duty-trucks-national-emission,* for the ALDT NESHAP; *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-miscellaneous-metal-parts-and-products-national* for the MMPP NESHAP; and *https://www.epa.gov/stationary-sources-air-pollution/surface-coating-plastic-parts-and-products-national-emission* for the PPP NESHAP.

VIII. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was, therefore, not submitted to OMB for review.

B. Executive Order 13771: Reducing Regulations and Controlling Regulatory Costs

This action is not expected to be an Executive Order 13771 regulatory action because this action is not significant under Executive Order 12866.

C. Paperwork Reduction Act (PRA)

The information collection activities in this proposal have been submitted for approval to OMB under the PRA, as discussed for each source category covered by this proposal in sections VIII.C.1 through 3.

1. Surface Coating of Automobiles and Light-Duty Trucks

The Information Collection Request (ICR) document that the EPA prepared has been assigned EPA ICR number 2045.07. You can find a copy of the ICR in the ALDT Docket (Docket ID No. EPA–HQ–OAR–2019–0314), and it is briefly summarized here.

As part of the RTR for the ALDT NESHAP, the EPA is not proposing to revise the emission limit requirements. The EPA is proposing to revise the SSM provisions of the rule and proposing the use of electronic data reporting for future performance test data submittals, notifications, and reports. This information is being collected to assure compliance with 40 CFR part 63, subpart IIII.

Respondents/affected entities: Facilities performing surface coating of automobiles and light-duty trucks.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart IIII).

Estimated number of respondents: In the 3 years after the amendments are final, approximately 43 respondents per year would be subject to the NESHAP and no additional respondents are expected to become subject to the NESHAP during that period.

Frequency of response: The total number of responses in year 1 is 129 and in year 3 is 15. Year 2 would have no responses.

Total estimated burden: The average annual burden to the ALDT surface coating facilities over the 3 years if the amendments are finalized is estimated to be 410 hours (per year). The average annual burden to the Agency over the 3 years after the amendments are final is estimated to be 19 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: The average annual cost to the ALDT surface coating facilities is $47,000 in labor costs and in the first 3 years after the amendments are final. The average annual capital and operation and maintenance (O&M) costs is $32,000. The total average annual Agency cost over the first 3 years after the amendments are final is estimated to be $910.

2. Surface Coating of Miscellaneous Metal Parts and Products

The ICR document that the EPA prepared has been assigned EPA ICR number 2056.07. You can find a copy of the ICR in the MMPP Docket (Docket ID No. EPA–HQ–OAR–2019–0312), and it is briefly summarized here.

As part of the RTR for the MMPP NESHAP, the EPA is not proposing to revise the emission limit requirements. The EPA is proposing to revise the SSM provisions of the rule and proposing the use of electronic data reporting for future performance test data submittals, notifications, and reports. This information is being collected to assure compliance with 40 CFR part 63, subpart MMMM.

Respondents/affected entities: Facilities performing surface coating of miscellaneous metal parts and products.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart MMMM).

Estimated number of respondents: In the 3 years after the amendments are final, approximately 368 respondents per year will be subject to the NESHAP and no additional respondents are expected to become subject to the NESHAP during that period.

Frequency of response: The total number of responses in year 1 is 1,104 and in year 3 is 14. Year 2 would have no responses.

Total estimated burden: The average annual burden to the MMPP surface coating facilities over the 3 years if the amendments are finalized is estimated to be 2,934 hours (per year). The average annual burden to the Agency over the 3 years after the amendments are final is estimated to be 27 hours (per year) for the Agency. Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: The average annual cost to the MMPP surface coating facilities is $334,000 in labor costs in the first 3 years after the amendments are final. The average annual capital and O&M cost is $44,000. The average annual Agency cost over the first 3 years after the amendments are final is estimated to be $1,300.

3. Surface Coating of Plastic Parts and Products

The ICR document that the EPA prepared has been assigned EPA ICR number 2044.07. You can find a copy of the ICR in the PPP Docket (Docket ID No. EPA–HQ–OAR–2019–0313), and it is briefly summarized here.

As part of the RTR for the PPP NESHAP, the EPA is not proposing to revise the emission limit requirements. The EPA is proposing to revise the SSM provisions of the rule and proposing the use of electronic data reporting for future performance test data submittals, notifications, and reports. This information is being collected to assure compliance with 40 CFR part 63, subpart PPPP.

Respondents/affected entities: Facilities performing surface coating of plastic parts and products.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart PPPP).

Estimated number of respondents: In the 3 years after the amendments are final, approximately 125 respondents per year will be subject to the NESHAP and no additional respondents are expected to become subject to the NESHAP during that period.

Frequency of response: The total number of responses in year 1 is 375 and in year 3 is 9. Year 2 would have no responses.

Total estimated burden: The average annual burden to the PPP surface coating facilities over the 3 years if the amendments are finalized is estimated to be 1,007 hours (per year). The average annual burden to the Agency over the 3 years after the amendments are final is estimated to be 18 hours (per year) for the Agency. Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: The average annual cost to the PPP surface coating facilities is $115,000 in labor costs in the first 3 years after the amendments are final. The average annual capital and O&M cost is $19,000. The average annual Agency cost over the first 3 years after the amendments are final is estimated to be $870.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9.

Submit your comments on the Agency's need for this information, the accuracy of the provided burden estimates and any suggested methods for minimizing respondent burden to the EPA using the dockets identified at the beginning of this rule. You may also send your ICR-related comments to OMB's Office of Information and Regulatory Affairs via email to *OIRA_submission@omb.eop.gov,* Attention: Desk Officer for the EPA. Since OMB is required to make a decision concerning the ICR between 30 and 60 days after receipt, OMB must receive comments no later than December 2, 2019. The EPA will respond to any ICR-related comments in the final rule.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. The economic impact associated with the proposed requirements in this action for the affected small entities is described in section V.D. above.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local, or tribal governments or the private sector.

F. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. No tribal facilities are known to be engaged in any of the industries that would be affected by this action (ALDT surface coating, MMPP surface coating, and PPP surface coating). Thus, Executive Order 13175 does not apply to this action.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 because it is not economically significant as defined in Executive Order 12866, and because the EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. This action's health and risk assessments are contained in sections III.A and C, IV.A.1 and 2, IV.B.1 and 2, and IV.C.1 and 2 of this preamble and are further documented in the *Automobiles and Light-Duty Trucks Risk Assessment Report,* in the ALDT Docket, *Miscellaneous Metal Parts and Products Risk Assessment Report,* in the MMPP Docket and the *Plastic Parts and Products Risk Assessment Report,* in the PPP Docket.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51

This rulemaking involves technical standards. We are proposing to amend the ALDT NESHAP, the MMPP NESHAP, and the PPP NESHAP in this action to provide owners and operators with the option of using two new methods. We are proposing to add EPA Method 18 of appendix A to 40 CFR part 60, ''Measurement of Gaseous Organic Compound Emissions by Gas Chromatography'' to measure and subtract methane emissions from measured total gaseous organic mass emissions as carbon. We are also proposing to amend each of these NESHAP to incorporate by reference ASTM Method D2369–10 (2015), ''Test Method for Volatile Content of Coatings'' into these three NESHAP as an alternative to EPA Method 24 for the determination of the volatile matter content in surface coatings. ASTM Method D2369–10 (2015) is a test method that allows for more accurate results for multi-component chemical resistant coatings.

We are proposing to amend the MMPP NESHAP and the PPP NESHAP to incorporate by reference ASTM Method D2111–10 (2015), ''Standard Test Methods for Specific Gravity of Halogenated Organic Solvents and Their Admixtures,'' as an alternative to ASTM Method D1475–13. ASTM Method D2111–10 (2015) is a test method that allows measurement of specific gravity at different temperatures that are chosen by the analyst.

We are proposing to amend all three NESHAP to update ASTM Method D1475–98, ''Standard Test Method for Density of Liquid Coatings, Inks, and Related Products,'' by incorporating by reference ASTM Method D1475–13. This test method covers the measurement of the density of paints, inks, varnishes, lacquers, and components thereof, other than pigments, when in fluid form.

We are proposing to amend the ALDT NESHAP and the MMPP NESHAP to update ASTM Method D2697–86 (1998), ''Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings,'' by incorporating by reference ASTM Method D2697–03 (2014), which is the updated version of the previously approved method, and to update ASTM Method D6093–97 (2003), ''Standard Test Method for Percent Volume Nonvolatile Matter in Clear or Pigmented Coatings Using Helium Gas Pycnometer,'' by incorporating by reference ASTM Method D6093–97 (2016), which is the updated version of the previously approved method. ASTM Method D2697–03 (2014) is a test method that can be used to determine the volume of nonvolatile matter in clear and pigmented coatings and ASTM Method D6093–97 (2016) is a test method that can be used to determine the percent volume of nonvolatile matter in clear and pigmented coatings.

We are proposing to amend the ALDT NESHAP to update ASTM D5066–91, ''Standard Test Method for Determination of the Transfer Efficiency Under Production Conditions for Spray Application of Automotive Paints-Weight Basis,'' by incorporating by reference ASTM D5066–91 (Reapproved 2017). This test method covers procedures for determination of the transfer efficiency (using a weight method) under production conditions for in-plant spray application of automotive paints as outlined in Section 18 of EPA 450/3–88–018.

We are proposing to amend the ALDT NESHAP and the MMPP NESHAP to update ASTM Method D5965, ''Standard Test Methods for Specific Gravity of Coating Powders,'' by incorporating by reference ASTM Method D5965–02 (2013). These test methods cover three procedures for determining the specific gravity (see definition) of coating powders, *i.e.,* Test Method A—For Testing Coating Powders, Excluding Metallics; Test Method B—For Tests Requiring Greater Precision than Test Method A, Including Metallics, Using Helium Pycnometry; and Test Method C—For Theoretical Calculation Based on Raw Material.

We are proposing to amend the ALDT NESHAP to update ASTM D6266–00a, ''Test Method for Determining the Amount of Volatile Organic Compound (VOC) Released from Waterborne Automotive Coatings and Available for Removal in a VOC Control Device (Abatement),'' by incorporating by reference ASTM D6266–00a (Reapproved 2017). This test method describes the determination of the amount of VOC released from applied waterborne automotive coatings that is available for delivery to a VOC control device. The determination is accomplished by measuring the weight loss of a freshly coated test panel subject to evaporation or drying and by analysis of the VOC or water content in the coating.

The ASTM standards are available from the American Society for Testing and Materials (ASTM), 100 Barr Harbor Drive, Post Office Box C700, West Conshohocken, PA 19428–2959. See *http://www.astm.org/.*

The EPA is proposing to amend the ALDT NESHAP to incorporate by reference EPA–450/3–88–018 ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light Duty Truck Topcoat Operations'' for use in §§ 63.3161(f), 63.3165(e). This protocol determines the daily VOC emission rate (pounds of VOC per gallon of coating solids deposited) for a complete automobile and light-duty truck topcoat operation and is available in the ALDT Docket. The protocol is designed for uses in cases where topcoat emission limit is stated in units of pounds of VOC per gallon of solids deposited, compliance is demonstrated each day, and entire topcoat operation is treated as a single entity. The protocol uses the number of square feet coated on each vehicle in each booth with each coating as the basis for the daily weighting of individual transfer efficiency and bake oven exhaust control values. The method is intended to apply to primary coatings for new ALDT bodies, body parts for new ALDT, and other parts that are coated along with these bodies or body parts. It can also be downloaded from EPA's website at the National Service Center for Environmental Publications, just access the following website at *https://nepis.epa.gov* and search either the title or document number. The EPA is not proposing ASTM Method D1963–85 (1996), ''Standard Test Method for Specific Gravity of Drying Oils, Varnishes, Resins, and Related Materials at 25/25 C,'' as an alternative for the determination of the specific gravity because ASTM has withdrawn the method without replacement. The EPA is also not proposing California Air Resources Board Method 310, ''Determination of Volatile Organic

Compounds in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products,'' as an alternative to EPA Method 24 because the EPA has approved the method only for consumer products and aerosol coatings, which do not apply to the rulemakings or source categories addressed in this action.

ASTM D5087–02 was previously approved for incorporation by reference into § 63.3165(e).

Although we identified another 14 VCS for ALDT, MMPP, and PPP as being possible alternatives for methods included in these rules, we are not proposing to add these VCS in these rulemakings. See the memoranda titled *Voluntary Consensus Standard Results for Surface Coating of Automobiles and Light-duty Trucks,* June 2019, *Voluntary Consensus Standard Results for Surface Coating of Miscellaneous Metal Parts and Products,* June 2019, and *Voluntary Consensus Standard Results for Surface Coating of Plastic Parts and Products,* June 2019, in the ALDT Docket, MMPP Docket, and the PPP Docket, respectively, for the reasons for these determinations.

Under 40 CFR 63.7(f) and 40 CFR 63.8(f) of subpart A of the General Provisions, a source may apply to the EPA for permission to use alternative test methods or alternative monitoring requirements in place of any required testing methods, performance specifications, or procedures in the final rule or any amendments.

The EPA welcomes comments on this aspect of the proposed rulemaking and, specifically, invites the public to identify potentially applicable VCS and to explain why such standards should be used in this regulation.

K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action does not have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations, and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994).

The documentation for this decision is contained in sections IV.A.1 and 2, sections IV.B.1 and 2, and IV.C.1 and 2 of this preamble and the technical reports titled *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Automobiles and Light-Duty Trucks Source Category Operations,* March 2019, *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Miscellaneous Metal Parts and Products Source Category Operations,* May 2019, and *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Plastic Parts and Products Source Category Operations,* April 2019, available in the ALDT Docket, MMPP Docket, and the PPP Docket, respectively.

As discussed in sections IV.A.1, IV.B.1, and IV.C.1 of this preamble, we performed a demographic analysis for each source category, which is an assessment of risks to individual demographic groups, of the population close to the facilities (within 50 km and within 5 km). In this analysis, we evaluated the distribution of HAP-related cancer risks and noncancer hazards from the ALDT, MMPP, and PPP source categories across different social, demographic, and economic groups within the populations living near operations identified as having the highest risks.

The results of the ALDT source category demographic analysis indicate that approximately 15,000 people are exposed to a cancer risk at or above 1-in-1 million and no one is exposed to a chronic noncancer HI greater than 1. The overall percent of the population that is minorities is similar nationally (38 percent) and for the category population with cancer risk greater than or equal to 1-in-1 million (40 percent). However, the category population with cancer risk greater than or equal to 1-in-1 million has a greater percent Hispanic population (27 percent) as compared to the national percent Hispanic population (18 percent).

The proximity results (irrespective of risk) indicate that the overall percentage of the population that is minority is higher (48 percent) within 5 km of ALDT facilities than the nationwide percentage (38 percent). This is driven by a higher percentage of ''African American'' (27 percent) within 5 km of facilities in this category than the nationwide percentage (12 percent).

The results of the MMPP source category demographic analysis indicate that approximately 18,000 people are exposed to a cancer risk at or above 1-in-1 million and no one is exposed to a chronic noncancer HI greater than 1. The percentages of the at-risk population in the following specific demographic groups are higher than their respective nationwide percentages: ''White,'' ''Below the Poverty Level,'' and ''Over 25 and Without a High School Diploma.''

The proximity results (irrespective of risk) indicate that the overall percentage of the population that is minority is higher (45 percent) within 5 km of MMPP facilities than the nationwide percentage (38 percent). This is driven by a higher percentage of ''African American'' (18 percent) within 5 km of facilities in this category than the nationwide percentage (12 percent).

The results of the PPP source category demographic analysis indicate that approximately 500 people are exposed to a cancer risk at or above 1-in-1 million and no one is exposed to a chronic noncancer HI greater than 1. The percentages of the at-risk population in the following specific demographic groups are higher than their respective nationwide percentages: ''White'' and ''Below the Poverty Level.''

The proximity results (irrespective of risk) indicate that the population percentages for all demographic categories located within 5 km of PPP facilities are very similar to their respective nationwide percentages.

We do not expect this proposal to achieve significant reductions in HAP emissions. The EPA anticipates that this action does not have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations, and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not significantly affect the level of protection provided to human health or the environment. The documentation for this decision is contained in section IV of this preamble and the technical reports titled *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Automobiles and Light-Duty Trucks Category Operations,* June 2019, *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Miscellaneous Metal Parts and Products Source Category Operations,* June 2019, and *Risk and Technology Review—Analysis of Demographic Factors for Populations Living Near Surface Coating of Plastic Parts and Products Source Category Operations,* June 2019, which are available in the ALDT Docket, MMPP Docket, and the PPP Docket, respectively.

List of Subjects in 40 CFR Part 63

Environmental protection, Air pollution control, Appendix A, Hazardous substances, Incorporation by reference, Reporting and recordkeeping requirements, Surface coating of automobiles and light-duty trucks, Surface coating of miscellaneous metal parts and products, Surface coating of plastic parts and products.

Dated: August 16, 2019.

Andrew R. Wheeler,

Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency proposes to amend part 63 of title 40, chapter I, of the Code of Federal Regulations as follows:

PART 63—NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS FOR SOURCE CATEGORIES

■ 1. The authority citation for part 63 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart A—General Provisions

■ 2. Section 63.14 is amended by:

■ a. Revising paragraphs (h)(12), (13), (21), (26), (29), (30), (66), (76), (78), (79), and (81);

■ b. Redesignating paragraphs (n)(1) through (24) as paragraphs (n)(2) through (25); and

■ c. Adding new paragraph (n)(1).

The revisions and addition read as follows:

§ 63.14 Incorporations by reference

* * * * *

(h) * * *

(12) ASTM D1475–98 (Reapproved 2003), ''Standard Test Method for Density of Liquid Coatings, Inks, and Related Products,'' IBR approved for § 63.4141(b) and (c).

(13) ASTM D1475–13, Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, approved November 1, 2013, IBR approved for §§ 63.3151(b), 63.3941(b) and (c), 63.3951(c), 63.4141(b) and (c), 63.4551(c), 63.4741(b) and (c), 63.4751(c), and 63.4941(b) and (c).

* * * * *

(21) ASTM D2111–10 (Reapproved 2015), Standard Test Methods for Specific Gravity and Density of Halogenated Organic Solvents and Their Admixtures, approved June 1, 2015, IBR approved for §§ 63.3951(c), 63.4141(b) and (c), 63.4551(c), and 63.4741(a).

* * * * *

(26) ASTM D2369–10 (Reapproved 2015)^{e}, Standard Test Method for Volatile Content of Coatings, approved June 1, 2015, IBR approved for §§ 63.3151(a), 63.3961(j), 63.4141(a) and (b), 63.4161(h), 63.4321(e), 63.4341(e), 63.4351(d), 63.4541(a), 63.4561(j), 63.4741(a), 63.4941(a) and (b), and 63.4961(j).

* * * * *

(29) ASTM D2697–86 (Reapproved 1998), Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, IBR approved for §§ 63.3521(b), 63.4141(b), 63.4741(b), 63.4941(b), and 63.5160(c).

(30) ASTM D2697–03 (Reapproved 2014), Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, approved July 1, 2014, IBR approved for §§ 63.3161(f), 63.3941(b), 63.4141(b), 63.4741(a) and (b), and 63.4941(b).

* * * * *

(66) ASTM D5066–91 (Reapproved 2017), Standard Test Method for Determination of the Transfer Efficiency Under Production Conditions for Spray Application of Automotive Paints-Weight Basis, IBR approved for § 63.3161(g).

* * * * *

(76) ASTM D5965–02 (2013), Standard Test Methods for Specific Gravity of Coating Powders, IBR approved for §§ 63.3151(b) and 63.3951(c).

* * * * *

(78) ASTM D6093–97 (Reapproved 2003), Standard Test Method for Percent Volume Nonvolatile Matter in Clear or Pigmented Coatings Using a Helium Gas Pycnometer, IBR approved for §§ 63.3521 and 63.5160(c).

(79) ASTM D6093–97 (Reapproved 2016), Standard Test Method for Percent Volume Nonvolatile Matter in Clear or Pigmented Coatings Using a Helium Gas Pycnometer, Approved December 1, 2016, IBR approved for §§ 63.3161(f), 63.3941(b), 63.4141(b), 63.4741(a) and (b), and 63.4941(b).

* * * * *

(81) ASTM D6266–00a (Reapproved 2017), Test Method for Determining the Amount of Volatile Organic Compound (VOC) Released from Waterborne Automotive Coatings and Available for Removal in a VOC Control Device (Abatement), IBR approved for § 63.3165(e).

* * * * *

(n) * * *

(1) EPA–450/3–88–018, Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations, IBR approved for §§ 63.3161(f) and 63.3165(e)

* * * * *

Subpart IIII—National Emission Standards for Hazardous Air Pollutants: Surface Coating of Automobiles and Light-Duty Trucks

■ 3. Section 63.3092 is amended by revising paragraph (a)(2) to read as follows:

§ 63.3092 How must I control emissions from my electrodeposition primer system if I want to comply with the combined primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive emission limit?

* * * * *

(a) * * *

(2) 0.10 percent by weight of any organic HAP in Table 5 of this subpart.

* * * * *

■ 4. Section 63.3093 is amended by revising paragraph (b) to read as follows:

§ 63.3093 What operating limits must I meet?

* * * * *

(b) Except as provided in paragraph (d) of this section, for any controlled coating operation(s), you must meet the operating limits specified in Table 1 to this subpart. These operating limits apply to the emission capture and add-on control systems on the coating operation(s) for which you use this option, and you must establish the operating limits during performance tests according to the requirements in § 63.3167. You must meet the operating limits at all times after you establish them.

* * * * *

■ 5. Section 63.3100 is amended by revising paragraphs (b), (d), and (f) to read as follows:

§ 63.3100 What are my general requirements for complying with this subpart?

* * * * *

(b) Before [date 181 days after date of publication of final rule in the **Federal Register**], the coating operations must be in compliance with the operating limits for emission capture systems and add-on control devices required by § 63.3093 at all times except during periods of startup, shutdown, and malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the coating operations must be in compliance with the operating limits for emission capture systems and add-on control devices required by § 63.3093 at all times.

* * * * *

(d) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must always operate and maintain your affected source including all air pollution control and monitoring equipment you use for purposes of complying with this subpart according to the provisions in § 63.6(e)(1)(i). On and after [date 181 days after date of publication of final rule in the **Federal Register**], at all times, the owner or operator must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require the owner or operator to make any further efforts to reduce emissions if levels required by the applicable standard have been achieved. Determination of whether a source is operating in compliance with operation and maintenance requirements will be based on information available to the Administrator that may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the affected source.

* * * * *

(f) Before [date 181 days after date of publication of final rule in the **Federal Register**], if your affected source uses emission capture systems and add-on control devices, you must develop a written startup, shutdown, and malfunction plan (SSMP) according to the provisions in § 63.6(e)(3). The SSMP must address startup, shutdown, and corrective actions in the event of a malfunction of the emission capture system or the add-on control devices. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the SSMP is not required.

■ 6. Section 63.3120 is amended by:

■ a. Revising paragraphs (a)(4), (a)(5) introductory text, (a)(5)(iv), (a)(6) introductory text, (a)(6)(iii), (a)(6)(vi) through (viii), (a)(6)(x), and (a)(6)(xiii) and (xiv);

■ b. Adding paragraphs (a)(5)(v) and (a)(6)(xv);

■ c. Revising paragraphs (a)(7) introductory text and (a)(7)(i) and (iii);

■ d. Adding paragraph (a)(7)(iv);

■ e. Revising paragraphs (a)(8) introductory text, (a)(8)(ii), (a)(8)(v) through (vii), (a)(8)(ix), (a)(8)(xii), (a)(9) introductory text, (a)(9)(i) and (ii), and (c) introductory text; and

■ f. Adding paragraphs (d) through (h).

The revisions and additions read as follows:

§ 63.3120 What reports must I submit?

(a) * * *

(4) *No deviations.* If there were no deviations from the emission limits, operating limits, or work practices in §§ 63.3090, 63.3091, 63.3092, 63.3093, and 63.3094 that apply to you, the semiannual compliance report must include a statement that there were no deviations from the applicable emission limitations during the reporting period. If you used control devices to comply with the emission limits, and there were no periods during which the CPMS were out of control as specified in § 63.8(c)(7), the semiannual compliance report must include a statement that there were no periods during which the CPMS were out of control during the reporting period.

(5) *Deviations: Adhesive, sealer, and deadener.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if there was a deviation from the applicable emission limits in § 63.3090(c) and (d) or § 63.3091(c) and (d), the semiannual compliance report must contain the information in paragraphs (a)(5)(i) through (iv) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], if there was a deviation from the applicable emission limits in § 63.3090(c) and (d) or § 63.3091(c) and (d), the semiannual compliance report must contain the information in paragraphs (a)(5)(i) through (v) of this section.

* * * * *

(iv) The reason for the deviation (including unknown cause, if applicable).

(v) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations and, for each deviation, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over the applicable emission limit in § 63.3090(c) and (d) or § 63.3091(c) and (d), and a description of the method used to estimate the emissions.

(6) *Deviations:* Combined electrodeposition primer, primer-surfacer, topcoat, final repair, glass bonding primer and glass bonding adhesive, or combined primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive plus all coatings and thinners, except for deadener materials and for adhesive and sealer materials that are not components of glass bonding systems, used in coating operations added to the affected source pursuant to § 63.3082(c). Before [date 181 days after date of publication of final rule in the **Federal Register**], if there was a deviation from the applicable emission limits in § 63.3090(a) or (b) or § 63.3091(a) or (b) or the applicable operating limit(s) in Table 1 to this subpart, the semiannual compliance report must contain the information in paragraphs (a)(6)(i) through (xiv) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], if there was a deviation from the applicable emission limits in § 63.3090(a) or (b) or § 63.3091(a) or (b) or the applicable operating limit(s) in Table 1 to this subpart, the semiannual compliance report must contain the information in paragraphs (a)(6)(i) through (xv) of this section.

* * * * *

(iii) The date and time that each malfunction of the capture system or add-on control devices used to control emissions from these operations started and stopped.

* * * * *

(vi) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time that each CPMS was inoperative, except for zero (low-level) and high-level checks. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each instance that the CPMS was inoperative, except for zero (low-level) and high-level checks, the date, time, and duration that the CPMS was inoperative; the cause (including unknown cause) for the CPMS being inoperative; and descriptions of corrective actions taken.

(vii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time period that each CPMS was out of control, including the information in § 63.8(c)(8). On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each instance that the CPMS was out of control, as specified in § 63.8(c)(7), the date, time, and duration that the CPMS was out-of-control; the cause (including unknown cause) for the CPMS being out-of-control; and descriptions of corrective actions taken.

(viii) Before [date 181 days after date of publication of final rule in the **Federal Register**], The date and time period of each deviation from an operating limit in Table 1 to this subpart; date and time period of each bypass of an add-on control device; and whether each deviation occurred during a period of startup, shutdown, or malfunction or during another period. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration of each deviation from an operating limit in Table 1 to this subpart; and the date, time, and duration of each bypass of an add-on control device.

* * * * *

(x) Before [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from each operating limit in Table 1 to this subpart and bypasses of each add-on control device during the semiannual reporting period into those that were due to startup, shutdown, control equipment problems, process problems, other known causes, and other unknown causes. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from each operating limit in Table 1 to this subpart and bypasses of each add-on control device during the semiannual reporting period into those that were due to control equipment problems, process problems, other known causes, and other unknown causes.

* * * * *

(xiii) Before [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from the work practice standards a description of the deviation, the date and time period of the deviation, and the actions you took to correct the deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from the work practice standards, the number of deviations, and, for each deviation, the information in paragraphs (a)(6)(xiii)(A) and (B) of this section.

(A) A description of the deviation, the date, time, and duration of the deviation; and the actions you took to minimize emissions in accordance with § 63.3100(d).

(B) A list of the affected sources or equipment for which a deviation occurred, the cause of the deviation (including unknown cause, if applicable), and any corrective actions taken to return the affected unit to its normal or usual manner of operation.

(xiv) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from an emission limitation in § 63.3090(a) or (b) or § 63.3091(a) or (b) or operating limit in Table 1 of this subpart, a statement of the cause of each deviation (including unknown cause, if applicable).

(xv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limitation in § 63.3090(a) or (b), or § 63.3091(a) or (b), or operating limit in Table 1 to this subpart, a list of the affected sources or equipment for which a deviation occurred, an estimate of the quantity of each regulated pollutant emitted over any emission limit in § 63.3090(a) or (b) or § 63.3091(a) or (b), and a description of the method used to estimate the emissions.

(7) *Deviations: Separate electrodeposition primer organic HAP content limit.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if you used the separate electrodeposition primer organic HAP content limits in § 63.3092(a), and there was a deviation from these limits, the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (iii) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], if you used the separate electrodeposition primer organic HAP content limits in § 63.3092(a), and there was a deviation from these limits, the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (iv) of this section.

(i) Identification of each material used that deviated from the emission limit, and the date, time, and duration each was used.

* * * * *

(iii) A statement of the cause of each deviation (including unknown case, if applicable).

(iv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over any emission limit in § 63.3092(a), and a description of the method used to estimate the emissions.

(8) *Deviations: Separate electrodeposition primer bake oven capture and control limitations.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if you used the separate electrodeposition primer bake oven capture and control limitations in § 63.3092(b), and there was a deviation from the limitations in § 63.3092(b) or the applicable operating limit in Table 1 to this subpart, the semiannual compliance report must contain the information in paragraphs (a)(8)(i) through (xii) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], if you used the separate electrodeposition primer bake oven capture and control limitations in § 63.3092(b), and there was a deviation from the limitations in § 63.3092(b) or the applicable operating limit in Table 1 to this subpart, the semiannual compliance report must contain the information in paragraphs (a)(8)(i) through (xiv) of this section.

* * * * *

(ii) The date and time that each malfunction of the capture systems or control devices used to control emissions from the electrodeposition primer bake oven started and stopped.

* * * * *

(v) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time that each CPMS was inoperative, except for zero (low-level) and high-level checks. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each instance that the CPMS was inoperative, except for zero (low-level) and high-level checks, the date, time, and duration that the CPMS was inoperative; the cause (including unknown cause) for the CPMS being inoperative; and descriptions of corrective actions taken.

(vi) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration that each CPMS was out of control, including the information in § 63.8(c)(8). On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each instance that the CPMS was out of control, as specified in § 63.8(c)(7), the date, time, and duration that the CPMS was out-of-control; the cause (including unknown cause) for the CPMS being out-of-control; and descriptions of corrective actions taken.

(vii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time period of each deviation from an operating limit in Table 1 to this subpart; date and time period of each bypass of an add-on control device; and whether each deviation occurred during a period of startup, shutdown, or malfunction or during another period. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration of each deviation from an operating limit in Table 1 to this subpart; and the date, time, and duration of each bypass of an add-on control device.

* * * * *

(ix) Before [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from each operating limit in Table 1 to this subpart and bypasses of each add-on control device during the semiannual reporting period into those that were due to startup, shutdown, control equipment problems, process problems, other known causes, and other unknown causes. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from each operating limit in Table 1 to this subpart and bypasses of each add-on control device during the semiannual reporting period into those that were due to control equipment problems, process problems, other known causes, and other unknown causes.

* * * * *

(xii) A statement of the cause of each deviation (including unknown cause, if applicable).

(9) *Deviations: Work practice plans.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if there was a deviation from an applicable work practice plan developed in accordance with § 63.3094(b) or (c), the semiannual compliance report must contain the information in paragraphs (a)(9)(i) through (iii) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], if there were deviations from an applicable work practice plan developed in accordance with § 63.3094(b) or (c), the semiannual compliance report must contain the number of deviations, and, for each deviation, the information in paragraphs (a)(9)(i) through (iii) of this section.

(i) Before [date 181 days after date of publication of final rule in the **Federal Register**], the time period during which each deviation occurred. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration of the deviation.

(ii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the nature of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the nature of the deviation, including a list of the affected sources or equipment for which the deviation occurred, and the cause of the deviation (including unknown cause, if applicable).

* * * * *

(c) *Startup, shutdown, and malfunction reports.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if you used add-on control devices and you had a startup, shutdown, or malfunction during the semiannual reporting period, you must submit the reports specified in paragraphs (c)(1) and (2) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the reports specified in paragraphs (c)(1) and (2) of this section are not required.

* * * * *

(d) On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must submit the results of the performance test required in paragraph (b) of this section following the procedure specified in paragraphs (d)(1) through (3) of this section.

(1) For data collected using test methods supported by the EPA's Electronic Reporting Tool (ERT) as listed on the EPA's ERT website (*https://www.epa.gov/electronic-reporting-air-emissions/electronic-reporting-tool-ert*) at the time of the test, you must submit the results of the performance test to the EPA via the Compliance and Emissions Data Reporting Interface (CEDRI). (CEDRI can be accessed through the EPA's Central Data Exchange (CDX) (*https://cdx.epa.gov/*)). Performance test data must be submitted in a file format generated through the use of the EPA's ERT or an alternate electronic file format consistent with the extensible markup language (XML) schema listed on the EPA's ERT website.

(2) For data collected using test methods that are not supported by the EPA's ERT as listed on the EPA's ERT website at the time of the test, you must submit the results of the performance test to the Administrator at the appropriate address listed in § 63.13, unless the Administrator agrees to or specifies an alternate reporting method.

(3) If you claim that some of the performance test information being submitted under paragraph (c)(1) of this section is confidential business information (CBI), you must submit a complete file generated through the use of the EPA's ERT or an alternate electronic file consistent with the XML schema listed on the EPA's ERT website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium must be clearly marked as CBI and mailed to U.S. EPA/OAPQS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same ERT or alternate file with the CBI omitted must be submitted to the EPA via the EPA's CDX as described in paragraph (c)(1) of this section.

(e) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the owner or operator shall submit the initial notifications required in § 63.9(b) and the notification of compliance status required in § 63.9(h) and § 63.3110(c) to the EPA via the CEDRI. (CEDRI can be accessed through the EPA's CDX (*https://cdx.epa.gov/*)). The owner or operator must upload to CEDRI an electronic copy of each applicable notification in portable document format (PDF). The applicable notification must be submitted by the deadline specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the extensible markup language (XML) schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(f) On and after [date 181 days after date of publication of final rule in the **Federal Register**], or once the reporting template has been available on the CEDRI website for 1 year, whichever date is later, the owner or operator shall submit the semiannual compliance report required in paragraph (a) of this section to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov/*). The owner or operator must use the appropriate electronic template on the CEDRI Web for this subpart or an alternate electronic file format consistent with the XML schema listed on the CEDRI website (*https://www.epa.gov/electronic-reporting-air-emissions/compliance-and-emissions-data-reporting-interface-cedri*). If the reporting form for the semiannual compliance report specific to this subpart is not available in CEDRI at the time that the report is due, you must submit the report to the Administrator at the appropriate addresses listed in § 63.13. Once the form has been available in CEDRI for 1 year, you must begin submitting all subsequent reports via CEDRI. The reports must be submitted by the deadlines specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the XML schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(g) If you are required to electronically submit a report through the CEDRI in the EPA's CDX, and due to a planned or actual outage of either the EPA's CEDRI or CDX systems within the period of time beginning 5 business days prior to the date that the submission is due, you will be or are precluded from accessing CEDRI or CDX and submitting a required report within the time prescribed, you may assert a claim of EPA system outage for failure to timely comply with the reporting requirement. You must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description identifying the date, time and length of the outage; a rationale for attributing the delay in reporting beyond the regulatory deadline to the EPA system outage; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the report must be submitted electronically as soon as possible after the outage is resolved. The decision to accept the claim of EPA system outage and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

(h) If you are required to electronically submit a report through CEDRI in the EPA's CDX and a force majeure event is about to occur, occurs, or has occurred or there are lingering effects from such an event within the period of time beginning 5 business days prior to the date the submission is due, the owner or operator may assert a claim of force majeure for failure to timely comply with the reporting requirement. For the purposes of this section, a force majeure event is defined as an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents you from complying with the requirement to submit a report electronically within the time period prescribed. Examples of such events are acts of nature (*e.g.,* hurricanes, earthquakes, or floods), acts of war or terrorism, or equipment failure or safety hazard beyond the control of the affected facility (*e.g.,* large scale power outage). If you intend to assert a claim of force majeure, you must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description of the force majeure event and a rationale for attributing the delay in reporting beyond the regulatory deadline to the force majeure event; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the reporting must occur as soon as possible after the force majeure event occurs. The decision to accept the claim of force majeure and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

■ 7. Section 63.3130 is amended by revising paragraphs (g) and (h) and adding paragraph (p) to read as follows:

§ 63.3130 What records must I keep?

* * * * *

(g) Before [date 181 days after date of publication of final rule in the **Federal Register**], a record of the date, time, and duration of each deviation, and for each deviation, a record of whether the deviation occurred during a period of startup, shutdown, or malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limitation, operating limit, or work practice plan reported under § 63.3120(a)(5) through (9), a record of the information specified in paragraphs (g)(1) through (4) of this section, as applicable.

(1) The date, time, and duration of the deviation, and for each deviation, the information as reported under § 63.3120(a)(5) through (9).

(2) A list of the affected sources or equipment for which the deviation occurred and the cause of the deviation, as reported under § 63.3120(a)(5) through (9).

(3) An estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.3090 (a) through (d) or 63.3091(a) through (d) or any applicable operating limit in Table 1 to this subpart, and a description of the method used to calculate the estimate, as reported under § 63.3120(a)(5) through (9).

(4) A record of actions taken to minimize emissions in accordance with § 63.3100(d) and any corrective actions taken to return the affected unit to its normal or usual manner of operation.

(h) Before [date 181 days after date of publication of final rule in the **Federal Register**], the records required by § 63.6(e)(3)(iii) through (v) related to startup, shutdown, and malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the provisions of this paragraph no longer apply.

* * * * *

(p) On and after [date 181 days after date of publication of final rule in the **Federal Register**], any records required to be maintained by this subpart that are submitted electronically via the EPA's CEDRI may be maintained in electronic format. This ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

■ 8. Section 63.3131 is amended by revising paragraph (a) to read as follows:

§ 63.3131 In what form and for how long must I keep my records?

(a) Your records must be in a form suitable and readily available for expeditious review according to § 63.10(b)(1). Where appropriate, the records may be maintained as electronic spreadsheets or as a database. On and after [date 181 days after date of publication of final rule in the **Federal Register**], any records required to be maintained by this subpart that are submitted electronically via the EPA's CEDRI may be maintained in electronic format. This ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

* * * * *

■ 9. Section 63.3151 is amended by revising paragraphs (a)(1)(i), (a)(2) and (4), and (b) to read as follows.

§ 63.3151 How do I demonstrate initial compliance with the emission limitations?

* * * * *

(a) * * *

(1) * * *

(i) Count each organic HAP in Table 5 to this subpart that is present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 to this subpart) is measured to be 0.5 percent of the material by mass, you do not have to count it. Express the mass fraction of each organic HAP you count as a value truncated to four places after the decimal point (*e.g.,* 0.3791).

* * * * *

(2) *EPA Method 24 (appendix A–7 to 40 CFR part 60).* For coatings, you may use EPA Method 24 to determine the mass fraction of nonaqueous volatile matter and use that value as a substitute for mass fraction of organic HAP. As an alternative to using EPA Method 24, you may use ASTM D2369–10 (2015)[e] (incorporated by reference, *see* § 63.14).

* * * * *

(4) *Information from the supplier or manufacturer of the material.* You may rely on information other than that generated by the test methods specified in paragraphs (a)(1) through (3) of this section, such as manufacturer's formulation data, if it represents each organic HAP in Table 5 to this subpart that is present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 of this subpart) is 0.5 percent of the material by mass, you do not have to count it. If there is a disagreement between such information and results of a test conducted according to paragraphs (a)(1) through (3) of this section, then the test method results will take precedence, unless after consultation, the facility demonstrates to the satisfaction of the enforcement authority that the facility's data are correct.

* * * * *

(b) *Determine the density of each material used.* Determine the density of each material used during the compliance period from test results using ASTM D1475–13 (incorporated by reference, *see* § 63.14) or for powder coatings, test method A or test method B of ASTM D5965–02 (2013) (incorporated by reference, *see* § 63.14), or information from the supplier or manufacturer of the material. If there is disagreement between ASTM D1475–13 test results or ASTM D5965–02 (2013), test method A or test method B test results and the supplier's or manufacturer's information, the test results will take precedence unless after consultation, the facility demonstrates to the satisfaction of the enforcement authority that the facility's data are correct.

* * * * *

■ 10. Section 63.3160 is amended by revising the section heading and paragraph (b)(1) to read as follows:

§ 63.3160 By what date must I conduct initial performance tests and other initial compliance demonstrations?

* * * * *

(b) * * *

(1) All emission capture systems, add-on control devices, and CPMS must be installed and operating no later than the applicable compliance date specified in § 63.3083. You must conduct an initial performance test of each capture system and add-on control device according to the procedures in §§ 63.3164 through 63.3166 and establish the operating limits required by § 63.3093 no later than the compliance date specified in § 63.3083.

* * * * *

■ 11. Section 63.3161 is amended by revising paragraphs (a), (f)(1), (g), and (k)(3) to read as follows:

§ 63.3161 How do I demonstrate initial compliance?

(a) You must meet all of the requirements of this section to demonstrate initial compliance. To demonstrate initial compliance, the organic HAP emissions from the combined electrodeposition primer, primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operations plus all coatings and thinners, except for deadener materials and for adhesive and sealer materials that are not components of glass bonding systems, used in coating operations added to the affected source pursuant to § 63.3082(c) must meet the applicable emission limitation in § 63.3090(a) or § 63.3091(a) and the applicable operating limits and work practice standards in §§ 63.3093 and 63.3094.

* * * * *

(f) * * *

(1) *ASTM Method D2697–03 (2014) or ASTM Method D6093–97 (2016).* You may use ASTM D2697–03 (Reapproved 2014) (incorporated by reference, *see* § 63.14), or ASTM D6093–97 (Reapproved 2016) (incorporated by reference, *see* § 63.14), to determine the volume fraction of coating solids for each coating. Divide the nonvolatile volume percent obtained with the methods by 100 to calculate volume fraction of coating solids.

* * * * *

(g) *Determine the transfer efficiency for each coating.* You must determine the transfer efficiency for each primer-surfacer and topcoat coating, and for all coatings, except for deadener and for adhesive and sealer that are not components of glass bonding systems, used in coating operations added to the affected source pursuant to § 63.3082(c) using ASTM D5066–91 (Reapproved 2017) (incorporated by reference, *see* § 63.14), or the guidelines presented in ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018. You may conduct transfer efficiency testing on representative coatings and for representative spray booths as described in ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018. You may assume 100 percent transfer efficiency for electrodeposition primer coatings, glass bonding primers, and glass bonding adhesives. For final repair coatings, you may assume 40 percent transfer efficiency for air atomized spray and 55 percent transfer efficiency for electrostatic spray and high volume, low pressure spray. For blackout, chip resistant edge primer, interior color, in-line repair, lower body anti-chip coatings, or underbody anti-chip coatings, you may assume 40 percent transfer efficiency for air atomized spray, 55 percent transfer efficiency for electrostatic spray and high volume-low pressure spray, and 80 percent transfer efficiency for airless spray.

* * * * *

(k) * * *

(3) Determine the mass fraction of volatile organic matter for each coating and thinner used in the coating operation controlled by the solvent recovery system during the month, kg volatile organic matter per kg coating. You may determine the volatile organic matter mass fraction using EPA Method 24 of 40 CFR part 60, appendix A–7, or an EPA approved alternative method, or you may use information provided by the manufacturer or supplier of the coating. In the event of any inconsistency between information provided by the manufacturer or supplier and the results of EPA Method 24 of 40 CFR part 60, appendix A–7, or an approved alternative method, the test method results will govern unless after

consultation, the facility demonstrates to the satisfaction of the enforcement authority that the facility's data are correct.

* * * * *

■ 12. Section 63.3163 is amended by revising the section heading and paragraph (c) introductory text, adding paragraph (c)(3), and revising paragraphs (f) and (h) to read as follows:

§ 63.3163 How do I conduct periodic performance tests and demonstrate continuous compliance with the emission limitations?

* * * * *

(c) You must demonstrate continuous compliance with each operating limit required by § 63.3093 that applies to you, as specified in Table 1 to this subpart, and you must conduct performance tests as specified in paragraph (c)(3) of this section.

* * * * *

(3) Except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.3161(k) for controlled coating operations, you must conduct periodic performance tests and establish the operating limits required by § 63.3093 within 5 years following the previous performance test. You must conduct the first periodic performance test before [date 3 years after date of publications of final rule in the **Federal Register**], unless you are already required to complete periodic performance tests as a requirement of renewing your facility's operating permit under 40 CFR part 70 or 40 CFR part 71 and have conducted a performance test on or after [date 2 years before date of publications of final rule in the **Federal Register**]. Thereafter you must conduct a performance test no later than 5 years following the previous performance test. Operating limits must be confirmed or reestablished during each performance test. For any control device for which you are using the catalytic oxidizer control option at § 63.3167(b) and following the catalyst maintenance procedures in § 63.3167(b)(6), you are not required to conduct periodic control device performance testing as specified by this paragraph. For any control device for which instruments are used to continuously measure organic compound emissions, you are not required to conduct periodic control device performance testing as specified by this paragraph.

* * * * *

(f) If there were no deviations from the emission limitations, submit a statement as part of the semiannual compliance report that you were in compliance with the emission limitations during the reporting period because the organic HAP emission rate for each compliance period was less than or equal to the applicable emission limit in § 63.3090(a) or § 63.3091(a), § 63.3090(b) or § 63.3091(b), or § 63.3092(a) or § 63.3092(b), you achieved the operating limits required by § 63.3093, and you achieved the work practice standards required by § 63.3094 during each compliance period.

* * * * *

(h) Before [date 181 days after date of publication of final rule in the **Federal Register**], consistent with §§ 63.6(e) and 63.7(e)(1), deviations that occur during a period of startup, shutdown, or malfunction of the emission capture system, add-on control device, or coating operation that may affect emission capture or control device efficiency are not violations if you demonstrate to the Administrator's satisfaction that you were operating in accordance with § 63.6(e)(1). The Administrator will determine whether deviations that occur during a period you identify as a startup, shutdown, or malfunction are violations according to the provisions in § 63.6(e). On and after [date 181 days after date of publication of final rule in the **Federal Register**], the provisions of this paragraph no longer apply.

* * * * *

■ 13. Section 63.3164 is amended by revising paragraphs (a) introductory text and (a)(1) to read as follows:

§ 63.3164 What are the general requirements for performance tests?

(a) You must conduct each applicable performance test required by §§ 63.3160, 63.3163, and 63.3171 according to the requirements in § 63.7(e)(1) and under the conditions in this section unless you obtain a waiver of the performance test according to the provisions in § 63.7(h).

(1) *Representative coating operation operating conditions.* You must conduct the performance test under representative operating conditions for the coating operation. Before [date 181 days after date of publication of final rule in the **Federal Register**], operations during periods of startup, shutdown, or malfunction, and during periods of nonoperation do not constitute representative conditions. You must record the process information that is necessary to document operating conditions during the test and explain why the conditions represent normal operation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], operations during periods of startup, shutdown, or nonoperation do not constitute representative conditions for purposes of conducting a performance test. The owner or operator may not conduct performance tests during periods of malfunction. You must record the process information that is necessary to document operating conditions during the test and explain why the conditions represent normal operation. Upon request, you must make available to the Administrator such records as may be necessary to determine the conditions of performance tests.

* * * * *

■ 14. Section 63.3165 is amended by revising the introductory text and paragraphs (e) introductory text, the definition of ''$Wvoc_{c,i}$'' in Equation 6 of paragraph (e)(2), the definition of ''$Wvoc_{c,i}$'' in Equation 7 of paragraph (e)(3), and the definition of ''$W_{s,i}$'' in Equation 8 of paragraph (e)(4) to read as follows:

§ 63.3165 How do I determine the emission capture system efficiency?

You must use the procedures and test methods in this section to determine capture efficiency as part of the performance test required by § 63.3160 and § 63.3163. For purposes of this subpart, a spray booth air seal is not considered a natural draft opening in a PTE or a temporary total enclosure provided you demonstrate that the direction of air movement across the interface between the spray booth air seal and the spray booth is into the spray booth. For purposes of this subpart, a bake oven air seal is not considered a natural draft opening in a PTE or a temporary total enclosure provided you demonstrate that the direction of air movement across the interface between the bake oven air seal and the bake oven is into the bake oven. You may use lightweight strips of fabric or paper, or smoke tubes to make such demonstrations as part of showing that your capture system is a PTE or conducting a capture efficiency test using a temporary total enclosure. You cannot count air flowing from a spray booth air seal into a spray booth as air flowing through a natural draft opening into a PTE or into a temporary total enclosure unless you elect to treat that spray booth air seal as a natural draft opening. You cannot count air flowing from a bake oven air seal into a bake oven as air flowing through a natural draft opening into a PTE or into a temporary total enclosure unless you elect to treat that bake oven air seal as a natural draft opening.

* * * * *

(e) *Panel testing to determine the capture efficiency of flash-off or bake oven emissions.* You may conduct panel testing to determine the capture efficiency of flash-off or bake oven emissions using ASTM D5087–02 (incorporated by reference, *see* § 63.14), ASTM D6266–00a (Reapproved 2017) (incorporated by reference, *see* § 63.14), or the guidelines presented in ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018 . You may conduct panel testing on representative coatings as described in ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018. The results of these panel testing procedures are in units of mass of VOC per volume of coating solids deposited and must be converted to a percent value for use in this subpart. If you panel test representative coatings, then you may convert the panel test result for each representative coating either to a unique percent capture efficiency for each coating grouped with that representative coating by using coating specific values for the volume of coating solids deposited per volume of coating used, mass of VOC per volume of coating, volume fraction solids, transfer efficiency, density and mass fraction VOC in Equations 4 through 6 of this section; or to a composite percent capture efficiency for the group of coatings by using composite values for the group of coatings for the volume of coating solids deposited per volume of coating used and for the mass of VOC per volume of coating, and average values for the group of coatings for volume fraction solids, transfer efficiency, density and mass fraction VOC in Equations 4 through 6 of this section. If you panel test each coating, then you must convert the panel test result for each coating to a unique percent capture efficiency for that coating by using coating specific values for the volume of coating solids deposited per volume of coating used, mass of VOC per volume of coating, volume fraction solids, transfer efficiency, density, and mass fraction VOC in Equations 4 through 6 of this section. Panel test results expressed in units of mass of VOC per volume of coating solids deposited must be converted to percent capture efficiency using Equation 4 of this section. An alternative for using panel test results expressed in units of mass of VOC per mass of coating solids deposited is presented in paragraph (e)(3) of this section.

* * * * *

(2) * * *

$Wvoc_{c,i}$ = Mass fraction of VOC in coating, i, or average mass fraction of VOC for the group of coatings, including coating, i, kg VOC per kg coating, determined by EPA Method 24 (appendix A–7 to 40 CFR part 60) or the guidelines for combining analytical VOC content and formulation solvent content presented in Section 9 of ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018 (Docket ID No. OAR–2002–0093 and Docket ID No. A–2001–22).

(3) * * *

$Wvoc_{c,i}$ = Mass fraction of VOC in coating, i, or average mass fraction of VOC for the group of coatings, including coating, i, kg VOC per kg coating, determined by EPA Method 24 (appendix A–7 to 40 CFR part 60) or the guidelines for combining analytical VOC content and formulation solvent content presented in Section 9 of ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018 (Docket ID No. OAR–2002–0093 and Docket ID No. A–2001–22).

(4) * * *

$W_{s,\,i}$ = Mass fraction of coating solids for coating, i, or average mass fraction of coating solids for the group of coatings including coating, i, kg coating solids per kg coating, determined by EPA Method 24 (appendix A–7 to 40 CFR part 60) or the guidelines for combining analytical VOC content and formulation solvent content presented in ''Protocol for Determining Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations,'' EPA–450/3–88–018 (Docket ID No. OAR–2002–0093 and Docket ID No. A–2001–22).

* * * * *

■ 15. Section 63.3166 is amended by revising the introductory text and paragraphs (a)(1) through (4) and (b) introductory text, and adding paragraph (b)(4) to read as follows:

§ 63.3166 How do I determine the add-on control device emission destruction or removal efficiency?

You must use the procedures and test methods in this section to determine the add-on control device emission destruction or removal efficiency as part of the performance test required by §§ 63.3160, 63.3163, or 63.3171. You must conduct three test runs as specified in § 63.7(e)(3), and each test run must last at least 1 hour.

(a) * * *

(1) Use EPA Method 1 or 1A of appendix A–1 to 40 CFR part 60, as appropriate, to select sampling sites and velocity traverse points.

(2) Use EPA Method 2, 2A, 2C, 2D, or 2F of appendix A–1, or 2G of appendix A–2 to 40 CFR part 60, as appropriate, to measure gas volumetric flow rate.

(3) Use EPA Method 3, 3A, or 3B of appendix A–2 to 40 CFR part 60, as appropriate, for gas analysis to determine dry molecular weight. The ANSI/ASME PTC 19.10–1981, ''Flue and Exhaust Gas Analyses [Part 10, Instruments and Apparatus]'' (incorporated by reference, *see* § 63.14), may be used as an alternative to EPA Method 3B.

(4) Use EPA Method 4 of appendix A–3 to 40 CFR part 60 to determine stack gas moisture.

* * * * *

(b) Measure total gaseous organic mass emissions as carbon at the inlet and outlet of the add-on control device simultaneously, using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60, as specified in paragraphs (b)(1) through (4) of this section. You must use the same method for both the inlet and outlet measurements.

* * * * *

(4) You may use EPA Method 18 of appendix A–6 to 40 CFR part 60 to subtract methane emissions from measured total gaseous organic mass emissions as carbon.

* * * * *

■ 16. Section 63.3167 is amended by revising the section heading, introductory text, and paragraph (f)(1) to read as follows:

§ 63.3167 How do I establish the add-on control device operating limits during performance tests?

During the performance tests required by §§ 63.3160, 63.3163, and 63.3171 (and described in §§ 63.3164 and 63.3166), you must establish the operating limits required by § 63.3093 according to this section, unless you have received approval for alternative monitoring and operating limits under § 63.8(f) as specified in § 63.3093.

* * * * *

(f) * * *

(1) During the capture efficiency determination required by §§ 63.3160 and 63.3163 and described in §§ 63.3164 and 63.3165, you must monitor and record either the gas volumetric flow rate or the duct static pressure for each separate capture device in your emission capture system at least once every 15 minutes during each of the three test runs at a point in the duct between the capture device and the add-on control device inlet.

* * * * *

■ 17. Section 63.3168 is amended by revising paragraphs (a)(4) through (7) and (c)(3) introductory text to read as follows:

§ 63.3168 What are the requirements for continuous parameter monitoring system installation, operation, and maintenance?

(a) * * *

(4) You must maintain the CPMS at all times in accordance with § 63.3100(d) and have readily available necessary parts for routine repairs of the monitoring equipment.

(5) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times that a controlled coating operation is operating, except during monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, if applicable, calibration checks and required zero and span adjustments). On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times that a controlled coating operation is operating in accordance with § 63.3100(d).

(6) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must not use emission capture system or add-on control device parameter data recorded during monitoring malfunctions, associated repairs, out-of-control periods, or required quality assurance or control activities when calculating data averages. You must use all the data collected during all other periods in calculating the data averages for determining compliance with the emission capture system and add-on control device operating limits. On and after [date 181 days after date of publication of final rule in the **Federal Register**], startups and shutdowns are normal operation for this source category. Emissions from these activities are to be included when determining if the standards specified in §§ 63.3090, 63.3091, 63.3092, 63.4292, and 63.4293 are being attained. You must not use emission capture system or add-on control device parameter data recorded during monitoring malfunctions, associated repairs, out-of-control periods, or required quality assurance or control activities when calculating data averages. You must use all the data collected during all other periods in calculating the data averages for determining compliance with the emission capture system and add-on control device operating limits.

(7) A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the CPMS to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions. Before [date 181 days after date of publication of final rule in the **Federal Register**], any period for which the monitoring system is out of control and data are not available for required calculations is a deviation from the monitoring requirements. On and after [date 181 days after date of publication of final rule in the **Federal Register**], except for periods of required quality assurance or control activities, any period during which the CPMS fails to operate and record data continuously as required by paragraph (a)(1) of this section, or generates data that cannot be included in calculating averages as specified in paragraph (a)(7) of this section constitutes a deviation from the monitoring requirements.

* * * * *

(c) * * *

(3) For all thermal oxidizers and catalytic oxidizers, you must meet the requirements in paragraphs (a)(1) through (6) and (c)(3)(i) through (vii) of this section for each gas temperature monitoring device. For the purposes of this paragraph (c)(3), a thermocouple is part of the temperature sensor.

* * * * *

■ 18. Section 63.3171 is amended by revising paragraphs (a) and (e)(3) to read as follows:

§ 63.3171 How do I demonstrate initial compliance?

(a) You must meet all of the requirements of this section to demonstrate initial compliance. To demonstrate initial compliance, the organic HAP emissions from the combined primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operations plus all coatings and thinners, except for deadener materials and for adhesive and sealer materials that are not components of glass bonding systems, used in coating operations added to the affected source pursuant to § 63.3082(c) must meet the applicable emission limitation in § 63.3090(b) or § 63.3091(b); the organic HAP emissions from the electrodeposition primer operation must meet the applicable emissions limitations in § 63.3092(a) or (b); and you must meet the applicable operating limits and work practice standards in §§ 63.3093 and 63.3094.

* * * * *

(e) * * *

(3) *Information from the supplier or manufacturer of the material.* You may rely on information other than that generated by the test methods specified in paragraphs (e)(1) and (2) of this section, such as manufacturer's formulation data, if it represents each organic HAP in Table 5 to this subpart that is present at 0.1 percent by mass, and at 1.0 percent by mass or more for other compounds. If there is a disagreement between such information and results of a test conducted according to paragraph (e)(1) or (2) of this section, then the test method results will take precedence unless after consultation, the facility demonstrates to the satisfaction of the enforcement authority that the facility's data are correct.

* * * * *

■ 19. Section 63.3176 is amended by revising the definition of ''*Deviation*'' to read as follows:

§ 63.3176 What definitions apply to this subpart?

* * * * *

Deviation means:

(1) Before [date 181 days after date of publication of final rule in the **Federal Register**], any instance in which an affected source subject to this subpart or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to any emission limit, operating limit, or work practice standard;

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit; or

(iii) Fails to meet any emission limit or operating limit or work practice standard in this subpart during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by this subpart; and

(2) On and after [date 181 days after date of publication of final rule in the **Federal Register**], any instance in which an affected source subject to this subpart or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to any emission limit, operating limit, or work practice standard; or

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit.

* * * * *

■ 20. Table 2 to subpart IIII of part 63 is revised to read as follows:

TABLE 2 TO SUBPART IIII OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART IIII OF PART 63

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart IIII	Explanation
§ 63.1(a)(1)–(12)	General Applicability	Yes.	
§ 63.1(b)(1)–(3)	Initial Applicability Determination	Yes	Applicability to subpart IIII is also specified in § 63.3081.
§ 63.1(c)(1)	Applicability After Standard Established.	Yes.	
§ 63.1(c)(2)	Applicability of Permit Program for Area Sources.	No	Area sources are not subject to subpart IIII.
§ 63.1(c)(5)	Extensions and Notifications	Yes.	
§ 63.1(e)	Applicability of Permit Program Before Relevant Standard is Set.	Yes.	
§ 63.2	Definitions	Yes	Additional definitions are specified in § 63.3176.
§ 63.3	Units and Abbreviations	Yes.	
§ 63.4(a)(1)–(2)	Prohibited Activities	Yes.	
§ 63.4(b)–(c)	Circumvention/Fragmentation	Yes.	
§ 63.5(a)	Preconstruction Review Applicability.	Yes.	
§ 63.5(b)(1), (3), (4), (6)	Requirements for Existing, Newly Constructed, and Reconstructed Sources.	Yes.	
§ 63.5(d)(1)(i)–(ii)(F), (d)(1)(ii)(H), (d)(1)(ii)(J), (d)(1)(iii), (d)(2)–(4).	Application for Approval of Construction/Reconstruction.	Yes.	
§ 63.5(e)	Approval of Construction/Reconstruction.	Yes.	
§ 63.5(f)	Approval of Construction/Reconstruction Based on Prior State Review.	Yes.	
§ 63.6(a)	Compliance With Standards and Maintenance Requirements—Applicability.	Yes.	
§ 63.6(b)(1)–(5), (b)(7)	Compliance Dates for New and Reconstructed Sources.	Yes	Section 63.3083 specifies the compliance dates.
§ 63.6(c)(1), (2), (5)	Compliance Dates for Existing Sources.	Yes	Section 63.3083 specifies the compliance dates.
§ 63.6(e)(1)(i)–(ii)	Operation and Maintenance	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3100(d) for general duty requirement.
§ 63.6(e)(1)(iii)	Operation and Maintenance	Yes	
§ 63.6(e)(3)(i), (e)(3)(iii)–(ix)	SSMP	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.6(f)(1)	Compliance Except During Startup, Shutdown, and Malfunction.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.6(f)(2)–(3)	Methods for Determining Compliance.	Yes.	
§ 63.6(g)	Use of an Alternative Standard	Yes.	
§ 63.6(h)	Compliance With Opacity/Visible Emission Standards.	No	Subpart IIII does not establish opacity standards and does not require continuous opacity monitoring systems (COMS).
§ 63.6(i)(1)–(14)	Extension of Compliance	Yes.	
63.6(j)	Presidential Compliance Exemption.	Yes.	
§ 63.7(a)(1)	Performance Test Requirements—Applicability.	Yes	Applies to all affected sources. Additional requirements for performance testing are specified in §§ 63.3164 and 63.3166.

TABLE 2 TO SUBPART IIII OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART IIII OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart IIII	Explanation
§ 63.7(a)(2) except (a)(2)(i)–(viii)	Performance Test Requirements—Dates.	Yes	Applies only to performance tests for capture system and control device efficiency at sources using these to comply with the standards. Section 63.3160 specifies the schedule for performance test requirements that are earlier than those specified in § 63.7(a)(2).
§ 63.7(a)(3)–(4)	Performance Tests Required By the Administrator, Force Majeure.	Yes.	
§ 63.7(b)–(d)	Performance Test Requirements—Notification, Quality Assurance, Facilities Necessary for Safe Testing Conditions During Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standards.
§ 63.7(e)(1)	Conduct of performance tests	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3164.
§ 63.7(e)(2)–(4)	Conduct of performance tests	Yes.	
§ 63.7(f)	Performance Test Requirements—Use of Alternative Test Method.	Yes	Applies to all test methods except those used to determine capture system efficiency.
§ 63.7(g)–(h)	Performance Test Requirements—Data Analysis, Recordkeeping, Reporting, Waiver of Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standards.
§ 63.8(a)(1)–(2)	Monitoring Requirements—Applicability.	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standards. Additional requirements for monitoring are specified in § 63.3168.
§ 63.8(a)(4)	Additional Monitoring Requirements.	No	Subpart IIII does not have monitoring requirements for flares.
§ 63.8(b)	Conduct of Monitoring	Yes.	
§ 63.8(c)(1)	Continuous Monitoring Systems (CMS) Operation and Maintenance.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	Section 63.3168 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply.
63.8(c)(2)–(3)	CMS Operation and Maintenance	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standards. Additional requirements for CMS operations and maintenance are specified in § 63.3168.
§ 63.8(c)(4)	CMS	No	Section 63.3168 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply with the standards.
§ 63.89(c)(5)	COMS	No	Subpart IIII does not have opacity or visible emission standards.

TABLE 2 TO SUBPART IIII OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART IIII OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart IIII	Explanation
§ 63.8(c)(6)	CMS Requirements	No	Section 63.3168 specifies the requirements for monitoring systems for capture systems and add-on control devices at sources using these to comply with the standards.
§ 63.8(c)(7)	CMS Out-of-Control Periods	Yes.	
§ 63.8(c)(8)	CMS Out-of-Control Periods Reporting.	No	Section 63.3120 requires reporting of CMS out-of-control periods.
§ 63.8(d)–(e)	Quality Control Program and CMS Performance Evaluation.	No	Subpart IIII does not require the use of continuous emissions monitoring systems (CEMS).
§ 63.8(f)(1)–(5)	Use of an Alternative Monitoring Method.	Yes.	
§ 63.8(f)(6)	Alternative to Relative Accuracy Test.	No	Subpart IIII does not require the use of CEMS.
§ 63.8(g)	Data Reduction	No	Sections 63.3167 and 63.3168 specify monitoring data reduction.
§ 63.9(a)	Notification Requirements	Yes.	
§ 63.9(b)(1)–(2)	Initial Notifications	Yes.	
§ 63.9(b)(4)(i), (b)(4)(v), (b)(5)	Application for Approval of Construction or Reconstruction.	Yes.	
§ 63.9(c)	Request for Extension of Compliance.	Yes.	
§ 63.9(d)	Special Compliance Requirement Notification.	Yes.	
§ 63.9(e)	Notification of Performance Test	Yes	Applies only to capture system and add-on control device performance tests at sources using these to comply with the standards.
§ 63.9(f)	Notification of Visible Emissions/Opacity Test.	No	Subpart IIII does not have opacity or visible emission standards.
§ 63.9(g)	Additional Notifications When Using CMS.	No	Subpart IIII does not require the use of CEMS.
§ 63.9(h)(1)–(3)	Notification of Compliance Status	Yes	Section 63.3110 specifies the dates for submitting the notification of compliance status.
§ 63.9(h)(5)–(6)	Clarifications	Yes.	
§ 63.9(i)	Adjustment of Submittal Deadlines.	Yes.	
§ 63.9(j)	Change in Previous Information	Yes.	
§ 63.10(a)	Recordkeeping/Reporting—Applicability and General Information.	Yes.	
§ 63.10(b)(1)	General Recordkeeping Requirements.	Yes	Additional requirements are specified in §§ 63.3130 and 63.3131.
§ 63.10(b)(2)(i)–(ii)	Recordkeeping of Occurrence and Duration of Startups and Shutdowns and of Failures to Meet Standards.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* 63.3130(g).
§ 63.10(b)(2)(iii)	Recordkeeping Relevant to Maintenance of Air Pollution Control and Monitoring Equipment.	Yes.	
§ 63.10(b)(2)(iv)–(v)	Actions Taken to Minimize Emissions During SSM.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3130(g)(4) for a record of actions taken to minimize emissions during a deviation from the standard.
§ 63.10(b)(2)(vi)	Recordkeeping for CMS Malfunctions.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3130(g) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.

TABLE 2 TO SUBPART IIII OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART IIII OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart IIII	Explanation
§ 63.10(b)(2)(vii)–(xi)	Records	Yes.	
§ 63.10(b)(2)(xii)	Records	Yes.	
§ 63.10(b)(2)(xiii)		No	Subpart IIII does not require the use of CEMS.
§ 63.10(b)(2)(xiv)		Yes.	
§ 63.10(b)(3)	Recordkeeping Requirements for Applicability Determinations.	Yes.	
§ 63.10(c)(1)–(6)	Additional Recordkeeping Requirements for Sources with CMS.	Yes.	
§ 63.10(c)(7)–(8)	Additional Recordkeeping Requirements for Sources with CMS.	No	*See* § 63.3130(g) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.
§ 63.10(c)(10)–(14)		Yes.	
§ 63.10(c)(15)	Records Regarding the SSM Plan	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.10(d)(1)	General Reporting Requirements	Yes	Additional requirements are specified in § 63.3120.
§ 63.10(d)(2)	Report of Performance Test Results.	Yes	Additional requirements are specified in § 63.3120(b).
§ 63.10(d)(3)	Reporting Opacity or Visible Emissions Observations.	No	Subpart IIII does not require opacity or visible emissions observations.
§ 63.10(d)(4)	Progress Reports for Sources With Compliance Extensions.	Yes.	
§ 63.10(d)(5)	Startup, Shutdown, and Malfunction Reports.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* 63.3120(a)(6).
§ 63.10(e)(1)–(2)	Additional CMS Reports	No	Subpart IIII does not require the use of CEMS.
§ 63.10(e)(3)	Excess Emissions/CMS Performance Reports.	No	Section 63.3120(b) specifies the contents of periodic compliance reports.
§ 63.10(e)(4)	COMS Data Reports	No	Subpart IIII does not specify requirements for opacity or COMS.
§ 63.10(f)	Recordkeeping/Reporting Waiver	Yes.	
§ 63.11	Control Device Requirements/Flares.	No	Subpart IIII does not specify use of flares for compliance.
§ 63.12	State Authority and Delegations	Yes.	
§ 63.13	Addresses	Yes.	
§ 63.14	Incorporation by Reference	Yes.	
§ 63.15	Availability of Information/Confidentiality.	Yes.	

■ 21. Table 5 to subpart IIII of part 63 is added to read as follows:

TABLE 5 TO SUBPART IIII OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS

Chemical name	CAS No.
1,1,2,2-Tetrachloroethane	79–34–5
1,1,2-Trichloroethane	79–00–5
1,1-Dimethylhydrazine	57–14–7
1,2-Dibromo-3-chloropropane	96–12–8
1,2-Diphenylhydrazine	122–66–7

TABLE 5 TO SUBPART IIII OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS—Continued

Chemical name	CAS No.
1,3-Butadiene	106–99–0
1,3-Dichloropropene	542–75–6
1,4-Dioxane	123–91–1
2,4,6-Trichlorophenol	88–06–2
2,4/2,6-Dinitrotoluene (mixture)	25321–14–6
2,4-Dinitrotoluene	121–14–2
2,4-Toluene diamine	95–80–7
2-Nitropropane	79–46–9
3,3′-Dichlorobenzidine	91–94–1
3,3′-Dimethoxybenzidine	119–90–4
3,3′-Dimethylbenzidine	119–93–7
4,4′-Methylene bis(2-chloroaniline)	101–14–4
Acetaldehyde	75–07–0
Acrylamide	79–06–1
Acrylonitrile	107–13–1
Allyl chloride	107–05–1
alpha-Hexachlorocyclohexane (a-HCH)	319–84–6
Aniline	62–53–3
Benzene	71–43–2
Benzidine	92–87–5
Benzotrichloride	98–07–7
Benzyl chloride	100–44–7
beta-Hexachlorocyclohexane (b-HCH)	319–85–7
Bis(2-ethylhexyl)phthalate	117–81–7
Bis(chloromethyl)ether	542–88–1
Bromoform	75–25–2
Captan	133–06–2
Carbon tetrachloride	56–23–5
Chlordane	57–74–9
Chlorobenzilate	510–15–6
Chloroform	67–66–3
Chloroprene	126–99–8
Cresols (mixed)	1319–77–3
DDE	3547–04–4
Dichloroethyl ether	111–44–4
Dichlorvos	62–73–7
Epichlorohydrin	106–89–8
Ethyl acrylate	140–88–5
Ethylene dibromide	106–93–4
Ethylene dichloride	107–06–2
Ethylene oxide	75–21–8
Ethylene thiourea	96–45–7
Ethylidene dichloride (1,1-Dichloroethane)	75–34–3
Formaldehyde	50–00–0
Heptachlor	76–44–8
Hexachlorobenzene	118–74–1
Hexachlorobutadiene	87–68–3
Hexachloroethane	67–72–1
Hydrazine	302–01–2
Isophorone	78–59–1
Lindane (hexachlorocyclohexane, all isomers)	58–89–9
m-Cresol	108–39–4
Methylene chloride	75–09–2
Naphthalene	91–20–3
Nitrobenzene	98–95–3
Nitrosodimethylamine	62–75–9
o-Cresol	95–48–7
o-Toluidine	95–53–4
Parathion	56–38–2
p-Cresol	106–44–5
p-Dichlorobenzene	106–46–7
Pentachloronitrobenzene	82–68–8
Pentachlorophenol	87–86–5
Propoxur	114–26–1
Propylene dichloride	78–87–5
Propylene oxide	75–56–9
Quinoline	91–22–5
Tetrachloroethene	127–18–4
Toxaphene	8001–35–2
Trichloroethylene	79–01–6
Trifluralin	1582–09–8

TABLE 5 TO SUBPART IIII OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS—Continued

Chemical name	CAS No.
Vinyl bromide	593–60–2
Vinyl chloride	75–01–4
Vinylidene chloride	75–35–4

Subpart MMMM—National Emission Standards for Hazardous Air Pollutants for Surface Coating of Miscellaneous Metal Parts and Products

■ 22. Section 63.3900 is amended by revising paragraphs (a)(2)(i) and (ii), (b), and (c) to read as follows:

§ 63.3900 What are my general requirements for complying with this subpart?

(a) * * *

(2) * * *

(i) Before [date 181 days after publication of final rule in the **Federal Register**], the coating operation(s) must be in compliance with the applicable emission limit in § 63.3890 at all times except during periods of startup, shutdown, and malfunction. On or after [date 181 days after publication of final rule in the **Federal Register**] you must be in compliance with the applicable emission limits in § 63. 3890 and the operating limits in Table 1 of this subpart at all times.

(ii) Before [date 181 days after publication of final rule in the **Federal Register**], the coating operation(s) must be in compliance with the operating limits for emission capture systems and add-on control devices required by § 63.3892 at all times except during periods of startup, shutdown, and malfunction, and except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.3961(j). On or after [date 181 days after publication of final rule in the **Federal Register**] the coating operation(s) must be in compliance with the operating limits for emission capture systems and add-on control devices required by § 63.3892 at all times, except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.3961(j).

* * * * *

(b) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must always operate and maintain your affected source, including all air pollution control and monitoring equipment you use for purposes of complying with this subpart, according to the provisions in § 63.6(e)(1)(i). On and after [date 181 days after date of publication of final rule in the **Federal Register**], at all times, the owner or operator must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require the owner or operator to make any further efforts to reduce emissions if levels required by the applicable standard have been achieved. Determination of whether a source is operating in compliance with operation and maintenance requirements will be based on information available to the Administrator that may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the affected source.

(c) Before [date 181 days after date of publication of final rule in the **Federal Register**], if your affected source uses an emission capture system and add-on control device, you must develop a written startup, shutdown, and malfunction plan (SSMP) according to the provisions in § 63.6(e)(3). The plan must address the startup, shutdown, and corrective actions in the event of a malfunction of the emission capture system or the add-on control device. The plan must also address any coating operation equipment that may cause increased emissions or that would affect capture efficiency if the process equipment malfunctions, such as conveyors that move parts among enclosures. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the SSMP is not required.

■ 23. Section 63.3920 is amended by:
■ a. Revising paragraphs (a)(5) introductory text and (a)(5)(i) and (iv);
■ b. Adding paragraph (a)(5)(v);
■ c. Revising paragraphs (a)(6) introductory text and (a)(6)(iii);
■ d. Adding paragraph (a)(6)(iv);
■ e. Revising paragraphs (a)(7) introductory text, (a)(7)(iii), (a)(7)(vi) through (viii), (a)(7) (x), and (a)(7)(xiii) and (xiv);
■ f. Adding paragraph (a)(7)(xv);
■ g. Revising paragraph (c) introductory text; and
■ h. Adding paragraphs (d) through (h).

The revisions and additions read as follows:

§ 63.3920 What reports must I submit?

(a) * * *

(5) *Deviations: Compliant material option.* If you used the compliant material option and there was a deviation from the applicable organic HAP content requirements in § 63.3890, the semiannual compliance report must contain the information in paragraphs (a)(5)(i) through (v) of this section.

(i) Identification of each coating used that deviated from the applicable emission limit, and each thinner and/or other additive, and cleaning material used that contained organic HAP, and the dates, time and duration each was used.

* * * * *

(iv) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation (including unknown cause, if applicable).

(v) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations and, for each deviation, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.3890, a description of the method used to estimate the emissions, and the actions you took to minimize emissions in accordance with § 63.3900(b).

(6) *Deviations: Emission rate without add-on controls option.* If you used the emission rate without add-on controls option and there was a deviation from the applicable emission limit in § 63.3890, the semiannual compliance report must contain the information in paragraphs (a)(6)(i) through (iv) of this section.

* * * * *

(iii) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation (including unknown cause, if applicable).

(iv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations and, for each deviation, the date, time, duration, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.3890, a description of the method used to estimate the emissions, and the actions you took to minimize emissions in accordance with § 63.3900(b).

(7) *Deviations: Emission rate with add-on controls option.* If you used the emission rate with add-on controls option and there was a deviation from the applicable emission limit in § 63.3890 or the applicable operating limit(s) in Table 1 to this subpart (including any periods when emissions bypassed the add-on control device and were diverted to the atmosphere), before [date 181 days after date of publication of final rule in the **Federal Register**], the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (xiv) of this section. This includes periods of startup, shutdown, and malfunction during which deviations occurred. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (xii), (a)(7)(xiv), and (a)(7)(xv) of this section. If you use the emission rate with add-on controls option and there was a deviation from the applicable work practice standards in § 63.3893(b), the semiannual compliance report must contain the information in paragraph (a)(7)(xiii) of this section.

* * * * *

(iii) The date and time that each malfunction of the capture system or add-on control devices started and stopped.

* * * * *

(vi) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time that each CPMS was inoperative, except for zero (low-level) and high-level checks. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of instances that the CPMS was inoperative, and for each instance, except for zero (low-level) and high-level checks, the date, time, and duration that the CPMS was inoperative; the cause (including unknown cause) for the CPMS being inoperative; and the actions you took to minimize emissions in accordance with § 63.3900(b).

(vii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration that each CPMS was out-of-control, including the information in § 63.8(c)(8). On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of instances that the CPMS was out of control as specified in § 63.8(c)(7) and, for each instance, the date, time, and duration that the CPMS was out-of-control; the cause (including unknown cause) for the CPMS being out-of-control; and descriptions of corrective actions taken.

(viii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time period of each deviation from an operating limit in Table 1 to this subpart; date and time period of any bypass of the add-on control device; and whether each deviation occurred during a period of startup, shutdown, or malfunction or during another period. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations from an operating limit in Table 1 to this subpart and, for each deviation, the date, time, and duration of each deviation; and the date, time, and duration of any bypass of the add-on control device.

* * * * *

(x) Before [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from the operating limits in Table 1 of this subpart and bypasses of the add-on control device during the semiannual reporting period into those that were due to startup, shutdown, control equipment problems, process problems, other known causes, and other unknown causes. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from the operating limits in Table 1 to this subpart and bypasses of the add-on control device during the semiannual reporting period into those that were due to control equipment problems, process problems, other known causes, and other unknown causes.

* * * * *

(xiii) Before [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from the work practice standards, a description of the deviation, the date and time period of the deviation, and the actions you took to correct the deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from the work practice standards, the number of deviations, and, for each deviation, the information in paragraphs (a)(7)(xiii)(A) and (B) of this section:

(A) A description of the deviation; the date, time, and duration of the deviation; and the actions you took to minimize emissions in accordance with § 63.3900(b).

(B) The description required in paragraph (a)(7)(xiii)(A) of this section must include a list of the affected sources or equipment for which a deviation occurred and the cause of the deviation (including unknown cause, if applicable).

(xiv) Before [date 181 days after date of publication of final rule in the **Federal Register**], statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from an emission limit in § 63.3890 or an operating limit in Table 1 to this subpart, a statement of the cause of each deviation (including unknown cause, if applicable) and the actions you took to minimize emissions in accordance with § 63.3900(b).

(xv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limit in § 63.3890 or operating limit in Table 1 to this subpart, a list of the affected sources or equipment for which a deviation occurred, an estimate of the quantity of each regulated pollutant emitted over any emission limit in § 63.3890 or operating limit in Table 1 to this subpart, and a description of the method used to estimate the emissions.

* * * * *

(c) *Startup, shutdown, malfunction reports.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if you used the emission rate with add-on controls option and you had a startup, shutdown, or malfunction during the semiannual reporting period, you must submit the reports specified in paragraphs (c)(1) and (2) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the reports specified in paragraphs (c)(1) and (2) of this section are not required.

* * * * *

(d) On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must submit the results of the performance test required in §§ 63.3940 and 63.3950 following the procedure specified in paragraphs (d)(1) through (3) of this section.

(1) For data collected using test methods supported by the EPA's Electronic Reporting Tool (ERT) as listed on the EPA's ERT website (*https://www.epa.gov/electronic-reporting-air-emissions/electronic-reporting-tool-ert*) at the time of the test, you must submit the results of the performance test to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov//*). Performance test data must be submitted in a file format generated through the use of the EPA's ERT or an alternate electronic file format consistent with the XML schema listed on the EPA's ERT website.

(2) For data collected using test methods that are not supported by the EPA's ERT as listed on the EPA's ERT website at the time of the test, you must submit the results of the performance test to the Administrator at the appropriate address listed in § 63.13, unless the Administrator agrees to or specifies an alternate reporting method.

(3) If you claim that some of the performance test information being submitted under paragraph (d)(1) of this section is CBI, you must submit a complete file generated through the use of the EPA's ERT or an alternate electronic file consistent with the XML schema listed on the EPA's ERT website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium must be clearly marked as CBI and mailed to U.S. EPA/OAPQS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same ERT or alternate file with the CBI omitted must be submitted to the EPA via the EPA's CDX as described in paragraph (d)(1) of this section.

(e) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the owner or operator shall submit the initial notifications required in § 63.9(b) and the notification of compliance status required in § 63.9(h) and § 63.3910(c) to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov/*). The owner or operator must upload to CEDRI an electronic copy of each applicable notification in portable document format (PDF). The applicable notification must be submitted by the deadline specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the XML schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(f) On and after [date 181 days after date of publication of final rule in the **Federal Register**], or once the reporting template has been available on the CEDRI website for 1 year, whichever date is later, the owner or operator shall submit the semiannual compliance report required in paragraph (a) of this section to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov/*). The owner or operator must use the appropriate electronic template on the CEDRI website for this subpart or an alternate electronic file format consistent with the XML schema listed on the CEDRI website (*https://www.epa.gov/electronic-reporting-air-emissions/compliance-and-emissions-data-reporting-interface-cedri*). The date report templates become available will be listed on the CEDRI website. If the reporting form for the semiannual compliance report specific to this subpart is not available in CEDRI at the time that the report is due, you must submit the report to the Administrator at the appropriate addresses listed in § 63.13. Once the form has been available in CEDRI for 1 year, you must begin submitting all subsequent reports via CEDRI. The reports must be submitted by the deadlines specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the XML schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(g) If you are required to electronically submit a report through the CEDRI in the EPA's CDX, and due to a planned or actual outage of either the EPA's CEDRI or CDX systems within the period of time beginning 5 business days prior to the date that the submission is due, you will be or are precluded from accessing CEDRI or CDX and submitting a required report within the time prescribed, you may assert a claim of EPA system outage for failure to timely comply with the reporting requirement. You must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description identifying the date, time and length of the outage; a rationale for attributing the delay in reporting beyond the regulatory deadline to the EPA system outage; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the report must be submitted electronically as soon as possible after the outage is resolved. The decision to accept the claim of EPA system outage and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

(h) If you are required to electronically submit a report through CEDRI in the EPA's CDX and a force majeure event is about to occur, occurs, or has occurred or there are lingering effects from such an event within the period of time beginning 5 business days prior to the date the submission is due, the owner or operator may assert a claim of force majeure for failure to timely comply with the reporting requirement. For the purposes of this section, a force majeure event is defined as an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents you from complying with the requirement to submit a report electronically within the time period prescribed. Examples of such events are acts of nature (*e.g.,* hurricanes, earthquakes, or floods), acts of war or terrorism, or equipment failure or safety hazard beyond the control of the affected facility (*e.g.,* large scale power outage). If you intend to assert a claim of force majeure, you must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description of the force majeure event and a rationale for attributing the delay in reporting beyond the regulatory deadline to the force majeure event; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the reporting must occur as soon as possible after the force majeure event occurs. The decision to accept the claim of force majeure and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

■ 24. Section 63.3930 is amended by revising paragraphs (j), (k) introductory text, and (k)(1) and (2) to read as follows:

§ 63.3930 What records must I keep?

* * * * *

(j) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must keep records of the date, time, and duration of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limitation reported under § 63.3920(a)(5) through (7), a record of the information specified in paragraphs (j)(1) through (4) of this section, as applicable.

(1) The date, time, and duration of the deviation, as reported under § 63.3920(a)(5) through (7).

(2) A list of the affected sources or equipment for which the deviation occurred and the cause of the deviation, as reported under § 63.3920(a)(5) through (7).

(3) An estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.3890 or any applicable operating limit in Table 1 to this subpart, and a description of the method used to calculate the estimate, as reported under § 63.3920(a)(5) through (7).

(4) A record of actions taken to minimize emissions in accordance with § 63.3900(b) and any corrective actions taken to return the affected unit to its normal or usual manner of operation.

(k) If you use the emission rate with add-on controls option, you must also keep the records specified in paragraphs (k)(1) through (8) of this section.

(1) Before [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation, a record of whether the deviation occurred during a period of startup, shutdown, or malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a record of whether the deviation occurred during a period of startup, shutdown, or malfunction is not required.

(2) Before [date 181 days after date of publication of final rule in the **Federal Register**], the records in § 63.6(e)(3)(iii) through (v) related to startup, shutdown, and malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the records in § 63.6(e)(3)(iii) through (v) related to startup, shutdown, and malfunction are not required.

* * * * *

■ 25. Section 63.3931 is amended by revising paragraph (a) to read as follows:

§ 63.3931 In what form and for how long must I keep my records?

(a) Your records must be in a form suitable and readily available for expeditious review, according to § 63.10(b)(1). Where appropriate, the records may be maintained as electronic spreadsheets or as a database. On and after [date 181 days after date of publication of final rule in the **Federal Register**], any records required to be maintained by this subpart that are in reports that were submitted electronically via the EPA's CEDRI may be maintained in electronic format. This ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

* * * * *

■ 26. Section 63.3941 is amended by revising paragraphs (a)(1)(i), (a)(4), (b)(1), the definition of ''Davg'' in Equation 1 of paragraph (b)(4), and paragraph (c) to read as follows:

§ 63.3941 How do I demonstrate initial compliance with the emission limitations?

* * * * *

(a) * * *

(1) * * *

(i) Count each organic HAP in Table 5 to this subpart that is measured to be present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 to this subpart) is measured to be 0.5 percent of the material by mass, you do not have to count it. Express the mass fraction of each organic HAP you count as a value truncated to four places after the decimal point (*e.g.,* 0.3791).

* * * * *

(4) *Information from the supplier or manufacturer of the material.* You may rely on information other than that generated by the test methods specified in paragraphs (a)(1) through (3) of this section, such as manufacturer's formulation data, if it represents each organic HAP in Table 5 to this subpart that is present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 to this subpart) is 0.5 percent of the material by mass, you do not have to count it. For reactive adhesives in which some of the HAP react to form solids and are not emitted to the atmosphere, you may rely on manufacturer's data that expressly states the organic HAP or volatile matter mass fraction emitted. If there is a disagreement between such information and results of a test conducted according to paragraphs (a)(1) through (3) of this section, then the test method results will take precedence unless, after consultation, you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

* * * * *

(b) * * *

(1) *ASTM Method D2697–03 (2014) or D6093–97 (2016).* You may use ASTM D2697–03 (Reapproved 2014) (incorporated by reference, *see* § 63.14), or D6093–97 (Reapproved 2016) (incorporated by reference, *see* § 63.14), to determine the volume fraction of coating solids for each coating. Divide the nonvolatile volume percent obtained with the methods by 100 to calculate volume fraction of coating solids.

* * * * *

(4) * * *

D_{avg} = Average density of volatile matter in the coating, grams volatile matter per liter volatile matter, determined from test results using ASTM D1475–13 (incorporated by reference, *see* § 63.14), information from the supplier or manufacturer of the material, or reference sources providing density or specific gravity data for pure materials. If there is disagreement between ASTM D1475–13 test results and other information sources, the test results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

(c) *Determine the density of each coating.* Determine the density of each coating used during the compliance period from test results using ASTM

D1475–13 (incorporated by reference, *see* § 63.14), information from the supplier or manufacturer of the material, or specific gravity data for pure chemicals. If there is disagreement between ASTM D1475–13 test results and the supplier's or manufacturer's information, the test results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

* * * * *

■ 27. Section 63.3951 is amended by revising paragraph (c) to read as follows:

§ 63.3951 How do I demonstrate initial compliance with the emission limitations?

* * * * *

(c) *Determine the density of each material.* Determine the density of each liquid coating, thinner and/or other additive, and cleaning material used during each month from test results using ASTM D1475–13 or ASTM D2111–10 (Reapproved 2015) (both incorporated by reference, *see* § 63.14), information from the supplier or manufacturer of the material, or reference sources providing density or specific gravity data for pure materials. If you are including powder coatings in the compliance determination, determine the density of powder coatings, using ASTM D5965–02 (2013) (incorporated by reference, *see* § 63.14), or information from the supplier. If there is disagreement between ASTM D1475–13 or ASTM D2111–10 (2015) test results and other such information sources, the test results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct. If you purchase materials or monitor consumption by weight instead of volume, you do not need to determine material density. Instead, you may use the material weight in place of the combined terms for density and volume in Equations 1A, 1B, 1C, and 2 of this section.

* * * * *

■ 28. Section 63.3960 is amended by revising paragraphs (a)(1) and (4), (b)(1), and (c) introductory text to read as follows:

§ 63.3960 By what date must I conduct performance tests and other initial compliance demonstrations?

(a) * * *

(1) All emission capture systems, add-on control devices, and CPMS must be installed and operating no later than the applicable compliance date specified in § 63.3883. Except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.3961(j), you must conduct according to the schedule in paragraphs (a)(1)(i) and (ii) of this section initial and periodic performance tests of each capture system and add-on control device according to the procedures in §§ 63.3964, 63.3965, and 63.3966 and establish the operating limits required by § 63.3892. For a solvent recovery system for which you conduct liquid-liquid material balances according to § 63.3961(j), you must initiate the first material balance no later than the applicable compliance date specified in § 63.3883. For magnet wire coating operations, you may, with approval, conduct a performance test of one representative magnet wire coating machine for each group of identical or very similar magnet wire coating machines.

(i) You must conduct the initial performance test and establish the operating limits required by § 63.3892 no later than 180 days after the applicable compliance date specified in § 63.3883.

(ii) You must conduct periodic performance tests and establish the operating limits required by § 63.3892 within 5 years following the previous performance test. You must conduct the first periodic performance test before [date 3 years after date of publications of final rule in the **Federal Register**], unless you are already required to complete periodic performance tests as a requirement of renewing your facility's operating permit under 40 CFR part 70 or 40 CFR part 71 and have conducted a performance test on or after [date 2 years before date of publications of final rule in the **Federal Register**]. Thereafter you must conduct a performance test no later than 5 years following the previous performance test. Operating limits must be confirmed or reestablished during each performance test. For any control device for which you are using the catalytic oxidizer control option at § 63.3967(b) and following the catalyst maintenance procedures in § 63.3967(b)(4), you are not required to conduct periodic testing control device performance testing as specified by this paragraph. For any control device for which instruments are used to continuously measure organic compound emissions, you are not required to conduct periodic control device performance testing as specified by this paragraph.

* * * * *

(4) For the initial compliance demonstration, you do not need to comply with the operating limits for the emission capture system and add-on control device required by § 63.3892 until after you have completed the initial performance tests specified in paragraph (a)(1) of this section. Instead, you must maintain a log detailing the operation and maintenance of the emission capture system, add-on control device, and continuous parameter monitors during the period between the compliance date and the performance test. You must begin complying with the operating limits established based on the initial performance tests specified in paragraph (a)(1) of this section for your affected source on the date you complete the performance tests. For magnet wire coating operations, you must begin complying with the operating limits for all identical or very similar magnet wire coating machines on the date you complete the performance test of a representative magnet wire coating machine. The requirements in this paragraph (a)(4) do not apply to solvent recovery systems for which you conduct liquid-liquid material balances according to the requirements in § 63.3961(j).

(b) * * *

(1) All emission capture systems, add-on control devices, and CPMS must be installed and operating no later than the applicable compliance date specified in § 63.3883. Except for magnet wire coating operations and solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.3961(j), you must conduct according to the schedule in paragraphs (b)(1)(i) and (ii) of this section initial and periodic performance tests of each capture system and add-on control device according to the procedures in §§ 63.3964, 63.3965, and 63.3966 and establish the operating limits required by § 63.3892. For magnet wire coating operations, you may, with approval, conduct a performance test of a single magnet wire coating machine that represents identical or very similar magnet wire coating machines. For a solvent recovery system for which you conduct liquid-liquid material balances according to § 63.3961(j), you must initiate the first material balance no later than the compliance date specified in § 63.3883.

(i) You must conduct the initial performance test and establish the operating limits required by § 63.3892 no later than 180 days after the applicable compliance date specified in § 63.3883.

(ii) You must conduct periodic performance tests and establish the operating limits required by § 63.3892 within 5 years following the previous performance test. You must conduct the first periodic performance test before [date 3 years after date of publications of final rule in the **Federal Register**], unless you are already required to complete periodic performance tests as a requirement of renewing your facility's operating permit under 40 CFR part 70 or 40 CFR part 71 and have conducted a performance test on or after [date 2 years before date of publications of final rule in the **Federal Register**]. Thereafter you must conduct a performance test no later than 5 years following the previous performance test. Operating limits must be confirmed or reestablished during each performance test. For any control device for which you are using the catalytic oxidizer control option at § 63.3967(b) and following the catalyst maintenance procedures in § 63.3967(b)(4), you are not required to conduct periodic testing control device performance testing as specified by this paragraph. For any control device for which instruments are used to continuously measure organic compound emissions, you are not required to conduct periodic control device performance testing as specified by this paragraph.

* * * * *

(c) You are not required to conduct an initial performance test to determine capture efficiency or destruction efficiency of a capture system or control device if you receive approval to use the results of a performance test that has been previously conducted on that capture system or control device. Any such previous tests must meet the conditions described in paragraphs (c)(1) through (3) of this section. You are still required to conduct a periodic performance test according to the applicable requirements of paragraphs (a)(1)(ii) and (b)(2)(ii) of this section.

* * * * *

■ 29. Section 63.3961 is amended by revising paragraph (j)(3) to read as follows:

§ 63.3961 How do I demonstrate initial compliance?

* * * * *

(j) * * *

(3) Determine the mass fraction of volatile organic matter for each coating, thinner and/or other additive, and cleaning material used in the coating operation controlled by the solvent recovery system during the month, kg volatile organic matter per kg coating. You may determine the volatile organic matter mass fraction using EPA Method 24 of 40 CFR part 60, appendix A–7, ASTM D2369–10 (Reapproved 2015)e, (incorporated by reference, *see* § 63.14), or an EPA approved alternative method, or you may use information provided by the manufacturer or supplier of the coating. In the event of any inconsistency between information provided by the manufacturer or supplier and the results of EPA Method 24 of 40 CFR part 60, appendix A–7, ASTM D2369–10 (Reapproved 2015)e, or an approved alternative method, the test method results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

* * * * *

■ 30. Section 63.3963 is amended by revising paragraph (f) and adding paragraph (i) to read as follows:

§ 63.3963 How do I demonstrate continuous compliance with the emission limitations?

* * * * *

(f) As part of each semiannual compliance report required in § 63.3920, you must identify the coating operation(s) for which you used the emission rate with add-on controls option. If there were no deviations from the emission limits in § 63.3890, the operating limits in § 63.3892, and the work practice standards in § 63.3893, submit a statement that you were in compliance with the emission limitations during the reporting period because the organic HAP emission rate for each compliance period was less than or equal to the applicable emission limit in § 63.3890, and you achieved the operating limits required by § 63.3892 and the work practice standards required by § 63.3893 during each compliance period.

* * * * *

(i) On and after [date 181 days after date of publication of final rule in the **Federal Register**], deviations that occur due to malfunction of the emission capture system, add-on control device, or coating operation that may affect emission capture or control device efficiency are required to operate in accordance with § 63.3900(b). The Administrator will determine whether the deviations are violations according to the provisions in § 63.3900(b).

* * * * *

■ 31. Section 63.3964 is amended by revising paragraphs (a) introductory text and (a)(1) to read as follows:

§ 63.3964 What are the general requirements for performance tests?

(a) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must conduct each performance test required by § 63.3960 according to the requirements in § 63.7(e)(1) and under the conditions in this section, unless you obtain a waiver of the performance test according to the provisions in § 63.7(h). On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must conduct each performance test required by § 63.3960 according to the requirements in this section unless you obtain a waiver of the performance test according to the provisions in § 63.7(h).

(1) *Representative coating operation operating conditions.* You must conduct the performance test under representative operating conditions for the coating operation. Operations during periods of startup, shutdown, or periods of nonoperation do not constitute representative conditions for purposes of conducting a performance test. The owner or operator may not conduct performance tests during periods of malfunction. You must record the process information that is necessary to document operating conditions during the test and explain why the conditions represent normal operation. Upon request, you must make available to the Administrator such records as may be necessary to determine the conditions of performance tests.

* * * * *

■ 32. Section 63.3965 is amended by revising the introductory text to read as follows:

§ 63.3965 How do I determine the emission capture system efficiency?

You must use the procedures and test methods in this section to determine capture efficiency as part of each performance test required by § 63.3960.

* * * * *

■ 33. Section 63.3966 is amended by revising the introductory text and paragraph (b) to read as follows:

§ 63.3966 How do I determine the add-on control device emission destruction or removal efficiency?

You must use the procedures and test methods in this section to determine the add-on control device emission destruction or removal efficiency as part of the performance test required by § 63.3960. For each performance test, you must conduct three test runs as specified in § 63.7(e)(3) and each test run must last at least 1 hour. If the source is a magnet wire coating machine, you may use the procedures in section 3.0 of appendix A to this subpart as an alternative.

* * * * *

(b) Measure total gaseous organic mass emissions as carbon at the inlet and outlet of the add-on control device simultaneously, using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60.

(1) Use EPA Method 25 of appendix A–7 to 40 CFR part 60 if the add-on

control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be more than 50 parts per million (ppm) at the control device outlet.

(2) Use EPA Method 25A of appendix A–7 to 40 CFR part 60 if the add-on control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be 50 ppm or less at the control device outlet.

(3) Use EPA Method 25A of appendix A–7 to 40 CFR part 60 if the add-on control device is not an oxidizer.

(4) You may use EPA Method 18 of appendix A–6 to 40 CFR part 60 to subtract methane emissions from measured total gaseous organic mass emissions as carbon.

* * * * *

■ 34. Section 63.3967 is amended by revising paragraphs (a)(1) and (2), (b)(1) through (3), (d)(1) and (2), and (e)(1) through (4) to read as follows:

§ 63.3967 How do I establish the emission capture system and add-on control device operating limits during the performance test?

* * * * *

(a) * * *

(1) During performance tests, you must monitor and record the combustion temperature at least once every 15 minutes during each of the three test runs. You must monitor the temperature in the firebox of the thermal oxidizer or immediately downstream of the firebox before any substantial heat exchange occurs.

(2) For each performance test, use the data collected during the performance test to calculate and record the average combustion temperature maintained during the performance test. This average combustion temperature is the minimum operating limit for your thermal oxidizer.

(b) * * *

(1) During performance tests, you must monitor and record the temperature just before the catalyst bed and the temperature difference across the catalyst bed at least once every 15 minutes during each of the three test runs.

(2) For each performance test, use the data collected during the performance test to calculate and record the average temperature just before the catalyst bed and the average temperature difference across the catalyst bed maintained during the performance test. These are the minimum operating limits for your catalytic oxidizer.

(3) You must monitor the temperature at the inlet to the catalyst bed and implement a site-specific inspection and maintenance plan for your catalytic oxidizer as specified in paragraph (b)(4) of this section. During the performance test, you must monitor and record the temperature just before the catalyst bed at least once every 15 minutes during each of the three test runs. For each performance test, use the data collected during the performance test to calculate and record the average temperature just before the catalyst bed during the performance test. This is the minimum operating limit for your catalytic oxidizer.

* * * * *

(d) * * *

(1) During performance tests, you must monitor and record the condenser outlet (product side) gas temperature at least once every 15 minutes during each of the three test runs.

(2) For each performance test, use the data collected during the performance test to calculate and record the average condenser outlet (product side) gas temperature maintained during the performance test. This average condenser outlet gas temperature is the maximum operating limit for your condenser.

(e) * * *

(1) During performance tests, you must monitor and record the desorption concentrate stream gas temperature at least once every 15 minutes during each of the three runs of the performance test.

(2) For each performance test, use the data collected during the performance test to calculate and record the average temperature. This is the minimum operating limit for the desorption concentrate gas stream temperature.

(3) During performance tests, you must monitor and record the pressure drop of the dilute stream across the concentrator at least once every 15 minutes during each of the three runs of the performance test.

(4) For each performance test, use the data collected during the performance test to calculate and record the average pressure drop. This is the minimum operating limit for the dilute stream across the concentrator.

* * * * *

■ 35. Section 63.3968 is amended by revising paragraphs (a)(4), (5), and (7) and (c)(3) introductory text to read as follows:

§ 63.3968 What are the requirements for continuous parameter monitoring system installation, operation, and maintenance?

(a) * * *

(4) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must maintain the CPMS at all times and have available necessary parts for routine repairs of the monitoring equipment. On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must maintain the CPMS at all times in accordance with § 63.3900(b) and keep necessary parts readily available for routine repairs of the monitoring equipment.

(5) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times that a controlled coating operation is operating, except during monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, if applicable, calibration checks and required zero and span adjustments). On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times in accordance with § 63.3900(b).

* * * * *

(7) A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the CPMS to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions. Before [date 181 days after date of publication of final rule in the **Federal Register**], any period for which the monitoring system is out-of-control and data are not available for required calculations is a deviation from the monitoring requirements. On and after [date 181 days after date of publication of final rule in the **Federal Register**], except for periods of required quality assurance or control activities, any period for which the CPMS fails to operate and record data continuously as required by paragraph (a)(5) of this section, or generates data that cannot be included in calculating averages as specified in (a)(6) of this section constitutes a deviation from the monitoring requirements.

* * * * *

(c) * * *

(3) For all thermal oxidizers and catalytic oxidizers, you must meet the requirements in paragraphs (a) and (c)(3)(i) through (v) of this section for each gas temperature monitoring device. For the purposes of this paragraph (c)(3), a thermocouple is part of the temperature sensor.

* * * * *

■ 36. Section 63.3981 is amended by revising the definitions of ''*Deviation*'' and ''*Non-HAP coating*'' to read as follows:

§ 63.3981 What definitions apply to this subpart?

* * * * *

Deviation means:

(1) Before [date 181 days after date of publication in the **Federal Register**], any instance in which an affected source subject to this subpart, or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to, any emission limit or operating limit or work practice standard;

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit; or

(iii) Fails to meet any emission limit, or operating limit, or work practice standard in this subpart during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by this subpart; and

(2) On and after [date 181 days after date of publication of final rule in the **Federal Register**], any instance in which an affected source subject to this subpart or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to any emission limit, operating limit, or work practice standard; or

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit.

* * * * *

Non-HAP coating means, for the purposes of this subpart, a coating that contains no more than 0.1 percent by mass of any individual organic HAP that is listed in Table 5 to this subpart and no more than 1.0 percent by mass for any other individual HAP.

* * * * *

■ 37. Table 2 to Subpart MMMM of part 63 is revised to read as follows:

TABLE 2 TO SUBPART MMMM OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART MMMM OF PART 63

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart MMMM	Explanation
§ 63.1(a)(1)–(14)	General Applicability	Yes.	
§ 63.1(b)(1)–(3)	Initial Applicability Determination	Yes	Applicability to subpart MMMM is also specified in § 63.3881.
§ 63.1(c)(1)	Applicability After Standard Established.	Yes.	
§ 63.1(c)(2)–(3)	Applicability of Permit Program for Area Sources.	No	Area sources are not subject to subpart MMMM.
§ 63.1(c)(4)–(5)	Extensions and Notifications	Yes.	
§ 63.1(e)	Applicability of Permit Program Before Relevant Standard is Set.	Yes.	
§ 63.2	Definitions	Yes	Additional definitions are specified in § 63.3981.
§ 63.1(a)–(c)	Units and Abbreviations	Yes.	
§ 63.4(a)(1)–(5)	Prohibited Activities	Yes.	
§ 63.4(b)–(c)	Circumvention/Severability	Yes.	
§ 63.5(a)	Construction/Reconstruction	Yes.	
§ 63.5(b)(1)–(6)	Requirements for Existing Newly Constructed, and Reconstructed Sources.	Yes.	
§ 63.5(d)	Application for Approval of Construction/Reconstruction.	Yes.	
§ 63.5(e)	Approval of Construction/Reconstruction.	Yes.	
§ 63.5(f)	Approval of Construction/Reconstruction Based on Prior State Review.	Yes.	
§ 63.6(a)	Compliance With Standards and Maintenance Requirements—Applicability.	Yes.	
§ 63.6(b)(1)–(7)	Compliance Dates for New and Reconstructed Sources.	Yes	Section 63.3883 specifies the compliance dates.
§ 63.6(c)(1)–(5)	Compliance Dates for Existing Sources.	Yes	Section 63.3883 specifies the compliance dates.
§ 63.6(e)(1)–(2)	Operation and Maintenance	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3900(b) for general duty requirement.
§ 63.6(e)(3)	Startup, Shutdown, and Malfunction Plan.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	

TABLE 2 TO SUBPART MMMM OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART MMMM OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart MMMM	Explanation
§ 63.6(f)(1)	Compliance Except During Start-up, Shutdown, and Malfunction.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.6(f)(2)–(3)	Methods for Determining Compliance..	Yes.	
§ 63.6(g)(1)–(3)	Use of an Alternative Standard	Yes.	
§ 63.6(h)	Compliance With Opacity/Visible Emission Standards.	No	Subpart MMMM does not establish opacity standards and does not require continuous opacity monitoring systems (COMS).
§ 63.6(i)(1)–(16)	Extension of Compliance	Yes.	
§ 63.6(j)	Presidential Compliance Exemption.	Yes.	
§ 63.7(a)(1)	Performance Test Requirements—Applicability.	Yes	Applies to all affected sources. Additional requirements for performance testing are specified in §§ 63.3964, 63.3965, and 63.3966.
§ 63.7(a)(2)	Performance Test Requirements—Dates.	Yes	Applies only to performance tests for capture system and control device efficiency at sources using these to comply with the standard. Section 63.3960 specifies the schedule for performance test requirements that are earlier than those specified in § 63.7(a)(2).
§ 63.7(a)(3)–(4)	Performance Tests Required By the Administrator, Force Majeure.	Yes.	
§ 63.7(b)–(d)	Performance Test Requirements—Notification, Quality Assurance, Facilities Necessary for Safe Testing, Conditions During Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standard.
§ 63.7(e)(1)	Conduct of Performance Tests	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* §§ 63.3964
§ 63.7(e)(2)–(4)	Conduct of Performance Tests	Yes.	
§ 63.7(f)	Performance Test Requirements—Use of Alternative Test Method.	Yes	Applies to all test methods except those used to determine capture system efficiency.
§ 63.7(g)–(h)	Performance Test Requirements—Data Analysis, Recordkeeping, Reporting, Waiver of Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standard.
§ 63.8(a)(1)–(3)	Monitoring Requirements—Applicability.	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standard. Additional requirements for monitoring are specified in § 63.3968.
§ 63.8(a)(4)	Additional Monitoring Requirements.	No	Subpart MMMM does not have monitoring requirements for flares.
§ 63.8(b)	Conduct of Monitoring	Yes.	

TABLE 2 TO SUBPART MMMM OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART MMMM OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart MMMM	Explanation
§ 63.8(c)(1)	Continuous Monitoring System (CMS) Operation and Maintenance.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	Section 63.3968 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(2)–(3)	CMS Operation and Maintenance	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standard. Additional requirements for CMS operations and maintenance are specified in § 63.3968.
§ 63.8(c)(4)	CMS	No	§ 63.3968 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(5)	COMS	No	Subpart MMMM does not have opacity or visible emission standards.
§ 63.8(c)(6)	CMS Requirements	No	Section 63.3968 specifies the requirements for monitoring systems for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(7)	CMS Out-of-Control Periods	Yes.	
§ 63.8(c)(8)	CMS Out-of-Control Periods and Reporting.	No	§ 63.3920 requires reporting of CMS out-of-control periods.
§ 63.8(d)–(e)	Quality Control Program and CMS Performance Evaluation.	No	Subpart MMMM does not require the use of continuous emissions monitoring systems.
§ 63.8(f)(1)–(5)	Use of an Alternative Monitoring Method.	Yes.	
§ 63.8(f)(6)	Alternative to Relative Accuracy Test.	No	Subpart MMMM does not require the use of continuous emissions monitoring systems.
§ 63.8(g)(1)–(5)	Data Reduction	No	Sections 63.3967 and 63.3968 specify monitoring data reduction.
§ 63.9(a)–(d)	Notification Requirements	Yes.	
§ 63.9(e)	Notification of Performance Test	Yes	Applies only to capture system and add-on control device performance tests at sources using these to comply with the standard.
§ 63.9(f)	Notification of Visible Emissions/ Opacity Test.	No	Subpart MMMM does not have opacity or visible emissions standards.
§ 63.9(g)(1)–(3)	Additional Notifications When Using CMS.	No	Subpart MMMM does not require the use of continuous emissions monitoring systems.
§ 63.9(h)	Notification of Compliance Status	Yes	Section 63.3910 specifies the dates for submitting the notification of compliance status.
§ 63.9(i)	Adjustment of Submittal Deadlines.	Yes.	
§ 63.9(j)	Change in Previous Information	Yes.	
§ 63.10(a)	Recordkeeping/Reporting—Applicability and General Information.	Yes.	
§ 63.10(b)(1)	General Recordkeeping Requirements.	Yes	Additional requirements are specified in §§ 63.3930 and 63.3931.
§ 63.10(b)(2)(i)–(ii)	Recordkeeping of Occurrence and Duration of Startups and Shutdowns and of Failures to Meet Standards.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3930(j).

TABLE 2 TO SUBPART MMMM OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART MMMM OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart MMMM	Explanation
§ 63.10(b)(2)(iii)	Recordkeeping Relevant to Maintenance of Air Pollution Control and Monitoring Equipment.	Yes	§ 63.10(b)(2)(iii)
§ 63.10(b)(2) (iv)–(v)	Actions Taken to Minimize Emissions During Startup, Shutdown, and Malfunction.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3930(j) for a record of actions taken to minimize emissions duration a deviation from the standard.
§ 63.10(b)(2) (vi)	Recordkeeping for CMS Malfunctions.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3930(j) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.
§ 63.10(b)(2) (xii)	Records	Yes.	
§ 63.10(b)(2) (xiii)		No	Subpart MMMM does not require the use of continuous emissions monitoring systems.
§ 63.10(b)(2) (xiv)		Yes.	
§ 63.10(b)(3)	Recordkeeping Requirements for Applicability Determinations.	Yes.	
§ 63.10(c) (1)–(6)	Additional Recordkeeping Requirements for Sources with CMS.	Yes.	
§ 63.10(c) (7)–(8)	Additional Recordkeeping Requirements for Sources with CMS.	No	*See* § 63.3930(j) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.
§ 63.10(c)(10)–(14)	Additional Recordkeeping Requirements for Sources with CMS.	Yes.	
§ 63.10(c)(15)	Records Regarding the Startup, Shutdown, and Malfunction Plan.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.10(d)(1)	General Reporting Requirements	Yes	Additional requirements are specified in § 63.3920.
§ 63.10(d)(2)	Report of Performance Test Results.	Yes	Additional requirements are specified in § 63.3920(b) and (d).
§ 63.10(d)(3)	Reporting Opacity or Visible Emissions Observations.	No	Subpart MMMM does not require opacity or visible emissions observations.
§ 63.10(d)(4)	Progress Reports for Sources With Compliance Extensions.	Yes.	
§ 63.10(d)(5)	Startup, Shutdown, and Malfunction Reports.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.3920 (a)(7) and (c).
§ 63.10(e) (1)–(2)	Additional CMS Reports	No	Subpart MMMM does not require the use of continuous emissions monitoring systems.
§ 63.10(e) (3)	Excess Emissions/CMS Performance Reports.	No	Section 63.3920 (b) specifies the contents of periodic compliance reports.
§ 63.10(e) (4)	COMS Data Reports	No	Subpart MMMMM does not specify requirements for opacity or COMS.
§ 63.10(f)	Recordkeeping/Reporting Waiver	Yes.	
§ 63.11	Control Device Requirements/ Flares.	No	Subpart MMMM does not specify use of flares for compliance.
§ 63.12	State Authority and Delegations	Yes.	
§ 63.13	Addresses	Yes.	
§ 63.14	Incorporation by Reference	Yes.	

TABLE 2 TO SUBPART MMMM OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART MMMM OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart MMMM	Explanation
§ 63.15	Availability of Information/Confidentiality.	Yes.	

■ 38. Table 5 to Subpart MMMM of part 63 is added to read as follows:

TABLE 5 TO SUBPART MMMM OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS

Chemical name	CAS No.
1,1,2,2-Tetrachloroethane	79–34–5
1,1,2-Trichloroethane	79–00–5
1,1-Dimethylhydrazine	57–14–7
1,2-Dibromo-3-chloropropane	96–12–8
1,2-Diphenylhydrazine	122–66–7
1,3-Butadiene	106–99–0
1,3-Dichloropropene	542–75–6
1,4-Dioxane	123–91–1
2,4,6-Trichlorophenol	88–06–2
2,4/2,6-Dinitrotoluene (mixture)	25321–14–6
2,4-Dinitrotoluene	121–14–2
2,4-Toluene diamine	95–80–7
2-Nitropropane	79–46–9
3,3′-Dichlorobenzidine	91–94–1
3,3′-Dimethoxybenzidine	119–90–4
3,3′-Dimethylbenzidine	119–93–7
4,4′-Methylene bis(2-chloroaniline)	101–14–4
Acetaldehyde	75–07–0
Acrylamide	79–06–1
Acrylonitrile	107–13–1
Allyl chloride	107–05–1
alpha-Hexachlorocyclohexane (a-HCH)	319–84–6
Aniline	62–53–3
Benzene	71–43–2
Benzidine	92–87–5
Benzotrichloride	98–07–7
Benzyl chloride	100–44–7
beta-Hexachlorocyclohexane (b-HCH)	319–85–7
Bis(2-ethylhexyl)phthalate	117–81–7
Bis(chloromethyl)ether	542–88–1
Bromoform	75–25–2
Captan	133–06–2
Carbon tetrachloride	56–23–5
Chlordane	57–74–9
Chlorobenzilate	510–15–6
Chloroform	67–66–3
Chloroprene	126–99–8
Cresols (mixed)	1319–77–3
DDE	3547–04–4
Dichloroethyl ether	111–44–4
Dichlorvos	62–73–7
Epichlorohydrin	106–89–8
Ethyl acrylate	140–88–5
Ethylene dibromide	106–93–4
Ethylene dichloride	107–06–2
Ethylene oxide	75–21–8
Ethylene thiourea	96–45–7
Ethylidene dichloride (1,1-Dichloroethane)	75–34–3
Formaldehyde	50–00–0
Heptachlor	76–44–8
Hexachlorobenzene	118–74–1
Hexachlorobutadiene	87–68–3
Hexachloroethane	67–72–1
Hydrazine	302–01–2
Isophorone	78–59–1
Lindane (hexachlorocyclohexane, all isomers)	58–89–9

TABLE 5 TO SUBPART MMMM OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS—Continued

Chemical name	CAS No.
m-Cresol	108–39–4
Methylene chloride	75–09–2
Naphthalene	91–20–3
Nitrobenzene	98–95–3
Nitrosodimethylamine	62–75–9
o-Cresol	95–48–7
o-Toluidine	95–53–4
Parathion	56–38–2
p-Cresol	106–44–5
p-Dichlorobenzene	106–46–7
Pentachloronitrobenzene	82–68–8
Pentachlorophenol	87–86–5
Propoxur	114–26–1
Propylene dichloride	78–87–5
Propylene oxide	75–56–9
Quinoline	91–22–5
Tetrachloroethene	127–18–4
Toxaphene	8001–35–2
Trichloroethylene	79–01–6
Trifluralin	1582–09–8
Vinyl bromide	593–60–2
Vinyl chloride	75–01–4
Vinylidene chloride	75–35–4

Subpart NNNN—National Emission Standards for Hazardous Air Pollutants: Surface Coating of Large Appliances

■ 39. Section 63.4168 is amended by adding paragraphs (c)(3)(i) through (vii) to read as follows:

§ 63.4168 What are the requirements for continuous parameter monitoring system installation, operation, and maintenance?

* * * * *

(c) * * *

(3) * * *

(i) Locate the temperature sensor in a position that provides a representative temperature.

(ii) Use a temperature sensor with a measurement sensitivity of 4 degrees Fahrenheit or 0.75 percent of the temperature value, whichever is larger.

(iii) Shield the temperature sensor system from electromagnetic interference and chemical contaminants.

(iv) If a gas temperature chart recorder is used, it must have a measurement sensitivity in the minor division of at least 20 degrees Fahrenheit.

(v) Perform an electronic calibration at least semiannually according to the procedures in the manufacturer's owners manual. Following the electronic calibration, you must conduct a temperature sensor validation check in which a second or redundant temperature sensor placed nearby the process temperature sensor must yield a reading within 30 degrees Fahrenheit of the process temperature sensor's reading.

(vi) Any time the sensor exceeds the manufacturer's specified maximum operating temperature range, either conduct calibration and validation checks or install a new temperature sensor.

(vii) At least monthly, inspect components for integrity and electrical connections for continuity, oxidation, and galvanic corrosion.

* * * * *

Subpart OOOO—National Emission Standards for Hazardous Air Pollutants: Printing, Coating, and Dyeing of Fabrics and Other Textiles

■ 40. Section 63.4371 is amended by revising the definition for ''*No organic HAP*'' to read as follows:

§ 63.4371 What definitions apply to this subpart?

* * * * *

No organic HAP means no organic HAP in Table 5 to this subpart is present at 0.1 percent by mass or more and no organic HAP not listed in Table 5 to this subpart is present at 1.0 percent by mass or more. The organic HAP content of a regulated material is determined according to § 63.4321(e)(1).

* * * * *

Subpart PPPP—National Emission Standards for Hazardous Air Pollutants for Surface Coating of Plastic Parts and Products

■ 41. Section 63.4492 is amended by revising paragraph (b) to read as follows:

§ 63.4492 What operating limits must I meet?

* * * * *

(b) For any controlled coating operation(s) on which you use the emission rate with add-on controls option, except those for which you use a solvent recovery system and conduct a liquid-liquid material balance according to § 63.4561(j), you must meet the operating limits specified in Table 1 to this subpart. These operating limits apply to the emission capture and control systems on the coating operation(s) for which you use this option, and you must establish the operating limits during the performance tests required in § 63.4560 according to the requirements in § 63.4567. You must meet the operating limits established during the most recent performance tests required in § 63.4560 at all times after you establish them.

* * * * *

■ 42. Section 63.4500 is amended by revising paragraphs (a)(2)(i) and (ii), (b), and (c) to read as follows:

§ 63.4500 What are my general requirements for complying with this subpart?

(a) * * *

(2) * * *

(i) The coating operation(s) must be in compliance with the applicable emission limit in § 63.4490 at all times.

(ii) The coating operation(s) must be in compliance with the operating limits for emission capture systems and add-on control devices required by § 63.4492 at all times, except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.4561(j).

* * * * *

(b) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must always operate and maintain your affected source, including all air pollution control and monitoring equipment you use for purposes of complying with this subpart, according to the provisions in § 63.6(e)(1)(i). On and after [date 181 days after date of publication of final rule in the **Federal Register**], at all times, the owner or operator must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require the owner or operator to make any further efforts to reduce emissions if levels required by the applicable standard have been achieved. Determination of whether a source is operating in compliance with operation and maintenance requirements will be based on information available to the Administrator that may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the affected source.

(c) Before [date 181 days after date of publication of final rule in the **Federal Register**], if your affected source uses an emission capture system and add-on control device, you must develop a written startup, shutdown, and malfunction plan (SSMP) according to the provisions in § 63.6(e)(3). The plan must address the startup, shutdown, and corrective actions in the event of a malfunction of the emission capture system or the add-on control device. The plan must also address any coating operation equipment that may cause increased emissions or that would affect capture efficiency if the process equipment malfunctions, such as conveyors that move parts among enclosures. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the SSMP is not required.

■ 43. Section 63.4520 is amended by:

■ a. Revising paragraphs (a)(5) introductory text and (a)(5)(i) and (iv);

■ b. Adding paragraph (a)(5)(v);

■ c. Revising paragraph (a)(6) introductory text and (a)(6)(iii);

■ d. Adding paragraph (a)(6)(iv);

■ e. Revising paragraph (a)(7) introductory text, (a)(7)(iii), (a)(7)(vi) through (viii), (a)(7)(x), and (a)(7)(xiii) and (xiv);

■ f. Adding paragraph (a)(7)(xv);

■ g. Revising paragraph (c) introductory text; and

■ h. Adding paragraphs (d) through (h).

The revisions and additions read as follows:

§ 63.4520 What reports must I submit?

(a) * * *

(5) *Deviations: Compliant material option.* If you used the compliant material option and there was a deviation from the applicable organic HAP content requirements in § 63.4490, the semiannual compliance report must contain the information in paragraphs (a)(5)(i) through (v) of this section.

(i) Identification of each coating used that deviated from the applicable emission limit, and each thinner and/or other additive, and cleaning material used that contained organic HAP, and the date, time, and duration each was used.

* * * * *

(iv) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation (including unknown cause, if applicable).

(v) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations and, for each deviation, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.4490, a description of the method used to estimate the emissions, and the actions you took to minimize emissions in accordance with § 63.4500(b).

(6) *Deviations: Emission rate without add-on controls option.* If you used the emission rate without add-on controls option and there was a deviation from the applicable emission limit in § 63.4490, the semiannual compliance report must contain the information in paragraphs (a)(6)(i) through (iv) of this section.

* * * * *

(iii) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation (including unknown cause, if applicable).

(iv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations, date, time, duration, a list of the affected source or equipment, an estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.4490, a description of the method used to estimate the emissions, and the actions you took to minimize emissions in accordance with § 63.4500(b).

(7) *Deviations: Emission rate with add-on controls option.* If you used the emission rate with add-on controls option and there was a deviation from the applicable emission limit in § 63.4490 or the applicable operating limit(s) in Table 1 to this subpart (including any periods when emissions bypassed the add-on control device and were diverted to the atmosphere), before [date 181 days after date of publication of final rule in the **Federal Register**], the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (xiv) of this section. This includes periods of startup, shutdown, and malfunction during which deviations occurred. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the semiannual compliance report must contain the information in paragraphs (a)(7)(i) through (xii), (a)(7)(xiv), and (a)(7)(xv) of this section. If you use the emission rate with add-on controls option and there was a deviation from the applicable work practice standards in § 63.4493(b), the semiannual compliance report must contain the information in paragraph (a)(7)(xiii) of this section.

* * * * *

(iii) The date and time that each malfunction of the capture system or add-on control devices started and stopped.

* * * * *

(vi) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time that each CPMS was inoperative, except for zero (low-level) and high-level checks. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of instances that the CPMS was inoperative, and for each instance, except for zero (low-level) and high-level checks, the date, time, and duration that the CPMS was inoperative;

the cause (including unknown cause) for the CPMS being inoperative; and the actions you took to minimize emissions in accordance with § 63.4500(b).

(vii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date, time, and duration that each CPMS was out-of-control, including the information in § 63.8(c)(8). On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of instances that the CPMS was out of control as specified in § 63.8(c)(7) and, for each instance, the date, time, and duration that the CPMS was out-of-control; the cause (including unknown cause) for the CPMS being out-of-control; and descriptions of corrective actions taken.

(viii) Before [date 181 days after date of publication of final rule in the **Federal Register**], the date and time period of each deviation from an operating limit in Table 1 to this subpart; date and time period of any bypass of the add-on control device; and whether each deviation occurred during a period of startup, shutdown, or malfunction or during another period. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the number of deviations from an operating limit in Table 1 to this subpart and, for each deviation, the date, time, and duration of each deviation; the date, time, and duration of any bypass of the add-on control device.

* * * * *

(x) Before [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from the operating limits in Table 1 of this subpart and bypasses of the add-on control device during the semiannual reporting period into those that were due to startup, shutdown, control equipment problems, process problems, other known causes, and other unknown causes. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a breakdown of the total duration of the deviations from the operating limits in Table 1 to this subpart and bypasses of the add-on control device during the semiannual reporting period into those that were due to control equipment problems, process problems, other known causes, and other unknown causes.

* * * * *

(xiii) Before [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from the work practice standards, a description of the deviation, the date and time period of the deviation, and the actions you took to correct the deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from the work practice standards, the number of deviations, and, for each deviation, the information in paragraphs (a)(7)(xiii)(A) and (B) of this section:

(A) A description of the deviation; the date, time, and duration of the deviation; and the actions you took to minimize emissions in accordance with § 63.4500(b).

(B) The description required in paragraph (a)(7)(xiii)(A) of this section must include a list of the affected sources or equipment for which a deviation occurred and the cause of the deviation (including unknown cause, if applicable.

(xiv) Before [date 181 days after date of publication of final rule in the **Federal Register**], a statement of the cause of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for deviations from an emission limit in § 63.4490 or an operating limit in Table 1 to this subpart, a statement of the cause of each deviation (including unknown cause, if applicable) and the actions you took to minimize emissions in accordance with § 63.4500(b).

(xv) On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limit in § 63.4490 or operating limit in Table 1 to this subpart, a list of the affected sources or equipment for which a deviation occurred, an estimate of the quantity of each regulated pollutant emitted over any emission limit in § 63.4490 or operating limit in Table 1 to this subpart, and a description of the method used to estimate the emissions.

* * * * *

(c) *Startup, shutdown, malfunction reports.* Before [date 181 days after date of publication of final rule in the **Federal Register**], if you used the emission rate with add-on controls option and you had a startup, shutdown, or malfunction during the semiannual reporting period, you must submit the reports specified in paragraphs (c)(1) and (2) of this section. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the reports specified in paragraphs (c)(1) and (2) of this section are not required.

* * * * *

(d) On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must submit the results of the performance tests required in § 63.4560 following the procedure specified in paragraphs (d)(1) through (3) of this section.

(1) For data collected using test methods supported by the EPA's Electronic Reporting Tool (ERT) as listed on the EPA's ERT website (*https://www.epa.gov/electronic-reporting-air-emissions/electronic-reporting-tool-ert*) at the time of the test, you must submit the results of the performance test to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov/*). Performance test data must be submitted in a file format generated through the use of the EPA's ERT or an alternate electronic file format consistent with the XML schema listed on the EPA's ERT website.

(2) For data collected using test methods that are not supported by the EPA's ERT as listed on the EPA's ERT website at the time of the test, you must submit the results of the performance test to the Administrator at the appropriate address listed in § 63.13, unless the Administrator agrees to or specifies an alternate reporting method.

(3) If you claim that some of the performance test information being submitted under paragraph (d)(1) of this section is CBI, you must submit a complete file generated through the use of the EPA's ERT or an alternate electronic file consistent with the XML schema listed on the EPA's ERT website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium must be clearly marked as CBI and mailed to U.S. EPA/OAPQS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same ERT or alternate file with the CBI omitted must be submitted to the EPA via the EPA's CDX as described in paragraph (d)(1) of this section.

(e) On and after [date 181 days after date of publication of final rule in the **Federal Register**], the owner or operator shall submit the initial notifications required in § 63.9(b) and the notification of compliance status required in § 63.9(h) and § 63.4510(c) to the EPA via the CEDRI. The CEDRI interface can be accessed through the EPA's CDX (*https://cdx.epa.gov/*). The owner or operator must upload to CEDRI an electronic copy of each applicable notification in portable document format (PDF). The applicable notification must be submitted by the deadline specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the XML schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(f) On and after [date 181 days after date of publication of final rule in the **Federal Register**], or once the reporting template has been available on the CEDRI website for 1 year, whichever date is later, the owner or operator shall submit the semiannual compliance report required in paragraph (a) of this section to the EPA via the CEDRI. (CEDRI can be accessed through the EPA's CDX (*https://cdx.epa.gov/*)). The owner or operator must use the appropriate electronic template on the CEDRI website for this subpart or an alternate electronic file format consistent with the XML schema listed on the CEDRI website (*https://www.epa.gov/electronic-reporting-air-emissions/compliance-and-emissions-data-reporting-interface-cedri*). The date report templates become available will be listed on the CEDRI website. If the reporting form for the semiannual compliance report specific to this subpart is not available in CEDRI at the time that the report is due, you must submit the report to the Administrator at the appropriate addresses listed in § 63.13. Once the form has been available in CEDRI for 1 year, you must begin submitting all subsequent reports via CEDRI. The reports must be submitted by the deadlines specified in this subpart, regardless of the method in which the reports are submitted. Owners or operators who claim that some of the information required to be submitted via CEDRI is CBI shall submit a complete report generated using the appropriate form in CEDRI or an alternate electronic file consistent with the XML schema listed on the EPA's CEDRI website, including information claimed to be CBI, on a compact disc, flash drive, or other commonly used electronic storage medium to the EPA. The electronic medium shall be clearly marked as CBI and mailed to U.S. EPA/OAQPS/CORE CBI Office, Attention: Group Leader, Measurement Policy Group, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same file with the CBI omitted shall be submitted to the EPA via the EPA's CDX as described earlier in this paragraph.

(g) If you are required to electronically submit a report through the CEDRI in the EPA's CDX, and due to a planned or actual outage of either the EPA's CEDRI or CDX systems within the period of time beginning 5 business days prior to the date that the submission is due, you will be or are precluded from accessing CEDRI or CDX and submitting a required report within the time prescribed, you may assert a claim of EPA system outage for failure to timely comply with the reporting requirement. You must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description identifying the date, time and length of the outage; a rationale for attributing the delay in reporting beyond the regulatory deadline to the EPA system outage; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the report must be submitted electronically as soon as possible after the outage is resolved. The decision to accept the claim of EPA system outage and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

(h) If you are required to electronically submit a report through CEDRI in the EPA's CDX and a force majeure event is about to occur, occurs, or has occurred or there are lingering effects from such an event within the period of time beginning 5 business days prior to the date the submission is due, the owner or operator may assert a claim of force majeure for failure to timely comply with the reporting requirement. For the purposes of this section, a force majeure event is defined as an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents you from complying with the requirement to submit a report electronically within the time period prescribed. Examples of such events are acts of nature (*e.g.,* hurricanes, earthquakes, or floods), acts of war or terrorism, or equipment failure or safety hazard beyond the control of the affected facility (*e.g.,* large scale power outage). If you intend to assert a claim of force majeure, you must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or caused a delay in reporting. You must provide to the Administrator a written description of the force majeure event and a rationale for attributing the delay in reporting beyond the regulatory deadline to the force majeure event; describe the measures taken or to be taken to minimize the delay in reporting; and identify a date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported. In any circumstance, the reporting must occur as soon as possible after the force majeure event occurs. The decision to accept the claim of force majeure and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

■ 44. Section 63.4530 is amended by revising paragraphs (h), (i) introductory text, and (i)(1) and (2) to read as follows:

§ 63.4530 What records must I keep?

* * * * *

(h) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must keep records of the date, time, and duration of each deviation. On and after [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation from an emission limitation reported under § 63.4520(a)(5) through (7), a record of the information specified in paragraphs (h)(1) through (4) of this section, as applicable.

(1) The date, time, and duration of the deviation, as reported under § 63.4520(a)(5) through (7).

(2) A list of the affected sources or equipment for which the deviation occurred and the cause of the deviation, as reported under § 63.4520(a)(5) through (7).

(3) An estimate of the quantity of each regulated pollutant emitted over any applicable emission limit in § 63.4490 or any applicable operating limit in Table 1 to this subpart, and a description of the method used to calculate the estimate, as reported under § 63.4520(a)(5) through (7).

(4) A record of actions taken to minimize emissions in accordance with § 63.4500(b) and any corrective actions taken to return the affected unit to its normal or usual manner of operation.

(i) If you use the emission rate with add-on controls option, you must also keep the records specified in paragraphs (i)(1) through (8) of this section.

(1) Before [date 181 days after date of publication of final rule in the **Federal Register**], for each deviation, a record of whether the deviation occurred during a period of startup, shutdown, or malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], a record of whether the deviation occurred during a period of startup, shutdown, or malfunction is not required.

(2) Before [date 181 days after date of publication of final rule in the **Federal Register**], the records in § 63.6(e)(3)(iii) through (v) related to startup, shutdown, and malfunction. On and after [date 181 days after date of publication of final rule in the **Federal Register**], the records in § 63.6(e)(3)(iii) through (v) related to startup, shutdown, and malfunction are not required.

* * * * *

■ 45. Section 63.4531 is amended by revising paragraph (a) to read as follows:

§ 63.4531 In what form and for how long must I keep my records?

(a) Your records must be in a form suitable and readily available for expeditious review, according to § 63.10(b)(1). Where appropriate, the records may be maintained as electronic spreadsheets or as a database. On and after [date 181 days after date of publication of final rule in the **Federal Register**], any records required to be maintained by this subpart that are in reports that were submitted electronically via the EPA's CEDRI may be maintained in electronic format. This ability to maintain electronic copies does not affect the requirement for facilities to make records, data, and reports available upon request to a delegated air agency or the EPA as part of an on-site compliance evaluation.

* * * * *

■ 46. Section 63.4541 is amended by revising paragraphs (a)(1)(i) and (a)(2) and (4) to read as follows:

§ 63.4541 How do I demonstrate initial compliance with the emission limitations?

* * * * *

(a) * * *

(1) * * *

(i) Count each organic HAP in Table 5 to this subpart that is measured to be present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 to this subpart) is measured to be 0.5 percent of the material by mass, you do not have to count it. Express the mass fraction of each organic HAP you count as a value truncated to four places after the decimal point (*e.g.,* 0.3791).

* * * * *

(2) *EPA Method 24 (appendix A–7 to 40 CFR part 60).* For coatings, you may use EPA Method 24 to determine the mass fraction of nonaqueous volatile matter and use that value as a substitute for mass fraction of organic HAP. As an alternative to using EPA Method 24, you may use ASTM D2369–10 (Reapproved 2015)^{e} (incorporated by reference, *see* § 63.14). For reactive adhesives in which some of the HAP react to form solids and are not emitted to the atmosphere, you may use the alternative method contained in appendix A to this subpart, rather than EPA Method 24. You may use the volatile fraction that is emitted, as measured by the alternative method in appendix A to this subpart, as a substitute for the mass fraction of organic HAP.

* * * * *

(4) *Information from the supplier or manufacturer of the material.* You may rely on information other than that generated by the test methods specified in paragraphs (a)(1) through (3) of this section, such as manufacturer's formulation data, if it represents each organic HAP in Table 5 to this subpart that is present at 0.1 percent by mass or more and at 1.0 percent by mass or more for other compounds. For example, if toluene (not listed in Table 5 to this subpart) is 0.5 percent of the material by mass, you do not have to count it. For reactive adhesives in which some of the HAP react to form solids and are not emitted to the atmosphere, you may rely on manufacturer's data that expressly states the organic HAP or volatile matter mass fraction emitted. If there is a disagreement between such information and results of a test conducted according to paragraphs (a)(1) through (3) of this section, then the test method results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

* * * * *

■ 47. Section 63.4551 is amended by revising paragraph (c) to read as follows:

§ 63.4551 How do I demonstrate initial compliance with the emission limitations?

* * * * *

(c) *Determine the density of each material.* Determine the density of each liquid coating, thinner and/or other additive, and cleaning material used during each month from test results using ASTM D1475–13 or ASTM D2111–10 (Reapproved 2015) (both incorporated by reference, *see* § 63.14), information from the supplier or manufacturer of the material, or reference sources providing density or specific gravity data for pure materials. If there is disagreement between ASTM D1475–13 or ASTM D2111–10 (2015) and other such information sources, the test results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct. If you purchase materials or monitor consumption by weight instead of volume, you do not need to determine material density. Instead, you may use the material weight in place of the combined terms for density and volume in Equations 1A, 1B, 1C, and 2 of this section.

* * * * *

■ 48. Section 63.4560 is amended by revising the section heading and paragraphs (a)(1) and (4), (b)(1), and (c) introductory text to read as follows:

§ 63.4560 By what date must I conduct performance tests and initial compliance demonstrations?

(a) * * *

(1) All emission capture systems, add-on control devices, and CPMS must be installed and operating no later than the applicable compliance date specified in § 63.4483. Except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.4561(j), you must conduct according to the schedule in paragraphs (a)(1)(i) and (ii) of this section initial and periodic performance tests of each capture system and add-on control device according to the procedures in §§ 63.4564, 63.4565, and 63.4566 and establish the operating limits required by § 63.4492. For a solvent recovery system for which you conduct liquid-liquid material balances according to § 63.4561(j), you must initiate the first material balance no later than the applicable compliance date specified in § 63.4483.

(i) You must conduct the initial performance test and establish the operating limits required by § 63.4492 no later than 180 days after the applicable compliance date specified in § 63.4483.

(ii) You must conduct periodic performance tests and establish the operating limits required by § 63.4492 within 5 years following the previous performance test. You must conduct the first periodic performance test before [date 3 years after date of publications of final rule in the **Federal Register**], unless you are already required to complete periodic performance tests as a requirement of renewing your facility's operating permit under 40 CFR part 70 or 40 CFR part 71 and have conducted a performance test on or after [date 2 years before date of publications of final rule in the **Federal Register**]. Thereafter you must conduct a performance test no later than 5 years following the previous performance test. Operating limits must be confirmed or reestablished during each performance test. For any control device for which you are using the catalytic oxidizer control option at § 63.4567(b) and following the catalyst maintenance procedures in § 63.4567(b)(4), you are not required to conduct periodic control device performance testing as specified by this paragraph. For any control device for which instruments are used to continuously measure organic compound emissions, you are not required to conduct periodic control device performance testing as specified by this paragraph.

* * * * *

(4) For the initial compliance demonstration, you do not need to comply with the operating limits for the emission capture system and add-on control device required by § 63.4492 until after you have completed the initial performance tests specified in paragraph (a)(1) of this section. Instead, you must maintain a log detailing the operation and maintenance of the emission capture system, add-on control device, and continuous parameter monitors during the period between the compliance date and the performance test. You must begin complying with the operating limits established based on the initial performance tests specified in paragraph (a)(1) of this section for your affected source on the date you complete the performance tests. The requirements in this paragraph (a)(4) do not apply to solvent recovery systems for which you conduct liquid-liquid material balances according to the requirements in § 63.4561(j).

(b) * * *

(1) All emission capture systems, add-on control devices, and CPMS must be installed and operating no later than the applicable compliance date specified in § 63.4483. Except for solvent recovery systems for which you conduct liquid-liquid material balances according to § 63.4561(j), you must conduct according to the schedule in paragraphs (b)(1)(i) and (ii) of this section initial and periodic performance tests of each capture system and add-on control device according to the procedures in §§ 63.4564, 63.4565, and 63.4566 and establish the operating limits required by § 63.4492. For a solvent recovery system for which you conduct liquid-liquid material balances according to § 63.4561(j), you must initiate the first material balance no later than the compliance date specified in § 63.4483.

(i) You must conduct the initial performance test and establish the operating limits required by § 63.4492 no later than 180 days after the applicable compliance date specified in § 63.4483.

(ii) You must conduct periodic performance tests and establish the operating limits required by § 63.4492 within 5 years following the previous performance test. You must conduct the first periodic performance test before [date 3 years after date of publications of final rule in the **Federal Register**], unless you are already required to complete periodic performance tests as a requirement of renewing your facility's operating permit under 40 CFR part 70 or 40 CFR part 71 and have conducted a performance test on or after [date 2 years before date of publications of final rule in the **Federal Register**]. Thereafter you must conduct a performance test no later than 5 years following the previous performance test. Operating limits must be confirmed or reestablished during each performance test. For any control device for which you are using the catalytic oxidizer control option at § 63.4567(b) and following the catalyst maintenance procedures in § 63.4567(b)(4), you are not required to conduct periodic control device performance testing as specified by this paragraph. For any control device for which instruments are used to continuously measure organic compound emissions, you are not required to conduct periodic control device performance testing as specified by this paragraph.

* * * * *

(c) You are not required to conduct an initial performance test to determine capture efficiency or destruction efficiency of a capture system or control device if you receive approval to use the results of a performance test that has been previously conducted on that capture system or control device. Any such previous tests must meet the conditions described in paragraphs (c)(1) through (3) of this section. You are still required to conduct a periodic performance test according to the applicable requirements of paragraphs (a)(1)(ii) and (b)(2)(ii) of this section.

* * * * *

■ 49. Section 63.4561 is amended by revising paragraphs (j)(3) and (n) to read as follows:

§ 63.4561 How do I demonstrate initial compliance?

* * * * *

(j) * * *

(3) Determine the mass fraction of volatile organic matter for each coating, thinner and/or other additive, and cleaning material used in the coating operation controlled by the solvent recovery system during the month, kg volatile organic matter per kg coating. You may determine the volatile organic matter mass fraction using EPA Method 24 of 40 CFR part 60, appendix A–7, ASTM D2369–10 (Reapproved 2015)^e (incorporated by reference, *see* § 63.14), or an EPA approved alternative method. Alternatively, you may determine the volatile organic matter mass fraction using information provided by the manufacturer or supplier of the coating. In the event of any inconsistency between information provided by the manufacturer or supplier and the results of EPA Method 24 of 40 CFR part 60, appendix A–7, ASTM D2369–10 (Reapproved 2015)^e, or an approved alternative method, the test method results will take precedence unless, after consultation you demonstrate to the satisfaction of the enforcement agency that the formulation data are correct.

* * * * *

(n) *Compliance demonstration.* The organic HAP emission rate for the initial compliance period, calculated using Equation 5 of this section, must be less than or equal to the applicable emission limit for each subcategory in § 63.4490 or the predominant activity or facility-specific emission limit allowed in § 63.4490(c). You must keep all records as required by §§ 63.4530 and 63.4531. As part of the notification of compliance status required by § 63.4510, you must identify the coating operation(s) for which you used the emission rate with add-on controls option and submit a statement that the coating operation(s) was (were) in compliance with the emission limitations during the initial compliance period because the organic HAP emission rate was less than or equal to the applicable emission limit in § 63.4490, and for control devices other than solvent recovery system using a liquid-liquid material balance, you achieved the operating limits required by § 63.4492 and the work practice standards required by § 63.4493.

■ 50. Section 63.4563 is amended by revising paragraph (f) and adding paragraph (g) to read as follows:

§ 63.4563 How do I demonstrate continuous compliance with the emission limitations?

* * * * *

(f) As part of each semiannual compliance report required in § 63.4520, you must identify the coating operation(s) for which you used the emission rate with add-on controls option. If there were no deviations from the emission limits in § 63.4490, the operating limits in § 63.34492, and the work practice standards in § 63.4493, submit a statement that you were in compliance with the emission limitations during the reporting period because the organic HAP emission rate for each compliance period was less than or equal to the applicable emission limit in § 63.4490, and you achieved the operating limits required by § 63.4492 and the work practice standards required by § 63.4493 during each compliance period.

(g) On and after [date 181 days after date of publication of final rule in the **Federal Register**], deviations that occur due to malfunction of the emission capture system, add-on control device, or coating operation that may affect emission capture or control device efficiency are required to operate in accordance with § 63.4500(b). The Administrator will determine whether the deviations are violations according to the provisions in § 63.4500(b).

* * * * *

■ 51. Section 63.4564 is amended by revising paragraphs (a) introductory text and (a)(1) to read as follows:

§ 63.4564 What are the general requirements for performance tests?

(a) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must conduct each performance test required by § 63.4560 according to the requirements in § 63.7(e)(1) and under the conditions in this section, unless you obtain a waiver of the performance test according to the provisions in § 63.7(h). On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must conduct each performance test required by § 63.4560 according to the requirements in this section unless you obtain a waiver of the performance test according to the provisions in § 63.7(h).

(1) Representative coating operation operating conditions. You must conduct the performance test under representative operating conditions for the coating operation. Operations during periods of startup, shutdown, or nonoperation do not constitute representative conditions for purposes of conducting a performance test. The owner or operator may not conduct performance tests during periods of malfunction. You must record the process information that is necessary to document operating conditions during the test and explain why the conditions represent normal operation. Upon request, you must make available to the Administrator such records as may be necessary to determine the conditions of performance tests.

* * * * *

■ 52. Section 63.4565 is amended by revising the introductory text to read as follows:

§ 63.4565 How do I determine the emission capture system efficiency?

You must use the procedures and test methods in this section to determine capture efficiency as part of each performance test required by § 63.4560.

* * * * *

■ 53. Section 63.4566 is amended by revising the introductory text and paragraphs (a)(1) through (4) and (b) to read as follows:

§ 63.4566 How do I determine the add-on control device emission destruction or removal efficiency?

You must use the procedures and test methods in this section to determine the add-on control device emission destruction or removal efficiency as part of the performance test required by § 63.4560. For each performance test, you must conduct three test runs as specified in § 63.7(e)(3) and each test run must last at least 1 hour.

(a) * * *

(1) Use EPA Method 1 or 1A of appendix A–1 to 40 CFR part 60, as appropriate, to select sampling sites and velocity traverse points.

(2) Use EPA Method 2, 2A, 2C, 2D, or 2F of appendix A–1 to 40 CFR part 60, or 2G of appendix A–2 to 40 CFR part 60, as appropriate, to measure gas volumetric flow rate.

(3) Use EPA Method 3, 3A, or 3B of appendix A–2 to 40 CFR part 60, as appropriate, for gas analysis to determine dry molecular weight.

(4) Use EPA Method 4 of appendix A–3 to 40 CFR part 60, to determine stack gas moisture.

* * * * *

(b) Measure total gaseous organic mass emissions as carbon at the inlet and outlet of the add-on control device simultaneously, using either EPA Method 25 or 25A of appendix A–7 to 40 CFR part 60.

(1) Use EPA Method 25 of appendix A–7 if the add-on control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be more than 50 parts per million (ppm) at the control device outlet.

(2) Use EPA Method 25A of appendix A–7 if the add-on control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be 50 ppm or less at the control device outlet.

(3) Use EPA Method 25A of appendix A–7 if the add-on control device is not an oxidizer.

(4) You may use EPA Method 18 in appendix A–6 of part 60 to subtract methane emissions from measured total gaseous organic mass emissions as carbon.

* * * * *

■ 54. Section 63.4567 is amended by revising the introductory text and paragraphs (a)(1) and (2), (b)(1) through (3), (c)(1), (d)(1) and (2), and (e)(1) through (4) to read as follows:

§ 63.4567 How do I establish the emission capture system and add-on control device operating limits during the performance test?

During performance tests required by § 63.4560 and described in §§ 63.4564, 63.4565, and 63.4566, you must establish the operating limits required by § 63.4492 according to this section, unless you have received approval for alternative monitoring and operating limits under § 63.8(f) as specified in § 63.4492.

(a) * * *

(1) During performance tests, you must monitor and record the combustion temperature at least once every 15 minutes during each of the three test runs. You must monitor the temperature in the firebox of the thermal oxidizer or immediately downstream of the firebox before any substantial heat exchange occurs.

(2) For each performance test, use the data collected during the performance test to calculate and record the average combustion temperature maintained during the performance test. This average combustion temperature is the minimum operating limit for your thermal oxidizer.

(b) * * *

(1) During performance tests, you must monitor and record the temperature just before the catalyst bed and the temperature difference across the catalyst bed at least once every 15 minutes during each of the three test runs.

(2) For each performance test, use the data collected during the performance test to calculate and record the average temperature just before the catalyst bed and the average temperature difference across the catalyst bed maintained during the performance test. These are the minimum operating limits for your catalytic oxidizer.

(3) You must monitor the temperature at the inlet to the catalyst bed and implement a site-specific inspection and maintenance plan for your catalytic oxidizer as specified in paragraph (b)(4) of this section. During performance

tests, you must monitor and record the temperature just before the catalyst bed at least once every 15 minutes during each of the three test runs. For each performance test, use the data collected during the performance test to calculate and record the average temperature just before the catalyst bed during the performance test. This is the minimum operating limit for your catalytic oxidizer.

* * * * *

(c) * * *

(1) During performance tests, you must monitor and record the total regeneration desorbing gas (*e.g.,* steam or nitrogen) mass flow for each regeneration cycle, and the carbon bed temperature after each carbon bed regeneration and cooling cycle for the regeneration cycle either immediately preceding or immediately following the performance test.

* * * * *

(d) * * *

(1) During performance tests, you must monitor and record the condenser outlet (product side) gas temperature at least once every 15 minutes during each of the three test runs of the performance test.

(2) For each performance test, use the data collected during the performance test to calculate and record the average condenser outlet (product side) gas temperature maintained during the performance test. This average condenser outlet gas temperature is the maximum operating limit for your condenser.

(e) * * *

(1) During performance tests, you must monitor and record the desorption concentrate stream gas temperature at least once every 15 minutes during each of the three runs of the performance test.

(2) For each performance test, use the data collected during the performance test to calculate and record the average temperature. This is the minimum operating limit for the desorption concentrate gas stream temperature.

(3) During each performance test, you must monitor and record the pressure drop of the dilute stream across the concentrator at least once every 15 minutes during each of the three runs of the performance test.

(4) For each performance test, use the data collected during the performance test to calculate and record the average pressure drop. This is the minimum operating limit for the dilute stream across the concentrator.

* * * * *

■ 55. Section 63.4568 is amended by revising paragraphs (a)(4), (5), and (7) and (c)(3) introductory text to read as follows:

§ 63.4568 What are the requirements for continuous parameter monitoring system installation, operation, and maintenance?

(a) * * *

(4) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must maintain the CPMS at all times and have available necessary parts for routine repairs of the monitoring equipment. On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must maintain the CPMS at all times in accordance with § 63.4500(b) and keep necessary parts readily available for routine repairs of the monitoring equipment.

(5) Before [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times that a controlled coating operation is operating, except during monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, if applicable, calibration checks and required zero and span adjustments). On and after [date 181 days after date of publication of final rule in the **Federal Register**], you must operate the CPMS and collect emission capture system and add-on control device parameter data at all times in accordance with § 63.4500(b).

* * * * *

(7) A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the CPMS to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions. Before [date 181 days after date of publication of final rule in the **Federal Register**], any period for which the monitoring system is out-of-control and data are not available for required calculations is a deviation from the monitoring requirements. On and after [date 181 days after date of publication of final rule in the **Federal Register**], except for periods of required quality assurance or control activities, any period for which the CPMS fails to operate and record data continuously as required by paragraph (a)(5) of this section, or generates data that cannot be included in calculating averages as specified in (a)(6) of this section constitutes a deviation from the monitoring requirements.

* * * * *

(c) * * *

(3) For all thermal oxidizers and catalytic oxidizers, you must meet the requirements in paragraphs (a) and (c)(3)(i) through (v) of this section for each gas temperature monitoring device. For the purposes of this paragraph (c)(3), a thermocouple is part of the temperature sensor.

* * * * *

■ 56. Section 63.4581 is amended by revising the definitions of ''*Deviation*'' and ''*Non-HAP coating*'' to read as follows:

§ 63.4581 What definitions apply to this subpart?

* * * * *

Deviation means:

(1) Before [date 181 days after date of publication of final rule in the **Federal Register**], any instance in which an affected source subject to this subpart, or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to, any emission limit or operating limit or work practice standard;

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit; or

(iii) Fails to meet any emission limit, or operating limit, or work practice standard in this subpart during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by this subpart; and

(2) On and after [date 181 days after date of publication of final rule in the **Federal Register**], any instance in which an affected source subject to this subpart or an owner or operator of such a source:

(i) Fails to meet any requirement or obligation established by this subpart including but not limited to any emission limit, operating limit, or work practice standard; or

(ii) Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit.

* * * * *

Non-HAP coating means, for the purposes of this subpart, a coating that contains no more than 0.1 percent by mass of any individual organic HAP that is listed in Table 5 to this subpart and no more than 1.0 percent by mass for any other individual HAP.

* * * * *

■ 57. Table 2 to Subpart PPPP of part 63 is revised to read as follows:

TABLE 2 TO SUBPART PPPP OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART PPPP OF PART 63

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart PPPP	Explanation
§ 63.1(a)(1)–(12)	General Applicability	Yes.	
§ 63.1(b)(1)–(3)	Initial Applicability Determination	Yes	Applicability to subpart PPPP is also specified in § 63.4481.
§ 63.1(c)(1)	Applicability After Standard Established.	Yes.	
§ 63.1(c)(2)	Applicability of Permit Program for Area Sources.	No	Area sources are not subject to subpart PPPP.
§ 63.1(c)(5)	Extensions and Notifications	Yes.	
§ 63.1(e)	Applicability of Permit Program Before Relevant Standard is Set.	Yes.	
§ 63.2	Definitions	Yes	Additional definitions are specified in § 63.4581.
§ 63.3	Units and Abbreviations	Yes.	
§ 63.4(a)(1)–(2)	Prohibited Activities	Yes.	
§ 63.4(b)–(c)	Circumvention/Fragmentation	Yes.	
§ 63.5(a)	Construction/Reconstruction	Yes.	
§ 63.5(b)(1), (3), (4), (6)	Requirements for Existing, Newly Constructed, and Reconstructed Sources.	Yes.	
§ 63.5(d)(1)(i)\(ii)(F), (d)(1)(ii)(H), (d)(1)(ii)(J), (d)(1)(iii), (d)(2)–(4).	Application for Approval of Construction/Reconstruction.	Yes.	
§ 63.5(e)	Approval of Construction/Reconstruction.	Yes.	
§ 63.5(f)	Approval of Construction/Reconstruction Based on Prior State Review.	Yes.	
§ 63.6(a)	Compliance With Standards and Maintenance Requirements—Applicability.	Yes.	
§ 63.6(b)(1)–(5), (b)(7)	Compliance Dates for New and Reconstructed Sources.	Yes	Section 63.4483 specifies the compliance dates.
§ 63.6(c)(1), (2), (5)	Compliance Dates for Existing Sources.	Yes	Section 63.4483 specifies the compliance dates.
§ 63.6(e)(1)(i)–(ii)	Operation and Maintenance	Yes before [date 181 days after date of publication of final rule in the **Federal Register**] No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4500(b) for general duty requirement.
§ 63.6(e)(1)(iii)	Operation and Maintenance	Yes.	
§ 63.6(e)(3)(i), (e)(3)(iii)–(ix)	Startup, Shutdown, and Malfunction Plan (SSMP).	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.6(f)(1)	Compliance Except During Startup, Shutdown, and Malfunction.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.6(f)(2)–(3)	Methods for Determining Compliance.	Yes.	
§ 63.6(g)	Use of an Alternative Standard	Yes.	
§ 63.6(h)	Compliance With Opacity/Visible Emission Standards.	No	Subpart PPPP does not establish opacity standards and does not require continuous opacity monitoring systems (COMS).
§ 63.6(i)(1)–(14), (16)	Extension of Compliance	Yes.	
§ 63.6(j)	Presidential Compliance Exemption.	Yes.	
§ 63.7(a)(1)	Performance Test Requirements—Applicability.	Yes	Applies to all affected sources. Additional requirements for performance testing are specified in §§ 63.4564, 63.4565, and 63.4566.

TABLE 2 TO SUBPART PPPP OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART PPPP OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart PPPP	Explanation
§ 63.7(a)(2), except (a)(2)(i)–(viii)	Performance Test Requirements—Dates.	Yes	Applies only to performance tests for capture system and control device efficiency at sources using these to comply with the standards. Section 63.4560 specifies the schedule for performance test requirements that are earlier than those specified in § 63.7(a)(2).
§ 63.7(a)(3)–(4)	Performance Tests Required By the Administrator, Force Majeure.	Yes.	
§ 63.7(b)–(d)	Performance Test Requirements—Notification, Quality Assurance, Facilities Necessary for Safe Testing, Conditions During Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standards.
§ 63.7(e)(1)	Conduct of Performance Tests	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4500 and § 63.4564(a).
§ 63.7(e)(2)–(4)	Conduct of Performance Tests	Yes.	
§ 63.7(f)	Performance Test Requirements—Use Alternative Test Method.	Yes	Applies to all test methods except those of used to determine capture system efficiency.
§ 63.7(g)–(h)	Performance Test Requirements—Data Analysis, Recordkeeping, Reporting, Waiver of Test.	Yes	Applies only to performance tests for capture system and add-on control device efficiency at sources using these to comply with the standards.
§ 63.8(a)(1)–(2)	Monitoring Requirements—Applicability.	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standards. Additional requirements for monitoring are specified in § 63.4568.
§ 63.8(a)(4)	Additional Monitoring Requirements.	No	Subpart PPPP does not have monitoring requirements for flares.
§ 63.8(b)	Conduct of Monitoring	Yes.	
§ 63.8(c)(1)	Continuous Monitoring System (CMS) Operation and Maintenance.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	Section 63.4568 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(2)–(3)	CMS Operation and Maintenance	Yes	Applies only to monitoring of capture system and add-on control device efficiency at sources using these to comply with the standard. Additional requirements for CMS operations and maintenance are specified in § 63.4568.
§ 63.8(c)(4)	CMS	No	Section 63.4568 specifies the requirements for the operation of CMS for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(5)	COMS	No	Subpart PPPP does not have opacity or visible emission standards.

TABLE 2 TO SUBPART PPPP OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART PPPP OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart PPPP	Explanation
§ 63.8(c)(6)	CMS Requirements	No	Section 63.4568 specifies the requirements for monitoring systems for capture systems and add-on control devices at sources using these to comply.
§ 63.8(c)(7)	CMS Out-of-Control Periods	Yes.	
§ 63.8(c)(8)	CMS Out-of-Control Periods and Reporting.	No	Section 63.4520 requires reporting of CMS out-of-control periods.
§ 63.8(d)–(e)	Quality Control Program and CMS Performance Evaluation.	No	Subpart PPPP does not require the use of continuous emissions monitoring systems.
§ 63.8(f)(1)–(5)	Use of an Alternative Monitoring Method.	Yes.	
§ 63.8(f)(6)	Alternative to Relative Accuracy Test.	No	Subpart PPPP does not require the use of continuous emissions monitoring systems.
§ 63.8(g)	Data Reduction	No	Sections 63.4567 and 63.4568 specify monitoring data reduction.
§ 63.9(a)–(d)	Notification Requirments	Yes.	
§ 63.9(e)	Notification of Performance Test	Yes	Applies only to capture system and add-on control device performance tests at sources using these to comply with the standards.
§ 63.9(f)	Notification of Visible Emissions/Opacity Test.	No	Subpart PPPP does not have opacity or visible emission standards.
§ 63.9(g)	Additional Notifications When Using CMS.	No	Subpart PPPP does not require the use of continuous emissions monitoring systems.
§ 63.9(h)(1)–(3), (5)–(6)	Notification of Compliance Status	Yes	Section 63.4510 specifies the dates for submitting the notification of compliance status.
§ 63.9(i)	Adjustment of Submittal Deadlines.	Yes.	
§ 63.9(j)	Change in Previous Information	Yes.	
§ 63.10(a)	Recordkeeping/Reporting—Applicability and General Information.	Yes.	
§ 63.10(b)(1)	General Recordkeeping Requirements.	Yes	Additional requirements are specified in §§ 63.4530 and 63.4531.
§ 63.10(b)(2)(i)–(ii)	Recordkeeping of Occurrence and Duration of Startups and Shutdowns and of Failures to Meet Standards.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4530(h).
§ 63.10(b)(2)(iii)	Recordkeeping Relevant to Maintenance of Air Pollution Control and Monitoring Equipment.	Yes.	
§ 63.10(b)(2)(iv)–(v)	Actions Taken to Minimize Emissions During Startup, Shutdown, and Malfunction.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4530(h)(4) for a record of actions taken to minimize emissions during a deviation from the standard.
§ 63.10(b)(2)(vi)	Recordkeeping for CMS Malfunctions.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4530(h) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.
§ 63.10(b)(2)(vii)–(xii)	Records	Yes.	
§ 63.10(b)(2)(xiii)		No	Subpart PPPP does not require the use of continuous emissions monitoring systems.
§ 63.10(b)(2)(xiv)		Yes.	

TABLE 2 TO SUBPART PPPP OF PART 63—APPLICABILITY OF GENERAL PROVISIONS TO SUBPART PPPP OF PART 63—Continued

You must comply with the applicable General Provisions requirements according to the following table:

Citation	Subject	Applicable to subpart PPPP	Explanation
§ 63.10(b)(3)	Recordkeeping Requirements for Applicability Determinations.	Yes.	
§ 63.10(c)(1),(5)–(6)	Additional Recordkeeping Requirements for Sources with CMS.	Yes.	
§ 63.10(c)(7)–(8)	Additional Recordkeeping Requirements for Sources with CMS.	No	*See* § 63.4530(h) for records of periods of deviation from the standard, including instances where a CMS is inoperative or out-of-control.
§ 63.10(c)(10)–(14)	Additional Recordkeeping Requirements for Sources with CMS.	Yes.	
§ 63.10(c)(15)	Records Regarding the Startup, Shutdown, and Malfunction Plan.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	
§ 63.10(d)(1)	General Reporting Requirements	Yes	Additional requirements are specified in § 63.4520.
§ 63.10(d)(2)	Report of Performance Test Results.	Yes	Additional requirements are specified in § 63.4520(b).
§ 63.10(d)(3)	Reporting Opacity or Visible Emissions Observations.	No	Subpart PPPP does not require opacity or visible emissions observations.
§ 63.10(d)(4)	Progress Reports for Sources With Compliance Extensions.	Yes.	
§ 63.10(d)(5)	Startup, Shutdown, and Malfunction Reports.	Yes before [date 181 days after date of publication of final rule in the **Federal Register**]. No on and after [date 181 days after date of publication of final rule in the **Federal Register**].	*See* § 63.4520(a)(7).
§ 63.10(e)(1)–(2)	Additional CMS Reports	No	Subpart PPPP does not require the use of continuous emissions monitoring systems.
§ 63.10(e)(3)	Excess Emissions/CMS Performance Reports.	No	Section 63.4520(b) specifies the contents of periodic compliance reports.
§ 63.10(e)(4)	COMS Data Reports	No	Subpart PPPP does not specify requirements for opacity or COMS.
§ 63.10(f)	Recordkeeping/Reporting Waiver	Yes.	
§ 63.11	Control Device Requirements/Flares.	No	Subpart PPPP does not specify use of flares for compliance.
§ 63.12	State Authority and Delegations	Yes.	
§ 63.13	Addresses	Yes.	
§ 63.14	Incorporation by Reference	Yes.	
§ 63.15	Availability of Information/Confidentiality.	Yes.	

■ 58. Table 5 to Subpart PPPP of part 63 is added to read as follows:

TABLE 5 TO SUBPART PPPP OF PART 63—LIST OF HAZARDOUS AIR POLLUTANTS THAT MUST BE COUNTED TOWARD TOTAL ORGANIC HAP CONTENT IF PRESENT AT 0.1 PERCENT OR MORE BY MASS

Chemical name	CAS No.
1,1,2,2-Tetrachloroethane	79–34–5
1,1,2-Trichloroethane	79–00–5
1,1-Dimethylhydrazine	57–14–7
1,2-Dibromo-3-chloropropane	96–12–8
1,2-Diphenylhydrazine	122–66–7
1,3-Butadiene	106–99–0
1,3-Dichloropropene	542–75–6

Subpart RRRR—National Emission Standards for Hazardous Air Pollutants: Surface Coating of Metal Furniture

■ 59. Section 63.4965 is amended by adding paragraphs (b)(1) through (3) to read as follows:

§ 63.4965 How do I determine the add-on control device emission destruction or removal efficiency?

* * * * *

(b) * * *

(1) Use EPA Method 25 if the add-on control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be more than 50 parts per million (ppm) at the control device outlet.

(2) Use EPA Method 25A if the add-on control device is an oxidizer and you expect the total gaseous organic concentration as carbon to be 50 ppm or less at the control device outlet.

(3) Use EPA Method 25A if the add-on control device is not an oxidizer.

Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations; Final Rule

FEDERAL RESERVE SYSTEM

12 CFR Parts 217, 225, 238, 242, and 252

[Regulations Q, Y, LL, PP, and YY; Docket No. R–1658]

RIN 7100–AF 45

Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations

AGENCY: Board of Governors of the Federal Reserve System (Board).

ACTION: Final rule.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a final rule that establishes risk-based categories for determining prudential standards for large U.S. banking organizations and foreign banking organizations, consistent with section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, as amended by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA), and with the Home Owners' Loan Act. The final rule amends certain prudential standards, including standards relating to liquidity, risk management, stress testing, and single-counterparty credit limits, to reflect the risk profile of banking organizations under each category; applies prudential standards to certain large savings and loan holding companies using the same categories; makes corresponding changes to reporting forms; and makes additional modifications to the Board's company-run stress test and supervisory stress test rules, consistent with section 401 of EGRRCPA. Separately, the Office of the Comptroller of the Currency (OCC), the Board, and the Federal Deposit Insurance Corporation (FDIC) are adopting a final rule that revises the criteria for determining the applicability of regulatory capital and standardized liquidity requirements for large U.S. banking organizations and the U.S. intermediate holding companies of foreign banking organizations, using a risk-based category framework that is consistent with the framework described in this final rule. In addition, the Board and the FDIC are separately adopting a final rule that amends the resolution planning requirements under section 165(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act using a risk-based category framework that is consistent with the framework described in this final rule.

DATES: The final rule is effective December 31, 2019.

I. Introduction

In 2018 and 2019, the Board of Governors of the Federal Reserve System (Board) sought comment on two separate proposals to revise the framework for determining application of prudential standards to large banking organizations. First, on October 31, 2018, the Board sought comment on a proposal to revise the criteria for determining the application of prudential standards for U.S. banking organizations with $100 billion or more in total consolidated assets (domestic proposal).[1] Then, on April 8, 2019, the Board sought comment on a proposal to revise the criteria for determining the application of prudential standards for foreign banking organizations with total consolidated assets of $100 billion or more (foreign bank proposal, and, together with the domestic proposal, the proposals).[2]

[1] *See https://www.federalreserve.gov/newsevents/pressreleases/bcreg20181031a.htm;* Prudential Standards for Large Bank Holding Companies and Savings and Loan Holding Companies, 83 FR 61408 (Nov. 29, 2018).

[2] *See https://www.federalreserve.gov/newsevents/pressreleases/bcreg20190408a.htm;* Prudential Standards for Large Foreign Banking Organizations; Revisions to Proposed Prudential Standards for Large Domestic Bank Holding Companies and Savings and Loan Holding Companies, 84 FR 21988 (May 15, 2019). Foreign banking organization means a foreign bank that operates a branch, agency, or commercial lending company subsidiary

The Board is finalizing the framework set forth under the proposals, with certain adjustments.[3] Specifically, the final rule revises the thresholds for application of prudential standards to large banking organizations and tailors the stringency of these standards based on the risk profiles of these firms. For U.S. banking organizations with $100 billion or more in total consolidated assets and foreign banking organizations with $100 billion or more in combined U.S. assets, the final rule establishes four categories of prudential standards. The most stringent set of standards (Category I) applies to U.S. global systemically important bank holding companies (U.S. GSIBs) based on the methodology in the Board's GSIB surcharge rule.[4] The remaining categories of standards apply to U.S. and foreign banking organizations based on indicators of a firm's size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. The framework set forth in the final rule will be used throughout the Board's prudential standards framework for large banking organizations.

In connection with a proposal on which the Board sought comment in January 2019, and consistent with EGRRCPA, this final rule also revises the minimum asset threshold for state member banks to conduct stress tests, revises the frequency by which state member banks would be required to conduct stress tests, and removes the adverse scenario from the list of required scenarios in the Board's stress test rules. This final rule also makes conforming changes to the Board's Policy Statement on the Scenario Design Framework for Stress Testing.[5]

Concurrently with this final rule, the Board, with the Office of the Comptroller of the Currency (OCC) and Federal Deposit Insurance Corporation (FDIC) (together, the agencies), is separately finalizing amendments to the agencies' regulatory capital rule and liquidity coverage ratio (LCR) rule, to introduce the same risk-based categories for tailoring standards (the interagency capital and liquidity final rule). The Board and FDIC are also finalizing changes to the resolution planning requirements (resolution plan final rule) that would adopt the same risk-based category framework.

II. Background

The financial crisis revealed significant weaknesses in resiliency and risk management in the financial sector, and demonstrated how the failure or distress of large, leveraged, and interconnected financial companies, including foreign banking organizations, could pose a threat to U.S. financial stability. To address weaknesses in the banking sector that were evident in the financial crisis, the Board strengthened prudential standards for large U.S. and foreign banking organizations. These enhanced standards included capital planning requirements; supervisory and company-run stress testing; liquidity risk management, stress testing, and buffer requirements; and single-counterparty credit limits. The Board's enhanced standards also implemented section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), which directed the Board to establish enhanced prudential standards for bank holding companies and foreign banking organizations with total consolidated assets of $50 billion or more.[6]

The Board has calibrated the stringency of requirements based on the size and complexity of a banking organization. Regulatory capital requirements, such as the GSIB capital surcharge, advanced approaches capital requirements, enhanced supplementary leverage ratio standards for U.S. GSIBs,[7] as well as the requirements under the capital plan rule,[8] are examples of this tailoring.[9] For foreign banking organizations, the Board tailored enhanced standards based, in part, on the size and complexity of a foreign banking organization's activities in the United States. The standards applicable to foreign banking organizations with a more limited U.S. presence largely rely on compliance with comparable home-country standards applied at the consolidated foreign parent level. In comparison, a foreign banking organization with a significant U.S. presence is subject to enhanced prudential standards and supervisory expectations that generally apply to its combined U.S. operations.[10]

The Board regularly reviews its regulatory framework to update and streamline regulatory requirements based on its experience implementing the rules and consistent with the statutory provisions that motivated the rules. These efforts include assessing the impact of regulations as well as considering alternatives that achieve regulatory objectives while improving the simplicity, transparency, and efficiency of the regulatory regime. The final rule is the result of this practice and reflects amendments to section 165 of the Dodd-Frank Act made by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA).[11]

Specifically, EGRRCPA amended section 165 of the Dodd-Frank Act by raising the threshold for general application of enhanced prudential standards. By taking into consideration a broader range of risk-based indicators and establishing four categories of standards, the final rule enhances the risk sensitivity and efficiency of the Board's regulatory framework. This approach better aligns the prudential standards applicable to large banking organizations with their risk profiles, taking into account the size and complexity of these banking organizations as well as their potential

in the United States; controls a bank in the United States; or controls an Edge corporation acquired after March 5, 1987; and any company of which the foreign bank is a subsidiary. *See* 12 CFR 211.21(o); 12 CFR 252.2. An agency is place of business of a foreign bank, located in any state, at which credit balances are maintained, checks are paid, money is lent, or, to the extent not prohibited by state or federal law, deposits are accepted from a person or entity that is not a citizen or resident of the United States. A branch is a place of business of a foreign bank, located in any state, at which deposits are received and that is not an agency. *See* 12 CFR 211.21(b) and (e).

[3] On January 8, 2019, the Board also issued a proposal that would revise the stress testing requirements that were proposed in the domestic proposal for certain savings and loan holding companies. *See https://www.federalreserve.gov/newsevents/pressreleases/bcreg20190108a.htm;* Regulations LL and YY; Amendments to the Company-Run and Supervisory Stress Test Rules, 84 FR 4002 (Feb. 19, 2019). This final rule adopts those proposed changes, with certain adjustments.

[4] 12 CFR 217.403.

[5] *See* 12 CFR part 252, appendix A. The proposals would have revised the scope of applicability of the capital plan rule to apply to U.S. bank holding companies and U.S. intermediate holding companies with $100 billion or more in assets. In addition, the proposals would have revised the definition of large and noncomplex bank holding company to mean banking organizations subject to Category IV standards. The Board received a number of comments about its capital requirements. While the Board intends separately to propose modifications at a future date to capital planning requirements to incorporate the proposed risk-based categories, the final rule revises the scope of applicability of the Board's capital plan rule to apply to U.S. bank holding companies and U.S. intermediate holding companies with $100 billion or more in total assets. This final rule does not revise the definition of large and noncomplex bank holding company.

[6] 12 U.S.C. 5365.

[7] 12 CFR 217.11.

[8] 12 CFR 225.8.

[9] For example, prior to the adoption of this final rule, heightened capital requirements and full LCR requirements applied to firms with $250 billion or more in total consolidated assets or $10 billion or more in on-balance sheet foreign exposure, including the requirement to calculate regulatory capital requirements using internal models and meeting a minimum supplementary leverage ratio requirement.

[10] The combined U.S. operations of a foreign banking organization include any U.S. subsidiaries (including any U.S. intermediate holding company), U.S. branches, and U.S. agencies.

to pose systemic risk. The final rule also maintains the fundamental reforms of the post-crisis framework and supports large banking organizations' resilience.

III. Overview of the Notices of Proposed Rulemaking and General Summary of Comments

As noted above, the Board sought comment on two separate proposals to establish a framework for determining the prudential standards that would apply to large banking organizations. Specifically, the proposals would have calibrated requirements for large banking organizations using four risk-based categories. Category I would have been based on the methodology in the Board's GSIB surcharge rule for identification of U.S. GSIBs, while Categories II through IV would have been based on measures of size and the levels of the following indicators: Cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure (together with size, the risk-based indicators). The applicable standards would have included supervisory and company-run stress testing; risk committee and risk management requirements; liquidity risk management, stress testing, and buffer requirements; and single-counterparty credit limits. Foreign banking organizations with $100 billion or more in total consolidated assets that do not meet the thresholds for application of Category II, Category III, or Category IV standards due to their limited U.S. presence would have been subject to requirements that largely defer to compliance with similar home-country standards at the consolidated level, with the exception of certain risk-management standards.

The proposals would have applied to U.S. banking organizations, foreign banking organizations, and certain large savings and loan holding companies using the same categories, with some differences particular to foreign banking organizations. Specifically, while the foreign bank proposal was largely consistent with the domestic proposal, it would have included certain adjustments to reflect the unique structures through which foreign banking organizations operate in the United States. As Category I standards under the domestic proposal would have applied only to U.S. GSIBs, foreign banking organizations would have been subject to standards in Categories II, III, or IV. The foreign bank proposal based the requirements of Categories II, III, and IV on the risk profile of a foreign banking organization's combined U.S. operations or U.S. intermediate holding company, as measured by the level of the same risk-based indicators as under the domestic proposal. However, in order to reflect the structural differences between foreign banking organizations' operations in the United States and domestic holding companies, the foreign bank proposal would have adjusted the measurement of cross-jurisdictional activity to exclude inter-affiliate liabilities and to recognize collateral in calculating inter-affiliate claims.

A. General Summary of Comments

The Board received approximately 50 comments on the proposals from U.S. and foreign banking organizations, public entities, public interest groups, private individuals, and other interested parties.[12] Many commenters supported the proposals as meaningfully tailoring prudential standards. A number of commenters, however, expressed the view that the proposed framework would not have sufficiently aligned the Board's prudential standards with the risk profile of a firm. For example, some commenters on the domestic proposal argued that banking organizations with total consolidated assets of less than $250 billion that do not meet a separate indicator of risk should not be subject to any enhanced standards. Some commenters on both proposals argued that proposed Category II standards were too stringent given the risks indicated by a high level of cross-jurisdictional activity. By contrast, other commenters argued that the proposals would weaken the safety and soundness of large banking organizations and increase risks to U.S. financial stability.

In response to the foreign bank proposal, commenters generally argued that the framework remained too stringent for the risks posed by foreign banking organizations. These commenters also argued that the risk-based indicators would disproportionately and unfairly result in the application of more stringent requirements to foreign banking organizations and, as a result, could disrupt the efficient functioning of financial markets and have negative effects on the U.S. economy. A number of these commenters argued that all risk-based indicators should exclude transactions with affiliates. By contrast, other commenters criticized the foreign bank proposal for reducing the stringency of standards and argued that the proposal understated the financial stability risks posed by foreign banking organizations.

While some commenters argued that the proposed changes went beyond the changes mandated by EGRRCPA, other commenters argued that the proposals did not fully implement EGRRCPA. In addition, several commenters argued that the proposal exceeded the Board's authority under section 165 of the Dodd-Frank Act, as amended by EGRRCPA, and that enhanced standards should not be included in Category IV standards or applied to savings and loan holding companies. Foreign banking organization commenters also argued that the proposals did not adequately take into consideration the principle of national treatment and equality of competitive opportunity, or the extent to which a foreign banking organization is subject on a consolidated basis to home country standards that are comparable to those that are applied to the firm in the United States. As discussed in this **SUPPLEMENTARY INFORMATION**, the final rule largely adopts the proposals, with certain adjustments in response to comments.

IV. Overview of Final Rule

The final rule establishes four categories to apply enhanced standards based on indicators designed to measure the risk profile of a banking organization.[13] The prudential standards are applicable to U.S. bank holding companies, certain savings and loan holding companies, and foreign banking organizations. For U.S. banking organizations and savings and loan holding companies that are not substantially engaged in insurance underwriting or commercial activities (covered savings and loan holding companies), these risk-based indicators are measured at the level of the top-tier holding company. For foreign banking organizations, these risk-based indicators are generally measured at the level of such firms' combined U.S. operations, except for supervisory and company-run stress testing requirements and certain single-counterparty credit limits, which are based on the risk profile of such firms' U.S. intermediate holding companies. In addition, as discussed in the interagency capital and liquidity final rule, regulatory capital and LCR requirements also are based on the risk profile of such firms' U.S. intermediate holding company.

[12] The Board received a number of comments that were not specifically responsive to the proposals. In particular, commenters recommended specific changes related to the Board's supervisory stress test scenarios and stress capital buffer proposal. These comments are not within the scope of this rulemaking, and therefore are not discussed separately in this **SUPPLEMENTARY INFORMATION**.

[13] The final rule also increases the threshold for general application of enhanced prudential standards from $50 billion to $100 billion in total consolidated assets.

Under the final rule, and unchanged from the domestic proposal, the most stringent prudential standards apply to U.S. GSIBs under Category I, as these banking organizations have the potential to pose the greatest risks to U.S. financial stability. Category I includes standards that reflect agreements reached by the Basel Committee on Banking Supervision (BCBS).[14] The existing post-financial crisis framework for U.S. GSIBs has resulted in significant gains in resiliency and risk management. The final rule accordingly maintains the most stringent standards for these firms. For example, U.S. GSIBs are subject to the GSIB capital surcharge and enhanced supplementary leverage ratio standards under the agencies' regulatory capital rule. U.S. GSIBs are also subject to the most stringent stress testing requirements, including annual company-run and supervisory stress testing requirements, as well as the most stringent liquidity standards, including liquidity risk management, stress testing and buffer requirements, as well as single-counterparty credit limits. U.S. GSIBs also will remain subject to the most comprehensive reporting requirements, including the FR Y–14 (capital assessments and stress testing) and daily FR 2052a (complex institution liquidity monitoring report) reporting requirements.

The second set of standards, Category II standards, apply to U.S. banking organizations and foreign banking organizations that have $700 billion or more in total assets,[15] or $75 billion or more in cross-jurisdictional activity, and that do not meet the criteria for Category I. As a result, these standards apply to banking organizations that are very large or have significant international activity. In addition to being subject to current enhanced risk-management requirements, banking organizations subject to Category II standards are subject to annual supervisory stress testing and annual company-run stress testing requirements. These banking organizations also are subject to the FR Y–14 and daily FR 2052a reporting requirements and the most stringent liquidity risk management, stress testing, and buffer requirements. Category II standards also include single-counterparty credit limits.

The third set of standards, Category III standards, apply to U.S. banking organizations and foreign banking organizations that have $250 billion or more in total assets, or $75 billion or more in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposure, and that do not meet the criteria for Category I or II. In addition to being subject to current enhanced risk management requirements, a banking organization subject to Category III standards is subject to annual supervisory stress testing. However, under Category III, a banking organization is required to publicly disclose company-run test results every other year, rather than on an annual basis. These banking organizations are subject to the existing FR Y–14 reporting requirements and the most stringent liquidity risk management, stress testing, and buffer requirements. Under Category III standards, banking organizations are subject to daily or monthly FR 2052a reporting requirements, depending on their levels of weighted short-term wholesale funding. Category III standards also include single-counterparty credit limits.

The fourth category, Category IV standards, apply to U.S. banking organizations and foreign banking organizations that have at least $100 billion in total assets and that do not meet the criteria for Category I, II, or III, as applicable. Category IV standards align with the scale and complexity of these banking organizations but are less stringent than Category I, II, or III standards, which reflects the lower risk profile of these banking organizations relative to other banking organizations with $100 billion or more in total assets. For example, a banking organization subject to Category IV standards is subject to supervisory stress testing every other year, and is not required to conduct and publicly report the results of a company-run stress test. In addition, Category IV standards under the final rule continue to include enhanced liquidity standards, including liquidity risk management, stress testing and buffer requirements, but the final rule reduces the required minimum frequency of liquidity stress tests and granularity of certain liquidity risk-management requirements, commensurate with these firms' size and risk profile.

TABLE I—SCOPING CRITERIA FOR CATEGORIES OF PRUDENTIAL STANDARDS

Category	U.S. banking organizations †	Foreign banking organizations ‡
I	U.S. GSIBs	N/A.
II	$700 billion or more in total assets; or $75 billion or more in cross-jurisdictional activity; do not meet the criteria for Category I.	
III	$250 billion or more in total assets; or $75 billion or more in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposure; do not meet the criteria for Category I or II.	
IV	$100 billion or more in total assets; do not meet the criteria for Category I, II, or III.	

† For a U.S. banking organization, the applicable category of prudential requirements is measured at the level of the top-tier holding company.
‡ For a foreign banking organization, the applicable category of prudential requirements is measured at the level of the combined U.S. operations or U.S. intermediate holding company of the foreign banking organization, depending on the particular standard.

V. Tailoring Framework

This section describes the framework for determining the application of prudential standards under this final rule, including a discussion of comments received on the proposed framework. The final rule largely establishes the framework set forth in the proposals and introduces four

[14] International standards reflect agreements reached by the BCBS as implemented in the United States through notice and comment rulemaking.

[15] Category I–IV standards apply to U.S. banking organizations with $100 billion or more in total consolidated assets and foreign banking organizations with $100 billion or more in combined U.S assets. As discussed above, the risk-based indicators are measured at the level of the top-tier holding company for U.S. banking organizations and at the level of combined U.S. operations or U.S. intermediate holding company for foreign banking organizations. Accordingly, for U.S. banking organizations, total assets means total consolidated assets. For foreign banking organizations, total assets means combined U.S. assets or total consolidated assets of the U.S. intermediate holding company, as applicable. Foreign banking organizations with $100 billion or more in total consolidated assets but with combined U.S. assets of less than $100 billion are subject to less stringent standards than required under Category I–IV. *See* section X of this **SUPPLEMENTARY INFORMATION.**

categories of prudential standards based on certain indicators of risk.

A. Indicators-Based Approach and the Alternative Scoring Methodology

The proposals would have established four categories of prudential standards that would have applied to U.S banking organizations with $100 billion or more in total consolidated assets and three categories of prudential standards that would have applied to foreign banking organizations with $100 billion or more in combined U.S. assets, based on the risk profile of their U.S. operations. The proposals generally would have relied on five risk-based indicators to determine a banking organization's applicable category of standards: Size, cross-jurisdictional activity, nonbank assets, off-balance sheet exposure, and weighted short-term wholesale funding. The proposals also sought comment on an alternative approach that would have used a single, comprehensive score based on the GSIB identification methodology, which is currently used to identify U.S. GSIBs and apply risk-based capital surcharges to these banking organizations (scoring methodology).[16] Under the alternative approach, a banking organization's size and score from the scoring methodology would have been used to determine which category of standards would apply to the banking organization.

Most commenters preferred the proposed indicators-based approach to the scoring methodology for determining the category of standards that would apply to large banking organizations. These commenters stated that the indicators-based approach would be more transparent, less complex, and more appropriate for applying categories of standards to banking organizations that are not U.S. GSIBs. Some commenters also asserted that if the Board used the scoring methodology, the Board should use only method 1. These commenters argued that method 2 would be inappropriate for determining applicable prudential standards on the basis that the denominators to method 2 are fixed, rather than being updated annually. Commenters also asserted that method 2 was calibrated specifically for U.S. GSIBs and, as a result, should not be used to determine prudential standards for other banking organizations.

The final rule adopts the indicators-based approach for applying Category II, III, or IV standards to a banking organization, as this approach provides a simple framework that supports the objectives of risk sensitivity and transparency. Many of the risk-based indicators are used in the agencies' existing regulatory frameworks or are reported by banking organizations. By using indicators that exist or are reported by most banking organizations subject to the final rule, the indicators-based approach limits additional reporting requirements. The Board will continue to use the scoring methodology to apply Category I standards to a U.S. GSIB and its depository institution subsidiaries.[17]

B. Dodd-Frank Act Statutory Framework

The Board received a number of comments discussing the scope of the changes required by EGRRCPA and the Board's authority for implementing certain parts of the proposal. Some commenters argued that EGRRCPA did not require the Board to make any changes to prudential standards applied to bank holding companies and foreign banking organizations with $100 billion or more in total consolidated assets. Conversely, other commenters argued that, in passing EGRRCPA, Congress intended for banking organizations with less than $250 billion in total consolidated assets to be exempt from most enhanced prudential standards under section 165 of the Dodd-Frank Act. These commenters argued that the proposal was not consistent with the revised criteria for applying enhanced prudential standards to bank holding companies with between $100 billion and $250 billion in total consolidated assets provided under section 165(a)(2)(C) of the Dodd-Frank Act. Specifically, commenters argued that EGRRCPA does not permit the Board to apply enhanced prudential standards to a bank holding company with $100 billion or more in total consolidated assets if the bank holding company does not meet a risk-based indicator other than size. Some commenters urged the Board to apply enhanced prudential standards on a case-by-case basis. Foreign banking organization commenters argued that the proposals did not give adequate regard to the principle of national treatment and equality of competitive opportunity. These commenters also argued that the proposals did not appropriately account for home country standards applied to the foreign parent or the capacity of the foreign parent to serve as a source of strength during times of stress. To provide greater recognition of home country standards and parental support, foreign banking organization commenters asserted that standards applied to their U.S. operations should be discounted relative to the standards applied to U.S. banking organizations.

Section 401 of EGRRCPA amended section 165 of the Dodd-Frank Act by generally raising the minimum asset threshold for application of prudential standards under section 165 from $50 billion in total consolidated assets to $250 billion in total consolidated assets.[18] However, the Board is required to apply certain enhanced prudential standards to bank holding companies with less than $250 billion in total consolidated assets. Specifically, the Board must conduct periodic supervisory stress tests of bank holding companies with total consolidated assets equal to or greater than $100 billion and less than $250 billion,[19] and must require publicly traded bank holding companies with $50 billion or more in total consolidated assets to establish a risk committee.[20] In addition, section 165(a)(2)(C) of the Dodd-Frank Act authorizes the Board to apply enhanced prudential standards to bank holding companies with $100 billion or more, but less than $250 billion, in total consolidated assets, provided that the Board (1) determines that application of the prudential standard is appropriate to prevent or mitigate risks to the financial stability of the United States, or to promote the safety and soundness of a bank holding company or bank holding companies; and (2) takes into consideration a bank holding company's or bank holding companies' capital structure, riskiness, complexity, financial activities (including financial activities of subsidiaries), size, and any other risk-

[16] For more discussion relating to the scoring methodology, see the Board's final rule establishing the GSIB identification methodology. See Regulatory Capital Rules: Implementation of Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies, 80 FR 49082 (Aug. 14, 2015).

[17] *See* the interagency capital and liquidity final rule for application of Category I liquidity and capital standards to depository institution subsidiaries of U.S. GSIBs.

[18] A bank holding company designated as a GSIB under the Board's GSIB surcharge rule is subject to section 165, regardless of its size. *See* EGRRCPA 401(f). The term bank holding company as used in section 165 of the Dodd-Frank Act includes a foreign bank or company treated as a bank holding company for purposes of the Bank Holding Company Act, pursuant to section 8(a) of the International Banking Act of 1978. *See* 12 U.S.C. 3106(a); 12 U.S.C. 5311(a)(1). *See also* EGRRCPA 401(g) (regarding the Board's authority to establish enhanced prudential standards for foreign banking organizations with total consolidated assets of $100 billion or more).

[19] EGRRCPA 401(e). Pursuant to section 165(i)(1), the Board must conduct an annual stress test of bank holding companies described in section 165(a), and nonbank financial companies designated for supervision by the Board. 12 U.S.C. 5365(i)(1).

[20] 12 U.S.C. 5365(h)(2)(A).

related factors that the Board of Governors deems appropriate.[21] Section 165(a)(2)(C) permits the Board to apply any enhanced prudential standard or standards to an individual bank holding company and also permits the Board to apply enhanced prudential standards to a class of bank holding companies. Similarly, in tailoring the application of enhanced prudential standards, section 165 provides the Board with discretion in differentiating among companies on an individual basis or by category.[22] Finally, in applying section 165 to foreign banking organizations, the Dodd-Frank Act directs the Board to give due regard to the principle of national treatment and equality of competitive opportunity, and to take into account the extent to which the foreign banking organization is subject, on a consolidated basis, to home country standards that are comparable to those applied to financial companies in the United States.

The framework for application of enhanced prudential standards established in this final rule is consistent with section 165 of the Dodd-Frank Act, as amended by EGRRCPA. The framework takes into consideration banking organizations' risk profiles by applying prudential standards based on a banking organization's size, cross-jurisdictional activity, nonbank assets, off-balance sheet exposure, and weighted short-term wholesale funding. By evaluating the degree of each risk-based indicator's presence at various thresholds, the framework takes into account concentrations in various types of risk. As explained below, the risk-based indicators were selected to measure risks to both financial stability and safety and soundness, including a bank holding company or bank holding companies' capital structure, riskiness, complexity, and financial activities. Size is specifically mentioned in section 165(a)(2)(C)(ii). By establishing categories of standards that increase in stringency based on risk, the framework would ensure that the Board's prudential standards align with the risk profile of large banking organizations, supporting financial stability and promoting safety and soundness.

Category IV standards apply if a banking organization reaches an asset size threshold ($100 billion or more, as identified in the statute) but does not meet the thresholds for the other risk-based indicators. Size, as discussed below in section V.C.1 of this Supplementary Information, provides a measure of the extent to which stress at a banking organization's operations could be disruptive to U.S. markets and present significant risks to U.S. financial stability. Size also provides a measure of other types of risk, including managerial and operational complexity. The presence of one factor and absence of other factors suggests that prudential standards should apply to this group of banking organizations, but with reduced stringency to account for these organizations' reduced risk profiles. In addition, as discussed above, the Board must apply periodic supervisory stress testing and risk-committee requirements to institutions of this size.

Under the final rule, the standards applied to the U.S. operations of foreign banking organizations are consistent with the standards applicable to U.S. bank holding companies. The standards also take into account the extent to which a foreign banking organization is subject, on a consolidated basis, to home country standards that are comparable to those applied to financial companies in the United States. Specifically, the final rule would continue the Board's approach of tailoring the application of prudential standards to foreign banking organizations based on the foreign banking organization's U.S. risk profile. For a foreign banking organization with a smaller U.S. presence, the final rule would largely defer to the foreign banking organization's compliance with home-country capital and liquidity standards at the consolidated level, and impose certain risk-management requirements that are specific to the U.S. operations of a foreign banking organization. For foreign banking organizations with significant U.S. operations, the final rule would apply a framework that is consistent with the framework applied to U.S. banking organizations. By using consistent indicators of risk, the final rule facilitates a level playing field between foreign and U.S. banking organizations operating in the United States, in furtherance of the principle of national treatment and equality of competitive opportunity. Differences in the measurement of risk-based indicators and in the application of standards between foreign banking organizations and U.S. banking organizations takes into account structural differences in operation and organization of foreign banking organizations, as well as the standards to which the foreign banking organization on a consolidated basis may be subject. For example, the cross-jurisdictional activity indicator excludes liabilities of the combined U.S. operations, or U.S. intermediate holding company, to non-U.S. affiliates, which recognizes the benefit of the foreign banking organization providing support to its U.S. operations.

Commenters also raised questions over the Board's legal authority to apply prudential standards to covered savings and loan holding companies. These comments are addressed in Section VIII of this Supplementary Information.

C. Choice of Risk-Based Indicators

To determine the applicability of the Category II, III, or IV standards, the proposals considered a banking organization's level of five risk-based indicators: Size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure.

The Board received a number of comments on the choice of risk-based indicators and suggested modifications to the calculation of the indicators. Several commenters expressed the general view that the proposed risk-based indicators were poor measures of risk. A number of these commenters also asserted that the Board did not provide sufficient justification to support the proposed risk-based indicators, and requested that the Board provide additional explanation regarding its selection. Commenters also asserted that the framework should take into consideration additional risk-mitigating characteristics when measuring the proposed risk-based indicators. Several other commenters argued that the proposals are too complex and at odds with the stated objective of simplicity and burden reduction.

By considering the relative presence or absence of each risk-based indicator, the proposals would have provided a basis for assessing a banking organization's financial stability and safety and soundness risks. The risk-based indicators generally track measures already used in the Board's existing regulatory framework and that are already publicly reported by affected banking organizations.[23] Together with fixed, uniform thresholds, use of the

[21] 12 U.S.C. 5365(a)(2)(C). Section 401(a) of EGRRCPA amended section 165 of the Dodd-Frank Act to add section 165(a)(2)(C).

[22] 12 U.S.C. 5365(a)(2)(A).

[23] Bank holding companies, covered savings and loan holding companies, and U.S. intermediate holding companies subject to this final rule already report the information required to determine size, weighted short-term wholesale funding, and off-balance sheet exposure on the Banking Organization Systemic Risk Report (FR Y–15). Such bank holding companies and covered savings and loan holding companies also currently report the information needed to calculate cross-jurisdictional activity on the FR Y–15. Nonbank assets are reported on the FR Y–9 LP. This information is publicly available.

indicators supports the Board's objectives of transparency and efficiency, while providing for a framework that enhances the risk-sensitivity of the Board's enhanced prudential standards in a manner that continues to allow for comparability across banking organizations. Risk-mitigating factors, such as a banking organization's high-quality liquid assets and the presence of collateral to secure an exposure, are incorporated into the enhanced standards to which the banking organization is subject.

One commenter asserted that an analysis of the proposed risk-based indicators based on a measure of the expected capital shortfall of a banking organization in the event of a steep equity market decline (SRISK) [24] demonstrated that only the cross-jurisdictional activity and weighted short-term wholesale funding indicators were positively correlated with SRISK while the other indicators were not important drivers of a banking organization's SRISK measures. Because SRISK is conditioned on a steep decline in equity markets, it does not capture the probability of a financial crisis or an idiosyncratic failure of a large banking organization. In addition, SRISK does not directly capture other important aspects of systemic risk, such as a banking organization's interconnectedness with other financial market participants. For these reasons, SRISK alone is not a sufficient means of determining the risk-based indicators used in the tailoring framework.

Accordingly and as discussed below, the Board is adopting the risk-based indicators as proposed.

1. Size

The proposals would have considered size in tailoring the application of enhanced standards to a domestic banking organization or the U.S. operations of a foreign banking organization.

Some commenters argued that the proposals placed too much reliance on size for determining the prudential standards applicable to large banking organizations. These commenters generally criticized the size indicator as not sufficiently risk sensitive and a poor measure of systemic and safety and soundness risk, and suggested using risk-weighted assets, as determined under the regulatory capital rule, rather than total consolidated assets or combined U.S. assets, as applicable. Several commenters argued that the proposals did not adequately explain the relationship between size and safety and soundness risk, particularly risks associated with operational or control gaps.

Other commenters, however, supported the use of size as a measure of financial stability and safety and soundness risk. These commenters asserted that size serves as an indicator of credit provision that could be disrupted in times of stress, as well as the difficulties associated with the resolution of a large banking organization. These commenters also recommended placing additional emphasis on size for purposes of tailoring prudential standards, and expressed the view that the size indicator is less susceptible to manipulation through temporary adjustments at the end of a reporting period as compared to the other risk-based indicators.

Section 165 of the Dodd-Frank Act, as amended by EGRRCPA, establishes thresholds based on total consolidated assets.[25] Size is also among the factors that the Board must take into consideration in differentiating among banking organizations under section 165.[26] A banking organization's size provides a measure of the extent to which stress at its operations could be disruptive to U.S. markets and present significant risks to U.S. financial stability. A larger banking organization has a greater number of customers and counterparties that may be exposed to a risk of loss or suffer a disruption in the provision of services if the banking organization were to experience distress. In addition, size is an indicator of the extent to which asset fire sales by a banking organization could transmit distress to other market participants, given that a larger banking organization has more counterparties and more assets to sell. The failure of a large banking organization in the United States also may give rise to challenges that complicate the resolution process due to the size and diversity of its customer base and the number of counterparties that have exposure to the banking organization.

The complexities associated with size also can give rise to operational and control gaps that are a source of safety and soundness risk and could result in financial losses to a banking organization and adversely affect its customers. A larger banking organization operates on a larger scale, has a broader geographic scope, and generally will have more complex internal operations and business lines relative to a smaller banking organization. Growth of a banking organization, whether organic or through an acquisition, can require more robust risk management and development of enhanced systems or controls; for example, when managing the integration and maintenance of information technology platforms.

Size also can be a proxy for other measures of complexity, such as the amount of trading and available-for-sale securities, over-the-counter derivatives, and Level 3 assets.[27] Using Call Report data from the first quarter of 2005 to the first quarter of 2018, the correlation between a bank's total trading assets (a proxy of complexity) and its total assets (a proxy of size) is over 90 percent.[28] As was seen in the financial crisis, a more complex institution can be more opaque to the markets and may have difficulty managing its own risks, warranting stricter standards for both capital and liquidity.

Further, notwithstanding commenters' assertions that risk-weighted assets more appropriately capture risk, an approach that relies on risk-weighted assets as an indication of size would not align with the full scope of risks intended to be measured by the size indicator. Risk-weighted assets

[24] For the definition and measurement of SRISK, see Acharya, V., Engle, R. and Richardson, M., 2012. Capital shortfall: A new approach to ranking and regulating systemic risks. *American Economic Review, 102*(3), pp.59–64, and *see* Brownlees, Christian, and Robert F. Engle (2017). ''SRISK: A conditional capital shortfall measure of systemic risk.'' *The Review of Financial Studies* 30.1 (2016): 48–79.

[25] *See generally* 12 U.S.C. 5635 and EGRRCPA section 401.

[26] EGRRCPA § 401(a)(1)(B)(i) (codified at 12 U.S.C. 5365(a)(2)(A)). The Board has also previously used size as a simple measure of a banking organization's potential systemic impact and risk, and have differentiated the stringency of capital and liquidity requirements based on total consolidated asset size. For example, prior to the adoption of this final rule, advanced approaches capital requirements, the supplementary leverage ratio, and the LCR requirement generally applied to banking organizations with total consolidated assets of $250 billion or more or total consolidated on-balance sheet foreign exposure of $10 billion or more.

[27] The FR Y–15 and the GSIB surcharge methodology include three indicators of complexity that are used to determine a banking organization's systemic importance for purposes of the GSIB surcharge rule: Notional amount of OTC derivatives, Level 3 assets, and trading and AFS securities. In the second quarter of 2019, the average complexity score of a U.S. GSIB was 104.7, the average complexity score of a banking organization with assets of greater than $250 billion that is not a U.S. GSIB was 12.0, the average complexity score of a banking organization with assets of more than $100 billion but less than $250 billion was 3.5, and the average complexity score of a banking organization with assets of $50 billion but less than $100 billion was 0.4.

[28] *See* Amy G. Lorenc, and Jeffery Y. Zhang (2018) ''The Differential Impact of Bank Size on Systemic Risk,'' *Finance and Economics Discussion Series* 2018–066. Washington: Board of Governors of the Federal Reserve System, available at: *https://doi.org/10.17016/FEDS.2018.066.*

serve as an indication of credit risk and are not designed to capture the risks associated with managerial and operational complexity or the potential for distress at a large banking organization to cause widespread market disruptions.

Some commenters argued that the Board staff analysis cited in the proposals does not demonstrate that size is a useful indicator for determining the systemic importance of a banking organization.[29] Specifically, one commenter asserted that the Board staff analysis (1) uses a flawed measure of bank stress and (2) does not use robust standard errors or sufficiently control for additional macroeconomic factors that may contribute to a decline in economic activity. The Board staff paper employs the natural logarithm of deposits at failed banks as a proxy of bank stress. This choice was informed by Bernanke's 1983 article, which uses the level (namely, thousands of dollars) of deposits at failed banks to proxy bank stress.[30] The staff paper makes modifications to this stress proxy in order to account for the evolution of the banking sector over time. In contrast to Bernanke's study of a three-year period during the Great Depression, Board staff's analysis spans almost six decades. Expressing bank stress in levels (namely, trillions of dollars) would not account for the structural changes that have occurred in the banking sector and therefore would place a disproportionately greater weight on the bank failures that occurred during the 2008–2009 financial crisis. In addition to the analysis conducted by Board staff, other research has found evidence of a link between size and systemic risk.[31]

For the reasons discussed above, the Board is adopting the proposed measure of size for foreign and domestic banking organizations without change. Size is a simple and transparent measure of systemic importance and safety and soundness risk that can be readily understood and measured by banking organizations and market participants.

2. Cross-Jurisdictional Activity

The proposals would have included a measure of cross-jurisdictional activity as a risk-based indicator to determine the application of Category II standards. For U.S. banking organizations, the domestic proposal defined cross-jurisdictional activity as the sum of cross-jurisdictional claims and liabilities. In recognition of the structural differences between foreign and domestic banking organizations, the foreign bank proposal would have adjusted the measurement of cross-jurisdictional activity for foreign banking organizations to exclude inter-affiliate liabilities and certain collateralized inter-affiliate claims.[32] Specifically, claims on affiliates[33] would be reduced by the value of any financial collateral in a manner consistent with the Board's capital rule,[34] which permits, for example, banking organizations to recognize financial collateral when measuring the exposure amount of repurchase agreements and securities borrowing and securities lending transactions (together, repo-style transactions).[35] The foreign bank proposal sought comment on alternative adjustments to the cross-jurisdictional activity indicator for foreign banking organizations, and on other modifications to the components of the indicator.

Some commenters urged the Board to adopt the cross-jurisdictional activity indicator as proposed. By contrast, a number of commenters expressed concern regarding this aspect of the proposals. Several commenters opposed the inclusion of cross-jurisdictional liabilities in the cross-jurisdictional activity indicator. Some commenters argued that cross-jurisdictional liabilities are not a meaningful indicator of systemic risk as measured by SRISK.[36] Other commenters asserted that cross-jurisdictional liabilities can reflect sound risk management practices on the basis that cross-jurisdictional liabilities can indicate a diversity of funding sources and may be used to fund assets in the same foreign jurisdiction as the liabilities. These commenters suggested modifying the indicator to exclude the amount of any central bank deposits, other high-quality liquid assets (HQLA), or assets that receive a zero percent risk weight under the capital rule if those assets are held in the same jurisdiction as a cross-jurisdictional liability.

A number of commenters suggested revisions to the cross-jurisdictional activity indicator that would exclude specific types of claims or liabilities. For example, some commenters asserted that the measure of cross-jurisdictional

---

[29] As described in the proposals, relative to a smaller banking organization, the failure of a large banking organization is more likely to have a destabilizing effect on the economy, even if the two banking organizations are engaged in similar business lines. Board staff estimated that stress at a single large banking organization with an assumed $100 billion in deposits would result in approximately a 107 percent decline in quarterly real U.S. GDP growth, whereas stress among five smaller banking organizations—each with an assumed $20 billion in deposits—would collectively result in roughly a 22 percent decline in quarterly real U.S. GDP growth. Both scenarios assume $100 billion in total deposits, but the negative impact is significantly greater when the larger banking organization fails. *Id.*

[31] *See* Bremus, Buck, Russ and Schnitzer, *Big Banks and Macroeconomic Outcomes: Theory and Cross-Country Evidence of Granularity,* Journal of Money, Credit and Banking (July 2018). Allen, Bali, and Tang construct a measure of systemic risk (CATFIN) and demonstrate that the CATFIN of both large and small banking organizations can forecast macroeconomic declines, and found that the CATFIN of large banks can successfully forecast lower economic activity sooner than that of small banks. *See,* Allen, Bali, and Tang, *Does Systemic Risk in the Financial Sector Predict Future Economic Downturns?,* Review of Financial Studies, Vol. 25, Issue 10 (2012). Adrian and Brunnermeier constructed a measurement of systemic risk, designated CoVar, and show that firms with higher leverage, more maturity mismatch, and larger size are associated with larger systemic risk contributions. Specifically, the authors find that if a bank is 10 percent larger than another bank, then the size coefficient predicts that the larger bank's CoVaR per unit of capital is 27 basis points higher than the smaller bank's CoVaR. *See,* Adrian & Brunnermeir, *CoVar,* American Economic Review Journal, Vol. 106 No. 7 (July 2016)

In the same vein, research conducted by the Bank for International Settlements suggests that the ratio of one institution's systemic importance to a smaller institution's systemic importance is larger than the ratio of the respective sizes. *See* Tarashev, Borio and Tsatsaronis, *Attributing systemic risk to individual institutions,* BIS Working Paper No. 308 (2010). Relatedly, Dávila and Walther (2017) show that large banks take on more leverage relative to small banks in times of stress and government bailouts. *See* Dávila & Walther, *Does Size Matter? Bailouts with Large and Small Banks,* NBER Working Paper No. 24132 (2017).

[32] Specifically, the proposal would have excluded from the cross-jurisdictional activity indicator all inter-affiliate claims of a foreign banking organization secured by financial collateral, in accordance with the capital rule. Financial collateral is defined under the capital rule to mean collateral, (1) in the form of (i) cash on deposit with the banking organization (including cash held for the banking organization by a third-party custodian or trustee), (ii) gold bullion, (iii) long-term debt securities that are not resecuritization exposures and that are investment grade, (v) short-term debt instruments that are not resecuritization exposures and that are investment grade, (v) equity securities that are publicly traded; (vi) convertible bonds that are publicly traded, or (vii) money market fund shares and other mutual fund shares if a price for the shares is publicly quoted daily; and (2) in which the banking organization has a perfected, first-priority security interest or, outside of the United States, the legal equivalent thereof (with the exception of cash on deposit and notwithstanding the prior security interest of any custodial agent). *See* 12 CFR 217.2.

[33] For the combined U.S. operations, the measure of cross-jurisdictional activity would exclude all claims between the foreign banking organization's U.S. domiciled affiliates, branches, and agencies to the extent such items are not already eliminated in consolidation. For the U.S. intermediate holding company, the measure of cross-jurisdictional activity would eliminate through consolidation all intercompany claims within the U.S. intermediate holding company.

[34] *See* 12 CFR 217.37.

[35] *See* the definition of repo-style transaction at 12 CFR 217.2.

[36] *See, supra* note 25.

activity should exclude any claim secured by HQLA or highly liquid assets [37] based on the nature of the collateral. Another commenter suggested excluding operating payables arising in the normal course of business, such as merchant payables. Other commenters suggested that the indicator exclude exposures to U.S. entities or projects that have a foreign guarantee or foreign insurer, unless the U.S. direct counterparty does not meet an appropriate measure of creditworthiness. Some commenters stated that investments in co-issued collateralized loan obligations should be excluded from the measure of cross-jurisdictional activity.

Commenters also suggested specific modifications to exclude exposures to certain types of counterparties. For example, several commenters suggested excluding exposures to sovereign, supranational, international, or regional organizations. Commenters asserted that these exposures do not present the same interconnectivity concerns as exposures with other types of counterparties and that claims on these types of entities present little or no credit risk. Another commenter suggested excluding transactions between a U.S. intermediate holding company and any affiliated U.S. branches of its parent foreign banking organization on the basis that the foreign bank proposal could disadvantage foreign banking organizations relative to U.S. banking organizations that eliminate such inter-affiliate transactions in consolidation. Similarly, one commenter suggested excluding transactions between a U.S. intermediate holding company and any U.S. branch of a foreign banking organization, whether affiliated or not, on the basis that such exposures are geographically domestic. Another commenter argued that exposures denominated in a foreign banking organization's home currency should be excluded. By contrast, one commenter argued that cross-jurisdictional activity should be revised to include derivatives, arguing that derivatives can be used as a substitute for other cross-jurisdictional transactions and, as a result, could be used to avoid the cross-jurisdictional activity threshold.

A number of commenters provided other suggestions for modifying the cross-jurisdictional activity indicator. In particular, some commenters recommended that the cross-jurisdictional activity indicator permit netting of claims and liabilities with a counterparty, with only the net claim or liability counting towards cross-jurisdictional activity. Several commenters suggested that the Board should consider excluding assets or transactions that satisfy another regulatory requirement. For example, these commenters argued that the Board should consider excluding transactions resulting in the purchase of or receipt of HQLA.

Other commenters suggested modifications to the criteria for determining when an exposure is considered cross-border. Specifically, commenters requested modifications to the calculation of cross-jurisdictional activity for claims supported by multiple guarantors or a combination of guarantors and collateral, for example, by not attributing the claim to the jurisdiction of the entity holding the claim, or collateral that bears the highest rating for reporting on an ultimate-risk basis. Commenters also requested that the Board presume that an exposure created through negotiations with agents or asset managers would generally create an exposure based in the jurisdiction of the location of the agent or manager for their undisclosed principal.

Foreign banking organization commenters generally supported the approach taken in the foreign bank proposal with respect to the treatment of inter-affiliate cross-jurisdictional liabilities, but stated that such an approach would not adequately address the differences between domestic and foreign banking organizations. These commenters urged the Board to eliminate the cross-jurisdictional activity indicator for foreign banking organizations or, alternatively, to eliminate all inter-affiliate transactions from measurement of the indicator.

Significant cross-border activity can indicate heightened interconnectivity and operational complexity. Cross-jurisdictional activity can add operational complexity in normal times and complicate the ability of a banking organization to undergo an orderly resolution in times of stress, generating both safety and soundness and financial stability risks. In addition, cross-jurisdictional activity may present increased challenges in resolution because there could be legal or regulatory restrictions that prevent the transfer of financial resources across borders where multiple jurisdictions and regulatory authorities are involved. Banking organizations with significant cross-jurisdictional activity may require more sophisticated risk management to appropriately address the complexity of those operations and the diversity of risks across all of the jurisdictions in which the banking organization provides financial services. For example, banking organizations with significant cross-border activities may require more sophisticated risk management related to raising funds in foreign financial markets, accessing international payment and settlement systems, and obtaining contingent sources of liquidity. In addition, the application of consistent prudential standards to banking organizations with significant size or cross-jurisdictional activity helps to promote competitive equity in the United States as well as abroad.

Measuring cross-jurisdictional activity taking into account both assets and liabilities—instead of just assets—provides a broader gauge of the scale of cross-border operations and associated risks, as it includes both borrowing and lending activities outside of the United States.[38] While both borrowing and lending outside the United States may reflect prudent risk management, cross-jurisdictional activity of $75 billion or more indicates a level of organizational complexity that warrants more stringent prudential standards. With respect to commenters' suggestion to exclude central bank deposits, HQLA, or assets that receive a zero percent risk weight in the same jurisdiction as a cross-jurisdictional liability, such an exclusion would assume that all local liabilities are used to fund local claims. However, because foreign affiliates rely on local funding to different extents, such an exclusion could understate risk.[39]

The cross-jurisdictional activity indicator and threshold is intended to identify banking organizations with significant cross-border activities. Significant cross-border activities indicate a complexity of operations, even if some of those activities are low risk. Excluding additional types of claims or liabilities would reduce the transparency and simplicity of the

[37] *See* 12 CFR part 252.35(b)(3)(i) and 252.157(c)(7)(i).

[38] The BCBS recently amended its measurement of cross-border activity to more consistently reflect derivatives, and the Board anticipates it will separately propose changes to the FR Y–15 in a manner consistent with this change. Any related changes to the proposed cross-jurisdictional activity indicator would be updated through those separately proposed changes to the FR Y–15.

[39] Based on data collected from the Country Exposure Report (FFIEC 009), some affiliates of U.S. banking organizations relied extensively (75 percent) on local funding, while others collected almost no local funding. In particular, approximately 40 percent of bank-affiliate locations had no local lending. *See* Nicola Cetorelli & Linda Goldberg, ''Liquidity Management of U.S. Global Banks: Internal Capital Markets In the Great Recession'' (Fed. Reserve Bank of N.Y. Staff Report No. 511, 2012), available at *http://www.newyorkfed.org/research/staff_reports/sr511.pdf.*

tailoring framework. In addition, excluding certain types of assets based on the credit risk presented by the counterparty would be inconsistent with the purpose of the indicator as a measure of operational complexity and risk. The measure of cross-jurisdictional activity in the final rule therefore does not exclude specific types of claims or liabilities, or claims and liabilities with specific types of counterparties, other than the proposed treatment of inter-affiliate liabilities and certain inter-affiliate claims.

The proposals requested comment on possible additional changes to the components of the cross-jurisdictional activity indicator to potentially provide more consistent treatment across repurchase agreements and other securities financing transactions and with respect to the recognition of collateral across types of transactions. Commenters were generally supportive of these additional changes. The proposals also requested comment on the most appropriate way in which the proposed cross-jurisdictional activity indicator could account for the risk of transactions with a delayed settlement date. Several commenters argued that the indicator should exclude trade-date receivables or permit the use settlement-date accounting in calculating the cross-jurisdictional activity indicator. Commenters also supported measuring securities lending agreements and repurchase agreements on an ultimate-risk basis, rather than allocating these exposures based on the residence of the counterparty.

The final rule adopts the cross-jurisdictional activity indicator as proposed. Under the final rule, cross-jurisdictional activity is measured based on the instructions to the FR Y–15 and, by reference, to the FFIEC 009.[40] The Board is considering whether additional technical modifications and refinements to the cross-jurisdictional indicator would be appropriate, including with respect to the treatment of derivatives, and would seek comment on any changes to the indicator through a separate notice. Specifically, cross-jurisdictional claims are measured according to the instructions to the FFEIC 009. The instructions to the FFIEC 009 currently do not permit risk transfer for repurchase agreements and securities financing transactions and the Board is not altering the measurement of repurchase agreements and securities financing transactions under this final rule. This approach maintains consistency between the FR Y–15 and FFIEC 009. In addition, the cross-jurisdictional indicator maintains the use of trade-date accounting for purposes of the final rule. The preference for trade-date accounting is consistent with other reporting forms (*e.g.,* Consolidated Financial Statements for Holding Companies (FR Y–9C)) and with generally accepted accounting principles. With respect to netting, the instructions to the FFIEC 009 permit netting in limited circumstances. Allowing banking organizations to net all claims and liabilities with a counterparty could significantly understate an organization's level of international activity, even if such netting might be appropriate from the perspective of managing risk.

As noted above, the risk-based indicators generally track measures already used in the Board's existing regulatory framework and rely on information that banking organizations covered by the final rule already publicly report.[41] The Board believes that the measure of cross-jurisdictional activity as proposed (including the current reported measurements of repurchase agreements and securities financing transactions, trade date accounting items, and netting) along with the associated $75 billion threshold, appropriately captures the risks that warrant the application of Category II standards. The Board may consider future changes regarding the measurement of cross-jurisdictional activity indicator, and in doing so, would consider the comments described above and the impact of any future changes on the $75 billion threshold, and would draw from supervisory experience following the implementation of the final rule. Any such changes would be considered in the context of a separate rulemaking process.

3. Nonbank Assets

The proposals would have considered the level of nonbank assets in determining the applicable category of standards for foreign and domestic banking organizations. The amount of a banking organization's activities conducted through nonbank subsidiaries provides a measure of the organization's business and operational complexity. Specifically, banking organizations with significant activities in nonbank subsidiaries are more likely to have complex corporate structures and funding relationships. In addition, in certain cases nonbank subsidiaries are subject to less prudential regulation than regulated banking entities.

Under the proposals, nonbank assets would have been measured as the average amount of assets in consolidated nonbank subsidiaries and equity investments in unconsolidated nonbank subsidiaries.[42] The proposals would have excluded from this measure assets in a depository institution subsidiary, including a national bank, state member bank, state nonmember bank, federal savings association, federal savings bank, or state savings association subsidiary. The proposals also would have excluded assets of subsidiaries of these depository institutions, as well as assets held in each Edge or Agreement Corporation that is held through a bank subsidiary.[43]

A number of commenters argued that measuring nonbank assets based on the location of the assets in a nonbank subsidiary provides a poor measure of risk. Some commenters requested that the Board instead consider whether the assets relate to bank-permissible activities. Other commenters argued that activities conducted in nonbank subsidiaries can present less risk than banking activities. Specifically, some commenters argued that the proposed measure of nonbank assets was over-inclusive on the basis that many of the assets in nonbank subsidiaries would receive a zero percent risk weight under the Board's capital rule. In support of this position, commenters noted that retail brokerage firms often hold significant amounts of U.S. treasury securities.

[40] Specifically, cross-jurisdictional claims are measured on an ultimate-risk basis according to the instructions to the FFIEC 009. The instructions to the FFIEC 009 currently do not permit risk transfer for repurchase agreements and securities financing transactions. Foreign banking organizations must include in cross-jurisdictional claims only the net exposure (*i.e.,* net of collateral value subject to haircuts) of all secured transactions with affiliates to the extent that these claims are collateralized by financial collateral or excluded in consolidation (*see supra* note 35).

[41] *See* Form FR Y–15. This information is publicly available.

[42] For a foreign banking organization, nonbank assets would have been measured as the average amount of assets in consolidated U.S. nonbank subsidiaries and equity investments in unconsolidated U.S. nonbank subsidiaries.

[43] As noted above, the Parent Company Only Financial Statements for Large Holding Companies (FR Y–9LP), Schedule PC–B, line item 17 is used to determine nonbank assets. For purposes of this item, nonbank companies exclude (i) all national banks, state member banks, state nonmember insured banks (including insured industrial banks), federal savings associations, federal savings banks, and thrift institutions (collectively for purposes of this item, ''depository institutions'') and (ii) except for an Edge or Agreement Corporation designated as ''Nonbanking'' in the box on the front page of the Consolidated Report of Condition and Income for Edge and Agreement Corporations (FR 2886b), any subsidiary of a depository institution (for purposes of this item, ''depository institution subsidiary''). The revised FR Y–15 includes a line item that would automatically populate this information. *See* Section XV of this SUPPLEMENTARY INFORMATION.

Other commenters argued that the measure of nonbank assets is poorly developed and infrequently used and urged the Board to provide additional support for the inclusion of the indicator in the proposed framework. Specifically, commenters requested that the Board provide additional justification for nonbank assets as an indicator of complex corporate structures and funding relationships, as well as interconnectedness. A number of commenters argued that, to the extent the measure was intended to address risk in broker-dealer operations, it was unnecessary in light of existing supervision and regulation of broker-dealers and application of consolidated capital, stress testing, and risk-management requirements to the parent banking organization.

A number of commenters argued that, if retained, the nonbank assets indicator should be more risk-sensitive. Some commenters suggested excluding assets related to bank-permissible activities as well as certain types of nonbanking activities, such as retail brokerage activity. The commenter argued that, at a minimum, the nonbank assets indicator should exclude any nonbank subsidiary or asset that would be permissible for a bank to own. Other commenters suggested risk-weighting nonbank assets or deducting certain assets held by nonbank subsidiaries, such as on-balance sheet items that are deducted from regulatory capital under the capital rule (*e.g.,* deferred tax assets and goodwill).

Both the organizational structure of a banking organization and the activities it conducts contribute to its complexity and risk profile. Banking organizations with significant investments in nonbank subsidiaries are more likely to have complex corporate structures, inter-affiliate transactions, and funding relationships.[44] A banking organization's complexity is positively correlated with the impact of the organization's failure or distress.[45]

Market participants typically evaluate the financial condition of a banking organization on a consolidated basis. Therefore, the distress or failure of a nonbank subsidiary could be destabilizing to, and cause counterparties and creditors to lose confidence in, the banking organization as a whole. In addition, the distress or failure of banking organizations with significant nonbank assets has coincided with or increased the effects of significant disruptions to the stability of the U.S. financial system.[46]

Nonbank activities also may involve a broader range of risks than those associated with activities that are permissible for a depository institution to conduct directly and can increase interconnectedness with other financial firms, requiring sophisticated risk management and governance, including capital planning, stress testing, and liquidity risk management. For example, holding companies with significant nonbank assets are generally engaged in financial intermediation of a different nature (such as complex derivatives activities) than those typically conducted through a depository institution. If not adequately managed, the risks associated with nonbank activities could present significant safety and soundness concerns and increase financial stability risks. Nonbank assets also reflect the degree to which a banking organization may be engaged in activities through legal entities that are not subject to separate capital or liquidity requirements or to the direct regulation and supervision applicable to a regulated banking entity.

The nonbank assets indicator in the final rule provides a proxy for operational complexity and nonbanking activities without requiring banking organizations to track assets, income, or revenue based on whether a depository institution has the legal authority to hold such assets or conduct the related activities (legal authority). In addition, a depository institution's legal authority depends on the institution's charter and may be subject to additional interpretation over time.[47] A measure of nonbank assets based on legal authority would be costly and complex for banking organizations to implement, as they do not currently report this information based on legal authority. Defining nonbank assets based on the type of entity that owns them, rather than legal authority, reflects the risks associated with organizational complexity and nonbanking activities without imposing additional reporting burden as a result of implementing the final rule or monitoring any future changes to legal authority. In addition, as noted above, the nonbank assets indicator is designed, in part, to identify activities that a banking organization conducts in subsidiaries that may be subject to less prudential regulation, which makes relevant whether the asset or activity is located in a bank or nonbank subsidiary.

Commenters' suggested modifications to exclude certain types of assets or entities, or to risk-weight nonbank assets, would not align with the full scope of risks intended to be measured by the indicator, including risks associated with operational and managerial complexity. As noted in the discussion of size above, risk weights are primarily designed to measure credit risk, and can underestimate operational and other risks. Further, because nonbank entities are permitted to conduct a wide range of complex activities, assets held by those entities, including those that receive a zero percent risk weight, may be held in connection with complex activities, such as certain prime brokerage or other trading activities. Finally, as noted above, the nonbank assets measure is a relatively simple and transparent measure of a banking organization's nonbank activities, and exclusion of specific assets based on risk could undermine the simplicity and transparency of the indicator. For these reasons, the Board is finalizing the nonbank assets indicator, including the measurement of the indicator, as proposed.

4. Off-Balance Sheet Exposure

The proposals included off-balance sheet exposure as a risk-based indicator to complement the measure of size. Under the proposals, off-balance sheet exposure would have been measured as the difference between total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, and total assets.[48] Total exposure includes on-balance sheet assets plus certain off-

[47] *See, e.g.,* ''OCC Releases Updated List of Permissible Activities for Nat'l Banks & Fed. Sav. Associations,'' OCC NR 17–121 (Oct. 13, 2017) (''The OCC may permit national banks and federal savings associations to conduct additional activities in the future''), available at *https://www.occ.treas.gov/publications/publications-by-type/other-publications-reports/pub-activities-permissible-for-nat-banks-fed-saving.pdf.*

[48] Total exposure would be reported for domestic holding companies on the FR Y–15, Schedule A, Line Item 5, and for foreign banking organizations' U.S. intermediate holding companies and combined U.S. operations on the FR Y–15, Schedule H, Line Item 5. Total off-balance sheet exposure would be reported as Line Item M5 on Schedules A and H.

balance sheet exposures, including derivative exposures and commitments.

A number of commenters argued that the proposed measure of off-balance sheet exposure was not sufficiently risk-sensitive. Specifically, these commenters argued that the exposures captured by the indicator were generally associated with low-risk activities or assets, such as securities lending activities. In addition, the commenters argued that the proposed measure could be harmful to economic activity by discouraging corporate financing through commitments and letters of credit. Commenters accordingly urged the Board to modify the proposed approach to measuring the risk of off-balance sheet exposures, for example, by using the combination of credit-conversion factors and risk weights applied under the Board's capital rule. Other commenters suggested that the Board exclude certain types of exposures from the indicator, such as letters of credit. Foreign banking organization commenters also argued that inter-affiliate transactions should be excluded from the measure, including any guarantee related to securities used to fund the foreign parent, and guarantees used to facilitate clearing of swaps and futures for affiliates that are not clearing members. With respect to guarantees used to facilitate clearing, commenters argued that these exposures are the result of mandatory clearing requirements and help support the central clearing objectives of the Dodd-Frank Act. Commenters expressed concern that including these exposures also could result in increased concentration of clearing through U.S. GSIBs. For the same reasons, commenters argued that potential future exposures associated with derivatives cleared by an affiliate also should be excluded from the measure of off-balance sheet exposure.

Off-balance sheet exposure complements the size indicator under the tailoring framework by taking into account additional risks that are not reflected in a banking organization's measure of on-balance sheet assets. This indicator provides a measure of the extent to which customers or counterparties may be exposed to a risk of loss or suffer a disruption in the provision of services stemming from off-balance sheet activities. In addition, off-balance sheet exposure can lead to significant future draws on liquidity, particularly in times of stress. For example, during stress conditions vulnerabilities at individual banking organizations may be exacerbated by calls on commitments and the need to post collateral on derivatives exposures. The nature of these off-balance sheet risks for banking organizations of significant size and complexity can also lead to financial stability risk, as they can manifest rapidly and with less transparency and predictability to other market participants relative to on-balance sheet exposures.

Excluding certain off-balance sheet exposures would be inconsistent with the purpose of the indicator as a measure of the extent to which customers or counterparties may be exposed to a risk of loss or suffer a disruption in the provision of services. Commitments and letters of credit, like extensions of credit through loans and other arrangements included on a banking organization's balance sheet, help support economic activity. Because corporations tend to increase their reliance on committed credit lines during periods of stress in the financial system, draws on these instruments can exacerbate the effects of stress conditions on banking organizations by increasing their on-balance sheet credit exposure.[49] During the 2008–2009 financial crisis, reliance on lines of credit was particularly pronounced among smaller and non-investment grade corporations, suggesting that an increase in these exposures may be associated with decreasing credit quality.[50]

Including guarantees to affiliates related to cleared derivative transactions in off-balance sheet exposure also is consistent with the overall purpose of the indicators. A clearing member that guarantees the performance of a clearing member client to a central counterparty is exposed to a risk of loss if the clearing member client were to fail to perform its obligations under a derivative contract. By including these exposures, the indicator identifies a source of interconnectedness with other financial market participants. These transactions can arise with respect not only to principal trades, but also because a client wishes to face a particular part of the organization, and thus excluding these guarantees could insufficiently measure risk and interconnectedness.[51]

As described above, the tailoring framework's risk-based indicators and uniform category thresholds balance risk-sensitivity with simplicity and transparency. Excluding certain types of exposures would not align with the full scope of risks intended to be measured by the indicator. The final rule, therefore, adopts the off-balance sheet exposure indicator as proposed.

5. Weighted Short-Term Wholesale Funding

The proposed weighted short-term wholesale funding indicator would have measured the amount of a banking organization's short-term funding obtained generally from wholesale counterparties. Reliance on short-term, generally uninsured funding from more sophisticated counterparties can make a banking organization more vulnerable to large-scale funding runs, generating both safety and soundness and financial stability risks. The proposals would have calculated this indicator as the weighted-average amount of funding obtained from wholesale counterparties, certain brokered deposits, and certain sweep deposits with a remaining maturity of one year or less, in the same manner as currently reported by holding companies on the FR Y–15.[52]

A number of commenters expressed concern regarding the use of the weighted short-term wholesale funding indicator in the tailoring framework. Several commenters argued that this indicator fails to take into account the extent to which the risk of short-term wholesale funding has been mitigated through existing regulatory requirements, such as the Board's enhanced prudential standards rule and, for foreign banking organizations, standardized liquidity requirements applicable to foreign banking organizations at the global consolidated level. Other commenters argued that the indicator is a poor measure of risk more

[49] During the financial crisis, increased reliance on credit lines began as early as 2007, and increased after September 2008. *See* Jose M. Berrospide, Ralf R. Meisenzahl, and Briana D. Sullivan, ''Credit Line Use and Availability in the Financial Crisis: The Importance of Hedging,'' available at: *https://www.federalreserve.gov/pubs/feds/2012/201227/201227pap.pdf.* Some have found evidence that an increase in draws on credit lines may have been motivated by concerns about the ability of financial institutions to provide credit in the future. *See* Victoria Ivashina & David Scharfstein, ''Bank Lending During the Financial Crisis of 2008,'' 97 J. Fin. Econ. 319–338 (2010). *See also,* William F. Bassett, Simon Gilchrist, Gretchen C. Weinbach, and Egon Zakrajšek, ''Improving Our Ability to Monitor Bank Lending'' chapter on *Risk Topography: Systemic Risk and Macro Modeling* (2014), Markus Brunnermeier and Arvind Krishnamurthy, ed., pp. 149–161, available at: *http://www.nber.org/chapters/c12554.*

[50] *Id.*

[51] In order to facilitate clearing generally, the capital rule more specifically addresses the counterparty credit risk associated with transactions that facilitate client clearing, such as a shorter margin period of risk, and provides incentives that are intended to help promote the central clearing objectives of the Dodd-Frank Act. *See* 12 CFR 217.35.

[52] Average amounts over a 12 month period in each category of short-term wholesale funding are weighted based on four residual maturity buckets; the asset class of collateral, if any, securing the funding; and liquidity characteristics of the counterparty. Weightings reflect risk of runs and attendant fire sales. *See* 12 CFR 217.406 and 80 FR 49082 (August 14, 2015).

broadly because it fails to consider the maturity of assets funded by short-term wholesale funding. Commenters argued that focusing on liabilities and failing to recognize the types of assets funded by the short-term funding would disproportionately affect foreign banking organizations' capital market activities and ability to compete in the United States.

The weighted short-term wholesale funding indicator is designed to serve as a broad measure of the risks associated with elevated, ongoing reliance on funding sources that are typically less stable than funding of a longer term or funding such as fully insured retail deposits, long-term debt, and equity. For example, a banking organization's weighted short-term wholesale funding level serves as an indication of the likelihood of funding disruptions in firm-specific or market-wide stress conditions. These funding disruptions may give rise to urgent liquidity needs and unexpected losses, which warrant heightened application of liquidity and regulatory capital requirements. A measure of funding dependency that reflects the various types or maturities of assets supported by short-term wholesale funding sources, as suggested by commenters, would add complexity to the indicator. For example, because a banking organization's funding is fungible, monitoring the relationship between specific liabilities and assets with various maturities is complex and imprecise. The LCR rule and the proposed net stable funding ratio (NSFR) rule therefore include methodologies for reflecting asset maturity in regulatory requirements that address the associated risks.[53]

Commenters suggested revisions to the weighted short-term wholesale funding indicator that would align with the treatment of certain assets and liabilities under the LCR rule. For example, some commenters recommended that the Board more closely align the indicator's measurement of weighted short-term wholesale funding with the outflow rates applied in the LCR rule, such as by excluding from the indicator funding that receives a zero percent outflow in the LCR rule or reducing the weights for secured funding to match the LCR rule's outflow treatment. Similarly, commenters suggested that the Board provide a lower weighting for brokered and sweep deposits from affiliates, consistent with the lower outflow rates assigned to these deposits in the LCR rule. Specifically, commenters argued that the weighted short-term wholesale funding indicator inappropriately applies the same 25 percent weight to sweep deposits sourced by both affiliates and non-affiliates alike and treats certain non-brokered sweep deposits in a manner inconsistent with the LCR rule.

The Board notes that when it established the weights applied in calculating and reporting short-term wholesale funding for purposes of the GSIB surcharge rule, the Board took into account the treatment of certain liabilities in the LCR rule, including comments received in connection with that rulemaking, and fire sale risks in key short-term wholesale funding markets. At that time, the Board noted that the LCR rule does not fully address the systemic risks of certain types and maturities of funding.[54] The Board continues to believe the current scope of the weighted short-term wholesale funding indicator, and the weights applied in the indicator, are appropriately calibrated for assessing the risk to broader financial stability as a result of a banking organization's reliance on short-term wholesale funding. The final rule treats brokered deposits as short-term wholesale funding because they are generally considered less stable than standard retail deposits. In order to preserve the relative simplicity of the short-term wholesale funding metric, the final rule does not distinguish between different types of brokered deposits and sweep deposits. Accordingly, all retail deposits identified as brokered deposits and brokered sweep deposits under the LCR rule are reported on the FR Y–15 as retail brokered deposits and sweeps for purpose of the weighted short-term wholesale funding indicator.

Commenters also suggested other specific revisions to the calculation of the weighted short-term wholesale funding indicator. Some commenters argued that the weighted short-term wholesale funding indicator should look to the original maturity of the funding relationship—instead of the remaining maturity—and exclude long-term debt that is maturing within the next year. Commenters also urged the Board to recognize certain offsets to reduce the amount of short-term wholesale funding included in the indicator. For example, a number of commenters suggested that the amount of short-term wholesale funding should be reduced by the amounts of HQLA held by the banking organization, cash deposited at the Federal Reserve by the banking organization, or any high-quality collateral used for secured funding. Commenters argued that this approach would better reflect the banking organization's liquidity risk because it would take into account assets that could be used to meet cash outflows as well as collateral that typically maintains its value and therefore would not contribute to asset fire sales. Commenters also argued that the measure of weighted short-term wholesale funding should exclude funding that the commenters viewed as stable, such as credit lines from Federal Home Loan Banks and Federal Reserve Banks, savings and checking accounts of wholesale customers, and brokered sweep deposits received from an affiliate.

The Board believes that the remaining maturity of a funding relationship, instead of original maturity as suggested by commenters, provides a more accurate measure of the banking organization's ongoing exposure to rollover risk. As discussed above, because a banking organization's inability to rollover funding may generate safety and soundness and financial stability risks, the Board believes that using remaining maturity is more appropriate given the purposes of the weighted short-term wholesale funding indicator. Further, the weighted short-term wholesale funding indicator takes into account the quality of collateral used in funding transactions by assigning different weights to average amounts of secured funding depending on its collateral. These weights reflect the liquidity characteristics of the collateral and the extent to which the quality of such assets may mitigate fire sale risk. Revising the weighted short-term wholesale funding indicator to permit certain assets to offset liabilities because the assets may be used to address cash outflows, as suggested by commenters, could understate financial stability and safety and soundness risks because such an approach assumes those assets are available to offset funding needs in stress conditions. Further, the indicator measures average short-term funding dependency over the prior 12 months, and a banking organization's current holdings of liquid assets may not address the financial stability and safety and soundness risks associated with its ongoing funding structure. Similarly, excluding a banking organization's general reliance

[53] For example, the LCR rule includes cash inflows from certain maturing assets and the proposed NSFR rule would use the maturity profile of a banking organization's assets to determine its required stable funding amount.

[54] For example, the LCR rule generally does not address maturities beyond 30 calendar days and offsets outflows from certain short-term funding transactions with inflows from certain short-term claims, which may not fully address the risk of asset fire sales.

on certain types of short-term funding from the indicator may result in an underestimation of a banking organization's potential to contribute to systemic risk because such funding may be unavailable for use in a time of stress. Thus, the final rule does not exclude short-term borrowing from the Federal Home Loan Banks, which may be secured by a broad range of collateral, and the final rule treats such short-term borrowing the same as borrowing from other wholesale counterparties in order to identify risk. More generally, incorporating commenters' recommended exclusions and offsets would reduce the transparency of the weighted short-term wholesale funding indicator, contrary to the Board's intention to provide a simplified measure to identify banking organizations with heightened risks. For these reasons, the final rule adopts the weighted short-term wholesale funding indicator without change.

Commenters also provided suggestions to reduce or eliminate inter-affiliate transactions from the measure of weighted short-term wholesale funding. Specifically, commenters provided suggestions to weight inter-affiliate transactions or net transactions with affiliates.

Including funding from affiliated sources provides an appropriate measure of the risks associated with a banking organization's general reliance on short-term wholesale funding. Banking organizations that generally rely on funding with a shorter contractual maturity from financial sector affiliates may present higher risks relative to those that generally rely on funding with a longer contractual term from outside of the financial sector. While funding relationships with affiliates may provide a banking organization with additional flexibility in the normal course of business, ongoing reliance on contractually short-term funding from affiliates may present risks that are similar to funding from nonaffiliated sources.

For the reasons discussed above, the final rule adopts the weighted short-term wholesale funding indicator as proposed.

D. Application of Standards Based on the Proposed Risk-Based Indicators

The proposed risk-based indicators would have determined the application of enhanced standards under Categories II, III, and IV. By taking into consideration the relative presence or absence of each risk-based indicator, the proposals would have provided a basis for assessing a banking organization's financial stability and safety and soundness risks for purposes of determining the applicability and stringency of these requirements.

Commenters criticized the methods by which the proposed risk-based indicators would determine the category of standards applicable to a banking organization. Certain commenters expressed concern that a banking organization could become subject to Category II or III standards without first being subject to Category IV standards, due to the disjunctive use of the size and other risk-based indicators under the proposals. One commenter suggested that the Board should instead apply a category of standards based on a weighted average of the risk-based indicators. Another commenter suggested that application of Category II standards should be based on other risk factors that they asserted are more relevant to the determination of whether a banking organization has a risk profile that would warrant Category II standards. Several commenters suggested that the application of standardized liquidity requirements should be based only on the levels of the weighted short-term wholesale funding indicator, and not based on the levels of any other risk-based indicator. One commenter criticized the proposals for not providing sufficient justification for the number of categories.

Because each indicator serves as a proxy for various types of risk, a high level in a single indicator warrants the application of more stringent standards to mitigate those risks and support the overall purposes of each category. The Board therefore does not believe using a weighted average of a banking organization's levels in the risk-based indicators, or the methods that would require a banking organization to exceed multiple risk-based indicators, is appropriate to determine the applicable category of standards. The final rule therefore adopts the use of the risk-based indicators, generally as proposed.

Certain commenters suggested that the Board reduce requirements under the foreign bank proposal to account for the application of standards at the foreign banking organization parent. The final rule takes into account the standards that already apply to the foreign banking organization parent. Specifically, the final rule tailors the application of enhanced standards based, in part, on the size and complexity of a foreign banking organization's activities in the United States. The standards applicable to foreign banking organizations with a more limited U.S. presence largely rely on compliance with comparable home-country standards applied at the consolidated foreign parent level. In this way, the final rule helps to mitigate the risk such banking organizations present to safety and soundness and U.S. financial stability, consistent with the overall objectives of the tailoring framework. Requiring foreign banking organizations to maintain financial resources in the jurisdictions in which they operate subsidiaries also reflects existing agreements reached by the BCBS and international regulatory practice.

E. Calibration of Thresholds and Indexing

The proposals would have employed fixed nominal thresholds to assign the categories of standards that apply to banking organizations. In particular, the proposals included total asset thresholds of $100 billion, $250 billion, and $700 billion, along with $75 billion thresholds for each of the other risk-based indicators. The foreign bank proposal also included a $50 billion weighted short-term wholesale funding threshold for U.S. and foreign banking organizations subject to Category IV standards.

Some commenters expressed concerns regarding the use of $75 billion thresholds for cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. In particular, these commenters stated that the $75 billion thresholds were poorly justified and requested additional information as to why the Board chose these thresholds. A number of these commenters also supported the use of a higher threshold for these indicators. Other commenters urged the Board to retain the discretion to adjust the thresholds on a case-by-case basis, such as in the case of a temporary excess driven by customer transactions or for certain transactions that would result in a sudden change in categorization.

The $75 billion thresholds are based on the degree of concentration of a particular risk-based indicator for each banking organization relative to total assets. That is, a threshold of $75 billion represents at least 30 percent and as much as 75 percent of total assets for banking organizations with between $100 billion and $250 billion in total assets.[55] Thus, for banking organizations

[55] The $100 billion and $250 billion size thresholds are consistent with those set forth in section 165 of the Dodd-Frank Act, as amended by section 401 of EGRRCPA. Section 165 of the Dodd-Frank Act requires the application of enhanced prudential standards to bank holding companies and foreign banking organizations with $250 billion or more in total consolidated assets. Section 165

Continued

that do not meet the size threshold for Category III standards, other risks represented by the risk-based indicators would be substantial, while banking organizations with $75 billion in cross-jurisdictional activity have a substantial international footprint. In addition, setting the thresholds at $75 billion ensures that banking organizations that account for the vast majority of the total amount of each risk-based indicator among banking organizations with $100 billion or more in total assets are subject to prudential standards that account for the associated risks of these risk-based indicators, which facilitates consistent treatment of these risks across banking organizations. The use of a single threshold also supports the overall simplicity of the framework. Moreover, a framework that permits the Board to adjust thresholds on a temporary basis would not support the objectives of predictability and transparency.

One commenter stated that the Board should not use the $700 billion size threshold as the basis for applying Category II standards, arguing that the Board had not provided sufficient justification for that threshold. However, as noted in the proposals, historical examples suggest that the distress or failure of a banking organization of this size would have systemic impacts. For example, during the financial crisis significant losses at Wachovia Corporation, which had $780 billion in total assets at the time of being acquired in distress, had a destabilizing effect on the financial system. The $700 billion size threshold under Category II addresses the substantial risks that can arise from the activities and potential distress of very large banking organizations that are not U.S. GSIBs. Commenters did not request additional explanation regarding the $100 billion and $250 billion total asset thresholds. As noted above, these size thresholds are consistent with those set forth in section 165 of the Dodd-Frank Act, as amended by section 401 of EGRRCPA.

Several commenters requested that the Board index certain of the proposed thresholds based on changes in various measures, such as growth in domestic banking assets, inflation, gross domestic product growth or other measures of economic growth, or share of the indicator held by the banking organization in comparison to the amount of the indicator held in the financial system. These commenters requested that the thresholds be automatically adjusted on an annual basis based on changes in the relevant index, by operation of a provision in the rule. Other commenters expressed concern that indexing can have pro-cyclical effects.

As commenters noted, the $100 billion and $250 billion size thresholds prescribed in the Dodd-Frank Act, as amended by EGRRCPA, are fixed by statute.[56] Indexing the other thresholds would add complexity, a degree of uncertainty, and potential discontinuity to the framework. The Board acknowledges the thresholds should be reevaluated over time to ensure they appropriately reflect growth on a macroeconomic and industry-wide basis, as well as to continue to support the objectives of this rule. The Board plans to accomplish this by periodically reviewing the thresholds and proposing changes through the notice and comment process, rather than including an automatic adjustment of thresholds based on indexing.

F. The Risk-Based Categories

1. Category I

Under the proposals, Category I standards would have applied to U.S. GSIBs, which are banking organizations that have a U.S. GSIB score of 130 or more under the scoring methodology.[57] Category I standards would have included the most stringent standards relative to those imposed under the other categories to reflect the heightened risks that banking organizations subject to Category I standards pose to U.S. financial stability. The requirements applicable to U.S. GSIBs would have largely remained unchanged from existing requirements.

The Board did not receive comments regarding the criteria for application of Category I standards to U.S. GSIBs. Several commenters expressed concern regarding applying more stringent standards than Category II standards to foreign banking organizations, even if the risk profile of a foreign banking organization's U.S. operations were comparable to a U.S. GSIB. The final rule adopts the scoping criteria for Category I, and the prudential standards that apply under this category, as proposed.[58] U.S. GSIBs have the potential to pose the greatest risks to U.S. financial stability due to their systemic risk profile and, accordingly, should be subject to the most stringent prudential standards. The treatment for U.S. GSIBs aligns with international efforts to address the financial stability risks posed by the largest, most interconnected financial institutions. In 2011, the BCBS adopted a framework to identify global systemically important banking organizations and assess their systemic importance.[59] This framework generally applies to the global consolidated parent organization, and does not apply separately to subsidiaries and operations in host jurisdictions. Consistent with this approach, the U.S. operations of foreign banking organizations are not subject to Category I standards under the final rule. The Board will continue to monitor the systemic risk profiles of foreign banking organization's U.S. operations, and consider whether application of more stringent requirements is appropriate to address any increases in their size, complexity or overall systemic risk profile.

2. Category II

The proposals would have applied Category II standards to banking organizations with $700 billion in total assets or $100 billion or more in total assets and $75 billion or more in cross-jurisdictional activity. The proposals also sought comment on whether Category II standards should apply based on a banking organization's weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure, using a higher threshold than the $75 billion threshold that would have applied for Category III standards.

Some commenters argued that cross-jurisdictional activity should be an indicator for Category III standards rather than Category II standards. Another commenter expressed concern

authorizes the Board to apply enhanced prudential standards to such banking organizations with assets between $100 billion and $250 billion, taking into consideration the firm's capital structure, riskiness, complexity, financial activities (including those of subsidiaries), size, and any other risk-related factors the Board deems appropriate. 12 U.S.C. 5365.

[56] Section 165 of the Dodd-Frank Act does provide the Board with discretion to establish a minimum asset threshold above the statutory thresholds for some, but not all, enhanced prudential standards. However, the Board may only utilize this discretion pursuant to a recommendation by the Financial Stability Oversight Council in accordance with section 115 of the Dodd-Frank Act. This authority is not available for stress testing and risk committee requirements. 12 U.S.C. 5365(a)(2)(B).

[57] As noted above, the foreign bank proposal would not have applied Category I standards to the U.S. operations of foreign banking organizations because the Board's GSIB surcharge rule would not identify a foreign banking organization or a U.S. intermediate holding company as a U.S. GSIB. The foreign bank proposal sought comment on the advantages and disadvantages of applying standards that are more stringent than Category II standards to the U.S. operations of foreign banking organizations with a comparable risk profile to U.S. GSIBs. Several commenters expressed general opposition to such an approach.

[58] Under the final rule, a U.S. banking organization that meets the criteria for Categories I, II, or III standards is required to calculate its method 1 GSIB score annually.

[59] *See* BCBS, ''Global systemically important banks: Assessment methodology and the additional loss absorbency requirement'' (November 4, 2011).

with expanding the criteria for Category II standards to include any of the other risk-based indicators used for purposes of Category III standards. Some commenters also argued that the proposed Category II standards were too stringent relative to the risks indicated by a high level of cross-jurisdictional activity or very large size. Other commenters argued that application of Category II standards to foreign banking organizations was unnecessary because these banking organizations are already subject to BCBS-based standards on a global, consolidated basis by their home-country regulators. Another commenter requested that the Board provide greater differentiation between Category I and Category II standards.

As discussed above, banking organizations that engage in significant cross-jurisdictional activity present complexities that support the application of more stringent standards relative to those that would apply under Category III. In addition, application of consistent prudential standards across jurisdictions to banking organizations with significant size or cross-jurisdictional activity helps to promote competitive equity among U.S. banking organizations and their foreign peers, while applying standards that appropriately reflect the risk profiles of banking organizations that meet the thresholds for Category III standards. As noted above, this approach is consistent with international regulatory practice.

Accordingly, and consistent with the proposal, the final rule applies Category II standards to banking organizations with $700 billion in total consolidated assets or cross-jurisdictional activity of $75 billion or more.

3. Category III

Under the proposals, Category III standards would have applied to banking organizations that are not subject to Category I or II standards and that have total assets of $250 billion or more. They also would have applied to banking organizations with $100 billion or more in total assets and $75 billion or more in nonbank assets, weighted short-term wholesale funding, or off-balance-sheet exposure.

A number of commenters supported the proposed scoping criteria for Category III, as well as the standards that would have applied under this category. Several other commenters requested certain changes to the specific thresholds and indicators used to determine which banking organizations would have been subject to Category III standards, as well as the prudential standards that would have applied under this category. Comments regarding the prudential standards that would have applied under Category III are discussed in section VI.C of this Supplementary Information.

The final rule generally adopts the scoping criteria for Category III, and the prudential standards that apply under this Category, as proposed.

4. Category IV

Under the proposals, Category IV standards would have applied to banking organizations with $100 billion or more in total assets that do not meet the thresholds for any other category. A number of commenters argued that no heightened prudential standards should apply to banking organizations that meet the criteria for Category IV because such banking organizations are not as large or complex as banking organizations that would be subject to more stringent categories of standards under the proposals. Alternatively, these commenters suggested that the threshold for application of Category IV standards should be raised from $100 billion to $250 billion in total assets.[60] In contrast, one commenter argued that the Board should not reduce the requirements applicable to banking organizations that would be subject to Category IV until current requirements have been in effect for a full business cycle.

The final rule includes Category IV because banking organizations subject to this category of standards generally have greater scale and operational and managerial complexity relative to smaller banking organizations and, as a result, present heightened safety and soundness risks. In addition, the failure of one or more banking organizations subject to Category IV standards could have a more significant negative effect on economic growth and employment relative to the failure or distress of smaller banking organizations.[61] The final rule generally adopts the scoping criteria for Category IV, and the prudential standards that apply under this Category, as proposed.

G. Specific Aspects of the Foreign Bank Proposal—Treatment of Inter-Affiliate Transactions

Except for cross-jurisdictional activity, which would have excluded liabilities to and certain collateralized claims on non-U.S. affiliates, the proposed risk-based indicators would have included transactions between a foreign banking organization's combined U.S. operations and non-U.S. affiliates.[62] Similarly, and as noted above, except for cross-jurisdictional activity, a U.S. intermediate holding company would have included transactions with affiliates outside the U.S. intermediate holding company when reporting its risk-based indicators.

Most commenters on the foreign bank proposal supported the proposed exclusion of certain inter-affiliate transactions in the cross-jurisdictional activity indicator, and argued further that all risk-based indicators should exclude transactions with affiliates. These commenters asserted that including inter-affiliate transactions disadvantaged foreign banking organizations relative to U.S. peers and argued that the rationale for excluding certain inter-affiliate claims from the cross-jurisdictional activity measure applied equally to all other risk-based indicators. A number of commenters argued that including inter-affiliate transactions would overstate the risks to a foreign banking organization's U.S. operations or U.S. intermediate holding company because inter-affiliate transactions may be used to manage risks of the foreign banking organization's global operations. Similarly, some commenters asserted that the inclusion of inter-affiliate transactions was inconsistent with risks that the risk-based indicators are intended to capture. Other commenters argued that any risks associated with inter-affiliate transactions were appropriately managed through the supervisory process and existing regulatory requirements, and expressed concern that including inter-affiliate transactions could encourage ring fencing in other jurisdictions. Some commenters suggested that, if the Board does not exclude inter-affiliate transactions entirely, the Board should weight inter-affiliate transactions at no more than 50 percent. By contrast, one commenter argued that inter-affiliate transactions should be included in the risk-based indicators, arguing that the purpose of the Board's U.S. intermediate holding company framework is that resources located outside the organization may not be reliably available during periods of financial stress.

Tailoring standards based on the risk profile of the U.S. intermediate holding company or combined U.S. operations of a foreign banking organization, as applicable, requires measurement of risk-based indicators at a sub-

[60] Commenters also argued that the Board had not sufficiently justified the application of enhanced prudential standards to firms subject to Category IV standards. These comments are addressed in section VI.D. of this **SUPPLEMENTARY INFORMATION**.

[61] *See* section V.C.1. of this **SUPPLEMENTARY INFORMATION**.

[62] *See supra* note 34.

consolidated level rather than at the global parent. As a result, calculation of the risk-based indicators must distinguish between such a banking organization's U.S. operations or U.S. intermediate holding company, as applicable, and affiliates outside of the United States, including by providing a treatment for inter-affiliate transactions that would otherwise be eliminated in consolidation at the global parent. Including inter-affiliate transactions in the calculation of risk-based indicators would mirror, as closely as possible, the risk profile of a U.S. intermediate holding company or combined U.S. operations if each were consolidated in the United States.

Including inter-affiliate transactions in the calculation of risk-based indicators is consistent with the Board's approach to measuring and applying standards at a sub-consolidated level in other contexts. For example, existing thresholds and requirements in the Board's Regulation YY are based on measures of a foreign banking organization's size in the United States that includes inter-affiliate transactions.[63] Similarly, the total consolidated assets of a U.S. intermediate holding company or depository institution include transactions with affiliates outside of the U.S. intermediate holding company.[64] Capital and liquidity requirements applied to U.S. intermediate holding companies and insured depository institutions generally do not distinguish between exposures with affiliates and third parties. For example, the LCR rule assigns outflow rates to funding according to the characteristics of the source of funding, but generally does not distinguish between funding provided by an affiliate or third party.[65] Excluding inter-affiliate transactions from off-balance sheet exposure, size, and weighted short-term wholesale funding indicators would be inconsistent with the treatment of these exposures under the capital and liquidity rules.

In some cases, the exclusion of inter-affiliate transactions would not align with the full scope of risks intended to be measured by an indicator. Inter-affiliate positions can represent sources of risk—for example, claims on the resources of a foreign banking organization's U.S. operations.[66] As another example, short-term wholesale funding provided to a U.S. intermediate holding company by its parent foreign bank represents funding that the parent could withdraw quickly, which could leave fewer assets available for U.S. counterparties of the U.S. intermediate holding company.[67] By including inter-affiliate transactions in weighted short-term wholesale funding while excluding these positions from cross-jurisdictional liabilities, the framework provides a more risk-sensitive measure of funding risk from foreign affiliates as it takes into consideration the maturity and other risk characteristics of the funding for purposes of the weighted short-term wholesale funding measure. Additionally, because long-term affiliate funding (such as instruments used to meet total loss absorbing capacity requirements) would not be captured in weighted short-term wholesale funding, the indicator is designed to avoid discouraging a foreign parent from providing support to its U.S. operations.

Similarly, with respect to off-balance sheet exposure, an exclusion for inter-affiliate transactions would not account for the risks associated with any funding commitments provided by the U.S. operations of a foreign banking organization to non-U.S. affiliates. Accordingly, the Board believes it would be inappropriate to exclude inter-affiliate transactions from the measure of off-balance sheet exposure.

For purposes of the nonbank assets indicator, the proposals would have treated inter-affiliate transactions similarly for foreign and domestic banking organizations. For foreign banking organizations, the proposals would have measured nonbank assets as the sum of assets in consolidated U.S. nonbank subsidiaries together with investments in unconsolidated U.S. nonbank companies that are controlled by the foreign banking organization.[68] Both foreign and domestic banking organizations would have included in nonbank assets inter-affiliate transactions between the nonbank company and other parts of the organization.[69]

Accordingly, for purposes of the risk-based indicators, the final rule adopts the treatment of inter-affiliate transactions as proposed.

H. Determination of Applicable Category of Standards

Under the proposals, a banking organization would have determined its category of standards based on the average levels of each indicator at the banking organization, reported over the preceding four calendar quarters. If the banking organization had not reported risk-based indicator levels for each of the preceding four calendar quarters, the category would have been based on the risk-based indicator level for the quarter, or average levels over the quarters, that the banking organization has reported.

For a change to a more stringent category (for example, from Category IV to Category III), the change would have been based on an increase in the average value of its indicators over the prior four quarters of a calendar year. In contrast, for a banking organization to change to a less stringent category (for example, Category II to Category III), the banking organization would have been required to report risk-based indicator levels below any applicable threshold for the more stringent category in each of the four preceding calendar quarters. Changes in a banking organization's requirements that result from a change in category generally would have taken effect on the first day of the second quarter following the change in the banking organization's category.

The Board received several comments on the process for determining the applicable category of standards under the proposal and on the amount of time provided to comply with the

requirements of a new category. In particular, several commenters suggested providing banking organizations with at least 18 months to comply with a more stringent category of standards. Several commenters recommended that the Board retain discretion to address a temporary increase in an activity, such as to help a banking organization avoid a sudden change in the categorization of applicable standards. These commenters suggested that any adjustments of thresholds could consider both qualitative information and supervisory judgment. Commenters also requested that the Board clarify the calculation of certain indicators; for example, by providing references to specific line items in the relevant reporting forms. One commenter also suggested that the Board revise the reporting forms used to report risk-based indicator levels so that they apply to a depository institution that is not part of a bank or savings and loan holding company structure.

The final rule maintains the process for determining the category of standards applicable to a banking organization as proposed. To move into a category of standards or to determine the category of standards that would apply for the first time, a banking organization would rely on an average of the previous four quarters or, if the banking organization has not reported in each of the prior four quarters, the category would be based on the risk-based indicator level for the quarter, or average levels over the quarter or quarters, that the banking organization has reported. Use of a four-quarter average would capture significant changes in a banking organization's risk profile, rather than temporary fluctuations, while maintaining incentives for a banking organization to reduce its risk profile relative to a longer period of measurement.

To move to a less stringent category of standards, a banking organization must report risk-based indicator levels below any applicable threshold for the more stringent category in each of the four preceding calendar quarters. This approach is consistent with the existing applicability and cessation requirements of the Board's enhanced prudential standards rule.[70] In addition, the final rule would adopt the transition for compliance with a new category of standards as proposed. Specifically, a banking organization that changes from one category of applicable standards to another category must generally comply with the new requirements no later than on the first day of the second quarter following the change in category.

The final rule does not provide for discretionary adjustments of thresholds on a case-by-case basis, because such an approach would diminish the transparency and predictability of the framework and could reduce incentives for banking organizations to engage in long-term management of their risks.[71]

Each risk-based indicator will generally be calculated in accordance with the instructions to the FR Y–15, FR Y–9LP, Capital and Asset Report for Foreign Banking Organizations (FR Y–7Q), or FR Y–9C, as applicable. The risk-based indicators must be reported for the banking organization on a quarterly basis.[72] U.S. banking organizations currently report the information necessary to determine their applicable category of standards based on a four-quarter average. In response to concerns raised by commenters, the Board also is revising its reporting forms to specify the line items used in determining the risk-based indicators. Section XV of this **SUPPLEMENTARY INFORMATION** discusses changes to reporting requirements, and identifies the specific line items that will be used to calculate risk-based indicators.[73] With respect to the commenters' concern regarding the applicability of these reporting forms to depository institutions that are not part of a bank or savings and loan holding company structure, the Board notes that no such depository institution would be subject to the final rule based on first quarter 2019 data. The Board will monitor the implementation of the final rule and make any such adjustments to reporting forms, as needed, to require such a depository institution to report risk-based indicator levels.

Some commenters asserted that banking organizations could adjust their exposures to avoid thresholds, including by making temporary adjustments to lower risk-based indicator levels reported. The Board will continue to monitor risk-based indicator amounts reported and information collected through supervisory processes to ensure that the risk-based indicators are reflective of a banking organization's overall risk profile, and would consider changes to reporting forms, as needed. In particular, the Board will monitor weighted short-term wholesale funding levels reported at quarter-end, relative to levels observed during the reporting period.

VI. Prudential Standards for Large U.S. and Foreign Banking Organizations

A. Category I Standards

U.S. GSIBs are subject to the most stringent prudential standards relative to other firms, which reflects and helps to mitigate the heightened risks these firms pose to U.S. financial stability.

The domestic proposal would have required that U.S. GSIBs remain subject to the most stringent stress testing requirements, such as an annual supervisory stress testing, FR Y–14 reporting requirements, and a requirement to conduct company-run stress tests on an annual basis. Consistent with changes made by EGRRCPA, the proposal would have removed the mid-cycle company-run stress test requirement for all bank holding companies, including U.S. GSIBs.[74] The proposal would have maintained the requirement for a U.S. GSIB to conduct an annual company-run stress test.

While many commenters supported a reduction in the frequency of company-run stress testing, some commenters expressed the view that this aspect of the proposal could weaken a tool that is intended to enhance the safety and soundness of banking organizations. These commenters argued that the Board should postpone removing the mid-cycle company-run stress test until the efficacy of this requirement has been evaluated over a full business cycle.

Relative to the annual company-run stress test, the mid-cycle company-run stress test has provided only modest risk management benefits and limited incremental information to market participants. To provide additional flexibility to respond to changes in the risk profile of a banking organization or in times of stress, it is important for the Board to have the ability to adjust the frequency of the company-run stress test requirement. Accordingly, and in

[70] *See, e.g.,* 12 CFR 252.43.

[71] The Board retains the general authority under its enhanced prudential standards, capital, and liquidity rules to increase or adjust requirements as necessary on a case-by-case basis. *See* 12 CFR 217.1(d); 249.2; 252.3.

[72] A foreign banking organization must also report risk-based indicators as with respect to the organization's combined U.S. operations as applicable under the final rule.

[73] Although U.S. intermediate holding companies currently report the FR Y–15, the revised form would reflect the cross-jurisdictional activity indicator adopted in the final rule.

[74] Section 401 of EGRRCPA amended section 165(i) of the Dodd-Frank Act to require company-run stress tests to be conducted periodically rather than on a semi-annual basis. Certain commenters requested that the Board remove the mid-cycle company-run stress test requirement for the 2019 stress test cycle. Because the final rule is effective after October 5, 2019, which was the due date for mid-cycle company-run stress tests, the removal of this requirement will take effect for the 2020 stress test cycle.

response to commenters, the final rule eliminates the mid-cycle stress testing requirement for all bank holding companies but provides the Board authority to adjust the required frequency at which a banking organization, including a U.S. GSIB, must conduct a stress test based on its financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy. The final rule therefore provides flexibility to the Board to require more frequent company-run stress testing as needed, while minimizing the burden associated with an ongoing semi-annual requirement.

Some commenters also requested that the Board eliminate its ability to object to a firm's capital plan on the basis of qualitative deficiencies (qualitative objection) for all banking organizations.[75] This comment was addressed after the domestic proposal was issued in a separate rulemaking. In March 2019, the Board eliminated the qualitative objection for most firms, including firms that are subject to Category I standards under this final rule.[76] In recognition of the progress that firms have made in their risk management and capital planning practices, their significantly strengthened capital positions, and changes to the Board's supervisory processes, the Board expressed its belief that it is appropriate to transition away from the qualitative objection under the capital plan rule. Because the qualitative objection has led to improvements in firms' capital planning, however, the Board decided to temporarily retain the qualitative objection for firms that recently became subject to the Federal Reserve's qualitative assessment, including certain U.S. intermediate holding companies. In doing so, the capital plan rule provides additional time for those firms to improve their capital planning practices before the qualitative objection is removed. While the qualitative objection no longer applies to certain banking organizations, all banking organizations continue to be subject to robust supervisory assessments of their capital planning practices.

The proposal also would have required U.S. GSIBs to remain subject to the most stringent liquidity standards, including the liquidity risk management, monthly internal liquidity stress testing, and liquidity buffer requirements under the enhanced prudential standards rule. The proposal also would have required U.S. GSIBs to report certain liquidity data for each business day under the FR 2052a. The Board did not receive comments on the continued application of these enhanced liquidity standards to U.S. GSIBs and is finalizing liquidity requirements for U.S. GSIBs as proposed.

B. Category II Standards

The proposals would have required banking organizations subject to Category II standards to remain subject to the most stringent stress testing requirements, including annual supervisory stress testing, FR Y–14 reporting requirements, and a requirement to conduct company-run stress tests on an annual basis. As noted above, the failure or distress of a U.S. banking organization or the U.S. operations of a foreign banking organization that is subject to Category II standards could impose significant costs on the U.S. financial system and economy, although these banking organizations generally do not present the same degree of systemic risk as U.S. GSIBs. Sophisticated stress testing helps to address the risks presented by the size and cross-jurisdictional activity of such banking organizations.[77]

The Board did not receive any comments related to capital planning and stress testing for firms subject to Category II standards, other than those discussed for Category I. The Board is finalizing the removal of the mid-cycle stress test for firms subject to Category II standards and adjusting the frequency of stress testing requirements, as discussed above. The Board is not finalizing changes to the capital plan rule to amend the definition of large and noncomplex bank holding company at this time, however. The Board intends to consider such changes in conjunction with other changes to the capital plan rule as part of a future capital plan proposal.

With respect to liquidity, the proposals would have maintained the existing liquidity risk management, monthly internal liquidity stress testing, and liquidity buffer requirements under the enhanced prudential standards rule for banking organizations that would have been subject to Category II standards. The liquidity risk management requirements under the Board's enhanced prudential standards rule reflect important elements of liquidity risk management in normal and stressed conditions, such as cash flow projections and contingency funding plan requirements. Similarly, internal liquidity stress testing and buffer requirements require a banking organization to project its liquidity needs based on its own idiosyncratic risk profile and to hold a liquidity buffer sufficient to cover those needs. A banking organization subject to Category II standards under the proposals would have been required to conduct internal liquidity stress tests on a monthly basis. A U.S. banking organization would have conducted such stress tests at the top-tier consolidated level, whereas a foreign banking organization would have been required to conduct internal liquidity stress tests separately for each of its U.S. intermediate holding company, if applicable, its collective U.S. branches and agencies, and its combined U.S. operations. The proposals would have also required a top-tier U.S. depository institution holding company or foreign banking organization subject to Category II standards to report FR 2052a liquidity data for each business day.

Category II liquidity standards are appropriate for banking organizations of a very large size or with significant cross-jurisdictional activity. Such banking organizations may have greater liquidity risk and face heightened challenges for liquidity risk management compared to an organization that is smaller or has less of a global reach. In addition, a very large banking organization that becomes subject to funding disruptions may need to engage in asset fire sales to meet its liquidity needs and has the potential to transmit distress to the financial sector on a broader scale because of the greater volume of assets it could sell in a short period of time. Similarly, a banking organization with significant cross-jurisdictional activity may have greater challenges in the monitoring and management of its liquidity risk across jurisdictions and may be exposed to a greater diversity of liquidity risks as a result of its more global operations.

The Board received comments related to the frequency and submission timing of FR 2052a reporting for banking organizations subject to Category II standards. These comments are discussed below in section XV of this **SUPPLEMENTARY INFORMATION**. Otherwise,

[75] The qualitative assessment evaluates the strength of a company's capital planning process, including the extent to which the analysis underlying a company's capital plan comprehensively captures and addresses potential risks stemming from company-wide activities, as well as the reasonableness of a company's capital plan and the assumptions and analysis underlying the plan.

[76] 84 FR 8953 (March 13, 2019). Specifically, a firm that participates in four assessments and successfully passes the qualitative evaluation in the fourth year is no longer subject to a potential qualitative objection.

[77] *See* section V.C of this **SUPPLEMENTARY INFORMATION**.

commenters did not provide views on liquidity requirements applicable under Category II. The Board is adopting Category II liquidity standards as proposed.

C. Category III Standards

For banking organizations subject to Category III standards, the proposals would have removed the mid-cycle company-run stress testing requirement and changed the frequency of the required public disclosure for company-run stress test results to every other year rather than annually. The proposals would have maintained all other stress testing requirements for banking organizations subject to Category III standards. These standards would have included the requirements for an annual capital plan submission and annual supervisory stress testing. A firm subject to Category III standards would also be required to conduct an internal stress test, and report the results on the FR Y–14A, in connection with its annual capital plan submission.

A number of commenters requested that the Board clarify the relationship between the capital plan rule and the stress testing rules and minimize the imposition of any additional requirements or processes. Specifically, commenters requested that the Board clarify expectations for internal stress testing conducted in years during which a company-run stress test would not be required. These commenters requested that internal stress tests be aligned with the analysis required under the capital plan rule by, for example, relying on the capital action assumptions in the Board's stress testing rules. In addition, some of these commenters suggested that the Board reduce burden by limiting the number of scenarios required. Alternatively, some commenters requested that the Board reduce the frequency of the stress testing cycle—including capital plan submissions—to every other year for banking organizations subject to Category III standards.

The final rule retains the frequency of supervisory stress testing and FR Y–14 reporting requirements as proposed. These requirements help to ensure that a banking organization subject to Category III standards maintains sufficient capital to absorb unexpected losses and continue to serve as a financial intermediary under stress. Additionally, all large banking organizations should maintain a sound capital planning process on an ongoing basis, including in years during which a company-run stress test is not required.[78] As noted in the proposals, the Board will consider any other changes to the capital plan rule as part of a separate capital plan proposal. Reporting requirements are discussed in more detail in section XV of this **SUPPLEMENTARY INFORMATION.**

Other commenters requested that the Board retain the requirement for banking organizations to publicly disclose the results of their stress tests on an annual basis. The Board will continue to publish its annual supervisory stress test results for firms subject to Category III standards and thus the reduced frequency to every other year of firm's required public disclosure should only modestly limit the amount of information that is publicly available. Accordingly, the final rule adopts the stress testing disclosure requirements for banking organizations subject to Category III standards without change.

The proposals would have applied the existing liquidity risk management, monthly internal liquidity stress testing, and liquidity buffer requirements under the enhanced prudential standards rule to banking organizations subject to Category III standards. Additionally, the proposals would have required a top-tier U.S. depository institution holding company or foreign banking organization subject to Category III standards to report daily or monthly FR 2052a liquidity data, depending on the weighted short-term wholesale funding level of the domestic holding company or the foreign banking organization's combined U.S. operations. Specifically, to provide greater insight into banking organizations with heightened liquidity risk, the Board proposed that a top-tier U.S. holding company with $75 billion or more in weighted short-term wholesale funding, or a foreign banking organization with U.S. operations having at least that amount of weighted short-term wholesale funding, be required to submit FR 2052a data for each business day.

The Board did not receive comments on the application of liquidity stress testing and buffer requirements to banking organizations subject to Category III standards. With respect to liquidity risk management requirements, some commenters requested that the rule permit a banking organization's board of directors to delegate certain oversight and approval functions to a risk committee with primary responsibility for overseeing liquidity risks, including approval of liquidity policies and review of quarterly risk reports. These commenters also requested elimination of the requirement for a banking organization's board or risk committee to review or approve certain operational documents, such as cash flow projection methodologies and liquidity risk procedures, arguing that these responsibilities are more appropriate for senior management than the board or a committee of the board.

The Board has long taken the view that the board of directors should have responsibility for oversight of liquidity risk management because the directors have ultimate responsibility for the strategic direction of the banking organization, and thus its liquidity profile. Certain risk management responsibilities, however, are assigned to senior management. As such, the final rule maintains the requirement for the board of directors to approve and periodically review the liquidity risk management strategies and policies and review quarterly risk reports. In addition, the final rule continues to state that the liquidity risk management requirements for certain operational documents such as cash flow projection methodologies require submission to the risk committee, rather than the board of directors, for approval.[79] The final rule adopts Category III liquidity risk-management standards as proposed, including monthly liquidity stress testing and liquidity buffer maintenance requirements.

Additionally, as discussed in section XV of this Supplementary Information, the Board received certain comments related to the frequency and timeliness of FR 2052a reporting for banking organizations subject to Category III standards. As discussed in that section, the Board is finalizing FR 2052a reporting requirements for banking organizations subject to Category III standards generally as proposed, with minor changes to submission timing.

D. Category IV Standards

The proposal would have applied revised stress testing requirements to banking organizations subject to Category IV standards to align with the risk profile of these firms. Specifically, the proposal would have revised the frequency of supervisory stress testing to every other year and eliminated the requirement for firms subject to Category IV standards to conduct and publicly disclose the results of a company-run stress test. Firms subject to Category IV standards also would be subject to FR Y–14 reporting requirements. Relative to current requirements under the enhanced

[78] *See* SR letters 15–18 and 15–19.

[79] *See* 12 CFR 252.34(e)(3).

prudential standards rule, the proposed Category IV standards would have maintained core elements of existing standards but tailored these requirements to reflect these banking organizations' lower risk profile and lesser degree of complexity relative to other large banking organizations.

Many commenters supported the reduced frequency of supervisory stress tests as a form of burden reduction. However, some commenters opposed this change and expressed concern that it would allow banking organizations subject to Category IV standards to take on additional risk during off-cycle years, and limit the public and market's ability to assess systemic risk. Other commenters also argued that stress testing requirements are not justified for banking organizations subject to Category IV standards in view of the significant costs and burden associated with such requirements. Some commenters requested that the Board provide additional information on the impact of reducing the frequency of supervisory stress testing for banking organizations subject to Category IV standards.

Supervisory stress testing on a two-year cycle is consistent with section 401(e) of EGRRCPA, and takes into account the risk profile of these banking organizations relative to those that are larger and more complex. Maintaining FR Y–14 reporting requirements for firms subject to Category IV standards will provide the Board with the data it needs to conduct supervisory stress testing and inform ongoing supervision of these firms. The Federal Reserve will continue to supervise banking organizations subject to Category IV standards on an ongoing basis, including evaluation of the capital adequacy and capital planning processes during off-cycle years. In addition, the final rule provides the Board with authority to adjust the frequency of stress testing requirements based on the risk profile of a banking organization or other factors. Accordingly, the final rule adopts the revisions to the frequency of supervisory stress testing requirements for firms subject to Category IV standards as proposed. Reporting requirements are discussed in more detail in section XV below.

Similar to the comments discussed above, several commenters requested that the Board clarify the relationship between the capital plan rule and the stress testing rules for banking organizations subject to Category IV standards. In particular, commenters requested that the Board clarify what information would be required in a capital plan and related reporting forms submitted by a banking organization subject to Category IV standards, given that these banking organizations would not be subject to company-run stress testing requirements. Other commenters requested that any forward-looking analysis required for banking organizations subject to Category IV standards be limited and not require hypothetical stress scenarios. The Board plans to propose changes to the capital plan rule as part of a separate proposal, including providing firms subject to Category IV standards additional flexibility to develop their annual capital plans.

Under the proposals, Category IV standards would have included liquidity risk management, stress testing, and buffer requirements. Banking organizations subject to Category IV standards also would have been required to report FR 2052a liquidity data on a monthly basis. While the proposals would have retained core liquidity requirements under Category IV standards, certain liquidity risk management and liquidity stress testing requirements would have been further tailored to more appropriately reflect the risk profiles of banking organizations subject to this category of standards.

As a class, banking organizations that would have been subject to Category IV standards tend to have more stable funding profiles, as measured by their generally lower level of weighted short-term wholesale funding, and lesser degrees of liquidity risk and operational complexity associated with size, cross-jurisdictional activity, nonbank assets, and off-balance sheet exposure. Accordingly, the proposals would have reduced the frequency of required internal liquidity stress testing to at least quarterly, rather than monthly. The proposals would not have changed other aspects of the liquidity buffer requirements for banking organizations subject to Category IV standards.

The proposals would have modified certain liquidity risk-management requirements under the enhanced prudential standards rule for banking organizations subject to Category IV standards. First, the proposals would have required such banking organizations to calculate collateral positions on a monthly basis, rather than a weekly basis. Second, the proposals would have further tailored the requirement under the enhanced prudential standards rule for certain bank holding companies to establish risk limits to monitor sources of liquidity risk.[80] Third, Category IV standards would have specified fewer required elements of monitoring intraday liquidity risk exposures.[81] Such changes would have reflected the generally more stable funding profiles and lower degrees of intraday risk and operational complexity of these banking organizations relative to those that are larger and more complex. Under the proposals, banking organizations subject to Category IV standards also would have been required to report FR 2052a liquidity data on a monthly basis.

Some commenters objected to the liquidity risk-management standards proposed for banking organizations subject to Category IV standards, on the basis that any reduction in such requirements could increase safety and soundness and financial stability risks. Other commenters supported this aspect of the proposals, and asserted that it would distinguish more effectively between banking organizations in this category and those that are larger and more complex.

Banking organizations subject to Category IV standards generally are less prone to funding disruptions, even under stress conditions. Monthly FR 2052a information, which is discussed in more detail in section XV below, together with information obtained through the supervisory process, allows the Board to monitor the liquidity risk profiles of these banking organizations. Accordingly, the final rule adopts the proposed Category IV liquidity standards without change.

VII. Single-Counterparty Credit Limits

In 2018, the Board adopted a final rule to apply single-counterparty credit limits to large U.S. and foreign banking organizations (single-counterparty credit limits rule). The single-counterparty credit limits rule limits the aggregate net credit exposure of a U.S. GSIB and any bank holding company with total consolidated assets of $250 billion or more to a single counterparty. The credit exposure limits are tailored to the size and systemic footprint of the firm. Single-counterparty credit limit requirements also apply to a foreign banking organization with $250 billion or more in total consolidated assets with respect to its combined U.S. operations, and separately to any subsidiary U.S. intermediate holding company of such a firm.[82] A foreign banking organization may comply with single-counterparty credit limits applicable to its combined U.S. operations by certifying that it

[80] 12 CFR 252.34(g).

[81] *See* 12 CFR 252.34(h)(3).

[82] 12 CFR 252.170(a).

meets, on a consolidated basis, standards established by its home country supervisor that are consistent with the BCBS large exposure standard.[83]

The domestic proposal would have modified the thresholds for application of the single-counterparty credit limit rule to apply single-counterparty credit limits to all U.S. bank holding companies that would be subject to Category II or Category III standards. This change would have aligned the thresholds for application of single-counterparty credit limits requirements with the proposed thresholds for other prudential standards. Similarly, the foreign bank proposal would have revised the single-counterparty credit limit requirements to align with the proposed thresholds for other enhanced prudential standards applied to the U.S. operations of foreign banking organizations. Under the proposal, single-counterparty credit limits would have applied to foreign banking organizations subject to Category II or Category III standards or to a foreign banking organization with $250 billion or more in total consolidated assets. The proposal would have preserved the ability of a foreign banking organization to comply with the single-counterparty credit limits by certifying to the Board that it meets comparable home-country standards that apply on a consolidated basis. The proposal also would have applied single-counterparty credit limits separately to a U.S. intermediate holding company subsidiary of a foreign banking organization subject to Category II or Category III standards, based on the risk profile of the foreign banking organization's combined U.S. operations. Under the proposal, the requirements previously applicable to U.S. intermediate holding companies with $250 billion or more in assets would have applied to all U.S. intermediate holding companies subject to single-counterparty credit limits—specifically, the aggregate net credit exposure limit of 25 percent of tier 1 capital, the treatment regarding exposures to special purpose vehicles (SPVs) and the application of the economic interdependence and control relationship tests, as well as the required frequency of compliance. The proposal also would have eliminated the distinction under the single-counterparty credit limits rule for ''major'' U.S. intermediate holding companies, and subjected all U.S. intermediate holding companies subject to the single-counterparty credit limits rule to the same aggregate net credit exposure limit. The proposal would not have applied single-counterparty credit limits to U.S. intermediate holding companies under Category IV.

Many commenters supported the proposed exclusion of U.S. intermediate holding company subsidiaries of foreign banking organizations subject to Category IV standards from single-counterparty credit limits.[84] Some commenters asserted that single-counterparty credit limits for a U.S. intermediate holding company should be determined based on the risk profile of the U.S. intermediate holding company rather than on the risk profile of the combined U.S. operations of its parent foreign banking organization. While some commenters supported the proposal's expansion of single-counterparty credit limit requirements for U.S. intermediate holding companies with less than $250 billion in assets under Categories II and III, others argued that this approach was unnecessary. Some commenters also requested an extended compliance period for the treatment of exposures to SPVs and application of the economic interdependence and control test. The commenters also argued that the Board should give the single-counterparty credit limits rule the opportunity to take effect before considering further changes.

Single-counterparty credit limits support safety and soundness and are designed to reduce transmission of distress, particularly for larger, riskier, and interconnected banking organizations. The risks indicated by size, cross-jurisdictional activity, off-balance sheet exposure, and weighted short-term wholesale funding and that result in the application of Category II and Category III standards evidence vulnerability to safety and soundness and financial stability risks, which may be exacerbated if a banking organization has outsized credit exposure to a single counterparty. Therefore, the final rule adopts the single-counterparty credit limits proposed for U.S. banking organizations without change. The Board is, however, revising the proposed single-counterparty credit limit requirements for U.S. intermediate holding companies so that the application of such requirements are based on the risk profile of the U.S. intermediate holding company rather than on the risk profile of the combined U.S. operations of its parent foreign banking organization. This revision would improve the focus and efficiency of single-counterparty credit limits relative to the proposal, because single-counterparty credit limits that apply to a U.S. intermediate holding company will be based on the U.S. intermediate holding company's own risk profile. As a result, only U.S. intermediate holding companies subject to Category II or III standards are separately subject to the single-counterparty credit limits rule. These U.S. intermediate holding companies are subject to a single net aggregate credit exposure limit of 25 percent of tier 1 capital. In addition, these firms are subject to the treatment for exposures to SPVs, the economic interdependence and control tests, and the daily compliance requirement that was previously only applicable to U.S. intermediate holding companies with $250 billion or more in assets. The final rule would provide U.S. intermediate holding companies with less than $250 billion in assets that are subject to Category II or III standards an additional transition time, until January 1, 2021, to come into compliance with more stringent requirements.

VIII. Covered Savings and Loan Holding Companies

The proposal would have subjected covered savings and loan holding companies to supervisory and company-run stress testing requirements; risk-management and risk-committee requirements; liquidity risk management, stress testing, and buffer requirements; and single-counterparty credit limits, pursuant to section 10(g) of the Home Owners' Loan Act (HOLA).[85] These requirements would have been applied to covered savings and loan holding companies in the same manner as a similarly situated bank holding company.[86] As described in the reporting section, section XV, the proposal would have expanded the scope of applicability of the FR Y–14 reporting requirements to apply to covered savings and loan holding companies with total consolidated assets of $100 billion or more. The proposal also noted that the Board planned to seek comment on the application of capital planning requirements to covered savings and

[83] 12 CFR 252.172(d). *See also* BCBS, Supervisory Framework for Measuring and Controlling Large Exposures (April 2014). The large exposures standard establishes an international single-counterparty credit limit framework for internationally active banks.

[84] Some commenters' suggested modifications to the single-counterparty credit limit rule that are beyond the scope of changes in this rulemaking. Therefore, these changes are not discussed separately in this **SUPPLEMENTARY INFORMATION**.

[85] 12 U.S.C. 1467a(g).

[86] A covered savings and loan holding company would not be subject to Category I standards as the definition of ''global systemically important BHC'' under the GSIB surcharge rule does not include savings and loan holding companies. *See* 12 CFR 217.2.

loan holding companies that would be consistent with the capital planning requirements for large bank holding companies as part of a separate proposal.

Some commenters argued that the Board lacks the authority to apply prudential standards to savings and loan holding companies that are not designated by the Financial Stability Oversight Council (FSOC) as systemically important nonbank financial companies under section 113 of the Dodd-Frank Act.[87] These commenters argued that the Board may only apply the proposed prudential standards to covered savings and loan holding companies that have been designated by the FSOC for supervision by the Board and not based on the general grant of authority in section 10(g) of the HOLA.[88] Commenters argued that application of prudential standards to covered savings and loan holding companies pursuant to section 10(g) of HOLA implied that these prudential standards could be applied to banking organizations regardless of size, an inference that commenters asserted would be contrary to the congressional intent of the Dodd-Frank Act and EGRRCPA.

Section 10(g) of HOLA authorizes the Board to issue such regulations and orders, including regulations relating to capital requirements, as the Board deems necessary or appropriate to administer and carry out the purposes of section 10 of HOLA. As the primary federal regulator and supervisor of savings and loan holding companies, one of the Board's objectives is to ensure that savings and loan holding companies operate in a safe-and-sound manner and in compliance with applicable law. Like bank holding companies, savings and loan holding companies must serve as a source of strength to their subsidiary savings associations and may not conduct operations in an unsafe and unsound manner.

Section 165 of the Dodd-Frank Act directs the Board to establish specific enhanced prudential standards for large bank holding companies and companies designated by FSOC in order to prevent or mitigate risks to the financial stability of the United States.[89] Section 165 does not prohibit the application of standards to savings and loan holding companies and bank holding companies pursuant to other statutory authorities.[90]

One commenter supported the proposal's application of prudential standards to covered savings and loan holding companies, asserting that covered savings and loan holding companies have similar risk profiles as bank holding companies and therefore should not be treated differently under the Board's regulatory framework. Another commenter asserted that certain of the risk-based indicators were not reflective of risks to safety and soundness for savings and loan holding companies and should be modified. Similarly, this commenter also argued that covered savings and loan holding companies were less risky and less complex than bank holding companies of the same size and should be subject to streamlined capital planning requirements and supervisory expectations. The commenter also opposed the application of single-counterparty credit limits to covered savings and loan holding companies on the basis that the application of these standards would be inconsistent with the qualified thrift lender test, described below. This commenter argued that, if applied, the limits should be modified to exclude mortgage-backed securities of U.S. government-sponsored enterprises.

Large covered savings and loan holding companies engage in many of the same activities and face similar risks as large bank holding companies. By definition, covered savings and loan holding companies are substantially engaged in banking and financial activities, including deposit taking, lending, and broker-dealer activities.[91] Large covered savings and loan holding companies engage in credit card and margin lending and certain complex nonbanking activities that pose higher levels of risk. Large covered savings and loan holding companies can also rely on high levels of short-term wholesale funding, which may require sophisticated capital, liquidity, and risk management processes. Similar to large bank holding companies, large covered savings and loan holding companies also conduct business across a large geographic footprint, which in times of stress could present certain operational risks and complexities. As discussed above in section V, the risk-based indicators identify risks to safety and soundness in addition to risks to financial stability. The category framework would align requirements with the risk profile of a banking organization, including by identifying risks that warrant more sophisticated capital planning, more frequent company-run stress testing, and greater supervisory oversight through supervisory stress testing, to further the safety and soundness of these banking organizations. By strengthening the risk-management, capital, and liquidity requirements commensurate with these risks, the final rule would improve the resiliency and promote the safe and sound operations of covered savings and loan holding companies. Accordingly, the Board is adopting the application of prudential standards to covered savings and loan holding companies as proposed.

These standards include supervisory stress testing and, for Categories II and III, company-run stress testing requirements.[92] Stress testing requirements provide a means to better understand the financial condition of the banking organization and risks within the banking organization that may pose a threat to safety and soundness. To implement the supervisory stress testing requirements, the Board is requiring covered savings and loan holding companies to report the FR Y–14 reports in the same manner as a bank holding company.[93] The final rule does not establish capital planning requirements for covered savings and loan holding companies. The Board intends to propose to apply those requirements to covered savings and loan holding companies as part of a separate proposal that would be issued for public notice and comment.

The final rule also would apply liquidity risk management, stress testing and buffer requirements to covered savings and loan holding companies. Specifically, a covered savings and loan holding company is required to conduct internal stress tests at least monthly (or

[87] 12 U.S.C. 5323.

[88] Specifically, commenters argued that relying on the general authority of section 10(g) of HOLA to apply prudential standards to covered savings and loan holding companies would be inconsistent with a canon of statutory construction that specific statutory language ordinarily prevail over conflicting general language.

[89] 12 U.S.C. 5365(a)(1).

[90] *See* EGRRCPA 401(b).

[91] A covered savings and loan holding company must have less than 25 percent of its total consolidated assets in insurance underwriting subsidiaries (other than assets associated with insurance underwriting for credit), must not have a top-tier holding company that is an insurance underwriting company, and must derive a majority of its assets or revenues from activities that are financial in nature under section 4(k) of the Bank Holding Company Act. 12 CFR 217.2.

[92] Company-run stress test requirements are discussed further in section XIII. of this **SUPPLEMENTARY INFORMATION**.

[93] Covered savings and loan holding companies with total consolidated assets of $100 or more are required to report the FR Y–14M and all schedules of the FR Y–14Q except for Schedules C—Regulatory Capital Instruments and Schedule D—Regulatory Capital Transitions. These firms also are required to report the FR Y–14A Schedule E—Operational Risk. Covered savings and loan holding companies subject to Category II or III standards are required to submit the FR Y–14A Schedule A—Summary and Schedule F—Business Plan Changes in connection with the company-run stress test requirement.

quarterly, for a firm that is subject to Category IV standards) to measure its potential liquidity needs across overnight, 30-day, 90-day, and 1-year planning horizons during times of instability in the financial markets. In addition, the covered savings and loan holding company is required to hold highly liquid assets sufficient to meet the projected 30-day net stress cash-flow need under internal stress scenarios. A covered savings and loan holding company is also required to meet specified corporate governance requirements around liquidity risk management, to produce cash flow projections over various time horizons, to establish internal limits on certain liquidity metrics, and to maintain a contingency funding plan that identifies potential sources of liquidity strain and alternative sources of funding when usual sources of liquidity are unavailable. These liquidity risk management, liquidity stress testing, and buffer requirements help to ensure that covered savings and loan holding companies have effective governance and risk-management processes to determine the amount of liquidity to cover risks and exposures, and sufficient liquidity to support their activities through a range of conditions.

The final rule applies single-counterparty credit limits to covered savings and loan holding companies that are subject to Category II or III standards as proposed. Application of single-counterparty credit limits to covered savings and loan holding companies would reduce the likelihood that distress at another firm would be transmitted to the savings and loan holding company.

The single-counterparty credit limits exempt transactions with government-sponsored entities (GSEs), such as the Federal National Mortgage Association (Fannie Mae) or the Federal Home Loan Mortgage Corp. (Freddie Mac), from limits on credit exposure, so long as the GSE remains under U.S. government conservatorship.[94] As commenters observed, if the GSEs exit conservatorship, the single-counterparty credit limits would limit a banking organization from holding mortgage-backed securities of U.S. GSEs (Agency MBS) in excess of 25 percent of tier 1 capital.[95] The qualified thrift lender test (QTL test) requires a savings association to either be a domestic building association or have qualified thrift investments exceeding 65 percent of its portfolio assets.[96] The QTL test permits Agency MBS to be used to satisfy the QTL test without limit.[97] While the GSEs are under U.S. government conservatorship, the single-counterparty credit limits would not affect the ability of a banking organization, including a savings association, to hold Agency MBS.

Fannie Mae and Freddie Mac have been operating under the conservatorship of the Federal Housing Finance Agency since 2008 and, concurrent with being placed in conservatorship, received capital support from the United States Department of the Treasury.[98] The timing and terms of Fannie Mae and Freddie Mac exiting conservatorship are uncertain. In addition, other aspects of the Board's regulatory framework could be affected by a change to the conservatorship status of Fannie Mae or Freddie Mac. The Board will continue to monitor and take into consideration any future changes to the conservatorship status of the GSEs, including the extent and type of support received by the GSEs. As appropriate, the Board will consider changes to the application of single-counterparty credit limits to covered savings and loan holding companies and other banking organizations, as well as to other aspects of the Board's regulatory framework.

Finally, one commenter urged the Board to provide covered savings and loan holding companies extended transition periods to come into compliance with the new requirements, if adopted. The final rule would provide covered savings and loan holding companies a transition period to come into compliance with the new prudential standards. Specifically, a covered savings and loan holding company will be required to comply with risk-management and risk-committee requirements as well as the liquidity risk-management, stress testing, and buffer requirements on the first day of the fifth quarter following the effective date of the final rule. A covered savings and loan holding company will be required to comply with single-counterparty credit limits and stress testing requirements on the first day of the ninth quarter following the effective date of the final rule. Transition periods for reporting requirements are discussed in section XV of this **SUPPLEMENTARY INFORMATION**.

IX. Risk Management and Risk Committee Requirements

Section 165(h) of the Dodd-Frank Act requires certain publicly traded bank holding companies to establish a risk committee that is "responsible for the oversight of the enterprise-wide risk management practices" and meets other statutory requirements.[99] EGRRCPA raised the threshold for mandatory application of the risk-committee requirement from publicly traded bank holding companies with $10 billion or more in total consolidated assets to publicly traded bank holding companies with $50 billion or more in total consolidated assets. However, the Board has discretion to apply risk-committee requirements to publicly traded bank holding companies with under $50 billion in total consolidated assets if the Board determines doing so would be necessary or appropriate to promote sound risk-management practices.

The proposal would have raised the threshold for application of risk-committee requirements consistent with the changes made by EGRRCPA. Under the proposal, a publicly traded or privately held U.S. bank holding company with total consolidated assets of $50 billion or more would have been required to maintain a risk committee. The proposal would have applied the same risk-committee requirements to covered savings and loan holding companies with $50 billion or more in total consolidated assets as would have applied to a U.S. bank holding company of the same size.

Under the enhanced prudential standards rule, as adopted, all foreign banking organizations with total consolidated assets of $50 billion or more, and publicly traded foreign banking organizations with $10 billion or more in total consolidated assets, were required to maintain a risk committee that met specified requirements. These requirements varied based on a foreign banking organization's total consolidated assets and combined U.S. assets. Publicly traded foreign banking organizations with at least $10 billion but less than $50 billion in total consolidated assets, as well as foreign banking organizations with total consolidated assets of $50 billion or more but less than $50 billion in combined U.S. assets, were required to annually certify to the Board that they maintain a qualifying committee that oversees the risk management practices

[94] The Board's single-counterparty credit limits exclude any direct claim on, and the portion of a claim that is directly and fully guaranteed as to principal and interest by, the Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation, only while operating under the conservatorship or receivership of the Federal Housing Finance Agency. 12 CFR 252.77. Agency MBS also are considered eligible collateral while the GSEs remain in conservatorship. 12 CFR 252.71.

[95] 12 CFR 252.177(a)(1); 12 CFR 238.150.

[96] 12 U.S.C. 1467a(m)(3)(C).

[97] 12 U.S.C. 1467a(m)(4)(C)(ii)(III).

[98] *See* 79 FR 77602 (December 24, 2014).

[99] 12 U.S.C. 5363(h).

of the combined U.S. operations of the foreign banking organization. In contrast, foreign banking organizations with total consolidated assets of $50 billion or more and $50 billion or more in combined U.S. assets were subject to more detailed risk-committee and risk-management requirements, including the requirement to appoint a U.S. chief risk officer.

Consistent with EGRRCPA, the proposal would have raised the total consolidated asset threshold for application of the risk-committee requirements to foreign banking organizations but would not have changed the substance of the risk-committee requirements for these firms.

One commenter argued for additional flexibility in meeting certain requirements for certain foreign banking organizations that do not have a U.S. intermediate holding company. Specifically, the commenter requested that the Board modify the U.S. chief risk officer requirement so that foreign banking organizations without a U.S. intermediate holding company could be allowed to identify a senior officer to serve as the point of contact responsible for the U.S. risk management structure.

The Board is finalizing the risk-committee requirements as proposed. Sound enterprise-wide risk management supports safe and sound operations of banking organizations and reduces the likelihood of their material distress or failure, and thus also promotes financial stability. The final rule applies risk-committee requirements to a publicly traded or privately held bank holding company or covered savings and loan holding company with total consolidated assets of $50 billion or more. These standards enhance safety and soundness and help to ensure independent risk management, which is appropriate for firms of this size, including both privately held as well as publicly traded banking organizations. Applying the same minimum standards to covered savings and loan holding companies accordingly furthers their safety and soundness by addressing concerns that apply equally across large depository institution holding companies.

Taking into consideration varying structures of their U.S. operations, the proposed risk-management requirements are important to ensure safety and soundness of the U.S. operations of a foreign banking organization as well. Under the final rule, foreign banking organizations with $50 billion or more but less than $100 billion in total consolidated assets, as well as foreign banking organizations with total consolidated assets of $100 billion or more but less than $50 billion in combined U.S. assets, are required to maintain a risk committee and make an annual certification to that effect. Additionally, foreign banking organizations with total consolidated assets of $100 billion or more and $50 billion or more in combined U.S. assets are required to comply with the more detailed risk-committee and risk-management requirements under the enhanced prudential standards rule, which include the chief risk officer requirement. The final rule eliminates the risk-committee requirements that apply to foreign banking organizations with less than $50 billion in total consolidated assets. For banking organizations with less than $50 billion in total consolidated assets, the Board proposes to review the risk-management practices of such firms through existing supervisory processes and expects that all firms establish risk-management processes and procedures commensurate with their risks.

X. Enhanced Prudential Standards for Foreign Banking Organizations With a Smaller U.S. Presence

The Board's regulatory framework tailors the application of enhanced prudential standards to foreign banking organizations based on the size and complexity of the organization's U.S. operations. In particular, subparts L and M of the enhanced prudential standards rule, as adopted, established company-run stress testing and risk-management and risk-committee requirements for foreign banking organizations with at least $10 billion but less than $50 billion in total consolidated assets, the latter of which is described above. Additionally, subpart N, as adopted, established risk-based and leverage capital, risk-management and risk-committee, liquidity risk management, and capital stress testing requirements for foreign banking organizations with at least $50 billion in total consolidated assets but less than $50 billion in combined U.S. assets.[100] These provisions largely required the foreign banking organization to comply with home-country capital and liquidity standards at the consolidated level, and imposed certain risk-management requirements that are specific to the U.S. operations of a foreign banking organization.

The proposal would have maintained this approach for foreign banking organizations with a limited U.S. presence; however, it would have also implemented targeted changes to reduce the stringency of certain requirements applicable to these firms. It also would have maintained certain risk-management and capital requirements for a U.S. intermediate holding company of a foreign banking organization that does not meet the thresholds under the proposal for the application of Category II, III, or IV standards.

A. Enhanced Prudential Standards for Foreign Banking Organizations With Less Than $50 Billion in Total Consolidated Assets

The proposal would have eliminated risk-committee and risk-management requirements for foreign banking organizations with less than $50 billion in total consolidated assets, as described above.

In addition, consistent with EGRRCPA, the proposal would have eliminated subpart L of the Board's enhanced prudential standards rule, which currently prescribes company-run stress testing requirements for foreign banking organizations with more than $10 billion but less than $50 billion in total consolidated assets.[101] As a result, foreign banking organizations with less than $50 billion in total consolidated assets would no longer be required to be subject to a home-country capital stress testing regime, or if the foreign banking organization was not subject to qualifying home country standards, additional stress testing requirements in subpart L.[102]

EGRRCPA raised the threshold for mandatory application of company-run stress testing requirements from financial companies with more than $10 billion in total consolidated assets to financial companies with more than $250 billion in total consolidated assets. Commenters were generally supportive of the Board's proposed changes to raise the thresholds for application of standards consistent with EGRRCPA. Accordingly, the Board is finalizing

[100] 79 FR 17240 (March 27, 2014).

[101] Subpart L, as adopted, also applied to foreign savings and loan holding companies with more than $10 billion in total consolidated assets. *See* 12 CFR 252.120 *et seq.*

[102] For foreign savings and loan holding companies, the proposal would have applied company-run stress testing requirements to foreign savings and loan holding companies with more than $250 billion in total consolidated assets. These requirements would have been the same as those that were established under subpart L of the enhanced prudential standards rule. *See id.* Raising the asset size threshold for application of company-run stress testing requirements for foreign savings and loan holding companies to more than $250 billion in total consolidated assets would be consistent with section 165(i)(2) of the Dodd-Frank Act, as amended by EGRRCPA. Under this final rule, company-run stress test requirements for foreign savings and loan holding companies would be in the new subpart R of Regulation LL.

changes to the thresholds for application of the company-run stress testing, risk-committee and risk-management requirements as proposed.

B. Enhanced Prudential Standards for Foreign Banking Organizations With $100 Billion or More in Total Consolidated Assets but Less Than $100 Billion in Combined U.S. Assets

Subpart N of the enhanced prudential standards rule, as adopted, established risk-based and leverage capital, liquidity risk management, and capital stress testing requirements for foreign banking organizations with $50 billion or more in total consolidated assets but less than $50 billion in combined U.S. assets. These standards largely required compliance with home-country standards.

Under the proposed rule, the requirements under subpart N would have continued to largely defer to home-country standards and remain generally unchanged from the requirements that apply currently to a foreign banking organization with a limited U.S presence, including liquidity risk management requirements, risk-based and leverage capital requirements, and capital stress testing requirements. However, consistent with the proposed changes to the frequency of stress testing for smaller and less complex domestic holding companies, the proposal would have required foreign banking organizations with total consolidated assets of less than $250 billion that do not meet the criteria for application of Category II, III, or IV standards to be subject to a home-country supervisory stress test on a biennial basis, rather than annually.

As discussed above, risk-committee requirements in subpart N would have been further differentiated based on combined U.S. assets. Under the proposal, foreign banking organizations with $100 billion or more in total consolidated assets but less than $50 billion in combined U.S. assets would have been required to certify on an annual basis that they maintain a qualifying risk committee that oversees the risk management policies of the combined U.S. operations of the foreign banking organization. In contrast, foreign banking organizations with $100 billion or more in total consolidated assets, and at least $50 billion but less than $100 billion in combined U.S. assets would have been subject to more detailed risk-committee and risk-management requirements, which include the chief risk officer requirement. These more detailed risk-committee requirements would be the same requirements that previously applied to foreign banking organizations with $100 billion or more in combined U.S. assets.

The Board did not propose to revise the $50 billion U.S. non-branch asset threshold for the U.S. intermediate holding company formation requirement. Because a foreign banking organization with less than $100 billion in combined U.S. assets may have or could be required to form a U.S. intermediate holding company, the proposal would have established an intermediate holding company requirement for these foreign banking organizations in subpart N (subpart N intermediate holding company). Under the proposal, a subpart N intermediate holding company would not have been subject to Category II, III, or IV capital standards, but would have remained subject to the risk-based and leverage capital requirements that apply to a U.S. bank holding company of a similar size and risk profile under the Board's capital rule.[103] Similarly, a subpart N intermediate holding company would have been required to comply with risk-management and risk-committee requirements. As under the current rule, under the proposal the risk committee of the U.S. intermediate holding company would have also been able to serve as the U.S. risk committee for the foreign banking organization's combined U.S. operations.

Some commenters objected to the U.S. intermediate holding company requirement entirely. These commenters also argued that, if the requirement is retained, the threshold should be increased to $100 billion or more, arguing that a $100 billion threshold would be more consistent with section 401 of EGRRCPA and principle of national treatment and competitive equality.

A number of commenters argued that the U.S. intermediate holding company requirement and the standards applied to U.S. intermediate holding companies discouraged growth through subsidiaries rather than branches (non-branch assets). Instead, commenters argued that growth in non-branch assets should be encouraged on the basis that it improved a foreign banking organization's liquidity risk profile in the United States. These commenters argued that disincentives to form an U.S. intermediate holding company were particularly pronounced if the standards that are applied to the U.S. intermediate holding company are calibrated based on the risk profile of the foreign banking organization's combined U.S. operations. Some commenters supported the proposed application of fewer enhanced prudential standards to subpart N intermediate holding companies. Other commenters argued that a subpart N intermediate holding company should be subject to risk management standards only.

The Board did not propose to amend the threshold for formation of the U.S. intermediate holding company requirement. The U.S. intermediate holding company requirement has resulted in substantial gains in the resilience and safety and soundness of foreign banking organizations' U.S. operations. EGRRCPA raised the thresholds for application of section 165 of the Dodd-Frank Act, but did not affect the $50 billion threshold for application of the U.S. intermediate holding company requirement.[104]

The final rule would adopt the subpart N intermediate holding company requirements as proposed. By applying risk management and standardized capital requirements to subpart N intermediate holding companies, the enhanced prudential standards rule would treat a subpart N intermediate holding company similarly to a domestic banking organization of the same size. As some commenters observed, a subpart N intermediate holding company would be subject to fewer and less stringent requirements than a U.S. intermediate holding company of a foreign banking organization subject to subpart O of the Board's enhanced prudential standards rule (subpart O intermediate holding company). Specifically, a subpart N intermediate holding company is not subject to liquidity risk management, liquidity stress testing and buffer requirements. In addition, as discussed above, the application of capital, liquidity and single-counterparty credit limits to a subpart O intermediate holding company would be based on the risk profile of the subpart O intermediate holding company. By establishing two tiers of U.S. intermediate holding company and tailoring the standards applicable to each type of U.S. intermediate holding company, this approach would significantly reduce cliff-effects in the standards applied to U.S. intermediate holding companies and reduce

[103] 12 CFR part 217. As discussed in the interagency foreign banking organization capital and liquidity proposal, such a U.S. intermediate holding company would be subject to the generally applicable risk-based and leverage capital requirements.

[104] *See also* EGRRCPA 401(g) (discussing the Board's authority to apply enhanced prudential standards to foreign banking organizations with more than $100 billion in total consolidated assets.

disincentives to growth in branch assets relative to non-branch assets.

XI. Technical Changes to the Regulatory Framework for Foreign Banking Organizations and Domestic Banking Organizations

The proposal would have made several technical changes and clarifying revisions to the Board's enhanced prudential standards rule. In addition to any defined terms described previously in this **SUPPLEMENTARY INFORMATION**, the proposal would have added defined terms for foreign banking organizations with combined U.S. operations subject to Category II, III, or IV standards, defined as ''Category II foreign banking organization,'' ''Category III foreign banking organization,'' or ''Category IV foreign banking organization,'' respectively. Similarly, the proposal would have added defined terms for ''Category II U.S. intermediate holding company,'' ''Category III U.S. intermediate holding company,'' and ''Category IV U.S. intermediate holding company.'' The addition of these terms would facilitate the requirements for application of enhanced prudential standards under the category framework. The final rule uses the Board's GSIB surcharge methodology to identify a U.S. GSIB and refers to these banking organizations as global systemically important bank holding companies, consistent with the term used elsewhere in the Board's regulations. The final rule adopts these changes as proposed, consistent with the adoption of the category framework in this final rule.

In addition, the final rule further streamlines the Board's enhanced prudential standards rule by locating certain definitions common to all subparts into a common definitions section.[105] In addition, the proposal would have made revisions to streamline the process for forming a U.S. intermediate holding company and for requesting an alternative organizational structure. The Board did not receive any comments on these aspects of the proposal and is adopting these changes as proposed.

Specifically, the final rule eliminates the requirement to submit an implementation plan for formation of a U.S. intermediate holding company. The implementation plan requirement was intended to facilitate initial compliance with the U.S. intermediate holding company requirement. To assess compliance with the U.S. intermediate holding company requirement under the proposal, information would have been requested through the supervisory process. Such information could include information on the U.S. subsidiaries of the foreign banking organization that would be transferred, a projected timeline for the structural reorganization, and a discussion of the firm's plan to comply with the enhanced prudential standards that would be applicable to the U.S. intermediate holding company.

In addition, the Board is making conforming amendments to the process for requesting an alternative organizational structure for a U.S. intermediate holding company, as well as clarifying that a foreign banking organization may submit a request for an alternative organizational structure in the context of a reorganization, anticipated acquisition, or prior to formation of a U.S. intermediate holding company. In light of the requests received under this section following the initial compliance with the U.S. intermediate holding company requirement, the final rule shortens the time period for action by the Board from 180 days to 90 days. This process applies to both subpart N and subpart O intermediate holding companies.

As discussed above in sections VI and VII of this Supplementary Information, capital, liquidity and single-counterparty credit limits would apply to a U.S. intermediate holding company based on its risk profile. Subpart O of the enhanced prudential standards rule currently provides that a foreign banking organization that forms two or more U.S. intermediate holding companies would meet any threshold governing applicability of particular requirements by aggregating the total consolidated assets of all such U.S. intermediate holding companies. The final rule retains this aggregation requirement, but amends the requirement to consider the risk-based indicators discussed above.

In addition, the final rule provides a reservation of authority to permit a foreign banking organization to comply with the requirements of the enhanced prudential standards rule through a subsidiary foreign bank or company of the foreign banking organization. In making this determination, the Board would take into consideration the ownership structure of the foreign banking organization, including whether the foreign banking organization is owned or controlled by a foreign government; (2) whether the action would be consistent with the purposes of the enhanced prudential standards rule; and (3) any other factors that the Board determines are relevant. For example, if a top-tier foreign banking organization is a sovereign wealth fund that controls a U.S. bank holding company, with prior approval of the Board, the U.S. bank holding company could comply with the requirements established under the enhanced prudential standards rule instead of the sovereign wealth fund, provided that doing so would not raise significant supervisory or policy issues and would be consistent with the purposes the enhanced prudential standards rule. The reservation of authority is intended to provide additional flexibility to address certain foreign banking organization structures the Board has encountered following the initial implementation of the rule, as well as to provide clarity and reduce burden for these institutions.

Finally, the proposal would have eliminated transition and initial applicability provisions that were relevant only for purposes of the initial adoption and implementation of the enhanced prudential standards rule. For example, the proposal would have removed paragraph (a)(2) of § 252.14 of part 252, which provides the required timing of the stress tests for each stress test cycle prior to October 1, 2014. The Board did not receive comments on these aspects of the proposals and is adopting them without change.

XII. Changes to Liquidity Buffer Requirements

Banking organizations subject to the Board's enhanced prudential standards rule are required to maintain liquidity buffers composed of unencumbered highly liquid assets sufficient to cover projected net stressed cash-flow needs determined under firm-conducted stress scenarios over specified planning horizons.[106] At the time of the proposals, the rule stated that cash and securities issued or guaranteed by the U.S. government or a U.S. government-sponsored enterprise are highly liquid assets.[107] In addition, the rule required

[105] *See* 12 CFR 252.2.

[106] A bank holding company subject to the enhanced prudential standards rule must maintain a liquidity buffer sufficient to meet its projected net stressed cash-flow needs over a 30-day planning horizon. Similarly, a foreign banking organization subject to the enhanced prudential standards rule must maintain a liquidity buffer for a U.S. intermediate holding company, if any, sufficient to meet its projected net stressed cash-flow needs over a 30-day planning horizon. Separately, such a foreign banking organization must maintain a liquidity buffer for its collective U.S. branches and agencies sufficient to meet their net stressed cash-flow need over the first 14 days of a stress test with a 30-day planning horizon. *See* 12 CFR 252.35(b)(1) and 252.157(c)(2)–(3).

[107] 12 CFR 252.35(b)(3)(i)(A)–(B) and 12 CFR 252.157(c)(7)(i)(A)–(B). The foreign bank proposal requested comment on whether it would be appropriate to limit ''cash'' in the enhanced prudential standards rule to Reserve Bank balances

banking organizations to demonstrate to the satisfaction of the Board that any other asset meets specific liquidity criteria in order to use it to meet the rule's liquidity buffer requirements.[108]

The criteria for highly liquid assets set forth in the enhanced prudential standards rule are substantially similar to the qualifying criteria for HQLA under the LCR rule, which requires banking organizations covered by that rule to maintain an amount of HQLA sufficient to meet net stressed outflows over a 30-day period of stress.[109] Under the LCR rule, HQLA includes asset classes that are expected to be easily and immediately convertible into cash with little or no expected loss of value during a period of stress. Certain of the asset classes are also subject to additional, asset-specific requirements. In the preamble to the enhanced prudential standards rule, which was adopted prior to finalization of the LCR rule, the Board indicated that assets that would qualify as HQLA under the then-proposed LCR rule would be liquid under most scenarios, but a banking organization would still be required to demonstrate to the Board that the asset meets the criteria for highly liquid assets set forth in the enhanced prudential standards rule.

The foreign bank proposal sought comment on whether to more closely align the assets that qualify as highly liquid assets in the enhanced prudential standards rule with HQLA under the LCR rule. Specifically, the foreign bank proposal asked how, if at all, should the Board adjust the current definition of highly liquid assets in 12 CFR 252.35(b)(3) and 252.157(c)(7) of the enhanced prudential standards rule to improve alignment with the definition of HQLA. The foreign bank proposal also sought comment on whether the Board should incorporate other HQLA requirements in the enhanced prudential standards rule for highly liquid assets, such as the LCR rule's Level 2A and Level 2B liquid asset haircuts, the 40 percent composition limit on the total amount of Level 2 liquid assets, as well as the operational requirements set forth in 12 CFR 249.22.

Commenters generally supported aligning the definition of highly liquid assets with HQLA. However, commenters did not support including in the enhanced prudential standards rule the haircuts and composition limits under the LCR rule. These commenters argued that firms should instead continue to evaluate all market and credit risk characteristics of assets eligible for inclusion as highly liquid assets, and apply market and credit risk haircuts consistent with the design of their internal liquidity stress test scenarios. Commenters also did not support adding the operational requirements for eligible HQLA under the LCR rule to the requirements for highly liquid assets under the enhanced prudential standards rule, arguing that firms should be able to apply independent judgement in assessing operational or other risks in the context of highly liquid assets.

Due to the similarity in asset qualification requirements under the two rules, the Board is amending the definition of highly liquid assets under the enhanced prudential standards rule to include all assets that would qualify as HQLA under LCR rule. The asset must satisfy all the qualifying criteria for HQLA, including, where appropriate, that the asset is liquid and readily marketable as defined in the LCR rule and meets the additional asset-specific criteria under the LCR rule.[110] In addition, the Board is amending the definition of highly liquid assets to include requirements that the banking organization subject to the rule demonstrate each asset is under the control of the management function that is charged with managing liquidity risk (liquidity management function) and demonstrate the capability to monetize the highly liquid assets. For banking organizations that are subject to the LCR rule, the liquidity management function that controls the highly liquid assets is intended to be the same function that controls eligible HQLA. For a foreign banking organization, the appropriate management function is the one that is charged with managing liquidity risk for its combined U.S. operations.

The Board is retaining, without change, the provision that permits other assets to qualify as highly liquid assets if the banking organization demonstrates to the satisfaction of the Board that these assets meet the criteria for highly liquid assets (Section C assets).[111] The Board is clarifying that the banking organization cannot include Section C assets in its buffer until it has received approval from the Board.

As a result of the expansion of the definition of highly liquid assets to include HQLA, the Board expects other assets will qualify as highly liquid assets only in narrow circumstances. However, the Board is retaining this provision to provide a banking organization the opportunity to determine and demonstrate to the Board that other assets meet the criteria for highly liquid assets.[112] For example, it may be possible for a banking organization to demonstrate that an asset that is eligible as HQLA under another jurisdiction's LCR rule meets the requirements for Section C assets. The Board is not changing the definition of highly liquid assets or other asset requirements under the rule to include the haircuts or quantitative limits that exist in the LCR rule. The Board believes that the requirements in the enhanced prudential standards rule that banking organizations discount the fair market value of the asset to reflect any credit risk and market price volatility of the asset serve to address similar concerns as the LCR rule's haircuts while permitting a banking organization to perform its own assessment of potential stress. In addition, the enhanced prudential standard rule's diversification requirement that a liquidity buffer not contain significant concentrations of highly liquid assets by issuer, business sector, region, or other factor related to the banking organization's risk address similar risks as the LCR rule's quantitative limits to the composition of the HQLA amount, and permit a banking organization to consider its idiosyncratic risk profile and market conditions. Consistent with the LCR rule's composition limits on Level 2 and Level 2B liquid assets, the Board believes overreliance on Level 2 liquid assets that are generally not immediately convertible to cash and subject to greater price volatility, present safety and soundness concerns and increase the risks a banking organization would not be able to meet its obligations during a period of stress. The Board is clarifying that the diversification requirements in the enhanced prudential standards rule are

and foreign withdrawable reserves. The Board received a comment recommending that the Board not limit ''cash'' for purposes of the definition of highly liquid asset. The Board is not revising the term ''cash'' as part of this final rule.

[108] 12 CFR 252.35(b)(3)(i)(C) and 12 CFR 252.157(c)(7)(i)(C).

[109] 12 CFR part 249.

[110] *See* 12 CFR 249.20.

[111] *See* 12 CFR 252.35(d)(b)(i)(C) and 12 CFR 252.157(c)(7)(i)(C). The requirements for a Section C asset include that the bank holding company or foreign banking organization demonstrate to the satisfaction of the Board that the asset: (*1*) Has low credit risk and low market risk; (*2*) is traded in an active secondary two-way market that has committed market makers and independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a reasonable time period conforming with trade custom; and (*3*) is a type of asset that investors historically have purchased in periods of financial market distress during which market liquidity has been impaired.

[112] *Id.*

intended to prevent such overreliance.[113]

Although commenters requested that the definition of highly liquid assets or other asset requirements not include the operational requirements for eligible HQLA prescribed in the LCR rule, the Board believes demonstrating the liquidity buffer is under the control of the liquidity management function and demonstrating the capability to monetize the liquidity buffer are fundamental risk management processes that ensure the liquidity buffer is available during times of stress. Specifically, these requirements are intended to ensure a banking organization can monetize highly liquid assets during the relevant stress scenario and have the proceeds available to the liquidity management function without conflicting with another business or risk management strategy, sending a negative signal to market participants, or adversely affecting its reputation or franchise. However, to address commenters' concern that banking organizations be allowed to apply independent judgement in assessing operational and other risks in the context of highly liquid assets, the Board is not incorporating the LCR rule's more prescriptive requirements for demonstrating the operational capability to control and monetize assets. The Board believes it is appropriate to allow for a greater range of risk management practices to demonstrate control or monetization capabilities for a firm's highly liquid asset buffer, consistent with the goal that the internal liquidity stress test be tailored to a firm's risk profile, size, and complexity. The Board is clarifying, however, that a banking organization's approach to demonstrating control and monetization capabilities under the LCR rule would also meet the requirements of the amended definition.

XIII. Changes to Company-Run Stress Testing Requirements for State Member Banks, Removal of the Adverse Scenario, and Other Technical Changes Proposed in January 2019

In January 2019, the Board requested comment on a proposed rule that would amend the Board's stress testing rules, consistent with section 401 of EGRRCPA (stress testing proposal).[114]

Prior to the passage of EGRRCPA, section 165(i) of the Dodd-Frank Act[115] required each state member bank with total consolidated assets of more than $10 billion to conduct annual stress tests. In addition, section 165 required the Board to issue regulations that establish methodologies for conducting stress tests, which were required to include at least three different stress-testing scenarios: ''baseline,'' ''adverse,'' and ''severely adverse.''[116]

Section 401 of EGRRCPA amended certain aspects of the stress testing requirements applicable to state member banks under section 165(i) of the Dodd-Frank Act.[117] Specifically, 18 months after the date of enactment, section 401 of EGRRCPA raises the minimum asset threshold for application of the stress testing requirement from more than $10 billion to more than $250 billion in total consolidated assets; revises the requirement for state member banks to conduct stress tests ''annually,'' and instead requires them to conduct stress tests ''periodically.'' In addition, EGRRCPA amended section 165(i) to no longer require the Board's supervisory stress test and firms' company-run stress tests to include an ''adverse'' scenario, thus reducing the number of required stress test scenarios from three to two.

The stress testing proposal would have raised the minimum asset threshold for state member banks to conduct stress tests from more than $10 billion to more than $250 billion, and revised the frequency with which state member banks with assets greater than $250 billion would have been required to conduct stress tests. In addition, the stress testing proposal would have removed the adverse scenario from the list of required scenarios in the Board's stress testing rules and the Board's Policy Statement on the Scenario Design Framework for Stress Testing. As discussed below, the Board received two comments on the stress testing proposal and is adopting the proposal without change.

In preparing the stress testing proposal and this aspect of the final rule, the Board coordinated closely with the FDIC and the OCC to help to ensure that the company-run stress testing requirements are consistent and comparable across depository institutions and depository institution holding companies, and to address any burden that may be associated with having multiple entities within one organizational structure complying with different stress testing requirements.

A. Minimum Asset Threshold for State Member Banks

As described above, section 401 of EGRRCPA amends section 165 of the Dodd-Frank Act by raising the minimum asset threshold for state member banks required to conduct company-run stress tests from more than $10 billion to more than $250 billion. Consistent with EGRRCPA, the proposal would have raised this threshold such that only state member banks with total consolidated assets greater than $250 billion would be required to conduct stress tests. The Board did not receive comments on this aspect of the proposal and is finalizing it without change.

B. Frequency of Stress Testing for State Member Banks

Section 401 of EGRRCPA revised the requirement under section 165 of the Dodd-Frank Act for state member banks to conduct stress tests, changing the required frequency from ''annual'' to ''periodic.'' Under the stress testing proposal, state member banks with total consolidated assets of more than $250 billion generally would have no longer been required to conduct stress tests annually; rather, they would be required to conduct stress tests once every other year. As an exception to the two-year cycle, state member banks that are subsidiaries of banking organizations subject to Category I or Category II standards would have been required to conduct a stress test on an annual basis. The proposed frequency was intended to provide the Board and the state member bank with information necessary to satisfy the purposes of stress testing, including: Assisting in an overall assessment of the state member bank's capital adequacy, identifying downside risks and the potential impact of adverse conditions on the state member bank's capital adequacy, and determining whether additional analytical techniques and exercises are appropriate for the state member bank to employ in identifying, measuring, and monitoring risks to the soundness of the state member bank.

One commenter asserted that the Board should not reduce the frequency of stress testing for any covered banks. Based on the Board's experience overseeing and reviewing the results of company-run stress testing since 2012, the Board believes that a two-year stress testing cycle generally would be appropriate for certain state member banks. Specifically, the state member banks that would be subject to a two-

[113] *See* 12 CFR 238.124(b)(3)(v) (covered savings and loan holding companies), 12 CFR 252.35(b)(3)(v) and 12 CFR 252.157(c)(7)(v). As discussed in Section VIII of this Supplementary Information, this final rule adopts the same liquidity risk management, stress testing and buffer requirements for covered savings and loan holding companies.

[114] 84 FR 4002 (February 14, 2019).

[115] Public Law 111–203, 124 Stat. 1376 (2010).

[116] 12 U.S.C. 5365(i)(2)(C).

[117] Public Law 115–174, 132 Stat. 1296–1368 (2018).

year stress testing cycle under the proposal would not be the subsidiaries of larger, more complex firms, which can present greater risk and therefore merit closer monitoring. State member banks that are subsidiaries of larger, more complex firms would continue to be required to conduct stress tests on an annual basis. Accordingly, the final rule retains the frequency of company-run stress test requirements for state member banks set forth in the stress testing proposal without change. In addition, and as discussed above, the final rule provides the Board with the authority to adjust the required frequency for a holding company or state member bank subject to the Board's stress testing rules based on the company's financial condition, size, complexity, risk profile, scope of operations, activities, or risks to the U.S. economy. The final rule therefore provides flexibility to the Board to require more frequent company-run stress testing at the state member bank or holding company level, which would take into account the risk profile of the subsidiary state member bank, as needed.

Under the stress testing proposal, all state member banks that would conduct stress tests every other year would have been required to conduct stress tests in the same even numbered year (*i.e.,* the reporting years for these state member banks would be synchronized). By requiring these state member banks to conduct their stress tests in the same year, the proposal would continue to allow the Board to make comparisons across state member banks for supervisory purposes and assess macroeconomic trends and risks to the banking industry. The Board did not receive comments on this aspect of the stress testing proposal and is adopting it without change.

Under the stress testing proposal, a state member bank that was subject to a two-year stress test cycle would have become subject to an annual stress test if, for example, the parent bank holding company of the bank becomes a firm subject to Category I or II standards. The proposal would not have established a transition period in these cases. Accordingly, a state member bank that becomes subject to an annual stress test requirement would have been required to begin stress testing on an annual basis as of the next year. The Board did not receive comments on this aspect of the proposal and is adopting it without change.

C. Removal of ''Adverse'' Scenario

As adopted, the Board's stress testing requirements—which are applicable to state member banks, savings and loan holding companies, bank holding companies, U.S. intermediate holding companies of foreign banking organizations, and any nonbank financial company supervised by the Board—required the inclusion of an ''adverse'' scenario in the stress test. Section 401 of EGRRCPA amends section 165(i) of the Dodd-Frank Act to no longer require the Board to include an ''adverse'' scenario in the company-run stress test or its supervisory stress tests, reducing the number of required stress test scenarios from three to two. The stress testing proposal would have removed the ''adverse'' scenario from the list of required scenarios in the Board's stress testing rules. In addition, the proposal would have made conforming changes to the Board's Policy Statement on the Scenario Design Framework for Stress Testing to reflect the removal of the adverse scenario.

The ''baseline'' scenario represents a set of conditions that affect the U.S. economy or the financial condition of the banking organization, and that reflect the consensus views of the economic and financial outlook, and the ''severely adverse'' scenario is a more severe set of conditions and the most stringent of the scenarios. Because the ''baseline'' and ''severely adverse'' scenarios are designed to cover a full range of expected and stressful conditions, the ''adverse'' scenario has provided limited incremental information to the Board and market participants. Accordingly, the stress testing proposal would have maintained the requirement for a banking organization to conduct company-run stress tests under both a ''baseline'' and ''severely adverse'' scenario. In addition, the proposal would have redefined the ''severely adverse'' scenario to mean a set of conditions that affect the U.S. economy or the financial condition of a banking organization that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

One commenter requested that the Board immediately eliminate certain stress testing requirements that would no longer be in effect upon finalization of the proposal or that are not appropriate for any firm of any size. Specifically, the commenter asserted that the Board should immediately eliminate the ''adverse'' scenario from the scenarios required for purposes of the Board's 2019 stress test cycle. Because the final rule is effective after the October 5, 2019, due date for mid-cycle company-run stress tests, and there is no additional requirement that necessitates use of the ''adverse'' scenarios for the 2019 stress test cycle, the removal of this requirement will take effect for the 2020 stress test cycle.

D. Review by Board of Directors

The enhanced prudential standards rule, as adopted, required the board of directors of a banking organization to ''review and approve the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the company may warrant, but no less than annually.'' [118] The domestic proposal would have established similar requirements for covered savings and loan holding companies. The stress testing proposal would have revised the frequency of these requirements for banking organizations from ''annual'' to ''no less than each year a stress test is conducted'' in order to make review by the board of directors consistent with the supervised firm's stress testing cycle. The Board did not receive comments on this aspect of the proposal and is adopting it without change.

E. Scope of Applicability for Savings and Loan Holding Companies

The stress testing proposal would have revised the company-run stress testing requirements for covered savings and loan holding companies included in the domestic proposal. As part of the domestic proposal, the Board generally proposed to apply prudential standards to certain covered savings and loan holding companies using the standards for determining prudential standards for large bank holding companies. Section 165(i)(2) of the Dodd-Frank Act, as amended by EGRRCPA, requires all financial companies that have total consolidated assets of more than $250 billion to conduct periodic stress tests. Consistent with EGRRCPA, the Board proposed to revise the scope of applicability of the company-run stress testing requirements included in the domestic proposal to include all savings and loan holding companies that meet the criteria for Category II or Category III standards. The proposal also would have amended the proposed company-run stress test requirements to maintain the existing transition provision that provides that a savings and loan holding company would not be required to conduct its first stress test until after it is subject to minimum capital requirements. The Board did not receive comments on this aspect of the proposal and adopting it generally as proposed. The final rule applies company-run

[118] *See* 77 FR 62396 (October 12, 2012); 77 FR 62378 (October 12, 2012).

stress testing requirements to covered savings and loan holding companies subject to Category II or III standards, consistent with the requirements that apply to similarly-situated bank holding companies. In addition, the final rule applies company-run stress test requirements to all other savings and loan holding companies with total consolidated assets of $250 billion or more, consistent with the Dodd-Frank Act, as amended by EGRRCPA. A savings and loan holding company is required to comply with company-run stress testing requirements after it is subject to minimum regulatory capital requirements. Covered savings and loan holding companies are subject to minimum regulatory capital requirements through the Board's capital rule.[119]

XIV. Changes to Dodd-Frank Definitions

The proposal would have made changes to the Board's implementation of certain definitions in the Dodd-Frank Act. Specifically, the Dodd-Frank Act directed the Board to define the terms ''significant bank holding company'' and ''significant nonbank financial company,'' terms that are used in the credit exposure reports provision in section 165(d)(2).[120] The terms ''significant nonbank financial company'' and ''significant bank holding company'' are also used in section 113 of the Dodd-Frank Act, which specifies that FSOC must consider the extent and nature of a nonbank company's transactions and relationships with other ''significant nonbank financial companies'' and ''significant bank holding companies,'' among other factors, in determining whether to designate a nonbank financial company for supervision by the Board.[121] The Board previously defined ''significant bank holding company'' and ''significant nonbank financial company'' using $50 billion minimum asset thresholds to conform with section 165.[122] In light of EGRRCPA's amendments, the Board proposed to amend these definitions to include minimum asset thresholds of $100 billion, and make other conforming edits in the Board's regulation on definitions in Title I of the Dodd-Frank Act.[123] The Board did not receive any comments on this aspect of the proposal and is finalizing it as proposed.

XV. Reporting Requirements

In the proposals, the Board proposed changes to the FR Y–14, FR Y–15, FR 2052a, FR Y–9C, FR Y–9LP, FR Y–7, and FR Y–7Q report forms. The Board received comments on changes to the FR Y–14, FR Y–15, and FR 2052a, which are discussed below. The Board did not receive comments on its proposed changes to the FR Y–9C, FR Y–9LP, FR Y–7 and FR Y–7Q, and is finalizing those changes as proposed.

Some commenters requested that the Board clearly identify in the preamble to the final rule the specific line items and forms that would be used to determine a banking organization's size and other risk-based indicators. Table II below indicates the line items that measure risk-based indicators under the final rule:

TABLE II—LINE ITEMS FOR RISK-BASED INDICATORS

	Reporting unit		
	U.S. holding companies	U.S. intermediate holding companies of foreign banking organizations	Combined U.S. operations of foreign banking organizations
Size	FR Y–15, Schedule A, Line Item M4	FR Y–15, Schedule H, Line Item M4, Column A.	FR Y–15, Schedule H, Line Item M4, Column B.
Cross-jurisdictional activity	FR Y–15, Schedule E, Line Item 5	FR Y–15, Schedule L, Line Item 4, Column A.	FR Y–15, Schedule L, Line Item 4, Column B.
Nonbank assets	FR Y–15, Schedule A, Line Item M6	FR Y–15, Schedule H, Line Item M6, Column A.	FR Y–15, Schedule H, Line Item M6, Column B.
Short-term wholesale funding.	FR Y–15, Schedule G, Line Item 6	FR Y–15, Schedule N, Line Item 6, Column A.	FR Y–15, Schedule N, Line Item 6, Column B.
Off-balance sheet exposure.	FR Y–15, Schedule A, Line Item M5	FR Y–15, Schedule H, Line Item M5, Column A.	FR Y–15, Schedule H, Line Item M5, Column B.

The proposal would have added two line items to Schedule A and Schedule H of the FR Y–15 to clarify the calculation of risk-based indicators: Line Item M4 would calculate total assets and Line Item M5 would calculate total off-balance sheet exposure. The Board did not receive specific comments on these line items and is adopting them as proposed.[124] To further clarify the line items for calculating risk-based indicators, the Board has added Line Item 5, Cross-jurisdictional activity, to Schedule E of the FR Y–15. The Board has also added Line Item M6, Total non-bank assets, on Schedule A and Schedule H of the FR Y–15.

The Board received a number of general comments on compliance periods. Various commenters requested that the Board provide banking organizations subject to new or heightened reporting requirements under the proposals with extended compliance periods for such requirements. The Board is providing a phase-in time for banking organizations to prepare for new reporting requirements, as applicable. The compliance and transition periods for each form are discussed below.

The Board also received comments that were outside the scope of the proposals, such as suggested changes to forms that the Board did not propose to modify through these proposals. Some commenters requested tailoring of the proposed FR 2590, which relates to compliance with the single-counterparty credit limits rule. Proposed changes to the proposed FR 2590 will be addressed in a separate Board action. Commenters also requested a change to the FFIEC forms. The agencies are reviewing interagency forms and intend to propose changes to them to conform to EGRRCPA and this final rule.

[119] 12 CFR 217.

[120] 12 U.S.C. 5311(a)(7); 5365(d)(2). EGRRCPA changed credit exposure reports from a mandatory to discretionary prudential standard under section 165.

[121] *See* 12 U.S.C. 5323.

[122] 12 CFR 242.4.

[123] 12 CFR part 242.

[124] Comments regarding the composition of the risk-based indicators are discussed in section V of this SUPPLEMENTARY INFORMATION.

A. FR Y–14

Consistent with EGRRCPA's changes and the Board's July 2018 statement relating to EGRRCPA,[125] the proposals would have revised the FR Y–14 series of reports (FR Y–14A, Y–14Q, and Y–14M) so that domestic bank holding companies and U.S. intermediate holding companies with less than $100 billion in total consolidated assets would no longer be required to submit the forms. Under the proposals, domestic bank holding companies and U.S. intermediate holding companies with $100 billion or more in total consolidated assets would continue to submit the FR Y–14 reports.

The proposal also would have required all covered savings and loan holding companies with $100 billion or more in total consolidated assets to complete elements of the FR Y–14 series of reports that are used in conducting supervisory stress tests: (1) The FR Y–14M; (2) all schedules of the FR Y–14–Q except for Schedule C—Regulatory Capital Instruments and Schedule D—Regulatory Capital Transitions; and (3) Schedule E—Operational Risk of the FR Y–14A. The proposal would have required covered savings and loan holding companies subject to Category II or III standards to report the Form FR Y–14A Schedule A—Summary and Schedule F—Business Plan Changes with respect to company run stress testing.

Commenters argued that the Board should adjust various FR Y–14 reporting requirements for banking organizations subject to the proposals. Commenters generally requested that the FR Y–14 be amended to provide reductions in burden for banking organizations, particularly those subject to Category III or IV standards. Some commenters asked the Board to revise the FR Y- 14M and Y–14A for banking organizations subject to Category IV standards, by reducing the frequency of the Y–14M from monthly to quarterly and altering or eliminating certain Y–14A schedules and worksheets. These commenters also asked the Board to review the relevance of information requested on the Y–14Q for banking organizations subject to Category IV standards. Other commenters suggested that certain Y–14A sub-schedules should not be required for banking organizations subject to Category III standards. Some commenters requested that the Board simplify the Y–14A Summary schedule for all banking organizations.

The final rule adopts the changes to the FR Y–14 largely as proposed. The final rule maintains the existing FR Y–14 substantive reporting requirements in order to provide the Board with the data it needs to conduct supervisory stress testing and inform the Board's ongoing monitoring and supervision of bank holding companies, covered savings and loan holding companies, and U.S. intermediate holding companies. However, as discussed in the proposals, the Board intends to provide greater flexibility to banking organizations subject to Category IV standards in developing their annual capital plans and consider further changes to the FR Y–14 forms as part of a separate proposal. The Board has also revised the FR Y–14 instructions to remove references to the adverse scenario, consistent with the changes in this final rule.

The final rule does not finalize certain definitional changes to the FR Y–14 series of reports, however. The proposal would have made changes to the definitions of ''large and complex'' and ''large and noncomplex'' bank holding company to align with proposed changes in section 225.8(d)(9). The Board is not finalizing these changes as part of this final rule, and instead intends to consider these changes in conjunction with other changes to the capital plan rule as part of a separate capital plan proposal.

Commenters also requested that the Board provide an initial transition period for covered savings and loan holding companies to submit their first FR Y–14 reports. The final rule provides covered savings and loan holding companies with an extended amount of time to file their first reports. Table III details the submission date requirements for covered savings and loan holding companies with $100 billion or more in total consolidated assets that will be submitting FR Y–14 reports under the final rule for the first time:

TABLE III—FIRST SUBMISSION DATES OF FR Y–14 FOR COVERED SAVINGS AND LOAN HOLDING COMPANIES

Form	First as-of date	First submission dates
FR Y–14A	12/31/2021	April 5, 2022.
FR Y–14Q	6/30/2020	90 days after quarter end for first two quarterly submissions; 65 days after quarter end for the third and fourth quarterly submissions.
FR Y–14M	6/30/2020	For the first three monthly submissions, 90 days after the month-end as-of date.

B. FR Y–15

The proposals would have modified the reporting panel and substantive requirements of the FR Y–15. First, the domestic proposal would have no longer required U.S. bank holding companies and covered savings and loan holding companies with $50 billion or more, but less than $100 billion, in total consolidated assets to file the FR Y–15. The foreign bank proposal would have further revised the reporting panels and scope of the FR Y–15. Currently, U.S. intermediate holding companies with $50 billion or more in total consolidated assets report the FR Y–15. Under the foreign bank proposal, foreign banking organizations with $100 billion or more in combined U.S. assets, rather than U.S. intermediate holding companies, would have been required to submit the FR Y–15 with respect to their combined U.S. operations. Specifically, the proposal would have required a foreign banking organization to report information described in the FR Y–15 separately for its (i) U.S. branch and agency network, if any; (ii) U.S. intermediate holding company, if any; and (iii) combined U.S. operations.

Some commenters supported the changes to the FR Y–15's scope and reporting panel in the proposals. Commenters noted that the Board does not currently compile systemic risk data on foreign banking organizations that includes information on branch networks. These commenters argued that incorporating combined U.S. operations into the FR Y–15 would provide more complete information on a foreign banking organization's

[125] *See* Board statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act, July 6, 2018, available at: *https://www.federalreserve.gov/newsevents/pressreleases/bcreg20180706b.htm.*

financial profile, and that such a revision was overdue. However, other commenters opposed the changes. These commenters argued that the proposed reporting based on the combined U.S. operations was unjustified, and would require significant modifications to foreign banking organizations' existing reporting systems at a substantial cost. Some commenters also argued that the proposed FR Y–15 changes would disproportionately burden foreign banking organizations compared to domestic banking organizations, and therefore were inconsistent with the principle of national treatment.

To address these concerns, commenters suggested alternatives to the proposal. Some commenters stated that the FR Y–15 should not include any reporting on a combined U.S. operations basis. In particular, commenters argued that the Board should implement a tailoring framework that does not measure risk-based indicators across a foreign banking organization's combined U.S. operations, and eliminate FR Y–15 reporting on a combined U.S. operations basis. Other commenters suggested that a foreign banking organization should only be required to report information on its combined U.S. operations that is necessary for calculating the risk-based indicators. Commenters also recommended that the Board allow banking organizations to file a modified FR Y–15 with an option to prepare top-line items and not require more nuanced risk-based indicator calculations with respect to a particular indicator if a banking organization is well below the threshold for the risk-based indicator based on the top-line item. Another commenter also requested removal of the requirement to calculate risk-weighted assets at the combined U.S. operations level.

As commenters acknowledged, the proposal would have required foreign banking organizations to calculate size, cross-jurisdictional activity, nonbank assets, off-balance sheet exposure, and weighted short-term wholesale funding for their combined U.S. operations in order to determine the category of standards that would apply to a foreign banking organization at the level of its combined U.S. operations.[126] Most of these indicators are already reported by U.S. bank holding companies, covered savings and loan holding companies, and U.S. intermediate holding companies. Requiring a foreign banking organization to report this information for its combined U.S. operations supports tailoring prudential standards based on the risk-profile of foreign banking organization's U.S. operations. This approach also establishes a central location for information on the risk-based indicators to help support the transparency of the framework.

The purpose and use of the FR Y–15 is broader than compliance with the tailoring framework, however. The FR Y–15 requests granular data on an institution's funding, structure, and activities that is consistent and comparable among institutions, and is often unavailable from other sources. The Board uses this information to monitor the systemic risk profile of banking organizations, as well as for other purposes.[127] Information on the combined U.S. operations of foreign banking organizations from the FR Y–15 will enhance the Board's ability to monitor and supervise the U.S. footprint of large foreign banking organizations and compare the risk profiles of large banking organizations. Having this data reported on the FR Y–15 also ensures that information on the combined U.S. operations of foreign banking organizations is available to the public, and thus can be used by the market to evaluate the systemic importance of domestic banking organizations and the U.S. operations of foreign banking organizations.

Accordingly, the final rule requires foreign banking organizations to report the FR Y–15 at the U.S. intermediate holding company and combined U.S. operations levels largely as proposed. The FR Y–15 as finalized is consistent with the principle of national treatment because it requires similarly-situated domestic holding companies and foreign banking organizations to report similar data on their U.S. footprint, taking into account the unique structures of foreign banking organizations. In response to comments, and because the Board is not applying categories of standards to the U.S. operations of foreign banking organizations based only on the risk profile of their U.S. branch and agency networks, the Board will not require foreign banking organizations to provide standalone data on their U.S. branches and agencies on the FR Y–15. Accordingly, the Board is modifying the proposal by eliminating the U.S. branch and agency column on the FR Y–15, and instead will only require foreign banking organizations to complete the FR Y–15 in two columns for purposes of the final rule: Column A, U.S. intermediate holding companies, if any; and Column B, combined U.S. operations. Foreign banking organizations also will not be required to calculate average risk-weighted assets for their combined U.S. operations in Column B on Schedule N, line item 7. Because branches and agencies are not subject to capital requirements, this information would provide limited supervisory benefit and could be burdensome to compile and calculate.

Commenters requested a number of specific line item changes and instruction clarifications for completing the FR Y–15. These commenters requested more clarity in the General Instructions on the rule of consolidation for foreign banking organizations and foreign affiliate netting. The final form includes revised language in the General Instructions and certain schedules that is intended to further clarify and address questions regarding consolidation rules and netting. The Board also intends to continue to review the FR Y–15 instructions in light of the changes in this final rule and, if necessary, further refine the form and instructions to provide additional clarity on how to report line items for the combined U.S. operations of foreign banking organizations. Commenters requested that the Board permit foreign banking organizations to report size as a spot, rather than average measure, on proposed Schedule H of the FR Y–15 unless the foreign banking organization's U.S. intermediate holding company is subject to the supplementary leverage ratio. Averages provide a more reliable and risk-sensitive estimate of the banking organization's size over the period, and as such, the Board is finalizing the calculation of total exposure on Schedule H as proposed.

Commenters raised a number of issues and questions regarding proposed Schedule L—FBO Cross-Jurisdictional Activity Indicators. For purposes of reporting cross-jurisdictional activity, the proposal would have required a foreign banking organization to report assets and liabilities of the combined U.S. operations, U.S. intermediate holding company, and U.S. branch and agency network, excluding cross-jurisdictional liabilities to non-U.S. affiliates and cross-jurisdictional claims on non-U.S. affiliates to the extent that these claims are secured by eligible financial collateral. To effectuate this

[126] Standards that apply to the combined U.S. operations of a foreign banking organization include liquidity stress tests, risk management, and buffer requirements under the enhanced prudential standards rule; resolution planning requirements; and the reporting frequency of the FR 2052a.

[127] For example, the FR Y–15 is used to facilitate the implementation of GSIB capital surcharges, identify other institutions which may present significant systemic risk, and analyze the systemic risk implications of proposed mergers and acquisitions.

change, the proposal would have amended the FR Y–15 by adding new line items to proposed Schedule L and changed the accompanying FR Y–15 instructions. Comments related to the substance of the cross-jurisdictional indicator are discussed in section V. The Board is finalizing Schedule L substantively as proposed, with some technical edits to language to provide further clarity on how to report line items for a foreign banking organization's combined U.S. operations.

One commenter recommended expanding line item 4 on Schedule E—Cross-Jurisdictional Activity Indicators to separately identify deposits; trading liabilities; borrowings (including short-term borrowings, long-term debt, federal funds purchased, and repurchase agreements); accounts payable; and other liabilities. The commenter argued that such additional specificity would provide the Board and the public with additional insight into the nature of an institution's cross-jurisdictional liabilities without increasing reporting burden. The Board finds that line item 4 is reported with sufficient granularity to understand the risk profile of the banking organizations and is adopting it as proposed.

Commenters expressed concern about the amount of time required to establish systems necessary to collect information from combined U.S. operations of a foreign banking organization as well as with the accuracy and integrity of the data collected. Commenters also requested at minimum, a 12-month phase-in period to accommodate the expanded scope of the FR Y–15 reporting requirements, and that the first two quarterly FR Y–15 filings be prepared on a ''best efforts'' basis. To allow firms to develop reporting and data systems, the final rule provides a phase-in period to meet the expanded reporting requirements in the FR Y–15. Under the phase-in period, banking organizations will be required to report the first combined U.S. operations data on the FR Y–15 with an as-of date of June 30, 2020, and submit the data to the Board no later than August 19, 2020.

Under the foreign bank proposal, Schedule N—FBO Short-Term Wholesale Funding Indicator of the FR Y–15 would have required foreign banking organizations that report the FR 2052a daily to report the average weighted short-term wholesale funding values using daily data, and all other foreign banking organizations to report average values using monthly data. Some commenters requested that weighted short-term wholesale funding in Schedule N be reported using monthly data for all foreign banking organizations. An average of day-end data points is a more accurate representation of a banking organization's ongoing reliance on wholesale funding. Accordingly, for foreign banking organizations that have sufficient liquidity risks that would require FR 2052a daily reporting, the final rule requires these banking organizations to report Schedule N on the FR Y–15 using daily data. For firms not subject to FR 2052a daily reporting, the Board is finalizing the rule for calculating weighted short-term wholesale funding as proposed.

The Board continues to evaluate whether the benefits of a more frequent average would be justified for these firms, particularly for firms that report the LCR on a daily basis, and may propose adjustments to the calculation frequency. Furthermore, the Board intends to monitor a firm's weighted short-term wholesale funding position at month-end relative to its position throughout the month through the supervisory process, and continues to have the authority to apply additional prudential standards based on the risk profile of a firm, including its liquidity risk profile.[128]

C. FR 2052a

The proposals would have modified the current reporting frequency and granularity of the FR 2052a to align with the proposed tailoring framework. Specifically, the proposals would have required U.S. bank holding companies and covered savings and loan holding companies, each with $100 billion or more in total consolidated assets, or foreign banking organizations with combined U.S. assets of $100 billion or more, to report FR 2052a data each business day if they were (i) subject to Category I or II standards, as applicable, or (ii) subject to Category III standards and had $75 billion or more in weighted short-term wholesale funding (for foreign banking organizations, this would be measured at the level of the combined U.S. operations). All other domestic holding companies and foreign banking organizations would have been required to report the FR 2052a on a monthly basis. These changes would have increased the frequency of reporting for domestic banking organizations subject to Category II standards with less than $700 billion in total consolidated assets, and domestic banking organizations subject to Category III standards with $75 billion or more in weighted short-term wholesale funding; both groups of banking organizations currently report the FR 2052a monthly. Similarly, the frequency of reporting would have changed for some foreign banking organizations. The proposals also would have simplified the FR 2052a reporting thresholds by eliminating the current criteria used to identify daily filers of the FR 2052a—for domestic holding companies, those firms with $700 billion or more in total assets or $10 trillion or more in assets under custody, and for foreign banking organizations, those firms included in the Large Institution Supervision Coordinating Committee portfolio—and replacing these criteria with the category framework.

A number of commenters requested that the Board reduce or eliminate proposed FR 2052a reporting requirements. Commenters requested that the Board modify the proposed FR 2052a reporting frequencies so that banking organizations subject to Category II and Category III standards would be subject to monthly or quarterly, rather than daily, reporting. Similarly, commenters argued that the Board should not expand the scope of daily FR 2052a reporting beyond its current reach, and that no banking organization should be subject to more frequent FR 2052a reporting under the proposals. Some commenters suggested that the requirement to report FR 2052a data each business day should not be based on the $75 billion weighted short-term wholesale funding threshold, but instead on a higher short-term wholesale funding threshold, such as $100 billion or $125 billion. Commenters on the foreign proposal noted that certain foreign banking organizations would move from monthly to daily FR 2052a reporting under the proposal and argued that this was unjustified, as well as inconsistent with the principle of national treatment.

The Board is finalizing the FR 2052a generally as proposed, with certain modifications as discussed below. Daily FR 2052a reporting is appropriate for institutions subject to Category II standards or Category III standards with $75 billion or more in weighted short-term wholesale funding. The Board uses liquidity data provided through FR 2052a reporting to monitor and assess the liquidity risks and resiliency of large banking organizations on an ongoing basis. The frequency and timeliness with which data is provided to supervisors should be commensurate with the scale and dynamic nature of a banking organization's liquidity risk. Liquidity stresses can materialize rapidly for banking organizations of all

[128] *See* 12 CFR 217.1(d); 12 CFR 249.2(a); 12 CFR 252.3(a).

sizes, but banking organizations with significant size and cross-jurisdictional activity in the United States may be more likely to face stress suddenly due to the scale of their funding and their operational complexity. Moreover, greater reliance on short-term wholesale funding may indicate heightened rollover risk and greater volatility in the funding profile of a banking organization or its U.S. operations. Banking organizations subject to Category II standards or Category III standards with $75 billion or more in weighted short-term wholesale funding have liquidity risk profiles that present higher risk to both financial stability and safety and soundness. Therefore, supervisory monitoring through daily FR 2052a reporting is critical to ensure these banking organizations are maintaining appropriate levels of liquidity and supervisors have a detailed understanding of their funding sources. The Board is thus finalizing the FR 2052a criteria and reporting frequency as proposed for banking organizations subject to Category II or III standards.

Some commenters on the domestic proposal argued that banking organizations that engage in activities that present lower liquidity risk, such as custodial activities, should not be required to submit the FR 2052a daily. Liquidity stresses may arise from a broad range of sources and markets, and can be impactful for banking organizations that have a range of business models. Accordingly, the Board is not providing different FR 2052a reporting requirements for institutions that engage in custodial activities.

A number of commenters argued that banking organizations subject to Category IV standards should be subject to quarterly reporting to align with the institutions' liquidity stress testing requirements. Other commenters requested that the Board eliminate FR 2052a reporting for banking organizations subject to Category IV standards, or instead require these institutions to report on an alternative form, such as the previously-used FR 2052b. If banking organizations subject to Category IV standards report the FR 2052a but are not subject to an LCR requirement under the final rule, commenters requested that the Board clarify and confirm that FR 2052a reporting will not implicitly bind these firms to the LCR rule.

The Board uses FR 2052a information to analyze systemic and idiosyncratic liquidity risk and to inform supervisory processes. As a class, banking organizations that are subject to Category IV standards tend to have more stable funding profiles, as measured by their generally lower level of weighted short-term wholesale funding, and lesser degrees of liquidity risk and operational complexity associated with size, cross-jurisdictional activity, nonbank assets, and off-balance sheet exposure compared to institutions subject to Categories I, II, or III standards. For this reason, the Board previously tailored data elements in the FR 2052a report based on the risk profiles for firms, and currently requires most banking organizations that would be subject to Category IV standards under the final rule to report the FR 2052a monthly rather than daily. The size of institutions subject to Category IV standards indicates that such institutions still present heightened liquidity risk relative to smaller banking organizations, however, and should continue to provide the information on the FR 2052a to ensure sufficient supervisory monitoring.

Similarly, because of their potential liquidity risks, banking organizations that would be subject to Category IV standards would still be required to develop comprehensive liquidity stress tests and short term daily cash flow projections under the enhanced prudential standards rule. The FR 2052b, which was discontinued in 2017, did not capture cash flow projections but collected information covering broad funding classifications by product, outstanding balance, and purpose, each segmented by maturity date. FR 2052a reporting aligns with the cash flows projection expectations and is substantially similar to the management information system a banking organization is required to develop to meet liquidity stress test requirements. The FR 2052a thus is a more comprehensive reporting form that is more appropriate for firms subject to the tailoring framework.

Accordingly, the Board is finalizing the FR 2052a largely as proposed, and requiring institutions subject to Category IV standards to report the form on a monthly basis. As discussed above, the purpose of FR 2052a reporting is broader than compliance with the LCR rule. In particular, the FR 2052a report collects data elements that enable the Federal Reserve to assess the cash flow profile of reporting firms. As a result, the Board notes that FR 2052a reporting will not be used to implicitly bind firms to an LCR rule.

Some commenters requested that banking organizations that would have been subject to monthly FR 2052a reporting be required to submit the form ten days after the as-of date (T+10) rather than two days after the as-of date (T+2). Under the proposals, top-tier U.S. depository institution holding companies and foreign banking organizations subject to either (1) Category III standards with less than $75 billion in weighted short-term wholesale funding or (2) Category IV standards with $50 billion or more in weighted short-term wholesale funding would have filed the FR 2052a monthly on a T+2 basis; all other monthly filers would have filed on a T+10 basis. Some commenters noted that, based on estimated categories included in the proposal, more foreign banking organizations would be required to file on a T+2 basis when compared to domestic banking organizations. Under the interagency capital and liquidity final rule, all banking organizations subject to Category III standards continue to be required to compute the LCR each business day. For banking organizations subject to Category III standards that file the FR 2052a monthly, a T+2 submission is not expected to create significant additional burden and the final rule will continue to require submission on a T+2 basis for these firms. However, for all banking organizations subject to Category IV standards that are subject to FR 2052a reporting on a monthly basis, the Board will require these firms to submit data on a T+10 basis, regardless of their level of weighted short-term wholesale funding. Based on the lower liquidity risk profile of Category IV banking organizations, the benefits of T+2 reporting for these firms would not outweigh the burden for these institutions.

Commenters requested clarification that foreign banking organizations may use the FR 2052a to calculate both the LCR and proposed NSFR. Appendix VI within the FR 2052a instructions was developed to assist reporting firms subject to the LCR rule in mapping the provisions of the LCR rule to the unique data identifiers reported on FR 2052a. This mapping document is neither part of the LCR rule nor a component of the FR 2052a report, and therefore may be used at firms' discretion. Finally, the FR 2052a includes a number of additional technical edits to the form and appendices to conform to the substantive changes in this final rule.

D. Summary of Reporting Effective Dates

The following chart summarizes when banking organizations will be required to first determine their category under this final rule, as well as when amended reporting forms and new reporting requirements will take effect. As reflected on the chart, U.S. bank holding companies, covered U.S. savings and loan holding companies, and U.S. intermediate holding companies should determine the category of standards that apply to them on the effective date of this final rule, using data from the FR Y–15 and FR Y–9LP reports as-of the quarter end dates for the previous four quarters. Foreign banking organizations will not be required to comply with the amended Schedule L of the FR Y–15 with respect to their U.S. intermediate holding companies until as-of June 30, 2020. Until that time, U.S. intermediate holding companies should determine their category under the tailoring framework consistent with the cross-jurisdictional activity schedule on the FR Y–15 that previously applied to U.S. intermediate holding companies provided that, when a foreign banking organization reports on the amended Schedule L with respect to its U.S. intermediate holding company, the U.S. intermediate holding company's measure of cross-jurisdictional activity will be based on the amount reported on the amended Schedule L and will not be averaged with amounts of cross-jurisdictional activity previously reported by the U.S. intermediate holding company.

In contrast, foreign banking organizations will not be required to determine the category of standards applied to their combined U.S. operations until the submission date of the FR Y–15 following the June 30, 2020 as-of date. Accordingly, a foreign banking organization would be required to comply with the category of standards applied to its combined U.S. operations beginning on October 1, 2020. This delay is to account for foreign banking organizations filing the FR Y–15 on behalf of their combined U.S. operations for the first time as-of June 30, 2020.

TABLE IV—TIMELINE FOR INITIAL CATEGORIZATIONS AND REPORTING UNDER THE FINAL RULE

	Reporting unit			
	U.S. bank holding companies	Covered U.S. savings and loan holding companies	U.S. intermediate holding companies	Combined U.S. operations of foreign banking organizations
Date for first categorization under 12 CFR 252.5 or 12 CFR 238.10.	Effective date of final rule[129].	Effective date of final rule[130].	Effective date of final rule[131].	Submission date of FR Y–15 as-of June 30, 2020.
First as-of date for amended FR Y–15	June 30, 2020	June 30, 2020	June 30, 2020.[132]	
First as-of date for amended FR 2052a	June 30, 2020	June 30, 2020	October 1, 2020.[133]	
First as-of date for amended FR Y–14A	Next report after effective date of final rule.	December 31, 2021	Next report after effective date of final rule.	N/A.
First as-of date for amended FR Y–14Q	Next report after effective date of final rule.	June 30, 2020	Next report after effective date of final rule.	N/A.
First as-of date for amended FR Y–14M	Next report after effective date of final rule.	June 30, 2020	Next report after effective date of final rule.	N/A.
First as-of date for amended FR Y–9C	Next report after effective date of final rule.	Next report after effective date of final rule.	Next report after effective date of final rule.	N/A.
First as-of date for amended FR Y–9LP	Next report after effective date of final rule.	Next report after effective date of final rule.	Next report after effective date of final rule.	N/A.
First as-of date for amended FR Y–7Q	N/A	N/A	Next report after effective date of final rule.[134]	
First as-of date for amended FR Y–7	N/A	N/A	Next report after effective date of final rule (fiscal year-end 2020).[135]	

XVI. Impact Assessment

In general, U.S. banking organizations with less than $100 billion in total consolidated assets and U.S. intermediate holding companies with less than $100 billion in total consolidated assets would have significantly reduced compliance costs, as under the final rule these firms are no longer subject to the enhanced prudential standards rule or the capital plan rule, and are no longer required to file FR Y–14, FR Y–15, or FR 2052a reports.[136] While these banking organizations are no longer subject to internal liquidity stress testing and buffer requirements, these firms currently hold highly liquid assets well in excess of their current liquidity buffer requirements.

[129] A bank holding company should determine its initial category based on averages using the bank holding company's four most recent FR Y–15 and FR Y–9LP filings.

[130] A covered savings and loan holding company should determine its initial category based on averages using the covered savings and loan holding company's four most recent FR Y–15 and FR Y–9LP filings.

[131] A U.S. intermediate holding company should determine its initial category based on averages using the U.S. intermediate holding company's four most recent FR Y–15 and FR Y–9LP filings. When a foreign banking organization reports on the amended Schedule L with respect to its U.S. intermediate holding company, the U.S. intermediate holding company's measure of cross-jurisdictional activity will be based on the amount reported on the amended Schedule L and will not be averaged with amounts of cross-jurisdictional activity previously reported by the U.S. intermediate holding company.

[132] As-of this date, top-tier foreign banking organizations will report the FR Y–15 on behalf of their U.S. intermediate holding company and combined U.S. operations.

[133] Until this date, a foreign banking organization should report the FR 2052a with the frequency and as-of date (Day T) as the foreign banking organization was required to report on September 1, 2019.

[134] Top-tier foreign banking organizations currently, and will continue to, report the FR Y–7Q.

[135] Top-tier foreign banking organizations currently, and will continue to, report the FR Y–7. The FR Y–7 is due annually at the end of a foreign banking organization's fiscal year.

[136] However, bank holding companies have not been complying with these requirements since July 6, 2018, when the Board issued a statement noting that it would no longer enforce these regulations or reporting requirements with respect to these firms. *See* Board statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act, July 6, 2018, available at, *https://www.federalreserve.gov/newsevents/pressreleases/files/bcreg20180706b1.pdf.*

For U.S. banking organizations with $100 billion or more in total consolidated assets and foreign banking organizations with $100 billion or more in combined U.S. assets, the Board expects the adjustments to the enhanced prudential standards under this final rule to reduce aggregate compliance costs with minimal effects on the safety and soundness of these firms and U.S. financial stability. With respect to reporting, foreign banking organizations will experience an increase in compliance costs as a result of having to report the information required under Form FR Y–15 at the level of their combined U.S. operations, and certain banking organizations with weighted short-term wholesale funding of $75 billion or more that previously filed the FR 2052a on a monthly basis may experience an increase in compliance costs due to the increase in reporting frequency of the FR 2052a to daily. The interagency capital and liquidity final rule provides additional impact information.

A. Liquidity

The changes to liquidity requirements are expected to reduce compliance costs for banking organizations subject to Category IV standards by reducing the required frequency of internal liquidity stress tests from monthly to quarterly, and tailoring the liquidity risk management requirements to the risk profiles of these firms. The Board does not expect these changes to materially affect the liquidity buffer levels held by these banking organizations or their exposure to liquidity risk.

B. Stress Testing

First, while the Board expects the changes to stress testing requirements to have no material impact on the capital levels of U.S. banking organizations and U.S. intermediate holding companies with $100 billion or more in total consolidated assets, the final rule will reduce compliance costs for those firms subject to Category III or IV capital standards. These firms were previously required to conduct company-run stress tests on a semi-annual basis. For U.S. banking organizations and U.S. intermediate holding companies subject to Category III standards, the final rule reduces this frequency to every other year. For U.S. banking organizations and U.S. intermediate holding companies subject to Category IV standards, the final rule removes the company-run stress test requirement altogether.[137] In addition, under the final rule, the Board will conduct supervisory stress tests of U.S. banking organizations and U.S. intermediate holding companies subject to Category IV standards on a two-year, rather than annual, cycle.

C. Single-Counterparty Credit Limits

The changes to the single-counterparty credit limits framework under the final rule are not expected to increase risks to safety and soundness or U.S. financial stability. The final rule removes U.S. intermediate holding companies subject to Category IV standards from the applicability of single-counterparty credit limits. While these firms would recognize reductions in compliance costs associated with these requirements, they typically do not present the risks that are intended to be addressed by the single-counterparty credit limits framework. In addition, the final rule removes the single-counterparty credit limits applicable to major U.S. intermediate holding companies; however, there currently are no U.S. intermediate holding companies that meet or exceed the asset size threshold for these requirements.

The final rule will increase the costs of compliance for U.S. intermediate holding companies with less than $250 billion in total consolidated assets and that are subject to Category II or Category III standards, by extending the applicability of certain provisions under the single-counterparty credit limits framework to these firms. Specifically, as of January 1, 2021, U.S. intermediate holding companies with less than $250 billion in total consolidated assets that subject to Category II or Category III standards will be subject to a net credit exposure limit equal to 25 percent of tier 1 capital, the treatment for investments in and exposures to certain special purpose entities and the economic interdependence and control relationship tests for purposes of aggregating exposures to connected counterparties.

D. Covered Savings and Loan Holding Companies

For covered savings and loan holding companies, the final rule increases compliance costs while reducing risks to the safety and soundness of these firms. The Board expects the new requirements for covered savings and loan holding companies to meaningfully improve the risk management capabilities of these firms and their resiliency to stress, which furthers their safety and soundness.

A covered savings and loan holding company that is subject to Category II or III standards is required to conduct company-run stress tests, which would be a new requirement. In connection with the application of supervisory and company-run capital stress testing requirements, covered savings and loan holding companies with total consolidated assets of $100 billion or more must report the FR Y–14 reports. In addition, the final rule requires a covered savings and loan holding company with total consolidated assets of $100 billion or more to conduct internal liquidity stress testing and maintain a liquidity buffer. While covered savings and loan holding companies will incur costs for conducting internal liquidity stress testing, this requirement will serve to improve the capability of these firms to understand, manage, and plan for liquidity risk exposures across a range of conditions. Depending on its liquidity buffer requirement, a covered savings and loan holding company may need to increase the amount of liquid assets it holds or otherwise adjust its risk profile to reduce estimated net stressed cash-flow needs. Because covered savings and loan holding companies are already subject to the LCR rule, which also requires a firm to maintain a minimum amount of liquid assets to meet net outflows under a stress scenario, covered savings and loan holding companies generally will need to hold only an incremental amount—if any—above the levels already required to comply with the LCR rule.

XVII. Administrative Law Matters

A. Paperwork Reduction Act Analysis

Certain provisions of the final rule contain ''collections of information'' within the meaning of the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The Board may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The Board

[137] Although the final rule would not modify the requirement for a U.S. banking organization or intermediate holding company subject to Category IV standards to conduct an internal capital stress test as part of its annual capital plan submission, the Board intends to propose changes in the future capital plan proposal to align with the proposed removal of company-run stress testing requirements for these firms. *See* section IV.D of this **SUPPLEMENTARY INFORMATION**.

reviewed the final rule under the authority delegated to the Board by OMB. The Board did not receive any specific comments on the PRA.

The final rule contains reporting requirements subject to the PRA. To implement these requirements, the Board is revising the (1) Complex Institution Liquidity Monitoring Report (FR 2052a; OMB No. 7100–0361), (2) Annual Report of Foreign Banking Organizations (FR Y–7; OMB No. 7100–0297), (3) Capital and Asset Report for Foreign Banking Organizations (FR Y–7Q; OMB No. 7100–0125), (4) Consolidated Financial Statements for Holding Companies (FR Y–9C; OMB No. 7100–0128), (5) Capital Assessments and Stress Testing (FR Y–14A/Q/M; OMB No. 7100–0341), and (6) Systemic Risk Report (FR Y–15; OMB No. 7100–0352).

The final rule also contains reporting and recordkeeping requirements subject to the PRA. To implement these requirements, the Board is revising the reporting and recordkeeping requirements associated with Regulations Y, LL and YY: (7) Reporting and Recordkeeping Requirements Associated with Regulation Y (Capital Plans) (FR Y–13; OMB No. 7100–0342), (8) Reporting Requirements Associated with Regulation LL (FR LL; OMB No. 7100–NEW), and (9) Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation YY (FR YY; OMB No. 7100–0350). Foreign banking organizations do not yet report all of the data for the measure of cross-jurisdictional activity and, accordingly, the burden estimates rely on firm categorizations using best available data.

Adopted Revision, With Extension, of the Following Information Collections

(1) *Report title:* Complex Institution Liquidity Monitoring Report.

Agency form number: FR 2052a.

OMB control number: 7100–0361.

Effective Date: June 30, 2020 (October 1, 2020 for foreign banking organizations with U.S. assets).

Frequency: Monthly, each business day (daily).

Affected Public: Businesses or other for-profit.

Respondents: U.S. bank holding companies, U.S. savings and loan holding companies, and foreign banking organizations.

Estimated number of respondents: Monthly: 26; Daily: 16.

Estimated average hours per response: Monthly: 120; Daily: 220.

Estimated annual burden hours: 917,440.

General description of report: The FR 2052a is used to monitor the overall liquidity profile of institutions supervised by the Board. These data provide detailed information on the liquidity risks within different business lines (*e.g.,* financing of securities positions, prime brokerage activities). In particular, these data serve as part of the Board's supervisory surveillance program in its liquidity risk management area and provide timely information on firm-specific liquidity risks during periods of stress. Analyses of systemic and idiosyncratic liquidity risk issues are used to inform the Board's supervisory processes, including the preparation of analytical reports that detail funding vulnerabilities.

Legal authorization and confidentiality: The FR 2052a is authorized pursuant to section 5 of the Bank Holding Company Act (12 U.S.C. 1844), section 8 of the International Banking Act (12 U.S.C. 3106), section 10 of the Home Owners' Loan Act (HOLA) (12 U.S.C. 1467a), and section 165 of the Dodd-Frank Act (12 U.S.C. 5365) and is mandatory. Section 5(c) of the Bank Holding Company Act authorizes the Board to require bank holding companies (BHCs) to submit reports to the Board regarding their financial condition. Section 8(a) of the International Banking Act subjects foreign banking organizations to the provisions of the Bank Holding Company Act. Section 10(b)(2) of HOLA authorizes the Board to require savings and loan holding companies (SLHCs) to file reports with the Board concerning their operations. Section 165 of the Dodd-Frank Act requires the Board to establish prudential standards, including liquidity requirements, for certain BHCs and foreign banking organizations.

Financial institution information required by the FR 2052a is collected as part of the Board's supervisory process. Therefore, such information is entitled to confidential treatment under exemption 8 of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(8)). In addition, the institution information provided by each respondent would not be otherwise available to the public and its disclosure could cause substantial competitive harm. Accordingly, it is entitled to confidential treatment under the authority of exemption 4 of the FOIA (5 U.S.C. 552(b)(4), which protects from disclosure trade secrets and commercial or financial information.

Current Actions: To implement the reporting requirements of the final rule, the Board is modifying the current FR 2052a reporting frequency. The Board revised the FR 2052a (1) so that BHCs and SLHCs with less than $100 billion in total consolidated assets would no longer have to report, (2) BHCs or SLHCs subject to Category II standards ($700 billion or more in total consolidated assets or $75 billion or more in cross jurisdictional activity) would have to report FR 2052a daily, and (3) BHCs or SLHCs subject to Category III standards with $75 billion or more in weighted short-term wholesale funding would have to report FR 2052a daily, rather than monthly. Consistent with EGRRCPA's changes, the revisions would remove foreign banking organizations with less than $100 billion in combined U.S. assets from the scope of FR 2052a reporting requirements. Additionally, the final rule would require foreign banking organizations with combined U.S. assets of $100 billion or more to report the FR 2052a on a daily basis if they are (1) subject to Category II standards or (2) are subject to Category III standards and have $75 billion or more in weighted short-term wholesale funding. All other foreign banking organizations with combined U.S. assets of $100 billion or more would be subject to monthly filing requirements. The Board estimates that the revisions to the FR 2052a would decrease the respondent count by 6. Specifically, the Board estimates that the number of monthly filers would decrease from 36 to 26, but the number of daily filers would increase from 12 to 16. The Board estimates that revisions to the FR 2052a would increase the estimated annual burden by 205,600 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(2) *Report title:* Annual Report of Holding Companies; Annual Report of Foreign Banking Organizations; Report of Changes in Organizational Structure; Supplement to the Report of Changes in Organizational Structure.

Agency form number: FR Y–6; FR Y–7; FR Y–10; FR Y–10E.

OMB control number: 7100–0297.

Effective Date: For the amended FR Y–7, the next report after effective date of final rule (fiscal year-end 2020).

Frequency: Annual and event-generated.

Affected Public: Businesses or other for-profit.

Respondents: Bank holding companies (BHCs), savings and loan holding companies (SLHCs), securities holding companies (SHCs), and intermediate holding companies (IHCs) (collectively, holding companies (HCs)), foreign banking organizations (FBOs), state member banks (SMBs) unaffiliated with a BHC, Edge Act and agreement corporations, and nationally chartered banks that are not controlled by a BHC (with regard to their foreign investments only).

Estimated number of respondents: FR Y–6: 4,044; FR Y–7: 256; FR Y–10: 4,232; FR Y–10E: 4,232.

Estimated average hours per response: FR Y–6: 5.5; FR Y–7: 4.5; FR Y–10: 2.5; FR Y–10E: 0.5.

Estimated annual burden hours: FR Y–6: 22,242; FR Y–7: 1,152; FR Y–10: 43,233; FR Y–10E: 2,116.

General description of report: The FR Y–6 is an annual information collection submitted by top-tier domestic HCs and FBOs that are non-qualifying. It collects financial data, an organization chart, verification of domestic branch data, and information about shareholders. The Federal Reserve uses the data to monitor HC operations and determine HC compliance with the provisions of the BHC Act, Regulation Y (12 CFR part 225), the Home Owners' Loan Act (HOLA), Regulation LL (12 CFR part 238), and Regulation YY (12 CFR part 252).

The FR Y–7 is an annual information collection submitted by FBOs that are qualifying to update their financial and organizational information with the Federal Reserve. The FR Y–7 collects financial, organizational, shareholder, and managerial information. The Federal Reserve uses the information to assess an FBO's ability to be a continuing source of strength to its U.S. operations and to determine compliance with U.S. laws and regulations.

The FR Y–10 is an event-generated information collection submitted by FBOs; top-tier HCs; securities holding companies as authorized under Section 618 of the Dodd-Frank Act (12 U.S.C. 1850a(c)(1)); state member banks unaffiliated with a BHC; Edge and agreement corporations that are not controlled by a member bank, a domestic BHC, or an FBO; and nationally chartered banks that are not controlled by a BHC (with regard to their foreign investments only) to capture changes in their regulated investments and activities. The Federal Reserve uses the data to monitor structure information on subsidiaries and regulated investments of these entities engaged in banking and nonbanking activities.

The FR Y–10E is an event-driven supplement that may be used to collect additional structural information deemed to be critical and needed in an expedited manner.

Legal authorization and confidentiality: These information collections are mandatory as follows:

FR Y–6: Section 5(c)(1)(A) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1844(c)(1)(A)); sections 8(a) and 13(a) of the International Banking Act (IBA) (12 U.S.C. 3106(a) and 3108(a)); sections 11(a)(1), 25, and 25A of the Federal Reserve Act (FRA) (12 U.S.C. 248(a)(1), 602, and 611a); and sections 113, 165, 312, 618, and 809 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) (12 U.S.C. 5361, 5365, 5412, 1850a(c)(1), and 5468(b)(1)).

FR Y–7: Sections 8(a) and 13(a) of the IBA (12 U.S.C. 3106(a) and 3108(a)); sections 113, 165, 312, 618, and 809 of the Dodd-Frank Act (12 U.S.C. 5361, 5365, 5412, 1850a(c)(1), and 5468(b)(1)).

FR Y–10 and FR Y–10E: Sections 4(k) and 5(c)(1)(A) of the BHC Act (12 U.S.C. 1843(k), and 1844(c)(1)(A)); section 8(a) of the IBA (12 U.S.C. 3106(a)); sections 11(a)(1), 25(7), and 25A of the FRA (12 U.S.C. 248(a)(1), 321, 601, 602, 611a, 615, and 625); sections 113, 165, 312, 618, and 809 of the Dodd-Frank Act (12 U.S.C. 5361, 5365, 5412, 1850a(c)(1), and 5468(b)(1)); and section 10(c)(2)(H) of the Home Owners' Loan Act (HOLA) (12 U.S.C. 1467a(c)(2)(H)).

Except as discussed below, the data collected in the FR Y–6, FR Y–7, FR Y–10, and FR Y–10E are generally not considered confidential. With regard to information that a banking organization may deem confidential, the institution may request confidential treatment of such information under one or more of the exemptions in the Freedom of Information Act (FOIA) (5 U.S.C. 552). The most likely case for confidential treatment will be based on FOIA exemption 4, which permits an agency to exempt from disclosure ''trade secrets and commercial or financial information obtained from a person and privileged and confidential'' (5 U.S.C. 552(b)(4)). To the extent an institution can establish the potential for substantial competitive harm, such information would be protected from disclosure under the standards set forth in *National Parks & Conservation Association* v. *Morton*, 498 F.2d 765 (D.C. Cir. 1974). In particular, the disclosure of the responses to the certification questions on the FR Y–7 may interfere with home country regulators' administration, execution, and disclosure of their stress test regime and its results, and may cause substantial competitive harm to the FBO providing the information, and thus this information may be protected from disclosure under FOIA exemption 4. Exemption 6 of FOIA might also apply with regard to the respondents' submission of non-public personal information of owners, shareholders, directors, officers and employees of respondents. Exemption 6 covers ''personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy'' (5 U.S.C. 552(b)(6)). All requests for confidential treatment would need to be reviewed on a case-by-case basis and in response to a specific request for disclosure.

Current Actions: The Board revised item 5 on the FR Y–7, Regulation YY Compliance for the Foreign Banking Organization (FBO), to align the reporting form with the applicability thresholds set forth in the final rules and other regulatory changes that are consistent with the Board's July 2018 statement concerning EGRRCPA. The Board estimates that revisions to the FR Y–7 would not impact the respondent count, but the estimated average hours per response would decrease from 6 hours to 4.5 hours. The Board estimates that revisions to the FR Y–7 would decrease the estimated annual burden by 384 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(3) *Report title:* Financial Statements of U.S. Nonbank Subsidiaries Held by Foreign Banking Organizations, Abbreviated Financial Statements of U.S. Nonbank Subsidiaries Held by Foreign Banking Organizations, and Capital and Asset Report for Foreign Banking Organizations.

Agency form number: FR Y–7N, FR Y–7NS, and FR Y–7Q.

OMB control number: 7100–0125.

Effective Date: For the amended FR Y–7Q, the next report after effective date of final rule.

Frequency: Quarterly and annually.

Affected Public: Businesses or other for-profit.

Respondents: Foreign banking organizations (FBOs).

Estimated number of respondents: FR Y–7N (quarterly): 35; FR Y–7N (annual): 19; FR Y–7NS: 22; FR Y–7Q (quarterly): 130; FR Y–7Q (annual): 29.

Estimated average hours per response: FR Y–7N (quarterly): 7.6; FR Y–7N (annual): 7.6; FR Y–7NS: 1; FR Y–7Q (quarterly): 2.25; FR Y–7Q (annual): 1.5.

Estimated annual burden hours: FR Y–7N (quarterly): 1,064; FR Y–7N (annual): 144; FR Y–7NS: 22; FR Y–7Q (quarterly): 1,170; FR Y–7Q (annual): 44.

General description of report: The FR Y–7N and the FR Y–7NS are used to assess an FBO's ability to be a continuing source of strength to its U.S.

operations and to determine compliance with U.S. laws and regulations. FBOs file the FR Y–7N quarterly or annually or the FR Y–7NS annually predominantly based on asset size thresholds. The FR Y–7Q is used to assess consolidated regulatory capital and asset information from all FBOs. The FR Y–7Q is filed quarterly by FBOs that have effectively elected to become or be treated as a U.S. financial holding company (FHC) and by FBOs that have total consolidated assets of $50 billion or more, regardless of FHC status. All other FBOs file the FR Y–7Q annually.

Legal authorization and confidentiality: With respect to FBOs and their subsidiary IHCs, section 5(c) of the BHC Act, in conjunction with section 8 of the International Banking Act (12 U.S.C. 3106), authorizes the board to require FBOs and any subsidiary thereof to file the FR Y–7N reports, and the FR Y–7Q.

Information collected in these reports generally is not considered confidential. However, because the information is collected as part of the Board's supervisory process, certain information may be afforded confidential treatment pursuant to exemption 8 of FOIA (5 U.S.C. 552(b)(8)). Individual respondents may request that certain data be afforded confidential treatment pursuant to exemption 4 of the FOIA if the data has not previously been publically disclosed and the release of the data would likely cause substantial harm to the competitive position of the respondent (5 U.S.C. 552(b)(4)). Additionally, individual respondents may request that personally identifiable information be afforded confidential treatment pursuant to exemption 6 of the FOIA if the release of the information would constitute a clearly unwarranted invasion of personal privacy (5 U.S.C. 552(b)(6)). The applicability of FOIA exemptions 4 and 6 would be determined on a case-by-case basis.

Current Actions: The final rule would amend the FR Y–7Q to align with revisions to the enhanced prudential standards rule. Previously, top-tier foreign banking organizations with $50 billion or more in total consolidated assets were required to report Part 1B—Capital and Asset Information for Top-tier Foreign Banking Organizations with Consolidated Assets of $50 billion or more. The final rule would now require top-tier foreign banking organizations that are subject to either sections 252.143 or 252.154 of the enhanced prudential standards rule to report Part 1B. The Board estimates that revisions to the FR Y–7Q would not impact the respondent count, but the estimated average hours per response would decrease from 3 hours to 2.25 hours for quarterly filers. The Board estimates that revisions to the FR Y–7Q would decrease the estimated annual burden by 390 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(4) *Report title:* Consolidated Financial Statements for Holding Companies.

Agency form number: FR Y–9C, FR Y–9LP, FR Y–9SP, FR Y–9ES, and FR Y–9CS.

OMB control number: 7100–0128.

Effective Date: For amended FR Y–9C and FR Y–9LP, next report after effective date of final rule.

Frequency: Quarterly, semiannually, and annually.

Affected Public: Businesses or other for-profit.

Respondents: Bank holding companies (BHCs), savings and loan holding companies (SLHCs), securities holding companies (SHCs), and U.S. Intermediate Holding Companies (IHCs) (collectively, holding companies (HCs)).

Estimated number of respondents: FR Y–9C (non-advanced approaches holding companies): 344; FR Y–9C (advanced approached holding companies): 19; FR Y–9LP: 434; FR Y–9SP: 3,960; FR Y–9ES: 83; FR Y–9CS: 236.

Estimated average hours per response: FR Y–9C (non-advanced approaches holding companies): 46.34; FR Y–9C (advanced approached holding companies): 47.59; FR Y–9LP: 5.27; FR Y–9SP: 5.40; FR Y–9ES: 0.50; FR Y–9CS: 0.50.

Estimated annual burden hours: FR Y–9C (non advanced approaches holding companies): 63,764; FR Y–9C (advanced approached holding companies): 3,617; FR Y–9LP: 9,149; FR Y–9SP: 42,768; FR Y–9ES: 42; FR Y–9CS: 472.

General description of report: The FR Y–9 family of reporting forms continues to be the primary source of financial data on HCs on which examiners rely between on-site inspections. Financial data from these reporting forms is used to detect emerging financial problems, review performance, conduct pre-inspection analysis, monitor and evaluate capital adequacy, evaluate HC mergers and acquisitions, and analyze an HC's overall financial condition to ensure the safety and soundness of its operations. The FR Y–9C, FR Y–9LP, and FR Y–9SP serve as standardized financial statements for the consolidated holding company. The Board requires HCs to provide standardized financial statements to fulfill the Board's statutory obligation to supervise these organizations. The FR Y–9ES is a financial statement for HCs that are Employee Stock Ownership Plans. The Board uses the FR Y–9CS (a free-form supplement) to collect additional information deemed to be critical and needed in an expedited manner. HCs file the FR Y–9C on a quarterly basis, the FR Y–9LP quarterly, the FR Y–9SP semiannually, the FR Y–9ES annually, and the FR Y–9CS on a schedule that is determined when this supplement is used.

Legal authorization and confidentiality: The FR Y–9 family of reports is authorized by section 5(c) of the Bank Holding Company Act (12 U.S.C. 1844(c)), section 10(b) of the Home Owners' Loan Act (12 U.S.C. 1467a(b)), section 618 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) (12 U.S.C. 1850a(c)(1)), and section 165 of the Dodd-Frank Act (12 U.S.C. 5365). The obligation of covered institutions to report this information is mandatory.

With respect to FR Y–9LP, FR Y–9SP, FR Y–ES, and FR Y–9CS, the information collected would generally not be accorded confidential treatment. If confidential treatment is requested by a respondent, the Board will review the request to determine if confidential treatment is appropriate.

With respect to FR Y–9C, Schedule HI's item 7(g) ''FDIC deposit insurance assessments,'' Schedule HC–P's item 7(a) ''Representation and warranty reserves for 1–4 family residential mortgage loans sold to U.S. government agencies and government sponsored agencies,'' and Schedule HC–P's item 7(b) ''Representation and warranty reserves for 1–4 family residential mortgage loans sold to other parties'' are considered confidential. Such treatment is appropriate because the data is not publicly available and the public release of this data is likely to impair the Board's ability to collect necessary information in the future and could cause substantial harm to the competitive position of the respondent. Thus, this information may be kept confidential under exemptions (b)(4) of the Freedom of Information Act, which exempts from disclosure ''trade secrets and commercial or financial information obtained from a person and privileged or confidential'' (5 U.S.C. 552(b)(4)), and (b)(8) of the Freedom of Information Act, which exempts from disclosure information related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions (5 U.S.C. 552(b)(8)).

Current Actions: To implement the reporting requirements of the final rule, the Board is amending the FR Y–9C to clarify requirements for holding companies subject to Category III capital standards. The final rule amends those instructions to further clarify that the supplementary leverage ratio and countercyclical buffer also apply to Category III bank holding companies, Category III savings and loan holding companies, and Category III U.S. intermediate holding companies. The FR Y–9LP is revised to require covered savings and loan holding companies with total consolidated assets of $100 billion or more to report total nonbank assets on Schedule PC–B, in order to determine whether the firm would be subject to Category III standards. The Board estimates that revisions to the FR Y–9C would increase the non AA HCs respondent count by 11 and decrease the AA HCs respondent count by 11. The Board estimates that revisions to the FR Y–9 would decrease the estimated annual burden by 55 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(5) *Report title:* Capital Assessments and Stress Testing.

Agency form number: FR Y–14A/Q/M.

OMB control number: 7100–0341.

Effective Date: For U.S. bank holding companies and U.S. intermediate holding companies, the next reports (FR Y–14A, Q, and M) after the effective date of final rule. For U.S. covered savings and loan holding companies June 30, 2020 (FR Y–14Q and FR Y–14M), and December 31, 2021 (FR Y–14A).

Frequency: Annually, semiannually, quarterly, and monthly.

Affected Public: Businesses or other for-profit.

Respondents: The respondent panel consists of any top-tier bank holding company (BHC) that has $100 billion or more in total consolidated assets, as determined based on (1) the average of the firm's total consolidated assets in the four most recent quarters as reported quarterly on the firm's FR Y–9C or (2) the average of the firm's total consolidated assets in the most recent consecutive quarters as reported quarterly on the firm's FR Y–9Cs, if the firm has not filed an FR Y–9C for each of the most recent four quarters. The respondent panel also consists of any U.S. intermediate holding company (IHC). Reporting is required as of the first day of the quarter immediately following the quarter in which the respondent meets this asset threshold, unless otherwise directed by the Board.

Estimated number of respondents: 38.

Estimated average hours per response: FR Y–14A: Summary, 887; Macro Scenario, 31; Operational Risk, 18; Regulatory Capital Instruments, 21; Business Plan Changes, 16; and Adjusted Capital Plan Submission, 100. FR Y–14Q: Retail, 15; Securities, 13; PPNR, 711; Wholesale, 151; Trading, 1,926; Regulatory Capital Transitions, 23; Regulatory Capital Instruments, 54; Operational Risk, 50; MSR Valuation, 23; Supplemental, 4; Retail FVO/HFS, 15; Counterparty, 514; and Balances, 16. FR Y–14M: 1st Lien Mortgage, 516; Home Equity, 516; and Credit Card, 512. FR Y–14: Implementation, 7,200; Ongoing Automation Revisions, 480. FR Y–14 Attestation—Implementation, 4,800; Attestation On-going Audit and Review, 2,560.

Estimated annual burden hours: FR Y–14A: Summary, 67,412; Macro Scenario, 2,232; Operational Risk, 684; Regulatory Capital Instruments, 756; Business Plan Changes, 608; and Adjusted Capital Plan Submission, 500. FR Y–14Q: Retail, 2,280; Securities, 1,976; Pre-Provision Net Revenue (PPNR), 108,072; Wholesale, 22,952; Trading, 92,448; Regulatory Capital Transitions, 3,212; Regulatory Capital Instruments, 7,776; Operational risk, 7,600; Mortgage Servicing Rights (MSR) Valuation, 1,564; Supplemental, 608; Retail Fair Value Option/Held for Sale (Retail FVO/HFS), 1,620; Counterparty, 24,672; and Balances, 2,432. FR Y–14M: 1st Lien Mortgage, 222,912; Home Equity, 185,760; and Credit Card, 98,304. FR Y–14: Implementation, 14,400 and On-going Automation Revisions, 18,240. FR Y–14 Attestation On-going Audit and Review, 33,280.

General description of report: These collections of information are applicable to top-tier BHCs with total consolidated assets of $100 billion or more and U.S. IHCs. This family of information collections is composed of the following three reports:

1. The FR Y–14A collects quantitative projections of balance sheet, income, losses, and capital across a range of macroeconomic scenarios and qualitative information on methodologies used to develop internal projections of capital across scenarios either annually or semi-annually.

2. The quarterly FR Y–14Q collects granular data on various asset classes, including loans, securities, and trading assets, and PPNR for the reporting period.

3. The monthly FR Y–14M is comprised of three retail portfolio- and loan-level schedules, and one detailed address-matching schedule to supplement two of the portfolio and loan-level schedules.

The data collected through the FR Y–14A/Q/M reports provide the Board with the information and perspective needed to help ensure that large firms have strong, firm-wide risk measurement and management processes supporting their internal assessments of capital adequacy and that their capital resources are sufficient given their business focus, activities, and resulting risk exposures. The annual CCAR exercise complements other Board supervisory efforts aimed at enhancing the continued viability of large firms, including continuous monitoring of firms' planning and management of liquidity and funding resources, as well as regular assessments of credit, market and operational risks, and associated risk management practices. Information gathered in this data collection is also used in the supervision and regulation of these financial institutions. To fully evaluate the data submissions, the Board may conduct follow-up discussions with, or request responses to follow up questions from, respondents. Respondent firms are currently required to complete and submit up to 18 filings each year: Two semi-annual FR Y–14A filings, four quarterly FR Y–14Q filings, and 12 monthly FR Y–14M filings. Compliance with the information collection is mandatory.

Legal authorization and confidentiality: The Board has the authority to require BHCs to file the FR Y–14A/Q/M reports pursuant to section 5 of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1844), and to require the U.S. IHCs of FBOs to file the FR Y–14 A/Q/M reports pursuant to section 5 of the BHC Act, in conjunction with section 8 of the International Banking Act (12 U.S.C. 3106). The Board has authority to require SLHCs to file the FR Y–14A/Q/M reports pursuant to section 10 of HOLA (12 U.S.C. 1467a).

The information collected in these reports is collected as part of the Board's supervisory process, and therefore is afforded confidential treatment pursuant to exemption 8 of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(8)). In addition, individual respondents may request that certain data be afforded confidential treatment pursuant to exemption 4 of FOIA if the data has not previously been publicly disclosed and the release of the data would likely cause substantial harm to the competitive position of the respondent (5 U.S.C. 552(b)(4)). Determinations of confidentiality based on exemption 4 of FOIA would be made on a case-by-case basis.

Current Actions: To implement the reporting requirements of the final rule, the Board revised the FR Y–14 so that (1) BHCs with less than $100 billion in total consolidated assets would no longer have to report and (2) covered SLHCs with $100 billion or more in total consolidated assets are included in the reporting panel for certain FR Y–14 schedules. The Board revised the FR Y–14 threshold for U.S. intermediate holding companies that would be required to submit these forms, by increasing it to apply only U.S. intermediate holding companies with $100 billion or more in total consolidated assets. U.S. intermediate holding companies below this size threshold would no longer be required to submit these forms. The Board has also made certain revisions to the FR Y–14 forms to eliminate references to the adverse scenario, consistent with other changes in this final rule. The Board estimates that revisions to the FR Y–14 would increase the reporting panel by 2 respondents. The Board estimates that revisions to the FR Y–14 would increase the estimated annual burden by 64,016 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(6) *Report title:* Systemic Risk Report.

Agency form number: FR Y–15.

OMB control number: 7100–0352.

Effective Date: June 30, 2020.

Frequency: Quarterly.

Affected Public: Businesses or other for-profit.

Respondents: U.S. bank holding companies (BHCs) and covered savings and loan holding companies (SLHCs) with $100 billion or more in total consolidated assets, foreign banking organizations with $100 billion or more in combined U.S. assets, and any BHC designated as a global systemically important bank holding company (GSIB) that does not otherwise meet the consolidated assets threshold for BHCs.

Estimated number of respondents: 43.

Estimated average hours per response: 403.

Estimated annual burden hours: 69,316.

General description of report: The FR Y–15 quarterly report collects systemic risk data from U.S. bank holding companies (BHCs), and covered savings and loan holding companies (SLHCs) with total consolidated assets of $100 billion or more, any BHC identified as a global systemically important banking organization (GSIB) based on its method 1 score calculated as of December 31 of the previous calendar year, and foreign banking organizations with $100 billion or more in combined U.S. assets. The Board uses the FR Y–15 data to monitor, on an ongoing basis, the systemic risk profile of subject institutions. In addition, the FR Y–15 is used to (1) facilitate the implementation of the GSIB surcharge rule, (2) identify other institutions that may present significant systemic risk, and (3) analyze the systemic risk implications of proposed mergers and acquisitions.

Legal authorization and confidentiality: The mandatory FR Y–15 is authorized by sections 163 and 165 of the Dodd-Frank Act (12 U.S.C. 5463 and 5365), the International Banking Act (12 U.S.C. 3106 and 3108), the Bank Holding Company Act (12 U.S.C. 1844), and HOLA (12 U.S.C. 1467a).

Most of the data collected on the FR Y–15 is made public unless a specific request for confidentiality is submitted by the reporting entity, either on the FR Y–15 or on the form from which the data item is obtained. Such information will be accorded confidential treatment under exemption 4 of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(4)) if the submitter substantiates its assertion that disclosure would likely cause substantial competitive harm. In addition, items 1 through 4 of Schedules G and N of the FR Y–15, which contain granular information regarding the reporting entity's short-term funding, will be accorded confidential treatment under exemption 4 for observation dates that occur prior to the liquidity coverage ratio disclosure standard being implemented. To the extent confidential data collected under the FR Y–15 will be used for supervisory purposes, it may be exempt from disclosure under Exemption 8 of FOIA (5 U.S.C. 552(b)(8)).

Current Actions: Consistent with the final rule, the FR Y–15 has been amended to require U.S. bank holding companies and U.S. covered savings and loan holding companies with $100 billion or more in total consolidated assets to file the form, as well as foreign banking organizations with $100 billion or more in combined U.S. assets. These foreign banking organizations will file all schedules of the FR Y–15 on behalf of their U.S. intermediate holding companies (Column A) and combined U.S. operations (Column B). The final form includes others edits described further in the **SUPPLEMENTARY INFORMATION** sections.

The Board estimates that the changes to the FR Y–15 would increase the respondent count by 6 respondents. The Board also estimates that the revisions to the FR Y–15 would increase the estimated average hours per response by 2 hours and would increase the estimated annual burden by 9,968 hours. The final reporting forms and instructions are available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx.*

(7) *Report title:* Reporting and Recordkeeping Requirements Associated with Regulation Y (Capital Plans).

Agency form number: FR Y–13.

OMB control number: 7100–0342.

Effective Date: Effective date of final rule.

Frequency: Annually.

Affected Public: Businesses or other for-profit.

Respondents: BHCs and IHCs.

Estimated number of respondents: 34.

Estimated average hours per response: Annual capital planning reporting (225.8(e)(1)(ii)), 80 hours; data collections reporting (225.8(e)(3)), 1,005 hours; data collections reporting (225.8(e)(4)), 100 hours; review of capital plans by the Federal Reserve reporting (225.8(f)(3)(i)), 16 hours; prior approval request requirements reporting (225.8(g)(1), (3), & (4)), 100 hours; prior approval request requirements exceptions (225.8(g)(3)(iii)(A)), 16 hours; prior approval request requirements reports (225.8(g)(6)), 16 hours; annual capital planning recordkeeping (225.8(e)(1)(i)), 8,920 hours; annual capital planning recordkeeping (225.8(e)(1)(iii)), 100 hours.

Estimated annual burden hours: Annual capital planning reporting (225.8(e)(1)(ii)), 2,720 hours; data collections reporting (225.8(e)(3)), 25,125 hours; data collections reporting (225.8(e)(4)), 1,000 hours; review of capital plans by the Federal Reserve reporting (225.8(f)(3)(i)), 32 hours; prior approval request requirements reporting (225.8(g)(1), (3), & (4)), 2,300 hours; prior approval request requirements exceptions (225.8(g)(3)(iii)(A)), 32 hours; prior approval request requirements reports (225.8(g)(6)), 32 hours; annual capital planning recordkeeping (225.8(e)(1)(i)), 303,280 hours; annual capital planning recordkeeping (225.8(e)(1)(iii)), 3,400 hours.

General description of report: Regulation Y (12 CFR part 225) requires large bank holding companies (BHCs) to submit capital plans to the Federal Reserve on an annual basis and to require such BHCs to request prior approval from the Federal Reserve under certain circumstances before making a capital distribution.

Current Actions: The final rule raises the threshold for application of § 225.8 from bank holding companies with $50 billion or more in total consolidated assets to bank holding companies with $100 billion or more in total consolidated assets. This change would reduce the panels for various provisions in § 225.8. The Board estimates that the revisions to the FR Y–13 would decrease the estimated annual burden by 28,115 hours.

(8) *Report title:* Reporting and Disclosure Requirements Associated with Regulation LL.

Agency Form Number: FR LL.

OMB control number: 7100–NEW.

Effective Date: Effective date of final rule.

Frequency: Biennial.

Affected Public: Businesses or other for-profit.

Respondents: Savings and loan holding companies.

Estimated number of respondents: 1.[138]

Estimated average hours per response: Reporting section 238.162b1ii, 80; Disclosure section 238.146 (initial setup), 150; Disclosure section 238.146, 60.

Estimated annual burden hours: Reporting section 238.162b1ii, 40; Disclosure section 238.146 (initial setup), 75; Disclosure section 238.146, 30.

Description of the Information Collection: Section 252.122(b)(1)(iii) of the Board's Regulation YY currently requires, unless the Board otherwise determines in writing, a foreign savings and loan holding company with more than $10 billion in total consolidated assets that does not meet applicable home-country stress testing standards to report on an annual basis a summary of the results of the stress test to the Board.

Legal authorization and confidentiality: This information collection is authorized by section 10 of the Home Owners' Loan Act (HOLA) and section 165(i)(2) of the Dodd-Frank Act. The obligation of covered institutions to report this information is mandatory. This information would be disclosed publicly and, as a result, no issue of confidentiality is raised.

Current Actions: The Board is moving the requirement for foreign savings and loan holding companies currently in § 252.122(b)(1)(iii) of Regulation YY into § 238.162(b)(1)(ii) of Regulation LL. In doing so, the Board is amending the frequency of the reporting requirement in proposed § 238.162(b)(1)(ii) from annual to at least biennial. The Board is also raising the threshold for applicability of section 238.162 from more than $10 billion in total consolidated assets to more than $250 billion in total consolidated assets.

(9) *Report title:* Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation YY (Enhanced Prudential Standards).

Agency Form Number: FR YY.

OMB Control Number: 7100–0350.

Effective Date: Effective date of final rule.

Frequency: Annual, semiannual, quarterly.

Affected Public: Businesses or other for-profit.

Respondents: State member banks, U.S. bank holding companies, nonbank financial companies, foreign banking organizations, U.S. intermediate holding companies, foreign saving and loan holding companies, and foreign nonbank financial companies supervised by the Board.

Estimated number of respondents: 23 U.S. bank holding companies with total consolidated assets of $100 billion or more, 4 U.S. bank holding companies with total consolidated assets of $50 billion or more but less than $100 billion, 1 state member bank with total consolidated assets over $250 billion, 11 U.S. intermediate holding companies with $100 billion or more in total assets, 23 foreign banking organizations with total consolidated assets of more than $50 billion but less than $100 billion; 23 foreign banking organizations with total consolidated assets of $100 billion or more but combined U.S. operations of at least $50 billion but less than $100 billion; 17 foreign banking organizations with total consolidated assets of $100 billion or more and combined U.S. operations of $100 billion or more.

Current estimated annual burden: 41,619 hours.

Proposed revisions estimated annual burden: (13,868) hours.

Total estimated annual burden: 27,751 hours.

General description of report: Section 165 of the Dodd-Frank Act, as amended by EGRRCPA, requires the Board to implement enhanced prudential standards for bank holding companies and foreign banking organizations with total consolidated assets of $250 billion or more, and provides the Board with discretion to apply enhanced prudential standards to certain bank holding companies and foreign banking organizations with $100 billion or more, but less than $250 billion, in total consolidated assets. The enhanced prudential standards include risk-based and leverage capital requirements, liquidity standards, requirements for overall risk management (including establishing a risk committee), stress test requirements, and debt-to-equity limits for companies that the Financial Stability Oversight Council has determined pose a grave threat to financial stability.

Current Actions: As described in this **SUPPLEMENTARY INFORMATION**, the Board is amending reporting, recordkeeping and disclosure requirements in Regulation YY to generally raise the thresholds for application of these requirements to state member banks, U.S. bank holding companies, U.S. intermediate holding companies, and foreign banking organizations, consistent with EGRRCPA's changes to section 165 of the Dodd-Frank.

B. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA) generally requires that, in connection with a final rulemaking, an agency prepare and make available for public comment a final regulatory flexibility analysis describing the impact of the proposed rule on small entities.[139] However, a final regulatory flexibility analysis is not required if the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities. The Small Business Administration (SBA) has defined ''small entities'' to include banking organizations with total assets of less than or equal to $600 million that are independently owned and operated or owned by a holding company with less than or equal to $600 million in total assets.[140] For the reasons described below and under section 605(b) of the RFA, the Board certifies that the final rule will not have a significant economic impact on a substantial number of small entities. As of June 30, 2019, there were 2,976 bank holding companies, 133 savings and loan holding companies, and 537 state member banks that would fit the SBA's current definition of ''small entity'' for purposes of the RFA.

[138] Currently, there are no foreign savings and loan holding companies in existence. For PRA purposes, ''1'' is used as a placeholder.

[139] 5 U.S.C. 601 *et seq.*

[140] *See* 13 CFR 121.201. Effective August 19, 2019, the Small Business Administration revised the size standards for banking organizations to $600 million in assets from $550 million in assets. *See* 84 FR 34261 (July 18, 2019). Consistent with the General Principles of Affiliation in 13 CFR 121.103, the Board counts the assets of all domestic and foreign affiliates when determining if the Board should classify a Board-supervised institution as a small entity.

The Board is finalizing amendments to Regulations Q,[141] Y,[142] LL,[143] PP,[144] and YY [145] that would affect the regulatory requirements that apply to state member banks, U.S. bank holding companies, U.S. covered savings and loan holding companies, U.S. intermediate holding companies, foreign banking organizations, and foreign savings and loan holding companies with $10 billion or more in total consolidated assets. These changes are consistent with EGRRCPA, which amended section 165 of the Dodd-Frank Act. The reasons and justification for the final rule are described above in more detail in this SUPPLEMENTARY INFORMATION.

The assets of institutions subject to this final rule substantially exceed the $600 million asset threshold under which a banking organization is considered a ''small entity'' under SBA regulations. Because the final rule is not likely to apply to any depository institution or company with assets of $600 million or less, it is not expected to apply to any small entity for purposes of the RFA. The Board does not believe that the final rule duplicates, overlaps, or conflicts with any other Federal rules. In light of the foregoing, the Board certifies that the final rule will not have a significant economic impact on a substantial number of small entities supervised.

C. Riegle Community Development and Regulatory Improvement Act of 1994

Pursuant to section 302(a) of the Riegle Community Development and Regulatory Improvement Act (RCDRIA),[146] in determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions (IDIs), each Federal banking agency must consider, consistent with principle of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, including small depository institutions, and customers of depository institutions, as well as the benefits of such regulations. In addition, section 302(b) of RCDRIA requires new regulations and amendments to regulations that impose additional reporting, disclosures, or other new requirements on IDIs generally to take effect on the first day of a calendar quarter that begins on or after the date on which the regulations are published in final form.[147]

The final rule imposes no additional reporting, disclosure, or other requirements on insured depository institutions, including small depository institutions, nor on the customers of depository institutions. The final rule would raise the minimum asset threshold for state member banks that would be required to conduct a stress test from $10 billion to $250 billion, would revise the frequency with which state member banks with assets greater than $250 billion would be required to conduct stress tests, and would reduce the number of required stress test scenarios from three to two. The requirement to conduct, report, and publish a company-run stress testing is a previously existing requirement imposed by section 165 of the Dodd-Frank Act. Accordingly, the RCDRIA does not apply to the final rule.

List of Subjects

12 CFR Part 217

Administrative practice and procedure, Banks, Banking, Capital, Federal Reserve System, Holding companies, Reporting and recordkeeping requirements, Risk, Securities.

12 CFR Part 225

Administrative practice and procedure, Banks, Banking, Capital planning, Holding companies, Reporting and recordkeeping requirements, Securities, Stress testing.

12 CFR Part 238

Administrative practice and procedure, Banks, Banking, Federal Reserve System, Reporting and recordkeeping requirements, Securities.

12 CFR Part 242

Administrative practice and procedure, Holding companies, Nonbank financial companies.

12 CFR Part 252

Administrative practice and procedure, Banks, Banking, Capital planning, Federal Reserve System, Holding companies, Reporting and recordkeeping requirements, Securities, Stress testing.

Authority and Issuance

For the reasons stated in the SUPPLEMENTARY INFORMATION, chapter II of title 12 of the Code of Federal Regulations is amended as follows:

PART 217—CAPITAL ADEQUACY OF BANK HOLDING COMPANIES, SAVINGS AND LOAN HOLDING COMPANIES, AND STATE MEMBER BANKS (REGULATION Q)

■ 1. The authority citation for part 217 continues to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1462a, 1467a, 1818, 1828, 1831n, 1831o, 1831p–1, 1831w, 1835, 1844(b), 1851, 3904, 3906–3909, 4808, 5365, 5368, 5371.

Subpart H—Risk-Based Capital Surcharge for Global Systemically Important Bank Holding Companies

■ 2. In § 217.400:
■ a. Revise paragraphs (b)(1), (b)(2 introductory text, and (b)(2)(i); and
■ b. Remove paragraph (b)(3).
The revisions read as follows:

§ 217.400 Purpose and applicability.

* * * * *

(b) * * *

(1) *General.* This subpart applies to a bank holding company that:

(i) Is an advanced approaches Board-regulated institution or a Category III Board-regulated institution;

(ii) Is not a consolidated subsidiary of a bank holding company; and

(iii) Is not a consolidated subsidiary of a foreign banking organization.

(2) *Effective date of calculation and surcharge requirements.* (i) A bank holding company identified in § 217.400(b)(1) is subject to § 217.402 of this part and must determine whether it qualifies as a global systemically important BHC by December 31 of the year immediately following the year in which the bank holding company becomes an advanced approaches Board-regulated institution or a Category III Board-regulated institution; and

* * * * *

PART 225—BANK HOLDING COMPANIES AND CHANGE IN BANK CONTROL (REGULATION Y)

■ 3. The authority citation for part 225 continues to read as follows:

Authority: 12 U.S.C. 1817(j)(13), 1818, 1828(o), 1831i, 1831p–1, 1843(c)(8), 1844(b), 1972(1), 3106, 3108, 3310, 3331–3351, 3906, 3907, and 3909; 15 U.S.C. 1681s, 1681w, 6801 and 6805.

Subpart A—General Provisions

■ 4. In § 225.8, revise paragraphs (b)(1)(i), (b)(2) and (3), and (c) to read as follows:

§ 225.8 Capital planning.

* * * * *

(b) * * *

(1) * * *

(i) Any top-tier bank holding company domiciled in the United States with average total consolidated assets of $100 billion or more ($100 billion asset threshold);

* * * * *

(2) *Average total consolidated assets.* For purposes of this section, average total consolidated assets means the average of the total consolidated assets as reported by a bank holding company on its Consolidated Financial Statements for Holding Companies (FR Y–9C) for the four most recent consecutive quarters. If the bank holding company has not filed the FR Y–9C for each of the four most recent consecutive quarters, average total consolidated assets means the average of the company's total consolidated assets, as reported on the company's FR Y–9C, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent FR Y–9C used in the calculation of the average.

(3) *Ongoing applicability.* A bank holding company (including any successor bank holding company) that is subject to any requirement in this section shall remain subject to such requirements unless and until its total consolidated assets fall below $100 billion for each of four consecutive quarters, as reported on the FR Y–9C and effective on the as-of date of the fourth consecutive FR Y–9C.

* * * * *

(c) *Transition periods for certain bank holding companies.* (1) A bank holding company that meets the $100 billion asset threshold (as measured under paragraph (b) of this section) on or before September 30 of a calendar year must comply with the requirements of this section beginning on January 1 of the next calendar year, unless that time is extended by the Board in writing.

(2) A bank holding company that meets the $100 billion asset threshold after September 30 of a calendar year must comply with the requirements of this section beginning on January 1 of the second calendar year after the bank holding company meets the $100 billion asset threshold, unless that time is extended by the Board in writing.

(3) The Board or the appropriate Reserve Bank with the concurrence of the Board, may require a bank holding company described in paragraph (c)(1) or (2) of this section to comply with any or all of the requirements in paragraph (e)(1), (e)(3), (f), or (g) of this section if the Board or appropriate Reserve Bank with concurrence of the Board, determines that the requirement is appropriate on a different date based on the company's risk profile, scope of operation, or financial condition and provides prior notice to the company of the determination.

* * * * *

PART 238—SAVINGS AND LOAN HOLDING COMPANIES (REGULATION LL)

■ 5. The authority citation for part 238 is revised to read as follows:

Authority: 5 U.S.C. 552, 559; 12 U.S.C. 1462, 1462a, 1463, 1464, 1467, 1467a, 1468, 5365; 1813, 1817, 1829e, 1831i, 1972, 15 U.S.C. 78 *l.*

Subpart A—General Provisions

■ 6. In § 238.2, add paragraphs (v) through (ss) to read as follows:

§ 238.2 Definitions.

* * * * *

(v) *Applicable accounting standards* means GAAP, international financial reporting standards, or such other accounting standards that a company uses in the ordinary course of its business in preparing its consolidated financial statements.

(w) *Average cross-jurisdictional activity* means the average of cross-jurisdictional activity for the four most recent calendar quarters or, if the banking organization has not reported cross-jurisdictional activity for each of the four most recent calendar quarters, the cross-jurisdictional activity for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

(x) *Average off-balance sheet exposure* means the average of off-balance sheet exposure for the four most recent calendar quarters or, if the banking organization has not reported total exposure and total consolidated assets for each of the four most recent calendar quarters, the off-balance sheet exposure for the most recent calendar quarter or average of the most recent quarters, as applicable.

(y) *Average total consolidated assets* means the average of total consolidated assets for the four most recent calendar quarters or, if the banking organization has not reported total consolidated assets for each of the four most recent calendar quarters, the total consolidated assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

(z) *Average total nonbank assets* means the average of total nonbank assets for the four most recent calendar quarters or, if the banking organization has not reported total nonbank assets for each of the four most recent calendar quarters, the total nonbank assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

(aa) *Average weighted short-term wholesale funding* means the average of weighted short-term wholesale funding for each of the four most recent calendar quarters or, if the banking organization has not reported weighted short-term wholesale funding for each of the four most recent calendar quarters, the weighted short-term wholesale funding for the most recent quarter or average of the most recent calendar quarters, as applicable.

(bb) *Banking organization.* Banking organization means a covered savings and loan holding company that is:

(1) Incorporated in or organized under the laws of the United States or any State; and

(2) Not a consolidated subsidiary of a covered savings and loan holding company that is incorporated in or organized under the laws of the United States or any State.

(cc) *Category II savings and loan holding company* means a covered savings and loan holding company identified as a Category II banking organization pursuant to § 238.10.

(dd) *Category III savings and loan holding company* means a covered savings and loan holding company identified as a Category III banking organization pursuant to § 238.10.

(ee) *Category IV savings and loan holding company* means a covered savings and loan holding company identified as a Category IV banking organization pursuant to § 238.10.

(ff) *Covered savings and loan holding company* means a savings and loan holding company other than:

(1) A top-tier savings and loan holding company that is:

(i) A grandfathered unitary savings and loan holding company as defined in section 10(c)(9)(C) of the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*); and

(ii) As of June 30 of the previous calendar year, derived 50 percent or more of its total consolidated assets or 50 percent of its total revenues on an enterprise-wide basis (as calculated under GAAP) from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k));

(2) A top-tier depository institution holding company that is an insurance underwriting company; or

(3)(i) A top-tier depository institution holding company that, as of June 30 of the previous calendar year, held 25 percent or more of its total consolidated assets in subsidiaries that are insurance underwriting companies (other than assets associated with insurance for credit risk); and

(ii) For purposes of paragraph (ff)(3)(i) of this section, the company must calculate its total consolidated assets in accordance with GAAP, or if the company does not calculate its total consolidated assets under GAAP for any regulatory purpose (including compliance with applicable securities laws), the company may estimate its total consolidated assets, subject to review and adjustment by the Board of Governors of the Federal Reserve System.

(gg) *Cross-jurisdictional activity.* The cross-jurisdictional activity of a banking organization is equal to the cross-jurisdictional activity of the banking organization as reported on the FR Y–15.

(hh) *Foreign banking organization* has the same meaning as in § 211.21(o) of this chapter.

(ii) *FR Y–9C* means the Consolidated Financial Statements for Holding Companies reporting form.

(jj) *FR Y–9LP* means the Parent Company Only Financial Statements of Large Holding Companies.

(kk) *FR Y–15* means the Systemic Risk Report.

(ll) *GAAP* means generally accepted accounting principles as used in the United States.

(mm) *Off-balance sheet exposure.* The off-balance sheet exposure of a banking organization is equal to:

(1) The total exposure of the banking organization, as reported by the banking organization on the FR Y–15; minus

(2) The total consolidated assets of the banking organization for the same calendar quarter.

(nn) *State* means any state, commonwealth, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, American Samoa, Guam, or the United States Virgin Islands.

(oo) *Total consolidated assets.* Total consolidated assets of a banking organization are equal to its total consolidated assets calculated based on the average of the balances as of the close of business for each day for the calendar quarter or an average of the balances as of the close of business on each Wednesday during the calendar quarter, as reported on the FR Y–9C.

(pp) *Total nonbank assets.* Total nonbank assets of a banking organization is equal to the total nonbank assets of such banking organization, as reported on the FR Y–9LP.

(qq) *U.S. government agency* means an agency or instrumentality of the United States whose obligations are fully and explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the United States.

(rr) *U.S. government-sponsored enterprise* means an entity originally established or chartered by the U.S. government to serve public purposes specified by the U.S. Congress, but whose obligations are not explicitly guaranteed by the full faith and credit of the United States.

(ss) *Weighted short-term wholesale funding* is equal to the weighted short-term wholesale funding of a banking organization, as reported on the FR Y–15.

■ 7. Add § 238.10 to subpart A to read as follows:

§ 238.10 Categorization of banking organizations.

(a) *General.* A banking organization with average total consolidated assets of $100 billion or more must determine its category among the three categories described in paragraphs (b) through (d) of this section at least quarterly.

(b) *Category II.* (1) A banking organization is a Category II banking organization if the banking organization has:

(i) $700 billion or more in average total consolidated assets; or

(ii)(A) $75 billion or more in average cross-jurisdictional activity; and

(B) $100 billion or more in average total consolidated assets.

(2) After meeting the criteria in paragraph (b)(1) of this section, a banking organization continues to be a Category II banking organization until the banking organization has:

(i)(A) Less than $700 billion in total consolidated assets for each of the four most recent calendar quarters; and

(B) Less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters; or

(ii) Less than $100 billion in total consolidated assets for each of the four most recent calendar quarters.

(c) *Category III.* (1) A banking organization is a Category III banking organization if the banking organization:

(i) Has:

(A) $250 billion or more in average total consolidated assets; or

(B) $100 billion or more in average total consolidated assets and at least:

(*1*) $75 billion in average total nonbank assets;

(*2*) $75 billion in average weighted short-term wholesale funding; or

(*3*) $75 billion in average off-balance sheet exposure; and

(ii) Is not a Category II banking organization.

(2) After meeting the criteria in paragraph (c)(1) of this section, a banking organization continues to be a Category III banking organization until the banking organization:

(i) Has:

(A) Less than $250 billion in total consolidated assets for each of the four most recent calendar quarters;

(B) Less than $75 billion in total nonbank assets for each of the four most recent calendar quarters;

(C) Less than $75 billion in weighted short-term wholesale funding for each of the four most recent calendar quarters; and

(D) Less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters; or

(ii) Has less than $100 billion in total consolidated assets for each of the four most recent calendar quarters; or

(iii) Meets the criteria in paragraph (b)(1) of this section to be a Category II banking organization.

(d) *Category IV.* (1) A banking organization with average total consolidated assets of $100 billion or more is a Category IV banking organization if the banking organization:

(i) Is not a Category II banking organization; and

(ii) Is not a Category III banking organization.

(2) After meeting the criteria in paragraph (d)(1) of this section, a banking organization continues to be a Category IV banking organization until the banking organization:

(i) Has less than $100 billion in total consolidated assets for each of the four most recent calendar quarters;

(ii) Meets the criteria in paragraph (b)(1) of this section to be a Category II banking organization; or

(iii) Meets the criteria in paragraph (c)(1) of this section to be a Category III banking organization.

■ 8. Add subpart M, consisting of §§ 238.118 and 238.119, to read as follows:

Subpart M—Risk Committee Requirement for Covered Savings and Loan Holding Companies With Total Consolidated Assets of $50 Billion or More and Less Than $100 Billion

§238.118 Applicability.

(a) *General applicability.* A covered savings and loan bank holding company must comply with the risk-committee requirements set forth in this subpart beginning on the first day of the ninth quarter following the date on which its average total consolidated assets equal or exceed $50 billion.

(b) *Cessation of requirements.* A covered savings and loan holding company will remain subject to the requirements of this subpart until the earlier of the date on which:

(1) Its total consolidated assets are below $50 billion for each of four consecutive calendar quarters; and

(2) It becomes subject to the requirements of subpart N of this part.

§ 238.119 Risk committee requirement for covered savings and loan holding companies with total consolidated assets of $50 billion or more.

(a) *Risk committee*—(1) *General.* A covered savings and loan holding company subject to this subpart must maintain a risk committee that approves and periodically reviews the risk-management policies of the covered savings and loan holding company's global operations and oversees the operation of the company's global risk-management framework.

(2) *Risk-management framework.* The covered savings and loan holding company's global risk-management framework must be commensurate with its structure, risk profile, complexity, activities, and size and must include:

(i) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for its global operations; and

(ii) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(A) Processes and systems for identifying and reporting risks and risk-management deficiencies, including regarding emerging risks, and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies for its global operations;

(B) Processes and systems for establishing managerial and employee responsibility for risk management;

(C) Processes and systems for ensuring the independence of the risk-management function; and

(D) Processes and systems to integrate risk management and associated controls with management goals and its compensation structure for its global operations.

(3) *Corporate governance requirements.* The risk committee must:

(i) Have a formal, written charter that is approved by the covered savings and loan holding company's board of directors;

(ii) Be an independent committee of the board of directors that has, as its sole and exclusive function, responsibility for the risk-management policies of the covered savings and loan holding company's global operations and oversight of the operation of the company's global risk-management framework;

(iii) Report directly to the covered savings and loan holding company's board of directors;

(iv) Receive and review regular reports on a not less than a quarterly basis from the covered savings and loan holding company's chief risk officer provided pursuant to paragraph (b)(3)(ii) of this section; and

(v) Meet at least quarterly, or more frequently as needed, and fully document and maintain records of its proceedings, including risk-management decisions.

(4) *Minimum member requirements.* The risk committee must:

(i) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(ii) Be chaired by a director who:

(A) Is not an officer or employee of the covered savings and loan holding company and has not been an officer or employee of the covered savings and loan holding company during the previous three years;

(B) Is not a member of the immediate family, as defined in § 238.31(b)(3), of a person who is, or has been within the last three years, an executive officer of the covered savings and loan holding company, as defined in § 215.2(e)(1) of this chapter; and

(C)(*1*) Is an independent director under Item 407 of the Securities and Exchange Commission's Regulation S–K (17 CFR 229.407(a)), if the covered savings and loan holding company has an outstanding class of securities traded on an exchange registered with the U.S. Securities and Exchange Commission as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f) (national securities exchange); or

(*2*) Would qualify as an independent director under the listing standards of a national securities exchange, as demonstrated to the satisfaction of the Board, if the covered savings and loan holding company does not have an outstanding class of securities traded on a national securities exchange.

(b) *Chief risk officer*—(1) *General.* A covered savings and loan holding company subject to this subpart must appoint a chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

(2) *Responsibilities.* (i) The chief risk officer is responsible for overseeing:

(A) The establishment of risk limits on an enterprise-wide basis and the monitoring of compliance with such limits;

(B) The implementation of and ongoing compliance with the policies and procedures set forth in paragraph (a)(2)(i) of this section and the development and implementation of the processes and systems set forth in paragraph (a)(2)(ii) of this section; and

(C) The management of risks and risk controls within the parameters of the company's risk control framework, and monitoring and testing of the company's risk controls.

(ii) The chief risk officer is responsible for reporting risk-management deficiencies and emerging risks to the risk committee and resolving risk-management deficiencies in a timely manner.

(3) *Corporate governance requirements.* (i) The covered savings and loan holding company must ensure that the compensation and other incentives provided to the chief risk officer are consistent with providing an objective assessment of the risks taken by the company; and

(ii) The chief risk officer must report directly to both the risk committee and chief executive officer of the company.

■ 9. Add subpart N to read as follows:

Subpart N—Risk Committee, Liquidity Risk Management, and Liquidity Buffer Requirements for Covered Savings and Loan Holding Companies With Total Consolidated Assets of $100 Billion or More

Sec.
238.120 Scope.
238.121 Applicability.
238.122 Risk-management and risk committee requirements.
238.123 Liquidity risk-management requirements.

§ 238.120 Scope.

This subpart applies to covered savings and loan holding companies with average total consolidated assets of $100 billion or more.

§ 238.121 Applicability.

(a) *Applicability*—(1) Initial applicability. A covered savings and loan holding company must comply with the risk-management and risk-committee requirements set forth in § 238.122 and the liquidity risk-management and liquidity stress test requirements set forth in §§ 238.123 and 238.124 no later than the first day of the fifth quarter following the date on which its average total consolidated assets equal or exceed $100 billion.

(2) *Changes in requirements following a change in category.* A covered savings and loan holding company with average total consolidated assets of $100 billion or more that changes from one category of covered savings and loan holding company described in § 238.10(b) through (d) to another such category must comply with the requirements applicable to the new category no later than on the first day of the second calendar quarter following the change in the covered savings and loan holding company's category.

(b) *Cessation of requirements.* A covered savings and loan holding company is subject to the risk-management and risk committee requirements set forth in § 238.122 and the liquidity risk-management and liquidity stress test requirements set forth in §§ 238.123 and 238.124 until its total consolidated assets are below $100 billion for each of four consecutive calendar quarters.

§ 238.122 Risk-management and risk committee requirements.

(a) *Risk committee*—(1) *General.* A covered savings and loan holding subject to this subpart must maintain a risk committee that approves and periodically reviews the risk-management policies of the covered savings and loan holding company's global operations and oversees the operation of the covered savings and loan holding company's global risk-management framework. The risk committee's responsibilities include liquidity risk-management as set forth in § 238.123(b).

(2) *Risk-management framework.* The covered savings and loan holding company's global risk-management framework must be commensurate with its structure, risk profile, complexity, activities, and size and must include:

(i) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for its global operations; and

(ii) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(A) Processes and systems for identifying and reporting risks and risk-management deficiencies, including regarding emerging risks, and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies for its global operations;

(B) Processes and systems for establishing managerial and employee responsibility for risk management;

(C) Processes and systems for ensuring the independence of the risk-management function; and

(D) Processes and systems to integrate risk management and associated controls with management goals and its compensation structure for its global operations.

(3) *Corporate governance requirements.* The risk committee must:

(i) Have a formal, written charter that is approved by the covered savings and loan holding company's board of directors;

(ii) Be an independent committee of the board of directors that has, as its sole and exclusive function, responsibility for the risk-management policies of the covered savings and loan holding company's global operations and oversight of the operation of the covered savings and loan holding company's global risk-management framework;

(iii) Report directly to the covered savings and loan holding company's board of directors;

(iv) Receive and review regular reports on not less than a quarterly basis from the covered savings and loan holding company's chief risk officer provided pursuant to paragraph (b)(3)(ii) of this section; and

(v) Meet at least quarterly, or more frequently as needed, and fully document and maintain records of its proceedings, including risk-management decisions.

(4) *Minimum member requirements.* The risk committee must:

(i) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(ii) Be chaired by a director who:

(A) Is not an officer or employee of the covered savings and loan holding company and has not been an officer or employee of the covered savings and loan holding company during the previous three years;

(B) Is not a member of the immediate family, as defined in § 238.31(b)(3), of a person who is, or has been within the last three years, an executive officer of the covered savings and loan holding company, as defined in § 215.2(e)(1) of this chapter; and

(C)(*1*) Is an independent director under Item 407 of the Securities and Exchange Commission's Regulation S–K (17 CFR 229.407(a)), if the covered savings and loan holding company has an outstanding class of securities traded on an exchange registered with the U.S. Securities and Exchange Commission as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f) (national securities exchange); or

(*2*) Would qualify as an independent director under the listing standards of a national securities exchange, as demonstrated to the satisfaction of the Board, if the covered savings and loan holding company does not have an outstanding class of securities traded on a national securities exchange.

(b) *Chief risk officer*—(1) *General.* A covered savings and loan holding company subject to this subpart must appoint a chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

(2) *Responsibilities.* (i) The chief risk officer is responsible for overseeing:

(A) The establishment of risk limits on an enterprise-wide basis and the monitoring of compliance with such limits;

(B) The implementation of and ongoing compliance with the policies and procedures set forth in paragraph (a)(2)(i) of this section and the development and implementation of the processes and systems set forth in paragraph (a)(2)(ii) of this section; and

(C) The management of risks and risk controls within the parameters of the company's risk control framework, and monitoring and testing of the company's risk controls.

(ii) The chief risk officer is responsible for reporting risk-management deficiencies and emerging risks to the risk committee and resolving risk-management deficiencies in a timely manner.

(3) *Corporate governance requirements.* (i) The covered savings and loan holding company must ensure that the compensation and other incentives provided to the chief risk officer are consistent with providing an objective assessment of the risks taken by the covered savings and loan holding company; and

(ii) The chief risk officer must report directly to both the risk committee and chief executive officer of the company.

§ 238.123 Liquidity risk-management requirements.

(a) *Responsibilities of the board of directors*—(1) *Liquidity risk tolerance.* The board of directors of a covered savings and loan holding company subject to this subpart must:

(i) Approve the acceptable level of liquidity risk that the covered savings and loan holding company may assume in connection with its operating strategies (liquidity risk tolerance) at least annually, taking into account the covered savings and loan holding company's capital structure, risk profile, complexity, activities, and size; and

(ii) Receive and review at least semi-annually information provided by senior management to determine whether the covered savings and loan holding company is operating in accordance with its established liquidity risk tolerance.

(2) *Liquidity risk-management strategies, policies, and procedures.* The board of directors must approve and periodically review the liquidity risk-management strategies, policies, and procedures established by senior management pursuant to paragraph (c)(1) of this section.

(b) *Responsibilities of the risk committee.* The risk committee (or a designated subcommittee of such committee composed of members of the board of directors) must approve the contingency funding plan described in paragraph (f) of this section at least annually, and must approve any material revisions to the plan prior to the implementation of such revisions.

(c) *Responsibilities of senior management*—(1) *Liquidity risk.* (i) Senior management of a covered savings and loan holding company subject to this subpart must establish and implement strategies, policies, and procedures designed to effectively manage the risk that the covered savings and loan holding company's financial condition or safety and soundness would be adversely affected by its inability or the market's perception of its inability to meet its cash and collateral obligations (liquidity risk). The board of directors must approve the strategies, policies, and procedures pursuant to paragraph (a)(2) of this section.

(ii) Senior management must oversee the development and implementation of liquidity risk measurement and reporting systems, including those required by this section and § 238.124.

(iii) Senior management must determine at least quarterly whether the covered savings and loan holding company is operating in accordance with such policies and procedures and whether the covered savings and loan holding company is in compliance with this section and § 238.124 (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition warrant), and establish procedures regarding the preparation of such information.

(2) *Liquidity risk tolerance.* Senior management must report to the board of directors or the risk committee regarding the covered savings and loan holding company's liquidity risk profile and liquidity risk tolerance at least quarterly (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition of the company warrant).

(3) *Business lines or products.* (i) Senior management must approve new products and business lines and evaluate the liquidity costs, benefits, and risks of each new business line and each new product that could have a significant effect on the company's liquidity risk profile. The approval is required before the company implements the business line or offers the product. In determining whether to approve the new business line or product, senior management must consider whether the liquidity risk of the new business line or product (under both current and stressed conditions) is within the company's established liquidity risk tolerance.

(ii) Senior management must review at least annually significant business lines and products to determine whether any line or product creates or has created any unanticipated liquidity risk, and to determine whether the liquidity risk of each strategy or product is within the company's established liquidity risk tolerance.

(4) *Cash-flow projections.* Senior management must review the cash-flow projections produced under paragraph (e) of this section at least quarterly (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition of the covered savings and loan holding company warrant) to ensure that the liquidity risk is within the established liquidity risk tolerance.

(5) *Liquidity risk limits.* Senior management must establish liquidity risk limits as set forth in paragraph (g) of this section and review the company's compliance with those limits at least quarterly (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition of the company warrant).

(6) *Liquidity stress testing.* Senior management must:

(i) Approve the liquidity stress testing practices, methodologies, and assumptions required in § 238.124(a) at least quarterly, and whenever the covered savings and loan holding company materially revises its liquidity stress testing practices, methodologies or assumptions;

(ii) Review the liquidity stress testing results produced under § 238.124(a) at least quarterly;

(iii) Review the independent review of the liquidity stress tests under § 238.123(d) periodically; and

(iv) Approve the size and composition of the liquidity buffer established under § 238.124(b) at least quarterly.

(d) *Independent review function.* (1) A covered savings and loan holding company subject to this subpart must establish and maintain a review function that is independent of management functions that execute funding to evaluate its liquidity risk management.

(2) The independent review function must:

(i) Regularly, but no less frequently than annually, review and evaluate the adequacy and effectiveness of the company's liquidity risk management processes, including its liquidity stress test processes and assumptions;

(ii) Assess whether the company's liquidity risk-management function complies with applicable laws and regulations, and sound business practices; and

(iii) Report material liquidity risk management issues to the board of directors or the risk committee in writing for corrective action, to the extent permitted by applicable law.

(e) *Cash-flow projections.* (1) A covered savings and loan holding company subject to this subpart must produce comprehensive cash-flow projections that project cash flows arising from assets, liabilities, and off-balance sheet exposures over, at a minimum, short- and long-term time horizons. The covered savings and loan holding company must update short-term cash-flow projections daily and must update longer-term cash-flow projections at least monthly.

(2) The covered savings and loan holding company must establish a methodology for making cash-flow projections that results in projections that:

(i) Include cash flows arising from contractual maturities, intercompany transactions, new business, funding renewals, customer options, and other potential events that may impact liquidity;

(ii) Include reasonable assumptions regarding the future behavior of assets, liabilities, and off-balance sheet exposures;

(iii) Identify and quantify discrete and cumulative cash flow mismatches over these time periods; and

(iv) Include sufficient detail to reflect the capital structure, risk profile, complexity, currency exposure, activities, and size of the covered savings and loan holding company and include analyses by business line, currency, or legal entity as appropriate.

(3) The covered savings and loan holding company must adequately

document its methodology for making cash flow projections and the included assumptions and submit such documentation to the risk committee.

(f) *Contingency funding plan*—(1) *General.* A covered savings and loan holding company subject to this subpart must establish and maintain a contingency funding plan that sets out the company's strategies for addressing liquidity needs during liquidity stress events. The contingency funding plan must be commensurate with the company's capital structure, risk profile, complexity, activities, size, and established liquidity risk tolerance. The company must update the contingency funding plan at least annually, and when changes to market and idiosyncratic conditions warrant.

(2) *Components of the contingency funding plan*—(i) *Quantitative assessment.* The contingency funding plan must:

(A) Identify liquidity stress events that could have a significant impact on the covered savings and loan holding company's liquidity;

(B) Assess the level and nature of the impact on the covered savings and loan holding company's liquidity that may occur during identified liquidity stress events;

(C) Identify the circumstances in which the covered savings and loan holding company would implement its action plan described in paragraph (f)(2)(ii)(A) of this section, which circumstances must include failure to meet any minimum liquidity requirement imposed by the Board;

(D) Assess available funding sources and needs during the identified liquidity stress events;

(E) Identify alternative funding sources that may be used during the identified liquidity stress events; and

(F) Incorporate information generated by the liquidity stress testing required under § 238.124(a).

(ii) *Liquidity event management process.* The contingency funding plan must include an event management process that sets out the covered savings and loan holding company's procedures for managing liquidity during identified liquidity stress events. The liquidity event management process must:

(A) Include an action plan that clearly describes the strategies the company will use to respond to liquidity shortfalls for identified liquidity stress events, including the methods that the company will use to access alternative funding sources;

(B) Identify a liquidity stress event management team that would execute the action plan described in paragraph (f)(2)(ii)(A) of this section;

(C) Specify the process, responsibilities, and triggers for invoking the contingency funding plan, describe the decision-making process during the identified liquidity stress events, and describe the process for executing contingency measures identified in the action plan; and

(D) Provide a mechanism that ensures effective reporting and communication within the covered savings and loan holding company and with outside parties, including the Board and other relevant supervisors, counterparties, and other stakeholders.

(iii) *Monitoring.* The contingency funding plan must include procedures for monitoring emerging liquidity stress events. The procedures must identify early warning indicators that are tailored to the company's capital structure, risk profile, complexity, activities, and size.

(iv) *Testing.* The covered savings and loan holding company must periodically test:

(A) The components of the contingency funding plan to assess the plan's reliability during liquidity stress events;

(B) The operational elements of the contingency funding plan, including operational simulations to test communications, coordination, and decision-making by relevant management; and

(C) The methods the covered savings and loan holding company will use to access alternative funding sources to determine whether these funding sources will be readily available when needed.

(g) *Liquidity risk limits*—(1) *General.* A covered savings and loan holding company subject to this subpart must monitor sources of liquidity risk and establish limits on liquidity risk that are consistent with the company's established liquidity risk tolerance and that reflect the company's capital structure, risk profile, complexity, activities, and size.

(2) *Liquidity risk limits established by a Category II savings and loan holding company, or Category III savings and loan holding company.* If the covered savings and loan holding company is a Category II savings and loan holding company or Category III savings and loan holding company, liquidity risk limits established under paragraph (g)(1) of this section by must include limits on:

(i) Concentrations in sources of funding by instrument type, single counterparty, counterparty type, secured and unsecured funding, and as applicable, other forms of liquidity risk;

(ii) The amount of liabilities that mature within various time horizons; and

(iii) Off-balance sheet exposures and other exposures that could create funding needs during liquidity stress events.

(h) *Collateral, legal entity, and intraday liquidity risk monitoring.* A covered savings and loan holding company subject to this subpart must establish and maintain procedures for monitoring liquidity risk as set forth in this paragraph.

(1) *Collateral.* The covered savings and loan holding company must establish and maintain policies and procedures to monitor assets that have been, or are available to be, pledged as collateral in connection with transactions to which it or its affiliates are counterparties. These policies and procedures must provide that the covered savings and loan holding company:

(i) Calculates all of its collateral positions according to the frequency specified in paragraphs (h)(1)(i)(A) and (B) of this section or as directed by the Board, specifying the value of pledged assets relative to the amount of security required under the relevant contracts and the value of unencumbered assets available to be pledged:

(A) If the covered savings and loan holding company is not a Category IV savings and loan holding company, on at least a weekly basis;

(B) If the covered savings and loan holding company is a Category IV savings and loan holding company, on at least a monthly basis;

(ii) Monitors the levels of unencumbered assets available to be pledged by legal entity, jurisdiction, and currency exposure;

(iii) Monitors shifts in the covered savings and loan holding company's funding patterns, such as shifts between intraday, overnight, and term pledging of collateral; and

(iv) Tracks operational and timing requirements associated with accessing collateral at its physical location (for example, the custodian or securities settlement system that holds the collateral).

(2) *Legal entities, currencies and business lines.* The covered savings and loan holding company must establish and maintain procedures for monitoring and controlling liquidity risk exposures and funding needs within and across significant legal entities, currencies, and business lines, taking into account legal and regulatory restrictions on the transfer of liquidity between legal entities.

(3) *Intraday exposures.* The covered savings and loan holding company must establish and maintain procedures for monitoring intraday liquidity risk exposures that are consistent with the covered savings and loan holding company's capital structure, risk profile, complexity, activities, and size. If the covered savings and loan holding company is a Category II savings and loan holding company or a Category III savings and loan holding company, these procedures must address how the management of the covered savings and loan holding company will:

(i) Monitor and measure expected daily gross liquidity inflows and outflows;

(ii) Manage and transfer collateral to obtain intraday credit;

(iii) Identify and prioritize time-specific obligations so that the covered savings and loan holding company can meet these obligations as expected and settle less critical obligations as soon as possible;

(iv) Manage the issuance of credit to customers where necessary; and

(v) Consider the amounts of collateral and liquidity needed to meet payment systems obligations when assessing the covered savings and loan holding company's overall liquidity needs.

§ 238.124 Liquidity stress testing and buffer requirements.

(a) *Liquidity stress testing requirement*—(1) *General.* A covered savings and loan holding company subject to this subpart must conduct stress tests to assess the potential impact of the liquidity stress scenarios set forth in paragraph (a)(3) of this section on its cash flows, liquidity position, profitability, and solvency, taking into account its current liquidity condition, risks, exposures, strategies, and activities.

(i) The covered savings and loan holding company must take into consideration its balance sheet exposures, off-balance sheet exposures, size, risk profile, complexity, business lines, organizational structure, and other characteristics of the covered savings and loan holding company that affect its liquidity risk profile in conducting its stress test.

(ii) In conducting a liquidity stress test using the scenarios described in paragraphs (a)(3)(i) and (ii) of this section, the covered savings and loan holding company must address the potential direct adverse impact of associated market disruptions on the covered savings and loan holding company and incorporate the potential actions of other market participants experiencing liquidity stresses under the market disruptions that would adversely affect the covered savings and loan holding company.

(2) *Frequency.* The covered savings and loan holding company must perform the liquidity stress tests required under paragraph (a)(1) of this section according to the frequency specified in paragraph (a)(2)(i) or (ii) of this section or as directed by the Board:

(i) If the covered savings and loan holding company is not a Category IV savings and loan holding company, at least monthly; or

(ii) If the covered savings and loan holding company is a Category IV savings and loan holding company, at least quarterly.

(3) *Stress scenarios.* (i) Each stress test conducted under paragraph (a)(1) of this section must include, at a minimum:

(A) A scenario reflecting adverse market conditions;

(B) A scenario reflecting an idiosyncratic stress event for the covered savings and loan holding company; and

(C) A scenario reflecting combined market and idiosyncratic stresses.

(ii) The covered savings and loan holding company must incorporate additional liquidity stress scenarios into its liquidity stress test, as appropriate, based on its financial condition, size, complexity, risk profile, scope of operations, or activities. The Board may require the covered savings and loan holding company to vary the underlying assumptions and stress scenarios.

(4) *Planning horizon.* Each stress test conducted under paragraph (a)(1) of this section must include an overnight planning horizon, a 30-day planning horizon, a 90-day planning horizon, a one-year planning horizon, and any other planning horizons that are relevant to the covered savings and loan holding company's liquidity risk profile. For purposes of this section, a ''planning horizon'' is the period over which the relevant stressed projections extend. The covered savings and loan holding company must use the results of the stress test over the 30-day planning horizon to calculate the size of the liquidity buffer under paragraph (b) of this section.

(5) *Requirements for assets used as cash-flow sources in a stress test.* (i) To the extent an asset is used as a cash flow source to offset projected funding needs during the planning horizon in a liquidity stress test, the fair market value of the asset must be discounted to reflect any credit risk and market volatility of the asset.

(ii) Assets used as cash-flow sources during a planning horizon must be diversified by collateral, counterparty, borrowing capacity, and other factors associated with the liquidity risk of the assets.

(iii) A line of credit does not qualify as a cash flow source for purposes of a stress test with a planning horizon of 30 days or less. A line of credit may qualify as a cash flow source for purposes of a stress test with a planning horizon that exceeds 30 days.

(6) *Tailoring.* Stress testing must be tailored to, and provide sufficient detail to reflect, a covered savings and loan holding company's capital structure, risk profile, complexity, activities, and size.

(7) *Governance*—(i) *Policies and procedures.* A covered savings and loan holding company subject to this subpart must establish and maintain policies and procedures governing its liquidity stress testing practices, methodologies, and assumptions that provide for the incorporation of the results of liquidity stress tests in future stress testing and for the enhancement of stress testing practices over time.

(ii) *Controls and oversight.* A covered savings and loan holding subject to this subpart must establish and maintain a system of controls and oversight that is designed to ensure that its liquidity stress testing processes are effective in meeting the requirements of this section. The controls and oversight must ensure that each liquidity stress test appropriately incorporates conservative assumptions with respect to the stress scenario in paragraph (a)(3) of this section and other elements of the stress test process, taking into consideration the covered savings and loan holding company's capital structure, risk profile, complexity, activities, size, business lines, legal entity or jurisdiction, and other relevant factors. The assumptions must be approved by the chief risk officer and be subject to the independent review under § 238.123(d).

(iii) *Management information systems.* The covered savings and loan holding company must maintain management information systems and data processes sufficient to enable it to effectively and reliably collect, sort, and aggregate data and other information related to liquidity stress testing.

(8) *Notice and response.* If the Board determines that a covered savings and loan holding company must conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section, the Board will notify the covered savings and loan holding company before the change in frequency takes effect, and describe the basis for its determination. Within 14 calendar days of receipt of a notification under

this paragraph, the covered savings and loan holding company may request in writing that the Board reconsider the requirement. The Board will respond in writing to the company's request for reconsideration prior to requiring that the company conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section.

(b) *Liquidity buffer requirement.* (1) A covered savings and loan holding company subject to this subpart must maintain a liquidity buffer that is sufficient to meet the projected net stressed cash-flow need over the 30-day planning horizon of a liquidity stress test conducted in accordance with paragraph (a) of this section under each scenario set forth in paragraph (a)(3)(i) through (ii) of this section.

(2) *Net stressed cash-flow need.* The net stressed cash-flow need for a covered savings and loan holding company is the difference between the amount of its cash-flow need and the amount of its cash flow sources over the 30-day planning horizon.

(3) *Asset requirements.* The liquidity buffer must consist of highly liquid assets that are unencumbered, as defined in paragraph (b)(3)(ii) of this section:

(i) *Highly liquid asset.* A highly liquid asset includes:

(A) Cash;

(B) Assets that meet the criteria for high quality liquid assets as defined in 12 CFR 249.20; or

(C) Any other asset that the covered savings and loan holding company demonstrates to the satisfaction of the Board:

(*1*) Has low credit risk and low market risk;

(*2*) Is traded in an active secondary two-way market that has committed market makers and independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a reasonable time period conforming with trade custom; and

(*3*) Is a type of asset that investors historically have purchased in periods of financial market distress during which market liquidity has been impaired.

(ii) *Unencumbered.* An asset is unencumbered if it:

(A) Is free of legal, regulatory, contractual, or other restrictions on the ability of such company promptly to liquidate, sell or transfer the asset; and

(B) Is either:

(*1*) Not pledged or used to secure or provide credit enhancement to any transaction; or

(*2*) Pledged to a central bank or a U.S. government-sponsored enterprise, to the extent potential credit secured by the asset is not currently extended by such central bank or U.S. government-sponsored enterprise or any of its consolidated subsidiaries.

(iii) *Calculating the amount of a highly liquid asset.* In calculating the amount of a highly liquid asset included in the liquidity buffer, the covered savings and loan holding company must discount the fair market value of the asset to reflect any credit risk and market price volatility of the asset.

(iv) *Operational requirements.* With respect to the liquidity buffer, the bank holding company must:

(A) Establish and implement policies and procedures that require highly liquid assets comprising the liquidity buffer to be under the control of the management function in the covered savings and loan holding company that is charged with managing liquidity risk; and

(B) Demonstrate the capability to monetize a highly liquid asset under each scenario required under § 238.124(a)(3).

(v) *Diversification.* The liquidity buffer must not contain significant concentrations of highly liquid assets by issuer, business sector, region, or other factor related to the covered savings and loan holding company's risk, except with respect to cash and securities issued or guaranteed by the United States, a U.S. government agency, or a U.S. government-sponsored enterprise.

■ 10. Add subpart O to read as follows:

Subpart O—Supervisory Stress Test Requirements for Covered Savings and Loan Holding Companies

Sec.
238.130 Definitions.
238.131 Applicability.
238.132 Analysis conducted by the Board.
238.133 Data and information required to be submitted in support of the Board's analyses.
238.134 Review of the Board's analysis; publication of summary results.
238.135 Corporate use of stress test results.

§ 238.130 Definitions.

For purposes of this subpart, the following definitions apply:

Advanced approaches means the risk-weighted assets calculation methodologies at 12 CFR part 217, subpart E, as applicable.

Baseline scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that reflect the consensus views of the economic and financial outlook.

Covered company means a covered savings and loan holding company (other than a foreign banking organization) subject to this subpart.

Planning horizon means the period of at least nine consecutive quarters, beginning on the first day of a stress test cycle over which the relevant projections extend.

Pre-provision net revenue means the sum of net interest income and non-interest income less expenses before adjusting for loss provisions.

Provision for credit losses means:

(1) With respect to a covered company that has adopted the current expected credit losses methodology under GAAP, the provision for credit losses, as would be reported by the covered company on the FR Y–9C in the current stress test cycle; and,

(2) With respect to a covered company that has not adopted the current expected credit losses methodology under GAAP, the provision for loan and lease losses as would be reported by the covered company on the FR Y–9C in the current stress test cycle.

Regulatory capital ratio means a capital ratio for which the Board has established minimum requirements for the covered savings and loan holding company by regulation or order, including, as applicable, the company's regulatory capital ratios calculated under 12 CFR part 217 and the deductions required under 12 CFR 248.12; except that the company shall not use the advanced approaches to calculate its regulatory capital ratios.

Scenarios are those sets of conditions that affect the U.S. economy or the financial condition of a covered company that the Board determines are appropriate for use in the supervisory stress tests, including, but not limited to, baseline and severely adverse scenarios.

Severely adverse scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

Stress test cycle means the period beginning on January 1 of a calendar year and ending on December 31 of that year.

Subsidiary has the same meaning as in § 225.2(o) of this chapter.

§ 238.131 Applicability.

(a) *Scope*—(1) *Applicability.* Except as provided in paragraph (b) of this section, this subpart applies to any covered savings and loan holding company with average total consolidated assets of $100 billion or more.

(2) *Ongoing applicability.* A covered savings and loan holding company (including any successor company) that is subject to any requirement in this subpart shall remain subject to any such requirement unless and until its total consolidated assets fall below $100 billion for each of four consecutive quarters, effective on the as-of date of the fourth consecutive FR Y–9C.

(b) *Transitional arrangements.* (1) A covered savings and loan holding company that becomes a covered company on or before September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the second calendar year after the covered savings and loan holding company becomes a covered company, unless that time is extended by the Board in writing.

(2) A covered savings and loan holding company that becomes a covered company after September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the third calendar year after the covered savings and loan holding company becomes a covered company, unless that time is extended by the Board in writing.

§ 238.132 Analysis conducted by the Board.

(a) *In general.* (1) The Board will conduct an analysis of each covered company's capital, on a total consolidated basis, taking into account all relevant exposures and activities of that covered company, to evaluate the ability of the covered company to absorb losses in specified economic and financial conditions.

(2) The analysis will include an assessment of the projected losses, net income, and pro forma capital levels and regulatory capital ratios and other capital ratios for the covered company and use such analytical techniques that the Board determines are appropriate to identify, measure, and monitor risks of the covered company.

(3) In conducting the analyses, the Board will coordinate with the appropriate primary financial regulatory agencies and the Federal Insurance Office, as appropriate.

(b) *Economic and financial scenarios related to the Board's analysis.* The Board will conduct its analysis using a minimum of two different scenarios, including a baseline scenario and a severely adverse scenario. The Board will notify covered companies of the scenarios that the Board will apply to conduct the analysis for each stress test cycle to which the covered company is subject by no later than February 15 of that year, except with respect to trading or any other components of the scenarios and any additional scenarios that the Board will apply to conduct the analysis, which will be communicated by no later than March 1 of that year.

(c) *Frequency of analysis conducted by the Board*—(1) *General.* Except as provided in paragraph (c)(2) of this section, the Board will conduct its analysis of a covered company according to the frequency in Table 1 to § 238.132(c)(1).

TABLE 1 TO § 238.132(c)(1)

If the covered company is a	Then the Board will conduct its analysis
Category II savings and loan holding company	Annually.
Category III savings and loan holding company	Annually.
Category IV savings and loan holding company	Biennially, occurring in each year ending in an even number.

(2) *Change in frequency.* The Board may conduct a stress test of a covered company on a more or less frequent basis than would be required under paragraph (c)(1) of this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Notice and response*—(i) *Notification of change in frequency.* If the Board determines to change the frequency of the stress test under paragraph (c)(2), the Board will notify the company in writing and provide a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under paragraph (c)(2) of this section, a covered company may request in writing that the Board reconsider the requirement to conduct a stress test on a more or less frequent basis than would be required under paragraph (c)(1) of this section. A covered company's request for reconsideration must include an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

§ 238.133 Data and information required to be submitted in support of the Board's analyses.

(a) *Regular submissions.* Each covered company must submit to the Board such data, on a consolidated basis, that the Board determines is necessary in order for the Board to derive the relevant pro forma estimates of the covered company over the planning horizon under the scenarios described in § 238.132(b).

(b) *Additional submissions required by the Board.* The Board may require a covered company to submit any other information on a consolidated basis that the Board deems necessary in order to:

(1) Ensure that the Board has sufficient information to conduct its analysis under this subpart; and

(2) Project a company's pre-provision net revenue, losses, provision for credit losses, and net income; and pro forma capital levels, regulatory capital ratios, and any other capital ratio specified by the Board under the scenarios described in § 238.132(b).

(c) *Confidential treatment of information submitted.* The confidentiality of information submitted to the Board under this subpart and related materials shall be determined in accordance with the Freedom of Information Act (5 U.S.C. 552(b)) and the Board's Rules Regarding Availability of Information (12 CFR part 261).

§ 238.134 Review of the Board's analysis; publication of summary results.

(a) *Review of results.* Based on the results of the analysis conducted under this subpart, the Board will conduct an evaluation to determine whether the covered company has the capital, on a total consolidated basis, necessary to absorb losses and continue its operation by maintaining ready access to funding, meeting its obligations to creditors and other counterparties, and continuing to serve as a credit intermediary under baseline and severely adverse scenarios, and any additional scenarios.

(b) *Publication of results by the Board.* (1) The Board will publicly disclose a summary of the results of the Board's analyses of a covered company by June 30 of the calendar year in which the stress test was conducted pursuant to § 238.132.

(2) The Board will notify companies of the date on which it expects to publicly disclose a summary of the Board's analyses pursuant to paragraph (b)(1) of this section at least 14 calendar days prior to the expected disclosure date.

§ 238.135 Corporate use of stress test results.

The board of directors and senior management of each covered company must consider the results of the analysis conducted by the Board under this subpart, as appropriate:

(a) As part of the covered company's capital plan and capital planning process, including when making changes to the covered company's capital structure (including the level and composition of capital); and

(b) When assessing the covered company's exposures, concentrations, and risk positions.

■ 11. Add subpart P to read as follows:

Subpart P—Company-Run Stress Test Requirements for Savings and Loan Holding Companies

Sec.
238.140 Authority and purpose.
238.141 Definitions.
238.142 Applicability.
238.143 Stress test.
238.144 Methodologies and practices.
238.145 Reports of stress test results.
238.146 Disclosure of stress test results.

§ 238.140 Authority and purpose.

(a) *Authority.* 12 U.S.C. 1467; 1467a, 1818, 5361, 5365.

(b) *Purpose.* This subpart establishes the requirement for a covered company to conduct stress tests. This subpart also establishes definitions of stress test and related terms, methodologies for conducting stress tests, and reporting and disclosure requirements.

§ 238.141 Definitions.

For purposes of this subpart, the following definitions apply:

Advanced approaches means the risk-weighted assets calculation methodologies at 12 CFR part 217, subpart E, as applicable.

Baseline scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that reflect the consensus views of the economic and financial outlook.

Capital action means any issuance or redemption of a debt or equity capital instrument, any capital distribution, and any similar action that the Federal Reserve determines could impact a savings and loan holding company's consolidated capital.

Covered company means:

(1) A Category II savings and loan holding company;

(2) A Category III savings and loan holding company; or

(3) A savings and loan holding company with average total consolidated assets of greater than $250 billion.

Planning horizon means the period of at least nine consecutive quarters, beginning on the first day of a stress test cycle over which the relevant projections extend.

Pre-provision net revenue means the sum of net interest income and non-interest income less expenses before adjusting for loss provisions.

Provision for credit losses means:

(1) With respect to a covered company that has adopted the current expected credit losses methodology under GAAP, the provision for credit losses, as would be reported by the covered company on the FR Y–9C in the current stress test cycle; and

(2) With respect to a covered company that has not adopted the current expected credit losses methodology under GAAP, the provision for loan and lease losses as would be reported by the covered company on the FR Y–9C in the current stress test cycle.

Regulatory capital ratio means a capital ratio for which the Board has established minimum requirements for the savings and loan holding company by regulation or order, including, as applicable, the company's regulatory capital ratios calculated under 12 CFR part 217 and the deductions required under 12 CFR 248.12; except that the company shall not use the advanced approaches to calculate its regulatory capital ratios.

Scenarios are those sets of conditions that affect the U.S. economy or the financial condition of a covered company that the Board determines are appropriate for use in the company-run stress tests, including, but not limited to, baseline and severely adverse scenarios.

Severely adverse scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

Stress test means a process to assess the potential impact of scenarios on the consolidated earnings, losses, and capital of a covered company over the planning horizon, taking into account its current condition, risks, exposures, strategies, and activities.

Stress test cycle means the period beginning on January 1 of a calendar year and ending on December 31 of that year.

§ 238.142 Applicability.

(a) *Scope*—(1) *Applicability.* Except as provided in paragraph (b) of this section, this subpart applies to any covered company, which includes:

(i) Any Category II savings and loan holding company;

(ii) Any Category III savings and loan holding company; and

(iii) Any savings and loan holding company with average total consolidated assets of greater than $250 billion.

(2) *Ongoing applicability.* A savings and loan holding company (including any successor company) that is subject to any requirement in this subpart shall remain subject to any such requirement unless and until the savings and loan holding company:

(i) Is not a Category II savings and loan holding company;

(ii) Is not a Category III savings and loan holding company; and

(iii) Has $250 billion or less in total consolidated assets in each of four consecutive calendar quarters.

(b) *Transitional arrangements.* (1) A savings and loan holding company that is subject to minimum capital requirements and that becomes a covered company on or before September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the second calendar year after the savings and loan holding company becomes a covered company, unless that time is extended by the Board in writing.

(2) A savings and loan holding company that is subject to minimum capital requirements and that becomes a covered company after September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the third calendar year after the savings and loan holding company becomes a covered company, unless that time is extended by the Board in writing.

§ 238.143 Stress test.

(a) *Stress test requirement*—(1) *In general.* A covered company must conduct a stress test as required under this subpart.

(2) *Frequency.* (i) *General.* Except as provided in paragraph (a)(2)(ii) of this section, a covered company must conduct a stress test according to the frequency in Table 1 of § 238.143(a)(2)(i).

TABLE 1 OF § 238.143(a)(2)(i)

If the covered company is a	Then the stress test must be conducted
Category II savings and loan holding company	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category III savings and loan holding company	Biennially, by April 5 of each calendar year ending in an even number, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Savings and loan holding company that is not: (A) A Category II savings and loan holding company; or (B) A Category III savings and loan holding company.	Periodically, as determined by rule or order.

(ii) *Change in frequency.* The Board may require a covered company to conduct a stress test on a more or less frequent basis than would be required under paragraphs (a)(2)(i) of this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Notice and response*—(i) *Notification of change in frequency.* If the Board requires a covered company to change the frequency of the stress test under paragraph (a)(2)(ii) of this section, the Board will notify the company in writing and provide a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under this paragraph (a)(3), a covered company may request in writing that the Board reconsider the requirement to conduct a stress test on a more or less frequent basis than would be required under paragraph (a)(2)(i) of this section. A covered company's request for reconsideration must include an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(b) *Scenarios provided by the Board*—(1) *In general.* In conducting a stress test under this section, a covered company must, at a minimum, use the scenarios provided by the Board. Except as provided in paragraphs (b)(2) and (3) of this section, the Board will provide a description of the scenarios to each covered company no later than February 15 of the calendar year in which the stress test is performed pursuant to this section.

(2) *Additional components.* (i) The Board may require a covered company with significant trading activity, as determined by the Board and specified in the Capital Assessments and Stress Testing report (FR Y–14), to include a trading and counterparty component in its severely adverse scenario in the stress test required by this section. The data used in this component must be as-of a date selected by the Board between October 1 of the previous calendar year and March 1 of the calendar year in which the stress test is performed pursuant to this section, and the Board will communicate the as-of date and a description of the component to the company no later than March 1 of the calendar year in which the stress test is performed pursuant to this section.

(ii) The Board may require a covered company to include one or more additional components in its severely adverse scenario in the stress test required by this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Additional scenarios.* The Board may require a covered company to use one or more additional scenarios in the stress test required by this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(4) *Notice and response*—(i) *Notification of additional component.* If the Board requires a covered company to include one or more additional components in its severely adverse scenario under paragraph (b)(2) of this section or to use one or more additional scenarios under paragraph (b)(3) of this section, the Board will notify the company in writing and include a discussion of the basis for its determination. The Board will provide such notification no later than December 31 of the preceding calendar year. The notification will include a general description of the additional component(s) or additional scenario(s) and the basis for requiring the company to include the additional component(s) or additional scenario(s).

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under this paragraph, the covered company may request in writing that the Board reconsider the requirement that the company include the additional component(s) or additional scenario(s), including an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(iii) *Description of component.* The Board will provide the covered company with a description of any additional component(s) or additional scenario(s) by March 1 of the calendar year in which the stress test is performed pursuant to this section.

§ 238.144 Methodologies and practices.

(a) *Potential impact on capital.* In conducting a stress test under § 238.143, for each quarter of the planning horizon, a covered company must estimate the following for each scenario required to be used:

(1) Losses, pre-provision net revenue, provision for credit losses, and net income; and

(2) The potential impact on pro forma regulatory capital levels and pro forma capital ratios (including regulatory capital ratios and any other capital ratios specified by the Board), incorporating the effects of any capital actions over the planning horizon and maintenance of an allowance for credit losses appropriate for credit exposures throughout the planning horizon.

(b) *Assumptions regarding capital actions.* In conducting a stress test under § 238.143, a covered company is required to make the following assumptions regarding its capital actions over the planning horizon:

(1) For the first quarter of the planning horizon, the covered company must take into account its actual capital actions as of the end of that quarter; and

(2) For each of the second through ninth quarters of the planning horizon, the covered company must include in the projections of capital:

(i) Common stock dividends equal to the quarterly average dollar amount of common stock dividends that the company paid in the previous year (that is, the first quarter of the planning horizon and the preceding three calendar quarters) plus common stock dividends attributable to issuances related to expensed employee compensation or in connection with a planned merger or acquisition to the extent that the merger or acquisition is reflected in the covered company's pro forma balance sheet estimates;

(ii) Payments on any other instrument that is eligible for inclusion in the numerator of a regulatory capital ratio equal to the stated dividend, interest, or principal due on such instrument during the quarter;

(iii) An assumption of no redemption or repurchase of any capital instrument that is eligible for inclusion in the numerator of a regulatory capital ratio; and

(iv) An assumption of no issuances of common stock or preferred stock, except for issuances related to expensed employee compensation or in connection with a planned merger or acquisition to the extent that the merger or acquisition is reflected in the covered company's pro forma balance sheet estimates.

(c) *Controls and oversight of stress testing processes*—(1) *In general.* The senior management of a covered company must establish and maintain a system of controls, oversight, and documentation, including policies and procedures, that are designed to ensure that its stress testing processes are effective in meeting the requirements in this subpart. These policies and procedures must, at a minimum, describe the covered company's stress testing practices and methodologies, and processes for validating and updating the company's stress test practices and methodologies consistent with applicable laws and regulations.

(2) *Oversight of stress testing processes.* The board of directors, or a committee thereof, of a covered company must review and approve the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the covered company may warrant, but no less than each year a stress test is conducted. The board of directors and senior management of the covered company must receive a summary of the results of any stress test conducted under this subpart.

(3) *Role of stress testing results.* The board of directors and senior management of each covered company must consider the results of the analysis it conducts under this subpart, as appropriate:

(i) As part of the covered company's capital plan and capital planning process, including when making changes to the covered company's capital structure (including the level and composition of capital); and

(ii) When assessing the covered company's exposures, concentrations, and risk positions.

§ 238.145 Reports of stress test results.

(a) *Reports to the Board of stress test results.* A covered company must report the results of the stress test required under § 238.143 to the Board in the manner and form prescribed by the Board. Such results must be submitted by April 5 of the calendar year in which the stress test is performed pursuant to § 238.143, unless that time is extended by the Board in writing.

(b) *Confidential treatment of information submitted.* The confidentiality of information submitted to the Board under this subpart and related materials shall be determined in accordance with applicable exemptions under the Freedom of Information Act (5 U.S.C. 552(b)) and the Board's Rules Regarding Availability of Information (12 CFR part 261).

§ 238.146 Disclosure of stress test results.

(a) *Public disclosure of results*—(1) *In general.* A covered company must publicly disclose a summary of the results of the stress test required under § 238.143 within the period that is 15 calendar days after the Board publicly discloses the results of its supervisory stress test of the covered company pursuant to § 238.134, unless that time is extended by the Board in writing.

(2) *Disclosure method.* The summary required under this section may be disclosed on the website of a covered company, or in any other forum that is reasonably accessible to the public.

(b) *Summary of results.* The summary results must, at a minimum, contain the following information regarding the severely adverse scenario:

(1) A description of the types of risks included in the stress test;

(2) A general description of the methodologies used in the stress test, including those employed to estimate losses, revenues, provision for credit losses, and changes in capital positions over the planning horizon;

(3) Estimates of—

(i) Pre-provision net revenue and other revenue;

(ii) Provision for credit losses, realized losses or gains on available-for-sale and held-to-maturity securities, trading and counterparty losses, and other losses or gains;

(iii) Net income before taxes;

(iv) Loan losses (dollar amount and as a percentage of average portfolio balance) in the aggregate and by subportfolio, including: Domestic closed-end first-lien mortgages; domestic junior lien mortgages and home equity lines of credit; commercial and industrial loans; commercial real estate loans; credit card exposures; other consumer loans; and all other loans; and

(v) Pro forma regulatory capital ratios and any other capital ratios specified by the Board; and

(4) An explanation of the most significant causes for the changes in regulatory capital ratios; and

(5) With respect to any depository institution subsidiary that is subject to stress testing requirements pursuant to 12 U.S.C. 5365(i)(2), 12 CFR part 46 (OCC), or 12 CFR part 325, subpart C (FDIC), changes over the planning horizon in regulatory capital ratios and any other capital ratios specified by the Board and an explanation of the most significant causes for the changes in regulatory capital ratios.

(c) *Content of results.* (1) The following disclosures required under paragraph (b) of this section must be on a cumulative basis over the planning horizon:

(i) Pre-provision net revenue and other revenue;

(ii) Provision for credit losses, realized losses or gains on available-for-sale and held-to-maturity securities, trading and counterparty losses, and other losses or gains;

(iii) Net income before taxes; and

(iv) Loan losses in the aggregate and by subportfolio.

(2) The disclosure of pro forma regulatory capital ratios and any other capital ratios specified by the Board that is required under paragraph (b) of this section must include the beginning value, ending value, and minimum value of each ratio over the planning horizon.

■ 12. Add subpart Q to read as follows:

Subpart Q—Single Counterparty Credit Limits for Covered Savings and Loan Holding Companies

Sec.

238.150 Applicability and general provisions.
238.151 Definitions.
238.152 Credit exposure limits.
238.153 Gross credit exposure.
238.154 Net credit exposure.
238.155 Investments in and exposures to securitization vehicles, investment funds, and other special purpose vehicles that are not subsidiaries of the covered company.
238.156 Aggregation of exposures to more than one counterparty due to economic interdependence or control relationships.
238.157 Exemptions.
238.158 Compliance.

§ 238.150 Applicability and general provisions.

(a) *In general.* This subpart establishes single counterparty credit limits for a covered company. For purposes of this subpart, covered company means:

(i) A Category II savings and loan holding company; or

(ii) A Category III savings and loan holding company.

(b) *Credit exposure limits.* (1) Section 238.152 establishes credit exposure limits for a covered company.

(2) A covered company is required to calculate its aggregate net credit exposure, gross credit exposure, and net credit exposure to a counterparty using the methods in this subpart.

(c) *Applicability of this subpart.* (1) A covered company that becomes subject to this subpart must comply with the requirements of this subpart beginning on the first day of the ninth calendar quarter after it becomes a covered company, unless that time is accelerated or extended by the Board in writing.

(d) *Cessation of requirements.* Any company that becomes a covered company will remain subject to the requirements of this subpart unless and until it is not a Category II savings and loan holding company or a Category III savings and loan holding company.

§ 238.151 Definitions.

Unless defined in this section, terms that are set forth in § 238.2 and used in this subpart have the definitions assigned in § 238.2. For purposes of this subpart:

(a) *Adjusted market value* means:

(1) With respect to the value of cash, securities, or other eligible collateral transferred by the covered company to a counterparty, the sum of:

(i) The market value of the cash, securities, or other eligible collateral; and

(ii) The product of the market value of the securities or other eligible collateral multiplied by the applicable collateral haircut in Table 1 to § 217.132 of this chapter; and

(2) With respect to cash, securities, or other eligible collateral received by the covered company from a counterparty:

(i) The market value of the cash, securities, or other eligible collateral; minus

(ii) The market value of the securities or other eligible collateral multiplied by the applicable collateral haircut in Table 1 to § 217.132 of this chapter.

(3) Prior to calculating the adjusted market value pursuant to paragraphs (a)(1) and (2) of this section, with regard to a transaction that meets the definition of ''repo-style transaction'' in § 217.2 of this chapter, the covered company would first multiply the applicable collateral haircuts in Table 1 to § 217.132 of this chapter by the square root of 1/2.

(b) *Affiliate* means, with respect to a company:

(1) Any subsidiary of the company and any other company that is consolidated with the company under applicable accounting standards; or

(2) For a company that is not subject to principles or standards referenced in paragraph (b)(1) of this section, any subsidiary of the company and any other company that would be consolidated with the company, if consolidation would have occurred if such principles or standards had applied.

(c) *Aggregate net credit exposure* means the sum of all net credit exposures of a covered company and all of its subsidiaries to a single counterparty as calculated under this subpart.

(d) *Bank-eligible investments* means investment securities that a national bank is permitted to purchase, sell, deal in, underwrite, and hold under 12 U.S.C. 24 (Seventh) and 12 CFR part 1.

(e) *Counterparty* means, with respect to a credit transaction:

(1) With respect to a natural person, the natural person, and, if the credit exposure of the covered company to such natural person exceeds 5 percent of the covered company's tier 1 capital, the natural person and members of the person's immediate family collectively;

(2) With respect to any company that is not a subsidiary of the covered company, the company and its affiliates collectively;

(3) With respect to a State, the State and all of its agencies, instrumentalities, and political subdivisions (including any municipalities) collectively;

(4) With respect to a foreign sovereign entity that is not assigned a zero percent risk weight under the standardized approach in 12 CFR part 217, subpart D, the foreign sovereign entity and all of its agencies and instrumentalities (but not including any political subdivision) collectively; and

(5) With respect to a political subdivision of a foreign sovereign entity such as a state, province, or municipality, any political subdivision of the foreign sovereign entity and all of such political subdivision's agencies and instrumentalities, collectively.[1]

(f) *Covered company* is defined in § 238.150(a)

(g) *Credit derivative* has the same meaning as in § 217.2 of this chapter.

(h) *Credit transaction* means, with respect to a counterparty:

(1) Any extension of credit to the counterparty, including loans, deposits, and lines of credit, but excluding uncommitted lines of credit;

(2) Any repurchase agreement or reverse repurchase agreement with the counterparty;

(3) Any securities lending or securities borrowing transaction with the counterparty;

(4) Any guarantee, acceptance, or letter of credit (including any endorsement, confirmed letter of credit, or standby letter of credit) issued on behalf of the counterparty;

(5) Any purchase of securities issued by or other investment in the counterparty;

(6) Any credit exposure to the counterparty in connection with a derivative transaction between the covered company and the counterparty;

(7) Any credit exposure to the counterparty in connection with a credit derivative or equity derivative between the covered company and a third party, the reference asset of which is an obligation or equity security of, or equity investment in, the counterparty; and

(8) Any transaction that is the functional equivalent of the above, and any other similar transaction that the Board, by regulation or order, determines to be a credit transaction for purposes of this subpart.

(i) *Depository institution* has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813(c)).

(j) *Derivative transaction* means any transaction that is a contract, agreement, swap, warrant, note, or option that is based, in whole or in part, on the value of, any interest in, or any quantitative measure or the occurrence of any event relating to, one or more commodities, securities, currencies, interest or other rates, indices, or other assets.

(k) *Eligible collateral* means collateral in which, notwithstanding the prior security interest of any custodial agent, the covered company has a perfected, first priority security interest (or the legal equivalent thereof, if outside of the United States), with the exception of cash on deposit, and is in the form of:

(1) Cash on deposit with the covered company or a subsidiary of the covered company (including cash in foreign currency or U.S. dollars held for the covered company by a custodian or trustee, whether inside or outside of the United States);

[1] In addition, under § 238.156, under certain circumstances, a covered company is required to aggregate its net credit exposure to one or more counterparties for all purposes under this subpart.

(2) Debt securities (other than mortgage- or asset-backed securities and resecuritization securities, unless those securities are issued by a U.S. government-sponsored enterprise) that are bank-eligible investments and that are investment grade, except for any debt securities issued by the covered company or any subsidiary of the covered company;

(3) Equity securities that are publicly traded, except for any equity securities issued by the covered company or any subsidiary of the covered company;

(4) Convertible bonds that are publicly traded, except for any convertible bonds issued by the covered company or any subsidiary of the covered company; or

(5) Gold bullion.

(l) *Eligible credit derivative* means a single-name credit derivative or a standard, non-tranched index credit derivative, provided that:

(1) The contract meets the requirements of an eligible guarantee and has been confirmed by the protection purchaser and the protection provider;

(2) Any assignment of the contract has been confirmed by all relevant parties;

(3) If the credit derivative is a credit default swap, the contract includes the following credit events:

(i) Failure to pay any amount due under the terms of the reference exposure, subject to any applicable minimal payment threshold that is consistent with standard market practice and with a grace period that is closely in line with the grace period of the reference exposure; and

(ii) Receivership, insolvency, liquidation, conservatorship, or inability of the reference exposure issuer to pay its debts, or its failure or admission in writing of its inability generally to pay its debts as they become due, and similar events;

(4) The terms and conditions dictating the manner in which the contract is to be settled are incorporated into the contract;

(5) If the contract allows for cash settlement, the contract incorporates a robust valuation process to estimate loss reliably and specifies a reasonable period for obtaining post-credit event valuations of the reference exposure;

(6) If the contract requires the protection purchaser to transfer an exposure to the protection provider at settlement, the terms of at least one of the exposures that is permitted to be transferred under the contract provide that any required consent to transfer may not be unreasonably withheld; and

(7) If the credit derivative is a credit default swap, the contract clearly identifies the parties responsible for determining whether a credit event has occurred, specifies that this determination is not the sole responsibility of the protection provider, and gives the protection purchaser the right to notify the protection provider of the occurrence of a credit event.

(m) *Eligible equity derivative* means an equity derivative, provided that:

(1) The derivative contract has been confirmed by all relevant parties;

(2) Any assignment of the derivative contract has been confirmed by all relevant parties; and

(3) The terms and conditions dictating the manner in which the derivative contract is to be settled are incorporated into the contract.

(n) *Eligible guarantee* has the same meaning as in § 217.2 of this chapter.

(o) *Eligible guarantor* has the same meaning as in § 217.2 of this chapter.

(p) *Equity derivative* has the same meaning as ‘‘equity derivative contract’’ in § 217.2 of this chapter.

(q) *Exempt counterparty* means an entity that is identified as exempt from the requirements of this subpart under § 238.157, or that is otherwise excluded from this subpart, including any sovereign entity assigned a zero percent risk weight under the standardized approach in 12 CFR part 217, subpart D.

(r) *Financial entity* means:

(1)(i) A bank holding company or an affiliate thereof; a savings and loan holding company; a U.S. intermediate holding company established or designated pursuant to 12 CFR 252.153; or a nonbank financial company supervised by the Board;

(ii) A depository institution as defined in section 3(c) of the Federal Deposit Insurance Act (12 U.S.C. 1813(c)); an organization that is organized under the laws of a foreign country and that engages directly in the business of banking outside the United States; a federal credit union or state credit union as defined in section 2 of the Federal Credit Union Act (12 U.S.C. 1752(1) and (6)); a national association, state member bank, or state nonmember bank that is not a depository institution; an institution that functions solely in a trust or fiduciary capacity as described in section 2(c)(2)(D) of the Bank Holding Company Act (12 U.S.C. 1841(c)(2)(D)); an industrial loan company, an industrial bank, or other similar institution described in section 2(c)(2)(H) of the Bank Holding Company Act (12 U.S.C. 1841(c)(2)(H));

(iii) An entity that is state-licensed or registered as:

(A) A credit or lending entity, including a finance company; money lender; installment lender; consumer lender or lending company; mortgage lender, broker, or bank; motor vehicle title pledge lender; payday or deferred deposit lender; premium finance company; commercial finance or lending company; or commercial mortgage company; except entities registered or licensed solely on account of financing the entity's direct sales of goods or services to customers;

(B) A money services business, including a check casher; money transmitter; currency dealer or exchange; or money order or traveler's check issuer;

(iv) Any person registered with the Commodity Futures Trading Commission as a swap dealer or major swap participant pursuant to the Commodity Exchange Act of 1936 (7 U.S.C. 1 *et seq.*), or an entity that is registered with the U.S. Securities and Exchange Commission as a security-based swap dealer or a major security-based swap participant pursuant to the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*);

(v) A securities holding company as defined in section 618 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 1850a); a broker or dealer as defined in sections 3(a)(4) and 3(a)(5) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(4)–(5)); an investment adviser as defined in section 202(a) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–2(a)); an investment company registered with the U.S. Securities and Exchange Commission under the Investment Company Act of 1940 (15 U.S.C. 80a–1 *et seq.*); or a company that has elected to be regulated as a business development company pursuant to section 54(a) of the Investment Company Act of 1940 (15 U.S.C. 80a–53(a));

(vi) A private fund as defined in section 202(a) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–2(a)); an entity that would be an investment company under section 3 of the Investment Company Act of 1940 (15 U.S.C. 80a–3) but for section 3(c)(5)(C); or an entity that is deemed not to be an investment company under section 3 of the Investment Company Act of 1940 pursuant to Investment Company Act Rule 3a–7 (17 CFR 270.3a–7) of the U.S. Securities and Exchange Commission;

(vii) A commodity pool, a commodity pool operator, or a commodity trading advisor as defined, respectively, in sections 1a(10), 1a(11), and 1a(12) of the Commodity Exchange Act of 1936 (7 U.S.C. 1a(10), 1a(11), and 1a(12)); a floor broker, a floor trader, or introducing broker as defined, respectively, in sections 1a(22), 1a(23) and 1a(31) of the Commodity Exchange Act of 1936 (7 U.S.C. 1a(22), 1a(23), and 1a(31)); or a futures commission merchant as defined in section 1a(28) of the Commodity Exchange Act of 1936 (7 U.S.C. 1a(28));

(viii) An employee benefit plan as defined in paragraphs (3) and (32) of section 3 of the Employee Retirement Income and Security Act of 1974 (29 U.S.C. 1002);

(ix) An entity that is organized as an insurance company, primarily engaged in writing insurance or reinsuring risks underwritten by insurance companies, or is subject to supervision as such by a State insurance regulator or foreign insurance regulator;

(x) Any designated financial market utility, as defined in section 803 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5462); and

(xi) An entity that would be a financial entity described in paragraphs (r)(1)(i) through (x) of this section, if it were organized under the laws of the United States or any State thereof; and

(2) Provided that, for purposes of this subpart, ''financial entity'' does not include any counterparty that is a foreign sovereign entity or multilateral development bank.

(s) *Foreign sovereign entity* means a sovereign entity other than the United States government and the entity's agencies, departments, ministries, and central bank collectively.

(t) *Gross credit exposure* means, with respect to any credit transaction, the credit exposure of the covered company before adjusting, pursuant to § 238.154, for the effect of any eligible collateral, eligible guarantee, eligible credit derivative, eligible equity derivative, other eligible hedge, and any unused portion of certain extensions of credit.

(u) *Immediate family* means the spouse of an individual, the individual's minor children, and any of the individual's children (including adults) residing in the individual's home.

(v) *Intraday credit exposure* means credit exposure of a covered company to a counterparty that by its terms is to be repaid, sold, or terminated by the end of its business day in the United States.

(w) *Investment grade* has the same meaning as in § 217.2 of this chapter.

(x) *Multilateral development bank* has the same meaning as in § 217.2 of this chapter.

(y) *Net credit exposure* means, with respect to any credit transaction, the gross credit exposure of a covered company and all of its subsidiaries calculated under § 238.153, as adjusted in accordance with § 238.154.

(z) *Qualifying central counterparty* has the same meaning as in § 217.2 of this chapter.

(aa) *Qualifying master netting agreement* has the same meaning as in § 217.2 of this chapter.

(bb) *Securities financing transaction* means any repurchase agreement, reverse repurchase agreement, securities borrowing transaction, or securities lending transaction.

(cc) *Short sale* means any sale of a security which the seller does not own or any sale which is consummated by the delivery of a security borrowed by, or for the account of, the seller.

(dd) *Sovereign entity* means a central national government (including the U.S. government) or an agency, department, ministry, or central bank, but not including any political subdivision such as a state, province, or municipality.

(ee) *Subsidiary.* A company is a *subsidiary* of another company if:

(1) The company is consolidated by the other company under applicable accounting standards; or

(2) For a company that is not subject to principles or standards referenced in paragraph (ee)(1) of this section, consolidation would have occurred if such principles or standards had applied.

(ff) *Tier 1 capital* means common equity tier 1 capital and additional tier 1 capital, as defined in 12 CFR part 217 and as reported by the covered savings and loan holding company on the most recent FR Y–9C report on a consolidated basis.

(gg) *Total consolidated assets.* A company's total consolidated assets are determined based on:

(1) The average of the company's total consolidated assets in the four most recent consecutive quarters as reported quarterly on the FR Y–9C; or

(2) If the company has not filed an FR Y–9C for each of the four most recent consecutive quarters, the average of the company's total consolidated assets, as reported on the company's FR Y–9C, for the most recent quarter or consecutive quarters, as applicable.

§ 238.152 Credit exposure limits.

General limit on aggregate net credit exposure. No covered company may have an aggregate net credit exposure to any counterparty that exceeds 25 percent of the tier 1 capital of the covered company.

§ 238.153 Gross credit exposure.

(a) *Calculation of gross credit exposure.* The amount of gross credit exposure of a covered company to a counterparty with respect to a credit transaction is, in the case of:

(1) A deposit of the covered company held by the counterparty, loan by a covered company to the counterparty, and lease in which the covered company is the lessor and the counterparty is the lessee, equal to the amount owed by the counterparty to the covered company under the transaction.

(2) A debt security or debt investment held by the covered company that is issued by the counterparty, equal to:

(i) The market value of the securities, for trading and available-for-sale securities; and

(ii) The amortized purchase price of the securities or investments, for securities or investments held to maturity.

(3) An equity security held by the covered company that is issued by the counterparty, equity investment in a counterparty, and other direct investments in a counterparty, equal to the market value.

(4) A securities financing transaction must be valued using any of the methods that the covered company is authorized to use under 12 CFR part 217, subparts D and E to value such transactions:

(i)(A) As calculated for each transaction, in the case of a securities financing transaction between the covered company and the counterparty that is not subject to a bilateral netting agreement or does not meet the definition of ''repo-style transaction'' in § 217.2 of this chapter; or

(B) As calculated for a netting set, in the case of a securities financing transaction between the covered company and the counterparty that is subject to a bilateral netting agreement with that counterparty and meets the definition of ''repo-style transaction'' in § 217.2 of this chapter;

(ii) For purposes of paragraph (a)(4)(i) of this section, the covered company must:

(A) Assign a value of zero to any security received from the counterparty that does not meet the definition of ''eligible collateral'' in § 238.151; and

(B) Include the value of securities that are eligible collateral received by the covered company from the counterparty (including any exempt counterparty), calculated in accordance with paragraphs (a)(4)(i) through (iv) of this section, when calculating its gross credit exposure to the issuer of those securities;

(iii) Notwithstanding paragraphs (a)(4)(i) and (ii) of this section and with respect to each credit transaction, a covered company's gross credit exposure to a collateral issuer under this paragraph (a)(4) is limited to the covered company's gross credit exposure to the counterparty on the credit transaction; and

(iv) In cases where the covered company receives eligible collateral from a counterparty in addition to the cash or securities received from that counterparty, the counterparty may reduce its gross credit exposure to that counterparty in accordance with § 238.154(b).

(5) A committed credit line extended by a covered company to a counterparty, equal to the face amount of the committed credit line.

(6) A guarantee or letter of credit issued by a covered company on behalf of a counterparty, equal to the maximum potential loss to the covered company on the transaction.

(7) A derivative transaction must be valued using any of the methods that the covered company is authorized to use under 12 CFR part 217, subparts D and E to value such transactions:

(i)(A) As calculated for each transaction, in the case of a derivative transaction between the covered company and the counterparty, including an equity derivative but excluding a credit derivative described in paragraph (a)(8) of this section, that is not subject to a qualifying master netting agreement; or

(B) As calculated for a netting set, in the case of a derivative transaction between the covered company and the counterparty, including an equity derivative but excluding a credit derivative described in paragraph (a)(8) of this section, that is subject to a qualifying master netting agreement.

(ii) In cases where a covered company is required to recognize an exposure to an eligible guarantor pursuant to § 238.154(d), the covered company must exclude the relevant derivative transaction when calculating its gross exposure to the original counterparty under this section.

(8) A credit derivative between the covered company and a third party where the covered company is the protection provider and the reference asset is an obligation or debt security of the counterparty, equal to the maximum potential loss to the covered company on the transaction.

(b) *Investments in and exposures to securitization vehicles, investment funds, and other special purpose vehicles that are not subsidiaries.* Notwithstanding paragraph (a) of this section, a covered company must calculate pursuant to § 238.155 its gross credit exposure due to any investment in the debt or equity of, and any credit derivative or equity derivative between the covered company and a third party where the covered company is the protection provider and the reference asset is an obligation or equity security of, or equity investment in, a securitization vehicle, investment fund, and other special purpose vehicle that is not a subsidiary of the covered company.

(c) *Attribution rule.* Notwithstanding any other requirement in this subpart, a covered company must treat any transaction with any natural person or entity as a credit transaction with another party, to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, the other party.

§ 238.154 Net credit exposure.

(a) *In general.* For purposes of this subpart, a covered company must calculate its net credit exposure to a counterparty by adjusting its gross credit exposure to that counterparty in accordance with the rules set forth in this section.

(b) *Eligible collateral.* (1) In computing its net credit exposure to a counterparty for any credit transaction other than a securities financing transaction, a covered company must reduce its gross credit exposure on the transaction by the adjusted market value of any eligible collateral.

(2) A covered company that reduces its gross credit exposure to a counterparty as required under paragraph (b)(1) of this section must include the adjusted market value of the eligible collateral, when calculating its gross credit exposure to the collateral issuer.

(3) Notwithstanding paragraph (b)(2) of this section, a covered company's gross credit exposure to a collateral issuer under this paragraph (b) is limited to:

(i) Its gross credit exposure to the counterparty on the credit transaction, or

(ii) In the case of an exempt counterparty, the gross credit exposure that would have been attributable to that exempt counterparty on the credit transaction if valued in accordance with § 238.153(a).

(c) *Eligible guarantees.* (1) In calculating net credit exposure to a counterparty for any credit transaction, a covered company must reduce its gross credit exposure to the counterparty by the amount of any eligible guarantee from an eligible guarantor that covers the transaction.

(2) A covered company that reduces its gross credit exposure to a counterparty as required under paragraph (c)(1) of this section must include the amount of eligible guarantees when calculating its gross credit exposure to the eligible guarantor.

(3) Notwithstanding paragraph (c)(2) of this section, a covered company's gross credit exposure to an eligible guarantor with respect to an eligible guarantee under this paragraph (c) is limited to:

(i) Its gross credit exposure to the counterparty on the credit transaction prior to recognition of the eligible guarantee, or

(ii) In the case of an exempt counterparty, the gross credit exposure that would have been attributable to that exempt counterparty on the credit transaction prior to recognition of the eligible guarantee if valued in accordance with § 238.153(a).

(d) *Eligible credit and equity derivatives.* (1) In calculating net credit exposure to a counterparty for a credit transaction under this section, a covered company must reduce its gross credit exposure to the counterparty by:

(i) In the case of any eligible credit derivative from an eligible guarantor, the notional amount of the eligible credit derivative; or

(ii) In the case of any eligible equity derivative from an eligible guarantor, the gross credit exposure amount to the counterparty (calculated in accordance with § 238.153(a)(7)).

(2)(i) A covered company that reduces its gross credit exposure to a counterparty as provided under paragraph (d)(1) of this section must include, when calculating its net credit exposure to the eligible guarantor, including in instances where the underlying credit transaction would not be subject to the credit limits of § 238.152 (for example, due to an exempt counterparty), either

(A) In the case of any eligible credit derivative from an eligible guarantor, the notional amount of the eligible credit derivative; or

(B) In the case of any eligible equity derivative from an eligible guarantor, the gross credit exposure amount to the counterparty (calculated in accordance with § 238.153(a)(7)).

(ii) Notwithstanding paragraph (d)(2)(i) of this section, in cases where the eligible credit derivative or eligible equity derivative is used to hedge covered positions that are subject to the Board's market risk rule (12 CFR part 217, subpart F) and the counterparty on the hedged transaction is not a financial entity, the amount of credit exposure that a company must recognize to the eligible guarantor is the amount that would be calculated pursuant to § 238.153(a).

(3) Notwithstanding paragraph (d)(2) of this section, a covered company's

gross credit exposure to an eligible guarantor with respect to an eligible credit derivative or an eligible equity derivative this paragraph (d) is limited to:

(i) Its gross credit exposure to the counterparty on the credit transaction prior to recognition of the eligible credit derivative or the eligible equity derivative, or

(ii) In the case of an exempt counterparty, the gross credit exposure that would have been attributable to that exempt counterparty on the credit transaction prior to recognition of the eligible credit derivative or the eligible equity derivative if valued in accordance with § 238.153(a).

(e) *Other eligible hedges.* In calculating net credit exposure to a counterparty for a credit transaction under this section, a covered company may reduce its gross credit exposure to the counterparty by the face amount of a short sale of the counterparty's debt security or equity security, provided that:

(1) The instrument in which the covered company has a short position is junior to, or *pari passu* with, the instrument in which the covered company has the long position; and

(2) The instrument in which the covered company has a short position and the instrument in which the covered company has the long position are either both treated as trading or available-for-sale exposures or both treated as held-to-maturity exposures.

(f) *Unused portion of certain extensions of credit.* (1) In computing its net credit exposure to a counterparty for a committed credit line or revolving credit facility under this section, a covered company may reduce its gross credit exposure by the amount of the unused portion of the credit extension to the extent that the covered company does not have any legal obligation to advance additional funds under the extension of credit and the used portion of the credit extension has been fully secured by eligible collateral.

(2) To the extent that the used portion of a credit extension has been secured by eligible collateral, the covered company may reduce its gross credit exposure by the adjusted market value of any eligible collateral received from the counterparty, even if the used portion has not been fully secured by eligible collateral.

(3) To qualify for the reduction in net credit exposure under this paragraph, the credit contract must specify that any used portion of the credit extension must be fully secured by the adjusted market value of any eligible collateral.

(g) *Credit transactions involving exempt counterparties.* (1) A covered company's credit transactions with an exempt counterparty are not subject to the requirements of this subpart, including but not limited to § 238.152.

(2) Notwithstanding paragraph (g)(1) of this section, in cases where a covered company has a credit transaction with an exempt counterparty and the covered company has obtained eligible collateral from that exempt counterparty or an eligible guarantee or eligible credit or equity derivative from an eligible guarantor, the covered company must include (for purposes of this subpart) such exposure to the issuer of such eligible collateral or the eligible guarantor, as calculated in accordance with the rules set forth in this section, when calculating its gross credit exposure to that issuer of eligible collateral or eligible guarantor.

(h) *Currency mismatch adjustments.* For purposes of calculating its net credit exposure to a counterparty under this section, a covered company must apply, as applicable:

(1) When reducing its gross credit exposure to a counterparty resulting from any credit transaction due to any eligible collateral and calculating its gross credit exposure to an issuer of eligible collateral, pursuant to paragraph (b) of this section, the currency mismatch adjustment approach of § 217.37(c)(3)(ii) of this chapter; and

(2) When reducing its gross credit exposure to a counterparty resulting from any credit transaction due to any eligible guarantee, eligible equity derivative, or eligible credit derivative from an eligible guarantor and calculating its gross credit exposure to an eligible guarantor, pursuant to paragraphs (c) and (d) of this section, the currency mismatch adjustment approach of § 217.36(f) of this chapter.

(i) *Maturity mismatch adjustments.* For purposes of calculating its net credit exposure to a counterparty under this section, a covered company must apply, as applicable, the maturity mismatch adjustment approach of § 217.36(d) of this chapter:

(1) When reducing its gross credit exposure to a counterparty resulting from any credit transaction due to any eligible collateral or any eligible guarantees, eligible equity derivatives, or eligible credit derivatives from an eligible guarantor, pursuant to paragraphs (b) through (d) of this section, and

(2) In calculating its gross credit exposure to an issuer of eligible collateral, pursuant to paragraph (b) of this section, or to an eligible guarantor, pursuant to paragraphs (c) and (d) of this section; provided that

(3) The eligible collateral, eligible guarantee, eligible equity derivative, or eligible credit derivative subject to paragraph (i)(1) of this section:

(i) Has a shorter maturity than the credit transaction;

(ii) Has an original maturity equal to or greater than one year;

(iii) Has a residual maturity of not less than three months; and

(iv) The adjustment approach is otherwise applicable.

§ 238.155 Investments in and exposures to securitization vehicles, investment funds, and other special purpose vehicles that are not subsidiaries of the covered company.

(a) *In general.* (1) For purposes of this section, the following definitions apply:

(i) *SPV* means a securitization vehicle, investment fund, or other special purpose vehicle that is not a subsidiary of the covered company.

(ii) *SPV exposure* means an investment in the debt or equity of an SPV, or a credit derivative or equity derivative between the covered company and a third party where the covered company is the protection provider and the reference asset is an obligation or equity security of, or equity investment in, an SPV.

(2)(i) A covered company must determine whether the amount of its gross credit exposure to an issuer of assets in an SPV, due to an SPV exposure, is equal to or greater than 0.25 percent of the covered company's tier 1 capital using one of the following two methods:

(A) The sum of all of the issuer's assets (with each asset valued in accordance with § 238.153(a)) in the SPV; or

(B) The application of the look-through approach described in paragraph (b) of this section.

(ii) With respect to the determination required under paragraph (a)(2)(i) of this section, a covered company must use the same method to calculate gross credit exposure to each issuer of assets in a particular SPV.

(iii) In making a determination under paragraph (a)(2)(i) of this section, the covered company must consider only the credit exposure to the issuer arising from the covered company's SPV exposure.

(iv) For purposes of this paragraph (a)(2), a covered company that is unable to identify each issuer of assets in an SPV must attribute to a single unknown counterparty the amount of its gross credit exposure to all unidentified issuers and calculate such gross credit exposure using one method in either paragraph (a)(2)(i)(A) or (a)(2)(i)(B) of this section.

(3)(i) If a covered company determines pursuant to paragraph (a)(2) of this section that the amount of its gross credit exposure to an issuer of assets in an SPV is less than 0.25 percent of the covered company's tier 1 capital, the amount of the covered company's gross credit exposure to that issuer may be attributed to either that issuer of assets or the SPV:

(A) If attributed to the issuer of assets, the issuer of assets must be identified as a counterparty, and the gross credit exposure calculated under paragraph (a)(2)(i)(A) of this section to that issuer of assets must be aggregated with any other gross credit exposures (valued in accordance with § 238.153) to that same counterparty; and

(B) If attributed to the SPV, the covered company's gross credit exposure is equal to the covered company's SPV exposure, valued in accordance with § 238.153(a).

(ii) If a covered company determines pursuant to paragraph (a)(2) of this section that the amount of its gross credit exposure to an issuer of assets in an SPV is equal to or greater than 0.25 percent of the covered company's tier 1 capital or the covered company is unable to determine that the amount of the gross credit exposure is less than 0.25 percent of the covered company's tier 1 capital:

(A) The covered company must calculate the amount of its gross credit exposure to the issuer of assets in the SPV using the look-through approach in paragraph (b) of this section;

(B) The issuer of assets in the SPV must be identified as a counterparty, and the gross credit exposure calculated in accordance with paragraph (b) of this section must be aggregated with any other gross credit exposures (valued in accordance with § 238.153) to that same counterparty; and

(C) When applying the look-through approach in paragraph (b) of this section, a covered company that is unable to identify each issuer of assets in an SPV must attribute to a single unknown counterparty the amount of its gross credit exposure, calculated in accordance with paragraph (b) of this section, to all unidentified issuers.

(iii) For purposes of this section, a covered company must aggregate all gross credit exposures to unknown counterparties for all SPVs as if the exposures related to a single unknown counterparty; this single unknown counterparty is subject to the limits of § 238.152 as if it were a single counterparty.

(b) *Look-through approach.* A covered company that is required to calculate the amount of its gross credit exposure with respect to an issuer of assets in accordance with this paragraph (b) must calculate the amount as follows:

(1) Where all investors in the SPV rank *pari passu,* the amount of the gross credit exposure to the issuer of assets is equal to the covered company's pro rata share of the SPV multiplied by the value of the underlying asset in the SPV, valued in accordance with § 238.153(a); and

(2) Where all investors in the SPV do not rank *pari passu,* the amount of the gross credit exposure to the issuer of assets is equal to:

(i) The pro rata share of the covered company's investment in the tranche of the SPV; multiplied by

(ii) The lesser of:

(A) The market value of the tranche in which the covered company has invested, except in the case of a debt security that is held to maturity, in which case the tranche must be valued at the amortized purchase price of the securities; and

(B) The value of each underlying asset attributed to the issuer in the SPV, each as calculated pursuant to § 238.153(a).

(c) *Exposures to third parties.* (1) Notwithstanding any other requirement in this section, a covered company must recognize, for purposes of this subpart, a gross credit exposure to each third party that has a contractual obligation to provide credit or liquidity support to an SPV whose failure or material financial distress would cause a loss in the value of the covered company's SPV exposure.

(2) The amount of any gross credit exposure that is required to be recognized to a third party under paragraph (c)(1) of this section is equal to the covered company's SPV exposure, up to the maximum contractual obligation of that third party to the SPV, valued in accordance with § 238.153(a). (This gross credit exposure is in addition to the covered company's gross credit exposure to the SPV or the issuers of assets of the SPV, calculated in accordance with paragraphs (a) and (b) of this section.)

(3) A covered company must aggregate the gross credit exposure to a third party recognized in accordance with paragraphs (c)(1) and (2) of this section with its other gross credit exposures to that third party (that are unrelated to the SPV) for purposes of compliance with the limits of § 238.152.

§ 238.156 Aggregation of exposures to more than one counterparty due to economic interdependence or control relationships.

(a) *In general.* (1) If a covered company has an aggregate net credit exposure to any counterparty that exceeds 5 percent of its tier 1 capital, the covered company must assess its relationship with the counterparty under paragraph (b)(2) of this section to determine whether the counterparty is economically interdependent with one or more other counterparties of the covered company and under paragraph (c)(1) of this section to determine whether the counterparty is connected by a control relationship with one or more other counterparties.

(2) If, pursuant to an assessment required under paragraph (a)(1) of this section, the covered company determines that one or more of the factors of paragraph (b)(2) or (c)(1) of this section are met with respect to one or more counterparties, or the Board determines pursuant to paragraph (d) of this section that one or more other counterparties of a covered company are economically interdependent or that one or more other counterparties of a covered company are connected by a control relationship, the covered company must aggregate its net credit exposure to the counterparties for all purposes under this subpart, including, but not limited to, § 238.152.

(3) In connection with any request pursuant to paragraph (b)(3) or (c)(2) of this section, the Board may require the covered company to provide additional information.

(b) *Aggregation of exposures to more than one counterparty due to economic interdependence.* (1) For purposes of this paragraph, two counterparties are economically interdependent if the failure, default, insolvency, or material financial distress of one counterparty would cause the failure, default, insolvency, or material financial distress of the other counterparty, taking into account the factors in paragraph (b)(2) of this section.

(2) A covered company must assess whether the financial distress of one counterparty (counterparty A) would prevent the ability of the other counterparty (counterparty B) to fully and timely repay counterparty B's liabilities and whether the insolvency or default of counterparty A is likely to be associated with the insolvency or default of counterparty B and, therefore, these counterparties are economically interdependent, by evaluating the following:

(i) Whether 50 percent or more of one counterparty's gross revenue is derived from, or gross expenditures are directed to, transactions with the other counterparty;

(ii) Whether counterparty A has fully or partly guaranteed the credit exposure of counterparty B, or is liable by other means, in an amount that is 50 percent or more of the covered company's net credit exposure to counterparty A;

(iii) Whether 25 percent or more of one counterparty's production or output is sold to the other counterparty, which cannot easily be replaced by other customers;

(iv) Whether the expected source of funds to repay the loans of both counterparties is the same and neither counterparty has another independent source of income from which the loans may be serviced and fully repaid; [1] and

(v) Whether two or more counterparties rely on the same source for the majority of their funding and, in the event of the common provider's default, an alternative provider cannot be found.

(3)(i) Notwithstanding paragraph (b)(2) of this section, if a covered company determines that one or more of the factors in paragraph (b)(2) is met, the covered company may request in writing a determination from the Board that those counterparties are not economically interdependent and that the covered company is not required to aggregate those counterparties.

(ii) Upon a request by a covered company pursuant to paragraph (b)(3) of this section, the Board may grant temporary relief to the covered company and not require the covered company to aggregate one counterparty with another counterparty provided that the counterparty could promptly modify its business relationships, such as by reducing its reliance on the other counterparty, to address any economic interdependence concerns, and provided that such relief is in the public interest and is consistent with the purpose of this subpart.

(c) *Aggregation of exposures to more than one counterparty due to certain control relationships.* (1) For purposes of this subpart, one counterparty (counterparty A) is deemed to control the other counterparty (counterparty B) if:

(i) Counterparty A owns, controls, or holds with the power to vote 25 percent or more of any class of voting securities of counterparty B; or

(ii) Counterparty A controls in any manner the election of a majority of the directors, trustees, or general partners (or individuals exercising similar functions) of counterparty B.

(2)(i) Notwithstanding paragraph (c)(1) of this section, if a covered company determines that one or more of the factors in paragraph (c)(1) is met, the covered company may request in writing a determination from the Board that counterparty A does not control counterparty B and that the covered company is not required to aggregate those counterparties.

(ii) Upon a request by a covered company pursuant to paragraph (c)(2) of this section, the Board may grant temporary relief to the covered company and not require the covered company to aggregate counterparty A with counterparty B provided that, taking into account the specific facts and circumstances, such indicia of control does not result in the entities being connected by control relationships for purposes of this subpart, and provided that such relief is in the public interest and is consistent with the purpose of this subpart.

(d) *Board determinations for aggregation of counterparties due to economic interdependence or control relationships.* The Board may determine, after notice to the covered company and opportunity for hearing, that one or more counterparties of a covered company are:

(1) Economically interdependent for purposes of this subpart, considering the factors in paragraph (b)(2) of this section, as well as any other indicia of economic interdependence that the Board determines in its discretion to be relevant; or

(2) Connected by control relationships for purposes of this subpart, considering the factors in paragraph (c)(1) of this section and whether counterparty A:

(i) Controls the power to vote 25 percent or more of any class of voting securities of Counterparty B pursuant to a voting agreement;

(ii) Has significant influence on the appointment or dismissal of counterparty B's administrative, management, or governing body, or the fact that a majority of members of such body have been appointed solely as a result of the exercise of counterparty A's voting rights; or

(iii) Has the power to exercise a controlling influence over the management or policies of counterparty B.

(e) *Board determinations for aggregation of counterparties to prevent evasion.* Notwithstanding paragraphs (b) and (c) of this section, a covered company must aggregate its exposures to a counterparty with the covered company's exposures to another counterparty if the Board determines in writing after notice and opportunity for hearing, that the exposures to the two counterparties must be aggregated to prevent evasions of the purposes of this subpart, including, but not limited to § 238.156.

§ 238.157 Exemptions.

(a) *Exempted exposure categories.* The following categories of credit transactions are exempt from the limits on credit exposure under this subpart:

(1) Any direct claim on, and the portion of a claim that is directly and fully guaranteed as to principal and interest by, the Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation, only while operating under the conservatorship or receivership of the Federal Housing Finance Agency, and any additional obligation issued by a U.S. government-sponsored entity as determined by the Board;

(2) Intraday credit exposure to a counterparty;

(3) Any trade exposure to a qualifying central counterparty related to the covered company's clearing activity, including potential future exposure arising from transactions cleared by the qualifying central counterparty and pre-funded default fund contributions;

(4) Any credit transaction with the Bank for International Settlements, the International Monetary Fund, the International Bank for Reconstruction and Development, the International Finance Corporation, the International Development Association, the Multilateral Investment Guarantee Agency, or the International Centre for Settlement of Investment Disputes;

(5) Any credit transaction with the European Commission or the European Central Bank; and

(6) Any transaction that the Board exempts if the Board finds that such exemption is in the public interest and is consistent with the purpose of this subpart.

(b) *Exemption for Federal Home Loan Banks.* For purposes of this subpart, a covered company does not include any Federal Home Loan Bank.

(c) *Additional exemptions by the Board.* The Board may, by regulation or order, exempt transactions, in whole or in part, from the definition of the term ''credit exposure,'' if the Board finds that the exemption is in the public interest.

§ 238.158 Compliance.

(a) *Scope of compliance.* (1) Using all available data, including any data required to be maintained or reported to the Federal Reserve under this subpart,

[1] An employer will not be treated as a source of repayment under this paragraph because of wages and salaries paid to an employee.

a covered company must comply with the requirements of this subpart on a daily basis at the end of each business day.

(2) A covered company must report its compliance to the Federal Reserve as of the end of the quarter, unless the Board determines and notifies that company in writing that more frequent reporting is required.

(3) In reporting its compliance, a covered company must calculate and include in its gross credit exposure to an issuer of eligible collateral or eligible guarantor the amounts of eligible collateral, eligible guarantees, eligible equity derivatives, and eligible credit derivatives that were provided to the covered company in connection with credit transactions with exempt counterparties, valued in accordance with and as required by § 238.154(b) through (d) and § 238.154 (g).

(b) *Qualifying master netting agreement.* With respect to any qualifying master netting agreement, a covered company must establish and maintain procedures that meet or exceed the requirements of § 217.3(d) of this chapter to monitor possible changes in relevant law and to ensure that the agreement continues to satisfy these requirements.

(c) *Noncompliance.* (1) Except as otherwise provided in this section, if a covered company is not in compliance with this subpart with respect to a counterparty solely due to the circumstances listed in paragraphs (c)(2)(i) through (v) of this section, the covered company will not be subject to enforcement actions for a period of 90 days (or, with prior notice to the company, such shorter or longer period determined by the Board, in its sole discretion, to be appropriate to preserve the safety and soundness of the covered company), if the covered company uses reasonable efforts to return to compliance with this subpart during this period. The covered company may not engage in any additional credit transactions with such a counterparty in contravention of this rule during the period of noncompliance, except as provided in paragraph (c)(2) of this section.

(2) A covered company may request a special temporary credit exposure limit exemption from the Board. The Board may grant approval for such exemption in cases where the Board determines that such credit transactions are necessary or appropriate to preserve the safety and soundness of the covered company. In acting on a request for an exemption, the Board will consider the following:

(i) A decrease in the covered company's capital stock and surplus;

(ii) The merger of the covered company with another covered company;

(iii) A merger of two counterparties; or

(iv) An unforeseen and abrupt change in the status of a counterparty as a result of which the covered company's credit exposure to the counterparty becomes limited by the requirements of this section; or

(v) Any other factor(s) the Board determines, in its discretion, is appropriate.

(d) *Other measures.* The Board may impose supervisory oversight and additional reporting measures that it determines are appropriate to monitor compliance with this subpart. Covered companies must furnish, in the manner and form prescribed by the Board, such information to monitor compliance with this subpart and the limits therein as the Board may require.

■ 13. Add subpart R to read as follows:

Subpart R—Company-Run Stress Test Requirements for Foreign Savings and Loan Holding Companies With Total Consolidated Assets Over $250 Billion

Sec.

238.160 Definitions.
238.161 Applicability.
238.162 Capital stress testing requirements.

Subpart R—Company-Run Stress Test Requirements for Foreign Savings and Loan Holding Companies With Total Consolidated Assets Over $250 Billion

§ 238.160 Definitions.

For purposes of this subpart, the following definitions apply:

(a) *Foreign savings and loan holding company* means a savings and loan holding company as defined in section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a(a)) that is incorporated or organized under the laws of a country other than the United States.

(b) *Pre-provision net revenue* means revenue less expenses before adjusting for total loan loss provisions.

(c) *Stress test cycle* has the same meaning as in subpart O of this part.

(d) *Total loan loss provisions* means the amount needed to make reserves adequate to absorb estimated credit losses, based upon management's evaluation of the loans and leases that the company has the intent and ability to hold for the foreseeable future or until maturity or payoff, as determined under applicable accounting standards.

§ 238.161 Applicability.

(a) *Applicability for foreign savings and loan holding companies with total consolidated assets of more than $250 billion*—(1) *General.* A foreign savings and loan holding company must comply with the stress test requirements set forth in this section beginning on the first day of the ninth quarter following the date on which its average total consolidated assets exceed $250 billion.

(2) *Cessation of requirements.* A foreign savings and loan holding company will remain subject to requirements of this subpart until the date on which the foreign savings and loan holding company's total consolidated assets are below $250 billion for each of four most recent calendar quarters.

(b) [Reserved]

§ 238.162 Capital stress testing requirements.

(a) *In general.* (1) A foreign savings and loan holding company subject to this subpart must:

(i) Be subject on a consolidated basis to a capital stress testing regime by its home-country supervisor that meets the requirements of paragraph (a)(2) of this section; and

(ii) Conduct such stress tests or be subject to a supervisory stress test and meet any minimum standards set by its home-country supervisor with respect to the stress tests.

(2) The capital stress testing regime of a foreign savings and loan holding company's home-country supervisor must include:

(i) A supervisory capital stress test conducted by the relevant home-country supervisor or an evaluation and review by the home-country supervisor of an internal capital adequacy stress test conducted by the foreign savings and loan holding company, conducted on at least a biennial basis; and

(ii) Requirements for governance and controls of stress testing practices by relevant management and the board of directors (or equivalent thereof).

(b) *Additional standards.* (1) Unless the Board otherwise determines in writing, a foreign savings and loan holding company that does not meet each of the requirements in paragraphs (a)(1) and (2) of this section must:

(i) Conduct an annual stress test of its U.S. subsidiaries to determine whether those subsidiaries have the capital necessary to absorb losses as a result of adverse economic conditions; and

(ii) Report on at least a biennial basis a summary of the results of the stress test to the Board that includes a description of the types of risks included in the stress test, a description of the conditions or scenarios used in the stress test, a summary description of the methodologies used in the stress test, estimates of aggregate losses, pre-provision net revenue, total loan loss provisions, net income before taxes and pro forma regulatory capital ratios required to be computed by the home-country supervisor of the foreign savings and loan holding company and any other relevant capital ratios, and an explanation of the most significant causes for any changes in regulatory capital ratios.

(2) An enterprise-wide stress test that is approved by the Board may meet the stress test requirement of paragraph (b)(1)(ii) of this section.

PART 242—DEFINITIONS RELATING TO TITLE I OF THE DODD-FRANK ACT (REGULATION PP)

■ 14. The authority citation for part 242 continues to read as follows:

Authority: 12 U.S.C. 5311.

■ 15. In § 242.1, paragraph (b)(2)(ii)(B) is revised to read as follows:

§ 242.1 Authority and purpose

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(B) A bank holding company or foreign bank subject to the Bank Holding Company Act (BHC Act) (12 U.S.C. 1841 *et seq.*) that is a bank holding company described in section 165(a) of the Dodd-Frank Act (12 U.S.C. 5365(a)).

■ 16. Section 242.4 is revised to read as follows:

§ 242.4 Significant nonbank financial companies and significant bank holding companies

For purposes of Title I of the Dodd-Frank Act, the following definitions shall apply:

(a) *Significant nonbank financial company.* A ''significant nonbank financial company'' means—

(1) Any nonbank financial company supervised by the Board; and

(2) Any other nonbank financial company that had $100 billion or more in total consolidated assets (as determined in accordance with applicable accounting standards) as of the end of its most recently completed fiscal year.

(b) *Significant bank holding company.* A ''significant bank holding company'' means any bank holding company or company that is, or is treated in the United States as, a bank holding company, that had $100 billion or more in total consolidated assets as of the end of the most recently completed calendar year, as reported on either the Federal Reserve's FR Y–9C (Consolidated Financial Statement for Holding Companies), or any successor form thereto, or the Federal Reserve's Form FR Y–7Q (Capital and Asset Report for Foreign Banking Organizations), or any successor form thereto.

PART 252—ENHANCED PRUDENTIAL STANDARDS (REGULATION YY)

■ 17. The authority citation for part 252 is revised to read as follows:

Authority: 12 U.S.C. 321–338a, 481–486, 1818, 1828, 1831n, 1831o, 1831p–l, 1831w, 1835, 1844(b), 1844(c), 3101 *et seq.,* 3101 note, 3904, 3906–3909, 4808, 5361, 5362, 5365, 5366, 5367, 5368, 5371.

Subpart A—General Provisions

■ 18. Revise § 252.1 to read as follows:

§ 252.1 Authority and purpose.

(a) *Authority.* This part is issued by the Board of Governors of the Federal Reserve System (the Board) under sections 162, 165, 167, and 168 of Title I of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) (Pub. L. 111–203, 124 Stat. 1376, 1423–1432, 12 U.S.C. 5362, 5365, 5367, and 5368); section 9 of the Federal Reserve Act (12 U.S.C. 321–338a); section 5(b) of the Bank Holding Company Act (12 U.S.C. 1844(b)); sections 8 and 39 of the Federal Deposit Insurance Act (12 U.S.C. 1818(b) and 1831p–1); the International Banking Act (12 U.S.C. 3101*et seq.*); the Foreign Bank Supervision Enhancement Act (12 U.S.C. 3101 note); and 12 U.S.C. 3904, 3906–3909, and 4808.

(b) *Purpose.* This part implements certain provisions of section 165 of the Dodd-Frank Act (12 U.S.C. 5365), which require the Board to establish enhanced prudential standards for certain bank holding companies, foreign banking organizations, nonbank financial companies supervised by the Board, and certain other companies.

■ 19. Revise § 252.2 to read as follows:

§ 252.2 Definitions.

Unless otherwise specified, the following definitions apply for purposes of this part:

Affiliate has the same meaning as in section 2(k) of the Bank Holding Company Act (12 U.S.C. 1841(k)) and 12 CFR 225.2(a).

Applicable accounting standards means GAAP, international financial reporting standards, or such other accounting standards that a company uses in the ordinary course of its business in preparing its consolidated financial statements.

Average combined U.S. assets means the average of combined U.S. assets for the four most recent calendar quarters or, if the banking organization has not reported combined U.S. assets for each of the four most recent calendar quarters, the combined U.S. assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average cross-jurisdictional activity means the average of cross-jurisdictional activity for the four most recent calendar quarters or, if the banking organization has not reported cross-jurisdictional activity for each of the four most recent calendar quarters, the cross-jurisdictional activity for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average off-balance sheet exposure means the average of off-balance sheet exposure for the four most recent calendar quarters or, if the banking organization has not reported total exposure and total consolidated assets or combined U.S. assets, as applicable, for each of the four most recent calendar quarters, the off-balance sheet exposure for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average total consolidated assets means the average of total consolidated assets for the four most recent calendar quarters or, if the banking organization has not reported total consolidated assets for each of the four most recent calendar quarters, the total consolidated assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average total nonbank assets means the average of total nonbank assets for the four most recent calendar quarters or, if the banking organization has not reported or calculated total nonbank assets for each of the four most recent calendar quarters, the total nonbank assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average U.S. non-branch assets means the average of U.S. non-branch assets for the four most recent calendar quarters or, if the banking organization has not reported the total consolidated assets of its top-tier U.S. subsidiaries for each of the four most recent calendar quarters, the U.S. non-branch assets for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Average weighted short-term wholesale funding means the average of weighted short-term wholesale funding for each of the four most recent calendar quarters or, if the banking organization has not reported weighted short-term wholesale funding for each of the four most recent calendar quarters, the weighted short-term wholesale funding for the most recent calendar quarter or average of the most recent calendar quarters, as applicable.

Bank holding company has the same meaning as in section 2(a) of the Bank Holding Company Act (12 U.S.C. 1841(a)) and 12 CFR 225.2(c).

Banking organization means:

(1) A bank holding company that is a U.S. bank holding company;

(2) A U.S. intermediate holding company; or

(3) A foreign banking organization.

Board means the Board of Governors of the Federal Reserve System.

Category II bank holding company means a U.S. bank holding company identified as a Category II banking organization pursuant to § 252.5.

Category II foreign banking organization means a foreign banking organization identified as a Category II banking organization pursuant to § 252.5.

Category II U.S. intermediate holding company means a U.S. intermediate holding company identified as a Category II banking organization pursuant to § 252.5.

Category III bank holding company means a U.S. bank holding company identified as a Category III banking organization pursuant to § 252.5.

Category III foreign banking organization means a foreign banking organization identified as a Category III banking organization pursuant to § 252.5.

Category III U.S. intermediate holding company means a U.S. intermediate holding company identified as a Category III banking organization pursuant to § 252.5.

Category IV bank holding company means a U.S. bank holding company identified as a Category IV banking organization pursuant to § 252.5.

Category IV foreign banking organization means a foreign banking organization identified as a Category IV banking organization pursuant to § 252.5.

Category IV U.S. intermediate holding company means a U.S. intermediate holding company identified as a Category IV banking organization pursuant to § 252.5.

Combined U.S. assets means the sum of the consolidated assets of each top-tier U.S. subsidiary of the foreign banking organization (excluding any section 2(h)(2) company, if applicable) and the total assets of each U.S. branch and U.S. agency of the foreign banking organization, as reported by the foreign banking organization on the FR Y–15 or FR Y–7Q.

Combined U.S. operations means:

(1) The U.S. branches and agencies of the foreign banking organization; and

(2) The U.S. subsidiaries of the foreign banking organization (excluding any section 2(h)(2) company, if applicable) and subsidiaries of such U.S. subsidiaries.

Company means a corporation, partnership, limited liability company, depository institution, business trust, special purpose entity, association, or similar organization.

Control has the same meaning as in section 2(a) of the Bank Holding Company Act (12 U.S.C. 1841(a)), and the terms controlled and controlling shall be construed consistently with the term control.

Council means the Financial Stability Oversight Council established by section 111 of the Dodd-Frank Act (12 U.S.C. 5321).

Credit enhancement means a qualified financial contract of the type set forth in section 210(c)(8)(D)(ii)(XII), (iii)(X), (iv)(V), (v)(VI), or (vi)(VI) of Title II of the Dodd-Frank Act (12 U.S.C. 5390(c)(8)(D)(ii)(XII), (iii)(X), (iv)(V), (v)(VI), or (vi)(VI)) or a credit enhancement that the Federal Deposit Insurance Corporation determines by regulation is a qualified financial contract pursuant to section 210(c)(8)(D)(i) of Title II of the Act (12 U.S.C. 5390(c)(8)(D)(i)).

Cross-jurisdictional activity. The cross-jurisdictional activity of a banking organization is equal to the cross-jurisdictional activity of the banking organization as reported on the FR Y–15.

Depository institution has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813(c)).

DPC branch subsidiary means any subsidiary of a U.S. branch or a U.S. agency acquired, or formed to hold assets acquired, in the ordinary course of business and for the sole purpose of securing or collecting debt previously contracted in good faith by that branch or agency.

Foreign banking organization has the same meaning as in 12 CFR 211.21(o), provided that if the top-tier foreign banking organization is incorporated in or organized under the laws of any State, the foreign banking organization shall not be treated as a foreign banking organization for purposes of this part.

FR Y–7 means the Annual Report of Foreign Banking Organizations reporting form.

FR Y–7Q means the Capital and Asset Report for Foreign Banking Organizations reporting form.

FR Y–9C means the Consolidated Financial Statements for Holding Companies reporting form.

FR Y–9LP means the Parent Company Only Financial Statements of Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

Global methodology means the assessment methodology and the higher loss absorbency requirement for global systemically important banks issued by the Basel Committee on Banking Supervision, as updated from time to time.

Global systemically important banking organization means a global systemically important bank, as such term is defined in the global methodology.

Global systemically important BHC means a bank holding company identified as a global systemically important BHC pursuant to 12 CFR 217.402.

Global systemically important foreign banking organization means a top-tier foreign banking organization that is identified as a global systemically important foreign banking organization under § 252.147(b)(4) or § 252.153(b)(4) of this part.

GAAP means generally accepted accounting principles as used in the United States.

Home country, with respect to a foreign banking organization, means the country in which the foreign banking organization is chartered or incorporated.

Home country resolution authority, with respect to a foreign banking organization, means the governmental entity or entities that under the laws of the foreign banking organization's home county has responsibility for the resolution of the top-tier foreign banking organization.

Home-country supervisor, with respect to a foreign banking organization, means the governmental entity or entities that under the laws of the foreign banking organization's home county has responsibility for the supervision and regulation of the top-tier foreign banking organization.

Nonbank financial company supervised by the Board means a company that the Council has determined under section 113 of the Dodd-Frank Act (12 U.S.C. 5323) shall be supervised by the Board and for which such determination is still in effect.

Non-U.S. affiliate means any affiliate of a foreign banking organization that is incorporated or organized in a country other than the United States.

Off-balance sheet exposure. (1) The off-balance sheet exposure of a U.S. bank holding company or U.S. intermediate holding company is equal to:

(i) The total exposure of such banking organization, as reported by the banking organization on the FR Y–15; minus

(ii) The total consolidated assets of such banking organization for the same calendar quarter.

(2) The off-balance sheet exposure of a foreign banking organization is equal to:

(i) The total exposure of the combined U.S. operations of the foreign banking organization, as reported by the foreign banking organization on the FR Y–15; minus

(ii) The combined U.S. assets of the foreign banking organization for the same calendar quarter.

Publicly traded means an instrument that is traded on:

(1) Any exchange registered with the U.S. Securities and Exchange Commission as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f); or

(2) Any non-U.S.-based securities exchange that:

(i) Is registered with, or approved by, a non-U.S. national securities regulatory authority; and

(ii) Provides a liquid, two-way market for the instrument in question, meaning that there are enough independent bona fide offers to buy and sell so that a sales price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined promptly and a trade can be settled at such price within a reasonable time period conforming with trade custom.

(3) A company can rely on its determination that a particular non-U.S.-based securities exchange provides a liquid two-way market unless the Board determines that the exchange does not provide a liquid two-way market.

Section 2(h)(2) company has the same meaning as in section 2(h)(2) of the Bank Holding Company Act (12 U.S.C. 1841(h)(2)).

State means any state, commonwealth, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, American Samoa, Guam, or the United States Virgin Islands.

State member bank has the same meaning as in 12 CFR 208.2(g).

Subsidiary has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813).

Top-tier foreign banking organization, with respect to a foreign bank, means the top-tier foreign banking organization or, alternatively, a subsidiary of the top-tier foreign banking organization designated by the Board.

Total consolidated assets. (1) Total consolidated assets of a U.S. bank holding company or a U.S. intermediate holding company is equal to the total consolidated assets of such banking organization calculated based on the average of the balances as of the close of business for each day for the calendar quarter or an average of the balances as of the close of business on each Wednesday during the calendar quarter, as reported on the FR Y–9C.

(2) Total consolidated assets of a foreign banking organization is equal to the total consolidated assets of the foreign banking organization, as reported on the FR Y–7Q.

(3) Total consolidated assets of a state member bank is equal to the total consolidated assets as reported by a state member bank on its Consolidated Report of Condition and Income (Call Report).

Total nonbank assets. (1) Total nonbank assets of a U.S. bank holding company or U.S. intermediate holding company is equal to the total nonbank assets of such banking organization, as reported on the FR Y–9LP.

(2) Total nonbank assets of a foreign banking organization is equal to:

(i) The sum of the total nonbank assets of any U.S. intermediate holding company, if any, as reported on the FR Y–9LP; plus

(ii) The assets of the foreign banking organization's nonbank U.S. subsidiaries excluding the U.S. intermediate holding company, if any; plus

(iii) The sum of the foreign banking organization's equity investments in unconsolidated U.S. subsidiaries, excluding equity investments in any section 2(h)(2) company; minus

(iv) The assets of any section 2(h)(2) company.

U.S. agency has the same meaning as the term ''agency'' in § 211.21(b) of this chapter.

U.S. bank holding company means a bank holding company that is:

(1) Incorporated in or organized under the laws of the United States or any State; and

(2) Not a consolidated subsidiary of a bank holding company that is incorporated in or organized under the laws of the United States or any State.

U.S. branch has the same meaning as the term ''branch'' in § 211.21(e) of this chapter.

U.S. branches and agencies means the U.S. branches and U.S. agencies of a foreign banking organization.

U.S. government agency means an agency or instrumentality of the United States whose obligations are fully and explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the United States.

U.S. government-sponsored enterprise means an entity originally established or chartered by the U.S. government to serve public purposes specified by the U.S. Congress, but whose obligations are not explicitly guaranteed by the full faith and credit of the United States.

U.S. intermediate holding company means a top-tier U.S. company that is required to be established pursuant to § 252.147 or § 252.153.

U.S. non-branch assets. U.S. non-branch assets are equal to the sum of the consolidated assets of each top-tier U.S. subsidiary of the foreign banking organization (excluding any section 2(h)(2) company and DPC branch subsidiary, if applicable) as reported on the FR Y–7Q. In calculating U.S. non-branch assets, a foreign banking organization must reduce its U.S. non-branch assets by the amount corresponding to balances and transactions between a top-tier U.S. subsidiary and any other top-tier U.S. subsidiary (excluding any 2(h)(2) company or DPC branch subsidiary) to the extent such items are not already eliminated in consolidation.

U.S. subsidiary means any subsidiary that is incorporated in or organized under the laws of the United States or any State, commonwealth, territory, or possession of the United States, the Commonwealth of Puerto Rico, the Commonwealth of the North Mariana Islands, American Samoa, Guam, or the United States Virgin Islands.

Weighted short-term wholesale funding is equal to the weighted short-term wholesale funding of a banking organization, as reported on the FR Y–15.

■ 19. In § 252.3, add paragraph (c) to read as follows:

§ 252.3 Reservation of authority.

* * * * *

(c) *Reservation of authority for certain foreign banking organizations.* The Board may permit a foreign banking organization to comply with the requirements of this part through a subsidiary. In making this determination, the Board shall consider:

(1) The ownership structure of the foreign banking organization, including

whether the foreign banking organization is owned or controlled by a foreign government;

(2) Whether the action would be consistent with the purposes of this part; and

(3) Any other factors that the Board determines are relevant.

■ 20. Section 252.5 is added to read as follows:

§ 252.5 Categorization of banking organizations.

(a) *General.* (1) A U.S. bank holding company with average total consolidated assets of $100 billion or more must determine its category among the four categories described in paragraphs (b) through (e) of this section at least quarterly.

(2) A U.S. intermediate holding company with average total consolidated assets of $100 billion or more must determine its category among the three categories described in paragraphs (c) through (e) of this section at least quarterly.

(3) A foreign banking organization with average total consolidated assets of $100 billion or more and average combined U.S. assets of $100 billion or more must determine its category among the three categories described in paragraphs (c) through (e) of this section at least quarterly.

(b) *Global systemically important BHC.* A banking organization is a global systemically important BHC if it is identified as a global systemically important BHC pursuant to 12 CFR 217.402.

(c) *Category II.* (1) A banking organization is a Category II banking organization if the banking organization:

(i) Has:

(A)(*1*) For a U.S. bank holding company or a U.S. intermediate holding company, $700 billion or more in average total consolidated assets;

(*2*) For a foreign banking organization, $700 billion or more in average combined U.S. assets; or

(B)(*1*) $75 billion or more in average cross-jurisdictional activity; and

(*2*)(*i*) For a U.S. bank holding company or a U.S. intermediate holding company, $100 billion or more in average total consolidated assets; or

(*ii*) For a foreign banking organization, $100 billion or more in average combined U.S. assets; and

(ii) Is not a global systemically important BHC.

(2) After meeting the criteria in paragraph (c)(1) of this section, a banking organization continues to be a Category II banking organization until the banking organization:

(i) Has:

(A)(*1*) For a U.S. bank holding company or a U.S. intermediate holding company, less than $700 billion in total consolidated assets for each of the four most recent calendar quarters; or

(*2*) For a foreign banking organization, less than $700 billion in combined U.S. assets for each of the four most recent calendar quarters; and

(B) Less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters;

(ii) Has:

(A) For a U.S. bank holding company or a U.S. intermediate holding company, less than $100 billion in total consolidated assets for each of the four most recent calendar quarters;

(B) For a foreign banking organization, less than $100 billion in combined U.S. assets for each of the four most recent calendar quarters; or

(iii) Meets the criteria in paragraph (b) to be a global systemically important BHC.

(d) *Category III.* (1) A banking organization is a Category III banking organization if the banking organization:

(i) Has:

(A)(*1*) For a U.S. bank holding company or a U.S. intermediate holding company, $250 billion or more in average total consolidated assets; or

(*2*) For a foreign banking organization, $250 billion or more in average combined U.S. assets; or

(B)(*1*)(*i*) For a U.S. bank holding company or a U.S. intermediate holding company, $100 billion or more in average total consolidated assets; or

(*ii*) For a foreign banking organization, $100 billion or more in average combined U.S. assets; and

(*2*) At least:

(*i*) $75 billion in average total nonbank assets;

(*ii*) $75 billion in average weighted short-term wholesale funding; or

(*iii*) $75 billion in average off-balance sheet exposure;

(ii) Is not a global systemically important BHC; and

(iii) Is not a Category II banking organization.

(2) After meeting the criteria in paragraph (d)(1) of this section, a banking organization continues to be a Category III banking organization until the banking organization:

(i) Has:

(A)(*1*) For a U.S. bank holding company or a U.S. intermediate holding company, less than $250 billion in total consolidated assets for each of the four most recent calendar quarters; or

(*2*) For a foreign banking organization, less than $250 billion in combined U.S. assets for each of the four most recent calendar quarters;

(B) Less than $75 billion in total nonbank assets for each of the four most recent calendar quarters;

(C) Less than $75 billion in weighted short-term wholesale funding for each of the four most recent calendar quarters; and

(D) Less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters; or

(ii) Has:

(A) For a U.S. bank holding company or a U.S. intermediate holding company, less than $100 billion in total consolidated assets for each of the four most recent calendar quarters; or

(B) For a foreign banking organization, less than $100 billion in combined U.S. assets for each of the four most recent calendar quarters;

(iii) Meets the criteria in paragraph (b) of this section to be a global systemically important BHC; or

(iv) Meets the criteria in paragraph (c)(1) of this section to be a Category II banking organization.

(e) *Category IV.* (1) A banking organization is a Category IV banking organization if the banking organization:

(i) Is not global systemically important BHC;

(ii) Is not a Category II banking organization;

(iii) Is not a Category III banking organization; and

(iv) Has:

(A) For a U.S. bank holding company or a U.S. intermediate holding company, average total consolidated assets of $100 billion or more; or

(B) For a foreign banking organization, average combined U.S. assets of $100 billion or more.

(2) After meeting the criteria in paragraph (e)(1), a banking organization continues to be a Category IV banking organization until the banking organization:

(i) Has:

(A) For a U.S. bank holding company or a U.S. intermediate holding company, less than $100 billion in total consolidated assets for each of the four most recent calendar quarters;

(B) For a foreign banking organization, less than $100 billion in combined U.S. assets for each of the four most recent calendar quarters;

(ii) Meets the criteria in paragraph (b) of this section to be a global systemically important BHC;

(iii) Meets the criteria in paragraph (c)(1) of this section to be a Category II banking organization; or

(iv) Meets the criteria in paragraph (d)(1) of this section to be a Category III banking organization.

■ 21. Revise the heading of subpart B to read as follows:

Subpart B—Company-Run Stress Test Requirements for State Member Banks With Total Consolidated Assets Over $250 Billion

■ 22. Section 252.11 is revised to read as follows:

§ 252.11 Authority and purpose.

(a) *Authority.* 12 U.S.C. 321–338a, 1818, 1831p–1, 3906–3909, 5365.

(b) *Purpose.* This subpart implements section 165(i)(2) of the Dodd-Frank Act (12 U.S.C. 5365(i)(2)), which requires state member banks with total consolidated assets of greater than $250 billion to conduct stress tests. This subpart also establishes definitions of stress tests and related terms, methodologies for conducting stress tests, and reporting and disclosure requirements.

■ 23. Section 252.12 is revised to read as follows:

§ 252.12 Definitions.

For purposes of this subpart, the following definitions apply:

Advanced approaches means the regulatory capital requirements at 12 CFR 217, subpart E, as applicable, and any successor regulation.

Asset threshold means average total consolidated assets of greater than $250 billion.

Baseline scenario means a set of conditions that affect the U.S. economy or the financial condition of a state member bank, and that reflect the consensus views of the economic and financial outlook.

Capital action has the same meaning as in 12 CFR 225.8(d)).

Covered company subsidiary means a state member bank that is a subsidiary of a covered company as defined in subpart F of this part.

Planning horizon means the period of at least nine consecutive quarters, beginning on the first day of a stress test cycle over which the relevant projections extend.

Pre-provision net revenue means the sum of net interest income and non-interest income less expenses before adjusting for loss provisions.

Provision for credit losses means:

(1) With respect to a state member bank that has adopted the current expected credit losses methodology under GAAP, the provision for credit losses, as would be reported by the state member bank on the Call Report in the current stress test cycle; and

(2) With respect to a state member bank that has not adopted the current expected credit losses methodology under GAAP, the provision for loan and lease losses as would be reported by the state member bank on the Call Report in the current stress test cycle.

Regulatory capital ratio means a capital ratio for which the Board has established minimum requirements for the state member bank by regulation or order, including, as applicable, the state member bank's regulatory capital ratios calculated under 12 CFR part 217 and the deductions required under 12 CFR 248.12; except that the state member bank shall not use the advanced approaches to calculate its regulatory capital ratios.

Scenarios are those sets of conditions that affect the U.S. economy or the financial condition of a state member bank that the Board determines are appropriate for use in the company-run stress tests, including, but not limited to baseline and severely adverse scenarios.

Severely adverse scenario means a set of conditions that affect the U.S. economy or the financial condition of a state member bank and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

Stress test means a process to assess the potential impact of scenarios on the consolidated earnings, losses, and capital of a state member bank over the planning horizon, taking into account the current condition, risks, exposures, strategies, and activities.

Stress test cycle means the period beginning on January 1 of a calendar year and ending on December 31 of that year.

Subsidiary has the same meaning as in 12 CFR 225.2(o).

■ 24. Section 252.13 is revised to read as follows:

§ 252.13 Applicability.

(a) *Scope*—(1) *Applicability.* Except as provided in paragraph (b) of this section, this subpart applies to any state member bank with average total consolidated assets of greater than $250 billion.

(2) *Ongoing applicability.* A state member bank (including any successor company) that is subject to any requirement in this subpart shall remain subject to any such requirement unless and until its total consolidated assets fall below $250 billion for each of four consecutive quarters, effective on the as-of date of the fourth consecutive Call Report.

(b) *Transition period.* (1) A state member bank that exceeds the asset threshold for the first time on or before September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the second calendar year after the state member bank becomes subject to this subpart, unless that time is extended by the Board in writing.

(2) A state member bank that exceeds the asset threshold for the first time after September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the third year after the state member bank becomes subject to this subpart, unless that time is extended by the Board in writing.

■ 25. Section 252.14 is revised to read as follows:

§ 252.14 Stress test.

(a) *In general.* (1) A state member bank must conduct a stress test as required under this subpart.

(2) *Frequency*—(i) *General.* Except as provided in paragraph (a)(2)(ii) of this section, a state member bank must conduct a stress test according to the frequency in table 1 to § 252.14(a)(2)(i).

TABLE 1 TO § 252.14(a)(2)(i)

If the state member bank is a	Then the stress test must be conducted
Subsidiary of a global systemically important BHC	Annually, by April 5 of each calendar year, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Subsidiary of a Category II bank holding company	Annually, by April 5 of each calendar year, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Subsidiary of a Category II U.S. intermediate holding company	Annually, by April 5 of each calendar year, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.

TABLE 1 TO § 252.14(a)(2)(i)—Continued

If the state member bank is a	Then the stress test must be conducted
Not a subsidiary of a: (A) Global systemically important BHC; (B) Category II bank holding company; or (C) Category II U.S. intermediate holding company.	Biennially, by April 5 of each calendar year ending in an even number, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.

(ii) *Change in frequency.* The Board may require a state member bank to conduct a stress test on a more or less frequent basis than would be required under paragraph (a)(2)(i) of this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Notice and response*—(i) *Notification of change in frequency.* If the Board requires a state member bank to change the frequency of the stress test under paragraph (a)(2)(ii) of this section, the Board will notify the state member bank in writing and provide a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under paragraph (a)(3)(i) of this section, a state member bank may request in writing that the Board reconsider the requirement to conduct a stress test on a more or less frequent basis than would be required under paragraph (a)(2)(i) of this section. A state member bank's request for reconsideration must include an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(b) *Scenarios provided by the Board*—(1) *In general.* In conducting a stress test under this section, a state member bank must, at a minimum, use the scenarios provided by the Board. Except as provided in paragraphs (b)(2) and (3) of this section, the Board will provide a description of the scenarios no later than February 15 of each calendar year.

(2) *Additional components.* (i) The Board may require a state member bank with significant trading activity, as determined by the Board and specified in the Capital Assessments and Stress Testing report (FR Y–14), to include a trading and counterparty component in its severely adverse scenario in the stress test required by this section. The Board may also require a state member bank that is subject to 12 CFR part 217, subpart F or that is a subsidiary of a bank holding company that is subject to section § 252.54(b)(2)(i) to include a trading and counterparty component in the state member bank's severely adverse scenario in the stress test required by this section. The data used in this component must be as of a date between October 1 of the previous calendar year and March 1 of the calendar year in which the stress test is performed, and the Board will communicate the as-of date and a description of the component to the company no later than March 1 of that calendar year.

(ii) The Board may require a state member bank to include one or more additional components in its severely adverse scenario in the stress test required by this section based on the state member bank's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Additional scenarios.* The Board may require a state member bank to include one or more additional scenarios in the stress test required by this section based on the state member bank's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(4) *Notice and response*—(i) *Notification of additional component or scenario.* If the Board requires a state member bank to include one or more additional components in its severely adverse scenario under paragraph (b)(2) of this section or to use one or more additional scenarios under paragraph (b)(3) of this section, the Board will notify the company in writing by December 31 and include a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under paragraph (b)(4)(i) of this section, the state member bank may request in writing that the Board reconsider the requirement that the company include the additional component(s) or additional scenario(s), including an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(iii) *Description of component.* The Board will provide the state member bank with a description of any additional component(s) or additional scenario(s) by March 1.

■ 26. In § 252.15, paragraphs (a) introductory text and (b) are revised and paragraph (c) is removed.

The revisions read as follows:

§ 252.15 Methodologies and practices.

(a) *Potential impact on capital.* In conducting a stress test under § 252.14, for each quarter of the planning horizon, a state member bank must estimate the following for each scenario required to be used:

* * * * *

(b) *Controls and oversight of stress testing processes*—(1) *In general.* The senior management of a state member bank must establish and maintain a system of controls, oversight, and documentation, including policies and procedures, that are designed to ensure that its stress testing processes are effective in meeting the requirements in this subpart. These policies and procedures must, at a minimum, describe the company's stress testing practices and methodologies, and processes for validating and updating the company's stress test practices and methodologies consistent with applicable laws and regulations.

(2) *Oversight of stress testing processes.* The board of directors, or a committee thereof, of a state member bank must review and approve the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the company may warrant, but no less than each year that a stress test is conducted. The board of directors and senior management of the state member bank must receive a summary of the results of the stress test conducted under this section.

(3) *Role of stress testing results.* The board of directors and senior management of a state member bank must consider the results of the stress test in the normal course of business, including but not limited to, the state member bank's capital planning, assessment of capital adequacy, and risk management practices.

■ 27. In § 252.16, paragraphs (a) and (b) are revised to read as follows:

§ 252.16 Reports of stress test results.

(a) *Reports to the Board of stress test results*—(1) *General.* A state member bank must report the results of the stress test to the Board in the manner and form prescribed by the Board, in accordance with paragraphs (a)(2) of this section.

(2) *Timing.* For each stress test cycle in which a stress test is conducted:

(i) A state member bank that is a covered company subsidiary must report the results of the stress test to the Board by April 5, unless that time is extended by the Board in writing; and

(ii) A state member bank that is not a covered company subsidiary must report the results of the stress test to the Board by July 31, unless that time is extended by the Board in writing.

(b) *Contents of reports.* The report required under paragraph (a) of this section must include the following information for the baseline scenario, severely adverse scenario, and any other scenario required under § 252.14(b)(3):

* * * * *

■ 28. In § 252.17, paragraphs (a) and (b) are revised to read as follows:

§ 252.17 Disclosure of stress test results.

(a) *Public disclosure of results*—(1) *General.* A state member bank must publicly disclose a summary of the results of the stress test required under this subpart.

(2) *Timing.* For each stress test cycle in which a stress test is conducted:

(i) A state member bank that is a covered company subsidiary must publicly disclose a summary of the results of the stress test within 15 calendar days after the Board discloses the results of its supervisory stress test of the covered company pursuant to § 252.46(b), unless that time is extended by the Board in writing; and

(ii) A state member bank that is not a covered company subsidiary must publicly disclose a summary of the results of the stress test in the period beginning on October 15 and ending on October 31, unless that time is extended by the Board in writing.

(3) *Disclosure method.* The summary required under this section may be disclosed on the website of a state member bank, or in any other forum that is reasonably accessible to the public.

(b) *Summary of results*—(1) *State member banks that are subsidiaries of bank holding companies.* A state member bank that is a subsidiary of a bank holding company satisfies the public disclosure requirements under this subpart if the bank holding company publicly discloses summary results of its stress test pursuant to this section or § 252.58, unless the Board determines that the disclosures at the holding company level do not adequately capture the potential impact of the scenarios on the capital of the state member bank and requires the state member bank to make public disclosures.

(2) *State member banks that are not subsidiaries of bank holding companies.* A state member bank that is not a subsidiary of a bank holding company or that is required to make disclosures under paragraph (b)(1) of this section must publicly disclose, at a minimum, the following information regarding the severely adverse scenario:

(i) A description of the types of risks being included in the stress test;

(ii) A summary description of the methodologies used in the stress test;

(iii) Estimates of—

(A) Aggregate losses;

(B) Pre-provision net revenue

(C) Provision for credit losses;

(D) Net income; and

(E) Pro forma regulatory capital ratios and any other capital ratios specified by the Board; and

(iv) An explanation of the most significant causes for the changes in regulatory capital ratios.

* * * * *

■ 29. The heading of subpart C is revised to read as follows:

Subpart C—Risk Committee Requirement for Bank Holding Companies With Total Consolidated Assets of $50 Billion or More and Less Than $100 Billion

■ 30. Section 252.21 is revised to read as follows:

§ 252.21 Applicability.

(a) *General applicability.* A bank holding company must comply with the risk-committee requirements set forth in this subpart beginning on the first day of the ninth quarter following the date on which its average total consolidated assets equal or exceed $50 billion.

(b) *Cessation of requirements.* A bank holding company will remain subject to the requirements of this subpart until the earlier of the date on which:

(1) Its total consolidated assets are below $50 billion for each of four consecutive calendar quarters; and

(2) It becomes subject to the requirements of subpart D of this part.

■ 31. Section 252.22 is revised to read as follows:

§ 252.22 Risk committee requirement for bank holding companies with total consolidated assets of $50 billion or more.

(a) *Risk committee*—(1) *General.* A bank holding company subject to this subpart must maintain a risk committee that approves and periodically reviews the risk-management policies of the bank holding company's global operations and oversees the operation of the bank holding company's global risk-management framework.

(2) *Risk-management framework.* The bank holding company's global risk-management framework must be commensurate with its structure, risk profile, complexity, activities, and size, and must include:

(i) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for its global operations; and

(ii) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(A) Processes and systems for identifying and reporting risks and risk-management deficiencies, including regarding emerging risks, and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies for its global operations;

(B) Processes and systems for establishing managerial and employee responsibility for risk management;

(C) Processes and systems for ensuring the independence of the risk-management function; and

(D) Processes and systems to integrate risk management and associated controls with management goals and its compensation structure for its global operations.

(3) *Corporate governance requirements.* The risk committee must:

(i) Have a formal, written charter that is approved by the bank holding company's board of directors;

(ii) Be an independent committee of the board of directors that has, as its sole and exclusive function, responsibility for the risk-management policies of the bank holding company's global operations and oversight of the operation of the bank holding company's global risk-management framework;

(iii) Report directly to the bank holding company's board of directors;

(iv) Receive and review regular reports on a not less than a quarterly basis from the bank holding company's chief risk officer provided pursuant to paragraph (b)(3)(ii) of this section; and

(v) Meet at least quarterly, or more frequently as needed, and fully document and maintain records of its proceedings, including risk-management decisions.

(4) *Minimum member requirements.* The risk committee must:

(i) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(ii) Be chaired by a director who:

(A) Is not an officer or employee of the bank holding company and has not been an officer or employee of the bank holding company during the previous three years;

(B) Is not a member of the immediate family, as defined in 12 CFR 225.41(b)(3), of a person who is, or has been within the last three years, an executive officer of the bank holding company, as defined in 12 CFR 215.2(e)(1); and

(C)(*1*) Is an independent director under Item 407 of the Securities and Exchange Commission's Regulation S–K (17 CFR 229.407(a)), if the bank holding company has an outstanding class of securities traded on an exchange registered with the U.S. Securities and Exchange Commission as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f) (national securities exchange); or

(*2*) Would qualify as an independent director under the listing standards of a national securities exchange, as demonstrated to the satisfaction of the Board, if the bank holding company does not have an outstanding class of securities traded on a national securities exchange.

(b) *Chief risk officer*—(1) *General.* A bank holding company subject to this subpart must appoint a chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

(2) *Responsibilities.* (i) The chief risk officer is responsible for overseeing:

(A) The establishment of risk limits on an enterprise-wide basis and the monitoring of compliance with such limits;

(B) The implementation of and ongoing compliance with the policies and procedures set forth in paragraph (a)(2)(i) of this section and the development and implementation of the processes and systems set forth in paragraph (a)(2)(ii) of this section; and

(C) The management of risks and risk controls within the parameters of the company's risk-control framework, and monitoring and testing of the company's risk controls.

(ii) The chief risk officer is responsible for reporting risk-management deficiencies and emerging risks to the risk committee and resolving risk-management deficiencies in a timely manner.

(3) *Corporate governance requirements.* (i) The bank holding company must ensure that the compensation and other incentives provided to the chief risk officer are consistent with providing an objective assessment of the risks taken by the bank holding company; and

(ii) The chief risk officer must report directly to both the risk committee and chief executive officer of the company.

■ 32. Revise the heading of subpart D to read as follows:

Subpart D—Enhanced Prudential Standards for Bank Holding Companies With Total Consolidated Assets of $100 Billion or More

■ 33. Section 252.30 is revised to read as follows:

§ 252.30 Scope.

This subpart applies to bank holding companies with average total consolidated assets of $100 billion or more.

■ 34. Section 252.31 is revised to read as follows:

§ 252.31 Applicability.

(a) *Applicability*—(1) *Initial applicability.* Subject to paragraph (c) of this section, a bank holding company must comply with the risk-management and risk-committee requirements set forth in § 252.33 and the liquidity risk-management and liquidity stress test requirements set forth in §§ 252.34 and 252.35 no later than the first day of the fifth quarter following the date on which its average total consolidated assets equal or exceed $100 billion.

(2) *Changes in requirements following a change in category.* A bank holding company with average total consolidated assets of $100 billion or more that changes from one category of banking organization described in § 252.5(b) through (e) to another of such categories must comply with the requirements applicable to the new category no later than on the first day of the second quarter following the change in the bank holding company's category.

(b) *Cessation of requirements.* Except as provided in paragraph (c) of this section, a bank holding company is subject to the risk-management and risk committee requirements set forth in § 252.33 and the liquidity risk-management and liquidity stress test requirements set forth in §§ 252.34 and 252.35 until its total consolidated assets are below $100 billion for each of four consecutive calendar quarters.

(c) *Applicability for bank holding companies that are subsidiaries of foreign banking organizations.* If a bank holding company that has average total consolidated assets of $100 billion or more is controlled by a foreign banking organization, the U.S. intermediate holding company established or designated by the foreign banking organization must comply with the risk-management and risk committee requirements set forth in § 252.153(e)(3) and the liquidity risk-management and liquidity stress test requirements set forth in § 252.153(e)(4).

■ 35. Section 252.32 is revised to read as follows:

§ 252.32 Risk-based and leverage capital and stress test requirements.

A bank holding company subject to this subpart must comply with, and hold capital commensurate with the requirements of, any regulations adopted by the Board relating to capital planning and stress tests, in accordance with the applicability provisions set forth therein.

■ 36. In § 252.33, paragraphs (a)(1) and (b)(1) are revised to read as follows:

§ 252.33 Risk-management and risk committee requirements.

(a) *Risk committee*—(1) *General.* A bank holding company subject to this subpart must maintain a risk committee that approves and periodically reviews the risk-management policies of the bank holding company's global operations and oversees the operation of the bank holding company's global risk-management framework. The risk committee's responsibilities include liquidity risk-management as set forth in § 252.34(b).

* * * * *

(b) *Chief risk officer*—(1) *General.* A bank holding company subject to this subpart must appoint a chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

* * * * *

■ 37. In § 252.34, paragraphs (a)(1) introductory text, (c)(1)(i), (d), (e)(1), (f)(1), (f)(2)(i), (g), and (h) are revised to read as follows:

§ 252.34 Liquidity risk-management requirements.

(a) * * *

(1) *Liquidity risk tolerance.* The board of directors of a bank holding company that is subject to this subpart must:

* * * * *

(c) * * *

(1) * * *

(i) Senior management of a bank holding company subject to this subpart must establish and implement strategies, policies, and procedures designed to effectively manage the risk that the bank holding company's financial condition or safety and soundness would be adversely affected by its inability or the market's perception of its inability to meet its cash and collateral obligations (liquidity risk). The board of directors must approve the strategies, policies, and procedures pursuant to paragraph (a)(2) of this section.

* * * * *

(d) *Independent review function.* (1) A bank holding company subject to this subpart must establish and maintain a review function that is independent of management functions that execute funding to evaluate its liquidity risk management.

(2) The independent review function must:

(i) Regularly, but no less frequently than annually, review and evaluate the adequacy and effectiveness of the company's liquidity risk-management processes, including its liquidity stress test processes and assumptions;

(ii) Assess whether the company's liquidity risk-management function complies with applicable laws and regulations, and sound business practices; and

(iii) Report material liquidity risk-management issues to the board of directors or the risk committee in writing for corrective action, to the extent permitted by applicable law.

(e) * * *

(1) A bank holding company subject to this subpart must produce comprehensive cash-flow projections that project cash flows arising from assets, liabilities, and off-balance sheet exposures over, at a minimum, short- and long-term time horizons. The bank holding company must update short-term cash-flow projections daily and must update longer-term cash-flow projections at least monthly.

* * * * *

(f) * * *

(1) *General.* A bank holding company subject to this subpart must establish and maintain a contingency funding plan that sets out the company's strategies for addressing liquidity needs during liquidity stress events. The contingency funding plan must be commensurate with the company's capital structure, risk profile, complexity, activities, size, and established liquidity risk tolerance. The company must update the contingency funding plan at least annually, and when changes to market and idiosyncratic conditions warrant.

(2) * * *

(i) *Quantitative assessment.* The contingency funding plan must:

(A) Identify liquidity stress events that could have a significant impact on the bank holding company's liquidity;

(B) Assess the level and nature of the impact on the bank holding company's liquidity that may occur during identified liquidity stress events;

(C) Identify the circumstances in which the bank holding company would implement its action plan described in paragraph (f)(2)(ii)(A) of this section, which circumstances must include failure to meet any minimum liquidity requirement imposed by the Board;

(D) Assess available funding sources and needs during the identified liquidity stress events;

(E) Identify alternative funding sources that may be used during the identified liquidity stress events; and

(F) Incorporate information generated by the liquidity stress testing required under § 252.35(a).

* * * * *

(g) *Liquidity risk limits*—(1) *General.* A bank holding company must monitor sources of liquidity risk and establish limits on liquidity risk that are consistent with the company's established liquidity risk tolerance and that reflect the company's capital structure, risk profile, complexity, activities, and size.

(2) *Liquidity risk limits established by a global systemically important BHC, Category II bank holding company, or Category III bank holding company.* If the bank holding company is a global systemically important BHC, Category II bank holding company, or Category III bank holding company, liquidity risk limits established under paragraph (g)(1) of this section must include limits on:

(i) Concentrations in sources of funding by instrument type, single counterparty, counterparty type, secured and unsecured funding, and as applicable, other forms of liquidity risk;

(ii) The amount of liabilities that mature within various time horizons; and

(iii) Off-balance sheet exposures and other exposures that could create funding needs during liquidity stress events.

(h) *Collateral, legal entity, and intraday liquidity risk monitoring.* A bank holding company subject to this subpart must establish and maintain procedures for monitoring liquidity risk as set forth in this paragraph.

(1) *Collateral.* The bank holding company must establish and maintain policies and procedures to monitor assets that have been, or are available to be, pledged as collateral in connection with transactions to which it or its affiliates are counterparties. These policies and procedures must provide that the bank holding company:

(i) Calculates all of its collateral positions according to the frequency specified in paragraph (h)(1)(i)(A) or (B) of this section, or as directed by the Board, specifying the value of pledged assets relative to the amount of security required under the relevant contracts and the value of unencumbered assets available to be pledged;

(A) If the bank holding company is not a Category IV bank holding company, on at least a weekly basis; or

(B) If the bank holding company is a Category IV bank holding company, on at least a monthly basis;

(ii) Monitors the levels of unencumbered assets available to be pledged by legal entity, jurisdiction, and currency exposure;

(iii) Monitors shifts in the bank holding company's funding patterns, such as shifts between intraday, overnight, and term pledging of collateral; and

(iv) Tracks operational and timing requirements associated with accessing collateral at its physical location (for example, the custodian or securities settlement system that holds the collateral).

(2) *Legal entities, currencies, and business lines.* The bank holding company must establish and maintain procedures for monitoring and controlling liquidity risk exposures and funding needs within and across significant legal entities, currencies, and business lines, taking into account legal and regulatory restrictions on the transfer of liquidity between legal entities.

(3) *Intraday exposures.* The bank holding company must establish and maintain procedures for monitoring intraday liquidity risk exposures that are consistent with the bank holding company's capital structure, risk profile, complexity, activities, and size. If the bank holding company is a global systemically important BHC, Category II bank holding company, or a Category III bank holding company, these procedures must address how the management of the bank holding company will:

(i) Monitor and measure expected daily gross liquidity inflows and outflows;

(ii) Manage and transfer collateral to obtain intraday credit;

(iii) Identify and prioritize time-specific obligations so that the bank holding company can meet these obligations as expected and settle less critical obligations as soon as possible;

(iv) Manage the issuance of credit to customers where necessary; and

(v) Consider the amounts of collateral and liquidity needed to meet payment systems obligations when assessing the bank holding company's overall liquidity needs.

■ 38. In § 252.35:

■ a. Paragraphs (a)(1) introductory text, (a)(2), and (a)(7)(i) and (ii) are revised;

■ b. Paragraph (a)(8) is added; and

■ c. Paragraphs (b)(1) and (3) are revised.

The revisions and addition read as follows:

§ 252.35 Liquidity stress testing and buffer requirements.

(a) * * *

(1) *General.* A bank holding company subject to this subpart must conduct stress tests to assess the potential impact of the liquidity stress scenarios set forth in paragraph (a)(3) of this section on its cash flows, liquidity position, profitability, and solvency, taking into account its current liquidity condition, risks, exposures, strategies, and activities.

* * * * *

(2) *Frequency.* The bank holding company must perform the liquidity stress tests required under paragraph (a)(1) of this section according to the frequency specified in paragraph (a)(2)(i) or (ii), or as directed by the Board:

(i) If the bank holding company is not a Category IV bank holding company, at least monthly; or

(ii) If the bank holding company is a Category IV bank holding company, at least quarterly.

* * * * *

(7) * * *

(i) *Policies and procedures.* A bank holding company subject to this subpart must establish and maintain policies and procedures governing its liquidity stress testing practices, methodologies, and assumptions that provide for the incorporation of the results of liquidity stress tests in future stress testing and for the enhancement of stress testing practices over time.

(ii) *Controls and oversight.* A bank holding company subject to this subpart must establish and maintain a system of controls and oversight that is designed to ensure that its liquidity stress testing processes are effective in meeting the requirements of this section. The controls and oversight must ensure that each liquidity stress test appropriately incorporates conservative assumptions with respect to the stress scenario in paragraph (a)(3) of this section and other elements of the stress test process, taking into consideration the bank holding company's capital structure, risk profile, complexity, activities, size, business lines, legal entity or jurisdiction, and other relevant factors. The assumptions must be approved by the chief risk officer and be subject to the independent review under § 252.34(d) of this subpart.

* * * * *

(8) *Notice and response.* If the Board determines that a bank holding company must conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section, the Board will notify the bank holding company before the change in frequency takes effect, and describe the basis for its determination. Within 14 calendar days of receipt of a notification under this paragraph, the bank holding company may request in writing that the Board reconsider the requirement. The Board will respond in writing to the company's request for reconsideration prior to requiring the company conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section.

(b) *Liquidity buffer requirement.* (1) A bank holding company subject to this subpart must maintain a liquidity buffer that is sufficient to meet the projected net stressed cash-flow need over the 30-day planning horizon of a liquidity stress test conducted in accordance with paragraph (a) of this section under each scenario set forth in paragraph (a)(3)(i) through (iii) of this section.

* * * * *

(3) *Asset requirements.* The liquidity buffer must consist of highly liquid assets that are unencumbered, as defined in paragraph (b)(3)(ii) of this section:

(i) *Highly liquid asset.* A highly liquid asset includes:

(A) Cash;

(B) Assets that meet the criteria for high quality liquid assets as defined in 12 CFR 249.20; or

(C) Any other asset that the bank holding company demonstrates to the satisfaction of the Board:

(*1*) Has low credit risk and low market risk;

(*2*) Is traded in an active secondary two-way market that has committed market makers and independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a reasonable time period conforming with trade custom; and

(*3*) Is a type of asset that investors historically have purchased in periods of financial market distress during which market liquidity has been impaired.

(ii) *Unencumbered.* An asset is unencumbered if it:

(A) Is free of legal, regulatory, contractual, or other restrictions on the ability of such company promptly to liquidate, sell or transfer the asset; and

(B) Is either:

(*1*) Not pledged or used to secure or provide credit enhancement to any transaction; or

(*2*) Pledged to a central bank or a U.S. government-sponsored enterprise, to the extent potential credit secured by the asset is not currently extended by such central bank or U.S. government-sponsored enterprise or any of its consolidated subsidiaries.

(iii) *Calculating the amount of a highly liquid asset.* In calculating the amount of a highly liquid asset included in the liquidity buffer, the bank holding company must discount the fair market value of the asset to reflect any credit risk and market price volatility of the asset.

(iv) *Operational requirements.* With respect to the liquidity buffer, the bank holding company must:

(A) Establish and implement policies and procedures that require highly liquid assets comprising the liquidity buffer to be under the control of the management function in the bank holding company that is charged with managing liquidity risk; and

(B) Demonstrate the capability to monetize a highly liquid asset under each scenario required under § 252.35(a)(3).

(v) *Diversification.* The liquidity buffer must not contain significant concentrations of highly liquid assets by issuer, business sector, region, or other factor related to the bank holding company's risk, except with respect to cash and securities issued or guaranteed by the United States, a U.S. government agency, or a U.S. government-sponsored enterprise.

■ 39. The heading of subpart E is revised to read as follows:

Subpart E—Supervisory Stress Test Requirements for Certain U.S. Banking Organizations With $100 Billion or More in Total Consolidated Assets and Nonbank Financial Companies Supervised by the Board

■ 40. Section 252.41 is revised to read as follows

§ 252.41 Authority and purpose.

(a) *Authority.* 12 U.S.C. 321–338a, 1818, 1831p–1, 1844(b), 1844(c), 5361, 5365, 5366, sec. 401(e), Pub. L. 115–174, 132 Stat. 1296.

(b) *Purpose.* This subpart implements section 165 of the Dodd-Frank Act (12 U.S.C. 5365) and section 401(e) of the Economic Growth, Regulatory Relief, and Consumer Protection Act, which requires the Board to conduct annual analyses of nonbank financial companies supervised by the Board and bank holding companies with $100 billion or more in total consolidated assets to evaluate whether such companies have the capital, on a total consolidated basis, necessary to absorb losses as a result of adverse economic conditions.

■ 41. Section 252.42 is revised to read as follows:

§ 252.42 Definitions

For purposes of this subpart E, the following definitions apply:

Advanced approaches means the risk-weighted assets calculation methodologies at 12 CFR part 217, subpart E, as applicable, and any successor regulation.

Baseline scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that reflect the consensus views of the economic and financial outlook.

Covered company means:

(1) A U.S. bank holding company with average total consolidated assets of $100 billion or more;

(2) A U.S. intermediate holding company subject to this section pursuant to § 252.153; and

(3) A nonbank financial company supervised by the Board.

Foreign banking organization has the same meaning as in 12 CFR 211.21(o).

Pre-provision net revenue means the sum of net interest income and non-interest income less expenses before adjusting for loss provisions.

Planning horizon means the period of at least nine consecutive quarters, beginning on the first day of a stress test cycle over which the relevant projections extend.

Provision for credit losses means:

(1) With respect to a covered company that has adopted the current expected credit losses methodology under GAAP, the provision for credit losses, as would be reported by the covered company on the FR Y–9C in the current stress test cycle; and,

(2) With respect to a covered company that has not adopted the current expected credit losses methodology under GAAP, the provision for loan and lease losses as would be reported by the covered company on the FR Y–9C in the current stress test cycle.

Regulatory capital ratio means a capital ratio for which the Board has established minimum requirements for the company by regulation or order, including, as applicable, the company's regulatory capital ratios calculated under 12 CFR part 217 and the deductions required under 12 CFR 248.12; except that the company shall not use the advanced approaches to calculate its regulatory capital ratios.

Scenarios are those sets of conditions that affect the U.S. economy or the financial condition of a covered company that the Board determines are appropriate for use in the supervisory stress tests, including, but not limited to, baseline and severely adverse scenarios.

Severely adverse scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

Stress test cycle means the period beginning on January 1 of a calendar year and ending on December 31 of that year.

Subsidiary has the same meaning as in 12 CFR 225.2.

■ 42. In § 252.43, paragraph (a) is revised to read as follows:

§ 252.43 Applicability.

(a) *Scope*—(1) *Applicability.* Except as provided in paragraph (b) of this section, this subpart applies to any covered company, which includes:

(i) Any U.S. bank holding company with average total consolidated assets of $100 billion or more;

(ii) Any U.S. intermediate holding company subject to this section pursuant to § 252.153; and

(iii) Any nonbank financial company supervised by the Board that is made subject to this section pursuant to a rule or order of the Board.

(2) *Ongoing applicability.* A bank holding company or U.S. intermediate holding company (including any successor company) that is subject to any requirement in this subpart shall remain subject to any such requirement unless and until its total consolidated assets fall below $100 billion for each of four consecutive quarters.

* * * * *

■ 43. In § 252.44, the section heading and paragraphs (a)(1) and (b) are revised and paragraph (c) is added to read as follows:

§ 252.44 Analysis conducted by the Board.

(a) *In general.* (1) The Board will conduct an analysis of each covered company's capital, on a total consolidated basis, taking into account all relevant exposures and activities of that covered company, to evaluate the ability of the covered company to absorb losses in specified economic and financial conditions.

* * * * *

(b) *Economic and financial scenarios related to the Board's analysis.* The Board will conduct its analysis using a minimum of two different scenarios, including a baseline scenario and a severely adverse scenario. The Board will notify covered companies of the scenarios that the Board will apply to conduct the analysis for each stress test cycle to which the covered company is subject by no later than February 15 of that year, except with respect to trading or any other components of the scenarios and any additional scenarios that the Board will apply to conduct the analysis, which will be communicated by no later than March 1 of that year.

(c) *Frequency of analysis conducted by the Board*—(1) *General.* Except as provided in paragraph (c)(2) of this section, the Board will conduct its analysis of a covered company according to the frequency in Table 1 to § 252.44(c)(1).

TABLE 1 TO § 252.44(c)(1)

If the covered company is a	Then the Board will conduct its analysis
Global systemically important BHC	Annually.
Category II bank holding company	Annually.
Category II U.S. intermediate holding company	Annually.
Category III bank holding company	Annually.
Category III U.S. intermediate holding company	Annually.
Category IV bank holding company	Biennially, occurring in each year ending in an even number.
Category IV U.S. intermediate holding company	Biennially, occurring in each year ending in an even number.

TABLE 1 TO § 252.44(c)(1)—Continued

If the covered company is a	Then the Board will conduct its analysis
Nonbank financial company supervised by the Board	Annually.

(2) *Change in frequency.* The Board may conduct a stress test of a covered company on a more or less frequent basis than would be required under paragraph (c)(1) of this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Notice and response*—(i) *Notification of change in frequency.* If the Board determines to change the frequency of the stress test under paragraph (c)(2) of this section, the Board will notify the company in writing and provide a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under paragraph (c)(3)(i) of this section, a covered company may request in writing that the Board reconsider the requirement to conduct a stress test on a more or less frequent basis than would be required under paragraph (c)(1) of this section. A covered company's request for reconsideration must include an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

■ 44. The heading of subpart F is revised to read as follows:

Subpart F—Company-Run Stress Test Requirements for Certain U.S. Bank Holding Companies and Nonbank Financial Companies Supervised by the Board

■ 45. Section 252.51 is revised to read as follows:

§ 252.51 Authority and purpose.

(a) *Authority.* 12 U.S.C. 321–338a, 1818, 1831p–1, 1844(b), 1844(c), 5361, 5365, 5366.

(b) *Purpose.* This subpart establishes the requirement for a covered company to conduct stress tests. This subpart also establishes definitions of stress test and related terms, methodologies for conducting stress tests, and reporting and disclosure requirements.

■ 46. Section 252.52 is revised as follows:

§ 252.52 Definitions.

For purposes of this subpart, the following definitions apply:

Advanced approaches means the risk-weighted assets calculation methodologies at 12 CFR part 217, subpart E, as applicable, and any successor regulation.

Baseline scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that reflect the consensus views of the economic and financial outlook.

Capital action has the same meaning as in 12 CFR 225.8(d).

Covered company means:

(1) A global systemically important BHC;

(2) A Category II bank holding company;

(3) A Category III bank holding company;

(4) A Category II U.S. intermediate holding company subject to this section pursuant to § 252.153;

(5) A Category III U.S. intermediate holding company subject to this section pursuant to § 252.153; and

(6) A nonbank financial company supervised by the Board that is made subject to this section pursuant to a rule or order of the Board.

Foreign banking organization has the same meaning as in 12 CFR 211.21(o).

Planning horizon means the period of at least nine consecutive quarters, beginning on the first day of a stress test cycle over which the relevant projections extend.

Pre-provision net revenue means the sum of net interest income and non-interest income less expenses before adjusting for loss provisions.

Provision for credit losses means:

(1) With respect to a covered company that has adopted the current expected credit losses methodology under GAAP, the provision for credit losses, as would be reported by the covered company on the FR Y–9C in the current stress test cycle; and

(2) With respect to a covered company that has not adopted the current expected credit losses methodology under GAAP, the provision for loan and lease losses as would be reported by the covered company on the FR Y–9C in the current stress test cycle.

Regulatory capital ratio means a capital ratio for which the Board has established minimum requirements for the company by regulation or order, including, as applicable, the company's regulatory capital ratios calculated under 12 CFR part 217 and the deductions required under 12 CFR 248.12; except that the company shall not use the advanced approaches to calculate its regulatory capital ratios.

Scenarios are those sets of conditions that affect the U.S. economy or the financial condition of a covered company that the Board determines are appropriate for use in the company-run stress tests, including, but not limited to, baseline and severely adverse scenarios.

Severely adverse scenario means a set of conditions that affect the U.S. economy or the financial condition of a covered company and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

Stress test means a process to assess the potential impact of scenarios on the consolidated earnings, losses, and capital of a covered company over the planning horizon, taking into account its current condition, risks, exposures, strategies, and activities.

Stress test cycle means the period beginning on January 1 of a calendar year and ending on December 31 of that year.

Subsidiary has the same meaning as in 12 CFR 225.2.

■ 47. Section 252.53 is revised to read as follows:

§ 252.53 Applicability.

(a) *Scope*—(1) *Applicability.* Except as provided in paragraph (b) of this section, this subpart applies to any covered company, which includes:

(i) Any global systemically important BHC;

(ii) Any Category II bank holding company;

(iii) Any Category III bank holding company;

(iv) Any Category II U.S. intermediate holding company subject to this section pursuant to § 252.153;

(v) Any Category III U.S. intermediate holding company subject to this section pursuant to § 252.153; and

(vi) Any nonbank financial company supervised by the Board that is made subject to this section pursuant to a rule or order of the Board.

(2) *Ongoing applicability.* (i) A bank holding company (including any successor company) that is subject to any requirement in this subpart shall

remain subject to any such requirement unless and until the bank holding company:

(A) Is not a global systemically important BHC;

(B) Is not a Category II bank holding company; and

(C) Is not a Category III bank holding company.

(ii) A U.S. intermediate holding company (including any successor company) that is subject to any requirement in this subpart shall remain subject to any such requirement unless and until the U.S. intermediate holding company:

(A) Is not a Category II U.S. intermediate holding company; and

(B) Is not a Category III U.S. intermediate holding company.

(b) *Transitional arrangements.* (1) A company that becomes a covered company on or before September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the second calendar year after the company becomes a covered company, unless that time is extended by the Board in writing.

(2) A company that becomes a covered company after September 30 of a calendar year must comply with the requirements of this subpart beginning on January 1 of the third calendar year after the company becomes a covered company, unless that time is extended by the Board in writing.

■ 48. In § 252.54 the section heading, paragraphs (a), (b)(2)(i), and (b)(4)(ii) and (iii) are revised to read as follows:

§ 252.54 Stress test.

(a) *Stress test*—(1) *In general.* A covered company must conduct a stress test as required under this subpart.

(2) *Frequency*—(i) *General.* Except as provided in paragraph (a)(2)(ii) of this section, a covered company must conduct a stress test according to the frequency in Table 1 to § 252.54(a)(2)(i).

TABLE 1 TO § 252.54(a)(2)(i)

If the covered company is a	Then the stress test must be conducted
Global systemically important BHC	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category II bank holding company	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category II U.S. intermediate holding company	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category III bank holding company	Biennially, by April 5 of each calendar year ending in an even number, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category III U.S. intermediate holding company	Biennially, by April 5 of each calendar year ending in an even number, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Nonbank financial company supervised by the Board	Periodically, as determined by rule or order.

(ii) *Change in frequency.* The Board may require a covered company to conduct a stress test on a more or less frequent basis than would be required under paragraph (a)(2)(i) of this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

(3) *Notice and response*—(i) *Notification of change in frequency.* If the Board requires a covered company to change the frequency of the stress test under paragraph (a)(2)(ii) of this section, the Board will notify the company in writing and provide a discussion of the basis for its determination.

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under paragraph (a)(3)(i) of this section, a covered company may request in writing that the Board reconsider the requirement to conduct a stress test on a more or less frequent basis than would be required under paragraph (a)(2)(i) of this section. A covered company's request for reconsideration must include an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(b) * * *

(2) * * *

(i) The Board may require a covered company with significant trading activity, as determined by the Board and specified in the Capital Assessments and Stress Testing report (FR Y–14), to include a trading and counterparty component in its severely adverse scenario in the stress test required by this section. The data used in this component must be as of a date selected by the Board between October 1 of the previous calendar year and March 1 of the calendar year in which the stress test is performed pursuant to this section, and the Board will communicate the as-of date and a description of the component to the company no later than March 1 of the calendar year in which the stress test is performed pursuant to this section.

(ii) The Board may require a covered company to include one or more additional components in its severely adverse scenario in the stress test required by this section based on the company's financial condition, size, complexity, risk profile, scope of operations, or activities, or risks to the U.S. economy.

* * * * *

(4) * * *

(ii) *Request for reconsideration and Board response.* Within 14 calendar days of receipt of a notification under this paragraph, the covered company may request in writing that the Board reconsider the requirement that the company include the additional component(s) or additional scenario(s), including an explanation as to why the request for reconsideration should be granted. The Board will respond in writing within 14 calendar days of receipt of the company's request.

(iii) *Description of component.* The Board will provide the covered company with a description of any additional component(s) or additional scenario(s) by March 1 of the calendar year in which the stress test is performed pursuant to this section.

§ 252.55 [Removed and Reserved]

■ 49. Section 252.55 is removed and reserved.

■ 50. Section 252.56, paragraphs (a) introductory text, (b) introductory text, and (c)(1) and (2) are revised to read as follows:

§ 252.56 Methodologies and practices.

(a) *Potential impact on capital.* In conducting a stress test under § 252.54, for each quarter of the planning horizon, a covered company must estimate the following for each scenario required to be used:

* * * * *

(b) *Assumptions regarding capital actions.* In conducting a stress test under § 252.54, a covered company is required to make the following assumptions regarding its capital actions over the planning horizon:

* * * * *

(c) * * *

(1) *In general.* The senior management of a covered company must establish and maintain a system of controls, oversight, and documentation, including policies and procedures, that are designed to ensure that its stress testing processes are effective in meeting the requirements in this subpart. These policies and procedures must, at a minimum, describe the covered company's stress testing practices and methodologies, and processes for validating and updating the company's stress test practices and methodologies consistent with applicable laws and regulations.

(2) *Oversight of stress testing processes.* The board of directors, or a committee thereof, of a covered company must review and approve the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the covered company may warrant, but no less than each year a stress test is conducted. The board of directors and senior management of the covered company must receive a summary of the results of any stress test conducted under this subpart.

* * * * *

■ 51. In § 252.57, paragraph (a) is revised to read as follows:

§ 252.57 Reports of stress test results.

(a) *Reports to the Board of stress test results.* A covered company must report the results of the stress test required under § 252.54 to the Board in the manner and form prescribed by the Board. Such results must be submitted by April 5 of the calendar year in which the stress test is conducted pursuant to § 252.54, unless that time is extended by the Board in writing.

* * * * *

■ 52. In § 252.58, paragraph (a)(1) is revised to read as follows:

§ 252.58 Disclosure of stress test results.

(a) * * *

(1) *In general.* A covered company must publicly disclose a summary of the results of the stress test required under § 252.54 within the period that is 15 calendar days after the Board publicly discloses the results of its supervisory stress test of the covered company pursuant to § 252.46(c), unless that time is extended by the Board in writing.

* * * * *

Subpart H—Single-Counterparty Credit Limits

■ 53. In § 252.70, paragraphs (a) and (d)(1) are revised to read as follows:

§ 252.70 Applicability and general provisions.

(a) *In general.* (1) This subpart establishes single counterparty credit limits for a covered company.

(2) For purposes of this subpart:

(i) *Covered company* means:

(A) A global systemically important BHC;

(B) A Category II bank holding company; and

(C) A Category III bank holding company;

(ii) *Major covered company* means any covered company that is a global systemically important BHC.

* * * * *

(d) * * *

(1) Any company that becomes a covered company will remain subject to the requirements of this subpart unless and until:

(i) The covered company is not a global systemically important BHC;

(ii) The covered company is not a Category II bank holding company; and

(iii) The covered company is not a Category III bank holding company.

* * * * *

Subpart L—[Removed and Reserved]

■ 54. Subpart L, consisting of §§ 252.120 through 252.122, is removed.

■ 55. Revise the heading for subpart M to read as follows.

Subpart M—Risk Committee Requirement for Foreign Banking Organizations With Total Consolidated Assets of at Least $50 Billion but Less Than $100 Billion

■ 56. Section 252.131 is revised to read as follows:

§ 252.131 Applicability.

(a) *General applicability.* A foreign banking organization with average total consolidated assets of at least $50 billion but less than $100 billion must comply with the risk-committee requirements set forth in this subpart beginning on the first day of the ninth quarter following the date on which its average total consolidated assets equal or exceed $50 billion.

(b) *Cessation of requirements.* A foreign banking organization will remain subject to the risk-committee requirements of this section until the earlier of the date on which:

(1) Its total consolidated assets are below $50 billion for each of four consecutive calendar quarters; and

(2) It becomes subject to the requirements of subpart N or subpart O of this part.

■ 57. In § 252.132, the section heading and paragraphs (a) introductory text and (d) are revised to read as follows:

§ 252.132 Risk-committee requirements for foreign banking organizations with total consolidated assets of $50 billion or more but less than $100 billion.

(a) *U.S. risk committee certification.* A foreign banking organization subject to this subpart, must, on an annual basis, certify to the Board that it maintains a committee of its global board of directors (or equivalent thereof), on a standalone basis or as part of its enterprise-wide risk committee (or equivalent thereof) that:

* * * * *

(d) *Noncompliance with this section.* If a foreign banking organization does not satisfy the requirements of this section, the Board may impose requirements, conditions, or restrictions relating to the activities or business operations of the combined U.S. operations of the foreign banking organization. The Board will coordinate with any relevant State or Federal regulator in the implementation of such requirements, conditions, or restrictions. If the Board determines to impose one or more requirements, conditions, or restrictions under this paragraph, the Board will notify the organization before it applies any requirement, condition or restriction, and describe the basis for imposing such requirement, condition, or restriction. Within 14 calendar days of receipt of a notification under this paragraph, the company may request in writing that the Board reconsider the requirement, condition, or restriction. The Board will respond in writing to the organization's request for reconsideration prior to applying the requirement, condition, or restriction.

■ 58. The heading of subpart N is revised as follows:

Subpart N—Enhanced Prudential Standards for Foreign Banking Organizations With Total Consolidated Assets of $100 Billion or More and Combined U.S. Assets of Less Than $100 Billion

■ 59. Section 252.140 is revised to read as follows:

§ 252.140 Scope.

This subpart applies to foreign banking organizations with average total consolidated assets of $100 billion or more, but average combined U.S. assets of less than $100 billion.

■ 60. Section 252.142 is revised to read as follows:

§ 252.142 Applicability.

(a) *General applicability.* A foreign banking organization with average total consolidated assets of $100 billion or more and average combined U.S. assets of less than $100 billion must:

(1) Comply with the capital stress testing, risk-management and risk-committee requirements set forth in this subpart beginning no later than on the first day of the ninth quarter the date on which its average total consolidated assets equal or exceed $100 billion; and

(2) Comply with the risk-based and leverage capital requirements and liquidity risk-management requirements set forth in this subpart beginning no later than on the first day of the ninth quarter following the date on which its total consolidated assets equal or exceed $250 billion; and

(3) Comply with the U.S. intermediate holding company requirement set forth in § 252.147 beginning no later than on the first day of the ninth quarter following the date on which its average U.S. non-branch assets equal or exceed $50 billion.

(b) *Cessation of requirements*—(1) *Enhanced prudential standards applicable to the foreign banking organization.* (i) A foreign banking organization will remain subject to the requirements set forth in §§ 252.144 and 252.146 until its total consolidated assets are below $100 billion for each of four consecutive calendar quarters, or it becomes subject to the requirements of subpart O of this part.

(ii) A foreign banking organization will remain subject to the requirements set forth in §§ 252.143 and 252.145 until its total consolidated assets are below $250 billion for each of four consecutive calendar quarters, or it becomes subject to the requirements of subpart O of this part.

(2) *Intermediate holding company requirement.* A foreign banking organization will remain subject to the U.S. intermediate holding company requirement set forth in § 252.147 until the sum of the total consolidated assets of the top-tier U.S. subsidiaries of the foreign banking organization (excluding any section 2(h)(2) company and DPC branch subsidiary) is below $50 billion for each of four consecutive calendar quarters, or it becomes subject to the U.S. intermediate holding company requirements of subpart O of this part.

■ 61. In § 252.143, the section heading and paragraphs (a)(1) introductory text, (b), and (c) are revised to read as follows:

§ 252.143 Risk-based and leverage capital requirements for foreign banking organizations with total consolidated assets of $250 billion or more and combined U.S. assets of less than $100 billion.

(a) * * *

(1) A foreign banking organization subject to this subpart and with average total consolidated assets of $250 billion or more must certify to the Board that it meets capital adequacy standards on a consolidated basis established by its home-country supervisor that are consistent with the regulatory capital framework published by the Basel Committee on Banking Supervision, as amended from time to time (Basel Capital Framework).

* * * * *

(b) *Reporting.* A foreign banking organization subject to this subpart and with average total consolidated assets of $250 billion or more must provide to the Board reports relating to its compliance with the capital adequacy measures described in paragraph (a) of this section concurrently with filing the FR Y–7Q.

(c) *Noncompliance with the Basel Capital Framework.* If a foreign banking organization does not satisfy the requirements of this section, the Board may impose requirements, conditions, or restrictions, including risk-based or leverage capital requirements, relating to the activities or business operations of the U.S. operations of the organization. The Board will coordinate with any relevant State or Federal regulator in the implementation of such requirements, conditions, or restrictions. If the Board determines to impose one or more requirements, conditions, or restrictions under this paragraph, the Board will notify the organization before it applies any requirement, condition or restriction, and describe the basis for imposing such requirement, condition, or restriction. Within 14 calendar days of receipt of a notification under this paragraph, the organization may request in writing that the Board reconsider the requirement, condition, or restriction. The Board will respond in writing to the organization's request for reconsideration prior to applying the requirement, condition, or restriction.

■ 62. Section 252.144 is revised to read as follows:

§ 252.144 Risk-management and risk-committee requirements for foreign banking organizations with total consolidated assets of $100 billion or more but combined U.S. assets of less than $100 billion.

(a) *Risk-management and risk-committee requirements for foreign banking organizations with combined U.S. assets of less than $50 billion*—(1) *U.S. risk committee certification.* A foreign banking organization with average combined U.S. assets of less than $50 billion must, on an annual basis, certify to the Board that it maintains a committee of its global board of directors (or equivalent thereof), on a standalone basis or as part of its enterprise-wide risk committee (or equivalent thereof) that:

(i) Oversees the risk-management policies of the combined U.S. operations of the foreign banking organization; and

(ii) Includes at least one member having experience in identifying, assessing, and managing risk exposures of large, complex firms.

(2) *Timing of certification.* The certification required under paragraph (a) of this section must be filed on an annual basis with the Board concurrently with the FR Y–7.

(b) *Risk-management and risk-committee requirements for foreign banking organizations with combined U.S. assets of $50 billion or more but less than $100 billion*—(1) *U.S. risk committee*—(i) *General.* A foreign banking organization subject to this this subpart and with average combined U.S. assets of $50 billion or more must maintain a U.S. risk committee that approves and periodically reviews the risk-management policies of the combined U.S. operations of the foreign banking organization and oversees the risk-management framework of such combined U.S. operations.

(ii) *Risk-management framework.* The foreign banking organization's risk-management framework for its combined U.S. operations must be commensurate with the structure, risk profile, complexity, activities, and size of its combined U.S. operations and consistent with its enterprise-wide risk management policies. The framework must include:

(A) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for the combined U.S. operations of the foreign banking organization; and

(B) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(*1*) Processes and systems for identifying and reporting risks and risk-management deficiencies, including regarding emerging risks, on a combined U.S. operations basis and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies;

(*2*) Processes and systems for establishing managerial and employee responsibility for risk management of the combined U.S. operations;

(*3*) Processes and systems for ensuring the independence of the risk-management function of the combined U.S. operations; and

(*4*) Processes and systems to integrate risk management and associated controls with management goals and the compensation structure of the combined U.S. operations.

(iii) *Placement of the U.S. risk committee.* (A) A foreign banking organization that conducts its operations in the United States solely through a U.S. intermediate holding company must maintain its U.S. risk committee as a committee of the board of directors of its U.S. intermediate holding company (or equivalent thereof).

(B) A foreign banking organization that conducts its operations through U.S. branches or U.S. agencies (in addition to through its U.S. intermediate holding company, if any) may maintain its U.S. risk committee either:

(*1*) As a committee of the global board of directors (or equivalent thereof), on a standalone basis or as a joint committee with its enterprise-wide risk committee (or equivalent thereof); or

(*2*) As a committee of the board of directors of its U.S. intermediate holding company (or equivalent thereof), on a standalone basis or as a joint committee with the risk committee of its U.S. intermediate holding company required pursuant to § 252.147(e)(3).

(iv) *Corporate governance requirements.* The U.S. risk committee must meet at least quarterly and otherwise as needed, and must fully document and maintain records of its proceedings, including risk-management decisions.

(v) *Minimum member requirements.* The U.S. risk committee must:

(A) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(B) Have at least one member who:

(*1*) Is not an officer or employee of the foreign banking organization or its affiliates and has not been an officer or employee of the foreign banking organization or its affiliates during the previous three years; and

(*2*) Is not a member of the immediate family, as defined in 12 CFR 225.41(b)(3), of a person who is, or has been within the last three years, an executive officer, as defined in 12 CFR 215.2(e)(1) of the foreign banking organization or its affiliates.

(2) [Reserved]

(c) *U.S. chief risk officer*—(1) *General.* A foreign banking organization with average combined U.S. assets of $50 billion or more but less than $100 billion or its U.S. intermediate holding company, if any, must appoint a U.S. chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

(2) *Responsibilities.* (i) The U.S. chief risk officer is responsible for overseeing:

(A) The measurement, aggregation, and monitoring of risks undertaken by the combined U.S. operations;

(B) The implementation of and ongoing compliance with the policies and procedures for the foreign banking organization's combined U.S. operations set forth in paragraph (b)(1)(ii)(A) of this section and the development and implementation of processes and systems set forth in paragraph (b)(1)(ii)(B) of this section; and

(C) The management of risks and risk controls within the parameters of the risk-control framework for the combined U.S. operations, and the monitoring and testing of such risk controls.

(ii) The U.S. chief risk officer is responsible for reporting risks and risk-management deficiencies of the combined U.S. operations, and resolving such risk-management deficiencies in a timely manner.

(3) *Corporate governance and reporting.* The U.S. chief risk officer must:

(i) Receive compensation and other incentives consistent with providing an objective assessment of the risks taken by the combined U.S. operations of the foreign banking organization;

(ii) Be employed by and located in the U.S. branch, U.S. agency, U.S. intermediate holding company, if any, or another U.S. subsidiary;

(iii) Report directly to the U.S. risk committee and the global chief risk officer or equivalent management official (or officials) of the foreign banking organization who is responsible for overseeing, on an enterprise-wide basis, the implementation of and compliance with policies and procedures relating to risk-management governance, practices, and risk controls of the foreign banking organization unless the Board approves an alternative reporting structure based on circumstances specific to the foreign banking organization;

(iv) Regularly provide information to the U.S. risk committee, global chief risk officer, and the Board regarding the nature of and changes to material risks undertaken by the foreign banking organization's combined U.S. operations, including risk-management deficiencies and emerging risks, and how such risks relate to the global operations of the foreign banking organization; and

(v) Meet regularly and as needed with the Board to assess compliance with the requirements of this section.

(d) *Responsibilities of the foreign banking organization.* The foreign banking organization must take appropriate measures to ensure that its combined U.S. operations implement the risk-management policies overseen by the U.S. risk committee described in paragraph (a) or (b) of this section, and its combined U.S. operations provide sufficient information to the U.S. risk committee to enable the U.S. risk committee to carry out the responsibilities of this subpart.

(e) *Noncompliance with this section.* If a foreign banking organization does not satisfy the requirements of this section, the Board may impose requirements, conditions, or restrictions relating to the activities or business operations of the combined U.S. operations of the foreign banking organization. The Board will coordinate with any relevant State or Federal regulator in the implementation of such requirements, conditions, or restrictions. If the Board determines to impose one or more requirements, conditions, or restrictions under this paragraph, the Board will notify the organization before it applies any requirement, condition, or restriction, and describe the basis for imposing such requirement, condition, or restriction. Within 14 calendar days of receipt of a notification under this paragraph, the organization may request in writing that the Board reconsider the requirement, condition, or restriction. The Board will respond in writing to the organization's request for reconsideration prior to applying the requirement, condition, or restriction.

■ 63. In § 252.145, the section heading and paragraph (a) are revised to read as follows:

§ 252.145 Liquidity risk-management requirements for foreign banking organizations with total consolidated assets of $250 billion or more and combined U.S. assets of less than $100 billion.

(a) A foreign banking organization subject to this subpart with average total consolidated assets of $250 billion or more must report to the Board on an annual basis the results of an internal liquidity stress test for either the consolidated operations of the foreign banking organization or the combined U.S. operations of the foreign banking organization. Such liquidity stress test must be conducted consistent with the Basel Committee principles for liquidity risk management and must incorporate 30-day, 90-day, and one-year stress-test horizons. The ''Basel Committee principles for liquidity risk management'' means the document titled ''Principles for Sound Liquidity Risk Management and Supervision'' (September 2008) as published by the Basel Committee on Banking Supervision, as supplemented and revised from time to time.

* * * * *

■ 64. In § 252.146, the section heading and paragraphs (b)(1) introductory text, (b)(2)(i), and (c)(1)(ii) and (iii) are revised to read as follows:

§ 252.146 Capital stress testing requirements for foreign banking organizations with total consolidated assets of $100 billion or more and combined U.S. assets of less than $100 billion.

* * * * *

(b) * * *

(1) A foreign banking organization subject to this subpart must:

* * * * *

(2) * * *

(i) A supervisory capital stress test conducted by the foreign banking organization's home-country supervisor or an evaluation and review by the foreign banking organization's home-country supervisor of an internal capital adequacy stress test conducted by the foreign banking organization, according to the frequency specified in the following paragraph (b)(2)(i)(A) or (B) of this section:

(A) If the foreign banking organization has average total consolidated assets of $250 billion or more, on at least an annual basis; or

(B) If the foreign banking organization has average total consolidated assets of less than $250 billion, at least biennially; and

* * * * *

(c) * * *

(1) * * *

(ii) Conduct a stress test of its U.S. subsidiaries to determine whether those subsidiaries have the capital necessary to absorb losses as a result of adverse economic conditions, according to the frequency specified in paragraph (c)(1)(ii)(A) or (B) of this section:

(A) If the foreign banking organization has average total consolidated assets of $250 billion or more, on at least an annual basis; or

(B) If the foreign banking organization has average total consolidated assets of less than $250 billion, at least biennially; and

(iii) Report a summary of the results of the stress test to the Board that includes a description of the types of risks included in the stress test, a description of the conditions or scenarios used in the stress test, a summary description of the methodologies used in the stress test, estimates of aggregate losses, pre-provision net revenue, total loan loss provisions, net income before taxes and pro forma regulatory capital ratios required to be computed by the home-country supervisor of the foreign banking organization and any other relevant capital ratios, and an explanation of the most significant causes for any changes in regulatory capital ratios.

* * * * *

■ 65. Section 252.147 is added to read as follows:

§ 252.147 U.S. intermediate holding company requirement for foreign banking organizations with combined U.S. assets of less than $100 billion and U.S. non-branch assets of $50 billion or more.

(a) *Requirement to form a U.S. intermediate holding company*—(1) *Formation.* A foreign banking organization with average U.S. non-branch assets of $50 billion or more must establish a U.S. intermediate holding company, or designate an existing subsidiary that meets the requirements of paragraph (a)(2) of this section, as its U.S. intermediate holding company.

(2) *Structure.* The U.S. intermediate holding company must be:

(i) Organized under the laws of the United States, any one of the fifty states of the United States, or the District of Columbia; and

(ii) Be governed by a board of directors or managers that is elected or appointed by the owners and that operates in an equivalent manner, and has equivalent rights, powers, privileges, duties, and responsibilities, to a board of directors of a company chartered as a corporation under the laws of the United States, any one of the fifty states of the United States, or the District of Columbia.

(3) *Notice.* Within 30 days of establishing or designating a U.S. intermediate holding company under this section, a foreign banking organization must provide to the Board:

(i) A description of the U.S. intermediate holding company, including its name, location, corporate form, and organizational structure;

(ii) A certification that the U.S. intermediate holding company meets the requirements of this section; and

(iii) Any other information that the Board determines is appropriate.

(b) *Holdings and regulation of the U.S. intermediate holding company*—(1) *General.* Subject to paragraph (c) of this section, a foreign banking organization that is required to form a U.S. intermediate holding company under paragraph (a) of this section must hold its entire ownership interest in any U.S. subsidiary (excluding each section 2(h)(2) company or DPC branch subsidiary, if any) through its U.S. intermediate holding company.

(2) *Reporting.* Each U.S. intermediate holding company shall submit information in the manner and form prescribed by the Board.

(3) *Examinations and inspections.* The Board may examine or inspect any U.S. intermediate holding company and each of its subsidiaries and prepare a report of their operations and activities.

(4) *Global systemically important banking organizations.* For purposes of this part, a top-tier foreign banking organization with average U.S. non-branch assets that equal or exceed $50 billion is a global systemically important foreign banking organization if any of the following conditions are met:

(i) The top-tier foreign banking organization determines, pursuant to paragraph (b)(6) of this section, that the top-tier foreign banking organization has the characteristics of a global systemically important banking organization under the global methodology; or

(ii) The Board, using information available to the Board, determines:

(A) That the top-tier foreign banking organization would be a global systemically important banking organization under the global methodology;

(B) That the top-tier foreign banking organization, if it were subject to the Board's Regulation Q, would be identified as a global systemically important BHC under 12 CFR 217.402; or

(C) That the U.S. intermediate holding company, if it were subject to 12 CFR 217.402, would be identified as a global systemically important BHC.

(5) *Notice.* Each top-tier foreign banking organization that controls a U.S. intermediate holding company shall submit to the Board by January 1 of each calendar year through the U.S. intermediate holding company:

(i) Notice of whether the home-country supervisor (or other appropriate home country regulatory authority) of the top-tier foreign banking organization of the U.S. intermediate holding company has adopted standards consistent with the global methodology; and

(ii) Notice of whether the top-tier foreign banking organization prepares or reports the indicators used by the global methodology to identify a banking organization as a global systemically important banking organization and, if it does, whether the top-tier foreign banking organization has determined that it has the characteristics of a global systemically important banking organization under the global methodology pursuant to paragraph (b)(6) of this section.

(6) *Global systemically important banking organization under the global methodology.* A top-tier foreign banking organization that controls a U.S. intermediate holding company and prepares or reports for any purpose the indicator amounts necessary to determine whether the top-tier foreign banking organization is a global systemically important banking organization under the global methodology must use the data to determine whether the top-tier foreign banking organization has the characteristics of a global systemically important banking organization under the global methodology.

(c) *Alternative organizational structure*—(1) *General.* Upon a written request by a foreign banking organization, the Board may permit the foreign banking organization to: Establish or designate multiple U.S. intermediate holding companies; not transfer its ownership interests in certain subsidiaries to a U.S. intermediate holding company; or use an alternative organizational structure to hold its combined U.S. operations.

(2) *Factors.* In making a determination under paragraph (c)(1) of this section, the Board may consider whether applicable law would prohibit the foreign banking organization from owning or controlling one or more of its U.S. subsidiaries through a single U.S. intermediate holding company, or whether circumstances otherwise warrant an exception based on the foreign banking organization's activities, scope of operations, structure, or similar considerations.

(3) *Request*—(i) *Contents.* A request submitted under this section must include an explanation of why the request should be granted and any other information required by the Board.

(ii) *Timing.* The Board shall act on a request for an alternative organizational structure within 90 days of receipt of a complete request, unless the Board provides notice to the organization that it is extending the period for action.

(4) *Conditions.* The Board may grant relief under this section upon such conditions as the Board deems appropriate, including, but not limited to, requiring the U.S. operations of the foreign banking organization to comply with additional enhanced prudential standards, or requiring the foreign banking organization to enter into supervisory agreements governing such alternative organizational structure.

(d) *Modifications.* The Board may modify the application of any section of this subpart to a foreign banking organization that is required to form a U.S. intermediate holding company or to such U.S. intermediate holding company if appropriate to accommodate the organizational structure of the foreign banking organization or characteristics specific to such foreign banking organization and such modification is appropriate and consistent with the capital structure, size, complexity, risk profile, scope of operations, or financial condition of each U.S. intermediate holding company, safety and soundness, and the financial stability mandate of section 165 of the Dodd-Frank Act.

(e) *Enhanced prudential standards for U.S. intermediate holding companies*—(1) *Capital requirements for a U.S. intermediate holding company.* (i)(A) A U.S. intermediate holding company must comply with 12 CFR part 217, other than subpart E of 12 CFR part 217, in the same manner as a bank holding company.

(B) A U.S. intermediate holding company may choose to comply with subpart E of 12 CFR part 217.

(ii) A U.S. intermediate holding company must comply with capital adequacy standards beginning on the date it is required to established under this subpart, or if the U.S. intermediate holding company is subject to capital adequacy standards on the date that the foreign banking organization becomes subject to § 252.142(a)(3), on the date that the foreign banking organization becomes subject to this subpart.

(2) *Risk-management and risk-committee requirements*—(i) *General.* A U.S. intermediate holding company must establish and maintain a risk committee that approves and periodically reviews the risk-management policies and oversees the risk-management framework of the U.S. intermediate holding company. The risk committee must be a committee of the board of directors of the U.S. intermediate holding company (or equivalent thereof). The risk committee may also serve as the U.S. risk committee for the combined U.S. operations required pursuant to § 252.144(b).

(ii) *Risk-management framework.* The U.S. intermediate holding company's risk-management framework must be commensurate with the structure, risk profile, complexity, activities, and size of the U.S. intermediate holding company and consistent with the risk management policies for the combined U.S. operations of the foreign banking organization. The framework must include:

(A) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for the U.S. intermediate holding company; and

(B) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(*1*) Processes and systems for identifying and reporting risks and risk-management deficiencies at the U.S. intermediate holding company, including regarding emerging risks and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies;

(*2*) Processes and systems for establishing managerial and employee responsibility for risk management of the U.S. intermediate holding company;

(*3*) Processes and systems for ensuring the independence of the risk-management function of the U.S. intermediate holding company; and

(*4*) Processes and systems to integrate risk management and associated controls with management goals and the compensation structure of the U.S. intermediate holding company.

(iii) *Corporate governance requirements.* The risk committee of the U.S. intermediate holding company must meet at least quarterly and otherwise as needed, and must fully document and maintain records of its proceedings, including risk-management decisions.

(iv) *Minimum member requirements.* The risk committee must:

(A) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(B) Have at least one member who:

(*1*) Is not an officer or employee of the foreign banking organization or its affiliates and has not been an officer or employee of the foreign banking organization or its affiliates during the previous three years; and

(*2*) Is not a member of the immediate family, as defined in 12 CFR 225.41(b)(3), of a person who is, or has been within the last three years, an executive officer, as defined in 12 CFR 215.2(e)(1), of the foreign banking organization or its affiliates.

(v) The U.S. intermediate holding company must take appropriate measures to ensure that it implements the risk-management policies for the U.S. intermediate holding company and it provides sufficient information to the U.S. risk committee to enable the U.S. risk committee to carry out the responsibilities of this subpart;

(vi) A U.S. intermediate holding company must comply with risk-committee and risk-management requirements beginning on the date that it is required to be established or designated under this subpart or, if the U.S. intermediate holding company is subject to risk-committee and risk-management requirements on the date that the foreign banking organization becomes subject to § 252.147(a)(3), on the date that the foreign banking organization becomes subject to this subpart.

■ 66. The heading of subpart O is revised to read as follows:

Subpart O—Enhanced Prudential Standards for Foreign Banking Organizations With Total Consolidated Assets of $100 Billion or More and Combined U.S. Assets of $100 Billion or More

■ 67. Section 252.150 is revised to read as follows:

§ 252.150 Scope.

This subpart applies to foreign banking organizations with average total consolidated assets of $100 billion or more and average combined U.S. assets of $100 billion or more.

■ 68. Section 252.152 is revised to read as follows:

§ 252.152 Applicability.

(a) *General applicability.* (1) A foreign banking organization must:

(i) Comply with the requirements of this subpart (other than the U.S. intermediate holding company requirement set forth in § 252.153) beginning on the first day of the ninth quarter following the date on which its average combined U.S. assets equal or exceed $100 billion; and

(ii) Comply with the requirement to establish or designate a U.S. intermediate holding company requirement set forth in § 252.153(a) beginning on the first day of the ninth quarter following the date on which its average U.S. non-branch assets equal or exceed $50 billion or, if the foreign banking organization has established or designated a U.S. intermediate holding company pursuant to § 252.147, beginning on the first day following the date on which the foreign banking organization's average combined U.S. assets equal or exceed $100 billion.

(2) *Changes in requirements following a change in category.* A foreign banking organization that changes from one category of banking organization described in § 252.5(c) through (e) to another of such categories must comply with the requirements applicable to the new category under this subpart no later than on the first day of the second quarter following the change in the foreign banking organization's category.

(b) *Cessation of requirements*—(1) *Enhanced prudential standards applicable to the foreign banking organization.* Subject to paragraph (c)(2) of this section, a foreign banking organization will remain subject to the applicable requirements of this subpart until its combined U.S. assets are below $100 billion for each of four consecutive calendar quarters.

(2) *Intermediate holding company requirement.* A foreign banking organization will remain subject to the U.S. intermediate holding company requirement set forth in § 252.153 until the sum of the total consolidated assets of the top-tier U.S. subsidiaries of the foreign banking organization (excluding any section 2(h)(2) company and DPC branch subsidiary) is below $50 billion for each of four consecutive calendar quarters, or until the foreign banking organization is subject to subpart N of this part and is in compliance with the U.S. intermediate holding company requirements as set forth in § 252.147.

■ 69. In § 252.153:

■ a.Revise the section heading and paragraph (a)(1);

■ b. Add a subject heading to paragraph (a)(2); and

■ c. Revise paragraphs (a)(3) and (c) through (e).

The revisions and addition read as follows:

§ 252.153 U.S. intermediate holding company requirement for foreign banking organizations with combined U.S. assets of $100 billion or more and U.S. non-branch assets of $50 billion or more.

(a) * * *

(1) *Formation.* A foreign banking organization with average U.S. non-branch assets of $50 billion or more must establish a U.S. intermediate holding company, or designate an existing subsidiary that meets the requirements of paragraph (a)(2) of this section, as its U.S. intermediate holding company.

(2) *Structure.* * * *

(3) *Notice.* Within 30 days of establishing or designating a U.S. intermediate holding company under this section, a foreign banking organization must provide to the Board:

(i) A description of the U.S. intermediate holding company, including its name, location, corporate form, and organizational structure;

(ii) A certification that the U.S. intermediate holding company meets the requirements of this section; and

(iii) Any other information that the Board determines is appropriate.

* * * * *

(c) *Alternative organizational structure*—(1) *General.* Upon a written request by a foreign banking organization, the Board may permit the foreign banking organization to: Establish or designate multiple U.S. intermediate holding companies; not transfer its ownership interests in certain subsidiaries to a U.S. intermediate holding company; or use an alternative organizational structure to hold its combined U.S. operations.

(2) *Factors.* In making a determination under paragraph (c)(1) of this section, the Board may consider whether applicable law would prohibit the foreign banking organization from owning or controlling one or more of its U.S. subsidiaries through a single U.S. intermediate holding company, or whether circumstances otherwise warrant an exception based on the foreign banking organization's activities, scope of operations, structure, or other similar considerations.

(3) *Request*—(i) *Contents.* A request submitted under this section must include an explanation of why the request should be granted and any other information required by the Board.

(ii) *Timing.* The Board will act on a request for an alternative organizational structure within 90 days of receipt of a complete request, unless the Board provides notice to the organization that it is extending the period for action.

(4) *Conditions.* (i) The Board may grant relief under this section upon such

conditions as the Board deems appropriate, including, but not limited to, requiring the U.S. operations of the foreign banking organization to comply with additional enhanced prudential standards, or requiring the foreign banking organization to enter into supervisory agreements governing such alternative organizational structure.

(ii) If the Board permits a foreign banking organization to form two or more U.S. intermediate holding companies under this section, each U.S. intermediate holding company must determine its category pursuant to § 252.5 of this part as though the U.S. intermediate holding companies were a consolidated company.

(d) *Modifications.* The Board may modify the application of any section of this subpart to a foreign banking organization that is required to form a U.S. intermediate holding company or to such U.S. intermediate holding company if appropriate to accommodate the organizational structure of the foreign banking organization or characteristics specific to such foreign banking organization and such modification is appropriate and consistent with the capital structure, size, complexity, risk profile, scope of operations, or financial condition of each U.S. intermediate holding company, safety and soundness, and the mandate of section 165 of the Dodd-Frank Act.

(e) *Enhanced prudential standards for U.S. intermediate holding companies*—(1) *Capital requirements for a U.S. intermediate holding company.* (i)(A) A U.S. intermediate holding company must comply with 12 CFR part 217, other than subpart E of 12 CFR part 217, in the same manner as a bank holding company.

(B) A U.S. intermediate holding company may choose to comply with subpart E of 12 CFR part 217.

(ii) A U.S. intermediate holding company must comply with applicable capital adequacy standards beginning on the date that it is required to be established or designated under this subpart or, if the U.S. intermediate holding company is subject to capital adequacy standards on the date that the foreign banking organization becomes subject to paragraph (a)(1)(ii) of this section, on the date that the foreign banking organization becomes subject to this subpart.

(2) *Capital planning.* (i) A U.S. intermediate holding company with total consolidated assets of $100 billion or more must comply with 12 CFR 225.8 in the same manner as a bank holding company.

(ii) A U.S. intermediate holding company with total consolidated assets of $100 billion or more must comply with 12 CFR 225.8 on the date prescribed in the transition provisions of 12 CFR 225.8.

(3) *Risk-management and risk committee requirements*—(i) *General.* A U.S. intermediate holding company must establish and maintain a risk committee that approves and periodically reviews the risk-management policies and oversees the risk-management framework of the U.S. intermediate holding company. The risk committee must be a committee of the board of directors of the U.S. intermediate holding company (or equivalent thereof). The risk committee may also serve as the U.S. risk committee for the combined U.S. operations required pursuant to § 252.155(a).

(ii) *Risk-management framework.* The U.S. intermediate holding company's risk-management framework must be commensurate with the structure, risk profile, complexity, activities, and size of the U.S. intermediate holding company and consistent with the risk management policies for the combined U.S. operations of the foreign banking organization. The framework must include:

(A) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for the U.S. intermediate holding company; and

(B) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(*1*) Processes and systems for identifying and reporting risks and risk-management deficiencies at the U.S. intermediate holding company, including regarding emerging risks and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies;

(*2*) Processes and systems for establishing managerial and employee responsibility for risk management of the U.S. intermediate holding company;

(*3*) Processes and systems for ensuring the independence of the risk-management function of the U.S. intermediate holding company; and

(*4*) Processes and systems to integrate risk management and associated controls with management goals and the compensation structure of the U.S. intermediate holding company.

(iii) *Corporate governance requirements.* The risk committee of the U.S. intermediate holding company must meet at least quarterly and otherwise as needed, and must fully document and maintain records of its proceedings, including risk-management decisions.

(iv) *Minimum member requirements.* The risk committee must:

(A) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(B) Have at least one member who:

(*1*) Is not an officer or employee of the foreign banking organization or its affiliates and has not been an officer or employee of the foreign banking organization or its affiliates during the previous three years; and

(*2*) Is not a member of the immediate family, as defined in 12 CFR 225.41(b)(3), of a person who is, or has been within the last three years, an executive officer, as defined in 12 CFR 215.2(e)(1), of the foreign banking organization or its affiliates.

(v) The U.S. intermediate holding company must take appropriate measures to ensure that it implements the risk-management policies for the U.S. intermediate holding company and it provides sufficient information to the U.S. risk committee to enable the U.S. risk committee to carry out the responsibilities of this subpart.

(vi) A U.S. intermediate holding company must comply with risk-committee and risk-management requirements beginning on the date that it is required to be established or designated under this subpart or, if the U.S. intermediate holding company is subject to risk-committee and risk-management requirements on the date that the foreign banking organization becomes subject to § 252.153(a)(1)(ii), on the date that the foreign banking organization becomes subject to this subpart.

(4) *Liquidity requirements.* (i) A U.S. intermediate holding company must comply with the liquidity risk-management requirements in § 252.156 and conduct liquidity stress tests and hold a liquidity buffer pursuant to § 252.157.

(ii) A U.S. intermediate holding company must comply with liquidity risk-management, liquidity stress test, and liquidity buffer requirements beginning on the date that it is required to be established or designated under this subpart.

(5) *Stress test requirements.* (i)(A) A U.S. intermediate holding company with total consolidated assets of $100 billion or more must comply with the requirements of subpart E of this part in the same manner as a bank holding company;

(B) A U.S. intermediate holding company must comply with the requirements of subpart E beginning the later of:

(*1*) The stress test cycle of the calendar year after the calendar year in which the U.S. intermediate holding company becomes subject to regulatory capital requirements; or

(*2*) The transition period provided under subpart E.

(ii)(A) A Category II U.S. intermediate holding company or a Category III U.S. intermediate holding company must comply with the requirements of subpart F of this part in the same manner as a bank holding company;

(B) A Category II U.S. intermediate holding company or Category III U.S. intermediate holding company must comply with the requirements of subpart F beginning the later of:

(*1*) The stress test cycle of the calendar year after the calendar year in which the U.S. intermediate holding company becomes subject to regulatory capital requirements; or

(*2*) The transition period provided under subpart F.

■ 70. In § 252.154 the section heading and paragraphs (a)(1), (b), and (c) are revised to read as follows:

§ 252.154 Risk-based and leverage capital requirements for foreign banking organizations with combined U.S. assets of $100 billion or more.

(a) * * *

(1) A foreign banking organization subject to this subpart more must certify to the Board that it meets capital adequacy standards on a consolidated basis that are established by its home-country supervisor and that are consistent with the regulatory capital framework published by the Basel Committee on Banking Supervision, as amended from time to time (Basel Capital Framework).

* * * * *

(b) *Reporting.* A foreign banking organization subject to this subpart must provide to the Board reports relating to its compliance with the capital adequacy measures described in paragraph (a) of this section concurrently with filing the FR Y–7Q.

(c) *Noncompliance with the Basel Capital Framework.* If a foreign banking organization does not satisfy the requirements of this section, the Board may impose requirements, conditions, or restrictions relating to the activities or business operations of the U.S. operations of the foreign banking organization. The Board will coordinate with any relevant State or Federal regulator in the implementation of such requirements, conditions, or restrictions. If the Board determines to impose one or more requirements, conditions, or restrictions under this paragraph, the Board will notify the organization before it applies any requirement, condition, or restriction, and describe the basis for imposing such requirement, condition, or restriction. Within 14 calendar days of receipt of a notification under this paragraph, the organization may request in writing that the Board reconsider the requirement, condition, or restriction. The Board will respond in writing to the organization's request for reconsideration prior to applying the requirement, condition, or restriction.

■ 71. In § 252.155 revise the section heading and paragraphs (a)(1) and (3) and (b)(1) to read as follows:

§ 252.155 Risk-management and risk-committee requirements for foreign banking organizations with combined U.S. assets of $100 billion or more.

(a) * * *

(1) *General.* A foreign banking organization subject to this subpart must maintain a U.S. risk committee that approves and periodically reviews the risk-management policies of the combined U.S. operations of the foreign banking organization and oversees the risk-management framework of such combined U.S. operations. The U.S. risk committee's responsibilities include the liquidity risk-management responsibilities set forth in § 252.156(a).

* * * * *

(3) *Placement of the U.S. risk committee.* (i) A foreign banking organization that conducts its operations in the United States solely through a U.S. intermediate holding company must maintain its U.S. risk committee as a committee of the board of directors of its U.S. intermediate holding company (or equivalent thereof).

(ii) A foreign banking organization that conducts its operations through U.S. branches or U.S. agencies (in addition to through its U.S. intermediate holding company, if any) may maintain its U.S. risk committee either:

(A) As a committee of the global board of directors (or equivalent thereof), on a standalone basis or as a joint committee with its enterprise-wide risk committee (or equivalent thereof); or

(B) As a committee of the board of directors of its U.S. intermediate holding company (or equivalent thereof), on a standalone basis or as a joint committee with the risk committee of its U.S. intermediate holding company required pursuant to § 252.153(e)(3).

* * * * *

(b) * * *

(1) *General.* A foreign banking organization subject to this subpart or its U.S. intermediate holding company, if any, must appoint a U.S. chief risk officer with experience in identifying, assessing, and managing risk exposures of large, complex financial firms.

* * * * *

■ 72. In § 252.156, the section heading and paragraphs (a)(1) introductory text, (b)(1) and (2), (b)(3)(i), (b)(4) through (6), (c)(1), (c)(2)(ii), (d)(1), (e)(1), (e)(2)(i)(A) and (C), (e)(2)(ii)(A), (f), and (g) are revised to read as follows:

The revisions read as follows:

§ 252.156 Liquidity risk-management requirements for foreign banking organizations with combined U.S. assets of $100 billion or more.

(a) * * *

(1) The U.S. risk committee established by a foreign banking organization pursuant to § 252.155(a) (or a designated subcommittee of such committee composed of members of the board of directors (or equivalent thereof)) of the U.S. intermediate holding company or the foreign banking organization, as appropriate must:

* * * * *

(b) * * *

(1) *Liquidity risk.* The U.S. chief risk officer of a foreign banking organization subject to this subpart must review the strategies and policies and procedures established by senior management of the U.S. operations for managing the risk that the financial condition or safety and soundness of the foreign banking organization's combined U.S. operations would be adversely affected by its inability or the market's perception of its inability to meet its cash and collateral obligations (liquidity risk).

(2) *Liquidity risk tolerance.* The U.S. chief risk officer of a foreign banking organization subject to this subpart must review information provided by the senior management of the U.S. operations to determine whether the combined U.S. operations are operating in accordance with the established liquidity risk tolerance. The U.S. chief risk officer must regularly, and, at least semi-annually, report to the foreign banking organization's U.S. risk committee and enterprise-wide risk committee, or the equivalent thereof (if any) (or a designated subcommittee of such committee composed of members of the relevant board of directors (or equivalent thereof)) on the liquidity risk profile of the foreign banking organization's combined U.S. operations and whether it is operating in accordance with the established liquidity risk tolerance for the U.S.

operations, and must establish procedures governing the content of such reports.

(3) * * *

(i) The U.S. chief risk officer of a foreign banking organization subject to this subpart must approve new products and business lines and evaluate the liquidity costs, benefits, and risks of each new business line and each new product offered, managed or sold through the foreign banking organization's combined U.S. operations that could have a significant effect on the liquidity risk profile of the U.S. operations of the foreign banking organization. The approval is required before the foreign banking organization implements the business line or offers the product through its combined U.S. operations. In determining whether to approve the new business line or product, the U.S. chief risk officer must consider whether the liquidity risk of the new business line or product (under both current and stressed conditions) is within the foreign banking organization's established liquidity risk tolerance for its combined U.S. operations.

* * * * *

(4) *Cash-flow projections.* The U.S. chief risk officer of a foreign banking organization subject to this subpart must review the cash-flow projections produced under paragraph (d) of this section at least quarterly (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition of the foreign banking organization or the U.S. operations warrant) to ensure that the liquidity risk of the foreign banking organization's combined U.S. operations is within the established liquidity risk tolerance.

(5) *Liquidity risk limits.* The U.S. chief risk officer of a foreign banking organization subject to this subpart must establish liquidity risk limits as set forth in paragraph (f) of this section and review the foreign banking organization's compliance with those limits at least quarterly (or more often, if changes in market conditions or the liquidity position, risk profile, or financial condition of the U.S. operations of the foreign banking organization warrant).

(6) *Liquidity stress testing.* The U.S. chief risk officer of a foreign banking organization subject to this subpart must:

(i) Approve the liquidity stress testing practices, methodologies, and assumptions required in § 252.157(a) at least quarterly, and whenever the foreign banking organization materially revises its liquidity stress testing practices, methodologies or assumptions;

(ii) Review the liquidity stress testing results produced under § 252.157(a) of this subpart at least quarterly; and

(iii) Approve the size and composition of the liquidity buffer established under § 252.157(c) of this subpart at least quarterly.

(c) * * *

(1) A foreign banking organization subject to this subpart must establish and maintain a review function, which is independent of the management functions that execute funding for its combined U.S. operations, to evaluate the liquidity risk management for its combined U.S. operations.

(2) * * *

(ii) Assess whether the foreign banking organization's liquidity risk-management function of its combined U.S. operations complies with applicable laws and regulations, and sound business practices; and

* * * * *

(d) * * *

(1) A foreign banking organization subject to this subpart must produce comprehensive cash-flow projections for its combined U.S. operations that project cash flows arising from assets, liabilities, and off-balance sheet exposures over, at a minimum, short- and long-term time horizons. The foreign banking organization must update short-term cash-flow projections daily and must update longer-term cash-flow projections at least monthly.

* * * * *

(e) * * *

(1) A foreign banking organization subject to this subpart must establish and maintain a contingency funding plan for its combined U.S. operations that sets out the foreign banking organization's strategies for addressing liquidity needs during liquidity stress events. The contingency funding plan must be commensurate with the capital structure, risk profile, complexity, activities, size, and the established liquidity risk tolerance for the combined U.S. operations. The foreign banking organization must update the contingency funding plan for its combined U.S. operations at least annually, and when changes to market and idiosyncratic conditions warrant.

(2) * * *

(i) * * *

(A) Identify liquidity stress events that could have a significant impact on the liquidity of the foreign banking organization or its combined U.S. operations;

* * * * *

(C) Identify the circumstances in which the foreign banking organization would implement its action plan described in paragraph (e)(2)(ii)(A) of this section, which circumstances must include failure to meet any minimum liquidity requirement imposed by the Board on the foreign banking organization's combined U.S. operations;

* * * * *

(ii) * * *

(A) Include an action plan that clearly describes the strategies that the foreign banking organization will use to respond to liquidity shortfalls in its combined U.S. operations for identified liquidity stress events, including the methods that the organization or the combined U.S. operations will use to access alternative funding sources;

* * * * *

(f) *Liquidity risk limits*—(1) *General.* A foreign banking organization must monitor sources of liquidity risk and establish limits on liquidity risk that are consistent with the organization's established liquidity risk tolerance and that reflect the organization's capital structure, risk profile, complexity, activities, and size.

(2) *Liquidity risk limits established by a Category II foreign banking organization or Category III foreign banking organization.* If the foreign banking organization is not a Category IV foreign banking organization, liquidity risk limits established under paragraph (f)(1) of this section must include limits on:

(i) Concentrations in sources of funding by instrument type, single counterparty, counterparty type, secured and unsecured funding, and as applicable, other forms of liquidity risk;

(ii) The amount of liabilities that mature within various time horizons; and

(iii) Off-balance sheet exposures and other exposures that could create funding needs during liquidity stress events.

(g) *Collateral, legal entity, and intraday liquidity risk monitoring.* A foreign banking organization subject to this subpart or more must establish and maintain procedures for monitoring liquidity risk as set forth in this paragraph (g).

(1) *Collateral.* The foreign banking organization must establish and maintain policies and procedures to monitor assets that have been, or are available to be, pledged as collateral in connection with transactions to which entities in its U.S. operations are counterparties. These policies and procedures must provide that the foreign banking organization:

(i) Calculates all of the collateral positions for its combined U.S. operations according to the frequency specified in paragraph (g)(1)(i)(A) or (B) of this section or as directed by the Board, specifying the value of pledged assets relative to the amount of security required under the relevant contracts and the value of unencumbered assets available to be pledged:

(A) If the foreign banking organization is not a Category IV foreign banking organization, on at least a weekly basis; or

(B) If the foreign banking organization is a Category IV foreign banking organization, on at least a monthly basis;

(ii) Monitors the levels of unencumbered assets available to be pledged by legal entity, jurisdiction, and currency exposure;

(iii) Monitors shifts in the foreign banking organization's funding patterns, including shifts between intraday, overnight, and term pledging of collateral; and

(iv) Tracks operational and timing requirements associated with accessing collateral at its physical location (for example, the custodian or securities settlement system that holds the collateral).

(2) *Legal entities, currencies and business lines.* The foreign banking organization must establish and maintain procedures for monitoring and controlling liquidity risk exposures and funding needs of its combined U.S. operations, within and across significant legal entities, currencies, and business lines and taking into account legal and regulatory restrictions on the transfer of liquidity between legal entities.

(3) *Intraday exposure.* The foreign banking organization must establish and maintain procedures for monitoring intraday liquidity risk exposure for its combined U.S. operations that are consistent with the capital structure, risk profile, complexity, activities, and size of the foreign banking organization and its combined U.S. operations. If the foreign banking organization is not a Category IV banking organization these procedures must address how the management of the combined U.S. operations will:

(i) Monitor and measure expected gross daily inflows and outflows;

(ii) Manage and transfer collateral to obtain intraday credit;

(iii) Identify and prioritize time-specific obligations so that the foreign banking organizations can meet these obligations as expected and settle less critical obligations as soon as possible;

(iv) Manage the issuance of credit to customers where necessary; and

(v) Consider the amounts of collateral and liquidity needed to meet payment systems obligations when assessing the overall liquidity needs of the combined U.S. operations.

■ 73. In § 252.157:

■ a. The section heading and paragraphs (a)(1)(i) through (iv), (a)(2), and (a)(7)(i) through (iii) are revised;

■ b. Paragraph (a)(8) is added;

■ c. Paragraphs (b) and (c)(1) and (c)(7)(i) through (iv) are revised; and

■ d. Paragraph (c)(7)(v) is added.

The revisions and addition read as follows:

§ 252.157 Liquidity stress testing and buffer requirements for foreign banking organizations with combined U.S. assets of $100 billion or more.

(a) * * *

(1) * * *

(i) A foreign banking organization subject to this subpart must conduct stress tests to separately assess the potential impact of liquidity stress scenarios on the cash flows, liquidity position, profitability, and solvency of:

(A) Its combined U.S. operations as a whole;

(B) Its U.S. branches and agencies on an aggregate basis; and

(C) Its U.S. intermediate holding company, if any.

(ii) Each liquidity stress test required under this paragraph (a)(1) must use the stress scenarios described in paragraph (a)(3) of this section and take into account the current liquidity condition, risks, exposures, strategies, and activities of the combined U.S. operations.

(iii) The liquidity stress tests required under this paragraph (a)(1) must take into consideration the balance sheet exposures, off-balance sheet exposures, size, risk profile, complexity, business lines, organizational structure and other characteristics of the foreign banking organization and its combined U.S. operations that affect the liquidity risk profile of the combined U.S. operations.

(iv) In conducting a liquidity stress test using the scenarios described in paragraphs (a)(3)(i) and (iii) of this section, the foreign banking organization must address the potential direct adverse impact of associated market disruptions on the foreign banking organization's combined U.S. operations and the related indirect effect such impact could have on the combined U.S. operations of the foreign banking organization and incorporate the potential actions of other market participants experiencing liquidity stresses under the market disruptions that would adversely affect the foreign banking organization or its combined U.S. operations.

(2) *Frequency.* The foreign banking organization must perform the liquidity stress tests required under paragraph (a)(1) of this section according to the frequency specified in paragraph (a)(2)(i) or (ii) of this section or as directed by the Board:

(i) If the foreign banking organization is not a Category IV foreign banking organization, at least monthly; or

(ii) If the foreign banking organization is a Category IV foreign banking organization, at least quarterly.

* * * * *

(7) * * *

(i) *Stress test function.* A foreign banking organization subject to this subpart, within its combined U.S. operations and its enterprise-wide risk management, must establish and maintain policies and procedures governing its liquidity stress testing practices, methodologies, and assumptions that provide for the incorporation of the results of liquidity stress tests in future stress testing and for the enhancement of stress testing practices over time.

(ii) *Controls and oversight.* The foreign banking organization must establish and maintain a system of controls and oversight that is designed to ensure that its liquidity stress testing processes are effective in meeting the requirements of this section. The controls and oversight must ensure that each liquidity stress test appropriately incorporates conservative assumptions with respect to the stress scenario in paragraph (a)(3) of this section and other elements of the stress-test process, taking into consideration the capital structure, risk profile, complexity, activities, size, and other relevant factors of the combined U.S. operations. These assumptions must be approved by U.S. chief risk officer and subject to independent review consistent with the standards set out in § 252.156(c).

(iii) *Management information systems.* The foreign banking organization must maintain management information systems and data processes sufficient to enable it to effectively and reliably collect, sort, and aggregate data and other information related to the liquidity stress testing of its combined U.S. operations.

(8) *Notice and response.* If the Board determines that a foreign banking organization must conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section, the Board will notify the foreign banking organization before the change in frequency takes effect, and describe the basis for its determination. Within

14 calendar days of receipt of a notification under this paragraph, the foreign banking organization may request in writing that the Board reconsider the requirement. The Board will respond in writing to the organization's request for reconsideration prior to requiring the foreign banking organization to conduct liquidity stress tests according to a frequency other than the frequency provided in paragraphs (a)(2)(i) and (ii) of this section.

(b) *Reporting of liquidity stress tests required by home-country regulators.* A foreign banking organization subject to this subpart must make available to the Board, in a timely manner, the results of any liquidity internal stress tests and establishment of liquidity buffers required by regulators in its home jurisdiction. The report required under this paragraph must include the results of its liquidity stress test and liquidity buffer, if required by the laws or regulations implemented in the home jurisdiction, or expected under supervisory guidance.

(c) * * *

(1) *General.* A foreign banking organization subject to this subpart must maintain a liquidity buffer for its U.S. intermediate holding company, if any, calculated in accordance with paragraph (c)(2) of this section, and a separate liquidity buffer for its U.S. branches and agencies, if any, calculated in accordance with paragraph (c)(3) of this section.

* * * * *

(7) * * *

(i) *Highly liquid assets.* The asset must be a highly liquid asset. For these purposes, a highly liquid asset includes:

(A) Cash;

(B) Assets that meet the criteria for high quality liquid assets as defined in 12 CFR 249.20; or

(C) Any other asset that the foreign banking organization demonstrates to the satisfaction of the Board:

(1) Has low credit risk and low market risk;

(2) Is traded in an active secondary two-way market that has committed market makers and independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a reasonable time period conforming with trade custom; and

(3) Is a type of asset that investors historically have purchased in periods of financial market distress during which market liquidity has been impaired.

(ii) *Unencumbered.* The asset must be unencumbered. For these purposes, an asset is unencumbered if it:

(A) Is free of legal, regulatory, contractual or other restrictions on the ability of such company promptly to liquidate, sell or transfer the asset; and

(B) Is either:

(*1*) Not pledged or used to secure or provide credit enhancement to any transaction; or

(*2*) Pledged to a central bank or a U.S. government-sponsored enterprise, to the extent potential credit secured by the asset is not currently extended by such central bank or U.S. government-sponsored enterprise or any of its consolidated subsidiaries.

(iii) *Calculating the amount of a highly liquid asset.* In calculating the amount of a highly liquid asset included in the liquidity buffer, the foreign banking organization must discount the fair market value of the asset to reflect any credit risk and market price volatility of the asset.

(iv) *Operational requirements.* With respect to the liquidity buffer, the foreign banking organization must:

(A) Establish and implement policies and procedures that require highly liquid assets comprising the liquidity buffer to be under the control of the management function in the foreign banking organization that is charged with managing liquidity risk of its combined U.S. operations; and

(B) Demonstrate the capability to monetize a highly liquid asset under each scenario required under § 252.157(a)(3).

(v) *Diversification.* The liquidity buffer must not contain significant concentrations of highly liquid assets by issuer, business sector, region, or other factor related to the foreign banking organization's risk, except with respect to cash and securities issued or guaranteed by the United States, a U.S. government agency, or a U.S. government sponsored enterprise.

* * * * *

■ 74. In § 252.158, the section heading and paragraphs (b)(1) introductory text, (b)(2)(i), (c)(1) introductory text, and (c)(2) introductory text are revised to read as follows:

§ 252.158 Capital stress testing requirements for foreign banking organizations with combined U.S. assets of $100 billion or more.

* * * * *

(b) * * *

(1) A foreign banking organization subject to this subpart and that has a U.S. branch or U.S. agency must:

* * * * *

(2) * * *

(i) A supervisory capital stress test conducted by the foreign banking organization's home-country supervisor or an evaluation and review by the foreign banking organization's home-country supervisor of an internal capital adequacy stress test conducted by the foreign banking organization, according to the frequency specified in paragraph (b)(2)(A) or (B):

(A) If the foreign banking organization is not a Category IV foreign banking organization, at least annually; or

(B) If the foreign banking organization is a Category IV foreign banking organization, at least biennially; and

* * * * *

(c) * * *

(1) *In general.* A foreign banking organization subject to this subpart must report to the Board by January 5 of each calendar year, unless such date is extended by the Board, summary information about its stress-testing activities and results, including the following quantitative and qualitative information:

* * * * *

(2) *Additional information required for foreign banking organizations in a net due from position.* If, on a net basis, the U.S. branches and agencies of a foreign banking organization subject to this subpart provide funding to the foreign banking organization's non-U.S. offices and non-U.S. affiliates, calculated as the average daily position over a stress test cycle for a given year, the foreign banking organization must report the following information to the Board by January 5 of each calendar year, unless such date is extended by the Board:

* * * * *

Subpart Q—Single-Counterparty Credit Limits

■ 75. Section 252.170 is revised to read as follows:

§ 252.170 Applicability and general provisions.

(a) *In general.* (1) This subpart establishes single counterparty credit limits for a covered foreign entity.

(2) For purposes of this subpart:

(i) *Covered foreign entity* means:

(A) A Category II foreign banking organization;

(B) A Category III foreign banking organization;

(C) A foreign banking organization with total consolidated assets that equal or exceed $250 billion;

(D) A Category II U.S. intermediate holding company; and

(E) A Category III U.S. intermediate holding company.

(ii) *Major foreign banking organization* means a foreign banking organization that is a covered foreign entity and meets the requirements of § 252.172(c)(3) through (5).

(b) *Credit exposure limits.* (1) Section 252.172 establishes credit exposure limits for covered foreign entities and major foreign banking organizations.

(2) A covered foreign entity is required to calculate its aggregate net credit exposure, gross credit exposure, and net credit exposure to a counterparty using the methods in this subpart.

(c) *Applicability of this subpart*—(1) *Foreign banking organizations.* (i) A foreign banking organization that is a covered foreign entity as of October 5, 2018, must comply with the requirements of this subpart, including but not limited to § 252.172, beginning on July 1, 2020, unless that time is extended by the Board in writing.

(ii) Notwithstanding paragraph (c)(1)(i) of this section, a foreign banking organization that is a major foreign banking organization as of October 5, 2018, must comply with the requirements of this subpart, including but not limited to § 252.172, beginning on January 1, 2020, unless that time is extended by the Board in writing.

(iii) A foreign banking organization that becomes a covered foreign entity subject to this subpart after October 5, 2018, must comply with the requirements of this subpart beginning on the first day of the ninth calendar quarter after it becomes a covered foreign entity, unless that time is accelerated or extended by the Board in writing.

(2) *U.S. intermediate holding companies.* (i) A U.S. intermediate holding company that is a covered foreign entity as of October 5, 2018, must comply with the requirements of this subpart, including but not limited to § 252.172, beginning on July 1, 2020, unless that time is extended by the Board in writing.

(ii) [Reserved]

(iii) A U.S. intermediate holding company that becomes a covered foreign entity subject to this subpart after October 5, 2018, must comply with the requirements of this subpart beginning on the first day of the ninth calendar quarter after it becomes a covered foreign entity, unless that time is accelerated or extended by the Board in writing.

(d) *Cessation of requirements*—(1) *Foreign banking organizations.* (i) Any foreign banking organization that becomes a covered foreign entity will remain subject to the requirements of this subpart unless and until:

(A) The covered foreign entity is not a Category II foreign banking organization;

(B) The covered foreign entity is not a Category III foreign banking organization; and

(C) Its total consolidated assets fall below $250 billion for each of four consecutive quarters, as reported on the covered foreign entity's FR Y–7Q, effective on the as-of date of the fourth consecutive FR Y–7Q.

(ii) A foreign banking organization that is a covered foreign entity and that has ceased to be a major foreign banking organization for purposes of § 252.172(c) is no longer subject to the requirements of § 252.172(c) beginning on the first day of the calendar quarter following the reporting date on which it ceased to be a major foreign banking organization; provided that the foreign banking organization remains subject to the requirements of this subpart, unless it ceases to be a foreign banking organization that is a covered foreign entity pursuant to paragraph (d)(1)(i) of this section.

(2) *U.S. intermediate holding companies.* (i) Any U.S. intermediate holding company that becomes a covered foreign entity will remain subject to the requirements of this subpart unless and until:

(A) The covered foreign entity is not a Category II U.S. intermediate holding company; or

(B) The covered foreign entity is not a Category III U.S. intermediate holding company.

■ 76. In § 252.171,

■ a. Paragraph (f)(1) is revised;

■ b. Paragraph (aa) is removed; and

■ c. Paragraphs (bb) through (ll) are redesignated as paragraphs (aa) through (kk).

The revision reads as follows:

§ 252.171 Definitions.

* * * * *

(f) * * *

(1) With respect to a natural person:

(i) The natural person;

(ii) Except as provided in paragraph (f)(1)(iii) of this section, if the credit exposure of the covered foreign entity to such natural person exceeds 5 percent of tier 1 capital, the natural person and members of the person's immediate family collectively; and

(iii) Until January 1, 2021, with respect to a U.S. intermediate holding company that is a covered foreign entity and that has less than $250 billion in total consolidated assets as of December 31, 2019, if the credit exposure of the U.S. intermediate holding company to such natural person exceeds 5 percent of its capital stock and surplus, the natural person and member of the person's immediately family collectively.

* * * * *

■ 77. In § 252.172:

■ a. Paragraphs (a), (b), and (c) introductory text are revised;

■ b. Paragraph (c)(1) is removed and reserved; and

■ c. Paragraph (c)(2) is revised.

The revisions read as follows:

§ 252.172 Credit exposure limits.

(a) *Transition limit on aggregate credit exposure for certain covered foreign entities.* (1) A U.S. intermediate holding company that is a covered foreign entity and that has less than $250 billion in total consolidated assets as of December 31, 2019 is not required to comply with paragraph (b)(1) of this section until January 1, 2021.

(2) Until January 1, 2021, no U.S. intermediate holding company that is a covered foreign entity and that has less than $250 billion in total consolidated assets as of December 31, 2019 may have an aggregate net credit exposure that exceeds 25 percent of the consolidated capital stock and surplus of the U.S. intermediate holding company.

(b) *Limit on aggregate net credit exposure for covered foreign entities.* (1) Except as provided in paragraph (a) of this section, no U.S. intermediate holding company that is a covered foreign entity may have an aggregate net credit exposure to any counterparty that exceeds 25 percent of the tier 1 capital of the U.S. intermediate holding company.

(2) No foreign banking organization that is a covered foreign entity may permit its combined U.S. operations to have aggregate net credit exposure to any counterparty that exceeds 25 percent of the tier 1 capital of the foreign banking organization.

(c) Limit on aggregate net credit exposure of major foreign banking organizations to major counterparties.

(1) [Reserved]

(2) No major foreign banking organization may permit its combined U.S. operations to have aggregate net credit exposure to any major counterparty that exceeds 15 percent of the tier 1 capital of the major foreign banking organization.

* * * * *

■ 76. In § 252.173 paragraphs (b)(1) and (2) are revised and paragraph (b)(3) is added to read as follows:

§ 252.173 Gross credit exposure.

* * * * *

(b) * * *

(1) A U.S. intermediate holding company that is a covered foreign entity and that has less than $250 billion in total consolidated assets as of December 31, 2019 is not required to comply with paragraph (b)(3) of this section until January 1, 2021.

(2) Until January 1, 2021, unless the Board applies the requirements of § 252.175 to the transaction pursuant to § 252.175(d), a U.S. intermediate holding company that is a covered foreign entity and that has less than $250 billion in total consolidated assets as of December 31, 2019 must:

(i) Calculate pursuant to paragraph (a) of this section its gross credit exposure due to any investment in the debt or equity of, and any credit derivative or equity derivative between the covered foreign entity and a third party where the covered foreign entity is in the protection provider and the reference asset is an obligation or equity security of, or equity investment in, a securitization vehicle, investment fund, and other special purpose vehicle that is not an affiliate of the covered foreign entity; and

(ii) Attribute that gross credit exposure to the securitization vehicle, investment fund, or other special purpose vehicle for purposes of this subpart.

(3) Except as provided in paragraph (b)(1) of this section, a covered foreign entity must calculate pursuant to § 252.175 its gross credit exposure due to any investment in the debt or equity of, and any credit derivative or equity derivative between the covered foreign entity and a third party where the covered foreign entity is the protection provider and the reference asset is an obligation or equity security of, or equity investment in, a securitization vehicle, investment fund, and other special purpose vehicle that is not an affiliate of the covered foreign entity.

* * * * *

■ 77. In § 252.175, paragraph (a)(1) is revised to read as follows:

§ 252.175 Investments in an exposure to securitization vehicles, investment funds, and other special purpose vehicles that are not affiliates of the covered foreign entity.

(a) * * *

(1) This section applies to a covered foreign entity, except as provided in paragraph (a)(1)(i) of this section.

(i) Until January 1, 2021, this section does not apply to a U.S. intermediate holding company that is a covered foreign entity with less than $250 billion in total consolidated assets as of December 31, 2019, provided that:

(A) In order to avoid evasion of this subpart, the Board may determine, after notice to the covered foreign entity and opportunity for hearing, that a U.S. intermediate holding company with less than $250 billion in total consolidated assets must apply either the approach in this paragraph (a) or the look-through approach in paragraph (b) of this section, or must recognize exposures to a third party that has a contractual obligation to provide credit or liquidity support to a securitization vehicle, investment fund, or other special purpose vehicle that is not an affiliate of the covered foreign entity, as provided in paragraph (c) of this section; and

(B) For purposes of paragraph (a)(1)(i)(A) of this section, the Board, in its discretion and as applicable, may allow a covered foreign entity to measure its capital base using the covered foreign entity's capital stock and surplus rather than its tier 1 capital.

* * * * *

■ 78. In § 252.176 paragraphs (a)(1) and (a)(2)(i) are revised to read as follows:

§ 252.176 Aggregation of exposures to more than one counterparty due to economic interdependence or control relationships.

(a) * * *

(1) This section applies to a covered foreign entity except as provided in paragraph (a)(1)(i) of this section.

(i) Until January 1, 2021, paragraphs (a)(2) through (d) of this section do not apply to a U.S. intermediate holding company that is a covered foreign entity with less than $250 billion in total consolidated assets as of December 31, 2019.

(ii) [Reserved]

(2)(i) If a covered foreign entity has an aggregate net credit exposure to any counterparty that exceeds 5 percent of its tier 1 capital, the covered foreign entity must assess its relationship with the counterparty under paragraph (b)(2) of this section to determine whether the counterparty is economically interdependent with one or more other counterparties of the covered foreign entity and under paragraph (c)(1) of this section to determine whether the counterparty is connected by a control relationship with one or more other counterparties.

* * * * *

■ 79. In § 252.178, paragraphs (a)(1) and (2) and (c)(2) are revised to read as follows:

§ 252.178 Compliance.

(a) * * *

(1) Except as provided in paragraph (a)(2) of this section, using all available data, including any data required to be maintained or reported to the Federal Reserve under this subpart, a covered foreign entity must comply with the requirements of this subpart on a daily basis at the end of each business day.

(2) Until December 31, 2020, using all available data, including any data required to be maintained or reported to the Federal Reserve under this subpart, a U.S. intermediate holding company that is a covered foreign entity with less than $250 billion in total consolidated assets as of December 31, 2019 must comply with the requirements of this subpart on a quarterly basis, unless the Board determines and notifies the entity in writing that more frequent compliance is required.

* * * * *

(c) * * *

(2) A covered foreign entity may request a special temporary credit exposure limit exemption from the Board. The Board may grant approval for such exemption in cases where the Board determines that such credit transactions are necessary or appropriate to preserve the safety and soundness of the covered foreign entity or U.S. financial stability. In acting on a request for an exemption, the Board will consider the following:

(i) A decrease in the covered foreign entity's capital stock and surplus or tier 1 capital, as applicable;

(ii) The merger of the covered foreign entity with another covered foreign entity;

(iii) A merger of two counterparties; or

(iv) An unforeseen and abrupt change in the status of a counterparty as a result of which the covered foreign entity's credit exposure to the counterparty becomes limited by the requirements of this section; or

(v) Any other factor(s) the Board determines, in its discretion, is appropriate.

* * * * *

■ 80. In appendix A to part 252:

■ a. Section 1, paragraphs (a) and (b) are revised;

■ b. Section 2 is revised

■ c. Section 3, paragraph (a) is revised

■ d. Section 3.2, paragraph (a) is revised;

■ e. Section 4 is revised;

■ f. Section 4.1, paragraph (a) is revised;

■ g. Section 4.2 is revised;

■ h. Section 4.3 is removed;

■ i. Section 5, paragraphs (a) and (b) are revised;

■ j. Section 5.2.2, paragraph (a) is revised;

■ k. Section 5.3 is removed; and

■ l. Section 6, paragraph (d) is removed.

The revisions read as follows:

Appendix A to Part 252—Policy Statement on the Scenario Design Framework for Stress Testing

1. Background

(a) The Board has imposed stress testing requirements through its regulations (stress test rules) implementing section 165(i) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act or Act) and section 401(e) of the Economic Growth, Regulatory Relief, and Consumer Protection Act, and through its capital plan rule (12 CFR 225.8). Under the stress test rules, the Board conducts a supervisory stress test of each bank holding company with total consolidated assets of $100 billion or more, intermediate holding company of a foreign banking organization with total consolidated assets of $100 billion or more, and nonbank financial company that the Financial Stability Oversight Council has designated for supervision by the Board (together, covered companies).[1] In addition, under the stress test rules, certain firms are also subject to company-run stress test requirements.[2] The Board will provide for at least two different sets of conditions (each set, a scenario), including baseline and severely adverse scenarios for both supervisory and company-run stress tests (macroeconomic scenarios).[3]

(b) The stress test rules provide that the Board will notify covered companies by no later than February 15 of each year of the scenarios it will use to conduct its supervisory stress tests and provide, also by no later than February 15, covered companies and other financial companies subject to the final rules the set of scenarios they must use to conduct their company-run stress tests. Under the stress test rules, the Board may require certain companies to use additional components in the severely adverse scenario or additional scenarios. For example, the Board expects to require large banking organizations with significant trading activities to include a trading and counterparty component (market shock, described in the following sections) in their severely adverse scenario. The Board will provide any additional components or scenario by no later than March 1 of each year.[4] The Board expects that the scenarios it will require the companies to use will be the same as those the Board will use to conduct its supervisory stress tests (together, stress test scenarios).

* * * * *

2. Overview and Scope

(a) This policy statement provides more detail on the characteristics of the stress test scenarios and explains the considerations and procedures that underlie the approach for formulating these scenarios. The considerations and procedures described in this policy statement apply to the Board's stress testing framework, including to the stress tests required under 12 CFR part 252, subparts B, E, and F as well as the Board's capital plan rule (12 CFR 225.8).[6]

(b) Although the Board does not envision that the broad approach used to develop scenarios will change from year to year, the stress test scenarios will reflect changes in the outlook for economic and financial conditions and changes to specific risks or vulnerabilities that the Board, in consultation with the other federal banking agencies, determines should be considered in the annual stress tests. The stress test scenarios should not be regarded as forecasts; rather, they are hypothetical paths of economic variables that will be used to assess the strength and resilience of the companies' capital in various economic and financial environments.

(c) The remainder of this policy statement is organized as follows. Section 3 provides a broad description of the baseline and severely adverse scenarios and describes the types of variables that the Board expects to include in the macroeconomic scenarios and the market shock component of the stress test scenarios applicable to companies with significant trading activity. Section 4 describes the Board's approach for developing the macroeconomic scenarios, and section 5 describes the approach for the market shocks. Section 6 describes the relationship between the macroeconomic scenario and the market shock components. Section 7 provides a timeline for the formulation and publication of the macroeconomic assumptions and market shocks.

3. Content of the Stress Test Scenarios

(a) The Board will publish a minimum of two different scenarios, including baseline and severely adverse conditions, for use in stress tests required in the stress test rules.[7] In general, the Board anticipates that it will not issue additional scenarios. Specific circumstances or vulnerabilities that in any given year the Board determines require particular vigilance to ensure the resilience of the banking sector will be captured in the severely adverse scenario. A greater number of scenarios could be needed in some years—for example, because the Board identifies a large number of unrelated and uncorrelated but nonetheless significant risks.

* * * * *

3.2 Market Shock Component

(a) The market shock component of the severely adverse scenario will only apply to companies with significant trading activity and their subsidiaries.[10] The component consists of large moves in market prices and rates that would be expected to generate losses. Market shocks differ from macroeconomic scenarios in a number of ways, both in their design and application. For instance, market shocks that might typically be observed over an extended period (*e.g.,* 6 months) are assumed to be an instantaneous event which immediately affects the market value of the companies' trading assets and liabilities. In addition, under the stress test rules, the as-of date for market shocks will differ from the quarter-end, and the Board will provide the as-of date for market shocks no later than February 1 of each year. Finally, as described in section 4, the market shock includes a much larger set of risk factors than the set of economic and financial variables included in macroeconomic scenarios. Broadly, these risk factors include shocks to financial market variables that affect asset prices, such as a credit spread or the yield on a bond, and, in some cases, the value of the position itself (*e.g.,* the market value of private equity positions).

* * * * *

4. Approach for Formulating the Macroeconomic Assumptions for Scenarios

(a) This section describes the Board's approach for formulating macroeconomic assumptions for each scenario. The methodologies for formulating this part of each scenario differ by scenario, so these methodologies for the baseline and severely adverse scenarios are described separately in each of the following subsections.

(b) In general, the baseline scenario will reflect the most recently available consensus views of the macroeconomic outlook expressed by professional forecasters, government agencies, and other public-sector organizations as of the beginning of the stress-test cycle. The severely adverse scenario will consist of a set of economic and financial conditions that reflect the conditions of post-war U.S. recessions.

(c) Each of these scenarios is described further in sections below as follows: Baseline (subsection 4.1) and severely adverse (subsection 4.2)

4.1 Approach for Formulating Macroeconomic Assumptions in the Baseline Scenario

(a) The stress test rules define the baseline scenario as a set of conditions that affect the

---

[1] 12 U.S.C. 5365(i)(1); 12 CFR part 252, subpart E.

[2] 12 U.S.C. 5365(i)(2); 12 CFR part 252, subparts B and F.

[3] The stress test rules define scenarios as those sets of conditions that affect the United States economy or the financial condition of a company that the Board determines are appropriate for use in stress tests, including, but not limited to, baseline and severely adverse scenarios. The stress test rules define baseline scenario as a set of conditions that affect the United States economy or the financial condition of a company and that reflect the consensus views of the economic and financial outlook. The stress test rules define severely adverse scenario as a set of conditions that affect the U.S. economy or the financial condition of a company and that overall are significantly more severe than those associated with the baseline scenario and may include trading or other additional components.

[4] *Id.*

[6] 12 CFR 252.14(a), 12 CFR 252.44(a), 12 CFR 252.54(a).

[7] 12 CFR 252.14(b), 12 CFR 252.44(b), 12 CFR 252.54(b).

[10] Currently, companies with significant trading activity include any bank holding company or intermediate holding company that (1) has aggregate trading assets and liabilities of $50 billion or more, or aggregate trading assets and liabilities equal to 10 percent or more of total consolidated assets, and (2) is not a large and noncomplex firm. The Board may also subject a state member bank subsidiary of any such bank holding company to the market shock component. The set of companies subject to the market shock component could change over time as the size, scope, and complexity of financial company's trading activities evolve.

U.S. economy or the financial condition of a banking organization, and that reflect the consensus views of the economic and financial outlook. Projections under a baseline scenario are used to evaluate how companies would perform in more likely economic and financial conditions. The baseline serves also as a point of comparison to the severely adverse scenario, giving some sense of how much of the company's capital decline could be ascribed to the scenario as opposed to the company's capital adequacy under expected conditions.

* * * * *

4.2 Approach for Formulating the Macroeconomic Assumptions in the Severely Adverse Scenario

The stress test rules define a severely adverse scenario as a set of conditions that affect the U.S. economy or the financial condition of a financial company and that overall are significantly more severe than those associated with the baseline scenario. The financial company will be required to publicly disclose a summary of the results of its stress test under the severely adverse scenario, and the Board intends to publicly disclose the results of its analysis of the financial company under the severely adverse scenario.

* * * * *

5. Approach for Formulating the Market Shock Component

(a) This section discusses the approach the Board proposes to adopt for developing the market shock component of the severely adverse scenario appropriate for companies with significant trading activities. The design and specification of the market shock component differs from that of the macroeconomic scenarios because profits and losses from trading are measured in mark-to-market terms, while revenues and losses from traditional banking are generally measured using the accrual method. As noted above, another critical difference is the time-evolution of the market shock component. The market shock component consists of an instantaneous ''shock'' to a large number of risk factors that determine the mark-to-market value of trading positions, while the macroeconomic scenarios supply a projected path of economic variables that affect traditional banking activities over the entire planning period.

(b) The development of the market shock component that are detailed in this section are as follows: Baseline (subsection 5.1) and severely adverse (subsection 5.2).

* * * * *

5.2.2 Approaches to Market Shock Design

(a) As an additional component of the severely adverse scenario, the Board plans to use a standardized set of market shocks that apply to all companies with significant trading activity. The market shocks could be based on a single historical episode, multiple historical periods, hypothetical (but plausible) events, or some combination of historical episodes and hypothetical events (hybrid approach). Depending on the type of hypothetical events, a scenario based on such events may result in changes in risk factors that were not previously observed. In the supervisory scenarios for 2012 and 2013, the shocks were largely based on relative moves in asset prices and rates during the second half of 2008, but also included some additional considerations to factor in the widening of spreads for European sovereigns and financial companies based on actual observation during the latter part of 2011.

* * * * *

By order of the Board of Governors of the Federal Reserve System.

Ann Misback,

Secretary of the Board.

The NCUA Staff Draft 2020–2021 Budget Justification; Notice

NATIONAL CREDIT UNION ADMINISTRATION

The NCUA Staff Draft 2020—2021 Budget Justification

AGENCY: National Credit Union Administration (NCUA).

ACTION: Notice.

SUMMARY: The NCUA's draft, ''detailed business-type budget'' is being made available for public review as required by federal statute. The proposed resources will finance the agency's annual operations and capital projects, both of which are necessary for the agency to accomplish its mission. The briefing schedule and comment instructions are included in the supplementary information section.

DATES: Requests to deliver a statement at the budget briefing must be received on or before Tuesday, November 12, 2019. In order for the NCUA to produce copies for public distribution at the budget briefing, written statements and presentations for those scheduled to appear at the budget briefing must be received on or before Monday, November 18, 2019.

Written comments without public presentation at the budget briefing may be submitted by Monday, December 2, 2019.

ADDRESSES: You may submit comments by any of the following methods (Please send comments by one method only):

• Presentation at public budget briefing: submit requests to deliver a statement at the briefing to *BudgetBriefing@ncua.gov* by Tuesday, November 12, 2019. Include your name, title, affiliation, mailing address, email address, and telephone number. Copies of your presentation must be submitted to the same email address by Monday, November 18, 2019.

• *Written comments:* submit comments to *BudgetComments@ncua.gov* by Monday, December 2, 2019. Include your name and the following subject line ''Comments on the NCUA Draft 2020–2021 Budget Justification.''

Copies of the NCUA Draft 2020–2021 Budget Justification and associated materials are also available on the NCUA website at *https://www.ncua.gov/About/Pages/budget-strategic-planning/supplementary-materials.aspx.* Printed copies will be available at the November 20, 2019 budget briefing.

FOR FURTHER INFORMATION CONTACT: Rendell Jones, Chief Financial Officer, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428 or telephone: (703) 518–6571.

SUPPLEMENTARY INFORMATION: The following itemized list details the documents attached to this notice and made available for public review:

I. The NCUA Budget in Brief
II. Introduction and Strategic Context
III. Forecast and Enterprise Challenges
IV. Key Themes of the 2020–2021 Budget
V. Operating Budget
VI. Capital Budget
VII. Share Insurance Fund Administrative Budget
VIII. Financing The NCUA Programs
IX. Appendix A: Supplemental Budget Information
X: Appendix B: Capital Projects

Section 212 of the Economic Growth, Regulatory Relief, and Consumer Protection Act (Pub. L. 115–174) amended 12 U.S.C. 1789(b)(1)(A) to require the NCUA Board (Board) to ''make publicly available and publish in the **Federal Register** a draft of the detailed business-type budget.'' Although 12 U.S.C. 1789(b)(1)(A) requires publication of a ''business-type budget'' only for the agency operations arising under the Federal Credit Union Act's subchapter on insurance activities, in the interest of transparency the Board is providing the agency's entire staff draft 2020–2021 Budget Justification (budget) in this Notice.

The draft budget details the resources required to support NCUA's mission as outlined in its 2018–2022 Strategic Plan. The draft budget includes personnel and dollar estimates for three major budget components: (1) The Operating Budget; (2) the Capital Budget; and (3) the Share Insurance Fund Administrative Budget. The resources proposed in the draft budget will be used to carry out the agency's annual operations.

The NCUA staff will present its draft budget to the Board at a budget briefing open to the public and scheduled for Wednesday, November 20, 2019 from 10:00 a.m. to 12:00 p.m. Eastern. The budget briefing will be held in the NCUA Board meeting room. A livestream of the briefing also will be available through a link on *ncua.gov*.

If you wish to attend the briefing and deliver a statement, you must email a request to *BudgetBriefing@ncua.gov* by Tuesday, November 12, 2019. Your request must include your name, title, affiliation, mailing address, email address, and telephone number. The NCUA will work to accommodate as many public statements as possible at the November 20, 2019 budget briefing. The Board Secretary will inform you if you have been approved to make a presentation and how much time you will be allotted. A written copy of your presentation must be delivered to the Board Secretary via email at *BudgetBriefing@ncua.gov* by Monday, November 18, 2019.

Written comments on the draft budget will also be accepted by email at *BudgetComments@ncua.gov* until Monday, December 2, 2019. Include your name and the following subject line with your comments: ''Comments on the NCUA Draft 2020–2021 Budget Justification.''

All comments should provide specific, actionable recommendations rather than general remarks. The Board will review and consider any comments from the public prior to approving the budget.

By the National Credit Union Administration Board on October 28, 2019.

Gerard S. Poliquin,

Secretary of the Board.

I. The NCUA Budget in Brief

Proposed 2020 and 2021 Budgets

The National Credit Union Administration's (NCUA) *2018–2022 Strategic Plan* sets forth the agency's goals and objectives that form the basis for determining resource needs and allocations. The annual budget provides the resources to execute the strategic plan, to implement important initiatives, and to undertake the NCUA's major programs: Examination and supervision, insurance, credit union development, consumer financial protection, and asset management.

2020–2021 NCUA BUDGET RESOURCES

Budget	2020 Board Approved Budget	2020 Revised Budget	Change (2020)	Change Percent (2020)	2021 Requested Budget	Change (2020-21)	Change Percent (2020–21)	2020 FTE	2021 FTE	FTE Change 2020–2021
Operating Budget	316,164,000	316,213,000	49,000	0.0%	325,973,000	9,760,000	3.1%	1,180	1,180	-
Capital Budget	18,608,000	25,075,541	6,467,541	34.8%	25,205,000	129,459	0.5%	-	-	-
Share Insurance Fund Admin. Budget	9,121,000	6,450,000	(2,671,000)	-29.3%	6,932,000	482,000	7.5%	5	5	-
Total	**$ 343,893,000**	**$ 347,738,541**	**$ 3,845,541**	**1.1%**	**$ 358,110,000**	**$10,371,459**	**3.0%**	**1,185**	**1,185**	**-**

The NCUA's 2020–2021 budget justification consists of three separate budgets: The Operating Budget, the Capital Budget, and the National Credit Union Share Insurance Fund Administrative Budget. Combined, these three budgets total $347.7 million for 2020, which is 1.1 percent more than the 2020 funding level approved by the NCUA Board in November 2018, and 3.9 percent more than the comparable 2019 Board-approved budget.

A significant cost driver in the 2020 budget is the increase in mandatory contributions all federal agencies must make to the Office of Personnel Management (OPM) for the Federal Employee Retirement System (FERS). Of the total 3.9 percent budget increase between 2019 and 2020, 1.6 percentage points of growth are directly attributable to the increased cost of FERS contributions and 2.3 percentage points of growth are the result of changes in agency operations.

The 2.3 percent growth in agency operations also includes absorbing the equivalent of 0.8 percentage points of growth for costs avoided in the Share Insurance Fund Administrative Budget. This means the actual budget increase to fund the agency's operations is the equivalent of 1.5 percent growth.

Personnel levels for 2020 and 2021 reflect the agency's current staffing requirements and proposed staffing enhancements related to high-priority initiatives.

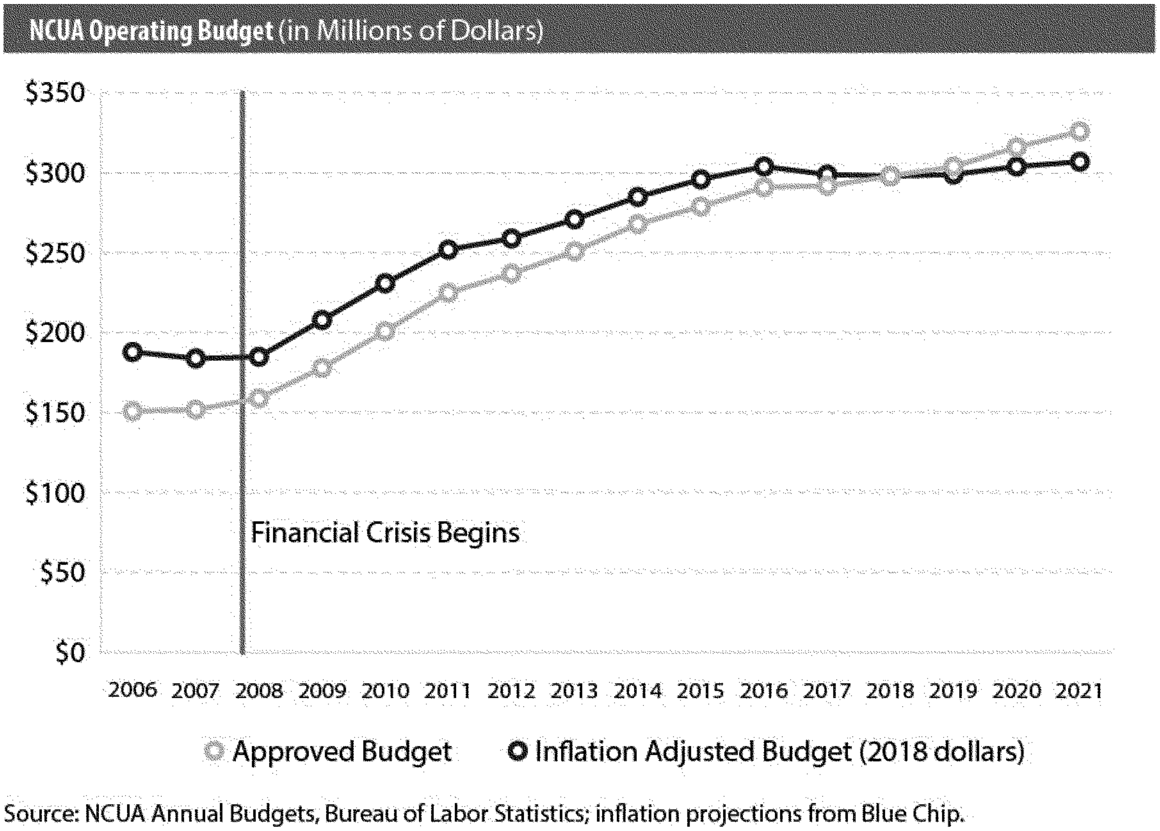
Operating Budget

The proposed 2020 Operating Budget is $316.2 million. Personnel levels increase by three full-time equivalents (FTE) compared to the 2019 Board-approved budget.[1]

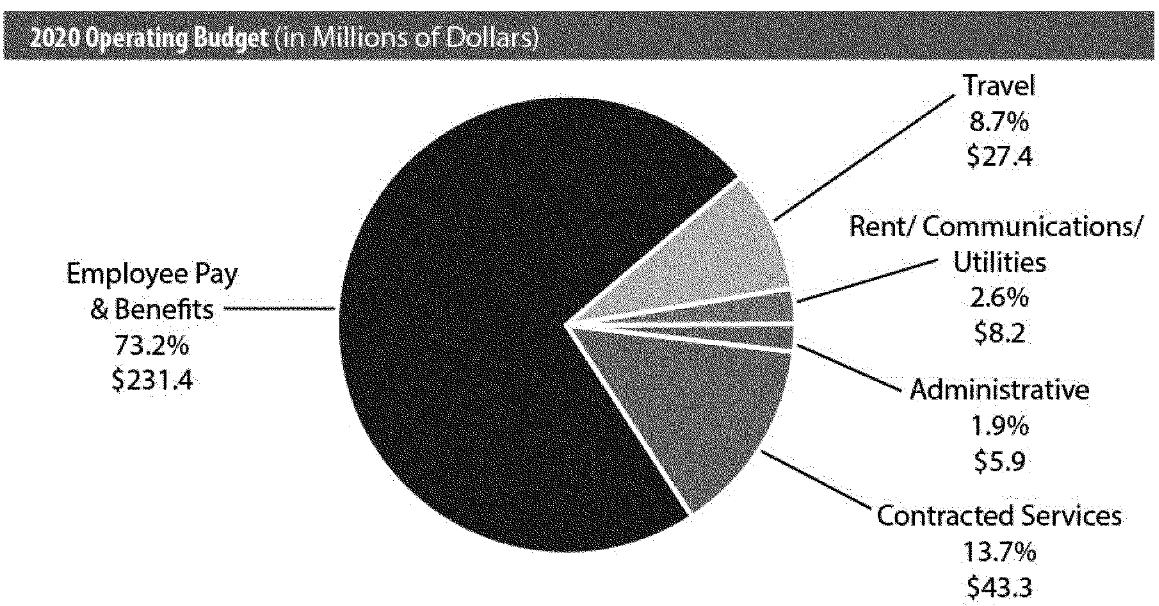
The 2020 Operating Budget, when adjusted for inflation, represents a real dollar increase of approximately $5.2 million, or 1.7 percent, compared to the 2019 Board-approved budget. In nominal dollars, the 2019 Budget increases by $11.8 million, or 3.9 percent, over the 2019 Board-approved budget of $304.4 million. The Operating Budget estimate for 2021 is $326 million and reflects no change to authorized positions.

The following chart shows recent year-on-year trends for the NCUA Operating Budget, in both real dollar and nominal terms:

[1] The published 2019 FTE level approved by the Board on November 15, 2018 was 1,173 for the Operating Budget. On July 18, 2019, the NCUA Board approved an additional four FTE. The revised 2020 Operating Budget proposes three more FTE, for a total of 1,180.

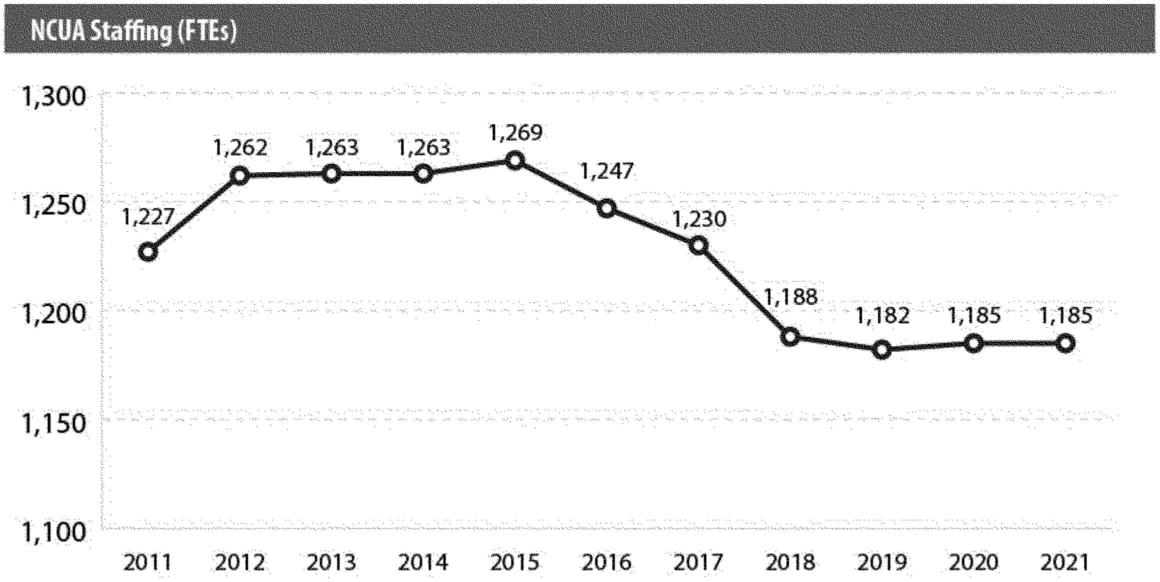


The following chart presents the major categories of spending supported by the 2020 budget, while specific adjustments to the 2019 Board-approved budget are discussed in further detail, below:



note: minor rounding differences may occur in totals

Total Staffing. The budget supports 1,185 FTE in total for 2020, of which five are funded by the Share Insurance Fund Administrative Budget. The Operating Budget funds 1,180 FTE in 2020, a net increase of three FTEs from the 2019 levels approved by the Board. Additional staff have been added to several offices as discussed later in this document. Since 2018 and despite significant credit union asset growth, total NCUA staffing has remained within a range of approximately five positions, as shown in the chart below.



Pay and Benefits. Pay and benefits increase by $8.5 million in 2020, or 3.8 percent, for a budget of $231.4 million. Over 50 percent of the growth in pay and benefits—nearly $5 million—is the result of OPM increasing the mandatory employer contribution for the FERS. Required FERS payments to OPM increase from 13.7 percent of covered employees' salaries to 16 percent, a change of 230 basis points. Nearly all NCUA employees are covered by FERS, which includes a defined pension benefit funded by both employee and employer contributions. Because almost every federal agency is required to participate in FERS, the employer share of contributions increases throughout the government in 2020. Excluding additional FERS contributions from the 2020 budget, total personnel compensation growth would be 1.6 percent instead of 3.8 percent, and total Operating Budget growth would be 2.2 percent instead of 3.9 percent.

The remaining increase in pay and benefits accounts for the merit and locality pay adjustments required by the NCUA's current collective bargaining agreement, the three new positions proposed for 2020, anticipated staff promotions, position changes, and increased costs for other mandatory employer contributions such as health insurance and retirement contributions.

Travel. The travel budget increases by $590,000 in 2020, or 2.2 percent, for a budget of $27.4 million. In 2020, the NCUA plans to train its Credit Union Examiner workforce to conduct examinations using the Modern Examination and Risk Identification Tool (MERIT) system, which is planned for full implementation in the fourth quarter of 2020. State credit union examiners will also be trained to use MERIT. The Operating Budget includes approximately $1.0 million in one-time travel costs associated with the 778 NCUA employees who will participate in MERIT training meetings in 2020.

In general, the NCUA continues working to contain the growth of travel costs by expanding offsite examination work and using technology-driven training. Government-wide per diem rates published by the General Services Administration (GSA) are expected to increase by almost 1.3 percent in 2020, accounting for a share of the travel budget growth. In addition, starting in 2019 GSA instituted a cost recovery fee for airline tickets purchased at negotiated government rates, which adds approximately $20,000 annually to the agency's cost of purchasing airline tickets at government rates.

Rent, Communications, and Utilities. Rent, communications, and utilities increase by $188,000 in 2020, or 2.3 percent, for a budget of $8.2 million. This funding pays for telecommunications services, data capacity contracts, and information technology network support. The increase is primarily due to additional data capacity that will be required as a result of implementing the new MERIT examination system, which will be cloud-based and consume more data bandwidth than the AIRES system it is replacing.

Administrative Expenses. Administrative expenses decrease by $2.8 million in 2020, or 31.9 percent, for a total budget of $5.9 million. Decreases to the administrative expenses budget category largely result from reclassifying $2.6 million in software licensing costs as contracted services, not administrative expenses, in order to reflect these costs consistently with other federal budgetary presentations.

Contracted Services. Contracted services expenses increase by $5.3 million in 2020 for a total budget of $43.3 million. However, as discussed above, approximately $2.6 million of this increase results from costs previously shown as administrative expenses being reclassified as contracted services in order to reflect these costs consistently with other federal budgetary presentations. The actual increase in the contracted services budget is approximately $2.7 million, or 7 percent.

Contracted services funding pays for products and services acquired in the commercial marketplace, and includes critical mission support services such as information technology hardware and software support, accounting and auditing services, and specialized subject matter expertise. Certain information technology costs that were previously reported as administrative expenses are now included as contracted services, which accounts for a portion of this increase. Expected price inflation for services to be purchased in 2020 accounts for the remainder of the growth in this category.

Capital Budget. The proposed 2020 Capital Budget is $25.1 million. The 2020 Capital Budget is $6.5 million more than the 2020 funding level approved by the Board in November 2018, and $3.1 million than the 2019 Board-approved budget.

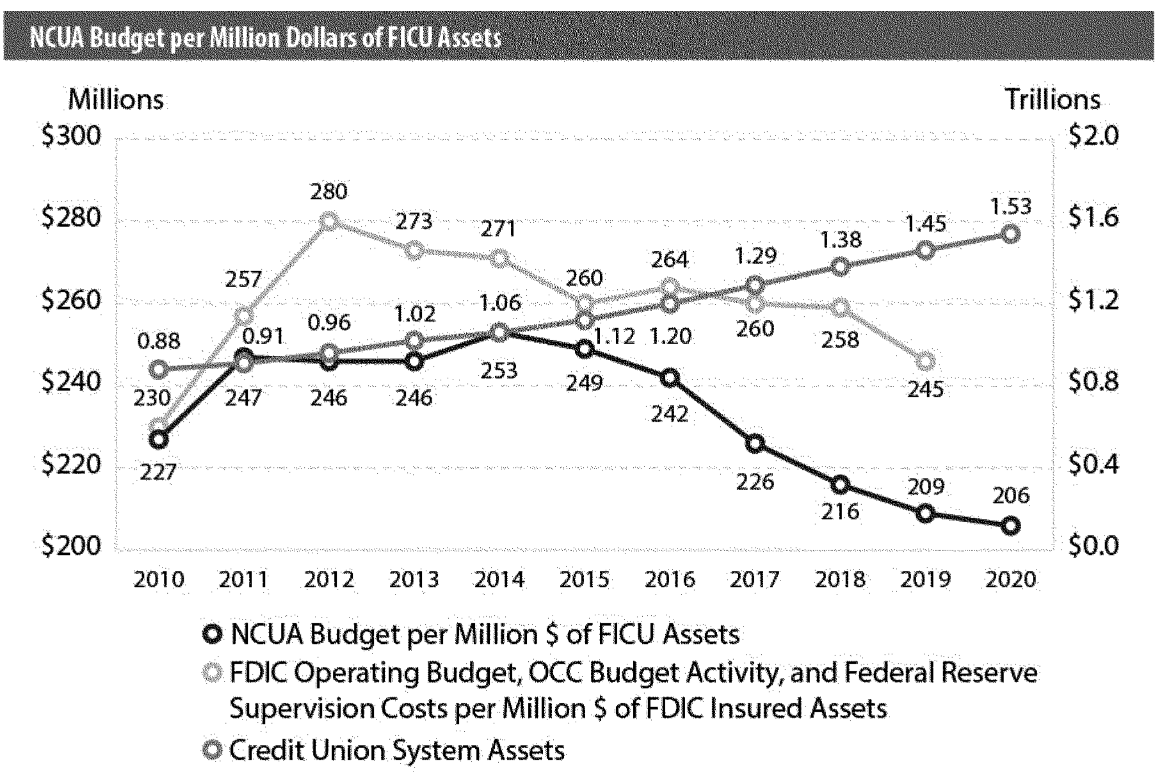
The Capital Budget pays for continued investments in technology and infrastructure projects. A major component of the Capital Budget is the development of the first phases of the Enterprise Solution Modernization (ESM) program, which includes a new technical platform and security infrastructure, a central user interface for stakeholders to transact business with the NCUA, integration of business intelligence tools into the supervision function, and the MERIT examination system, which will replace the agency's antiquated AIRES examination software and will be used by both federal and state examiners in almost all credit union examinations. The business intelligence capabilities were slated for a later iteration of ESM, but were added to the first phase when it was determined they could be integrated into MERIT for the 2020 release. The NCUA's Information Technology Prioritization Council recommended $20.9 million for IT software development projects that continue to replace the NCUA's decades-old and functionally obsolete information technology systems, and $2.7 million in other IT investments for 2020. The NCUA's facilities require $1.5 million in capital investments.

Share Insurance Fund Administrative Expenses. The proposed 2020 Share Insurance Fund Administrative budget is $6.5 million.

The 2020 Share Insurance Fund (SIF) Administrative Budget is $2.7 million less than the 2020 funding level approved by the Board in November 2018, and $1.9 million less than the 2019 Board-approved budget. The decrease in the SIF Administrative Budget is primarily attributed to the Office of National Examinations and Supervision plan to oversee credit union-run stress testing for the largest Credit Unions using its own proprietary models in 2020. Direct charges within this budget include administration of the NCUA Guaranteed Note (NGN) program, state examiner training and laptop leases, as well as financial audit support. The reduction in the SIF Administrative Expenses budget reflects that costs related to the oversight of credit union-run stress testing will be financed by the Operating Budget.

Budget Trends.

As shown in the chart below, the relative size of the NCUA budget continues to decline when compared to balance sheets at federally insured credit unions. This trend illustrates the greater operating efficiencies the NCUA has attained in the last several years relative to the size of the credit union system. Additionally, the NCUA has improved its operating efficiencies more aggressively than other financial industry regulators.



Source: NCUA Annual Budgets, Call Reports, FDIC, OCC, and Federal Reserve financial reports
*Budget per million dollars of FICU assets is calculated as the fiscal year's budget divided by the previous year's end-of-year assets (e.g. - FY2020 budget ($316M) / projected FICU assets as of 2019Q4 ($1.537T) = $206 of NCUA budget per $1M in FICU assets).

It is also notable that the NCUA's operations have become more efficient relative to the size of the credit union system because consolidation in the industry has led to growth in the number of large credit unions, specifically those with more than $10 billion in assets. This results in additional complexity in the balance sheets of such credit unions, and a corresponding increase in the supervisory review required to ensure the safety and soundness of such large institutions. The NCUA has responded to this increasing complexity through several initiatives: Creation of the specialized Office of National Examination and Supervision, development of in-house capabilities to oversee large credit unions' stress testing, use of specialist examiners with expertise in cybersecurity and capital markets, and improved quality of examination reports through enhanced quality review processes.

Federal Compliance Cost Burden

As a federal agency, the NCUA is required to devote significant resources to numerous compliance activities required by federal law, regulations, or, in some cases, Executive Orders. These requirements dictate how many of the agency's activities are implemented, and generally result in increasing costs. These compliance activities require additional effort in areas such as information technology acquisitions and management, human capital processes, financial management processes and reporting, privacy compliance, and physical and cyber security programs. While agency managers are responsible for these activities, required compliance activities add additional layers of review and procedures that make processes more challenging and expensive.

Financial Management

Federal law, regulations, and government-wide guidance promulgated by the Office of Management and Budget (OMB), the Government Accountability Office (GAO), and the Department of the Treasury place numerous requirements on federal agencies including the NCUA regarding the management of public funds. Government-wide financial management compliance requirements include: Financial statement audits, improper payments, prompt payments, internal controls, procurement, audits, enterprise risk management, strategic planning, and public reporting of financial and other information.

Information Technology (IT)

There are numerous laws, regulations and required guidance concerning information technology used by the federal government. Many of the requirements cover IT security such as the Federal Information Security Management Act. Other requirements cover records management, paperwork reduction, information technology acquisition, cybersecurity spending, and accessible technology and continuity.

Human Capital

Like other federal agencies, the NCUA is subject to an array of human capital-related laws, regulations, and other mandatory guidance issued by OPM, the Equal Employment Opportunity Commission, and OMB. Human capital compliance requirements include procedures for engagement related to hiring; management engagement with public unions and collective bargaining; employee discipline and removal procedures; required training for supervisors and employees; employee work-life and benefits programs; equal employment opportunity and required diversity and inclusion programs; and storage and retention of human resource records. The NCUA is also required by law to ''maintain comparability with other federal bank regulatory agencies'' when setting employee salaries.

Security

The NCUA's security posture is driven by numerous legal and regulatory requirements covering the full range of security functions. The NCUA is required to comply with mandatory requirements for personnel security; physical security; emergency management and continuity; communications and information security; and insider threat activities. In addition to meeting specific legislative mandates, as a federal agency, the NCUA is required to follow guidance from, but not limited to, the Office of the Director of National Intelligence, OPM, and the Federal Emergency Management Agency.

General Compliance Activities

The NCUA also has other general compliance activities that cut across numerous offices. For example, the NCUA expends resources complying with the Privacy Act; Government in the Sunshine Act; multiple laws and regulations related to government ethics standards; and various reporting and other requirements set forth by the Federal Credit Union Act and other statutes.

Federal retirement costs are an example of mandatory payments to other federal agencies. As discussed earlier in this document, the cost of mandatory contributions to OPM for most NCUA employees' retirement system will increase from 13.7 to 16.0 percent of their salaries, based on the OPM Board of Actuaries of the Civil Service Retirement System recommendations. The budget impact of these additional retirement costs in 2020 is an increase of approximately $5 million over 2019.

BILLING CODE 7535–01–P

2020 Budget in Brief: Summary Table

(dollars in millions)	Budget	Change from 2019 Budget	% Change	Description
2020 Operating Budget	$316.2	↑ $11.8	+ 3.9%	The 2020 budget provides the resources required to execute the priorities outlined in the NCUA's Strategic Plan (2018-2022).
Total Staffing (FTE)	1,185	↑ 3	+ 0.3%	The 2020 FTE level increases by three positions from 1,182 authorized by the Board in 2019[1].
Budget Category				
Pay & Benefits	$231.4	↑ $8.5	+ 3.8%	The pay and benefits adjustment covers merit and locality pay changes required by the Collective Bargaining Agreement. The increase also funds $5 million in one-time mandatory employer contributions for retirement, as well as health benefits and the compensation costs for new FTEs.
Travel	$27.4	↑ $0.6	+ 2.2%	The travel budget increases by $590,000. In 2020, the NCUA will conduct one-time MERIT training for credit union examiners. Other travel spending aligns with the examination workload.
Rent, Communications & Utilities	$8.2	↑ $0.2	+2.3%	Rent, communications, and utilities budgets maintain essential telecommunications, data capacity, and network support. This budget increases due to an anticipated increase in data capacity required for the MERIT examination system.
Administrative	$5.9	↓ $2.8	-31.9%	Administrative expenses primarily support operational requirements, FFIEC fees, relocation expenses, and employee supplies. This budget decreases because certain information technology costs were reclassified to the Contracted Services cost category.
Contracted Services	$43.3	↑ $5.3	+13.8%	Contracted services reflect costs incurred when products and services are acquired in the commercial marketplace and include critical mission support services such as information technology hardware and software development support, accounting and auditing services, and specialized subject matter expertise.

[1] The published 2019 FTE level approved by the Board on November 15, 2018 was 1,178. On July 18, 2019, the NCUA Board approved an additional four FTE.

2021 Budget in Brief: Summary Table

(dollars in millions)	Budget	Change from 2020 Budget	% Change	Description
2021 Operating Budget	**$326.0**	**↑ $9.8**	**+3.1%**	The 2021 budget provides the resources required to execute the priorities outlined in the NCUA's Strategic Plan (2018-2022).
Total Staffing (FTE)	**1,185**	**0**	**0%**	The 2021 budget includes no change from the 2020 FTE levels.
Budget Category				
Pay & Benefits	**$237.8**	**↑ $6.4**	**+ 2.8%**	The pay and benefits adjustment covers merit and locality pay changes required by the Collective Bargaining Agreement. The increase also funds mandatory employer contributions for health insurance and retirement. Other 2021 cost drivers include full cost for new FTEs added in 2020.
Travel	**$26.7**	**↓ $0.7**	**-2.4%**	Travels costs for carrying out the examination and supervision workload and other agency business.
Rent Communications & Utilities	**$8.0**	**↓ $0.2**	**-2.7%**	Rent, communications, and utilities expenses include utilities, space rental, software licenses and other recurring costs.
Administration	**$6.2**	**↑ $0.3**	**+4.2%**	Administration expenses primarily support operational requirements, FFIEC fees, relocation expenses, and employee supplies.
Contracted Services	**$47.4**	**$4.0**	**9.3%**	Contracted services reflect costs incurred for products and services acquired in the commercial marketplace. The increase for 2021 reflects system operations and maintenance support related to implementation of the MERIT examination and supervision solution.

BILLING CODE 7535–01–C

II. Introduction and Strategic Context

History

For more than 100 years, credit unions have provided financial services to their members in the United States. Credit unions are unique depository institutions created not for profit, but to serve their members as credit cooperatives.

On June 26, 2019, the NCUA celebrated the 85th Anniversary of President Franklin Roosevelt's signing of the Federal Credit Union Act. The law was enacted during the Great Depression, in 1934, enabling credit unions to be organized throughout the United States under charters approved by the federal government. The purpose of the federal law was to make credit available to Americans and promote thrift through a national system of nonprofit, cooperative credit unions. In the years since the passage of the Federal Credit Union Act, credit unions have evolved and are larger and more complex today than those first institutions. But, credit unions continue to provide needed financial services to millions of Americans.

The NCUA is the independent federal agency established in 1970 by the U.S. Congress to regulate, charter, and supervise federal credit unions. With the backing of the full faith and credit of the United States, the NCUA operates and manages the National Credit Union Share Insurance Fund, insuring the deposits of the account holders in all federal credit unions and the vast majority of state-chartered credit unions. No credit union member has ever lost a penny of deposits insured by the Share Insurance Fund.

Today, the NCUA is responsible for the regulation and supervision of 5,308 federally insured credit unions [2] with approximately 118.3 million members [3] and more than $1.5 trillion [3] in assets across all states and U.S. territories.

Authority

Pursuant to the Federal Credit Union Act, authority for management of the NCUA is vested in the NCUA Board. It is the Board's responsibility to determine the resources necessary to carry out the NCUA's responsibilities under the Act.[3] The Board is authorized to expend such funds and perform such other functions or acts as it deems necessary or appropriate in accordance with the rules, regulations, or policies it establishes.[4]

Upon determination of the budgeted annual expenses for the agency's operations, the Board determines a fee schedule to assess federal credit unions. The Board gives consideration to the ability of federal credit unions to pay

[2] Source: The NCUA quarterly call report data, Q2 2019.

[3] *See* 12 U.S.C. 1752a(a).

[4] *See* 12 U.S.C. 1766(i)(2).

such a fee, and the necessity of the expenses the NCUA will incur in carrying out its responsibilities in connection with federal credit unions.[5] Pursuant to the law, fees collected are deposited in the agency's Operating Fund at the Treasury of the United States, and those fees are expended by the Board to defray the cost of carrying out the agency's operations, including the examination and supervision of federal credit unions.[6] In accordance with its authority [7] to use the Share Insurance Fund to carry out a portion of its responsibilities, the Board approved an Overhead Transfer Rate methodology, and authorized the Office of the Chief Financial Officer to transfer resources from the Share Insurance Fund to the Operating Fund to account for insurance-related expenses.

Mission, Goals, and Strategy

The NCUA's 2020–2021 Budget Submission supports the agency's third year implementing its *2018–2022 Strategic Plan* to achieve its priorities and improve program performance.

Throughout 2020 and 2021, the NCUA will continue fulfilling its mission to ''*provide, through regulation and supervision, a safe and sound credit union system which promotes confidence in the national system of cooperative credit,*'' and its vision to ensure that the ''*NCUA protects credit unions and consumers who own them through effective supervision, regulation and insurance.*'' This budget commits the resources necessary to implement the NCUA's plans to identify key challenges facing the credit union industry and leverage agency strengths to help credit unions address those challenges.

The budget supports the NCUA's programs, which are focused on achieving the agency's three strategic goals:

- Ensure a safe and sound credit union system;
- Provide a regulatory framework that is transparent, efficient, and improves consumer access; and
- Maximize organizational performance to enable mission success.

Additional information about alignment of the budget to the NCUA's strategic goals is in Appendix A.

In support of its first strategic goal—*ensure a safe and sound credit union system*—the NCUA will continue to supervise federally insured credit unions effectively and maintain a strong Share Insurance Fund.

The NCUA's primary function is to identify credit union system risks, determine the magnitude of those risks, and mitigate unacceptable levels through the examination and supervision program. The agency identifies supervision program priorities each year, aligning budgeted resources to these priorities while addressing emerging issues in order to minimize losses to the Share Insurance Fund. Program priorities in 2020 include addressing broad market risks and emerging cybersecurity threats that could threaten financial stability generally, including the safety and soundness of the credit union system.

Cybersecurity threats and other technology-related issues continue to be of key interest and concern to the NCUA. Increasingly sophisticated cyber-attacks pose a significant threat to credit unions, financial regulators, and the broader financial services sector. The availability, confidentiality, and integrity of credit union member information remains a key supervisory priority for the NCUA. As such, the 2020 budget includes resources to continue to improve and standardize supervision related to information protection and cybersecurity risks and threats.

The NCUA staff of credit union examiners are the agency's most important assets for identifying and addressing risks before they threaten members' deposits. To do their jobs effectively in this complex and dynamic financial environment, the NCUA staff require the advanced skills, training, and tools supported by the budget. The multi-year ESM program will reach a major milestone in 2020 with the release of the Modern Examination and Risk Identification Tool (MERIT), the agency's modernized examination tool replacing the Automated Integrated Regulatory Examination System (AIRES), to all credit union examiners and state regulators. As the agency transitions to this new tool, which will result in more efficient and effective supervision, the NCUA must ensure its staff is prepared. The 2020 budget includes resources to train and prepare the NCUA staff as they transition to using MERIT.

To fulfill the NCUA's second strategic goal—*provide a regulatory framework that is transparent, efficient, and improves customer access*—the agency is committed to creating a more responsive system that will encourage innovation, provide flexibility, and fulfill its primary mission of protecting safety and soundness. The NCUA also seeks to promote financial inclusion to better serve a changing population and economy. The NCUA also seeks to ensure consumer compliance, and financial protection. The budget allocates resources to agency programs that keep regulations up to date and consistent with current law, assist existing and prospective credit unions with expansion and new chartering activities.

Accomplishing the third strategic goal—*maximize organizational performance to enable mission success*—ensures the NCUA employees achieve the agency's mission by supporting them through efficient and effective business processes, modern and secure technology, and suitable tools necessary to perform their duties. The budget makes investments in improved tools and facilities for the NCUA staff, and technological enhancements including new systems that will improve operational effectiveness and efficiency. The budget also allocates resources to developing better human capital planning and processes including a new leadership development strategy and a focus on training for the transition to MERIT.

Organization, Major Agency Programs, and Workforce

The NCUA operates its headquarters in Alexandria, Virginia, to administer and oversee its major programs and support functions; its Asset Management and Assistance Center (AMAC) in Austin, Texas, to liquidate credit unions and recover assets; and three regional offices, to carry out the agency's supervision and examination program.

In January 2019, the NCUA consolidated its five regional offices into three—Eastern, Southern, and Western—as part of its on-going effort to strengthen agency operations while increasing efficiency. Reporting to these regional offices, the NCUA has credit union examiners responsible for a portfolio of credit unions covering all 50 states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands.

The NCUA organizational chart below reflects the agency's current structure, and the map shows each region's geographical alignment:

BILLING CODE 7535–01–C

The NCUA's regional offices will carry out the agency's 2020 examination program. The NCUA uses an extended examination cycle for well-managed, low-risk federal credit unions with assets of less than $1 billion. Additionally, the NCUA's examiners perform streamlined examination procedures for financially and operationally sound credit unions with assets less than $50 million. In addition, the Office of National Examination and Supervision (ONES) will continue to examine credit unions with assets that total over $10 billion that are located throughout the United States. Based on 2019 second quarter call report statistics, there are currently nine such credit unions with 18.0 million members, accounting for $256 billion in credit union assets.

In 2020 and 2021, the agency's workforce will undertake tasks in all of the NCUA's major programs:

Supervision: The NCUA supervises federally insured credit unions through examinations and regulatory enforcement including providing guidance through various publications, taking administrative actions and conserving, liquidating, or merging severely troubled institutions as necessary to manage risk.

Insurance: The NCUA manages the $16 billion Share Insurance Fund, which provides insurance to at least $250,000 for deposits held at federally insured credit unions. The fund is capitalized by credit unions and through retained earnings.

Credit Union Development: Through training, partnerships and resource assistance, the NCUA fosters credit union development, particularly the expansion of services to eligible members provided by small, minority, newly chartered, and low-income designated credit unions. The NCUA also charters new federal credit unions, as well as approves modifications to existing charters and fields of membership.

Consumer Financial Protection: The NCUA protects consumers' rights through effective enforcement of federal consumer financial protection laws, regulations, and requirements. The NCUA also develops and promotes financial education programs for credit unions to assist members in making smarter financial decisions.

Asset Management: The NCUA conducts credit union liquidations and performs management and recovery of assets through AMAC. This office effectively and efficiently manages and disposes assets acquired from liquidations.

The NCUA also performs stakeholder outreach and is involved in numerous cross-agency initiatives. The NCUA conducts stakeholder outreach to clearly understand the needs of the credit union system. The NCUA seeks input from all of its stakeholders, including the Administration, Congress, State Supervisory Authorities, credit union members, credit unions, and their associations.

The NCUA collaborates with the other financial regulatory agencies including through participation in several councils. Significant councils include the Financial Stability Oversight Council (FSOC), the Federal Financial Institutions Examination Council (FFIEC), and the Financial and Banking Information Infrastructure Committee (FBIIC). These councils and relationships help ensure consistent policy and standards within the nation's financial system, where appropriate.

Budget Process—Strategy to Budget

The NCUA's budget process starts with a review of the agency's goals and objectives set forth in the strategic plan. The strategic plan is a framework that sets the agency's direction and guides resource requests, ensuring the agency's resources and workforce are allocated and aligned to agency priorities and initiatives.

Each regional and central office director at the NCUA develops an initial budget request identifying the resources necessary for their office to support the

NCUA's mission, strategic goals, and strategic objectives. These budgets are developed to ensure each office's requirements are individually justified and remain consistent with the agency's overall strategic plan.

For regional offices, one of the primary inputs in the development process is a comprehensive workload analysis that estimates the amount of time necessary to conduct examinations and supervise federally insured credit unions in order to carry out the NCUA's dual mission as insurer and regulator. This analysis starts with a field-level review of every federally insured credit union to estimate the number of workload hours needed for the current year. The workload estimates are then refined by regional managers and submitted to the NCUA central office for the annual budget proposal. The workload analysis accounts for the efforts of nearly seventy percent of the NCUA workforce and is the foundation for budget requests from regional offices and ONES.

In addition to the workload analysis, from which central office budget staff derive related personnel and travel cost estimates, each of the NCUA offices submit estimates for fixed and recurring expenses, such as rental payments for leased property, operations and maintenance for owned facilities or equipment, supplies, telecommunications services, major capital investments, and other administrative and contracted services costs.

Because information technology investments impact all offices within the agency, the NCUA has established an Information Technology Prioritization Council (ITPC). The ITPC meets several times each year to consider, analyze, and prioritize major information technology investments to ensure they are aligned with the NCUA's strategic plan. These focused reviews result in a mutually agreed-upon budget recommendation to support the NCUA's top short-term and long-term information technology needs and investment priorities.

Once compiled for the entire agency, all office budget submissions undergo thorough reviews by the responsible regional and central office directors, the Chief Financial Officer, and the NCUA's executive leadership. Through a series of presentations and briefings by the relevant office executives, the NCUA Executive Director formulates an agency-wide budget recommendation for consideration by the Board.

In recent years, the Board has emphasized the need for increased transparency of the NCUA's finances and its budgeting processes. In response, the Office of the Chief Financial Officer has made draft budgets available for public comment via the NCUA's website, and solicited public comments before presenting final budget recommendations for the Board's approval. Furthermore, the Economic Growth, Regulatory Relief, and Consumer Protection Act, Public Law 115–174, enacted May 24, 2018, requires in Section 212 that the NCUA "make publicly available and publish in the **Federal Register** a draft of the detailed business-type budget." To fulfill this requirement, the Board delegated to the Executive Director the authority to publish the draft budget before submitting it for Board review.

This 2020–2021 budget justification document includes comparisons to the Board approved 2019–2020 budget, and includes a summary description of the major spending items in each budget category to provide transparency and understanding of the use of budgeted resources. Estimates are provided by major budget category, office, and cost element.

The NCUA also posts supporting documentation for its budget request on the NCUA website to assist the public in understanding its budget development process. The budget request for 2020 represents the NCUA's projections of operating and capital costs for the year, and is subject to approval by the Board.

Commitment to Financial Stewardship

The NCUA funds its activities through operating fees levied on all federal credit unions and through reimbursements from the Share Insurance Fund, funded by both federal credit unions and federally insured state-chartered credit unions. The Overhead Transfer Rate (OTR) calculation determines the annual amount that the Share Insurance Fund reimburses the Operating Fund to pay for the NCUA's insurance-related activities. At the end of each calendar year, the NCUA's financial transactions are subject to audit in accordance with Generally Accepted Government Auditing Standards.[8]

The Board and the agency are committed to providing sound financial stewardship. In recent years, the NCUA Chief Financial Officer, with support and direction from the Executive Director and Board, has worked to improve the NCUA's financial management, financial reporting, and budget processes. In addition, through prudent management of the Corporate System Resolution Program, the NCUA has paid nearly $900 million in dividends to eligible credit unions over the last two years.

The NCUA revised its financial presentations to conform to federal budgetary concepts and increase transparency of the agency's planned financial activity, starting with the 2018 budget. The 2020–2021 budget continues this presentation. The NCUA is the only Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) agency that publishes a detailed, draft budget and solicits public comments on it at a meeting with its Board and other agency leadership.

The NCUA continues to work diligently to strengthen its internal controls for financial transactions, in accordance with sound financial management policies and practices. Based on the results of the NCUA's assessments conducted through the course of 2018, the agency provided an unmodified Statement of Assurance (signed February 14, 2019) that its management had established and maintained effective controls to achieve the objectives of the Federal Managers Financial Integrity Act (FMFIA) and Office of Management and Budget (OMB) Circular A–123. Specifically, the NCUA supports the internal control objectives of reporting, operations, and compliance, as well as its integration with overarching risk management activities. Within the Office of the Chief Financial Officer, the Internal Controls Assessment Team (ICAT) continues to mature the agency-wide internal control program and continues to strengthen the overall system of internal control, further promote the importance of identifying risk, and ensure the agency has identified appropriate responses to mitigate identified risks, in accordance with the Government Accountability Office's Standards for Internal Controls in the Federal Government (Green Book) requirements.

III. Forecast and Enterprise Challenges

Economic Outlook

The NCUA's mission is to provide, through regulation and supervision, a safe and sound credit union system, which promotes confidence in the national system of cooperative credit. The challenges that the NCUA faces, and the resources the NCUA requires to fulfill its mission, depend on a variety of factors that directly or indirectly affect the health of the credit union system. The NCUA must anticipate, to the extent possible, developments that will affect the system, develop strategies, plans and processes to meet

[8] *See* 12 U.S.C. 1783(b) and 1789(b).

both the current and anticipated needs, and assemble the resources, including staff, necessary to ensure a safe and sound system.

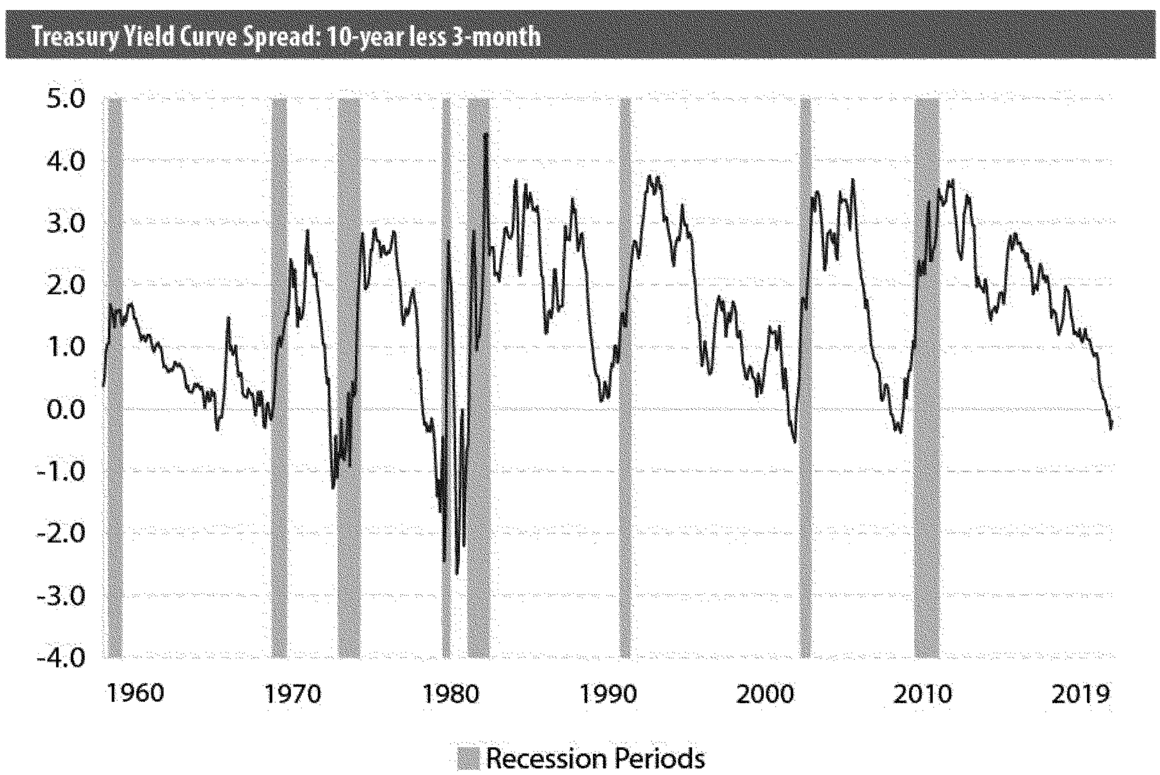
One key determinant of credit union performance is the underlying economic environment in which they must operate. In general, for the past few years, the economy has supported solid financial system performance. The economy continued to perform well in the first half of 2019. Real gross domestic product expanded by 2.6 percent at an annual rate and, in July, the current economic expansion reached the 10-year mark, making it the longest post-war expansion on record. Employment has risen steadily for close to a decade and the unemployment rate at mid-year was at a five-decade low. Inflation remained subdued.

With the support of a solid economic foundation, credit union lending, membership growth, and credit quality remained strong through the second quarter of 2019. Federally insured credit unions added 4.3 million members over the year, boosting credit union membership to 118.3 million in the second quarter of 2019. Credit union shares and deposits rose 5.5 percent over the year ending in the second quarter to $1.5 trillion. Total loans outstanding at federally insured credit unions increased 6.4 percent to $1.1 trillion, and the system-wide loan delinquency rate fell to 63 basis points from 67 basis points a year earlier. The credit union system's return on average assets rose to 97 basis points, and the system's net worth ratio increased to 11.27 percent in the second quarter.

Although economic conditions were generally favorable heading into the second half of 2019, a number of downside risks exist. Growth in several major economies overseas showed signs of weakness. This has generated a level of uncertainty, which weighs on business activity, boosts financial market volatility, has pushed long-term interest rates in the U.S. downward, and has contributed to the Federal Reserve's decision to loosen monetary policy and lower their short-term policy rate in two 25 basis point moves during the summer after four years of tightening.

As of early October, long-term interest rates had fallen by about 160 basis points from their most recent peaks in late 2018, and short-term rates had declined roughly 50 basis points. With long-term rates falling more than short-term rates, the yield curve shifted down and flattened.

In late May, the spread between the 10-year Treasury note and 3-month Treasury bond turned negative; it remained negative through the start of October. Yield curve inversion has preceded every recession in the last 50 years, but the timing between initial inversion and the onset of recession has varied, as shown in the chart. Most analysts expect the current expansion to continue during the NCUA 2020–2021 budget horizon.



Even though the number of negative risks to the economy has risen, the near-term outlook for the U.S. economy remains positive. Forecasts for the next two years call for somewhat slower—but still solid—economic growth compared with 2018. Employment is projected to rise and the unemployment rate—already below the level associated with full employment—is expected to remain low. Tight labor market conditions are projected to keep inflation near the Federal Reserve's 2.0 percent target. Federal Reserve policymakers have lowered the federal funds target rate by 50 basis points since July. Their most recent forecast, released in September, suggests they could leave the federal funds rate unchanged in a range of 1.75 percent and 2.00 percent through next year, but there is a wide range of views on the appropriate path of short-term interest rates going forward. Analysts are expecting the federal funds target rate to decline by an additional 25 basis points before the end of 2019 and are projecting that other short-term interest rates—which largely determine the interest payments credit unions make—will also move lower in the months ahead. Longer-term rates—which largely determine the interest payments credit unions receive—are expected to stabilize in the second half of 2019 and edge higher in 2020, as the recent flight to safety reverses.

Solid economic conditions should remain a positive force for credit union lending, membership growth, and credit quality over the 2020–2021 budget horizon. In addition, the wider term spread implied by current interest rate forecasts should translate into less pressure on credit union net interest margins and net income going forward.

However, forecasts of the economic environment are far from perfect. A recession would pose significant challenges to the credit union system, leading to rising delinquencies, reduced loan demand, and, potentially, an increase in shares as consumers move funds from riskier investments into safer, insured credit union deposits. A downturn in the economy would likely lead to lower interest rates as well. Credit union balance sheets should be robust to a variety of rate environments. The NCUA, like the credit unions themselves, needs to plan and prepare for a range of economic outcomes that could affect credit union performance and determine resource needs.

Other Risk Factors and Trends

In addition to risks associated with movements in the general economy, the NCUA and credit unions will need to understand their increasing exposure to, and address risks associated with, the technological and structural changes facing the system. Over the longer-term, increased concentration of loan portfolios, development of alternative loan and deposit products, technology-driven changes in the financial landscape, continued industry consolidation, and ongoing demographic changes will continue to shape the environment facing credit unions and will determine the resource needs of the NCUA.

Cybersecurity: Credit unions' increasing use of technology is making the credit union system more vulnerable to cyber-attacks. The prevalence of malware, ransomware, distributed denial of service (DDOS) attacks, and other forms of cyber intrusion are creating challenges at credit unions of all sizes, and will require ongoing measures for containment. These trends are likely to continue, and even accelerate, over the next two years.

Lending trends: Increasing concentrations in member business loans and private student loans, in addition to other new types of lending by credit unions, emphasize the need for long-term risk diversification and effective risk management tools and practices, along with expertise to properly manage increasing concentrations of risk.

Financial Landscape and Technology: New financial products that mimic deposit and loan accounts, such as Apple Pay, Walmart pre-paid cards and peer-to-peer lending, continue to emerge. These new products pose a competitive challenge to credit unions and banks alike. Credit unions also face a range of challenges from financial technology (Fintech) companies in the areas of lending and the provision of other services. For example, underwriting and lending may be automated at a cost below levels associated with more traditional financial institutions, but may not be subject to the same regulations and safeguards that credit unions and other traditional financial institutions face. The emergence and increasing importance of digital currencies may pose both risks and opportunities for credit unions. As these institutions and products gain popularity, credit unions may have to be more active in marketing and rethink their business models.

Technological changes outside the financial sector may also lead to changes in consumer behavior that indirectly affect credit unions. For example, the increase in on-demand use of auto services and pay-as-you-go, on-demand vehicle rental could reduce purchases of consumer-owned vehicles. That could lead to a slowdown or reduction in the demand for vehicle loans, now slightly more than a third of the credit union system loan portfolio.

Membership trends: While overall credit union membership continues to grow, roughly half of federally insured credit unions had fewer members at the end of the second quarter of 2019 than a year earlier. Demographic and field of membership changes are likely to continue leading to declining membership at many credit unions. All credit unions need to consider whether their product mix is consistent with their members' needs and demographic profile.

Smaller credit unions' challenges and industry consolidation: Small credit unions face challenges to their long-term viability for a variety of reasons, including weak earnings, declining membership, high loan delinquencies, and elevated non-interest expenses. If current consolidation trends persist, there will be fewer credit unions in operation and those that remain will be considerably larger and more complex. As of June 30, 2019, there were 576 federally insured credit unions with assets of at least $500 million, 29 percent more than just five years earlier. These 576 credit unions accounted for 73 percent of credit union members and 79 percent of credit union assets. Large credit unions tend to offer more complex products, services and investments. Increasingly complex institutions will pose management challenges for the institutions themselves, as well as the NCUA; consolidation means the risks posed by individual institutions will become more significant to the Share Insurance Fund.

Enterprise Risk Management

The NCUA uses an Enterprise Risk Management (ERM) program to evaluate various factors arising from its operations and activities (both internal to the agency and external in the industry) that can impact the agency's performance relative to its mission, vision, and performance outcomes. Agency priority risks include both internal considerations such as the agency's control framework, information security posture, and external factors such as credit union diversification risk. All of these risks can materially impact the agency's ability to achieve its mission.

The NCUA's ERM Council provides oversight of the agency's enterprise risk management activities. Through the ERM program, established in 2015, the agency is identifying and managing risks that could affect the achievement of its strategic objectives. In 2018 and 2019, the NCUA developed and implemented processes for analyzing and responding to enterprise risks. The NCUA has conducted several risk response assessments for priority areas including credit union business diversification, credit union cybersecurity, agency controls, and information security. These assessments help inform the agency's activities, operations, and planning and budget processes. Overall, the NCUA's ERM program promotes effective awareness and management of risks, which, when combined with robust measurement and communication, are central to cost-effective decision-making and risk optimization within the agency.

The NCUA adopted its enterprise risk appetite statement in the *2018–2022 Strategic Plan,* which is:

> The NCUA is vigilant and has an overall judicious risk appetite. The NCUA's primary goal is to ensure the safety and soundness of the credit union system and the agency recognizes it is not desirable or practical to avoid all risk. Acceptance of some risk is often necessary to foster innovation and agility. This risk appetite will guide the

NCUA's actions to achieve its strategic objectives in support of providing, through regulation and supervision, a safe and sound credit union system, which promotes confidence in the national system of cooperative credit.

The agency's risk appetite helps align risks with opportunities when making decisions and allocating resources to achieve the agency's strategic goals and objectives. This enterprise risk appetite statement is part of the NCUA's overall management approach and is supported by detailed appetite statements for individual risk areas.

In practice, this means that the NCUA recognizes that risk is unavoidable and sometimes inherent in carrying out the agency's mandate. The NCUA is positioned to accept greater risks in some areas than in others; however, when consolidated, the risk appetite establishes boundaries for the entire agency and all of its programs. Collaboration across programs and functions is a fundamental part of ensuring the agency stays within its risk appetite boundaries, and the NCUA will identify, assess, prioritize, respond to and monitor risks to an acceptable level. This budget proposal for 2020–2021 incorporates several specific programmatic changes that resulted from the NCUA's enterprise risk management reviews, such as hiring new personnel focused on cybersecurity, acquiring data loss prevention and other network security tools, and strengthening analytical focus on emerging financial risks within the credit union system.

IV. Key Themes of the 2020–2021 Budget

Overview

The budget supports the priorities and goals outlined in the agency's annual performance plan and the *2018–2022 Strategic Plan.* The resources and new initiatives proposed in the budget support the NCUA's mission to maintain a safe and sound credit union system.

The 2020–2021 budget carries forward a number of key ongoing initiatives, which include: The Exam Flexibility Initiative; the increased use of off-site examinations work and data analytics; the modernization of information technology systems; regulatory reform initiatives; and efforts to implement organizational efficiencies. Over the course of the next five years, these efforts will result in a more effective organization.

In the 2020–2021 budget, the NCUA will increase staffing in critical areas necessary to operate as an effective federal financial regulator capable of addressing emerging issues and continuing to modernize the examination program. The NCUA employees are the agency's most valuable resource for achieving its mission, and the agency is committed to a workplace and a workforce with integrity, accountability, transparency, inclusivity, and proficiency. We will continue investing in the workforce through training and development, helping employees develop the tools they need to do their work effectively.

Employment-related costs are the single largest driver of the NCUA budget; therefore, managing the size of the workforce is important from a budgetary standpoint. Increases to the agency's staffing levels in 2020 address gaps in the agency's workforce that must be filled in order to execute the agency's mission and foster an innovative, responsive and sound credit union system that meets the needs of all Americans. The NCUA continues to assess and balance its mission workload needs with the financial costs the agency imposes on the credit union system. Although the number of credit unions continues to decline nationwide, the NCUA must also consider the increasing complexity and growing asset base of the entire credit union system.

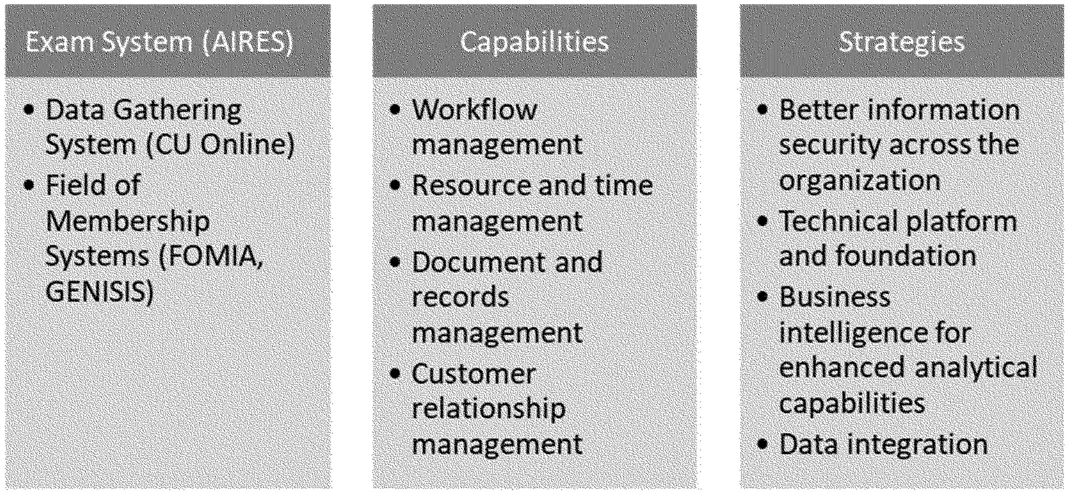
The efficiency and effectiveness of the agency's workforce is dependent upon the resiliency of the NCUA's information technology infrastructure and availability of technological applications. The NCUA is committed to implementing new technology responsibly and delivering secure, reliable and innovative technological solutions to support its mission. This necessitates investments funded in the Capital Budget and additional staff to provide the analytical tools and technology the workforce needs to achieve the NCUA mission.

Enterprise Solution Modernization

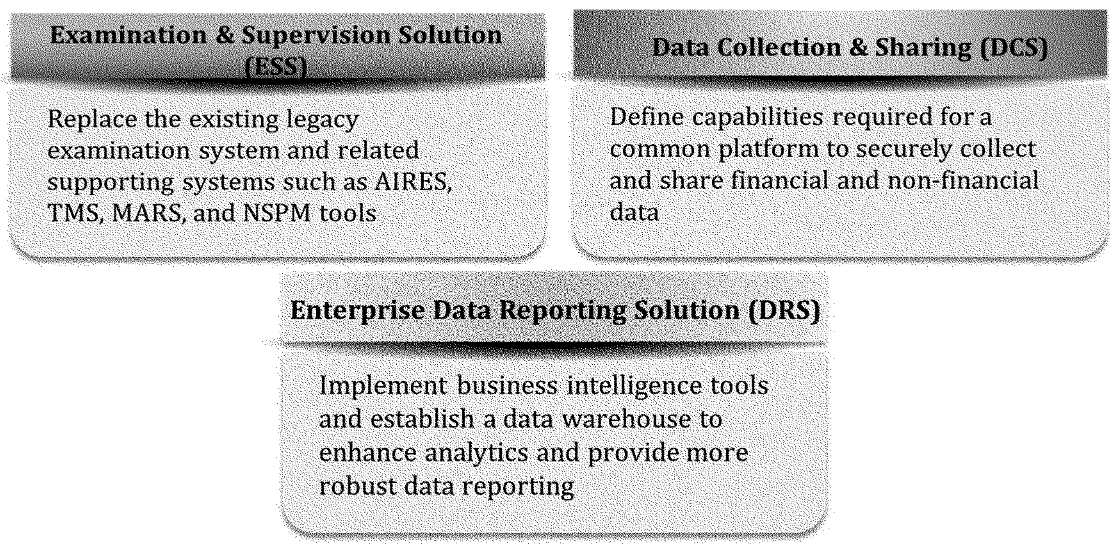
In 2015, the NCUA conducted an assessment of the information technology (IT) needs across the agency and developed a business case for replacing its antiquated legacy systems. This assessment recognized the full range of industry leading, cost-effective alternative strategies, services, and products for implementing the agency's next generation of IT information management, examination, supervisory, and data collection solutions.

At that time, the NCUA acknowledged a technology revamp of this magnitude as a high-risk endeavor, both in terms of cost and delivered functionality. The risk stems from the number of systems impacted and the unique nature of the NCUA's applications, many of which require a high degree of customization. However, the agency required a major modernization after many years of under-investment in software and application development.

In November 2015, the NCUA Board approved a plan for modernizing the agency's IT systems known as the Enterprise Solution Modernization (ESM) program. The ESM program recognizes the following legacy systems, capabilities and strategies need to be modernized:



To better manage the complexity of the ESM Program, the NCUA established three sub-programs to modernize the NCUA's technology solutions and create an integrated examination and data environment that facilitates a safe and sound credit union system:



Given the age of the NCUA's legacy examination systems and their importance to the mission of the agency, priority was given to the following parts of the modernization effort in the first phase of ESM development:

○ Better information security across the organization.

○ Technical platform and foundation for new applications.

○ AIRES replacement (Examination and Supervision Solution), including financial analytics.

○ Central user interface for stakeholders to interact with the NCUA.

○ Business Intelligence tools for enhanced analytical capabilities (added later to the initial phase as explained below).

To deploy the Examination and Supervision Solution, it was first necessary to stand up new agency infrastructure that supports the full modernization program: The technology architecture, infrastructure, and security posture required to operate modernized systems. The necessary infrastructure was acquired and put in place in 2019. The ESS program capabilities have been deployed in part in 2019 and will be rolled out nationwide in 2020. The new examination solution, which is named the Modern Examination and Risk Identification Tool (MERIT), was released to the Office of National Examinations and Supervision in September 2019, while the release to the remaining Regional staff is scheduled for the summer of 2020.

Though not originally included as part of the initial ESM plan, the agency has incorporated a robust business intelligence solution into the MERIT deployment, which advances the agency's analytic capabilities during this phase. The need for better analytics is central to the strategy to shift more exam work offsite.

In addition to better data analytics, MERIT provides numerous improvements over the legacy AIRES examination system, including:

○ Implementation of better controlled access to examination data across the organization.

○ Faster and well-organized ability to request and submit items for the examination.

○ Collaboration and real-time information for examiners, team members, and supervisors, including state supervisory authorities on joint exams.

○ Opportunities for credit union users to manage examination findings and view completed examination reports.

○ Business process improvements to achieve exam efficiencies, including less data redundancy and relational support between scope tasks, questionnaires, and findings.

Cost Estimates

The NCUA engaged an independent market research firm to estimate the cost of the initial ESM phases, including MERIT. Their research estimated a range in costs of $18.9 to $37.9 million.

From 2015 to 2019, the NCUA Board approved a total budget of $20.8 million for the MERIT program. This total included the modernized and more secure IT infrastructure, central user interface, and the first release of MERIT.

The total expected acquisition costs for this phase of ESM, including actual costs through 2019 and the budget for 2020, is $36.6 million. This will provide additional needed functionality in the second release of MERIT, including the loan and share download business intelligence integration.

The NCUA awarded the Examination and Supervision Solution agile development contract in 2018. For the first three-month discovery phase of the contract, the NCUA and the systems integrator worked diligently to translate the business process context and identify tool-based implications and functional gaps. After discovery concluded, the NCUA determined the full funding needed to meet developmental, organizational change management, and scheduling requirements. As discussed above, the funding total now includes the advanced business intelligence capabilities.

Through September 2019, the NCUA accomplished the following:

○ Established the ESM technical program infrastructure platform, including enhanced IT security.

○ Developed the central user interface known as NCUA Connect, achieving a secure, single entry point into NCUA applications.

○ Deployed the new MERIT examination tool to ONES to support examination and supervision of the largest credit unions.

○ Developed financial analytics with dashboards and visualizations designed to assist the examiner in identifying risk.

The project is on schedule to meet the following performance targets:

○ *2019:* Conduct ONES examinations and supervision contacts for all federal credit unions with assets greater than $10 billion and joint exams with state regulators in federally insured state-chartered credit unions with assets greater than $10 billion in Washington and North Carolina using the MERIT solution, which commenced on October 7, 2019.

○ *2020:* Deploy second release of MERIT for the majority of the NCUA staff, state supervisory authorities, and credit unions in the third quarter of 2020.

Cybersecurity Priorities

Cyber-attacks pose a threat to credit unions, financial regulators, and the broader financial system. Advances in technology and increased use of cyberspace for financial transactions means more opportunities for cybersecurity threats and other technology-related issues. As a result, cybersecurity is one of the top priorities of the NCUA Board. In June 2019, Chairman Rodney E. Hood appointed a special advisor for cybersecurity who not only will provide strategic counsel on cybersecurity policy but will also engage with other federal financial institution regulators and external stakeholders.

In 2018, the NCUA began implementing a new Automated Cybersecurity Examination Tool (ACET) maturity assessment for credit unions with assets greater than $1 billion. The focus of the ACET implementation was to baseline individual credit unions' cybersecurity maturity consistently while benchmarking the entirety of the sector. In 2019, the maturity assessments were conducted on credit unions with assets greater than $250 million; in 2020, the agency will conduct maturity assessments on credit unions with assets between $100 million and $250 million. The NCUA continues to evaluate the feasibility for conducting the maturity assessments on even smaller, less complex institutions.

Concurrently, the NCUA is developing a tailored examination program based on the Information Technology Risk Examination (InTREx) solution leveraged by the Federal Deposit Insurance Corporation, the Federal Reserve Board and state regulators to ensure a harmonized, repeatable, measurable and transparent process for examining the compliance, safety and soundness of the credit unions' information security programs.

The examination procedures will be maintained within the NCUA MERIT solution. The agency expects the results of both the maturity assessment and the examination program to help focus and prioritize cybersecurity for credit unions and make it an integral part of their risk-management strategies.

The NCUA will further build upon its cybersecurity capabilities and programs to continue helping credit unions and consumers protect themselves. Specifically, the 2020 budget allocates resources to the following cybersecurity-related activities:

○ Advancing consistency, transparency and accountability within the cybersecurity examination and supervision program;

○ Expanding cybersecurity analytics to better inform examination and supervision decisions;

○ Enhancing interoperability of the maturity assessment capability for broad credit union system distribution and full integration into the new examination system, MERIT;

○ Stimulating due diligence for supply chain and third-party service provider management within the credit union sub-sector;

○ Assisting institutions with resources to improve operational cybersecurity hygiene and resilience;

○ Performing skills assessments of credit union examiners and taking steps to build skill set of examination staff in accordance with the National Initiative of Cybersecurity Education (NICE) Framework;

○ Enhancing the professional expertise and knowledge management of

○ agency specialists on cybersecurity and emerging technical innovation in the delivery of financial services, cybersecurity trends and risk/threat; and

○ Expanding collaboration and coordination with relevant agencies towards a more harmonized examination and critical infrastructure protection capability.

These initiatives—focused on supervisory program development, training, industry analysis and exercises, combined with interagency coordination and industry outreach—will require additional personnel. The 2020 budget includes two new cybersecurity positions within the Office of Examination and Insurance to improve the agency's ability to be prepared for and respond to the broadening responsibilities tied to cybersecurity and critical infrastructure protection.

The NCUA also places strong emphasis on ensuring the security of the agency's systems and the controlled, unclassified information it collects. The NCUA's Office of the Chief Information Officer is continually taking steps to enhance the agency's information security posture and ensure the NCUA's systems and information are protected from compromise, including the work done as part of ESM. The 2020 budget allocates $500,000 to acquire and implement data loss prevention (DLP) as part of the Information Technology (IT) Infrastructure, Platform and Security Refresh Capital Initiative. DLP is a set of tools and processes used to ensure that sensitive data is not lost, misused, or accessed by unauthorized users.

Bank Secrecy Act Compliance

The NCUA continues to budget resources to comply with the statutory mandate from Congress to enforce federal credit union compliance with Bank Secrecy Act (BSA) and Anti-Money Laundering (AML) laws and regulations. Technological advancements may expose even the smallest credit unions to potential illicit finance activities. The NCUA examines federal credit union compliance with BSA during every examination. Additionally, the NCUA assists state regulators by conducting BSA examinations in federally insured, state-chartered credit unions where state resources are limited.

In 2019, the NCUA's field staff began more in-depth reviews of credit unions' BSA and AML policies, procedures, and processes to assess compliance with new customer due diligence (31 CFR 1020.210(b)(5)) and beneficial ownership requirements (31 CFR 1010.230) which became effective May 11, 2018.

The NCUA's BSA reviews are risk-focused and include procedures to review an institution's compliance with the pillars of the BSA. These procedures are based on the examination procedures in the FFIEC BSA/AML Examination Manual the NCUA issues jointly with the other federal financial institution regulators. The NCUA's examiners tailor examinations based on the unique risk characteristics of each federal credit union. Additional or more in depth reviews are performed for those with higher risk activities; reviews at credit unions with lower risk activities are scaled appropriately.

The NCUA coordinates regularly with our counterparts at the other federal financial institution regulatory agencies, as well as the Financial Crimes Enforcement Network (FinCEN). The NCUA actively participates in the Bank Secrecy Act Advisory Group (BSAAG), the FFIEC BSA/AML Working Group and an interagency working group to improve effectiveness and streamline, where possible, regulations and supervisory processes. The NCUA also partners with the other federal financial institution regulators to issue joint BSA statements, including the *Joint Statement on Risk-Focused BSA/AML Supervision,* dated July 22, 2019. Interagency groups are currently updating the *Interagency Statement on Enforcement of BSA/AML Requirements,* originally issued in 2007, and the *FFIEC BSA/AML Examination Manual,* last revised in 2014. The NCUA intends to continue collaborating with our regulatory counterparts, including FinCEN.

In 2019, the NCUA issued Regulatory Alert 19–RA–02, *Serving Hemp Businesses,* to update federally insured credit unions about changes in federal law and regulation related to hemp. Specifically, the guidance clarifies that credit unions may provide the customary range of financial services for business accounts, including loans, to lawfully operating hemp related businesses within their fields of membership, and provides information to help credit unions better understand what they should consider providing financial services to lawfully operating hemp businesses.

Stakeholder Engagement

In 2020, the agency is allocating resources for engagement summits with stakeholders. These events will include credit union officials, staff, and volunteers in order to discuss many of the priorities the agency has funded through this budget process. Topics of interest at these summits may include financial inclusion, minority depository institutions, cybersecurity or risk and risk mitigation strategies in the current environment. The NCUA Board is committed to understanding how these priority areas impact credit unions and engaging in a thoughtful dialogue to determine whether there are additional actions the NCUA should and shouldn't take to ensure credit unions are best prepared to serve their members while doing so in a safe and sound manner.

Examination Initiatives

The NCUA is focused on several additional examination modernization efforts as outlined in the August 2018 Letter to Credit Unions: 18–CU–01—''Examination Modernization Initiatives.'' This letter outlined five initiatives to modernize the agency's examinations processes, including the ESM program outlined above. Intended benefits of these initiatives include:

○ More efficient and less burdensome examinations and supervision

○ More consistent and accurate supervisory determinations

○ Enhanced coordination with State Supervisory Authorities

○ More secure, reliable, and flexible technology to support future expansion capabilities

These modernization initiatives are interrelated and complement each other. As these initiatives support and build upon each other, they will ultimately result in a fully modernized examination and supervision program with various incremental improvements along the way. The budget allocates resources in support of these improvements. Below is a more in-depth discussion of four of the initiatives. The fifth initiative, the ESM program, is discussed in detail above.

ONES Data-Driven Supervision

This initiative began in 2018 as an effort to move to a continuous supervision model for the large, natural-person credit unions supervised by the ONES. This ongoing supervision program will use data-driven analytics to monitor and identify credit union risk while supporting the oversight of credit union-driven stress testing. The NCUA's ONES travel costs are projected to decrease by 10 percent as a result of implementing this program and the transition to the NCUA's in-house oversight of credit union run stress-testing will allow the NCUSIF to avoid $3 million in costs in 2020. The data-driven supervision initiative may lead to analytical advancements that can be adapted for supervising some or all other insured credit unions.

Shared NCUA-State Regulator Federally Insured, State-Chartered Credit Unions Program

In 2017, the NCUA created the Joint NCUA-State Supervisor Working Group (working group), which is tasked with improving coordination and scheduling for joint exams, providing scheduling flexibility, and reducing redundancy where possible. The group's goal is to minimize the burden on federally insured, state-chartered credit unions resulting from having a separate financial regulator and insurer.

In addition, the working group is evaluating the appropriateness and feasibility of adopting an alternating-year examination approach for federally insured, state-chartered credit unions. A pilot program launched January 2019 and will allow the NCUA, state regulators, and stakeholders to evaluate the benefits and challenges of an alternate-year examination program. The pilot will last approximately three years in order to collect enough information to evaluate one full alternating-year exam cycle. The results of the pilot will provide valuable insight into the advantages and risks of such an approach prior to finalizing a decision about a permanent alternating-year exam cycle.

To support joint examinations in federally insured, state-chartered credit unions, the working group developed a new template framework for improved coordination and cooperation between the NCUA regions and the respective state regulators. The working group is also exploring ways to minimize duplication and overlap through examination and procedure improvements and greater use of technology. In addition, the working group is evaluating other areas of potential duplication that can be reduced or eliminated, such as loan participations, Credit Union Service Organizations (CUSOs) and third party vendor reviews, and other supervisory matters. The goal of these reviews is to better leverage the work of each regulatory party in examining and supervising federally insured, state-chartered credit unions.

Virtual Examination Program

In 2017, the NCUA Board approved the project and associated resources to research methods to conduct offsite as many aspects of the examination and supervision processes as possible. The virtual exam project team is researching ways to harness new and emerging data, advancements in analytical techniques, innovative technology, and improvements in supervisory approaches. When approving the 2019 budget, the NCUA Board approved using past years' unspent balances to complete the research and discovery phase for virtualizing key elements of the examination; this work will continue through 2020.

By identifying and adopting alternative methods to remotely analyze much of the financial and operational condition of a credit union, with equivalent or improved effectiveness relative to current examinations, it may be possible to significantly reduce the frequency and scope of onsite examinations. Onsite examination activities could potentially be limited to periodic data quality and governance reviews, interventions for material problems, and meetings or other examination activities that need to be handled in person.

The virtual exam should lead to greater use of standardized interaction protocols, advanced analytical capabilities, and more-informed subject matter experts. This should result in more consistent and accurate supervisory determinations, provide greater clarity and consistency with respect to how the agency conducts supervisory oversight, and reduce coordination challenges between agency and credit union staff.

To be successful, it is likely examination staff will need to analyze more information about the credit union being examined and communicate more frequently with management at the credit union. However, it is not the agency's intent to intervene in credit unions' day-to-day operations or strategic planning.

The virtual examination team will deliver to the NCUA Board by the end of 2020 a report discussing alternative methods identified to remotely analyze aspects of the financial and operational condition of a credit union.

Offsite Examination Procedures

Starting in 2016, the NCUA's Southern Region piloted a flexible exam program—commonly called FLEX. The pilot program ran through 2018 and evaluated conducting certain existing exam procedures offsite. The pilot assessed examiners working remotely on elements of examinations of well-run credit unions with the technology and platforms to provide electronic data securely.

In 2019, the NCUA adopted the best practices from the FLEX pilot nationally. Now known as offsite examination procedures, the NCUA updated its National Supervision Policy Manual to indicate the agency's support for providing staff with the flexibility to conduct examination work offsite when appropriate conditions are met. The NCUA continues to develop plans to increase agency use of offsite procedures.

Regulatory Reform

The NCUA established a Regulatory Reform Task Force (Task Force) in March 2017 to oversee implementation of the agency's regulatory reform agenda. This is consistent with the spirit of Executive Order 13777 and the Trump administration's regulatory reform agenda. Although the NCUA, as an independent agency, is not required to comply with Executive Order 13777, the agency chose to review all of the NCUA's regulations, consistent with the spirit of initiative and the public benefit of periodic regulatory review. The NCUA has undertaken a series of regulatory changes as part of this effort, and continues to pursue a regulatory reform agenda, including matters such as advertising, field of membership, equity distribution, and securitization. The Task Force published its final report in December 2018.

Reorganization/Restructuring

In July 2017, the NCUA's executive leadership committed to a comprehensive plan that would invest in the agency's future, make critical organizational alignment changes, and improve the NCUA's efficiency, effectiveness, and focus on its core mission responsibilities. The agency has completed the operational actions related to its reform plan.

As a result of the NCUA's reform plan:

- ○ The NCUA created an office focused exclusively on credit union service needs including new charters, credit union expansion, and training—the Credit Union Resources and Expansion (CURE) Office.
- ○ Examination reports have been improved through enhanced quality measures.
- ○ Two regional offices closed in January 2019 and leased office space has been reduced.
- ○ AMAC's staffing has been reduced, and support functions are now better aligned with the central office.

The NCUA continues to examine how to best balance meeting workforce and technology needs while containing operating costs.

V. Operating Budget

Overview

The NCUA Operating Budget is the annual resource plan for the NCUA to conduct activities prescribed by the Federal Credit Union Act of 1934. These activities include: (1) Chartering new federal credit unions; (2) approving field of membership applications of federal credit unions; (3) promulgating regulations and providing guidance; (4) performing regulatory compliance and safety and soundness examinations; (5) implementing and administering enforcement actions, such as prohibition orders, orders to cease and desist, orders of conservatorship and orders of liquidation; and (6) administering the National Credit Union Share Insurance Fund.

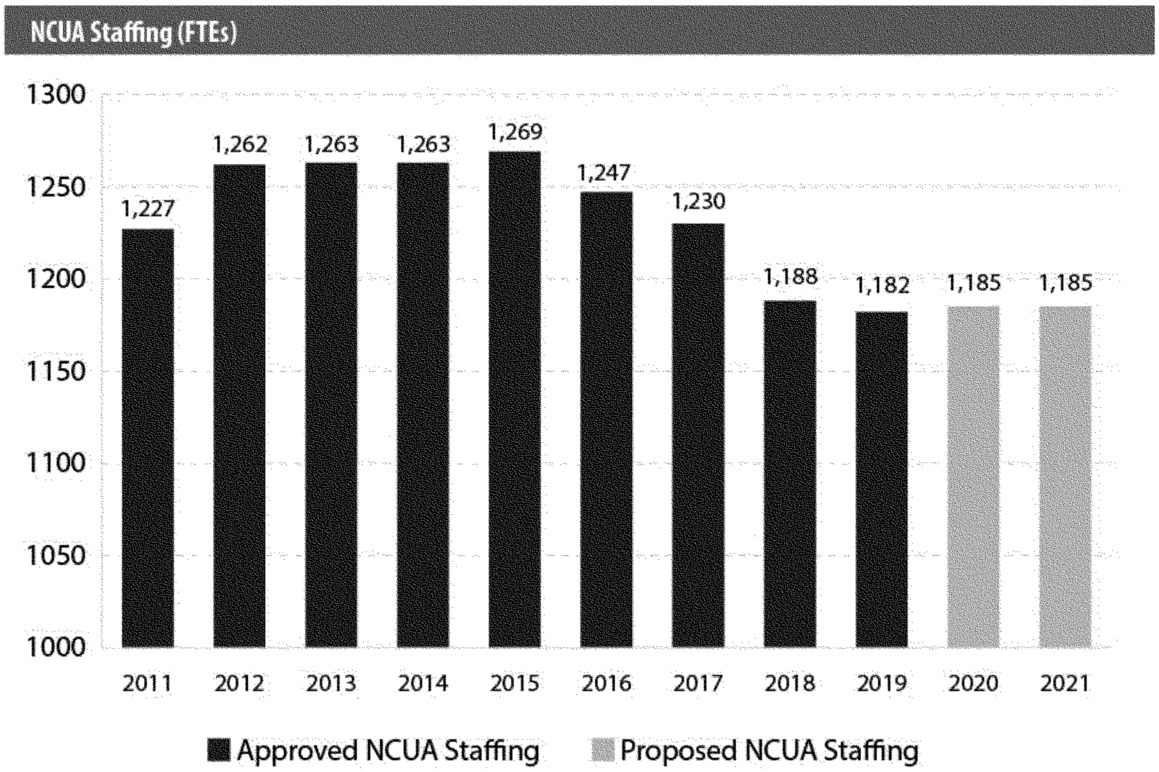
Staffing

The staffing levels proposed for 2020 reflect the resource requirements for steady state operations at the NCUA as it continues to modernize the examination process to enhance the efficiency and effectiveness of the supervisory process. Two new information systems officers in the Office of Examinations and Insurance will support expanded responsibilities for cybersecurity and critical infrastructure protection. A third position will be created in the

Chairman's office to support the NCUA through strategic outreach and engagement with stakeholders in the credit union system, including credit union management, associations and leagues, and journalists who cover the industry.

During the July 2019 mid-session review, the NCUA Board approved four additional staff to support the agency's growing engagement with the Administration, Congress, industry stakeholders, and the general public. The newly authorized positions for the Office of External Affairs and Communications include a Deputy Director, a Communications Specialist, a Technical Writer and Editor, and a Program Analyst for External Affairs. The full cost of these positions are included in the 2020 budget.

The 2020 budget supports a total agency staffing level of 1,185 personnel, of which 1,180 are funded in the Operating Budget. This is a net increase of three positions, or 0.25 percent, compared to the Board-approved level for 2019, as modified at the July 2019 Board meeting. The new 2020 positions are described in greater detail below.



Authorized Regional Examiners and Specialists	2013	2014	2015	2016	2017	2018	2019
Credit Union Examiner	600	566	571	541	517	472	471
Regional Capital Market Specialist	12	18	24	24	25	24	25
Regional Information System Officer	7	8	13	17	18	18	20
Problem Case Officer	41	46	37	31	31	32	32
Regional Lending Specialist	21	28	27	31	30	30	30
Director of Special Actions	7	10	9	10	10	10	10
Supervisory CU Examiner	71	73	68	67	64	50	50
Other Regional Staff	117	120	116	117	115	117	118
TOTAL	**876**	**869**	**865**	**838**	**810**	**753**	**756**

In addition to the staff assigned to regional offices, most of the staff in ONES are remote field staff who also travel to credit unions as part of their examination responsibilities.

Request for New Staff in 2020

Information Systems Officers (+2 New Positions)

These new employees, requested in the Office of Examination and Insurance, will be responsible for expanded cybersecurity responsibilities that include: Management of interagency activities, development of industry policy related to information security, and improvement of credit union cybersecurity resilience. The goal of these positions is to increase institutional knowledge of cybersecurity best practices within the credit union system and broaden skills within the NCUA to ensure a consistent and professional approach during credit union supervision.

Senior Adviser to the Chairman for Communications and Engagement (+1 New Position)

This new employee will support the NCUA through strategic outreach and engagement with stakeholders in the credit union system, including credit union management, associations and leagues, and journalists who cover the industry. This employee will also assist the NCUA Board by keeping members up to date about challenges and changes within the system.

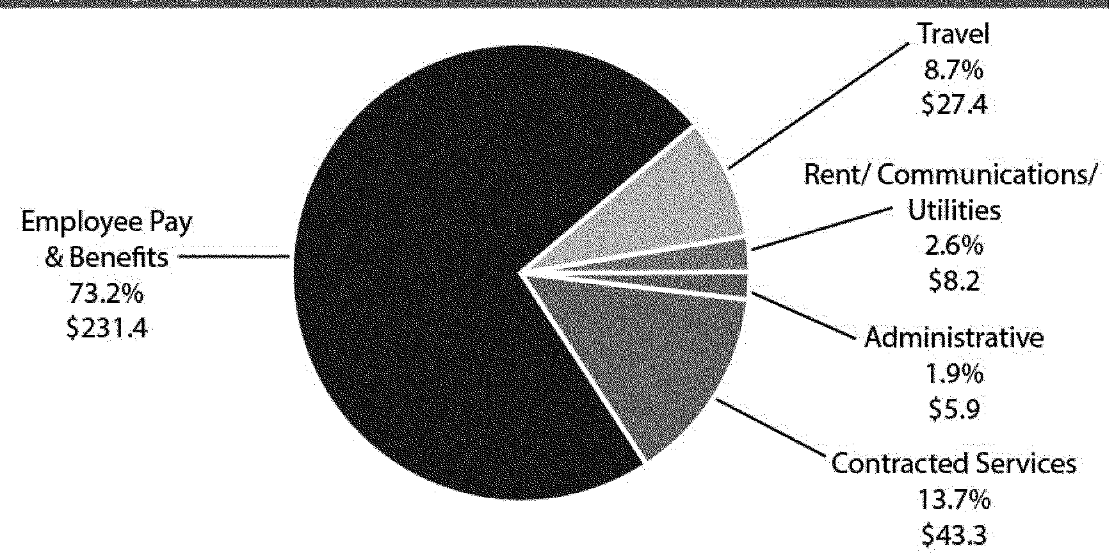
Budget Category Descriptions and Major Changes

There are five major expenditure categories in the NCUA budget. This section explains how these expenditures support the NCUA's operations, and presents a transparent and comprehensive accounting of the Operating Budget.

2020–2021 NCUA OPERATING BUDGET SUMMARY

Budget Cost Category	2019 Board Approved Budget	2020 Requested Budget	2019–2020 Change	Change Percent	2021 Requested Budget	2020–2021 Change	Change Percent
Employee compensation	222,827,000	231,365,000	8,538,000	3.8%	237,754,000	6,389,000	2.8%
Salaries	159,686,000	162,566,000	2,880,000	1.8%	167,257,000	4,691,000	2.9%
Benefits	63,141,000	68,799,000	5,658,000	9.0%	70,497,000	1,698,000	2.5%
Travel	26,774,000	27,364,000	590,000	2.2%	26,694,000	(670,000)	-2.4%
Rent/Comm/Utilities	8,044,000	8,232,000	188,000	2.3%	8,012,000	(220,000)	-2.7%
Administrative	8,672,000	5,907,000	(2,765,000)	-31.9%	6,157,000	250,000	4.2%
Contracted Services	38,081,000	43,345,000	5,264,000	13.8%	47,356,000	4,011,000	9.3%
Total	**$ 304,398,000**	**$ 316,213,000**	**11,815,000**	**3.9%**	**$ 325,973,000**	**9,760,000**	**3.1%**

2020 Operating Budget (in Millions of Dollars)



note: minor rounding differences may occur in totals

Salaries and Benefits

The budget includes $231.4 million for employee salaries and benefits in 2020. This change is an $8.5 million, or 3.8 percent, increase from the 2019 Board-approved budget.

Salaries and benefits costs make up 73.2 percent of the total budget. There are two primary drivers of increased costs in 2020 for the Salaries and Benefits category:

- Merit and locality pay increases for the NCUA's 1,180 personnel paid from the Operating Budget, in accordance with the agency's current Collective Bargaining Agreement (CBA) and its merit-based pay system. Salaries are estimated to increase 1.8 percent in aggregate compared to 2019. This growth is lower than prior years due to new employee starting salaries being set at the lower end of pay ranges when turnover occurs and because of some staff reaching the salary caps for their pay grades.
- Contributions for employee retirement to the Federal Employee

Retirement System (FERS), which are unilaterally set by the Office of Personnel Management, and which cannot be negotiated or changed by the NCUA. Driven by the mandatory rate adjustment, the 2020 benefits costs increase 9.0 percent compared to 2019.

These changes are described in more detail below.

In 2020, the NCUA's compensation levels will continue to ''maintain comparability with other federal bank regulatory agencies,'' as required by the Federal Credit Union Act.[9] The Salaries and Benefits category of the budget includes all employee pay raises for 2020, such as merit and locality increases, and those for promotions, reassignments, and other changes, as described below.

Consistent with other federal pay systems, the NCUA's compensation includes base pay and locality pay components. The NCUA staff will be eligible to receive an average merit-based increase of 3.0 percent, and an additional locality adjustment ranging from −1.0 percent to +3.0 percent, depending on the geographic location. The average increase in locality pay is estimated to be 1.52 percent. Starting in 2018, the NCUA discontinued the annual, general pay scale increase of 1.25 percent in accordance with the most-recent CBA negotiations.

The first-year cost of the new positions added in 2020 is estimated to be $0.9 million. Specific increases to individual offices' salaries and benefits budgets will vary based on current pay levels, position changes, and promotions.

Personnel compensation at the NCUA varies among every office and region depending on work experience, skills, years of service, supervisory or non-supervisory responsibilities, and geographic locations. In general, more than 85 percent of the NCUA workforce has earned a bachelor's degree or higher, compared to approximately 35 percent of the private-sector workforce. This high level of educational achievement ensures the NCUA workforce is able to fulfill its mission effectively and efficiently, and attracting a well-qualified workforce requires the agency to pay employees competitive salaries.

Individual employee compensation varies, depending on the cost of living in the location where the employee is stationed. The federal government sets locality pay standards, which are managed by the President's Pay Agent—a council established to make recommendations on federal pay. The council uses data from the Occupational Employment Statistics program, collected by the Bureau of Labor Statistics, to compare salaries in over 30 metropolitan areas, and establishes recommendations for equitable adjustments to employee salaries to account for cost-of-living differences between localities.

The OPM economic assumptions for actuarial valuation of the FERS have increased significantly for 2020. All federal agencies are expected to contribute 16.0 percent of FERS employees' salaries to the OPM retirement system, an increase of 230 basis points compared to the 2019 level. This mandatary contribution is prescribed in the OPM Benefits Administration Letter dated June 2019. The estimated impact on the NCUA budget is an increase of approximately $5.0 million in mandatory payments to OPM, or 1.6 percentage points of budgetary growth, compared to 2019 levels.

The average health insurance costs for the Federal Employees Health Benefits program for 2020 are consistent with historical actual expenses. The employee salary and benefits category also includes costs associated with other mandatory employer contributions such as Social Security, Medicare, transportation subsidies, unemployment, and workers' compensation.

The 2020 budget estimate for pay and benefits includes the assumption of a 2.2 percent vacancy rate (roughly 26 full-time positions) during the year. This aligns with the NCUA's recent attrition rates and workforce management efforts to carefully review every vacancy created in the agency in 2020 before a hiring notice is published. The effect of this adjustment lowers the NCUA budget estimate and results in reduced fees collected from credit unions.

The 2021 budget request for salaries and benefits is estimated at $237.8 million, a $6.4 million increase from the 2020 level, which accounts for merit and locality increases consistent with the CBA (approximately $4.1 million), the full-year cost impact of new positions (approximately $0.6 million), and associated increases in benefits for all employees (approximately $1.7 million). The assumptions used for compensation-related adjustments are based on the CBA currently in force. The NCUA CBA will be renegotiated during 2020, with any changes reflected in future budget cycles.

Travel

The 2020 budget includes $27.4 million for Travel. This change is a $590,000, or 2.2 percent, increase to the 2019 Board-approved budget. Travel comprises approximately nine percent of the overall 2020 budget. The cumulative reduction of the credit union examiner positions compared to past years, extended examination cycles, and increased use of offsite examinations all help contain the NCUA's travel costs. However, the General Services Administration (GSA) announced an increase to standard lodging rates to $96 dollars in 2020, an increase of four dollars, or four percent compared to 2019, which contributes to the growth of estimated travel expenses in 2020. In addition, effective with 2019, GSA will charge the NCUA fees for the city pair program that provides discounted and flexible air passenger transportation services to federal government travelers. Although the NCUA has always participated in the mandatory program, prior year fee payments were not applied to the NCUA. The annual cost of $20,000 to GSA for all the NCUA employee travel fees may increase depending on future travel schedules.

The Travel cost category includes expenses for employees' airfare, lodging, meals, auto rentals, reimbursements for privately owned vehicle usage, and other travel-related expenses. These are necessary expenses for examiners' onsite work in credit unions. Close to two-thirds of the NCUA's workforce is comprised of field staff who spend a significant part of their year traveling to conduct the examination and supervision program.

The NCUA staff also travel for routine and specialized training. In 2020, the NCUA will conduct a series of training events to support the nationwide roll-out of MERIT. The NCUA's planning staff conducted extensive research to identify low-cost locations for these events. The roll-out will be a labor intensive effort requiring up to six weeks of travel for many of the NCUA's staff, and will provide hands-on training for this new system, which will be officially deployed in the fourth quarter of 2020. The estimated travel costs for MERIT-related training funded in the 2020 Operating Budget is $1.0 million.

The NCUA plans to evaluate future cost avoidance for travel through continued expansion of offsite examination work. In addition, agency personnel will continue to utilize more virtual training options, where appropriate, to help minimize travel expenses. The 2021 budget request for

[9] The Federal Credit Union Act states that, ''In setting and adjusting the total amount of compensation and benefits for employees of the Board, the Board shall seek to maintain comparability with other [F]ederal bank regulatory agencies.'' *See* 12 U.S.C. 1766(j)(2).

the travel is estimated to be $26.7 million, less than 2020 because of the exclusion of one-time MERIT training costs.

Rent, Communications, and Utilities

The 2020 budget includes $8.2 million for Rent, Communications, and Utilities. This is an $188,000 increase, or 2.3 percent more than the 2019 Board-approved budget. The Rent, Communications, and Utilities category is the smallest component of the NCUA's budget and funds the agency's telecommunications and information technology network expenses, and facility rental costs.

The agency telecommunications budget for 2020 is $4.5 million and accounts for most of the increase in this budget category. The telecommunication charges include leased lines, domestic and international voice (including mobile), and other network charges. Telecommunication costs include the circuits and any associated usage fees for providing voice or data telecommunications service between data centers, office locations, the internet and any customer, supplier or partner. The increased costs support trusted internet protocol services due to higher data consumption and use of cloud-based services.

Office building leases, meeting rentals, office utilities, and postage expenses are also included in this budget category. Facility costs total $2.1 million for 2020 and include the NCUA's annual payment of $1.3 million to the Share Insurance Fund for its central office note, which is scheduled to be fully repaid in 2023. The annual utility costs for the central office and regional offices are estimated at $483,000.

The 2020 budget also includes $1.1 million for event rental costs for examiner meetings and other training events. This includes the one-time costs of $220,000 for space rental for the MERIT training events planned in 2020.

The 2021 budget request for the Rent, Communications, and Utilities category is estimated to be $8.0 million, less than 2020 because of the exclusion of one-time MERIT training costs.

Administrative Expenses

The 2020 budget includes $5.9 million for Administrative Expenses. This is a decrease of $2.8 million, or 31.9 percent, compared to the 2019 Board-approved budget. Recurring costs in the Administrative Expenses category include the annual reimbursement to the Federal Financial Institutions Examination Council (FFIEC), employee relocation expenses, recruitment and advertising, shipping, printing, subscriptions, examiner training and meeting supplies, office furniture, and employee supplies and materials.

Most of the decrease in the Administrative Expenses budget results from realigning the costs of various service contracts, maintenance fees, and end-user licensing for computer software and database management applications to the Contracted Services budget. Approximately $3.8 million, unchanged from 2019, will be permanently included in Contract Services, which is consistent with standard government reporting for software costs. This includes annual software licenses and maintenance support fees for the call center managed by the Office of Consumer Financial Protection.

As part of the FFIEC, the NCUA shares in costs for joint actions and services that affect the financial services industry. The overall decrease is $78,000 less than the 2019 budget levels since the state examiner training costs will be reduced next year.

The 2020 budget includes $100,000 for employee relocation expenses, although expected relocation expenses are estimated to be more. The budget proposes using $900,000 of unspent balances from prior years to pay for these additional costs, for a total relocation budget of $1,000,000. This spending level reflects recent average annual expenditures for employee relocations and is a $250,000 increase over the 2019 Board-approved budget. Relocation costs are paid by the NCUA to employees who are competitively selected for a promotion or new job within the agency in a different geographic area than where they live. Employee relocations have increased in quantity and cost per employee in recent years, especially in 2019. The larger number of employee relocations is partly the result of additional hiring and partly from the effects of the 2018 NCUA reorganization. The increase in relocation costs is also related to changes in the 2017 tax law that now treats all relocation reimbursements as taxable income. Like other government agencies and private sector employees, the NCUA must now reimburse employees not just for their relocation expenses, but also for the personal tax liability resulting from those payments.

Continuous business process improvements and financial controls have decreased costs for printing, and other administrative costs, which are estimated to be $112,000 less than in 2019.

The 2021 budget request for the Administrative Services category is expected to increase by $250,000, or 4.2 percent, due to increases in the employee relocation budget.

Contracted Services

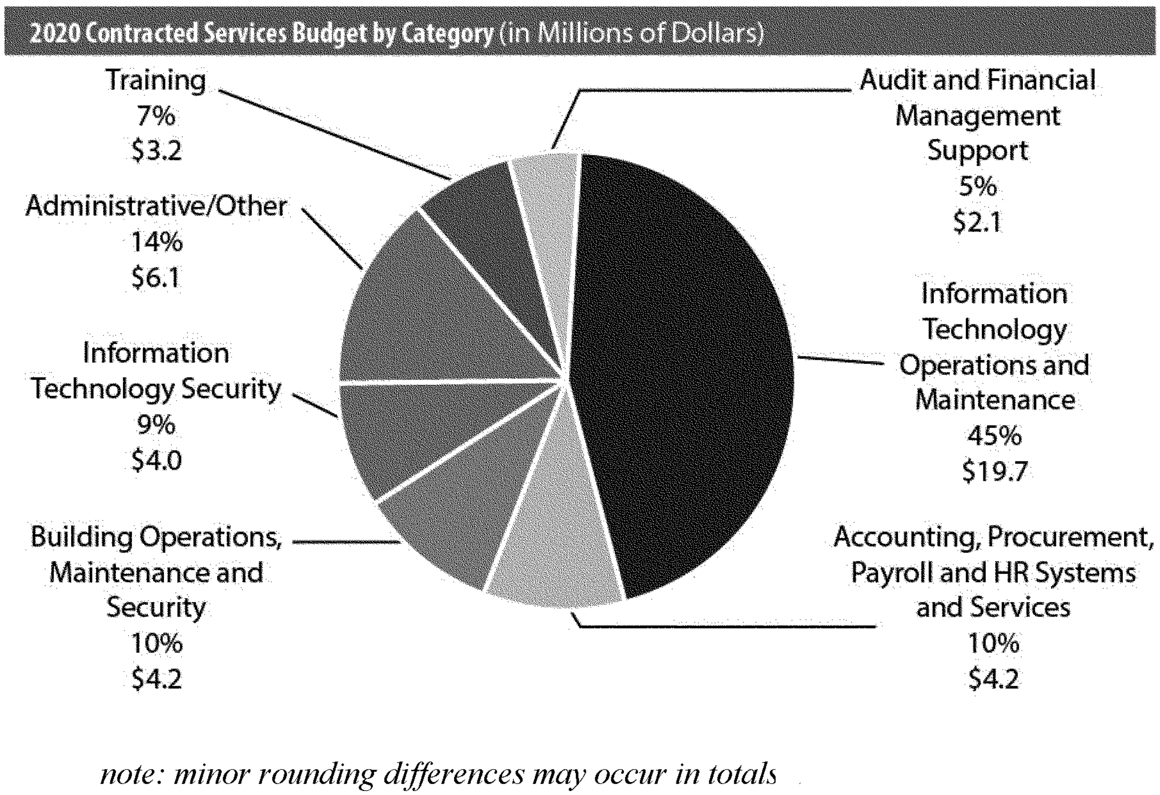
The 2020 budget includes $43.3 million for Contracted Services. This is a $5.3 million, or 13.8 percent, increase compared to the 2019 Board-approved budget. The Contracted Services budget category includes costs incurred when products and services are acquired in the commercial marketplace. Acquiring specific expertise or services from contract providers is often the most cost-effective approach to fulfill the NCUA's mission. Such services include critical mission support such as information technology equipment and software development, accounting and auditing services, and specialized subject matter expertise that enable staff to focus on core mission execution.

The majority of funding in the Contracted Services category is related to the NCUA's priority to implement a robust supervision framework by identifying and resolving traditional risk concerns such as interest rate risk, credit risk, and industry concentration risk, as well as by addressing new and evolving operational risks such as cybersecurity threats. Growth in the contracted services budget category results primarily from new operations and maintenance costs associated with ongoing capital investments, such as replacements for the AIRES and CU Online. Other costs include core agency business operation systems such as accounting and payroll processing, and various recurring costs, as described in the seven major categories, below:

- Information Technology Operations and Maintenance (45 percent of contracted services)
  - —IT network support services and help desk support
  - —Contractor program and web support and network and equipment maintenance services
  - —Administration of software products such as Microsoft Office, Share Point and audio visual services
- Administrative Support and Other Services (14 percent of contracted services)
  - —Examination and Supervision program support
  - —Technical support for examination and cybersecurity training programs
  - —Equipment maintenance services
  - —Legal services and other expert consulting support
  - —Other administrative mission support services for the NCUA central office

- Accounting, Procurement, Payroll and Human Resources Systems (10 percent of contracted services)
  —Accounting and procurement systems and support
  —Human resources, payroll, and employee services
  —Equal employment opportunity and diversity programs
- Building Operations, Maintenance, and Security (10 percent of contracted services)
  —Central office facility operations and maintenance
  —Building security and continuity programs
  —Personnel security and administrative programs
- Information Technology Security (9 percent of contracted services)
  —Enhanced secure data storage and operations
  —Information security programs
  —Security system assessment services
- Training (7 percent of contracted services)
  —Examiner staff, technical and specialized training and development
  —Senior executive and mission support staff professional development
- Audit and Financial Management Support (5 percent of contracted services)
  —Annual audit support services
  —Material loss reviews
  —Investigation support services
  —Financial management support services

The following pie chart illustrates the breakout of the seven categories for the total 2020 contracted services budget of $43.3 million.



Major programs within the contracted services category include:

- *Training requirements for the examiner workforce.* The NCUA's most important resource is its highly educated, experienced, and skilled workforce. It is important that staff have the proper knowledge, skills, and abilities to perform assigned duties and meet emerging needs. Each year, Credit Union Examiners attend several levels of training, including in core areas such as capital markets, consumer compliance, and specialized lending. The training deliverables for 2020 include the MERIT training sessions discussed elsewhere in this document, classes offered by the Federal Financial Institutions Examination Council, new examiner classes, and subject matter expert training sessions for the NCUA examiners.

Starting in 2020, the NCUA is reducing its financial support for training for state examiners. Budgets for state examiner training at the FFIEC have been reduced by approximately 50 percent.

Contracted service providers, in partnership with the NCUA subject matter experts, will develop and design subject matter expert training classes for examiners and conduct a triennial review of several modules of the NCUA's core course curriculum. Additionally, contracted service providers and central office staff will continue conducting organizational development and teambuilding training to help support new team operations as a result of the Agency reorganization.

- *The NCUA's information security program* supports ongoing efforts to strengthen cybersecurity and ensure compliance with the Federal Information System Management Act.
- *Agency financial management services, human resources technology support, and payroll services.* The NCUA contracts for these back-office support services with the U.S. Department of Transportation's Enterprise Service Center (DOT/ESC) and the General Services Administration. The NCUA's human resource system, HR Links, also adopted by other federal agencies, is a shared solution that automates routine human

resource tasks and improves time and attendance functionality.

- *Audit.* The NCUA Office of Inspector General contracts with an accounting firm to conduct the annual audit of the agency's four permanent funds. The results of these audits are posted annually on the NCUA website and also included as part of the agency's Annual Report.

A significant share of the budget for the Contracted Services category finances on-going infrastructure support for the agency. For example, the NCUA relies on recurring contracted services to maintain a number of the agency's examination systems that will replace legacy systems such as AIRES and CU Online. In future budgets, annual Operation and Maintenance costs for the MERIT system will be included in the Contract Services spending category. Several of the NCUA's core information technology systems and processes also require additional contract support in 2020, which result in increased budgets in the Contracted Services category, as described below.

Within the budget for the Office of Chief Information Officer, an additional $0.7 million is required primarily for the operations and maintenance costs of capital projects delivered in 2019 and 2020, and for other information technology hardware critical to ensure business continuity.

Within the budget for the Office of Chief Financial Officer, the annual fee paid to the Department of Transportation (DOT) for the NCUA's financial management system is roughly the same as the 2019 level of $1.2 million.

Within the budget for the Office of Continuity and Security Management, the Central Office building's physical access controls will be replaced in 2020, which is expected to cost approximately $600,000. In addition, mandatory reimbursement to the Office of Personnel Management for background investigations will increase by an estimated $125,000 in 2020.

The 2021 budget for Contracted Services is estimated to increase by $4,000,000, or 9.3 percent, compared to 2020, largely due to the operations and maintenance costs resulting from the delivery of capital projects funded in prior years.

VI. Capital Budget

Overview

Annually, the NCUA uses a rigorous investment review process to identify the agency's needs for information technology (IT), facility improvements and repairs, and other multi-year capital investments. The NCUA staff review the agency's inventory of owned facilities, equipment, information technology systems, and information technology hardware to determine what requires repair, major renovation, or replacement. The staff then make recommendations for prioritized investments to the Executive Director and the NCUA Board.

Routine repairs and lifecycle-driven property renovations are necessary to properly maintain investments in the NCUA's central office building in Alexandria, Virginia and the agency's owned office building in Austin, Texas. The NCUA facility manager assesses the agency's properties to determine the need for essential repairs, replacement of building systems that have reached the end of their engineered lives, or renovations required to support changes in the agency's organizational structure or to address revisions to building standards and codes.

IT systems and hardware are another significant capital expenditure for modern organizations. The 2019 budget allowed the NCUA to deliver and deploy a number of cybersecurity and governance tools, and the first iteration of ESM with several projects included, such as the first release of MERIT in 2019. The 2020 budget maintains the investment in current and replacement IT systems.

The budget fully supports the NCUA's effort to modernize its IT infrastructure and applications, including the full rollout of MERIT, the NCUA's Examination and Supervision Solution (ESS) project, which will replace the legacy Automated Integrated Regulatory Examination System (AIRES) system. Other IT investments include ongoing enhancements and upgrades to enhance decades-old legacy systems, network servers, incident and vulnerability management systems to enhance the agency's cybersecurity posture, and various hardware investments to refresh agency networks and ensure staff have the tools necessary to maintain and increase their productivity.

The NCUA's 2020 capital budget is $25.1 million. The capital budget funds the NCUA's long-term investments. The Information Technology Prioritization Council recommended $20.9 million for IT software development projects and $2.7 million in other IT investments for 2020. The NCUA facilities require $1.5 million in capital investments. Detailed descriptions of all 2020 capital projects, including a discussion of how each project helps the agency achieve its strategic goals and objectives, are provided in Appendix B.

Summary of Capital Projects

Examination and Supervision Solution and Infrastructure Hosting ($15.8 Million)

The purpose of the Examination and Supervision Solution and Infrastructure Hosting (ESS&IH) project is to implement a new, flexible, technical foundation to enable current and future NCUA business process modernization initiatives, and replace the NCUA's legacy exam system, AIRES, with a new customized Commercial-Off-The-Shelf (COTS) solution. In 2020, all NCUA examiners will be trained to use the new MERIT system, with full implementation expected by the fourth quarter.

Enterprise Central Data Repository ($1.1 Million)

The Enterprise Central Data Repository (ECDR) project will implement a central data repository that will serve as the data integration point for ESS, ONES's analytic tools, the NCUA's legacy applications and the Data Collection Solution (DCS). The ECDR will become an enterprise solution for the NCUA allowing the agency to transition in a phased approach from the existing legacy databases to a cloud-based data repository serving the agency's needs.

Enterprise Data Program ($0.45 Million)

The purpose of this project is the centralization, organization and storage of the NCUA data. The primary goal is to enable the NCUA to manage enterprise data as a strategic asset through its full lifecycle (create/collect, manage/move, consume, dispose). The Enterprise Data Program (EDP) will also facilitate the centralization and organization of the NCUA's data with an authoritative source so analysis is more accurate, simple and easily distributed across the agency.

Asset and Liabilities Management Application ($2.1 Million)

The purpose of the Asset and Liabilities Management (ALM) application is for the NCUA to build internal analytical capabilities to run supervisory stress testing in house and to conduct regular quantitative risk assessments by procuring and configuring off-the-shelf analytical tools, models and software used commonly in stress testing and other risk management activities.

This effort delivers a complete solution that will focus on modernizing the NCUA's supervision tools and approaches, identifying material risks facing the covered credit unions, and tailoring resources to the material risks and risk focused exams. This effort will allow the NCUA to reduce the existing third party contractor's role to only consultation.

Enterprise Learning Management System Replacement ($1.0 Million)

The purpose of the Enterprise Learning Management System (LMS) Replacement project is to conduct market research, initiate an acquisition, create a project management plan, and execute the production and implementation of a cost-effective, cloud-based solution and training services that provides the NCUA with the full-range of eLearning functionality associated with a modern LMS. This will allow for enhanced examiner utilization and accessibility driven by quality content, ease of use and system reliability, role-based interface, ability to view personalized pages by role, centralized content and, adherence to federally mandated reporting requirements and records management requirements.

Integrated Financial Management System Analysis ($0.4 Million)

The purpose of this project is to analyze financial system improvements. The NCUA's current financial management system service provider increased the fee it charges the NCUA in 2019 by 40 percent. The NCUA plans to review various options to obtain better financial management results in a cost-effective manner.

Enterprise Laptop Lease ($0.65 Million)

The purpose of the Enterprise Laptop Refresh project is to provide the NCUA with a more efficient, mobile friendly, and secure tool to help employees better perform their jobs at a reasonable cost.

Information Technology Infrastructure, Platform and Security Refresh ($2.0 Million)

The purpose of the Information Technology (IT) Infrastructure, Platform and Security Refresh project is to refresh and/or replace routers, switches virtual servers, wireless, virtual private network, infrastructure appliances, end of life and end of service components in order to ensure that the NCUA data is secure and operations are stable.

NCUA Website Development ($0.1 Million)

The purpose of the Web Services project is to serve the web-related needs of the internal NCUA stakeholders and the public. The project provides design, development, and maintenance of the agency's public websites: *NCUA.gov* and *MyCreditUnion.gov.*

Central Office Renovations ($0.5 Million)

NCUA headquarters renovation project will improve overall space utilization in the NCUA-owned Central Office. The goal of the project is to improve operational efficiency while decreasing operating cost by discontinuing commercial office leases and consolidating all Washington-region operations within one owned building. The project will increase the NCUA headquarters building capacity and some offices currently on separate floors will be collocated onto one floor, increasing operational efficiency.

Central Office Heating, Ventilation, and Air Conditioning (HVAC) System Replacement ($0.75 Million)

The NCUA central office HVAC system replacement project will recapitalize the HVAC system in the agency's central office building, including all cooling towers, air handlers, boilers and HVAC components. The current HVAC system is original to the facility, 24 years old and obsolete. The current system is at the end of its usable life and it is not working efficiently.

Austin, Texas Office Building Modernization ($0.27 million)

In 2020, the NCUA will continue its multi-year improvement project at the Austin, Texas office building. These capital improvements are required for the facility to continue routine and safe operations, and align with the lifecycle replacement required for critical infrastructure.

VII. Share Insurance Fund Administrative Budget

Overview

The Share Insurance Fund Administrative budget funds direct costs associated with authorized Share Insurance Fund activities. The direct charges to the Share Insurance Fund include costs associated with the NCUA Guaranteed Note (NGN) program and administrative costs, and represent total estimated costs to the Share Insurance Fund.[10] The Share Insurance Fund Administrative budget funds five positions that were formerly part of the Temporary Corporate Credit Union Stabilization Fund (Stabilization Fund) budget.

The cost of the NGN program and the Corporate System Resolution Program, including costs associated with the administration of those programs, are funded from the Share Insurance Fund Administrative budget. These costs have no impact on the NCUA's current and future Operating Fund budgets. The budget for the Share Insurance Fund also includes funding for expenditures previously authorized as direct expenses of the Share Insurance Fund for items such as state examiner computer leases, training and financial audit support.

The 2020 Share Insurance Fund Administrative budget is estimated to be $6.5 million, $1.9 million, or 23 percent, less than 2019. The budget decrease is primarily driven by the removal of third-party stress testing on large credit unions and the decrease in costs for valuation services for the NGN program. These services enable the NCUA to continue supporting the NGN program, which includes managing legacy assets within the NGN trusts. Legacy assets consist of over 1,000 investment securities that are secured by residential mortgages and other assets.

The 2021 requested budget supports similar workload and resources, increasing $482,000, or 7.5 percent, compared to the 2020 funding level.

Budget Category Descriptions and Major Changes

Salaries and Benefits

The employee pay and benefits expense category for the Share Insurance Fund Administrative budget is estimated to be $1.47 million, which represents an increase of $232,000 compared to 2019. This increase is due to aligning the budget to actual payroll costs for staff on board, as well as an increase to mandatory agency contribution rates to the FERS retirement program. Personnel compensation is 23 percent of the total budget. The financial analysts on the NGN team have specialized technical expertise to manage the remaining $6 billion of legacy assets. Personnel costs are estimated in a manner similar to the operating budget.

Travel

The estimated travel cost of $52,000 is less than one percent of the overall 2019 budget and remains the same as the 2020 budget estimate. These costs cover all of the travel expenses for the five staff that manage and support the NGN

[10] Note these direct costs are exclusive of any costs that are shared with the Operating Fund through the Overhead Transfer Rate, and with payments available upon requisition by the Board, without fiscal year limitation, for insurance under section 1787 of this title, and for providing assistance and making expenditures under section 1788 of this title in connection with the liquidation or threatened liquidation of insured credit unions as it may determine to be proper.

program. Two of the five staff are remote employees and are expected to travel periodically to the NCUA's central office.

Administrative Training

Training expenses, which represent less than one percent of the budget, are estimated to be remain at $27,000, based on projections of employee professional development plans and specialized training requirements.

Support for the NGN Program (Contract Support)

Contract costs to support the NGN program, which represent 42 percent of the budget, are estimated to be $2.7 million, a decrease of $0.2 million from the 2019 level. Funding is needed to fulfill Corporate System Resolution Program requirements and includes outside professional services such as external valuation experts, financial specialists, and accountants.

These experts assist the NCUA with the following services:

Consulting Services in the amount of $1.0 million support two NCUA offices: Examination and Insurance and the Chief Financial Officer. Services include quarterly management reviews of asset valuations, as well as analyses of emerging issues. Contractors also provide support for the annual financial audit process and improvements in internal controls. Tasks include: Supporting complex accounting and financial requirements for settlements, sale of legacy assets, parity payments, changing valuation model assumptions, and other asset disposition activities. Additionally, professional services are used to assist with accounting, tax, financial reporting, and systems support for the corporate Asset Management Estates.

Valuation Services in the amount of $0.9 million funds valuation support for the NGN legacy assets. As supported by the NGN Oversight Committee, resources are also needed to conduct special analyses, including valuations for determining reasonable market prices for securities to be sold by auction.

Software and Data Subscription Services in the amount of $0.8 million supports technical tools used to provide waterfall models, calculations, and metrics for the structured investment products underlying the NGN portfolio. The service provides coverage of all relevant asset classes, waterfall models that are seasoned and tested throughout the industry, and a broad array of calculations and metrics. Financial data analytics play a critical role in the surveillance, modeling, and pricing of the legacy assets that securitize the NGN Trusts, as well as supporting the management reviews that the NCUA performs on the cash flow projections. Now that some of the NGNs have begun maturing, the NCUA has added data subscription services to provide additional valuation as well as support for the legacy asset disposition process.

Other annual subscriptions provide important services related to surveillance of the portfolio of corporate bonds and mortgage-related bonds. Independent credit research services include fundamental capital structure research, credit analyses for surveillance of corporate bond portfolio and monoline insurer exposure, and direct access to various industry experts for discussion on specific credits.

Other Direct Expenses

Other direct expenses of the Share Insurance Fund are estimated to be $2.2 million in 2020, a decrease of $1.9 million, or 47 percent, compared to the 2019 budget level. NCUA is required to conduct annual stress testing of certain large credit unions to ensure the credit unions remain financially sound through challenging economic cycles. In previous years the NCUA engaged BlackRock Solutions as its partner to challenge the stress test results prepared by the covered credit unions. Over a multi-year endeavor, the NCUA has procured the personnel, data, and systems to conduct this analysis internally. Accordingly, the NCUA has determined it will not engage BlackRock Solutions for the 2020 stress test cycle and has removed this cost from the budget. Had BlackRock been engaged for the 2020 cycle, the agency would have incurred $3 million in costs.

The $0.7 million increase in the estimated costs for state examiner training is driven by the MERIT travel and training requirement.

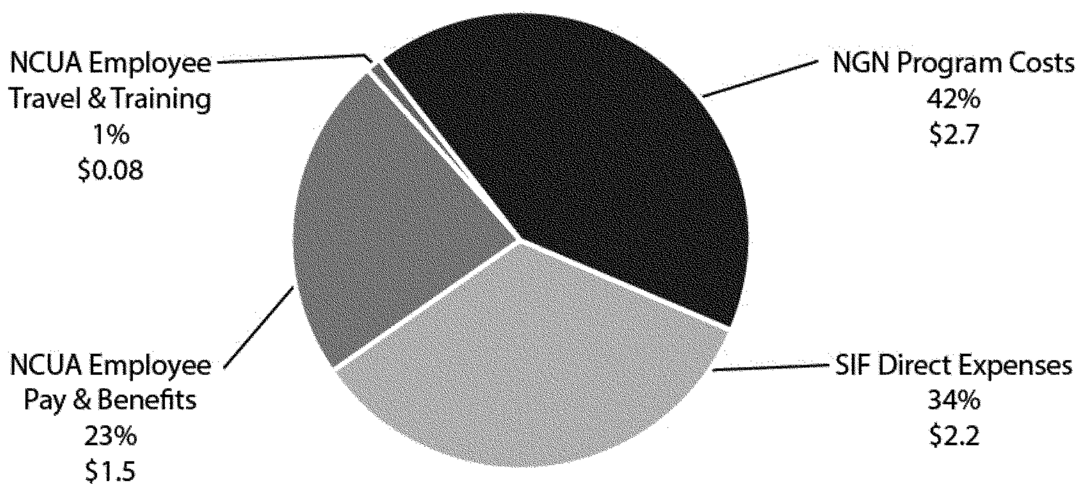
2020 Share Insurance Fund Administrative Budget (in Millions of Dollars)



note: minor rounding differences may occur in totals

BILLING CODE 7535–01–C

The NCUA website has a dedicated section that provides financial reports for the Share Insurance Fund,[11] and a separate page that explains the NCUA Guaranteed Notes Program and provides comprehensive reporting and analysis on the legacy assets.[12]

VIII. Financing the NCUA Programs

Overview

As part of the annual budgetary process, the NCUA remains mindful that its operating funding comes directly from federal and state chartered credit unions. The agency strives to ensure that any allocation of these funds follows a thorough review of the necessity of the expenditures and whether programs are operating in an efficient, effective, transparent, and fully accountable manner.

To achieve its statutory mission, the NCUA incurs various expenses, including those involved in examining

[11] See: *https://www.ncua.gov/services/Pages/share-insurance/reports.aspx.*

[12] See: *https://www.ncua.gov/regulation-supervision/Pages/guaranteed-notes.aspx.*

and supervising federally insured credit unions. The NCUA Board adopts an Operating Budget, including the Capital Budget, in the fall of each year to fund the vast majority of the costs of operating the agency.[13] The Federal Credit Union Act authorizes two primary sources to fund the Operating Budget:

(1) Requisitions from the Share Insurance Fund ''for such administrative and other expenses incurred in carrying out the purposes of [Title II of the Act] as [the Board] may determine to be proper''; [14] and

(2) ''fees and assessments (including income earned on insurance deposits) levied on insured credit unions under [the Act].'' [15] Among the fees levied under the Act are annual Operating Fees, which are required for federal credit unions under 12 U.S.C. 1755 ''and may be expended by the Board to defray the expenses incurred in carrying out the provisions of [the Act,] including the examination and supervision of [federal credit unions].''

Taken together, these dual authorities effectively require the Board to determine which expenses are appropriately paid from each source while giving the Board broad discretion in allocating expenses.

In 1972, the Government Accountability Office recommended the NCUA adopt a method for properly allocating Operating Budget costs—that is, the portion of the NCUA's budget funded by requisitions from the Share Insurance Fund and the portion covered by Operating Fees paid by federal credit unions.[16] The NCUA has since used an allocation methodology, known as the Overhead Transfer Rate (OTR), to determine how much of the Operating Budget to fund with a requisition from the Share Insurance Fund.

To allocate agency expenses between these two primary funding sources, the NCUA uses the OTR methodology. The OTR is the formula the NCUA uses to allocate insurance-related expenses to the Share Insurance Fund under Title II. Almost all other operating expenses are collected through annual Operating Fees paid by federal credit unions.[17]

Two statutory provisions directly limit the Board's discretion with respect to Share Insurance Fund requisitions for the NCUA's Operating Budget and, hence, the OTR. First, expenses funded from the Share Insurance Fund must carry out the purposes of Title II of the Act, which relate to share insurance.[18] Second, the NCUA may not fund its entire Operating Budget through charges to the Share Insurance Fund.[19] The NCUA has not imposed additional policy or regulatory limitations on its discretion for determining the OTR.

Overhead Transfer Rate (OTR)

The NCUA Board approved the current methodology for calculating the OTR at its November 2017 open meeting.[20] The OTR is designed to cover the NCUA's costs of examining and supervising the risk to the Share Insurance Fund posed by all federally insured credit unions, as well as the costs of administering the fund. The OTR represents the percentage of the agency's operating budget paid for by a transfer from the Share Insurance Fund. Federally insured credit unions are not billed for, and do not have to remit, the OTR amount; instead, it is transferred directly to the Operating Fund from the Share Insurance Fund. This transfer, therefore, represents a cost to all federally insured credit unions.

The OTR formula is based on the following underlying principles to allocate agency operating costs:

1. Time spent examining and supervising federal credit unions is allocated as 50 percent insurance related.[21]

2. All time and costs the NCUA spends supervising or evaluating the risks posed by federally insured, state-chartered credit unions or other entities that the NCUA does not charter or regulate (for example, third-party vendors and CUSOs) are allocated as 100 percent insurance related.[22]

3. Time and costs related to the NCUA's role as charterer and enforcer of consumer protection and other non-insurance based laws governing the operation of credit unions (like field of membership requirements) are allocated as 0 percent insurance related.[23]

4. Time and costs related to the NCUA's role in administering federal share insurance and the Share Insurance Fund are allocated as 100 percent insurance related.[24]

These four principles are applied to the activities and costs of the agency, which results in the portion of the agency's Operating Budget that is transferred from the Share Insurance Fund. Based on the Board–approved methodology, the OTR for 2020 is modestly higher than 2019, and estimated to be 61.3 percent. Thus, 61.3 percent of the total Operating Budget is estimated to be paid out of the Share Insurance Fund. The remaining 38.7 percent of the Operating Budget is estimated to be paid for through the Operating Fee. The explicit and implicit distribution of total Operating Budget costs for federal credit unions and federally insured, state-chartered credit unions is as follows:

[13] Some costs are directly charged to the Share Insurance Fund when appropriate to do so. For example, costs for training and equipment provided to State Supervisory Authorities are directly charged to the Share Insurance Fund.

[14] 12 U.S.C. 1783(a).

[15] 12 U.S.C. 1766(j)(3). Other sources of income for the Operating Budget have included interest income, funds from publication sales, parking fee income, and rental income.

[16] *http://www.gao.gov/assets/210/203181.pdf.*

[17] Annual Operating Fees must ''be determined according to a schedule, or schedules, or other method determined by the NCUA Board to be appropriate, which gives due consideration to the expenses of the [NCUA] in carrying out its responsibilities under the [Act] and to the ability of [FCUs] to pay the fee.'' 12 U.S.C. 1755(b).

[18] 12 U.S.C. 1783(a).

[19] The Act in 12 U.S.C. 1755(a) states, ''[i]n accordance with rules prescribed by the Board, each [federal credit union] shall pay to the [NCUA] an annual operating fee which may be composed of one or more charges identified as to the function or functions for which assessed.'' See also 12 U.S.C. 1766(j)(3).

[20] 82 FR 55644 (Nov. 22, 2017).

[21] The 50 percent allocation mathematically emulates an examination and supervision program design where the NCUA would alternate examinations, and/or conduct joint examinations, between its insurance function and its prudential regulator function if they were separate units within the NCUA. It reflects an equal sharing of supervisory responsibilities between the NCUA's dual roles as charterer/prudential regulator and insurer given both roles have a vested interest in the safety and soundness of federal credit unions. It is consistent with the alternating examinations the FDIC and state regulators conduct for insured state-chartered banks as mandated by Congress. Further, it reflects that the NCUA is responsible for managing risk to the Share Insurance Fund and therefore should not rely solely on examinations and supervision conducted by the prudential regulator.

[22] The NCUA does not charter state-chartered credit unions nor serve as their prudential regulator. The NCUA's role with respect to federally insured state-chartered credit unions is as insurer. Therefore, all examination and supervision work and other agency costs attributable to insured state-chartered credit unions is allocated as 100 percent insurance related.

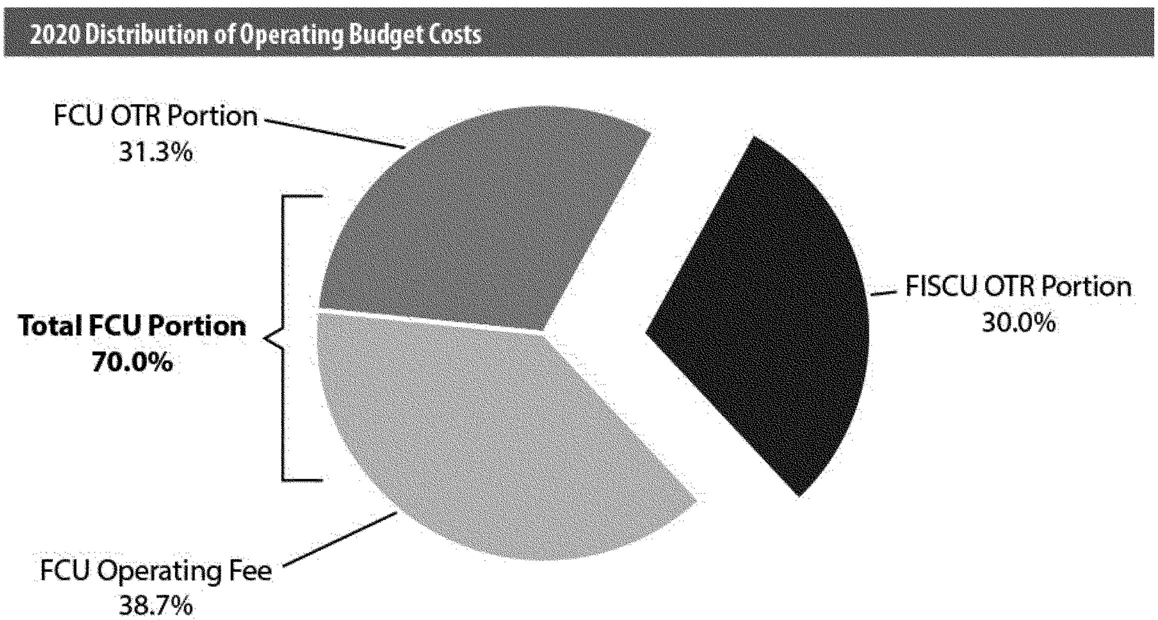
[23] As the federal agency with the responsibility to charter federal credit unions and enforce non-insurance related laws governing how credit unions operate in the marketplace, the NCUA resources allocated to these functions are properly assigned to its role as charterer/prudential regulator.

[24] The NCUA conducts liquidations of credit unions, insured share payouts, and other resolution activities in its role as insurer. Also, activities related to share insurance, such as answering consumer inquiries about insurance coverage, are a function of the NCUA's role as insurer.

Est. share of the operating budget covered by:	Federal credit unions (percent)	Federally insured, state-chartered credit unions (percent)
Federal Credit Union Operating Fee	38.7	0.0
OTR × Percent of Insured Shares	31.3 (61.3 × 51.1)	30.0 (61.3 × 48.9)
Total	70.0	30.0

In terms of accounting for funds transferred from the Share Insurance Fund to the Operating Fund, the OTR is applied to actual expenses incurred each month. Therefore, the rate calculated by the OTR formula is multiplied by each month's actual operating expenses and charged to the Share Insurance Fund. Because of this monthly reconciliation to actual operating expenditures, when the NCUA's expenditures are less than budgeted, the amount charged to the Share Insurance Fund is also less—and those lower expenditures benefit both federally chartered and state charted credit unions.

The following chart illustrates the share of the Operating Budget paid by federal credit unions (FCUs, 70.0%) and federally insured, state-chartered credit unions (FISCUs, 30.0%).



Operating Fee

The Board delegated authority to the Chief Financial Officer to administer the methodology approved by the Board for calculating the Operating Fees, and to set the fee schedule as calculated per the approved methodology outlined in this section. There is no change to the underlying approved Operating Fee methodology for 2020; the change in the assessments for 2020 are due to changes in the OTR rate and to indexing the fee schedule for projected asset growth.

For 2020, based on the OTR methodology discussed above, the resulting share of the budget that is funded from the Operating Fee is $144.8 million. This equates to 0.0181 percent of the estimated federal credit union assets for December 2019. The overall increase for the operating fee is 1.2 percent over 2019.

The Operating Fee will be assessed to federal credit unions based on estimated year-end assets. Credit unions with assets less than $1 million will not be assessed an Operating Fee. To set the assessment scale for 2020, federal credit union asset growth will be projected through December 31, 2019. Based on the June 30, 2019, Call Report data, annual growth is projected to be 5.6 percent at year end. The asset level dividing points will be increased by this same projected growth rate. Assets are indexed annually to preserve the same relative relationship of the scale to applicable asset base.

To establish the rate applicable to each asset level, the factors outlined in the table below result in an average Operating Fee rate increase of 1.2 percent for natural person federal credit unions. The corporate federal credit union rate scale remains unchanged from prior years.

To illustrate the rate impact for federal credit unions with assets under $1.5 billion, the fee increases from $269.4 per million dollars of assets, to $272.7 per one million dollars of assets. This is an increase of $3.3 per million dollars of assets, or 1.2 percent.

Federal credit union assets between $1.5 billion and $4.8 billion would be assessed at a rate of $79.48 per million, and assets above $4.8 billion would be assessed at $26.54 per million. As noted above, these tiers were indexed to the 5.6 percent projected asset growth, and the rates are increased by 1.2 percent.

The following tables illustrate the methodology and calculations used to develop the Operating Fee.

BILLING CODE 7535–01–P

2020 OPERATING FEE REQUIREMENTS AND OPERATING FEE METHODOLOGY

Operating Fee Schedule explanation:

	Natural Person Federal Credit Union Operating Fee Calculation Factors and Explanation	Calculation Formula	2020
1	**Proposed Annual Operating Fund Budget** amount determines the baseline fee requirement.		**$ 316.213**
2	**Remove King Street Station Note from Calculation,** because the Share Insurance Fund cannot fund this expense since the building loan is from the Share Insurance Fund.	Subtract amount of KSS note payment	$ (1.340)
3	**Operating Fund Budget to apply OTR (61.3%)**	Sum lines 1–2	$ 314.873
4	**Overhead Transfer Rate** determines the amount of the budget to be reimbursed by the Share Insurance Fund, pursuant to the Board-approved methodology. This amount is subtracted from the proposed budget amount.	OTR% x line 3	**$ (193.017)**
5	**Interest Income** projected for the year is estimated based on the latest financial statements, and is subtracted from the budget.		$ (2.250)
6	**Miscellaneous** (publication and FOIA fees) is estimated based on the latest financial statements, and is subtracted from the budget.		$ (1.000)
7	**Net** Adjustment to Budget	Sum lines 3–6	**$ 118.606**
8	Reduction of any **Operating Fund** adjustment	*reduce cash collections*	$ -
Removed non-cash items of depreciation and accrued annual leave previously adjusted since these non-cash line items are now excluded as part of the budget.			
9	**New investment projects requested in Capital Budget**	*increase cash collections*	$ 25.075
10	**Annual payment of King Street Station Note Payable** (scheduled principal payments)		$ 1.340
11	**Budgeted Operating Fee/Capital Requirements**	Sum lines 7–10	**$ 145.021**
12	Corporate federal credit union fees are collected and subtracted from natural person credit union fee requirement (based on corporate credit union scale)		$ (0.200)
13	**Natural Person Federal Credit Union Operating Fees Required**	Sum lines 11–12	**$ 144.821**
14	**Estimated Fee collections** for end of year (December 31). This projection uses the current operating fee scale with estimated asset growth from an internal NCUA economic forecasting model . Based on the June 30 assets, the year end assets are projected using the estimated asset growth to calculate fee collection estimates for the following year. The operating fee assessment is applied against the year end credit union asset value.		$ (143.072)
15	Difference between estimated operating fee collections and projected collections based on estimated asset growth.	Difference between lines 13 and 14	**$ 1.749**
16	**Average Rate Adjustment Indicated** (line 15 divided by line 14)	Line 15 divided by 14	**1.21%**

B: Operating Fee Scale explanation:

Projected federal credit union asset growth = change in asset level dividing points. Every year, the asset level scale is adjusted by the same percentage as the estimated growth rate.	Percent growth noted on line 14
Operating fee rate change = Change in assessment rate percentage	same as Line 16
The Corporate Credit Union scale remains unchanged from year to year as the number of CCUs and the collections continue to decrease to an immaterial amount.	

PROPOSED 2020 OPERATING FEE SCALE

2019 Natural Person Federal Credit Union Scale

Asset Level			Operating Fee Assessment				
$0	to	$1,000,000	$0.00				
$1,000,000	to	$1,514,387,940	$0.00	+	0.00026940	X total assets over	$0.00
$1,514,387,940	to	$4,582,515,156	$407,976	+	0.00007852	X total assets over	$1,514,387,940
$4,582,515,156	and	over	$648,885	+	0.00002622	X total assets over	$4,582,515,156

2020 (Proposed) Natural Person Federal Credit Union Scale

Projected FCU asset growth rate	5.6%	Change in asset level dividing points
Operating fee rate change	1.2%	Change in assessment rate percentages

Asset Level			Operating Fee Assessment				
$0	to	$1,000,000	$0.00				
$1,000,000	to	$1,599,193,665	$0.00	+	0.00027269	X total assets over	$0.00
$1,599,193,665	to	$4,839,136,005	$436,084	+	0.00007948	X total assets over	$1,599,193,665
$4,839,136,005	and	over	$693,595	+	0.00002654	X total assets over	$4,839,136,005

FY2020 (Proposed) Corporate Federal Credit Union Scale

Asset Level			Operating Fee Assessment				
$50,000,000	to	$100,000,000	$11,047	+	0.00019870	X total assets over	$50,000,000
$100,000,000	and	over	$20,982	+	0.00001230	X total assets over	$100,000,000

IX. Appendix A: Supplemental Budget Information

2020 Budget by Strategic Goal

Strategic Goal	2020 Proposed Budget	
	Dollars (in Millions)	Full-Time Equivalents*
Goal 1: Ensure a safe and sound credit union system	$227.9	929.6
Goal 2: Provide a regulatory framework that is transparent, efficient, and improves consumer access	$32.9	115.3
Goal 3: Maximize organizational performance to enable mission success	$83.0	130.2
Office of Inspector General	$3.9	10.0
Total	$347.8	1,185.0

Expenses for the Offices of the Board, Executive Director, Inspector General, External Affairs and Communications, and Chief Financial Officer are allocated across all strategic goals.

*NCUA's 2020 positions are funded by three different sources: the Central Liquidity Facility funds 3 full-time equivalents, and the Share Insurance Fund funds 5 full-time equivalents. NCUA's Operating Fund funds the remaining 1,177 full-time equivalents.

note: minor rounding differences may occur in totals.

*Budget includes 8 FTEs related to other NCUA funds; 3 FTEs are paid-for by the Central Liquidity Facility, and 5 FTEs are paid-for by the Share Insurance Fund.
**2019 Budget adjusted with mid-season approval of 4 FTEs that support the office of External Affairs and Communications. The overall number of FTEs increased from 1,178 to 1,182. Other internal office FTE reallocation adjustments for the Eastern and Southern regions and the Chief Financial Officer did not affect the bottom line of 1,182 authorized FTEs.

Project name	**Examination and Supervision Solution and Infrastructure Hosting (ESS&IH)/MERIT**					
Project sponsor	Office of Business Innovation and Office of the Chief Information Officer					
Customers/ beneficiaries	Internal: E&I, ONES, All Field Program Offices, OCIO, CURE, OHR, and OCFP External: Credit Unions, State Supervisory Authorities (SSAs)					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$8,414	$15,782	$4,000	TBD	TBD
	Operations and Maintenance	$0	$0	TBD	TBD	TBD
Link to NCUA strategic goals	<u>Goal 1: Ensure a Safe and Sound Credit Union System.</u> ESS will enable credit union examiners to fulfill NCUA strategic objective 1.2, "provide high-quality and efficient supervision," by providing a more effective and secure examination tool. <u>Goal 3: Maximize organizational performance to enable mission success.</u> ESS will enable credit union examiners to perform their work more efficiently, helping the NCUA achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation."					
Project Performance	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	<u>Release 1 (2019)</u>: Starting October 7, 2019, use MERIT to conduct examinations and supervision for all identified contacts.* <u>Release 2 (2020)</u>: Starting the fourth quarter, 2020, use MERIT to conduct examinations and supervision for all identified contacts.*	100% of contacts identified for Release 1* (achieved)	100% of contacts identified for Release 2**			

	Development Sprint completion: Estimate versus Actual	Within +/- 20% (Planned) Within +/- 10% (Actual)	Within +/- 20%			
	Testing Pass Rate: % of User Stories that Pass User Acceptance Testing on First attempt	90% (Planned) 72% (Actual)	90%			
	Production System Availability	99.9% (Planned) 99.9% (Actual)	99.9%	99.9%	99.9%	99.9%
	* Release 1 includes ESM Iterations 1-3: ONES natural person federal credit union exam Program (Contact Type 10, 11, 22, 23, 26, 27, and 28) and joint exam programs with two SSAs. ** Release 2 includes ESM Iteration 4: Core examination and supervision functionality including Consumer Complaints, Corporate CU, Fair Lending, Risk Focused Exam, ONES Quarterly, SCUEP, Bank Purchase, Compliance, Conservatorship Admin, Fraud, Liquidations, NFICU, Loan and Share ingest and analytics capability. Enhancements to core functionality will continue into operations and maintenance.					
Detailed project description	The ESS&IH projects will put access to the key examination and supervision capabilities into a streamlined toolset allowing the NCUA's Examiners and Supervisors to be more efficient, consistent and effective. The overarching ESS&IH project scope and key deliverables include a new, flexible, technical foundation to enable current and future NCUA business process modernization initiatives, a central user interface (CUI), which will serve as a common point of access for future ESM applications, secure transfer of data between the NCUA and third parties, and replacement of the NCUA's legacy exam system, AIRES, with new Commercial-Off-The-Shelf (COTS) solutions. This project represents the first deliverable of the NCUA's Enterprise System Modernization program. Investment objectives include: • Process Efficiency and Scalability – To enable the NCUA staff to effectively oversee all credit unions, from the smallest to the largest, with various types of examinations from a single platform;					

	• Process Flexibility and Adaptability – To adjust to new regulatory processes, demands, and priorities rapidly to an increasingly sophisticated credit union industry; • Improved Analytics – To enhance the ability to identify and evaluate risk in credit unions effectively through deep, detailed, "vertical" and "horizontal" analysis of credit unions using various analytical techniques and tools; • Robust and Flexible Data Collection – To securely collect and share financial and non-financial data with flexible workflows to automate manual processes and efficiently route work assignments; • Risk-based Examination Approach – To focus examiner resources on credit unions and asset portfolios that pose the most risk to the credit union industry; and, • Modern IT Infrastructure – To enable current and future business process modernization including a single point of entry to related IT services. Time Management System (TMS), Management Automated Resource System (MARS), and National Supervision Policy Manual (NSPM) tools are not in scope of this project. Replacement of these legacy systems will be included in future procurement efforts under the ESM program. Schedule updates reflect completion of the initial development of key deliverables in 2020, a year earlier than previously planned. Transition to an Operations and Maintenance (O&M) state, with ongoing enhancements to the examination solution, is anticipated to begin in the 3rd quarter of 2020.	
Quarterly project schedule and deliverables	March/2020	Release 2 – Complete system development for product increments 1-2 out of 3 and conduct a hands-on system demo.
	June/2020	Release 2 – Complete system development and system integration testing.
	August/2020	Release 2 – Examination and supervision functionality for all planned credit union contacts deployed and end user training started.
	December/2020	Release 2 – End User Training and transition to operations and maintenance support team is complete.
Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If significant policy changes are made then the ESS configuration timelines and planned functionality may be impacted due to changing requirements.	Maintain regular monthly communications with Examination & Insurance team on the status, planned activities, and estimated timeline.
	If vendor discovery requirements and level of effort assumptions are incorrect, then costs, schedule, or scope could be impacted and additional funding would be required.	Validate Release 2 requirements and technical implementation in FY 19 Q4; prioritize important, complex functionality for development earlier in the schedule; down-scope R-2 functionality to fit budget; and preserve management reserve for most important needs.
	If Release 1 updates, enhancements, or support service levels are prioritized over Release 2 development then cost, schedule, scope could be impacted.	Only address the highest priority Release 1 updates, enhancements, and service level improvements required to preserve capacity for Release 2 development.

Project name	**Data Collection and Sharing (DCS) Solution.** Phase I: Analysis of Alternatives (AoA) Study
Project sponsor	Office of Business Innovation and Office of the Chief Information Officer
Customers/ beneficiaries	Internal: OCIO and OBI External: N/A

Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$200	$0*	$5,000	TBD	TBD
	Operations and Maintenance	$0	$0	TBD	TBD	TBD
	* 2019 budget remains available in 2020 for the AoA study.					

Link to NCUA strategic goals	Goal 1: Ensure a Safe and Sound Credit Union System. DCS will enable credit union examiners to fulfill NCUA strategic objective 1.2, "provide high-quality and efficient supervision," by implementing a solution that ingests data simply and with improved performance. Goal 3: Maximize organizational performance to enable mission success. DCS will assist credit union examiners to perform their work more efficiently, helping the NCUA achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation" by implementing a platform that will support the NCUA's requirements for data collection, workflow, document management, customer relationship management and records management thereby improving the NCUA's records management compliance.

Project Performance (note: ☑ indicates achievement of performance measure in year)	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Capture and Validate Requirements	☑	☑			
	Complete DCS AoA Solicitation Package		☑			
	Award DCS AoA contract			☑		
	Complete AoA Study			☑		
	Provide, Scope and Review 3-4 Viable Alternative Solutions			☑		
	Complete DCS Solution Solicitation Package			☑		
	Award DCS Solution Contract			☑		
	Develop and Implement DCS Solution				☑	☑

Detailed project description	DCS will deliver a common platform to securely request, collect and share periodically or on an *ad hoc* basis both financial and non-financial data including the following: data from natural person and corporate credit union call reports and profiles; data from NCUA regional offices; customer complaints and inquiries; share and loan downloads; low income designation data; Credit Union Service Organization (CUSO) registry data; grants and loan applications; and credit union charter, expansion, conversion, and merger data. DCS will enable data collection and sharing with increased efficiency, decreased errors, and reduced redundancy by integrating data systems to efficiently receive and share information collected through a single point of entry. The common platform will also provide flexible routing of incoming data, complaints, inquiries, or requests to appropriate points of contact and track assignments from initiation to completion. DCS will allow designing of prototypical forms and applications with context sensitive input of data, provide automatic notification to all stakeholders, and integrate with in-house and third party applications. DCS will support collection, management, and retention of information within the agency and facilitate a comprehensive view of each credit union. This initiative will enable the NCUA to efficiently collect and share data in support of enterprise reporting, analytics, and examination solutions. The scope for Phase I of the DCS project is to award and complete an AoA study to identify a solution or set of solutions to replace the following legacy systems: • Credit Union and Corporate Credit Union Online (CUOnline) • CUSO Registry • Generated Efficient National Information System for Insurance Services (GENISIS) • Field of Membership Internet Application (FOMIA) • Management Information System (MIS) In addition, the AoA will evaluate a solution or set of solutions to meet the following capabilities requirements: • Workflow Management • Case Management • Content Management • Customer Relationship Management (CRM) • Document and Records Management • Logging (Assignment and Transaction Tracking) • Secure File Sharing The purpose of Phase I is to provide the requirements needed to award and complete an AoA study. The AoA will provide insight into what solution the NCUA can acquire to improve

	operational effectiveness, suitability, and the risks and life-cycle costs of alternative solutions that will support the NCUA's capability requirements as outlined above. An AoA needs to be completed to evaluate tools available in the market and how they would meet the needs of the NCUA. Additionally, the project will provide a roadmap for acquiring and implementing a solution to meet the agency's needs. It will be followed by a subsequent project to solicit and implement the selected solution(s).	
Quarterly project schedule and deliverables	March/2020	Capture and Validate Requirements for AoA
	June/2020	Complete Requirements Capture for AoA
	September/2020	Complete DCS AoA Solicitation Package
	December/2020	Issue DCS AoA Solicitation to Vendors
Performance Benchmark for Investment	This is a pre-planning project, with the anticipated outcomes being 3-4 viable alternative solutions and an acquisition and implementation roadmap. The Return on Investment (ROI) for the solution will be determined as a part of the AoA study and will be provided as a part of the follow-on solicitation and implementation of the project. As a part of the AoA, the NCUA will perform market research to determine the best acquisition plan to meet the agency's requirements for a data collection and sharing solution. The NCUA will also leverage industry experts and research organizations to assess alternatives available to meet the document and data collection needs.	
Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If the scope and requirements of the DCS AoA study are not properly defined, then the study may not yield suitable alternatives and solutions for the NCUA's DCS project.	Project sponsor will engage in early collaboration with OCIO and OBI leadership to define the scope and requirements needed for the AoA study.

Project name	**Enterprise Central Data Repository (ECDR)**
Project sponsor	Office of the Chief Information Officer
Customers/ beneficiaries	Internal: All NCUA Offices External: Credit Unions, Credit Union members and the public will indirectly benefit from this project.

Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$990	$1,096	$2,000	TBD	TBD
	Operations and Maintenance	$0	$0	$2,709	$2,933	TBD

Link to NCUA strategic goals	Goal 1: Ensure a Safe and Sound Credit Union System. The ECDR project will enable credit union examiners to fulfill strategic objective 1.2, "provide high-quality and efficient supervision," by providing a data platform that will enable the NCUA to more accurately and cost-effectively assess risks to the credit union system. In turn, the system will enable the NCUA to better identify and evaluate credit union risk and more efficiently conduct its mission through data analytics. Goal 3: Maximize organizational performance to enable mission success. The ECDR project will enable credit union examiners to perform their work more effectively and efficiently, helping the NCUA achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation" by providing the central data repository on which the agency's enterprise data analytics and ESM initiative will rely, and that will improve the integrity, security and business value of the NCUA's data.

Project Performance (note: ☑ indicates achievement of performance measure in year)	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Expand infrastructure to support legacy data required for MERIT	☑	☑			
	Continue to ingest ONES quarterly loan data	☑	☑	☑	☑	☑
	Eliminate duplicate data tables	☑	☑			
	Accurately categorize data (enterprise, analytics, etc.)	☑	☑			

	Migrate infrastructure to the cloud			☑	☑	
	Expand infrastructure to support DCS			☑	☑	☑
	Number of legacy data sources consolidated into ECDR	Establish Baseline # Tables	Call Report: 29 Tables	Exam Tables: # TBD	Member Financial Tables: # TBD	

Detailed project description	The ECDR project will implement a data repository that will serve as the enterprise data integration point for MERIT, ONES' analytic tools, the NCUA's legacy applications, the Data Collection and Sharing Solution (DCS), and provide a platform to support future data and analytic initiatives. The ECDR is an enterprise solution for the NCUA that will allow the organization to transition through a phased approach from the existing legacy databases to a cloud-based data repository while meeting the agency's requirements.

Quarterly project schedule and deliverables	March/2020	Phase 1: Support for MERIT Iteration 4 (Examination Data & Institutional Financial Data for All Credit Unions)
	June/2020	Phase 2: Member Financial Data ALM for Production
	September/2020	
	December/2020	Institutional Financial data (Call Report) migrated to ECDR for analytical purposes.

Performance Benchmark for Investment	• Improved data quality by governing enterprise data in one place, better ensuring consistency, accuracy and availability of data across the NCUA • Provides ability to access and analyze historical data allowing for more ease of in-depth analysis • The NCUA will build a central data repository to support enterprise data analytics leveraging lessons learned from federal agencies and private industry. • The data repository will be scalable to accommodate additional data requirements. • ALM integration with the ECDR will be automated so that ONES can directly access data from the ECDR to use in ALM models for stress testing.

Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If resources assigned to this project are needed to support high priority tasks, then there may be impacts to this project.	Continuous communication with OCIO Management on task prioritization and/or resource conflicts.
	If requirement changes are needed, then there may be impact to the schedule.	Hold regular status meetings with project team to keep requirements delivery on schedule. Escalate any requirements changes or expansion of requirements immediately to determine the impact of such changes.
	If there are schedule delays with the cloud environment, then additional storage may be required on premise.	Continue to communicate with the ESS team. Prepare for possible delays in moving to cloud by increasing storage by the time solution is scheduled to migrate to Test.

	Conduct Business Metadata Gap Assessment for Exam and Institutional Financial Data Domains		☑			
	Provide Data Governance training sessions for the Enterprise Data Council members	☑	☑			
	Implement data governance for initial data standards for Exam and Institutional Financial Data Domains	☑	☑			
	Develop initial business requirements for agency reporting and analytics		☑			
	Discovery and analysis on create/collect phase of data lifecycle		☑	☑		
	Implement data governance for additional data domains			☑	☑	☑
	Assess and align EDP with Federal Data Strategy and Evidence-Based Policy Making Act	☑	☑	☑	☑	☑
Detailed project description	The purpose is to establish and support the implementation of a data governance program under the OBI comprised of a policy, a data lead, data steward team, and a representative central data governing body. The primary goal is to enable the NCUA to manage enterprise data as a strategic asset through its full lifecycle (create/collect, manage/move, consume, dispose). The EDP will also facilitate the centralization, organization and storage of NCUA data with an authoritative source so analysis is more accurate, simple and easily distributed across the agency. The EDP will reduce risks facing the current data environment and improve NCUA's overall reporting and data analysis capabilities. Organized and governed data from legacy and new systems will allow for timely reporting (BI tools) to conduct risk analysis and target exams and supervision where needed to enhance the agency's ability to adapt to institution and industry conditions. The early emphasis is on the specific stakeholder-driven discovery results and related recommendations regarding the consumption lifecycle phase from the 2017-2018 Data Strategy & Framework project. Initial focus is on examination and credit union financial data domains. The first collaborative efforts will concentrate on enhancing clarity of enterprise data used in reporting and analytics for these two domains. This work will complement, not replace, other aspects of the agency's existing data management and					

	compliance processes (e.g. collection decisions, security, privacy, records management). The scope will evolve over time based on priorities and capacity.	
Quarterly project schedule and deliverables	March/2020	• Catalogue additional priority consumption issues in Institutional Financial and Exam Data Domains from Stakeholders/SMEs/Enterprise Data Governance Council (EDGC) • Plan and Operate the EDGC
	June/2020	• Develop business meta data glossary template
	September/2020	• Develop additional priority consumption standards for Institutional Financial and Exam Data Domains • Align data governance and software development requirements
	December/2020	• Complete updated data management maturity assessment • Assess pain points with internal representative working group regarding the create/collect data lifecycle phase
Performance Benchmark for Investment	• Create reporting and analysis efficiencies by reducing the time required to prepare data for analysis and correct data anomalies. • Reduce agency risk by improving accuracy in reporting and analytics. Standardizing critical data and driving increased consistency in reporting processes will mitigate risk of inconsistent reporting processes. • Enable advanced analytics to enhance risk assessment of credit unions.	
Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If the EDGC members are not adequately prepared to address data governance issues, or to participate with an enterprise perspective, the council's effectiveness will be limited and data governance objectives may not be fully met.	1. Brief Data SMEs on Data Issues and enlist their assistance in preparing EDGC members for EDGC meetings. 2. Solicit feedback on Data Issues from Data SMEs. 3. Develop clear and thorough Data Issue briefing materials. 4. Provide sufficient time for EDGC members to review Data Issue materials and appropriately engage their offices in advance of council meetings. 5. Emphasize timely engagement with the Enterprise Data Team.
	If the scope of the EDP is not appropriately managed, then the effectiveness may be compromised.	1. Work with the OED, OBI, and OCIO to build a roadmap to take on additional scope as the EDP matures and resources allow. 2. Work with the OED, OBI, OCIO and other stakeholders to manage the EDGC's scope, ensuring that the scope is not too narrow to limit its effectiveness, and not too broad to paralyze its decision-making ability.

Project name	**Asset & Liabilities Management (ALM) Application**					
Project sponsor	Office of National Examination and Supervision					
Customers/ beneficiaries	Internal: ONES External: Large and Corporate Credit Unions					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$3,167*	$2,074	$0	$0	$0
	Operations and Maintenance	$0	$0	$2,282	$3,600	$3,600
	* $1.4 million of 2019 capital funds will be carried over and programmed in 2020.					
Link to NCUA strategic goals	<u>Goal 1: Ensure a Safe and Sound Credit Union System.</u> The ALM Application will enable credit union examiners to fulfill their responsibility to achieve strategic objective 1.2, "provide high-quality and efficient supervision," by building internal analytical capabilities to run supervisory stress testing in house and to conduct quantitative risk assessments. <u>Goal 3: Maximize organizational performance to enable mission success.</u> The ALM Application will enable credit union examiners to perform their work more effectively and efficiently, helping the NCUA achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation," by improving the NCUA's supervision tools and approaches, identifying material risks facing the covered credit unions, and tailoring resources to the material risks and risk focused exams.					
Project Performance (note: ☑ indicates achievement of performance measure in year)	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Procure ALM tool for Stress Testing	☑				
	Complete software development lifecycle deployment into production	☑				
	Perform data extraction and integration	☑				
	Identify remaining software tools	☑				
	Procure remaining tools	☑				
	Perform in-house stress testing to challenge credit		☑			

	unions' self-run Supervisory Stress Testing					
	Continue to perform in-house stress testing and risk assessments			☑	☑	☑

Detailed project description	This project will allow the NCUA to build internal analytical capabilities to run supervisory stress testing in house and to conduct regular quantitative risk assessments by procuring and configuring off-the-shelf analytical tools, models, and software used commonly in financial industry stress testing and other risk management activities. This effort delivers a complete solution that will focus on transforming the NCUA's supervision tools and approaches, identifying material risks facing the covered credit unions, and tailoring resources to the material risks and risk focused exams. This effort will allow the NCUA to reduce the existing third party contractor's role to only consultation while also improving the NCUA's ability to perform independent credit union risk assessments.

Quarterly project schedule and deliverables	March/2020	ALM Process Ready for In-House Stress Testing
	June/2020	Complete Stand-Up of In-House Stress Testing
	September/2020	
	December/2020	

Performance Benchmark for Investment	• Increased efficiencies by providing immediate access to the data required to perform risk assessment of credit unions • Increased Supervisory quality through improved ability to develop the NCUA's independent assessment of credit union risk • Reduction in cost of supervisory stress testing by removal of third party vendor contract

Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If the ALM Tool provides results that are inaccurate, then the NCUA will need identify other tools for consideration.	Allow adequate time to validate results against existing third party vendor's results. Continue utilizing existing third party vendor contract to perform supervisory stress testing.

Project name	**Enterprise Learning Management System (LMS) Replacement**					
Project sponsor	Office of Human Resources					
Customers/ beneficiaries	Internal: All NCUA staff External: State Supervisory Authority (SSA) and Contractors					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$550*	$1,000*	$0	$0	$0
	Operations and Maintenance	$0	$0	$105	$112	$112
	*Note: 2019 funds reprogrammed in mid-session to support higher priority needs. If additional resources are required in 2020 to deliver the LMS project, additional project reprioritization may be required.					
Link to NCUA strategic goals	Goal 3: Maximize organizational performance to enable mission success. The LMS Replacement project will assist all NCUA employees to perform their work more effectively and efficiently, helping the NCUA achieve strategic objective 3.1, "attract, engage and retain highly-skilled, diverse workforce and cultivate an inclusive environment." The new LMS will be the NCUA's primary system for hosting and delivering eLearning courses and will allow for increased access to training and eLearning.					
Project Performance (note: ☑ indicates achievement of performance measure in year)	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Initiate and plan the acquisition of a new LMS	☑				
	Acquire a modern, cost-efficient cloud-based LMS that meets agency requirements		☑			
	Prepare and provide access to a new LMS and a full array of learning services to ~2,500 end users*		☑			
	* includes users from State Supervisory Authorities and contract staff.					
Detailed project description	The purpose of the LMS Replacement project is to initiate an acquisition, create a project management plan, and execute production implementation of a cost-effective, cloud-based solution and training services that provides the NCUA with the full-range of eLearning functionality associated with a modern LMS. This will allow for enhanced examiner utilization and accessibility driven by quality content, ease of use and system reliability. The new system will also support role-based interface or the ability to view					

	personalized pages by role, and allow for centralized content, adherence to federally mandated reporting requirements and adherence to records management best practices.		
Quarterly project schedule and deliverables	January/2020	Release package to vendors.	
	April/2020	Evaluations ongoing	
	June/2020	Award contract	
	December/2020	Implementation of LMS	
Performance Benchmark for Investment	The planned LMS will: • support collection of request, authorization, agreement, and certification of training • provide Single Sign-on (SSO) • provide a customized, automated Individual Development Plan (IDP) workflow • provide a competency management system to evaluate training needs within the agency		
Project Risks and Mitigation Strategies	**Risk**		**Mitigation**
	If HTML 5 is not enabled in the agency's web browser to support Adobe Flash content in the current LMS, then the existing training system will not work. Support for Adobe Flash is scheduled to be discontinued in 2020.		Procure learning content constructed using modern web standards and that is compatible with the latest version of the agency web browser.
	If technical issues arise during the data migration process, it could result in the loss of training records, content or other data.		Assess data compatibility during market research and use compatibility as a qualifying factor.

Project name	**Integrated Financial Management System (IFMS) Analysis**					
Project sponsor	Office of Chief Financial Officer					
Customers/ beneficiaries	Internal: OCFO External: N/A					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$350*	$400	$400	TBD	TBD
	Operations and Maintenance	$0	$0	TBD	TBD	TBD
	*Funds reprogrammed in 2019 mid-session to support higher priority needs.					
Link to NCUA strategic goals	<u>Goal 3: Maximize organizational performance to enable mission success.</u> The primary purpose of the IFMS Analysis will be to plan for changes needed to efficiently implement a new IFMS or make improvements to the existing financial management services environment. To maximize performance and efficiency and to minimize long-term operational costs, the desired path is to update the NCUA's processes, practices and accounting structure so that they better align with the system capabilities and service offerings of a federal Shared Service Provider (SSP). The benefits of this would include leveraging processes that already exist and minimizing future upgrade costs since such costs will be shared among other government agencies.					
Project Performance	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Initiate and plan the IFMS Analysis	☑				
(note: ☑ indicates achievement of performance measure in year)	Acquire a vendor to conduct an analysis.		☑			
	Report on the feasibility, changes needed, costs, data migration strategy, and implementation recommendations.		☑			
Detailed project description	The IFMS Analysis will conduct a study of the NCUA's accounting operations, financial reporting, and budget and procurement processes for the purpose of determining and recommending changes needed, both to the NCUA's processes and to a target federal IFMS SSP. The project will include: • Business Analysis – Review and supplement the NCUA's requirements for a financial management system, contract writing and related services for budget, payments, receivables and reporting.					

	• Business Reengineering – Identification of business processes that may be candidates for modification to enable the efficient adoption of a recommended SSP. • SSP Research – Evaluate the NCUA's requirements against current offerings from SSPs. This includes assessing SSP processes to assess whether processes can be adopted by the NCUA with or without customization. • Lifecycle Cost Estimation and Analysis – Provide a cost breakdown for installation, training, hosting, operations and maintenance and disposition. Consider data migration costs, although assume historical transaction data is not migrated. • Risk Analysis –Identify risks and opportunities associated with SSP products or services as they relate to the NCUA.		
Quarterly project schedule and deliverables	March/2020	Release procurement and award contract for IFMS Analysis.	
	June/2020	Conduct analysis of the NCUA's IFMS requirements and business processes, assess offerings from federal SSPs.	
	September/2020		
	December/2020	Analysis complete.	
Performance Benchmark for Investment	1. The study of federal shared service providers will identify the capability of an IFMS to meet the NCUA's needs. 2. Make a determination of transition costs for Delphi to the recommended federal shared service provider. 3. Report will define the gaps between the NCUA's requirements and system capabilities.		
Project Risks and Mitigation Strategies	**Risk**		**Mitigation**
	Vendor proposals exceed the estimated project costs.		Understand the underlying cost assumptions for vendors' proposals; identify lower-priority projects from which funding can be reallocated, if needed; descope project, if necessary.

<tr><td>N/A</td><td></td><td></td><td></td><td></td><td></td></tr>
<tr><td>Detailed project description</td><td colspan="6">The purpose of the Enterprise Laptop Lease project is to provide the NCUA with a more efficient, mobile friendly, and secure tool to help better perform their jobs at a reasonable cost.

The project scope includes: (1) the selection of new, standard laptop configurations; (2) image and compatibility testing; (3) device acquisition; and (4) the managed deployment of the new devices to end users. Out year costs are associated with the required lease payments. All stakeholders who use the NCUA-provided and supported laptops to perform their work will receive the new laptops.

By including hardware and OS support into the lease agreement contract, and following a three-year replacement lifecycle, the NCUA will be able to keep pace with changes in workstation and OS technology in a cost effective manner.

The current lease for NCUA laptops ends in early 2021. During the last year of the current lease, the NCUA's staff will analyze options for the next laptop acquisition, comparing the lifecycle costs for leasing and purchasing of the equipment. Once the most cost-effective solution is determined, the NCUA will update this project with refined cost estimates. Programmed funding levels for 2021 and future years approximate spending on the current lease agreement.</td></tr>
<tr><td rowspan="4">Quarterly project schedule and deliverables</td><td>March/2020</td><td colspan="5">Make final payment for current laptop lease</td></tr>

Project name	**Information Technology (IT) Infrastructure, Platform and Security Refresh**					
Project sponsor	Office of the Chief Information Officer					
Customers/ beneficiaries	Internal: All NCUA External: All Credit Unions					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$2,350	$2,000	$2,000	TBD	TBD
	Operations and Maintenance	$0	$1,068	$1,068	$1,068	$1,068
Link to NCUA strategic goals	Goal 3: Maximize organizational performance to enable mission success. The IT Infrastructure, Platform and Security Refresh project will enable credit union examiners to perform their work more effectively and efficiently, helping the NCUA achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation" by refreshing and/or replacing co-located (COLO) and Regional routers, switches, virtual servers, wireless infrastructure and equipment, virtual private networks, firewalls, security tools (endpoint protection, password managers, derived credential, security information and event management, governance and risk compliance (GRC), and data loss prevention (DLP)) and end-of-life and end-of-service components. Investment in these projects helps ensure business continuity and efficient operations by improving system availability and stability.					
Project Performance	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Reduce OCIO administrative overhead on end-of-life (EOL) and failing systems by 75 percent through: - eliminating ad hoc support for EOL equipment, - updating platforms with enhanced troubleshooting and management consoles, and	Developed baseline estimate of OCIO administrative overhead: 5% of total contract spending	Reduce OCIO administrative overhead to 3.75%	3.75%	3.75%	3.75%

	- reducing maintenance requirements. (note: administrative overhead to monitor and mitigate risk for EOL and failing systems estimated at approximately 5% of total OCIO contract spending)					
	Gain efficiencies through: - enhanced capabilities resulting in lower contract support costs , - greater integration from modernized interfaces and software, and - predictable upgrade and vulnerability management paths	Developed baseline support contract estimate of $5.25M/ year	Reduce support contract to $4.2M/ year	$4.2M/ year	$4.2M/ year	$4.2M/ year

Detailed project description	The purpose of the IT Infrastructure, Platform and Security Refresh project is to ensure that NCUA data is secure and operations are stable by refreshing and/or replacing COLO and Regional routers, switches, firewalls, virtual servers, wireless infrastructure and equipment, virtual private networks, security tools (including GRC and DLP) and other network end-of-life and end-of-service components.

Quarterly project schedule and deliverables	March/2020	Complete Phase I of refresh and/or replacement: Servers and Storage devices (Server 2008 replacement, potential cloud infrastructure initial implementation (M365)), and complete derived credentials capability for mobile device access to NCUA business applications
	June/2020	Complete the replacement of Network Security Scan devices and Cybersecurity tools (endpoint protection, GRC and DLP)
	September/2020	Complete Phase II of refresh and/or replacement: Network devices and switches
	December/2020	Complete the replacement of NCUA wide wireless antennas and routers

Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	If the acquisition timeframe is extended, then the implementation schedule will be delayed.	Provide all required procurement artifacts well in advance of deadlines and manage all activities closely with clear escalation paths for higher level issue resolution.
	If resources are assigned to other assignments, then the implementation schedule will be delayed.	Create integrated master schedule with clear process for resource prioritization and scheduling.

Project name	**NCUA Public Websites Updates**					
Project sponsor	Office of the Chief Information Officer					
Customers/ beneficiaries	Internal: OEAC External: Visitors to NCUA Public Websites					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$0	$100*	$100	$100	$100
	*Note: web services contract will be re-competed and awarded in December 2019. New contract begins in January 2020.					
Link to NCUA strategic goals	<u>Goal 2: Provide a regulatory framework that is transparent, efficient and improves consumer access.</u> The web services program will assist the NCUA to share information with the public, credit unions, Congress, the media and NCUA employees about the agency and its functions, Board actions and other matters. The program will help the NCUA achieve strategic objective 2.1, "deliver an effective and transparent regulatory framework." The web services contract provides on-demand, agile support for the completion and delivery of special web projects and tasks requested by various NCUA offices of primary interest on behalf of the NCUA Chairman, Board members, Executive and Deputy Executive Director. <u>Goal 3: Maximize organizational performance to enable mission success.</u> The web services program will ensure that the NCUA is utilizing the efficient technology and business processes for managing the content of its public-facing websites.					
Project Performance	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	N/A					
Detailed project description	The purpose of the Web Services project is to serve the web-related needs of the internal NCUA stakeholders and the public. The project provides design, development, and maintenance of the NCUA.gov. The project scope includes: (1) support for NCUA special projects and tasks; (2) website publishing; (3) website operations and maintenance; (4) accessibility/Section 508 and usability; and, (5) Spanish website content translation.					
Quarterly project schedule and deliverables	March/2020	ITSS web services contract implemented				
	June/2020	High-priority projects implemented on a continuous basis on NCUA.gov				
	September/2020					
	December/2020					

Performance Benchmark for Investment	NCUA.gov includes redesigned website content, such as updated visual design, content that conforms with Section 508 an usability standards, and design documents that conform with NCUA web style guides.	
Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	Urgent requests for website updates could result in content not compliant with approved style guides and accessibility standards.	OCIO will coordinate with OEAC to ensure content complies with requirements of the NCUA Communications manual, NCUA Web Style Guide, Section 508, and Web Content Accessibility Guides (WCAG). OCIO will follow the change request process by creating OneStop requests for every project or request.
	New high priority project requests may result in unfunded requirements exceeding the contract budget.	OCIO will work closely with OEAC to forecast potential projects.

Project name	**Central Office HVAC Replacement Project**					
Project sponsor	Office of the Chief Financial Officer					
Customers/ beneficiaries	Internal: All NCUA Headquarters Building Occupants External: All NCUA Headquarters Building Visitors					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$750	$750	$500	$0	$0
Link to NCUA strategic goals	Goal 3: Maximize organizational performance to enable mission success. The NCUA headquarters Heating, Ventilation, and Air Conditioning (HVAC) system replacement project will improve the operations of the agency's largest building while lowering utility costs by installing more energy-efficient systems, helping achieve strategic objective 3.2, "deliver an efficient organizational design supported by improved business processes and innovation." The current HVAC system is 24 years old, and by replacing it the NCUA will ensure its infrastructure meets all current codes for life safety, accessibility, and security. The new system will result in cost savings through and increased energy and operational efficiency and lower maintenance costs.					
Project Performance	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Energy Consumption (kWh/degree days)	1.8K	1.6K	=<1.55K	=<1.55K	=<1.55K
	System Outages (unscheduled repair visits)	<30	<20	<10	<10	<10
Detailed project description	The project will replace all HVAC systems in the headquarters building to include all cooling towers, air handlers, boilers and HVAC components. The current HVAC system is original to the facility, 24 years old and obsolete; some component parts are no longer available. HVAC systems are the biggest users of electricity in a facility, and the anticipated life span of these system's major components is approximately 20-25 years. The current system is at the end of its usable life and it is not working efficiently. Additionally the maintenance and operating costs have increased considerably and system components are failing more frequently, which are clear signs of decreased reliability. A design and proposal has been completed with the anticipated replacement of the first cooling tower during the spring of 2020. Additionally all building HVAC controls are in the					

	process of being replaced. Follow on phases include the replacement of the second cooling tower and boiler system.		
Quarterly project schedule and deliverables	March/2020	First cooling tower replaced	
	June/2020		
	September/2020		
	December/2020	Updates to 70% of thermostats and obsolete Variable Airflow Boxes	
Performance Benchmark for Investment	The replacement will improve building efficiency by an estimated 15%, which exceeds the 2011 Energy Code that mandates that requires, for existing nonresidential buildings 10,000 square feet and larger: (1) an energy efficiency audit has to be performed once every 5 years identifying specific cost-effective measures that would save energy; and (2) the reduction of energy consumption of 5% by the introduction of more efficient systems.		
Project Risks and Mitigation Strategies	**Risk**		**Mitigation**
	Schedule. Headquarters renovation work will affect all floors and will be ongoing through 2020.		Project managers have developed an integrated master schedule for Headquarters Renovation and HVAC System Replacement to avoid scheduling conflicts for work.
	Ongoing existing system failures. In 2019 the NCUA headquarters building experienced over 28 HVAC isolated system failures due to aging equipment.		HVAC System Replacement plan encompasses replacing parts showing high levels of deterioration first to address the most common failure types

Project name	**Austin, TX Office Building Improvements**					
Project sponsor	Office of the Chief Financial Officer					
Customers/ beneficiaries	Internal: All Austin, TX Building Occupants External: All Austin, TX Building Visitors					
Budget	**$ in thousands**	**2019**	**2020**	**2021**	**2022**	**2023**
	Acquisition	$150	$274	$230	$230	$0
Link to NCUA strategic goals	Goal 3: Maximize organizational performance to enable mission success Repairs to NCUA's Austin, Texas office building will improve operations at the facility and help enable the agency to meet its strategic objective 3.3 "ensure sound corporate governance." Many of the systems and building elements in the Austin office building have not been adequately maintained, and this investment will ensure that facility infrastructure meets current building codes for life safety, accessibility, and security. Once the investments have been completed, replaced equipment and better management of maintenance schedules will result in increased energy and operational efficiency.					
Project Performance (note: ☑ indicates achievement of performance measure in year)	**Performance measure**	**2019**	**2020**	**2021**	**2022**	**2023**
	Repair Critical items identified in field assessments	☑	☑			
	Repair Potentially Critical items identified in field assessments		☑	☑	☑	
Detailed project description	The NCUA assessed the condition of its office building in Austin, Texas in 2018 and identified a significant amount of required improvements, such as replacing the fire alarm system, repairing and replacing doors and sensors, and installing fire-proof roofing. In addition, nearly all of the windows in the 30+ year old building required replacement in 2019. The 2020 investment of $274,000 will support repairing or replacing all of the items identified as critical and potentially critical. These capital improvements are required in order for the facility to continue routine and safe operations, and align with the life cycle replacement required for critical infrastructure. Future year budgets will fund additional major repair or replacement projects in a priority order.					

Quarterly project schedule and deliverables	March/2020	Repair of critical and potentially critical items, as identified in field assessments.
	June/2020	
	September/2020	
	December/2020	
Performance Benchmark for Investment	The repairs are expected to improve building efficiency by at least 20%, which will reduce the general cost of ownership for NCUA facilities.	
Project Risks and Mitigation Strategies	**Risk**	**Mitigation**
	Facility systems will continue to fail due to lack of maintenance	Depending on priorities, resources may be reprogrammed to repair failing equipment
	Cost. Construction costs have increased while the economy strengthened.	Adjust the scope, schedule, or priority of planned renovation work.
	Schedule. Projects may not be delivered on time.	Contractor support services have been acquired to provide additional construction management and oversight.

Resolution Plans Required

AGENCY: Board of Governors of the Federal Reserve System (Board) and Federal Deposit Insurance Corporation (Corporation).

ACTION: Final rule.

SUMMARY: The Board and the Corporation (together, the agencies) are jointly adopting this final rule implementing the resolution planning requirements of section 165(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act). This final rule is intended to reflect improvements identified since the agencies finalized their joint resolution plan rule in November 2011 (2011 rule) and to address amendments to the Dodd-Frank Act made by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA). Through this final rule, the Board is also establishing risk-based categories for determining the application of the resolution planning requirement to certain U.S. and foreign banking organizations, consistent with section 401 of EGRRCPA. The final rule also extends the default resolution plan filing cycle, allows for more focused resolution plan submissions, and improves certain aspects of the resolution planning rule.

DATES: This rule is effective December 31, 2019.

FOR FURTHER INFORMATION CONTACT:

Board: Mona Elliot, Deputy Associate Director, (202) 912–4688, Catherine Tilford, Assistant Director, (202) 452–5240, Kathryn Ballintine, Lead Financial Institution Policy Analyst, (202) 452–2555, or Tudor Rus, Lead Financial Institution Policy Analyst, (202) 475–6359, Division of Supervision and Regulation; or Laurie Schaffer, Associate General Counsel, (202) 452–2272, Jay Schwarz, Special Counsel, (202) 452–2970, Steve Bowne, Senior Counsel, (202) 452–3900, or Sarah Podrygula, Attorney, (202) 912–4658, Legal Division, Board of Governors of the Federal Reserve System, 20th and C Streets NW, Washington, DC 20551. I. Introduction

A. Background

Section 165(d) of the Dodd-Frank Act [1] and the 2011 rule [2] require certain financial companies (covered companies) to report periodically to the agencies their plans for rapid and orderly resolution under the U.S. Bankruptcy Code (the Bankruptcy Code) in the event of material financial distress or failure. The goal of the Dodd-Frank Act resolution planning process is to help ensure that a covered company's failure would not have serious adverse effects on financial stability in the United States. The Dodd-Frank Act and the 2011 rule require a covered company to submit a resolution plan for review by the agencies. The resolution planning process requires covered companies to demonstrate that they have adequately assessed the challenges that their structures and business activities pose to a rapid and orderly resolution in the event of material financial distress or failure and that they have taken action to address those challenges, including through the development of capabilities appropriate to the covered company's size and complexity.

Implementation of the 2011 rule has been an iterative process aimed at strengthening the resolvability and resolution planning capabilities of covered companies. Since finalization of the 2011 rule, the agencies have reviewed multiple resolution plan submissions and have provided feedback on individual resolution plans following their review by the agencies (firm-specific feedback) and guidance directed to groups of firms (general guidance) to assist covered companies in their development of subsequent resolution plan submissions.

EGRRCPA revised the resolution planning requirement as part of the changes the law made to application of the enhanced prudential standards in section 165 of the Dodd-Frank Act. Specifically, EGRRCPA raised the $50 billion minimum asset threshold for general application of the resolution planning requirement to $250 billion in total consolidated assets, and provided the Board with discretion to apply the resolution planning requirement to firms with $100 billion or more and less than $250 billion in total consolidated

[1] 12 U.S.C. 5365(d).

[2] 76 FR 67323 (November 1, 2011).

assets.[3] The threshold increase occurs in two stages. Immediately on the date of EGRRCPA's enactment, firms with total consolidated assets of less than $100 billion (for foreign banking organizations, $100 billion in total global assets) were no longer subject to the resolution planning requirement. Eighteen months after the date of EGRRCPA's enactment, the threshold increases to $250 billion in total consolidated assets. However, EGRRCPA provides the Board with the authority to apply resolution planning requirements to firms with $100 billion or more and less than $250 billion in total consolidated assets. Specifically, under section 165(a)(2)(C) of the Dodd-Frank Act, as revised by EGRRCPA, the Board may, by order or rule, apply the resolution planning requirement to any firm or firms with total consolidated assets of $100 billion (for foreign banking organizations, $100 billion in total global assets) or more.[4]

In May 2019, the agencies invited comment on a proposal to amend and restate the 2011 rule (the proposed rule or proposal).[5] The proposed rule was intended to address amendments to the Dodd-Frank Act made by the EGRRCPA and improve certain aspects of the 2011 rule based on the agencies' experience implementing the 2011 rule since its adoption. The agencies are now finalizing the proposed rule, with certain changes based on public comments on the proposed rule, as described in detail below.

The Board's Tailoring Rules

Consistent with section 401 of EGRRCPA, the Board finalized two separate proposals to revise the framework for determining the prudential standards that should apply to large U.S. banking organizations (domestic tailoring rule)[6] and to large foreign banking organizations (FBO tailoring rule[7] and together with the domestic tailoring rule, the tailoring rules). Among other provisions, the tailoring rules identify distinct standards applicable to firms for the purpose of calibrating requirements. The tailoring categories established in the tailoring rules are as follows:

- Category I standards will apply to:
  - Global systemically important bank holding companies (U.S. GSIBs),
- Category II standards will apply to:
  - U.S. firms that are not subject to Category I standards with (a) $700 billion or more in average total consolidated assets, or (b) $100 billion or more in average total consolidated assets that have $75 billion or more in average cross-jurisdictional activity, and
  - Foreign banking organizations with (a) $700 billion or more in average combined U.S. assets,[8] or (b) $100 billion or more in average combined U.S. assets that have $75 billion or more in average cross-jurisdictional activity measured based on the foreign banking organization's combined U.S. operations.[9]
- Category III standards will apply to:
  - U.S. firms that are not subject to Category I or Category II standards with (a) $250 billion or more in average total consolidated assets, or (b) $100 billion or more in average total consolidated assets that have $75 billion or more in any of the following risk-based indicators: Average total nonbank assets, average weighted short-term wholesale funding, or average off-balance sheet exposure, and
  - Foreign banking organizations that are not subject to Category II standards with (a) $250 billion or more in average combined U.S. assets, or (b) $100 billion or more in average combined U.S. assets that have $75 billion or more in any of the following risk-based indicators measured based on the combined U.S. operations: Average total nonbank assets, average weighted short-term wholesale funding, or average off-balance sheet exposure and
- Category IV standards will apply to:
  - U.S. firms with $100 billion or more in average total consolidated assets that do not meet any of the thresholds specified for Categories I through III, and
  - Foreign banking organizations with $100 billion or more in average combined U.S. assets that do not meet any of the thresholds specified for Categories II or III.

These categories form the basis for the final rule's framework for imposing resolution planning requirements, with adjustments where appropriate. The categories are also used to tailor the content of the resolution planning requirements, taking into account covered companies' particular geographic footprints, operations, and activities, as described below.

B. Overview of the Proposed Rule

Under the proposed rule, resolution planning requirements would have applied to (1) those firms that are statutorily required to submit resolution plans (*i.e.,* U.S. and foreign banking organizations with $250 billion or more in total consolidated assets, the U.S. GSIBs, and any non-bank financial company designated by the Financial Stability Oversight Council (Council) for supervision by the Board) and (2) firms with total consolidated assets of $100 billion or more and less than $250 billion that would have been subject to Category II or III standards under the notices of proposed rulemaking for the tailoring rules. In particular, the Board would have applied resolution planning requirements to firms with total consolidated assets of $100 billion or more and less than $250 billion that would have had $75 billion or more in any of the following four risk-based indicators: Cross-jurisdictional activity, nonbank assets, weighted short-term wholesale funding, or off-balance-sheet exposure. In the case of a foreign banking organization, resolution planning requirements would only have applied if the firm also had combined U.S. assets equal to $100 billion or more, and the risk-based indicators would have been measured based on the firm's combined U.S. operations.

The proposed rule would have divided firms subject to resolution

[3] EGRRCPA also provides that any bank holding company, regardless of asset size, that has been identified as a U.S. global systemically important bank (U.S. GSIB) under the Board's U.S. GSIB surcharge rule shall be considered a bank holding company with $250 billion or more in total consolidated assets for purposes of the application of the resolution planning requirement. EGRRCPA section 401(f), Public Law 115 174, 132 Stat. 1296.

[5] 84 FR 21600 (May 14, 2019).

[6] Prudential Standards for Large Bank Holding Companies and Savings and Loan Holding Companies, 83 FR 61408 (November 29, 2018). The Board's final rule is published elsewhere in this issue of the **Federal Register** and is also available on the Board's website at *https://www.federalreserve.gov/aboutthefed/boardmeetings/files/tailoring-rule-fr-notice-20191010a2.pdf*.

[7] Prudential Standards for Large Foreign Banking Organizations; Revisions to Proposed Prudential Standards for Large Domestic Bank Holding Companies and Savings and Loan Holding Companies, 84 FR 21988 (May 15, 2019). The Board's final rule is published elsewhere in this issue of the **Federal Register** and is also available on the Board's website at *https://www.federalreserve.gov/aboutthefed/boardmeetings/files/tailoring-rule-fr-notice-20191010a2.pdf*.

[8] Combined U.S. assets means the sum of the consolidated assets of each top-tier U.S. subsidiary of the foreign banking organization (excluding any section 2(h)(2) company as defined in section 2(h)(2) of the Bank Holding Company Act (12 U.S.C. 1841(h)(2)), if applicable) and the total assets of each U.S. branch and U.S. agency of the foreign banking organization, as reported by the foreign banking organization on the FR Y–7Q.

[9] The combined U.S. operations of a foreign banking organization include any U.S. subsidiaries (including any U.S. intermediate holding company), U.S. branches, and U.S. agencies. In addition, for a foreign banking organization that is not required to form a U.S. intermediate holding company, combined U.S. operations refer to its U.S. branch and agency network and the U.S. subsidiaries of the foreign banking organization (excluding any section 2(h)(2) company as defined in section 2(h)(2) of the Bank Holding Company Act (12 U.S.C. 1841(h)(2), if applicable) and any subsidiaries of such U.S. subsidiaries.

planning requirements into three categories for purposes of determining submission frequency and resolution plan content requirements. The U.S. GSIBs would have been required to submit a resolution plan every two years, alternating between full and targeted resolution plans. Firms subject to Category II or III standards under the notices of proposed rulemaking for the tailoring rules would have been required to submit a resolution plan every three years, alternating between full and targeted resolution plans. Other foreign banking organizations subject to the proposed rule but not subject to Category II or III standards would have been required to submit a resolution plan every three years, with their initial filing being a full resolution plan and each subsequent submission being a reduced resolution plan. The proposal would have generally maintained the same informational content requirements for full resolution plans as under the 2011 rule, but would have established a new process whereby covered companies could request a waiver from certain informational content requirements in their full resolution plans. Under the proposal, covered companies would have been required to include in targeted resolution plans and reduced resolution plans information about certain changes since their previous resolution plan submission. Targeted resolution plans would also have included information about certain resolution planning core elements and information responsive to the agencies' targeted information requests.

The proposed rule would also have made certain procedural changes to the provisions of the 2011 rule relating to the identification of critical operations. The proposal would have established formal processes for firms and the agencies to identify particular operations of covered companies as critical operations and to rescind prior critical operations identifications made by the agencies. In addition, the proposal would have specified a process for a covered company to request reconsideration of operations previously identified by the agencies as critical operations, and required that a covered company notify the agencies if it ceased to identify an operation as a critical operation.

II. Overview of Comments

The agencies received and reviewed 14 comment letters on the proposed rule. Commenters included various financial services trade associations, covered companies, public interest groups, and individuals. In addition, the agencies met with industry representatives at their request to discuss issues relating to the proposed rule. This section provides an overview of the general themes raised by commenters. Comments are addressed in further detail in the below sections describing the final rule, including any changes that the agencies have made to the proposed rule in response to comments.

General Support and Opposition

A number of commenters generally supported the proposed rule. These commenters supported the proposed rule's efforts to tailor resolution planning requirements to a firm's size, complexity, and risk profile, and asserted that the proposed rule would preserve and improve upon key elements of resolution planning while enhancing transparency and meaningfully reducing burden.[10]

Several commenters raised concerns about the proposed rule. These commenters generally asserted that the proposed rule would inappropriately weaken financial regulations put in place after the 2008 financial crisis and thereby increase systemic risk. In addition, certain commenters asserted that the proposed rule inappropriately relied on burden reduction as a rationale for the proposed changes, was inconsistent with administrative law because the agencies did not provide sufficient justification for reducing the frequency and content of resolution plans, and was inconsistent with the Dodd-Frank Act. One commenter questioned whether firms would reallocate resources no longer needed to comply with the current rule to activities considered to be more beneficial, and whether any such benefit would accrue to the public at large. One commenter also asserted that the agencies should delay modifying the 2011 rule until it has been tested in an economic downturn, and another commenter asserted that the agencies should be cognizant of the effect of regulations on non-financial companies and small business lending. As further explained below, the final rule would continue to apply appropriate requirements on firms based on the relative risk that a firm's failure would pose to U.S. financial stability, and would preserve and improve upon key elements of the resolution planning framework that were put in place after the 2008 financial crisis. The agencies believe that this approach is consistent with the Dodd-Frank Act, as amended by the EGRRCPA, which generally provides for the tailoring of enhanced prudential standards based on firms' capital structure, riskiness, complexity, financial activities (including financial activities of subsidiaries), size, and other risk-related factors. Moreover, since the finalization of the 2011 rule, the agencies have reviewed multiple resolution plan submissions and have provided firm-specific feedback and general guidance to assist the covered companies in their development of subsequent resolution plan submissions. Consequently, covered companies' submissions and the agencies' firm-specific feedback and general guidance have matured over several resolution plan cycles, and the agencies believe this is an appropriate time to revise the 2011 rule to reflect improvements identified since it was originally adopted, including changes in the frequency and content of resolution plans, for the reasons stated in the proposal and this preamble.[11]

2019 and 2020 Plans

The agencies received several comments from covered companies and industry representatives requesting clarification regarding resolution plan filing requirements for 2019 and 2020. On July 26, 2019, the agencies informed (1) covered companies with resolution plans due in December 2019 that their next resolution plan submission dates were extended to July 1, 2021 or such other date that may be specified when the agencies adopt the final rule and (2) Barclays PLC, Credit Suisse, Deutsche Bank AG, and UBS AG that the informational requirements for their July 2020 resolution plans may be limited to changes they have made to their 2018 resolution plans to address shortcomings identified in those resolution plans, and they are required to submit their next full resolution plans on July 1, 2021 or such other date that

[10] Certain commenters also made assertions that characterized the agencies' views of prior resolution plan submissions under the 2011 rule or the agencies' rationale for proposing certain changes to the 2011 rule. The agencies are not responding to or endorsing these assertions in this preamble. The agencies' views regarding individual resolution plans are communicated to covered companies following the agencies' review of those resolution plans. Separately, certain commenters proposed strengthening regulatory requirements that are unrelated to the resolution planning rule. These comments are outside the scope of this rulemaking.

[11] With respect to the timing of these changes, the agencies also note that, due to the effective date of section 401 of the EGRRCPA, the agencies believe it is important to complete revisions to the rule prior to the date that, pursuant to EGRRCPA, the resolution plan submission threshold increases to $250 billion in total consolidated assets.

may be specified when the agencies adopt the final rule.[12]

Comments Related to the Corporation's IDI Rule

The agencies received several comments asserting that the filing cycle or resolution plan content requirements under the final rule should align with the requirements under the Corporation's rule requiring certain insured depository institutions to submit resolution plans (the IDI rule).[13] Some commenters also asserted that firms should be able to incorporate by reference information included in a resolution plan submitted pursuant to the IDI rule into a resolution plan submitted pursuant to the final rule. A commenter stated that the agencies should harmonize the informational content requirements for resolution plans under the final rule with resolution plans under the IDI rule for filers subject to Category III standards, and that doing so would permit these filers to focus their resolution planning efforts on a uniform resolution plan filing process.

The agencies have not modified the proposal on the basis of these comments. The agencies note that the final rule and the IDI rule are separate requirements with different purposes and goals, and that the IDI rule is administered by only the Corporation. In part because a resolution plan submitted pursuant to the IDI rule is submitted to only the Corporation, incorporating by reference such information into a resolution plan submitted pursuant to the final rule is more challenging than incorporation by reference of such information into a resolution plan submitted pursuant to the IDI rule. The agencies note that the Corporation has issued an advanced notice of proposed rulemaking regarding the IDI rule. That advanced notice of proposed rulemaking notes, ''[t]o promote efficiency and reduce burden, the [Corporation] is encouraging the use of incorporation by reference to [resolution plan submissions required under section 165(d) of the Dodd-Frank Act] where practicable.'' [14] As the Corporation works to amend the IDI rule, the Corporation will seek to reduce unnecessary duplication between the IDI rule and the final rule.

Firms Subject to Resolution Planning Requirements

The agencies received several comments regarding the Board's proposed scope of application for the resolution planning requirement. Certain commenters supported the Board's proposal to rely on the risk-based indicators to identify those firms with $100 billion or more and less than $250 billion in total consolidated assets that would remain subject to resolution planning requirements under the final rule. However, some commenters recommended changes to the manner in which the risk-based indicators were proposed to be calculated or recommended that the Board further narrow the scope of coverage of the resolution planning requirement. Conversely, some commenters asserted that the proposed scope of coverage should be expanded so that more firms would be subject to the resolution planning requirement.

Filing Cycle

The agencies received comments in support of and opposed to the proposed filing cycle. Some commenters asserted that a less-than-annual requirement would allow sufficient time for covered companies to integrate firm-specific feedback, while other commenters raised concerns that significant changes to resolvability could occur between less frequent resolution plan submissions. Some commenters asserted that covered companies generally begin to prepare their resolution plans at least one year prior to submission and recommended related changes to the proposed filing cycle to enhance the predictability of the timing of producing a resolution plan. For example, these commenters asserted that the final rule should include a formal timeline for the agencies to provide firm-specific feedback to covered companies within one year following a resolution plan submission and advanced notice requirements when the agencies require submission of a full resolution plan or an interim update, or alter resolution plan submission dates.

Informational Content

Several commenters asserted that the proposal should further tailor informational content requirements among different categories and types of covered companies. Some of these commenters also expressed concern that certain covered companies within a category would have general guidance directed to them that is not appropriate for their category. Certain other commenters asserted that the proposed targeted resolution plans and reduced resolution plans would contain inadequate information. Some commenters supported the inclusion of a process by which covered companies would be able to request waivers from certain informational content requirements for their full resolution plans and asserted that it would help to streamline resolution plan submissions. However, some other commenters opposed the proposed firm-initiated waiver request process and asserted that it was unnecessary or would be subject to abuse by covered companies.

Critical Operations

Numerous commenters asserted that the proposed timeline for identification and de-identification of a critical operation should be modified to provide covered companies with additional notice of new identifications prior to a resolution plan submission date. Some commenters asserted that the final rule should automatically exempt from the requirement to have a process for identifying critical operations any covered company that does not currently have an identified critical operation.

The comments on the proposed rule and the agencies' related responses are discussed in further detail below.

III. Final Rule

A. Identification of Firms Subject to the Resolution Planning Requirement and Filing Groups

1. Firms Subject to the Resolution Planning Requirement

Following EGRRCPA, three types of firms are statutorily subject to the resolution planning requirement:

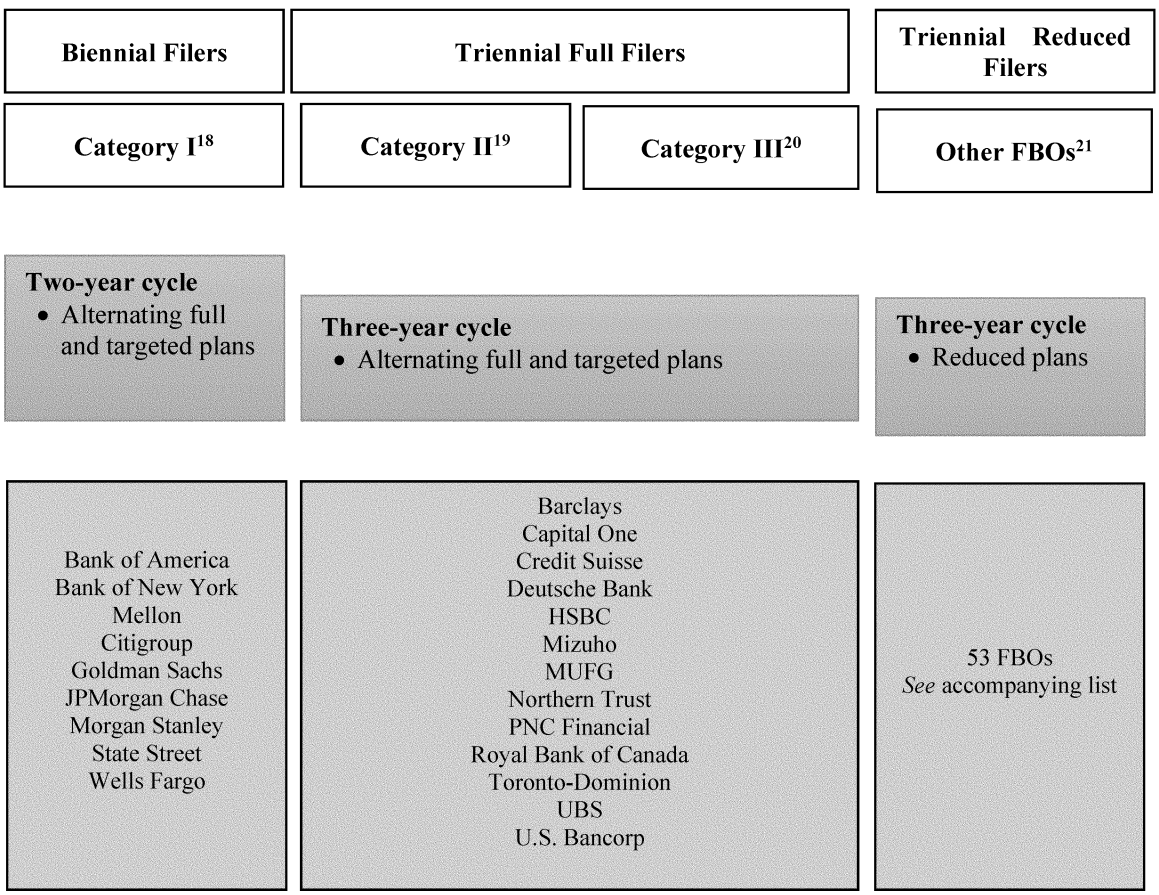
- U.S. and foreign banking organizations with $250 billion or more in total consolidated assets,
- U.S. banking organizations identified as U.S. GSIBs, and
- Any designated nonbank financial companies that the Council has determined under section 113 of the Dodd-Frank Act should be supervised by the Board.

As discussed in the proposal, following EGRRCPA, the Board has the authority to apply the resolution planning requirement to firms with $100 billion or more and less than $250 billion in total consolidated assets.[15] In the proposal, the Board proposed to apply the risk-based indicators established in the notices of proposed rulemaking for the tailoring rules to

[15] 12 U.S.C. 5365(a); EGRRCPA section 401(a)(1)(B)(iii) (to be codified at 12 U.S.C. 5365(a)(2)(C)). *See also* EGRRCPA section 401(g).

identify those U.S. firms with total consolidated assets equal to $100 billion or more and less than $250 billion that would be subject to a resolution planning requirement. Consistent with the notices of proposed rulemaking for the domestic tailoring rule, the Board proposed to apply resolution planning requirements to U.S. bank holding companies with (a) total consolidated assets equal to $100 billion or more and less than $250 billion and (b) $75 billion or more in any of the following risk-based indicators: Cross-jurisdictional activity, nonbank assets, weighted short-term wholesale funding, or off-balance sheet exposure. Consistent with the notices of proposed rulemaking for the FBO tailoring rule, the Board proposed to apply resolution planning requirements to foreign banking organizations [16] with (a) total global assets equal to $100 billion or more and less than $250 billion, (b) combined U.S. assets equal to $100 billion or more, and (c) $75 billion or more in any of the risk-based indicators measured based on combined U.S. operations. In addition, the agencies proposed to use the risk-based indicators to divide U.S. and foreign firms into groups for the purposes of determining the frequency and informational content of resolution plan filings.

Expected Resolution Plan Filing Groups[17]



Foreign banking organizations that are expected to be triennial reduced filers

Agricultural Bank of China

Australia and New Zealand Banking Group

Banco Bradesco

Banco De Sabadell

Banco Do Brasil

Banco Santander

[16] Consistent with the 2011 rule and the proposal, for purposes of the final rule, a foreign banking organization is a foreign bank that has a banking presence in the United States by virtue of operating a branch, agency, or commercial lending subsidiary in the United States or controlling a bank in the United States; or any company of which the foreign bank is a subsidiary.

[17] Projected categories are based on data for Q1 2019. Actual categories will be based on 4-quarter averages. For certain measures for foreign banks, conservative assumptions were used to estimate incomplete data.

[18] Firms subject to Category I standards will be the U.S. GSIBs. Any future Council-designated nonbank would file full and targeted plans on a two-year cycle, unless the agencies jointly determine the firm should file full and targeted plans on a three-year cycle.

[19] Firms subject to Category II standards will be: (1) U.S. firms with (a) ≥$700b average total consolidated assets; or (b) ≥$100b average total consolidated assets with ≥$75b in average cross-jurisdictional activity and (2) foreign banking organizations (FBOs) with (a) ≥$700b average combined U.S. assets; or (b) ≥$100b average combined U.S. assets with ≥$75b in average cross-jurisdictional activity.

[20] Firms subject to Category III standards will be: (1) U.S. firms with (a) ≥$250b and <$700b average total consolidated assets; or (b) ≥$100b average total consolidated assets with ≥$75b in average total nonbank assets, average weighted short-term wholesale funding, or average off-balance sheet exposure and (2) FBOs with (a) ≥$250b and <$700b average combined U.S. assets; or (b) ≥$100b average combined U.S. assets with ≥$75b in average total nonbank assets, average weighted short-term wholesale funding, or average off-balance sheet exposure.

[21] Other FBOs subject to resolution planning pursuant to statute are FBOs with ≥$250b global consolidated assets that are not subject to Category II or Category III standards.

Woori Bank

In the proposal, the Board noted that the thresholds and risk-based indicators identified in the categories were designed to take into account an individual firm's particular activities and organizational footprint that may present significant challenges to an orderly resolution. The Board proposed to apply a uniform threshold of $75 billion for each of these risk-based indicators, based on the degree of concentration this amount would represent for each firm and the proportion of the risk factor among all U.S. firms with $100 billion or more in total consolidated assets that would be included by the threshold.

In the proposal, the Board noted that increased levels of cross-jurisdictional activity could increase operational complexity and that it may be more difficult to resolve or unwind a firm's positions due to the multiple jurisdictions and regulatory authorities involved and potential legal or regulatory barriers to transferring financial resources across borders. Similarly, the Board noted that bank holding companies with significant nonbank assets would be more likely to be engaged in activities such as prime brokerage, or complex derivatives and capital markets activities. Where a firm has not engaged in planning to address these particular challenges, it is less likely the firm's resolution would proceed in an orderly manner without unduly impacting other firms. Regarding weighted short-term wholesale funding, the Board noted that firms particularly reliant on short-term funding sources may be more vulnerable to large-scale funding runs or ''fire sale'' effects on asset prices and therefore proposed to continue to apply resolution planning requirements to firms with higher levels of potential liquidity vulnerability, as measured by the firm's weighted short-term wholesale funding. Finally, the Board noted that where a firm's activities result in large off-balance sheet exposure, the firm may be more vulnerable to significant draws on capital and liquidity in times of stress. The proposal therefore would have continued to apply resolution planning requirements to firms with this risk-based indicator.

The agencies received several comments on the use of the four risk-based indicators and associated thresholds.[22] One commenter reiterated concerns that it described in its comment letter on the notices of proposed rulemaking for the tailoring rules and stated that its concerns regarding those notices applied equally to the proposed rule. Another commenter expressed general support for the risk-based indicator approach. Several commenters recommended changes to the calibration of U.S. assets and activity in the risk-based indicators for foreign banking organizations. One commenter argued against the inclusion of U.S. branches and agencies in the calculation of a foreign firm's combined U.S. assets or thresholds for risk-based indicators unless the operations of branches or agencies are significant to a critical operation. Instead, the commenter recommended that risk-based indicators be calculated consistent with how the strategic analysis requirements in the 2011 rule apply to U.S. branches, agencies, and offices. Another commenter argued against the use of U.S. branch assets in determining activity in risk-based indicators because branches are discrete entities from the U.S. intermediate holding companies and often have more stable funding.

The resolution planning requirement currently applies to a foreign banking organization's entire U.S. operations, including U.S. branches and agencies. U.S. branches and agencies constitute a significant share of these foreign banking organizations' presence in the United States. In addition, the agencies' experience reviewing resolution plans demonstrates that there are interconnections and dependencies between a foreign firm's U.S. branches, agencies, and offices and its U.S. subsidiaries, core business lines, and critical operations. The commenters' proposals to exclude certain U.S. branches, agencies, and offices from the calculation of the risk-based indicators or combined U.S. operations would not be consistent with the objective of measuring the full scope of potential risks to U.S. financial stability, including risks associated with operational complexity. Moreover, it is appropriate to tailor resolution planning requirements based on the size and complexity of a foreign firm's entire U.S. operations because the resolution planning requirement applies to a firm's entire U.S. operations. Accordingly, under the final rule, risk-based indicators and combined U.S. operations would be measured as proposed, including a foreign firm's U.S. branches, agencies, and offices.

Two commenters expressed concerns with the use of asset thresholds to determine a firm's category unless the asset threshold is indexed to inflation or total U.S. banking assets. As further explained in the notices of final rulemaking for the tailoring rules, the $100 billion and $250 billion size thresholds prescribed in the Dodd-Frank Act, as amended by EGRRCPA, are fixed by statute.[23] Indexing the other

[22] This preamble responds to comments received on the proposed rule regarding the risk-based indicators. Responses to comments received on the notices of proposed rulemaking for the tailoring rules and additional information concerning the basis for the risk-based indicators established under the tailoring rules are included in the notices of final rulemaking for the tailoring rules. *See* Board Final Rule, ''Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations'' published elsewhere in this issue of the **Federal Register**.

[23] Section 165 of the Dodd-Frank Act does provide the Board with discretion to establish a minimum asset threshold above the statutory

Continued

thresholds would add complexity, a degree of uncertainty, and potential discontinuity to the framework. The Board acknowledges the thresholds should be reevaluated over time to ensure they appropriately reflect growth on a macroeconomic and industry-wide basis, as well as to continue to support the objectives of the final rule. The Board plans to accomplish this by periodically reviewing the thresholds under the tailoring rules and proposing changes through notice and comment process, rather than including an automatic adjustment of thresholds based on indexing.

Several commenters discussed the criteria for being subject to Category II standards. Two commenters supported the calibration of these criteria as proposed and asserted that no additional risk-based indicators should be used to determine whether a firm would be subject to Category II standards. These commenters opposed the use of additional risk-based indicators (*e.g.,* weighted short-term wholesale funding, nonbank assets, or off balance-sheet exposure) and stated that such indicators would only be appropriate if the threshold were set to $210 billion. Another commenter stated that the criteria for being subject to Category II standards should not be based on exceeding the threshold for cross-jurisdictional activity only.

As further explained in the notices of final rulemaking for the tailoring rules, significant cross-border activity can indicate heightened interconnectivity and operational complexity. Cross-jurisdictional activity can add operational complexity in normal times and complicate the ability of a firm to undergo an orderly resolution in times of stress, generating risks to financial stability in the United States. In addition, cross-jurisdictional activity may present increased challenges in resolution because there could be legal or regulatory restrictions that prevent the transfer of financial resources across borders where multiple jurisdictions and regulatory authorities are involved. The cross-jurisdictional activity indicator and threshold is intended to identify firms with significant cross-border activities. Accordingly, the tailoring rules apply Category II standards to domestic and foreign banking organizations with cross-jurisdictional activity of $75 billion or more.

Alternative Scoping and Tailoring Criteria

In the proposal, the Board also proposed an alternative approach for assessing the risk profile and systemic footprint of a U.S. banking organization and of a foreign banking organization's combined U.S. operations or U.S. intermediate holding company: Using a single, comprehensive score. The Board uses an identification methodology (scoring methodology) to identify a U.S. bank holding company as a U.S. GSIB and apply risk-based capital surcharges to these firms. The Board proposed using the same scoring methodology to determine whether to apply the resolution planning requirements to firms with $100 billion or more and less than $250 billion in total consolidated assets.[24] The agencies also proposed using this same scoring methodology to divide U.S. and foreign firms into groups to determine the frequency and informational content of resolution plan filings.

One commenter directed agency staff to comments on the alternative scoping criteria in relation to the notices of proposed rulemaking for the tailoring rules. The comment generally expressed support for the risk-based indicator methodology rather than the alternative methodology, which the commenter described as flawed conceptually and in calibration.

Under the tailoring rules, the Board finalized an indicators-based approach for applying Category II, III, or IV standards to the firms, as this approach provides a simple framework that supports the objectives of risk sensitivity and transparency. To determine whether a firm with total consolidated assets equal to $100 billion or more and less than $250 billion is subject to resolution planning requirements, the Board is finalizing the same indicators-based approach, requiring any such firm that is subject to Category II or III standards to submit resolution plans. As under the proposal, and as further described below, the agencies are similarly finalizing the indicators-based approach for determining the scope of resolution planning requirements for firms other than the U.S. GSIBs and nonbank financial companies supervised by the Board. The Board will continue to use the scoring methodology to apply Category I standards to a U.S. GSIB and, as under the proposal, the final rule relies on this identification for determining the scope of resolution planning requirements for these firms.

U.S. Covered Companies With $100 Billion or More and Less Than $250 Billion in Total Consolidated Assets

Under the proposed rule, resolution planning requirements would not have applied to U.S. firms with total consolidated assets of $100 billion or more and less than $250 billion whose activities did not exceed the threshold for any of the risk-based indicators (*i.e.,* cross-jurisdictional activity, nonbank assets, weighted short-term wholesale funding, or off-balance-sheet exposure). In the proposal, the Board noted that it was less likely that one of these firms' failure would present a risk of serious adverse effects on U.S. financial stability and that requiring a plan for rapid and orderly resolution in bankruptcy from such a firm may impose burden without sufficient corresponding benefit.

The Board received several comments on this aspect of the proposal. One commenter expressed support for not applying the resolution planning requirements to U.S. firms subject to Category IV standards. Other commenters stated that the Board should apply resolution planning requirements to all firms with $100 billion or more and less than $250 billion in total consolidated assets. A further commenter expressed concern that the proposal would not apply resolution planning requirements to any firm with less than $250 billion in total consolidated assets. The commenter asserted that, instead, resolution planning should be required for all firms with more than $100 billion in total consolidated assets because the Corporation's resolution authority under the Federal Deposit Insurance Act does not extend beyond a covered company's insured depository institution subsidiary, and that the resolution plan process under the final rule should be coordinated with the IDI rule. Another commenter expressed concerns about removing the resolution planning requirements for large regional banks, asserting that the agencies did not explain sufficiently the rationale for removing the requirement for U.S. firms subject to Category IV standards.

The Board is finalizing this aspect of the proposal as proposed. In response to comments on this aspect of the final

thresholds for some, but not all, enhanced prudential standards. However, the Board may only utilize this discretion pursuant to a recommendation by the Financial Stability Oversight Council in accordance with section 115 of the Dodd-Frank Act. 12 U.S.C. 5365(a)(2)(B).

[24] As discussed in further detail in the proposal, the scoring methodology in the Board's regulations that is used to calculate a U.S. GSIB's capital surcharge includes two methods (12 CFR part 217, subpart H). The first method is based on the sum of a firm's systemic indicator scores reflecting its size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity (method 1). The second method is based on the sum of these same measures of risk, except that the substitutability measures are replaced with a measure of the firm's reliance on short-term wholesale funding (method 2).

rule, the Board notes that the proposal and final rule would continue to apply resolution planning requirements to some firms with $100 billion or more and less than $250 billion in total consolidated assets.[25] As explained above, the final rule relies on the risk-based indicators to apply resolution planning requirements to firms in this group. The Board believes the risk-based indicators are an effective means for identifying those firms with total consolidated assets of $100 billion or more and less than $250 billion whose material financial distress or failure would pose a threat to U.S. financial stability, for the reasons described above, in the proposal, and in the proposed and final tailoring rules. Where a firm's activities in one or more of the risk-based indicators exceed the $75 billion threshold, it is more likely that its failure could adversely affect U.S. financial stability; accordingly, the firm should be subject to resolution planning requirements. However, when a firm's activities do not exceed one or more of the risk-based indicators and its total consolidated assets are less than $250 billion, it is less likely that the firm's failure would have serious adverse effects on U.S. financial stability and, accordingly, to impose resolution planning requirements on such a firm would not yield a sufficient corresponding benefit.

Foreign-Based Covered Companies With $100 Billion or More and Less Than $250 Billion in Total Global Assets

In the proposal, the Board proposed applying resolution planning requirements to foreign banking organizations with (a) total global assets equal to $100 billion or more and less than $250 billion, (b) combined U.S. assets equal to $100 billion or more, and (c) $75 billion or more in any of the following risk-based indicators measured based on combined U.S. operations: Cross-jurisdictional activity, nonbank assets, weighted short-term wholesale funding, or off-balance-sheet exposure. The Board noted in the proposal that it would no longer require resolution plan submissions from foreign banking organizations with total global assets equal to $100 billion or more and less than $250 billion where (a) the firm has combined U.S. assets below $100 billion or (b) the firm does not have $75 billion or more in any of the risk-based indicators measured based on combined U.S. operations.

One commenter asserted that resolution planning requirements should be eliminated entirely for foreign firms with limited U.S. operations, regardless of their total global asset size, or, in the alternative, resolution planning requirements should apply to a foreign firm subject to Category IV standards only if it is a global systemically important financial institution. The commenter asserted that foreign firms should also be permitted to comply with resolution planning requirements pursuant to the final rule by certifying compliance with the home country resolution requirements.

The Board is finalizing this aspect of the proposal as proposed. The Board notes that the Dodd-Frank Act, as amended by EGRRCPA, requires all foreign banking organizations with $250 billion or more in total global assets to submit resolution plans, and a certification of home country compliance by itself would not satisfy this statutory standard. Moreover, as explained above, the Board believes that the risk-based indicators are an effective means for identifying those firms that should be subject to resolution planning requirements due to the potential effect on U.S. financial stability of their financial distress or failure.

Exiting Covered Company Status

The proposal would have updated the methodology for ascertaining when a firm ceased to be a covered company. With respect to a decrease in assets, under the proposal, a U.S. firm would have ceased to be a covered company when its total consolidated assets are less than $250 billion based on total consolidated assets for each of the four most recent calendar quarters (and it is not otherwise subject to Category II or Category III standards based on the risk-based indicators identified above). A foreign banking organization that files quarterly reports on Form FR Y–7Q similarly would have been assessed on the basis of its total global assets for each of the four most recent calendar quarters. A foreign banking organization that files the Y–7Q report annually rather than quarterly would have been assessed based on its total global assets over two consecutive years. The agencies would have retained the discretion to jointly determine that a firm is no longer a covered company at an earlier time than it would be pursuant to its quarterly or annual reports. Under the proposal, firms that would have ceased to be, or to be treated as, bank holding companies or that were de-designated by the Council for supervision by the Board would no longer have been covered companies and would not have had any further resolution planning requirements as of the effective date of the applicable action unless there were a subsequent change to their status. The agencies received no comments on this aspect of the proposal and are finalizing it as proposed, but have clarified in the final rule that a firm's total consolidated assets are determined on the basis of total consolidated assets as reported on each of its four most recent quarterly reports or two most recent annual reports.

2. Filing Groups and Filing Cycle

The proposal would have divided covered companies into three groups of filers: (a) Biennial filers; (b) triennial full filers; and (c) triennial reduced filers. Under the proposal, all covered companies would have had a July 1 submission date, instead of the current division between July 1 and December 31.

The agencies received comments offering general support for the longer filing cycle and asserting that it would allow filers sufficient time to consider firm-specific feedback. The agencies also received comments suggesting that the current annual filing requirement be retained to reflect the potential for rapid changes to firms' structure and financial condition that may cause resolution plans to become outdated.

The agencies note that the annual submission requirement has been a challenging constraint for both the firms and the agencies. The annual requirement did not provide sufficient time for the agencies to review the resolution plans and develop useful firm-specific feedback or general guidance, and for the firms to consider that firm-specific feedback or general guidance in their next resolution plan submissions. Independent of the proposal, the agencies have extended the resolution plan filing deadlines over the past few submission cycles to provide at least two years between resolution plan submissions. Accordingly, the agencies are finalizing an extended filing cycle, consistent with the proposal and described in more detail below.

The agencies received one comment regarding the proposal to move the submission date to July 1 for all filers. The commenter suggested that the 2011 rule's December 31 submission date be retained for triennial full filers subject to Category III standards as this would allow more efficient allocation of resources for resolution planning and other supervisory activities. The

[25] For this purpose, total consolidated assets are determined under the tailoring rules. Accordingly, a firm has total consolidated assets of $100 billion or more if the average of its total consolidated assets as reported on multiple regulatory reports, as specified in the tailoring rules, is $100 billion or more.

agencies are finalizing the July 1 submission date as proposed. Having one resolution plan submission date will simplify administration of the final rule for filers and the agencies, such as when filers change filing groups.

Biennial Filers

In the proposal, the biennial filers would have comprised firms subject to Category I standards, or the U.S. GSIBs, as well as any nonbank financial company supervised by the Board that has not been jointly designated as a triennial full filer by the agencies. The agencies noted that any such designation of a nonbank financial company would be made taking into account the relevant facts and circumstances, including the degree of systemic risk posed by the particular covered company's failure.

Since the failure of a firm in this group would pose the most serious threat to U.S. financial stability, the proposal would have applied the most stringent resolution planning requirements to biennial filers in terms of both submission frequency and informational content. Under the proposed rule, the biennial filers would have been required to submit a resolution plan every two years, alternating between a full resolution plan, subject to the waiver option, and a targeted resolution plan. The agencies noted that the U.S. GSIBs' resolution plans had matured over time and these firms had taken meaningful steps to develop the foundational capabilities necessary for the implementation of their resolution strategies. In addition, in recent years, the agencies have provided extensions under the 2011 rule to provide the biennial filers with two years between resolution plan submissions, so formalization of a two-year cycle would be consistent with established practice.

The agencies received two comments on this aspect of the proposal. One commenter stated that the U.S. GSIBs should be required to submit full resolution plans every two years. Another commenter expressed general opposition to the two-year cycle and asserted that it would be insufficient to capture important information about firms' resolvability due to the speed with which changes can occur.

The agencies are finalizing this aspect of the proposal as proposed. After several rounds of resolution plans, firm-specific feedback, and general guidance, the U.S. GSIBs' resolution plans have matured over time, making more frequent submissions generally unnecessary. In addition, experience under the 2011 rule has shown that an annual resolution plan submission schedule is too challenging a constraint for the reasons described above. The agencies note, however, that they retain the ability under the final rule to obtain key information between resolution plan submissions, including by requiring interim updates and receiving notices of extraordinary events, which will allow the agencies to remain informed of material developments affecting resolvability notwithstanding the less frequent filing cycle. The agencies also will have authority to require a full resolution plan instead of a targeted resolution plan and to move a resolution plan submission date.

Triennial Full Filers

The proposal identified the second filing group, triennial full filers, as firms subject to Category II or III standards under the notices of proposed rulemaking for the tailoring rules, as well as any nonbank financial company supervised by the Board that was designated as a triennial full filer by the agencies.

The agencies proposed that triennial full filers be on a three-year filing cycle rather than a two-year filing cycle because the failure of a triennial full filer would generally be less likely to pose a threat to U.S. financial stability as compared to the failure of a biennial filer. The proposal would have required triennial full filers to submit a resolution plan every three years, alternating between a full resolution plan and a targeted resolution plan.

The agencies received several comments on the proposed three-year filing cycle for triennial full filers. One commenter expressed support for the proposed three-year cycle, and alternating between full and targeted resolution plans for firms subject to Category III standards. Another commenter stated that these firms should be on a biennial schedule, alternating between full and targeted resolution plans. One commenter expressed general opposition to the three-year cycle and asserted that it would be insufficient to capture important information about firms' resolvability due to the speed at which change can occur. Another commenter stated that firms that would be triennial full filers under the proposal should be allowed to submit targeted resolution plans every three years, absent an extraordinary event.

The agencies are finalizing as proposed the three-year cycle for triennial full filers, alternating between full and targeted resolution plans. While the failure of a firm in this group could threaten U.S. financial stability, such failure is less likely to threaten U.S. financial stability as compared to the failure of a biennial filer. Accordingly, it is appropriate to tailor this group's requirements relative to the requirements for biennial filers. Given these firms' size and complexity, the agencies have determined that a triennial schedule is appropriate. In addition, as with biennial filers, the agencies would retain authority to require interim updates and full resolution plans, and to move resolution plan submission dates, and firms would be required to submit notices of extraordinary events, which would allow the agencies to remain informed of material developments affecting resolvability that occur between resolution plan submissions.

The agencies are not adopting commenters' recommendation to limit all resolution plan submissions from triennial full filers to targeted resolution plans absent an extraordinary event because the agencies believe that, given the potential risks inherent in firms in this group and because firms and markets change over time, it is appropriate for these firms to submit a full resolution plan at least every six years. In addition, the agencies note that a firm may apply for a waiver from certain informational content requirements in its full resolution plan and incorporate by reference information in a prior submission that remains accurate in all respects that is material to the covered company's resolution plan, as described further below. These aspects of the final rule should appropriately tailor the burden of preparing a full resolution plan.

In the proposal, the agencies also noted that the proposed triennial full filer group would have included foreign banking organizations that had previously received detailed general guidance from the agencies.[26] These firms have taken important steps to enhance their resolvability and facilitate their orderly resolution in bankruptcy and have significantly reduced the size and risk profiles of their U.S. operations since the passage of the Dodd-Frank Act and in response to the implementation of Regulation YY,[27] although the failure of one of these firms could potentially pose a threat to U.S. financial stability. The agencies stated that it was appropriate that these firms be part of

[26] *See, e.g.,* Guidance for 2018 § 165(d) Annual Resolution Plan Submissions By Foreign-based Covered Companies that Submitted Resolution Plans in July 2015, *https://www.federalreserve.gov/newsevents/pressreleases/files/bcreg20170324a21.pdf, https://www.fdic.gov/resauthority/2018subguidance.pdf.*

[27] 12 CFR part 252.

the triennial full filer group and submit resolution plans on the three-year filing cycle because the preferred outcome for each of these foreign banking organizations is a successful home country resolution using a single point of entry resolution strategy, not the resolution strategy described in its U.S. resolution plan.

The agencies received one comment on this aspect of the proposal. The commenter asserted that the largest and most complex foreign banking organizations should submit resolution plans every two years, alternating between full and targeted resolution plans, because they pose similar risks to the U.S. financial system as the risks posed by the U.S. GSIBs. The commenter also stated that the rationale that these firms would be resolved through a home country single point of entry strategy was not compelling because the purpose of the resolution planning requirement is to plan for the failure of a U.S. entity.

The agencies note that the U.S. footprints of the larger and more complex foreign banking organizations are significantly smaller than those of, and do not present the same complexities as, the U.S. GSIBs. Consequently, while the failure of these operations may threaten the U.S. financial system, it is less likely than the failure of a U.S. GSIB, regardless of whether the global firm executes its preferred resolution strategy successfully. Accordingly, the agencies believe that a longer filing cycle is appropriate for these firms and are finalizing this aspect of the proposal as proposed.

Triennial Reduced Filers

The proposal identified a third group, triennial reduced filers, which would have consisted of any covered company that was not subject to Category I, II, or III standards and was not a nonbank financial company supervised by the Board. The proposal would have applied less stringent resolution planning requirements to firms in this group because they do not have the same size or complexity as firms that would have been subject to Category I, II, or III standards. Under the proposal, triennial reduced filers would have been required to submit reduced resolution plans every three years. The proposal also would have required a new triennial reduced filer to submit a full resolution plan as its initial submission and thereafter a reduced resolution plan every three years.

The agencies received one comment on this aspect of the proposal. The commenter asserted that some of the larger triennial reduced filers should be on a biennial schedule, alternating between full and targeted resolution plans, and supported applying a longer filing cycle to the U.S. operations of certain smaller foreign firms.

The agencies are finalizing the triennial reduced filer group and related filing cycle as proposed. Given the limited scope of these firms' U.S. operations and activities, the agencies have determined that it is appropriate for triennial reduced filers to submit reduced resolution plans on a three-year cycle; this requirement will appropriately tailor burden for these firms while ensuring that the agencies remain apprised of changes that could materially affect the firms' resolvability or resolution strategies. In addition, the failure of the U.S. operations of one of these firms may threaten the U.S. financial system, but failure of these operations poses a lower risk than the failure of a biennial filer or triennial full filer. Nonetheless, the agencies retain the ability to obtain additional information between resolution plan submissions, as mentioned above, and to require any firm to submit a full resolution plan, as described below.

Moving Submission Dates, Changing Plan Content, and Requiring Interim Updates

The proposal would have provided the agencies the flexibility to move covered companies' submission dates. The proposal would have required the agencies to notify a covered company that had previously submitted a resolution plan at least 180 days prior to the new submission date. A new covered company would have received at least 12 months' notice prior to the new submission date. Consistent with the 2011 rule, the proposal also would have allowed agencies to require covered companies to provide interim updates within a reasonable amount of time. In addition, the proposal would have allowed the agencies to jointly require that a covered company submit a full resolution plan within a reasonable period of time.

The agencies received several comments on these aspects of the proposal. Commenters asserted that the final rule should provide a minimum of 12 months' notice prior to requiring a full resolution plan or an off-cycle submission and six or 12 months' notice prior to an interim update. Commenters also asserted that the agencies should clarify that a ''reasonable amount of time'' for prior notice of a full resolution plan submission would be at least 12 months' notice. These commenters generally asserted that their proposed notice periods are necessary to provide covered companies with sufficient time to prepare their resolution plans.

The final rule contains certain changes from the proposal in response to these commenters. Under the final rule, the agencies will provide at least 12 months' notice prior to requiring a full resolution plan submission or an off-cycle submission (*i.e.,* a submission on a date other than the regularly scheduled date for the covered company's filing group).[28] The agencies believe that these changes will enhance the predictability of resolution plan submission dates, provide appropriate time for resolution plan preparation, and help facilitate covered companies' resource allocation decisions.

Consistent with the proposal and the 2011 rule, the final rule provides that the agencies may require a covered company to submit an interim update within a reasonable amount of time, as jointly determined by the agencies. An interim update is intended to be a flexible tool for the agencies to obtain information between resolution plan submission dates. When requiring an interim update, the agencies will specify the portions or aspects of a previously submitted resolution plan that a firm is required to update. Accordingly, the informational content requirements for an interim update are not fixed, making it difficult to identify a specific period that is necessary to prepare every interim update. While a six- or 12-month period may be appropriate in certain circumstances, a shorter time period may be appropriate in other circumstances, especially where an interim update would contain only limited information. Accordingly, the agencies do not believe that it would be appropriate to introduce a fixed notice period for an interim update.

The final rule provides that the agencies may require a covered company to submit a full resolution plan instead of a targeted or reduced resolution plan that the covered company is otherwise required to submit. The full resolution plan's submission date will be the submission date for the replaced targeted or reduced

[28] If the agencies were to require an off-cycle submission from a covered company, the covered company's next resolution plan submission date after the off-cycle submission date would be determined based on the off-cycle submission date. For example, if the agencies were to move a triennial full filer's submission date from July 1, 2027 to July 1, 2026, the covered company's next resolution plan submission date after July 1, 2026 would be July 1, 2029 (absent the agencies jointly moving the July 1, 2029 submission date). The agencies will consider the impact on the covered company's future resolution plan submission dates and any deadlines related to those submission dates when requiring an off-cycle submission.

resolution plan.[29] The submission of such a full resolution plan will not change the type of resolution plan that the covered company is otherwise thereafter required to submit.

The agencies do not expect to regularly exercise this authority. However, it may be necessary to require a full resolution plan instead of a targeted or reduced resolution plan under unusual circumstances, and the agencies have preserved this authority as a means for the agencies to receive additional information from firms when appropriate. The agencies could, for example, exercise their discretion to require a triennial reduced filer whose activities have evolved gradually (rather than as the result of a single material event) to submit full resolution plan in lieu of a reduced resolution plan if the aggregate effect of those changes might meaningfully increase the risk that the firm's failure could have serious adverse effects on U.S. financial stability.

B. Resolution Plan Content

1. General Guidance and Firm-Specific Feedback

The preamble to the proposal specified that general guidance previously directed to specific full resolution plan filers concerning the content of their upcoming submissions would continue to be directed to those individual firms.

The agencies received several comments related to prior resolution planning general guidance and firm-specific feedback. Some commenters suggested that existing resolution planning general guidance directed to some firms should be consolidated and tailored among the different categories of firms, that any future general guidance be subject to notice and public comment, and that the agencies commit to providing firm-specific feedback on resolution plans and any general guidance no later than 12 months prior to a covered company's resolution plan submission date. These commenters asserted in particular that covered companies subject to Category II or III standards should not receive general guidance that is similar to the general guidance that is directed to the U.S. GSIBs, which are subject to Category I standards. A few commenters suggested that the agencies clarify to whom existing general guidance is directed, and one commenter suggested incorporating existing general guidance into the final rule.

The final rule provides that, absent extenuating circumstances, the agencies will provide a firm with notice of any deficiency or shortcoming identified by the agencies and any other firm-specific feedback regarding its resolution plan no later than 12 months after the later of (1) the date when the firm submitted the resolution plan and (2) the date by which the firm was required to submit the resolution plan. The agencies recognize firms' strong interest in prompt firm-specific feedback from the agencies and in having sufficient time to respond thereto, and would expect to exercise their authority to provide such notice after the one-year period only when providing the notice within a year would be impractical due to circumstances outside the agencies' control. Absent extenuating circumstances, this approach will provide a firm with at least one year to consider any and all firm-specific feedback before it is next required to submit a resolution plan. However, the agencies would retain the authority to require a firm to submit within a shorter period a revised resolution plan that addresses deficiencies or an interim update.

In addition to firm-specific feedback that provides the agencies' views on a particular resolution plan,[30] the agencies may continue to issue general guidance regarding future resolution plan submissions. The firm-specific feedback letters sent to-date to firms are examples of the firm-specific feedback that the agencies will provide to firms within the 12-month period described in the previous paragraph. While both firm-specific feedback (other than a notice of a deficiency) and general guidance are meant to assist firms in preparing future resolution plans, general guidance outlines the agencies' expectations or priorities and articulates the agencies' general views regarding resolution plans more generally than firm-specific feedback, which presents the agencies' views on a particular resolution plan. The agencies will strive to provide final general guidance at least a year before the next resolution plan submission date of firms to which the general guidance is directed.

Existing general guidance, including its content and scope, is not modified by the final rule. Accordingly, the detailed general guidance that certain foreign banking organizations have received from the agencies (FBO guidance) [31] continues to be directed to only those firms and is not directed to all triennial full filers as a result of the changes from the 2011 rule reflected in the final rule. Likewise, general guidance directed to certain domestic banking organizations (domestic guidance) [32] continues to be directed to only those domestic banking organizations to which it was directed prior to adoption of the final rule. Because general guidance sets forth non-binding expectations as opposed to rule-based requirements, the agencies do not believe that it is necessary or appropriate to incorporate all general guidance into the final rule.

The agencies sought and received public comment on the domestic guidance in 2018. The notice and comment process allowed the agencies to gain valuable insight, which led to improvements and clarifications in the final domestic guidance. Similar to the domestic guidance, the agencies intend to consolidate and request public comment in the near future on all aspects of the FBO guidance, including the informational content expectations and the subset of firms to which it is directed. The agencies expect that this process will lead to similar benefits for the FBO guidance. Similarly, the agencies intend to make any future general guidance concerning resolution planning available for public comment, and will endeavor to finalize any such general guidance at least one year prior to the submission date for the first resolution plan submission to which it would apply. The agencies will continue to provide firm-specific feedback on resolution plan submissions without first making that firm-specific feedback available for notice and comment.

2. Material Changes and Extraordinary Events

The proposal would have revised and clarified the requirements for filing a notice of material events to reflect the creation of a material changes definition. A material change would have been defined as any event,

[29] Accordingly, a firm could be required to submit a full resolution plan while the other members of the firm's filing group are required to submit targeted or reduced resolution plans on that submission date. Thereafter, the firm that was required to submit a full resolution plan will revert to its filing group's regular resolution plan type submission schedule.

[30] The agencies may provide the same or substantially similar firm-specific feedback to more than one firm. For example, some elements of firm-specific feedback provided to the U.S. GSIBs may be the same or substantially similar when certain aspects of their resolution plans are substantially similar.

[31] *See* Guidance for 2018 § 165(d) Annual Resolution Plan Submissions By Foreign-based Covered Companies that Submitted Resolution Plans in July 2015, *https://www.federalreserve.gov/newsevents/pressreleases/files/bcreg20170324a21.pdf, https://www.fdic.gov/resauthority/2018subguidance.pdf.*

[32] *See* Guidance for § 165(d) Resolution Plan Submissions by Domestic Covered Companies applicable to the Eight Largest, Complex U.S. Banking Organizations, 84 FR 1438, 1449 (February 4, 2019).

occurrence, change in conditions or circumstances, or other change that results in, or could reasonably be foreseen to have a material effect on the resolvability of the covered company, the covered company's resolution strategy, or how the covered company's resolution strategy is implemented. Full, targeted, and reduced resolution plans would have been required to include information about material changes since a covered company's previously submitted resolution plan and changes the covered company made to its resolution plan in response.

Because of the broad definition of ''material change,'' the agencies determined that a notice requirement triggered by the occurrence of a material change between resolution plan submissions was not appropriate and instead proposed the concept of an extraordinary event, which would have required such a notice. Under the proposed rule, a material merger, acquisition of assets or other similar transaction, or a fundamental change to a covered company's resolution strategy would have been an extraordinary event requiring notice to the agencies between resolution plan submissions.

One commenter supported the inclusion in the proposal of the terms ''material change'' and ''extraordinary event,'' while another commenter expressed concern that the proposal put too much reliance on firms self-identifying material changes.

The final rule includes the proposed provisions regarding ''material changes'' [33] and ''extraordinary events,'' with the clarification that a notice related to an extraordinary event must describe the event and explain how the event affects the resolvability of the firm. The agencies believe that firms can effectively identify these types of events, and note that the rule's requirement that the board of directors (or delegee in the case of a foreign firm) approve each resolution plan should help ensure that firms take appropriate steps to identify material changes. In addition, the final rule has been revised from the proposal to require that a firm affirmatively state in its resolution plan that no material change has occurred since its prior resolution plan submission if the resolution plan does not identify any material changes. The agencies believe that this clarification will further help to ensure that firms give due attention to the requirement to identify material changes.

3. Full Resolution Plans

The proposal would not have generally modified the components or informational content requirements of a full resolution plan. Through numerous resolution plan submissions, the agencies and firms have gained familiarity with the format and content of the information required to be submitted pursuant to the 2011 rule. The agencies also recognize the utility of the existing informational content requirements for full resolution plans. Focus on these items has facilitated resolution plan and resolvability improvements, particularly by the largest and most complex firms.

Several commenters suggested that the proposal tailor the full resolution plan informational content requirements between categories of firms, as well as among domestic and foreign firms based on their relative risk to U.S. financial stability. One commenter suggested that the contents of a full resolution plan should be further tailored for foreign firms, focus on critical operations in the United States, and include U.S. branches in the firm's strategic analysis only if they are significant to a critical operation. The commenter also suggested that the agencies should revise the definition of ''covered company'' to clarify that the strategy for a foreign firm need only focus on resolution of its U.S. core business lines, critical operations, and material entities. The commenter also suggested that the agencies confirm that foreign firms that have filed resolution plans under the 2011 rule will not be subject to requirements that impose greater burdens than applied previously, and that any new requirements be based on the occurrence of extraordinary events.

The agencies are not changing the informational content requirements of a full resolution plan in the final rule from the proposal, other than requiring an affirmation that no material change has occurred, if applicable. With respect to differentiation of requirements between domestic and foreign firms, section ____.5(a) of the final rule appropriately distinguishes between informational content requirements for domestic firms and foreign firms by focusing foreign firms' resolution plans on information related to their U.S. operations, consistent with the 2011 rule. The agencies do not believe that it is appropriate to limit resolution plan content to operations that are related to a critical operation because the Dodd-Frank Act's resolution planning requirement requires firms to plan generally for their rapid and orderly resolution. Similarly, nothing in the Dodd-Frank Act suggests that branches should be categorically excluded as suggested. However, the agencies note that, consistent with the 2011 rule, the final rule limits the strategic analysis requirements relating to material entities that are subject to an insolvency regime other than the Bankruptcy Code (including branches) by allowing covered companies to exclude such entities from their strategic analysis unless the entities have $50 billion or more in total assets or conduct a critical operation. The agencies have found this limitation to appropriately capture the need for information about material entities that may affect U.S. financial stability and accordingly are retaining it under the final rule.

Although the informational content requirements for resolution plans are not differentiated among filing groups in the final rule, the firm-initiated waiver request process will enable further tailoring of the informational content requirements of full resolution plans based on the attributes and risks posed by a particular covered company and the content of firms' most recent submissions. In addition, the agencies will retain the authority to tailor informational content requirements through waivers on the agencies' own initiative and will continue to communicate their tailored expectations for individual firms' resolution plans through firm-specific feedback. Moreover, as explained in more detail below, under the final rule the firm-initiated waiver request process would be available only to triennial full filers and triennial reduced filers. As a result, the final rule would keep in place all informational content requirements for biennial filers' full resolution plans unless the agencies grant a waiver on their own initiative. As explained below, this change to the process for covered companies to request waivers reflects that among all categories of covered companies, biennial filers' material financial distress or failure

[33] As noted in the proposal, such changes include the identification of a new critical operation or core business line; the identification of a new material entity or the de-identification of a material entity; significant increases or decreases in the business, operations, or funding of a material entity; or changes in the primary regulatory authorities of a material entity or the covered company on a consolidated basis. Other such changes include material changes in operational and financial interconnectivity, both those that are intra-firm and external. Examples of such operational interconnectivity include reliance on affiliates for access to key financial market utilities or critical services, or significant reliance on the covered company by other firms for certain Payments, Clearing, and Settlement (PCS) services, including agent bank clearing or nostro account clearing, or government securities settlement services. Examples of such financial interconnectivity include a material entity becoming reliant on an affiliate as a source for funding or collateral, or the covered company becoming a major over-the-counter derivatives dealer.

would be most likely to pose risks to U.S. financial stability, so their full resolution plans should, as a general matter, be the most comprehensive. The agencies believe that this procedural change is also responsive to commenters' concerns about the degree of tailoring of informational content requirements between biennial filers and triennial full filers. Accordingly, the agencies believe that the final rule reflects appropriate tailoring of informational content among different categories of covered companies.

4. Waivers of Informational Content Requirements

The proposal would have continued to permit the agencies to waive certain informational content requirements for one or more firms on the agencies' joint initiative, given that through a covered company's repeated resolution plan submissions, certain aspects of its resolution plan may reach a steady state or become less material such that regular updates would not be useful to the agencies in their review of the resolution plan. The proposal also introduced a process whereby a covered company that had previously submitted a resolution plan would have been able to apply for a waiver of certain informational content requirements of a full resolution plan. Under the proposal, firms would have been able to submit one waiver request per filing cycle, which would have included a public section containing the requirements sought to be waived. These requests would have been required to be submitted at least 15 months before the submission date and include all information necessary to support the request. A waiver request would have been automatically granted on the date that was nine months prior to the submission date for the resolution plan to which it related if the agencies did not jointly deny the waiver prior to that date. The proposal would have enabled the agencies to deny a waiver in their discretion.

Several commenters supported the firm-initiated waiver request process, noting that the process would help streamline submissions and that automatically approving waivers unless jointly denied would ensure that requests would not be unduly delayed. One of those commenters suggested that the waiver should be made automatic for filers that qualified to submit tailored resolution plans under the 2011 rule, while others, as discussed above, generally contended that different categories of filers should be subject to different levels of resolution plan informational content requirements. Other commenters expressed concern that the firm-initiated waiver request process was unnecessary or would inappropriately reduce resolution plan content requirements, increase burden on the agencies, and be biased in favor of approval. One commenter suggested that waivers should be required to be approved by both agencies. This commenter was further concerned that the agencies could grant waivers for multiple submission cycles, effectively undermining the proposed rule's limit of one waiver request per submission cycle. Another commenter stated that providing for automatic approval of waivers when the agencies do not jointly deny them could result in the loss of important information based on the challenges of coordinating joint agency action.

The final rule retains both the agencies' ability to waive certain informational content requirements on their joint initiative and the firm-initiated waiver request process introduced in the proposal, with some modifications. In response to concerns raised about the firm-initiated waiver request process, and to suggestions that the agencies should take additional steps to tailor the informational content requirements between biennial filers and triennial full filers, the agencies have revised the process for covered companies to request waivers. The agencies have determined that the firm-initiated waiver process should not be extended to biennial filers in light of the additional risks that these firms present. Because the concerns noted above outweigh the advantages of a firm-initiated waiver process for biennial filers, the agencies are limiting firm-initiated waiver requests to triennial full filers and triennial reduced filers.[34] As under the 2011 rule, the agencies have the authority to jointly waive one or more of the resolution plan requirements on their own initiative for any firm, including any biennial filer. This procedural change will help to address these commenters' concerns by ensuring that, absent the agencies granting a waiver on their own initiative, all full resolution plan informational content requirements will remain in place for biennial filers, whose material financial distress or failure would be most likely to pose a threat to U.S. financial stability.

The agencies believe that for triennial full filers and triennial reduced filers, waiver requests will be a useful means to tailor the informational content of resolution plans in a manner that will be both efficient for the agencies and transparent to the public and, accordingly, the final rule permits waiver requests from these firms.

Relative to the proposed rule, the final rule changes the procedure by which the agencies act on waiver requests. Under the proposal, a waiver request would have been automatically approved if the agencies did not jointly deny it before a certain date. Under the final rule, a waiver request is automatically denied if the agencies do not jointly approve it before a certain date. The agencies believe that this change from the proposal will be more consistent with other provisions of the final rule that require joint agency agreement. The agencies will nonetheless endeavor to respond to waiver requests in a timely manner.

Furthermore, safeguards are in place to ensure that firm-initiated waivers would not inappropriately reduce resolution plan content requirements or otherwise favor filers and that the firm-initiated waiver request process will not be unnecessarily burdensome for the agencies or inefficient. For example, firms can only request waivers for full resolution plans and firms can only submit one waiver request per full resolution plan submission. In addition, firm-initiated waivers are not permitted for some of the most critical informational content, including the core elements required for a targeted resolution plan, any information specifically required pursuant to section 165(d) of the Dodd-Frank Act, information about material changes, and information about deficiencies and shortcomings. Moreover, the timing for the agencies' processing of waiver requests has been structured to ensure that the agencies have sufficient opportunity to properly review and consider the requests.

This preamble describes below the kind of information that waiver requests should contain, which should help make the firm-initiated waiver request process more efficient and focused. Finally, notwithstanding the new firm-initiated waiver request process, the agencies have retained the ability under the final rule to obtain additional information in a timely manner through, for example, interim updates, notices of extraordinary events, and the ability to require off-cycle resolution plan submissions.

[34] Waiver requests will generally have limited application to triennial reduced filers under the final rule because waiver requests do not apply to a covered company's initial full resolution plan or reduced resolution plans. However, the firm-initiated waiver request process could apply to a triennial reduced filer if the agencies were to require it to submit a full resolution plan with at least 18 months' prior notice.

The agencies are also clarifying in the final rule that, while the agencies may waive requirements for one or more resolution plan submissions on their own initiative, firm-initiated waivers apply to the submission of only a single full resolution plan. The final rule also clarifies that the agencies may approve or deny a waiver request in whole or in part.

One commenter suggested changes to the firm-initiated waiver request process aimed at ensuring transparency and consistency in its application, including requirements that the agencies consider whether approved waivers should apply to similarly situated firms and that both the criteria used in waiver determinations and the agencies' waiver decisions be made public. To ensure transparency in the firm-initiated waiver request process, the agencies intend to make their decisions on waiver requests public, although the information made public may not be the complete response provided to a firm and would not include confidential information. The agencies also note that under the final rule they will be able to waive informational content requirements on their joint initiative, and they could elect to exercise this discretionary authority to waive informational content requirements for similarly situated firms if they deem it appropriate to do so. However, the final rule retains the agencies' ability to approve or deny waiver requests at their joint discretion. The proposal's preamble included clarifying examples of how the agencies expect to exercise this discretion to approve waivers in appropriate circumstances, and these examples also apply for the final rule. For example, a waiver may be appropriate to reduce informational content that would be of limited utility to the agencies, such as when the agencies have recently completed an in-depth review of a particular business line and are satisfied that they are in possession of current information relevant to a firm's ability to resolve that business line. More specifically, if the agencies have recently undertaken a comprehensive review of a firm's Payments, Clearing, and Settlement (PCS) activities, it may be appropriate to waive the requirement for that firm to submit information relevant to these activities in its next resolution plan submission. A waiver may also be appropriate for a firm that submitted a tailored resolution plan under the 2011 rule and requests a waiver that would limit the firm's required resolution plan content in a manner that is similar to the tailored resolution plan provisions. Additional circumstances may arise under the final rule where it is appropriate to grant or deny waivers, and the agencies believe it is therefore appropriate to maintain a flexible standard under the final rule.

A covered company should provide all information necessary to support its waiver request, including an explanation of why approval of the request would be appropriate, why the information for which a waiver is sought would not be relevant to the agencies' review of the firm's resolution plan, and confirmation that the request meets the eligibility requirements for a waiver under the final rule (*i.e.,* that it is not a core element, not related to an identified deficiency that has not been adequately remedied, etc.). To ensure that the agencies have the information necessary to evaluate a waiver request, the final rule provides that covered companies would be required to explain why the information sought to be waived would not be relevant to the agencies' review of the covered company's next full resolution plan and why a waiver of the requirement would be appropriate. Failure to provide appropriate explanation or any information requested by the agencies in a timely manner could lead the agencies to deny a waiver request on the basis that insufficient explanation or a lack of information makes it impossible to determine that the information sought to be waived would not be relevant to their review of the resolution plan. A full resolution plan should specify content omitted due to a waiver request that was granted.

Two commenters suggested that the deadline for a waiver request to be jointly denied by the agencies should be moved from nine months to 12 months prior to the submission deadline to better align with filers' resolution plan preparation timelines. These commenters suggested that the rule should provide for waiver requests to be submitted 15 months prior to a full resolution plan submission date and allow the agencies 90 days within which to consider and act upon waiver requests, thereby reducing the time period for agency review from six months to 90 days.

The agencies recognize that a firm may require more than nine months to prepare a full resolution plan taking into account an approved waiver request. Therefore, the final rule provides that a waiver request is automatically denied on the date that is 12 months prior to the submission date for the resolution plan to which it related if the agencies do not jointly approve the waiver request prior to that date. However, the agencies continue to believe that a minimum of six months is the appropriate period for the agencies to review a waiver request. Accordingly, the final rule requires a waiver request to be submitted at least 18 months before the related resolution plan submission date. If the agencies waive informational content requirements for one or more firms on the agencies' own initiative, the agencies will endeavor to provide those firms with notice of the waiver at least 12 months before their next resolution plan submission date.

5. Targeted Resolution Plans

The proposal included a new type of resolution plan: A targeted resolution plan. The agencies proposed the targeted resolution plan to strike the appropriate balance between providing a means for the agencies to continue receiving updated information on structural or other changes that may impact a firm's resolution strategy while not requiring submission of information that remains largely unchanged since the previous submission. Under the proposed rule, the targeted resolution plan would have been a subset of a full resolution plan and would have included the following components: The information required to be included in a full resolution plan regarding capital, liquidity, and the covered company's plan for executing any recapitalization contemplated in its resolution plan, including updated quantitative financial information and analyses important to the execution of the covered company's resolution strategy (*i.e.,* the core elements); a description of material changes since the covered company's previously submitted resolution plan and changes the covered company has made to its resolution plan in response; a description of changes in response to firm-specific feedback provided by the agencies, general guidance issued by the agencies, or legal or regulatory changes; a public section; and information responsive to targeted areas of interest identified by the agencies at least 12 months prior to the submission.

The agencies received several comments regarding the proposed targeted resolution plan. One commenter asserted that the agencies should further tailor the contents of the targeted resolution plan based on firms' structures, business models, and activities in the risk-based indicators and that the targeted resolution plan requirement should apply differently to foreign filers subject to Category II or III standards. Another commenter expressed concern that the targeted resolution plan did not include significant elements, such as booking and trading practices for derivatives, trading exposure limits, and relationships with counterparties, and that targeted resolution plans are untested. Another commenter expressed concerns that the proposal's requirement for biennial filers and triennial full filers to alternate between full and targeted resolution plans would not be sufficient to capture important information about resolvability given the speed with which firms can change. Another commenter suggested that the agencies clarify that targeted areas of interest identified by the agencies would not require information that is wider in scope or depth than the information required for a full resolution plan.

The agencies are finalizing the elements of the targeted resolution plan as proposed, other than requiring a firm to affirm that no material change has occurred, if applicable, and clarifying that a targeted information request will be made in writing.[35] Regarding the request for further tailoring of the targeted resolution plan requirement, the targeted resolution plan is already tailored to capture the core elements and key informational content most critical to helping ensure orderly resolution in bankruptcy, and to the extent additional tailoring is needed, the agencies can provide it through agency-initiated waivers and targeted information requests. Accordingly, the agencies believe that the final rule will facilitate appropriate tailoring of informational content requirements. The agencies also note that they will continue to communicate their tailored expectations for resolution plan content through firm-specific feedback.

Regarding commenters' concerns that the targeted resolution plan does not include certain important elements, the agencies have found, based on their experience reviewing resolution plans, that the information that would be contained in the proposed targeted resolution plan is the information that is most important to assessing firms' resolvability, including the information that has the tendency to change with the most frequency. While information about other topic areas may be relevant to resolvability, the agencies believe it is appropriate to receive this other information on a less frequent basis through full resolution plan submissions. The agencies note that targeted resolution plans must also address material changes. Accordingly, a covered company that experiences material changes relating to, for example, its booking and trading practices for derivatives, trading exposure limits, relationships with counterparties, or other activities or characteristics, would be required to include such information in its targeted resolution plan. In addition, the agencies have designed the targeted resolution plan to ensure that they will receive important information that would allow them to review and evaluate potential problem areas, including by allowing the agencies to require firms to respond to targeted information requests, while permitting less frequent submission of information that may have a tendency to remain materially unchanged over time. The agencies' ability to make targeted information requests, require full resolution plan submissions and interim updates, move resolution plan submission dates, and receive notices of extraordinary events provides further means for the agencies to receive additional information from these firms.

Regarding one commenter's request for clarification in relation to the targeted information requests element of the targeted resolution plan, consistent with the proposal, the agencies note that a targeted resolution plan is a subset of a full resolution plan. Accordingly, the information to be provided regarding areas of focus within a targeted resolution plan would not require submission of information wider in scope than what a full resolution plan requires.

The agencies may, however, request information in greater depth than the firm chose to provide in prior submissions.

6. Reduced Resolution Plans

The proposal would have formalized the informational content requirements for the reduced resolution plan. For foreign banking organizations with relatively limited U.S. operations, the reduced resolution plan components were proposed to include: A description of (1) material changes experienced by the covered company since the filing of the covered company's previously submitted resolution plan and (2) changes to the strategic analysis that was presented in the firm's previously submitted resolution plan resulting from material changes, firm-specific feedback provided by the agencies, general guidance issued by the agencies, or legal or regulatory changes. Reduced resolution plans would also contain a public section. The agencies noted that receiving updates of this information would permit them to continue to monitor significant changes in a firm's structure or activities while appropriately focusing the informational components of these firms' resolution plans.

The agencies received several comments on the reduced resolution plan. One commenter suggested that reduced resolution plans would not provide the agencies sufficient information and that agencies may not be able to assess whether a change is material as a result of triennial reduced filers not filing full resolution plans after their initial submissions. Another commenter suggested that firms that had previously been resolution plan filers should not be required to submit a new full resolution plan upon once again becoming a covered company and a new triennial reduced filer. Another commenter suggested that the agencies clarify when triennial reduced filers would be required to submit full resolution plans under the final rule.

The agencies are finalizing the reduced resolution plan as proposed, other than requiring an affirmation that no material change has occurred, if applicable. Taking into account the relative degree of risk posed by these firms, the agencies believe that the reduced resolution plan as proposed generally would capture the information necessary for the agencies to assess triennial reduced filers' resolvability.

[35] The proposal's preamble included clarifying examples of how the agencies expect firms to respond to the core elements informational content requirement, and these examples also apply for the final rule. For firms that have received general guidance from the agencies applicable to their upcoming submissions regarding capital, liquidity, and governance mechanisms, the targeted resolution plans should address these elements consistent with that general guidance. For example, a targeted resolution plan could discuss changes to a firm's methodology for modeling liquidity needs for its material entities during periods of financial stress, as well as changes to the firm's means for providing capital and liquidity to such entities as would be needed to successfully execute the firm's resolution strategy. These updates could, for example, involve changes to triggers upon which the firm relies to execute a recapitalization, including triggers based on capital or liquidity modeling. *See, e.g.,* Guidance for § 165(d) Resolution Plan Submissions by Domestic Covered Companies, 84 FR 1438, 1449 (February 4, 2019); Guidance for 2018 § 165(d) Annual Resolution Plan Submissions By Foreign-based Covered Companies that Submitted Resolution Plans in July 2015, *https://www.federalreserve.gov/newsevents/pressreleases/files/bcreg20170324a21.pdf, https://www.fdic.gov/resauthority/2018subguidance.pdf.* The firms that received this general guidance would be expected to address Resolution Capital Adequacy and Positioning (RCAP), Resolution Liquidity Execution Need (RLEN), and governance mechanisms as part of their updates concerning capital, liquidity, and any plans for executing a recapitalization, respectively. A firm that has not received general guidance is required to describe the capital and liquidity needed to execute the firm's resolution strategy consistent with § __.5(c), (d)(1)(i), (iii), and (iv), (e)(1)(ii), (e)(2), (3), and (5), (f)(1)(v), and (g) of the final rule and, to the extent its resolution plan contemplates recapitalization, the covered company's plan for executing the recapitalization consistent with § __.5(c)(5) of the final rule.

The material change requirement in the reduced resolution plan is designed to capture important information relevant to the firm's resolvability, its resolution strategy, and implementation of the resolution strategy. In addition, and as discussed above, the final rule has been revised from the proposal to require that a firm affirmatively state in its resolution plan that no material change has occurred since its prior resolution plan submission if the resolution plan does not identify any material change. The agencies believe this clarification will further help to ensure that firms give due attention to the requirement to identify material changes. Finally, the agencies' ability to require full resolution plan submissions and interim updates, move resolution plan submission dates, and receive notices of extraordinary events provides further means for the agencies to receive additional information from triennial reduced filers.

The final rule also retains the requirement that any firm that was not a covered company on the effective date of the final rule but becomes a triennial reduced filer after the effective date of the final rule submit a full resolution plan as its initial submission, even if the firm was at some point previously subject to resolution planning requirements (*e.g.,* under the 2011 rule). There could be an extended period of time between a firm's previous full resolution plan submission and the time when it again becomes subject to the final rule, rendering the earlier full resolution plan less relevant to the firm's current operations, activities, and structure. The agencies note, however, that a firm would be able to incorporate by reference information from its prior resolution plan that meets the final rule's standard for incorporation by reference. In addition, the agencies are clarifying that full resolution plans filed under the 2011 rule by firms that would continue to be covered companies under the final rule and would be triennial reduced filers under the final rule would be grandfathered for purposes of determining compliance with the requirement that a triennial reduced filer's initial submission be a full resolution plan. Accordingly, those firms would be required to submit reduced resolution plans going forward but would not be required to resubmit a new full resolution plan absent other relevant changes in their circumstances (*e.g.,* becoming subject to Category II or Category III standards).

7. Tailored Resolution Plans

Under the 2011 rule, a tailored resolution plan was a means for certain bank-centric firms to request that their resolution plan submissions focus on nonbank activities that may pose challenges to executing the firm's resolution strategy. Pursuant to the 2011 rule's tailored resolution plan notice requirement, firms were required to apply to the agencies to submit a tailored resolution plan rather than a full resolution plan every year that a submission was required. The agencies' proposal would have eliminated the tailored resolution plan in light of the introduction of the firm-initiated waiver request process and the targeted resolution plan as effective substitutes. The agencies also noted in the proposal that many of the covered companies that were eligible under the 2011 rule to file a tailored resolution plan would no longer be subject to the resolution planning requirement under the final rule or would become triennial reduced filers.

One commenter expressed concern regarding the proposal to eliminate the tailored resolution plan. In particular, the commenter stated that previous tailored resolution plan filers should be grandfathered so that they would not need to apply for a waiver to continue to submit similar submissions under the final rule. As an alternative, the commenter proposed that the agencies limit the scope of these firms' full and targeted resolution plan submissions to nonbank operations. Another commenter asserted that the proposal should be modified to allow for automatic waiver, upon request, from certain informational content requirements for filers that qualified to submit tailored resolution plans under the 2011 rule.

The agencies are finalizing the proposal to eliminate the tailored resolution plan type. As explained in the proposal, the agencies expect that the firm-initiated waiver request process and targeted resolution plan requirements will be effective substitutes for the tailored resolution plan and will allow the agencies to appropriately tailor informational content requirements, taking into account the relative mix of banking and non-banking activities for particular filers. Accordingly, the agencies believe that it is unnecessary to retain the tailored resolution plan in the final rule.

C. Critical Operations Methodology and Reconsideration Process

Under the final rule, and consistent with the 2011 rule, a critical operation is an operation the failure or discontinuance of which would pose a threat to the financial stability of the United States. The 2011 rule provides for critical operations to be identified by the firms or at the agencies' joint direction. As part of their rule implementation and supervision efforts, the agencies have developed a process and methodology for jointly identifying critical operations and have made certain critical operations identifications. In recognition that financial markets and firms change over time, the agencies proposed establishing a periodic, comprehensive review of critical operations identifications by both the agencies and covered companies to ensure that resolution planning reflects current operations and markets and appropriately focuses on areas vital to financial stability.

1. Identification by Covered Companies and Methodology Requirement

Many covered companies have incorporated into their resolution planning frameworks a procedure for identifying critical operations, and the agencies proposed requiring biennial filers and triennial full filers to maintain a process for identifying critical operations on a scale that reflected the nature, size, complexity, and scope of their operations. The proposal would have required this process for self-identification to occur at least as frequently as a covered company's resolution plan submission cycle and be documented in the covered company's corporate governance policies and procedures. In addition, the proposal would have established a process whereby firms that did not currently have identified critical operations could request a waiver from the requirement to maintain a self-identification process and methodology. Firms that self-identified a critical operation would have been required to notify the agencies if they ceased to identify an operation as a critical operation. Finally, the agencies proposed a conforming definitional change.[36]

Two commenters suggested that the agencies clarify that the requirement that firms have a process to self-identify critical operations is presumptively waived for any covered company that has previously submitted resolution plans and does not currently have an identified critical operation. Finally, one commenter recommended either eliminating or clarifying the use of the term ''economic functions'' in the

[36] The agencies proposed including a new definition, ''identified critical operations,'' to clarify that critical operations can be identified by either the covered company or jointly identified by the agencies and that until such an operation has been identified by either method, the operation does not need to be addressed as a critical operation in a resolution plan.

agencies' description of a firm's methodology for identifying critical operations.

Consistent with the proposal, under the final rule, biennial filers and triennial full filers must establish and implement a process designed to identify their critical operations. However, after July 1, 2022, the final rule also requires a triennial reduced filer that has an identified critical operation to establish and implement a process designed to identify its critical operations. As under the proposal, in all cases, that process must contain a methodology and consider the nature, size, complexity, and scope of the covered company's operations.

Under the final rule, triennial reduced filers with identified critical operations will be required to establish and implement a process to identify critical operations, but only after they are required to submit their next resolution plans in 2022. Where a firm has an identified critical operation, it may be the case that it has additional critical operations such that a periodic review by the firm of its operations that is appropriate to the nature, size, complexity, and scope of its operations could be beneficial. This timing will provide the agencies the opportunity to complete their first joint review of critical operations under the final rule and triennial reduced filers with the opportunity to request reconsideration of any currently identified critical operation in anticipation of their next resolution plan submission.

Also consistent with the proposal, the final rule allows a covered company that has previously submitted a resolution plan and does not have an identified critical operation to request a waiver of the requirement to have a process and methodology to identify its critical operations if it does not have an identified critical operation as of the date the waiver request is submitted.[37] Under the proposal, the covered company would have needed to apply for such a waiver at least 15 months before the submission date for that resolution plan, and waivers would have been automatically granted on the date that was nine months prior to the date that the resolution plan it relates to was due if the agencies did not jointly deny the waiver prior to that date.

Consistent with the changes to the firm-initiated waiver request process for informational content requirements, under the final rule, a request for a waiver from the critical operations process and methodology requirement will be automatically denied on a certain date unless the agencies have jointly approved it before that date. Requiring joint approval of waiver requests will be more consistent with other provisions of the final rule that require joint agency approval.

The agencies recognize that a firm may require more than nine months to prepare a resolution plan taking into account any critical operation the covered company newly identifies and, accordingly, a covered company may need to complete its process more than nine months before its next resolution plan is due. Therefore, the final rule provides that a waiver request is automatically denied on the date that is 12 months prior to the submission date for the resolution plan to which it related if the agencies do not jointly approve the waiver prior to that date. However, the agencies continue to believe that a minimum of six months is the appropriate period for the agencies to review a waiver request. Accordingly, the final rule requires a waiver request to be submitted at least 18 months before the submission date. This timing is consistent with the timing for firm-initiated waiver requests of informational content requirements under the final rule. However, to provide firms with an appropriate period to prepare a waiver request after the agencies' adoption of the final rule with respect to a resolution plan due on or before July 1, 2021, the final rule provides that a waiver request must be submitted at least 17 months before that submission date.

The proposal would have required a covered company to submit a waiver request with respect to each resolution plan submission. The agencies recognize that a covered company that does not have an identified critical operation and has been granted a waiver may not experience any changes between resolution plan submissions that would increase the likelihood of it having a critical operation. Accordingly, to balance the benefits of covered companies engaging in a process to identify their critical operations with the burden placed on covered companies, the final rule provides that if a critical operations waiver request is granted, the waiver will remain effective until the covered company is required to submit its next full resolution plan. For example, if a triennial full filer submits a waiver request in connection with a full resolution plan that is due on or before July 1, 2024 and the request is approved, the waiver would be effective for the July 1, 2024 full resolution plan submission and the firm's next regularly scheduled targeted resolution plan due on or before July 1, 2027. To continue the effectiveness of the waiver, the covered company would need to submit a new waiver request at least 18 months before its next regularly scheduled full resolution plan due on or before July 1, 2030. Similarly, if a triennial full filer submits a waiver request in connection with a targeted resolution plan and the request is granted, the waiver would be effective for only that targeted resolution plan and not its next full resolution plan.

The agencies recognize a foreign firm may not first determine the category of standards to which it is subject (and, accordingly, whether it is a triennial full filer or a triennial reduced filer) until after the date by which a triennial full filer would need to submit a waiver request with respect to its resolution plan due on or before July 1, 2021. Therefore, the final rule exempts each foreign triennial full filer from the requirement to establish and implement a process and methodology designed to identify their critical operations with respect to its resolution plan due on or before July 1, 2021 if the foreign firm does not have an identified critical operation as of the date by which the waiver would have had to be submitted for this resolution plan submission (*i.e.,* 17 months before the resolution plan submission date).

In addition, the agencies are clarifying the final rule by eliminating usage of the term ''economic function,'' as suggested by the commenter. However, consistent with the preamble to the proposed rule, the agencies note that the types of operations that may be critical operations include, but are not limited to, the core banking functions of deposit taking; lending; payments, clearing and settlement; custody; wholesale funding; and capital markets and investment activities. In general, an operation is most likely to be a critical operation of the firm where both (a) a market or activity engaged in by the firm is significant to U.S. financial stability and (b) the firm is a significant provider or participant in such a market or activity. Factors relevant for determining whether a market or activity is significant to U.S. financial stability, or

[37] The proposal's preamble included clarifying examples of why a waiver may be appropriate, and these examples also apply for the final rule. For example, for a covered company that has not experienced any significant changes in its business, operations, or organizational structure since its most recent resolution plan, a waiver request that so states, with reasonable supporting detail, could provide sufficient information for the agencies to evaluate the request. Alternatively, if one of a covered company's operations gained significant market share since it submitted its most recent resolution plan submission, the waiver request should include this information, a description of the operation, and a discussion of why this change would not warrant the development of a methodology for identifying critical operations.

whether a firm is a significant provider or participant in such a market or activity, may include substitutability, market concentration, interconnectedness, and the impact of cessation. The firm's analysis should focus on the significance of the activity to U.S. financial stability, not whether a particular activity is significant for a foreign parent or other foreign affiliates of the firm.[38] The process undertaken by a firm in completing such an analysis should be commensurate with the nature, size, complexity, and scope of its operations.[39]

2. Identification by Agencies and Requests for Reconsideration

Under the proposal, the agencies would have reviewed the operations of covered companies at least every six years to determine whether any new operations should be identified as critical or any prior identifications should be rescinded. The proposal provided that, when the agencies identified an operation as critical, the covered company would have been required to treat the operation as an identified critical operation in future resolution plans, unless the identification occurred within six months of a firm's resolution plan submission date. In addition, the proposal would have permitted a covered company to request that the agencies reconsider a jointly made critical operation identification. The agencies generally would have been required to complete their assessment of the request within 90 days after receipt of the request, if the request were made at least 270 days before the firm's next resolution plan submission deadline.

Commenters were generally supportive of efforts to codify the critical operations identification processes. Some commenters suggested that the agencies modify the timeline for de-identification of a critical operation identified by the agencies.[40] A commenter also suggested that the deadline for the agencies to be able to identify a new critical operation be 12 months prior to a submission deadline, instead of six months, as proposed.

The agencies are adopting the proposed provisions related to the identification of critical operations by the agencies with revisions that address certain concerns raised by commenters.[41] Consistent with the proposal, the final rule permits the joint identification and rescission of critical operations by the agencies at any time and the agencies will review all identified critical operations and the operations of firms for consideration as critical operations at least every six years. The agencies recognize that a firm may require time to revise its resolution plan to take into account a newly identified critical operation. Therefore, consistent with commenters' feedback, a covered company will be required to treat a critical operation as an identified critical operation only if the joint identification is made at least 12 months before the resolution plan submission date. The agencies believe 12 months is a reasonable period for a firm to assess the identified critical operation and adjust its resolution plan. To align with this notice period, the agencies will endeavor to complete their first joint review under the final rule of the operations of covered companies at least 12 months prior to the 2021 resolution plan submission date.

Finally, the agencies are adopting a modified process whereby firms can request that the agencies reconsider a jointly identified critical operation. Under the final rule, a firm may request reconsideration of a jointly identified critical operation at any time. If a firm requests reconsideration at least 18 months prior to its next resolution plan submission date, the agencies will generally complete their review no later than 12 months before that resolution plan submission date. However, the agencies may request additional information, in which case the agencies will complete their review no later than the later of (a) 90 days after the submission of all requested information and (b) 12 months before the resolution plan submission date. This generally aligns the timing for requests for reconsideration with the timing under the final rule for waiver requests of the requirement to establish and implement a process designed to identify critical operations and firm-initiated waiver requests of informational content requirements.

The agencies retain discretion to defer consideration of a reconsideration request submitted less than 18 months before a resolution plan submission date until after the covered company's next submission. If the agencies do not defer consideration of the reconsideration request, the agencies intend to communicate with the firm regarding the timing of the agencies' response. If the agencies defer consideration of a request submitted less than 18 months before a resolution plan submission date, the agencies will generally complete their review no later than 12 months before the next resolution plan submission date that follows that resolution plan submission date.

The agencies understand commenters' concerns regarding the de-identification timeline, and have revised and lengthened the process to provide covered companies with additional notice of new identifications prior to a resolution plan submission date. However, the agencies decline to adopt the commenters' request for an automatic rescission of a critical operations identification if a request is submitted at least 15 months before the firm's next resolution plan is due and the agencies have not acted within three months. A firm's initial request for de-identification may be incomplete or unclear, and critical operations identifications may raise complex issues that require substantial time to consider. Accordingly, the agencies may require more than 90 days to make an informed decision regarding whether an operation should be de-identified. The agencies believe the final rule adequately balances covered companies' need for certainty prior to a resolution plan submission date with the need to carefully assess critical operations identifications.

D. Clarifications to the 2011 Rule

1. Resolution Strategy for Foreign-based Covered Companies

The 2011 rule does not specify the assumptions a foreign banking organization should make with respect to how resolution actions it takes outside of the United States should be addressed in its resolution plan. The proposal, consistent with general guidance that the agencies have previously provided,[42] would have

[38] Where a firm's operation, such as U.S. dollar deposit taking, is significant to the firm, but the failure or discontinuance of that activity would not pose a threat to the financial stability of the United States, that operation would not be an identified critical operation under the final rule.

[39] For a foreign firm, the critical operations identification process and methodology should be commensurate with the nature, size, complexity, and scope of its U.S. operations.

[40] Specifically, the commenters suggested requiring a request for de-identification to be filed no later than 15 months before the next resolution plan submission is due; mandating that the agencies make a decision within 90 days of receipt of the request; and deeming the request approved if not denied by one year prior to the resolution plan submission date.

[41] The agencies are also adopting the proposed term, ''identified critical operations.''

[42] *See* Guidance for 2018 § 165(d) Annual Resolution Plan Submissions By Foreign-based Covered Companies that Submitted Resolution Plans in July 2015, *https://www.federalreserve.gov/newsevents/pressreleases/files/bcreg20170324a21.pdf,* p. 4, *https://www.fdic.gov/resauthority/2018subguidance.pdf,* p. 4 and *https://www.federalreserve.gov/newsevents/pressreleases/bcreg20180129a.htm, https://www.fdic.gov/news/news/press/2018/pr18006.html.*

clarified that covered companies that are foreign banking organizations should not assume that the covered company takes resolution actions outside of the United States that would eliminate the need for any U.S. subsidiaries to enter into resolution proceedings.

One commenter asserted that the agencies should better align U.S. resolution planning with home country resolution strategy by recognizing the development of single point of entry strategies, total loss absorbing capacity, and other improved resolvability measures implemented by international banks. Although the agencies recognize that foreign banking organizations may have home-country resolution strategies under which U.S. entities are not planned to enter resolution, the Dodd-Frank Act requires firms to plan for the failure of their U.S. operations. General guidance and firm-specific feedback have taken into account resolution plan resolvability improvements made by foreign banking organizations. Accordingly, the final rule includes this clarification as proposed.

2. Covered Company in Multi-Tier Foreign Banking Organization Holding Companies

The definition of covered company in the 2011 rule includes the top tier entity in a multi-tier holding company structure of any foreign bank or company that is a bank holding company or is treated as a bank holding company under section 8(a) of the International Banking Act of 1978. There is no benefit to the agencies in obtaining resolution plan information relating to a top tier holding company that is, for example, a government, sovereign entity, or family trust. The agencies previously addressed this issue on a case-by-case basis and proposed including a formal process in the proposal by which the agencies would identify a subsidiary in a multi-tiered FBO holding company structure to serve as the covered company that would be required to submit the resolution plan. The agencies did not receive comment on this provision and are adopting the clarification as proposed.

3. Removal of the Incompleteness Concept and Related Review

The 2011 rule includes a requirement that the agencies review a resolution plan within 60 days of submission and jointly inform the covered company if the resolution plan is informationally incomplete or additional information is required to facilitate review of the resolution plan. This process has not led to resubmissions in recent years, and the proposal would have removed it. The agencies received one comment in support of this provision, and the agencies are removing the incompleteness concept and related review as proposed for the reasons stated in the proposal.

4. Assessment of New Covered Companies

The 2011 rule provides that covered company status for a foreign banking organization may be based on annual or quarterly reports, depending on availability of such reports, but does not clarify whether firms that file quarterly reports would be assessed for covered company status on a quarterly or annual basis. The proposal would have clarified that a foreign banking organization's status as a covered company would be assessed quarterly for foreign banking organizations that file the Federal Reserve's Form FR Y–7Q (FR Y–7Q) on a quarterly basis and annually for foreign banking organizations that file the Y–7Q on an annual basis only. In each case, the assessment would have been based on total consolidated assets as averaged over the preceding four calendar quarters as reported on the FR Y–7Q.

In addition, the proposal would also have addressed the process for assessing a firm whose assets have grown due to a merger, acquisition, combination, or similar transaction for covered company status. Under these circumstances, the agencies would have the discretion to alternatively consider, to the extent and in the manner the agencies jointly consider appropriate, the relevant assets reflected on the one or more of the four most recent reports of the pre-combination entities (the FR Y–9C in the case of a U.S. firm and the FR Y–7Q in the case of a foreign banking organization). The agencies did not receive comment on these provisions and are adopting the clarifications as proposed.

5. Timing of New Filings, Firms That Change Filing Categories

To address the new filing cycles for biennial, triennial full, and triennial reduced filers, the proposal included related modifications to the timing of the initial submission for new filers. The proposal also included a reservation of authority permitting the agencies to require the initial resolution plan earlier than the date of the filing group's next filing, so long as the submission deadline would have been at least 12 months from the date on which the agencies jointly determined to require the covered company to submit its resolution plan. Similarly, the proposal specified the timing and type of resolution plan a firm would be required to submit if it changed groups (*e.g.,* a triennial reduced filer becomes a triennial full filer or a triennial full filer becomes a triennial reduced filer). The agencies received no comments on these changes and are finalizing them as proposed with technical changes to clarify that the relevant date for these timing provisions is the date as of which the covered company became a covered company or a member of a filing group.

6. Clarification of the Mapping Expectations for Foreign Banking Organizations

The proposal would have amended the language governing the expectations regarding the mapping of intragroup interconnections and interdependencies by foreign banking organizations. The proposal also would have clarified that foreign banking organizations would be expected to map (a) the interconnections and interdependencies among their U.S. subsidiaries, branches, and agencies, (b) the interconnections and interdependencies between these U.S. entities and any critical operations and core business lines, and (c) the interconnections and interdependencies between these U.S. entities and any foreign-based affiliates. The agencies did not receive comment on these provisions and are adopting the clarifications regarding mapping expectations for foreign banking organizations as proposed.

7. Standard of Review

In reviewing resolution plans, the agencies have identified ''deficiencies'' and ''shortcomings'' in resolution plans and have issued firm-specific feedback letters to covered companies describing the rationale for the findings and suggesting potential alternatives for how the identified deficiencies and shortcomings could be addressed. While the agencies have defined these terms in a public statement,[43] they are not defined in the 2011 rule. To provide an opportunity for public comment on these terms and a clearer articulation of the standards the agencies apply in identifying deficiencies and shortcomings, the agencies proposed defining a deficiency and a shortcoming. In addition, the agencies proposed continuing to require a covered company that was assessed to have a deficiency to submit a revised resolution plan to the agencies addressing the deficiency within 90

[43] Resolution Plan Assessment Framework and Firm Determinations (2016), April 13, 2016, *https://www.fdic.gov/news/news/press/2016/pr16031a.pdf.*

days of receiving notice of the deficiency, consistent with the 2011 rule. The agencies received one comment in support of the proposal's timeline for requiring a firm to respond to a notice of deficiency, and the agencies are adopting the definitions of deficiency and shortcoming, and the related standard of review, as proposed.

8. Deletion of ''Deficiencies'' Relating to Management Information Systems

The 2011 rule requires a resolution plan to include information about a covered company's management information systems, including a description and analysis of the system's ''deficiencies, gaps or weaknesses'' in the system's capabilities. The proposal would have deleted the term ''deficiencies'' from this informational content requirement solely to avoid confusion with the proposal's new definition of ''deficiencies'' in the proposal, and not to change the informational content requirement relating to a covered company's management information systems. The agencies did not receive comment on this provision and are adopting the clarification as proposed.

9. Incorporation by Reference

Similar to the 2011 rule, the proposal would have continued to allow a covered company to incorporate by reference information from its previously submitted resolution plans, subject to certain restrictions. The proposal would have required the referenced information to remain accurate in all respects that are material to the covered company's resolution plan, and the incorporated information would remain subject to the contemporaneous certification requirement. The agencies intended that this clarification regarding the material accuracy of referenced information provide covered companies greater flexibility in their ability to incorporate by reference information, thereby reducing duplication and further streamlining the resolution planning process. One commenter supported this clarification and the proposed expanded ability of firms to utilize incorporation by reference, and the agencies are adopting the clarification as proposed.

E. Technical and Conforming Changes From the Proposal

In addition to the changes to the proposal described above, the final rule includes technical and conforming changes for purposes of clarity and consistency. For example, the final rule clarifies that firms are required to submit a resolution plan on or before the applicable submission date. The technical and conforming changes have no substantive effect on the final rule as compared to the proposal.

F. Board Delegation of Authority

The Board has delegated to its Director of Supervision and Regulation, or his or her delegatee, in consultation with the General Counsel, or his or her delegatee, the authority to identify on behalf of the Board a holding company in a multi-tiered holding company to satisfy the requirements that apply to a covered company under the final rule, to the extent such identification is consistent with the criteria specified in the final rule and does not raise any significant legal, policy, or supervisory concerns.

IV. Effective Date and Transition Period

The effective date of the final rule is [60 days after publication in the **Federal Register**]. Financial institutions that are covered companies under the final rule are required to comply with the final rule beginning on the effective date.

The requirements for covered companies' initial resolution plans under the final rule will be determined based on their categorization under the tailoring rules on October 1, 2020, which is after the first date foreign banking organizations are required to submit reports including data for purposes of their categorization based on their combined U.S. operations under the tailoring rules.[44] In particular, firms that are covered companies as of the effective date of the final rule are required to submit their initial and subsequent resolution plans under the final rule as follows:

Biennial filers (all firms subject to Category I standards): Covered companies that are biennial filers on October 1, 2020 are required to submit their next resolution plans on or before July 1, 2021, unless a firm changes its filing group before July 1, 2021. This submission will be a targeted resolution plan. Thereafter, the biennial filers will alternate between filing full and targeted resolution plans on a biennial basis.

Triennial full filers (all firms subject to Category II or Category III standards): Covered companies that are triennial full filers on October 1, 2020 are required to submit targeted resolution plans on or before July 1, 2021, unless a firm changes its filing group before July 1, 2021. The proposal would have required these firms to submit a full resolution plan on or before July 1, 2021. The agencies recognize a foreign firm may not first determine the category of standards to which it is subject (and, accordingly, whether it is a triennial full filer or a triennial reduced filer) until after the date by which a triennial full filer would need to submit a firm-initiated waiver request of informational content requirements for a full resolution plan due on or before July 1, 2021. To provide clarity to covered companies during this transition period, the final rule requires all triennial full filers to submit a targeted resolution plan on or before July 1, 2021. Thereafter, the triennial full filers will alternate between filing full and targeted resolution plans on a triennial basis.

For firms with outstanding shortcomings or deficiencies, the agencies' expectations regarding remediation and related timelines established by the agencies continue to apply. For example, the four foreign banking organizations that received firm-specific feedback letters on December 20, 2018 (Barclays plc, Credit Suisse Group AG, Deutsche Bank AG, and UBS Group AG) are expected to address their shortcomings and complete their respective project plans by July 1, 2020, as provided in the agencies' firm-specific feedback letters. Consistent with prior communications to these firms, they are required to submit resolution plans on or before July 1, 2020 that may be limited to describing changes that the firms have made to their July 2018 resolution plans to address shortcomings identified in those resolution plans.[45]

Likewise, consistent with previous communications to Northern Trust Corporation, it is required to provide an interim update, as specified in the agencies' joint March 29, 2019 firm-specific feedback letter, concerning its projects to address the liquidity shortcoming identified in its 2015 resolution plan.

Triennial reduced filers (all other filers): Covered companies that are triennial reduced filers on October 1, 2020 must submit their initial reduced resolution plans under the final rule on

[44] Top-tier foreign banking organizations will report the FR Y–15 on behalf of their U.S. intermediate holding company and combined U.S. operations using data as of June 30, 2020.

[45] As the final rule makes clear, the requirement to submit a resolution plan on or before July 1, 2020 does not affect the timing or type of resolution plans required to be submitted as described above. The applicable date for completion of the following activities remains July 1, 2020: (i) The resolvability enhancement initiatives identified in the agencies' 2018 firm-specific feedback letters, and (ii) any additional enhancement initiatives identified in the July 2018 resolution plan submission or in writing by firm management during the 2018 resolution plan review. In connection with their July 1, 2020 submissions, the firms should provide an update concerning these initiatives.

or before July 1, 2022, unless a firm changes its filing group before July 1, 2022. Thereafter, they are required to submit reduced resolution plans on a triennial basis.

V. Impact Analysis

The final rule will modify the expected costs imposed by the 2011 rule while seeking to preserve the benefits to U.S. financial stability provided by the 2011 rule. The economic effects of the final rule are driven by the changes in the reporting costs related to resolution plan submissions.

Consistent with EGRRCPA, the final rule changes the asset thresholds at which all firms are required to file resolution plans from $50 billion to $250 billion in total consolidated assets. The final rule also requires the submission of resolution plans by certain firms with $100 billion or more and less than $250 billion in total consolidated assets, including those that have certain risk-based indicators. As of March 31, 2019, firms with $50 billion or more and less than $100 billion in total consolidated assets accounted for less than 2 percent of total U.S. industry assets, and firms with $100 billion or more and less than $250 billion in total consolidated assets accounted for 18 percent of total U.S. industry assets.[46] The net impact of these threshold changes would reduce the number of U.S. filers from 23 to 12 and the number of foreign banking organization filers from 86 to 62.[47] This reduction in resolution plan filers decreases costs as fewer firms would be required to prepare plans.

The final rule also seeks to minimize the impact of this change on benefits to U.S. financial stability provided from resolution plan filings by maintaining filing requirements for certain firms with $100 billion or more and less than $250 billion in total consolidated assets, including those that have certain risk-based indictors.

The final rule also reduces the frequency of required resolution plan submissions for the remaining resolution plan filers, including the largest and most complex resolution plan filers, by extending the default filing cycle between resolution plan submissions. The final rule modifies the filing cycle to every two years for the U.S. GSIBs and certain systemically important nonbank financial companies and to every three years for all other resolution plan filers. This change formalizes a practice that has developed over time to extend firms' resolution plan submission dates to allow at least two years between resolution plan submissions and should reduce costs.

In the August 2018 proposal to extend mandatory Reporting Requirements Associated with Regulation QQ, the estimate of total annual burden for resolution plan filings was estimated to be 1,137,797 hours for 111 resolution plan filers.[48] Since then, the number of resolution plan filers has declined to 109, with a current total annual burden of 1,066,086 hours.[49] Under the final rule, the revised estimated annual burden, incorporating proposed modifications to the resolution plan rule, is 425,525 hours.[50] At an estimated mean wage of $56.05 per hour,[51] this reduction in the estimated burden hours has an estimated wage savings of approximately $35,903,444 per year. Reductions in submission frequency and content could potentially reduce the preparedness of covered companies to execute a rapid and orderly resolution in the event of material financial distress or failure. However, this potential economic effect would be ameliorated by the agencies' authority to require a firm to submit a full resolution plan, interim update, or alter resolution plan submission dates. This authority would address circumstances where the agencies determine that waiting for a firm to submit on its regular submission cycle could present excess risk.

Finally, the final rule is expected to improve efficiency by streamlining the information requirements for the resolution plan submissions: The final rule includes a mechanism for certain firms to request a waiver from certain informational requirements in full resolution plan submissions; introduces a new, more focused resolution plan submission (*i.e.,* targeted resolution plan); and formalizes the conditions and content for reduced resolution plans. These resolution plan modifications are appropriate because the firms' resolution plans have matured and become more stable through multiple submissions. Further, the resolution plan modifications should reduce the costs of preparing and reviewing the resolution plans without having a material impact on the benefits provided by the resolution plans.

In short, as detailed in this section, the proposal would provide estimated wage savings, to the institutions affected by it, totaling $35,903,444 due to the reduction of an estimated 640,561 burden hours needed to comply with the final rule. Moreover, firms could reallocate the estimated 640,561 hours used to comply with the final rule to other activities considered to be more beneficial.[52] Thus, the total economic benefits of the proposal could be greater than the dollar amount estimated.

VI. Regulatory Analysis

A. Paperwork Reduction Act

Certain provisions of the final rule contain ''collections of information'' within the meaning of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) (PRA). In accordance with the requirements of the PRA, the agencies may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The agencies reviewed the final rule and determined that it would revise the reporting requirements that have been previously approved by the Board under OMB control number 7100–0346 (Reporting Requirements Associated with Regulation QQ; FR QQ). The Board's information collection will be extended for three years, with revision.

Since the original rule was adopted in 2011, the Board's PRA clearance has accounted for the entire burden associated with the rule even though the Board and the Corporation are both legally authorized to receive and review the Resolution Plans. The agencies have decided to now equally account for the burden associated with this final rule. As a result, the Corporation has submitted to OMB a request to implement, for three years, an information collection in connection with the final rule Resolution Plan submissions that accounts for half of the estimated burden associated with the final rule.

The Corporation has submitted its request to OMB for review and approval under section 3507(d) of the PRA (44 U.S.C. 3507(d)) and section 1320.11 of

[46] Assets as reported on form FR Y–9C for the quarter ending March 31, 2019.

[47] Upon enactment of EGRRCPA on May 24, 2018, firms with total consolidated assets of less than $100 billion were automatically no longer subject to the resolution planning requirement, reducing the number of U.S. filers and foreign banking organizations filers.

[48] Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB, 83 FR 42296 (August 21, 2018).

[49] As of March 31, 2019.

[50] *See* Section VI.A. for estimated annual hourly burden details.

[51] Mean hourly wages retrieved from the Bureau of Labor and Statistics (BLS), Occupational Employment and Wages May 2017, published March 30, 2018 *https://www.bls.gov/oes/2017/may/oes_nat.htm.*

[52] A commenter asserted that firms would likely eliminate (and not repurpose) compliance jobs, resulting in cost savings to the firms, and that these savings will likely only benefit the firms' shareholders and executives. The agencies note that it is speculative how firms will utilize resources no longer needed to comply with the final rule.

OMB's implementing regulations (5 CFR 1320). The Corporation submitted the information collection requirements to OMB at the proposed rule stage. OMB filed a comment assigning the Corporation OMB control number 3064–0210 and requested that the Corporation make a submission to OMB after the proposed rule is finalized. The Board has reviewed the final rule under the authority delegated to the Board by OMB. The agencies did not receive any comments on the PRA.

Proposed Information Collection

Title of Information Collection: Reporting Requirements Associated with Resolution Planning.

Agency Form Number: FR QQ.

OMB Control Number: 7100–0346.

Frequency of Response: Biennially, Triennially.

Respondents: Bank holding companies [53] with assets of $250 billion or more, bank holding companies with $100 billion or more with certain characteristics specified in the preamble, and nonbank financial firms designated by the Council for supervision by the Board.

FR QQ	Number of respondents [54]	Annual frequency	Estimated average hours per response	Estimated annual burden hours
Current [55]				
Reduced Reporters	71	1	60	4,260
December Filers:				
Tailored Reporters:				
Domestic	12	1	9,000	108,000
Foreign	5	1	1,130	5,650
Full Reporters:				
Domestic	3	1	26,000	78,000
Foreign	6	1	2,000	12,000
Complex Filers:				
Domestic	8	1	[56] 79,522	636,176
Foreign	4	1	55,500	222,000
Current Total				1,066,086
Final Rule				
Triennial Reduced	53	1	20	1,060
Triennial Full:				
Complex Foreign	4	1	13,135	52,540
Foreign and Domestic	9	1	5,667	51,003
Biennial Filers:				
Domestic	8	1	40,115	320,920
Waivers [57]	2	1	1	2
Proposed Total				425,525
Change				−640,561

The agencies did not receive any comments on their proposed revisions to this information collection. Accordingly, with the exception of minor technical adjustments, the information collection revisions are adopted as proposed in the proposal and replicated in the chart above.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires that, in connection with a final rulemaking, an agency prepare and make available for public comment a final regulatory flexibility analysis describing the impact of the proposed rule on small entities.[58] However, a regulatory flexibility analysis is not required if the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities. The Small Business Administration (SBA) has defined "small entities" to include banking organizations with total assets of less than or equal to $600 million that are independently owned and operated or owned by a holding company with less than or equal to $600 million in total assets.[59] For the reasons described below and under section 605(b) of the RFA, the agencies certify that the final rule will not have a significant economic impact on a substantial number of small entities. As of March 31, 2019, there were 4,004

[53] This includes any foreign bank or company that is, or is treated as, a bank holding company under section 8(a) of the International Banking Act of 1978, and meets the relevant total consolidated assets threshold.

[54] Of these respondents, none are small entities as defined by the Small Business Administration (*i.e.,* entities with less than $600 million in total assets) *www.sba.gov/document/support-table-size-standards.*

[55] As of March 31, 2019.

[56] This estimate captures the annual time that complex domestic filers will spend complying with this collection, given that these filers will only submit two resolution plans over the three-year period covered by this notice. The estimate therefore represents two-thirds of the time these firms are estimated to spend on each resolution plan submission.

[57] The agencies cannot reasonably estimate how many of the firms that file resolution plans may submit waiver requests, nor how long it would take to prepare a waiver request. Accordingly, the agencies are including this line as a placeholder. To facilitate the split of the burden between the agencies, this placeholder has been adjusted to two estimated annual burden hours in the final rule.

[58] 5 U.S.C. 601 *et seq.*

[59] The SBA defines a small banking organization as having $600 million or less in assets, where an organization's "assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year." *See* 13 CFR 121.201 as amended by Small Business Size Standards: Adjustment of Monetary-Based Size Standards for Inflation, 84 FR 34261 (July 18, 2019) (effective August 19, 2019). In its determination, the "SBA counts the receipts, employees, or other measure of size of the concern whose size is at issue and all of its domestic and foreign affiliates." *See* 13 CFR 121.103. Following these regulations, the agencies use a covered entity's affiliated and acquired assets, averaged over the preceding four quarters, to determine whether the covered entity is "small" for the purposes of RFA.

insured depository institutions and approximately 3,198 bank holding companies that would fit the SBA's current definition of ''small entity'' for purposes of the RFA.

As discussed in detail above, section 165(d) of the Dodd-Frank Act requires certain financial companies to report periodically to the agencies their plans for rapid and orderly resolution under the Bankruptcy Code in the event of material financial distress or failure. This provision of the Dodd-Frank Act was amended by EGRRCPA in 2018. Specifically, EGRRCPA raised the $50 billion minimum asset threshold for general application of the resolution planning requirement to $250 billion in total consolidated assets, and provided the Board with discretion to apply the resolution planning requirement to firms with $100 billion or more and less than $250 billion in total consolidated assets. EGRRCPA also provides that any bank holding company, regardless of asset size, that has been identified as a U.S. GSIB under the Board's U.S. GSIB surcharge rule shall be considered a bank holding company with $250 billion or more in total consolidated assets for purposes of the application of the resolution planning requirement.

In accordance with section 165(d) of the Dodd-Frank Act as amended by EGRRCPA, the Board is amending Regulation QQ [60] and the Corporation is amending part 381 [61] to amend the requirement that a covered company periodically submit a resolution plan to the Board and Corporation.[62] The final rule also modifies the procedures for joint review of a resolution plan by the agencies. The reasons and justification for the final rule are described in the preamble.

As discussed in the preamble, the final rule applies to covered companies, which include only bank holding companies and foreign banking organizations with at least $100 billion in total consolidated assets, and nonbank financial companies that the Council has determined under section 113 of the Dodd-Frank Act must be supervised by the Board and for which such determination is in effect. The assets of a covered company substantially exceed the $600 million asset threshold under which a banking organization is considered a ''small entity'' under SBA regulations.[63]

The final rule also applies to a nonbank financial company designated by the Council for supervision by the Board under section 113 of the Dodd-Frank Act, regardless of such a company's asset size. As of the date of the adoption of the final rule, there are no such nonbank financial companies supervised by the Board. Although the asset size of nonbank financial companies may not be the sole determinative factor of whether such companies may pose systemic risks and would be designated by the Council for supervision by the Board, it is one consideration.[64] It therefore may be unlikely that a financial firm that is at or below the $600 million asset threshold would be designated by the Council under section 113 of the Dodd-Frank Act.

Because the final rule is not likely to apply to any company with assets of $600 million or less, it is not expected to apply to any small entity for purposes of the RFA. The agencies do not believe that the final rule duplicates, overlaps, or conflicts with any other Federal rules.

In light of the foregoing, the Board and the Corporation certify that the final rule will not have a significant economic impact on a substantial number of small entities supervised.

C. Riegle Community Development and Regulatory Improvement Act of 1994

Pursuant to section 302(a) of the Riegle Community Development and Regulatory Improvement Act (RCDRIA),[65] in determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions (IDIs), each Federal banking agency must consider, consistent with principles of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, including small depository institutions, and customers of depository institutions, as well as the benefits of such regulations. In addition, section 302(b) of RCDRIA requires new regulations and amendments to regulations that impose additional reporting, disclosures, or other new requirements on IDIs generally to take effect on the first day of a calendar quarter that begins on or after the date on which the regulations are published in final form.[66]

Because the final rule would not impose additional reporting, disclosure, or other requirements on IDIs, section 302 of the RCDRIA therefore does not apply.

D. Plain Language

Section 722 of the Gramm-Leach-Bliley Act [67] requires the Federal banking agencies to use plain language in all proposed and final rules published after January 1, 2000. The agencies have sought to present the final rule in a simple and straightforward manner, and did not receive any comments on plain language.

E. The Congressional Review Act

For purposes of Congressional Review Act, the OMB makes a determination as to whether a final rule constitutes a ''major'' rule.[68] If a rule is deemed a ''major rule'' by the Office of Management and Budget (OMB), the Congressional Review Act generally provides that the rule may not take effect until at least 60 days following its publication.[69]

The Congressional Review Act defines a ''major rule'' as any rule that the Administrator of the Office of Information and Regulatory Affairs of the OMB finds has resulted in or is likely to result in (A) an annual effect on the economy of $100,000,000 or more; (B) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies or geographic regions, or (C) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.[70]

The OMB has determined that the final rule is not a ''major rule'' within the meaning of the Congressional Review Act. As required by the Congressional Review Act, the agencies will submit the final rule and other appropriate reports to Congress and the Government Accountability Office for review.

PART [ ]—RESOLUTION PLANS

Sec.
____.1 Authority and scope.
____.2 Definitions.
____.3 Critical operations.
____.4 Resolution plan required.
____.5 Informational content of a full resolution plan.
____.6 Informational content of a targeted resolution plan.
____.7 Informational content of a reduced resolution plan.
____.8 Review of resolution plans; resubmission of deficient resolution plans.
____.9 Failure to cure deficiencies on resubmission of a resolution plan.
____.10 Consultation.
____.11 No limiting effect or private right of action; confidentiality of resolution plans.
____.12 Enforcement.

§ ____.1 Authority and scope.

(a) *Authority.* This part is issued pursuant to section 165(d)(8) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, 124 Stat. 1376, 1426–1427), as amended by the Economic Growth, Regulatory Relief, and Consumer Protection Act (Pub. L. 115–174, 132 Stat. 1296) (the *Dodd-Frank Act*), 12 U.S.C. 5365(d)(8), which requires the Board of Governors of the Federal Reserve System (Board) and the Federal Deposit Insurance Corporation (Corporation) to jointly issue rules implementing the provisions of section 165(d) of the Dodd-Frank Act.

(b) *Scope.* This part applies to each covered company and establishes rules and requirements regarding the submission and content of a resolution plan, as well as procedures for review by the Board and Corporation of a resolution plan.

§ ____.2 Definitions.

For purposes of this part:

Bankruptcy Code means Title 11 of the United States Code.

Biennial filer is defined in § ____.4(a)(1).

Category II banking organization means a covered company that is a category II banking organization pursuant to § 252.5 of this title.

Category III banking organization means a covered company that is a category III banking organization pursuant to § 252.5 of this title.

Company means a corporation, partnership, limited liability company, depository institution, business trust, special purpose entity, association, or similar organization, but does not include any organization, the majority of the voting securities of which are owned by the United States.

Control. A company controls another company when the first company, directly or indirectly, owns, or holds with power to vote, 25 percent or more of any class of the second company's outstanding voting securities.

Core business lines means those business lines of the covered company, including associated operations, services, functions and support, that, in the view of the covered company, upon failure would result in a material loss of revenue, profit, or franchise value.

Core elements mean the information required to be included in a full resolution plan pursuant to § ____.5(c), (d)(1)(i), (iii), and (iv), (e)(1)(ii), (e)(2), (3), and (5), (f)(1)(v), and (g) regarding capital, liquidity, and the covered company's plan for executing any recapitalization contemplated in its resolution plan, including updated quantitative financial information and analyses important to the execution of the covered company's resolution strategy.

Council means the Financial Stability Oversight Council established by section 111 of the Dodd-Frank Act (12 U.S.C. 5321).

Covered company—(1) *In general.* A covered company means:

(i) Any nonbank financial company supervised by the Board;

(ii) Any global systemically important BHC;

(iii) Any bank holding company, as that term is defined in section 2 of the Bank Holding Company Act, as amended (12 U.S.C. 1841), and part 225 of this title (the Board's Regulation Y), that has $250 billion or more in total consolidated assets, as determined based on the average of the company's four most recent Consolidated Financial Statements for Holding Companies as reported on the Federal Reserve's Form FR Y–9C; provided that in the case of a company whose total consolidated assets have increased as the result of a merger, acquisition, combination, or similar transaction, the Board and the Corporation may alternatively consider, in their discretion, to the extent and in the manner the Board and the Corporation jointly consider to be appropriate, one or more of the four most recent Consolidated Financial Statements for Holding Companies as reported on the Federal Reserve's Form FR Y–9C or Capital and Asset Reports for Foreign Banking Organizations as reported on the Federal Reserve's Form FR Y–7Q of the companies that were party to the merger, acquisition, combination or similar transaction;

(iv) Any foreign bank or company that is a bank holding company or is treated as a bank holding company under section 8(a) of the International Banking Act of 1978 (12 U.S.C. 3106(a)), and that has $250 billion or more in total consolidated assets, as determined annually based on the foreign bank's or company's most recent annual or, as applicable, quarterly based on the average of the foreign bank's or company's four most recent quarterly Capital and Asset Reports for Foreign Banking Organizations as reported on the Federal Reserve's Form FR Y–7Q; provided that in the case of a company whose total consolidated assets have increased as the result of a merger, acquisition, combination, or similar transaction, the Board and the Corporation may alternatively consider, in their discretion, to the extent and in the manner the Board and the Corporation jointly consider to be appropriate, one or more of the four most recent Consolidated Financial Statements for Holding Companies as reported on the Federal Reserve's Form FR Y–9C or Capital and Asset Reports for Foreign Banking Organizations as reported on the Federal Reserve's Form FR Y–7Q of the companies that were party to the merger, acquisition, combination or similar transaction; and

(v) Any additional covered company as determined pursuant to § 243.13.

(2) *Cessation of covered company status for nonbank financial companies supervised by the Board and global systemically important BHCs.* Once a covered company meets the requirements described in paragraph (1)(i) or (ii) of this definition of covered company, the company shall remain a covered company until it no longer meets any of the requirements described in paragraph (1) of this definition of covered company.

(3) *Cessation of covered company status for other covered companies.* Once a company meets the requirements described in paragraph (1)(iii) or (iv) of this definition of covered company, the company shall remain a covered company until—

(i) In the case of a covered company described in paragraph (1)(iii) of this definition of covered company or a covered company described in paragraph (1)(iv) of this definition of covered company that files quarterly Capital and Asset Reports for Foreign Banking Organizations on the Federal Reserve's Form FR Y–7Q, the company has reported total consolidated assets that are below $250 billion for each of four consecutive quarters, as determined based on its total consolidated assets as reported on each of its four most recent Consolidated Financial Statements for Holding Companies on the Federal Reserve's Form FR Y–9C or Capital and

Asset Reports for Foreign Banking Organizations on the Federal Reserve's Form FR Y–7Q, as applicable; or

(ii) In the case of a covered company described in paragraph (1)(iv) of this definition of covered company that does not file quarterly Capital and Asset Reports for Foreign Banking Organizations on the Federal Reserve's Form FR Y–7Q, the company has reported total consolidated assets that are below $250 billion for each of two consecutive years, as determined based on its total consolidated assets as reported on each of its two most recent annual Capital and Asset Reports for Foreign Banking Organizations on the Federal Reserve's Form FR Y–7Q, or such earlier time as jointly determined by the Board and the Corporation.

(4) *Multi-tiered holding company.* In a multi-tiered holding company structure, covered company means the top-tier of the multi-tiered holding company unless the Board and the Corporation jointly identify a different holding company to satisfy the requirements that apply to the covered company. In making this determination, the Board and the Corporation shall consider:

(i) The ownership structure of the foreign banking organization, including whether the foreign banking organization is owned or controlled by a foreign government;

(ii) Whether the action would be consistent with the purposes of this part; and

(iii) Any other factors that the Board and the Corporation determine are relevant.

(5) *Asset threshold for bank holding companies and foreign banking organizations.* The Board may, pursuant to a recommendation of the Council, raise any asset threshold specified in paragraph (1)(iii) or (iv) of this definition of covered company.

(6) *Exclusion.* A bridge financial company chartered pursuant to 12 U.S.C. 5390(h) shall not be deemed to be a covered company hereunder.

Critical operations means those operations of the covered company, including associated services, functions and support, the failure or discontinuance of which would pose a threat to the financial stability of the United States.

Deficiency is defined in § ____.8(b).

Depository institution has the same meaning as in section 3(c)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1813(c)(1)) and includes a state-licensed uninsured branch, agency, or commercial lending subsidiary of a foreign bank.

Foreign banking organization means—

(1) A foreign bank, as defined in section 1(b)(7) of the International Banking Act of 1978 (12 U.S.C. 3101(7)), that:

(i) Operates a branch, agency, or commercial lending company subsidiary in the United States;

(ii) Controls a bank in the United States; or

(iii) Controls an Edge corporation acquired after March 5, 1987; and

(2) Any company of which the foreign bank is a subsidiary.

Foreign-based covered company means any covered company that is not incorporated or organized under the laws of the United States.

Full resolution plan means a full resolution plan described in § ____.5.

Functionally regulated subsidiary has the same meaning as in section 5(c)(5) of the Bank Holding Company Act, as amended (12 U.S.C. 1844(c)(5)).

Global systemically important BHC means a covered company that is a global systemically important BHC pursuant to § 252.5 of this title.

Identified critical operations means the critical operations of the covered company identified by the covered company or jointly identified by the Board and the Corporation under § ____.3(b)(2).

Material change means an event, occurrence, change in conditions or circumstances, or other change that results in, or could reasonably be foreseen to have, a material effect on:

(1) The resolvability of the covered company;

(2) The covered company's resolution strategy; or

(3) How the covered company's resolution strategy is implemented. Such changes include, but are not limited to:

(i) The identification of a new critical operation or core business line;

(ii) The identification of a new material entity or the de-identification of a material entity;

(iii) Significant increases or decreases in the business, operations, or funding or interconnections of a material entity; or

(iv) Changes in the primary regulatory authorities of a material entity or the covered company on a consolidated basis.

Material entity means a subsidiary or foreign office of the covered company that is significant to the activities of an identified critical operation or core business line, or is financially or operationally significant to the resolution of the covered company.

Material financial distress with regard to a covered company means that:

(1) The covered company has incurred, or is likely to incur, losses that will deplete all or substantially all of its capital, and there is no reasonable prospect for the company to avoid such depletion;

(2) The assets of the covered company are, or are likely to be, less than its obligations to creditors and others; or

(3) The covered company is, or is likely to be, unable to pay its obligations (other than those subject to a bona fide dispute) in the normal course of business.

Nonbank financial company supervised by the Board means a nonbank financial company or other company that the Council has determined under section 113 of the Dodd-Frank Act (12 U.S.C. 5323) shall be supervised by the Board and for which such determination is still in effect.

Rapid and orderly resolution means a reorganization or liquidation of the covered company (or, in the case of a covered company that is incorporated or organized in a jurisdiction other than the United States, the subsidiaries and operations of such foreign company that are domiciled in the United States) under the Bankruptcy Code that can be accomplished within a reasonable period of time and in a manner that substantially mitigates the risk that the failure of the covered company would have serious adverse effects on financial stability in the United States.

Reduced resolution plan means a reduced resolution plan described in § ____.7.

Shortcoming is defined in § ____.8(e).

Subsidiary means a company that is controlled by another company, and an indirect subsidiary is a company that is controlled by a subsidiary of a company.

Targeted resolution plan means a targeted resolution plan described in § ____.6.

Triennial full filer is defined in § ____.4(b)(1).

Triennial reduced filer is defined in § ____.4(c)(1).

United States means the United States and includes any state of the United States, the District of Columbia, any territory of the United States, Puerto Rico, Guam, American Samoa, and the Virgin Islands.

§ ____.3 Critical operations.

(a) *Identification of critical operations by covered companies*—(1) *Process and methodology required.* (i) Each biennial filer and triennial full filer shall establish and implement a process designed to identify each of its critical operations. After July 1, 2022, each triennial reduced filer that has any identified critical operation shall establish and implement a process designed to identify each of its critical operations. The scale of the process must be appropriate to the nature, size, complexity, and scope of the covered company's operations. The covered company must review its process periodically and update it as necessary to ensure its continued effectiveness. The covered company shall describe its process and how it is applied as part of its corporate governance relating to resolution planning under § ____.5(d)(1). The covered company must conduct the process described in this paragraph (a)(1) sufficiently in advance of its next resolution plan submission so that the covered company is prepared to submit the information required under §§ ____.5 through ____.7 for each identified critical operation.

(ii) The process required under paragraph (a)(1)(i) of this section must include a methodology for evaluating the covered company's participation in activities and markets that may be critical to the financial stability of the United States. The methodology must be designed, taking into account the nature, size, complexity, and scope of the covered company's operations, to identify and assess:

(A) The markets and activities in which the covered company participates or has operations;

(B) The significance of those markets and activities with respect to the financial stability of the United States; and

(C) The significance of the covered company as a provider or other participant in those markets and activities.

(2) *Waiver requests.* A covered company that has previously submitted a resolution plan under this part may request a waiver of the requirement to have a process and methodology under paragraph (a)(1) of this section by submitting a waiver request in accordance with this paragraph (a)(2) if the covered company does not have an identified critical operation as of the date it submits the waiver request.

(i) Each waiver request shall be divided into a public section and a confidential section. A covered company shall segregate and separately identify the public section from the confidential section. A covered company shall include in the confidential section of a waiver request its rationale for why a waiver of the requirement would be appropriate, including an explanation of why the process and methodology are not likely to identify any critical operation given its business model, operations, and organizational structure. A covered company shall describe in the public section of a waiver request that it is seeking to waive the requirement.

(ii) Any waiver request must be made in writing no later than 18 months before the date by which the covered company is required to submit its next resolution plan. Notwithstanding the foregoing, with respect to any resolution plan that a covered company is required to submit on or before July 1, 2021, any waiver request must be made in writing no later than 17 months before that date.

(iii) The Board and Corporation may jointly approve or deny a waiver request in their discretion. Unless the Board and the Corporation have jointly approved a waiver request, the waiver request will be deemed denied on the date that is 12 months before the date by which the covered company is required to submit the resolution plan that immediately follows submission of the waiver request.

(iv) An approved waiver request under this paragraph (a)(2) is effective for the resolution plan submission that immediately follows submission of the waiver request and for any resolution plan submitted thereafter until, but not including, the covered company's next full resolution plan submission.

(3) *Limited exemption.* A foreign-based covered company is exempt from the requirement to have a process and methodology under paragraph (a)(1) of this section in connection with any requirement to submit a resolution plan on or before July 1, 2021 if the foreign-based covered company does not have an identified critical operation as of the date that is 17 months before the date by which the covered company is required to submit the resolution plan.

(b) *Joint identification of critical operations by the Board and the Corporation.* (1) The Board and the Corporation shall, not less frequently than every six years, jointly review the operations of covered companies to determine whether to jointly identify critical operations of any covered company in accordance with paragraph (b)(2) of this section, or to jointly rescind any currently effective joint identification in accordance with paragraph (b)(3) of this section.

(2) If the Board and the Corporation jointly identify a covered company's operation as a critical operation, the Board and the Corporation shall jointly notify the covered company in writing. A covered company is not required to include the information required under §§ ____.5 through ____.7 for the identified critical operation in any resolution plan that the covered company is required to submit within 12 months after the joint notification unless the operation had been identified by the covered company as a critical operation on or before the date the Board and the Corporation jointly notified the covered company.

(3) The Board and the Corporation may jointly rescind a joint identification under paragraph (b)(2) of this section by providing the covered company with joint notice of the rescission. Upon the notification, the covered company is not required to include the information regarding the operation required for identified critical operations under §§ ____.5 through ____.7 in any subsequent resolution plan unless:

(i) The covered company identifies the operation as a critical operation; or

(ii) The Board and the Corporation subsequently provide a joint notification under paragraph (b)(2) of this section to the covered company regarding the operation.

(4) A joint notification provided by the Board and the Corporation to a covered company before [effective date of final rule] that identifies any of its operations as a critical operation and not previously jointly rescinded is deemed to be a joint identification under paragraph (b)(2) of this section.

(c) *Request for reconsideration of jointly identified critical operations.* A covered company may request that the Board and the Corporation reconsider a joint identification under paragraph (b)(2) of this section in accordance with this paragraph (c).

(1) *Written request for reconsideration.* The covered company must submit a written request for reconsideration to the Board and the Corporation that includes a clear and complete statement of all arguments and all relevant, material information that the covered company expects to have considered. If a covered company has previously requested reconsideration regarding the operation, the written request must also describe the material differences between the new request and the most recent prior request.

(2) *Timing.* (i) If a covered company submits a request for reconsideration on or before the date that is 18 months before the date by which it is required to submit its next resolution plan, the Board and the Corporation will complete their reconsideration no later than 12 months before the date by which the covered company is required to submit its next resolution plan. Notwithstanding the foregoing, if the Board and the Corporation jointly find that additional information from the covered company is required to complete their reconsideration, the Board and the Corporation will jointly request in writing the additional information from the covered company.

The Board and the Corporation will then complete their reconsideration no later than the later of:

(A) Ninety (90) days after receipt of all additional information from the covered company; and

(B) Twelve (12) months before the date by which the covered company is required to submit its next resolution plan.

(ii) If a covered company submits a request for reconsideration less than 18 months before the date by which it is required to submit its next resolution plan, the Board and the Corporation may, in their discretion, defer reconsideration of the joint identification until after the submission of that resolution plan, with the result that the covered company must include the identified critical operation in that resolution plan and the Board and the Corporation will complete their reconsideration in accordance with paragraph (c)(2)(i) of this section as though the covered company had submitted the request after the date by which the covered company is required to submit that resolution plan.

(3) *Joint communication following reconsideration.* The Board and the Corporation will communicate jointly the results of their reconsideration in writing to the covered company.

(d) *De-identification by covered company of self-identified critical operations.* A covered company may cease to include in its resolution plans the information required under §§ ____.5 through ____.7 regarding an operation previously identified only by the covered company (and not also jointly by the Board and the Corporation) as a critical operation only in accordance with this paragraph (d).

(1) *Notice of de-identification.* If a covered company ceases to identify an operation as a critical operation, the covered company must notify the Board and the Corporation of its de-identification. The notice must be in writing and include a clear and complete explanation of:

(i) Why the covered company previously identified the operation as a critical operation; and

(ii) Why the covered company no longer identifies the operation as a critical operation.

(2) *Timing.* Notwithstanding a covered company's de-identification, and unless otherwise notified in writing jointly by the Board and the Corporation, a covered company shall include the applicable information required under §§ ____.5 through § ____.7 regarding an operation previously identified by the covered company as a critical operation in any resolution plan the covered company is required to submit during the period ending 12 months after the covered company notifies the Board and the Corporation in accordance with paragraph (d)(1) of this section.

(3) *No effect on joint identifications.* Neither a covered company's de-identification nor notice thereof under paragraph (d)(1) of this section rescinds a joint identification made by the Board and the Corporation under paragraph (b)(2) of this section.

§ ____.4 Resolution plan required.

(a) *Biennial filers*—(1) *Group members.* Biennial filer means:

(i) Any global systemically important BHC; and

(ii) Any nonbank financial company supervised by the Board that has not been jointly designated a triennial full filer by the Board and Corporation under paragraph (a)(2) of this section or that has been jointly re-designated a biennial filer by the Board and the Corporation under paragraph (a)(2) of this section.

(2) *Nonbank financial companies.* The Board and the Corporation may jointly designate a nonbank financial company supervised by the Board as a triennial full filer in their discretion, taking into account facts and circumstances that each of the Board and the Corporation in its discretion determines to be relevant. The Board and the Corporation may in their discretion jointly re-designate as a biennial filer a nonbank financial company that the Board and the Corporation had previously designated as a triennial filer, taking into account facts and circumstances that each of the Board and the Corporation in its discretion determines to be relevant.

(3) *Frequency of submission.* Biennial filers shall each submit a resolution plan to the Board and the Corporation every two years.

(4) *Submission date.* Biennial filers shall submit their resolution plans on or before July 1 of each year in which a resolution plan is due.

(5) *Type of resolution plan required to be submitted.* Biennial filers shall alternate submitting a full resolution plan and a targeted resolution plan.

(6) *New covered companies that are biennial filers.* A company that becomes a covered company and a biennial filer after [effective date of final rule] shall submit a full resolution plan on or before the next date by which the other biennial filers are required to submit resolution plans pursuant to paragraph (a)(4) of this section that occurs no earlier than 12 months after the date as of which the company became a covered company. The company's subsequent resolution plans shall be of the type required to be submitted by the other biennial filers.

(b) *Triennial full filers*—(1) *Group members.* Triennial full filer means:

(i) Any category II banking organization;

(ii) Any category III banking organization; and

(iii) Any nonbank financial company supervised by the Board that is jointly designated a triennial full filer by the Board and Corporation under paragraph (a)(2) of this section.

(2) *Frequency of submission.* Triennial full filers shall each submit a resolution plan to the Board and the Corporation every three years.

(3) *Submission date.* Triennial full filers shall submit their resolution plans on or before July 1 of each year in which a resolution plan is due.

(4) *Type of resolution plan required to be submitted.* Triennial full filers shall alternate submitting a full resolution plan and a targeted resolution plan.

(5) *New covered companies that are triennial full filers.* A company that becomes a covered company and a triennial full filer after [effective date of final rule] shall submit a full resolution plan on or before the next date by which the other triennial full filers are required to submit resolution plans pursuant to paragraph (b)(3) of this section that occurs no earlier than 12 months after the date as of which the company became a covered company. The company's subsequent resolution plans shall be of the type required to be submitted by the other triennial full filers.

(c) *Triennial reduced filers*—(1) *Group members.* Triennial reduced filer means any covered company that is not a global systemically important BHC, nonbank financial company supervised by the Board, category II banking organization, or category III banking organization.

(2) *Frequency of submission.* Triennial reduced filers shall each submit a resolution plan to the Board and the Corporation every three years.

(3) *Submission date.* Triennial reduced filers shall submit their resolution plans on or before July 1 of each year in which a resolution plan is due.

(4) *Type of resolution plan required to be submitted.* Triennial reduced filers shall submit a reduced resolution plan.

(5) *New covered companies that are triennial reduced filers.* A company that becomes a covered company and a triennial reduced filer after December 31, 2019 shall submit a full resolution plan on or before the next date by which

the other triennial reduced filers are required to submit resolution plans pursuant to paragraph (c)(3) of this section that occurs no earlier than 12 months after the date as of which the company became a covered company. The company's subsequent resolution plans shall be reduced resolution plans.

(d) *General*—(1) *Changing filing groups.* If a covered company that is a member of a filing group specified in paragraphs (a) through (c) of this section (''original group filer'') becomes a member of a different filing group specified in paragraphs (a) through (c) of this section (''new group filer''), then the covered company shall submit its next resolution plan as follows:

(i) If the next date by which the original group filers are required to submit their next resolution plans is the same date by which the other new group filers are required to submit their next resolution plans and:

(A) That date is less than 12 months after the date as of which the covered company became a new group filer, the covered company shall submit its next resolution plan on or before that date. The resolution plan may be the type of resolution plan that the original group filers are required to submit on or before that date or the type of resolution plan that the other new group filers are required to submit on or before that date.

(B) That date is 12 months or more after the date as of which the covered company became a new group filer, the covered company shall submit on or before that date the type of resolution plan the other new group filers are required to submit on or before that date.

(ii) If the next date by which the original group filers are required to submit their next resolution plans is different from the date by which the new group filers are required to submit their next resolution plans, the covered company shall submit its next resolution plan on or before the next date by which the other new group filers are required to submit a resolution plan that occurs no earlier than 12 months after the date as of which the covered company became a new group filer. The covered company shall submit the type of resolution plan that the other new group filers are required to submit on or before the date the covered company is required to submit its next resolution plan.

(iii) Notwithstanding paragraph (d)(1)(i) or (ii) of this section, any triennial reduced filer that becomes a biennial filer or a triennial full filer shall submit a full resolution plan on or before the next date by which the other new group filers are required to submit their next resolution plans that occurs no earlier than 12 months after the date as of which the covered company became a new group filer. After submitting a full resolution plan, the covered company shall submit, on or before the next date that the other new group filers are required to submit their next resolution plans, the type of resolution plan the other new group filers are required to submit on or before that date.

(2) *Altering submission dates.* Notwithstanding anything to the contrary in this part, the Board and Corporation may jointly determine that a covered company shall submit its resolution plan on or before a date other than as provided in paragraphs (a) through (c) or paragraph (d)(1) of this section. The Board and the Corporation shall provide a covered company with written notice of a determination under this paragraph (d)(2) no later than 12 months before the date by which the covered company is required to submit the resolution plan.

(3) *Authority to require interim updates.* The Board and the Corporation may jointly require that a covered company submit an update to a resolution plan submitted under this part, within a reasonable amount of time, as jointly determined by the Board and Corporation. The Board and the Corporation shall notify the covered company of its requirement to submit an update under this paragraph (d)(3) in writing, and shall specify the portions or aspects of the resolution plan the covered company shall update.

(4) *Notice of extraordinary events*—(i) *In general.* Each covered company shall provide the Board and the Corporation with a notice no later than 45 days after any material merger, acquisition of assets, or similar transaction or fundamental change to the covered company's resolution strategy. Such notice must describe the event and explain how the event affects the resolvability of the covered company. The covered company shall address any event with respect to which it has provided notice pursuant to this paragraph (d)(4)(i) in the following resolution plan submitted by the covered company.

(ii) *Exception.* A covered company shall not be required to submit a notice under paragraph (d)(4)(i) of this section if the date by which the covered company would be required to submit the notice under paragraph (d)(4)(i) of this section would be within 90 days before the date by which the covered company is required to submit a resolution plan under this section.

(5) *Authority to require a full resolution plan submission.* Notwithstanding anything to the contrary in this part, the Board and Corporation may jointly require a covered company to submit a full resolution plan instead of a targeted resolution plan or a reduced resolution plan that the covered company is otherwise required to submit under this section. The Board and the Corporation shall provide a covered company with written notice of a determination under this paragraph (d)(5) no later than 12 months before the date by which the covered company is required to submit the full resolution plan. The date on or before which a full resolution plan must be submitted under this paragraph (d)(5) will be the date by which the covered company would otherwise be required to submit its upcoming targeted resolution plan or reduced resolution plan under paragraphs (a) through (c), or (d)(1) or (2) of this section. The requirement to submit a full resolution plan under this paragraph (d)(5) does not alter the type of resolution plan the covered company will subsequently be required to submit under this section.

(6) *Waivers*—(i) *Authority to waive requirements.* The Board and the Corporation may jointly waive one or more of the resolution plan requirements of § ____.5, § ____.6, or § ____.7 for one or more covered companies for any number of resolution plan submissions. A request pursuant to paragraph (d)(6)(ii) of this section is not required for the Board and Corporation to exercise their authority under this paragraph (d)(6)(i).

(ii) *Waiver requests by covered companies.* In connection with the submission of a full resolution plan, a triennial full filer or triennial reduced filer that has previously submitted a resolution plan under this part may request a waiver of one or more of the informational content requirements of § ____.5 in accordance with this paragraph (d)(6)(ii).

(A) A requirement to include any of the following information is not eligible for a waiver at the request of a triennial full filer or triennial reduced filer:

(*1*) Information specified in section 165(d)(1)(A) through (C) of the Dodd-Frank Act (12 U.S.C. 5365(d)(1)(A) through (C));

(*2*) Any core element;

(*3*) Information required to be included in the public section of a full resolution plan under § ____.11(c)(2);

(*4*) Information about the remediation of any previously identified deficiency or shortcoming unless the Board and the Corporation have jointly determined that the triennial full filer or triennial reduced filer has satisfactorily remedied the deficiency or addressed the shortcoming before its submission of the waiver request; or

(*5*) Information about changes to the triennial full filer or triennial reduced filer's last submitted resolution plan resulting from any:

(*i*) Change in law or regulation;

(*ii*) Guidance or feedback from the Board and the Corporation; or

(*iii*) Any material change experienced by the triennial full filer or triennial reduced filer since it submitted that resolution plan.

(B) Each waiver request shall be divided into a public section and a confidential section. A triennial full filer or triennial reduced filer shall segregate and separately identify the public section from the confidential section.

(*1*) The triennial full filer or triennial reduced filer shall include in the confidential section of a waiver request a clear and complete explanation of why:

(*i*) Each requirement sought to be waived is not a requirement described in paragraph (d)(6)(ii)(A) of this section;

(*ii*) The information sought to be waived would not be relevant to the Board's and Corporation's review of the triennial full filer or triennial reduced filer's next full resolution plan; and

(*iii*) A waiver of each requirement would be appropriate.

(*2*) The triennial full filer or triennial reduced filer shall include in the public section of a waiver request a list of the requirements that it is requesting be waived.

(C) A triennial full filer or triennial reduced filer may not make more than one waiver request for any full resolution plan submission and any waiver request must be made in writing no later than 18 months before the date by which the triennial full filer or triennial reduced filer is required to submit the full resolution plan.

(D) The Board and Corporation may jointly approve or deny a waiver request, in whole or in part, in their discretion. Unless the Board and the Corporation have jointly approved a waiver request, the waiver request will be deemed denied on the date that is 12 months before the date by which the triennial full filer or triennial reduced filer is required to submit the full resolution plan to which the waiver request relates.

(E) An approved waiver request under this paragraph (d)(6)(ii) is effective for only the full resolution plan that immediately follows submission of the waiver request.

(e) *Access to information.* In order to allow evaluation of a resolution plan, each covered company must provide the Board and the Corporation such information and access to personnel of the covered company as the Board and the Corporation jointly determine during the period for reviewing the resolution plan is necessary to assess the credibility of the resolution plan and the ability of the covered company to implement the resolution plan. In order to facilitate review of any waiver request by a covered company under §____.3(a)(2) or paragraph (d)(6)(ii) of this section, or any joint identification of a critical operation of a covered company under §____.3(b), each covered company must provide such information and access to personnel of the covered company as the Board and the Corporation jointly determine is necessary to evaluate the waiver request or whether the operation is a critical operation. The Board and the Corporation will rely to the fullest extent possible on examinations conducted by or on behalf of the appropriate Federal banking agency for the relevant company.

(f) *Board of directors approval of resolution plan.* Before submission of a resolution plan under paragraphs (a) through (c) of this section, the resolution plan of a covered company shall be approved by:

(1) The board of directors of the covered company and noted in the minutes; or

(2) In the case of a foreign-based covered company only, a delegee acting under the express authority of the board of directors of the covered company to approve the resolution plan.

(g) *Resolution plans provided to the Council.* The Board shall make the resolution plans and updates submitted by the covered company pursuant to this section available to the Council upon request.

(h) *Required and prohibited assumptions.* In preparing its resolution plan, a covered company shall:

(1) Take into account that the material financial distress or failure of the covered company may occur under the severely adverse economic conditions provided to the covered company by the Board pursuant to 12 U.S.C. 5365(i)(1)(B);

(2) Not rely on the provision of extraordinary support by the United States or any other government to the covered company or its subsidiaries to prevent the failure of the covered company, including any resolution actions taken outside the United States that would eliminate the need for any of a covered company's U.S. subsidiaries to enter into resolution proceedings; and

(3) With respect to foreign banking organizations, not assume that the covered company takes resolution actions outside of the United States that would eliminate the need for any U.S. subsidiaries to enter into resolution proceedings.

(i) *Point of contact.* Each covered company shall identify a senior management official at the covered company responsible for serving as a point of contact regarding the resolution plan of the covered company.

(j) *Incorporation of previously submitted resolution plan information by reference.* Any resolution plan submitted by a covered company may incorporate by reference information from a resolution plan previously submitted by the covered company to the Board and the Corporation, provided that:

(1) The resolution plan seeking to incorporate information by reference clearly indicates:

(i) The information the covered company is incorporating by reference; and

(ii) Which of the covered company's previously submitted resolution plan(s) originally contained the information the covered company is incorporating by reference and the specific location of the information in the covered company's previously submitted resolution plan; and

(2) The covered company certifies that the information the covered company is incorporating by reference remains accurate in all respects that are material to the covered company's resolution plan.

(k) *Initial resolution plans after effective date.* (1) Notwithstanding anything to the contrary in paragraphs (a) through (c) or (d)(1) of this section, each company that is a covered company as of December 31, 2019 is required to submit its initial resolution plan after December 31, 2019, as provided in this paragraph (k). The submission date and resolution plan type for each subsequent resolution plan will be determined pursuant to paragraphs (a) through (d) of this section.

(i) *Biennial filers.* Each covered company that is a biennial filer on October 1, 2020 and remains a biennial filer as of July 1, 2021, is required to submit a targeted resolution plan pursuant to paragraph (a)(4) of this section on or before July 1, 2021.

(ii) *Triennial full filers.* Each covered company that is a triennial full filer on October 1, 2020 and remains a triennial full filer as of July 1, 2021 is required to submit a targeted resolution plan pursuant to paragraph (b)(3) of this section on or before July 1, 2021.

(iii) *Triennial reduced filers.* Each covered company that is a triennial reduced filer on October 1, 2020 and remains a triennial reduced filer as of July 1, 2022 is required to submit a reduced resolution plan pursuant to paragraph (c)(3) of this section on or before July 1, 2022.

(2) With respect to any company that is a covered company as of December 31, 2019, and changes filings groups specified in paragraphs (a) through (c) of this section after October 1, 2020 and before the date by which it would be required to submit a resolution plan under paragraph (k)(1) of this section, the requirements for its initial resolution plan after it changes filing groups will be determined pursuant to paragraph (d)(1) of this section.

(3) Notwithstanding anything to the contrary in this paragraph (k), a covered company that has been jointly directed by the Board and the Corporation before December 31, 2019, to submit a resolution plan on or before July 1, 2020 describing changes it has made to its most recent resolution plan submission to address each shortcoming the agencies identified in that resolution plan shall submit a responsive resolution plan on or before July 1, 2020 in addition to any resolution plan that such covered company is otherwise required to submit under this section. The requirement to submit such a resolution plan on or before July 1, 2020 does not alter the timing or type of resolution plan any such covered company is required to submit under this section after July 1, 2020.

§ ____.5 Informational content of a full resolution plan.

(a) *In general*—(1) *Domestic covered companies.* A full resolution plan of a covered company that is organized or incorporated in the United States shall include the information specified in paragraphs (b) through (h) of this section with respect to the subsidiaries and operations that are domiciled in the United States as well as the foreign subsidiaries, offices, and operations of the covered company.

(2) *Foreign-based covered companies.* A full resolution plan of a covered company that is organized or incorporated in a jurisdiction other than the United States (other than a bank holding company) or that is a foreign banking organization shall include:

(i) The information specified in paragraphs (b) through (h) of this section with respect to the subsidiaries, branches and agencies, and identified critical operations and core business lines, as applicable, that are domiciled in the United States or conducted in whole or material part in the United States. With respect to the information specified in paragraph (g) of this section, the resolution plan of a foreign-based covered company shall also identify, describe in detail, and map to legal entity the interconnections and interdependencies among the U.S. subsidiaries, branches, and agencies, and between those entities and:

(A) The identified critical operations and core business lines of the foreign-based covered company; and

(B) Any foreign-based affiliate; and

(ii) A detailed explanation of how resolution planning for the subsidiaries, branches and agencies, and identified critical operations and core business lines of the foreign-based covered company that are domiciled in the United States or conducted in whole or material part in the United States is integrated into the foreign-based covered company's overall resolution or other contingency planning process.

(b) *Executive summary.* Each full resolution plan of a covered company shall include an executive summary describing:

(1) The key elements of the covered company's strategic plan for rapid and orderly resolution in the event of material financial distress at or failure of the covered company;

(2) A description of each material change experienced by the covered company since the filing of the covered company's previously submitted resolution plan (or affirmation that no such material change has occurred);

(3) Changes to the covered company's previously submitted resolution plan resulting from any:

(i) Change in law or regulation;

(ii) Guidance or feedback from the Board and the Corporation; or

(iii) Material change described pursuant to paragraph (b)(2) of this section; and

(4) Any actions taken by the covered company since filing of the previous resolution plan to improve the effectiveness of the covered company's resolution plan or remediate or otherwise mitigate any material weaknesses or impediments to effective and timely execution of the resolution plan.

(c) *Strategic analysis.* Each full resolution plan shall include a strategic analysis describing the covered company's plan for rapid and orderly resolution in the event of material financial distress or failure of the covered company. Such analysis shall:

(1) Include detailed descriptions of the:

(i) Key assumptions and supporting analysis underlying the covered company's resolution plan, including any assumptions made concerning the economic or financial conditions that would be present at the time the covered company sought to implement such plan;

(ii) Range of specific actions to be taken by the covered company to facilitate a rapid and orderly resolution of the covered company, its material entities, and its identified critical operations and core business lines in the event of material financial distress or failure of the covered company;

(iii) Funding, liquidity and capital needs of, and resources available to, the covered company and its material entities, which shall be mapped to its identified critical operations and core business lines, in the ordinary course of business and in the event of material financial distress at or failure of the covered company;

(iv) Covered company's strategy for maintaining operations of, and funding for, the covered company and its material entities, which shall be mapped to its identified critical operations and core business lines;

(v) Covered company's strategy in the event of a failure or discontinuation of a material entity, core business line or identified critical operation, and the actions that will be taken by the covered company to prevent or mitigate any adverse effects of such failure or discontinuation on the financial stability of the United States; provided, however, if any such material entity is subject to an insolvency regime other than the Bankruptcy Code, a covered company may exclude that entity from its strategic analysis unless that entity either has $50 billion or more in total assets or conducts an identified critical operation; and

(vi) Covered company's strategy for ensuring that any insured depository institution subsidiary of the covered company will be adequately protected from risks arising from the activities of any nonbank subsidiaries of the covered company (other than those that are subsidiaries of an insured depository institution);

(2) Identify the time period(s) the covered company expects would be needed for the covered company to successfully execute each material aspect and step of the covered company's plan;

(3) Identify and describe any potential material weaknesses or impediments to effective and timely execution of the covered company's plan;

(4) Discuss the actions and steps the covered company has taken or proposes to take to remediate or otherwise mitigate the weaknesses or impediments identified by the covered company, including a timeline for the remedial or other mitigatory action; and

(5) Provide a detailed description of the processes the covered company employs for:

(i) Determining the current market values and marketability of the core business lines, identified critical operations, and material asset holdings of the covered company;

(ii) Assessing the feasibility of the covered company's plans (including timeframes) for executing any sales, divestitures, restructurings, recapitalizations, or other similar actions contemplated in the covered company's resolution plan; and

(iii) Assessing the impact of any sales, divestitures, restructurings, recapitalizations, or other similar actions on the value, funding, and operations of the covered company, its material entities, identified critical operations and core business lines.

(d) *Corporate governance relating to resolution planning.* Each full resolution plan shall:

(1) Include a detailed description of:

(i) How resolution planning is integrated into the corporate governance structure and processes of the covered company;

(ii) The covered company's policies, procedures, and internal controls governing preparation and approval of the covered company's resolution plan;

(iii) The identity and position of the senior management official(s) of the covered company that is primarily responsible for overseeing the development, maintenance, implementation, and filing of the covered company's resolution plan and for the covered company's compliance with this part; and

(iv) The nature, extent, and frequency of reporting to senior executive officers and the board of directors of the covered company regarding the development, maintenance, and implementation of the covered company's resolution plan;

(2) Describe the nature, extent, and results of any contingency planning or similar exercise conducted by the covered company since the date of the covered company's most recently filed resolution plan to assess the viability of or improve the resolution plan of the covered company; and

(3) Identify and describe the relevant risk measures used by the covered company to report credit risk exposures both internally to its senior management and board of directors, as well as any relevant risk measures reported externally to investors or to the covered company's appropriate Federal regulator.

(e) *Organizational structure and related information.* Each full resolution plan shall:

(1) Provide a detailed description of the covered company's organizational structure, including:

(i) A hierarchical list of all material entities within the covered company's organization (including legal entities that directly or indirectly hold such material entities) that:

(A) Identifies the direct holder and the percentage of voting and nonvoting equity of each legal entity and foreign office listed; and

(B) The location, jurisdiction of incorporation, licensing, and key management associated with each material legal entity and foreign office identified;

(ii) A mapping of the covered company's identified critical operations and core business lines, including material asset holdings and liabilities related to such identified critical operations and core business lines, to material entities;

(2) Provide an unconsolidated balance sheet for the covered company and a consolidating schedule for all material entities that are subject to consolidation by the covered company;

(3) Include a description of the material components of the liabilities of the covered company, its material entities, identified critical operations and core business lines that, at a minimum, separately identifies types and amounts of the short-term and long-term liabilities, the secured and unsecured liabilities, and subordinated liabilities;

(4) Identify and describe the processes used by the covered company to:

(i) Determine to whom the covered company has pledged collateral;

(ii) Identify the person or entity that holds such collateral; and

(iii) Identify the jurisdiction in which the collateral is located, and, if different, the jurisdiction in which the security interest in the collateral is enforceable against the covered company;

(5) Describe any material off-balance sheet exposures (including guarantees and contractual obligations) of the covered company and its material entities, including a mapping to its identified critical operations and core business lines;

(6) Describe the practices of the covered company, its material entities and its core business lines related to the booking of trading and derivatives activities;

(7) Identify material hedges of the covered company, its material entities, and its core business lines related to trading and derivative activities, including a mapping to legal entity;

(8) Describe the hedging strategies of the covered company;

(9) Describe the process undertaken by the covered company to establish exposure limits;

(10) Identify the major counterparties of the covered company and describe the interconnections, interdependencies and relationships with such major counterparties;

(11) Analyze whether the failure of each major counterparty would likely have an adverse impact on or result in the material financial distress or failure of the covered company; and

(12) Identify each trading, payment, clearing, or settlement system of which the covered company, directly or indirectly, is a member and on which the covered company conducts a material number or value amount of trades or transactions. Map membership in each such system to the covered company's material entities, identified critical operations and core business lines.

(f) *Management information systems.* (1) Each full resolution plan shall include:

(i) A detailed inventory and description of the key management information systems and applications, including systems and applications for risk management, accounting, and financial and regulatory reporting, used by the covered company and its material entities. The description of each system or application provided shall identify the legal owner or licensor, the use or function of the system or application, service level agreements related thereto, any software and system licenses, and any intellectual property associated therewith;

(ii) A mapping of the key management information systems and applications to the material entities, identified critical operations and core business lines of the covered company that use or rely on such systems and applications;

(iii) An identification of the scope, content, and frequency of the key internal reports that senior management of the covered company, its material entities, identified critical operations and core business lines use to monitor the financial health, risks, and operation of the covered company, its material entities, identified critical operations and core business lines;

(iv) A description of the process for the appropriate supervisory or regulatory agencies to access the management information systems and applications identified in paragraph (f) of this section; and

(v) A description and analysis of:

(A) The capabilities of the covered company's management information systems to collect, maintain, and report, in a timely manner to management of the covered company, and to the Board, the information and data underlying the resolution plan; and

(B) Any gaps or weaknesses in such capabilities, and a description of the actions the covered company intends to take to promptly address such gaps, or weaknesses, and the time frame for implementing such actions.

(2) The Board will use its examination authority to review the demonstrated capabilities of each covered company to satisfy the requirements of paragraph (f)(1)(v) of this section. The Board will share with the Corporation information regarding the capabilities of the covered company to collect, maintain, and report in a timely manner information and data underlying the resolution plan.

(g) *Interconnections and interdependencies.* To the extent not provided elsewhere in this part, each full resolution plan shall identify and map to the material entities the interconnections and interdependencies among the covered company and its material entities, and among the identified critical operations and core business lines of the covered company that, if disrupted, would materially affect the funding or operations of the covered company, its material entities, or its identified critical operations or core business lines. Such interconnections and interdependencies may include:

(1) Common or shared personnel, facilities, or systems (including information technology platforms, management information systems, risk management systems, and accounting and recordkeeping systems);

(2) Capital, funding, or liquidity arrangements;

(3) Existing or contingent credit exposures;

(4) Cross-guarantee arrangements, cross-collateral arrangements, cross-default provisions, and cross-affiliate netting agreements;

(5) Risk transfers; and

(6) Service level agreements.

(h) *Supervisory and regulatory information.* Each full resolution plan shall:

(1) Identify any:

(i) Federal, state, or foreign agency or authority (other than a Federal banking agency) with supervisory authority or responsibility for ensuring the safety and soundness of the covered company, its material entities, identified critical operations and core business lines; and

(ii) Other Federal, state, or foreign agency or authority (other than a Federal banking agency) with significant supervisory or regulatory authority over the covered company, and its material entities and identified critical operations and core business lines.

(2) Identify any foreign agency or authority responsible for resolving a foreign-based material entity and identified critical operations or core business lines of the covered company; and

(3) Include contact information for each agency identified in paragraphs (h)(1) and (2) of this section.

§ ____.6 Informational content of a targeted resolution plan.

(a) *In general.* A targeted resolution plan is a subset of a full resolution plan and shall include core elements of a full resolution plan and information concerning key areas of focus as set forth in this section.

(b) *Targeted resolution plan content.* Each targeted resolution plan of a covered company shall include:

(1) The core elements;

(2) Such targeted information as the Board and Corporation may jointly identify pursuant to paragraph (c) of this section;

(3) A description of each material change experienced by the covered company since the filing of the covered company's previously submitted resolution plan (or affirmation that no such material change has occurred); and

(4) A description of changes to the covered company's previously submitted resolution plan resulting from any;

(i) Change in law or regulation;

(ii) Guidance or feedback from the Board and the Corporation; or

(iii) Material change described pursuant to paragraph (b)(3) of this section.

(c) *Targeted information requests.* No less than 12 months before the date by which a covered company is required to submit a targeted resolution plan, the Board and Corporation may jointly identify in writing resolution-related key areas of focus, questions, and issues that must also be addressed in the covered company's targeted resolution plan.

(d) *Deemed incorporation by reference.* If a covered company does not include in its targeted resolution plan a description of changes to any information set forth in section 165(d)(1)(A), (B), or (C) of the Dodd-Frank Act (12 U.S.C. 5365(d)(1)(A), (B), or (C)) since its previously submitted resolution plan, such information from its previously submitted resolution plan are incorporated by reference into its targeted resolution plan.

§ ____.7 Informational content of a reduced resolution plan.

(a) *Reduced resolution plan content.* Each reduced resolution plan of a covered company shall include:

(1) A description of each material change experienced by the covered company since the filing of the covered company's previously submitted resolution plan (or affirmation that no such material change has occurred); and

(2) A description of changes to the strategic analysis that was presented in the covered company's previously submitted resolution plan resulting from any:

(i) Change in law or regulation;

(ii) Guidance or feedback from the Board and the Corporation; or

(iii) Material change described pursuant to paragraph (a)(1) of this section.

(b) *Deemed incorporation by reference.* If a covered company does not include in its reduced resolution plan a description of changes to any information set forth in section 165(d)(1)(A), (B), or (C) of the Dodd-Frank Act (12 U.S.C. 5365(d)(1)(A), (B), or (C)) since its previously submitted resolution plan, such information from its previously submitted resolution plan are incorporated by reference into its reduced resolution plan.

§ ____.8 Review of resolution plans; resubmission of deficient resolution plans.

(a) *Review of resolution plans.* The Board and Corporation will seek to coordinate their activities concerning the review of resolution plans, including planning for, reviewing, and assessing the resolution plans, as well as such activities that occur during the periods between resolution plan submissions.

(b) *Joint determination regarding deficient resolution plans.* If the Board and Corporation jointly determine that the resolution plan of a covered company submitted under § ____.4 is not credible or would not facilitate an orderly resolution of the covered company under the Bankruptcy Code, the Board and Corporation shall jointly notify the covered company in writing of such determination. Any joint notice provided under this paragraph (b) shall be provided pursuant to paragraph (f) of this section and shall identify the deficiencies identified by the Board and Corporation in the resolution plan. A deficiency is an aspect of a covered company's resolution plan that the

Board and Corporation jointly determine presents a weakness that individually or in conjunction with other aspects could undermine the feasibility of the covered company's resolution plan.

(c) *Resubmission of a resolution plan.* Within 90 days of receiving a notice of deficiencies issued pursuant to paragraph (b) of this section, or such shorter or longer period as the Board and Corporation may jointly determine, a covered company shall submit a revised resolution plan to the Board and Corporation that addresses the deficiencies jointly identified by the Board and Corporation, and that discusses in detail:

(1) The revisions made by the covered company to address the deficiencies jointly identified by the Board and the Corporation;

(2) Any changes to the covered company's business operations and corporate structure that the covered company proposes to undertake to facilitate implementation of the revised resolution plan (including a timeline for the execution of such planned changes); and

(3) Why the covered company believes that the revised resolution plan is credible and would result in an orderly resolution of the covered company under the Bankruptcy Code.

(d) *Extensions of time.* Upon their own initiative or a written request by a covered company, the Board and Corporation may jointly extend any time period under this section. Each extension request shall be supported by a written statement of the covered company describing the basis and justification for the request.

(e) *Joint determination regarding shortcomings in resolution plans.* The Board and Corporation may also jointly identify one or more shortcomings in a covered company's resolution plan. A shortcoming is a weakness or gap that raises questions about the feasibility of a covered company's resolution plan, but does not rise to the level of a deficiency for both the Board and Corporation. If a shortcoming is not satisfactorily explained or addressed before or in the submission of the covered company's next resolution plan, it may be found to be a deficiency in the covered company's next resolution plan. The Board and the Corporation may identify an aspect of a covered company's resolution plan as a deficiency even if such aspect was not identified as a shortcoming in an earlier resolution plan submission.

(f) *Feedback.* Following their review of a resolution plan, the Board and the Corporation will jointly send a notification to each covered company that identifies any deficiencies or shortcomings in the covered company's resolution plan (or confirms that no deficiencies or shortcomings were identified) and provides any feedback on the resolution plan. The Board and the Corporation will jointly send the notification no later than 12 months after the later of the date on which the covered company submitted the resolution plan and the date by which the covered company was required to submit the resolution plan, unless the Board and the Corporation jointly determine in their discretion that extenuating circumstances exist that require delay.

§ ____.9 Failure to cure deficiencies on resubmission of a resolution plan.

(a) *In general.* The Board and Corporation may jointly determine that a covered company or any subsidiary of a covered company shall be subject to more stringent capital, leverage, or liquidity requirements, or restrictions on the growth, activities, or operations of the covered company or the subsidiary if:

(1) The covered company fails to submit a revised resolution plan under § ____.8(c) within the required time period; or

(2) The Board and the Corporation jointly determine that a revised resolution plan submitted under § ____.8(c) does not adequately remedy the deficiencies jointly identified by the Board and the Corporation under § ____.8(b).

(b) *Duration of requirements or restrictions.* Any requirements or restrictions imposed on a covered company or a subsidiary thereof pursuant to paragraph (a) of this section shall cease to apply to the covered company or subsidiary, respectively, on the date that the Board and the Corporation jointly determine the covered company has submitted a revised resolution plan that adequately remedies the deficiencies jointly identified by the Board and the Corporation under § ____.8(b).

(c) *Divestiture.* The Board and Corporation, in consultation with the Council, may jointly, by order, direct the covered company to divest such assets or operations as are jointly identified by the Board and Corporation if:

(1) The Board and Corporation have jointly determined that the covered company or a subsidiary thereof shall be subject to requirements or restrictions pursuant to paragraph (a) of this section; and

(2) The covered company has failed, within the 2-year period beginning on the date on which the determination to impose such requirements or restrictions under paragraph (a) of this section was made, to submit a revised resolution plan that adequately remedies the deficiencies jointly identified by the Board and the Corporation under § ____.8(b); and

(3) The Board and Corporation jointly determine that the divestiture of such assets or operations is necessary to facilitate an orderly resolution of the covered company under the Bankruptcy Code in the event the company was to fail.

§ ____.10 Consultation.

Before issuing any notice of deficiencies under § ____.8(b), determining to impose requirements or restrictions under § ____.9(a), or issuing a divestiture order pursuant to § ____.9(c) with respect to a covered company that is likely to have a significant impact on a functionally regulated subsidiary or a depository institution subsidiary of the covered company, the Board—

(a) Shall consult with each Council member that primarily supervises any such subsidiary; and

(b) May consult with any other Federal, state, or foreign supervisor as the Board considers appropriate.

§ ____.11 No limiting effect or private right of action; confidentiality of resolution plans.

(a) *No limiting effect on bankruptcy or other resolution proceedings.* A resolution plan submitted pursuant to this part shall not have any binding effect on:

(1) A court or trustee in a proceeding commenced under the Bankruptcy Code;

(2) A receiver appointed under title II of the Dodd-Frank Act (12 U.S.C. 5381 *et seq.*);

(3) A bridge financial company chartered pursuant to 12 U.S.C. 5390(h); or

(4) Any other authority that is authorized or required to resolve a covered company (including any subsidiary or affiliate thereof) under any other provision of Federal, state, or foreign law.

(b) *No private right of action.* Nothing in this part creates or is intended to create a private right of action based on a resolution plan prepared or submitted under this part or based on any action taken by the Board or the Corporation with respect to any resolution plan submitted under this part.

(c) *Form of resolution plans*—(1) *Generally.* Each full, targeted, and reduced resolution plan of a covered company shall be divided into a public section and a confidential section. Each covered company shall segregate and separately identify the public section from the confidential section.

(2) *Public section of full and targeted resolution plans.* The public section of a full or targeted resolution plan shall consist of an executive summary of the resolution plan that describes the business of the covered company and includes, to the extent material to an understanding of the covered company:

(i) The names of material entities;

(ii) A description of core business lines;

(iii) Consolidated or segment financial information regarding assets, liabilities, capital and major funding sources;

(iv) A description of derivative activities and hedging activities;

(v) A list of memberships in material payment, clearing and settlement systems;

(vi) A description of foreign operations;

(vii) The identities of material supervisory authorities;

(viii) The identities of the principal officers;

(ix) A description of the corporate governance structure and processes related to resolution planning;

(x) A description of material management information systems; and

(xi) A description, at a high level, of the covered company's resolution strategy, covering such items as the range of potential purchasers of the covered company, its material entities, and its core business lines.

(3) *Public section of reduced resolution plans.* The public section of a reduced resolution plan shall consist of an executive summary of the resolution plan that describes the business of the covered company and includes, to the extent material to an understanding of the covered company:

(i) The names of material entities;

(ii) A description of core business lines;

(iii) The identities of the principal officers; and

(iv) A description, at a high level, of the covered company's resolution strategy, referencing the applicable resolution regimes for its material entities.

(d) *Confidential treatment of resolution plans.* (1) The confidentiality of resolution plans and related materials shall be determined in accordance with applicable exemptions under the Freedom of Information Act (5 U.S.C. 552(b)), 12 CFR part 261 (the Board's Rules Regarding Availability of Information), and 12 CFR part 309 (the Corporation's Disclosure of Information rules).

(2) Any covered company submitting a resolution plan or related materials pursuant to this part that desires confidential treatment of the information under 5 U.S.C. 552(b)(4), 12 CFR part 261 (the Board's Rules Regarding Availability of Information), and 12 CFR part 309 (the Corporation's Disclosure of Information rules) may file a request for confidential treatment in accordance with those rules.

(3) To the extent permitted by law, information comprising the Confidential Section of a resolution plan will be treated as confidential.

(4) To the extent permitted by law, the submission of any nonpublic data or information under this part shall not constitute a waiver of, or otherwise affect, any privilege arising under Federal or state law (including the rules of any Federal or state court) to which the data or information is otherwise subject. Privileges that apply to resolution plans and related materials are protected pursuant to section 18(x) of the Federal Deposit Insurance Act (12 U.S.C. 1828(x)).

§ ____.12 Enforcement.

The Board and Corporation may jointly enforce an order jointly issued by the Board and Corporation under § ____.9(a) or (c). The Board, in consultation with the Corporation, may take any action to address any violation of this part by a covered company under section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818).

[END OF COMMON TEXT]

List of Subjects

12 CFR Part 243

Administrative practice and procedure, Banks, Banking, Holding companies, Reporting and recordkeeping requirements, Securities.

12 CFR Part 381

Administrative practice and procedure, Banks, Banking, Holding companies, Reporting and recordkeeping requirements, Resolution plans.

Adoption of the Common Rule Text

The adoption of the common rules by the agencies, as modified by agency-specific text, is set forth below:

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

12 CFR Chapter II

Authority and Issuance

For the reasons set forth in the preamble, the Board of Governors of the Federal Reserve System revises part 243 to 12 CFR chapter II as set forth in the text of the common rule at the end of the preamble and further amends 12 CFR part 243 as follows:

PART 243—RESOLUTION PLANS (REGULATION QQ)

■ 1. The authority citation for part 243 continues to read as follows:

Authority: 12 U.S.C. 5365.

■ 2. The heading of part 243 is revised to read as set forth above.

■ 3. In § 243.1, amend paragraph (a) by adding a sentence at the end to read as follows:

§ 243.1 Authority and scope.

(a) * * * The Board is also issuing this part pursuant to section 165(a)(2)(C) of the Dodd-Frank Act.

* * * * *

■ 4. Add § 243.13 to read as follows:

§ 243.13 Additional covered companies.

An additional covered company is any bank holding company or any foreign bank or company that is a bank holding company or is treated as a bank holding company under section 8(a) of the International Banking Act of 1978 (12 U.S.C. 3106(a)) that is:

(a) Identified as a category II banking organization pursuant to § 252.5 of this title;

(b) Identified as a category III banking organization pursuant to § 252.5 of this title; or

(c) Made subject to this part by order of the Board.

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Chapter III

Authority and Issuance

For the reasons set forth in the preamble, the Federal Deposit Insurance Corporation revises part 381 to 12 CFR chapter III as set forth in the text of the common rule at the end of the preamble and further amends 12 part 381 as follows:

PART 381—RESOLUTION PLANS

■ 5. The authority citation for part 381 continues to read as follows:

Authority: 12 U.S.C.5365(d).

§ 381.2 [Amended]

■ 6. In § 381.2, in paragraph (1)(v) of the definition of ''covered company'', add the words ''of this title'' after the phrase ''pursuant to § 243.13''.

By order of the Board of Governors of the Federal Reserve System, October 23, 2019.

Margaret McCloskey Shanks,

Deputy Secretary of the Board.

Federal Deposit Insurance Corporation.

By order of the Board of Directors.

Dated at Washington, DC, on October 15, 2019.

Annmarie H. Boyd,

Assistant Executive Secretary.

Changes to Applicability Thresholds for Regulatory Capital and Liquidity Requirements

AGENCY: Office of the Comptroller of the Currency, Treasury; the Board of Governors of the Federal Reserve System; and the Federal Deposit Insurance Corporation.

ACTION: Final rule.

SUMMARY: The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC) (together, the agencies) are adopting a final rule to revise the criteria for determining the applicability of regulatory capital and liquidity requirements for large U.S. banking organizations and the U.S. intermediate holding companies of certain foreign banking organizations. The final rule establishes four risk-based categories for determining the applicability of requirements under the agencies' regulatory capital rule and liquidity coverage ratio (LCR) rule. Under the final rule, such requirements increase in stringency based on measures of size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. The final rule applies tailored regulatory capital and liquidity requirements to depository institution holding companies and U.S. intermediate holding companies with $100 billion or more in total consolidated assets as well as to certain depository institutions. Separately, the Board is adopting a final rule that revises the criteria for determining the applicability of enhanced prudential standards for large domestic and foreign banking organizations using a risk-based category framework that is consistent with the framework described in this final rule, and makes additional modifications to the Board's company-run stress test and supervisory stress test rules. In addition, the Board and the FDIC are separately adopting a final rule that amends the resolution planning requirements under section 165(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act using a risk-based category framework that is consistent with the framework described in this final rule.

DATES: The final rule is effective December 31, 2019.

I. Introduction

The Office of the Comptroller of the Currency (OCC), Board of Governors of the Federal Reserve System (Board), and Federal Deposit Insurance Corporation (FDIC) (together, the agencies) are finalizing the framework set forth under the agencies' recent proposals to change the applicability thresholds under the regulatory capital and liquidity requirements for U.S. banking organizations (domestic proposal) and the U.S. operations of foreign banking organizations (foreign bank proposal, and together, the proposals), with certain adjustments in response to comments.[1] The final rule establishes four risk-based categories for determining the regulatory capital and liquidity requirements applicable to large U.S. banking organizations and the U.S. intermediate holding companies of foreign banking organizations, which apply generally based on indicators of size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure.[2] The final rule measures these indicators based on the risk profile of the top-tier banking organization.[3] For the largest and most systemic and interconnected U.S. bank holding companies, the final rule retains the identification methodology in the Board's global systemically important bank holding company (GSIB) surcharge rule.[4] Under the final rule, the capital and liquidity requirements that apply to U.S. intermediate holding companies and their depository institution subsidiaries generally align with those applicable to similarly situated U.S. banking organizations.

II. Background: Regulatory Capital and Liquidity Framework

In 2013, the agencies adopted a revised capital rule that, among other things, addressed weaknesses in the regulatory framework that became apparent during the financial crisis.[5] The revised capital rule strengthened the regulatory capital requirements applicable to banking organizations supervised by the agencies, including U.S. intermediate holding companies and depository institution subsidiaries of foreign banking organizations, by improving both the quality and quantity of regulatory capital and enhancing the risk sensitivity of capital requirements.[6] In 2014, the agencies adopted the liquidity coverage ratio (LCR) rule to improve the banking sector's resiliency to liquidity stress by requiring large U.S. banking organizations to be more actively engaged in monitoring and managing liquidity risk.[7] The LCR rule generally applies to large depository institution holding companies, certain of their depository institution subsidiaries, and large depository institutions that do not have a parent holding company.[8] Banking organizations subject to the LCR rule must maintain an amount of high-quality liquid assets (HQLA) equal to or greater than their projected total net cash outflows over a prospective 30-calendar-day period.[9] In addition, in June 2016, the agencies invited comment on a proposal to implement a net stable funding ratio (NSFR) requirement that would apply to the same U.S. banking organizations, including U.S. intermediate holding companies, as are subject to the LCR rule.[10] The NSFR proposed rule would establish a quantitative metric to measure and help ensure the stability of a banking organization's funding profile over a one-year time horizon. During the same period, the Board implemented enhanced prudential standards for large bank holding companies and foreign banking organizations.[11]

These and other post-crisis financial regulations have resulted in substantial gains in the resiliency of individual banking organizations and the financial system as a whole. U.S. banking organizations, including the U.S. operations of foreign banking organizations, hold higher levels of high-quality capital and liquidity than before the financial crisis. Robust regulatory capital, stress testing, and liquidity regulations for large banking organizations operating in the United States have helped to ensure that they are better positioned to continue lending and perform other financial intermediation functions through periods of economic stress and market turbulence.

The agencies regularly review their regulatory framework, including capital and liquidity requirements, to ensure it is functioning as intended. These efforts include assessing the impact of regulations as well as exploring alternatives that achieve regulatory objectives and promote safe and sound practices while improving the simplicity, transparency, and efficiency of the regulatory regime. The final rule is the product of such a review. The final rule revises the applicability of requirements for U.S. banking organizations and U.S. intermediate holding companies in a way that enhances the risk sensitivity and efficiency of the agencies' capital and liquidity regulations, maintains the fundamental reforms of the post-crisis framework, and supports banking organizations' resilience. Thus, the final rule seeks to better align the regulatory requirements for large banking

[1] *See* ''Proposed Changes to Applicability Thresholds for Regulatory Capital and Liquidity Requirements,'' 83 FR 66024 (December 21, 2018); ''Changes to Applicability Thresholds for Regulatory Capital Requirements for Certain U.S. Subsidiaries of Foreign Banking Organizations and Application of Liquidity Requirements to Foreign Banking Organizations, Certain U.S. Depository Institution Holding Companies, and Certain Depository Institution Subsidiaries,'' 84 FR 24296 (May 24, 2019). The final rule combines these two proposals into a single final rule.

[2] The Board's rules require foreign banking organizations with $50 billion or more in U.S. non-branch assets to establish a U.S. intermediate holding company and to hold its ownership interest in all U.S. subsidiaries (other than companies whose assets are held pursuant to section 2(h)(2) of the Bank Holding Company Act, 12 U.S.C. 1841(h)(2) and DPC branch subsidiaries) through its U.S. intermediate holding company. *See* 12 CFR 252.153.

[3] A ''top tier banking organization'' means the top-tier bank holding company, U.S. intermediate holding company, savings and loan holding company, or depository institution domiciled in the United States. As of the date of this final rule, no depository institution that is not also a subsidiary of a bank holding company, U.S. intermediate holding company, or savings and loan holding company meets any risk-based indicator threshold. Accordingly, references to ''top tier banking organization'' in this Supplementary Information as a practical matter refer to holding companies, including U.S. intermediate holding companies.

[4] *See* ''Regulatory Capital Rules: Implementation of Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies,'' 80 FR 49082 (Aug. 14, 2015).

[5] The Board and OCC issued a joint final rule on October 11, 2013 (78 FR 62018), and the FDIC issued a substantially identical interim final rule on September 10, 2013 (78 FR 55340). The FDIC adopted the interim final rule as a final rule with no substantive changes on April 14, 2014 (79 FR 20754).

[6] Banking organizations subject to the agencies' capital rule include national banks, state member banks, insured state nonmember banks, savings associations, and top-tier bank holding companies and savings and loan holding companies domiciled in the United States not subject to the Board's Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (12 CFR part 225, appendix C, and 12 CFR 238.9), excluding certain savings and loan holding companies that are substantially engaged in insurance underwriting or commercial activities or that are estate trusts, and bank holding companies and savings and loan holding companies that are employee stock ownership plans.

[7] *See* 79 FR 61440 (October 10, 2014), codified at 12 CFR part 50 (OCC), 12 CFR part 249 (Board), and 12 CFR part 329 (FDIC).

[8] The LCR rule applies to depository institutions with $10 billion or more in total consolidated assets that are subsidiaries of a holding company subject to the full requirements of the agencies' LCR rule.

[9] For certain depository institution holding companies with $50 billion or more, but less than $250 billion, in total consolidated assets and less than $10 billion in on-balance sheet foreign exposure, the Board separately adopted a modified LCR requirement. *See* 12 CFR part 249, subpart G.

[10] *See* ''Net Stable Funding Ratio: Liquidity Risk Measurement Standards and Disclosure Requirements,'' 81 FR 35124 (Proposed June 1, 2016). For certain depository institution holding companies with $50 billion or more, but less than $250 billion, in total consolidated assets and less than $10 billion in total on-balance sheet foreign exposure, the Board separately proposed a modified NSFR requirement.

[11] *See* ''Enhanced Prudential Standards for Bank Holding Companies and Foreign Banking Organizations,'' 79 FR 17240 (March 27, 2014) (the enhanced prudential standards rule), codified at 12 CFR part 252.

organizations with their risk profiles, taking into account the size and complexity of these banking organizations as well as their potential systemic risks. The final rule is consistent with considerations and factors set forth under section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act),[12] as amended by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA).[13]

The final rule also builds upon the agencies' practice of differentiating requirements among banking organizations based on one or more risk-based indicators. Specifically, prior to this final rule, the agencies applied more stringent capital and liquidity requirements to banking organizations with $250 billion or more in total consolidated assets or $10 billion or more in total on-balance sheet foreign exposure (advanced approaches banking organizations) relative to banking organizations that did not meet these thresholds.[14] The Board also established a methodology under its GSIB surcharge rule to identify the largest, most interconnected and systemically risky banking organizations and to apply additional requirements to those organizations.[15] By refining the application of capital and liquidity requirements based on the risk profile of a banking organization, the final rule further improves upon the risk sensitivity and efficiency of the agencies' rules.

III. Overview of the Notices of Proposed Rulemaking and General Summary of Comments

In 2018 and 2019, the agencies sought comment on two separate proposals to revise the requirements for determining the applicability of regulatory capital and liquidity requirements for large banking organizations. On December 21, 2018, the agencies published a proposal to revise the criteria for determining the applicability of requirements under the capital rule, LCR rule, and the proposed NSFR rule for U.S. banking organizations with $100 billion or more in total consolidated assets, based on four risk-based categories (domestic proposal).[16] Using the risk profile of the top-tier banking organization, Category I would have been based on the methodology in the Board's GSIB surcharge rule for identification of U.S. GSIBs, whereas Categories II through IV would have been based on size and levels of cross-jurisdictional activity, nonbank assets, off-balance sheet exposure, and weighted short-term wholesale funding (together with size, the risk-based indicators). Capital and liquidity requirements for depository institution subsidiaries, if applicable, would have been based on the risk profile of the top-tier banking organization.

Subsequently, on May 24, 2019, the agencies published a proposal to revise the criteria for determining the applicability of capital and liquidity requirements with respect to the U.S. operations of foreign banking organizations (foreign bank proposal).[17] This proposal also included certain changes to the domestic proposal, as described below.[18] The foreign bank proposal was largely consistent with the domestic proposal, with certain adjustments to reflect the unique structures through which foreign banking organizations operate in the United States. The foreign bank proposal would have applied three categories of standards (Category II, III, or IV) to foreign banking organizations with large U.S. operations, as Category I under the domestic proposal was proposed to apply only to U.S. GSIBs. For capital, the foreign bank proposal would have determined the application of requirements for U.S. intermediate holding companies with total consolidated assets of $100 billion or more and their depository institution subsidiaries. For liquidity, the foreign bank proposal would have applied an LCR requirement to, and amended the scope of the proposed NSFR rule to include, certain foreign banking organizations with combined U.S. assets of $100 billion or more.[19] Foreign banking organizations would have been subject to an LCR requirement with respect to any U.S. intermediate holding company and certain of their large depository institution subsidiaries. Additionally, in the foreign bank proposal the Board requested comment on whether and how it should approach the potential application of standardized liquidity requirements for foreign banking organizations with respect to their U.S. branch and agency networks.

The agencies received approximately 50 public comments on the proposals, from U.S. and foreign banking organizations, public entities (including a foreign central bank and a U.S. state regulator), public interest groups, private individuals, and other interested parties. Agency staff also met with some commenters at those commenters' requests to discuss their comments on

[12] Public Law 111–203, 124 Stat. 1376 (2010), sec. 165, codified at 12 U.S.C. 5365.

[13] Public Law 115–174, 132 Stat. 1296 (2018).

[14] *See* 12 CFR 217.1(c), 12 CFR 217.100(b), 249.1 (Board); 12 CFR 3.1(c), 12 CFR 3.100(b), 50.1 (OCC); 12 CFR 324.1(c), 12 CFR 324.100(b), 329.1 (FDIC). The agencies designed these thresholds to identify large, interconnected and internationally active banking organizations and to act as broad indicators for banking organizations with more complex risk profiles. With respect to capital, the agencies required banking organizations meeting these thresholds to calculate risk-weighted assets for credit risk and operational risk using advanced methodologies and be subject to risk-based capital requirements that are not less than the generally applicable risk-based capital requirement; calculate a supplementary leverage ratio; and include most elements of accumulated other comprehensive income in regulatory capital. Advanced approaches banking organizations must also increase their capital conservation buffers by the amount of a countercyclical capital buffer under certain circumstances. Similarly, the agencies applied the LCR requirement to banking organizations based on the same measures of total asset size and total on-balance sheet foreign exposure. The Board's regulations also applied a less stringent, modified LCR requirement to certain depository institution holding companies that do not meet the advanced approaches thresholds but have total consolidated assets of $50 billion or more. U.S. GSIBs form a sub-category of advanced approaches banking organizations.

[15] *See* 12 CFR part 217, subpart H. The additional requirements for U.S. GSIBs include a risk-based capital surcharge at the top-tier bank holding company level, calibrated to reflect GSIBs' respective systemic footprints, total long term debt and loss-absorbing capacity requirements (TLAC) applicable at the top-tier bank holding company level, and enhanced supplementary leverage ratio standards at both the top-tier bank holding company level and depository institution subsidiary level. Certain internal TLAC requirements also apply to the U.S. intermediate holding companies of foreign GSIBs. The FDIC and OCC apply an enhanced supplementary leverage ratio standard to depository institution subsidiaries of U.S. top-tier bank holding companies with more than $700 billion in total consolidated assets or more than $10 trillion in total assets under custody, whereas the Board's regulation applies these requirements to depository institution subsidiaries of U.S. GSIBs. There is currently no difference between the U.S. holding companies identified by these regulations, and the OCC has proposed to amend its regulation to reference the Board's U.S. GSIB definition. *See* ''Regulatory Capital Rules: Regulatory Capital, Enhanced Supplementary Leverage Ratio Standards for U.S. Global Systemically Important Bank Holding Companies and Certain of Their Subsidiary Insured Depository Institutions; Total Loss-Absorbing Capacity Requirements for U.S. Global Systemically Important Bank Holding Companies,'' 83 FR 17317 (proposed April 19, 2018).

[16] 83 FR 66024 (Dec. 21, 2018).

[17] 84 FR 24296 (May 24, 2019).

[18] Specifically, under the foreign bank proposal, the Board proposed applying standardized liquidity requirements to a U.S. depository institution holding company that would have been subject to Category IV standards if the depository institution holding company significantly relies on short-term wholesale funding.

[19] Combined U.S. assets means the sum of the consolidated assets of each top-tier U.S. subsidiary of the foreign banking organization (excluding any company whose assets are held pursuant to section 2(h)(2) of the Bank Holding Company Act, 12 U.S.C. 1841(h)(2), if applicable) and the total assets of each U.S. branch and U.S. agency of the foreign banking organization, as reported by the foreign banking organization on the Capital and Asset Report for Foreign Banking Organizations (FR Y–7Q).

the proposals.[20] Many commenters supported the proposals as meaningfully tailoring prudential standards, and some were particularly supportive of the proposed approach to further tailor regulatory capital and liquidity requirements. Many commenters, however, expressed the view that the proposed framework would not have sufficiently aligned the agencies' capital and liquidity requirements to the risk profile of a banking organization.[21] For example, some commenters argued that banking organizations with less than $250 billion in assets that do not meet a separate indicator of risk should not be subject to prudential standards under the proposals and that Category IV standards should be eliminated. Other commenters argued that the proposed Category II standards were too stringent given the risks indicated by a high level of cross-jurisdictional activity. By contrast, other commenters argued that the proposals would have revised the criteria for determining the applicability and stringency of standards in a way that would weaken the safety and soundness of large banking organizations and increase risks to U.S. financial stability, and asserted that the agencies had gone beyond the changes required by EGRRCPA. Other commenters believed that the proposals could be further revised to more closely align standards to the risk profile of banking organizations in that category. For example, one commenter argued for further differentiation in the standards between Categories I and II. A number of these commenters argued that all risk-based indicators should exclude transactions with affiliates. In addition, some commenters expressed the general view that the thresholds set forth in the proposals should be further justified.

In response specifically to the foreign bank proposal, industry commenters argued that the proposal would unfairly increase requirements applicable to foreign banking organizations. These commenters also expressed the general view that certain aspects of the foreign bank proposal were inconsistent with the principle of national treatment and equality of competitive opportunity, and argued that the proposals should defer more broadly to compliance with home country standards applicable to the parent foreign banking organization. In particular, commenters argued that the foreign bank proposal should not determine the applicability of the LCR and proposed NSFR requirements for a foreign banking organization with respect to its U.S. intermediate holding company based on the risk profile of the foreign banking organization's combined U.S. operations. These commenters asserted that the final rule should instead determine the application of standardized liquidity requirements for a foreign banking organization's U.S. intermediate holding company based on the risk-based indicator levels of the U.S. intermediate holding company. Commenters argued that the risk-based indicators, if applied to combined U.S. assets, would disproportionately result in the application of more stringent requirements to foreign banking organizations, and asserted the proposal could disrupt the efficient functioning of global financial markets and lead to increased fragmentation. These commenters also generally opposed the potential issuance of a separate proposal that would apply standardized liquidity requirements to the U.S. branch and agency network of a foreign banking organization, on the basis that such an approach could lead to ring-fencing and regulatory inconsistencies across jurisdictions.

By contrast, other commenters criticized the foreign bank proposal for reducing the stringency of standards beyond the changes required by EGRRCPA, and argued that the proposal understated the financial stability risks posed by foreign banking organizations. These commenters supported the application of standardized liquidity requirements for a foreign banking organization's U.S. intermediate holding company based on the risk profile of the foreign banking organization's combined U.S. operations, supported the application of standardized liquidity requirements to the U.S. branches and agencies of foreign banking organizations, and criticized the agencies for not proposing such requirements for U.S. branches and agencies.

As discussed in this **SUPPLEMENTARY INFORMATION**, the final rule largely adopts the proposals, with certain adjustments in response to the comments.

IV. Overview of Final Rule

The final rule establishes four categories to apply regulatory capital and liquidity requirements to large U.S. banking organizations and U.S. intermediate holding companies.[22] The criteria for each category are based on certain indicators of risk that are measured at the level of the top-tier banking organization. This approach represents an amendment from the foreign bank proposal, as under the final rule the liquidity requirements applicable to a U.S. intermediate holding company are based on its own risk characteristics rather than those of the combined U.S. operations of the foreign banking organization, as discussed further below.

Under the final rule, and unchanged from the domestic proposal, the most stringent capital and liquidity requirements apply to U.S. GSIBs and their depository institution subsidiaries under Category I, as these banking organizations have the potential to pose the greatest risks to U.S. financial stability. The Category I standards generally reflect agreements reached by the Basel Committee on Banking Supervision (BCBS)[23] and include additional requirements adopted by the Board to increase the resiliency of these banking organizations and to mitigate the potential risk their material financial distress or failure could pose to U.S. financial stability. Category I standards generally remain unchanged from existing requirements.

The second set of standards, under Category II, apply to U.S. banking organizations and U.S. intermediate holding companies with total consolidated assets of $700 billion or more or cross-jurisdictional activity of $75 billion or more, and that do not qualify as U.S. GSIBs.[24] Like Category I standards, Category II standards generally reflect agreements reached by the BCBS, and requirements for banking

[20] Summaries of these meetings may be found on the agencies' public websites. *See https://www.regulations.gov/docket?D=OCC-2019-0009* (OCC); *https://www.federalreserve.gov/regreform/reform-systemic.htm* (Board); *https://www.fdic.gov/regulations/laws/federal/2018/2018-proposed-changes-to-applicability-thresholds-3064-ae96.html* (FDIC).

[21] The agencies received a number of comments that were not specifically responsive to the proposals. In particular, commenters recommended more targeted revisions or requests for clarification related to the U.S. GSIB capital surcharge rule, generally applicable capital rule, capital plan rule, stress capital buffer proposal, total loss absorbing capacity rule, current expected credit losses standard, Volcker rule, and capital simplifications final rule. These comments are not within the scope of this rulemaking, and therefore are not discussed in this **SUPPLEMENTARY INFORMATION**.

[22] Regulatory capital requirements also apply to depository institution subsidiaries of banking organizations subject to Category I, II, III, or IV standards, while liquidity requirements apply to depository institution subsidiaries of banking organizations subject to Category I, II, or III standards where those depository institution subsidiaries have $10 billion or more in total consolidated assets.

[23] International standards that reflect agreements reached by the BCBS may be implemented in the United States through notice and comment rulemaking.

[24] The Board's GSIB surcharge rule does not apply to U.S. intermediate holding companies, and therefore, a U.S. intermediate holding company does not qualify as a U.S. GSIB. *See* 12 CFR part 217, subpart H.

organizations in this category remain largely unchanged from requirements previously applicable to banking organizations with $250 billion or more in total consolidated assets or $10 billion or more in on-balance-sheet foreign exposure. Applying requirements that reflect agreements reached by the BCBS is appropriate for the risk profiles of banking organizations in this category. For example, foreign operations and cross-border positions add operational and funding complexity in normal times and complicate the ability of a banking organization to undergo an orderly resolution in times of stress, generating both safety and soundness and financial stability risks. The application of consistent prudential standards across jurisdictions to banking organizations with significant size or cross-jurisdictional activity also helps to promote international competitive equity and reduce opportunities for regulatory arbitrage.

The third set of standards, under Category III, apply to U.S. banking organizations and U.S. intermediate holding companies that do not meet the criteria for Category I or II, and have total consolidated assets of $250 billion or more or $75 billion or more in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposure. Category III standards reflect the heightened risk profiles of these banking organizations relative to smaller and less complex banking organizations, such as those subject to Category IV standards. As compared to existing requirements, under the final rule regulatory capital and liquidity requirements under Category III are more stringent for some banking organizations and less stringent for others. For example, under Category III, a banking organization with weighted short-term wholesale funding of $75 billion or more is subject to the full set of requirements under the LCR rule; however, a banking organization below that threshold is subject to a reduced LCR requirement, calibrated to 85 percent of the full LCR requirement.[25] With respect to capital, banking organizations subject to Category III standards are subject to the supplementary leverage ratio, among other requirements, but are not required to calculate risk-weighted assets under the advanced approaches. For some banking organizations subject to Category III standards, application of the supplementary leverage ratio is a new requirement. In addition, although some banking organizations subject to Category III standards were previously required to include elements of accumulated other comprehensive income (AOCI) in regulatory capital, these banking organizations can now elect to exclude most elements of AOCI from regulatory capital. Similarly, some banking organizations in Category III will now be subject to simpler regulatory capital requirements for mortgage servicing assets, certain deferred tax assets arising from temporary differences, and investments in the capital of unconsolidated financial institutions, relative to those that previously applied. These banking organizations also will now be subject to a simplified treatment for the amount of capital issued by a consolidated subsidiary and held by third parties (sometimes referred to as a minority interest) that is includable in regulatory capital.[26]

The fourth set of standards, under Category IV, apply to U.S. banking organizations and U.S. intermediate holding companies with total consolidated assets of $100 billion or more that do not meet the thresholds for one of the other three categories. Banking organizations in Category IV generally have greater scale and operational and managerial complexity relative to smaller banking organizations, but less than banking organizations subject to Category I, II, or III standards. Category IV regulatory capital requirements remain largely unchanged relative to prior requirements. With regard to liquidity requirements, the final rule applies a reduced LCR requirement to a banking organization subject to Category IV standards with weighted short-term wholesale funding of at least $50 billion, but less than $75 billion, calibrated at 70 percent of the full LCR requirement.[27] The reduced LCR requirement does not apply to a depository institution subsidiary of a banking organization subject to Category IV standards. Further, the LCR rule does not apply to banking organizations subject to Category IV standards with less than $50 billion in weighted short-term wholesale funding. Similar to banking organizations in Categories I, II, and III, banking organizations subject to Category IV standards must monitor and report information regarding the risk-based indicators, as described further below. In addition, under a separate final rule the Board is adopting to revise the criteria for determining the applicability of enhanced prudential standards for large domestic and foreign banking organizations using a risk-based category framework that is consistent with the framework described in this final rule (Board-only final rule), all banking organizations subject to Category I, II, III or IV standards are subject to enhanced prudential standards as well as liquidity data reporting under the Board's Complex Institution Liquidity Monitoring Report (FR 2052a).

[25] For banking organizations subject to Category III with less than $75 billion in weighted short-term wholesale funding, the reduced LCR requirement under this final rule is calibrated to 85 percent of the full LCR. All other requirements of the LCR rule, including the maturity mismatch add-on, apply to these banking organizations. *See* section VI.B of this **SUPPLEMENTARY INFORMATION.**

[26] *See* ''Regulatory Capital Rule: Simplifications to the Capital Rule Pursuant to the Economic Growth and Regulatory Paperwork Reduction Act of 1996,'' 84 FR 35234 (July 22, 2019) (simplifications final rule).

[27] Similar to Category III, all other requirements of the LCR rule apply to such banking organizations, including the LCR rule's maturity mismatch requirement. *See* section VI.B of this Supplementary Information.

TABLE I—SCOPING CRITERIA FOR CATEGORIES OF REGULATORY CAPITAL AND LIQUIDITY REQUIREMENTS

Category	U.S. banking organizations †	Foreign banking organizations ‡
I	U.S. GSIBs and their depository institution subsidiaries	N/A.
II	$700 billion or more in total consolidated assets; or $75 billion or more in cross-jurisdictional activity; do not meet the criteria for Category I.	
III	$250 billion or more in total consolidated assets; or $75 billion or more in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposure; do not meet the criteria for Category I or II.	
IV	$100 billion or more in total consolidated assets; do not meet the criteria for Category I, II or III.	

† For U.S. banking organizations, the applicable category of regulatory capital and liquidity requirements is measured at the level of the top-tier banking organization level, and applies to any of its depository institution subsidiaries for purposes of capital requirements or to any of its depository institution subsidiaries with $10 billion or more in total consolidated assets for liquidity requirements.

‡ For foreign banking organizations, the applicable category of regulatory capital and liquidity requirements is measured at the level of the top-tier U.S. intermediate holding company level, and applies to any depository institution subsidiary of such holding company for purposes of capital requirements or to any depository institution subsidiary with $10 billion or more in total consolidated assets for liquidity requirements.

V. Framework for the Application of Capital and Liquidity Requirements

This section describes the framework for determining the application of regulatory capital and liquidity requirements under this final rule, including a discussion of comments received on the proposed framework. The final rule largely establishes the framework set forth in the proposals and introduces four categories of capital and liquidity requirements based on certain indicators of risk that are measured at the level of the top-tier banking organization.[28]

A. Indicators-Based Approach and the Alternative Scoring Methodology

The proposals would have established four categories of regulatory capital and liquidity requirements and the criteria for Categories II, III and IV would have relied on the following risk-based indicators: Size, cross-jurisdictional activity, weighted short-term wholesale funding, off-balance sheet exposure, and nonbank assets. These risk-based indicators are already used in the Board's existing regulatory framework and reported by large U.S. bank holding companies, U.S. intermediate holding companies, and covered savings and loan holding companies.[29]

The proposals also sought comment on an alternative approach that would have used a single, comprehensive score based on the GSIB identification methodology, which is currently used to identify U.S. GSIBs and apply risk-based capital surcharges to these banking organizations (scoring methodology).[30] Under the alternative approach, a banking organization's size and its score from the scoring methodology would have been used to determine which category of standards would apply to the banking organization.[31]

Most commenters preferred the proposed indicators-based approach to the alternative scoring methodology for determining the category of standards that would apply to large banking organizations. These commenters stated that the indicators-based approach would be more transparent, less complex, and more appropriate for applying categories of standards to banking organizations that are not U.S. GSIBs. Some commenters also asserted that if the agencies used the scoring methodology, the agencies should use only method 1. These commenters argued that method 2 would be inappropriate for tailoring capital and liquidity requirements on the basis that the denominators to method 2 are fixed, rather than updated annually. Commenters also argued against using method 2 on the basis that method 2 was calibrated specifically for U.S. GSIBs.

The final rule adopts the indicators-based approach for applying Category II, III, or IV standards to a banking organization, as this approach provides a simple framework that supports the objectives of risk sensitivity and transparency. Many of the risk-based indicators are used in the agencies' existing regulatory frameworks or reported by top-tier banking organizations. By using indicators that exist or are reported by most banking organizations subject to the final rules, the indicators-based approach limits additional reporting requirements. The agencies will continue to use the scoring methodology to apply Category I standards to a U.S. GSIB and its depository institution subsidiaries.

B. Choice of Risk-Based Indicators

To determine the applicability of Category II, III, or IV standards, the proposals considered a top-tier banking organization's level of five risk-based indicators: Size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure.

The agencies received a number of comments on the choice of risk-based indicators and suggested modifications to the calculation of the indicators. Several commenters expressed the general view that the proposed risk-based indicators were poor measures of risk. A number of these commenters also asserted that the agencies did not provide sufficient justification to support the proposed risk-based indicators, and requested that the agencies provide additional explanation regarding their selection. Commenters also asserted that the framework should take into consideration additional risk-mitigating characteristics when measuring the proposed risk-based indicators. Several other commenters argued that the proposals are too complex and at odds with the stated objectives of simplicity and burden reduction.

By considering the relative presence or absence of each risk-based indicator, the proposals would have provided a basis for assessing a banking organization's financial stability and safety and soundness risks. The risk-

[28] Comments regarding the NSFR proposal will be addressed in the context of any final rule to adopt a NSFR requirement for large U.S. banking organizations and U.S. intermediate holding companies.

[29] A covered savings and loan holding company means a savings and loan holding company that is not substantially engaged in insurance and commercial underwriting activities.

[30] For more discussion relating to the scoring methodology, see the Board's final rule establishing the GSIB identification methodology. *See* "Regulatory Capital Rules: Implementation of Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies," 80 FR 49082 (Aug. 14, 2015).

[31] The scoring methodology contains two methods, method 1 and method 2. The alternative proposal would have used the higher of method 1 or method 2 to determine the applicable category of standards.

based indicators generally track measures already used in the Board's existing regulatory framework and rely on information that is already publicly reported by affected banking organizations.[32] Together with fixed, uniform thresholds, use of the risk-based indicators supports the agencies' objectives of transparency and efficiency, while providing for a framework that enhances the risk sensitivity of the agencies' capital and liquidity rules in a manner that continues to allow for comparability across banking organizations. Risk-mitigating factors, such as a banking organization's HQLA and the presence of collateral to secure an exposure, are incorporated into the enhanced standards to which the banking organization is subject.

One commenter asserted that an analysis of the proposed risk-based indicators based on a measure of the expected capital shortfall of a banking organization in the event of a steep equity market decline (SRISK)[33] demonstrated that only the cross-jurisdictional activity and weighted short-term wholesale funding indicators were positively correlated with SRISK, whereas the other risk-based indicators were not important drivers of a banking organization's SRISK measures. However, because SRISK is conditioned on a steep decline in equity markets, it does not capture the probability of a financial crisis or an idiosyncratic failure of a large banking organization. In addition, SRISK does not directly capture other important aspects of systemic risk, such as a banking organization's interconnectedness with other financial market participants. For these reasons, SRISK alone is not a sufficient means of determining the risk-based indicators used in the tailoring framework.

Accordingly, and as discussed below, the agencies are adopting the risk-based indicators as proposed.

1. Size

The proposals would have considered size in tailoring the application of capital and liquidity requirements to a domestic banking organization or the U.S. operations of a foreign banking organization. Some commenters argued that the proposals placed too much reliance on size for determining the prudential standards applicable to large banking organizations. These commenters generally criticized the size indicator as not sufficiently risk sensitive and a poor measure of systemic and safety and soundness risk, and suggested using risk-weighted assets, as determined under the capital rule, rather than total consolidated assets or combined U.S. assets, as applicable. Several commenters argued that the proposals did not adequately explain the relationship between size and safety and soundness risk, particularly risks associated with operational or control gaps.

Other commenters, however, supported the use of size as a measure of financial stability and safety and soundness risk. These commenters asserted that size serves as an indicator of credit provision that could be disrupted in times of stress, as well as the difficulties associated with the resolution of a large banking organization. These commenters also recommended placing additional emphasis on size for purposes of tailoring prudential standards, and expressed the view that the size indicator is less susceptible to manipulation through temporary adjustments at the end of a reporting period as compared to the other risk-based indicators.

Section 165 of the Dodd-Frank Act, as amended by EGRRCPA, establishes thresholds based on total consolidated assets.[34] Size is also among the factors that the Board must take into consideration in differentiating among banking organizations under section 165.[35] A banking organization's size provides a measure of the extent to which stress at its operations could be disruptive to U.S. markets and present significant risks to U.S. financial stability. A larger banking organization has a greater number of customers and counterparties that may be exposed to a risk of loss or suffer a disruption in the provision of services if the banking organization were to experience distress. In addition, size is an indicator of the extent to which asset fire sales by a banking organization could transmit distress to other market participants, given that a larger banking organization has more counterparties and more assets to sell. The failure of a large banking organization in the U.S. also may give rise to challenges that complicate the resolution process due to the size and diversity of its customer base and the number of counterparties that have exposure to the banking organization.

The complexities associated with size also can give rise to operational and control gaps that are a source of safety and soundness risk and could result in financial losses to a banking organization and adversely affect its customers. A larger banking organization operates on a larger scale, has a broader geographic scope, and generally will have more complex internal operations and business lines relative to a smaller banking organization. Growth of a banking organization, whether organic or through an acquisition, can require more robust risk management and development of enhanced systems or controls; for example, when managing the integration and maintenance of information technology platforms.

Size also can be a proxy for other measures of complexity, such as the amount of trading and available-for-sale securities, over-the-counter derivatives, and Level 3 assets.[36] Using Call Report data from the first quarter of 2005 to the first quarter of 2018, the correlation between a bank's total trading assets (a proxy of complexity) and its total assets

[32] Bank holding companies, covered savings and loan holding companies, and U.S. intermediate holding companies subject to this final rule already report the information required to determine size, weighted short-term wholesale funding, and off-balance sheet exposure on the Banking Organization Systemic Risk Report (FR Y–15). Such bank holding companies and covered savings and loan holding companies also currently report the information needed to calculate cross-jurisdictional activity on the FR Y–15. Nonbank assets are reported on FR Form Y–9 LP. This information is publicly available.

[33] For the definition and measurement of SRISK, *see* Acharya, V., Engle, R. and Richardson, M. (2012). Capital shortfall: A new approach to ranking and regulating systemic risks. *American Economic Review, 102*(3), pp. 59–64, *see also* Brownlees, Christian, and Robert F. Engle (2017). ''SRISK: A conditional capital shortfall measure of systemic risk.'' *The Review of Financial Studies* 30.1 (2016): 48–79.

[34] *See generally* 12 U.S.C. 5635 and EGRRCPA section 401.

[35] EGRRCPA section 401(a)(1)(B)(i) (codified at 12 U.S.C. 5365(a)(2)(A)). The agencies haves also previously used size as a simple measure of a banking organization's potential systemic impact and risk, and have differentiated the stringency of capital and liquidity requirements based on total consolidated asset size. For example, prior to the adoption of this final rule, advanced approaches capital requirements, the supplementary leverage ratio, and the LCR requirement generally applied to banking organizations with total consolidated assets of $250 billion or more or total consolidated on-balance sheet foreign exposure of $10 billion or more.

[36] The FR Y15 and the GSIB surcharge methodology include three indicators of complexity that are used to determine a banking organization's systemic importance for purposes of the U.S. GSIB surcharge rule: Notional amount of OTC derivatives, Level 3 assets, and trading and AFS securities. In the second quarter of 2019, the average complexity score of a U.S. GSIB was 104.7, the average complexity score of a banking organization with assets of greater than $250 billion that is not a U.S. GSIB was 12.0, the average complexity score of a banking organization with assets of more than $100 billion but less than $250 billion was 3.5, and the average complexity score of a banking organization with assets of $50 billion but less than $100 billion was 0.4.

(a proxy of size) is over 90 percent.[37] As was seen in the financial crisis, a more complex institution can be more opaque to the markets and may have difficulty managing its own risks, warranting stricter standards for both capital and liquidity.

Further, notwithstanding commenters' assertions that risk-weighted assets more appropriately capture risk, an approach that relies on risk-weighted assets as an indication of size would not align with the full scope of risks intended to be measured by the size indicator. Risk-weighted assets serve as an indication of credit risk and are not designed to capture the risks associated with managerial and operational complexity or the potential for distress at a large banking organization to cause widespread market disruptions.

Some commenters argued that the Board staff analysis cited in the proposals does not demonstrate that size is a useful indicator for determining the systemic importance of a banking organization.[38] Specifically, one commenter asserted that the Board staff analysis (1) uses a flawed measure of bank stress and (2) does not use robust standard errors or sufficiently control for additional macroeconomic factors that may contribute to a decline in economic activity.

The Board staff paper employs the natural logarithm of deposits at failed banks as a proxy of bank stress. This choice was informed by Bernanke's 1983 article, which uses the level (namely, thousands of dollars) of deposits at failed banks to proxy bank stress.[39] The staff paper makes modifications to the stress proxy in order to account for the evolution of the banking sector over time. In contrast to Bernanke's study of a three-year period during the Great Depression, Board staff's analysis spans almost six decades. Expressing bank stress in levels as the commenter suggests (namely, trillions of dollars) would not account for the structural changes that have occurred in the banking sector and therefore would place a disproportionately greater weight on the bank failures that occurred during the 2008–2009 financial crisis. In addition to the analysis conducted by Board staff, other research has found evidence of a link between size and systemic risk.[40]

For the reasons discussed above, the agencies are adopting the proposed measure of size for foreign and domestic banking organizations without change.[41] Size is a simple and transparent measure of systemic importance and safety and soundness risk that can be readily understood and measured by banking organizations and market participants.

2. Cross-Jurisdictional Activity

The proposals would have included a measure of cross-jurisdictional activity as a risk-based indicator to determine the application of Category II standards. For U.S. banking organizations, the domestic proposal would have defined cross-jurisdictional activity as the sum of cross-jurisdictional claims and liabilities. In recognition of the structural differences between foreign and domestic banking organizations, the foreign bank proposal would have adjusted the measurement of cross-jurisdictional activity for foreign banking organizations to exclude inter-affiliate liabilities and certain collateralized inter-affiliate claims.[42] Specifically, claims on affiliates[43] would have been reduced by the value of any financial collateral in a manner consistent with the agencies' capital rule,[44] which permits, for example, banking organizations to recognize financial collateral when measuring the exposure amount of repurchase agreements and securities borrowing and securities lending transactions (together, repo-style transactions).[45] The foreign bank proposal sought comment on alternative adjustments to the cross-jurisdictional activity indicator for foreign banking organizations, and on other modifications to the components of the indicator.

Some commenters urged the agencies to adopt the cross-jurisdictional activity indicator as proposed. By contrast, a number of commenters expressed concern regarding this aspect of the proposals. Several commenters opposed the inclusion of cross-jurisdictional

[38] As described in the proposals, relative to a smaller banking organization, the failure of a large banking organization is more likely to have a destabilizing effect on the economy, even if the two banking organizations are engaged in similar business lines. Board staff estimated that stress at a single large banking organization with an assumed $100 billion in deposits would result in approximately a 107 percent decline in quarterly real U.S. GDP growth, whereas stress among five smaller banking organizations—each with an assumed $20 billion in deposits—would collectively result in roughly a 22 percent decline in quarterly real U.S. GDP growth. Both scenarios assume $100 billion in total deposits, but the negative impact is significantly greater when the larger banking organization fails. *Id.*

[40] *See* Bremus, Buck, Russ and Schnitzer, *Big Banks and Macroeconomic Outcomes: Theory and Cross-Country Evidence of Granularity,* Journal of Money, Credit and Banking (July 2018). Allen, Bali, and Tang construct a measure of systemic risk (CATFIN) and demonstrate that the CATFIN of both large and small banking organizations can forecast macroeconomic declines, and found that the CATFIN of large banks can successfully forecast lower economic activity sooner than that of small banks. *See* Allen, Bali, and Tang, *Does Systemic Risk in the Financial Sector Predict Future Economic Downturns?,* Review of Financial Studies, Vol. 25, Issue 10 (2012). Adrian and Brunnermeier constructed a measurement of systemic risk, designated CoVar, and show that firms with higher leverage, more maturity mismatch, and larger size are associated with larger systemic risk contributions. Specifically, the authors find that if a bank is 10 percent larger than another bank, then the size coefficient predicts that the larger bank's CoVaR per unit of capital is 27 basis points higher than the smaller bank's CoVaR. *See* Adrian & Brunnermeir, *CoVar,* American Economic Review Journal, Vol. 106 No. 7 (July 2016).

In the same vein, research conducted by the Bank for International Settlements suggests that the ratio of one institution's systemic importance to a smaller institution's systemic importance is larger than the ratio of the respective sizes. *See* Tarashev, Borio and Tsatsaronis, *Attributing systemic risk to individual institutions,* BIS Working Paper No. 308 (2010). Relatedly, Dávila and Walther (2017) show that large banks take on more leverage relative to small banks in times of stress. *See* Dávila &Walther, *Does Size Matter? Bailouts with Large and Small Banks,* NBER Working Paper No. 24132 (2017).

[41] The final rule calibrates liquidity and capital requirements for U.S. intermediate holding companies based on the risk profile, including size, of the U.S. intermediate holding company. However, the elements of the size indicator itself, as well as the other risk-based indicators, are being finalized without change.

[42] Specifically, the proposal would have excluded from the cross-jurisdictional activity indicator all inter-affiliate claims of a foreign banking organization secured by financial collateral, in accordance with the capital rule. Financial collateral is defined under the capital rule to mean collateral, (1) in the form of (i) cash on deposit with the banking organization (including cash held for the banking organization by a third-party custodian or trustee), (ii) gold bullion, (iii) long-term debt securities that are not resecuritization exposures and that are investment grade, (iv) short-term debt instruments that are not resecuritization exposures and that are investment grade, (v) equity securities that are publicly traded; (vi) convertible bonds that are publicly traded, or (vii) money market fund shares and other mutual fund shares if a price for the shares is publicly quoted daily; and (2) in which the banking organization has a perfected, first-priority security interest or, outside of the United States, the legal equivalent thereof (with the exception of cash on deposit and notwithstanding the prior security interest of any custodial agent). *See* 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); and 12 CFR 324.2 (FDIC).

[43] For the combined U.S. operations, the measure of cross-jurisdictional activity would have excluded all claims between the foreign banking organization's U.S. domiciled affiliates, branches, and agencies to the extent such items are not already eliminated in consolidation. For the U.S. intermediate holding company, the measure of cross-jurisdictional activity would have eliminated through consolidation all inter-affiliate claims within the U.S. intermediate holding company.

[44] *See* 12 CFR 3.37 (OCC); 12 CFR 217.37 (Board); 12 CFR 324.37 (FDIC).

[45] *See* the definition of repo-style transaction at 12 CFR 217.2.

liabilities in the cross-jurisdictional activity indicator. Some commenters argued that cross-jurisdictional liabilities are not a meaningful indicator of systemic risk as measured by SRISK.[46] Other commenters asserted that cross-jurisdictional liabilities can reflect sound risk-management practices on the basis that cross-jurisdictional liabilities can indicate a diversity of funding sources and may be used to fund assets in the same foreign jurisdiction as the liabilities. These commenters suggested modifying the indicator to exclude the amount of any central bank deposits, other HQLA, or assets that receive a zero percent risk weight under the capital rule if those assets are held in the same jurisdiction as a cross-jurisdictional liability.

A number of commenters suggested revisions to the cross-jurisdictional activity indicator that would exclude specific types of claims or liabilities. For example, some commenters asserted that the measure of cross-jurisdictional activity should exclude any claim secured by HQLA or highly liquid assets[47] based on the nature of the collateral. Another commenter suggested excluding operating payables arising in the normal course of business, such as merchant payables. Other commenters suggested that the indicator exclude exposures to U.S. entities or projects that have a foreign guarantee or foreign insurer, unless the U.S. direct counterparty does not meet an appropriate measure of creditworthiness. Some commenters recommended that investments in co-issued collateralized loan obligations be excluded from the measure of cross-jurisdictional activity.

Commenters also suggested specific modifications to exclude exposures to certain types of counterparties. For example, several commenters suggested excluding exposures to sovereign, supranational, international, or regional organizations. Commenters asserted that these exposures do not present the same interconnectivity concerns as exposures with other types of counterparties and that claims on these types of entities present little or no credit risk. Another commenter suggested excluding transactions between a U.S. intermediate holding company and any affiliated U.S. branches of its parent foreign banking organization, on the basis that the foreign bank proposal could disadvantage foreign banking organizations relative to U.S. banking organizations that eliminate such inter-affiliate transactions in consolidation.

Similarly, one commenter suggested excluding transactions between a U.S. intermediate holding company and any U.S. branch of a foreign banking organization, whether affiliated or not, on the basis that such exposures are geographically domestic. Another commenter argued that exposures denominated in a foreign banking organization's home currency should be excluded. By contrast, one commenter argued that cross-jurisdictional activity should be revised to include derivatives, arguing that derivatives can be used as a substitute for other cross-jurisdictional transactions and, as a result, could be used to avoid the cross-jurisdictional activity threshold.

A number of commenters provided other suggestions for modifying the cross-jurisdictional activity indicator. In particular, some commenters recommended that the cross-jurisdictional activity indicator permit netting of claims and liabilities with a counterparty, with only the net claim or liability counting towards cross-jurisdictional activity. Several commenters suggested that the agencies should consider excluding assets or transactions that satisfy another regulatory requirement. For example, these commenters argued that the agencies should consider excluding transactions resulting in the purchase of or receipt of HQLA.

Other commenters suggested modifications to the criteria for determining whether an exposure would be considered cross-border. Specifically, commenters requested modifications to the calculation of cross-jurisdictional activity for claims supported by multiple guarantors or a combination of guarantors and collateral, for example, by not attributing the claim to the jurisdiction of the entity holding the claim or collateral that bears the highest rating for reporting on an ultimate-risk basis. Commenters also requested that the agencies presume that an exposure created through negotiations with agents or asset managers would generally create an exposure based in the jurisdiction of the location of the agent or manager for their undisclosed principal.

Foreign banking organization commenters generally supported the approach taken in the foreign bank proposal with respect to the treatment of inter-affiliate cross-jurisdictional liabilities, but stated that such an approach would not adequately address the differences between domestic and foreign banking organizations. These commenters urged the agencies to eliminate the cross-jurisdictional activity indicator for foreign banking organizations or, alternatively, to eliminate all inter-affiliate transactions from measurement of the indicator.

Significant cross-border activity can indicate heightened interconnectivity and operational complexity. Cross-jurisdictional activity can add operational complexity in normal times and complicate the ability of a banking organization to undergo an orderly resolution in times of stress, generating both safety and soundness and financial stability risks. In addition, cross-jurisdictional activity may present increased challenges in resolution because there could be legal or regulatory restrictions that prevent the transfer of financial resources across borders where multiple jurisdictions and regulatory authorities are involved. Banking organizations with significant cross-jurisdictional activity may require more sophisticated risk management to appropriately address the complexity of those operations and the diversity of risks across all jurisdictions in which the banking organization provides financial services. For example, banking organizations with significant cross-border activities may require more sophisticated risk management related to raising funds in foreign financial markets, accessing international payment and settlement systems, and obtaining contingent sources of liquidity. In addition, the application of consistent capital and liquidity standards to banking organizations with significant size or cross-jurisdictional activity helps to promote competitive equity in the United States as well as abroad.

Measuring cross-jurisdictional activity taking into account both assets and liabilities—instead of just assets—provides a broader gauge of the scale of cross-border operations and associated risks, as it includes both borrowing and lending activities outside of the United States.[48] While both borrowing and lending outside the United States may reflect prudent risk management, cross-jurisdictional activity of $75 billion or more indicates a level of organizational complexity that warrants more stringent prudential standards. With respect to commenters' suggestion to exclude central bank deposits, HQLA, or assets that receive a zero percent risk weight in the same jurisdiction as a cross-

[46] *See supra* note 33.

[47] *See* 12 CFR 252.35(b)(3)(i) and 252.157(c)(7)(i).

[48] The BCBS recently amended its measurement of cross-border activity to more consistently reflect derivatives, and the Board anticipates it will separately propose changes to the FR Y–15 in a manner consistent with this change. Any related changes to the proposed cross-jurisdictional activity indicator would be updated through those separately proposed changes to the FR Y–15.

jurisdictional liability, such an exclusion would assume that all local liabilities are used to fund local claims. However, because foreign affiliates rely on local funding to different extents, such an exclusion could understate risk.[49]

The cross-jurisdictional activity indicator and threshold identify banking organizations with significant cross-border activities. Significant cross-border activities indicate a complexity of operations, even if some of those activities are low risk. Excluding additional types of claims or liabilities would reduce the transparency and simplicity of the tailoring framework. In addition, excluding certain types of assets based on the credit risk presented by the counterparty would be inconsistent with the purpose of the indicator as a measure of operational complexity and risk. The measure of cross-jurisdictional activity in the final rule therefore does not exclude specific types of claims or liabilities, or claims and liabilities with specific types of counterparties, other than the proposed treatment of inter-affiliate liabilities and certain inter-affiliate claims.

The proposals requested comment on possible additional changes to the components of the cross-jurisdictional activity indicator to potentially provide more consistent treatment across repurchase agreements and other securities financing transactions and with respect to the recognition and treatment of collateral across types of transactions. Commenters were generally supportive of these additional changes. The proposals also requested comment on the most appropriate way in which the proposed cross-jurisdictional activity indicator could account for the risk of transactions with a delayed settlement date. Several commenters argued that the indicator should exclude trade-date receivables or permit the use of settlement-date accounting in calculating the cross-jurisdictional activity indicator. Commenters also supported measuring securities lending agreements and repurchase agreements on an ultimate-risk basis, rather than allocating these exposures based on the residence of the counterparty.

The final rule adopts the cross-jurisdictional activity indicator as proposed. Under the final rule cross-jurisdictional activity is measured based on the instructions to the FR Y–15 and, by reference, to the Country Exposure Report Form (FFIEC 009).[50] The agencies are considering whether additional technical modifications and refinements to the cross-jurisdictional indicator would be appropriate, including with respect to the treatment of derivatives, and would seek comment on any such changes to the indicator through a separate notice. Specifically, under the final rule, cross-jurisdictional claims are measured according to the instructions to the FFIEC 009. The instructions to the FFIEC 009 currently do not permit risk transfer for repurchase agreements and securities financing transactions and the Board is not altering the measurement of repurchase agreements and securities financing transactions under this final rule. This approach maintains consistency between the FR Y–15 and FFIEC 009. In addition, the cross-jurisdictional indicator maintains the use of trade-date accounting for purposes of the final rule. The preference for trade-date accounting is consistent with other reporting forms (*e.g.,* Consolidated Financial Statements for Holding Companies Form (FR Y–9C)) and with generally accepted accounting principles. With respect to netting, the instructions to the FFIEC 009 permit netting in limited circumstances. Allowing banking organizations to net all claims and liabilities with a counterparty could significantly understate an organization's level of international activity, even if such netting might be appropriate from the perspective of managing risk.

As noted above, the risk-based indicators generally track measures already used in the Board's existing regulatory framework and rely on information that banking organizations covered by the final rule already publicly report.[51] The agencies believe that the measure of cross-jurisdictional activity as proposed (including the current reported measurements of repurchase agreements and securities financing transactions, trade date accounting items, and netting) along with the associated $75 billion threshold, appropriately captures the risks that warrant the application of Category II standards. The agencies may consider future changes regarding the measurement of the cross-jurisdictional activity indicator, and in doing so, would consider the comments described above and the impact of any future changes on the $75 billion threshold, and would draw from supervisory experience following the implementation of the final rule. Any such changes would be considered in the context of a separate rulemaking process.

3. Nonbank Assets

The proposals would have considered the level of nonbank assets in determining the applicable category of standards. The amount of a banking organization's activities conducted through nonbank subsidiaries provides a measure of the organization's business and operational complexity. Specifically, banking organizations with significant activities in nonbank subsidiaries are more likely to have complex corporate structures and funding relationships. In addition, in certain cases nonbank subsidiaries are subject to less prudential regulation than regulated banking entities.

Under the proposals, nonbank assets would have been measured as the average amount of assets in consolidated nonbank subsidiaries and equity investments in unconsolidated nonbank subsidiaries.[52] The proposals would have excluded from this measure assets in a depository institution subsidiary, including a national bank, state member bank, state nonmember bank, federal savings association, federal savings bank, or state savings association subsidiary. The proposals also would have excluded assets of subsidiaries of these depository institutions, as well as assets held in each Edge or Agreement Corporation that is held through a bank subsidiary.[53]

[49] Based on data collected from the FFIEC 009, some affiliates of U.S. banking organizations relied extensively (75 percent) on local funding, while others collected almost no local funding. In particular, approximately 40 percent of bank-affiliate locations had no local lending. *See* Nicola Cetorelli & Linda Goldberg, ''Liquidity Management of U.S. Global Banks: Internal Capital Markets In the Great Recession'' (Fed. Reserve Bank of N.Y. Staff Report No. 511, 2012), available at *http://www.newyorkfed.org/research/staff_reports/sr511.pdf.*

[50] Specifically, cross-jurisdictional claims are measured on an ultimate-risk basis according to the instructions to the FFIEC 009. The instructions to the FFIEC 009 currently do not permit risk transfer for repurchase agreements and securities financing transactions. Foreign banking organizations must include in cross-jurisdictional claims only the net exposure (*i.e.,* net of collateral value subject to haircuts) of all secured transactions with affiliates to the extent that these claims are collateralized by financial collateral or excluded in consolidation. *See supra* note 43.

[51] *See* Form FR Y–15. This information is publicly available.

[52] For a foreign banking organization, nonbank assets would have been measured as the average amount of assets in consolidated U.S. nonbank subsidiaries and equity investments in unconsolidated U.S. nonbank subsidiaries.

[53] As noted above, the Parent Company Only Financial Statements for Large Holding Companies (FR Y–9LP), Schedule PC–B, line item 17 is used to determine nonbank assets. For purposes of this item, nonbank companies exclude (i) all national banks, state member banks, state nonmember insured banks (including insured industrial banks), federal savings associations, federal savings banks,

Continued

A number of commenters argued that measuring nonbank assets based on the location of the assets in a nonbank subsidiary provides a poor measure of risk. Some commenters requested that the agencies instead consider whether the assets relate to bank-permissible activities. Other commenters argued that activities conducted in nonbank subsidiaries can present less risk than banking activities. Specifically, some commenters argued that the proposed measure of nonbank assets was over-inclusive on the basis that many of the assets in nonbank subsidiaries would receive a zero percent risk weight under the agencies' capital rule. In support of this position, commenters noted that retail brokerage firms often hold significant amounts of U.S. treasury securities.

Other commenters argued that the measure of nonbank assets is poorly developed and infrequently used and urged the agencies to provide additional support for the inclusion of the indicator in the proposed framework. Specifically, commenters requested that the agencies provide additional justification for nonbank assets as an indicator of complex corporate structures and funding relationships, as well as interconnectedness. A number of commenters argued that, to the extent the measure was intended to address risk in broker-dealer operations, it was unnecessary in light of existing supervision and regulation of broker-dealers and application of consolidated capital, stress testing, and risk-management requirements to the parent banking organization.

A number of commenters argued that, if retained, the nonbank assets indicator should be more risk sensitive. Some commenters suggested excluding assets related to bank-permissible activities as well as certain types of nonbanking activities, such as retail brokerage activity. The commenters argued that, at a minimum, the nonbank assets indicator should exclude any nonbank subsidiary or asset that would be permissible for a bank to own. Other commenters suggested risk-weighting nonbank assets or deducting certain assets held by nonbank subsidiaries, such as on-balance sheet items that are deducted from regulatory capital under the capital rule (*e.g.,* deferred tax assets and goodwill).

Both the organizational structure of a banking organization and the activities it conducts contribute to its complexity and risk profile. Banking organizations with significant investments in nonbank subsidiaries are more likely to have complex corporate structures, inter-affiliate transactions, and funding relationships.[54] A banking organization's complexity is positively correlated with the impact of the organization's failure or distress.[55]

Market participants typically evaluate the financial condition of a banking organization on a consolidated basis. Therefore, the distress or failure of a nonbank subsidiary could be destabilizing to, and cause counterparties and creditors to lose confidence in, the banking organization as a whole. In addition, the distress or failure of banking organizations with significant nonbank assets has coincided with or increased the effects of significant disruptions to the stability of the U.S. financial system.[56]

Nonbank activities also may involve a broader range of risks than those associated with activities that are permissible for a depository institution to conduct directly and can increase interconnectedness with other financial firms, requiring sophisticated risk management and governance, including capital planning, stress testing, and liquidity risk management. For example, holding companies with significant nonbank assets are generally engaged in financial intermediation of a different nature (such as complex derivatives activities) than those typically conducted through a depository institution. If not adequately managed, the risks associated with nonbank activities could present significant safety and soundness concerns and increase financial stability risks. Nonbank assets also reflect the degree to which a banking organization may be engaged in activities through legal entities that are not subject to separate capital or liquidity requirements or to the direct regulation and supervision applicable to a regulated banking entity.

The nonbank assets indicator in the final rule provides a proxy for operational complexity and nonbanking activities without requiring banking organizations to track assets, income, or revenue based on whether a depository institution has the legal authority to hold such assets or conduct the related activities (legal authority). In addition, a depository institution's legal authority depends on the institution's charter and may be subject to additional interpretation over time.[57] A measure of nonbank assets based on legal authority would be costly and complex for banking organizations to implement, as they do not currently report this information based on legal authority. Defining nonbank assets based on the type of entity that owns them, rather than legal authority, reflects the risks associated with organizational complexity and nonbanking activities without imposing additional reporting burden as a result of implementing the final rule or monitoring any future changes to legal authority. In addition, as noted above, the nonbank assets indicator is designed, in part, to identify activities that a banking organization conducts in subsidiaries that may be subject to less prudential regulation, which makes relevant whether the asset or activity is located in a bank or nonbank subsidiary.

Commenters' suggested modifications to exclude certain types of assets or entities, or to risk-weight nonbank assets, would not align with the full scope of risks intended to be measured by the indicator, including risks associated with operational and managerial complexity. In particular, under the generally applicable risk-based capital requirements, the risk weight assigned to an individual asset is primarily designed to measure credit risk, so relying on risk-weighted assets could underestimate operational and other risks. Further, because nonbank entities are permitted to conduct a wide range of complex activities, assets held by those entities, including those that receive a zero percent risk weight, may be held in connection with complex activities, such as certain prime

and thrift institutions (collectively for purposes of this item, ''depository institutions'') and (ii) except for an Edge or Agreement Corporation designated as ''Nonbanking'' in the box on the front page of the Consolidated Report of Condition and Income for Edge and Agreement Corporations (FR 2886b), any subsidiary of a depository institution (for purposes of this item, ''depository institution subsidiary''). The revised FR Y–15 includes a line item that would automatically populate this information. *See* section XV of the **SUPPLEMENTARY INFORMATION** in the Board-only final rule.

[57] *See e.g.,* ''OCC Releases Updated List of Permissible Activities for Nat'l Banks & Fed. Sav. Associations,'' OCC NR 17–121 (Oct. 13, 2017) (''The OCC may permit national banks and federal savings associations to conduct additional activities in the future''), available at: *https://www.occ.treas.gov/publications/publications-by-type/other-publications-reports/pub-activities-permissible-for-nat-banks-fed-saving.pdf.*

brokerage or other trading activities. Finally, as noted above, the nonbank asset measure is a relatively simple and transparent measures of a banking organization's nonbank activities, and exclusion of specific assets based on risk could undermine the simplicity and transparency of the indicator. For these reasons, the agencies are finalizing the nonbank assets indicator, including the measurement of the indicator, generally as proposed.

4. Off-Balance Sheet Exposure

The proposals would have included off-balance sheet exposure as a risk-based indicator to complement the measure of size. Under the proposals, off-balance sheet exposure would have been measured as the difference between total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, and total assets.[58] Total exposure includes on-balance sheet assets plus certain off-balance sheet exposures, including derivative exposures and commitments.

A number of commenters argued that the proposed measure of off-balance sheet exposure was not sufficiently risk sensitive. Specifically, these commenters argued that the exposures captured by the indicator were generally associated with low-risk activities or assets, such as securities lending activities. In addition, the commenters argued that the proposed measure could be harmful to economic activity by discouraging corporate financing through commitments and letters of credit. Commenters accordingly urged the agencies to modify the proposed approach to measuring the risk of off-balance sheet exposures; for example, by using the combination of credit conversion factors and risk weights applied under the agencies' capital rule. Other commenters suggested that the agencies exclude certain types of exposures from the indicator, such as letters of credit. Foreign banking organization commenters also argued that inter-affiliate transactions should be excluded from the measure, including any guarantee related to securities issued to fund the foreign parent, and guarantees used to facilitate clearing of swaps and futures for affiliates that are not clearing members. With respect to guarantees used to facilitate clearing, commenters argued that these exposures are the result of mandatory clearing requirements and help support the central clearing objectives of the Dodd-Frank Act. Commenters expressed concern that including these exposures also could result in increased concentration of clearing through U.S. GSIBs. For the same reasons, commenters argued that potential future exposures associated with derivatives cleared by an affiliate also should be excluded from the measure of off-balance sheet exposure.

Off-balance sheet exposure complements the size indicator under the tailoring framework by taking into account additional risks that are not reflected in a banking organization's measure of on-balance sheet assets. This indicator provides a measure of the extent to which customers or counterparties may be exposed to a risk of loss or suffer a disruption in the provision of services stemming from off-balance sheet activities. In addition, off-balance sheet exposure can lead to significant future draws on liquidity, particularly in times of stress. For example, during stress conditions vulnerabilities at individual banking organizations may be exacerbated by calls on commitments and the need to post collateral on derivatives exposures. The nature of these off-balance sheet risks for banking organizations of significant size and complexity can also lead to financial stability risk, as they can manifest rapidly and with less transparency and predictability to other market participants relative to on-balance sheet exposures.

Excluding certain off-balance sheet exposures would be inconsistent with the purpose of the indicator as a measure of the extent to which customers or counterparties may be exposed to a risk of loss or suffer a disruption in the provision of services. Commitments and letters of credit, like extensions of credit through loans and other arrangements included on a banking organization's balance sheet, help support economic activity. Because corporations tend to increase their reliance on committed credit lines during periods of stress in the financial system, draws on these instruments can exacerbate the effects of stress conditions on banking organizations by increasing their on-balance sheet credit exposure.[59] During the 2008–2009 financial crisis, reliance on lines of credit was particularly pronounced among smaller and non-investment grade corporations, suggesting that an increase in these exposures may be associated with decreasing credit quality.[60]

Including guarantees to affiliates related to cleared derivative transactions in off-balance sheet exposure also is consistent with the overall purpose of the indicator. A clearing member that guarantees the performance of an affiliate to a central counterparty is exposed to a risk of loss if the affiliate were to fail to perform its obligations under a derivative contract. By including these exposures, the indicator identifies a source of interconnectedness with other financial market participants. These transactions can arise with respect not only to principal trades, but also because a client wishes to face a particular part of the organization, and thus excluding these guarantees could understate risk and interconnectedness.[61]

As described above, the tailoring framework's risk-based indicators and uniform category thresholds balance risk sensitivity with simplicity and transparency. Excluding certain types of exposures would not align with the full scope of risks intended to be measured by the indicator. The final rule, therefore, adopts the off-balance sheet exposure indicator as proposed.

5. Weighted Short-Term Wholesale Funding

The proposed weighted short-term wholesale funding indicator would have measured the amount of a banking organization's short-term funding obtained generally from wholesale counterparties. Reliance on short-term, generally uninsured funding from more sophisticated counterparties can make a banking organization more vulnerable to

[58] Total exposure would be reported for domestic holding companies on the FR Y–15, Schedule A, Line Item 5, and for foreign banking organizations' U.S. intermediate holding companies and combined U.S. operations on the FR Y–15, Schedule H, Line Item 5. Total off-balance sheet exposure would be reported as Line Item M5 on Schedules A and H.

[59] During the financial crisis, increased reliance on credit lines began as early as 2007, and increased after September 2008. *See* Jose M. Berrospide, Ralf R. Meisenzahl, and Briana D. Sullivan, ''Credit Line Use and Availability in the Financial Crisis: The Importance of Hedging,'' available at: *https://www.federalreserve.gov/pubs/feds/2012/201227/201227pap.pdf.* Some have found evidence that an increase in draws on credit lines may have been motivated by concerns about the ability of financial institutions to provide credit in the future. *See* Victoria Ivashina & David Scharfstein, ''Bank Lending During the Financial Crisis of 2008,'' 97 J. Fin. Econ. 319–338 (2010). *See* William F. Bassett, Simon Gilchrist, Gretchen C. Weinbach, and Egon Zakrajšek, ''Improving Our Ability to Monitor Bank Lending'' chapter on *Risk Topography: Systemic Risk and Macro Modeling* (2014), Markus Brunnermeier and Arvind Krishnamurthy, ed., pp. 149–161, available at: *http://www.nber.org/chapters/c12554.*

[60] *Id.*

[61] In order to facilitate clearing generally, the capital rule more specifically addresses the counterparty credit risk associated with transactions that facilitate client clearing, such as a shorter margin period of risk, and provides incentives that are intended to help promote the central clearing objectives of the Dodd-Frank Act. *See* 12 CFR 3.35 (OCC); 12 CFR 217.35 (Board); 12 CFR 324.35 (FDIC).

large-scale funding runs, generating both safety and soundness and financial stability risks. The proposals would have calculated this indicator as the weighted-average amount of funding obtained from wholesale counterparties, certain brokered deposits, and certain sweep deposits with a remaining maturity of one year or less, in the same manner as currently reported by holding companies on the FR Y–15.[62]

A number of commenters expressed concern regarding the use of the weighted short-term wholesale funding indicator in the tailoring framework. Several commenters argued that this indicator fails to take into account the extent to which the risk of short-term wholesale funding has been mitigated through existing regulatory requirements, such as the Board's enhanced prudential standards rule and, for foreign banking organizations, standardized liquidity requirements applicable to foreign banking organizations at the global consolidated level. Other commenters argued that the indicator is a poor measure of risk more broadly because it fails to consider the maturity of assets funded by short-term wholesale funding. Commenters argued that focusing on liabilities and failing to recognize the types of assets funded by the short-term funding would disproportionately affect foreign banking organizations' capital market activities and ability to compete in the United States.

The weighted short-term wholesale funding indicator is designed to serve as a broad measure of the risks associated with elevated, ongoing reliance on funding sources that are typically less stable than funding of a longer term or funding such as fully-insured retail deposits, long-term debt, and equity. For example, a banking organization's weighted short-term wholesale funding level serves as an indication of the likelihood of funding disruptions in firm-specific or market-wide stress conditions. These funding disruptions may give rise to urgent liquidity needs and unexpected losses, which warrant heightened application of liquidity and regulatory capital requirements. A measure of funding dependency that reflects the various types or maturities of assets supported by short-term wholesale funding sources, as suggested by commenters, would add complexity to the indicator. For example, because a banking organization's funding is fungible, monitoring the direct relationship between specific liabilities and assets with various maturities requires a methodology for asset-liability matching and liability maturity. The LCR rule and the proposed NSFR rule therefore include methodologies for reflecting asset maturity in regulatory requirements that address the associated risks.[63]

Commenters suggested revisions to the weighted short-term wholesale funding indicator that would align with the treatment of certain assets and liabilities under the LCR rule. For example, some commenters recommended that the agencies more closely align the indicator's measurement of weighted short-term wholesale funding with the outflow rates applied in the LCR rule, such as by excluding from the indicator funding that receives a zero percent outflow rate in the LCR rule or reducing the weights for secured funding to match the LCR's outflow treatment. Similarly, commenters suggested that the agencies provide a lower weighting for brokered and sweep deposits from affiliates, consistent with the lower outflow rates assigned to these deposits in the LCR rule. Specifically, commenters argued that the weighted short-term wholesale funding indicator inappropriately applies the same 25 percent weight to sweep deposits sourced by both affiliates and non-affiliates alike, and treats certain non-brokered sweep deposits in a manner inconsistent with the LCR rule.

The agencies note that when the Board established the weights applied in calculating and reporting short-term wholesale funding for purposes of the GSIB surcharge rule, the Board took into account the treatment of certain liabilities in the LCR rule and fire sale risks in key short-term wholesale funding markets. The agencies continue to believe the current scope of the weighted short-term wholesale funding indicator, and the weights applied in the indicator, are appropriately calibrated for assessing the risk to broader financial stability as a result of a banking organization's reliance on short-term wholesale funding. The final rule treats brokered deposits as short-term wholesale funding because they are generally considered less stable than standard retail deposits. In order to preserve the relative simplicity of the short-term wholesale funding metric, the final rule does not distinguish among different types of brokered deposits and sweep deposits. Accordingly, all retail deposits identified as brokered deposits and brokered sweep deposits under the LCR rule are reported on the FR Y–15 as retail brokered deposits and sweeps for purpose of the weighted short-term wholesale funding indicator.

Commenters also suggested other specific revisions to the calculation of the weighted short-term wholesale funding indicator. Some commenters argued that the weighted short-term wholesale funding indicator should look to the original maturity of the funding relationship—instead of the remaining maturity—and exclude long-term debt that is maturing within the next year. Commenters also urged the agencies to recognize certain offsets to reduce the amount of short-term wholesale funding included in the indicator. For example, a number of commenters suggested that the amount of short-term wholesale funding should be reduced by the amounts of HQLA held by the banking organization, cash deposited at the Federal Reserve by the banking organization, or of any high-quality collateral used for secured funding. Commenters argued that this approach would better reflect the banking organization's liquidity risk because it would take into account assets that could be used to meet cash outflows as well as collateral that typically maintains its value and therefore would not contribute to asset fire sales. Commenters also argued that the measure of weighted short-term wholesale funding should exclude funding that the commenters viewed as stable, such as credit lines from Federal Home Loan Banks and Federal Reserve Banks, savings and checking accounts of wholesale customers, and brokered sweep deposits received from an affiliate.

The agencies believe that the remaining maturity of a funding relationship, instead of original maturity as suggested by commenters, provides a more accurate measure of the banking organization's ongoing exposure to rollover risk. As discussed above, because a banking organization's inability to rollover funding may generate safety and soundness and financial stability risks, the agencies believe that using remaining maturity is more appropriate given the purposes of the short-term wholesale funding indicator. Further, the weighted short-term wholesale funding indicator takes into account the quality of collateral used in funding transactions by

[62] Average amounts over a 12 month period in each category of short-term wholesale funding are weighted based on four residual maturity buckets; the asset class of collateral, if any, securing the funding; and liquidity characteristics of the counterparty. Weightings reflect risk of runs and attendant fire sales. *See* 12 CFR 217.406 and 80 FR 49082 (August 14, 2015).

[63] For example, the LCR rule includes cash inflows from certain maturing assets and the proposed NSFR rule would use the maturity profile of a banking organization's assets to determine its required stable funding amount.

assigning different weights to average amounts of secured funding depending on its collateral. These weights reflect the liquidity characteristics of the collateral and the extent to which the quality of such assets may mitigate fire sale risk. Revising the short-term wholesale funding indicator to permit certain assets to offset liabilities because the assets may be used to address cash outflows, as suggested by commenters, could understate financial stability and safety and soundness risk because such an approach assumes those assets are available to offset funding needs in stress conditions. Similarly, excluding a banking organization's reliance on certain types of short-term funding from the indicator may result in an underestimation of a banking organization's potential to contribute to systemic risk because such funding may be unavailable for use in a time of stress. Thus, the final rule does not exclude short-term borrowing from the Federal Home Loan Banks, which may be secured by a broad range of collateral, and the final rule treats such short-term borrowing the same as borrowing from other wholesale counterparties in order to identify risk. More generally, incorporating commenters' recommended exclusions and offsets would reduce the transparency of the weighted short-term wholesale funding indicator, contrary to the agencies' intention to provide a simplified measure to identify banking organizations with heightened risks. For these reasons, the final rule adopts the weighted short-term wholesale funding indicator without change.

Commenters also provided suggestions to reduce or eliminate inter-affiliate transactions from the measure of weighted-short term wholesale funding. Specifically, commenters provided suggestions to weight inter-affiliate transactions or net transactions with affiliates.

Including funding from affiliated sources provides an appropriate measure of the risks associated with a banking organization's general reliance on short-term wholesale funding. Banking organizations that generally rely on funding with a shorter contractual maturity from financial sector affiliates may present higher risks relative to those that generally rely on funding with a longer contractual term from outside of the financial sector. Based on the contractual term, the risks presented by ongoing reliance on short-term funding from affiliates may be similar to funding from non-affiliated sources. For the reasons discussed above, the final rule adopts the weighted short-term wholesale funding indicator as proposed.

C. Application of Standards Based on the Proposed Risk-Based Indicators

The proposed risk-based indicators would have determined the application of capital and liquidity requirements under Categories II, III, and IV. By taking into consideration the relative presence or absence of each risk-based indicator, the proposals would have provided a basis for assessing a banking organization's financial stability and safety and soundness risks for purposes of determining the applicability and stringency of these requirements.

Commenters criticized the methods by which the proposed risk-based indicators would determine the category of standards applicable to a banking organization. Certain commenters expressed concern that a banking organization could become subject to Category II or III standards without first being subject to Category IV standards, due to the disjunctive use of the size and other risk-based indicators under the proposals. One commenter suggested that the agencies should instead apply a category of standards based on a weighted average of the risk-based indicators. Another commenter suggested that application of Category II standards should be based on other or additional risk factors. Several commenters suggested that the application of standardized liquidity requirements should be based only on the levels of the weighted short-term wholesale funding indicator, and not based on the levels of any other risk-based indicator. One commenter criticized the proposals for not providing sufficient justification for the number of categories.

Because each indicator serves as a proxy for various types of risk, a high level in a single indicator warrants the application of more stringent standards to mitigate those risks and support the overall purposes of each category. The agencies therefore do not believe using a weighted average of a banking organization's levels in the risk-based indicators, or the methods that would require a banking organization to exceed multiple risk-based indicators, is appropriate to determine the applicable category of standards. The final rule therefore adopts the use of the risk-based indicators generally as proposed.

Certain commenters suggested that the agencies reduce requirements under the foreign bank proposal to account for the application of standards at the foreign banking organization parent. The final rule takes into account the standards that already apply to the foreign banking organization parent. Specifically, the final rule tailors the application of capital and liquidity requirements based, in part, on the size and complexity of a foreign banking organization's activities in the United States. Moreover, under the Board-only final rule, the standards applicable to foreign banking organizations with a more limited U.S. presence largely rely on compliance with comparable home-country standards applied at the consolidated foreign parent level. In this way, the final rule helps to mitigate the risk such banking organizations present to safety and soundness and U.S. financial stability, consistent with the overall objectives of the tailoring framework. Requiring foreign banking organizations to maintain financial resources in the jurisdictions in which they operate subsidiaries also reflects existing agreements reached by the BCBS and international regulatory practice.

D. Calibration of Thresholds and Indexing

The proposals would have employed fixed nominal thresholds to assign the categories of standards that apply to banking organizations. In particular, the proposals included total asset thresholds of $100 billion, $250 billion, and $700 billion, along with $75 billion thresholds for each of the other risk-based indicators. The foreign bank proposal also included a $50 billion weighted short-term wholesale funding threshold for U.S. and foreign banking organizations subject to Category IV standards.

Some commenters expressed concerns regarding the use of $75 billion thresholds for cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. In particular, these commenters stated that the $75 billion thresholds were poorly justified and requested additional information as to why the agencies chose these thresholds. A number of these commenters also supported the use of a higher threshold for these risk-based indicators. Other commenters urged the agencies to retain the discretion to adjust the thresholds on a case-by-case basis, such as in the case of a temporary excess driven by customer transactions or for certain transactions that would result in a sudden change in categorization.

The $75 billion thresholds are based on the degree of concentration of a particular risk indicator for each banking organization relative to total assets. That is, a threshold of $75 billion represents at least 30 percent and as much as 75 percent of total assets for banking organizations with between $100 billion and $250 billion in total assets.[64] Thus, for banking organizations that do not meet the size threshold for Category III standards, other risks represented by the risk-based indicators would be substantial, while banking organizations with $75 billion in cross-jurisdictional activity have a substantial international footprint. In addition, setting the thresholds at $75 billion ensures that banking organizations that account for the vast majority of the total amount of each risk-based indicator among banking organizations with $100 billion or more in total consolidated assets are subject to prudential standards that account for the associated risks of these risk-based indicators, which facilitates consistent treatment of these risks across banking organizations. The use of a single threshold also supports the overall simplicity of the framework. Moreover, a framework in which thresholds are regularly adjusted on a temporary and case-by-case basis would not support the objectives of predictability and transparency.

One commenter stated that the agencies should not use the $700 billion size threshold as the basis for applying Category II standards, arguing that the agencies had not provided sufficient justification for that threshold. However, as noted in the proposals, historical examples suggest that the distress or failure of a banking organization of this size would have systemic impacts. For example, during the 2008–2009 financial crisis, significant losses at Wachovia Corporation, which had $780 billion in total assets at the time of being acquired in distress, had a destabilizing effect on the financial system. The $700 billion size threshold under Category II addresses the substantial risks that can arise from the activities and potential distress of very large banking organizations that are not U.S. GSIBs. Commenters did not request additional explanation regarding the $100 billion and $250 billion total asset thresholds. As noted above, these size thresholds are consistent with those set forth in section 165 of the Dodd-Frank Act, as amended by section 401 of EGRRCPA.[65]

Several commenters requested that the agencies index certain of the proposed thresholds based on changes in various measures, such as growth in domestic banking assets, inflation, gross domestic product growth or other measures of economic growth, or share of the indicator held by the banking organization in comparison to the amount of the indicator held in the financial system. These commenters requested that the thresholds be automatically adjusted on an annual basis based on changes in the relevant index, by operation of a provision in the rule. Other commenters expressed concern that indexing can have pro-cyclical effects.

As commenters noted, the $100 billion and $250 billion size thresholds prescribed in the Dodd-Frank Act, as amended by EGRRCPA, are fixed by statute.[66] Indexing the other thresholds would add complexity, a degree of uncertainty, and potential discontinuity to the framework. The agencies acknowledge the thresholds should be reevaluated over time to ensure they appropriately reflect growth on a macroeconomic and industry-wide basis, as well as to continue to support the objectives of this rule. The agencies plan to accomplish this by periodically reviewing the thresholds and proposing changes through the notice and comment process, rather than including an automatic adjustment of thresholds based on indexing.[67]

E. The Risk-Based Categories

1. Category I

Under the domestic proposal, Category I standards would have applied to U.S. GSIBs, which are banking organizations that have a U.S. GSIB score of 130 or more under the scoring methodology. Category I standards would have included the most stringent standards relative to those imposed under the other categories, to reflect the heightened risks that banking organizations subject to Category I standards pose to U.S. financial stability. The requirements applicable to U.S. GSIBs would have remained largely unchanged from existing requirements.

The agencies did not receive comments regarding the criteria for application of Category I standards to U.S. GSIBs. Several commenters expressed concern regarding applying more stringent standards than Category II standards to foreign banking organizations, even if the risk profile of a foreign banking organization's U.S. operations were comparable to a U.S. GSIB.[68] The final rule adopts the scoping criteria for Category I, and the capital and liquidity standards that apply under this category as proposed. U.S. GSIBs have the potential to pose the greatest risks to U.S. financial stability due to their systemic risk profile and, accordingly, should be subject to the most stringent capital and liquidity standards. The treatment for U.S. GSIBs aligns with international efforts to address the financial stability risks posed by the largest, most interconnected financial institutions. In 2011, the BCBS adopted a framework to identify global systemically important banking organizations and evaluate their systemic importance.[69] This framework generally applies to the global consolidated parent organization, and does not apply separately to subsidiaries and operations in host jurisdictions. Consistent with this approach, U.S. intermediate holding companies of foreign banking organizations are not subject to Category I standards under the final rule. The agencies will continue to monitor the systemic risk profiles of foreign banking organizations' U.S. operations, and consider whether application of more stringent requirements is appropriate to address any increases in their size, complexity or overall systemic risk profile.

2. Category II

The proposals would have applied Category II standards to banking organizations with $700 billion in total assets or $100 billion or more in total assets and $75 billion or more in cross-

[64] The $100 billion and $250 billion size thresholds are consistent with those set forth in section 165 of the Dodd-Frank Act, as amended by 401 of EGRRCPA. Section 165 requires the application of enhanced prudential standards to bank holding companies and foreign banking organizations with $250 billion or more in total consolidated assets. Section 165 authorizes the Board to apply enhanced prudential standards to such banking organizations with assets between $100 billion and $250 billion, taking into consideration the banking organization's capital structure, riskiness, complexity, financial activities (including those of subsidiaries), size, and any other risk-related factors the Board deems appropriate. 12 U.S.C. 5365.

[65] *Id.*

[66] Section 165 of the Dodd-Frank Act does provide the Board with discretion to establish a minimum asset threshold above the statutory thresholds for some, but not all, enhanced prudential standards. However, the Board may only utilize this discretion ''pursuant to a recommendation by the Financial Stability Oversight Council in accordance with section 115 of the Dodd-Frank Act.'' This authority is not available for stress testing and risk committee requirements. 12 U.S.C. 5365(a)(2)(B).

[67] Similarly, the Board-only final rule does not include an automatic indexing function.

[68] As noted above, the foreign bank proposal would not have applied Category I standards to the U.S. operations of foreign banking organizations because the Board's GSIB surcharge rule would not identify a foreign banking organization or a U.S. intermediate holding company as a U.S. GSIB. The foreign bank proposal sought comment on the advantages and disadvantages of applying enhanced prudential standards that are more stringent than Category II standards to the U.S. operations of foreign banking organizations with a comparable risk profile to U.S. GSIBs.

[69] *See* BCBS, ''Global systemically important banks: Assessment methodology and the additional loss absorbency requirement'' (November 4, 2011).

jurisdictional activity. Like Category I standards, Category II capital and liquidity standards are generally based on standards that reflect agreements reached by the BCBS. The proposals also sought comment on whether Category II standards should apply based on a banking organization's weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure, using a higher threshold than the $75 billion threshold that would apply for Category III standards.

Some commenters argued that cross-jurisdictional activity should be an indicator for Category III standards rather than Category II standards. Another commenter expressed concern with expanding the criteria for Category II standards to include any of the other risk-based indicators used for purposes of Category III standards. Some commenters also argued that the proposed Category II standards were too stringent relative to the risks indicated by a high level of cross-jurisdictional activity or very large size. Other commenters argued that application of Category II standards to foreign banking organizations was unnecessary because these banking organizations are already subject to BCBS-based standards on a global, consolidated basis by their home-country regulators. Another commenter requested that the agencies make clearer distinctions between Category I and Category II standards.

As discussed above, banking organizations that engage in significant cross-jurisdictional activity present complexities that support the application of more stringent standards relative to those that would apply under Category III. In addition, application of consistent prudential standards across jurisdictions to banking organizations with significant size or cross-jurisdictional activity helps to promote competitive equity among U.S. banking organizations and their foreign peers, while applying standards that appropriately reflect the risk profiles of banking organizations that meet the thresholds for Category III standards. As noted above, this approach is consistent with international regulatory practice.

Accordingly, and consistent with the proposal, the final rule applies Category II standards to U.S. banking organizations and U.S. intermediate holding companies with $700 billion in total consolidated assets or cross-jurisdictional activity of $75 billion or more.

3. Category III

Under the proposals, Category III standards would have applied to banking organizations that are not subject to Category I or II standards and that have total assets of $250 billion or more. They also would have applied to banking organizations with $100 billion or more in total assets and $75 billion or more in nonbank assets, weighted short-term wholesale funding, or off-balance-sheet exposure.

A number of commenters supported the proposed scoping criteria for Category III, as well as the standards that would have applied under this category. Several other commenters requested certain changes to the specific thresholds and risk-based indicators used to determine which banking organizations would have been subject to Category III standards, as well as the capital and liquidity standards that would have applied under this category. Comments regarding the capital and liquidity requirements that would have applied under Category III are discussed in section V.B of this Supplementary Information.

The final rule generally adopts the scoping criteria for Category III, and the capital and liquidity standards that apply under this Category as proposed.

4. Category IV

Under the proposals, Category IV standards would have applied to banking organizations with $100 billion or more in total assets that do not meet the thresholds for any other category. A number of commenters argued that no heightened prudential standards should apply to banking organizations that meet the criteria for Category IV standards because such banking organizations are not as large or complex as banking organizations that would be subject to more stringent categories of standards under the proposals. Alternatively, these commenters suggested that the threshold for application of Category IV standards should be raised from $100 billion to $250 billion in total assets.[70] In contrast, one commenter argued that the agencies should not reduce the requirements applicable to banking organizations that would be subject to Category IV until current requirements have been in effect for a full business cycle.

The final rule includes Category IV because banking organizations subject to this category of standards generally have greater scale and operational and managerial complexity relative to smaller banking organizations and, as a result, present heightened safety and soundness risks. In addition, the failure of one or more banking organizations subject to Category IV standards could have a more significant negative effect on economic growth and employment relative to the failure or distress of smaller banking organizations. The banking organizations subject to Category IV standards have lower risk profiles than those subject to Category I, II, or III standards. Banking organizations subject to these standards therefore generally will be subject to capital and liquidity requirements that are similar to those applicable to banking organizations with less than $100 billion in assets. To the extent a banking organization subject to Category IV standards has elevated levels of short-term wholesale funding, it will be subject to a reduced LCR requirement. The agencies believe this approach strikes the right balance in applying standards that are tailored to the risk profiles of banking organizations subject to Category IV standards.

F. Treatment of Depository Institution Subsidiaries

The proposals generally would have applied the same category of standards to U.S. depository institution holding companies and their depository institution subsidiaries. As discussed in section VI.B of this **SUPPLEMENTARY INFORMATION**, standardized liquidity requirements would have applied only to depository institutions with $10 billion or more in total consolidated assets that are subsidiaries of banking organizations subject to Category I, II, or III standards.

Commenters on the domestic proposal generally supported the application of consistent requirements for U.S. depository institution holding companies and their depository institution subsidiaries. This treatment aligns with the agencies' longstanding policy of applying similar standards to holding companies and their depository institution subsidiaries. For example, since 2007 the agencies generally have required depository institutions to apply the advanced approaches capital requirements if their parent holding company is identified as an advanced approaches banking organization.

Accordingly, the final rule maintains the application of regulatory capital and LCR requirements to depository institution subsidiaries as proposed.

[70] Commenters also argued that the Board had not sufficiently justified the application of enhanced prudential standards to banking organizations subject to Category IV standards, in the manner required under EGRRCPA. These comments are addressed in section VI.D of the Supplementary Information in the Board-only final rule.

G. Specific Aspects of the Foreign Bank Proposal

1. Liquidity Standards Based on Combined U.S. Operations

The foreign bank proposal would have determined the category of liquidity standards applicable to a foreign banking organization with respect to its U.S. intermediate holding company based on the risk profile of its combined U.S. operations, in recognition of the agencies' observation that liquidity needs may arise suddenly and manifest across all segments of a foreign banking organization's U.S. operations.[71]

Some commenters supported the proposal to calibrate liquidity standards applicable to foreign banking organizations based on the risk profile of their combined U.S. operations. Most commenters objected to this aspect of the foreign bank proposal, however, and argued that the agencies instead should determine the applicability and calibration of liquidity standards based on the risk profile of a foreign banking organization's U.S. intermediate holding company. These commenters argued the U.S. intermediate holding company is a separate legal entity from the foreign banking organization's U.S. branches and agencies, with separate activities and risks. Commenters also asserted that the proposed approach does not recognize the potential capacity of the parent foreign banking organization to serve as a source of support for its U.S. operations. Other commenters asserted that certain requirements, such as capital planning requirements, stress testing, and internal liquidity stress testing-based buffer requirements could help to insulate a U.S. intermediate holding company from risks at other parts of the foreign banking organization. Some commenters also argued the proposed approach would have resulted in a framework that is overly complex.

In addition, commenters stated that the proposed approach could create a competitive disadvantage for U.S. intermediate holding companies relative to U.S. banking organizations that the commenters viewed as similarly situated, because the foreign bank proposal would have considered risks and activities outside of the consolidated U.S. intermediate holding company to determine the applicability and calibration of standardized liquidity requirements. These commenters stated that such an approach is inconsistent with the principle of national treatment and equality of competitive opportunity. Some commenters also asserted that the proposed approach would have inappropriately required a foreign banking organization to hold liquid assets at its U.S. intermediate holding company to meet outflows at the foreign banking organization's U.S. branches and require HQLA of a U.S. intermediate holding company to be controlled by the international bank rather than the U.S. intermediate holding company. One commenter suggested that the agencies should provide data in support of assertions that requirements based on the combined U.S. operations would reduce the incentives for a foreign banking organization to migrate risky activities to the branches and agencies.

The final rule determines the applicability of liquidity standards with respect to a U.S. intermediate holding company based on the risk profile of the U.S. intermediate holding company, rather than the combined U.S. operations of the foreign banking organization. Specifically, the final rule applies a full LCR or reduced LCR requirement to a U.S. intermediate holding company under the risk-based categories based on measures of the U.S. intermediate holding company's size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. The agencies believe this approach helps to enhance the focus and efficiency of standardized liquidity requirements relative to the proposal, because liquidity requirements that apply to a U.S. intermediate holding company will be based on the U.S. intermediate holding company's own risk profile. As discussed in the foreign bank proposal and in section VI.B.10 of this **SUPPLEMENTARY INFORMATION**, the Board may develop and propose a standardized liquidity requirement for the U.S. branches and agencies of a foreign banking organization. As part of that process, the agencies intend to further consider how to most appropriately address concerns regarding the liquidity risk profiles of foreign banking organizations' U.S. operations, including through the use of existing supervisory processes, other relevant regulations and international coordination, as well as developments in the U.S. activities and liquidity risk-management practices of foreign banking organizations.

2. The Treatment of Inter-Affiliate Transactions

Except for cross-jurisdictional activity, which would have excluded liabilities and certain collateralized claims on non-U.S. affiliates, the proposed risk-based indicators would have included transactions between a foreign banking organization's combined U.S. operations and non-U.S. affiliates. Similarly, and as noted above, except for cross-jurisdictional activity, a U.S. intermediate holding company would have included transactions with affiliates outside the U.S. intermediate holding company when reporting its risk-based indicators.

Most commenters on the foreign bank proposal supported the proposed exclusion of certain inter-affiliate transactions in the cross-jurisdictional activity indicator, and argued further that all risk-based indicators should exclude transactions with affiliates. These commenters asserted that including inter-affiliate transactions disadvantaged foreign banking organizations relative to U.S. peers and argued that the rationale for excluding certain inter-affiliate claims from the cross-jurisdictional activity measure applied equally to all other risk-based indicators. A number of commenters argued that including inter-affiliate transactions would overstate the risks to a foreign banking organization's U.S. operations or U.S. intermediate holding company because inter-affiliate transactions may be used to manage risks of the foreign bank's global operations. Similarly, some commenters asserted that the inclusion of inter-affiliate transactions would be inconsistent with the risks that the risk-based indicators are intended to capture. Other commenters argued that any risks associated with inter-affiliate transactions would be appropriately managed through the supervisory process and existing requirements, and expressed concern that including inter-affiliate transactions could encourage ring fencing in other jurisdictions. Some commenters suggested that, if inter-affiliate transactions are not excluded entirely, the agencies should assign inter-affiliate transactions a weight at no more than 50 percent. By contrast, one commenter argued that inter-affiliate transactions should be included in the risk-based indicators, arguing that the purpose of the Board's U.S. intermediate holding company framework is that resources located outside the organization may not be reliably available during periods of financial stress.

[71] Combined U.S. operations consist of the foreign banking organizations U.S. subsidiaries, including any intermediate holding company, and U.S. branch and agency operations.

Tailoring standards based on the risk profile of the U.S. intermediate holding company, or combined U.S. operations of a foreign banking organization as under the Board-only final rule, requires measurement of risk-based indicators at a level below that of the global consolidated foreign banking organization. As a result, the calculation of the risk-based indicators must distinguish between a foreign banking organization's U.S. operations or U.S. intermediate holding company, as applicable, and affiliates outside of the United States, including by providing a treatment for inter-affiliate transactions that would otherwise be eliminated in consolidation at the global parent. Including inter-affiliate transactions in the calculation of risk-based indicators would mirror, as closely as possible, the risk profile of a U.S. intermediate holding company or combined U.S. operations if each were consolidated in the United States.

Including inter-affiliate transactions in the calculation of risk-based indicators is consistent with the agencies' approach to measuring and applying standards at a sub-consolidated level in other contexts. For example, existing thresholds and requirements in the Board's Regulation YY are based on measures of a foreign banking organization's size in the United States that includes inter-affiliate transactions.[72] Similarly, the total consolidated assets of a U.S. intermediate holding company or depository institution include transactions with affiliates outside of the consolidated U.S. intermediate holding company.[73] Capital and liquidity requirements applied to U.S. intermediate holding companies and depository institutions generally do not distinguish between exposures with affiliates and third parties.[74] For example, the LCR rule assigns inflow rates to funding according to the characteristics of the source of funding, but generally does not distinguish between funding provided by an affiliate or third party. Excluding inter-affiliate transactions from off-balance sheet exposure, size, and short-term wholesale funding indicators would be inconsistent with the treatment of these exposures under the capital and liquidity rules.

In some cases, the exclusion of inter-affiliate transactions would not align with the full scope of risks intended to be measured by an indicator. Inter-affiliate positions can represent sources of risk—for example, claims on the resources of a foreign banking organization's U.S. operations. As another example, short-term wholesale funding provided to a U.S. intermediate holding company by its parent foreign bank represents funding that the parent could withdraw quickly, which could leave fewer assets available for U.S. counterparties of the U.S. intermediate holding company.[75] By including inter-affiliate transactions in weighted short-term wholesale funding while excluding these positions from cross-jurisdictional liabilities, the framework provides a more risk-sensitive measure of funding risk from foreign affiliates as it takes into consideration the maturity and other risk characteristics of the funding for purposes of the weighted short-term wholesale funding measure. Additionally, because long-term affiliate funding (such as instruments used to meet total loss absorbing capacity requirements) would not be captured in weighted short-term wholesale funding, the indicator is designed to avoid discouraging a foreign parent from providing support to its U.S. operations.

Similarly, with respect to off-balance sheet exposure, an exclusion for inter-affiliate transactions would not account for the risks associated with any funding commitments provided by the U.S. operations of a foreign banking organization to non-U.S. affiliates. Accordingly, the agencies believe it would be inappropriate to exclude inter-affiliate transactions from the measure of off-balance sheet exposure.

For purposes of the nonbank assets indicator, the proposals would have treated inter-affiliate transactions similarly for foreign and domestic banking organizations. For foreign banking organizations, the proposals would have measured nonbank assets as the sum of assets in consolidated U.S. nonbank subsidiaries together with investments in unconsolidated U.S. nonbank companies that are controlled by the foreign banking organization.[76] Both foreign and domestic banking organizations would have included in nonbank assets inter-affiliate transactions between the nonbank company and other parts of the organization.[77]

Accordingly, for purposes of the risk-based indicators, the final rule adopts the treatment of inter-affiliate transactions as proposed.

H. Determination of Applicable Category of Standards

Under the proposals, a banking organization would have determined its category of standards based on the average levels of each indicator at the top-tier banking organization, reported over the preceding four calendar quarters. If the banking organization had not reported risk-based indicator levels for each of the preceding four calendar quarters, the category would have been based on the risk-based indicator level for the quarter, or average levels over the quarters, that the banking organization has reported.

For a change to a more stringent category (for example, from Category IV to Category III), the change would have been based on an increase in the average value of its risk-based indicators over the prior four quarters of a calendar year. In contrast, for a banking organization to change to a less stringent category (for example, Category II to Category III), the banking organization

---

72 Combined U.S. assets are calculated as the average of the total combined assets of U.S. operations for the four most recent consecutive quarters as reported by the foreign banking organization on the Capital and Asset Report for Foreign Banking Organizations Form (FR Y–7Q), or, if the foreign banking organization has not reported this information on the FR Y–7Q for each of the four most recent consecutive quarters, the average of the combined U.S. assets for the most recent quarter or consecutive quarters as reported on the FR Y–7Q. Combined U.S. assets are measured on the as-of date of the most recent FR Y–7Q used in the calculation of the average. *See e.g.* 12 CFR 252.15(b)(1).

73 *See* Call Report instructions, FR Y–9C.

74 For example, the LCR rule differentiates unsecured wholesale funding provided by financial sector entities and by non-financial sector entities, but does not differentiate between financial sector entities that are affiliates and those that are not affiliates. *See* 12 CFR 50.32(h) (OCC), 12 CFR 249.32(h) (Board), 12 CFR 329.32(h) (FDIC). The LCR rule differentiates between affiliates and third parties under limited circumstances. *See e.g.,* 12 CFR 50.32(g)(7) (OCC), 12 CFR 249.32(g)(7) (Board), 12 CFR 329.32(g)(7) (FDIC).

would have been required to report risk-based indicator levels below any applicable threshold for the more stringent category in each of the four preceding calendar quarters. Changes in a banking organization's requirements that result from a change in category generally would have taken effect on the first day of the second quarter following the change in the banking organization's category.

The agencies received several comments on the process for determining the applicable category of standards under the proposal and on the amount of time provided to comply with the requirements of a new category. In particular, several commenters suggested providing banking organizations with at least 18 months to comply with a more stringent category of standards. Several commenters recommended that the agencies retain discretion to address a temporary increase in an activity, such as to help a banking organization avoid a sudden change in the categorization of applicable standards. These commenters suggested that any adjustments of thresholds could consider both qualitative information and supervisory judgment. Commenters also requested that the agencies clarify the calculation of certain risk-based indicators. For example, by providing references to specific line items in the relevant reporting forms. One commenter also suggested that the agencies revise the reporting forms used to report risk-based indicator levels so that they apply to a depository institution that is not part of a bank or savings and loan holding company structure.

The final rule maintains the process for determining the category of standards applicable to a banking organization as proposed. To move into a category of standards or to determine the category of standards that would apply for the first time, a banking organization would rely on an average of the previous four quarters or, if the banking organization has not reported in each of the prior four quarters, the category would be based on the risk-based indicator level for the quarter, or average levels over the quarter or quarters that the banking organization has reported. Use of a four-quarter average would capture significant changes in a banking organization's risk profile, rather than temporary fluctuations, while maintaining incentives for a banking organization to reduce its risk profile relative to a longer period of measurement.

To move to a less stringent category of standards, a banking organization must report risk-based indicator levels below any applicable threshold for the more stringent category in each of the four preceding calendar quarters. This approach is consistent with the existing applicability and cessation requirements of the Board's enhanced prudential standards rule.[78]

The final rule does not provide for discretionary adjustments of thresholds on a case-by-case basis, because such an approach would diminish the transparency and predictability of the framework and could reduce incentives for banking organizations to engage in long-term management of their risks.[79]

Each risk-based indicator will generally be calculated in accordance with the instructions to the FR Y–15, FR Y–9LP, FR Y–7Q, or FR Y–9C, as applicable. The risk-based indicators must be reported for the top-tier banking organization on a quarterly basis.[80] U.S. banking organizations currently report the information necessary to determine their applicable category of standards based on a four-quarter average.[81] In response to concerns raised by commenters, the Board also is revising its reporting forms to specify the line items used in determining the risk-based indicators.[82] With respect to the commenters' concern regarding the applicability of these reporting forms to depository institutions that are not a consolidated subsidiary of a U.S. depository institution holding company, the agencies note that no such depository institution would be subject to the final rule based on first quarter 2019 data. The agencies will monitor the implementation of the final rule and make any such adjustments to reporting forms, as needed, to require such a depository institution to report risk-based indicator levels.

Some commenters asserted that banking organizations could adjust their exposures to avoid thresholds, including by making temporary adjustments to lower risk-based indicator levels reported. The agencies will continue to monitor risk-based indicator amounts reported and information collected through supervisory processes to ensure that the risk-based indicators are reflective of a banking organization's overall risk profile, and would consider changes to reporting forms, as needed. In particular, the agencies will monitor weighted short-term wholesale funding levels reported at quarter-end, relative to levels observed during the reporting period.

VI. Capital and Liquidity Requirements for Large U.S. and Foreign Banking Organizations

A. Capital Requirements That Apply Under Each Category

As discussed below, the final rule adopts the capital requirements applicable to large banking organizations under the risk-based category framework as proposed. Under the final rule, Category I capital requirements apply to U.S. GSIBs, whereas capital requirements under Categories II through IV apply to large U.S. banking organizations and U.S. intermediate holding companies based on measures of a top-tier banking organization's size, cross-jurisdictional activity, weighted short-term wholesale funding, nonbank assets, and off-balance sheet exposure. Consistent with the principle of national treatment and equality of competitive opportunity, as well as agreements reached by the BCBS,[83] the capital requirements applicable to U.S. intermediate holding companies under this final rule are generally consistent with those applicable to U.S. bank holding companies and savings and loan holding companies of a similar size and risk profile.

1. Category I Capital Requirements

The domestic proposal would not have changed the capital requirements applicable to U.S. GSIBs and their depository institution subsidiaries. Therefore, such banking organizations would have remained subject to the most stringent capital requirements, including requirements based on

[78] *See e.g.,* 12 CFR 252.43.

[79] The agencies retain general authority under their capital and liquidity rules to increase or adjust requirements as necessary on a case-by-case basis. *See* 12 CFR 217.1(d) and 249.2 (Board); 12 CFR 324.1(d) and 329.2 (FDIC); 12 CFR 3.1(d) and 50.2 (OCC). The discussion of transitions specific to the LCR rule are addressed below in section VI of this **SUPPLEMENTARY INFORMATION**.

[80] A foreign banking organization must also report risk-based indicators with respect to its combined U.S. operations as applicable under the final rule.

[81] The Board-only final rule includes information on changes to Federal Reserve reporting forms and discussion of the specific line items that will be used to calculate risk-based indicators. Although U.S. intermediate holding companies currently report the FR Y–15, the revised form would reflect the cross-jurisdictional activity indicator adopted in the final rule.

[82] Section XV of the Supplementary Information in the Board-only final rule discusses changes to reporting requirements, and identifies the specific line items that will be used to calculate risk-based indicators. Although U.S. intermediate holding companies currently report the FR Y–15, the revised form reflects the cross-jurisdictional activity indicator adopted in the final rule.

[83] *See e.g.,* BCBS, "International Convergence of Capital Measurement and Capital Standards," Sec. 781 (June 2006).

standards that reflect agreements reached by the BCBS.

One commenter supported the proposal to maintain the most stringent capital requirements for U.S. GSIBs under Category I. Some commenters specifically supported retaining the requirement to recognize elements of AOCI in regulatory capital, and expressed the view that it serves as an early warning signal for credit deterioration. However, a few other commenters requested that the agencies permit all banking organizations to make an election to opt out of this requirement.

Following the financial crisis, the agencies adopted heightened capital requirements for U.S. GSIBs to support the resiliency of these banking organizations and reduce risks to U.S. financial stability. These requirements are tailored to the systemic risk profile of U.S. GSIBs, and have contributed to the significant improvements in the capital positions and risk-management practices of these banking organizations since the financial crisis. The requirement to recognize elements of AOCI in regulatory capital, in particular, has helped to improve the transparency of regulatory capital ratios, as it better reflects banking organizations' actual risk at a specific point in time. The agencies previously have observed that AOCI is an important indicator that market participants use to evaluate the capital strength of a banking organization, and thus is particularly important for the largest, most systemically significant banking organizations.

The final rule maintains the capital requirements applicable to U.S. GSIBs and their depository institution subsidiaries. These requirements generally reflect agreements reached by the BCBS. U.S. GSIBs and their depository institution subsidiaries must calculate risk-based capital ratios using both the advanced approaches and the standardized approach and are subject to the U.S. leverage ratio. Such banking organizations are also subject to the requirement to recognize elements of AOCI in regulatory capital; the requirement to expand the capital conservation buffer by the amount of the countercyclical capital buffer, if applicable; and enhanced supplementary leverage ratio standards. In addition, U.S. GSIBs are subject to the GSIB surcharge. Application of these Category I capital requirements will continue to strengthen the capital positions of U.S. GSIBs and reduce risks to financial stability.

2. Category II Capital Requirements

The proposals generally would have maintained the capital requirements applicable to banking organizations of a very large size or that engage in significant cross-jurisdictional activity under Category II. Similar to Category I, capital requirements under Category II would have been based on standards that reflect agreements reached by the BCBS and included the requirement to recognize elements of AOCI in regulatory capital and to expand the capital conservation buffer by the amount of the countercyclical capital buffer, if applicable. Banking organizations subject to Category II capital requirements also would have been required to comply with the advanced approaches capital requirements, generally applicable risk-based capital requirements, and the supplementary leverage ratio. Consistent with the prior treatment of U.S. intermediate holding companies with $250 billion or more in total consolidated assets or $10 billion or more in on-balance sheet foreign exposure, U.S. intermediate holding companies subject to Category II capital requirements would not have been required to calculate risk-based capital requirements using the advanced approaches under the capital rule. These banking organizations would instead have used the generally applicable capital requirements for calculating risk-weighted assets due to the compliance burden of applying the advanced approaches in both the U.S. and the home-country jurisdiction.[84]

Several commenters argued that capital requirements under Category II would not be appropriately aligned to the scoping criteria for this category. In particular, some commenters asserted that the cross-jurisdictional activity indicator is designed to identify activities that could give rise to liquidity risks in foreign jurisdictions and that would not need to be supported by more stringent capital requirements. Therefore, commenters suggested a banking organization scoped into Category II as a result of its cross-jurisdictional activity should be subject to the same capital requirements that would apply to banking organizations under Category III. In particular, commenters opposed the application of advanced approaches capital requirements and the requirement to recognize elements of AOCI in regulatory capital. Some commenters argued that the proposals did not establish the purpose of the requirement to reflect elements of AOCI in regulatory capital for banking organizations with significant cross-jurisdictional activity.

Relative to banking organizations subject to Category III capital requirements, banking organizations of a very large size or with significant cross-jurisdictional activity pose heightened risks to U.S. financial stability and present increased complexity due to their operational scale or global presence. The heightened capital requirements under Category II, including the requirement to recognize elements of AOCI in regulatory capital, serve to address these risks by supporting the transparency of the capital strength of these banking organizations, and promote consistency in the capital regulations across all jurisdictions in which they operate. In view of the operational and managerial sophistication required for a banking organization of a very large size or global scale, banking organizations subject to Category II capital standards are appropriately positioned to manage the interest rate risk and regulatory capital volatility that may result from this requirement.

More generally, with respect to the agencies' regulatory capital requirements, the BCBS recently completed revisions to its capital standards, including the methodologies for credit risk, operational risk, and market risk. The agencies are considering how most appropriately to implement these standards in the United States, including potentially replacing the advanced approaches with risk-based capital requirements based on the revised Basel standardized approaches for credit risk and operational risk. Any such changes to applicable risk-based capital requirements would be subject to notice and comment through a future rulemaking process.

Some commenters argued that U.S. intermediate holding companies subject to Category II capital requirements should not be subject to the countercyclical capital buffer or the supplementary leverage ratio.[85]

---

[84] After adoption of the enhanced prudential standards rule, and its general exemption for U.S. intermediate holding companies from calculating risk-weighted assets under the advanced approaches, depository institution subsidiaries of U.S. intermediate holding companies were similarly exempted by order from calculating risk-weighted assets under the advanced approaches.

[85] These commenters also stated that U.S. intermediate holding companies subject to Category III capital requirements should not be subject to the countercyclical capital buffer and supplementary leverage ratio. For the reasons stated above, and in the following section regarding Category III capital requirements, the final rule maintains these requirements as proposed.

Commenters argued that application of these requirements to foreign banking organizations on both a global consolidated basis and at the local subsidiary level in a host jurisdiction could lead to fragmentation of capital.

The countercyclical capital buffer is an important element of the capital framework that aims to enhance the resilience of the banking system and reduce systemic vulnerabilities. The benefits from additional resiliency created by this requirement are more pronounced when it is applied to all banking organizations of a large size or global scale because they are interconnected with other market participants. Further, application of the U.S. countercyclical capital buffer to all such banking organizations with large U.S. operations adds to the desired countercyclical effect relative to incomplete activation of the buffer across comparable banking organizations. Application of the supplementary leverage ratio to U.S. intermediate holding companies subject to Category II capital standards also supports the resilience of these banking organizations and promotes consistency in the capital requirements across all jurisdictions in which they operate. As noted above, aligning the capital requirements for U.S. intermediate holding companies formed by foreign banking organizations and U.S. bank holding companies is consistent with longstanding international capital agreements that provide flexibility to host jurisdictions to establish capital requirements on a national treatment basis for local subsidiaries of foreign banking organizations. The overall consistency of the capital requirements under Category II with BCBS capital standards acts to mitigate concerns regarding capital fragmentation.

The failure or distress of banking organizations subject to Category II requirements could impose significant costs on the U.S. financial system and economy, although they generally do not present the same degree of risk as U.S. GSIBs. The application of consistent prudential standards across jurisdictions to banking organizations with significant size or cross-jurisdictional activity helps to promote competitive equity among U.S. banking organizations and their foreign peers and competitors, and to reduce opportunities for regulatory arbitrage, while applying standards that appropriately reflect the risk profiles of banking organizations in this category. Thus, the agencies are finalizing Category II capital requirements as proposed.

3. Category III Capital Requirements

Under the proposals, Category III capital requirements would have included the generally applicable risk-based capital requirements, supplementary leverage ratio, and the countercyclical capital buffer. The advanced approaches risk-based capital requirements would not have applied under Category III, and banking organizations subject to this category would have been permitted to make an election to opt out of the requirement to recognize elements of AOCI in regulatory capital. The proposals sought comment on various elements of Category III capital requirements, including the advantages and disadvantages of retaining the supplementary leverage ratio and countercyclical capital buffer, and the optional recognition of AOCI in regulatory capital.

Some commenters supported the application of the supplementary leverage ratio and countercyclical capital buffer to banking organizations subject to Category III capital requirements. Commenters asserted that the supplementary leverage ratio is a critical leverage measure that offers significant benefits to financial stability relative to risk-based capital measures, and that it is particularly important for banking organizations subject to Category III to maintain tier 1 capital for on- and off-balance sheet exposures because of their risk profile. In addition, some commenters asserted that the countercyclical capital buffer is a macro-prudential tool that supports the capital strength of the banking system more broadly, and noted that the consequence of not applying it to banking organizations subject to Category III would be to remove a substantial amount of assets from the potential activation of the buffer. Commenters added that retaining these requirements would not increase the complexity of the capital rule, as they currently apply to certain banking organizations that would be subject to Category III capital requirements.

In view of the scale at which they provide financial intermediation in the United States, banking organizations subject to Category III have a footprint substantial enough to merit an expansion of their regulatory capital base through application of the countercyclical capital buffer. These banking organizations also may have elevated levels of off-balance sheet exposure that is not accounted for in the U.S. leverage ratio. The supplementary leverage ratio helps to constrain the build-up of this exposure and mitigate any attendant risk to the financial stability and safety and soundness of these banking organizations. More broadly, the countercyclical capital buffer and supplementary leverage ratio are important elements of the post-crisis framework that support the agencies' objective to establish capital and other prudential requirements at a level that not only promotes resilience at a banking organization and protects financial stability, but also maximizes long-term through-the-cycle credit availability and economic growth. In addition, as noted above, application of these requirements to U.S. intermediate holding companies is consistent with international practice.

Consistent with the proposals, Category III capital requirements under the final rule include generally applicable risk-based capital requirements, the U.S. leverage ratio, and for the reasons described above, the supplementary leverage ratio and the countercyclical capital buffer. The final rule clarifies that the public disclosure requirements related to the supplementary leverage ratio also apply under Category III. Banking organizations subject to Category III requirements are not required to apply advanced approaches capital requirements. The models for applying these requirements are costly to build and maintain, and the agencies do not expect that removal of these requirements would materially change the amount of capital that these banking organizations would be required to hold. Relative to capital requirements under the advanced approaches, the standardized approach currently represents the binding risk-based capital constraint for the current population of banking organizations that are estimated to be subject to Category III capital requirements.

In addition, the proposals would have removed the mandatory application of the requirement to recognize elements of AOCI in regulatory capital for certain banking organizations subject to Category III capital requirements. Such banking organizations subject to this requirement currently would have been provided an opportunity to make a one-time opt-out election in the first regulatory report filed after the effective date of the final rule. A banking organization that is currently subject to this requirement and that does not make such an opt-out election would have continued to include all AOCI components in regulatory capital, except accumulated net gains and losses on cash flow hedges related to items that are not recognized at fair value.

Some commenters objected to the proposed regulatory capital treatment of AOCI under Category III. Commenters argued that mandatory application of the requirement to recognize elements of AOCI in regulatory capital would support investor confidence in banking organizations during stress, when gains and losses on securities holdings can result in significant volatility in regulatory capital levels. Commenters added that the agencies did not provide sufficient justification for allowing banking organizations subject to Category III capital standards to make an election to opt out of the requirement to recognize elements of AOCI in regulatory capital. In contrast, other commenters supported this aspect of the proposal.

Recognizing elements of AOCI in regulatory capital could introduce substantial volatility to a banking organization's regulatory capital levels, particularly during times of stress, and present significant challenges to asset-liability and capital management. Generally, the agencies' view has been that this volatility is justified for the largest, most internationally active banking organizations in order to provide a transparent, comparable measure of their capital. However, relative to banking organizations subject to Category I and Category II capital requirements, banking organizations subject to Category III present different risk profiles. Further, several of the banking organizations that would be subject to Category III or Category IV capital requirements currently are not subject to the mandatory recognition of AOCI in regulatory capital, and the agencies do not believe that the benefits mandatory recognition would provide to market participants sufficiently outweigh the associated burden and compliance costs. Therefore, consistent with the proposals, the final rule provides banking organizations subject to Category III capital requirements an opportunity to make a one-time election to opt out of the requirement to recognize elements of AOCI in regulatory capital.[86]

In July 2019, the agencies adopted the capital simplifications rule.[87] The capital simplifications rule established simpler capital requirements for mortgage servicing assets, certain deferred tax assets arising from temporary differences, and investments in the capital of unconsolidated financial institutions relative to those that previously applied to non-advanced approaches banking organizations. The capital simplifications rule also adopted a simplified treatment for the amount of capital issued by a consolidated subsidiary and held by third parties (sometimes referred to as a minority interest) that is includable in regulatory capital. This final rule extends the applicability of the capital simplifications rule to all banking organizations subject to Category III capital requirements.

The agencies separately have proposed to adopt the standardized approach for counterparty credit risk for derivatives exposures (SA–CCR) and to require advanced approaches banking organizations (banking organizations subject to Category I or II standards under this final rule) to use SA–CCR for calculating their risk-based capital ratios and a modified version of SA–CCR for calculating total leverage exposure under the supplementary leverage ratio. If that proposed approach were to be adopted, the agencies would allow a Category III banking organization to elect to use SA–CCR for calculating derivatives exposure in connection with its risk-based capital ratios, consistent with the SA–CCR proposal. Furthermore, the agencies intend to allow a banking organization subject to Category III standards to elect to use SA–CCR or continue to use the current exposure method for calculating its total leverage exposure for purposes of its the supplementary leverage ratio.[88]

4. Category IV Capital Requirements

Under the proposals, Category IV capital requirements would have included the generally applicable risk-based capital requirements and the U.S. leverage ratio. The proposals would not have applied the countercyclical capital buffer and the supplementary leverage ratio to Category IV banking organizations. In this manner, the requirements applicable to banking organizations subject to Category IV capital requirements would maintain the risk sensitivity of the current capital regime and resiliency of these banking organizations' capital positions, and would recognize that these banking organizations, while large, have lower risk-based indicator levels relative to their larger peers, as set forth in the proposals. As a result, and as noted above, banking organizations subject to Category IV capital requirements would have been subject to the same generally applicable risk-based and leverage capital requirements as banking organizations with less than $100 billion in total consolidated assets.

The agencies did not receive any comments specific to the capital requirements that would apply to banking organizations subject to Category IV standards. Similar to certain aspects of the current capital requirements, the final rule allows banking organizations to choose to apply the more stringent requirements of another category (*e.g.,* a banking organization subject to Category III standards could choose to comply with the more stringent Category II standards to minimize compliance costs across multiple jurisdictions).

5. Capital Requirements Transitions

Under the final rule, a banking organization that changes from one category of applicable standards to another category must generally comply with the new requirements no later than on the first day of the second quarter following the change in category. Transition provisions provided for certain requirements, such as increases to the GSIB surcharge and the parallel run process for internal models, continue to apply.

In addition, the agencies are amending the cessation provisions for calculating risk-based capital requirements under the advanced approaches. Previously, a banking organization that was required to calculate its risk-based capital ratios using both the advanced approaches and standardized approaches would have been required to calculate its risk-based capital ratios using both the advanced approaches and the standardized approaches until the appropriate Federal banking agency determined that application of the requirement would not be appropriate in light of the banking organization's asset size, level of complexity, risk profile, or scope of operations. The new framework makes this cessation provision unnecessary. Accordingly, a banking organization that no longer meets the relevant criteria for being subject to Category I or II standards will not be required to calculate its risk-based capital ratios using both approaches.

---

[86] Banking organizations that were previously advanced approaches banking organizations, but under the final rule will be subject to Category III capital requirements, can make a one-time election to become subject to AOCI-related adjustments as described in § __.22(b)(2) of the agencies' regulatory capital rules. *See* 12 CFR 3.22(b)(2) (OCC); 12 CFR 217.22(b)(2) (Board); 12 CFR 324.22(b)(2) (FDIC). Banking organizations must make this election on the organization's Call Report or FR Y–9C report, as applicable, filed on the first reporting date after this final rule is effective.

[87] *See supra* note 26.

[88] Banking organizations would be required to use the same approach, SA–CCR or the current exposure method, for calculating both its risk-based capital and its total leverage exposure. *See* 83 FR 64660 (December 17, 2018).

B. Liquidity Requirements Applicable to Each Category

1. Background on LCR Rule

The LCR rule requires a banking organization to calculate and maintain an amount of HQLA sufficient to cover its total net cash outflows in a 30-day stress, as calculated under the LCR rule. A banking organization's LCR is the ratio of its HQLA amount (LCR numerator) divided by its total net cash outflows (LCR denominator). Previously under the LCR rule, a banking organization, including a U.S. intermediate holding company with a depository institution subsidiary, with $250 billion in total consolidated assets or $10 billion in on-balance sheet foreign exposure, and any depository institution subsidiary with $10 billion or more in total consolidated assets, was required to calculate and maintain an LCR of at least 100 percent each business day. To ensure the HQLA amount can be used to cover relevant cash outflows in a period of stress, the LCR rule places certain requirements on the control and location of eligible HQLA within a banking organization. The total net cash outflow amount includes an amount that reflects the timing of certain outflows and inflows (maturity mismatch add-on) within the LCR's 30-day horizon to ensure the LCR denominator represents the potential cash needs of these banking organizations.[89] All banking organizations subject to the LCR rule are required to make certain public disclosures on a quarterly basis.

The Board previously applied a modified LCR requirement to certain depository institution holding companies with $50 billion or more in total consolidated assets, but less than $250 billion in total consolidated assets and less than $10 billion in on-balance sheet foreign exposure.[90] The Board's former modified LCR minimum requirement was calibrated at a level equivalent to 70 percent of the full requirement. In addition, under the modified LCR requirement, depository institution holding companies were not required to calculate a maturity mismatch add-on as a component of their total net cash outflow amounts.[91]

The proposals would have applied standardized liquidity and funding requirements for U.S. and foreign banking organizations based on the risk-based indicators and thresholds described above. Specifically, the proposals would have applied one of four categories of liquidity and funding requirements to a banking organization: Category I, II, III, or IV. Under the proposals, a full LCR requirement would have been applied to banking organizations subject to Category I and II standards. For banking organizations subject to Category III or Category IV standards, the proposals would have reduced the LCR requirement based on the weighted short-term wholesale funding of the U.S. banking organization or the combined U.S. operations of the foreign banking organization. A banking organization subject to Category III standards with $75 billion or more in weighted short-term wholesale funding would have been subject to the full LCR requirement. A banking organization subject to Category III standards with less than $75 billion in weighted short-term wholesale funding or to Category IV standards with $50 billion or more in weighted short-term wholesale funding would have been required to comply with a reduced LCR requirement.[92] Banking organizations subject to Category IV standards with less than $50 billion in weighted short-term wholesale funding would not have been subject to an LCR requirement.

Under the proposals, the agencies sought comment on the calibration of the reduced LCR requirement under Category III and Category IV, at a level within a range of between 70 percent and 85 percent of the full LCR requirement applicable under Category I and Category II. In addition, the proposals would have required all banking organizations subject to an LCR requirement to include a maturity mismatch add-on and would have retained the LCR rule's treatment of HQLA held at a banking organization's consolidated subsidiaries.[93]

In general, the agencies received comments on the application of a standardized liquidity requirement to certain categories of banking organizations, the calibration of the reduced LCR requirement, and the application of elements of the Board's former modified LCR requirement to banking organizations that would be subject to the reduced LCR requirement.[94] These comments are discussed below.

2. Category I Liquidity Requirements

As proposed, U.S. GSIBs would have been subject to Category I standards because they pose the highest risks to U.S. financial stability and safety and soundness. The domestic proposal did not propose to change the full LCR requirement applicable to U.S. GSIBs. Under the domestic proposal, U.S. GSIBs would also have been included in the scope of application of the full set of requirements described in the proposed NSFR rule. In addition, consistent with current requirements, a U.S. GSIB's depository institution subsidiary with $10 billion or more in total consolidated assets would have remained subject to the full LCR requirement under the proposal.

The agencies did not receive comments on the application of standardized liquidity requirements to U.S. GSIBs or their depository institution subsidiaries and are finalizing the application of the full LCR requirement to banking organizations subject to Category I as proposed. Under the final rule, a banking organization subject to Category I standards will continue to be required to hold an amount of HQLA equal to at least 100 percent of its total net cash outflows as calculated under the LCR rule each business day.

3. Category II Liquidity Requirements

The proposals would have applied the full LCR requirement to banking organizations subject to Category II standards. Consistent with existing requirements, the proposals would also have applied the full LCR requirement to their depository institution subsidiaries with total consolidated assets of $10 billion or more. Under the proposals, banking organizations subject

[89] Section __.30 of the LCR rule requires a banking organization, as applicable, to include in its total net cash outflow amount a maturity mismatch add-on, which is calculated as the difference (if greater than zero) between the banking organization's largest net cumulative maturity outflow amount for any of the 30 calendar days following the calculation date and the net day 30 cumulative maturity outflow amount. *See* 12 CFR 50.30 (OCC); 12 CFR 249.30 (Board); and 12 CFR 329.30 (FDIC).

[90] *See* 12 CFR part 249, subpart G (2018), which has been repealed as part of this final rule.

[91] Separately, certain U.S. and foreign banking organizations are required to submit data related to their liquidity positions under the Board's FR 2052a.

[92] The proposals would have removed the Board's modified LCR because the agencies believed that the reduced LCR would be better designed for assessing liquidity risks for banking organizations that meet the thresholds for Categories III and IV.

[93] The proposals would have permitted a top-tier banking organization to include in its HQLA amount the eligible HQLA of a consolidated subsidiary up to the amount of the net cash outflows of the subsidiary (as adjusted for the factor reducing the stringency of the LCR requirement), plus any additional amount of assets, including proceeds from the monetization of assets, that would be available to the top-tier banking organization during times of stress without statutory, regulatory, contractual, or supervisory restrictions.

[94] Comments regarding the NSFR proposal will be addressed in the context of any final rule to adopt a NSFR requirement for large U.S. banking organizations and U.S. intermediate holding companies.

to Category II standards would also have been included in the scope of application of the full requirement of the proposed NSFR rule.

Some commenters argued that Category II standards should include reduced, rather than the full LCR requirement because banking organizations subject to Category II standards have lower risk relative to U.S. GSIBs. In addition, commenters argued that custody activities present lower risks due to their use of operational deposits, which the commenters viewed as stable. Other commenters argued that U.S. intermediate holding companies should not be subject to an LCR requirement at all, or alternatively, that they should be subject to the Board's former modified LCR requirement if the top-tier foreign parent is subject to an LCR requirement.

The failure or distress of banking organizations that would be subject to Category II standards could impose significant costs on the U.S. financial system and economy. While these banking organizations generally do not present the same degree of systemic risk as U.S. GSIBs, the very large size or the cross-jurisdictional activity of these banking organizations present risks that make it appropriate to apply the most stringent liquidity standards. Size and cross-jurisdictional activity can present particularly heightened challenges in the case of a liquidity stress, and the nature of custody business does not substantially mitigate these risks. Any very large or global banking organization that engages in asset fire sales to meet short-term liquidity needs, including one that has a significant custody business, is likely to transmit distress on a broader scale because of the greater volume of assets it may sell and its multiple counterparties across multiple jurisdictions. Similarly, a banking organization with significant international activity, regardless of the level of custody business, is more exposed to the risk of ring-fencing of liquidity resources by one or more jurisdictions. Such ring-fencing would constrain the movement of liquid assets across jurisdictions to meet outflows. More generally, the overall size of a banking organization's operations, material transactions in foreign jurisdictions, and use of overseas funding sources add complexity to the management of its liquidity risk profile. Additionally, a U.S. intermediate holding company may pose risks in the United States similar to other banking organizations of similar size and risk profile, regardless of whether the foreign banking organization is subject to an LCR requirement in its home jurisdiction.[95] In light of these concerns, the agencies are adopting the full LCR requirement as a Category II requirement as proposed.

4. Category III Liquidity Requirements

Under the proposals, Category III liquidity requirements would have reflected the elevated risk profile of banking organizations subject to this category relative to smaller and less complex banking organizations subject to Category IV. Within Category III, the proposals would have differentiated liquidity requirements based on the level of weighted short-term wholesale funding of a banking organization or, for foreign banking organizations, its U.S. operations. Specifically, a banking organization subject to Category III with weighted short-term wholesale funding of $75 billion or more would have been subject to the full set of LCR and proposed NSFR requirements applicable under Categories I and II. The banking organization would also have been included in the amended scope of application of the proposed NSFR rule. A banking organization subject to Category III with less than $75 billion in weighted short-term wholesale funding would have been subject to reduced LCR and proposed NSFR requirements. The level of the LCR and proposed NSFR requirements applicable to a depository institution subsidiary with total consolidated assets of $10 billion or more of a banking organization subject to Category III standards would have been the same as the level that would apply to the parent banking organization.[96]

A banking organization subject to the reduced LCR requirement would have been required to hold a lower minimum amount of HQLA to address applicable net cash outflows, relative to a banking organization subject to the full LCR. All other requirements under the LCR rule would have remained the same, relative to a banking organization subject to the full LCR requirement. For example, these banking organizations would have been required to calculate an applicable LCR on each business day and include the maturity mismatch add-on in their calculations. The agencies requested comment on the calibration of the reduced LCR requirement under Category III, at a level between 70 and 85 percent of the full LCR requirement. The proposals additionally included a description of a potential reduced NSFR requirement for such banking organizations under the proposed NSFR rule that would have applied a similar adjustment factor to the banking organization's required stable funding amount.

Under the proposals, a banking organization subject to Category III liquidity requirements would not have been permitted to include in its HQLA amount eligible HQLA of a consolidated subsidiary except up to the amount of the net cash outflows of the subsidiary (as adjusted for the factor reducing the stringency of the requirement), plus any additional amount of assets, including proceeds from the monetization of assets, that would be available for transfer to the top-tier banking organization during times of stress without statutory, regulatory, contractual, or supervisory restrictions. For the purpose of this requirement, a banking organization subject to reduced LCR requirements under the proposals would have reduced the net cash outflows of that subsidiary by the appropriate outflow adjustment percentage.

Some commenters recommended that the proposals should not reduce the LCR requirement applicable to banking organizations subject to Category III with weighted short-term wholesale funding of less than $75 billion. However, other commenters expressed support for the reduced LCR requirement asserting that the proposals appropriately recognize the liquidity risk profiles of these banking organizations. The commenters that opposed reducing LCR requirements argued that requirements under the LCR rule are already adjusted to account for a banking organization's size and risk profile. Further, these commenters asserted that banking organizations that would be subject to the reduced LCR requirement under Category III had received substantial governmental support during the financial crisis, and that the proposals did not provide a sufficient economic justification for a reduced LCR requirement nor describe the benefit of the reduction relative to

[95] Consistent with agreements that reflect BCBS standards, other jurisdictions impose liquidity requirements on local subsidiaries of consolidated banking organizations that are not domiciled within that jurisdiction.

[96] For example, a depository institution subsidiary with $10 billion in total consolidated assets of a banking organization subject to the reduced LCR requirement under Category III standards would also be subject to the reduced LCR requirement. In the case of a depository institution that is domiciled in the United States and is not a consolidated subsidiary of a U.S. depository institution holding company that would have been subject to Category I, II, or III standards, the applicable category of standards would have depended on the risk-based indicators of the depository institution. For example, if the depository institution meets the criteria for Category III standards but has weighted short-term wholesale funding of less than $75 billion, the depository institution would have been subject to the proposed reduced LCR requirement.

its impact on the resilience of such banking organizations. Other commenters recommended that the agencies adopt a 70 percent outflow adjustment percentage for the reduced LCR requirement under Category III, consistent with the calibration of the Board's former modified LCR.

As noted by commenters, the LCR rule differentiates between banking organizations by requiring a banking organization to hold a minimum amount of HQLA based on its liquidity risk over a 30-day time horizon.[97] Banking organizations that have lower liquidity risk have lower minimum requirements under the rule. To improve the calibration of a banking organization's minimum HQLA amount relative to its risk profile and its potential risk to U.S. financial stability, the final rule differentiates between banking organizations based on their category of standards and their degree of reliance on short-term wholesale funding. Accordingly, under the final rule, a banking organization subject to Category III standards with weighted short-term wholesale funding of $75 billion or more is subject to the full LCR requirement. A banking organization subject to Category III standards with weighted short-term wholesale funding of less than $75 billion is subject to a reduced LCR requirement calibrated at 85 percent of the full LCR requirement. The agencies believe an 85 percent calibration is appropriate for these banking organizations because they are less likely to contribute to a systemic event relative to similarly sized banking organizations that have a greater reliance on short-term wholesale funding and, therefore, are more complex and more likely to have greater systemic impact. The 85 percent calibration reflects the expectation that these less complex banking organizations should be able to address their liquidity needs under a stress scenario in a shorter period of time than other larger or more complex banking organizations that are subject to the full LCR requirement.

Several commenters argued that, in addition to the lower minimum HQLA amount described above, the reduced LCR requirements should be further reduced to align with those of the Board's former modified LCR requirement. Commenters also requested that the reduced LCR requirement should permit the automatic inclusion of a subsidiary's HQLA up to 100 percent of that subsidiary's outflows, rather than limiting the amount based on reduced outflows, because the subsidiary's HQLA is available to meet its outflow needs and this approach would be consistent with the Board's former modified LCR treatment.

As a general matter, the broad alignment of the reduced LCR with the Board's former modified LCR would not be appropriate because each of these requirements was designed to address different risk profiles. The Board designed the former modified LCR for smaller U.S. holding companies with less complex business models and more limited potential impact on U.S. financial stability compared to banking organizations that would be subject to the reduced LCR requirement.[98] While a lower minimum HQLA amount improves the alignment of the LCR requirement with the systemic risks posed by certain banking organizations subject to Category III, additional approaches to reducing the stringency of the requirements may reduce the effectiveness of the LCR.

As discussed in section VI.B.6. of this Supplementary Information, the final rule requires large depository institution subsidiaries of banking organizations subject to Category III standards to calculate and maintain an LCR because large subsidiary depository institutions have a significant role in a consolidated banking organization's funding structure, and in the operation of the payments system.

In addition, consistent with previous restrictions under the LCR rule, the final rule retains the proposal's limitation on the amount of a subsidiary's HQLA that is automatically includable in the top-tier banking organization's HQLA amount. The agencies believe that it is important that banking organizations consider potential liquidity needs across the consolidated entity for which the LCR calculation is required. Accordingly, banking organizations must consider the extent to which assets held at a subsidiary are transferable across the organization and ensure that a minimum level of HQLA is positioned or freely available to transfer to meet outflows at the subsidiary where they would be expected to occur. Although HQLA at a subsidiary in excess of its adjusted net outflows may be available to support that subsidiary in a period of stress, permitting the automatic inclusion of such HQLA up to 100 percent of that subsidiary's outflows, as requested by commenters, without appropriate consideration of transfer restrictions, may make the consolidated asset coverage requirement less effective. Therefore, under the final rule, the agencies are only permitting an automatic inclusion of HQLA held at a subsidiary up to the reduced amount of the subsidiary's outflows.

5. Category IV Liquidity Requirements

The foreign bank proposal would have required certain depository institution holding companies and foreign banking organizations that meet the criteria for Category IV and that have weighted short-term wholesale funding of $50 billion or more to comply with a reduced LCR requirement. The proposals would not have applied Category IV liquidity requirements to standalone depository institutions or to depository institution holding companies or foreign banking organizations with less than $50 billion in weighted short-term wholesale funding, or their subsidiary depository institutions. The agencies requested comment on the calibration of the reduced LCR requirement under Category IV, at a level between 70–85 percent of the full LCR requirement.

Some commenters argued that all banking organizations subject to Category IV should be subject to some form of standardized liquidity requirements, rather than none, and that such requirements could be modified or simplified for these organizations, as appropriate. These commenters argued that, in absence of macroeconomic evidence that current requirements have harmed credit intermediation, any decrease in liquidity requirements for these organizations is difficult to support. In contrast, certain commenters argued for the removal of any LCR requirement for all banking organizations subject to Category IV.

Banking organizations subject to Category IV have smaller systemic footprints, more limited size, and present less risk and complexity relative to banking organizations subject to a more stringent category. However, banking organizations subject to Category IV that are substantially reliant on short-term wholesale funding are vulnerable to the liquidity risks addressed by the reduced LCR requirement. Weighted short-term wholesale funding of $50 billion or more is substantial relative to the size of

[97] 12 CFR 249.10(a). The LCR rule prescribes the minimum amount of HQLA that the banking organization must hold both by reference to its total net cash outflow amount and the minimum required ratio level, each as prescribed under the rule.

[98] The Board's former modified LCR applied to depository institution holding companies with between $50 billion and less than $250 billion in total assets whereas the proposal would have applied Category III to banking organizations that either have $250 billion or more in total assets or have $100 billion or more in total assets as well as heightened levels of off-balance sheet exposure, nonbank assets, or weighted short-term wholesale funding.

banking organizations subject to Category IV. Banking organizations with such funding dependencies are more likely to have higher risk of near-term outflows in a stress. The application of the LCR requirement is therefore appropriate for these banking organizations, albeit at a reduced level, given their lower potential systemic impact. The agencies are calibrating the minimum reduced LCR for banking organizations subject to Category IV at a level equivalent to 70 percent of the minimum level required under Category I and II. The difference between the 85 percent reduced LCR calibration in Category III and the 70 percent reduced LCR calibration in Category IV reflects the differences in the risk profiles of banking organizations subject to each respective requirement. The 70 percent calibration recognizes that these banking organizations are less complex and smaller than other banking organizations subject to more stringent liquidity requirements under the LCR rule and would likely have more modest systemic impact than larger, more complex banking organizations if they experienced liquidity stress. Under the final rule, banking organizations that are subject to Category IV liquidity standards and have weighted short-term wholesale funding of $50 billion or more apply an outflow adjustment factor of 70 percent to their total net cash outflow amount. Moreover, for the same reasons as discussed above, the final rule retains the proposed limitation on the amount of subsidiary's HQLA that is automatically includable in the top-tier banking organization's HQLA amount, equal to an amount up to the amount of the subsidiary's net cash outflows (as adjusted by the top-tier banking organization's 70 percent outflow adjustment factor). Banking organizations subject to Category IV that have weighted short-term wholesale funding of less than $50 billion are not subject to an LCR requirement under the final rule.[99]

6. Application of Liquidity Requirements to Depository Institution Subsidiaries

The proposals generally would have applied the same category of liquidity standards to depository institution holding companies, including U.S. intermediate holding companies, and their depository institution subsidiaries with $10 billion or more in total consolidated assets. As discussed above, standardized liquidity requirements would not have applied at the depository institution subsidiary level or to a depository institution domiciled in the United States that is not a consolidated subsidiary of a U.S. depository institution holding company under Category IV. Commenters argued that the application of liquidity requirements to depository institution subsidiaries is unnecessary and could limit the flexibility of a U.S. intermediate holding company and its foreign parent to respond in a period of stress by trapping liquidity at depository institution subsidiaries. One commenter argued that the calibration of the LCR requirement should reflect the size of the depository institution subsidiary, as the bulk of the line items reported in the Board's FR 2052a are applicable to, and driven by, the calculation of the depository institution subsidiary's profile.

Large depository institution subsidiaries play a significant role in a banking organization's funding structure and in the operation of the payments system. To reduce the potential systemic impact of a liquidity stress event at such large subsidiaries, the agencies believe that such entities should have sufficient amounts of HQLA to meet their own net cash outflows rather than be overly reliant on their parents or affiliates for liquidity in times of stress. Accordingly, the final rule maintains the application of the LCR requirement to certain depository institution subsidiaries as proposed.

7. Maturity Mismatch Add-On Requirement for Reduced LCR

As discussed above, the proposals would have required all banking organizations subject to an LCR requirement—full or reduced—to include a maturity mismatch add-on in their LCR calculations. When finalizing the LCR rule in 2014, the agencies required the maturity mismatch add-on for all banking organizations subject to the full LCR requirement. The agencies determined that the maturity mismatch add-on, based only on certain categories of outflows and inflows, is necessary to address a material risk to the safety and soundness of banking organizations subject to the requirement.

Several commenters argued that no maturity mismatch add-on should apply in the reduced LCR calculation. Commenters asserted that the maturity mismatch add-on would create competitive disparities for banking organizations because of different business models and observed that the mismatch was not included in the Board's former modified LCR requirement. One commenter stated that the maturity mismatch add-on should not apply to LCR calculations with respect to a U.S. intermediate holding company because, in the commenter's view, it represents a significant departure from the Basel LCR standard and the commenter argued that the U.S. operations of a foreign banking organization should not be subject to a materially different standard relative to its consolidated requirements.

The final rule provides that all banking organizations subject to an LCR requirement must include a maturity-mismatch add on when calculating the LCR and address the timing of potential outflows and inflows within the LCR's 30-day time horizon. The maturity mismatch add-on is appropriately risk sensitive because banking organizations that are engaged primarily in deposit gathering and traditional lending generally would have a smaller maturity mismatch add-on, while banking organizations that are engaged in activities that create timing mismatches inside the LCR rule's 30-day horizon may be subject to a higher mismatch add-on. The agencies acknowledge that contractual maturity mismatch is not a quantitative component of the Basel III LCR standard, but believe that is an important component of addressing the liquidity risks of banking organizations subject to the LCR rule. In addition, under the final rule, a U.S. intermediate holding company subject to an LCR requirement would only be required to assess its own mismatches, consistent with the calculation for other banking organizations, and without regard to business model. In response to comments that the Board's former modified LCR requirement did not require a maturity-mismatch add on calculation, as noted above, the modified LCR was designed for smaller, less systemic and less complex depository institution holding companies compared to banking organizations that are subject to a reduced LCR requirement under the final rule.

8. Timing of LCR Calculations and Public Disclosure Requirements

The proposal would have required banking organizations subject to Category I, Category II, or Category III standards to calculate an LCR on each business day. Banking organizations subject to Category IV standards with $50 billion or more in weighted short-term wholesale funding would have

[99] Banking organizations subject to Category IV remain subject to the internal liquidity stress testing requirements under the Board's regulations, which include 30-day and 1-year planning horizons, and additionally FR 2052a reporting requirements. The Board-only final rule provides further discussion of liquidity standards that apply under the Board's regulations to banking organizations subject to Category IV.

been required to calculate a monthly LCR. To reduce compliance costs for banking organizations subject to Category IV standards and to reflect these organizations' smaller systemic footprint, the agencies proposed to require the calculation of the LCR on the last business day of the applicable month rather than each business day.

Commenters requested that Category III standards require a monthly calculation frequency for banking organizations required to calculate a reduced LCR or, alternatively, the rule could require daily monitoring of the LCR by banking organizations but with monthly compliance requirements. A commenter also argued for LCR public disclosures based on the average month-end values to align with certain banking organizations' FR 2052a reporting obligations. A commenter also recommended that the public disclosure of LCR information be required with a two-year lag. Commenters also requested that the Board immediately eliminate the LCR public disclosure requirements for banking organizations that would be subject to Category IV.

Banking organizations subject to Category III standards are larger and generally have more complex risk profiles and business models than banking organizations subject to Category IV standards (or the depository institution holding companies that were previously subject to the Board's modified LCR requirement). The size and complexity of banking organizations subject to Category III standards warrant LCR calculations that are the same as those used under Category I and II standards, except for the 85 percent outflow adjustment factor for such banking organizations with less than $75 billion of weighted short-term wholesale funding.

The size and greater potential impact on U.S. financial stability of these organizations also warrant daily calculation and compliance requirements. Meaningful public disclosure by banking organizations supports market discipline and encourages sound risk-management practices. The current requirement that LCR public disclosures be made quarterly is consistent with the frequency of other quarterly disclosures of financial information, which should help market participants assess the liquidity risk profiles of banking organizations. Timely public disclosures based on the average of each required calculation under the LCR rule provide market participants and other stakeholders with more comprehensive information relative to only averaging month-end calculations. Therefore, for banking organizations whose LCR calculations are required each business day, the averages of these calculations should be used for public disclosure even in cases where the banking organizations are required only to provide more detailed FR 2052a reporting on a monthly basis. Similarly, if a banking organization subject to Category IV standards is required to calculate an LCR on a monthly basis, the public disclosure of averages of such calculations is also useful to market participants and other stakeholders and, therefore, the agencies are declining to remove public disclosure requirements from such banking organizations.[100] Accordingly, the agencies are finalizing the frequency of LCR calculations and the disclosure requirements as proposed.

9. Comments on Refinements to the Current LCR Rule

Under the proposals, the agencies did not propose to amend other definitions, calculation elements, or public disclosure requirements in the LCR rule beyond those related to the categories of standards discussed above. One commenter, however, expressed concern regarding a statement in the foreign bank proposal that the agencies expect HQLA to be "continually available" for use by the foreign banking organization's liquidity management function to be considered eligible HQLA. The commenter characterized this statement as creating an intraday utilization requirement, which it asserted would be a new requirement that would require an amendment to the LCR rule, following the APA's notice-and-comment procedures. Although the LCR rule requires a banking organization to calculate its LCR as of the same time on each business day (the elected calculation time), the LCR rule also contains explicit requirements for assets to be eligible for inclusion in the company's HQLA amount. Section __.22(a)(2) of the LCR rule provides that the banking organization must implement policies that require eligible HQLA to be under the control of the management function in the banking organization that is charged with managing liquidity risk (liquidity management function). Section __.22(a)(2) specifies that the liquidity management function must evidence its control over the HQLA by either: (i) Segregating the HQLA from other assets, with the sole intent to use the HQLA as a source of liquidity, or (ii) demonstrating the ability to monetize the assets and making the proceeds available to the liquidity management function without conflicting with a business or risk-management strategy of the banking organization. In response to the comment, the agencies are confirming that the LCR rule does not limit the requirements of § __.22(a)(2) to the elected calculation time. To so limit the application of these requirements would be inconsistent with the purpose of the requirements, which is to ensure that a central function of a banking organization has the authority and capability to liquidate HQLA to meet its obligations in times of stress. In order for a liquidity management function to demonstrate that it has the ability to monetize the HQLA in a way that does not conflict with the banking organization's business or risk-management strategy, the banking organization should be able to demonstrate its ability to monetize the assets and make the proceeds continuously available to the liquidity management function. Accordingly, HQLA that is only available to the liquidity management function of a banking organization at the elected calculation time would not meet the requirements of § __.22(a)(2).

One commenter provided a broad range of suggested technical amendments to the existing LCR rule. These included adjustments to the determination of the LCR numerator, such as expanding the types of assets that qualify as level 1 and level 2 liquid assets and making technical refinements to the definition of "liquid and readily marketable" under the rule. The suggested amendments also included changes to the determination of the total net cash outflow amount under the current LCR rule, such as changes in the calculation of the retail deposit and retail brokered deposit outflow amounts, a change to the definition of operational deposits and recognition of potential forward-dated collateral substitution under the LCR rule. The commenter further suggested amendments to the public disclosure requirements under the LCR rule and proposed NSFR rule.

The agencies assess the effectiveness of existing rules on a regular basis and take into account insights received from industry and public comments. As noted above, the agencies did not propose amendments to the LCR rule or proposed NSFR rule beyond those described above and are not amending other elements of the LCR rule or proposed NSFR rule at this time.

[100] Subject to the transitions under the final rule, banking organizations subject to Category IV standards with weighted short-term wholesale funding of less than $50 billion are not subject to LCR public disclosures under the final rule.

10. Comments Regarding the Potential Application of Standardized Liquidity Requirements With Respect to U.S. Branches and Agencies

In the foreign bank proposal, the Board requested comment on whether and how it should apply standardized liquidity requirements, such as an LCR-based requirement, to foreign banking organizations with respect to their U.S. branch and agency networks. As stated in the proposal, the goal of such a requirement would be to strengthen the overall resilience of a foreign banking organization's U.S. operations to liquidity risks and help prevent transmission of risks between various segments of the foreign banking organization. The foreign bank proposal clarified that if the Board were to consider application of standardized requirements with respect to the U.S. branches and agencies of foreign banking organizations, the proposed requirements would be subject to a separate notice-and-comment rulemaking process.

Commenters generally opposed development or issuance of a proposal that would apply standardized liquidity requirements to the U.S. branch and agency network of a foreign banking organization. Some of these commenters argued that the Board should defer to compliance with the standardized liquidity requirements that apply to foreign banking organizations in their home country, in recognition of the fact that branches and agencies are the same legal entity as the parent foreign banking organization. In the view of these commenters, the combination of home-country standardized requirements and existing regulation and supervision of U.S. branches and agencies would sufficiently address liquidity risk at these entities. Commenters also noted that a standardized requirement for U.S. branches and agencies could limit the ability of foreign banking organizations to deploy funds as needed, including during times of stress.

Certain commenters also argued that implementing liquidity requirements for branches and agencies in the United States could lead other jurisdictions to implement similar requirements for the branches and agencies of U.S. banking organizations abroad, which could lead to market fragmentation. Many of these commenters suggested that concerns regarding liquidity risk at branches and agencies should be further discussed and evaluated at the global level by international regulatory groups before any actions are taken at the national level.

In contrast, some commenters supported the application of standardized liquidity requirements with respect to the U.S. branches and agencies of foreign banking organizations in order to account more fully for liquidity risks of the U.S. operations of these entities. To support this position, one commenter noted that the role of foreign banking organizations, including their branches and agencies, as providers of liquidity was a critical driver of systemic risks during the financial crisis.

The Board is still considering whether to develop and propose for implementation a standardized liquidity requirement with respect to the U.S. branches and agencies of foreign banking organizations. As part of this process, the Board intends to further evaluate commenters' observations regarding the liquidity risk profiles of the U.S. operations of foreign banking organizations, consider potential interactions with existing regulations and supervisory processes, and engage in further discussion and evaluation of the issue at an international level. As mentioned above, any such requirement would be subject to notice and comment as part of a separate rulemaking process.

11. LCR Rule Transition Periods; Cessation of Applicability

a. Initial Transitions for Banking Organizations Subject to an LCR Requirement on the Effective Date

The domestic proposal did not include initial transition periods for banking organizations already subject to the LCR rule. The foreign bank proposal would have required compliance on the effective date for a foreign banking organization with respect to its U.S. intermediate holding company if that U.S. intermediate holding company was already subject to the full LCR requirement. Under this final rule, a U.S. banking organization or U.S. intermediate holding company that was subject to the LCR rule immediately prior to the effective date is required to comply with its applicable LCR requirement (full or reduced) beginning on the effective date.

In addition, the foreign bank proposal provided a transition period for a foreign banking organization that was not previously subject to an LCR requirement with respect to its U.S. intermediate holding company, including certain depository institution subsidiaries of such foreign banking organizations. Some commenters requested longer initial transitions. Consistent with the final framework and the proposed transitions for foreign banking organizations, under the final rule, a U.S. intermediate holding company that meets the applicability criteria for the LCR rule on the effective date of the final rule, but was not subject to an LCR requirement immediately prior to the effective date, must comply with the applicable LCR requirement one year following the effective date of the final rule.

TABLE II—TRANSITIONS FOR BANKING ORGANIZATIONS SUBJECT TO LCR RULE ON THE EFFECTIVE DATE

LCR requirement prior to effective date of the final rule	LCR requirement as of the effective date of the final rule	Mandatory compliance date
Full LCR requirement	LCR (full or reduced) or no requirement	Effective Date.
No requirement	Full LCR requirement or Category III Reduced LCR requirement.	First day of the fifth full calendar quarter following the effective date.
	Category IV LCR requirement	Last business day of the first month for the fifth full calendar quarter following the effective date.

b. Initial Transitions for Banking Organizations That Become Subject to LCR Rule After The Effective Date

Under the proposals, a banking organization that would have become subject to the LCR rule after the effective date of the final rule would have been required to comply with the LCR rule on the first day of the second quarter after the banking organization became subject it (newly covered banking organizations), consistent with the amount of time previously provided under the LCR rule. In addition, the proposals would have maintained the transition period under the LCR rule for the daily calculation requirement, which provides a newly covered banking organization three quarters to calculate its LCR on a monthly basis before it must conduct daily LCR calculations.

Some commenters requested additional time to comply with the LCR rule. The final rule provides an additional quarter to comply with the LCR rule, such that a newly covered banking organization will be required to comply with these requirements on the first day of the third quarter after becoming subject to these requirements. In addition, a newly covered banking organization that is required to calculate its LCR daily has two quarters to calculate its LCR on a monthly basis before transitioning to daily calculations.

TABLE III—EXAMPLE OF A BANKING ORGANIZATION THAT BECOMES SUBJECT TO A DAILY LCR REQUIREMENT AFTER THE EFFECTIVE DATE

Example:	First compliance date	LCR calculation frequency
Banking organization becomes subject as of December 31, 2023 to an LCR requirement (full or reduced) that includes daily calculation.	July 1, 2024	Monthly calculation: From July 2024 through December 2024. Daily calculation: Begins January 1, 2025.

c. Transitions for Changes to an LCR Requirement

Under the proposals, a banking organization subject to the LCR rule that becomes subject to a higher outflow adjustment percentage would have been able to continue using a lower calibration for one quarter. A banking organization that becomes subject to a lower outflow adjustment percentage at a quarter end would have been able to use the lower percentage immediately, as of the first day of the subsequent quarter. Some commenters requested longer transitions before a banking organization is required to meet an increased LCR requirement. The final rule allows a banking organization an additional quarter to continue using a lower outflow adjustment percentage after becoming subject to a higher outflow adjustment percentage. The agencies are finalizing the transition period for a banking organization that transitions to a lower outflow adjustment percentage as proposed.

The final rule also provides a banking organization that moves from Category IV into another category one year to begin complying with daily LCR calculation requirements. A depository institution subsidiary with $10 billion or more in total consolidated assets must begin complying on the same dates as its top-tier banking organization.[101]

TABLE IV—EXAMPLE DATES FOR CHANGES TO AN LCR REQUIREMENT

Example 1:	Continue to apply prior outflow adjustment percentage	Apply new outflow adjustment percentage
Banking organization that is subject to a daily LCR calculation requirement becomes subject to a higher outflow adjustment percentage as of December 31, 2023, as a result of having an average weighted-short-term wholesale funding level of greater than $75 billion based on the four prior calendar quarters.	1st and 2nd quarter of 2024	Beginning July 1, 2024.
Example 2:	**Continue to apply prior requirement (i.e., lower outflow adjustment percentage and monthly calculation)**	**Apply new requirements**
Banking organization subject to a reduced LCR requirement under Category IV moves to Category I, II, or III as of December 31, 2023.	Lower outflow adjustment percentage: 1st and 2nd quarter of 2024. Monthly calculation: January 2024–December 2024.	Higher outflow adjustment percentage begins 3rd quarter of 2024. Daily calculation begins January 1, 2025.
Example 3:	**Continue to apply prior requirement (i.e., lower outflow adjustment percentage and monthly calculation)**	**Apply new requirements**
Covered subsidiary depository institution of banking organization that moves from Category IV to another category as of December 31, 2023.	No prior requirement	Comply with outflow adjustment percentage applicable to new category from 3rd quarter of 2024, calculating monthly Daily calculation begins January 1, 2025.

[101] *See, supra* note 3.

d. Reservation of Authority To Extend Transitions

The final rule includes a reservation of authority that provides the agencies with the flexibility to extend transitions for banking organizations where warranted by events and circumstances. There may be limited circumstances where a banking organization needs a longer transition period. For example, an extension may be appropriate when unusual or unforeseen circumstances cause a banking organization to become subject to an LCR requirement for the first time, such as a merger with another entity that results in a banking organization becoming subject to the LCR rule. However, the agencies expect that this authority would be exercised in limited situations, consistent with prior practice.

e. Cessation of Applicability

Under the proposal, once a banking organization became subject to an LCR requirement, it would have remained subject to the rule until the appropriate Federal banking agency determined that application of the rule would not be appropriate in light of the foreign banking organization's asset size, level of complexity, risk profile, or scope of operations. The agencies are repealing this provision in the LCR rule because the new framework makes this cessation provision unnecessary. A banking organization that no longer meets the relevant criteria for being subject to the LCR rule will not be required to comply with the LCR rule.

VII. Impact Analysis

The Board assessed the potential impact of the tailoring final rule, considering potential benefits and costs, taking into account current levels of capital and holdings of HQLA at affected domestic and foreign banking organizations.[102] Potential benefits to banking organizations include increased net interest margins from holding higher yielding assets, reduced compliance costs as well as better tailoring of regulatory requirements to banking organizations. Potential costs to banking organizations and financial stability include increased risk during a period of elevated economic stress or market volatility.[103]

Capital requirements will not change for banking organizations subject to Category I or II standards. The Board expects the final rule to slightly lower capital requirements by about $8 billion and $3.5 billion for domestic and foreign banking organizations subject to Category III and IV standards, respectively, or about 60 basis points of total risk-weighted assets for these banking organizations. The impact on capital levels could vary under different economic and market conditions. For example, from 2001 to 2018, the total AOCI of affected banking organizations that included AOCI in capital ranged from a decrease of approximately 140 basis points of total risk-weighted assets to an increase of about 50 basis points of total risk-weighted assets for domestic banking organizations and a decrease of about 70 basis points of total risk-weighted assets to an increase of about 70 basis points of total risk-weighted assets for foreign banking organizations. In addition to no longer being required to reflect all changes in AOCI into regulatory capital, some of these banking organizations would receive a higher threshold for certain capital deductions as outlined in the capital simplification rule.[104] The Board also expects the final rule to reduce compliance costs as a result of certain banking organizations no longer being subject to the advanced approaches capital requirements and as a result of LCR and certain capital requirements no longer applying to banking organizations with total consolidated assets of between $50 billion and $100 billion.

The Board assessed the impact of the final rule on liquidity standards, focusing on the potential changes in the applicability and the stringency of the LCR requirement and taking into account the internal liquidity stress test (ILST) requirements of banking organizations, whose applicability remains unchanged.[105] The Board estimated that, under the final rule, total HQLA requirements would decrease by $48 billion and $5 billion for domestic and foreign banking organizations, respectively. The decrease would represent about a 2 percent reduction in the liquidity requirements for both domestic and foreign banking organizations with greater than $100 billion in assets. The decrease in the liquidity requirements of banking organizations subject to Category III standards accounts for the majority of the total liquidity requirement reduction, both among domestic and foreign banking organizations. For banking organizations in Category III, the decrease would represent an approximately 8 percent reduction in liquidity requirements.

The Board also estimated the impact of the final rule on the HQLA holdings of affected banking organizations. For the impact estimation, the Board assumed that banking organizations would adjust their liquid asset holdings so that they maintain the excess HQLA percentage that they held above the greater of their LCR and ILST requirements in the first quarter of 2019. According to the Board's estimates, total HQLA holdings are expected to decrease by about $56 billion and $6 billion at domestic and foreign banking organizations, respectively. The decrease would represent an approximately 2 percent reduction in the HQLA holdings for both domestic and foreign banking organizations with greater than $100 billion in total assets. The estimated impact on HQLA holdings is about equally distributed across Category III and Category IV banking organizations and would represent an approximately 8 percent reduction in the HQLA holdings of these organizations.

In addition to assessing the potential impact on liquid asset requirements and HQLA holdings, the Board investigated the broader benefits and costs associated with the final rule. Regarding domestic banking organizations, the Board analyzed how the final rule would affect the net interest margin, loan growth, and the likelihood of default or the need for external support during times of financial stress.[106] The analysis was implemented by using linear and nonlinear regression models for these outcome variables and calculating indirect impact estimates based on the tailoring rulemaking's direct impact on HQLA holdings discussed above. Regarding foreign banking organizations, the Board analyzed how the tailoring rulemaking would affect the participation in global dollar markets and their reliance on Federal Reserve liquidity facilities in the event of a financial crisis. The Board estimated the impact of the tailoring final rule on foreign banking organizations' reliance on Federal

[102] The Board assessed the impact of the tailoring rulemaking for domestic and foreign banking organizations that would be subject to Category III or Category IV standards based on the data submitted on the FR 2052a and FR Y–9C by banking organizations for the 2019:Q1 reporting period.

[103] The OCC also considered the potential costs of the tailoring rulemaking for the purpose of the Unfunded Mandates Reform Act of 1996 (2 U.S.C. 1532), the Regulatory Flexibility Act, and the Congressional Review Act.

[104] *See supra* note 26.

[105] The Board-only proposal would continue to require large domestic and foreign banking organizations to conduct internal liquidity stress tests and hold highly liquid assets sufficient to meet projected 30-day net stressed cash-flow needs under internal stress scenarios. *See* 12 CFR part 252.

[106] The analysis assessed banking organizations' probability of default or need for external support during the 2007–2008 financial crisis. In the analysis, external support reflected participation in the Troubled Asset Relief Program, implemented in 2008 by the U.S. Treasury.

Reserve liquidity facilities by analyzing the relationship between liquid asset holdings and the usage of the discount window and the Term Auction Facility during the financial crisis.

The Board estimated that the final rule would lead to a modest increase in the net interest margin and have a negligible impact on the loan growth of affected domestic banking organizations. The final rule would modestly increase the likelihood that affected domestic banking organizations experience liquidity pressure under stress. With regard to foreign banking organizations, as the estimated impact of the tailoring final rule on the HQLA holdings of these banking organizations is relatively small, the anticipated effect on global dollar markets and the safety and soundness of these banking organizations is likely to be mild. The Board will continue to assess the safety and soundness of both domestic and foreign banking organizations through the normal course of supervision, including the conduct of internal liquidity stress tests.

VIII. Administrative Law Matters

A. Paperwork Reduction Act

Certain provisions of the final rule contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) (PRA). In accordance with the requirements of the PRA, the agencies may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OMB control numbers for the agencies' respective LCR rules are OCC (1557–0323), Board (7100–0367), and FDIC (3064–0197). The OMB control numbers for the agencies' respective regulatory capital rules are OCC (1557–0318), Board (7100–0313), and FDIC (3064–0153). These information collections will be extended for three years, with revision. The information collection requirements contained in this final rule have been submitted by the OCC and FDIC to OMB for review and approval under section 3507(d) of the PRA (44 U.S.C. 3507(d)) and § 1320.11 of the OMB's implementing regulations (5 CFR part 1320). The Board reviewed the final rule under the authority delegated to the Board by OMB. The OCC and the FDIC submitted the information collection requirements to OMB at the proposed rule stage. OMB filed comments requesting that the agencies examine public comment in response to the proposal and describe in the supporting statement of its next collection any public comments received regarding the collection as well as why (or why it did not) incorporate the commenter's recommendations. The agencies received no comments on the information collection requirements.

LCR Rule

Current Actions: The final rule revise §§ ____.1, ____.3, ____.10, ____.30, and ____.50 of each of the agencies' respective LCR rules and §§ ____.90 and ____.91 of the Board's LCR rule to require certain depository institution subsidiaries of large domestic banking organizations and U.S. intermediate holding companies of foreign banking organizations to calculate an LCR. For more detail on §§ ____.90 and ____.91, please see ''Liquidity Coverage Ratio: Public Disclosure Requirements; Extension of Compliance Period for Certain Companies to Meet the Liquidity Coverage Ratio Requirements,'' 81 FR 94922 (Dec. 27, 2016).

Information Collections Proposed to be Revised:

OCC

OMB control number: 1557–0323.

Title of Information Collection: Reporting and Recordkeeping Requirements Associated with Liquidity Coverage Ratio: Liquidity Risk Measurement, Standards, and Monitoring.

Frequency: Event generated, monthly, quarterly, annually.

Affected Public: National banks and federal savings associations.

Estimated average hours per response:

50.40(a) (19 respondents)
Reporting (ongoing monthly)—.50
50.40(b) (19 respondents)
Reporting (ongoing)—.50
50.40(b)(3)(iv) (19 respondents)
Reporting (quarterly)—.50
50.22(a)(2) & (a)(5)) (19 respondents)
Recordkeeping (ongoing)—40
50.40(b) (19 respondents)
Recordkeeping (ongoing)—200

Estimated annual burden hours: 4,722.

Board

OMB control number: 7100–0367.

Title of Information Collection: Reporting, Recordkeeping, and Disclosure Requirements Associated with the Regulation WW.

Frequency: Event generated, monthly, quarterly, annually.

Affected Public: Insured state member banks, bank holding companies, and savings and loan holding companies, and foreign banking organizations.

Estimated average hours per response:

249.40(a) (3 respondents)
Reporting (ongoing monthly)—.50
249.40(b) (3 respondents)
Reporting (ongoing)—.50
249.40(b)(3)(iv) (3 respondents)

Recordkeeping (ongoing)—40
329.40(b) (2 respondents)
Recordkeeping (ongoing)—200

Estimated annual burden hours: 497.

Disclosure Burden—Advanced Approaches Banking Organizations

Current Actions

The final rule requires banking organizations subject to Category III standards to maintain a minimum supplementary leverage ratio of 3 percent given its size and risk profile. As a result, these intermediate holding companies would no longer be identified as ''advanced approaches banking organizations'' for purposes of the advanced approach disclosure respondent count.

Information Collections Proposed to be Revised:

OCC

Title of Information Collection: Risk-Based Capital Standards: Advanced Capital Adequacy Framework.

Frequency: Quarterly, annual.

Affected Public: Businesses or other for-profit.

Respondents: National banks, state member banks, state nonmember banks, and state and federal savings associations.

OMB control number: 1557–0318.

Estimated number of respondents: 1,365 (of which 18 are advanced approaches institutions).

Estimated average hours per response:
Minimum Capital Ratios
Recordkeeping (Ongoing)—16.

Estimated annual burden hours: 1,136 hours initial setup, 64,945 hours for ongoing.

Board

Title of Information Collection: Recordkeeping and Disclosure Requirements Associated with Regulation Q.
Frequency: Quarterly, annual.
Affected Public: Businesses or other for-profit.
Respondents: State member banks (SMBs), bank holding companies (BHCs), U.S. intermediate holding companies (IHCs), savings and loan holding companies (SLHCs), and global systemically important bank holding companies (GSIBs).
Current actions: This proposal would amend the definition of advanced approaches Board-regulated institution to include, as relevant here, a depository institution holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, and a U.S. intermediate holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5. Category III Board-regulated institutions would not be considered advanced approaches Board-regulated institutions. As a result, the Board estimates that 1 institution will no longer be an advanced approaches Board-regulated institution under the proposal.
Legal authorization and confidentiality: This information collection is authorized by section 38(o) of the Federal Deposit Insurance Act (12 U.S.C. 1831o(c)), section 908 of the International Lending Supervision Act of 1983 (12 U.S.C. 3907(a)(1)), section 9(6) of the Federal Reserve Act (12 U.S.C. 324), and section 5(c) of the Bank Holding Company Act (12 U.S.C. 1844(c)). The obligation to respond to this information collection is mandatory. If a respondent considers the information to be trade secrets and/or privileged such information could be withheld from the public under the authority of the Freedom of Information Act (5 U.S.C. 552(b)(4)). Additionally, to the extent that such information may be contained in an examination report such information could also be withheld from the public (5 U.S.C. 552 (b)(8)).
Agency form number: FR Q.

Reporting Burden—FFIEC and Board Forms

Current Actions

The final rule requires changes to the Consolidated Reports of Condition and Income (Call Reports) (FFIEC 031, FFIEC 041, and FFIEC 051; OMB Nos. 1557–0081 (OCC), 7100–0036 (Board), and 3064–0052 (FDIC)) and Risk-Based Capital Reporting for Institutions Subject to the Advanced Capital Adequacy Framework (FFIEC 101; OMB Nos. 1557–0239 (OCC), 7100–0319 (Board), and 3064–0159 (FDIC)), which will be addressed in a separate **Federal Register** notice.

B. Regulatory Flexibility Act

OCC: The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.* (''RFA''), requires an agency, in connection with a final rule, to prepare a final Regulatory Flexibility Analysis describing the impact of the final rule on small entities (defined by the Small Business Administration (''SBA'') for purposes of the RFA to include banking entities with total assets of $600 million or less) or to certify that the final rule would not have a significant economic impact on a substantial number of small entities.

The OCC currently supervises approximately 755 small entities.[107] Because the final rule only applies to banking organizations with total consolidated assets of $100 billion or more, it will not impact any OCC-supervised small entities. Therefore, the OCC certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Board: The Regulatory Flexibility Act (RFA) generally requires that, in connection with a final rulemaking, an agency prepare and make available for public comment a final regulatory flexibility analysis describing the impact of the proposed rule on small

[107] The OCC bases its estimate of the number of small entities on the SBA's size thresholds for commercial banks and savings institutions, and trust companies, which are $600 million and $41.5 million, respectively. Consistent with the General Principles of Affiliation 13 CFR 121.103(a), the OCC counts the assets of affiliated financial institutions when determining if it should classify an OCC-supervised institution as a small entity. The OCC uses December 31, 2018, to determine size because a ''financial institution's assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year.'' *See* footnote 8 of the U.S. Small Business Administration's *Table of Size Standards.*

entities.[108] However, a final regulatory flexibility analysis is not required if the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities. The Small Business Administration (SBA) has defined ''small entities'' to include banking organizations with total assets of less than or equal to $600 million that are independently owned and operated or owned by a holding company with less than or equal to $600 million in total assets.[109] For the reasons described below and under section 605(b) of the RFA, the Board certifies that the final rule will not have a significant economic impact on a substantial number of small entities. As of June 30, 2019, there were 2,976 bank holding companies, 133 savings and loan holding companies, and 537 state member banks that would fit the SBA's current definition of ''small entity'' for purposes of the RFA.

The Board is finalizing amendments to Regulations Q[110] and WW[111] that would affect the regulatory requirements that apply to state member banks, U.S. bank holding companies, U.S. covered savings and loan holding companies, and U.S. intermediate holding companies with $50 billion or more in total consolidated assets. These changes are consistent with EGRRCPA, which amended section 165 of the Dodd-Frank Act. The reasons and justification for the final rule are described above in more detail in this **SUPPLEMENTARY INFORMATION.**

The assets of institutions subject to this final rule substantially exceed the $600 million asset threshold under which a banking organization is considered a ''small entity'' under SBA regulations. Because the final rule is not likely to apply to any depository institution or company with assets of $600 million or less, it is not expected to apply to any small entity for purposes of the RFA. The Board does not believe that the final rule duplicates, overlaps, or conflicts with any other Federal rules. In light of the foregoing, the Board certifies that the final rule will not have a significant economic impact on a substantial number of small entities supervised.

FDIC: The Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* generally requires that, in connection with a final rulemaking, an agency prepare and make available for public comment a final regulatory flexibility analysis describing the impact of the proposed rule on small entities.[112] However, a regulatory flexibility analysis is not required if the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities. The SBA has defined ''small entities'' to include banking organizations with total assets of less than or equal to $600 million that are independently owned and operated or owned by a holding company with less than or equal to $600 million in total assets.[113] Generally, the FDIC considers a significant effect to be a quantified effect in excess of 5 percent of total annual salaries and benefits per institution, or 2.5 percent of total non-interest expenses. The FDIC believes that effects in excess of these thresholds typically represent significant effects for FDIC-supervised institutions. For the reasons described below and under section 605(b) of the RFA, the FDIC certifies that the proposed rule will not have a significant economic impact on a substantial number of small entities.

As of June 30, 2019, the FDIC supervised 3,424 institutions, of which 2,665 are considered small entities for the purposes of RFA.[114]

As discussed in Section I, the final rule establishes four risk-based categories for determining the regulatory capital and liquidity requirements applicable to large U.S. banking organizations and the U.S. intermediate holding companies of foreign banking organizations. The final rule applies to banking organizations with greater than $100 billion in assets. The final rule also affects certain banking organizations with greater than $50 billion in assets that were subject to the modified LCR requirement.[115]

Small banking organizations, as defined by the SBA, must have less than $600 million in total assets amongst its affiliates. Thus, no small banking organizations meet the minimum asset thresholds of banking organizations affected by the final rule. Since this proposal does not affect any institutions that are defined as small entities for the purposes of the RFA, the FDIC certifies that the proposed rule will not have a significant economic impact on a substantial number of small entities.

C. Plain Language

Section 722 of the Gramm-Leach-Bliley Act[116] requires the Federal banking agencies to use plain language in all proposed and final rules published after January 1, 2000. The agencies have sought to present the final rule in a simple and straightforward manner, and did not receive any comments on the use of plain language.

D. Riegle Community Development and Regulatory Improvement Act of 1994

Pursuant to section 302(a) of the Riegle Community Development and Regulatory Improvement Act (RCDRIA),[117] in determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions, each Federal banking agency must consider, consistent with the principle of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, including small depository institutions, and customers of depository institutions, as well as the benefits of such regulations. In addition, section 302(b) of RCDRIA requires new regulations and amendments to regulations that impose additional reporting, disclosures, or other new requirements on IDIs generally to take effect on the first day of a calendar quarter that begins on or after the date on which the regulations are published in final form.[118]

The Federal banking agencies considered the administrative burdens and benefits of the rule and its elective framework in determining its effective date and administrative compliance requirements. As such, the final rule

[108] 5 U.S.C. 601 *et seq.*

[109] *See* 13 CFR 121.201. Effective August 19, 2019, the Small Business Administration revised the size standards for banking organizations to $600 million in assets from $550 million in assets. *See* 84 FR 34261 (July 18, 2019). Consistent with the General Principles of Affiliation in 13 CFR 121.103, the Board counts the assets of all domestic and foreign affiliates when determining if the Board should classify a Board-supervised institution as a small entity.

[110] 12 CFR part 217.

[111] 12 CFR part 249.

[112] 5 U.S.C. 601 *et seq.*

[113] The SBA defines a small banking organization as having $600 million or less in assets, where an organization's ''assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year.'' See 13 CFR 121.201 (as amended by 84 FR 34261, effective August 19, 2019). In its determination, the ''SBA counts the receipts, employees, or other measure of size of the concern whose size is at issue and all of its domestic and foreign affiliates.'' See 13 CFR 121.103. Following these regulations, the FDIC uses a covered entity's affiliated and acquired assets, averaged over the preceding four quarters, to determine whether the covered entity is ''small'' for the purposes of RFA.

[114] Consolidated Reports of Condition and Income for the quarter ending June 30, 2019.

[115] *See* 12 CFR part 249, subpart G.

[116] Public Law 106–102, section 722, 113 Stat. 1338, 1471 (1999).

[117] 12 U.S.C. 4802(a).

[118] 12 U.S.C. 4802.

will be effective on the first day of the first calendar quarter following December 31, 2019. In addition, any banking organization subject to the final rule may elect to adopt amendments on December 31, 2019.[119]

E. The Congressional Review Act

For purposes of Congressional Review Act, the OMB makes a determination as to whether a final rule constitutes a ''major'' rule.[120] If a rule is deemed a ''major rule'' by the Office of Management and Budget (OMB), the Congressional Review Act generally provides that the rule may not take effect until at least 60 days following its publication.[121]

The Congressional Review Act defines a ''major rule'' as any rule that the Administrator of the Office of Information and Regulatory Affairs of the OMB finds has resulted in or is likely to result in (A) an annual effect on the economy of $100,000,000 or more; (B) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies or geographic regions, or (C) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.[122] As required by the Congressional Review Act, the agencies will submit the final rule and other appropriate reports to Congress and the Government Accountability Office for review.

Pursuant to the Congressional Review Act, the Office of Management and Budget's Office of Information and Regulatory Affairs (OMB) designated this rule as a ''major rule,'' as defined at 5 U.S.C. 804(2), as applied to OCC-supervised institutions [and Board-supervised institutions]. However, for FDIC-supervised institutions, OMB determined that this final rule is not a ''major rule,'' as defined in 5 U.S.C. 804(2).

F. OCC Unfunded Mandates Reform Act of 1995 Determination

The OCC analyzed the final rule under the factors set forth in the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532). Under this analysis, the OCC considered whether the rule includes a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year (adjusted for inflation). The OCC has determined that this rule will not result in expenditures by State, local, and Tribal governments, or the private sector, of $100 million or more in any one year.[123] Accordingly, the OCC has not prepared a written statement to accompany this rule.

12 CFR Part 324

Administrative practice and procedure, Banks, Banking, Reporting and recordkeeping requirements.

12 CFR Part 329

Administrative practice and procedure, Banks, Banking, Reporting and recordkeeping requirements.

[119] 12 U.S.C. 4802(b)(2).

[120] 5 U.S.C. 801 *et seq.*

[121] 5 U.S.C. 801(a)(3).

[122] 5 U.S.C. 804(2).

[123] The OCC identifies 29 OCC-supervised institutions that fall within the scope of the final rule. However, only 12 of these institutions will be impacted by the final rule. The remaining 17 institutions will not have any change from their current capital and liquidity requirements and thus will not be impacted by the final rule. Assuming a compensation cost of $114 per hour, the OCC estimates that that the final rule will result in one-time administrative costs of approximately $109,440. The OCC estimates that each institution will spend approximately 80 hours to modify policies and procedures (80 hours × $114 per hour × 12 institutions = $109,440). Consistent with the UMRA, the OCC review considers whether the mandates imposed by the final rule may result in an expenditure of $100 million or more by state, local, and tribal governments, or by the private sector, in any one year, adjusted annually for inflation (currently $154 million). The OCC interprets expenditure to mean assessment of costs (*i.e.,* this part of the UMRA analysis assesses the costs of a rule on OCC-supervised entities, rather than the overall impact). The UMRA expenditure estimate for the final rule is approximately $109,440.

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Chapter I

Authority and Issuance

For the reasons stated in the SUPPLEMENTARY INFORMATION section, chapter I of title 12 of the Code of Federal Regulations to be amended as follows:

PART 3—CAPITAL ADEQUACY STANDARDS

■ 1. The authority citation for part 3 continues to read as follows:

Authority: 12 U.S.C. 93a, 161, 1462, 1462a, 1463, 1464, 1818, 1828(n), 1828 note, 1831n note, 1835, 3907, 3909, and 5412(b)(2)(B).

■ 2. In § 3.1, add paragraph (f)(5) to read as follows:

§ 3.1 Purpose, applicability, reservations of authority, and timing.

* * * * *

(f) * * *

(5) A national bank or Federal savings association that changes from one category of national bank or Federal savings association to another of such categories must comply with the requirements of its category in this part, including applicable transition provisions of the requirements in this part, no later than on the first day of the second quarter following the change in the national bank's or Federal savings association's category.

■ 3. In § 3.2, add the definitions of *Category II national bank or Federal savings association, Category III national bank or Federal savings association, FR Y–9LP,* and *FR Y–15* in alphabetical order to read as follows:

§ 3.2 Definitions.

* * * * *

Category II national bank or Federal savings association means:

(1) A national bank or Federal savings association that is a subsidiary of a Category II banking organization, as defined pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(2) A national bank or Federal savings association that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the national bank's or Federal savings association's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the national bank or Federal savings association has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the national bank's or Federal savings association's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the national bank or Federal savings association has not filed the Call Report for each of the four most recent quarters, total consolidated assets is based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraph (2)(ii) of this definition, a national bank or Federal savings association continues to be a Category II national bank or Federal savings association until the national bank or Federal savings association has:

(A)(*1*) Less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form; or

(B) Less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters.

Category III national bank or Federal savings association means:

(1) A national bank or Federal savings association that is a subsidiary of a Category III banking organization, as defined pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(2) A national bank or Federal savings association that is a subsidiary of a depository institution that meets the criteria in paragraph (3)(ii)(A) or (B) of this definition; or

(3) A national bank or Federal savings association that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $250 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $250 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; and

(*2*) At least one of the following in paragraphs (3)(ii)(B)(*2*)(*i*) through (*iii*) of this definition, each calculated as the average of the four most recent calendar quarters, or if the depository institution has not filed each applicable reporting form for each of the four most recent calendar quarters, for the most recent quarter or quarters, as applicable:

(*i*) Total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure equal to $75 billion or more. Off-balance sheet exposure is a depository institution's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more.

(iii) After meeting the criteria in paragraph (3)(ii) of this definition, a national bank or Federal savings association continues to be a Category III national bank or Federal savings association until the national bank or Federal savings association:

(A) Has:

(*1*) Less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(*2*) Less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters; and

(*4*) Less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is a national bank's or Federal savings association's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the national bank or Federal savings association, as reported on the Call Report; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a Category II national bank or Federal savings association.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

■ 4. In § 3.10, revise paragraphs (a)(5), (c) introductory text, and (c)(4)(i) introductory text to read as follows:

§ 3.10 Minimum capital requirements.

(a) * * *

(5) For advanced approaches national banks and Federal savings associations, and for Category III national banks and Federal savings associations, a supplementary leverage ratio of 3 percent.

* * * * *

(c) *Advanced approaches and Category III capital ratio calculations.* An advanced approaches national bank or Federal savings association that has completed the parallel run process and received notification from the OCC pursuant to § 3.121(d) must determine its regulatory capital ratios as described in paragraphs (c)(1) through (3) of this section. An advanced approaches national bank or Federal savings association must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the national bank or Federal savings association institution meets any of the criteria in § 3.100(b)(1). A Category III national bank or Federal savings association must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the national bank or Federal savings association is identified as a Category III national bank or Federal savings association.

* * * * *

(4) * * *

(i) An advanced approaches national bank's or Federal savings association's or a Category III national bank's or Federal savings association's supplementary leverage ratio is the ratio of its tier 1 capital to total leverage exposure, the latter of which is calculated as the sum of:

* * * * *

■ 5. In § 3.11, revise paragraphs (b)(1) introductory text and (b)(1)(ii) to read as follows:

§ 3.11 Capital conservation buffer and countercyclical capital buffer amount.

* * * * *

(b) * * *

(1) *General.* An advanced approaches national bank or Federal savings association, and a Category III national bank or Federal savings association, must calculate a countercyclical capital buffer amount in accordance with paragraphs (b)(1)(i) through (iv) of this section for purposes of determining its maximum payout ratio under Table 1 to this section.

* * * * *

(ii) *Amount.* An advanced approaches national bank or Federal savings association, and a Category III national bank or Federal savings association, has a countercyclical capital buffer amount determined by calculating the weighted average of the countercyclical capital buffer amounts established for the national jurisdictions where the national bank's or Federal savings association's private sector credit exposures are located, as specified in paragraphs (b)(2) and (3) of this section.

* * * * *

■ 6. In § 3.22, revise paragraph (b)(2)(ii) introductory text to read as follows:

§ 3.22 Regulatory capital adjustments and deductions.

* * * * *

(b) * * *

(2) * * *

(ii) A national bank or Federal savings association that is not an advanced approaches national bank or Federal savings association must make its AOCI opt-out election in the Call Report:

(A) If the national bank or Federal savings association is a Category III national bank or Federal savings association, during the first reporting period after the national bank or Federal savings association meets the definition of a Category III national bank or Federal savings association in § 3.2; or

(B) If the national bank or Federal savings association is not a Category III national bank or Federal savings association, during the first reporting period after the national bank or Federal savings association is required to comply with subpart A of this part as set forth in § 3.1(f).

* * * * *

■ 7. In § 3.63, add paragraphs (d) and (e) to read as follows:

§ 3.63 Disclosures by national banks or Federal savings associations described in § 3.61.

* * * * *

(d) A Category III national bank or Federal savings association that is required to publicly disclose its supplementary leverage ratio pursuant to § 3.172(d) is subject to the supplementary leverage ratio disclosure requirement at § 3.173(a)(2).

(e) A Category III national bank or Federal savings association that is required to calculate a countercyclical capital buffer pursuant to § 3.11 is subject to the disclosure requirement at Table 4 to § 3.173, ''Capital Conservation and Countercyclical Capital Buffers,'' and not to the disclosure requirement at Table 4 to this section, ''Capital Conservation Buffer.''

■ 8. In § 3.100, revise paragraph (b)(1), remove paragraph (b)(2), and redesignate paragraph (b)(3) as paragraph (b)(2) to read as follows:

§ 3.100 Purpose, applicability, and principle of conservatism.

* * * * *

(b) *Applicability.* (1) This subpart applies to a national bank or Federal savings association that:

(i) Is a subsidiary of a global systemically important BHC, as identified pursuant to 12 CFR 217.402;

(ii) Is a Category II national bank or Federal savings association;

(iii) Is a subsidiary of a depository institution that uses the advanced approaches pursuant to this subpart (OCC), 12 CFR part 217, subpart E (Board), or 12 CFR part 324 (FDIC), to calculate its risk-based capital requirements;

(iv) Is a subsidiary of a bank holding company or savings and loan holding company that uses the advanced approaches pursuant to subpart E of 12 CFR part 217 to calculate its risk-based capital requirements; or

(v) Elects to use this subpart to calculate its risk-based capital requirements.

■ 9. In § 3.172, revise paragraph (d)(2) to read as follows:

§ 3.172 Disclosure requirements.

* * * * *

(d) * * *

(2) A national bank or Federal savings association that meets any of the criteria in § 3.100(b)(1) on or after January 1, 2015, or a Category III national bank or Federal savings association must publicly disclose each quarter its supplementary leverage ratio and the components thereof (that is, tier 1 capital and total leverage exposure) as calculated under subpart B of this part beginning with the calendar quarter immediately following the quarter in which the national bank or Federal savings association becomes an advanced approaches national bank or Federal savings association or a Category III national bank or Federal savings association. This disclosure requirement applies without regard to whether the national bank or Federal savings association has completed the parallel run process and has received notification from the OCC pursuant to § 3.121(d).

■ 10. In § 3.173, revise the section heading and paragraph (a)(2) to read as follows:

§ 3.173 Disclosures by certain advanced approaches national banks or Federal savings associations and Category III national banks or Federal savings associations.

* * * * *

(a) * * *

(2) An advanced approaches national bank or Federal savings association and a Category III national bank or Federal savings association that is required to publicly disclose its supplementary leverage ratio pursuant to § 3.172(d) must make the disclosures required under Table 13 to this section unless the national bank or Federal savings association is a consolidated subsidiary of a bank holding company, savings and loan holding company, or depository institution that is subject to these disclosure requirements or a subsidiary of a non-U.S. banking organization that is subject to comparable public

disclosure requirements in its home jurisdiction.

* * * * *

PART 50—LIQUIDITY RISK MEASUREMENT STANDARDS

■ 11. The authority citation for part 50 continues to read as follows:

Authority: 12 U.S.C. 1 *et seq.*, 93a, 481, 1818, and 1462 *et seq.*

■ 12. Revise § 50.1 to read as follows:

§ 50.1 Purpose and applicability.

(a) *Purpose.* This part establishes a minimum liquidity standard for certain national banks and Federal savings associations on a consolidated basis, as set forth in this part.

(b) *Applicability.* (1) A national bank or Federal savings association is subject to the minimum liquidity standard and other requirements of this part if:

(i) It is a:

(A) GSIB depository institution supervised by the OCC;

(B) Category II national bank or Federal savings association; or

(C) Category III national bank or Federal savings association; or

(ii) The OCC has determined that application of this part is appropriate in light of the national bank's or Federal savings association's asset size, level of complexity, risk profile, scope of operations, affiliation with foreign or domestic covered entities, or risk to the financial system.

(2) This part does not apply to:

(i) A bridge financial company as defined in 12 U.S.C. 5381(a)(3), or a subsidiary of a bridge financial company;

(ii) A new depository institution or a bridge depository institution, as defined in 12 U.S.C. 1813(i); or

(iii) A Federal branch or agency as defined by 12 CFR 28.11.

(3) In making a determination under paragraph (b)(1)(ii) of this section, the OCC will apply notice and response procedures in the same manner and to the same extent as the notice and response procedures in 12 CFR 3.404.

■ 13. In § 50.3:

■ a. Add a definition for ''Average weighted short-term wholesale funding'' in alphabetical order;

■ b. Revise the definition of ''Calculation date'';

■ c. Add definitions for ''Call Report'', ''Category II national bank or Federal savings association'', and ''Category III national bank or Federal savings association'' in alphabetical order;

■ d. Revise the definition of ''Covered depository institution holding company'';

■ e. Add definitions of ''FR Y–9LP'', ''FR Y–15'', ''Global systemically important BHC'', and ''GSIB depository institution'' in alphabetical order;

■ f. Revise the definition of ''Regulated financial company''; and

■ g. Add definitions for ''State'' and ''U.S. intermediate holding company'' in alphabetical order.

The additions and revisions read as follows:

§ 50.3 Definitions.

* * * * *

Average weighted short-term wholesale funding means the average of the national bank's or Federal savings association's weighted short-term wholesale funding for each of the four most recent calendar quarters as reported quarterly on the FR Y–15 or, if the national bank or Federal savings association has not filed the FR Y–15 for each of the four most recent calendar quarters, for the most recent quarter or averaged over the most recent quarters, as applicable.

* * * * *

Calculation date means, for purposes of subparts A through F of this part, any date on which a national bank or Federal savings association calculates its liquidity coverage ratio under § 50.10.

Call Report means the Consolidated Reports of Condition and Income.

* * * * *

Category II national bank or Federal savings association means:

(1)(i) A national bank or Federal savings association that:

(A) Is a consolidated subsidiary of:

(*1*) A company that is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(*2*) A U.S. intermediate holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5; or

(*3*) A depository institution that meets the criteria in paragraph (2)(ii)(A) or (B) of this definition; and

(B) Has total consolidated assets, calculated based on the average of the national bank's or Federal savings association's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the national bank or Federal savings association has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (1), a national bank or Federal savings association continues to be a Category II national bank or Federal savings association until the national bank or Federal savings association has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the national bank or Federal savings association is no longer a consolidated subsidiary of an entity described in paragraph (1)(i)(A)(*1*), (*2*), or (*3*) of this definition; or

(2) A national bank or Federal savings association that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraphs (2)(i) and (ii) of this definition, a national bank or Federal savings association continues to be a Category II national bank or Federal savings association until the national bank or Federal savings association:

(A)(*1*) Has less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Has less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form;

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a GSIB depository institution.

Category III national bank or Federal savings association means:

(1)(i) A national bank or Federal savings association that:

(A) Is a consolidated subsidiary of:

(*1*) A company that is identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(*2*) A U.S. intermediate holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5; or

(*3*) A depository institution that meets the criteria in paragraph (2)(ii)(A) or (B) of this definition; and

(B) Has total consolidated assets, calculated based on the average of the national bank's or Federal savings association's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the national bank or Federal savings association has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (1), a national bank or Federal savings association continues to be a Category III national bank or Federal savings association until the national bank or Federal savings association has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the national bank or Federal savings association is no longer a consolidated subsidiary of an entity described in paragraph (1)(i)(A)(*1*), (*2*), or (*3*) of this definition; or

(2) A national bank or Federal savings association that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $250 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $250 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) One or more of the following in paragraphs (2)(ii)(B)(*2*)(*i*) through (*iii*) of this definition, each measured as the average of the four most recent calendar quarters, or if the depository institution has not filed the FR Y–9LP or equivalent reporting form, Call Report, or FR Y–15 or equivalent reporting form, as applicable for each of the four most recent calendar quarters, for the most recent quarter or the average of the most recent quarters, as applicable:

(*i*) Total nonbank assets, calculated in accordance with instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report, equal to $75 billion or more; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more.

(iii) After meeting the criteria in paragraphs (2)(i) and (ii) of this definition, a national bank or Federal savings association continues to be a Category III national bank or Federal savings association until the national bank or Federal savings association:

(A)(*1*) Has less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(*2*) Has less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Has less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report; and

(*4*) Has less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a Category II national bank or Federal savings bank; or

(D) Is a GSIB depository institution.

* * * * *

Covered depository institution holding company means a top-tier bank holding company or savings and loan holding company domiciled in the United States other than:

(1) A top-tier savings and loan holding company that is:

(i) A grandfathered unitary savings and loan holding company as defined in section 10(c)(9)(A) of the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*); and

(ii) As of June 30 of the previous calendar year, derived 50 percent or more of its total consolidated assets or 50 percent of its total revenues on an enterprise-wide basis (as calculated under GAAP) from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k));

(2) A top-tier depository institution holding company that is an insurance underwriting company;

(3)(i) A top-tier depository institution holding company that, as of June 30 of the previous calendar year, held 25 percent or more of its total consolidated assets in subsidiaries that are insurance underwriting companies (other than assets associated with insurance for credit risk); and

(ii) For purposes of paragraph (3)(i) of this definition, the company must calculate its total consolidated assets in accordance with GAAP, or if the company does not calculate its total consolidated assets under GAAP for any regulatory purpose (including compliance with applicable securities laws), the company may estimate its total consolidated assets, subject to review and adjustment by the Board of Governors of the Federal Reserve System; or

(4) A U.S. intermediate holding company.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

Global systemically important BHC means a bank holding company identified as a global systemically important BHC pursuant to 12 CFR 217.402.

GSIB depository institution means a depository institution that is a consolidated subsidiary of a global systemically important BHC and has total consolidated assets equal to $10 billion or more, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent calendar quarter or the average of the most recent calendar quarters, as applicable. After meeting the criteria under this definition, a depository institution continues to be a GSIB depository institution until the depository institution has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the depository institution is no longer a consolidated subsidiary of a global systemically important BHC.

* * * * *

Regulated financial company means:

(1) A depository institution holding company or designated company;

(2) A company included in the organization chart of a depository institution holding company on the Form FR Y–6, as listed in the hierarchy report of the depository institution holding company produced by the National Information Center (NIC) website,[2] provided that the top-tier depository institution holding company is subject to a minimum liquidity standard under 12 CFR part 249;

(3) A depository institution; foreign bank; credit union; industrial loan company, industrial bank, or other similar institution described in section 2 of the Bank Holding Company Act of 1956, as amended (12 U.S.C. 1841 *et seq.*); national bank, state member bank, or state non-member bank that is not a depository institution;

(4) An insurance company;

(5) A securities holding company as defined in section 618 of the Dodd-Frank Act (12 U.S.C. 1850a); broker or dealer registered with the SEC under section 15 of the Securities Exchange Act (15 U.S.C. 78o); futures commission merchant as defined in section 1a of the Commodity Exchange Act of 1936 (7 U.S.C. 1 *et seq.*); swap dealer as defined in section 1a of the Commodity Exchange Act (7 U.S.C. 1a); or security-based swap dealer as defined in section 3 of the Securities Exchange Act (15 U.S.C. 78c);

(6) A designated financial market utility, as defined in section 803 of the Dodd-Frank Act (12 U.S.C. 5462);

(7) A U.S. intermediate holding company; and

(8) Any company not domiciled in the United States (or a political subdivision thereof) that is supervised and regulated in a manner similar to entities described in paragraphs (1) through (7) of this definition (*e.g.,* a foreign banking organization, foreign insurance company, foreign securities broker or dealer or foreign financial market utility).

(9) A regulated financial company does not include:

(i) U.S. government-sponsored enterprises;

(ii) Small business investment companies, as defined in section 102 of the Small Business Investment Act of 1958 (15 U.S.C. 661 *et seq.*);

(iii) Entities designated as Community Development Financial Institutions (CDFIs) under 12 U.S.C. 4701 *et seq.* and 12 CFR part 1805; or

(iv) Central banks, the Bank for International Settlements, the International Monetary Fund, or multilateral development banks.

* * * * *

State means any state, commonwealth, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, American Samoa, Guam, or the United States Virgin Islands.

* * * * *

U.S. intermediate holding company means the top-tier company that is required to be established pursuant to 12 CFR 252.153.

* * * * *

■ 14. In § 50.10, revise paragraph (a) to read as follows:

§ 50.10 Liquidity coverage ratio.

(a) *Minimum liquidity coverage ratio requirement.* Subject to the transition provisions in subpart F of this part, a national bank or Federal savings association must calculate and maintain a liquidity coverage ratio that is equal to or greater than 1.0 on each business day in accordance with this part. A national bank or Federal savings association must calculate its liquidity coverage ratio as of the same time on each calculation date (the elected calculation time). The national bank or Federal savings association must select this time by written notice to the OCC prior to December 31, 2019. The national bank or Federal savings association may not thereafter change its elected calculation time without prior written approval from the OCC.

* * * * *

■ 15. In § 50.30, revise paragraph (a) and add paragraphs (c) and (d) to read as follows:

§ 50.30 Total net cash outflow amount.

(a) *Calculation of total net cash outflow amount.* As of the calculation date, a national bank's or Federal savings association's total net cash outflow amount equals the national bank's or Federal savings association's outflow adjustment percentage as determined under paragraph (c) of this section multiplied by:

(1) The sum of the outflow amounts calculated under § 50.32(a) through (l); minus

(2) The lesser of:

(i) The sum of the inflow amounts calculated under § 50.33(b) through (g); and

(ii) 75 percent of the amount calculated under paragraph (a)(1) of this section; plus

(3) The maturity mismatch add-on as calculated under paragraph (b) of this section.

* * * * *

(c) *Outflow adjustment percentage.* A national bank's or Federal savings association's outflow adjustment percentage is determined pursuant to Table 1 to this paragraph (c).

[2] *http://www.ffiec.gov/nicpubweb/nicweb/NicHome.aspx.*

TABLE 1 TO § 50.30(c)—OUTFLOW ADJUSTMENT PERCENTAGES

	Percent
Outflow adjustment percentage	
GSIB depository institution that is a national bank or Federal savings association	100
Category II national bank or Federal savings association	100
Category III national bank or Federal savings association that: (1) Is a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III national bank or Federal savings association in this part, in each case with $75 billion or more in average weighted short-term wholesale funding; or (2) Has $75 billion or more in average weighted short-term wholesale funding and is not a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III national bank or Federal savings association in this part	100
Category III national bank or Federal savings association that: (1) Is a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III national bank or Federal savings association in this part, in each case with less than $75 billion in average weighted short-term wholesale funding; or (2) Has less than $75 billion in average weighted short-term wholesale funding and is not a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III national bank or Federal savings association in this part	85

(d) *Transition into a different outflow adjustment percentage.* (1) A national bank or Federal savings association whose outflow adjustment percentage increases from a lower to a higher outflow adjustment percentage may continue to use its previous lower outflow adjustment percentage until the first day of the third calendar quarter after the outflow adjustment percentage increases.

(2) A national bank or Federal savings association whose outflow adjustment percentage decreases from a higher to a lower outflow adjustment percentage must continue to use its previous higher outflow adjustment percentage until the first day of the first calendar quarter after the outflow adjustment percentage decreases.

■ 16. Revise § 50.50 to read as follows:

§ 50.50 Transitions.

(a) *No transition for certain national banks and Federal savings association.* A national bank or Federal savings association that is subject to the minimum liquidity standard and other requirements of this part prior to December 31, 2019 must comply with the minimum liquidity standard and other requirements of this part as of December 31, 2019.

(b) [Reserved]

(c) *Initial application.* (1) A national bank or Federal savings association that initially becomes subject to the minimum liquidity standard and other requirements of this part under § 50.1(b)(1)(i) must comply with the requirements of this part beginning on the first day of the third calendar quarter after which the national bank or Federal savings association becomes subject to this part, except that a national bank or Federal savings association must:

(i) For the first two calendar quarters after the national bank or Federal savings association begins complying with the minimum liquidity standard and other requirements of this part, calculate and maintain a liquidity coverage ratio monthly, on each calculation date that is the last business day of the applicable calendar month; and

(ii) Beginning the first day of the fifth calendar quarter after the national bank or Federal savings association becomes subject to the minimum liquidity standard and other requirements of this part and continuing thereafter, calculate and maintain a liquidity coverage ratio on each calculation date.

(2) A national bank or Federal savings association that becomes subject to the minimum liquidity standard and other requirements of this part under § 50.1(b)(1)(ii), must comply with the requirements of this part subject to a transition period specified by the OCC.

(d) *Transition into a different outflow adjustment percentage.* A national bank or Federal savings association whose outflow adjustment percentage changes is subject to transition periods as set forth in § 50.30(d).

(e) *Compliance date.* The OCC may extend or accelerate any compliance date of this part if the OCC determines that such extension or acceleration is appropriate. In determining whether an extension or acceleration is appropriate, the OCC will consider the effect of the modification on financial stability, the period of time for which the modification would be necessary to facilitate compliance with this part, and the actions the national bank or Federal savings association is taking to come into compliance with this part.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

12 CFR Chapter II

Authority and Issuance

For the reasons set forth in the Supplementary Information section, chapter II of title 12 of the Code of Federal Regulations is to be amended as follows:

PART 217—CAPITAL ADEQUACY OF BANK HOLDING COMPANIES, SAVINGS AND LOAN HOLDING COMPANIES, AND STATE MEMBER BANKS (REGULATION Q)

■ 17. The authority citation for part 217 continues to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1462a, 1467a, 1818, 1828, 1831n, 1831o, 1831p-1, 1831w, 1835, 1844(b), 1851, 3904, 3906–3909, 4808, 5365, 5368, 5371.

■ 18. In § 217.1, add paragraph (f)(5) to read as follows:

§ 217.1 Purpose, applicability, reservations of authority, and timing.

* * * * *

(f) * * *

(5) A depository institution holding company, a U.S. intermediate holding company, or a state member bank that changes from one category of Board-regulated institution to another of such categories must comply with the requirements of its category in this part, including applicable transition provisions of the requirements in this part, no later than on the first day of the second quarter following the change in the company's category.

■ 19. In § 217.2, add definitions for ''Category II Board-regulated institution'', ''Category III Board-regulated institution'', ''FR Y–9LP'', ''FR Y–15'', and ''U.S. intermediate holding company'' in alphabetical order to read as follows:

§ 217.2 Definitions.

* * * * *

Category II Board-regulated institution means:

(1) A depository institution holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(2) A U.S. intermediate holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5;

(3) A state member bank that is a subsidiary of a company identified in paragraph (1) of this definition; or

(4) A state member bank that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the state member bank has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the state member bank has not filed the Call Report for each of the four most recent quarters, total consolidated assets is based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraph (4)(i) of this section, a state member bank continues to be a Category II Board-regulated institution until the state member bank:

(A) Has:

(*1*) Less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters.

Category III Board-regulated institution means:

(1) A depository institution holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(2) A U.S. intermediate holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5;

(3) A state member bank that is a subsidiary of a company identified in paragraph (1) of this definition;

(4) A depository institution that:

(i) Is not a subsidiary of a depository institution holding company;

(ii)(A) Has total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $250 billion or more. If the state member bank has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $250 billion. If the state member bank has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based its total consolidated assets, as reported on the Call Report, for the most recent quarter or average of the most recent quarters, as applicable; and

(*2*) At least one of the following in paragraphs (4)(i)(B)(*2*)(*i*) through (*iii*) of this definition, each calculated as the average of the four most recent calendar quarters:

(*i*) Total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure equal to $75 billion or more. Off-balance sheet exposure is a state member bank's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the state member bank, as reported on the Call Report; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more; or

(iii) [Reserved]

(iv) After meeting the criteria in paragraph (4)(ii) of this definition, a state member bank continues to be a Category III Board-regulated institution until the state member bank:

(A) Has:

(*1*) Less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(*2*) Less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters; and

(*4*) Less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is a state member bank's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the state member bank, as reported on the Call Report; or

(B) Has less than $100 billion in total consolidated assets, as reported on the

Call Report, for each of the four most recent calendar quarters; or

(C) Is a Category II Board-regulated institution.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

U.S. intermediate holding company means the company that is required to be established or designated pursuant to 12 CFR 252.153.

* * * * *

■ 20. In § 217.10, revise paragraphs (a)(5), (c) introductory text, and (c)(4)(i) introductory text to read as follows:

§ 217.10 Minimum capital requirements.

(a) * * *

(5) For advanced approaches Board-regulated institutions or, for Category III Board-regulated institutions, a supplementary leverage ratio of 3 percent.

* * * * *

(c) *Advanced approaches and Category III capital ratio calculations.* An advanced approaches Board-regulated institution that has completed the parallel run process and received notification from the Board pursuant to § 217.121(d) must determine its regulatory capital ratios as described in paragraphs (c)(1) through (3) of this section. An advanced approaches Board-regulated institution must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the Board-regulated institution meets any of the criteria in § 217.100(b)(1). A Category III Board-regulated institution must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the Board-regulated institution is identified as a Category III Board-regulated institution.

* * * * *

(4) * * *

(i) An advanced approaches Board-regulated institution's or a Category III Board-regulated institution's supplementary leverage ratio is the ratio of its tier 1 capital to total leverage exposure, the latter which is calculated as the sum of:

* * * * *

■ 21. In § 217.11, revise paragraphs (b)(1) introductory text and (b)(1)(ii) to read as follows:

§ 217.11 Capital conservation buffer, countercyclical capital buffer amount, and GSIB surcharge.

* * * * *

(b) * * *

(1) *General.* An advanced approaches Board-regulated institution or a Category III Board-regulated institution must calculate a countercyclical capital buffer amount in accordance with this paragraph (b) for purposes of determining its maximum payout ratio under Table 1 to this section.

* * * * *

(ii) *Amount.* An advanced approaches Board-regulated institution or a Category III Board-regulated institution has a countercyclical capital buffer amount determined by calculating the weighted average of the countercyclical capital buffer amounts established for the national jurisdictions where the Board-regulated institution's private sector credit exposures are located, as specified in paragraphs (b)(2) and (3) of this section.

* * * * *

■ 22. In § 217.22, revise paragraph (b)(2)(ii) to read as follows:

§ 217.22 Regulatory capital adjustments and deductions.

* * * * *

(b) * * *

(2) * * *

(ii) A Board-regulated institution that is not an advanced approaches Board-regulated institution must make its AOCI opt-out election in the Call Report, for a state member bank, FR Y–9C, for bank holding companies or savings and loan holding companies:

(A) If the Board-regulated institution is a Category III Board-regulated institution or Category IV Board-regulated institution, during the first reporting period after the Board-regulated institution meets the definition of a Category III Board-regulated institution or Category IV Board-regulated institution in § 217.2; or

(B) If the A Board-regulated institution is not a Category III Board-regulated institution and not a Category IV Board-regulated institution, during the first reporting period after the Board-regulated institution is required to comply with subpart A of this part as set forth in § 217.1(f).

* * * * *

■ 23. In § 217.63, add paragraphs (d) and (e) to read as follows:

§ 217.63 Disclosures by Board-regulated institutions described in § 217.61.

* * * * *

(d) A Category III Board-regulated institution that is required to publicly disclose its supplementary leverage ratio pursuant to § 217.172(d) is subject to the supplementary leverage ratio disclosure requirement at § 217.173(a)(2).

(e) A Category III Board-regulated institution that is required to calculate a countercyclical capital buffer pursuant to § 217.11 is subject to the disclosure requirement at Table 4 to § 217.173, ''Capital Conservation and Countercyclical Capital Buffers,'' and not to the disclosure requirement at Table 4 to this section, ''Capital Conservation Buffer.''

■ 24. In § 217.100, revise paragraph (b)(1), remove paragraph (b)(2), and redesignate paragraph (b)(3) as paragraph (b)(2) to read as follows:

§ 217.100 Purpose, applicability, and principle of conservatism.

* * * * *

(b) * * *

(1) This subpart applies to:

(i) A top-tier bank holding company or savings and loan holding company domiciled in the United States that:

(A) Is not a consolidated subsidiary of another bank holding company or savings and loan holding company that uses this subpart to calculate its risk-based capital requirements; and

(B) That:

(*1*) Is identified as a global systemically important BHC pursuant to § 217.402;

(*2*) Is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10; or

(*3*) Has a subsidiary depository institution that is required, or has elected, to use 12 CFR part 3, subpart E (OCC), this subpart (Board), or 12 CFR part 324, subpart E (FDIC), to calculate its risk-based capital requirements;

(ii) A state member bank that:

(A) Is a subsidiary of a global systemically important BHC;

(B) Is a Category II Board-regulated institution;

(C) Is a subsidiary of a depository institution that uses 12 CFR part 3, subpart E (OCC), this subpart (Board), or 12 CFR part 324, subpart E (FDIC), to calculate its risk-based capital requirements; or

(D) Is a subsidiary of a bank holding company or savings and loan holding company that uses this subpart to calculate its risk-based capital requirements; or

(iii) Any Board-regulated institution that elects to use this subpart to calculate its risk-based capital requirements.

* * * * *

■ 25. In § 217.172, revise paragraph (d)(2) to read as follows:

§ 217.172 Disclosure requirements.

* * * * *

(d) * * *

(2) A Board-regulated that meets any of the criteria in § 217.100(b)(1) on or after January 1, 2015, or a Category III Board-regulated institution must publicly disclose each quarter its supplementary leverage ratio and the components thereof (that is, tier 1 capital and total leverage exposure) as calculated under subpart B of this part beginning with the calendar quarter immediately following the quarter in which the Board-regulated institution becomes an advanced approaches Board-regulated institution or a Category III Board-regulated institution. This disclosure requirement applies without regard to whether the Board-regulated institution has completed the parallel run process and has received notification from the Board pursuant to § 217.121(d).

■ 26. In § 217.173, revise the section heading and paragraph (a)(2) to read as follows:

§ 217.173 Disclosures by certain advanced approaches Board-regulated institutions and Category III Board-regulated institutions.

(a) * * *

(2) An advanced approaches Board-regulated institution and a Category III Board-regulated institution that is required to publicly disclose its supplementary leverage ratio pursuant to § 217.172(d) must make the disclosures required under Table 13 to this section unless the Board-regulated institution is a consolidated subsidiary of a bank holding company, savings and loan holding company, or depository institution that is subject to these disclosure requirements or a subsidiary of a non-U.S. banking organization that is subject to comparable public disclosure requirements in its home jurisdiction.

* * * * *

PART 249—LIQUIDITY RISK MEASUREMENT STANDARDS (REGULATION WW)

■ 27. Revise the authority citation for part 249 to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1467a(g)(1), 1818, 1828, 1831p–1, 1831o–1, 1844(b), 5365, 5366, 5368; 12 U.S.C. 3101 *et seq.*

■ 28. Revise § 249.1 to read as follows:

§ 249.1 Purpose and applicability.

(a) *Purpose.* This part establishes a minimum liquidity standard for certain Board-regulated institutions on a consolidated basis, as set forth in this part.

(b) *Applicability.* (1) A Board-regulated institution is subject to the minimum liquidity standard and other requirements of this part if:

(i) It is a:

(A) Global systemically important BHC;

(B) GSIB depository institution;

(C) Category II Board-regulated institution;

(D) Category III Board-regulated institution; or

(E) Category IV Board-regulated institution with $50 billion or more in average weighted short-term wholesale funding;

(ii) It is a covered nonbank company; or

(iii) The Board has determined that application of this part is appropriate in light of the Board-regulated institution's asset size, level of complexity, risk profile, scope of operations, affiliation with foreign or domestic covered entities, or risk to the financial system.

(2) This part does not apply to:

(i) A bridge financial company as defined in 12 U.S.C. 5381(a)(3), or a subsidiary of a bridge financial company; or

(ii) A new depository institution or a bridge depository institution, as defined in 12 U.S.C. 1813(i).

(3) In making a determination under paragraph (b)(1)(iii) of this section, the Board will apply, as appropriate, notice and response procedures in the same manner and to the same extent as the notice and response procedures set forth in 12 CFR 263.202.

(c) *Covered nonbank companies.* The Board will establish a minimum liquidity standard and other requirements for a designated company under this part by rule or order. In establishing such standard, the Board will consider the factors set forth in sections 165(a)(2) and (b)(3) of the Dodd-Frank Act and may tailor the application of the requirements of this part to the designated company based on the nature, scope, size, scale, concentration, interconnectedness, mix of the activities of the designated company, or any other risk-related factor that the Board determines is appropriate.

■ 29. Amend § 249.3 by:

■ a. Adding a definition for ''Average weighted short-term wholesale funding'' in alphabetical order;

■ b. Revising the definitions for ''Board-regulated institution'' and ''Calculation date'' in alphabetical order;

■ c. Adding the definitions for ''Call Report'', ''Category II Board-regulated institution'', ''Category III Board-regulated institution'', and ''Category IV Board-regulated institution'' in alphabetical order;

■ d. Revising the definition for ''Covered depository institution holding company'';

■ e. Adding the definitions for ''FR Y–9LP'', ''FR Y–15'', ''Global systemically important BHC'', and ''GSIB depository institution'' in alphabetical order;

■ f. Revising the definition for ''Regulated financial company''; and

■ g. Adding the definitions for ''State'' and ''U.S. intermediate holding company'' in alphabetical order.

The additions and revisions read as follows:

§ 249.3 Definitions.

* * * * *

Average weighted short-term wholesale funding means the average of the weighted short-term wholesale funding for each of the four most recent calendar quarters as reported quarterly on the FR Y–15 or, if the Board-regulated institution has not filed the FR Y–15 for each of the four most recent calendar quarters, for the most recent quarter or averaged over the most recent quarters, as applicable.

* * * * *

Board-regulated institution means a state member bank, covered depository institution holding company, U.S. intermediate holding company, or covered nonbank company.

* * * * *

Calculation date means, for purposes of subparts A through J of this part, any date on which a Board-regulated institution calculates its liquidity coverage ratio under § 249.10.

Call Report means the Consolidated Reports of Condition and Income.

Category II Board-regulated institution means:

(1) A covered depository institution holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10;

(2) A U.S. intermediate holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5;

(3)(i) A state member bank that:

(A) Is a consolidated subsidiary of:

(*1*) A company described in paragraph (1) or (2) of this definition; or

(*2*) A depository institution that meets the criteria in paragraph (4)(ii)(A) or (B) of this definition; and

(B) That has total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the state member bank has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (3), a state member bank continues to be a Category II Board-regulated institution until the state member bank has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the state member bank is no longer a consolidated subsidiary of a company described in paragraph (3)(i)(A)(*1*) or (*2*) of this definition; or

(4) A state member bank that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraphs (4)(i) and (ii) of this definition, a state member bank continues to be a Category II Board-regulated institution until the state member bank:

(A)(*1*) Has less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Has less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form;

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a GSIB depository institution.

Category III Board-regulated institution means:

(1) A covered depository institution holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(2) A U.S. intermediate holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5;

(3)(i) A state member bank that is:

(A) A consolidated subsidiary of:

(*1*) A company described in paragraph (1) or (2) of this definition; or

(*2*) A depository institution that meets the criteria in paragraph (4)(ii)(A) or (B) of this definition; and

(B) Has total consolidated assets, calculated based on the average of the state member bank's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the state member bank has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (3), a state member bank continues to be a Category III Board-regulated institution until the state member bank has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the state member bank is no longer a consolidated subsidiary of a company described in paragraph (3)(i)(A)(*1*) or (*2*) of this definition; or

(4) A state member bank that:

(i) Is not a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets in the four most recent quarters as reported on the most recent Call Report, equal to $250 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets in the four most recent calendar quarters as reported on the most recent Call Report, of $100 billion or more but less than $250 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) At least one of the following in paragraphs (4)(ii)(B)(*2*)(*i*) through (*iii*) of this definition, each measured as the average of the four most recent calendar quarters, or if the depository institution has not filed the FR Y–9LP or equivalent reporting form, Call Report, or FR Y–15 or equivalent reporting form, as applicable, for each of the four most recent calendar quarters, for the most recent quarter or the average of the most recent quarters, as applicable:

(*i*) Total nonbank assets, calculated in accordance with instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report, equal to $75 billion or more; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more.

(iii) After meeting the criteria in paragraphs (4)(i) and (ii) of this definition, a state member bank continues to be a Category III Board-regulated institution until the state member bank:

(A)(*1*) Has less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(*2*) Has less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Has less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is a state member bank's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the state member bank, as reported on the Call Report; and

(*4*) Has less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters;

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(C) Is a Category II Board-regulated institution; or

(D) Is a GSIB depository institution.

Category IV Board-regulated institution means:

(1) A covered depository institution holding company that is identified as a Category IV banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(2) A U.S. intermediate holding company that is identified as a Category IV banking organization pursuant to 12 CFR 252.5.

* * * * *

Covered depository institution holding company means a top-tier bank holding company or savings and loan holding company domiciled in the United States other than:

(1) A top-tier savings and loan holding company that is:

(i) A grandfathered unitary savings and loan holding company as defined in section 10(c)(9)(A) of the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*); and

(ii) As of June 30 of the previous calendar year, derived 50 percent or more of its total consolidated assets or 50 percent of its total revenues on an enterprise-wide basis (as calculated under GAAP) from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k));

(2) A top-tier depository institution holding company that is an insurance underwriting company;

(3)(i) A top-tier depository institution holding company that, as of June 30 of the previous calendar year, held 25 percent or more of its total consolidated assets in subsidiaries that are insurance underwriting companies (other than assets associated with insurance for credit risk); and

(ii) For purposes of paragraph (3)(i) of this definition, the company must calculate its total consolidated assets in accordance with GAAP, or if the company does not calculate its total consolidated assets under GAAP for any regulatory purpose (including compliance with applicable securities laws), the company may estimate its total consolidated assets, subject to review and adjustment by the Board of Governors of the Federal Reserve System; or

(4) A U.S. intermediate holding company.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

Global systemically important BHC means a bank holding company identified as a global systemically important BHC pursuant to 12 CFR 217.402.

GSIB depository institution means a depository institution that is a consolidated subsidiary of a global systemically important BHC and has total consolidated assets equal to $10 billion or more, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent calendar quarter or the average of the most recent calendar quarters, as applicable. After meeting the criteria under this definition, a depository institution continues to be a GSIB depository institution until the depository institution has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the depository institution is no longer a consolidated subsidiary of a global systemically important BHC.

* * * * *

Regulated financial company means:

(1) A depository institution holding company or designated company;

(2) A company included in the organization chart of a depository institution holding company on the Form FR Y–6, as listed in the hierarchy report of the depository institution holding company produced by the National Information Center (NIC) website,[2] provided that the top-tier depository institution holding company is subject to a minimum liquidity standard under this part;

(3) A depository institution; foreign bank; credit union; industrial loan company, industrial bank, or other similar institution described in section 2 of the Bank Holding Company Act of 1956, as amended (12 U.S.C. 1841 *et seq.*); national bank, state member bank, or state non-member bank that is not a depository institution;

(4) An insurance company;

(5) A securities holding company as defined in section 618 of the Dodd-Frank Act (12 U.S.C. 1850a); broker or dealer registered with the SEC under section 15 of the Securities Exchange Act (15 U.S.C. 78o); futures commission merchant as defined in section 1a of the Commodity Exchange Act of 1936 (7 U.S.C. 1a); swap dealer as defined in section 1a of the Commodity Exchange Act (7 U.S.C. 1a); or security-based swap dealer as defined in section 3 of the Securities Exchange Act (15 U.S.C. 78c);

(6) A designated financial market utility, as defined in section 803 of the Dodd-Frank Act (12 U.S.C. 5462);

(7) A U.S. intermediate holding company; and

(8) Any company not domiciled in the United States (or a political subdivision thereof) that is supervised and regulated in a manner similar to entities described in paragraphs (1) through (7) of this definition (*e.g.,* a foreign banking organization, foreign insurance company, foreign securities broker or dealer or foreign financial market utility).

(9) A regulated financial company does not include:

(i) U.S. government-sponsored enterprises;

(ii) Small business investment companies, as defined in section 102 of the Small Business Investment Act of 1958 (15 U.S.C. 661 *et seq.*);

(iii) Entities designated as Community Development Financial Institutions (CDFIs) under 12 U.S.C. 4701 *et seq.* and 12 CFR part 1805; or

(iv) Central banks, the Bank for International Settlements, the International Monetary Fund, or multilateral development banks.

* * * * *

State means any state, commonwealth, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, American

[2] *http://www.ffiec.gov/nicpubweb/nicweb/NicHome.aspx.*

Samoa, Guam, or the United States Virgin Islands.

* * * * *

U.S. intermediate holding company means a top-tier company that is required to be established pursuant to 12 CFR 252.153.

* * * * *

■ 30. In § 249.10, revise paragraph (a), redesignate paragraph (b) as paragraph (c), and add new paragraph (b) to read as follows:

§ 249.10 Liquidity coverage ratio.

(a) *Minimum liquidity coverage ratio requirement.* Subject to the transition provisions in subpart F of this part, a Board-regulated institution must calculate and maintain a liquidity coverage ratio that is equal to or greater than 1.0 on each business day (or, in the case of a Category IV Board-regulated institution, on the last business day of the applicable month) in accordance with this part. A Board-regulated institution must calculate its liquidity coverage ratio as of the same time on each calculation date (the elected calculation time). The Board-regulated institution must select this time by written notice to the Board prior to December 31, 2019. The Board-regulated institution may not thereafter change its elected calculation time without prior written approval from the Board.

(b) *Transition from monthly calculation to daily calculation.* A Board-regulated institution that was a Category IV Board-regulated institution immediately prior to moving to a different category must begin calculating and maintaining a liquidity coverage ratio each business day beginning on the first day of the fifth quarter after becoming a Category I Board-regulated institution, Category II Board-regulated institution, or Category III Board-regulated institution.

* * * * *

■ 31. In § 249.30, revise paragraph (a) and add paragraphs (c) and (d) to read as follows:

§ 249.30 Total net cash outflow amount.

(a) *Calculation of total net cash outflow amount.* As of the calculation date, a Board-regulated institution's total net cash outflow amount equals the Board-regulated institution's outflow adjustment percentage as determined under paragraph (c) of this section multiplied by:

(1) The sum of the outflow amounts calculated under § 249.32(a) through (l); *minus*

(2) The lesser of:

(i) The sum of the inflow amounts calculated under § 249.33(b) through (g); and

(ii) 75 percent of the amount calculated under paragraph (a)(1) of this section; *plus*

(3) The maturity mismatch add-on as calculated under paragraph (b) of this section.

* * * * *

(c) *Outflow adjustment percentage.* A Board-regulated institution's outflow adjustment percentage is determined pursuant to Table 1 to this paragraph (c).

TABLE 1 TO § 249.30(c)—OUTFLOW ADJUSTMENT PERCENTAGES

	Percent
Outflow adjustment percentage	
Global systemically important BHC or GSIB depository institution	100
Category II Board-regulated institution	100
Category III Board-regulated institution with $75 billion or more in average weighted short-term wholesale funding and any Category III Board-regulated institution that is a consolidated subsidiary of such a Category III Board-regulated institution	100
Category III Board-regulated institution with less than $75 billion in average weighted short-term wholesale funding and any Category III Board-regulated institution that is a consolidated subsidiary of such a Category III Board-regulated institution	85
Category IV Board-regulated institution with $50 billion or more in average weighted short-term wholesale funding	70

(d) *Transition into a different outflow adjustment percentage.* (1) A Board-regulated institution whose outflow adjustment percentage increases from a lower to a higher outflow adjustment percentage may continue to use its previous lower outflow adjustment percentage until the first day of the third calendar quarter after the outflow adjustment percentage increases.

(2) A Board-regulated institution whose outflow adjustment percentage decreases from a higher to a lower outflow adjustment percentage must continue to use its previous higher outflow adjustment percentage until the first day of the first calendar quarter after the outflow adjustment percentage decreases.

■ 32. Revise § 249.50 to read as follows:

§ 249.50 Transitions.

(a) *No transitions for certain Board-regulated institutions.* A Board-regulated institution that is subject to the minimum liquidity standards and other requirements of this part immediately prior to December 31, 2019 must comply with the requirements of this part as of December 31, 2019.

(b) *Transitions for certain U.S. intermediate holding companies.* A U.S. intermediate holding company that initially becomes subject to this part on December 31, 2019 does not need to comply with the minimum liquidity standard of § 249.10 or with the public disclosure requirements of § 249.90 until December 31, 2020, at which time the U.S. intermediate holding company must comply with the minimum liquidity standard of § 249.10 each business day (or, in the case of a Category IV Board-regulated institution, on the last business day of the applicable calendar month) in accordance with this part, and with the public disclosure requirements of § 249.90.

(c) *Initial application.* (1) A Board-regulated institution that initially becomes subject to the minimum liquidity standard and other requirements of this part under § 249.1(b)(1)(i) or (ii) after December 31, 2019, must comply with the requirements of this part beginning on the first day of the third calendar quarter after which the Board-regulated institution becomes subject to this part, except that a Board-regulated institution that is not a Category IV Board-regulated institution must:

(i) For the first two calendar quarters after the Board-regulated institution begins complying with the minimum liquidity standard and other requirements of this part, calculate and maintain a liquidity coverage ratio monthly, on each calculation date that is the last business day of the applicable calendar month; and

(ii) Beginning the first day of the fifth calendar quarter after the Board-regulated institution becomes subject to the minimum liquidity standard and other requirements of this part and continuing thereafter, calculate and maintain a liquidity coverage ratio on each calculation date.

(2) A Board-regulated institution that becomes subject to the minimum liquidity standard and other requirements of this part under § 249.1(b)(1)(iii) must comply with the requirements of this part subject to a transition period specified by the Board.

(d) *Transition into a different outflow adjustment percentage.* (1) A Board-regulated institution whose outflow adjustment percentage changes is subject to transition periods as set forth in § 249.30(d).

(2) A Board-regulated institution that is no longer subject to the minimum liquidity standard and other requirements of this part pursuant to § 249.1(b)(1)(i) or (ii) based on the size of total consolidated assets, cross-jurisdictional activity, total nonbank assets, weighted short-term wholesale funding, or off-balance sheet exposure calculated in accordance with the Call Report, instructions to the FR Y–9LP or the FR Y–15 or equivalent reporting form, as applicable, for each of the four most recent calendar quarters may cease compliance with this part as of the first day of the first quarter after it is no longer subject to § 249.1(b).

(e) *Reservation of authority.* The Board may extend or accelerate any compliance date of this part if the Board determines that such extension or acceleration is appropriate. In determining whether an extension or acceleration is appropriate, the Board will consider the effect of the modification on financial stability, the period of time for which the modification would be necessary to facilitate compliance with this part, and the actions the Board-regulated institution is taking to come into compliance with this part.

Subpart G—[Removed and Reserved]

■ 33. Remove and reserve subpart G, consisting of §§ 249.60 through 249.64.

■ 34. In § 249.90, revise paragraphs (a) and (b) to read as follows:

§ 249.90 Timing, method and retention of disclosures.

(a) *Applicability.* A covered depository institution holding company, U.S. intermediate holding company, or covered nonbank company that is subject to § 249.1 must disclose publicly all the information required under this subpart.

(b) *Timing of disclosure.* (1) A covered depository institution holding company, U.S. intermediate holding company, or covered nonbank company subject to this subpart must provide timely public disclosures each calendar quarter of all the information required under this subpart.

(2) A covered depository institution holding company, U.S. intermediate holding company, or covered nonbank company that is subject to this subpart must provide the disclosures required by this subpart beginning with the first calendar quarter that includes the date that is 18 months after the covered depository institution holding company or U.S. intermediate holding company first became subject to this subpart.

* * * * *

■ 35. In § 249.91:

■ a. Revise Table 1 to § 249.91(a);

■ b. In paragraph (b)(1)(i)(B):

■ i. Remove ''(c)(1), (c)(5), (c)(9), (c)(14), (c)(19), (c)(23), and (c)(28)'' and add in its place ''(c)(1), (5), (9), (14), (19), (23), and (28)''; and

■ ii. Remove the semicolon at the end of the paragraph and add a period in its place.

■ c. Remove paragraph (b)(1)(ii) and redesignate paragraph (b)(1)(iii) as paragraph (b)(1)(ii);

■ d. Revise paragraphs (c)(32) and (33): and

■ e. Add paragraphs (c)(34) and (35).

The revisions and additions read as follows:

§ 249.91 Disclosure requirements.

(a) * * *

Federal Deposit Insurance Corporation

12 CFR Chapter III

Authority and Issuance

For the reasons set forth in the Supplementary Information section, chapter III of title 12 of the Code of Federal Regulations is to be amended as follows:

PART 324—CAPITAL ADEQUACY OF FDIC–SUPERVISED INSTITUTIONS

■ 37. The authority citation for part 324 continues to read as follows:

Authority: 12 U.S.C. 1815(a), 1815(b), 1816, 1818(a), 1818(b), 1818(c), 1818(t), 1819(Tenth), 1828(c), 1828(d), 1828(i), 1828(n), 1828(o), 1831o, 1835, 3907, 3909, 4808; 5371; 5412; Pub. L. 102–233, 105 Stat. 1761, 1789, 1790 (12 U.S.C. 1831n note); Pub. L. 102–242, 105 Stat. 2236, 2355, as amended by Pub. L. 103–325, 108 Stat. 2160, 2233 (12 U.S.C. 1828 note); Pub. L. 102–242, 105 Stat. 2236, 2386, as amended by Pub. L. 102–550, 106 Stat. 3672, 4089 (12 U.S.C. 1828 note); Pub. L. 111–203, 124 Stat. 1376, 1887 (15 U.S.C. 78o–7 note).

■ 38. In § 324.1, add paragraph (f)(4) to read as follows:

§ 324.1 Purpose, applicability, reservations of authority, and timing.

* * * * *

(f) * * *

(4) An FDIC-supervised institution that changes from one category of FDIC-supervised institution to another of such categories must comply with the requirements of its category in this part, including applicable transition provisions of the requirements in this part, no later than on the first day of the second quarter following the change in the FDIC-supervised institution's category.

■ 39. In § 324.2, add the definitions of ''Category II FDIC-supervised institution'', ''Category III FDIC-supervised institution'', ''FR Y–15'', and ''FR Y–9LP'' in alphabetical order to read as follows:

§ 324.2 Definitions.

* * * * *

Category II FDIC-supervised institution means:

(1) An FDIC-supervised institution that is a consolidated subsidiary of a company that is identified as a Category II banking organization, as defined pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(2) An FDIC-supervised institution that:

(i) Is not a subsidiary of a depository institution holding company;

(ii)(A) Has total consolidated assets, calculated based on the average of the FDIC-supervised institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the FDIC-supervised institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the four most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the FDIC-supervised institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the FDIC-supervised institution has not filed the Call Report for each of the four most recent quarters, total consolidated assets is based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the four most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraph (2)(ii) of this definition, an FDIC-supervised institution continues to be a Category II FDIC-supervised institution until the FDIC-supervised institution has:

(A)(*1*) Less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form; or

(B) Less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters.

Category III FDIC-supervised institution means:

(1) An FDIC-supervised institution that is a subsidiary of a Category III banking organization, as defined pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable;

(2) An FDIC-supervised institution that is a subsidiary of a depository institution that meets the criteria in paragraph (3)(iii)(A) or (B) of this definition; or

(3) A depository institution that:

(i) Is an FDIC-supervised institution;

(ii) Is not a subsidiary of a depository institution holding company; and

(iii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $250 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the four most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $250 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the four most recent quarters, as applicable; and

(*2*) At least one of the following in paragraphs (3)(iii)(B)(*2*)(*i*) through (*iii*) of this definition, each calculated as the average of the four most recent calendar quarters, or if the depository institution has not filed each applicable reporting form for each of the four most recent calendar quarters, for the most recent quarter or quarters, as applicable:

(*i*) Total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure equal to $75 billion or more. Off-balance sheet exposure is a depository institution's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more.

(iv) After meeting the criteria in paragraph (3)(iii) of this definition, an FDIC-supervised institution continues to be a Category III FDIC-supervised institution until the FDIC-supervised institution:

(A) Has:

(*1*) Less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(*2*) Less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters; and

(*4*) Less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is an FDIC-supervised institution's total exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the FDIC-supervised institution, as reported on the Call Report; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a Category II FDIC-supervised institution.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

■ 40. In § 324.10, revise paragraphs (a)(5), (c) introductory text, and (c)(4)(i) introductory text to read as follows:

§ 324.10 Minimum capital requirements.

(a) * * *

(5) For advanced approaches FDIC-supervised institutions or, for Category III FDIC-supervised institutions, a supplementary leverage ratio of 3 percent.

* * * * *

(c) *Advanced approaches and Category III capital ratio calculations.* An advanced approaches FDIC-supervised institution that has completed the parallel run process and received notification from the FDIC pursuant to § 324.121(d) must determine its regulatory capital ratios as described in paragraphs (c)(1) through (3) of this section. An advanced approaches FDIC-supervised institution must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the FDIC-supervised institution meets any of the criteria in § 324.100(b)(1). A Category III FDIC-supervised institution must determine its supplementary leverage ratio in accordance with paragraph (c)(4) of this section, beginning with the calendar quarter immediately following the quarter in which the FDIC-supervised institution is identified as a Category III FDIC-supervised institution.

* * * * *

(4) * * *

(i) An advanced approaches FDIC-supervised institution's or a Category III FDIC-supervised institution's supplementary leverage ratio is the ratio of its tier 1 capital to total leverage exposure, the latter of which is calculated as the sum of:

* * * * *

■ 41. In § 324.11, revise paragraphs (b)(1) introductory text and (b)(1)(ii) to read as follows:

§ 324.11 Capital conservation buffer and countercyclical capital buffer amount.

* * * * *

(b) * * *

(1) *General.* An advanced approaches FDIC-supervised institution or a Category III FDIC-supervised institution must calculate a countercyclical capital buffer amount in accordance with paragraph (b) of this section for purposes of determining its maximum payout ratio under Table 1 to this section.

* * * * *

(ii) *Amount.* An advanced approaches FDIC-supervised institution or a Category III FDIC-supervised institution has a countercyclical capital buffer amount determined by calculating the weighted average of the countercyclical capital buffer amounts established for the national jurisdictions where the FDIC-supervised institution's private sector credit exposures are located, as specified in paragraphs (b)(2) and (3) of this section.

* * * * *

■ 42. In § 324.22, revise paragraph (b)(2)(ii) to read as follows:

§ 324.22 Regulatory capital adjustments and deductions.

* * * * *

(b) * * *

(2) * * *

(ii) An FDIC-supervised institution that is not an advanced approaches FDIC-supervised institution must make its AOCI opt-out election in the Call Report:

(A) If the FDIC-supervised institution is a Category III FDIC-supervised institution or a Category IV FDIC-supervised institution, during the first reporting period after the FDIC-supervised institution meets the definition of a Category III FDIC-supervised institution or a Category IV FDIC-supervised institution in § 324.2; or

(B) If the FDIC-supervised institution is not a Category III FDIC-supervised institution or a Category IV FDIC-supervised institution, during the first reporting period after the FDIC-supervised institution is required to comply with subpart A of this part as set forth in § 324.1(f).

* * * * *

■ 43. In § 324.63, add paragraphs (d) and (e) to read as follows:

§ 324.63 Disclosures by FDIC-supervised institutions described in § 324.61.

* * * * *

(d) A Category III FDIC-supervised institution that is required to publicly disclose its supplementary leverage ratio pursuant to § 324.172(d) is subject to the supplementary leverage ratio disclosure requirement at § 324.173(a)(2).

(e) A Category III FDIC-supervised institution that is required to calculate a countercyclical capital buffer pursuant to § 324.11 is subject to the disclosure requirement at Table 4 to § 324.173, ''Capital Conservation and Countercyclical Capital Buffers,'' and not to the disclosure requirement at Table 4 to this section, ''Capital Conservation Buffer.''

■ 44. In § 324.100, revise paragraph (b)(1), remove paragraph (b)(2), and redesignate paragraph (b)(3) as paragraph (b)(2) to read as follows:

§ 324.100 Purpose, applicability, and principle of conservatism.

* * * * *

(b) * * *

(1) This subpart applies to an FDIC-supervised institution that:

(i) Is a subsidiary of a global systemically important BHC, as identified pursuant to 12 CFR 217.402;

(ii) Is a Category II FDIC-supervised institution;

(iii) Is a subsidiary of a depository institution that uses the advanced approaches pursuant to 12 CFR part 3, subpart E (OCC), 12 CFR part 217, subpart E (Board), or this subpart (FDIC) to calculate its risk-based capital requirements;

(iv) Is a subsidiary of a bank holding company or savings and loan holding company that uses the advanced approaches pursuant to subpart E of 12 CFR part 217 to calculate its risk-based capital requirements; or

(v) Elects to use this subpart to calculate its risk-based capital requirements.

* * * * *

■ 45. In § 324.172, revise paragraph (d)(2) to read as follows:

§ 324.172 Disclosure requirements.

* * * * *

(d) * * *

(2) An FDIC-supervised institution that meets any of the criteria in § 324.100(b)(1) on or after January 1, 2015, or a Category III FDIC-supervised institution must publicly disclose each quarter its supplementary leverage ratio and the components thereof (that is, tier 1 capital and total leverage exposure) as calculated under subpart B of this part beginning with the calendar quarter immediately following the quarter in which the FDIC-supervised institution becomes an advanced approaches FDIC-supervised institution or a Category III FDIC-supervised institution. This disclosure requirement applies without regard to whether the FDIC-supervised institution has completed the parallel run process and has received notification from the FDIC pursuant to § 324.121(d).

■ 46. In § 324.173, revise the section heading and paragraph (a)(2) to read as follows:

§ 324.173 Disclosures by certain advanced approaches FDIC-supervised institutions and Category III FDIC-supervised institutions.

(a) * * *

(2) An advanced approaches FDIC-supervised institution and a Category III FDIC-supervised institution that is required to publicly disclose its supplementary leverage ratio pursuant to § 324.172(d) must make the disclosures required under Table 13 to this section unless the FDIC-supervised institution is a consolidated subsidiary of a bank holding company, savings and loan holding company, or depository institution that is subject to these disclosure requirements or a subsidiary of a non-U.S. banking organization that is subject to comparable public disclosure requirements in its home jurisdiction.

* * * * *

PART 329—LIQUIDITY RISK MEASUREMENT STANDARDS

■ 47. The authority citation for part 329 continues to read as follows:

Authority: 12 U.S.C. 1815, 1816, 1818, 1819, 1828, 1831p–1, 5412.

■ 48. Revise § 329.1 to read as follows:

§ 329.1 Purpose and applicability.

(a) *Purpose.* This part establishes a minimum liquidity standard for certain FDIC-supervised institutions on a consolidated basis, as set forth in this part.

(b) *Applicability.* (1) An FDIC-supervised institution is subject to the minimum liquidity standard and other requirements of this part if:

(i) It is a:

(A) GSIB depository institution supervised by the FDIC;

(B) Category II FDIC-supervised institution; or

(C) Category III FDIC-supervised institution; or

(ii) The FDIC has determined that application of this part is appropriate in light of the FDIC-supervised institution's asset size, level of complexity, risk profile, scope of operations, affiliation with foreign or domestic covered entities, or risk to the financial system.

(2) This part does not apply to:

(i) A bridge financial company as defined in 12 U.S.C. 5381(a)(3), or a subsidiary of a bridge financial company;

(ii) A new depository institution or a bridge depository institution, as defined in 12 U.S.C. 1813(i); or

(iii) An insured branch.

(3) In making a determination under paragraph (b)(1)(ii) of this section, the FDIC will apply, as appropriate, notice and response procedures in the same manner and to the same extent as the notice and response procedures set forth in 12 CFR 324.5.

■ 49. Amend § 329.3 by:

■ a. Adding a definition for ''Average weighted short-term wholesale funding'' in alphabetical order;

■ b. Revising the definition of ''Calculation date'';
■ c. Adding definitions for ''Call Report'', ''Category II FDIC-supervised institution'', and ''Category III FDIC-supervised institution'' in alphabetical order;
■ d. Revising the definition of ''Covered depository institution holding company'';
■ e. Adding definitions for ''FR Y–9LP'', ''FR Y–15'', ''Global systemically important BHC'', and ''GSIB depository institution'' in alphabetical order;
■ f. Revising the definition of ''Regulated financial company''; and
■ g. Adding definitions for ''State'' and ''U.S. intermediate holding company'' in alphabetical order.

The additions and revisions read as follows:

§ 329.3 Definitions.

* * * * *

Average weighted short-term wholesale funding means the average of the FDIC-supervised institution's weighted short-term wholesale funding for each of the four most recent calendar quarters as reported quarterly on the FR Y–15 or, if the FDIC-supervised institution has not filed the FR Y–15 for each of the four most recent calendar quarters, for the most recent quarter or averaged over the most recent quarters, as applicable.

* * * * *

Calculation date means, for purposes of subparts A through F of this part, any date on which an FDIC-supervised institution calculates its liquidity coverage ratio under § 329.10.

Call Report means the Consolidated Reports of Condition and Income.

Category II FDIC-supervised institution means:

(1)(i) An FDIC-supervised institution that:

(A) Is a consolidated subsidiary of:

(*1*) A company that is identified as a Category II banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(*2*) A U.S. intermediate holding company that is identified as a Category II banking organization pursuant to 12 CFR 252.5; or

(*3*) A depository institution that meets the criteria in paragraph (2)(ii)(A) or (B) of this definition; and

(B) Has total consolidated assets, calculated based on the average of the FDIC-supervised institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the FDIC-supervised institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (1), an FDIC-supervised institution continues to be a Category II FDIC-supervised institution until the FDIC-supervised institution has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the FDIC-supervised institution is no longer a consolidated subsidiary of an entity described in paragraph (1)(i)(A)(*1*), (*2*), or (*3*) of this definition; or

(2) An FDIC-supervised institution that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $700 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets is calculated based on its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $700 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) Cross-jurisdictional activity, calculated based on the average of its cross-jurisdictional activity for the four most recent calendar quarters, of $75 billion or more. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form.

(iii) After meeting the criteria in paragraphs (2)(i) and (ii) of this definition, an FDIC-supervised institution continues to be a Category II FDIC-supervised institution until the FDIC-supervised institution:

(A)(*1*) Has less than $700 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Has less than $75 billion in cross-jurisdictional activity for each of the four most recent calendar quarters. Cross-jurisdictional activity is the sum of cross-jurisdictional claims and cross-jurisdictional liabilities, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; or

(C) Is a GSIB depository institution.

Category III FDIC-supervised institution means:

(1)(i) An FDIC-supervised institution that:

(A) Is a consolidated subsidiary of:

(*1*) A company that is identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10, as applicable; or

(*2*) A U.S. intermediate holding company that is identified as a Category III banking organization pursuant to 12 CFR 252.5; or

(*3*) A depository institution that meets the criteria in paragraph (2)(ii)(A) or (B) of this definition; and

(B) Has total consolidated assets, calculated based on the average of the FDIC-supervised institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, equal to $10 billion or more.

(ii) If the FDIC-supervised institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable. After meeting the criteria under this paragraph (1), an FDIC-supervised institution continues to be a Category III FDIC-supervised institution until the FDIC-supervised institution has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the FDIC-supervised institution is no longer a consolidated subsidiary of an entity described in paragraph (1)(i)(A)(*1*), (*2*), or (3) of this definition; or

(2) An FDIC-supervised institution that:

(i) Is not a subsidiary of a depository institution holding company; and

(ii)(A) Has total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent quarters as reported on the Call Report, equal to $250 billion or more. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; or

(B) Has:

(*1*) Total consolidated assets, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report, of $100 billion or more but less than $250 billion. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent quarter or the average of the most recent quarters, as applicable; and

(*2*) One or more of the following in paragraphs (2)(ii)(B)(*2*)(*i*) through (*iii*) of this definition, each measured as the average of the four most recent calendar quarters, or if the depository institution has not filed the FR Y–9LP or equivalent reporting form, Call Report, or FR Y–15 or equivalent reporting form, as applicable for each of the four most recent calendar quarters, for the most recent quarter or the average of the most quarters, as applicable:

(*i*) Total nonbank assets, calculated in accordance with instructions to the FR Y–9LP or equivalent reporting form, equal to $75 billion or more;

(*ii*) Off-balance sheet exposure, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report, equal to $75 billion or more; or

(*iii*) Weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, equal to $75 billion or more.

(iii) After meeting the criteria in paragraphs (2)(i) and (ii) of this definition, an FDIC-supervised institution continues to be a Category III FDIC-supervised institution until the FDIC-supervised institution:

(A)(*1*) Has less than $250 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters; and

(*2*) Has less than $75 billion in total nonbank assets, calculated in accordance with the instructions to the FR Y–9LP or equivalent reporting form, for each of the four most recent calendar quarters;

(*3*) Has less than $75 billion in off-balance sheet exposure for each of the four most recent calendar quarters. Off-balance sheet exposure is calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, minus the total consolidated assets of the depository institution, as reported on the Call Report; and

(*4*) Has less than $75 billion in weighted short-term wholesale funding, calculated in accordance with the instructions to the FR Y–15 or equivalent reporting form, for each of the four most recent calendar quarters; or

(B) Has less than $100 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters;

(C) Is a Category II FDIC-supervised institution; or

(D) Is a GSIB depository institution.

* * * * *

Covered depository institution holding company means a top-tier bank holding company or savings and loan holding company domiciled in the United States other than:

(1) A top-tier savings and loan holding company that is:

(i) A grandfathered unitary savings and loan holding company as defined in section 10(c)(9)(A) of the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*); and

(ii) As of June 30 of the previous calendar year, derived 50 percent or more of its total consolidated assets or 50 percent of its total revenues on an enterprise-wide basis (as calculated under GAAP) from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k));

(2) A top-tier depository institution holding company that is an insurance underwriting company;

(3)(i) A top-tier depository institution holding company that, as of June 30 of the previous calendar year, held 25 percent or more of its total consolidated assets in subsidiaries that are insurance underwriting companies (other than assets associated with insurance for credit risk); and

(ii) For purposes of paragraph (3)(i) of this definition, the company must calculate its total consolidated assets in accordance with GAAP, or if the company does not calculate its total consolidated assets under GAAP for any regulatory purpose (including compliance with applicable securities laws), the company may estimate its total consolidated assets, subject to review and adjustment by the Board of Governors of the Federal Reserve System; or

(4) A U.S. intermediate holding company.

* * * * *

FR Y–9LP means the Parent Company Only Financial Statements for Large Holding Companies.

FR Y–15 means the Systemic Risk Report.

* * * * *

Global systemically important BHC means a bank holding company identified as a global systemically important BHC pursuant to 12 CFR 217.402.

GSIB depository institution means a depository institution that is a consolidated subsidiary of a global systemically important BHC and has total consolidated assets equal to $10 billion or more, calculated based on the average of the depository institution's total consolidated assets for the four most recent calendar quarters as reported on the Call Report. If the depository institution has not filed the Call Report for each of the four most recent calendar quarters, total consolidated assets means its total consolidated assets, as reported on the Call Report, for the most recent calendar quarter or the average of the most recent calendar quarters, as applicable. After meeting the criteria under this definition, a depository institution continues to be a GSIB depository institution until the depository institution has less than $10 billion in total consolidated assets, as reported on the Call Report, for each of the four most recent calendar quarters, or the depository institution is no longer a consolidated subsidiary of a global systemically important BHC.

* * * * *

Regulated financial company means:

(1) A depository institution holding company or designated company;

(2) A company included in the organization chart of a depository institution holding company on the Form FR Y–6, as listed in the hierarchy report of the depository institution holding company produced by the National Information Center (NIC) website,[2] provided that the top-tier depository institution holding company is subject to a minimum liquidity standard under 12 CFR part 249;

(3) A depository institution; foreign bank; credit union; industrial loan company, industrial bank, or other similar institution described in section 2 of the Bank Holding Company Act of

[2] *http://www.ffiec.gov/nicpubweb/nicweb/NicHome.aspx.*

1956, as amended (12 U.S.C. 1841 *et seq.*); national bank, state member bank, or state non-member bank that is not a depository institution;

(4) An insurance company;

(5) A securities holding company as defined in section 618 of the Dodd-Frank Act (12 U.S.C. 1850a); broker or dealer registered with the SEC under section 15 of the Securities Exchange Act (15 U.S.C. 78o); futures commission merchant as defined in section 1a of the Commodity Exchange Act of 1936 (7 U.S.C. 1a); swap dealer as defined in section 1a of the Commodity Exchange Act (7 U.S.C. 1a); or security-based swap dealer as defined in section 3 of the Securities Exchange Act (15 U.S.C. 78c);

(6) A designated financial market utility, as defined in section 803 of the Dodd-Frank Act (12 U.S.C. 5462);

(7) A U.S. intermediate holding company; and

(8) Any company not domiciled in the United States (or a political subdivision thereof) that is supervised and regulated in a manner similar to entities described in paragraphs (1) through (7) of this definition (*e.g.,* a foreign banking organization, foreign insurance company, foreign securities broker or dealer or foreign financial market utility).

(9) A regulated financial company does not include:

(i) U.S. government-sponsored enterprises;

(ii) Small business investment companies, as defined in section 102 of the Small Business Investment Act of 1958 (15 U.S.C. 661 *et seq.*);

(iii) Entities designated as Community Development Financial Institutions (CDFIs) under 12 U.S.C. 4701 *et seq.* and 12 CFR part 1805; or

(iv) Central banks, the Bank for International Settlements, the International Monetary Fund, or multilateral development banks.

* * * * *

State means any state, commonwealth, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, American Samoa, Guam, or the United States Virgin Islands.

* * * * *

U.S. intermediate holding company means a top-tier company that is required to be established pursuant to 12 CFR 252.153.

* * * * *

■ 50. In § 329.10, revise paragraph (a) to read as follows:

§ 329.10 Liquidity coverage ratio.

(a) *Minimum liquidity coverage ratio requirement.* Subject to the transition provisions in subpart F of this part, an FDIC-supervised institution must calculate and maintain a liquidity coverage ratio that is equal to or greater than 1.0 on each business day in accordance with this part. An FDIC-supervised institution must calculate its liquidity coverage ratio as of the same time on each calculation date (the elected calculation time). The FDIC-supervised institution must select this time by written notice to the FDIC prior to December 31, 2019. The FDIC-supervised institution may not thereafter change its elected calculation time without prior written approval from the FDIC.

* * * * *

■ 51. In § 329.30, revise paragraph (a) and add paragraphs (c) and (d) to read as follows:

§ 329.30 Total net cash outflow amount.

(a) *Calculation of total net cash outflow amount.* As of the calculation date, an FDIC-supervised institution's total net cash outflow amount equals the FDIC-supervised institution's outflow adjustment percentage as determined under paragraph (c) of this section multiplied by:

(1) The sum of the outflow amounts calculated under § 329.32(a) through (l); *minus*

(2) The lesser of:

(i) The sum of the inflow amounts calculated under § 329.33(b) through (g); and

(ii) 75 percent of the amount calculated under paragraph (a)(1) of this section; *plus*

(3) The maturity mismatch add-on as calculated under paragraph (b) of this section.

* * * * *

(c) *Outflow adjustment percentage.* An FDIC-supervised institution's outflow adjustment percentage is determined pursuant to Table 1 to this paragraph (c).

TABLE 1 TO § 329.30(c)—OUTFLOW ADJUSTMENT PERCENTAGES

	Percent
Outflow adjustment percentage	
GSIB depository institution supervised by the FDIC	100
Category II FDIC-supervised institution	100
Category III FDIC-supervised institution that: (1) Is a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III FDIC-supervised institution in this part, in each case with $75 billion or more in average weighted short-term wholesale funding; or (2) Has $75 billion or more in average weighted short-term wholesale funding and is not a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III FDIC-supervised institution in this part.	100
Category III FDIC-supervised institution that: Is a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III FDIC-supervised institution in this part, in each case with less than $75 billion in average weighted short-term wholesale funding; or (2) Has less than $75 billion in average weighted short-term wholesale funding and is not a consolidated subsidiary of (a) a covered depository institution holding company or U.S. intermediate holding company identified as a Category III banking organization pursuant to 12 CFR 252.5 or 12 CFR 238.10 or (b) a depository institution that meets the criteria set forth in paragraphs (2)(ii)(A) and (B) of the definition of Category III FDIC-supervised institution in this part.	85

(d) *Transition into a different outflow adjustment percentage.* (1) An FDIC-supervised institution whose outflow adjustment percentage increases from a lower to a higher outflow adjustment percentage may continue to use its previous lower outflow adjustment percentage until the first day of the third calendar quarter after the outflow adjustment percentage increases.

(2) An FDIC-supervised institution whose outflow adjustment percentage decreases from a higher to a lower outflow adjustment percentage must continue to use its previous higher outflow adjustment percentage until the first day of the first calendar quarter after the outflow adjustment percentage decreases.

■ 52. Revise § 329.50 to read as follows:

§ 329.50 Transitions.

(a) *No transition for certain FDIC-supervised institutions.* An FDIC-supervised institution that is subject to the minimum liquidity standard and other requirements of this part prior to December 31, 2019 must comply with the minimum liquidity standard and other requirements of this part as of December 31, 2019.

(b) [Reserved]

(c) *Initial application.* (1) An FDIC-supervised institution that initially becomes subject to the minimum liquidity standard and other requirements of this part under § 329.1(b)(1)(i) must comply with the requirements of this part beginning on the first day of the third calendar quarter after which the FDIC-supervised institution becomes subject to this part, except that an FDIC-supervised institution must:

(i) For the first two calendar quarters after the FDIC-supervised institution begins complying with the minimum liquidity standard and other requirements of this part, calculate and maintain a liquidity coverage ratio monthly, on each calculation date that is the last business day of the applicable calendar month; and

(ii) Beginning the first day of the fifth calendar quarter after the FDIC-supervised institution becomes subject to the minimum liquidity standard and other requirements of this part and continuing thereafter, calculate and maintain a liquidity coverage ratio on each calculation date.

(2) An FDIC-supervised institution that becomes subject to the minimum liquidity standard and other requirements of this part under § 329.1(b)(1)(ii), must comply with the requirements of this part subject to a transition period specified by the FDIC.

(d) *Transition into a different outflow adjustment percentage.* (1) An FDIC-supervised institution whose outflow adjustment percentage changes is subject to transition periods as set forth in § 329.30(d).

(2) An FDIC-supervised institution that is no longer subject to the minimum liquidity standard and other requirements of this part pursuant to § 329.1(b)(1)(i) based on the size of total consolidated assets, cross-jurisdictional activity, total nonbank assets, weighted short-term wholesale funding, or off-balance sheet exposure calculated in accordance with the Call Report, the instructions to the FR Y–9LP or the FR Y–15 or equivalent reporting form, as applicable, for each of the four most recent calendar quarters may cease compliance with this part as of the first day of the first quarter after it is no longer subject to § 329.1(b)(1).

(e) *Reservation of authority.* The FDIC may extend or accelerate any compliance date of this part if the FDIC determines that such extension or acceleration is appropriate. In determining whether an extension or acceleration is appropriate, the FDIC will consider the effect of the modification on financial stability, the period of time for which the modification would be necessary to facilitate compliance with this part, and the actions the FDIC-supervised supervised institution is taking to come into compliance with this part.

Dated: October 10, 2019.

Morris R. Morgan,

First Deputy Comptroller, Comptroller of the Currency.

By order of the Board of Governors of the Federal Reserve System.

Margaret McCloskey Shanks,

Deputy Secretary of the Board.

Federal Deposit Insurance Corporation.

By order of the Board of Directors.

Dated at Washington, DC, on October 15, 2019.

Annmarie H. Boyd,

Assistant Executive Secretary.

Part VIII

The President

Notice of October 31, 2019—Continuation of the National Emergency With Respect to Sudan

Federal Register
Vol. 84, No. 212
Friday, November 1, 2019

Presidential Documents

Title 3—

The President

Notice of October 31, 2019

Continuation of the National Emergency With Respect to Sudan

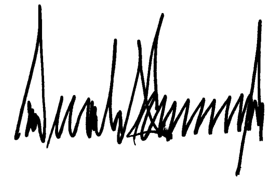
On November 3, 1997, by Executive Order 13067, the President declared a national emergency with respect to Sudan pursuant to the International Emergency Economic Powers Act (50 U.S.C. 1701–1706) and took related steps to deal with the unusual and extraordinary threat to the national security and foreign policy of the United States posed by the actions and policies of the Government of Sudan. On April 26, 2006, by Executive Order 13400, the President determined that the conflict in Sudan's Darfur region posed an unusual and extraordinary threat to the national security and foreign policy of the United States, expanded the scope of the national emergency declared in Executive Order 13067, and ordered the blocking of property of certain persons connected to the Darfur region. On October 13, 2006, by Executive Order 13412, the President took additional steps with respect to the national emergency declared in Executive Order 13067 and expanded in Executive Order 13400. In Executive Order 13412, the President also took steps to implement the Darfur Peace and Accountability Act of 2006 (Public Law 109–344).

On January 13, 2017, by Executive Order 13761, the President found that positive efforts by the Government of Sudan between July 2016 and January 2017 improved certain conditions that Executive Orders 13067 and 13412 were intended to address. Given these developments, and in order to encourage the Government of Sudan to sustain and enhance these efforts, section 1 of Executive Order 13761 provided that sections 1 and 2 of Executive Order 13067 and the entirety of Executive Order 13412 would be revoked as of July 12, 2017, provided that the criteria in section 12(b) of Executive Order 13761 had been met.

On July 11, 2017, by Executive Order 13804, I amended Executive Order 13761, extending until October 12, 2017, the effective date in section 1 of Executive Order 13761. On October 12, 2017, pursuant to Executive Order 13761, as amended by Executive Order 13804, sections 1 and 2 of Executive Order 13067 and the entirety of Executive Order 13412 were revoked.

Despite recent positive developments, the crisis constituted by the actions and policies of the Government of Sudan that led to the declaration of a national emergency in Executive Order 13067 of November 3, 1997; the expansion of that emergency in Executive Order 13400 of April 26, 2006; and with respect to which additional steps were taken in Executive Order 13412 of October 13, 2006, Executive Order 13761 of January 13, 2017, and Executive Order 13804 of July 11, 2017, has not been resolved. These actions and policies continue to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. I have, therefore, determined that it is necessary to continue the national emergency declared in Executive Order 13067, as expanded by Executive Order 13400, with respect to Sudan.

This notice shall be published in the *Federal Register* and transmitted to the Congress.



THE WHITE HOUSE,
October 31, 2019.
