SUPPLEMENTARY INFORMATION: The Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121–5207 (the Stafford Act), authorizes grants to assist State, Tribal, and local governments and certain Private Non-Profit entities with the response to and recovery from disasters following Presidentially declared major disasters and emergencies. 44 CFR part 206 specifies the information collections necessary to facilitate the provision of assistance under the Public Assistance (PA) Program. 44 CFR 206.202 describes the general application procedures for the PA Program.

FEMA is seeking a revision to the already existing collection of information, OMB Control Number 1660–0017, because FEMA proposes changing the title from “Request for Appeals and Recommendation/No Forms” to “Request for Appeals or Arbitrations and Recommendations/No Forms.” Section 1219 of the Disaster Recovery Reform Act of 2018, which amended Section 423(d) of the Stafford Act (42 U.S.C. 5189a), provides a right of arbitration to certain applicants of the PA Program that have a dispute concerning the eligibility for assistance or repayment of assistance. Plus, the annual cost to the Federal Government is increasing from \$805,311.96 to \$1,891,473. Finally, there has been a change in the annual burden hours due to a correction of errors in burden estimates. For example, in the past, FEMA incorrectly used 1.3 hours to represent 1.5 hours for FEMA Form 009–0–91.

SUPPLEMENTARY INFORMATION: The Presidential Policy Directive-21 and the National Infrastructure Protection Plan highlight the need for a centrally managed repository of infrastructure

attributes capable of assessing risks and facilitating data sharing. To support this mission need, the DHS CISA ISD has developed a data collection system that contains several capabilities which support the homeland security mission in the area of critical infrastructure (CI) protection.

Protective Security Advisors (PSAs) and Cyber Security Advisors (CSAs) conduct voluntary assessments on CI facilities. These assessments are web-based and are used to collect an organization's basic, high-level information, and its dependencies. This data is then used to determine a Protective Measures Index (PMI) and a Resilience Measures Index (RMI) for the assessed organization. This information allows an organization to see how it compares to other organizations within the same sector as well as allows them to see how adjusting certain aspects would change their score. This allows the organization to then determine where best to allocate funding and perform other high-level decision-making processes pertaining to the security and resiliency of the organization.

The information will be gathered by site visits, arranged between the organization owners and DHS PSAs or CSAs. The PSA or CSA will then visit the site and perform the assessment, as requested. They then return to complete the vulnerability assessment and input the data into the system where the data is then accessible to system users. Once available, the organization and other relevant system users can then review the data and use it for planning, risk identification, mitigation and decision making. All data is captured electronically by the PSA, CSA or by the organization as a self-assessment. Participation in the vulnerability assessments is voluntary, but full completion of the assessment data collection is required if the organization desires to receive a complete evaluation of their security posture.

After assessments are input into the system, the user is prompted to participate in a feedback questionnaire. Every user is prompted to participate in the Post Assessment questionnaire after entering an assessment. Participation in the Post Assessment questionnaire is voluntary. The Post Assessment Questionnaires are designed to capture feedback about a vulnerability assessment and the system. There are three different questionnaires correlated and prompted after entering a particular assessment into the database. The results are used internally within DHS to make programmatic improvements.
