## Background

When communities need to know how to protect and improve their population's health, they turn to The Community Guide, a collection of evidence-based recommendations and findings from the CPSTF. The CPSTF makes evidence-based recommendations about the effectiveness and economic merits of public health programs, services, and other interventions used in real-world settings—such as communities, worksites, schools, faith-based organizations, military bases, public health clinics and departments, and integrated healthcare systems. Systematic reviews are conducted in accordance with the highest international standards, using a transparent and replicable methodology that accounts for the complexities of real-world public health interventions. CPSTF recommendations are based on systematic reviews, which help make sense of large bodies of scientific literature by applying the scientific process to summarize evidence about the effectiveness of particular approaches for addressing a public health problem. CDC provides administrative, scientific, and technical support for the CPSTF.

The CPSTF periodically updates its priority topics so that its recommendations are responsive to changes in evidence, burden of disease, changing epidemiology, and changes in how interventions are delivered (e.g., use of technology). The CPSTF uses a multi-stage process to identify and prioritize topics. A prioritization committee seeks input from its members and liaison organizations, subject matter experts, public health authorities, the public, and other stakeholders. The topic areas identified are then ranked and prioritized by the full CPSTF using established criteria.

The criteria established by the CPSTF (such as the domains listed above) are then applied to each of the identified topics and presented to the full CPSTF for its discussion, expert assessment, and arrival at a final set of priorities.

CDC welcomes input to this docket from a diverse range of perspectives. The input will inform CDC's support to the CPSTF in its work to select priority topics and will improve the credibility and transparency of the process.
