submitted a complete application for an exempted fishing permit (EFP) on October 28, 2019, to conduct commercial fishing activities that the regulations would otherwise restrict. The application is a renewal of an EFP originally issued in December 2017 and renewed in March 2019. The original EFP allowed up to 24 trips (with a target of 24 days-at-sea); to date vessels have fished 10 days-at-sea. The EFP would authorize four vessels to test alternative gillnet configurations for haddock and to temporarily retain undersized catch for measurement and data collection. The applicant has requested exemptions from minimum mesh size regulations at 50 CFR 648.80(a)(4)(iv) and § 648.8(b)(2)(iv), and the prohibition on possessing groundfish below the minimum size § 648.83(a). These exemptions are necessary because vessels on commercial groundfish trips are prohibited from using gillnets with mesh size less than 6.5 inches (16.51 cm) and from retaining undersized groundfish. The applicant is also requesting an exemption from the Closed Area I North Georges Bank Spawning Groundfish Closure at § 648.81(c)(3), which NOAA Fisheries does not intend to approve, as further described below.

The project titled “Testing Selectivity and Raised Webbing Gillnets on Target and Non-Target Species in the Northeast Haddock Fishery” would continue to be conducted by CFF. The study would take place on Georges Bank and in southern New England from January 2020 through August 2020, with the 4 participating vessels fishing no more than 14 days-at-sea total. Vessels would fish a maximum of 20 gillnets, each 300 feet (91.44 m) long, in strings made up of 10 to 20 nets each. Nets would alternate between standard 6.5-inch (16.51-cm) mesh and 6.0-inch (15.24-cm) mesh. Half of the nets of each mesh size would be rigged with a 30-inch (76.2-cm) raised webbing section along the bottom. Two to three hauls of the nets are expected during each day at sea with an average soak time of 6 to 8 hours for each set.

A CFF researcher or technician would accompany all trips that occur under this EFP to identify and count all fish caught, as well as measure and weigh cod and haddock. Individual fish of other species would also be measured and weighed if time allows. Undersized fish would be discarded as quickly as possible after sampling. All Northeast multispecies of legal size would be landed, and all catch (including discards) would be attributed to the vessel’s sector annual catch entitlement, consistent with standard catch accounting procedures. Participating vessels would comply with all protected species regulations, and would not be able to set gillnets in areas otherwise closed to fishing with gillnet gear.

Under a recent court order, NOAA Fisheries is barred from allowing gillnet fishing in the former Nantucket Lightship and Closed Area I Groundfish Closure Areas. Accordingly, we can not approve, nor will we consider, the applicant’s request to allow access to the seasonal Closed Area I North Georges Bank Spawning Groundfish Closure, which falls entirely within the footprint of former Closed Area I. CFF had requested this exemption previously, but the request was denied because of potential negative impacts to spawning groundfish.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request.

Authority: 16 U.S.C. 1801 et seq.
Dated: December 6, 2019.

Alan D. Rosenhoover, Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Notice of Availability of the Deepwater Horizon Oil Spill Open Ocean Trustee Implementation Group Final Restoration Plan 2 and Environmental Assessment: Fish, Sea Turtles, Marine Mammals, and Mesophotic and Deep Benthic Communities and Finding of No Significant Impact

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice of availability.

SUMMARY: In accordance with the Oil Pollution Act of 1990 (OPA), the National Environmental Policy Act (NEPA), and a Consent Decree with BP Exploration & Production Inc. (BP), the Deepwater Horizon Federal natural resource trustee agencies for the Open Ocean Trustee Implementation Group (Open Ocean TIG) have prepared a Draft Restoration Plan 2 and Environmental Assessment (Draft RP/EA). The Draft RP/EA describes and proposes restoration project alternatives considered by the Open Ocean TIG to restore natural resources and ecological services injured or lost as a result of the Deepwater Horizon oil spill. The Open Ocean TIG evaluated these alternatives under criteria set forth in the OPA natural resource damage assessment regulations, and also evaluated the environmental consequences of the restoration alternatives in accordance with NEPA. The proposed projects are consistent with the restoration alternatives selected in the Deepwater Horizon Oil Spill: Final Programmatic Damage Assessment and Restoration Plan/Programmatic Environmental Impact Statement (PDARP/PEIS). The purpose of this notice is to inform the public of the availability of the Final RP II/EA and Finding of No Significant Impact (FONSI).

ADDRESSES: Obtaining Documents: You may obtain the Final RP/EA and FONSI at: http://www.gulfspillrestoration.noaa.gov/restoration-areas/open-ocean. Alternatively, you may request a CD of the Final RP/EA and FONSI (see FOR FURTHER INFORMATION CONTACT below). In addition, you may view the document at any of the public facilities listed in Appendix G.

FOR FURTHER INFORMATION CONTACT: National Oceanic and Atmospheric Administration—Laurie Rounds, Laurie.Rounds@noaa.gov, (850) 934–9284.

SUPPLEMENTARY INFORMATION:

Introduction

On April 20, 2010, the mobile offshore drilling unit Deepwater Horizon, which was being used to drill a well for BP Exploration and Production, Inc. (BP), in the Macondo prospect (Mississippi Canyon 252–MC252), experienced a significant explosion, fire, and subsequent sinking in the Gulf of Mexico, resulting in an unprecedented volume of oil and other discharges from the rig and from the wellhead on the seabed. The Deepwater Horizon oil spill is the largest offshore oil spill in U.S. history, discharging millions of barrels of oil over a period of 87 days. In addition, well over one Louisiana, Mississippi, and Texas entered in “In re: Oil Spill by the Oil Rig “Deepwater Horizon” in the Gulf of Mexico, on April 20, 2010,” MDL No. 2179 in the United States District Court for the Eastern District of Louisiana.
million gallons of dispersants were applied to the waters of the spill area in an attempt to disperse the spilled oil. An undetermined amount of natural gas was also released into the environment as a result of the spill.

The Deepwater Horizon Federal and State natural resource trustees (DWH Trustees) conducted the natural resource damage assessment (NRDA) for the Deepwater Horizon oil spill under OPA (OPA; 33 U.S.C. 2701 et seq.). Pursuant to OPA, Federal and State agencies act as trustees on behalf of the public to assess natural resource injuries and losses and to determine the actions required to compensate the public for those injuries and losses. OPA further instructs the designated trustees to develop and implement a plan for the restoration, rehabilitation, replacement, or acquisition of the equivalent of the injured natural resources under their trusteeship, including the loss of use and services from those resources from the time of injury until the time of restoration to baseline (the resource quality and conditions that would exist if the spill had not occurred) is complete.

The Deepwater Horizon Trustees are:
- U.S. Department of the Interior (DOI), as represented by the National Park Service, U.S. Fish and Wildlife Service, and Bureau of Land Management;
- National Oceanic and Atmospheric Administration (NOAA), on behalf of the U.S. Department of Commerce;
- U.S. Department of Agriculture (USDA);
- U.S. Environmental Protection Agency (EPA);
- State of Louisiana Coastal Protection and Restoration Authority, Oil Spill Coordinator’s Office, Department of Environmental Quality, Department of Wildlife and Fisheries, and Department of Natural Resources;
- State of Mississippi Department of Environmental Quality;
- State of Alabama Department of Conservation and Natural Resources and Geological Survey of Alabama;
- State of Florida Department of Environmental Protection and Fish and Wildlife Conservation Commission; and
- State of Texas: Texas Parks and Wildlife Department, Texas General Land Office, and Texas Commission on Environmental Quality.

The Trustees reached and finalized a settlement of their natural resource damage claims with BP in an April 4, 2016, Consent Decree approved by the United States District Court for the Eastern District of Louisiana. Pursuant to that Consent Decree, restoration projects in the Open Ocean Restoration Area are now selected and implemented by the Open Ocean TIG. The Open Ocean TIG is composed of the following Federal Trustees: NOAA; DOI; EPA; and USDA.

This restoration planning activity is proceeding in accordance with the PDARP/PEIS. Information on the Restoration Types evaluated in the Final RP/EA, as well as the OPA criteria against which project ideas are being evaluated, can be viewed in the PDARP/PEIS (http://www.gulfspillrestoration.noaa.gov/restoration-planning/gulf-plan) and in the Overview of the PDARP/PEIS (http://www.gulfspillrestoration.noaa.gov/restoration-planning/gulf-plan).

Background

On March 31, 2017, the Open Ocean TIG posted a public notice at http://www.gulfspillrestoration.noaa.gov requesting new or revised natural resource restoration project ideas by May 15, 2017 for the Open Ocean Restoration Area. The notice stated that the Open Ocean TIG was seeking project ideas for the following Restoration Types: (1) Birds; (2) Sturgeon; (3) Sea Turtles; (4) Marine Mammals; (5) Fish and Water Column Invertebrates; and (6) Mesophotic and Deep Benthic Communities.

On February 7, 2018 the Open Ocean TIG announced that it had initiated drafting of its first and second post settlement draft restoration plans; and that the first plan would include restoration projects for Birds and Sturgeon, while the second plan, noticed here, would include restoration projects for Sea Turtles, Marine Mammals, Fish and Water Column Invertebrates, and Mesophotic and Deep Benthic Communities.

Notice of availability of the Draft RP/EA was published in the Federal Register on May 15, 2019 (84 FR 21753). The Final RP/EA is being released in accordance with OPA NRDA regulations in the Code of Federal Regulations (CFR) at 15 CFR part 990, NEPA (42 U.S.C. 4321 et seq.), the Consent Decree, and the Final PDARP/PEIS.

In the Final RP/EA, the Open Ocean TIG selected the following 18 restoration projects from the following restoration types: Fish and Water Column Invertebrates, Sea Turtles, Marine Mammals, and Mesophotic and Deep Benthic Communities:

- Fish and Water Column Invertebrates
  - Reduction of Post-Release Mortality from Barotrauma in Gulf of Mexico Reef Fish Recreational Fisheries—Preferred, $30,011,000.
  - Better Bycatch Reduction Devices for the Gulf of Mexico Commercial Shrimp Trawl Fishery—Preferred, $17,171,000.
  - Communication Networks and Mapping Tools to Reduce Bycatch—Phase 1—Preferred, $4,416,000.
  - Restoring for Bluefin Tuna via Fishing Depth Optimization—Preferred, $6,175,000.

- Sea Turtles
  - Gulf of Mexico Sea Turtle Atlas—Preferred, $5,700,000.
  - Identifying Methods to Reduce Sea Turtle Bycatch in the Reef Fish Bottom Logline Fishery—Preferred, $290,000.
  - Developing a Gulf-wide Comprehensive Plan for In-Water Sea Turtle Data Collection—Preferred, $655,000.
  - Developing Methods to Observe Sea Turtle Interactions in the Gulf of Mexico Menhaden Purse Seine Fishery—Preferred, $3,000,000.
  - Reducing Juvenile Sea Turtle Bycatch Through Development of Reduced Bar Spacing in Turtle Excluder Devices—Preferred, $2,249,000.
  - Long-term Nesting Beach Habitat Protection for Sea Turtles—Preferred, $7,000,000.
Marine Mammals

- Reducing Impacts to Cetaceans During Disasters by Improving Response Activities—Preferred, $4,287,000.
- Compilation of Environmental, Threats, and Animal data for Cetacean Population Health Analyses—Preferred, $5,808,500.
- Reduce Impacts of Anthropogenic Noise on Cetaceans—Preferred, $8,992,200.
- Reduce and Mitigate Vessel Strike Mortality of Cetaceans—Preferred, $3,834,000.

Mesophotic and Deep Benthic Communities

- Mapping, Ground-Truthing, and Predictive Habitat Modeling—Preferred, $35,909,000.
- Habitat Assessment and Evaluation—Preferred, $52,639,000.
- Coral Propagation Technique Development—Preferred, $16,951,000.
- Active Management and Protection—Preferred, $20,689,000.

The Open Ocean TIG has examined the injuries assessed by the DWH Trustees and evaluated restoration alternatives to address the injuries. In the Final RP/EA, the Open Ocean TIG presents to the public its final plan for providing cost compensation to the public for injured natural resources and ecological services in the Open Ocean Restoration Area. The proposed alternatives are intended to continue the process of using DWH restoration funding to restore natural resources injured or lost as a result of the Deepwater Horizon oil spill. The estimated cost of the projects proposed as preferred is $225,776,700. Additional restoration planning for the Open Ocean Restoration Area will continue.

In accordance with NEPA and as part of the Final RP/EA, the Trustees issued a FONSI. The FONSI is available in the Final RP/EA.

I. Abstract

This request is for extension of a current information collection.

The Administrator of the National Oceanic and Atmospheric Administration (NOAA) is authorized by section 4002 of the America COMPETES Act, Public Law 110–69, to establish and administer a Graduate Sciences Program and two undergraduate scholarship programs to enhance understanding of ocean, coastal, Great Lakes, and atmospheric science and stewardship by the general public and other coastal stakeholders, including underrepresented groups in ocean and atmospheric science and policy careers. In addition, NOAA’s Administrator is authorized by section 214 of the Consolidated Appropriations Act, 2005, Public Law 108–447, to establish and administer the Ernest F. Hollings Undergraduate Scholarship Program to support undergraduate studies in oceanic and atmospheric science, research, technology, and education that support NOAA’s mission and programs.

The National Oceanic and Atmospheric Administration (NOAA) Office of Education (OEd) collects, evaluates, and assesses student data and information for the purpose of selecting and retaining personnel to fill vacant positions; to develop and maintain databases of faculty and other project participants to support internal NOAA reports, and articles to demonstrate the success of its program. The purpose of the OEd Educational Partnership Program (EPP) with Minority Serving Institutions is to educate, train, and graduate students in NOAA-mission sciences. OEd EPP is strongly committed to broadening the participation of Minority Serving Institutions (MSIs) such as Historically Black Colleges and Universities, Hispanic Serving Institutions, Indian Tribally Controlled Colleges and Universities, Alaska Native-Serving Institutions, and Native Hawaiian-Serving Institutions. NOAA’s OEd EPP/MSI partnership is comprised of four program components: the Graduate Scholarship Program (USP); the Graduate Sciences Program (GSP); the Environmental Entrepreneurship Program (EEP); and the Cooperative Science Center (CSC).

The OEd requires applicants to NOAA’s Graduate Scholarship Programs to complete an application in order to be considered. The application package requires two faculty and/or academic advisors to complete a NOAA student scholar reference form in support of the scholarship application. The Dr. Nancy Foster Scholarship Program and the NMFS Recruiting, Training and Research Program also...
