#### SUPPLEMENTARY INFORMATION:

#### I. Background Information on the IRIS Program and Systematic Review Protocols

EPA's IRIS Program is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to chemicals found in the environment. Through the IRIS Program, EPA provides high quality science-based human health assessments to support the Agency's regulatory activities and decisions to protect public health.

As part of developing a draft IRIS assessment, EPA presents a methods document, referred to as the protocol, for conducting a chemical-specific systematic review of the available scientific literature. EPA is seeking public comment on components of the protocol including the described strategies for literature searches, criteria for study inclusion or exclusion, considerations for evaluating study methods, information management for extracting data, approaches for synthesis within and across lines of evidence, and methods for derivation of toxicity values. Additionally, key scientific issues that warrant consideration in this assessment are identified in Section 2.5. The protocol serves to inform the subsequent development of the draft assessment and is made available to the

public. EPA may update the protocol based on the evaluation of the literature, and any updates will be posted to the docket and on the IRIS website. In accordance with the most current systematic review practices of the IRIS Program, EPA is releasing the PCB protocol to provide similar public engagement steps as other IRIS assessments that have started more recently.
