recreational measures for Gulf of Maine cod and Gulf of Maine haddock. They will also discuss Amendment 23: Groundfish Monitoring to review the draft Environmental Impact Statement (DEIS) and recommend preliminary preferred alternatives to the Groundfish Committee. The committee will receive an overview of the Council’s 2020 priorities. Other business will be discussed as necessary.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council’s intent to take final action to address the emergency.

Special Accommodations
This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

This meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.

Authority: 16 U.S.C. 1801 et seq.

Tracey L. Thompson,
Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF ENERGY

National Nuclear Security Administration

Notice of Availability of Final Supplement Analysis of the Complex Transformation Supplemental Programmatic Environmental Impact Statement

AGENCY: National Nuclear Security Administration, Department of Energy.

ACTION: Notice of availability.

SUMMARY: The National Nuclear Security Administration (NNSA), a semi-autonomous agency within the United States (U.S.) Department of Energy (DOE), announces the availability of a Final Supplement Analysis (SA) of the Complex Transformation Supplemental Programmatic Environmental Impact Statement (SPEIS) (DOE/EIS–0236–SA–02). NNSA prepared the Final SA to determine whether, prior to implementing a Modified Distributed Center of Excellence (DCE) Alternative for plutonium operations to enable producing plutonium pits at a rate of no fewer than 80 pits per year by 2030, the existing Complex Transformation SPEIS should be supplemented, a new environmental impact statement be prepared, or that no further National Environmental Policy Act (NEPA) analysis is required. NNSA published the Draft Supplement Analysis of the Complex Transformation Supplemental Programmatic Environmental Impact Statement on June 28, 2019, and announced a 45-day comment period. After considering all comments received, NNSA prepared the Final SA and concluded that no further NEPA documentation at a programmatic level is required.

DATES: This notice will be published on January 8, 2020.

FOR FURTHER INFORMATION CONTACT: For further information about this Notice, please contact Mr. James R. Sanderson, Office of NEPA Policy and Compliance, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585–0119; phone: 202–586–1402; email to: NEPA-SSRS@srs.gov.

SUPPLEMENTARY INFORMATION: NNSA prepared the Final SA to determine whether, prior to implementing a Modified Distributed Center of Excellence (DCE) Alternative for plutonium operations to enable producing plutonium pits at a rate of no fewer than 80 pits per year by 2030, the existing Complex Transformation SPEIS should be supplemented, a new environmental impact statement be prepared, or that no further National Environmental Policy Act (NEPA) analysis is required. Implementing a Modified DCE Alternative would enable NNSA to meet federal law and national policy by producing a minimum of 50 pits per year at a repurposed Mixed-Oxide Fuel Fabrication Facility (MFFF) at the Savannah River Site (SRS) and a minimum of 30 pits per year at the Los Alamos National Laboratory (LANL). An additional surge capacity would be available at each site, if needed, to meet the requirements of producing pits at a rate of no fewer than 80 pits per year by 2030 for the nuclear weapons stockpile. The Final SA includes NNSA’s determination that no further NEPA documentation at a programmatic level is required. The SA of the Complex Transformation SPEIS is an important element of the overall NEPA strategy related to fulfilling national requirements for pit production. DOE announced this NEPA strategy on June 10, 2019 (84 FR 26849).

National security policies require DOE, through NNSA, to maintain the United States’ nuclear weapons stockpile, as well as the nation’s core competencies in nuclear weapons. NNSA has the mission to maintain and enhance the safety, security, and effectiveness of the nuclear weapons stockpile. Plutonium pits are critical components of every nuclear weapon, with nearly all current stockpile pits having been produced from 1978–1989. Today, the United States’ capability to produce plutonium pits is limited. Since 2008, the United States has emphasized the need to eventually produce 80 pits per year. Since 2014, federal law has required the Secretary of Energy to produce no less than 30 war reserve plutonium pits by 2026 and thereafter demonstrate the capability to produce waste reserve plutonium pits at a rate sufficient to produce 80 pits per year (50 U.S.C. 2538a). On January 27, 2017, the President directed the Department of Defense (DoD) to conduct an updated Nuclear Posture Review (NPR) to ensure a safe, secure, and effective nuclear deterrent that protects the homeland, assures allies, and above all, deters adversaries. The 2018 NPR echoed the need for pit production and confirmed that the United States will pursue initiatives to ensure the necessary capability, capacity, and responsiveness of the nuclear weapons infrastructure and the needed skill of the workforce, including providing the enduring capability and capacity to produce plutonium pits at a rate of no fewer than 80 pits per year by 2030. In 2018, Congress enacted as formal policy of the United States that LANL will produce a minimum of 30 pits per year for the national production mission and will implement surge efforts to exceed 30 pits per year to meet NPR and national policy (Pub. L. 115–232, Section 3120).

To these ends, the DoD Under Secretary of Defense for Acquisition and Sustainment and the NNSA Administrator issued a Joint Statement on May 10, 2019, identifying their recommended alternative to meet the pit production requirement based on the
