

of information technology, *e.g.*, permitting electronic submission of responses.

### Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* Criminal Cases in State Courts (CCSC), formerly titled Analysis of Publicly Available Court Data.

(3) *Agency form number, if any, and the applicable component of the Department sponsoring the collection:* The Data Extraction guide is CCSC-001. The applicable component within the Department of Justice is the Bureau of Justice Statistics, in the Office of Justice Programs.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* BJS will request complete records from the statewide and mostly-statewide systems, with separate requests to the counties not included in the mostly statewide systems. BJS will also sample counties from the states unable to provide statewide extracts. The requests will sample with certainty any county with a total resident population exceeding one million persons. A total of 150 jurisdictions (states or counties) will be included in this effort.

BJS is requesting that the data extracts provided by courts include all felony and misdemeanor criminal cases disposed of between January 1 and December 31, 2019. BJS is also requesting that the extracts include defendant demographics; information about charges, disposition, and sentences. State and local courts can provide the data extract or extracts in any format.

BJS plans to publish this information in reports and reference it when responding to queries from the U.S. Congress, Executive Office of the President, the U.S. Supreme Court, state officials, international organizations, researchers, students, the media, and others interested in criminal justice statistics.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* BJS will send a data extraction guide to 150 jurisdictions. The 150 jurisdictions include 36 states (including 10 counties that are not included in the statewide case management systems) and the District of Columbia, 23 counties with total populations exceeding 1,000,000 residents, and 79 sampled counties representing the 14 states and Puerto Rico that cannot provide statewide data.

The expected burden placed on these jurisdictions is about 30 hours per jurisdiction, with an additional 10 hours to explain any data inconsistencies or questions of the data collection team.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 6,000 total burden hours associated with this collection.

### SUPPLEMENTARY INFORMATION:

#### I. Discussion

The NRC is issuing a revision to an existing guide in the NRC's "Regulatory Guide" series. This series was developed to describe and make available to the public information regarding methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, techniques that the NRC staff uses in evaluating specific issues or postulated events, and data that the NRC staff needs in its review of applications for permits and licenses.

Revision 2 of RG 1.151 was issued with a temporary identification of Draft Regulatory Guide, DG-1352. Revision 2 of RG 1.151 describes an approach that is acceptable to the staff of the NRC to meet regulatory requirements for instrument sensing lines in nuclear power plants. It endorses, with certain exceptions, American National Standards Institute/International Society of Automation (ANSI/ISA)-67.02.01-2014, "Nuclear Safety-Related Instrument Sensing Line Piping and Tubing Standard for Use in Nuclear

Power Plants” and it determines that the Institute of Electrical and Electronic Engineers (IEEE) Standard (Std.) 622–1987, “IEEE Recommended Practice for the Design and Installation of Electric Heat Tracing Systems for Nuclear Power Generating Systems,” reaffirmed in 1994, is acceptable for use. The revision of ANSI/ISA–67.02.01 previously endorsed by the NRC in RG 1.151 was revised and corrected by ANSI/ISA in 2014. In addition, this RG revision discusses recent operating experience, as described in NRC Information Notice (IN) 2013–12, “Improperly Sloped Instrument Sensing Lines,” dated July 3, 2013.

## II. Additional Information

The NRC published a notice of the availability of DG–1352 in the **Federal Register** on February 8, 2019 (84 FR 2934) for a 60-day public comment period. The public comment period closed on April 9, 2019 and the NRC received three comment documents. Public comments on DG–1352 and the staff responses to the public comments are available under ADAMS under Accession No. ML19156A128.

## III. Congressional Review Act

This RG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

## IV. Backfitting and Issue Finality

Revision 2 of RG 1.151 describes an approach that is acceptable to the NRC staff for applicants and licensees under 10 CFR parts 50 and 52 to meet regulatory requirements for instrument sensing lines in nuclear power plants. The issuance of this regulatory guide does not constitute backfitting as defined in 10 CFR 50.109, “Backfitting,” and as described in NRC Management Directive 8.4, “Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests,” or affect issue finality of any approval issued under 10 CFR part 52, “Licenses, Certificates, and Approvals for Nuclear Power Plants,” because, as explained in this regulatory guide, applicants and licensees are not required to comply with the positions set forth in this regulatory guide.

Dated at Rockville, Maryland, this 7th day of February, 2020.
