

potential treatment areas cover approximately 38 million acres within the project area boundary. The preferred alternative (Alternative D) analyzes a full suite of manual, chemical and mechanical treatments, including prescribed fire, seeding, and targeted grazing, to construct and maintain up to 11,000 miles of fuel breaks, potentially removing or altering vegetation on approximately 667,000 acres and protecting approximately 38 million acres of the sagebrush ecosystem. Fuel break types include green strips (areas planted with low-statured, fire-resistant vegetation), brown strips (areas where all vegetation is removed), and mowed fuel breaks (reduced vegetation height).

The NOA for the Draft Programmatic EIS published on June 21, 2019, initiating a 45-day public comment period. During July 2019, the BLM hosted 12 public comment meetings throughout the six-state project area. Agencies, organizations, and interested parties provided comments on the draft Programmatic EIS via mail, email, and at the public meetings. The BLM received 907 comment form letters and 138 unique comment letters. Comments on the Draft Programmatic EIS received from the public and internal BLM review were considered and incorporated as appropriate into the Final Programmatic EIS. Public comments resulted in the addition of clarifying text, but did not significantly change the alternatives or analysis.

We also review well records to ascertain whether the operations have encountered hydrocarbons or H₂S and to ensure that H₂S detection equipment, personnel protective equipment, and training of the crew are adequate for safe operations in zones known to contain H₂S and zones where the presence of H₂S is unknown.
