

Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notification; quota transfer.

**SUMMARY:** NMFS announces that the State of North Carolina is transferring a portion of its 2020 commercial summer flounder quota to the Commonwealth of Virginia. This quota adjustment is necessary to comply with the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan quota transfer provisions. This announcement informs the public of the revised 2020 commercial quotas for North Carolina and Virginia.

**DATES:** Effective March 6, 2020, through December 31, 2020.

**FOR FURTHER INFORMATION CONTACT:**

Laura Hansen, Fishery Management Specialist, (978) 281-9225.

**SUPPLEMENTARY INFORMATION:**

Regulations governing the summer flounder fishery are found in 50 CFR 648.100 through 648.110. These regulations require annual specification of a commercial quota that is apportioned among the coastal states from Maine through North Carolina. The process to set the annual commercial quota and the percent allocated to each state is described in § 648.102 and final 2020 allocations were published on October 9, 2019 (84 FR 54041).

The final rule implementing Amendment 5 to the Summer Flounder Fishery Management Plan (FMP), as published in the **Federal Register** on December 17, 1993 (58 FR 65936), provided a mechanism for transferring summer flounder commercial quota from one state to another. Two or more states, under mutual agreement and with the concurrence of the NMFS Greater Atlantic Regional Administrator, can transfer or combine summer flounder commercial quota under § 648.102(c)(2). The Regional Administrator is required to consider three criteria in the evaluation of requests for quota transfers or combinations: The transfer or combinations would not preclude the overall annual quota from being fully harvested; the transfer addresses an unforeseen variation or contingency in the fishery; and, the transfer is consistent with the objectives of the FMP and the Magnuson-Stevens Act. The Regional Administrator has determined these three criteria have been met for the transfer approved in this notice.

North Carolina is transferring 10,276 (4,661 kg) of summer flounder commercial quota to Virginia. This transfer was requested to repay landings made by a North Carolina-permitted

vessel in Virginia under a safe harbor agreement. Based on the revised summer flounder, scup, and black sea bass specifications, the summer flounder quotas for 2020 are now: North Carolina, 3,154,229 lb (1,430,734 kg); and, Virginia, 2,468,098 lb (1,119,510 kg).

**Authority:** 16 U.S.C. 1801 *et seq.*

Dated: March 2, 2020.

**Karyl K. Brewster-Geisz,**

*Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.*

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

#### 50 CFR Part 679

[Docket No. 200227-0066]

RIN 0648-XH080

#### Fisheries of the Exclusive Economic Zone Off Alaska; Bering Sea and Aleutian Islands; Final 2020 and 2021 Harvest Specifications for Groundfish

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Final rule; harvest specifications and closures.

**SUMMARY:** NMFS announces final 2020 and 2021 harvest specifications, apportionments, and prohibited species catch allowances for the groundfish fishery of the Bering Sea and Aleutian Islands management area (BSAI). This action is necessary to establish harvest limits for groundfish during the remainder of the 2020 and the start of the 2021 fishing years and to accomplish the goals and objectives of the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP). The 2020 harvest specifications supersede those previously set in the final 2019 and 2020 harvest specifications, and the 2021 harvest specifications will be superseded in early 2021 when the final 2021 and 2022 harvest specifications are published. The intended effect of this action is to conserve and manage the groundfish resources in the BSAI in accordance with the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

**DATES:** Harvest specifications and closures are effective from 1200 hours,

Alaska local time (A.l.t.), March 9, 2020, through 2400 hours, A.l.t., December 31, 2021.

**ADDRESSES:** Electronic copies of the Alaska Groundfish Harvest Specifications Final Environmental Impact Statement (EIS), Record of Decision (ROD), annual Supplementary Information Reports (SIRs) to the Final EIS, and the Initial Regulatory Flexibility Analysis (IRFA) prepared for this action are available from <https://www.fisheries.noaa.gov/region/alaska>. The 2019 Stock Assessment and Fishery Evaluation (SAFE) report for the groundfish resources of the BSAI, dated November 2019, as well as the SAFE reports for previous years, are available from the North Pacific Fishery Management Council (Council) at 1007 West 3rd Ave, Suite #400, Anchorage, AK 99501, phone 907-271-2809, or from the Council's website at <https://www.npfmc.org/>.

**FOR FURTHER INFORMATION CONTACT:**

Steve Whitney, 907-586-7228.

**SUPPLEMENTARY INFORMATION:** Federal regulations at 50 CFR part 679 implement the FMP and govern the groundfish fisheries in the BSAI. The Council prepared the FMP, and NMFS approved it, under the Magnuson-Stevens Act. General regulations governing U.S. fisheries also appear at 50 CFR part 600.

The FMP and its implementing regulations require NMFS, after consultation with the Council, to specify annually the total allowable catch (TAC) for each target species category. The sum of all TAC for all groundfish species in the BSAI must be within the optimum yield (OY) range of 1.4 million to 2.0 million metric tons (mt) (see § 679.20(a)(1)(i)(A)). This final rule specifies the total TAC at 2.0 million mt for both 2020 and 2021. NMFS also must specify apportionments of TAC, prohibited species catch (PSC) allowances, and prohibited species quota (PSQ) reserves established by § 679.21; seasonal allowances of pollock, Pacific cod, and Atka mackerel TAC; American Fisheries Act allocations; Amendment 80 allocations; Community Development Quota (CDQ) reserve amounts established by § 679.20(b)(1)(ii); and acceptable biological catch (ABC) surpluses and reserves for CDQ groups and the Amendment 80 cooperative for flathead sole, rock sole, and yellowfin sole. The final harvest specifications set forth in Tables 1 through 22 of this action satisfy these requirements.

Section 679.20(c)(3)(i) further requires that NMFS consider public comment on the proposed harvest specifications and,

after consultation with the Council, publish final harvest specifications in the **Federal Register**. The proposed 2020 and 2021 harvest specifications for the groundfish fishery of the BSAI were published in the **Federal Register** on December 3, 2019 (84 FR 66129). Comments were invited and accepted through January 2, 2020. As discussed in the Response to Comments section below, NMFS received one comment letter during the public comment period for the proposed BSAI groundfish harvest specifications. No changes were made to the final rule in response to the comment letter received.

NMFS consulted with the Council on the final 2020 and 2021 harvest specifications during the December 2019 Council meeting in Anchorage, AK. After considering public comments, as well as biological and socioeconomic data that were available at the Council's December meeting, NMFS implements in this final rule the final 2020 and 2021 harvest specifications as recommended by the Council.

#### **ABC and TAC Harvest Specifications**

The final ABC amounts for Alaska groundfish are based on the best available biological and socioeconomic information, including projected biomass trends, information on assumed distribution of stock biomass, and revised technical methods used to calculate stock biomass. In general, the development of ABCs and overfishing levels (OFLs) involves sophisticated statistical analyses of fish populations. The FMP specifies a series of six tiers to define OFL and ABC amounts based on the level of reliable information available to fishery scientists. Tier 1 represents the highest level of information quality available, while Tier 6 represents the lowest.

In December 2019, the Council, its Scientific and Statistical Committee (SSC), and its Advisory Panel (AP) reviewed current biological and harvest information about the condition of the BSAI groundfish stocks. The Council's BSAI Groundfish Plan Team (Plan Team) compiled and presented this information in the 2019 SAFE report for the BSAI groundfish fisheries, dated November 2019 (see **ADDRESSES**). The SAFE report contains a review of the latest scientific analyses and estimates of each species' biomass and other biological parameters, as well as summaries of the available information on the BSAI ecosystem and the economic condition of groundfish fisheries off Alaska. NMFS notified the public of the comment period for these harvest specifications—and of the publication of the 2019 SAFE report—

in the notice of proposed harvest specifications. From the data and analyses in the SAFE report, the Plan Team recommended an OFL and ABC for each species or species group at the November 2019 Plan Team meeting.

In December 2019, the SSC, AP, and Council reviewed the Plan Team's recommendations. The final TAC recommendations were based on the ABCs as adjusted for other biological and socioeconomic considerations, including maintaining the sum of all the TACs within the required OY range of 1.4 million to 2.0 million mt. As required by annual catch limit rules for all fisheries (74 FR 3178, January 16, 2009), none of the Council's recommended 2020 or 2021 TACs exceed the final 2020 or 2021 ABCs for any species or species group. NMFS finds that the Council's recommended OFLs, ABCs, and TACs are consistent with the preferred harvest strategy and the biological condition of groundfish stocks as described in the 2019 SAFE report that was approved by the Council. Therefore, this final rule provides notice that the Secretary of Commerce approves the final 2020 and 2021 harvest specifications as recommended by the Council.

The 2020 harvest specifications set in this final action will supersede the 2020 harvest specifications previously set in the final 2019 and 2020 harvest specifications (84 FR 9000, March 13, 2019). The 2021 harvest specifications herein will be superseded in early 2021 when the final 2021 and 2022 harvest specifications are published. Pursuant to this final action, the 2020 harvest specifications therefore will apply for the remainder of the current year (2020), while the 2021 harvest specifications are projected only for the following year (2021) and will be superseded in early 2021 by the final 2021 and 2022 harvest specifications. Because this final action (published in early 2020) will be superseded in early 2021 by the publication of the final 2021 and 2022 harvest specifications, it is projected that this final action will implement the harvest specifications for the BSAI for approximately one year.

#### **Other Actions Affecting the 2020 and 2021 Harvest Specifications**

##### *Reclassify Sculpins as an Ecosystem Component Species*

In October 2019, the Council recommended that sculpins be reclassified in the FMP as an "ecosystem component" species, which is a category of non-target species that are not in need of conservation and management. Currently, NMFS annually

sets an OFL, ABC, and TAC for sculpins in the BSAI groundfish harvest specifications. Under the Council's recommended action, OFL, ABC, and TAC specifications for sculpins would no longer be required. NMFS intends to develop rulemaking to implement the Council's recommendation for sculpins. Such rulemaking would prohibit directed fishing for sculpins, maintain recordkeeping and reporting requirements, and establish a sculpin maximum retainable amount at 20 percent when directed fishing for groundfish species to discourage sculpin retention, while allowing flexibility to prosecute groundfish fisheries. Further details (and public comment on the sculpin action) will be available on publication of the proposed rule to reclassify sculpins as an ecosystem component species in the FMP. If the FMP amendment and its implementing regulations are approved by the Secretary of Commerce, the action is anticipated to be effective in 2021. Until effective, NMFS will continue to publish OFLs, ABCs, and TACs for sculpins in the BSAI groundfish harvest specifications.

##### *Final Rulemaking To Prohibit Directed Fishing for American Fisheries Act (AFA) Program Sideboard Limits*

On February 8, 2019, NMFS published a final rule (84 FR 2723) that modified regulations for the AFA Program participants subject to limits on the catch of specific species (sideboard limits) in the BSAI. Sideboard limits are intended to prevent AFA Program participants who benefit from receiving exclusive harvesting privileges in a particular fishery from shifting effort to other fisheries. Specifically, the final rule established regulations to prohibit directed fishing for most groundfish species or species groups subject to sideboard limits under the AFA Program, rather than prohibiting directed fishing through the annual BSAI harvest specifications. Since the final rule is now effective, NMFS is no longer publishing in the annual BSAI harvest specifications the AFA Program sideboard limit amounts for groundfish species or species groups subject to the final rule. Those groundfish species subject to the final rule associated with sideboard limits are now prohibited from directed fishing in regulation (§ 679.20(d)(1)(iv)(D) and Tables 54, 55, and 56 to 50 CFR part 679). NMFS will continue to publish in the annual BSAI harvest specifications the AFA Program sideboard limit amounts for groundfish species or species groups that were not subject to the final rule (see Tables 20–22 of this action).

*State of Alaska Guideline Harvest Levels*

For 2020 and 2021, the Board of Fisheries (BOF) for the State of Alaska (State) established the guideline harvest level (GHL) for vessels using pot gear in State waters in the Bering Sea subarea (BS) equal to 9 percent of the Pacific cod ABC in the BS. The State's pot gear BS GHL will increase one percent annually up to 15 percent of the BS ABC, if 90 percent of the GHL is harvested by November 15 of the preceding year. If 90 percent of the 2020 BS GHL is not harvested by November 15, 2020, then the 2021 BS GHL will remain at the same percent as the 2020 BS GHL. If 90 percent of the 2020 BS GHL is harvested by November 15, 2020, then the 2021 BS GHL will increase by one percent and the 2021 BS TAC will be set to account for the increased BS GHL. Also, for 2020 and 2021, the BOF established an additional GHL for vessels using jig gear in State waters in the BS equal to 45 mt of Pacific cod in the BS. The Council and its Plan Team, SSC, and AP recommended that the sum of all State and Federal water Pacific cod removals from the BS not exceed the ABC recommendations for Pacific cod in the BS. Accordingly, the Council recommended, and NMFS approves, that the 2020 and 2021 Pacific cod TACs in the BS account for the State's GHLs for Pacific cod caught in State waters in the BS.

For 2020 and 2021, the BOF for the State established the GHL in State waters in the Aleutian Islands subarea (AI) equal to 35 percent of the 2020 AI ABC or 7,210 mt. The AI GHL will increase annually by 4 percent of the AI ABC, if 90 percent of the GHL is harvested by November 15 of the preceding year, but may not exceed 39 percent of the AI ABC or 15 million pounds (6,804 mt). For 2020, 35 percent of the AI ABC is 7,210 mt, which exceeds the AI GHL limit of 6,804 mt. The Council and its Plan Team, SSC, and AP recommended that the sum of all State and Federal water Pacific cod removals from the AI not exceed the ABC recommendations for Pacific cod in the AI. Accordingly, the Council recommended, and NMFS approves, that the 2020 and 2021 Pacific cod TACs in the AI account for the State's GHL of 6,804 mt for Pacific cod caught in State waters in the AI.

**Changes From the Proposed 2020 and 2021 Harvest Specifications for the BSAI**

The Council's recommendations for the proposed 2020 and 2021 harvest specifications (84 FR 66129, December 3, 2019) were based largely on

information contained in the 2018 SAFE report for the BSAI groundfish fisheries. Through the proposed harvest specifications, NMFS notified the public that these harvest specifications could change, as the Council would consider information contained in the 2019 SAFE report; recommendations from the Plan Team, SSC, and AP committees; and public comments when making its recommendations for final harvest specifications at the December 2019 Council meeting. NMFS further notified the public that, as required by the FMP and its implementing regulations, the sum of the TACs must be within the OY range of 1.4 million and 2.0 million mt.

Information contained in the 2019 SAFE report indicates biomass changes from the 2018 SAFE report for several groundfish species. The 2019 report was made available for public review during the public comment period for the proposed harvest specifications. At the December 2019 Council meeting, the SSC recommended the 2020 and 2021 ABCs based on the best and most recent information contained in the 2019 SAFE report. The SSC recommended slight model adjustments for Eastern Bering Sea pollock and BS Pacific cod, but accepted Plan Team recommendations for all other species, except for sablefish. The SSC's recommendation resulted in an ABC sum total for all BSAI groundfish species in excess of 2.0 million mt for both 2020 and 2021.

For sablefish, as discussed in the proposed 2020 and 2021 harvest specifications (84 FR 66129, December 3, 2019) the SSC considered the appropriateness of continuing to specify sablefish OFLs at the separate Bering Sea, Aleutian Islands, and Gulf of Alaska (GOA) management area levels. The SSC reviewed the information available regarding area apportionment of the OFL, and decided that the best scientific information available regarding stock structure for sablefish supports an Alaska-wide OFL specification. Therefore, based on biological considerations, the SSC recommended specification of a single Alaska-wide sablefish OFL, which includes the Bering Sea, Aleutian Islands, and the GOA. Also, the SSC agreed with the Plan Team that a substantial reduction in the 2020 and 2021 ABCs from the maximum permissible ABCs were warranted. However, the SSC revised the Plan Team's recommendation for the sablefish ABCs by revising the method and amount of the reduction of the sablefish ABCs from the maximum permissible ABCs.

Based on increased fishing effort in 2019, the Council recommends final BS

pollock TACs increase by 4,176 mt in 2020 and 29,176 mt in 2021 compared to the proposed 2020 and 2021 BS pollock TACs. In terms of percentage, the largest increases in final 2020 TACs relative to the proposed 2020 TACs include BS "other rockfish" and BSAI northern rockfish. The increases account for anticipated higher incidental catches of these species, based on increased incidental catches in 2019. Other increases in the final 2020 TACs relative to the proposed 2020 TACs include BS Pacific cod, Aleutian Islands (AI) Pacific cod, AI Greenland turbot, BSAI arrowtooth flounder, BSAI Kamchatka flounder, BSAI flathead sole, Bering Sea and Eastern Aleutian Islands (BS/EAI) blackspotted/rougheye rockfish, Central Aleutian and Western Aleutian (CAI/WAI) blackspotted/rougheye rockfish, BSAI shortraker rockfish, Eastern Aleutian Islands and Bering Sea (EAI/BS) Atka mackerel, Western Aleutian Islands (WAI) Atka mackerel, Central Aleutian Islands (CAI) Atka mackerel, BSAI sculpins, and BSAI sharks. The 2020 increases account for higher interest in directed fishing or higher anticipated incidental catch needs.

Decreases in final 2020 TACs compared to the proposed 2020 TACs include AI sablefish, BS sablefish, BS Pacific ocean perch, CAI Pacific ocean perch, Eastern Aleutian Islands (EAI) Pacific ocean perch, BSAI yellowfin sole, BSAI rock sole, BSAI Alaska plaice, BSAI "other flatfish," BSAI octopuses, and BSAI skates. The decreases are for anticipated lower incidental catch needs of these species relative to 2019. The changes to TACs between the proposed and final harvest specifications are based on the most recent scientific and economic information and are consistent with the FMP, regulatory obligations, and harvest strategy as described in the proposed harvest specifications, including the upper limit for OY of 2.0 million mt. These changes are compared in Table 1A.

Table 1 lists the Council's recommended final 2020 OFL, ABC, TAC, initial TAC (ITAC), and CDQ reserve allocations of the BSAI groundfish species or species groups; and Table 2 lists the Council's recommended final 2021 OFL, ABC, TAC, ITAC, and CDQ reserve allocations of the BSAI groundfish species or species groups. NMFS concurs in these recommendations. These final 2020 and 2021 TAC amounts for the BSAI are within the OY range established for the BSAI and do not exceed the ABC for any species or species group. The apportionment of TAC amounts among

fisheries and seasons is discussed below.

TABLE 1—FINAL 2020 OVERFISHING LEVEL (OFL), ACCEPTABLE BIOLOGICAL CATCH (ABC), TOTAL ALLOWABLE CATCH (TAC), INITIAL TAC (ITAC), AND CDQ RESERVE ALLOCATION OF GROUND FISH IN THE BSAI<sup>1</sup>

[Amounts are in metric tons]

Species	Area	2020

Octopuses	BSAI					
Total		5,584,382	3,272,581	2,000,000	1,791,907	195,935

<sup>1</sup> These amounts apply to the entire BSAI management area unless otherwise specified. With the exception of pollock, and for the purpose of these harvest specifications, the Bering Sea subarea (BS) includes the Bogoslof District.

<sup>2</sup> Except for pollock, the portion of the sablefish TAC allocated to hook-and-line and pot gear, and Amendment 80 species (Atka mackerel, yellowfin sole, rock sole, flathead sole, Pacific cod, and Aleutian Islands Pacific ocean perch), 15 percent of each TAC is put into a non-specified reserve. The ITAC for these species is the remainder of the TAC after the subtraction of these reserves. For pollock and Amendment 80 species, ITAC is the non-CDQ allocation of TAC (see footnotes 3 and 4).

<sup>3</sup> For the Amendment 80 species (Atka mackerel, flathead sole, rock sole, yellowfin sole, Pacific cod, and Aleutian Islands Pacific ocean perch), 10.7 percent of the TAC is reserved for use by CDQ participants (see §§ 679.20(b)(1)(ii)(C) and 679.31). Twenty percent of the sablefish TAC allocated to hook-and-line gear or pot gear, 7.5 percent of the sablefish TAC allocated to trawl gear, and 10.7 percent of the TACs for Bering Sea Greenland turbot and arrowtooth flounder are reserved for use by CDQ participants (see § 679.20(b)(1)(ii)(B) and (D)). Aleutian Islands Greenland turbot, "other flatfish," Alaska plaice, Bering Sea Pacific ocean perch, northern rockfish, shortraker rockfish, blackspotted/rougheye rockfish, "other rockfish," skates, sculpins, sharks, and octopuses are not allocated to the CDQ program.

<sup>4</sup> Under § 679.20(a)(5)(i)(A), the annual BS pollock TAC, after subtracting first for the CDQ directed fishing allowance (10 percent) and second for the incidental catch allowance (3.7 percent), is further allocated by sector for a pollock directed fishery as follows: inshore—50 percent; catcher/processor—40 percent; and motherships—10 percent. Under § 679.20(a)(5)(iii)(B)(2), the annual AI pollock TAC, after subtracting first for the CDQ directed fishing allowance (10 percent) and second for the incidental catch allowance (2,400 mt), is allocated to the Aleut Corporation for a pollock directed fishery.

<sup>5</sup> The BS Pacific cod TAC is set to account for the 9 percent, plus 45 mt, of the BS ABC for the State of Alaska's (State) guideline harvest level in State waters of the BS. The AI Pacific cod TAC is set to account for 35 percent of the AI ABC for the State guideline harvest level in State waters of the AI, except 35 percent of the AI ABC exceeds the State guideline harvest level of 15 million pounds (6,804 mt), in which case the TAC is set to account for the State guideline harvest level of 6,804 mt.

<sup>6</sup> The sablefish OFL is Alaska-wide and includes the Gulf of Alaska.

<sup>7</sup> "Rock sole" includes *Lepidopsetta polyxystra* (Northern rock sole) and *Lepidopsetta bilineata* (Southern rock sole).

<sup>8</sup> "Flathead sole" includes *Hippoglossoides elassodon* (flathead sole) and *Hippoglossoides robustus* (Bering flounder).

<sup>9</sup> "Other flatfish" includes all flatfish species, except for halibut (a prohibited species), Alaska plaice, arrowtooth flounder, flathead sole, Greenland turbot, Kamchatka flounder, rock sole, and yellowfin sole.

<sup>10</sup>“Blackspotted/Rougheye rockfish” includes *Sebastes aleutianus* (rougheye) and *Sebastes melanostictus* (blackspotted).  
<sup>11</sup>“Other rockfish” includes all *Sebastes* and *Sebastolobus* species except for dark rockfish, Pacific ocean perch, northern rockfish, blackspotted/rougheye rockfish, and shortraker rockfish.  
**Note:** Regulatory areas and districts are defined at § 679.2 (BSAI=Bering Sea and Aleutian Islands management area, BS=Bering Sea subarea, AI=Aleutian Islands subarea, EAI=Eastern Aleutian district, CAI=Central Aleutian district, WAI=Western Aleutian district).

TABLE 1A—COMPARISON OF FINAL 2020 AND 2021 WITH PROPOSED 2020 AND 2021 TOTAL ALLOWABLE CATCH IN THE BSAI

[Amounts are in metric tons]

<b>Total</b>		<b>4,910,201</b>	<b>3,020,278</b>	<b>2,000,000</b>	<b>1,789,193</b>	<b>194,816</b>

<sup>1</sup> These amounts apply to the entire BSAI management area unless otherwise specified. With the exception of pollock, and for the purpose of these harvest specifications, the Bering Sea subarea (BS) includes the Bogoslof District.

<sup>2</sup> Except for pollock, the portion of the sablefish TAC allocated to hook-and-line and pot gear, and Amendment 80 species (Atka mackerel, flathead sole, rock sole, yellowfin sole, Pacific cod, and Aleutian Islands Pacific ocean perch), 15 percent of each TAC is put into a non-specified reserve. The ITAC for these species is the remainder of the TAC after the subtraction of these reserves. For pollock and Amendment 80 species, ITAC is the non-CDQ allocation of TAC (see footnotes 3 and 4).

<sup>3</sup> For the Amendment 80 species (Atka mackerel, flathead sole, rock sole, yellowfin sole, Pacific cod, and Aleutian Islands Pacific ocean perch), 10.7 percent of the TAC is reserved for use by CDQ participants (see §§ 679.20(b)(1)(ii)(C) and 679.31). Twenty percent of the sablefish TAC allocated to hook-and-line gear or pot gear, 7.5 percent of the sablefish TAC allocated to trawl gear, and 10.7 percent of the TACs for Bering Sea Greenland turbot and arrowtooth flounder are reserved for use by CDQ participants (see § 679.20(b)(1)(ii)(B) and (D)). The 2021 hook-and-line or pot gear portion of the sablefish ITAC and CDQ reserve will not be specified until the final 2021 and 2022 harvest specifications. Aleutian Islands Greenland turbot, "other flatfish," Alaska plaice, Bering Sea Pacific ocean perch, northern rockfish, shortraker rockfish, blackspotted/rougheye rockfish, "other rockfish," skates, sculpins, sharks, and octopuses are not allocated to the CDQ program.

<sup>4</sup> Under § 679.20(a)(5)(i)(A), the annual BS pollock TAC, after subtracting first for the CDQ directed fishing allowance (10 percent) and second for the incidental catch allowance (3.7 percent), is further allocated by sector for a pollock directed fishery as follows: inshore—50 percent; catcher/processor—40 percent; and motherships—10 percent. Under § 679.20(a)(5)(iii)(B)(2), the annual AI pollock TAC, after subtracting first for the CDQ directed fishing allowance (10 percent) and second for the incidental catch allowance (2,400 mt), is allocated to the Aleut Corporation for a pollock directed fishery.

<sup>5</sup> Assuming an increase in the 2021 guideline harvest level based on the actual 2020 harvest, the 2021 BS Pacific cod TAC is set to account for the 10 percent, plus 45 mt, of the BS ABC for the State of Alaska's (State) guideline harvest level in State waters of the BS. The 2021 AI Pacific cod TAC is set to account for 35 percent of the AI ABC for the State guideline harvest level in State waters of the AI, except 35 percent of the AI ABC exceeds the State guideline harvest level of 15 million pounds (6,804 mt), in which case the TAC is set to account for the State guideline harvest level of 6,804 mt.

<sup>6</sup> The sablefish OFL is Alaska-wide and includes the Gulf of Alaska.

<sup>7</sup> "Rock sole" includes *Lepidopsetta polyxystra* (Northern rock sole) and *Lepidopsetta bilineata* (Southern rock sole).

<sup>8</sup> "Flathead sole" includes *Hippoglossoides elassodon* (flathead sole) and *Hippoglossoides robustus* (Bering flounder).

<sup>9</sup> "Other flatfish" includes all flatfish species, except for halibut (a prohibited species), Alaska plaice, arrowtooth flounder, flathead sole, Greenland turbot, Kamchatka flounder, rock sole, and yellowfin sole.

<sup>10</sup> "Blackspotted/Rougheye rockfish" includes *Sebastes aleutianus* (rougheye) and *Sebastes melanostictus* (blackspotted).

<sup>11</sup> "Other rockfish" includes all *Sebastes* and *Sebastolobus* species except for dark rockfish, Pacific ocean perch, northern rockfish, blackspotted/rougheye rockfish, and shortraker rockfish.

**Note:** Regulatory areas and districts are defined at § 679.2 (BSAI=Bering Sea and Aleutian Islands management area, BS=Bering Sea subarea, AI=Aleutian Islands subarea, EAI=Eastern Aleutian district, CAI=Central Aleutian district, WAI=Western Aleutian district).

*Groundfish Reserves and the Incidental Catch Allowance (ICA) for Pollock, Atka Mackerel, Flathead Sole, Rock Sole, Yellowfin Sole, and Aleutian Islands Pacific Ocean Perch*

Section 679.20(b)(1)(i) requires that NMFS reserves 15 percent of the TAC for each target species (except for pollock, hook-and-line and pot gear allocation of sablefish, and Amendment

80 species) in a non-specified reserve. Section 679.20(b)(1)(ii)(B) requires that NMFS allocate 20 percent of the hook-and-line or pot gear allocation of sablefish for the fixed-gear sablefish CDQ reserve for each subarea. Section 679.20(b)(1)(ii)(D) requires that NMFS allocate 7.5 percent of the trawl gear allocations of sablefish in the BS and AI and 10.7 percent of the Bering Sea Greenland turbot and arrowtooth

flounder TACs to the respective CDQ reserves. Section 679.20(b)(1)(ii)(C) requires that NMFS allocate 10.7 percent of the TACs for Atka mackerel, Aleutian Islands Pacific ocean perch, yellowfin sole, rock sole, flathead sole, and Pacific cod to the respective CDQ reserves. Sections 679.20(a)(5)(i)(A) and 679.31(a) also require that 10 percent of the Bering Sea pollock TAC be allocated to the pollock CDQ directed fishing

allowance (DFA). Sections 679.20(a)(5)(iii)(B)(2)(i) and 679.31(a) require that 10 percent of the Aleutian Islands pollock TAC be allocated to the pollock CDQ DFA. The entire Bogoslof District pollock TAC is allocated as an ICA pursuant to § 679.20(a)(5)(ii) because the Bogoslof District is closed to directed fishing for pollock by regulation (§ 679.22(a)(7)(B)). With the exception of the hook-and-line or pot gear sablefish CDQ reserve, the regulations do not further apportion the CDQ allocations by gear.

Pursuant to § 679.20(a)(5)(i)(A)(1), NMFS allocates a pollock ICA of 3.7 percent of the BS pollock TAC after subtracting the 10 percent CDQ DFA. This allowance is based on NMFS’s examination of the pollock incidental catch, including the incidental catch by CDQ vessels, in target fisheries other than pollock from 2000 through 2019. During this 20-year period, the pollock incidental catch ranged from a low of 2.2 percent in 2006 to a high of 4.6 percent in 2014, with a 20-year average

of 3 percent. Pursuant to § 679.20(a)(5)(iii)(B)(2)(i) and (ii), NMFS establishes a pollock ICA of 2,400 mt of the AI pollock TAC after subtracting the 10 percent CDQ DFA. This allowance is based on NMFS’s examination of the pollock incidental catch, including the incidental catch by CDQ vessels, in target fisheries other than pollock from 2003 through 2019. During this 17-year period, the incidental catch of pollock ranged from a low of 5 percent in 2006 to a high of 17 percent in 2014, with a 17-year average of 9 percent.

Pursuant to § 679.20(a)(8) and (10), NMFS allocates ICAs of 3,000 mt of flathead sole, 6,000 mt of rock sole, 4,000 mt of yellowfin sole, 10 mt of WAI Pacific ocean perch, 60 mt of CAI Pacific ocean perch, 100 mt of EAI Pacific ocean perch, 20 mt of WAI Atka mackerel, 75 mt of CAI Atka mackerel, and 800 mt of EAI and BS Atka mackerel TAC after subtracting the 10.7 percent CDQ reserve. These ICA allowances are based on NMFS’s examination of the incidental catch in

other target fisheries from 2003 through 2019.

The regulations do not designate the remainder of the non-specified reserve by species or species group. Any amount of the reserve may be apportioned to a target species that contributed to the non-specified reserves during the year, provided that such apportionments are consistent with § 679.20(a)(3) and do not result in overfishing (see § 679.20(b)(1)(i)). The Regional Administrator has determined that the ITACs specified for the species listed in Table 1 need to be supplemented from the non-specified reserve because U.S. fishing vessels have demonstrated the capacity to catch the full TAC allocations. Therefore, in accordance with § 679.20(b)(3), NMFS is apportioning the amounts shown in Table 3 from the non-specified reserve to increase the ITAC for AI “other rockfish” by 15 percent of the “other rockfish” TAC in 2020 and 2021.

TABLE 3—FINAL 2020 AND 2021 APPORTIONMENT OF NON-SPECIFIED RESERVES TO ITAC CATEGORIES

[Amounts are in metric tons]

Species-area or subarea	2020 ITAC	2020 Reserve amount	2020 Final TAC	2021 ITAC	2021 Reserve amount	2021 Final TAC

Total .....	330	58	388	330	58	388

*Allocation of Pollock TAC under the American Fisheries Act (AFA)*

Section 679.20(a)(5)(i)(A) requires that the BS pollock TAC be apportioned as a DFA, after subtracting 10 percent for the CDQ program and 3.7 percent for the ICA, as follows: 50 percent to the inshore sector, 40 percent to the catcher/processor (C/P) sector, and 10 percent to the mothership sector. In the BS, 45 percent of the DFA is allocated to the A season (January 20–June 10), and 55 percent of the DFA is allocated to the B season (June 10–November 1) (§§ 679.20(a)(5)(i)(B)(1) and 679.23(e)(2)). The Aleutian Islands directed pollock fishery allocation to the Aleut Corporation is the amount of pollock TAC remaining in the AI after subtracting 1,900 mt for the CDQ DFA (10 percent) and 2,400 mt for the ICA (§ 679.20(a)(5)(iii)(B)(2)). In the AI, the total A season apportionment of the TAC (including the AI directed fishery allocation, the CDQ DFA, and the ICA) may equal up to 40 percent of the ABC for AI pollock, and the remainder of the TAC is allocated to the B season

(§ 679.20(a)(5)(iii)(B)(3)). Tables 4 and 5 list these 2020 and 2021 amounts.

Section 679.20(a)(5)(iii)(B)(6) sets harvest limits for pollock in the A season (January 20 to June 10) in Areas 543, 542, and 541. In Area 543, the A season pollock harvest limit is no more than 5 percent of the Aleutian Islands pollock ABC. In Area 542, the A season pollock harvest limit is no more than 15 percent of the Aleutian Islands pollock ABC. In Area 541, the A season pollock harvest limit is no more than 30 percent of the Aleutian Islands pollock ABC.

Section 679.20(a)(5)(i)(A)(4) also includes several specific requirements regarding BS pollock allocations. First, it requires that 8.5 percent of the pollock allocated to the C/P sector be available for harvest by AFA catcher vessels (CVs) with C/P sector endorsements, unless the Regional Administrator receives a cooperative contract that allows the distribution of harvest among AFA C/Ps and AFA CVs in a manner agreed to by all members. Second, AFA C/Ps not listed in the AFA are limited to harvesting not more than 0.5 percent of the pollock allocated to

the C/P sector. Tables 4 and 5 list the 2020 and 2021 allocations of pollock TAC. Table 20 lists the AFA C/P prohibited species sideboard limits, and Tables 21 and 22 list the AFA CV prohibited species and groundfish sideboard limits. The tables for the pollock allocations to the BS inshore pollock cooperatives and open access sector will be posted on the Alaska Region website at <https://www.fisheries.noaa.gov/alaska/sustainable-fisheries/alaska-groundfish-fisheries-management>.

Tables 4 and 5 also list seasonal apportionments of pollock and harvest limits within the Steller Sea Lion Conservation Area (SCA). The harvest of pollock within the SCA, as defined at § 679.22(a)(7)(vii), is limited to no more than 28 percent of the annual pollock DFA before 12:00 noon, April 1, as provided in § 679.20(a)(5)(i)(C). The A season pollock SCA harvest limit will be apportioned to each sector in proportion to each sector’s allocated percentage of the DFA. Tables 4 and 5 list these final 2020 and 2021 amounts by sector.

<sup>1</sup> Pursuant to § 679.20(a)(5)(i)(A), the Bering Sea subarea pollock TAC, after subtracting the CDQ DFA (10 percent) and the ICA (3.7 percent), is allocated as a DFA as follows: inshore sector—50 percent, catcher/processor sector (C/P)—40 percent, and mothership sector—10 percent. In the Bering Sea subarea, 45 percent of the DFA is allocated to the A season (January 20–June 10) and 55 percent of the DFA is allocated to the B season (June 10–November 1). Pursuant to § 679.20(a)(5)(iii)(B)(2)(i) through (iii), the annual Aleutian Islands pollock TAC, after subtracting first for the CDQ DFA (10 percent) and second for the ICA (2,400 mt), is allocated to the Aleut Corporation for a pollock directed fishery. In the Aleutian Islands subarea, the A season is allocated up to 40 percent of the AI pollock ABC.

<sup>2</sup> In the Bering Sea subarea, pursuant to § 679.20(a)(5)(i)(C), no more than 28 percent of each sector's annual DFA may be taken from the SCA before noon, April 1.

<sup>3</sup> Pursuant to § 679.20(a)(5)(i)(A)(4), 8.5 percent of the DFA allocated to listed C/Ps shall be available for harvest only by eligible catcher vessels with a C/P endorsement delivering to listed C/Ps, unless there is a C/P sector cooperative for the year.

<sup>4</sup> Pursuant to § 679.20(a)(5)(i)(A)(4)(iii), the AFA unlisted catcher/processors are limited to harvesting not more than 0.5 percent of the catcher/processor sector's allocation of pollock.

<sup>5</sup> Pursuant to § 679.20(a)(5)(i)(A)(6), NMFS establishes an excessive harvesting share limit equal to 17.5 percent of the sum of the non-CDQ pollock DFAs.

<sup>6</sup> Pursuant to § 679.20(a)(5)(i)(A)(7), NMFS establishes an excessive processing share limit equal to 30.0 percent of the sum of the non-CDQ pollock DFAs.

<sup>7</sup> Pursuant to § 679.20(a)(5)(iii)(B)(6), NMFS establishes harvest limits for pollock in the A season in Area 541 of no more than 30 percent, in Area 542 of no more than 15 percent, and in Area 543 of no more than 5 percent of the Aleutian Islands pollock ABC.

<sup>8</sup> Pursuant to § 679.22(a)(7)(B), the Bogoslof District is closed to directed fishing for pollock. The amounts specified are for incidental catch only and are not apportioned by season or sector.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

<sup>1</sup> Pursuant to § 679.20(a)(5)(i)(A), the Bering Sea subarea pollock TAC, after subtracting the CDQ DFA (10 percent) and the ICA (3.7 percent), is allocated as a DFA as follows: inshore sector—50 percent, catcher/processor sector (C/P)—40 percent, and mothership sector—10 percent. In the Bering Sea subarea, 45 percent of the DFA is allocated to the A season (January 20–June 10) and 55 percent of the DFA is allocated to the B season (June 10–November 1). Pursuant to § 679.20(a)(5)(iii)(B)(2)(i) through (iii), the annual Aleutian Islands pollock TAC, after subtracting first for the CDQ DFA (10 percent) and second for the ICA (2,400 mt), is allocated to the Aleut Corporation for a pollock directed fishery. In the Aleutian Islands subarea, the A season is allocated up to 40 percent of the AI pollock ABC.

<sup>2</sup> In the Bering Sea subarea, pursuant to § 679.20(a)(5)(i)(C), no more than 28 percent of each sector's annual DFA may be taken from the SCA before noon, April 1.

<sup>3</sup> Pursuant to § 679.20(a)(5)(i)(A)(4), 8.5 percent of the DFA allocated to listed C/Ps shall be available for harvest only by eligible catcher vessels with a C/P endorsement delivering to listed C/Ps, unless there is a C/P sector cooperative for the year.

<sup>4</sup> Pursuant to § 679.20(a)(5)(i)(A)(4)(iii), the AFA unlisted catcher/processors are limited to harvesting not more than 0.5 percent of the catcher/processor sector's allocation of pollock.

<sup>5</sup> Pursuant to § 679.20(a)(5)(i)(A)(6), NMFS establishes an excessive harvesting share limit equal to 17.5 percent of the sum of the non-CDQ pollock DFAs.

<sup>6</sup> Pursuant to § 679.20(a)(5)(i)(A)(7), NMFS establishes an excessive processing share limit equal to 30.0 percent of the sum of the non-CDQ pollock DFAs.

<sup>7</sup> Pursuant to § 679.20(a)(5)(iii)(B)(6), NMFS establishes harvest limits for pollock in the A season in Area 541 of no more than 30 percent, in Area 542 of no more than 15 percent, and in Area 543 of no more than 5 percent of the Aleutian Islands pollock ABC.

<sup>8</sup> Pursuant to § 679.22(a)(7)(B), the Bogoslof District is closed to directed fishing for pollock. The amounts specified are for incidental catch only and are not apportioned by season or sector.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

*Allocation of the Atka Mackerel TACs*

Section 679.20(a)(8) allocates the Atka mackerel TACs to the Amendment 80 and BSAI trawl limited access sectors, after subtracting the CDQ reserves, ICAs for the BSAI trawl limited access sector and non-trawl gear sector, and the jig gear allocation (Tables 6 and 7). The percentage of the ITAC for Atka mackerel allocated to the Amendment 80 and BSAI trawl limited access sectors is listed in Table 33 to 50 CFR part 679 and in § 679.91. Pursuant to § 679.20(a)(8)(i), up to 2 percent of the EAI and the BS Atka mackerel ITAC may be allocated to vessels using jig gear. The percent of this allocation is recommended annually by the Council based on several criteria, including, among other criteria, the anticipated harvest capacity of the jig gear fleet. The Council recommended, and NMFS approves, a 0.5 percent allocation of the Atka mackerel ITAC in the EAI and BS to the jig gear sector in 2020 and 2021.

Section 679.20(a)(8)(ii)(A) apportions the Atka mackerel TAC into two equal seasonal allowances. Section 679.23(e)(3) sets the first seasonal allowance for directed fishing with trawl gear from January 20 through June 10 (A season), and the second seasonal allowance from June 10 through December 31 (B season). Section 679.23(e)(4)(iii) applies Atka mackerel seasons to CDQ Atka mackerel trawl fishing. The ICAs and jig gear allocations are not apportioned by season.

Section 679.20(a)(8)(ii)(C)(1)(i) and (ii) limits Atka mackerel catch within waters 0 nm to 20 nm of Steller sea lion sites listed in Table 6 to 50 CFR part 679 and located west of 178° W longitude to no more than 60 percent of the annual TACs in Areas 542 and 543, and equally divides the annual TACs between the A and B seasons as defined at § 679.23(e)(3). Section 679.20(a)(8)(ii)(C)(2) requires that the annual TAC in Area 543 will be no more

than 65 percent of the ABC in Area 543. Section 679.20(a)(8)(ii)(D) requires that any unharvested Atka mackerel A season allowance that is added to the B season be prohibited from being harvested within waters 0 nm to 20 nm of Steller sea lion sites listed in Table 6 to 50 CFR part 679 and located in Areas 541, 542, and 543.

Tables 6 and 7 list these 2020 and 2021 Atka mackerel seasonal and area allowances, and the sector allocations. One Amendment 80 cooperative has formed for the 2020 fishing year. Because all Amendment 80 vessels are part of the sole Amendment 80 cooperative, no allocation to the Amendment 80 limited access sector is required for 2020. The 2021 allocations for Atka mackerel between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in the program by November 1, 2020.

TABLE 6—FINAL 2020 SEASONAL AND SPATIAL ALLOWANCES, GEAR SHARES, CDQ RESERVE, INCIDENTAL CATCH ALLOWANCE, AND AMENDMENT 80 ALLOCATION OF THE BSAI ATKA MACKEREL TAC

[Amounts are in metric tons]

Sector <sup>1</sup>	Season <sup>2 3 4</sup>	2020 allocation by area

	Critical Habitat	n/a	392	
	B	1,050	654	
	Critical Habitat	n/a	392	
Amendment 80 sector	Total	18,904	11,764	17,884
	A	9,452	5,882	8,942
	Critical Habitat	n/a	3,529	5,365
	B	9,452	5,882	8,942
	Critical Habitat	n/a	3,529	5,365

<sup>1</sup> Section 679.20(a)(8)(ii) allocates the Atka mackerel TACs, after subtracting the CDQ reserves, jig gear allocation, and ICAs, to the Amendment 80 and BSAI trawl limited access sectors. The allocation of the ITAC for Atka mackerel to the Amendment 80 and BSAI trawl limited access sectors is established in Table 33 to 50 CFR part 679 and § 679.91. The CDQ reserve is 10.7 percent of the TAC for use by CDQ participants (see §§ 679.20(b)(1)(ii)(C) and 679.31).

<sup>2</sup> Sections 679.20(a)(8)(ii)(A) and 679.22(a) establish temporal and spatial limitations for the Atka mackerel fishery.

<sup>3</sup> The seasonal allowances of Atka mackerel are 50 percent in the A season and 50 percent in the B season.

<sup>4</sup> Section 679.23(e)(3) authorizes directed fishing for Atka mackerel with trawl gear during the A season from January 20 to June 10 and the B season from June 10 to December 31.

<sup>5</sup> Section 679.20(a)(8)(ii)(C)(1)(i) limits no more than 60 percent of the annual TACs in Areas 542 and 543 to be caught inside of Steller sea lion critical habitat; section 679.20(a)(8)(ii)(C)(1)(ii) equally divides the annual TACs between the A and B seasons as defined at § 679.23(e)(3); and section 679.20(a)(8)(ii)(C)(2) requires that the TAC in Area 543 shall be no more than 65 percent of ABC in Area 543.

<sup>6</sup> Sections 679.2 and 679.20(a)(8)(i) require that up to 2 percent of the Eastern Aleutian District and the Bering Sea subarea TAC be allocated to jig gear after subtracting the CDQ reserve and the ICA. NMFS sets the amount of this allocation for 2020 at 0.5 percent. The jig gear allocation is not apportioned by season.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

TABLE 7—FINAL 2021 SEASONAL AND SPATIAL ALLOWANCES, GEAR SHARES, CDQ RESERVE, INCIDENTAL CATCH ALLOWANCE, AND AMENDMENT 80 ALLOCATION OF THE BSAI ATKA MACKEREL TAC—Continued

[Amounts are in metric tons]

Sector <sup>1</sup>	Season <sup>2 3 4</sup>	2021 allocation by area		
		Eastern Aleutian District/ Bering Sea <sup>5</sup>	Central Aleutian District <sup>5</sup>	Western Aleutian District <sup>5</sup>
	Critical Habitat .....	n/a	3,241	4,928

<sup>1</sup> Section 679.20(a)(8)(ii) allocates the Atka mackerel TACs, after subtracting the CDQ reserves, jig gear allocation, and ICAs, to the Amendment 80 and BSAI trawl limited access sectors. The allocation of the ITAC for Atka mackerel to the Amendment 80 and BSAI trawl limited access sectors is established in Table 33 to 50 CFR part 679 and § 679.91. The CDQ reserve is 10.7 percent of the TAC for use by CDQ participants (see §§ 679.20(b)(1)(ii)(C) and 679.31).

<sup>2</sup> Sections 679.20(a)(8)(ii)(A) and 679.22(a) establish temporal and spatial limitations for the Atka mackerel fishery.

<sup>3</sup> The seasonal allowances of Atka mackerel are 50 percent in the A season and 50 percent in the B season.

<sup>4</sup> Section 679.23(e)(3) authorizes directed fishing for Atka mackerel with trawl gear during the A season from January 20 to June 10 and the B season from June 10 to December 31.

<sup>5</sup> Section 679.20(a)(8)(ii)(C)(1)(i) limits no more than 60 percent of the annual TACs in Areas 542 and 543 to be caught inside of Steller sea lion critical habitat; section 679.20(a)(8)(ii)(C)(1)(ii) equally divides the annual TACs between the A and B seasons as defined at § 679.23(e)(3); and section 679.20(a)(8)(ii)(C)(2) requires that the TAC in Area 543 shall be no more than 65 percent of ABC in Area 543.

<sup>6</sup> Sections 679.2 and 679.20(a)(8)(i) require that up to 2 percent of the Eastern Aleutian District and the Bering Sea subarea TAC be allocated to jig gear after subtracting the CDQ reserve and the ICA. NMFS sets the amount of this allocation for 2021 at 0.5 percent. The jig gear allocation is not apportioned by season.

<sup>7</sup> The 2021 allocations for Atka mackerel between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in the program by November 1, 2020.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

*Allocation of the Pacific Cod TAC*

The Council separated Bering Sea and Aleutian Islands subarea OFLs, ABCs, and TACs for Pacific cod in 2014 (79 FR 12108, March 4, 2014). Section 679.20(b)(1)(ii)(C) allocates 10.7 percent of the Bering Sea TAC and the Aleutian Islands TAC to the CDQ program. After CDQ allocations have been deducted from the respective Bering Sea and Aleutian Islands Pacific cod TACs, the remaining Bering Sea and Aleutian Islands Pacific cod TACs are combined for calculating further BSAI Pacific cod sector allocations. If the non-CDQ Pacific cod TAC is or will be reached in either the Bering Sea or the Aleutian Islands subareas, NMFS will prohibit non-CDQ directed fishing for Pacific cod in that subarea as provided in § 679.20(d)(1)(iii).

Section 679.20(a)(7)(i) and (ii) allocates to the non-CDQ sectors the Pacific cod TAC in the combined BSAI TAC, after subtracting 10.7 percent for the CDQ program, as follows: 1.4 percent to vessels using jig gear; 2.0 percent to hook-and-line or pot CVs less than 60 ft (18.3 m) length overall (LOA); 0.2 percent to hook-and-line CVs greater than or equal to 60 ft (18.3 m) LOA; 48.7 percent to hook-and-line C/Ps; 8.4 percent to pot CVs greater than or equal to 60 ft (18.3 m) LOA; 1.5 percent to pot C/Ps; 2.3 percent to AFA trawl C/Ps; 13.4 percent to Amendment 80 sector; and 22.1 percent to trawl CVs. The ICA for the hook-and-line and pot sectors

will be deducted from the aggregate portion of Pacific cod TAC allocated to the hook-and-line and pot sectors. For 2020 and 2021, the Regional Administrator establishes an ICA of 400 mt based on anticipated incidental catch by these sectors in other fisheries.

The ITAC allocation of Pacific cod to the Amendment 80 sector is established in Table 33 to 50 CFR part 679 and § 679.91. One Amendment 80 cooperative has formed for the 2020 fishing year. Because all Amendment 80 vessels are part of the sole Amendment 80 cooperative, no allocation to the Amendment 80 limited access sector is required for 2020. The 2021 allocations for Amendment 80 species between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in the program by November 1, 2020.

The sector allocations of Pacific cod are apportioned into seasonal allowances to disperse the Pacific cod fisheries over the fishing year (see §§ 679.20(a)(7)(i)(B), 679.20(a)(7)(iv)(A), and 679.23(e)(5)). In accordance with § 679.20(a)(7)(iv)(B) and (C), any unused portion of a seasonal Pacific cod allowance for any sector, except the jig sector, will become available at the beginning of that sector's next seasonal allowance.

Section 679.20(a)(7)(vii) requires that the Regional Administrator establish an Area 543 Pacific cod harvest limit based

on Pacific cod abundance in Area 543 as determined by the annual stock assessment process. Based on the 2019 stock assessment, the Regional Administrator determined for 2020 and 2021 the estimated amount of Pacific cod abundance in Area 543 is 15.7 percent of the total AI abundance. NMFS will first subtract the State GHL Pacific cod amount from the Aleutian Islands Pacific cod ABC. Then NMFS will determine the harvest limit in Area 543 by multiplying the percentage of Pacific cod estimated in Area 543 (15.7 percent) by the remaining ABC for AI Pacific cod. Based on these calculations, the Area 543 harvest limit is 2,166 mt for 2020 and 2021.

On March 21, 2019, the final rule adopting Amendment 113 to the FMP (81 FR 84434; November 23, 2016) was vacated by the U.S. District Court for the District of Columbia (*Groundfish Forum v. Ross*, No. 16–2495 (D.D.C. March 21, 2019)), and the corresponding regulations implementing Amendment 113 are no longer in effect. Therefore, this final rule is not specifying amounts for the AI Pacific Cod Catcher Vessel Harvest Set-Aside Program (see § 679.20(a)(7)(viii)).

Table 8 and Table 9 list the CDQ and non-CDQ seasonal allowances by gear based on the final 2020 and 2021 Pacific cod TACs; the sector allocation percentages of Pacific cod set forth at § 679.20(a)(7)(i)(B) and (a)(7)(iv)(A); and the seasons set forth at § 679.23(e)(5).

				Apr 30–Aug 31	389
				Aug 31–Dec 31	389

<sup>1</sup> The sector allocations and seasonal allowances for BSAI Pacific cod TAC are based on the sum of the BS and AI Pacific cod TACs, after the subtraction of the reserves for the CDQ Program. If the TAC for Pacific cod in either the AI or BS is or will be reached, then directed fishing for Pacific cod in that subarea will be prohibited, even if a BSAI allowance remains (§ 679.20(d)(1)(iii)).

<sup>2</sup> The ICA for the hook-and-line and pot sectors will be deducted from the aggregate portion of Pacific cod TAC allocated to the hook-and-line and pot sectors. The Regional Administrator approves an ICA of 400 mt for 2020 based on anticipated incidental catch in these fisheries.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

				Aug 31–Dec 31 .....	266

<sup>1</sup> The sector allocations and seasonal allowances for BSAI Pacific cod TAC are based on the sum of the BS and AI Pacific cod TACs, after the subtraction of the reserves for the CDQ Program. If the TAC for Pacific cod in either the AI or BS is or will be reached, then directed fishing for Pacific cod in that subarea will be prohibited, even if a BSAI allowance remains (§ 679.20(d)(1)(iii)).

<sup>2</sup> The ICA for the hook-and-line and pot sectors will be deducted from the aggregate portion of Pacific cod TAC allocated to the hook-and-line and pot sectors. The Regional Administrator approves an ICA of 400 mt for 2021 based on anticipated incidental catch in these fisheries.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

*Sablefish Gear Allocation*

Section 679.20(a)(4)(iii) and (iv) require allocation of the sablefish TAC for the BS and AI subareas between trawl gear and hook-and-line or pot gear sectors. Gear allocations of the sablefish TAC for the BS are 50 percent for trawl gear and 50 percent for hook-and-line or pot gear. Gear allocations of the TAC for the AI are 25 percent for trawl gear and 75 percent for hook-and-line or pot gear. Section 679.20(b)(1)(ii)(B) requires that NMFS apportion 20 percent of the

hook-and-line or pot gear allocation of sablefish TAC to the CDQ reserve for each subarea. Also, § 679.20(b)(1)(ii)(D)(1) requires that in the BS and AI 7.5 percent of the trawl gear allocation of sablefish TAC from the non-specified reserve, established under § 679.20(b)(1)(i), be assigned to the CDQ reserve.

The Council recommended that only trawl sablefish TAC be established biennially. The harvest specifications for the hook-and-line gear or pot gear sablefish Individual Fishing Quota (IFQ)

fisheries are limited to the 2020 fishing year to ensure those fisheries are conducted concurrently with the halibut IFQ fishery. Concurrent sablefish and halibut IFQ fisheries reduce the potential for discards of halibut and sablefish in those fisheries. The sablefish IFQ fisheries remain closed at the beginning of each fishing year until the final harvest specifications for the sablefish IFQ fisheries are in effect. Table 10 lists the 2020 and 2021 gear allocations of the sablefish TAC and CDQ reserve amounts.

TABLE 10—FINAL 2020 AND 2021 GEAR SHARES AND CDQ RESERVE OF BSAI SABLEFISH TACS

[Amounts are in metric tons]

Subarea and gear	Percent of TAC	2020 Share of TAC	2020 ITAC	2020 CDQ reserve	2021 Share of TAC	2021 ITAC	2021 CDQ reserve
<b>Bering Sea</b>							
Trawl <sup>1</sup> .....	50	931	791	70	1,433	1,218	107
Hook-and-line/pot gear <sup>2</sup> .....	50	931	744	186	n/a	n/a	n/a
Total .....	100	1,861	1,535	256	1,433	1,218	107
<b>Aleutian Islands</b>							
Trawl <sup>1</sup> .....	25	510	433	38	625	531	47
Hook-and-line/pot gear <sup>2</sup> .....	75	1,529	1,223	306	n/a	n/a	n/a
Total .....	100	2,039	1,657	344	625	531	47

<sup>1</sup> For the sablefish trawl gear allocations, 15 percent of TAC is apportioned to the non-specific reserve (§ 679.20(b)(1)(i)). The ITAC is the remainder of the TAC after subtracting these reserves. In the BS and AI, 7.5 percent of the trawl non-specified reserve is assigned to the CDQ reserves (§ 679.20(b)(1)(ii)(D)(1)).

<sup>2</sup> For the portion of the sablefish TAC allocated to vessels using hook-and-line or pot gear, 20 percent of the allocated TAC is reserved for use by CDQ participants (§ 679.20(b)(1)(ii)(B)). The Council recommended that specifications for the hook-and-line gear sablefish IFQ fisheries be limited to one year.

**Note:** Seasonal or sector apportionments may not total precisely due to rounding.

*Allocation of the Aleutian Islands Pacific Ocean Perch, and BSAI Flathead Sole, Rock Sole, and Yellowfin Sole TACs*

Section 679.20(a)(10)(i) and (ii) require that NMFS allocate Aleutian Islands Pacific ocean perch, and BSAI

flathead sole, rock sole, and yellowfin sole ITACs between the Amendment 80 sector and the BSAI trawl limited access sector, after subtracting 10.7 percent for the CDQ reserves and ICAs for the BSAI trawl limited access sector and vessels using non-trawl gear. The allocations of

the ITACs for Aleutian Islands Pacific ocean perch, and BSAI flathead sole, rock sole, and yellowfin sole to the Amendment 80 sector are established in accordance with Tables 33 and 34 to 50 CFR part 679 and § 679.91.

One Amendment 80 cooperative has formed for the 2020 fishing year. Because all Amendment 80 vessels are part of the sole Amendment 80 cooperative, no allocation to the Amendment 80 limited access sector is

required for 2020. The 2021 allocations for Amendment 80 species between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in

the program by November 1, 2020. Tables 11 and 12 list the 2020 and 2021 allocations of the Aleutian Islands Pacific ocean perch, and BSAI flathead sole, rock sole, and yellowfin sole TACs.

TABLE 11—FINAL 2020 COMMUNITY DEVELOPMENT QUOTA (CDQ) RESERVES, INCIDENTAL CATCH AMOUNTS (ICAS), AND AMENDMENT 80 ALLOCATIONS OF THE ALEUTIAN ISLANDS PACIFIC OCEAN PERCH, AND BSAI FLATHEAD SOLE, ROCK SOLE, AND YELLOWFIN SOLE TACS

<sup>1</sup> The 2021 allocations for Amendment 80 species between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in the program by November 1, 2020.

Note: Sector apportionments may not total precisely due to rounding.

Section 679.2 defines the ABC surplus for flathead sole, rock sole, and yellowfin sole as the difference between the annual ABC and TAC for each species. Section 679.20(b)(1)(iii) establishes ABC reserves for flathead sole, rock sole, and yellowfin sole. The ABC surpluses and the ABC reserves are necessary to mitigate the operational variability, environmental conditions, and economic factors that may constrain the CDQ groups and the Amendment 80 cooperatives from achieving, on a

continuing basis, the optimum yield in the BSAI groundfish fisheries. NMFS, after consultation with the Council, may set the ABC reserve at or below the ABC surplus for each species, thus maintaining the TAC below ABC limits. An amount equal to 10.7 percent of the ABC reserves will be allocated as CDQ ABC reserves for flathead sole, rock sole, and yellowfin sole. Section 679.31(b)(4) establishes the annual allocations of CDQ ABC reserves among the CDQ groups. The Amendment 80

ABC reserves shall be the ABC reserves minus the CDQ ABC reserves. Section 679.91(i)(2) establishes each Amendment 80 cooperative ABC reserve to be the ratio of each cooperatives' quota share units and the total Amendment 80 quota share units, multiplied by the Amendment 80 ABC reserve for each respective species. Table 13 lists the 2020 and 2021 ABC surplus and ABC reserves for BSAI flathead sole, rock sole, and yellowfin sole.

TABLE 13—FINAL 2020 AND 2021 ABC SURPLUS, ABC RESERVES, COMMUNITY DEVELOPMENT QUOTA (CDQ) ABC RESERVES, AND AMENDMENT 80 ABC RESERVES IN THE BSAI FOR FLATHEAD SOLE, ROCK SOLE, AND YELLOWFIN SOLE

#### *PSC Limits for Halibut, Salmon, Crab, and Herring*

Section 679.21(b), (e), (f), and (g) sets forth the BSAI PSC limits. Pursuant to § 679.21(b)(1), the annual BSAI halibut PSC limits total 3,515 mt. Section 679.21(b)(1) allocates 315 mt of the halibut PSC limit as the PSQ reserve for use by the groundfish CDQ program, 1,745 mt of the halibut PSC limit for the Amendment 80 sector, 745 mt of the halibut PSC limit for the BSAI trawl limited access sector, and 710 mt of the halibut PSC limit for the BSAI non-trawl sector.

Section 679.21(b)(1)(iii)(A) and (B) authorizes apportionment of the BSAI non-trawl halibut PSC limit into PSC allowances among six fishery categories in Table 17, and § 679.21(b)(1)(ii)(A) and (B), (e)(3)(i)(B), and (e)(3)(iv) requires apportionment of the trawl PSC limits in Tables 15 and 16 into PSC allowances among seven fishery categories.

Pursuant to Section 3.6 of the FMP, the Council recommends, and NMFS agrees, that certain specified non-trawl fisheries be exempt from the halibut PSC limit. As in past years, after consultation with the Council, NMFS exempts the pot gear fishery, the jig gear fishery, and the sablefish IFQ hook-and-line gear fishery categories from halibut bycatch restrictions for the following reasons: (1) The pot gear fisheries have low halibut bycatch mortality; (2) NMFS estimates halibut mortality for the jig gear fleet to be negligible because of the small size of the fishery and the selectivity of the gear; and (3) the sablefish and halibut IFQ fisheries have low halibut bycatch mortality because the IFQ program requires that legal-size halibut be retained by vessels using fixed gear if a halibut IFQ permit holder or a hired master is aboard and is holding unused halibut IFQ for that vessel category and the IFQ regulatory area in which the vessel is operating (§ 679.7(f)(11)).

The 2019 total groundfish catch for the pot gear fishery in the BSAI was 45,567 mt, with an associated halibut

bycatch mortality of 3.7 mt. The 2019 jig gear fishery harvested about 190 mt of groundfish. Most vessels in the jig gear fleet are exempt from observer coverage requirements. As a result, observer data are not available on halibut bycatch in the jig gear fishery. As mentioned above, NMFS estimates a negligible amount of halibut bycatch mortality because of the selective nature of jig gear and the low mortality rate of halibut caught with jig gear and released.

Under § 679.21(f)(2), NMFS annually allocates portions of either 33,318, 45,000, 47,591, or 60,000 Chinook salmon PSC limits among the AFA sectors, depending on past bycatch performance, on whether Chinook salmon bycatch incentive plan agreements (IPAs) are formed, and on whether NMFS determines it is a low Chinook salmon abundance year. NMFS will determine that it is a low Chinook salmon abundance year when abundance of Chinook salmon in western Alaska is less than or equal to 250,000 Chinook salmon. The State of Alaska provides to NMFS an estimate of Chinook salmon abundance using the 3-System Index for western Alaska based on the Kuskokwim, Unalakleet, and Upper Yukon aggregate stock grouping.

If an AFA sector participates in an approved IPA and has not exceeded its performance standard under § 679.21(f)(6), and if it is not a low Chinook salmon abundance year, then NMFS will allocate a portion of the 60,000 Chinook salmon PSC limit to that sector as specified in § 679.21(f)(3)(iii)(A). If no IPA is approved, or if the sector has exceeded its performance standard under § 679.21(f)(6), and if it is not a low abundance year, then NMFS will allocate a portion of the 47,591 Chinook salmon PSC limit to that sector as specified in § 679.21(f)(3)(iii)(C). If an AFA sector participates in an approved IPA and has not exceeded its performance standard under § 679.21(f)(6), in a low abundance year, then NMFS will allocate a portion of the 45,000 Chinook salmon PSC limit to that sector as specified in

§ 679.21(f)(3)(iii)(B). If no IPA is approved, or if the sector has exceeded its performance standard under § 679.21(f)(6), and if in a low abundance year, then NMFS will allocate a portion of the 33,318 Chinook salmon PSC limit to that sector as specified in § 679.21(f)(3)(iii)(D).

NMFS has determined that 2019 was not a low Chinook salmon abundance year, based on the State's estimate that Chinook salmon abundance in western Alaska is greater than 250,000 Chinook salmon. Therefore, in 2020, the Chinook salmon PSC limit is 60,000 Chinook salmon, allocated to each sector as specified in § 679.21(f)(3)(iii)(A). The AFA sector Chinook salmon allocations are also seasonally apportioned with 70 percent of the allocation for the A season pollock fishery, and 30 percent of the allocation for the B season pollock fishery (§§ 679.21(f)(3)(i) and 679.23(e)(2)). In 2020, the Chinook salmon bycatch performance standard under § 679.21(f)(6) is 47,591 Chinook salmon, allocated to each sector as specified in § 679.21(f)(3)(iii)(C).

NMFS publishes the approved IPAs, allocations, and reports at <https://alaskafisheries.noaa.gov/sustainablefisheries/bycatch/default.htm>.

Section 679.21(g)(2)(i) specifies 700 fish as the 2020 and 2021 Chinook salmon PSC limit for the AI pollock fishery. Section 679.21(g)(2)(ii) allocates 7.5 percent, or 53 Chinook salmon, as the AI PSQ reserve for the CDQ Program, and allocates the remaining 647 Chinook salmon to the non-CDQ fisheries.

Section 679.21(f)(14)(i) specifies 42,000 fish as the 2020 and 2021 non-Chinook salmon PSC limit for vessels using trawl gear from August 15 through October 14 in the Catcher Vessel Operational Area (CVOA). Section 679.21(f)(14)(ii) allocates 10.7 percent, or 4,494 non-Chinook salmon, in the CVOA as the PSQ reserve for the CDQ Program, and allocates the remaining 37,506 non-Chinook salmon in the CVOA to the non-CDQ fisheries.

PSC limits for crab and herring are specified annually based on abundance and spawning biomass. Section 679.21(e)(3)(i)(A)(1) allocates 10.7 percent from each trawl gear PSC limit specified for crab as a PSQ reserve for use by the groundfish CDQ program.

Based on 2019 survey data, the red king crab mature female abundance is estimated at 10.613 million red king crabs, and the effective spawning biomass is estimated at 29.009 million lbs (12,705 mt). Based on the criteria set out at § 679.21(e)(1)(i), the 2020 and 2021 PSC limit of red king crab in Zone 1 for trawl gear is 97,000 animals. This limit derives from the mature female abundance estimate of more than 8.4 million mature red king crab and the effective spawning biomass estimate of more than 14.5 million lbs (6,577 mt) but less than 55 million lbs (24,948 mt).

Section 679.21(e)(3)(ii)(B)(2) establishes criteria under which NMFS must specify an annual red king crab bycatch limit for the Red King Crab Savings Subarea (RKCSS) if the State has established a GHL fishery for red king crab in the Bristol Bay area in the previous year. The regulations limit the RKCSS red king crab bycatch limit to 25 percent of the red king crab PSC limit, based on the need to optimize the groundfish harvest relative to red king crab bycatch. In December 2019, the Council recommended and NMFS concurs that the red king crab bycatch limit for 2020 and 2021 be equal to 25 percent of the red king crab PSC limit within the RKCSS (Table 15).

Based on 2019 survey data, Tanner crab (*Chionoecetes bairdi*) abundance is estimated at 2,574 million animals. Pursuant to criteria set out at § 679.21(e)(1)(ii), the calculated 2020 and 2021 *C. bairdi* crab PSC limit for trawl gear is 980,000 animals in Zone 1, and 2,970,000 animals in Zone 2. The limit in Zone 1 is based on the abundance of *C. bairdi* estimated at 2,574 million animals, which is greater

than 400 million animals. The limit in Zone 2 is based on the abundance of *C. bairdi* estimated at 2,574 million animals, which is greater than 400 million animals.

Pursuant to § 679.21(e)(1)(iii), the PSC limit for trawl gear for snow crab (*C. opilio*) is based on total abundance as indicated by the NMFS annual bottom trawl survey. The *C. opilio* crab PSC limit in the *C. opilio* bycatch limitation zone (COBLZ) is set at 0.1133 percent of the Bering Sea abundance index minus 150,000 crabs. Based on the 2019 survey estimate of 7.706 billion animals, the calculated 2020 and 2021 *C. opilio* crab PSC limit is 8,580,898 animals, which is above the minimum PSC limit of 4.5 million and below the maximum PSC limit of 13 million animals.

Pursuant to § 679.21(e)(1)(v), the PSC limit of Pacific herring caught while conducting any trawl operation for BSAI groundfish is 1 percent of the annual eastern Bering Sea herring biomass. The best estimate of 2020 and 2021 herring biomass is 253,207 mt. This amount was developed by the Alaska Department of Fish and Game based on biomass for spawning aggregations. Therefore, the herring PSC limit for 2020 and 2021 is 2,532 mt for all trawl gear as listed in Tables 14 and 15.

Section 679.21(e)(3)(i)(A) requires that PSQ reserves be subtracted from the total trawl gear crab PSC limits. The crab and halibut PSC limits apportioned to the Amendment 80 and BSAI trawl limited access sectors are listed in Table 35 to 50 CFR part 679. The resulting 2020 and 2021 allocations of PSC limit to CDQ PSQ reserves, the Amendment 80 sector, and the BSAI trawl limited access sector are listed in Table 14. Pursuant to §§ 679.21(b)(1)(i), 679.21(e)(3)(vi), and 679.91(d) through (f), crab and halibut trawl PSC limits assigned to the Amendment 80 sector are then further allocated to Amendment 80 cooperatives as cooperative quota. Crab and halibut PSC

cooperative quota assigned to Amendment 80 cooperatives is not allocated to specific fishery categories. In 2020, there are no vessels in the Amendment 80 limited access sector and one Amendment 80 cooperative. The 2021 PSC allocations between Amendment 80 cooperatives and the Amendment 80 limited access sector will not be known until eligible participants apply for participation in the program by November 1, 2020. Section 679.21(e)(3)(i)(B) requires that NMFS apportion each trawl PSC limit for crab and herring not assigned to Amendment 80 cooperatives into PSC bycatch allowances for seven specified fishery categories in § 679.21(e)(3)(iv).

Section 679.21(b)(2) and (e)(5) authorizes NMFS, after consulting with the Council, to establish seasonal apportionments of halibut and crab PSC amounts for the BSAI trawl limited access and non-trawl sectors in order to maximize the ability of the fleet to harvest the available groundfish TAC and to minimize bycatch. The factors to be considered are (1) seasonal distribution of prohibited species, (2) seasonal distribution of target groundfish species relative to prohibited species distribution, (3) PSC bycatch needs on a seasonal basis relevant to prohibited species biomass and expected catches of target groundfish species, (4) expected variations in bycatch rates throughout the year, (5) expected changes in directed groundfish fishing seasons, (6) expected start of fishing effort, and (7) economic effects of establishing seasonal prohibited species apportionments on segments of the target groundfish industry. Based on this criteria, the Council recommended and NMFS approves the seasonal PSC apportionments in Tables 16 and 17 to maximize harvest among gear types, fisheries, and seasons while minimizing bycatch of PSC.

TABLE 14—FINAL 2020 AND 2021 APPORTIONMENT OF PROHIBITED SPECIES CATCH ALLOWANCES TO NON-TRAWL GEAR, THE CDQ PROGRAM, AMENDMENT 80, AND THE BSAI TRAWL LIMITED ACCESS SECTORS

PSC species and area and zone <sup>1</sup>	Total PSC	Non-trawl PSC	CDQ PSQ reserve <sup>2</sup>	Trawl PSC remaining after CDQ PSQ	Amendment 80 sector <sup>3</sup>	BSAI trawl limited access sector	BSAI PSC limits not allocated <sup>3</sup>

*Estimates of Halibut Biomass and Stock Condition*

The International Pacific Halibut Commission (IPHC) annually assesses the abundance and potential yield of the

Pacific halibut stock using all available data from the commercial and sport fisheries, other removals, and scientific surveys. Additional information on the Pacific halibut stock assessment may be found in the IPHC’s 2019 Pacific halibut

stock assessment (December 2019), available on the IPHC website at [www.iphc.int](http://www.iphc.int). The IPHC considered the 2019 Pacific halibut stock assessment at its February 2020 annual meeting when

it set the 2020 commercial halibut fishery catch limits.

*Halibut Discard Mortality Rates*

To monitor halibut bycatch mortality allowances and apportionments, the Regional Administrator uses observed halibut incidental catch rates, halibut discard mortality rates (DMRs), and estimates of groundfish catch to project when a fishery's halibut bycatch mortality allowance or seasonal apportionment is reached. Halibut incidental catch rates are based on observers' estimates of halibut incidental catch in the groundfish fishery. DMRs are estimates of the proportion of incidentally caught halibut that do not survive after being returned to the sea. The cumulative halibut mortality that accrues to a particular halibut PSC limit is the product of a DMR multiplied by the estimated halibut PSC. DMRs are estimated using the best scientific information available in conjunction with the annual BSAI stock assessment process. The DMR methodology and findings are included as an appendix to the annual BSAI groundfish SAFE report.

In 2016, the DMR estimation methodology underwent revisions per the Council's directive. An interagency halibut working group (IPHC, Council, and NMFS staff) developed improved estimation methods that have undergone review by the Plan Team, SSC, and the Council. A summary of the revised methodology is included in the BSAI proposed 2017 and 2018 harvest specifications (81 FR 87863, December 6, 2016), and the comprehensive discussion of the working group's statistical methodology is available from the Council (see **ADDRESSES**). The DMR working group's revised methodology is intended to improve estimation accuracy, transparency, and transferability in the methodology used for calculating DMRs. The working group will continue to consider improvements to the methodology used to calculate halibut mortality, including potential changes to the reference period (the period of data used for calculating the DMRs). Future DMRs may change based on additional years of observer sampling, which could provide more recent and accurate data and which could improve the accuracy of estimation and progress on

methodology. The new methodology will continue to ensure that NMFS is using DMRs that more accurately reflect halibut mortality, which will inform the different sectors of their estimated halibut mortality and allow specific sectors to respond with methods that could reduce mortality and, eventually, the DMR for that sector.

At the December 2019 meeting, the SSC, AP, and Council reviewed and concurred in the revised DMRs. The 2020 and 2021 DMRs use an updated 2-year reference period. Comparing the 2020 and 2021 final DMRs to the final DMRs from the 2019 and 2020 harvest specifications, the DMR for motherships and catcher/processors using non-pelagic trawl gear decreased to 75 percent from 78 percent, the DMR for catcher vessels using non-pelagic trawl gear decreased to 58 percent from 59 percent, the DMR for catcher/processors using hook-and-line gear increased to 9 percent from 8 percent, the DMR for catcher vessels using hook-and-line gear increased to 9 percent from 4 percent, and the DMR for pot gear increased to 27 percent from 19 percent. Table 18 lists the final 2020 and 2021 DMRs.

TABLE 18—2020 AND 2021 PACIFIC HALIBUT DISCARD MORTALITY RATES (DMR) FOR THE BSAI

Gear	Sector	Halibut discard mortality rate (percent)
Pelagic trawl	All	100
Non-pelagic trawl	Mothership and catcher/processor	75
Non-pelagic trawl	Catcher vessel	58
Hook-and-line	Catcher/processor	9
Hook-and-line	Catcher vessel	9
Pot	All	27

*Directed Fishing Closures*

In accordance with § 679.20(d)(1)(i), the Regional Administrator may establish a DFA for a species or species group if the Regional Administrator determines that any allocation or apportionment of a target species has been or will be reached. If the Regional Administrator establishes a DFA, and that allowance is or will be reached before the end of the fishing year, NMFS will prohibit directed fishing for that species or species group in the specified subarea, regulatory area, or district (see § 679.20(d)(1)(iii)). Similarly, pursuant to § 679.21(b)(4) and (e)(7), if the Regional Administrator determines that a fishery category's bycatch allowance

of halibut, red king crab, *C. bairdi* crab, or *C. opilio* crab for a specified area has been reached, the Regional Administrator will prohibit directed fishing for each species or species group in that fishery category in the area specified by regulation for the remainder of the season or fishing year.

Based on historic catch patterns and anticipated fishing activity, the Regional Administrator has determined that the groundfish allocation amounts in Table 19 will be necessary as incidental catch to support other anticipated groundfish fisheries for the 2020 and 2021 fishing years. Consequently, in accordance with § 679.20(d)(1)(i), the Regional Administrator establishes the DFA for the species and species groups in Table

19 as zero mt. Therefore, in accordance with § 679.20(d)(1)(iii), NMFS is prohibiting directed fishing for these sectors and species or species groups in the specified areas effective at 1200 hours, A.l.t., March 9, 2020, through 2400 hours, A.l.t., December 31, 2021. Also, for the BSAI trawl limited access sector, bycatch allowances of halibut, red king crab, *C. bairdi* crab, and *C. opilio* crab listed in Table 19 are insufficient to support directed fisheries. Therefore, in accordance with § 679.21(b)(4)(i) and (e)(7), NMFS is prohibiting directed fishing for these sectors, species, and fishery categories in the specified areas effective at 1200 hours, A.l.t., March 9, 2020, through 2400 hours, A.l.t., December 31, 2021.

TABLE 19—2020 AND 2021 DIRECTED FISHING CLOSURES <sup>1</sup>

		Rockfish—red king crab Zone 1	.....	.....

<sup>1</sup> Maximum retainable amounts may be found in Table 11 to 50 CFR part 679.

<sup>2</sup> “Other rockfish” includes all *Sebastes* and *Sebastolobus* species except for dark rockfish, Pacific ocean perch, northern rockfish, blackspotted/rougheye rockfish, and shorthead rockfish.

Closures implemented under the final 2019 and 2020 BSAI harvest specifications for groundfish (84 FR 9000, March 13, 2019) remain effective under authority of these final 2020 and 2021 harvest specifications and until the date specified in those notices. Closures are posted at the following website under the Alaska filter for Management Area: <https://www.fisheries.noaa.gov/rules-and-announcements/bulletins>. While these closures are in effect, the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a fishing trip. These closures to directed fishing are in addition to closures and prohibitions found at 50 CFR part 679.

*Listed AFA Catcher/Processor Sideboard Limits*

Pursuant to § 679.64(a), the Regional Administrator is responsible for restricting the ability of listed AFA C/Ps to engage in directed fishing for groundfish species other than pollock to protect participants in other groundfish fisheries from adverse effects resulting from the AFA fishery and from fishery cooperatives in the directed pollock fishery. These restrictions are set out as sideboard limits on catch. On February 8, 2019, NMFS published a final rule (84 FR 2723) that implemented regulations to prohibit non-exempt AFA C/Ps from directed fishing for groundfish species or species groups subject to sideboard limits (see § 679.20(d)(1)(iv)(D) and Table 54 to 50 CFR part 679). Section 679.64(a)(1)(v)

exempts AFA C/Ps from a yellowfin sole sideboard limit because the final 2020 and 2021 aggregate ITAC of yellowfin sole assigned to the Amendment 80 sector and BSAI trawl limited access sector is greater than 125,000 mt.

Section 679.64(a)(2) and Tables 40 and 41 to 50 CFR part 679 establish a formula for calculating PSC sideboard limits for halibut and crab caught by listed AFA C/Ps. The basis for these sideboard limits is described in detail in the final rules implementing the major provisions of the AFA (67 FR 79692, December 30, 2002) and Amendment 80 (72 FR 52668, September 14, 2007). PSC species listed in Table 20 that are caught by listed AFA C/Ps participating in any groundfish fishery other than pollock will accrue against the final 2020 and 2021 PSC sideboard limits for the listed

AFA C/Ps. Section 679.21(b)(4)(iii), (e)(3)(v), and (e)(7) authorize NMFS to close directed fishing for groundfish other than pollock for listed AFA C/Ps once a final 2020 or 2021 PSC sideboard

limit listed in Table 20 is reached. Pursuant to § 679.21(b)(1)(ii)(C) and (e)(3)(ii)(C), halibut or crab PSC by listed AFA C/Ps while fishing for pollock will accrue against the PSC

allowances annually specified for the pollock/Atka mackerel/“other species” fishery categories, according to § 679.21(b)(1)(ii)(B) and (e)(3)(iv).

TABLE 20—FINAL 2020 AND 2021 BSAI AFA LISTED CATCHER/PROCESSOR PROHIBITED SPECIES SIDEBOARD LIMITS

PSC species and area <sup>1</sup>	Ratio of PSC catch to total PSC	2020 and 2021 PSC available to trawl vessels after subtraction of PSQ <sup>2</sup>	2020 and 2021 AFA catcher/processor sideboard limit <sup>2</sup>
Halibut mortality BSAI .....	n/a	n/a	286
Red king crab Zone 1 .....	0.0070	86,621	606
<i>C. opilio</i> (COBLZ) .....	0.1530	7,662,742	1,172,400
<i>C. bairdi</i> Zone 1 .....	0.1400	875,140	122,520
<i>C. bairdi</i> Zone 2 .....	0.0500	2,652,210	132,611

<sup>1</sup> Refer to § 679.2 for definitions of areas.

<sup>2</sup> Halibut amounts are in metric tons of halibut mortality. Crab amounts are in numbers of animals.

**AFA Catcher Vessel Sideboard Limits**

Pursuant to § 679.64(b), the Regional Administrator is responsible for restricting the ability of AFA CVs to engage in directed fishing for groundfish species other than pollock to protect participants in other groundfish fisheries from adverse effects resulting from the AFA fishery and from fishery cooperatives in the pollock directed fishery. On February 8, 2019, NMFS published a final rule (84 FR 2723) that implemented regulations to prohibit

non-exempt AFA C/Vs from directed fishing for a majority of the groundfish species or species groups subject to sideboard limits (see § 679.20(d)(1)(iv)(D) and Table 55 to 50 CFR part 679). Section 679.64(b)(6) exempts AFA CVs from a yellowfin sole sideboard limit because the 2020 and 2021 aggregate ITAC of yellowfin sole assigned to the Amendment 80 sector and BSAI trawl limited access sector is greater than 125,000 mt. The remainder of the sideboard limits for non-exempt AFA C/Vs are in Table 21.

Section 679.64(b)(3) and (b)(4) establish formulas for setting AFA CV groundfish and halibut and crab PSC sideboard limits for the BSAI. The basis for these sideboard limits is described in detail in the final rules implementing the major provisions of the AFA (67 FR 79692, December 30, 2002) and Amendment 80 (72 FR 52668, September 14, 2007). Table 21 lists the final 2020 and 2021 AFA CV sideboard limits.

TABLE 21—FINAL 2020 AND 2021 BSAI PACIFIC COD SIDEBOARD LIMITS FOR AMERICAN FISHERIES ACT CATCHER VESSELS (CVs)

[Amounts are in metric tons]

Fishery by area/gear/season	Ratio of 1995–1997 AFA CV catch to 1995–1997 TAC	2020 Initial TAC	2020 AFA catcher vessel sideboard limits	2021 Initial TAC	2021 AFA catcher vessel sideboard limits
BSAI .....	n/a	n/a	n/a	n/a	n/a
Trawl gear CV .....	n/a	n/a	n/a	n/a	n/a
Jan 20–Apr 1 .....	0.8609	22,723	19,562	15,543	13,381
Apr 1–Jun 10 .....	0.8609	3,378	2,908	2,310	1,989
Jun 10–Nov 1 .....	0.8609	4,606	3,965	3,151	2,712

**Note:** Section 679.64(b)(6) exempts AFA catcher vessels from a yellowfin sole sideboard limit because the 2020 and 2021 aggregate ITAC of yellowfin sole assigned to the Amendment 80 sector and BSAI trawl limited access sector is greater than 125,000 mt.

Halibut and crab PSC limits listed in Table 22 that are caught by AFA CVs participating in any groundfish fishery other than pollock will accrue against the 2020 and 2021 PSC sideboard limits for the AFA CVs. Section 679.21(b)(4)(iii), (e)(3)(v), and (e)(7)

authorize NMFS to close directed fishing for groundfish other than pollock for AFA CVs once a final 2020 and 2021 PSC sideboard limit listed in Table 22 is reached. Pursuant to § 679.21(b)(1)(ii)(C) and (e)(3)(ii)(C), halibut or crab PSC by AFA CVs while

fishing for pollock in the BS will accrue against the PSC allowances annually specified for the pollock/Atka mackerel/“other species” fishery categories under §§ 679.21(b)(1)(ii)(B) and (e)(3)(iv).

TABLE 22—FINAL 2020 AND 2021 AMERICAN FISHERIES ACT CATCHER VESSEL PROHIBITED SPECIES CATCH SIDEBOARD LIMITS FOR THE BSAI <sup>1</sup>

<i>C. bairdi</i> Zone 2 .....	n/a .....	0.1860	2,652,210	493,311

<sup>1</sup> Refer to § 679.2 for definitions of areas.

<sup>2</sup> Target trawl fishery categories are defined at § 679.21(b)(1)(ii)(B) and (e)(3)(iv).

<sup>3</sup> Halibut amounts are in metric tons of halibut mortality. Crab amounts are in numbers of animals.

<sup>4</sup> "Other flatfish" for PSC monitoring includes all flatfish species, except for halibut (a prohibited species), Alaska plaice, arrowtooth flounder, flathead sole, Greenland turbot, Kamchatka flounder, rock sole, and yellowfin sole.

<sup>5</sup> "Other species" for PSC monitoring includes skates, sculpins, sharks, and octopuses.

**Response to Comments**

NMFS received one letter raising one comment during the public comment period for the proposed BSAI groundfish harvest specifications. No changes were made to the final rule in response to the comment letter received.

*Comment 1:* NMFS is allowing the massive taking of 2.0 million mt of groundfish from the Bering Sea, Alaska, which should be cut by 50% immediately, because the allocation is too high and is harming marine mammals and other animals that rely on groundfish for food.

*Response 1:* The FMP and its implementing regulations require NMFS, after consultation with the Council, to specify annually the TAC for each target species or species group, and the sum of all TACs for all groundfish species in the BSAI must be within the optimum yield (OY) range of 1.4 million to 2.0 mt (see § 679.20(a)(1)(i)(A)). For 2020 and 2021, the sum of all TACs is 2.0 million mt, which is the upper end of the required OY range of 1.4 to 2.0 million mt. For each groundfish species or species group in the BSAI, the Council and NMFS set annual harvest levels for 2020 and 2021 based on the best available scientific information on the biological condition of the groundfish species, the status of ecosystem, and other socio-economic factors. NMFS's primary objective in the harvest specifications process is the conservation and management of fish resources for the Nation as a whole, and the annual harvest specifications process is a key element to ensuring that Alaska fisheries are sustainably

managed in a controlled and orderly manner. This process incorporates the best available scientific information from the most recent SAFE reports, which include information on the condition of each groundfish species and other ecosystem components, such as marine mammals and seabirds. In addition, NMFS has considered impacts on endangered and threatened species and marine mammals and has developed measures to address those impacts. For example, there are a broad suite of conservation and management measures in place to protect Steller sea lions that were subject to consultation under Section 7 of the Endangered Species Act, including those described at <https://www.fisheries.noaa.gov/species/steller-sea-lion#management>.

**Classification**

NMFS has determined that the final harvest specifications are consistent with the FMP and with the Magnuson-Stevens Act and other applicable laws.

This action is authorized under 50 CFR 679.20 and is exempt from review under Executive Order 12866. This final rule is not an Executive Order 13771 regulatory action because this rule is not significant under Executive Order 12866.

NMFS prepared an EIS for the Alaska groundfish harvest specifications and alternative harvest strategies (see ADDRESSES) and made it available to the public on January 12, 2007 (72 FR 1512). On February 13, 2007, NMFS issued the ROD for the Final EIS. In January 2020, NMFS prepared a Supplementary Information Report (SIR)

for this action. Copies of the Final EIS, ROD, and annual SIRs for this action are available from NMFS (see ADDRESSES). The Final EIS analyzes the environmental, social, and economic consequences of the groundfish harvest specifications and alternative harvest strategies on resources in the action area. Based on the analysis in the Final EIS, NMFS concluded that the preferred alternative (Alternative 2) provides the best balance among relevant environmental, social, and economic considerations and allows for continued management of the groundfish fisheries based on the most recent, best scientific information.

The SIR evaluates the need to prepare a Supplemental EIS (SEIS) for the 2020 and 2021 groundfish harvest specifications. An SEIS should be prepared if (1) the agency makes substantial changes in the proposed action that are relevant to environmental concerns; or (2) significant new circumstances or information exist relevant to environmental concerns and bearing on the proposed action or its impacts (40 CFR 1502.9(c)(1)). After reviewing the information contained in the SIR and SAFE reports, the Regional Administrator has determined that (1) approval of the 2020 and 2021 harvest specifications, which were set according to the preferred harvest strategy in the Final EIS, does not constitute a substantial change in the action; and (2) there are no significant new

circumstances or information relevant to environmental concerns and bearing on the action or its impacts. Additionally, the 2020 and 2021 harvest specifications will result in environmental, social, and economic impacts within the scope of those analyzed and disclosed in the Final EIS. Therefore, an SEIS is not necessary to implement the 2020 and 2021 harvest specifications.

Section 604 of the Regulatory Flexibility Act (RFA) (5 U.S.C. 604) requires that, when an agency promulgates a final rule under 5 U.S.C. 553, after being required by that section, or any other law, to publish a general notice of proposed rulemaking, the agency shall prepare a final regulatory flexibility analysis (FRFA). The following constitutes the FRFA prepared for the final action.

The required contents of a FRFA, as described in section 604, are: (1) A statement of the need for, and objectives of, the rule; (2) a statement of the significant issues raised by the public comments in response to the initial regulatory flexibility analysis, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments; (3) the response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments; (4) a description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available; (5) a description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; and (6) a description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

A description of this action, its purpose, and its legal basis are included at the beginning of the preamble to this final rule and are not repeated here.

NMFS published the proposed rule on December 3, 2019 (84 FR 66129). NMFS

prepared an Initial Regulatory Flexibility Analysis (IRFA) to accompany the proposed action, and included a summary in the proposed rule. The comment period closed on January 2, 2020. No comments were received on the IRFA or on the economic impacts of the rule more generally. The Chief Counsel for Advocacy of the Small Business Administration did not file any comments on the proposed rule.

The entities directly regulated by this action are those that harvest groundfish in the exclusive economic zone of the BSAI and in parallel fisheries within State waters. These include entities operating catcher vessels and catcher/processors within the action area and entities receiving direct allocations of groundfish.

For RFA purposes only, NMFS has established a small business size standard for businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (NAICS code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates), and has combined annual gross receipts not in excess of \$11 million for all its affiliated operations worldwide.

Using the most recent data available (2018), the estimated number of directly regulated small entities include approximately 182 catcher vessels, three catcher/processors, and six CDQ groups. Some of these vessels are members of AFA inshore pollock cooperatives, Gulf of Alaska rockfish cooperatives, or BSAI Crab Rationalization Program cooperatives, and, since under the RFA the aggregate gross receipts of all participating members of the cooperative must meet the “under \$11 million” threshold, the cooperatives are considered to be large entities within the meaning of the RFA. Thus, the estimate of 182 catcher vessels may be an overstatement of the number of small entities. Average gross revenues in 2018 were \$520,000 for small hook-and-line vessels, \$1.2 million for small pot vessels, and \$2.6 million for small trawl vessels. The average gross revenue for catcher/processors are not reported, due to confidentiality considerations.

This action does not modify recordkeeping or reporting requirements.

The significant alternatives were those considered as alternative harvest strategies when the Council selected its preferred harvest strategy (Alternative 2) in December 2006. These included the following:

- Alternative 1: Alternative 1 set TAC to produce fishing mortality rates,  $F$ , that are equal to  $maxFABC$ , unless the sum of the TAC is constrained by the OY established in the FMP. This is equivalent to setting TAC to produce harvest levels equal to the maximum permissible ABC, as constrained by OY. The term “ $maxFABC$ ” refers to the maximum permissible value of  $FABC$  under Amendment 56 to the BSAI and Gulf of Alaska groundfish fishery management plans. Historically, the TAC has been set at or below the ABC; therefore, this alternative represents a likely upper limit for setting the TAC within the OY and ABC limits.

- Alternative 3: For species in Tiers 1, 2, and 3, Alternative 3 set TAC to produce  $F$  equal to the most recent 5-year average actual  $F$ . For species in Tiers 4, 5, and 6, Alternative 3 set TAC equal to the most recent 5-year average actual catch. For stocks with a high level of scientific information, TAC would be set to produce harvest levels equal to the most recent 5-year average actual fishing mortality rates. For stocks with insufficient scientific information, TAC would be set equal to the most recent 5-year average actual catch. This alternative recognizes that for some stocks, catches may fall well below ABC, and recent average  $F$  may provide a better indicator of actual  $F$  than  $FABC$  does.

- Alternative 4: First, Alternative 4 set TAC for rockfish species in Tier 3 at  $F75\%$ ; set TAC for rockfish species in Tier 5 at  $F = 0.5M$ ; and set spatially explicit TAC for shortraker and roughey rockfish in the BSAI. Second, taking the rockfish TAC as calculated above, Alternative 4 would reduce all other TAC by a proportion that does not vary across species, so that the sum of all TAC, including rockfish TAC, is equal to the lower bound of the area OY (1.4 million mt in the BSAI). This alternative sets conservative and spatially explicit TAC for rockfish species that are long-lived and late to mature, and sets conservative TAC for the other groundfish species.

- Alternative 5: Alternative 5 (No Action) set TAC at zero.

Alternative 2 is the preferred alternative chosen by the Council. Alternative 2 set TACs that fall within the range of ABCs recommended through the Council harvest specifications process and TACs recommended by the Council. Under this scenario,  $F$  is set equal to a constant fraction of  $maxFABC$ . The recommended fractions of  $maxFABC$  may vary among species or stocks, based on other considerations unique to each.

This is the method for determining TACs that has been used in the past.

Alternatives 1, 3, 4, and 5 do not meet the objectives of this action.

Alternatives 1 and 3 may have a smaller adverse economic impact on small entities than the preferred alternative, but would be inconsistent with the objectives of this action. Alternatives 4 and 5 likely would have a significant adverse economic impact on small entities. The Council rejected these alternatives as harvest strategies in 2006, and the Secretary of Commerce did so in 2007.

Alternative 1 would lead to TAC limits whose sum exceeds the fishery OY, which is set out in statute and the FMP. As shown in Table 1 and Table 2, the sum of ABCs in 2020 and 2021 would be 3,272,581 mt and 3,020,278 mt, respectively. Both of these are substantially in excess of the fishery OY for the BSAI. This result would be inconsistent with the objectives of this action, in that it would violate the Consolidated Appropriations Act of 2004, Public Law 108–199, Division B, Title VIII, section 803(c), the FMP, and implementing regulations (§ 679.20(a)(1)(i)(A)), which set a 2.0 million mt maximum harvest for BSAI groundfish.

Alternative 3 selects harvest rates based on the most recent 5 years' worth of harvest rates (for species in Tiers 1 through 3) or based on the most recent 5 years' worth of harvests (for species in Tiers 4 through 6). This alternative is inconsistent with the objectives of this action, as well as National Standard 2 of the Magnuson-Stevens Act (16 U.S.C. 1851(a)(2)), because it does not take into account the most recent biological information for this fishery. NMFS annually conducts at-sea stock surveys for different species, as well as statistical modeling, to estimate stock sizes and permissible harvest levels. Actual harvest rates or harvest amounts are a component of these estimates, but in and of themselves may not accurately portray stock sizes and conditions. Harvest rates are listed for each species category for each year in the SAFE report (see **ADDRESSES**).

Alternative 4 would lead to significantly lower harvests of all groundfish species and would reduce TAC from the upper end of the OY range in the BSAI to its lower end of 1.4 million mt. This result would lead to significant reductions in harvests of species by small entities. While reductions of this size could be associated with offsetting price increases, the size of these increases is uncertain, and, assuming volume decreases would lead to price increases,

it is unclear whether price increases would be sufficient to offset the volume decreases and to leave revenues unchanged for small entities. Thus, this alternative would have an adverse economic impact on small entities, compared to the preferred alternative.

Alternative 5, which sets all harvests equal to zero, may address conservation issues, but would have a significant adverse economic impact on small entities and would be inconsistent with achieving OY on a continuing basis, as mandated by the Magnuson-Stevens Act (16 U.S.C. 1851(a)(1)).

Adverse impacts on marine mammals or endangered or threatened species resulting from fishing activities conducted under these harvest specifications are discussed in the Final EIS and its accompanying annual SIRs (see **ADDRESSES**).

Pursuant to 5 U.S.C. 553(d)(3), the Assistant Administrator for Fisheries, NOAA, finds good cause to waive the 30-day delay in the date of effectiveness for this rule because delaying this rule is contrary to the public interest. The Plan Team review of the 2019 SAFE report occurred in November 2019, and based on the 2019 SAFE report the Council considered and recommended the final harvest specifications in December 2019. Accordingly, NMFS's review of the final 2020 and 2021 harvest specifications could not begin until after the December 2019 Council meeting, and after the public had time to comment on the proposed action.

If this rule's effectiveness is delayed, fisheries that might otherwise remain open under these rules may prematurely close based on the lower TACs established in the final 2019 and 2020 harvest specifications (84 FR 9000, March 13, 2019). If implemented immediately, this rule would allow these fisheries to continue fishing, because some of the new TACs implemented by this rule are higher than the TACs under which they are currently fishing.

In addition, immediate effectiveness of this action is required to provide consistent management and conservation of fishery resources based on the best available scientific information. This is particularly pertinent for those species that have lower 2020 ABCs and TACs than those established in the 2019 and 2020 harvest specifications (84 FR 9000, March 13, 2019). If implemented immediately, this rule would ensure that NMFS can properly manage those fisheries for which this rule sets lower 2020 ABCs and TACs, which are based on the most recent biological information on the condition of stocks,

rather than managing species under the higher TACs set in the previous year's harvest specifications.

Certain fisheries, such as those for pollock and Pacific cod, are intensive, fast-paced fisheries. Other fisheries, such as those for flatfish, rockfish, skates, sharks, and octopuses, are critical as directed fisheries and as incidental catch in other fisheries. U.S. fishing vessels have demonstrated the capacity to catch the TAC allocations in these fisheries. Any delay in allocating the final TAC limits in these fisheries would cause confusion in the industry and potential economic harm through unnecessary discards, thus undermining the intent of this rule. Predicting which fisheries may close is difficult because these fisheries are affected by several factors that cannot be predicted in advance, including fishing effort, weather, movement of fishery stocks, and market price. Furthermore, the closure of one fishery has a cascading effect on other fisheries, for example by freeing up fishing vessels, which would allow those vessels to move from closed fisheries to open ones and lead to an increase in the fishing capacity in those open fisheries, thereby causing those open fisheries to close at an accelerated pace.

Additionally, in fisheries subject to declining sideboard limits, delaying this rule's effectiveness could allow some vessels to inadvertently reach or exceed their new sideboard limits. Because sideboard limits are intended to protect traditional fisheries in other sectors, allowing one sector to exceed its new sideboard limits by delaying this rule's effectiveness would effectively reduce the available catch for sectors that the sideboard limits are meant to protect. Moreover, the new TACs and sideboard limits protect the fisheries from being overfished. Thus, the delay is contrary to the public interest in protecting traditional fisheries and fish stocks.

If the final harvest specifications are not effective by March 14, 2020, which is the start of the 2020 Pacific halibut season as specified by the IPHC, the fixed gear sablefish fishery will not begin concurrently with the Pacific halibut IFQ season. Delayed effectiveness of this action would result in confusion for sablefish harvesters and economic harm from unnecessary discard of sablefish that are caught along with Pacific halibut, as both fixed gear sablefish and Pacific halibut are managed under the same IFQ program. Immediate effectiveness of the final 2020 and 2021 harvest specifications will allow the sablefish IFQ fishery to begin concurrently with the Pacific halibut IFQ season.

Finally, immediate effectiveness also would provide the fishing industry the earliest possible opportunity to plan and conduct its fishing operations with respect to new information about TAC limits. Therefore, NMFS finds good cause to waive the 30-day delay in the date of effectiveness under 5 U.S.C. 553(d)(3).

### Small Entity Compliance Guide

This final rule is a plain language guide to assist small entities in complying with this final rule as required by the Small Business Regulatory Enforcement Fairness Act of 1996. This final rule's primary purpose is to announce the final 2020 and 2021 harvest specifications and prohibited species bycatch allowances for the groundfish fisheries of the BSAI. This action is necessary to establish harvest limits and associated management measures for groundfish during the 2020 and 2021 fishing years and to accomplish the goals and objectives of the FMP. This action directly affects all fishermen who participate in the BSAI fisheries. The specific amounts of OFL, ABC, TAC, and PSC amounts are provided in tables to assist the reader. NMFS will announce closures of directed fishing in the **Federal Register** and information bulletins released by the Alaska Region. Affected fishermen should keep themselves informed of such closures.

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

#### 50 CFR Part 679

[Docket No. 180831813-9170-02]

RTID 0648-XY079

### Fisheries of the Exclusive Economic Zone Off Alaska; Pollock in Statistical Area 630 in the Gulf of Alaska

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.

**ACTION:** Temporary rule; modification of closure.

**SUMMARY:** NMFS is opening directed fishing for pollock in Statistical Area 630 of the Gulf of Alaska (GOA). This action is necessary to fully use the A season allowance of the 2020 total allowable catch of pollock in Statistical Area 630 of the GOA.

**DATES:** Effective 1200 hours, Alaska local time (A.l.t.), March 9, 2020, through 1200 hours, A.l.t., March 10, 2020. Comments must be received at the following address no later than 4:30 p.m., A.l.t., March 23, 2020.

**ADDRESSES:** You may submit comments on this document, identified by FDMS Docket Number NOAA-NMFS-2019-0102 by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to [www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2019-0102](http://www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2019-0102), click the "Comment Now!" icon, complete the required fields, and enter or attach your comments.

- *Mail:* Address written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Ellen Sebastian. Mail comments to P.O. Box 21668, Juneau, AK 99802-1668.

*Instructions:* Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and NMFS will post the comments for public viewing on [www.regulations.gov](http://www.regulations.gov) without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

**FOR FURTHER INFORMATION CONTACT:** Josh Keaton, 907-586-7228.

**SUPPLEMENTARY INFORMATION:** NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The A season allowance of the 2020 total allowable catch (TAC) of pollock in Statistical Area 630 of the GOA is 5,783 metric tons (mt) as established by the final 2019 and 2020 harvest specifications for groundfish in the GOA (84 FR 9416, March 14, 2019) and inseason adjustment (84 FR 70436, December 23, 2019).

NMFS closed directed fishing for pollock in Statistical Area 630 of the GOA under § 679.20(d)(1)(iii) on February 23, 2020 (85 FR 10994, February 26, 2020).

As of March 2, 2020, NMFS has determined that approximately 3,000 mt of pollock remain in the A season allowance for pollock in Statistical Area 630 of the GOA. Therefore, in accordance with § 679.25(a)(1)(i), (a)(2)(i)(C), and (a)(2)(iii)(D), and to fully utilize the A season allowance of the 2020 TAC of pollock in Statistical Area 630 of the GOA, NMFS is terminating the previous closure and is reopening directed fishing for pollock in Statistical Area 630 of the GOA, effective 1200 hours, A.l.t., March 9, 2020.

The Administrator, Alaska Region (Regional Administrator) considered the following factors in reaching this decision: (1) The catch of pollock in Statistical Area 630 of the GOA and, (2) the harvest capacity and stated intent on future harvesting patterns of vessels in participating in this fishery.

### Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the opening of directed fishing for pollock in Statistical Area 630 of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 2, 2020.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

Without this inseason adjustment, NMFS could not allow the fishery for
