**SUPPLEMENTARY INFORMATION:****I. Abstract**

NOAA's National Marine Fisheries Service (NMFS) manages the Sea Turtle Disentanglement Network (STDN) to respond to sea turtle entanglement in active or discarded fishing gear (in particular those involving the vertical line of fixed gear fisheries), marine debris, or other line in the marine environment. Entanglement has the potential to cause serious injury or mortality, which would negatively impact the recovery of endangered and threatened sea turtle populations. The STDN is made up of dedicated, trained, and specially-equipped non-profit organizations, state and federal

agencies, and universities. The STDN's goals are to increase reporting, to reduce serious injury and mortality to sea turtles, and to collect information that can be used for mitigation of these threats. Initial reports are provided by radio or phone from a variety of sources, including private and commercial boaters, fishermen, government and state agencies, and even non-profit organizations. Once initial reports are received and the STDN responds to document and, hopefully, release the entangled turtle, information from the initial report and the response are provided via hard copy or electronic entanglement report forms that are later submitted to NOAA Fisheries via electronic mail (most often). As there is limited observer coverage of fixed gear fisheries, the STDN data are invaluable to NMFS in understanding the threat of entanglement and working towards mitigation.
