

information collection. The Large Pelagic Fishing Survey consists of dockside and telephone surveys of recreational anglers for large pelagic fish (tunas, sharks, and billfish) in the Atlantic Ocean. The survey provides the National Marine Fisheries Service (NMFS) with information to monitor catch of bluefin tuna, marlin and other federally managed species. Catch monitoring in these fisheries and collection of catch and effort statistics for all pelagic fish is required under the Atlantic Tunas Convention Act and the Magnuson-Stevens Fishery Conservation and Management Act. Telephone survey portion species-level response options have been updated to include blue marlin, roundscale spearfish, and porbeagle beginning in 2020. The information collected by the Large Pelagic Fishing Survey is essential for the United States (U.S.) to meet its reporting obligations to the International Commission for the Conservation of Atlantic Tuna.

Affected Public: Business or other for-profit organizations.

Frequency: Annually, weekly, or on occasion.
