k. This application is not ready for environmental analysis at this time.

l. The existing Camp Far West Transmission Line Project includes a 1.9-mile-long, three-phase, 60-kilovolt (kV) transmission line extending from the powerhouse of the Camp Far West Hydroelectric Project in Placer County to an interconnection with PG&E's 9-mile-long Smartville-Lincoln (formerly Smartville-Pleasant Grove) 60-kV transmission line. The Camp Far West Transmission Line Project is a transmission line only project; therefore, the project does not generate power, nor does it include any dams, diversions, or otherwise discharge to surface waters, nor does it include recreation facilities. The transmission line project annually transmits approximately 26,900 megawatt hours of energy generated at the project powerhouse for the Camp Far West Hydroelectric Project.

PG&E proposes to include the 9-mile-long Smartville-Lincoln 60-kV transmission line as a project facility in any subsequent license issued for the project. PG&E has determined that, while this segment of transmission line used to carry electricity from multiple sources, it now only carries electricity from the Camp Far West Hydroelectric Project to the integrated transmission system. Due to this, PG&E believes that the 9-mile-long segment should be considered part of the primary transmission line for the Camp Far West Hydroelectric Project and that it be incorporated into the Camp Far West Transmission Line Project. As proposed, the Camp Far West Transmission Line Project would consist of 10.9-mile-long, three-phase, 60-kV transmission line extending from the powerhouse of the Camp Far West Hydroelectric Project to the interconnection point located at Beale Air Force Base.
