k. *Description of Request*: Erie Boulevard Hydropower, L.P. (licensee) proposes to remove the existing 7.5-foot-

high wooden flashboard system located atop the approximately 160-foot-long concrete auxiliary spillway at the Trenton Development and replace it with a pneumatic flashboard system (rubber dam). The purpose of the proposed pneumatic flashboard system is to address the issue of debris, which currently becomes stuck on the vertical support members of the trippable flashboards during high flow events and reduces the ability of the project to pass flows downstream. The pneumatic flashboard system would improve the licensee's operational control at the auxiliary spillway and provide clear passage for debris during high flow events.

The licensee's proposal would require minor modifications to the existing auxiliary spillway crest in order to install the rubber bladder, and the crest elevation would remain at 1,016.2 feet. When inflated, the rubber dam would have a top elevation of 1,023.9 feet, which is the existing normal reservoir elevation. The proposed work would also include the installation of conduits, anchors, drain pipes, electrical components, a control building, and new concrete along the spillway crest and abutments. The proposed amendment would not change the existing project operations, the reservoir elevation, or the spillway capacity.
