

KPUD's existing intake pond on the Columbia River. The new project water fill line would connect to a new KPUD-owned flanged water supply service connection in a water supply vault located near the lower reservoir. Within the vault, and just downstream of the service connection, there would be a project shut-off and throttling valve to allow control of the initial fill and make-up water flow rate into the lower reservoir. The initial volume of water necessary to fill the lower reservoir is estimated to be 7,640 acre-feet and would be filled over about six months at an average flow rate of approximately 21 cubic feet per second (maximum flow rate available is 35 cubic feet per second). It is estimated that the project would need 260 acre-feet of water each year to replenish water lost through evaporation. The estimated annual generation for operating 8 hours a day, 7 days a week is 3,500 gigawatt-hours per year.
